THE Reichsmark exchange, which has fallen slowly but almost without temporary recoveries since early January, to-day had a particularly heavy drop, touching 1,336 to the pound and 306 to the dollar. The lowest point of the November collapse was 1,180 and 310; and, allowing for the fall of the dollar against the leading European exchanges, the mark is considerably lower than at its previous worst record. The mark's lowness in November created an international sensation, and brought a general resolution to put Reparations, the cause of the trouble, upon a reasonable basis; but nothing has been done, and the most favourable outcome of the general resolution is apparently to be a reduction of the 1922 payments to a sum which cannot possibly be paid without further wrecking the currency. Here history repeats itself. The rapid mark exchange collapse of winter 1919-20 also frightened responsible observers, and inspired general talk in Entente countries of the necessity of preventing Germany's ruin, and in March an Entente statement that Germany would be helped to her legs duly came out. On the basis of this, the mark exchange actually recovered 200 per cent. History is again repeating itself, the resolution to settle practically the Reparations question, which first took shape in the London negotiations of last November and December, caused a very great mark recovery. To-day the German public, and the large foreign public with mark interests, seem to have come to the conclusion that nothing of any use will be done. The new mark collapse has created no new international sensation; and apparently it will need a much greater exchange

catastrophe to advertise sufficiently the dangers to Germany and Europe, and to revive again the violent but transitory resolution to find remedies. Towards fulfilment of the Cannes terms, themselves imposed provisionally only on the condition that a definitive Reparations settlement would speedily be come to, has now been paid 248 millions of gold marks. This sum has been obtained only by expropriating the foreign currency of exporters, who have in most cases at once turned their paper-mark compensation back into foreign currencies, with a bad effect on the mark exchange.

An analysis of the expenditure in the Budget for 1922, which totals 265.7 milliards, is sufficient comment on the above. The Budget is based on the London Ultimatum, not on the as yet unconfirmed Cannes plan; but if the Cannes plan goes through, the latest mark exchange fall will enormously increase the paper-mark cost of its execution.

	Milliards of Paper Marks
Execution of the peace treaty	188
Interest on debt	29.8
War pensions and allowances	11.2
General administration	9.5
Deficits on State concerns	9.2
Social expenditure	7.1
Army and Navy	4.7
Economic and cultural	2.3
Salary supplements to States and Municipalities	2.0
Police	1.9

The "execution of the Peace Treaty," the greater part of which is Reparations, is the sole cause of the "Deficit-wirtschaft," of the increase of the floating debt, of the inflation, and ultimately (though the inflation does not directly react on the mark exchange) of the collapse of the mark. If the various suggested plans of financial reform, many of which, such as stoppage of the inflation, are impracticable, were accepted by Germany, no material improvement in the financial situation would result. The Cabinet, however, continues to raise the charges for State services. From April 1st, railway freight rates are to be raised by another 40 per cent. Postal charges are also to be again raised. The result of these measures is doubtful. It is already cheaper to send goods for short distances by motor than by rail. Postal charges were raised about threefold on January 1st, but receipts in January were only 40 per cent. more than in December; and the Telegraphs in January, despite an increase of the home rate from 3 to 10 marks per word, brought in practically the same sum as before the increase. Demands for higher State salaries and wages are still coming in. When the price-rise conditioned by the new low level of the mark exchange has fully taken place, the resulting claims upon the State will probably more than consume everything gained from the heavy increases of taxes and charges in the last six months. A remedy for this situation is not in sight, and is not likely to be found as long as two-thirds of the State expenditure, and the whole of the State revenue, goes in payments to foreign Governments.

The Reichsbank has again raised its price for gold—from 850 to 950 paper marks for the 20-mark gold piece. Revenue actually received in the ten months April-January is 63,694 millions, plus 6,998 millions on the separate posts, and 29,018 millions on the separate railways accounts. The largest receipts were: income-tax (for current financial year only), 12,257 millions; emergency levy, 8,171 millions; sales tax, 8,223 millions;

stamp duties, 3,482 millions; increment of property tax, 4,390 millions; Customs, 445 millions; gold supplements thereon, 3,890 millions; coal tax, 4,853 millions; tobacco tax, 3,010 millions; export duties, 1,777 millions. The Reichsbank, according to unofficial reports, will this week deposit 50,000,000 gold marks in the Bank of England, to be held as security for short-term advances. The permanent property tax, which replaces the emergency levy, has taken the following form in the Reichstag Commission. The yearly tax on the first 250,000 marks of taxable property will be 1 per cent., on the second 250,000 marks 2 per cent., and so on up to 10 per cent. on property exceeding 25,000,000 marks. To these rates, during the first 15 years, will be added supplements varying according to the taxable sum from 100 to 200 per cent. The permanent triennial increment of property tax exempts an increment of 100,000 marks, and is at the rate of 2 per cent. for the first 200,000 marks of taxable increment, 3 per cent. for the next 300,000 marks, up to 10 per cent. on an increment of 6,000,000 marks. The Reichstag has refused to sanction a vote for the Socialisation Commission, so that this institution will come to an end. The Government has been obliged to come to the aid of the mortgage banks, whose administration outlay has grown enormously while their revenues have remained the same. On existing mortgage contracts the banks are allowed to raise their interest rates by not more than $\frac{1}{2}$ per cent.

The Reichsbank's report for March 15th shows a new heavy demand for credit. Discounted Treasury bills increased from 130,908,522,000 marks to 138,742,091,000 marks. The Bourse last week was moderately active, and on the whole inclined to rise, with big rises for potash stocks. The *Frankfurter Zeitung's* index for industrials was 38,936 on March 17th against 38,249 on 10th. To-day, with a weak mark, exchange stocks were firm, but sentiment quiet. The close correspondence between stock movements and exchange movements is again shown by the fact that the average prices of industrials at the close of last week were almost exactly the same as on November 10th, when the mark exchange was about at its present level; but home loans, which do not follow the exchange, are much higher, the index figure of March 17th being 921 as against 881 on November 10th. Federal 3 per cent. on foreign (according to a newspaper statement, English) buying have risen still more to-day, quoting 126.75 as against 103.25 on the last Bourse day of 1921. War Loan was to-day 77.50, Federal 4 per cent. 93.25, $3\frac{1}{2}$ per cent. 86.25, Colonial 4 per cent. 114, Savings and Premium 82.40, and Prussian 4 per cent. Consols 76.75. The last-named loan has risen since end of 1921 from 69.10. Bourse speculation during the present mark decline has been much less than in the second part of last year. Tightness of money, due to speculative buying in expectation of a further price-rise, is apparently the chief cause.

Industrial conditions continue good. The official Labour statement for February shows a further increase in the proportion of industrial undertakings reporting a satisfactory supply of orders. The iron and steel industry reports a new boom, with an extraordinary increase in the home demand and a consequent decline of export. The metal-using finishing industries have orders for many months ahead, and take all the material they can get, and there is a great demand for girders, profiles, wire, and small iron goods. In the thick plate branch Germany is being undersold by foreigners. English plates have been sold at Hamburg. Pig-iron is being bought from Luxemburg. Scrap-iron is in great demand, and fetches 4,500 marks a metric ton, as against 2,300 marks in mid-January. The Rhenish-Westphalian Electricity Company, a very big corporation conducted by Hugo Stinnes jointly with the Westphalian municipalities, announces an increase of its capital from 150 to 550 millions, the object being the purchase of brown coal mines. Part of the capital is to be issued to employees, according to the so-called "Surrogate Socialism" scheme drawn up some months back by Herr Stinnes. This system has already been tried by Krupps, but it is opposed by the Socialist organisations. The Mannesmann Tubes Company has embarked on a big expansion plan, for which it proposes to double its capital. The furniture industry reports great prosperity, home sales and export

being alike active. Similar reports are published concerning textiles, in particular wool. The wool weaving concerns have received large orders, which ensure work at full capacity for months ahead, from high exchange countries, but raw material and capital are short. Germany produces only about a tenth of the wool she needs. The price of merino wool has risen from 3.85 marks a kilo in October, 1913, to about 330 marks to-day. The weaving companies refuse to give long credits, and the Cloth Convention, to which most manufacturers belong, is trying to insist on payment by native buyers in gold marks.

POLAND.—FOREIGN TRADE IN 1921—BANKING PROGRESS—TRANSIT TRADE—INFLATION.

(FROM OUR CORRESPONDENT.)

WARSAW, March 16.

STATISTICS of Poland's foreign trade in 1921 are now available. They reveal an increase of exports and a decrease of imports in the second half-year, as compared with the first. This is due in the first instance to the cessation of imports of cereals and flour. This year's crop has been sufficient for home consumption, and even a surplus has been obtained, which is available for export. Leading import and export quantities are shown below:—

(000's omitted.)

	Imports		Exports	
	Total.	of Coal.	Total.	of Coal.
Monthly average first half-year, 1921	411.6	295.5	116.1	146.3
July, 1921	437.7	340.7	97.0	195.2
August, "	349.5	261.3	88.2	176.5
November, "	321.5	255.1	66.4	147.0
December, "	374.8	293.6	81.2	170.4

The bulk of imports is composed of coal, which comes from the districts of Upper Silesia, which are to be united with Poland. Without this item, Poland's exports, expressed in tons, are greater than her imports. The export of timber, petroleum products, and textile fabrics has greatly increased, as shown by the figures below:—

	Timber.		Oil Products.		Textile Goods.	
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Monthly average, first half-year, 1921	45,600	18,952	38	97	82	167
July	92,900	16,603	97	82	167	207
August	99,600	16,645	82	167	207	
November	48,200	38,769	167	207		
December	53,600	37,992	207			

The quantity of timber exported in August is greater than the total export of this product during the whole year 1920. It is worth mentioning that Poland has lately sold great quantities of textile goods abroad. The Roumanian market is acquiring a great importance for the Lodz industry. Relations with Russia have been lately renewed, and large orders for textile goods have been placed here. These orders enabled the Lodz industry to increase its production, so that some factories were working day and night. The Soviet authorities are paying 5 to 10 per cent. in cash, the rest is taken on credit. They are offering for Polish goods hides, leather, bristles, and great quantities of tobacco. The formation of a special bank for the financing of these transactions is planned.

The number of banks in Poland has greatly increased during the last year. According to the statistics published by the Union of Polish Banks, there were at the beginning of this year 82 joint-stock banks, as compared with 59 institutions one year ago, distributed as follows:—

	Number of Banks.		Number of Branches.	
	Jan. 1, 1921.	Jan. 1, 1922.	Jan. 1, 1921.	Jan. 1, 1922.
Former Russian Poland	31	46	116	204
Former Prussian Poland	15	18	50	119
Former Austrian Poland	13	18	42	79
	59	82	208	402

The subscribed capital of these banks amounted to 2,159.8 millions in January, 1921, and to 7,060.5 millions in January, 1922. Including reserves, the figures were 2,087.7 and 9,144.8 millions respectively. During the

last months of 1921 the financial position of the banks was greatly strengthened. The proportion of cash to deposits was 16.4 per cent. in August, 18.6 per cent. in September, 26 per cent. in November, and 29 per cent. in December.

The transit trade through Poland, which hitherto has been much hampered by the necessity of obtaining special licences, has been recently facilitated. The transit is open for all countries with whom special agreements have been signed. The following routes are free for transit without licence:—(1) Sniatyn, Oswiecim, Szczakowa, Zebrzydowice, and Dziedzice. This route serves for the transit trade between Czechoslovakia and Roumania. (2) The transit route from Russia to all destinations. (3) The transit trade to Germany, whatever country of origin. Russia is benefiting from this provision, though a commercial treaty has not yet been signed with the Soviet authorities. (4) The transit between Danzig and Czechoslovakia. It is expected that this will attract a part of the transit trade from Stettin and Hamburg to the port of Danzig. A special licence for transit must be obtained from the Chief Office of Imports and Exports for all goods sent from Germany. In each case a decision must be approved by the Ministry of Industry and Trade. For goods which are sent through Germany by any of the allied or associated countries, a licence from the Chief Office of Imports and Exports is sufficient. For this purpose a certificate of origin must be produced. The transit trade through the Danzig corridor is equally free.

Though Mr Michalski has not succeeded hitherto in stopping the work of the printing press, some progress towards checking inflation may be observed. The quantity of notes in circulation increased by 20,500 millions in October, by 15,500 millions in November, by 7,000 millions in December, by 6,350 millions in January, and by 7,594 millions in February. Probably the capital levy which was partly paid at the beginning of this month will facilitate a further decrease of the quantity of new notes put into circulation.

SWITZERLAND.—GERMAN INSURANCE COMPANIES—MONEY AND STOCKS—THE NESTLE COMPANY.

(FROM OUR CORRESPONDENT.)

GENEVA, March 13.

ON Monday, March 6th, there met in Berne representatives of the German and Swiss Supervising Boards for life insurance companies, in order to try to come to an arrangement for the German life insurance companies working in Switzerland unable to deposit the cover in Swiss francs necessitated by the law of July, 1919. This law, which already existed in Germany before the war, compels foreign insurance companies contracting in Switzerland to deposit Swiss securities for the actuarial reserve. It may be remembered that several British insurance companies working in Switzerland did not wish to submit to this regulation, and withdrew from the Swiss market, ceding their policy contracts to Swiss companies. Similar action was taken by all American insurance companies working in Switzerland. Of course, these foreign companies withdrawing from the Swiss market were well able to indemnify their Swiss successors for the risks they took over. It was quite otherwise with the German companies. They did not withdraw from the Swiss market, with a single exception. The other nine companies, among them such leading companies as Gothaer, Stuttgarter, &c., deposited one-fifth of the reserve in Swiss securities and the rest in German securities. Owing to the depression of the German mark, this amount became more and more insufficient, and now the deficit in the legal cover is 100 million Swiss francs—that is to say, five milliard German marks. These five milliard German marks represent three times the share capital and reserve of the nine leading life insurance companies together. It is obvious that they can-

Manufacturers desiring representation in any of the above Countries are invited to communicate with the Company.

not pay. It is quite obvious that the German Government cannot grant a present of five milliards to a few German life insurance companies. The German Government is not responsible for the fact that the Swiss legislation before 1919 did not contain the necessary measures of protection for the Swiss insured. The German law expressly said that German life insurance companies had to keep their reserve in German securities provided foreign countries where they were working had not other prescriptions in their legislation. At all events, the numerous young and more active German life insurance companies will no doubt do all in their power to prevent any Government help being given to their competitors. It is also quite certain that they will apply to the Berlin representatives of the Reparations Commission, for payments of this kind are in complete contradiction to the Versailles Treaty. Therefore the negotiations have come to a deadlock, and the German representatives have returned to Berlin on the diplomatic pretext of needing fresh instructions.

The reduction of the Swiss bank rate, which is now only $3\frac{1}{2}$ per cent., has not had the effect of bringing the Swiss National Bank again into touch with the private discount market. The private rate fluctuates between $1\frac{1}{2}$ and $2\frac{1}{2}$ per cent. The outstanding feature is that the money market and the capital market were never so much in contradiction as at present. There is some possibility that the new issues of bonds of the Swiss cantonal banks for this spring will yield an interest of only 5 per cent. The country banks, the number of which is about 300, generally reduced already on March 1st or February 15th their rate of interest for bonds to 5 per cent., but the Union of Swiss Banks is still hesitating to accept loans from public bodies yielding less than $5\frac{1}{2}$ per cent. There is only a small real offer of investment capital, and the large quantities of money now lying idle with bankers will turn again into business as soon as the present crisis comes to an end. Therefore the leaders, especially of commercial banks, are convinced that the securities the public is so willingly purchasing will return to the market at the first moment of industrial or commercial recovery. The present animation in the stock market has its chief origin in purchases of securities by bankers. Tens of millions of money which would be used under normal conditions for the purposes of discounting commercial bills are now used for purchasing securities.

The final report of the Nestlé Company has not yet appeared, but it is already certain that the nominal value of the share capital (ordinary shares) will not be cut down. The Federal decree of December, 1919, already mentioned several times in my letters, grants the right to book currency depreciations as artificial assets, to be written down within 20 years. The chief losses of the Nestlé concern resulted from selling enormous quantities of condensed milk to the Central Powers and other countries with depreciated currencies. The only inconvenience of such a slow amortisation of the currency losses is that according to the same decree the distribution of more than 5 per cent. dividend is prohibited to companies having currency losses on the assets side of their balance-sheet. It would be interesting to know whether Swiss legislation, not having the same notion of preference shares as English legislation, will exempt the English issue of 8 per cent. preference shares from this restriction. At any rate, the Swiss shareholder who a year ago bought Nestlé shares at a price based on a $16\frac{1}{2}$ per cent. dividend, and expressed dissatisfaction at not receiving further bonus, is very badly off in receiving merely 5 per cent.

Books and Publications.

FAIR WAGE COURTS.

THE author, Dr Feis, who is Associate Professor of Economics in the University of Kansas, has written this book for the American public. This makes the volume all the more remarkable. Professor Feis is an optimist, and is not deterred by the relatively backward condition of the United States as regards collective bargaining in industry. As the struggle for trade union recognition has not yet been won, and as many "progressive" employers in the States regard trade unionism as synonymous with Bolshevism, Dr Feis is ahead of his time. His practical proposals, however, might commend themselves in certain quarters in this country, though that is by no means certain. The author is seeking for some satisfactory method of wages adjustment. His plan is based on the acceptance of collective bargaining with joint boards or councils of employers and wage-earners, and on the assumption that "whatever policy is put into force will be administered by a Government agency." Apparently also the compulsory settlement of wages disputes is assured. Disputes in any industry coming within the scope of the policy not settled by collective bargaining would be referred to a Government Commission or Court, which, in giving its decision, would state the principles on which it has acted, and the data on which its judgment was based. Professor Feis suggests as a preliminary that "the principle of standardisation should be applied throughout industry." He believes that the wages of those who are at the bottom of the industrial scale should be regulated upon the living wage principle. Provision should be made for the prompt adjustment of wages to movements in the general price level, and "whenever the general range of profits in industry exceeds that profits return which is considered to be just and sound, the wages of all groups of workers should be increased in an attempt to transfer the extra profits to the wage-earners." Probably the most valuable part of the book for British readers is the full analysis of the problem of wages and the factors governing the determination of wages.

* "The Settlement of Wage Disputes." By Herbert Feis. The Macmillan Company. 1921. Pp. 289. 12s net.

TWO STOCK AND SHARE REFERENCE BOOKS.*

THE two most important works of reference on shares and loans have been issued this week. The first—the "Stock Exchange Official Intelligence for 1922"—gives a carefully revised and detailed account of British American and Foreign Government securities in a volume running into 1870 pages of closely printed matter. Being published under the sanction of the Committee of the Stock Exchange, and edited by the secretary of the share and loan department of the Stock Exchange, it is quite naturally regarded as authoritative on practically every issue known to Stock Exchange circles. But, in addition, valuable information is given about the Railways Act, recommendations of the Indian Railway Committee of Inquiry, and Indian finance generally. Special attention has been paid to municipal securities and finance, while latest particulars of the position of gas and water undertakings under recent Acts are set out. The second stock and share handbook is "The Stock Exchange Year-Book." This careful annual digest of information relating to the origin, history, and present position of practically every public security and company with a limited liability known on stock markets of the United Kingdom is now in its 48th year of publication, and needs no further recommendation to most of our readers, who are already familiar with its pages. The following interesting table, which we have extracted, shows the total number of companies in existence, with the aggregate paid-up capital at the dates mentioned:—

	Number of Companies.	Paid-up Capital. £
December 31, 1920.....	79,541	3,508,012,486
" 1919.....	73,341	3,083,086,049
" 1918.....	66,852	2,806,515,116
April 30, 1918.....	66,456	2,730,594,008
" 1917.....	66,131	2,737,733,134
" 1916.....	66,094	2,716,989,129
" 1915.....	65,986	2,657,466,964
" 1914.....	64,692	2,531,947,661
" 1913.....	60,754	2,425,740,857

New companies registered during 1921 numbered approximately 6,900, with a nominal capital of about £108 millions. This shows a heavy decrease when compared with 11,000 companies and £593 millions for the previous year.

A RAILWAY MANUAL.*

THE seventy-fourth issue of Bradshaw's Railway Manual is of exceptional interest in that it is probably the last that will contain details of a large number of separate railway companies operating independently in this country. Very sweeping changes are to be made under the provisions of the Railways Act of 1921 relating to amalgamation. The separate history of about 187 railways in England will come to an end, capital stock and debenture loans will be merged into unified stocks of larger companies, and the names of directors and executive officers will undergo changes. For this reason alone the latest edition of Bradshaw's Manual will be of greater value than ever. It is perhaps hardly necessary to mention that this handy and well-arranged volume contains not only the history and financial position of every railway in the United Kingdom, but of every railway abroad which is controlled by British capital, not to mention the principal canal and rolling-stock companies, and statistics, powers, and all other data necessary for the railway shareholder. The composition of the four new groups to be formed from the English and Scottish companies is set out, and it may perhaps come as a surprise to some to learn that the Southern group will comprise five constituent companies and 14 subsidiary companies, the Western group seven constituent and 28 subsidiary, the North-Western, Midland, and West Scottish group eight constituent and 27 subsidiary, and the North-Eastern, Eastern, and East Scottish group seven constituent and 26 subsidiary companies, or 122 companies in all. The volume is illustrated with very clear railway maps of the United Kingdom and of European countries.

* "Bradshaw's Railway Manual, Shareholders' Guide, and Official Directory." 1922. Edited by Herbert H. Bassett. (London) Henry Blacklock and Co., Limited. 25s net.

ANGLO-SWISS TRADE AND TRAFFIC.*

THIS comprehensive survey of Anglo-Swiss relations extends from the evangelisation of Switzerland by Irish monks in the seventh century to the after-effects of the late war. Parts of it are primarily meant for Swiss exporters, and for students of economic history; but Dr Waldvogel provides for the general reader by a sketch of the historical, political, literary, and religious relations of the two countries, which should go far to modify that contented ignorance of Swiss life and history which characterises most English visitors to the playground of Europe. The economic relations, however, which give the book its title begin with intermittent trading in the sixteenth century and become regular with the establishment early in the seventeenth of Swiss mercantile and banking houses in London, and the investment of the surplus funds of the Canton of Berne in English Government stocks. British spinning and weaving machinery transformed the Swiss textile trade; British mechanical engineers, notably Charles Brown, the founder of the vast establishments of Brown, Boveri and Co., helped to create other branches of Swiss industry. But Anglo-Swiss commercial intercourse was not placed on a satisfactory footing till the Treaty of Commerce and Settlement of 1855.

* Les Relations Économiques entre la Grande-Bretagne et la Suisse dans le Passé et le Présent. Par William Waldvogel. (Neuchâtel) Imprimerie W. Henry, 1922.

ment of 1855. It made great strides owing to the most-favoured nation clause of the London Treaty with France, but its progress cannot be adequately measured till the provision of adequate statistics in 1892. Between that date and 1914, British exports to Switzerland rose in value 160 per cent., in spite of the Swiss reversion to Protectionism, but tended to consist more and more of iron and steel and textile goods; Swiss exports to Great Britain 101 per cent., largely through Swiss energy and "push." The export of Swiss chocolate increased in value in that time 53-fold; that of chemical products (apart from dyes) 18-fold; and, in spite of German activity and British indolence, Great Britain had gained on Germany in exports to Switzerland, while the British Empire was ahead of Germany as a market for Swiss goods. Dr Waldvogel deals very fully with the regulation of trade necessitated by the war, and with the Safeguarding of Industries Act and its prospective effect on the Swiss dye trade. And, unlike some other Swiss economists, he condescends to deal with the tourist industry from its beginnings (before the French Revolution!) to the present time. The intricacies of British Parliamentary procedure are too much for him; but this defect is trifling, and the work, as a whole, is deserving of very high praise.

Letters to the Editor.

CITY LIFE ASSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—For many years I have been a reader of the *Economist*, and a consistent admirer of the ability and impartiality with which facts and opinions are stated. I happen to know something about life assurance, and I think I ought to point out to you that in an article apparently suggested by "An Insurance Correspondent" in the *Economist* for February 25th, pp. 394-5, dealing with the City Life Assurance Company, the following words appear:—"The valuation of the ordinary branch was made on the H.M. table at 4 per cent., reserving 15 per cent. of the office premiums for future expenses. These assumptions were inconsistent with the actual facts, for expenses absorb, not 15 per cent., but 60 per cent., of the premiums."

Your figures show that the City Life completed ordinary life sums assured in 1920 for £3,293,363, increasing its premiums from £182,000 to £243,000. Now, your correspondent leads the inexperienced reader to suppose that the assumption of 15 per cent. future expenses is "inconsistent" with 60 per cent. current expenses, and leads him to conclude that because the actual current expenses are so much greater than the assumed future expenses, the situation is very unsound. I venture to suggest that your insurance correspondent ought not to write about insurance business and valuations until he knows at least the elements of them. If you consult any actuary you will find that all young offices doing a large amount of new business unavoidably have very heavy expenses to bear currently in respect of that new business, and the actuary allows for that fact in calculating the premiums, benefits, and future value of both premiums and liabilities.

I am in no way connected with the City Life, and I make no comment on your general observations upon it except to say that in so far as they are based upon the fallacy expressed by your correspondent, they are misleading.

Your readers are no less jealous than yourself that the *Economist* should be *sans reproche*.—Yours sincerely,
A. C. I. I.
March 17th, 1922.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
March 29.	March 30.
April 11.	April 12.

THE Stock Exchange financial year begins to-day, and the markets finished the week with a robust tendency noticeable in most of the gilt-edged departments. The strength of the War Loan is an outstanding feature of the House. The price spurted during the last day or two on the expectation of easier money after the turn of the national year 10 days hence. Some talked about a possible fall in the Bank rate before long. The War Loan rose from its recent lowest of 96½ to 97½. Scores of Colonial, Corporation, Home Railway debenture, preference, guaranteed, and similar stocks are better on the week. The India issues have recovered to a moderate extent. There is a fair amount of stock on supply in the Consol market, but amongst Home Railway fixed-interest stocks the demand is in excess of the amount available.

German Threes have been back to the neighbourhood of 2, in consequence of the exchange going to more than 6 marks to a penny. French railway bonds weakened on a rush of stags to sell their allotments of Midi and Orleans scrip. The P.L.M. Sixes, which were up to 6 premium, have been down to 3½ premium. They rallied briskly on the unexpectedly

AMERICAN TELEPHONE AND TELEGRAPH COMPANY.

ABSTRACT OF THE ANNUAL REPORT OF THE BELL SYSTEM.

The annual report of the American Telephone and Telegraph Company covering its operations during 1921 is in an unusual sense a human interest document. Its story is of amazing interest because the United States has two-thirds of the world's telephones, because this one company has more shareholders than any other American corporation, with also the widest distribution of ownership, and because no other agency undertakes to give a nation-wide telephone service and none comes into such close contact with the everyday social and business life of the people. So far as the telephone service was concerned, 1921 was in all respects a constructive year in which the system reached its highest state of efficiency.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY.

STATEMENT OF EARNINGS AND EXPENSES FOR THE YEARS 1920 AND 1921.

	1920.	1921.
Earnings:	\$	\$
Dividends	34,800,465.51	38,580,672.59
Interest	12,969,756.16	13,803,052.70
Telephone Operating Revenues	56,030,624.92	58,268,539.17
Miscellaneous Revenues	146,141.49	90,507.92
Total	103,946,988.08	110,742,772.38
Expenses (including provision for depreciation and all taxes)...	33,260,083.98	37,218,959.61
Net Earnings	70,686,904.10	73,523,812.77
Deduct Interest	18,865,688.44	19,521,109.05
Balance	51,821,215.66	54,002,703.72
Deduct Dividends	35,376,792.88	42,674,403.00
Balance	16,444,422.78	11,328,300.72
Appropriated for Contingencies	8,000,000.00	3,000,000.00
Balance for Surplus...	8,444,422.78	8,328,300.72

NEW DIVIDEND RATE.

H. B. Thayer, President of the Company, in a very interesting explanation of how the Company came to increase its annual dividend rate from 8 to 9 per cent., says that since the stockholders' equity in the business was more than \$200 a share, the higher dividend rate returned less than 5 per cent. on the equity, and could not be called at all excessive. It was felt also that the higher market price of the stock consequent upon the increased dividend rate if justified by earnings would react favourably upon the cost of bond issues and other borrowings of the Bell System. The shareholders took \$83,790,200 of the stock offered in May, and \$6,029,300 not subscribed for was sold in the open market at an average price of \$112.54. This offering, together with \$15,123,900 stock issued for bond conversions, brought the total amount of stock outstanding on December 31st last up to \$548,185,300.

The investment of the Bell System in plant and equipment, including construction in progress as shown by the companies as of December 31st last, aggregates \$1,569,000,000. In 1921 the associated companies earned 12.5 per cent. on the book cost of their plant, which is considerably below what State commissions and the public have long since considered a fair return. Because of the companies' conservative financial structure this return on the telephone property of the associated companies made it possible for the American Telephone and Telegraph Company to earn, including its equity in the undivided profits of the associated companies, 12.6 per cent. on its outstanding stock. All these profits were not distributed, however, by the associated companies, but earnings available for dividend on the Company's outstanding capital stock in the years since 1909 were as follows:—

	\$
1921	11.10
1920	11.72
1919	10.05
1918	9.97
1917	9.48
1916	9.77
1915	9.52
1914	9.38
1913	9.59
1912	9.86
1911	10.01
1910	10.34

BELL TELEPHONE SECURITIES COMPANY.

An especially interesting feature of the report is the announcement of the formation of the Bell Telephone Securities Company, of which D. F. Houston, who was formerly Secretary of Agriculture and later Secretary of the Treasury, has become president. Recent events make it clear that there is a large volume of income which the people might save and apply to constructive development if small investors could be afforded the opportunity and incentive to invest wisely. Emphasis is given this view by the recent study of national income, which shows that in 1919 the people received \$66,000,000,000, of which nearly 70 per cent. went to individuals who would not be ordinarily classed as potential investors. With the organisation of this securities company, however, the American Telephone and Telegraph Company gives a formal invitation to the users of the telephone to become partners in the business. It is believed that such a plan will promote national thrift and lead to the spread of a broader knowledge of investment conditions. The Company has "felt the need of an organisation whose function should be to disseminate information about Bell System securities to the public, especially to Bell telephone subscribers, and when desired to advise intending investors and to facilitate their transactions in our stocks and securities." All of the stock of the securities company will be held by the American Telephone and Telegraph Company, making this Company, therefore, the sole owner.

STOCK FOR EMPLOYEES.

The Company has long made it easy for its employees to acquire stock on the instalment payment basis, and the total response has been very satisfactory. When the year closed more than 125,000 employees, representing all parts of the Bell System, were paying for stock on the subscription plan. This means that 58 per cent. of the total number of employees—or more than half—who are eligible to subscribe under the provision of the plan requiring previous continuous employment of at least six months, are on the list of subscribers. Besides this some 3,000 employees are still paying for stock purchased under the second stock purchase plan.

SUGGESTIVE IMPROVEMENTS.

The Company is carrying on very important development work and research activities. The loud-speaking telephone system installed at the Washington Capitol at the time of the inauguration of President Harding made it possible for an audience of more than one hundred thousand assembled in front of the capitol to hear distinctly and easily every word spoken by the President. The problem of applying the system to long distance wires was so far advanced that on November 11th last, these improvements were employed in the burial services of the unknown soldier in the National Cemetery at Arlington. The prayers and hymns and the music of the solemn religious services were heard not only by those immediately at hand, but also by a multitude which thronged the cemetery and by corresponding assemblages at New York and San Francisco. On April 11th last, telephone service was opened with the Island of Cuba by means of submarine telegraph cables extending from Havana to Key West. Through the transcontinental line this connection was extended to San Francisco, and from there to Los Angeles, where by means of a radio telegraph connection the circuit was extended to the Catalina Island, some thirty miles distant in the Pacific. Satisfactory conversation was thus made possible between Catalina and Cuba, a distance of more than 5,500 miles. This is the greatest distance over which a commercial telephone service has been established. The Cuba cables are the longest deep-sea telephone cables in use, and embody in practical form a number of scientific developments designed by the Company's staff of experts. To provide for this traffic three of the cables were successfully laid. Each cable is capable of carrying one telephone conversation and eight telegraph messages.

BELL SYSTEM DATA.

At the close of last year there were approximately 10,300 separate telephone companies in the United States. Of these 26 were associated with the Bell System, and 9,264 were independent companies whose stations were connected with the Bell System. There were also a large number of rural lines and associations operated on a mutual or co-operative basis, and of these more than 26,000 were connected with the Bell Service.

The development of the Bell System at the end of the year, and its growth during the year, are set forth in the following tables:—

TELEPHONE STATIONS.

	Number at end of Year.	Increase during Year.
Bell Owned	8,914,135	86,176
Bell Connecting	4,466,064	108,108
Total	13,380,200	194,284

[Continued on next page.]

AMERICAN TELEPHONE AND TELEGRAPH CO.—Continued from preceding page.

TELEPHONE CONNECTIONS—BELL-OWNED EXCHANGES.

	Average Number Daily During Year.
Exchange Connections	33,671,000
Toll Connections	1,356,000
Total	35,027,000

The daily average of 35,027,000 exchange and toll connections during

1921 exceeded by 1,865,000 the daily average during 1920, and by nearly 11,000,000 the daily average of ten years ago.

DISTRIBUTION OF CAPITAL STOCK.

The number of shareholders of record on December 31, 1921, was 186,342, an increase of 46,894 during the year. The average number of shares held was twenty-nine. There are more women shareholders than men. About 1 per cent. of the stock was held in Europe.

BELL SYSTEM INCOME STATEMENT

FOR YEARS ENDING DECEMBER 31, 1920 and 1921

(DUPLICATIONS EXCLUDED).

	1920.	1921.	Increase.

COMPANY MEETINGS, &c.

BRITANNIC ASSURANCE COMPANY, LIMITED.

CONCESSIONS TO POLICY-HOLDERS.

ADVANCES UNDER HOME PURCHASE SCHEME.

The fifty-sixth ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held at the chief offices, Birmingham, on Friday, March 10th, Mr J. A. Patrick, J.P. (chairman), presiding. The following directors were also present: Mr J. A. Jefferson, F.I.A. (vice-chairman and general manager); Mr R. S. Close, Mr S. J. Port, Mr J. Murray Laing, F.I.A., F.F.A. (secretary and actuary), Mr W. Roscoe, and Mr A. M. Patrick.

The secretary read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report, said: It has been customary on similar occasions to take the directors' report and the accounts as read, and I presume it is your wish that we adopt a like course to-day. As I shall be followed by our vice-chairman and general manager, and he will go into the details of the accounts submitted, I do not propose to anticipate his remarks.

With these brief observations, I now move: "That the report of the directors produced, together with the annexed statement of the company's accounts, for the twelve months ending December 31, 1921, duly audited, be received, approved and adopted."

VIEWS OF MR J. A. JEFFERSON.

Mr J. A. Jefferson, seconding the report, said: It gives me great pleasure to second the resolution now before the meeting, but before doing so I am sure you will expect that I should run briefly through the accounts for the year ending 1921 and deal with some of the more interesting features which appear therein.

I suppose there is not a general manager in the country, whether connected with insurance or any other form of industry, who, in the course of his remarks, would not have something to say about the abnormal conditions through which we have passed in the year under review, and through which we are even now still passing. I refer, of course, to the unprecedented trade depression, followed by the inevitable unemployment, and unfortunately both these de-

pressing conditions were accentuated by very serious trade disputes.

As your Chairman has just said, and as I said in my remarks last year, I consider that an industrial assurance company is the most sensitive trade barometer in the world, for we are practically the first to feel the effects of any trade depression and its consequent unemployment, but, on the other hand, we are the first to feel the effects of any improvement in trade and employment.

A MOST ANXIOUS YEAR.

The year has been a most anxious one for your directors, for we, like all other kindred institutions, felt that it would be impossible to forsake those policyholders of ours who had been paying us premiums, many for some considerable time, at the moment when they fell on hard times through no fault of their own, and owing to circumstances over which they had no control.

Last year you will remember I referred to the trade depression which had started, and, of course, as time went on the effect became more and more apparent, and it was only a week or two after our last annual meeting that we issued our first circular to our staff setting forth some very generous concessions to meet the situation as we then found it. Little did we think when we issued that circular that unemployment would become so acute, that we should have to face one of the most terrible trade disputes that this country has experienced, or that the trade depression would continue for so long. We have, however, from time to time attempted to meet the situation on a broad-minded and liberal basis—a course which I am sure will be approved of by the shareholders. These concessions, stated briefly, are as follows: In the case of whole-life policies, we reduced the sum assured by an amount equal to twice the amount of arrears if the age did not exceed 50 years, and by an amount equal to one and a-half times the arrears if the age were over 50 years. In the case of endowment assurances maturing in a given number of years, the date of maturity was extended for a period corresponding to the number of weeks the policy was in arrears. This has meant that we have been able to save many thousands of our policyholders from having to lapse their policies, and incidentally, I may mention, that it also did something towards relieving the unemployment in this city, for, in order to cope with the enormous amount of work entailed by these concessions we had to employ a temporary staff of 64 married ex-service men, some of whom are still with us.

Our claims by death, which amounted to over half a million pounds, show a very slight increase in percentage to premium income, and the sums assured paid under maturing endowments, which amounted to no less than £123,000, also show a slight increase.

EXPENSES.

As regards the important question of expenses, which has been very much to the fore just recently, you will doubtless remember that last year I uttered a word of warning as to the future, and stated that I could see no hope of our expense ratio coming down. Although we have reduced our expenses from 47.41 to 45.59, my prophecy is none the less true, because the reduction is more than accounted for in the reduced amount spent in new business charges, and I am sure you, who understand our business, will be sorry that any saving in our expenses should be brought about in this manner, for, undoubtedly any company, to be successful, must be progressive, and we are only too willing to pay a fair price for good sound business.

The only other item to which I should like to draw your attention is the amount received in interest, dividends and rents, and you will see that this item has increased over last year by the handsome sum of £35,000—giving us a gross interest yield of no less than 5 13s 10d per cent. and a net yield of 4 17s 1 1/2d. per cent.—a rate which will compare very favourably indeed with that of any life assurance company, and on this point I shall have something further to say when dealing with the balance-sheet.

ASSETS.

Turning now to the asset side, I should like to explain briefly the variations that have occurred under the various classes of securities. You will see there is an increase of some £134,000 under the item of mortgages, and this, of course, is more than accounted for by the fact that we have, during the past year, advanced practically one-quarter of a million pounds under our house purchase scheme. As I informed you last year, every possible care is taken to see that the company is properly secured, and our actual experience shows the extreme care that has been exercised. I would like to say we believe that in this direction we are doing really good work, inasmuch as every man who ouys his house by means of our scheme thereby becomes a property owner and a stakeholder in the stability of this country.

Our British Government securities, which now stand at over £2,400,000, have increased by over £95,000, and our holding of Indian and Colonial Government securities by approximately £234,000, and this latter item is accounted for by the fact that we have underwritten and applied for large blocks of the numerous Indian and Colonial Government loans that were issued during the period under review.

You will notice also that our holding of foreign Government securities has been increased by £132,000, and this is accounted for by the fact that we have supported the new loans issued by some of our late Allies, and have also taken advantage of the rate of exchange to purchase blocks of internal loans of European countries other than ex-enemy countries.

The next item which calls for any comment is the increase of £78,000 under the heading of "Debentures," and this is made up almost entirely of the first debentures of well-known railways, and, to a much smaller degree, by first-class industrial debentures. You will notice that railway preference and ordinary stocks have also increased by about £50,000, and as regards this item I can only say that we were fortunate enough to get in at the bottom of the market.

RECORD AMOUNT ADDED TO THE FUNDS.

I would like to draw your attention to the fact that we have this year created a record in the history of the company in the amount added to our funds, such amount being practically three-quarters of a million pounds, and, as a further proof, if any be needed, of the soundness of our assets, I should like to say that during the year we have sold approximately £1,000,000 of our existing holdings of Stock Exchange securities and reinvested in other Stock Exchange securities approximately £1,500,000—the average interest yield of these new investments (without allowing for redemption) works out at the handsome rate of 6 12s 9 1/2d per cent., and a comparison between the cost and market prices as at December 31 last shows an actual appreciation of no less than £90,000. If, of course, you were to take the market prices as at to-day's date this appreciation would be very much enhanced.

As I have already stated, our gross interest yield on the whole of our funds has reached the very satisfactory figure of 5 13s 10d per cent., and you will appreciate how the excellent investment opportunities which arose last year have helped towards this end, but I am afraid it will become more and more difficult in the future to invest our new money to give us such a high yield as we were able to obtain last year, but fortunately we held a very small amount of short-dated securities and practically the whole of

our new investments have been placed in long-dated securities, and, as a final word on this subject, we are able to report that no less than 98 1/2 per cent. of our total funds are interest-bearing.

I have much pleasure in seconding the resolution proposed by our chairman.

The report was adopted, and Messrs. J. A. Patrick and J. Murray Laing were re-elected directors. The auditors, Messrs. Flint and Thompson, were re-elected.

EASTERN BANK, LIMITED.

SATISFACTORY YEAR DESPITE DIFFICULTIES.

The twelfth annual meeting of the Eastern Bank, Limited, was held, on the 22nd instant, at Cannon street Hotel, London, Mr J. S. Haskell (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The figures of the balance-sheet showed a considerable reduction upon the previous year, due to some extent to the lower rates of exchange, but to a much greater extent to the contraction of business due to the period of bad trade through which they were passing. The net profit, including the balance brought forward, amounted to £175,180, and they were paying a final dividend of 5s per share, less income-tax, making 9 per cent. for the year, putting £34,000 to reserve, transferring £20,000 to premises account, and carrying forward £31,180. Taking everything into consideration, he thought shareholders would agree that the position as disclosed by the balance-sheet could be regarded as satisfactory. Their policy was to progress along steady lines by extending the bank's activities whenever possible to new fields which held out fair prospects. A branch had been opened at Madras, and at the same time they deemed it advisable to close their local branch in the Bazaar at Basra city, which had lost much of its significance since the war. In the accounts they had made a provision of £20,000 for the new building they contemplated erecting for the bank in London.

The past year had been one of abnormal difficulty. Violent fluctuations, uncertain exchanges, falling prices, and diminishing trade had made the conduct of business a matter of more than ordinary difficulty. India had also had to face the unusual feature of an adverse trade balance.

MESOPOTAMIA.

As regarded Mesopotamia, in a situation so full of uncertainties, it would be futile to hazard a forecast as to the future. Like other countries, it had suffered a severe set-back, and business had been very restricted, the more so as Persia for the greater part of the year was closed to traffic. Moreover, the uncertainty as to the political future of Mesopotamia had created a state of nervousness, particularly in view of the contemplated withdrawal of the British Forces from the country. He sincerely trusted the Government would not allow that country to become derelict after the enormous sacrifices made; its commercial possibilities were not negligible, and, given stable conditions and a progressive administration, there was a considerable field for development.

FUTURE PROSPECTS.

As regarded the prospects of the current year, the position in India from a commercial aspect was not unsatisfactory. Her economic position was good, she had had a favourable monsoon, and with good harvests would have plenty to export. With this stimulus they would, under normal conditions, be justified in anticipating an expansion of her imports, but these were not normal times,

and there were some unfavourable factors, one of the most important being the collapse of the European exchanges. The problem of the currencies was a real stumbling-block to trade. Another disturbing element was that India was labouring under the shadow of grave political disturbances, the end of which he would not venture to forecast, but he would only express the hope that with a resolute spirit and firm measures the Government would be able to deal with it effectively. There was also the heavy burden of taxation, which was a serious handicap to commerce and industries, cramping their development and stifling fresh enterprises. If the income-tax was reduced to 4s Government would be able to raise money at lower interest, making up for part of the loss of revenue, and trade would receive a stimulus which would be reflected in improved revenue returns.

The report was unanimously adopted, and the usual formal business was duly transacted.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED.

CLIENTELE MAINTAINED—£521,694 FOR TAXATION.

The forty-first ordinary general meeting of the Employers' Liability Assurance Corporation, Limited, was held on the 22nd instant, at Hamilton House, Victoria Embankment, London, the Right Hon. Lord Claud Hamilton presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the 1920 accounts they had marine premiums of £425,107. They ceased to write marine business at the end of 1920, and there appeared in the present account only £4,363, an adjustment of old premiums. Apart from marine business there was a reduction in premiums of £810,793, a reflex of the stagnation of trade throughout the world. It was a matter of satisfaction that this did not reflect loss of clients, and that when normal stability returned they still had the same solid foundations on which to build. The losses of the year were in no way abnormal, although the fall of premium income caused the percentage to be higher.

Expenses of management were still increasing. The insurance fund had been increased by an additional reserve of £250,000, with which it was thought prudent to strengthen the marine account, which could not be closed for some years. The balance to profit and loss account was £743,813, an increase of £111,338, and interest on investments and rent made £291,897, an increase of £61,072, mainly due to the increased capital received last July. An outstanding feature was the enormous amount of £521,694 for taxes at home and abroad, equal to 9.4 per cent. of the premium income. The dividend recommended was 4s per share, free of tax, as for the preceding year, and although the gross interest covered it, they had to provide out of profits £86,345 for tax on the dividend. Of the balance of £167,951, £49,820 was applied in writing down the purchase price of their Merchants' Marine holding (which had proved of great value), and £118,130 remained for transfer to general reserve.

The reserve for unexpired risks was taken on the usual basis of 40 per cent. of the year's premium, and with the additional reserve the total reserves for current business amounted to £4,602,853. A special reserve of £150,000 had been instituted for loss in respect of the City Equitable, which might be substantial, of two Norwegian companies in liquidation, and of a Russian company, whose assets had been confiscated. The Chairman then went into details showing how the general reserve of £2,744,790 and the investment reserve of £271,367 were made up, and pointed out that the former figure was equal to 49.3 per cent. of the year's premium income. The accounts revealed the excellent manner in which their investments were made.

The report and accounts were unanimously adopted.

LAMPOR AND HOLT, LIMITED.

FAVOURABLE RESULTS OF YEAR'S TRADE.
EXPERIMENTS WITH NEW MOTOR CARGO BOAT.

The tenth ordinary general meeting of Lampor and Holt, Limited, was held, on the 17th instant, at 36 Lime street, London, E.C., Sir Owen Philipps, G.C.M.G., M.P. (the Chairman) presiding.

The secretary (Mr W. J. Moynihan) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—This old-established business was founded over three-quarters of a century ago, and was incorporated as a limited company ten years ago. The report and accounts which are before you to-day can, I think, in the circumstances be considered as very favourable, and they indicate the company's sound financial position. Our paid-up share and debenture capital and reserves total over £5,000,000, of which the debenture stock outstanding amounts to £950,000.

We have steadily pursued a progressive policy in conducting our business, but financially have consistently followed a conservative

policy, to which is due in large measure the position in which we stand to-day, notwithstanding the difficult and depressing conditions through which trade and shipping are passing. After providing for depreciation and adding £50,000 to the reserve account, we are able to recommend the payment of a dividend on the ordinary shares at the rate of 8 per cent. per annum. For the past ten years the dividends on the company's ordinary shares, after allowing for depreciation and adding to reserves, have averaged over 9 per cent. per annum.

COMPANY'S FLEET.

The Lampor and Holt Line fleet to-day consists of 52 passenger and cargo vessels, having a total gross register of 319,000 tons, in addition to numerous smaller craft. We have continually added up-to-date and well-equipped vessels to the fleet as the exigencies of our trades required them. The tonnage of the fleet has been more than doubled during the past ten years.

We have maintained our regular services between the United Kingdom and Continent and South America, as well as between North America and South America, and between the United Kingdom and the United States. Since the end of last year our fine new passenger steamer "Vanduyck," of over 13,000 tons gross register, has been delivered by the builders, and is now employed in our regular passenger and cargo service between Buenos Aires and New York, and I may mention that it has been arranged that during the height of the passenger season she will make a certain number of voyages from New York to this country in the Royal Mail regular service.

MOTOR CARGO BOAT.

The new motor cargo vessel "Linnell," of 7,424 tons gross register, has also been delivered, and has taken her place in the South American service, which will enable the company's engineering staff to obtain further experience of this class of vessel. At the same time, the continued high price of oil suitable for motor ships prevents full advantage being secured from this interesting development in modern marine engineering, as on the basis of the present cost of oil and coal in this country, there is relatively only a very small saving in the cost of fuel in the motor ship as compared with the coal-burning vessel.

Owing to severe trade depression we have been obliged during the past year to lay up some of our cargo steamers, but we are in a good position to take advantage of a revival of trade and commerce as soon as improvement sets in. The great Republics of South America with which our business is so closely concerned possess enormous natural resources, and there can be no doubt that, when some of the temporary difficulties common to most countries at the present time are removed and conditions generally become more settled, a freer expansion of business between the States of South America and the rest of the world will naturally follow.

SHIPPING INDUSTRY.

Shipping generally has been having a bad time of late. Working costs of all kinds, though they have fallen from their highest level, are still excessive, and it will only be by the exercise of the greatest economy combined with efficiency that British shipping will be able to hold its own in face of competition that is keener than ever before. If, however, all concerned work together in harmony, I am confident we shall stand our ground and retain our position as the principal ocean carrying nation of the world. During the year under review the company has opened its own offices at Buenos Aires and Rio de Janeiro, and also at Porto Alegre and Rio Grande do Sul.

Your board is continually alive to the desirability of keeping in close touch with everything that concerns our interests, and Mr Arthur Cook (one of the managing directors) has again left for South America on a business tour. I would like to express our thanks to the other managing director, my friend Mr George Melly as well as to Mr Cook, and to all our officials and staff, both afloat and ashore, for their attention to the company's interests, and our appreciation of the good service they have rendered.

SUPERANNUATION FUND.

The board recommend making a contribution out of the profits of the year of £15,000 to the superannuation fund, which, I am pleased to be able to report, is being built up on sound lines and has made very satisfactory progress since it was inaugurated a few years ago.

I now beg to move: "That the report of the board and the accounts and balance-sheet submitted to this meeting be and the same are hereby received and adopted, and that a dividend on the ordinary shares of 8 per cent per annum (less income-tax) for the year ended December 31, 1921, be and the same is hereby declared."

I will ask Lord Pirrie to second that resolution.

The Right Hon. the Viscount Pirrie, K.P., P.C., seconded the resolution, which, in the absence of questions, was carried unanimously.

Mr George H. Melly proposed the re-election of Sir Owen Phillips as a director of the company.

The Most Hon. the Marquis of Carisbrooke, G.C.V.O., seconded this, and it was unanimously agreed to.

On the proposition of Mr D. I. Conradi, seconded by Mr Picton H. Jones, Messrs Price, Waterhouse and Co. were re-appointed auditors of the company.

The proceedings then terminated.

BEYER, PEACOCK, AND COMPANY, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

SIR VINCENT CAILLARD ON LABOUR TROUBLES.

The ordinary general meeting of Beyer, Peacock, and Co., Limited, was held, on the 21st instant, Sir Vincent Caillard (the chairman) presiding.

The Chairman said: This year's results show a marked improvement on the previous year's figures. Our men worked much better, and no strikes have occurred in our works during the past year. We cannot but deplore, therefore, the unhappy contest which has now arisen in the engineering industry between the employers' and labour organisations. But it had become inevitable. I have not a doubt that the large majority of the men have no wish whatever to encroach upon "managerial functions." Unfortunately, the great body of the moderate men, disliking as much as we do the doctrines and the methods of the extremists, show that dislike by simply not attending the meetings of their branches, and thus the extremists rule the roost and precipitate the moderates into the very policy and action they do not approve.

Commenting on the accounts, the Chairman said: In addition to a strong cash position, the accounts owing by us have been considerably reduced. Reserve account will now total £200,000. We have also a depreciation reserve of over £235,000. The year under review is the twentieth financial year of the company, during which period nearly £550,000 has been set aside out of profits—no small achievement for a company with an original share capital of half-a-million.

POSITION OF THE INDUSTRY.

It is useless to attempt making any real forecast of what may be in store for us in the coming year. There is still a great shortage of locomotives in almost every country in the world. Orders, however, are still being held up. There is little doubt that this is to a

considerable extent due to the hope in the minds of intending purchasers that prices have not yet reached rock-bottom level. I am not inclined to share that belief. Prices have already fallen immensely. Manufacturers, with the object of getting orders into their works and thus keeping them going, have cut down expenditure to the lowest possible level, and have been offering their products at bare cost with no addition of profit—sometimes even at less than cost. This is an unhealthy condition of affairs; not only it must not, but it cannot last. There is a pretty widespread impression among certain classes that profits are an evil thing only required to satisfy the greed of grasping capitalists. There could be no falsier idea. Apart from the fact that greedy capitalists are, for far the greater part, quite small shareholders who have ventured a hundred pounds or so of hard-earned savings in industrial undertakings, without profits no reserves can be made for depreciation, for maintenance, for renewals, or, in other words, for keeping plant thoroughly up to date, or for extensions. In short, without profits there cannot be efficiency, and without efficiency industry must starve and die, and industrial population must starve and die with it.

NECESSITY FOR LABOUR CO-OPERATION.

From this point of view I really cannot see how prices can go appreciably lower, and we can only hope that intending purchasers may share the point of view, and starve their undertakings no longer. This does not mean that we should cease to do all in our power to bring costs down in order to achieve success in our competition with other industrial peoples. Otherwise we can hope for no permanent recovery. I trust that the time is not far distant when Labour will recognise that a vital element in effecting the reduction of costs, and therefore of unemployment, is to increase output, and to adopt labour-saving devices wherever possible.

FOREIGN EXCHANGES AND EMPIRE DEVELOPMENT.

The difficulties of unstable and unfavourable exchanges are again the commonplaces of the present situation, and I cannot see hope of any real stabilisation until the political conditions of the world generally become stable in peace. The Government has made decided steps in the right direction by the Export Credit Department and the Trade Facilities Act. If these operations are extended we can there, I think, see a real and encouraging ray of light. It has always been a marvel to me that the Government of this country has shown so little interest in the development of the

immense resources which lie within the British Empire. If those resources were persistently developed there is no question that the British Empire could be altogether self-supporting within itself. If the pronouncements of the Colonial Secretary are followed up by real and energetic action, no better service could be rendered to solving ultimately and permanently the difficulties of unemployment in this country.

Reverting to our own more immediate affairs, our works have been on full time, and lately we have had one or two good inquiries. A few months ago we built for the South African Government railways three different classes of "Garrett" engines. These engines have given the railway authorities entire satisfaction, which, we trust, may result in the ordering of further "Garrett" engines for South Africa in the near future.

THE DIVIDEND.

Your directors recommend 5 per cent. dividend on the ordinary shares. It is of the highest necessity to keep the position of the company as strong and as liquid as possible, in order that when the long-looked-for recovery of trade takes place we may be in the best position for taking advantage of it. Moreover, our new boiler shop still has to be equipped, and calls are being continually made upon us for labour-saving devices, expenditure which is very necessary if we are to compete successfully with other locomotive builders.

The reports and accounts were unanimously adopted.

WILLIAM WHITELEY, LIMITED.

SATISFACTORY RESULTS DESPITE YEAR'S DIFFICULTIES.

The annual general meeting of members of William Whiteley, Limited, was held, on the 24th instant, at the company's premises, Queen's road, London, Mr William Whiteley (the Chairman) presiding.

The secretary (Mr. F. G. Dann), having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: In presenting the directors' report and statement of accounts for the past year, I feel sure you will share my gratification that, after such a difficult year, almost unprecedented in our experience, we are able to submit such a satisfactory record. (Hear, hear.)

The volume of turnover is, of course, not so large as last year, owing entirely to the fall in prices, and on some commodities the reduction is very considerable, but I am pleased to say that the percentage of decrease in trade is much less than the average decrease in the price of goods; in fact, the bulk of merchandise supplied and the number of customers served are larger.

It is difficult on a falling market to adhere strictly to the usual rate of gross profit, and, as you know, it has always been our aim to sell at the lowest margin and to give our customers the best possible value. We have not departed from that traditional custom, with the result that the rate of gross profit is lower than last year, and it follows that, in consequence of the reduced prices, the total amount of gross profit is not so large.

Working expenses have not come down to any appreciable extent, wages are still high, taxes are still on a war basis, and the continued high rate of income tax and the corporation tax are a heavy drain on our resources. Local rates, both in assessment and in amount, are higher than they have ever been; the increase in rates alone is over £5,000, or more than 1 per cent. on the ordinary share capital, but we look with some hope to relief from both these charges in the near future, from the pressure which is being brought to bear upon the Government.

NET PROFIT AND DIVIDEND.

The net profit of £188,231, taking into consideration that there is no excess profits duty to pay this year, leaves the amount available to be dealt with just about equal to last year, and enables us to again pay the shareholders the very satisfactory dividend of 14 per cent. (Applause.)

This result has not been brought about without constant watchfulness and careful management. It has been very necessary to watch consistently both the stocks in hand and the buying. We made up our minds very early at the commencement of the slump not to be left with a large stock of goods which it would be impossible to realise without sacrifice; consequently our stocktaking did not find us with a large over-valued stock to deal with. Our stocks are all clean, good value, and up to date.

Although the high values of goods during the past few years have required considerably more working capital, we are fortunate in having been able to carry on without any increase of share capital at high rates of interest. This is a distinct advantage to our business, of which we are now reaping the benefit.

ALLOCATIONS.

As the accounts have been in your hands for some days, I will ask you to take them as read, and will only refer to one or two of the most important items in the balance-sheet. The net profit

is £188,231, and, with the balance of £171,960 brought in from last year, the total balance of profit is £360,192 6s 7d.

From this amount we have set aside a sum of £20,000 to provide for a small balance to complete the excess profits duty and the corporation profits tax and contingencies. The amount payable by the company for excess profits duty and corporation tax during the past three years is over a quarter of a million. We have also placed a further sum of £10,000 to reserve account, bringing it up to £210,000.

We did not think it advisable this year, when we are passing through such an anxious period of transition, to increase the distribution to the shareholders, but we look forward with confidence to the future.

The stocks are nearly a hundred thousand pounds less than they were last year. This is one of the most gratifying features of the balance-sheet, and has helped very materially in bringing about the present satisfactory results. In these times of falling prices, the value of the stocks is a supreme test of the balance-sheet, and I can with confidence assure you that the figures shown are represented by commodities of good sound marketable value.

The book debts, which include the debts on deferred payment accounts, all of which are well secured, are much about the same as last year.

The investments and cash in hand, taken together, have increased considerably—nearly one hundred and eighty thousand pounds. The bulk of these investments are Government stocks, and are of the market value of over £15,000 more than they stand in the company's books.

The report was unanimously adopted, and Mr John Lawrie, the managing director, said they had excellent prospects for the coming year.

DICKINS AND JONES, LIMITED.

RESULTS SATISFACTORY DESPITE REBUILDING DISORGANISATION.

The 22nd annual ordinary general meeting of Dickins and Jones, Limited, was held, on the 22nd instant, at the offices of the company, 29 Argyll street, London, Sir Woodman Burbidge, Bart., C.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that had the times been normal it was hardly likely that the company could reasonably have expected the profits to be maintained, having regard to the disturbance to business resulting from the rebuilding operations. The company had certainly had the advantage of the first section of the new building, but against that must be set the fact that when the other and larger portion of their Regent street front was given over to the housebreakers in March last the many departments up to that time having direct access to Regent street had to be moved to the rear of their premises, and could be carried on only in very straitened and congested surroundings. The year through which they had passed had been anything but a normal one, and the depression in trade had been reflected in the company's returns. Added to that there had been a heavy burden of taxation, which had resulted in greatly reducing the spending power of the public. The continual and heavy fall in prices during the year had necessitated the stocks being reduced in price periodically in order to bring them to existing market values, thereby considerably influencing the rates of gross profit. Those important factors had been a great handicap in the year's trading, and, bearing that in mind, the directors considered the results might be regarded as satisfactory. The trading profit for the year was £50,582. An interim dividend at the rate of 4 per

cent. per annum on the ordinary shares was paid in October last, and it was now proposed that a final dividend at the rate of 10 per cent. per annum be paid, making 7 per cent. for the year, thus maintaining the dividends paid during the past three years. The reserve accounts stood at £267,356.

In his remarks he had made reference to the fact that the rebuilding and alterations had had a great tendency to disorganise business. In several of the departments which were transferred to the first section there was now being experienced a response to the new and more pleasing surroundings. The opening of the further showrooms in the second section on Monday last marked an additional stage in the progress of their new building, which on completion would undoubtedly be one of the finest fashion houses in the kingdom. They were at present working at a lower margin of gross profit than in previous years, which policy would be continued.

Sir Harry K. Newton, Bart., M.P., seconded the resolution, which was carried unanimously.

BON MARCHÉ, LIMITED.

SATISFACTORY RESULTS—INCREASED PROFITS.

The thirty-first annual general meeting of Bon Marché, Limited, was held, on the 22nd instant, on the company's premises, 442 and 444 Brixton road, London, S.W.

Mr Harry T. Holdron (chairman of the company) presided.

The Chairman, in the course of his speech, said:—You will notice that the net profit, in round figures, is £114,000, as against £86,000 last year. The increase of £28,000 is accounted for in a large measure, but not entirely, by the profit received from the business of Messrs Quin and Axtens, which business, as you are aware, we took over as from February 21, 1921.

Our total stock for the three businesses now stands at the low figure of £150,229; you may take it from me that it is a clean, healthy stock, well worth the money. I might mention that our books recorded just over half a million more customers than last year, whilst Messrs Quin and Axtens and Pratt's accounted for a further 200,000, the three businesses together showing an increase in customers of nearly three-quarters of a million.

Coming to the balance-sheet figures, the freehold property now stands at £335,423 and leasehold at £22,041. Your directors are of opinion that these figures are a very modest computation of their value to-day. The freeholds include the entire Bon Marché building, the Ferndale road building, a large and well-equipped depository, our stables, and, last, but not least, the entire island site of Quin and Axtens. This site is generally admitted to be one of the finest in South London. The item of goodwill, you will notice, has been increased to £42,826, a sum amounting to less than six months' profits. Plant, fixtures, &c., valued at £99,316, less reserve for depreciation of £41,415, stand in our books at £57,900. The cash on deposit and in hand amounts to £75,371.

On the debit side, the issued ordinary capital has been increased by 20,000 to 140,000, and 100,000 7 per cent. mortgage debentures have been allotted to Mr Axtens in part payment for his interest in Quin and Axtens. No addition to the reserve fund has been made this year; it now stands at £90,000, but the expenses of acquiring Messrs Quin and Axtens, amounting to £5,572, have been written off. The carry-forward is £56,574, against £47,487.

With reference to the acquisition of Quin and Axtens, your directors are satisfied with the purchase in every way. It is a healthy, sound, and well-managed business, and they are convinced that it has great future possibilities.

Mr Charles H. Higgins seconded the resolution, which was unanimously carried without discussion.

THOMAS TILLING, LIMITED.

"ANOTHER SATISFACTORY REPORT."

The 25th annual general meeting of Thomas Tilling, Limited, was held, on the 23rd instant, at the head office of the company, 20 Victoria street, Westminster, London, Mr Richard S. Tilling, J.P. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: This is our 25th annual meeting, and I am glad to present yet another satisfactory report. You will observe that the net profit for the year, after providing for the interest in the first mortgage debentures, is £150,504, as against £110,214 the year previous, and we brought in £54,673, which gives a total of £205,177. Out of this total the interest on the income debenture stock and the dividend on the preference shares have to be provided for, and we propose to allocate £64,148 to special reserve for properties and investments, which will bring this fund up to £100,000, and, after declaring a dividend of 15 per cent. on the ordinary shares, there is a balance of £62,257 to carry forward, subject to excess profits duty for 1920.

After referring to the various outstanding phases through which the business of carrying passengers by road had passed during the last few years, the Chairman continued: The result has been that

this city now possesses what I believe is universally conceded to be the finest omnibus service in the world. The present system whereby the whole of the motor omnibuses in London are operated from one controlling centre has produced surprising results. It has eliminated wasteful competition, and the general public have shown their appreciation of the benefits secured by riding in such numbers as the most far-sighted would have considered impossible a short time ago. The earliest horsed omnibus that I remember only carried 24 people. The journey out and home averaged about 10 miles—now we carry 48 passengers, and in some cases 54, and journeys of 50 miles are undertaken.

So far as this is concerned, all the different sections of the business have contributed, thus confirming the principle on which we have always acted—that we spread our operations as far as we possibly can. In pursuance of this policy we established the Road Transport and General Insurance Company, the success of which has more than fulfilled our expectations.

We have now a direct or indirect interest in 22 provincial road transport undertakings.

The report and accounts were unanimously adopted, the retiring directors, Mr Edward W. Tilling, Mr Reginald M. Tilling, and Mr John F. Heaton, re-elected, the auditors reappointed, and a vote of thanks to the chairman, directors, and staff terminated the proceedings.

INDIAN TREASURY BILLS.

	March 31, 1921.	March 18, 1922.
Outstanding with public	43,67,10,000	51,08,55,000
In paper currency reserve	61,26,00,000	58,51,00,000
Total	104,93,10,000	109,59,55,000
India Office, March 23, 1922.		

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended March 22, 1922, the stock of coin and bullion shows an increase of £

coins withdrawn under the Order of April 13, 1920. This measure is rendered necessary by the continued shortage of small change. Up to the present, small coins (5, 10, and 50 pf) have been minted from substitute metals to the extent indicated below:—1919, 31,874,343.25 marks; 1920, 127,691,287.45 marks; 1921, 225,055,171.70 marks. An increased quantity of these small coins is now to be minted. Besides the desirability on hygienic grounds of replacing the 1, 2, and 5-mark notes by metal coins, the cost of their production has become more expensive during the last few months. No decision as to the character of the alloy for the coins has as yet been reached, but it is said that the necessary experiments are completed.

SILVER.

During the early part of the week under review the Indian bazaars were fairly good buyers for this week's shipment, but during the last few days resales have been made for that quarter. Prices, however, did not have time to lose more than a small fraction before a speculative wave set in from China, and brought buyers to open fresh positions and to close bear operations already open. The American exchange has vacillated so much that sales of silver by New York have not been at all constant. Some supplies have been available from the Continent. On the whole, the outlook keeps so uncertain from day to day that it is difficult to express an opinion about the future. The prevailing opinion is that quotations are too high, but the actual condition of the market at the moment does not encourage the backing of this view by actual sales. There was some discussion in the Indian Legislative Council as to the reimposition of the duty on silver, but the proposal was rejected by a large majority.

INDIAN CURRENCY RETURNS.
(In Lakhs of Rupees.)

	Feb. 28, 1922.	Mar. 7, 1922.	Mar. 15, 1922.

(d) On account of the unfavourable rate of exchange ruling during the past half-year, the directors regret that they are unable to declare an interim dividend on the ordinary stock. (e) Increased capital. (g) Fourteen months.

EVANS, SONS, LESGHER, and WEBB announce their inability to pay preference dividend due on April 1st. Company has suffered heavy losses through debts in Russia and other Continental countries, and also through shrinkage of export business and decline in value of stocks.

RANSOMES, SONS, and JEFFERIES.—No dividend on preference shares. UNITED ALKALI decided not to pay a dividend on the ordinary shares, but announce a dividend of 4s per share, less tax, on preference shares.

W. B. FORDHAM and SONS announce a loss of £16,017. After deducting the balance brought forward, £4,215, and the special reserve account, there remains a debit balance of £24,802, which is carried forward. The loss is attributed to the heavy depreciation in the value of stock, which has been written down to market values. A dividend of 6 per cent. was paid in 1920.

Reports and Notices.

Sir George Henry Sutherland has joined the board of the Bengal and North-Western Railway, vice the late Mr John Macdonald. Mr Harry Fildes, M.P., has accepted a seat on the board of Willys Overland Crossleys, Limited.

GOVERNMENT STOCKS, &c.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the March instalment of the Debt Service, in accordance with the arrangement of May 25, 1912.

BANKS.

SWISS BANK CORPORATION.—Taking the franc at 25 to the £, total assets of this old-established institution at December 31, 1921, amounted to £43,317,891, as against £47,607,180 a year ago. Current accounts were £18,518,655, as compared with £22,368,095, while bills receivable were £12,089,149, as against £13,297,805. Under liabilities, reserves have increased from £1,220,000 to £1,320,000, fixed deposits from £5,052,342 to £5,104,117, but current accounts have fallen from £32,139,808 to £29,698,340. Gross receipts for 1921 were £1,526,770, as compared with £1,556,651 for 1920. General expenses were higher at £985,992, the figures for a year ago being £877,366. Depreciation, &c., absorbed £78,788, leaving a net profit of £511,484. This is somewhat lower than profits for 1920, when the corporation earned £586,461. The directors state that "while the net profits do not quite attain last year's figures, we have decided that the results obtained justify the proposal for the year 1921, the fiftieth anniversary of the foundation of our corporation, of a dividend of 9 per cent."

HONGKONG AND SHANGHAI BANKING CORPORATION.—The report for 1921 shows that the net profits for the year, including £3,291,491, balance brought forward from

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Much colder weather prevailed during the week, and farmers would welcome more favourable conditions in order to proceed with spring sowings. Growing cereals continue to be well mentioned, and wheat, in particular, presents a healthy and vigorous plant. Supplies of native wheat were on a moderate scale, and prices showed a decline of 1s to 2s per qr, useful milling grades ruling at 53s to 56s, and inferior samples down to 51s per 504 lbs, free on rail. Imported irregular, but generally easier. No. 1 Northern Manitoba quoted 65s, No. 3 ditto 59s, Australian 60s to 60s 6d, and Argentine 56s 6d to 57s, all ex ship, to arrive per 480 lbs. The forward cargo market remained dull, and values declined, especially for Plate descriptions, owing to lack of demand and selling pressure. Cargoes of West Australian March 1st bill of lading sold to South Russia at 58s 6d, and Plate steamers-Rosafe 64 lbs.—April, also April 15th-May at 55s 6d per 480 lbs. U.K. stocks show a moderate increase, and recent large arrivals were mostly absorbed by millers, while supplies on passage continue on a liberal scale. Crop prospects in the principal exporting countries are favourable, but estimates of the United States winter crop show a marked decrease on last year. Flour remains quiet of sale, prices being irregular and easier. London standard straight run now stands at 51s, town households 49s, patents 53s to 54s, all English straight run 48s per sack delivered in London area. All English country straights 44s to 46s per sack, free on rail at London stations. Imported dull and 1s to 2s sack lower. Manitoba export patents 48s, straights 45s, Minneapolis first patents 48s, and Australian 46s per 280 lbs, all ex store. On c.i.f. terms business continues restricted. Manitoba patents April seaboard quoted 47s to 47s 6d, straights 44s 6d, Kansas top patents 47s to 50s, and Australian 42s 6d per 280 lbs. Millers offers quieter. Broad bran quoted £8 15s to £9, ordinary ditto £7 15s, middlings £8 per ton, ex mill. Of imported, Fancy Plate middlings £9, and Plate pollards £7 per ton, landed terms. Barley steady, but quiet. English malting ranges from 45s to 68s, as to sample, ditto feeding sorts 39s to 42s, Californian 41s to 49s, Chilian Chevalier 48s to 50s, Australian ditto 50s to 53s, ex store, per 448 lbs. No. 3 Canada Western 36s, No. 4 ditto 34s 6d, and Morocco 33s 6d, landed per 400 lbs. On c.i.f. terms the market ruled firm but inactive. Maize quiet and rates further tended in buyers' favour. Plate, ex ship, quoted 41s, ditto landed 43s, yellow round African, ex ship, 36s 6d, ditto landed 39s, and American mixed 34s, landed per 480 lbs. Cargoes were in quiet request, and the turn easier. Plate steamer, afloat, sold 40s 6d. Moderate trading occurred in Plate parcels, chiefly new crop positions, at irregular rates. South African white maize meal quoted £7 7s 6d, ex ship, and £7 12s 6d, ex store, per ton. Oats quiet and easier. Native ranges from 30s to 35s, according to sample, per 336 lbs. Of imported Plate, f.a.q. quoted 26s 9d, ditto clipped 28s 6d. No. 2 Canada Western 32s 6d, No. 2 Canada feed 28s 6d, and New Zealand 35s to 40s per 320 lbs, all landed terms. Oatmeal steady, while in moderate request. English all cuts quoted £18 to £20, rolled oats £19 to £20, flaked oats £21 to £22, ordinary Scottish oatmeal £18 10s to £19 10s, and American, all cuts, £18 to £18 10s per ton, ex store. Beans quiet. English Springs quoted 57s to 68s, ditto Winters 50s to 54s per 532 lbs. Chinese horse beans £10 10s to £11 10s per ton ex store. Madagascar haricots, old crop 12s to 13s, ditto new crop 17s to 19s. Rangoon, hand picked, 7s 3d to 7s 6d per cwt. English peas quiet but firm. English small blues 85s to 100s, Duns 60s to 70s, and Maples 85s to 92s 6d per 504 lbs. Of imported, Tasmanian best 23s to 25s, New Zealand blue 20s to 24s, Japanese hand picked 45s to 46s, Dutch blue 23s to 30s per cwt, ex store. English rye 44s to 48s per 504 lbs free on rail. Lentils quiet. No 1 split 29s to 30s, No. 2 ditto, also Egyptian, 24s to 25s per 100 lbs. Homeward grain chartering was again confined to moderate limits, but rates fairly steady, as there is no undue weight of tonnage on the market. The River Plate section continued quiet, with 25s paid, prompt from Upper ports, and 27s 6d quoted forward to U.K./Continent, heavy grain basis. From American Northern Range ports, tonnage was taken to the Continent at 17 cents, West Italy quoted 21 cents, Greece done at 25-26 cents, Denmark/Sweden (three ports) quoted 25 cents, Gulf Continent 18-19 cents, Lisbon 22 cents per 100 lbs. Montreal, May, to Continent paid 48 per quarter. India quiet. Bombay, on dead weight, 23s to 24s. Saigon rice 32s. Dalny beans 35s, while Australia paid 50s and 60s 6d loading at usual ports, wheat basis, to U.K./Cont., April-May. There is a steady demand on time charter basis, and modern steamers quoted at 5s per ton per month for three to six months' transatlantic trading, delivery U.K. or 1½ dols. for one United States round, delivery U.S.A.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 23rd, is as follows:—Pig-iron: The demand for home use is quiet, consequent upon the engineers' lock-out. It is reported that one or two more furnaces are to be damped down very shortly. Hematite—Although there is not such a strong demand, the increased output is all being disposed of. Prices remain at 90s per ton for No. 3 Cleveland G.M.B., and 100s per ton for East Coast mixed numbers hematite. Manufactured Iron and Steel—Only very small inquiries are being received by the steel makers, who are having troubled times owing to the strike of the bricklayers. Steel ship plates (home, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron Ore—Steamers are rather more plentiful, but very little new business is passing. Best Bilbao rubia iron ore nominally 27s per ton.

Our Glasgow correspondent (writing on Thursday) says:—Trading results over the week, so far as disclosed, have been unimportant and meagre in all departments. Steel makers have been surprisingly well engaged on the execution of booked orders for plates and sections, but they have done next to nothing in the way of entering new contracts, which reduces prospects to a minimum. The one satisfactory feature is the presence in the market of an encouraging number of inquiries for almost all kinds of structural steel. But not unnaturally, in the conditions, buyers are only committing themselves to small lines, such as they positively cannot do without. Operations are also being held back, in the anticipation that out of existing events producers will be enabled to reduce prices, which means that consumers expect that the movements for lower wages will succeed. In pig-iron circles, Scotch makers report that the outlook for mixed numbers of foundry qualities is not taking up outputs, and they have therefore been induced to cut quotations by another 2s 6d a ton, which brings No. 1 down to £5 and No. 3 to £4 15s. Scotch hematite remains at £5 7s 6d. Black sheets, which are rather quieter, all called £11 15s, with galvanised steady at £16 10s to £17. Crown bars moderate at £11 15s. It goes without saying that in all the finishing branches a very limited volume of work is going through, and the amount in hand is daily becoming smaller in proportion. The usual formal weekly meeting of the Scotch pig-iron market was held yesterday (Wednesday). No business was transacted, neither buyers' nor sellers' figures being named.

Our Sheffield correspondent writes:—Many orders in hand for Sheffield iron and steel material has been suspended owing to the strike, and for this reason some of the steel foundries, whose chief customers are marine and general engineers, are almost standing idle. Trade was just beginning to revive when the present trouble broke out. The turnover of the present quarter in both the home and overseas markets, so far as Sheffield products are concerned, is substantially larger than in the closing quarter of last year. Orders for steel from the Far East continue to come in, and business is being booked from European buyers unable to get their want satisfied in Germany or Belgium. If the ballot of the unions allied to the engineers is in favour of coming out, nearly all the local steel and tool works will be affected, and Sheffield industry will receive a deadly blow. The fear of such a calamity is causing our manufacturers to adopt a policy of extreme caution in the matter of buying and financial commitments. Prices of material are now fairly stable, and it is notorious that a good many commodities are

being produced at a loss. The inland consumption of steam coal is suffering from the effects of the dispute, and in consequence of reduced demand many pits are working short time, and stocks are increasing. Export business is, however, active, but although inquiries for forward delivery are numerous, not many of them are materialising. The reduced demand for slacks for boiler purposes is balanced by the smaller production from the pits. The market for blast furnace coke has weakened, especially in the export section, and prices are less firm. Best grades of house coal are selling freely, while the demand for second qualities is weak.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There has been considerably more activity in this market during the past week, and it is evident that buyers who were holding off in the expectation of lower prices are now beginning to realise that the strength of the raw material position is a force to be reckoned with. There appears to be no falling-off in the demand for wool, and where all the raw material is going to is a question that few can answer satisfactorily. However, both home and Continental buyers are active in London, and a firm basis of values seems to have been established. Topmakers are in a strong position, but most firms are adopting a more reasonable attitude than they did when wool prices advanced in January, and little attempt is being made to force the pace. Spinners now realise that cheaper wool is not in sight, and they are operating with more freedom. It is satisfactory to know that they are also finding much more business in yarns, and the increased turnover in this department during the past few days is one of the most encouraging features of the market. Hosiery yarns remain in good request, and there is more doing in coatings. Prices are tending upwards, and though some irregularity is still to be seen in quotations, there is really no excuse for anyone to accept unremunerative prices in the present state of trade. The firmness of the wool market appears to be influencing manufacturers to some extent, for although they have complained that business is almost impossible on to-day's level of values, there

is undoubtedly more demand for yarns, and there is some slight improvement in the number of looms running in the worsted section. The more expensive fabrics are still popular, and it is easier to sell the best botanias than it is to dispose of crossbred cloths. Taking a general survey of the position, it may be said that the outlook is more encouraging than for many months.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There continues to be an exceedingly good tone in Coleman street Wool Exchange, and the auctions could hardly be continued under more favourable conditions. This week some very decent offerings of both merinos and crossbreds have been submitted, and full justice has been done to them. The improvement which developed last week has been maintained, but until there is a further upward movement in the value of tops in consuming centres, it is hardly likely that wool will further appreciate, and there is no need for it. We are now thinking of the necessity for obtaining corresponding advances for yarns and pieces if profitable business is to be done, but this seems next to impossible. A very close canvass of spinners and manufacturers convinces us that there is no "shamming" whatever in their assertions that they cannot secure higher prices, particularly for pieces, old stocks of cloth still being too heavy. There are big stocks of crossbred pieces, both in dress goods and men's wear, which can be bought at anywhere up to 2s per yard cheaper than the cost of making similar cloths to-day, and the crossbred wool which is being bought in Coleman street must be finding its way into hosiery yarns where better margins are procurable than for pieces. Manufacturers are unanimous in stating that they cannot sell crossbreds at any price, and still the offerings of crossbred wool are readily absorbed. It makes one ardently wish that the knitting craze may continue, and that hosiery fabrics may remain popular.

The course of the market has shown practically no change compared with a week ago. Every day the catalogues have been carefully valued, and the wools keenly competed for. The sale of Government Capes last Tuesday was remarkable both for the extent of the competition and the standard of values paid. The wools were hardly suitable for Bradford topmaking purposes, but competition for them was very good, the bulk going to the Continent. Prices generally were 5 per cent. above those sold during the opening week. It is very significant that the standard of values ruling in Coleman street is higher to-day than in South Africa, but lately little has been done in Bradford in the sale of Cape combing wools. The combing difficulty is preventing business, and we hear of top-makers having booked combing turns right up to April, 1923. We are also impressed with the continued competition of Germany, notwithstanding the further depreciated value of the mark, but it all shows that German mill owners need the raw material, and are doing a big business on a sterling basis.

The publication early in the week of B.A.W.R.A.'s list of stocks up to the end of last month shows that, with disposals amounting to 205,707 bales during January and February, the stocks at that date were 1,684,695 bales, compared with 1,890,403 bales on December 31st last. To get rid of 100,000 bales of old wool per month is quite creditable, and the directors of B.A.W.R.A. can rest easy that in due time the whole of the surplus stocks will be absorbed. The higher standard of values now ruling has made it possible to market old wools under favourable conditions. It will be very interesting to know what losses are being made on the whole of the crossbred stocks.

THE COTTON TRADE.

MANCHESTER, March 23.

The tone of the market during the past week has been firmer, and owing to many spinners and manufacturers having recently obtained relief, as a result of the larger turnover, prices have hardened. Rather more difficulty has been met with in arranging fresh transactions. An extensive inquiry has been reported in cloth for India, and an encouraging business has been done, but merchants have been rather disturbed by the changes in the Indian Budget, and further developments are uncertain. Demand for China has rather tended to broaden, and more orders have been placed in bleaching descriptions and fancies. Trade advices from the Near East have not been very satisfactory, but increased activity has been mentioned in printing and finishing styles for South America, whilst miscellaneous fabrics have moved off more freely for European countries, especially France and Switzerland. Buying for the home trade has been rather better. A healthy trade has taken place in American and Egyptian yarns for home consumption, and prices have gone against buyers. Shipping yarns have been active, especially for India and the Continent.

VEGETABLE OILS AND OILSEEDS.

Markets have again been generally quiet, and business done below rather than equal to average. Demand for raw linseed oil has been small, home consumption being disappointing and export trade only moderate. Prices have had a falling tendency, but have been supported by "shoots" buying readily at every fall.

The Sixty Policy

Secures protection for your dependants
And a pension for yourself
And eases the cost during the present years of uncertainty.

Write for particulars to the

National Provident Institution,
48 GRACECHURCH STREET, LONDON, E.C.3.

Values are about 2s better on the week for spot, and March-April delivery at £35 15s, ex Hull mill. For May-August delivery the tone is more reserved and the improvement not so marked. Cotton oils have met with a fair trade, and prices, after a slight decline, have again stiffened to £39 for crude Egyptian and £44 for edible refined. Crude soya bean oil is scarce and dearer, and a fair trade is reported in palm kernel and ground nut oils, the latter advancing 20s. Rape oil is offering freely at £41 for prompt and forward delivery, without inviting much trade.

Crushers' wants having been met for the time being, Plate linseed has been inactive, but late values are firmly held, and on balance show little change. Plate on spot at £19 is at a discount of 10s as compared with seed on passage, and Bombay is offering at £21 5s afloat to Hull and Calcutta £19 17s 6d, April-May, to London. Local stocks have been replenished, and a fair quantity is on passage, Argentine and Indian together totalling 53,400 tons to the U.K. and 50,900 tons to the Continent, which is rather less than a week ago. Cotton seed has continued quiet and on the easier side, sellers being more inclined to meet the market. The trade in oilcakes is still very disappointing, linseeds being quoted 10s lower. There are, however, slight indications of an improved demand shortly.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Though it would be foolish under present conditions of general costs and labour charges to anticipate that prices for timber will get to the pre-war level, it is gratifying to buyers that values have shown a decided trend in a downward direction, compared with the early months of 1921. Taking import values of wood in January and February this year, our wood for building construction work cost us approximately £5 14s a load, against £10 17s a load in January and February, 1921; and our furniture woods at about 6s 6d a cubic foot, against 12s 3d. Although the 1922 prices are still much higher than those ruling before the war, they cannot under existing conditions get much lower until foreign manufacturers of timber have surmounted the obstacles that cheaper production entails, and this they are doing by degrees.

The demand on the spot for building woods has improved a little during the past month, and with the gradual wearing down of winter stocks there has been a better tone for favoured sizes of Swedish and Finnish deals and battens, but the narrow widths are more difficult to place, and old and faulty wood is being disposed of at cheap rate. There has, moreover, been a little more confidence displayed amongst the sellers of building woods, with greater inclination to hold, but the bad state of trade generally has been and still is difficult for merchants to contend with, and though prices show a tendency to firm up for special sizes, March values are not up to the anticipations of last autumn.

As regards the furniture and cabinet wood market, some large quantities of mahogany logs have been cleared by auction at reasonable levels, British Honduras logs making a little over 8d per foot and super, though a number were disposed of for 6d per foot, and African from 3½d up. Imports of American lumber have been heavy recently, particularly into Liverpool, and are hampering an already difficult position for merchants of this material. Shippers would be well advised to give the market a rest for a time.

Teak for shipbuilding work is a poor market, and there are no great prospects of large orders from that trade.

Foreign pitwood for collieries has been arriving in greater volume compared with the first two months of 1921. France is increasing her exports largely to this country, sending us 217,250 loads in January and February, value £301,150, against only 171,200 loads, value £335,630, in January and February last year.

The fall in the price is significant of present-day values of colliery timber compared with a year ago. We appear to have got rid of fancy prices of wood, no matter what it is or from whence it comes.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

Hides remained steady at the Bermondsey auctions on Thursday, best heavies making a slight advance of ¼d, and selling at 7½d. Cows were unaltered and sold from 6d to 6½d. Light calf were a shade dearer, but lights dropped to 10½d-13d, and showed a drop of 2½d. Wools sold as last, from 3s 3d to 7s 9d each. Trade is slow in imported hides, and slight concessions do not seem to have had much effect on the demand, as tanners hold frigorifics and drys are still in demand. 30,000 frigorifics are reported to have been sold to the United States at 39½ dollars.

The American market is cabled as slow with heavy packers selling at 13 cents. A sale of Russian hides and skins was held in London on Wednesday last; bidding was not brisk, and quite half the goods were withdrawn. Cow hides realised up to 7½d; horse hides, 5s 9d, calfskins up to 21½d, and goatskins 11d to 14d per lb. Several lots of horse hides and calfskins were bought, it is understood, for Holland or Germany.

Trade in sole leather has fallen very flat owing to the engineers' trouble, and tanners have in many cases decided to further reduce input. Germany is still buying raw hides here at higher prices than our tanners can pay, and her bill for the first two months of the current year amounted to £16,550, a great increase on the corresponding period of 1921. Only cheap sole leather is wanted, and bends at 12d per lb are now often met with. Rough dressing leather is not selling well, except in split hides, which are being taken for upholstery and motor-car work at round about 30s each.

Upper leather seems mainly confined to coloured willow and suedes, whilst patent is running it closely. Curriers are still poorly off for orders, and are restricting input.

The boot trade seems affected by the industrial dispute, and I hear of cancellations of orders. Makers, however, of light women's shoes seem the exception, and some of the Leicester and Norwich makers report sufficient orders in hand to last them for some weeks.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 24.

With one or two exceptions, the markets presented a quiet tone, with consumptive demand largely confined to wants of immediate necessity. Tea, however, was again briskly competed for at public sales, and prices keep very firm. Sugar also moved upward, and with a scarcity of white imported descriptions British refined received active support.

SUGAR in demand, particularly white sorts, and prices on the spot mostly 6d per cwt dearer on the week. Messrs Tate and Lyle's cubes, sold, 52s 9d to 53s 9d; crushed, 50s 6d; granulated, 48s 6d to 49s; caster, 50s 6d to 51s; yellow crystals, 43s; granulated, April, sold, 49s to 48s 9d; May-July, 48s 6d to 48s. Crystallised West India sold from 43s to 45s, as to quality. American granulated, spot, sold, 48s; ditto, March-April, 20s 10½d to 20s 7½d; May, 21s to 20s 6d, c.f. and i. terms, U.K. White Mauritius, spot, sold, 45s to 45s 3d. White Brazilian, April, sellers, 19s, c.f. and i., London; W.S.R. granulated, prompt, 21s 10½d; cubes, 25s 4½d; J granulated, 21s 3d, f.o.b. Amsterdam. Cuban, basis 96 per cent., April, quoted 14s 3d; and Brazilian, basis 80 per cent., April, sold, 9s 1½d, c.f. and i. terms, United Kingdom. Czech-Slovakian sugars mostly nominal for shipment. Terminal market firmer, but quieter since with fair dealings. May, sold, 20s 4½d to 19s 7½d; August, 20s 6d to 19s 9d, for white. Cuban stocks stand at 882,400 tons, against 749,000 same time last year.

COFFEE.—The market ruled fully steady. The East India crop is the smallest on record, and mostly inferior in quality, according to consignments received so far. The few attractive parcels, therefore, bring extreme prices. There is a good inquiry for Costa Rican. East India, good bold, sold, 120s 6d; Costa Rica ditto, 118s to 120s; fine bold, 138s 6d. Nairobi, fair bold, 111s 6d. Vera Paz, fine bold hard grey, sold, 151s. Futures steady, but trade moved quietly.

ever, will be relieved to-day by Government disbursements, both in the shape of dividend distributions and Supply payments. In anticipation of this, the discount market has been weak, and three months' bills have been readily taken at rates ranging down to $2\frac{1}{4}$ per cent., but the supply of bills has been short. The banks have been heavy buyers at the tap rate of $2\frac{3}{8}$ per cent. of Treasury bills, to secure maturity at the end of June.

	Mar. 31, 1922.	Mar. 24, 1922.	Mar. 17, 1922.	Mar. 10, 1922.	Previous Rate and Date Changed.
Bank Rate	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	5 (Feb. 16, '22)
Banks Deposit Rate	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Feb. 16, '22)
Discount (Call)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Feb. 16, '22)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 $\frac{1}{2}$ (Feb. 16, '22)
Market rate (3 mths' bills) ..	3	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	

The Bank Return showed a decrease of £8,600 in the stock of gold, an increase of £1,014,500 in the circulation, and a consequent reduction of £1,023,100 in the Reserve. Government securities declined by £2,146,700, and Other securities rose by £11,534,000, so that deposits were £8,351,800 higher, nearly the whole of which went to Public. There was an increase of £552,700 in the circulation of currency notes, the total outstanding amounting to £300,350,900, which includes £1,653,600 for notes called in but not yet cancelled. The fiduciary issue is £250,747,200, or £59,241,200 below the maximum.

THE STOCK MARKETS.

The week has seen a further improvement in gilt-edged securities of all descriptions, the supply of stock being insufficient to meet buying orders. The public is showing more interest in home rails, but the rapid rise in quotations is attributed more to speculation than to investment buying. In the foreign section interest still centres in the French railway issues, from which the stags have not yet been eliminated. Industrials have kept steady, and many sections have been moving quietly upwards. The oil and rubber markets have been very quiet, and Kaffirs are neglected, but other sections of the mining market show some improvement.

COMMODITY MARKETS.

Reports from Manchester indicate more activity in the cotton trade, some Indian cloth shippers buying freely grey shirtings and light fabrics. Prices were irregular at the Colonial wool sales; on the whole, no changes occurred, although towards the close of the sales a firmer tone was noticeable. In the iron market no changes are recorded in prices, although at one time hematite was in better demand, which demand, however, eased off towards the end of the week; our various correspondents record the effects of the engineering and shipbuilding disputes. Inquiries for coal continue to be made in anticipation of labour troubles in America. Best Admiralty was in demand at 27s 3d per ton. In the wheat markets, prices were steady and inclined to harden. Easier conditions prevailed in markets for linseed and the oil product. Prices in the Bermondsey hide market were firm, but there is little demand for sole leather. Further particulars of markets and prices from our trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

The uncertainty of the outcome of the approaching Genoa Conference is being felt, and during the week under review markets have been quiet, and movements within narrower limits than for some time past. New York, which was quoted on Monday at 4.37 $\frac{1}{2}$, dropped at one time on Tuesday to 4.34 $\frac{1}{2}$, only immediately to re-

cover, and at the time of writing is again back at 4.37 $\frac{1}{2}$. Forward dollars are quotably unchanged, at parity with spot. French and Belgian francs at 48.52 and 52.10 respectively show practically no change on balance, while the rates for futures remain at last week's figures. Berlin has again provided the most interesting feature in the market. The rate, which rose at one time last week to over 1,500, has shown a gradual, if hesitating, improvement, and at the moment is quoted at 1,300. Holland and Switzerland, which last week were moving in our favour, have again slipped back, and are now quoted 11.58 and 22.52 respectively. In the Scandinavian group, Norway and Denmark, at 24.65 and 20.68, have moved slightly against us, while Sweden, at 16.82, has gone fractionally in favour of this country. Vienna, though showing a weak tendency, is practically round previous figures, while the loan which has been arranged in favour of Poland has made little or no improvement in the exchange rate. In the Eastern market, rupees have been steady the whole week at 1s 3 $\frac{1}{4}$ d to 1s 3 $\frac{1}{2}$ d, but the silver exchanges have shown a rising tendency, Hongkong being now round 2s 6 $\frac{1}{2}$ d and Shanghai 3s 3 $\frac{1}{2}$ d. South Americans show little change, except Buenos Ayres and Monte Video, which at 44 $\frac{1}{2}$ d and 43 $\frac{1}{2}$ d respectively have moved in favour of this country.

THE NATIONAL ACCOUNTS.

The revenue statement for the financial year 1921-22, which is printed in full on a later page, was issued last night. A comparison of revenue receipts with the estimates is made below:—

	(000's omitted.)	Actual Receipts.	Inc. or Dec. on Estimate.
Revenue.	Estimate.	£	£
Customs	125,800	130,052	.. + 3,252
Excise	196,200	194,291	.. - 1,909
Motor Vehicle Duties	9,000	11,096	.. + 2,096
Income-tax (incl. Super-tax) ..	410,500	398,887	.. - 11,613
Excess Profits Duties	120,000	30,452	.. - 89,548
Corporation Profits Tax	30,000	17,516	.. - 12,484
Other Inland Revenue Duties ..	71,500	74,419	.. + 2,919
Total tax revenue	964,000	856,713	.. - 107,287
Post Office	60,000	56,400	.. - 3,600
Crown Lands	650	820	.. + 170
Sundry Loans	12,000	13,807	.. + 1,807
Miscellaneous—			
Ordinary	21,500	26,334	.. + 4,834
Special	158,500	170,806	.. + 12,306
Total revenue	1,216,650	1,124,880	.. - 91,770

The principal discrepancy is in Excess Profits Duties and Corporation Profits Tax, which have fallen very much short of anticipations. On the expenditure side the comparison reads as follows:—

	(000's omitted.)	Actual Expenditure.	Inc. or Dec. on Estimate.
Expenditure.	Estimate.	£	£
Debt Services	345,000	332,294	.. - 12,706
Road Fund	8,400	10,796	.. + 2,396
Local Taxation Payments	11,115	11,172	.. + 57
Northern Irish Exchequer		1,104	.. + 1,104
Land Settlement	5,000	2,647	.. - 2,353
Other Consol. Fund Services ..	1,757	1,868	.. + 111
Supply Services	774,851	719,307	.. - 55,544
	1,146,123	1,079,187	.. - 66,936

The saving on the debt service has been considerable, but the bulk of the reduction is in the Supply Services. The net result is a surplus of £45 $\frac{1}{2}$ millions, as against the revised estimate of £70 millions.

FINANCIAL YEAR, 1921-22.			
	£		£
Total spent	1,079,186,627	Raised by revenue ..	1,124,879,873

A MISTAKE IN PSYCHOLOGY.

ONCE again the political obituaries of Mr Lloyd George have proved to be premature. His return from Criccieth is by no means in accordance with the expectation of his critics. He returns, not as a tired and baffled man to surrender the seals of office, but as a giant refreshed by leisure and ozone, challenging his opponents to a trial of strength in Parliament and determined to triumph at Genoa. The sea air that has dispelled the Prime Minister's indisposition and fatigue has also apparently imparted a fresh glow to his faith in the Genoa Conference. This faith, and the reasons upon which it is based, will doubtless form the theme of Monday's speech in the House of Commons, when he will move the following resolution, to which Liberal and Labour amendments have been tabled:—"That this House approves the resolutions passed by the Supreme Council at Cannes as the basis of the Genoa Conference, and will support his Majesty's Government in endeavouring to give effect to them." Simultaneously with the terms of this resolution, a White Paper was published setting out the Cannes resolutions. From this it appears that the main conditions of participation at Genoa were laid down as follows:—(1) No dictation on matters of internal government. (2) Rights of foreign investors to be safeguarded. (3) Recognition of debts and enforcements of commercial contracts. (4) No subversive propaganda or aggression. How far these conditions may have been modified at Boulogne is not stated. It must be confessed that the omens for Genoa are unpropitious. The original project of the Conference was a hasty improvisation. It is to be brought to fruition before the nations principally concerned have had time to make adequate preparations, or to reach by less spectacular channels those mutual agreements that are the indispensable conditions of progress. The United States, whose part in world reconstruction must be of vital importance, will not be represented. The Russian delegates, despite their eagerness to establish relations with Western Governments, will go with ideas about the Conference very different from those entertained by other participants. Other nations will take part without enthusiasm, or even with reluctance, and the atmosphere thus created is scarcely conducive to achievement. Nor does the limited agenda paper, which we summarise on a later page, promise the opportunity of far-reaching results. It is to be hoped that Mr Lloyd George is right, and that his faith will be vindicated. For the decision to go through with the Conference is now apparently irrevocable, and a complete fiasco at Genoa would merely discredit the vital principle of international co-operation. If

failure results, then it must at last be clearly recognised, as it should have been recognised long ago, that spectacular conferences are of no use unless the ground has been carefully prepared beforehand. But what is to be said of a scheme planned and carried out while the Washington Conference was in session without consultation either with our delegates at Washington or with the American Government? The conditions for a genuine and carefully constituted conference are being slowly realised. The Finance Ministers of the Allies have already under consideration, in Sir Robert Horne's scheme for solving the Reparations problem, the basis for a sane and practical settlement. At last, too, British and French views on the Near East have been brought into harmony in proposals which promise satisfactory results. The conditions which have hitherto blocked the application of the League of Nations scheme to Austria have been removed, and naval disarmament has cleared the way to a frank discussion of the land forces of Europe. All these recent signs of progress will tend to make the atmosphere of Genoa less unhelpful than it might have been. But, unfortunately, developments in the political situation at home have come to reinforce Mr Lloyd George's chronic predilection for rush tactics, and these two forces together have driven the world into a conference before the time is ripe.

Throughout this episode, Mr Lloyd George's intuition which so clearly reveals to him the ebb and flow of popular opinion at home has deserted him and allowed him to misinterpret international psychology. Had he been present at Brussels or at Washington, or at the assemblies of the League of Nations at Geneva, he might have caught and adopted something of the true spirit of international co-operation. As it is, he still clings to the auction-room atmosphere of the Supreme Council long after other nations have learned to appreciate the clearer air of Geneva and Washington. The small but significant fact that whereas the greater Allies, and Germany and Russia may bring an unlimited number of delegates, the rest are restricted to two, and in the case of Luxemburg one only, at once reveals the parentage of this Conference without a constitution. Again, another illustration is provided by the devaluation question. We understand that one of the important features of the British Government's programme for financial reconstruction is the proposal that an early attempt should be made to revert to a gold standard in Europe on the basis of a reduced value of the gold unit in various countries. At the same time, the home policy of the British Government is to restore the old pre-war parity of the British £. This home policy is supported by bankers and others in this country on the ground that to restore gold currency on any other basis would be equivalent to a breach of faith, and would destroy Great Britain's credit in the eyes of the world. This argument, in our view, is unsound. Equity between debtor and creditor is most nearly attained if the former returns to the latter an amount of purchasing power which will give him command over commodities and services to an extent equivalent to that given by the original loan. If attention is confined to the British war debt, then the proposition which we have just stated would mean that a currency policy that would stabilise prices at about 75

per cent. above the pre-war figure—i.e., the level of 1917—would be the most equitable arrangement. It must, however, be remembered that war debt, though highly important, is only one form of debt. If we take into consideration the total invested capital of the country, we must recognise that a very large proportion was lent on the basis of pre-war prices, and therefore, on the whole, the nearest approach to equity would be for debts to be made repayable on the basis of a level of prices somewhere between that of 1917 and that of 1913. There are other arguments to be considered on this question; but, in our view, this is the only way in which we can deal with it on grounds of equity; if such a level of prices is likely to be obtained best by a policy of devaluation, then the equity argument adds its weight in favour of the scheme.

But the fact remains that the breach of faith argument has been exploited far and wide, and will make it very difficult for the British delegates to say at Genoa that, although Great Britain will not descend to such a doubtful expedient as devaluation, yet it is the only possible policy for Europe. As long ago as the Brussels Conference it was evident that if Europe was to return to a gold standard she would have to face the devaluation problem. This is a strong reason why Great Britain should hold its hand, and not yet commit itself to a return to the old pre-war par. For a declaration at this stage that Great Britain will at all costs return to the old gold standard in effect brands devaluation as a sign of bankruptcy. In these and other matters it is of the utmost importance that the Great Powers should avoid the appearance of laying down the law for other countries, and until Mr Lloyd George in particular rids himself of the idea of a diplomatic oligarchy of Allied statesmen settling the affairs of Europe, he will be unable to play the great part in Europe's reconstruction for which his great gifts and experience equip him.

There remains one other vital consideration. Not the reparations question only, but the whole problem of financial reconstruction is closely bound up with politics. The primary condition of a return to financial well-being is that Budgets should balance. But Budgets will not balance until armament expenditure is very heavily cut down. A reduction of armaments can only be achieved by a political pact between the nations of Europe. The only real hope in the sphere of financial reconstruction lies in the adoption of the Brussels principles of sound finance and in the employment, when preliminary conditions have been fulfilled, of the machinery of the League. As regards the Genoa Assembly, the best hope is that it will adhere to the limitations agreed to at Boulogne, which, it is understood, lay it down that the functions of the League shall in no way be impinged upon; and we are very glad to see that the Italian Government has seen fit to approach the League, and that the Council of the latter has passed a resolution authorising the supply to Genoa of all information and assistance that may be required.

RUSSIAN PROBLEMS.—I.

(FROM A CORRESPONDENT.)

THE decision of the Allies to invite representatives of the Soviet Government to the Conference of Genoa marks a turning-point in the relations between Russia and the outside world. It will not, indeed, be the first time that Soviet representatives have attended an International Conference with the Western Powers. Soviet delegates attended the International Conference on the Russian Famine, which met in Geneva in August last under the auspices of the International Red Cross. They were invited by the Council of the League of Nations to attend the recent International Health Conference in London, and the Soviet Government is officially represented at the League of Nations Conference on Epidemics, which is now sitting in Warsaw. But the meeting at Genoa will be the first occasion on which delegates from Moscow have been invited to take part in a general discussion of European problems. At the Brussels Financial Conference in September, 1920, Russia was not invited to attend, and if she had been invited would probably have sent a scornful refusal. To-day the

half-hearted invitation of the Allied Powers has been accepted with undisguised alacrity. The fanatics who formerly aimed at world-wide revolution now appear to be genuinely anxious to make terms with the West, and are inviting the assistance of foreign capitalists in the economic reconstruction of Russia.

This change in the relations between Russia and the outside world has been largely influenced by the Anglo-Russian Trade Agreement signed in London on March 16, 1921. Under that Agreement each party undertook to refrain from hostile action against the other, and from conducting official propaganda against each other's interests. The blockade was removed, and provision was made, by the appointment of official agents in each country, for the resumption of trade relations. The question of debts incurred by the former Russian Government and claims for compensation for acts done by the Soviet Government were left to be regulated in the general Treaty of Peace referred to in the preamble of the Agreement. The signing of the Trade Agreement was subsequently construed by the British Courts as involving the *de facto* recognition of the Soviet Government. At the time of signature the British Government gave an assurance to the Allies that, on the question of the recognition of debts, the claims of other countries would not be prejudiced in any negotiations that might take place in London.

The Trade Agreement has now been in force for a little over a year. The total exports from the United Kingdom to Russia during 1921 amounted to £5,320,703, compared with £27,694,000 in 1913. According to the *Russian Information and Review*, published by the Russian Trade Delegation in London, the total purchases made by the Russian Co-operative Society, Limited, up to December, 1921, amounted to £6,477,918. The chief items purchased were as follows:—

RUSSIAN PURCHASES in the UNITED KINGDOM, 1920-21.

Textiles and clothing	2,294,758
Agricultural machines and implements	493,754
Machinery and parts	237,012
Steel ropes	89,396
Binder twine.....	94,622
Seed	374,746
Foodstuffs	2,358,277
Drugs and chemicals	333,445
Coal	390,201

The total sales of Russian produce in the United Kingdom in 1921 amounted in value to £1,601,116. They started at £260 for January, and reached a maximum of £586,737 in November. Another table from the same source gives the value of the individual items sold:—

ANALYSIS of SALES of RUSSIAN PRODUCE, 1921.

Bristles	4,187
Caviare	5,783
Copper	26,300
Flax, hemp, and tow	202,035
Furs	14,401
Hides.....	1,994
Lycopodium.....	3,615
Manganese	8,550
Oil	408,757
Pitch	27,392
Potash	6,031
Sunflower oilcake	8,120
Timber	846,722
Tobacco	16,486
Tar	16,217

The above figures show that the sales of Russian produce have been less than one-third of Russian purchases, the remaining two-thirds having been paid for principally in gold. The most important articles sold have been timber, oil, and flax. The quantities of timber, which have recently come from Archangel and Petrograd, have had a substantial effect on the timber market. On the whole, the volume of trade, though it has not come up to the expectations of some enthusiasts, has been larger than most people anticipated at the time when the Trade Agreement was signed.

More important, perhaps, than the actual amount of trade which has taken place during the past year, has been the impression created by M. Krassin, the head of the Russian Trade Delegation in London. The British Government took the strongest objection to the former Soviet representative in London, M. Litvinof, and has persistently refused to allow him to return. M. Krassin

is of a different type. He is not a politician, but a business man who believes in efficiency, large-scale organisation, and strong Government. On the whole, he has created a favourable impression on the British industrialists and bankers with whom he has come in contact. His realistic outlook and conciliatory manner has undoubtedly done much to improve the relations of Soviet Russia, not only with Great Britain and Germany, but also with France.

It is a curious fact that the attitude of France towards the Soviet Government has become rather more conciliatory since M. Poincaré came into power. The chief influences have been the failure of all attempts to overthrow the existing Government, and the anxiety of French peasants and financiers to get former debts recognised and a fresh field opened for investment in the future. In any case, there are significant rumours that active negotiations have been proceeding during the last few weeks between Paris and Moscow through the agency of a well-known Russian co-operator domiciled in Paris.

It is not by any means certain, however, that the Genoa Conference will lead to the immediate *de jure* recognition of the Soviet Government. The French plan appears to be to place Russia on probation for a year or six months before extending full recognition; but, in the meantime, to demand the unconditional recognition of Russian debts. During this period attempts will be made to establish closer commercial relations, and to obtain special guarantees by way of concessions and spheres of influence in the most accessible parts of Russia. These proposals might have had some chance of being accepted a year ago, but we very much doubt whether it will be possible to do business with the Soviet Government on these lines at the present time. If the Soviet Government is to admit liability for the debts of the Tsarist régime, it will certainly claim to be recognised as the lawful successor of the Imperial Government. Nor will the Soviet authorities look kindly on any proposal to establish a régime of capitulations and special tribunals on the periphery of Russia. Special tribunals of a kind will no doubt have to be established, in London and elsewhere, for purposes of commercial arbitration and for the assessment of individual claims for compensation. But any infringement of Russian sovereignty would be strongly resisted, not merely by the Soviet Government, but by Russian public opinion, both inside and outside Russia. Russia at the present time has the largest standing army in Europe, and clearly cannot be brow-beaten. If, therefore, the French persist in maintaining the attitude recently reflected in the Paris Press, the discussions at Genoa may well end in a deadlock.

It is improbable, however, that France will be prepared to take the responsibility of breaking off negotiations on such an issue. A breakdown is more likely to occur, if it occurs at all, owing to the attitude of the Soviet representatives themselves. How far their recent change in economic policy is genuine, and how far they are prepared to make concessions and give satisfactory guarantees to the Western Powers, will be discussed in a subsequent article.

LORD BIRKENHEAD'S LAW OF PROPERTY BILL.

(BY A LEGAL CORRESPONDENT.)

It is generally admitted that the time has come for the law of real property to be simplified, and, so far as possible, assimilated to that of personal property.

Any Lord Chancellor who succeeds in getting rid of the mass of complexities and technicalities which at present incumber the law of real property will have deserved well of posterity. The methods which will best achieve this end can only be criticised by expert lawyers, but incidentally such assimilation involves a reconsideration of the way in which property should devolve upon intestacy, and this is a matter not for the expert lawyer, but for the plain man. What is required is that, when a person dies without making a will, his estate should devolve in the way in which he would probably have made his will. In many European countries it is common to die intestate and allow the property to devolve as the law provides; and, in fact, except in those countries where English ideas

prevail, an unlimited power of disposition by will is restricted. Thus by section 913 of the French Civil Code a man cannot leave by will more than half his property if he has one child, or one-third if he has two, or a quarter if he has three or more; and under section 2303 of the German Civil Code only one-half of the property which an heir would have taken upon an intestacy can be left away from him. In England, however, there is an unlimited right of disposing of property by will, and this has no doubt given rise first to the elaborate system of settlements, and secondly to the fact that intestacy, except in small estates, is comparatively rare. But if the law of intestacy were put upon a rational basis, intestacy might be more common, and many of those troublesome and expensive questions which arise upon home-made wills might be avoided to the great benefit of all persons except lawyers practising in the Chancery Division.

As the law stands at present, real property, that is freehold and copyhold land, descends to the heir, subject to certain rights of the husband or wife. Personal property, on the other hand, is distributed according to certain statutory provisions. It is generally recognised that if the law is to be assimilated property should devolve as if it was personalty rather than if it was realty; but the present law as regards personalty is not completely satisfactory, and in particular the husband and the wife are not upon the same footing.

Briefly, the present law is as follows:—In freehold land a widow is entitled to one-third of the husband's land during her life for her dower; a widower, on the other hand, is entitled to a life interest in the whole of his wife's land if he has a child by her, but not otherwise. The rule as to copyholds varies according to the customs of the various manors, and there are also certain other special customs relating to freeholds in different parts of the country. Gavelkind, which prevails in Kent, is the most celebrated of these.

As regards personal property, on the other hand, the husband, if he survives the wife, takes the whole. The wife takes one-third of her husband's property if there are children, or £500, plus half of the remainder, if there are none. The simplest solution would be to have assimilated the law of real property to that of personal property, by putting a husband on the same footing as a wife. Lord Birkenhead's Bill, however, proposes to make a most complete and profound change in the law of intestacy, so far as the husband and wife are concerned, according, roughly, to the following scheme.

The surviving husband or wife is to take all the furniture and personal goods, and also the sum of £1,000, and then as to the remainder of the property, if there are no issue, will take a life interest in the whole, or if there are issue a life interest in one-half. The result of this is to create a statutory settlement in every case in which the estate, other than furniture and moveable articles, exceeds £1,000. This is a more serious matter than at first sight appears. A settlement involves two things—(1) the keeping of accurate accounts, (2) a solicitor. Few people without expert advice can keep trust accounts. If a dividend comes in a month after the death of the whole of it is not income of the deceased's estate. But so much as represents income during his life has to be apportioned and attributed to capital. Since in most cases the administrator will be the surviving spouse, it is safe to prophesy that the trust fund will get mixed up with the other property, that the accounts will not be properly kept in the way in which the law provides, and that on the death of the surviving spouse there will in some cases be litigation, involving the taking of the accounts in the Chancery Division, and the consequent absorption of a large part of the trust fund.

Surely it would be very much better that the surviving spouse should, if there are no children, take the whole of the property (this is certainly a very common form of will), and that the surviving spouse should take a definite part of the property absolutely if there are children. It must be remembered that the cases to be dealt with are cases where an estate exceeds £1,000, and that in the vast majority of cases it will not exceed many thousand pounds. For it is rare for well-to-do people to die intestate; and in the case of large landed estates there is nearly always a settlement, so that the property does not pass

under the will. This is a matter which ought definitely to be put before the House of Commons for a non-party vote to decide whether there should be a statutory settlement or whether there should not. It is not right to make changes of this kind as part of a Bill of 189 clauses and 16 schedules dealing with a vast quantity of technical matters.

There is also another matter in relation to intestacy which requires consideration. Under the Bill as it now stands the relations of the half blood are postponed to relations of the whole blood. This may or may not be a good provision. Opinions differ very largely on this point. As the law stands at present, in personal property the half blood share equally with the whole. In real property, on the other hand, the half blood is postponed to the whole blood. Now, since these intestacy provisions will, for the reasons above stated, mainly apply to personal property, it may be doubted whether this change is desirable. There is one strong reason for supposing that the present law is what people want, namely, that in a marriage settlement it is common to have the ultimate trust of the wife's property (in default of issue of the marriage) in favour of the next-of-kin according to statutes of distribution; if it were generally desired that the whole blood should be preferred to the half blood this form would not be used. This again seems to be a matter which should be put clearly before the House of Commons.

There is a third point of less importance which may be mentioned. Under the Statute of Distribution in the reign of Charles II., if a person died, leaving no issue, or father, then the mother took all the personal property. This was considered unsatisfactory, and in the Reign of James II. an Act was passed making the mother share with the brothers and sisters and the children of deceased brothers and sisters. The present Bill, however, provides that in default of issue, and subject to the rights of the husband or wife, the parents or the sole parent should take the whole of the property to the exclusion of brothers and sisters. This again seems to require some consideration. It is unfortunate that these provisions as to intestacy making alterations in the law, which ought to be discussed in the House of Commons, should be included in a Bill of immense length dealing in the main with technical matters which the House of Commons is quite unfitted, even if it were willing, to discuss.

It may be mentioned, in conclusion, that the present provisions are less open to objection than those of the earlier Bills. In particular the original provision that all the furniture should be settled has been abandoned, and the sum of £500, which the surviving spouse was to take, has been increased to £1,000, as is only proper in view of the depreciation of the pound sterling.

THE INVESTOR'S DILEMMA.

INVESTORS at the present moment are faced with a curiously perplexing problem in the cheapness of money and the abnormal rise that has taken place in gilt-edged securities during the past 12 months. The slackness of trade which has led merchants and manufacturers to withdraw money from their business, and put it into the safe keeping of first-class stocks until it is needed again as liquid capital, has brought into existence a new class of investor who had in 1919 practically no influence on the course of prices, but is now a person of the very greatest importance. At the same time, speculators who put their money into the favourite speculative propositions of 1919 have been so hard hit by the industrial collapse that many of them have signed the pledge against indulgence in speculation, and look for safety of capital now with as much earnestness as they looked for appreciation of capital three years ago.

In very many respects the position to-day reproduces the position after the Baring crisis in 1890. The shock to confidence administered by that crisis is matched by the unpleasant sensations of the industrial slump during the past two years. The depression of trade which led to cheap money after 1890 has produced cheap money to-day. The mental attitude of investors now differs but little from the prevailing notions of the years 1891 to 1895. To show the effect on prices in that period and in this we may set out briefly a few prices taken from the years

1890-1895, and a few from the past 15 months. The comparative movements are as follows:—

	End of 1890.	End of 1895.
Consols	95½	107½
Glasgow 3½ %	104½	135½
Great Western 4 % deb.	130½	160

Among recent price movements have been the following:—

	End of Dec., 1920.	End of March, 1922.
Consols	45	56½
War Loan 5 %	83	99½
Local Loans	50½	63½
L. and N.-W. 3 % deb.	51	63

In the nineties the price of Consols was, of course, kept in check by the approaching fall in the rate of interest. Where that countervailing influence was not at work and market forces had their full sway, as in railway debentures, the rise was sharp and rapid, averaging about 6 points a year. The firm tone continued for nearly 10 years, until the development and growing strength of new countries restored the broken confidence of businessmen, and first-class trustee stocks had once again to meet the competition of such securities as Argentine and American railways as they came back into a new popularity with investors. Roughly, we may take it that the gilt-edged strength which followed the Baring crisis, and which is being reproduced to-day, lasted for a period of eight to 10 years.

Now comes the problem which faces the investor, and especially the trustee, who has to make his choice of securities at the present moment. Is this sharp rise in prices a permanent change from one level of investment interest to another, or is it, like the 1890-1895 movement, merely a concomitant of a temporary glut of money and loss of confidence? Should a trustee play his hand in such a way that the money which he invests to-day will be available for reinvestment in 10 or 20 years' time, or should he dispose of it once and for all at a lower rate of interest to-day? Should he, in a word, favour redeemable or perpetual securities?

As an indication of what this investors' problem involves we append a few figures showing the current yields on (1) stocks redeemable at various dates within the next 20 years, and (2) stocks that carry no right of redemption or pay such a low rate of interest that redemption need not be considered:—

REDEEMABLE STOCKS.			
	Redeemable.	Price March 28, 1922.	Yield.
5 % War Loan	1929-47	98½	5 1 6
3 % Metropolitan Consolidated	1941	73	5 6 9
Birkenhead 5 %	1924-34	96	5 8 9
Port of London 6 %	1930-40	106	5 9 9
Australia 6 %	1931-41	102	5 16 6

PERPETUAL STOCKS.			
		Price, March 28, 1922.	Present Yield.
Consols 2½ %		55½	4 9 9
Local Loans 3 %		63½	4 14 9
London County Council 2½ %		53	4 14 3
London and North-Western Railway 3 % deb.		62	4 16 9
Birmingham Corporation 3½ %		70	5 0 0

It will be seen from these figures that on equivalent security redeemable stocks give the investor, on current yields, ½-¾ per cent. more than perpetual stocks. Investors have been chary of buying 5 per cent. War Loan for fear that the Government may (when they have the right) introduce a great conversion scheme, and lighten the taxpayers' burden by reducing the rate of interest from 5 per cent. to 4½ or 4 per cent. The result has been a keen demand for these irredeemable securities, which has by now reduced the volume offering and made them far from easy to procure.

To prophesy or dogmatise on the future value of money, which must be the consideration governing the value of securities, would be folly. At present the investor seems to have made up his mind that money will be cheaper and the rate of investment interest lower well into the thirties; in fact, that the difference will be wide enough to make it possible for the whole of our war debt to be

put on to a 4½ per cent. basis some time in the thirties. He may be right, but there are considerations on the other side which ought not to be overlooked. We are at the lowest depression of trade that our generation has ever known. We have recently passed through a period of speculation that collapsed and left many of us with lost nerve and broken confidence. Is this depression of trade and the accompanying glut of money to last for ever? Has human nature's love of a speculation disappeared for good? Are we to continue indefinitely with business stagnant and over a million men in Great Britain unemployed?

If it is admitted that present-day trade conditions are abnormal, we must take into account the probability of such a change in them as would revolutionise the security markets, just as they were revolutionised between 1898 and 1914. During that period the three securities which were quoted above to illustrate the 1890-1895 movement fell to the following extent:—

	End of 1898.	End of 1913.
Consols 2½ %	110½	71½
Glasgow 3½ %	108½	99½
Great Western 4 % debenture	146	101

The investor who seems to be afraid to-day of stocks redeemable between 1930 and 1940 might do well to ponder these figures and consider whether the course of money between 1930 and 1940 may not reproduce the period of 1900 to 1913. Sooner or later the world's trade and the world's demand for money must be restored, and since the prospect of a great reduction of taxes is everywhere remote, the demand must be satisfied out of a comparatively small surplus of savings. With a permanently high level of taxation, a revival of trade that sooner or later is surely inevitable, and a general restoration of business confidence, the course of money and of securities may upset the calculations of those who now place all their hopes in irredeemable securities.

CUBA AND ITS RAILWAYS.

(FROM A CORRESPONDENT.)

HAVANA, March 4.

THE island of Cuba has an area of about half that of Great Britain. Its fixed population—and there is room for millions more—is probably about 2 millions, or, say, 44 per square mile, as against 480 per square mile in Great Britain. Yet the total annual trade per head of the fixed population of Cuba is about the same as the total annual trade per head of the population of the United Kingdom. As Cuba is not well provided with carriage roads, and as its total railway mileage is only about 1 per cent. of the total railway mileage of the United Kingdom, it follows that the railway business in Cuba should be very profitable, in spite of the fact that there is sea competition in Cuba as in the United Kingdom. Further, as not more than 12 per cent. of the land in Cuba is at present under cultivation, it follows that its railway business should be a progressive one.

The United Railways of the Havana and Regla Warehouses, Limited, has a practical monopoly of the railroad business in the western part of the island of Cuba, including the capital, Havana, with its population of over 350,000. The eastern part of the island is served by the Cuba Railroad, an American enterprise, and by a few other small, locally owned systems. Although the western part of the island has a smaller area than the eastern, it is much the more highly developed part, and has a much larger population, probably half as large again. It also contains half of the sugar mills and all the leading tobacco plantations. Sugar-cane, with its accessories, raw sugar, molasses and alcohol, forms Cuba's chief product, being responsible for three-quarters of the total tonnage moved by the railway. It is a highly profitable traffic, since it is easy to handle, and is directly responsible for half of the total money-takings of the United of Havana, and indirectly responsible for more, since most of the general merchandise and fuel moved is on account of the sugar producers.

This island is blessed with a soil and climate peculiarly well adapted to the growth of sugar-cane. And Nature has never permitted in any year more than a small curtailment of the crop. As a consequence of this and its numerous finely equipped sugar mills, Cuba, with its relatively small area and population, produces and exports more sugar than any other country in the world. It is in fact responsible for one-quarter of the entire world's production, even if beet sugar be included in the total. One can well imagine what prosperity this brought to the island in recent years, when the value of sugar rose to more than 10 times the present value of 2 cents a lb, on a total production of nearly 4 million tons. One can also imagine how great is the present feeling of depression after such a severe fall in the value of the staple product. Yet this depression is quite invisible to the eye of the casual visitor. Of all the numerous countries which I have visited, I do not remember one where there was more apparent prosperity, nor one where bad times were more cheerfully borne. The Cubans are a wonderful people.

I am greatly indebted to the directors of the United of Havana for sending me over their line, and for kind assistance and courtesy, and to the trade representative of the British Legation for information. This railway is British owned, and its executive is practically all British. Apart from the railway, there is very little British enterprise in Cuba. The principal foreign element is that of the United States. But British goods are popular here, and probably Britain could compete with profit, especially in such lines as machinery and supplies for the sugar mills, and, of course, textiles, in spite of the preference, from 20 to 40 per cent., which the United States enjoys. There is certainly an opening for an English bank here in Cuba. After the numerous bank disasters in 1920, many of the Cubans now keep their money in safe deposits sooner than entrust it to the banks here. Any English bank of standing which opened a branch here would almost certainly get these deposits. It is true that Canadian banks of high standing in Canada have branches here; but I believe that a bank with headquarters in the United Kingdom is what the Cubans would prefer.

Trade in Cuba has been much depressed during the past year, and there is consequently much unemployment. Unskilled labour receives only 40 per cent. of what it did in the boom period. Yet the climate is so fine and the soil so rich that little actual want seems to result. Cuba is in fact a good country for people to be poor in. Prices of all imports are very high—and most things are imported—but the bare necessities of life cost little.

In addition to its 1,210 miles of railway track, its workshops in the city of Havana and elsewhere, and its local stations, the United of Havana owns directly or through subsidiaries a very highly valuable railway terminal, and also a large proportion of the valuable sea front in the port of Havana. It has its wharves for deep-sea ships, its goods yards, warehouses and passenger terminus, all, as it were, in a ring fence. These properties place the railway in an extraordinarily advantageous position; and it also owns six other terminals, of which five are at seaports. Great foresight must have been displayed by those who are responsible for welding together such a compact enterprise. As a result, the traffic is highly concentrated, and the earnings per mile of line very high relative to those of other foreign railway enterprises. And this in spite of the fact that its clients are being supplied with relatively cheap transport, since this railway's rates to-day are only 30 per cent. above pre-war rates. On the other hand, it pays wages 50 per cent. over pre-war rates, and, by reason of the heavy tariffs and high costs of freight and insurance, has to pay from 33 per cent. to 40 per cent. more for its material than it would pay in the country from which the material was imported.

But in common with every other Cuban enterprise to-day this railway is hard put to it for ready money. From its last issued balance-sheet it would appear that it owes some £4,400,000, and is only owed some £2,000,000. It is probable that it will recover a large proportion of the latter by the end of the current financial year, and that the total of the former will sooner or later

be reduced. Probably the £4,400,000 includes unpaid excess profits tax and accounts with subsidiaries; and I believe that no part of this large debt constitutes a pressing liability. There is a further deferred liability to the Cuban Rolling Stock Company, and the capital account is somewhat overdrawn. But the value of the "investments at cost" doubtless more than balances these last two items. However it may be, the total capitalisation of this enterprise is so small in relation to the value of its terminal properties and warehouses, its rolling-stock, track, workshops and other possessions, that I am inclined to pay little attention to what are probably only passing difficulties.

The United of Havana has a total issued capital of some £21,265,000. As its terminal properties and warehouses in the capital, together with its rolling-stock, are alone worth more than half of this, it can comfortably carry a certain load of debt, especially when it has over 1,200 miles of well-maintained track, besides costly workshops in the capital and elsewhere, and has the virtual monopoly of the traffic in such a rich and progressive freight-growing territory. The enterprise has been in worse circumstances before, and has successfully surmounted them.

Great economies in working have been effected this year, and it seems likely that the surplus of net revenue available for dividend on the ordinary stock for the year ending June 30, 1922, including the amount brought forward from last year, will equal £500,000 odd of the previous year, in spite of the reduction of freight rates this year.

Doubtless, the foregoing makes optimistic reading; but it is well to sound a warning note to proprietors and would-be proprietors. There are forces operating all over the world these days which tend to prevent the holders of railway stocks from coming into their own; and Cuba, like other countries, is not exempt from the sway of these baneful influences, even though labour conditions are better here than in most countries. The economic history of Cuba is one of alternate booms and depressions, in proportion as the value of sugar rises and falls, but with the island's trade improving on balance all the time.

THE QUARTER'S NEW ISSUES.

THE new capital market has been abnormally active during the past three months, but so far as fresh issues outside the British Government's borrowings are concerned, the actual amount raised was by no means out of the ordinary. The total amount of new capital raised in the quarter was £286½ millions, the highest quarterly figure since the third quarter of 1919, which included the Funding Loan and Victory Bonds. The table below sets out the amounts raised in each quarter since 1904:—

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1904.....	19,905,000	50,654,000	9,547,000	42,913,000	123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400
1906.....	30,264,800	55,059,800	10,835,800	24,012,800	120,173,200
1907.....	49,428,600	40,304,600	15,631,400	18,265,400	123,630,000
1908.....	45,287,900	64,385,600	31,541,800	50,988,400	192,203,700
1909.....	64,238,400	56,835,200	27,694,400	33,588,800	182,356,800
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,361,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,308,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,136,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100				

These figures do not include money raised by the Government in the form of Treasury Bills and Ways and Means advances. Other British Government borrowings during the past three months totalled £211,893,100, which com-

pares with £143,647,500 in the last quarter of 1921 and £14,991,500 in the first quarter of last year. The bulk of the £211½ millions raised by the Government in the past quarter was in the form of Treasury Bonds, the 5½ per cent. bonds bringing in £115,106,900 and the 5 per cent. bonds £52,566,200. National Savings Certificates have also produced considerably more than their usual quota, owing to the approaching increase in their price from 15s 6d to 16s. The net amount received in the three months was £27,120,000, which compares with a total of £11,130,000 in the whole of 1921, of which £5,250,000 was received in the first quarter. There was also an issue of 3 per cent. Local Loans stock at 57 for £30 millions, the cash amount of which was £17,100,000. As will be seen from the analysis below, the purposes for which the remaining £70 millions were raised in the past quarter afford no striking contrast to the figures of the corresponding quarter of last year:—

Analysis of New Capital Applications.

	Total for First Quarters of Years.			
	1919.	1920.	1921.	1922.
British Government loans	262,635,600	7,460,000	14,931,500	211,893,100

Stocks, harbours, and shipping	100,000	13,417,800	2,243,200	9,797,200
Banks and insurance	10,003,600	11,425,900	4,000	920,700
Miscellaneous	5,243,000	1,844,100	478,400	1,569,500
Total	291,901,400	135,094,500	61,299,800	286,207,100

There were four Colonial Government loans raised in the quarter in the form of 6 per cent. stock by South Australia at 96, by the Commonwealth of Australia at 97, and the £5,000,000 loan now on offer in 5 per cent. stock at 96 per cent., and 5½ per cent. stock at 99 by the Government of Victoria. Chile and Siam were the only foreign Governments to make public issues in London during the quarter. Five British local authorities—namely, Bristol, Lanarkshire County, Swansea, Belfast, and Poole—and one Colonial municipality, the City of Sydney, are included in the list. The Department of the Seine loan in February is the only issue under the head of Foreign Corporations. Foreign railways have been active in the capital market. Apart from the four French companies, which have raised over £13 millions, the Buenos Ayres Western Railway borrowed £1,200,000 in January and Dorado Extension Railway £237,500 in February. The Anglo-Persian and the Shell companies account for the large total under oil. Four iron and steel, three electric lighting and power, and two gas and two water companies have been in the market. The shipping list includes the Union Castle, Clan Line, African Steam Ship, Sovereign Shipping, P. and O., and Lampart and Holt. The destination of the quarter's new issues is given below and compared with that shown in the first quarters of previous years:—

DESTINATION OF NEW CAPITAL.

	First Quarters of Years.				
	1912.	1913.	1920.	1921.	1922.
United Kingdom	12,147,600	7,542,000	119,124,500	39,914,400	240,215,500
British Possessions	9,010,400	21,954,100	12,988,300	9,773,500	18,947,000
Foreign countries	26,808,100	20,848,600	2,981,700	11,611,900	27,144,600
Total	47,966,100	50,344,700	135,094,500	61,299,800	286,207,100

Considerably more has gone abroad in the last three months than in the corresponding periods of 1920 and

1921, the amount for the Dominions and foreign countries together being quite similar to that shown for 1913. The amount raised for use in the United Kingdom, apart from Government borrowings, namely, £28 millions, is, however, considerably higher than the pre-war average.

Notes of the Week.

Irish Peace.—The leaders of the North and South of Ireland have reached an agreement which should put an end to the grave position that has been developing in recent weeks, and holds out hope not only of the restoration of law and order, but also of harmonious progress towards Irish unity. At the invitation of Downing Street, an Irish Peace Conference met in London on Wednesday, the Provisional Government being represented by Mr Griffith and Mr Collins, the Government of Northern Ireland by Sir James Craig and Lord Londonderry, and the British Government by Mr Churchill and Sir L. Worthington Evans. After two days of conference an agreement was reached, of which the leading points referring to the immediate situation may be summarised as follows:—(1) Peace is declared. (2) The two Governments will co-operate in restoring peaceful conditions in the troubled areas. (3) Ulster special police to be reorganised so as to assure fair proportionate representation of Catholics and Protestants. (4) A special court to be set up to try cases of serious crime. (5) A Committee to be set up in Belfast, composed equally of Catholics and Protestants with a neutral chairman, to investigate complaints of outrages, intimidation, &c. (6) I.R.A. activity to cease in the six counties. (7) The British Government to grant £500,000 to Belfast for relief works for Protestant and Catholic unemployed, and every effort to be made by the Northern Government to restore expelled workers. The terms are excellent and practical; and in view of the fact that both Governments may have a stiff task before them in curbing the exuberance of their more extreme followers, it is to be hoped that the public will watch with all patience and sympathy the efforts that both will undoubtedly put forth to carry out in loyal co-operation the bond to which they have set their signatures. These terms for dealing with the immediate situation in themselves contain promise of a new spirit of co-operation. But the agreement includes a clause that is even more hopeful. It reads as follows:—

During the month immediately following the passing into law of the Bill confirming the Constitution of the Free State (being the month within which the Northern Parliament is to exercise its option), and before any address in accordance with Article 12 of the Treaty is presented, there shall be a further meeting between the signatories to this agreement, with a view to ascertaining:—
(a) Whether means can be devised to secure the unity of Ireland;
(b) Failing this, whether agreement can be arrived at on the boundary question otherwise than by recourse to the Boundary Commission outlined in Article 12 of the Treaty.

It is unfamiliar to find Mr Devlin congratulating the British Government on interference in Irish affairs, and the eloquent blessing which he bestowed upon the agreement in the House of Commons on Thursday night is a measure of the new hope and opportunity which is presented to Ireland, and which, we trust, will, with due patience and perseverance, be translated into a full achievement of Irish unity and prosperity.

Proposed Græco-Turkish Settlement.—The proposals submitted to the Governments of Athens, Constantinople, and Angora by the Foreign Ministers of France, Great Britain, and Italy deserve the support of Western public opinion. The drafting of them has been by far the most reasonable and constructive act of Allied diplomacy in the Near and Middle East since the Armistice. They have the air of being the product of a genuine understanding between the Powers, and that is the essential preliminary to a settlement between the belligerents. The Franklin-Bouillon agreement between Paris and Angora revealed the dangers to which the divergence between the Oriental policies of the French and British Governments was exposing the Entente. The present project, which is an

important step towards a rapprochement, will be welcomed in both countries. An admirable feature of the document is its spirit. At last the arbitrary and dictatorial manner assumed during the Peace Conference (with such fatal consequences) by the Supreme Council has been replaced by a tone more suitable to civilised statesmanship. The concrete proposals are expounded by argument; the desire to be impartial is not only proclaimed, but vindicated by the text; and both belligerents are treated with consideration. To turn to details, the most important proposal is, of course, that for the complete evacuation of Anatolia by the Greek forces under Allied supervision. For the sake of both the Turkish and the Greek population in the occupied territories, it is greatly to be hoped that the Angora Government will agree to this, as the Greek Government have done already. Any other method might lead to a panic-exodus of the civilian Christian minority, who would wreak their vengeance upon the Moslem majority before they departed, and while the country was still in the power of the Greek Army. This happened on a small scale last June at Ismid, with appalling consequences. It is now in the power of the Angora Government to avert its repetition on a larger scale. Turkey is also offered a really effective strategic frontier for the protection of the land approaches to Constantinople on the European side. In regard to Adrianople, she is asked to make a serious sacrifice of sentiment and of nationals, but at least as great a sacrifice is required of Greece in "Ionia." There is an opportunity for both Governments to improve the status of their kindred minorities in one another's territory by going to the furthest length possible in granting special municipal franchises—at Adrianople in the one case, and at Smyrna (and, it should be added, at Aivali) in the other. There is ingenuity, too, in the proposal about the Straits. The maritime countries of the world are offered the necessary security for their trade with the Black Sea Riverains by the proposal that the European and Asiatic shores of the Dardanelles should be under the sovereignty of different States. On the other hand, the security of the Turkish capital is provided for on the sea side (as it is on the land side by the proposed new frontier in Thrace) by the rider that the non-Turkish State to which the Gallipoli Peninsula is assigned shall have no military control over it. The Allied garrison on the Gallipoli Peninsula and at Rodosto, and the demilitarisation not only of the Asiatic shores of the Dardanelles and the Bosphorus, but of almost the whole of Eastern Thrace, are really promising bases for the settlement of the Straits question. In regard to minorities, the Allied statesmen have found the right key in their desire to establish "mutual confidence and respect," and the right instrument in an identical inspectorate (to be established by the League of Nations) to superintend the operation of minority rights in both countries. Turkey also gains very greatly by the substitution of a fixed indemnity for a perpetual and almost unlimited financial control. The Dette Publique, which is an Ottoman institution, has never wounded Turkish sentiment, and has done great service to the economic life of the country. It is highly satisfactory that the Allies propose to restore it to its pre-war position. The revision of the capitulations (and it is noteworthy that the proposals provide for a speedy revision, as well as a radical one) will give Turkey that independence in her finances, as well as in her judiciary and administration, which is demanded in the last article of the National Pact—the document in which the minimum desiderata of

Turkey are embodied. In short, the proposals approach so nearly to the National Pact that it would be folly on the part of Angora to refuse to negotiate on the basis of them. Turkey has suffered heavily by the errors of Allied (and especially British) policy since the Armistice, but at least she has now the compensation that her rights have been recognised and her national future assured. Greece, on the other hand (though in the Anatolian war she has been the aggressor, and has not had her own territories ravaged), has been led into this costly and unprofitable adventure by the policy of greater Powers, who used her as a catspaw to fish their chestnuts out of the fire. The cat has burnt her paws badly before the apes have discovered that, after all, there were no chestnuts there. The Powers, and particularly Great Britain, owe Greece compensation—not only in the form of pious expressions, but in the satisfaction of legitimate Greek claims which it is in our power to grant. Public opinion in this country ought to press our Government to allow the Greek island of Cyprus to unite itself, as it wishes to do, with the Greek kingdom.

The Genoa Agenda.—The White Paper referred to elsewhere as laying down the conditions for the Genoa Conference also sets out the "outline agenda" as agreed upon at Cannes. It is as follows:—

1. Examination of the methods of putting into practice the principles contained in the resolution reached at Cannes on January 6, 1922.
2. The establishment of European peace on a firm basis.
3. Essential conditions for re-establishment of confidence without injury to existing treaties.
4. Financial subjects:—
 - (a) Currencies.
 - (b) Central banks and banks of issue.
 - (c) Public finance in relation to reconstruction.
 - (d) Exchanges.
 - (e) Organisation of public and private credit.
5. Economic and commercial subjects:—
 - (a) Facilities and guarantees for the import and export of commercial products.
 - (b) Legal guarantees for the re-establishment of commerce.
 - (c) Protection of industrial property and copyrights.
 - (d) Status of consuls.
 - (e) Admission and position of foreigners in regard to the conduct of business.
 - (f) Technical assistance to industrial reconstruction.

The Supreme Council appointed a Committee to prepare a detailed programme, and the final agenda paper will reveal the modifications made as a result of the Boulogne meeting between the British and French Premiers.

The Cost of Higher Education.—For the coming year, 1922-23 Government grants for higher education are shown in the Education estimates (White Paper 32-IV., price 2s) to be £8,022,575, against £8,778,430 in the year just ended. In addition to this, there is an item of £182,272 for scholarships, studentships, and exhibitions granted by the Board of Education; while, under the heading "services arising out of the war," £1,038,808 is allowed, as compared with £2,244,491 last year, for the higher education of ex-service officers and men. The last-named item is not a complete figure of Government expenditure on the educational needs of ex-service men, for the Agriculture estimates include a sum of £73,000 for "agricultural training of ex-service officers and men." Beside such large figures as these the grants recommended by the Royal Commission on Oxford and Cambridge Universities in the Report issued at the end of last week (Cmd. 1588, price 6s) do not appear very large. At present each of the two ancient Universities are in receipt of an emergency grant of £30,000 per annum. The Commission recommend that an additional £70,000 per annum should be granted in each case, in addition to specially conditioned grants of £10,000 per annum, and a lump sum (unspecified) for "pension arrears." No adequate pension fund exists at either seat of learning for the professorial and teaching staffs, and the Commission finds that these staffs are inadequately remunerated. The Commission recommend the establishment of a pensions system, such as is in force at newer Universities, and an increase in the teaching staffs and their remunerations. They also recommend reforms in estate manage-

ment and financial administration. The Report, which is a very careful and exhaustive survey—the result of two and a-half years of investigation—is, in the main, a vindication of Oxford and Cambridge. Mr Asquith, who was chairman of the Commission, described the Report as "not only, on the whole, a substantial vindication of these two ancient Universities and the manner in which, during the last generation at any rate, they had discharged their trust, but it was also a tribute based on evidence and a careful inquiry." Mr Asquith further emphasised the fact that these Universities play in the provision of an "educational ladder." He referred, as "the most gratifying thing in the University inquiry," to the fact that "the scholarships at the University, which used to be what they might call a preserve of the great public schools, were now in the proportion of very nearly half won by boys who had made their educational apprenticeship in the primary schools." "There was no obstacle," he continued, "to a boy of brains, faculty, capacity, and promise rising to the position of scholar, Fellow, or teacher at our two ancient Universities, except—and this was a serious exception—the difficulty of passing from the elementary to the secondary school." In these days of pressing need for economy such grants are necessarily a matter for serious thought, but the Commission has made out a case for its financial proposals that cannot logically be resisted.

Security Values.—The monthly computation by the *Bankers' Magazine* of the Stock Exchange value of securities shows that in March there was a further appreciation of £79½ millions, or 1.3 per cent., in the market value of 387 representative stocks. This follows an increase of £200 millions in the previous month, and raises the index number, in which the value of December, 1921, is taken as 100, to 107.3. In other words, there has been in three months an appreciation of 7.3 per cent., fixed-interest stocks being 8 per cent. better, and variable-dividend securities 5.9 per cent. higher. So far as March is concerned, variable-dividend securities show an increase of 2.9 per cent., and fixed-interest stocks an increase of 0.6 per cent. In the latter class Colonial Government stocks and Home Railway preferences are prominent with increases of 4.3 and 5 per cent. respectively. The only decreases in the list are United States bonds (gold), 0.9 per cent.; Indian Railway stocks, 0.2 per cent.; oil shares, 3.3 per cent.; rubber shares, 0.5 per cent.; and miscellaneous mining shares, 5.7 per cent. Nitrate shares show an increase of 28.7 per cent., and the tramways and omnibus group an advance of 13.6 per cent. British railway ordinary stocks have risen by 4.6 per cent., and commercial and industrial shares by 4.1 per cent.

World's Wheat Supplies.—A brief statement of the position as regards the world's wheat supplies, just published by the Statistical Bureau of the International Institute of Agriculture, indicates that exporting countries, after setting aside the requisite quantities for meeting their own consumption until their next harvests, had at disposal on January 1, 1922, an exportable surplus of 11.8 millions metric tons of wheat. It is impossible to form a definite estimate of the aggregate quantity that the importing countries will require before July 31st next, when, for the most part, they will gather their next wheat crop; economic and financial conditions will dictate, in more than one country, as to the possibility of affording complete satisfaction for the food requirements of the respective populations. It is ascertained, however, that the aggregate wheat crops in those importing countries that have furnished data of yield were considerably larger in 1921 than in 1920 (27.7 millions metric tons, as compared with 21.8 millions). In addition, the imports between August 1st and December 31, 1921, taking all the importing countries together, were larger than in 1920 (9.5 millions metric tons, against 8.2 millions). From January 1st to July 31, 1921 (the second portion of the season), imports were 9.9 millions tons, and supposing that arrivals between January 1st and July 31, 1922, reach the same figure (notwithstanding the increased yields of 1921 and the additional quantity imported in the last five months of that year) their total will still be

within the limits of exportable surplus, already stated at 11.8 millions tons on January 1, 1922. The available supply of wheat is consequently sufficient to meet the requirements of importing countries until their next harvests. It is also probable that some exportable surplus will still exist on August 1, 1922. Taking into account the somewhat varied prospects of growing crops and the certainty that Russia can afford no aid to the world's supply during next season (August 1, 1922, to July 31, 1923), a position which Roumania may also share, the size of this exportable surplus is of the greatest importance.

Sugar Duties.—The Minister for Agriculture announced in the House of Commons on Thursday that the Government intend to remove the Excise duty on home-grown sugar. Sir A. Griffith Boscawen said, in answer to a question, that "the Government had decided that, in view of the exceptional circumstances of the new industry of sugar beet, and the condition of unemployment in this country, no Excise duty should be charged on home-grown sugar. The necessary provision for the removal of the existing duty would be made in the Finance Bill of this session. It was, of course, impossible to bind any future Government, but in view of the fact that the remission of Excise was intended to assist a new industry during the experimental period, it might be hoped that Parliament would not reimpose any Excise duty until the industry had been firmly established." The Government thus propose to revive a question of acute fiscal controversy. Meanwhile, we understand that the co-operative movement is sending a deputation to discuss with the Colonial Office the whole question of the sugar duties.

Australia and "Anti-Dumping."—Last December the Commonwealth Government passed an Act entitled "The Customs Tariff (Industries Preservation) Act," which appears to be a first cousin of our own notorious Safeguarding of Industries Act. The appointment is now announced of the "Commonwealth Tariff Board," whose duties it will be to operate the Act. We do not envy the members of this Board, for, from the following statement issued recently from Australia House, it does not look as if their duties would be easy:—

The "dumping duties" are intended to prevent injury to Australian industries by the sale of goods from other countries at prices below the normal cost of their production. These duties will safeguard the manufacturing industries of Australia, that is to say, against the unfair competition of countries whose circumstances allow them to sell their goods at less than normal prices. As specified by the Australian Act, dumping duties are to be imposed in respect of goods exported to Australia and sold to an importer there at a price likely to be detrimental to an Australian industry; goods consigned to Australia which may similarly be sold there at less than a reasonable price; goods carried to Australia at freight rates which are lower than the prevailing rates; and goods sold to an importer in Australia at prices made possible by a depreciated rate of exchange in the country of export, whether those goods have been manufactured wholly or in part from material supplied from that country.

We shall not be surprised if the Board soon finds itself confronted with the same difficulties that have proved the Safeguarding of Industries Act in this country as unworkable as it was ill-advised. Indeed, the complications in Australia are likely to be greater than those that have arisen here, for preference is mixed up with anti-dumping. The official notice states:—"There is also an important provision for a 'dumping preference duty' to be imposed on goods from foreign countries offered in Australia at less than the fair market value of such goods as they are manufactured and sold in the United Kingdom." Even after solving all these problems, the Board's duties are not finished. It has not only to report on cases submitted to it, but to advise the Minister of Trade and Customs on tariff matters generally. "Prominent among the matters it will handle are disputes arising out of interpretation of the tariff, the necessity for new, increased, or reduced duties; and determination of the application of Australia's British Preferential Tariff, or the Intermediate Tariff; and it will deal with complaints as to unnecessarily high charges by manufacturers, or any

action alleged to be in restraint of trade, to the detriment of the public." We shall watch the work of the Board with an interest quickened by painful experience nearer home.

Cotton Trade Wages.—The agreement with regard to wages between the employers and the operatives in the Lancashire cotton industry came to an end on March 24th, writes our Manchester correspondent, and at the beginning of this week the trade union secretaries received a communication from the Federation of Master Cotton Spinners' Associations and the Cotton Spinners and Manufacturers' Association giving one month's notice of a reduction in wages of 75 per cent. on the standard piece price lists. This demand means a fall on present wages of about 30 per cent. It may be mentioned that at the outbreak of war the workpeople were being paid on a basis of 5 per cent. above the standard lists. Several advances were arranged during the war, until in May, 1920, the rates of pay were 215 per cent. above the lists. It must be pointed out that a rise of 30 per cent. was granted in July, 1919, to make up for the loss of wages as a result of the reduction in working hours from 55½ to 48 per week. Last June the employers secured a reduction of 60 per cent. on the list rates, and at the end of last year a further reduction of 10 per cent. on list rates came into operation. Current wages, therefore, are 145 per cent. above the lists, and if the application of the masters is enforced, the new wage rates will be 70 per cent. higher than the lists. Collective bargaining between the employers and the trade union officials has been in operation in the cotton industry for a long number of years, and it was arranged that there should be a joint conference yesterday (Friday) in Manchester of representatives of the two sides. A disquieting feature, however, is that the Cardroom Operatives' Amalgamation has decided not to join with the other trade unions in the negotiations, and they have informed the two employers' organisations that they must have a separate agreement. This development is rather unfortunate, as it may hinder satisfactory negotiations. In trade circles in Manchester it is believed that, as a result of discussions, the masters will be prepared to modify their claim somewhat, and it is expected that the new wage rates will be on a basis of about 95 per cent. above the lists, or a reduction of 50 per cent. on the lists, which will be equal to a drop of about 20 per cent. on current wages. The agreement, when reached, will cover the whole of the industry, and will affect about 400,000 operatives.

Indian Cotton Crop.—In our issue of the 11th inst. we gave particulars of the cabled summary from India of the present crop, and added particulars of the more recent ones. The receipt this week of the final official forecast enables us to give further particulars:—

IN THOUSANDS OF ACRES AND BALES OF 400 lbs.

Years.	Acres.	Bales.	Official February Forecast.	Approximate Crop.	Excess or Deficiency.
1918-19	20,997	3,972	3,671	3,991	+ 320
1919-20	23,352	5,796	5,845	5,343	- 502
1920-21	21,341	3,601	3,556	4,941	+ 1,385
1921-22	18,485	4,480	4,480	..	..
Mean 5 years	22,871	4,509	4,514	5,335	+ 821

The figures in the third column differ from the official ones. We give the actual forecasts as published in February each year, and not the revised figures of 12 months later, when they are no longer "forecasts." In the five years ending 1917-18 the approximate crops exceeded the forecasts by over 18 per cent., while the last one was apparently larger by no less than 1,385,000 bales, or nearly 39 per cent. When the returns of the present crop are compiled after August 31st, they will show what a large quantity of the last one was held back and found buyers subsequently. Compared with the revised estimate of last season, the present crop is larger by 879,000 bales, or over 24 per cent., and 59,000 bales, or a little over 1 per cent., more than the average of the previous five years. Both in

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1922, as compared with the corresponding periods of the preceding Year.

	Quarter from January 1 to March 31, 1922, compared with the corresponding Quarter of the preceding Year.				Year ended March 31, 1922, compared with the preceding Year.

Revenue, March 31, 1922.

quality and quantity the crop of Oomras is exceptional, exceeding the previous one by 1,323,000 bales, or 117 per cent., and the average by 480,000 bales, or over 24 per cent. The supply of Dholleris is expected to be about the same as last year, and 11 per cent. more than the mean. On the other hand, Bengal-Sind is the smallest crop for years, 35 per cent. less than last year, and 21 per cent. smaller than the mean. Coomptas and Dharwars, as well as Northern and Westerns, are short, but Tinnevellys, Salems, and Cambodias promise a yield of 250,000 bales, which is about the average.

DISTRIBUTION, in THOUSANDS of BALES.

	1919-20.	1920-21.	Average 5 Years.
Exports to United Kingdom	149	38	203
Continent	364	214	314
Far East	1,796	1,465	1,397
Elsewhere	393	509	27
Total	2,702	2,226	1,941
Home consumption: Mills	1,913	2,078	2,064
Local	750	750	800
Total	2,663	2,828	2,864
Grand total	5,365	5,054	4,805
Less imports	22	113	16
Approximate crop	5,343	4,941	4,821

† Mean of 5 years ending 1918-19.

Again we have added to the official figures a column showing the average distribution of the preceding five crops. Less than 1 per cent. of the supply was taken by this country. To the Continent there was a decline on the previous year of 150,000 bales, and of 100,000 bales on the five years' average. Japan and the Far East continue to be India's largest buyers, taking, last season, 65 per cent. of the total exports, compared with 66 per cent. in 1919-20, and 72 per cent. in the five years mean. The mills continue to consume rather over two million bales annually, while the home consumption other than by the mills is still estimated at 750,000 bales.

The New Order in Guatemala.—President Orellana's Message to the new National Assembly deals with the period of transition from the revolution of last December to the resumption of constitutional government. A Military Council took over the executive power on the compulsory resignation of President Herrero, and convoked the old Assembly, which "considered the resignation," nominated two candidates for the Presidency, and transferred its powers to the first, who was naturally General Orellana himself. He fixed the elections for the new Assembly, first in May, subsequently in February, and they were carried out quietly, in spite of local disturbances involving some loss of life. Backed by the Army, the President "made it his first care to maintain public order," and sent special missions to the Government of the United States, and to those of the neighbouring Republics, with whom it is hoped fully to re-establish friendly relations at an early date. Superfluous officials have been dismissed, and expenditure reduced by \$40,000,000 (about £144,000 at present rates of exchange); much, the Message states, is being done, and more is promised, to extend and improve education, to promote agriculture and forestry, and to make new roads, one of which will open up communication with Salvador. A law is also in preparation regulating the search for petroleum. From an independent source we learn that the country is quiet, and that business is being carried on as usual; but it seems improbable that the Government is within sight of any payment on account of the arrears of interest (more than £844,000) on the external debt under the settlement of 1914. Having frustrated the recent attempt to restore the Central American Federation, President Orellana's Government has appointed a Commission to study and report on the best means of effecting a union, and he intimates that he will strive to bring it about. The abortive Constitution, described in these columns last November, was largely Utopian; but probably, from the Guatemalan point of view, more urgent objections are found in the location of the capital in Honduras, in the strict limitation of the powers of the President, and in the financial provisions, which de-

prived the Federal Government of its chief means of raising foreign loans, and so protected its autonomy that any lenders could hardly have obtained adequate control over the revenues assigned as security. Guatemala, as the largest and most military of the three States willing to federate, presumably intends to have the hegemony.

Cammell Laird's Year.—The report of Cammell Laird for 1921 shows a further fall in profits, but when conditions prevailing in the period covered by the accounts are taken into consideration it is perhaps a matter for surprise that profits have been so well maintained. How the company has fared since 1905 may be seen from the following table:—

	Profit.	Deb. Int.	Prof. Div.	Appropriat'ns	Ord. Div.	Rate.	Carried Forward.
1905	£ 269,807	£ 38,000	£ 58,198	£ 60,415	£ 105,392	10*	£ 39,978
1906	349,280	75,500	61,261	86,126	114,767	10*	48,053

* Free of income-tax.

Profits are shown after providing special and ordinary depreciation and adjusting excess profits duty. Charges upon the issue of the £600,000 7½ per cent. notes come into the accounts for 1921, and these alone absorbed £45,000. The dividend has been reduced from 7½ to 5 per cent., and no special allocation to reserve has been made. If only the company could see its way clear to publish a profit and loss account, shareholders could obtain a clearer view of the year's results.

Some Rand Results.—The week has witnessed the appearance of the annual reports of two companies operating on the Witwatersrand, and also of statements regarding dividends on the part of two other kindred concerns. In no case has any ground for enthusiasm been afforded. The reports referred to are those of the Durban Roodepoort Deep and the Robinson Gold—old main-reef undertakings. The former shows a working profit of £27,800, the bulk of which is applied to replacement of capital expenditure; the last dividend was 2½ per cent. for 1918. Thanks mainly to the treatment of an increased tonnage of ore, the company was able to reduce its costs by 1s to 3s 5d per ton. Even the latter figure, however, represents an advance of fully 10s upon the 1915 average, and but for the gold premium, a substantial loss would have resulted. With gold at 95s per ounce, the mine is not a payable proposition. The ore reserves exceed a million tons, representing about three years' supply for the mill, and doubtless some further tonnage will be opened up. The consulting engineer observes that the mine cannot be restarted under the economic conditions prevailing at the end of 1921; the position has, however, changed as a consequence of the strike. The company is still somewhat in debt to its sponsor, the Central Mining Corporation. Last year's net earnings of that wonderful old property, the Robinson, amounted to only £22,000, as compared with £98,200 for 1920, but the carry-forward was drawn upon heavily in order that the shareholders might receive 2 per cent., or £55,000, bringing the grand total up to nearly £12,000,000. As already mentioned in these columns, the output is to be greatly reduced, as present economic conditions do not permit the treatment of the lower-grade ore. With both these companies a substantial reduction in costs would much extend the life of the mine. As regards the dividend items, the directors of the Transvaal Gold Mining Estates, whose property is situated in the Lydenburg district, announce that as the profit for the past half-year amounts to less than 1 per cent. upon the issued capital, no distribution can be made; the last

was 2½ per cent. in September, 1920. To people in touch with the position, it has been a foregone conclusion that the Consolidated Mines Selection Company would be unable to pay any dividend in respect of last year. This is now confirmed by an official announcement. So far as can be gathered, the company made a profit of some £50,000, but £152,000 is required to meet depreciation on certain of the company's holdings. Of this sum £100,000 is to be provided by a further transfer back from reserve. In respect of the two preceding years, 15 to 35 per cent. has been paid, but the chairman has taken the opportunity at the annual meetings to utter a warning that lean times were likely to come sooner or later. These warnings have now found their justification.

Globe and Phoenix.—Within the past 12 months writes our mining correspondent, a marked change has taken place in the position and prospects of this Rhodesian enterprise, whose history provides one of the romances of mining. In 1920 the receipts were swollen by adjustments in respect of the previous year's gold sales, as well as by the high average premium realised, and dividends totalling 6s per share were paid. The outlook for the mine, although not without points of hope, was somewhat uncertain; in view of this, the sum of £100,000 was transferred to special development reserve. Last year's profit came out at £182,100, a decline of £161,900, the effects of a sharp relapse in the price of gold being accentuated by a temporary suspension of operations in March as the outcome of labour trouble. After providing for dividends totalling 2s per share, and for taxation on an even higher scale than before, the increased balance of £23,900 remains to be carried forward. Of this, £10,000 represents a transfer back out of the development reserve—a proceeding the reason of which is obscure. The consulting engineer reports that the encouraging developments of the early part of the year failed to continue, but he is hopeful of making fresh discoveries. Unless these hopes are realised, the position of the company will become a parlous one, as the existing ore reserves constitute less than 18 months' supply for the mill. The balance-sheet shows surplus cash assets over liabilities equivalent to 3s per share, and if it is—somewhat optimistically—assumed that the existing ore reserves will supply 3s in dividends, it follows that about half the current market price of the shares is represented by the possibilities of the future. On more than one occasion the acquisition of adjoining ground has been mooted, but the directors make no reference to the subject in their report.

Oversea Correspondence.

UNITED STATES.—MONEY EASIER—FOREIGN LOANS — FOREIGN TRADE IN FEBRUARY — EXPORTS DECLINE.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 18.

THE most important development in the financial situation here this week was the sharp decline in money rates. For a long time past banks had been asking 5 per cent. for fixed-date accommodations on both mixed and all industrial collateral, with offerings very light at that figure, while borrowers, as a rule, were unwilling to bid more than 4½ per cent. This week, however, funds became plentiful at 4½ to 4¾ per cent. for 60 and 90-day loans, while loans for 30 days were negotiated at 4½ per cent., but demand was not very heavy even at the lower levels. The 4½ per cent. rate is the lowest witnessed here since September, 1917. On the Stock Exchange call money dropped from 4 to 3 per cent., the lowest rate seen since early in January, while in the outside money market demand funds were offered in large quantities at 2½ per cent. Commercial paper discounts, which for many weeks have ruled firm at 4½ to 5 per cent., also relaxed, prime names moving freely at 4½ per cent., while exceptionally choice business paper now discounts at 4½ per cent., and

occasionally at 4½ per cent. for short maturities; less desirable names are still discounted at 5 per cent., but the bulk of the transactions is put through at 4½ to 4¾ per cent. with both New York and interior institutions buying more freely than at any time this year. This week's decided easing in money rates occurred simultaneously with unusually heavy banking operations around March 15th. On that date, for instance, the 1921 Federal income taxes, or the first instalment thereof, were payable; Treasury certificates of indebtedness, aggregating \$530,000,000 approximately, matured; interest on the third Liberty Loan bonds, amounting to about \$107,000,000, was paid, as well as the interest which then fell due on certain Treasury notes, and payments were also made on account of subscriptions to the latest issue of 4½ per cent. Treasury certificates dated March 15th. The net result of all those transactions was the accumulation here, temporarily at least, of a vast sum of money. Naturally efforts were made by banks and other institutions to find employment for such funds, and under the flood of offerings rates declined. Many authorities expected money rates, especially for fixed periods, to continue easy for some time, pending a revival in trade and industry. Business has lately shown improvement in a number of directions, but nothing approaching a boom is yet in sight, and the best opinion seems to be that the recovery will be gradual.

New financing this week was again featured by a number of foreign security offerings. The largest single block of the latter—namely, \$40,000,000 Dutch East Indies 25-year 6 per cent. bonds, which were offered to investors at 94½—was heavily oversubscribed. The bonds are a direct external obligation of the Dutch East Indies Government. Like many other issues recently brought out, they are not callable for the first 10 years, but after that period—that is, after March 1, 1932—they will be redeemable at the option of the Government, as a whole or in part, at par and accrued interest. The syndicate which handled the offering was headed by the Guaranty Company of New York, and included the same banking and investment houses that early in January floated a like amount of such bonds here at 94½, to yield from 6.45 to 6.75 per cent. At the price offered this week, the new securities yield more than 6.35 per cent. if held to maturity. Another large and successful offering consisted of \$30,000,000 6 per cent. external sinking fund gold bonds of the Paris, Lyons, and Mediterranean Railway Company, maturing August 15, 1958. Provision is made for a cumulative sinking fund sufficient to redeem the entire issue by the date of maturity. They were offered by Kuhn, Loeb, and Co. and the National City Company at 83 per cent. and accrued interest to the date of delivery, to yield 7.35 per cent. to maturity, and were readily placed. Investors also quickly subscribed for the \$10,000,000 Framerican Industrial Development Corporation 20-year 7½ per cent. debenture bonds, unconditionally guaranteed as to principal and interest by endorsement on each bond by Schneider et Cie. The Framerican Corporation was organised in 1917 under the laws of New York State for the primary purpose of facilitating the business in this country of the French concern, Schneider and Co. A banking syndicate, headed by J. P. Morgan and Co., offered the bonds at 99 per cent. and accrued interest, to yield approximately 7.60 per cent.

The statement of our foreign trade in February has attracted a good deal of attention because of the heavy decline in exports which it revealed during that month. Some further shrinkage was looked for, since our outward movement of merchandise and commodities has been decreasing for some time, but the falling off last month was far greater than had been expected. The total value of February exports, \$251,000,000, was \$28,000,000 less than that of January, \$238,000,000 below the total for February, 1921, which was the highest total recorded for any month since November, 1914. Last month's imports of \$217,000,000 showed a slight increase over January, and about \$2,500,000 over February of last year. The excess of exports for February amounted to only \$34,000,000, or about half that of January, and compares with \$271,900,000 in the preceding February, and with \$349,900,000, approximately, in February, 1919. The surplus of exports last month was only about one-

twentieth of that in the peak month of June, 1919 (\$635,463,660), and was the smallest excess recorded since September, 1914. Gold imports amounted to some \$28,700,000, or little less than the merchandise export excess. These February figures, especially when considered in connection with Great Britain's exhibit for the same month, go a long way towards explaining the course of the foreign exchange market, notably sterling, in recent weeks.

Strange to say, very little concern has thus far been manifested by the general public over the threatened strike of soft coal miners in April 1st as a result of failure to agree on a new wage scale. The men have asked an advance or the maintenance of the old scale, while the operators have insisted on a reduction. Although some consumers have apparently been laying in supplies, judging from the steady increase in output since last December, the majority have shown remarkable indifference, and prices have certainly not been affected to any appreciable extent. The reason is found, perhaps, in the expectation of mild weather. Furthermore, large stocks are believed to be above ground, some estimates placing the amount at 60,000,000 to 65,000,000 tons. The stocks, however, are not uniformly distributed. The Geological Survey statistics, for instance, show that by-product coke works have 42 days' supply, steel plants enough to last them 48 days, other industrials 51 days, gas plants 80 days, electric utilities 51 days, dealers 33 days, and railroads 35 days. It is felt that in the event of a strike the non-union fields, particularly those in West Virginia, Alabama, and in some parts of Illinois will continue to furnish a good supply. Not much help is expected from the anthracite fields, where miners have demanded a 20 per cent. increase in wages after April 1st.

FRANCE.—RESTORATION—PAYMENT IN KIND—THE NEW AGREEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, March 28.

THERE at last appears to be some prospect, unless the German Government really refuses to accept the substantially easier terms now offered by the Reparations Commission (as set forth in this column last week), that it will be possible in the near future to commence the restoration of the devastated regions of France. The fact that, although the war ended nearly three and a-half years ago, it has so far been impossible to make any serious attempt to reconstruct the hundreds of thousands of buildings destroyed during the hostilities, is due to the circumstance that all efforts in this direction have been dependent on definite arrangements being made for the necessary money and materials (or both) to be furnished by Germany. These arrangements have now, it is hoped, been finally settled in the form of the stipulations (of which I gave a summary last week) that have now been forwarded to the German Government by the Allied Reparations Commission. An important feature of this arrangement is the amount that Germany will be allowed to pay in the form of merchandise and materials.

The first definite step taken in this direction, so far as France is concerned, was the signature, on October 6th last, by M. Loucheur and Dr Rathenau, of what are known as the Wiesbaden agreements, which set forth arrangements whereby Germany should furnish merchandise and materials to French sufferers from material war losses (and to sufferers alone), for a period of between four and five years (October 1, 1921, to May 1, 1926) up to a total value of 7 milliard gold marks, a certain proportion of this amount to be credited to Germany each year, on account of the amount of reparation payments due to France for that year, the surplus, if any, to be carried forward against payments that would subsequently become due. This was a purely private Franco-German arrangement, and was entered into independent of the Reparations Commission. As such it was dependent on ratification by the French Parliament, which ratification has so far been held in suspense, until it could be seen what action the Reparations Commission, which represents all the Allies, proposed to take.

The Loucheur-Rathenau agreements, upon examination, were found, although conferring substantial financial advantages on both countries, to present serious inconvenience. For one thing, they proposed the setting up of a special central organism in France, in the hands of which victims of war losses must place their orders for materials. This central office in France was to pass such orders on to a similar office that was to be created in Germany, which in its turn was to distribute the orders to firms of its own selection. In such circumstances the buyer would be ignorant of the firm to which his order would go, whereas he naturally desired to be put into direct relationship. Further, prices were to be fixed independently of either buyer or seller, and, according to a very complicated method, which made it appear possible that in practical working the prices charged would be so high as to render the arrangement of very little benefit to the purchaser, while in certain cases they would be absolutely impracticable.

The outcome of these criticisms, which excited a large amount of attention among business men here, was that the Reparations Commission entered into direct negotiations with the German Government, in order, while preserving the principle of the Loucheur-Rathenau agreements, to render it applicable to the nationals of all the Allied Powers (and not merely to French sufferers), and at the same time to bring about an arrangement that would prove more flexible in working and more acceptable to the parties directly concerned than would be possible under the Wiesbaden agreements. These efforts resulted in the signature in Berlin, on February 27th, between M. Bemelmans (for the Reparations Commission) and Herr Cuntze (for the German Government) of a new form of agreement applicable to all the Allies and covering payments in kind for a period of three years. By the terms of this agreement orders will be passed by purchasers direct to German manufacturers or merchants of their own personal selection, and in accordance with ordinary commercial procedure. The German manufacturer, after executing an order, will send in his account to his own Government, which will forward to the Reparations Commission its own cheque for the amount due, and debit the sum in question to the country to which the purchaser of the goods belongs, as part payment of the amount due to it by Germany on account of reparations. The Reparations Commission, when it receives the cheque from the German Government, will pass it on to the actual purchaser, who will forward it in settlement direct to the firm in Germany from whom he has obtained the goods.

Both victims of war losses and non-victims will be able to make use of the Bemelmans system, the principal difference between the two classes of purchasers being that the latter will be required to pay a varying percentage of the value (according to the nature of the goods required) in cash (which for certain categories will be as much as 90 per cent.), while victims who have claims against the German Government will pay nothing in cash, but will have the amount of their purchases debited against the amount of reparations due to them. Under the Bemelmans agreement, further, the price of the goods will be fixed by the two parties directly interested, in the usual way. The fact that non-victims will have to pay partly, and sometimes largely, in cash will naturally tend to restrict this category of purchasers to a comparatively small number, with the result that, as a maximum has been fixed for the total value of payments in kind to be made by Germany in any one year, both countries in-

terested in the paying off of the reparations debt will benefit.

When the French financial experts came to compare the provisions of the Bemelmans agreement with those of the Loucheur-Rathenau arrangement, it was at once seen that the advantages of the former, so far as the interests of the sufferers from war losses were concerned, were distinctly superior to those embodied in the Wiesbaden agreements. It was argued that if the provisions of the Bemelmans arrangement concerning the supply of materials to French holders of indemnity claims could be combined with the financial provisions of the Wiesbaden agreements, the inconveniences attaching to the latter would be got rid of. One of the stipulations put forward by the German representative, on signing the Bemelmans agreement, however, was that France should be excluded from profiting from the greater advantages conferred by the newer instrument. Direct negotiations were accordingly entered into between the French and German Governments, with the knowledge and consent of the Allied Finance Ministers present at the Paris Conference of March 7th last. As a result, on March 15th an amending agreement was signed in Berlin (by M. Gillet, representing the French Minister for the Liberated Regions, and Dr Ruppel for Germany), whereby French holders of indemnity claims are given, among other advantages, the benefit of adopting the same direct system of ordering and paying for the goods they require which is embodied in the Bemelmans agreement. In short, the agreement of March 15th enables France to retain all the financial advantages of the Wiesbaden agreements, and procures her the additional benefit of the procedure fixed by the Bemelmans arrangement.

In order that the agreements that have been arranged may be put into operation and the work of reconstructing the devastated regions begun, all that now appears to be necessary is for Parliamentary ratification to be given to them. A short Bill of two articles only was last week laid before the Chamber with this object. The second of the two articles provides for the fixation of special Customs rates for application to deliveries of goods and materials furnished by Germany for the reconstitution of the devastated regions.

GERMANY.—REPARATIONS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, March 28.

THE Note of the Reparations Commission stating the terms upon which the London Ultimatum payments would be reduced this year has, so far, had less disturbing effects than seemed likely at the time of publication. The mark exchange's sharp drop suddenly stopped, and the feared Cabinet crisis was prevented. It was prevented only because this time the Chancellor and the parties behind the pending Financial Reform (People's Party, Centre, Democrats and Socialists) agreed as to the policy to be pursued. If on the basis of this policy no agreement can be come to with the Reparations Commission, either the Cabinet must reverse its plans and give way to the Commission—in which case there will be a Cabinet crisis; or the Cabinet, backed by the parties mentioned, must continue to reject the Commission's demands—in which case the crisis will not be internal but international. The substance of Dr Wirth's statement to the Reichstag to-day is a refusal to impose the demanded 60 milliards of new taxes or to accept the Commission's claim to dictate taxation. The taxation system, according to Dr Wirth, has already been strained to the utmost.

The Commission's Note does not invite the negotiations for which Dr Wirth hopes. The terms are not framed directly in Ultimatum form; but they are put forward as the finally considered conditions upon which the temporary reduction of payments will be granted. As a means of bringing pressure on Germany to promise things which the dominant parties do not want to do and declare to be impossible, the semi-Ultimatum form of the Note is less effective than the Ultimatum form of May, 1921. Under threat of a new invasion, the

Ultimatum was accepted by parties which declared that its terms could not be carried out; and this surrender policy, though dishonest, was justified, it is claimed, by events, for the invasion was prevented, and within six months the framers of the Ultimatum had admitted its impracticability. The present threat is weaker, being merely that if the new demanded terms are not conceded, the full London Ultimatum payments will be required. This threat, for reasons which were probably visible to the Commission, has had very little effect. The Commission's reason for granting the reduction is its own formally acknowledged conviction that the London payments cannot be made; and no influence can be exerted on present German decisions by fear that these payments will be later demanded as a reprisal.

In the Press and in Reichstag circles, most opposition is provoked by the Commission's order to the Cabinet to impose another 60 milliards of taxes, of which 40 milliards must be collected before the end of the year. This is the cause of angry protests against the Allies' denial of Germany's "Steuerhoheit." The Cabinet and Party attitude, as defined during the recent negotiations for a taxation compromise and a forced loan, is that no further such tax can at present be raised. A practicable taxation source, it is claimed, does not exist. On this point the Commission's Note contains a weakness which is inevitable if any authority decrees taxation in a foreign country without taking responsibility. While the Cabinet and Parties declare that the tax cannot be imposed, and give their reasons, good or bad, the Commission, with full means of information as to recent desperate struggles to find new sources of taxation, declares that the tax can be imposed. Such an affirmation would have more persuasive influence if the Commission stated in what way the Cabinet had neglected to exploit possible sources. Instead, the Note implies that there are so many obvious sources that it leaves Germany the privilege of choosing the pleasantest. This concession, which reads like and is interpreted by the German Press as conscious irony, has no relation to real German politics. In real German politics it is extremely difficult to raise much smaller sums than 60 milliards; every pfennig of fresh taxes is the subject of heated controversies among the interests; and even if it were possible to coerce Dr Wirth, it is beyond Dr Wirth's, or any other Chancellor's, power to coerce the interests. With most of these interests, the objection to taxes which they cannot, or do not want to, pay is much stronger than their fear of any unpleasantness likely to result from a default in Reparations. They reason that if Dr Wirth imposes impossible taxes he will exact something; whereas if the claimant countries go to extremes they will get nothing. For these reasons it is highly unlikely that any new heavy tax can this year be imposed; and the Commission's belief that the Reichstag could be forced to sanction a specified heavy tax by a specified near date again shows a curious indifference to political realities. Probably the dictation of German taxes from outside Germany involves this ignoring of practicabilities. Autocratic systems of financial or general government could not endure for a moment unless they were associated with a certain responsibility. While partial dictation of German Government from outside is impossible, complete dictation is entirely possible, because it will involve responsibility for conducting the German Administration and feeding the German people. The system outlined in the Commission's Note merely acts as an irritant.

German obduracy is all the more inevitable because the execution—on paper—of the Commission's orders would not ensure a mark of Reparations money. While the Note states quite clearly, if impracticably, how the deficit in the Budget of 1922 could be reduced, it says nothing on the real question, which is how the unpaid remaining part of the 720 millions gold and the 1,450 millions in goods can be provided. As the Allies are not interested in the German Budget, except in so far as it is connected with Reparations, the Note must be taken to imply that the financial measures which it orders would in some way automatically ensure Reparations. Unfortunately, that is not so. It is true that the whole current deficit is (or before the last mark-exchange fall upset calculations was) caused by Reparations. But that

does not mean that the collection of a further large sum in paper marks would make it possible to pay Reparations without producing again the Budget evils for which the Note professes to point out the cure. The extra paper mark revenue would replace Treasury bills and new Reichsbank notes as a means for (1) buying native-owned foreign bills for the gold instalments, and (2) compensating native producers for deliveries in kind; but the foreign payment balance would be burdened just as heavily as under the present deficit system, and with that the mark exchange must continue to go down and the deficits to go up. The Budget, as Professor M. J. Bonn truthfully says, has become—in the mathematician's sense—merely a function of the mark exchange; if the exchange is brought further down by exports of gold, bills or goods, without any return to Germany, the State expenditure must increase; and the speediest Government procedure in imposing yet more taxes will not prevent the deficits increasing, and with them the Floating Debt and the Inflation. On this point the Note tends to follow foreign public prejudices rather than German actualities. The Note, for instance, requires Germany to invent a system by which nominal taxes shall automatically increase according to the future increase of the debt to the Reichsbank, or to the fall in the home-buying power of the mark.

The month-to-month increase in the Floating Debt, which determines (though it is not the same as) the increase in inflation, is almost wholly for Reparations, cash or kind. The imposition of a new heavy tax would, if the tax could be collected, reduce the rate of increase in the Floating Debt and Inflation, but it would not correct the unfavourable foreign payment balance; marks would continue to be thrown on the exchange bourses; the mark exchange would continue downwards, and rising prices and rising State expenditure would always tend to restore the deficits and the inflation. The payment of Reparations on the principles of sound finance is prevented, not by bad finance, but by the impossibility of creating an export surplus; and that being so, Reparations have been paid, and will be paid, if paid at all, on principles of bad finance, the ruin of the Budget being the result. To say this is not to accept without qualification the argument of some Germans that at present Reparations could not under any circumstances be paid. When compared with the annual gold burdens borne by countries which are little more prosperous than Germany, the gold cost of the payments in cash and kind is not overwhelming. But the mark exchange collapse, which could certainly have been prevented if Germany's international relations had been handled carefully by the dominant Powers, and if the incessant panics among the mark interests had been avoided, has hopelessly deranged the whole German financial system. Every attempt to repair past failures has been foiled by fresh exchange collapses, each of which can be directly traced to the unnecessarily violent and threatening political methods pursued. The Reparations burden, though the gold sum is now to be reduced, takes for German paper finance ever more impossible dimensions, and no way out of the difficulty can be seen.

The Stock Exchange last week did not react fully to the mark fall. Averages changed very little; but home loans continued to rise, and Federal Three to-day reached a new record of 132.75, other prices being: War Loan, 77.50; 4 per cent., 96.75; 3½ per cent., 91.10; colonial 4 per cent., 114; and Savings and Premium, 82.30, all except the last having sharp rises to-day. Industrial stocks yesterday and to-day were firm but quiet, leaders to-day being Upper Silesians—in particular Kattowitz—on the basis of rumours as to the negotiations with foreign capitalists. The banking houses of Mendelssohn in Berlin and Amsterdam have concluded an agreement for common operations with the Bavarian Vereinsbank. The gold supplement on Customs duties paid in paper marks has been raised from 4,400 to 5,900 per cent., or sixty times the nominal. The Reichsbank has raised its price for the 20-mark gold piece from 950 to 1,200 marks paper. The Government has forbidden the export of foreign securities or the sale thereof to persons residing abroad. Hitherto this was allowed on permit from the Reichsbank.

ITALY.—PROPOSED TAX ON BEARER SECURITIES— DUTY ON WHEAT POSTPONED—BANCA DI SCONTO AFFAIRS—STATE REVENUE.

(FROM OUR CORRESPONDENT.)

ROME, March 26.

THE new Finance Minister, Signor Bertone, has laid on the table of the House of Deputies a Bill imposing a tax of 15 per cent. on the dividends of State bearer securities. If a bondholder desires to be exempted from the tax, he can do so by inscribing the security to his name. If accepted by Parliament this Bill will put an end to the compulsory inscription of all securities. Signor Giolitti had made compulsory inscription one of the chief items of his financial programme, and by the Law of September 24, 1920, the principle was formally introduced into our legislative code. Signor Giolitti foresaw many good results from its adoption, of which the chief was the certainty that taxpayers could no more escape succession tax, capital levy, and income-tax. Having securities inscribed to their name, taxpayers would be obliged to fill in tax forms correctly, whereas at present the custom of omitting bearer securities altogether is prevalent.

Joint stock companies have been unable to issue new shares, for no capitalist would touch an inscribed share. Unfortunate subscribers to such shares cannot get rid of them, for they are unsaleable, and no bank would think of making advances upon them. In Italy the public is bent on having bearer securities, and the methods of transferring inscribed shares are clumsy and costly. The Treasury found itself obliged to recognise facts, for it was impossible for the State to issue Consols or other bonds liable to the compulsory inscription. The only State security which has a market is the seven-year Exchequer bonds, as these were, by the Law of September 24, 1920, exempted from compulsory inscription. At last the Government has yielded to the lesson of hard facts, and the new Bill, while maintaining the principle of compulsory inscription—the present Cabinet is made up by Giolitti followers and a formal renunciation of a cherished shibboleth of the old chief was impossible—authorises every possessor of State or private securities to keep them in bearer form if they will submit themselves to a 15 per cent. tax on the dividends. Foreigners and Italian residents abroad will have also to pay the tax if they object to technicalities of the inscription. The new tax will not be favourable to the easy marketing of Italian State securities.

A recent decree has postponed to July 1, 1922, the duty on wheat, which was suspended during the war and was to be re-established on April 1, 1922. The duty is 7.50 gold lire, corresponding to about 30 paper lire per quintal. As the price is to-day about 110 lire, the duty would have added from 25 to 30 per cent. to the bread price. It seems unlikely that the duty on wheat will be eventually restored, as the Socialist and popular parties are obliged to oppose it. Perhaps this will be the beginning of the wane of protectionism. Agricultural interests will feel more and more aggrieved by high duties on implements, machinery, and textiles not counterbalanced by protective duties on agricultural products.

The affairs of the Banca Italiana di Sconto are stationary. By a decree of the Roma Tribunal a balance-sheet dated December 31, 1921, has been published in which the assets are estimated at 4,929.2 millions lire, and the liabilities (exclusive of capital and the reserves) at 5,916.7 millions lire. Of these 1,673.7 are privileged,

so that only 3,255.5 millions are left to be shared among 4,243 millions lire of ordinary credits. The various classes of creditors and employees, though divided among themselves, are bent on obtaining the maximum aid from the banks of issue and the public Exchequer. It is not known exactly what shape State aid will take.

A recent official report states that the public revenue for the first eight months of the financial year 1921-22 (July to February) was 8,425 millions lire, against 7,016 millions lire for the corresponding months of 1920-21. The tax yield for the whole year can be estimated at 12,500 millions lire, against 2,500 in 1913-14. Adding about 2,500 millions lire paid to provinces and municipalities, we reach a sixfold increase on the pre-war year. As the purchasing power of the lira has been only reduced to one-fourth or one-fifth of its pre-war value, it appears that taxation has more than kept pace with the increase in paper incomes.

CANADA.—THE RECIPROCITY NEGOTIATIONS—CANADIAN LOAN IN NEW YORK—AGRICULTURE AND BUSINESS—RAILWAY PROBLEMS—FEDERAL FINANCES—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 13.

MR W. S. FIELDING, the Finance Minister, received (as he has admitted in a frank statement) little encouragement from President Harding and other Republican leaders for the immediate revival of the reciprocity negotiations. There is evidence that some American farmers are suffering disillusionment about the beneficial effects of the emergency tariff legislation, but the process is not general, and the reopening of the door to Canadian agricultural products would provoke an outcry in the Middle Western and North-Western States. Even if other obstacles had not existed, the reinstatement of the old pact in its original form would have been impossible, for changes in the intervening years had made many of its provisions obsolete. A clause in the Fordney Bill, which is now making slow progress through Congress, specifically provides for its repeal, and if negotiations for reciprocity are renewed, it will be on a completely fresh basis, and it is safe to prophesy that the Americans will demand much larger concessions for their manufactures than they did in 1911. Mr Fielding asserts that he regards the project as far from hopeless. He points out that the Fordney Bill contains a clause authorising the President to open negotiations with countries which will offer reciprocal treatment to American goods, and claims to have been assured that the framers of this clause have Canada specially in mind. The general impression is that both the Harding Administration and the business and financial interests of the East would like to see a wide measure of reciprocity with Canada enacted, and their attitude has found expression lately in a number of influential papers like the *New York Times* and the *Wall Street Journal*. The former has editorially expressed its belief in the benefits of continental free trade, and thinks a movement in its support should be organised on both sides of the border: Canada is still the best customer of the United States, and the drop in the trade between the two countries in the past year furnishes valuable ammunition to the friends of reciprocity. The idea, however, must remain in abeyance for a time until the political obstacles now existing at Washington are removed. A reciprocity agreement would not be universally popular in Canada, but many of the arguments of 1911 could not be repeated with success, and many of the bitterest opponents of the 1911 agreement would be found zealously championing a fresh pact.

In New York Mr Fielding borrowed for the benefit of the National Railways \$11,000,000. He only asked for a sum sufficient for immediate refunding needs, and issued short-term notes bearing 5 per cent. interest for three years. A syndicate consisting of Dillon, Read, and Co.,

the National City Company, the Guaranty Company, and Lee Higginson and Co. purchased them at 99.03, or on a basis of 5.35 per cent. The Government must borrow on a large scale in the near future, and a rumour that its next loan may be placed in London instead of New York has caused a setback in Canadian exchange in the latter city.

The improvement in prices for wheat and other farm products is favourably affecting business conditions in Western Canada; although no stabilised change in the situation can be looked for till another crop is actually harvested, a feeling of greater hope and confidence has already provided a welcome stimulus. The *Saskatoon Star* estimates that the recent rise in prices has meant an addition of \$45,000,000 to the value of the 1921 crop, and other Western papers are striking a more optimistic note than they have permitted themselves for six months. The banks and mortgage companies, which two months ago were very nervous about the situation, are now inclined to stand behind all farmers whose records warrant backing, and there never was a time when the Western farmers were in greater need of financial support. Manufacturers and wholesalers in Winnipeg do not admit any exceptional rush of orders from the country, but there has been a good demand for dry goods of every variety, and there is a feeling that spring business will in general be satisfactory. In the Eastern cities the wholesale dry-goods houses find the volume of orders immeasurably ahead of last year. There is every sign of an early break-up of winter, and there has been a gratifying decline in the figures of unemployment. The iron and steel trades are still facing difficult times, and the agricultural implement firms find the farmers very reluctant to buy. The milling industry remains in a very satisfactory condition, and for the first nine months of the fiscal year the exports of flour were 5,130,900 barrels, as compared with 3,869,931 barrels in the corresponding period of 1920-21. Owing to the drop in prices the value, however, had declined from 46 to 39 million dollars. The United Kingdom had taken 3,387,000 barrels in that period, as compared with 1,532,000 in the same nine months of the previous year.

The first session of the fourteenth Parliament opened on March 8th, and a short but interesting session is anticipated. The Speech from the Throne promises "co-ordination" of the various units of the State railway system, but the advocates of the latter will not be satisfied with anything short of consolidation, and it is exactly this development which the C.P.R. desires to avert. There will also be waged in Parliament this session a fierce controversy over railway rates. More than twenty years ago the C.P.R., in consideration of receiving a subsidy for their Crow's Nest Pass line, agreed with the Dominion Government that their freight rates on certain basic commodities should never exceed a certain level. To meet changed conditions caused by the rise in wages and prices, Parliament authorised a temporary suspension of the agreement; but unless the suspension is prolonged its terms come into effect again on July of this year, and their restoration will mean a loss of millions of dollars to the railways. Finance will provide the Government with another thorny problem. In his last Budget speech, Sir Henry Drayton, the late Finance Minister, estimated that if the country was to pay its way he should raise about 435 million dollars in the fiscal year 1921-22. In the eleven months which ended on February 28th, \$343,846,768 has been collected, as compared with \$418,916,180; despite the additions to the sales tax there has been a decrease in revenue of \$75,069,412. It has been partially offset by a decrease in expenditure amounting to \$46,433,543. The chief decline has been in customs, which have shrunk from 153 to 94 millions in the eleven months period. The last month of the fiscal year will probably show some improvement on the average, but Mr Fielding does not seem likely to find himself in possession of revenue much in excess of 380 millions, and a deficit of at least 50 millions must be faced. Recourse to extra taxation is almost impossible, and the result is that the Finance Minister is pressing for wholesale economies in the estimates.

The cost of living is steadily falling in Canada, and the following prices prevailing last week in the Ottawa market give some tangible evidence of its decline, the

figures for the corresponding week in 1920 when food prices were at their peak being added:—

	1920.	1922.
Butter	55-65c	35c
Eggs	75-90c	40-45c
Beef (hinds)	15-18c	10-11c
Mutton	22c	14-15c
Haddock	14c	11c
Potatoes	per bag \$3.50-\$4	\$1.60-\$1.75

In January of this year, the average cost of 29 staple articles, selected by the Labour Department, was \$11.03 per week, as compared with \$15.30 in January, 1920, the decrease being 27½ per cent. However, in the same period there had been an increase of 25 per cent. in rents, and 8 per cent. in the cost of fuel and lighting. Substantial though the reduction in the cost of living is, it is much smaller than the corresponding decline in the United States. Canadian wholesale prices are still on an average about 60 per cent. above the level of 1914, but in the United States they are only 15 per cent. above 1914 scale in some lines, and on an average about 30 per cent. The Canadian sales tax, which operates as an internal tariff, is partly responsible for this state of affairs.

SPAIN.—FINANCIAL POLICY—BANK OF SPAIN—MONEY AND STOCKS—EXCHANGE QUOTATIONS.

(FROM OUR CORRESPONDENT.)

MADRID, March 22.

THE political situation has not improved much, in spite of the substitution of a Maura Cabinet by one presided over by Señor Sanchez Guerra. The general opinion is that the new Government is wanting in stability, and will not last long; in any case, as the first declarations of the new cabinet were to the effect that it would continue the policy of its predecessor, people are wondering what need there was to change. The new Government is apparently inclined to adopt, with few modifications, the taxation scheme proposed by the ex-Minister of Finance, Señor Cambó, which provides for a considerable increase in the taxes on wealth and articles of luxury, especially automobiles. This prospect, combined with the poor business situation, is probably the main reason for the increasing number of second-hand motor cars which are being offered for sale.

The official discount rate of the Bank of Spain continues at 6 per cent., but there is said to be a possibility of a reduction in the near future, following the lead of other National Banks in Europe.

The general meeting of the shareholders of the Bank of Spain took place on March 12th, and the figures given out on that occasion indicate considerable progress in every respect. The gross profits for the year 1921 amount to 151,550,447 pesetas, as against 94,824,551 pesetas in 1920, and the net profits are 119,881,914, against 72,105,404; the dividend has been increased from 180 to 220 pesetas. Compared with 1920, the note circulation at the end of December had been reduced by some 80,000,000 pesetas, while the gold reserves remained practically unchanged and the holding of silver had increased by over 50,000,000 pesetas. An endeavour will be made shortly to refloat the Banco de Barcelona, but out of the many schemes which have been put forward to this effect, so far none has met with the entire approval of the Government.

The Northern Railway Company has issued 100,000 6 per cent. 38-year bonds, 500 pesetas nominal, issued at 485 pesetas and redeemable at par. The guarantee is constituted by a special mortgage on the main lines from Madrid to the frontier. The whole of the issue was underwritten by a group of Spanish banks, and has been well received by the public.

At the time of writing an issue is being put on the market of 10,000 6 per cent. bonds of the Sociedad Española de Construcciones Electro-Mecánicas, redeemable at par (500 pesetas) in 30 years. This issue is being offered to the public at 87 per cent., and has been underwritten by the Banco de Bilbao, Bauer and Co., Banco Español de Crédito, Lazard Brothers, Tréfileries and Laminiers du Havre, and the Banque de l'Union Parisienne.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

On the 15th inst. the Official Sample Fair of Barcelona was inaugurated by Government representatives, and while it is too early to make any predictions in this respect, it is hoped that this departure may help to restore some activity to Spanish industries, which fell into a state of stagnation after the conclusion of their war contracts. There has been, however, considerable reluctance on the part of foreign manufacturers to exhibit their products, in view of the prohibitive duties which are now being applied to imported goods.

From the census of the population of Spain, carried out in December of last year, the following figures are given for the principal towns:—

	Population in 1920.	Increase since 1910.
Madrid	751,352	151,545
Barcelona	710,335	122,924
Valencia	239,800	6,452
Seville	205,527	47,240
Malaga	150,584	14,219
Saragossa	141,350	29,646
Murcia	141,175	16,118
Bilbao	114,351	20,815

Although these figures are not stated to be definite, they give an idea of the relative importance of the different towns and the statistics have furthermore revealed a very marked movement of the inhabitants of the North-Central zone (Burgos, Palencia, Salamanca, Segovia, Soria, Teruel, Valladolid, and Zamora) towards the South-Central zone (Badajoz, Ciudad Real, Cordoba, Jaen, Seville, Toledo, and Albacete).

The Bolsa has reflected little animation this month, either in stocks or in foreign exchange. The volume of business has been smaller even than in the months of January and February. In the matter of official quotations of foreign currencies in Madrid and Barcelona, it may be of interest to mention that in neither city can the quotations be relied upon to reflect the real state of the market; in some cases the difference is very marked, and calls forth legitimate protests, which, however, are unheeded. The reason is that some of the banks have occasionally to apply the official closing rates of the Madrid or Barcelona Bolsas to important operations with their customers, and it is an easy matter for them, especially in the present state of the market, to effect a small transaction on the stroke of four o'clock completely out of proportion with the previous and succeeding operations, thereby acquiring the right to apply the same rate to their customers. Possibly this state of affairs may disappear to some extent when business revives, but, in any case, it is a factor to be taken into consideration when calculating "arbitrages" on the basis of official quotations received from Madrid or Barcelona.

S W E D E N.—INDUSTRIAL POSITION—BANKING TROUBLES—COMMODITY PRICES FALLING: STOCKS AND MONEY—TRADE AGREEMENT WITH RUSSIA.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, March 18.

THE position in this country's trade and industry shows no material improvement. Industry has been greatly hampered by protracted labour negotiations, but so far everything has been settled without a strike, except in the phosphate and the sulphate industries. The boisterous weather

which has been prevalent during the winter has kept a large number of hands busy for repairs, and to clear roads and streets, but now unemployment seems again to be on the increase. In the timber industry a slight revival has been noticeable in sales, and it is estimated that towards 170,000 stds have been contracted for. But even this is a very low figure, and hardly 50 per cent. of normal turnover at this time of the year. British buyers are slow in coming forward, and French buyers are most prominent. At the same time, it has been noticed with some surprise that Germany again appears on the scene as a buyer of timber, the heavy rise in German timber prices being evidently the explanation. The depression in industry, and the collapse of many important concerns, has not, of course, been without influence on the position of the banks concerned. The Sydsvenska Kredit A/B, one of the leading banks, has found it impossible to continue on the old lines, and a reconstruction with the aid of other interested financial institutions has therefore been undertaken. A new concern with a share capital of 34 million kr has been formed to take over the assets and liabilities of the old bank, the shareholders of which receive 4 million kr shares in the new undertaking, and receive the right to subscribe new shares correspondingly to their holdings in the old bank. The reconstructed concern is guaranteed by consortium of most of the other Swedish banks, and by the State Bank. Amongst other failures have been the Kopparbergbank and the Mälarbanken, but in neither case have deposits been endangered, although the shareholders have, of course, suffered severely. In regard to the Sydsvenska bank, this is the first time that a reconstruction on these lines has been undertaken in Sweden, and the loyalty shown in this case by other banks is especially reassuring. In connection with the above banking failures and the reported weak position of one or two other banks in southern Sweden, the Government has found it expedient to intervene, and is proposing in the Diet a credit for 50 million kr, to be used as a support for banks in need of assistance.

The downward tendency in the stock markets has continued, and during February alone the decline in Stock Exchange values amounted to 265 million kr, which means 30 per cent. loss for a group of 13 leading companies. The largest fall has been recorded in industrials, bank shares, and transport shares. The State Bank has now again lowered its discount rate to 5 per cent., and the private banks have followed suit. Opinions that the price-level had at the beginning of the year reached bottom and was about to stabilise itself in this country have proved unjustified, and a further drop of 4 points in the index number of commodity prices took place in February. Prices for vegetable foodstuffs and coal fuel rose, very naturally, because of the hard winter, prices for fuel oils were unchanged, but animal foodstuffs, metals, building materials, textiles, hides, leather, and wood-pulp went further down.

Of especial interest is the new trade treaty which has finally been established between Sweden and Soviet Russia, and although no great results are expected from this, it is clear that something would have to be done to meet the increasing demand from the left parties that the position should be cleared up. The new treaty is practically a copy of agreements existing between the Soviet, Germany, Norway, and Great Britain, and contains the stipulation that admittance will be granted to a Soviet representative to Sweden, and to a Swedish representative in Russia, and that both parties agree to facilitate trade between the two countries, while abstaining from any sort of political propaganda. A stipulation in the agreement which says that each party grants admittance to its territory not only to an official representative, and commercial delegate and agent, but also to nationals of each country for commercial and industrial purposes, subject to existing regulations regarding the admission of foreigners, has met with strong opposition among Conservatives and Liberals, who are generally against the treaty, but especially opposed this part of it on the ground that it affords opportunity to Bolsheviks to carry on insidious propaganda work.

Letters to the Editor.

REPARATIONS AND DEBTS TO AMERICA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have just had the extreme pleasure of reading Mr John Maynard Keynes' book, "A Revision of the Treaty," and would like to present to you what is, I believe, the average American's attitude towards the questions of inter-Allied indebtedness and reparations. Mr Keynes has, I believe, just missed arriving at the truth.

Mr Keynes is quite correct when he says (page 196): "It is, they say, as though a bank, having made an unsecured advance to a client.....this client were to cry off paying." He neglects to add, however, that said client is headed for the rocks, and would probably use the credit gained by the cancellation of said unsecured advance for further extravagances, which would only delay his rehabilitation.

Can he conceive it possible for public opinion in this country to favour cancellation when some of the Continental countries are using a large part of their credit resources for the purpose of financing military expenditures? When France, for example, takes the position that she cannot and does not expect to pay the sums due us, insists upon every last mark due upon reparations account, and then squanders her money on her military establishment, can she blame the United States for not coming forward and graciously laying a receipted bill in her lap? Would you, or anyone else, tear up the notes of a spendthrift (or, at least, let him know you had done so) as long as he showed no signs of reform?

Some day, perhaps, the United States may come forward with a proposal as momentous as that of Mr Hughes at the Arms Conference, but surely not until France has shown that she will not use the credit gained from the cancellation of her debt to us for the purpose of further military expansion.

I believe the great majority of thinking individuals in this country neither expect nor desire that those debts be paid, nor do they want a neatly engraved resolution of thanks for their cancellation (as Mr Keynes suggests); but they do want to know that the sums so cancelled will be used for the everlasting good of the nations involved, and not in preparation for future wars.

In the matter of reparations, it is only natural that we should assume a somewhat neutral attitude. In a measure, excepting as it affects the general rehabilitation of Europe, it is none of our affair, and we might be accused of presumption did we press our views in the matter. Realising what France has suffered, we believe it quite natural that she should want to make Germany disgorge to the limit. However, we very strongly suspect the French politicians of carrying reparations on the books as a current asset, knowing full well they are practically worthless and might easily become a liability. The sooner the stockholders (the French people) become aware of that fact, the sooner reorganisation will be accomplished, but (and here is the nigger in the wood-pile) the old management will be fired and a new one installed.

We cannot help but feel that France's attitude is just a shade too belligerent, that in the independent course she has followed she may be riding for a fall, which is the last thing we should care to see.

Let us hope that something tangible will come out of the Genoa Conference, and while the United States probably will not be present officially, she may yet send the Conference a momentous message, provided European statesmen will play the game, with all the cards on the table, and face up. Is it too much to hope for?—Very truly yours,

JULIUS A. PAYNE.

4,653 Hazel avenue, Phila., Pa., U.S.A.,
March 7th, 1922.

RAILWAYS AND ROAD TRANSPORT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I should be greatly obliged if you will allow me, on behalf of the Transport Committee of the Federation of British Industries, to put forward the views of the Federation in regard to the Bills which the railway companies in the North-Western and Midland Group are promoting to secure powers to conduct road transport.

The Federation considers that to transport by railway is the proper and sole function of the railway companies; that it was for this purpose only that they obtained parliamentary powers and privileges, and that the attention of those engaged in working the railways should be devoted during the next few years entirely to the restoration of their efficiency, which has been impaired as a result of the war, and to the introduction of more economic methods of working and the development of their new group organisation.

The Federation is also extremely apprehensive that if the railway companies are granted these powers, and if they desire to make this new branch of business profitable, they will be driven by circumstances to attempt the effective control of the road transport system of the country. The companies disclaim any intention of the kind, but in all their statements they admit that their intention is to regain on the road the traffic they have lost on the railway through unduly high charges, and to obtain for themselves a share of the other traffic which is at present passing by road.

As there are at present upon the roads a sufficient number of lorries to deal with the existing traffic or any additional traffic that is expected to develop within the reasonably near future, this can only result in fierce competition with the existing road carriers. The traders fear that, having regard to the large resources at the command of the railway companies, this competition will result in driving competing carriers who have not the same resources off the road, and placing road transport under the control of the companies.

In the view of the Federation these objections are so fundamental that it is impossible that they can be properly met by any attempt to safeguard individual points.

Generally speaking, the proposals put forward by the railway companies are regarded as inadequate, and not applicable to road transport, for the following reasons:—

(1) The Rates Tribunal is, and will be, fully occupied with railway matters. Any further addition thrown upon it must seriously prejudice its efficiency. Moreover, road transport is widely different from rail transport, and the machinery of the Railways Act is quite inappropriate to road traffic.

(2) The efficiency of the proposal enabling the road transport interests to appeal in the case of exceptional rates is extremely doubtful.

(3) The traders have no confidence in the proposal for special forms of account. The statutory provisions, which it is proposed to adapt to the new conditions, have not in the past resulted in showing clearly the financial position of the auxiliary businesses carried on by the railway companies. Moreover, the companies have repeatedly stated that in the costs of running a goods mile and a passenger mile, it was impossible to say how much of their fixed capital was used in respect of carriage of goods and how much in respect of carriage of passengers. Even if the position is clearly shown in the accounts, any loss on road transport will still be subsidised by the railway rates. Moreover, Parliament last year did not grant a guaranteed income to the railway companies for road transport, and a private Bill ought not to seek to extend the principle of guarantee.

(4) In regard to the continuance of services not found to be unprofitable, the question of the profitability of the service must depend upon the accounts.

If the companies maintain that they cannot profitably carry on any particular service, it will be extremely difficult for anyone to establish the contrary; nor is it seen how the companies can be put under a general obligation to carry goods by road by any route, since a great majority of the traffic of the country can never be carried by road owing to the bulk, weight, or some other characteristic of the goods concerned.

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

**BANKERS TRUST
COMPANY**

16, WALL STREET, NEW YORK
PARIS OFFICE
3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

All of these causes emphasise the argument that the conditions of road transport are such as to make adequate supervision by any independent tribunal, or adequate regulation by means of legislation, impossible.

In conclusion, may I submit that the whole question is one of such magnitude and importance to the community at large, that to attempt to deal with it piece-meal by private Bill is not in the public interest.—Yours faithfully,

CHARLES TENNYSON, Deputy Director.

Federation of British Industries,

INSURANCE OF MARINE CERTIFICATES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with much interest the article which recently appeared in the *Economist* relative to the activities of this company, and beg leave to reply to your criticism.

I think you will agree that the question of public policy arises when considering almost every form of insurance. Presumably the Board of Trade shares the belief held by all who come in close contact with officers of His Majesty's mercantile marine,* that the moral hazard is as satisfactory, if not superior to that associated with many other forms of insurance.

The high traditions of the British mercantile marine are as zealously guarded in the tramp steamer as in the first-class liner, and the unwritten laws of the sea are complied with as carefully in peace time as in war. Apart from moral considerations, the possibility of abuse is equally remote when one examines the question from the practical point of view.

The Board of Trade certificate of competency is the whole "stock-in-trade" of a man whose training and experience, in most cases, unsuits him for employment in other walks of life. If an officer's certificate is dealt with, he is stigmatised professionally, and his earning power is, in consequence, considerably reduced for the remainder of his life.

I further submit that the courts of inquiry into shipping casualties comprise men of ample legal and technical ability, well able to detect criminal intent if such should exist. A point which perhaps hardly needs demonstration is that a shipping casualty often results in loss of life to the captain and officers.

I have recently learned that policies covering the risks under consideration have been issued for several years by a well-known tariff office. The principle of navigators' indemnity appears to be exactly that involved in accountants', doctors', or solicitors' indemnity, all of which are liable to abuse, but which provide an extremely useful insurance facility for the members of those honourable professions. Surely the war record of the British mercantile marine does not place it outside the category of honourable professions!

I agree that the field for our enterprise is comparatively insignificant, and the capital of the company is, there-

* I use the term "His Majesty's" advisedly.

fore, correspondingly small. The guarantee arrangements with a company whose assets exceed £19,000,000 give our policy-holders ample security. None connected with this company expect to amass fortunes; there have, perhaps, been too many made out of the labours and trials of the mercantile marine.

Our proposal form enables us to select desirable business, and we do not accept proposals from under-offered ships of questionable ownership. We do not fear competition from the giant offices, as our distinctive nautical character has already won the support of a body of men who are particularly loyal to their cloth.

I consider that the legal defence section of our policy (which you described as a *small* part) is by far the most important and attractive section, and for this reason we have made very complete arrangements that our assureds are guaranteed the ablest legal assistance obtainable.

I would respectfully refer you to the report of the inquiry into the loss of the "Maskinonge" and to that of the subsequent appeal.—Yours faithfully,

WILLIAM H. COOMBS.

Master Mariner, Joint Managing Director, Navigators and General Insurance Company, Limited, London, March 31st, 1922.

UNEMPLOYMENT INSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the article by your Labour correspondent on "The Problem of Unemployment Insurance," which appeared in your last issue. Your correspondent does not seem to be aware that there is in being one special scheme under the Act of 1920. This scheme, which covers the whole of the insurance industry, and is administered by this board, is the only one which was formulated in time to receive the sanction of the Minister of Labour and to come into force before the limit imposed by the Act expired on July 4, 1921. Beyond saying that the scheme is a non-contributory one so far as the employees are concerned, I will not attempt to set out its details, which are necessarily complicated, but if your correspondent would like further information the board's secretary will be happy to supply it.—Yours faithfully,

GEOFFREY MARKS, Chairman Incorporated Insurance Industry Unemployment Insurance Board.

London, March 30th, 1922.

CITY LIFE ASSURANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent overlooks the fact that in dealing with two companies in a short article a certain amount of compression is unavoidable. Anyone who has anything to do with life assurance knows that first-year expenses are heavier than renewal expenses; it hardly seemed necessary to draw attention to this fact in an article intended for the *Economist*. Moreover, had this been done it would have led inevitably to some attempt to analyse the expenditure. Owing to the absence of any Board of Trade returns, a satisfactory analysis is impossible. While it might be justifiable to spend the whole of the first year's premiums under a whole-life policy, such an expenditure would clearly not be admissible under a short-term endowment assurance. The criticism was not made, however, without full consideration of all the facts of the case. If, for example, it be assumed that 80 per cent. of the first year's premiums went in expenses, we are still left with a renewal expense ratio of 45 per cent.

I would further point out that—as was clearly shown later on in the same article—the main point that I wished to bring out was that the deficiencies shown by the valuations of 1917-1918 must have been largely increased since. To prove this one was only concerned with the actual expenditure, and not with its theoretical distribution. Again, "A. C. I. I." overlooks the fact that while it may be justifiable for an actuarially solvent company to indulge for a time in a high rate of expenditure in order to increase its volume of new business, such a course is quite inadmissible for a company already burdened with a serious

deficiency. However, the following extracts from the 1920 report of the City Life's own consulting actuary speak for themselves:—

"During the five years 1913-17 from the excessive expenditure incurred in connection with the procurement of new business, which was not justified by results, the financial status of the company has undergone a complete change, and, as its report demonstrates, there is now a considerable deficiency in both branches..... Magnitude of business in any branch is of no material advantage to the assured or shareholder if its attainment involves abnormal expenditure."—Yours faithfully,

THE WRITER OF THE ARTICLE, M.A., F.I.A.

Books and Publications.

FOREIGN EXCHANGES.*

THE author of this work is Director of Economic Studies at the Bank of France, Professor at the Ecole des Hautes-Etudes Commerciales, and his work has been "couronné" by the Académie des Sciences Morales et Politiques. It is a good specimen of the French type of economic treatise—clear, lucid and interesting, but not showing very much appreciation of the newer march of economic inquiry. Thus the reader will search in vain for any mention of the name of Prof. Cassel, or for any general investigation into the theory of purchasing power parities, though the conception is, as a matter of fact, used to some extent in the latter part of the book. M. Descamps' exchange theory is essentially that of Goschen, whom he frequently quotes, and always with approval. But the general principles of the Ricardian view of the distribution of the precious metals, and the general teaching of the Ricardian school on the effects of inconvertible paper money on the exchanges, receive their due share of the author's attention.

The book consists of two parts. In the first the general principles of the exchanges and the methods of exchange regulation are set out. In the second part we have an analysis of the events of the war from the standpoint of the Paris market. The book is strong in its insistence on the fact that the export of gold is only one way in which the exchanges are regulated. In fact, of course, recourse is had to credit operations of more than one kind. Payment of debts is postponed by the raising of long-period loans, by bank credits, by speculative sales, and the like. M. Descamps' treatment of all these matters is excellent. He points to the evil influence of inconvertible money in raising prices, and thus causing an adverse balance of trade. Inflation for the time being helps the balancing of the adverse balance, because it is possible to sell money to the speculator, who buys in the hope of a rise, but the price of sale must get progressively worse from the standpoint of the selling country, and if the profits do not mature speculative sales must come to an end.

The experience with gold exchange systems both in the East and in South America is carefully re-examined by the author. He gives less than the usual welcome to methods of this kind, pointing to the fact that they are only likely to be successful so long as the countries which work them have a favourable balance of trade, and so long as the intrinsic value of their currencies does not rise above the parity with gold as fixed under the exchange standard. But he does not, in our opinion, go sufficiently into the question of why the balances of these countries are adverse in certain cases. At the present moment, for instance, is not the adverseness of the Indian balance due to the fact that Indian inflation has not been cut down *pari passu* with European inflation? As far as Brazil is concerned, the evidence seems to be fairly conclusive on this point. It is true that M. Descamps holds the view that the nature of Indian exports depends more on the harvests than on the price level (p. 162). This may explain why in a particular year the gold balances may fall, but the author does not quite realise how fatal to his view is the further statement which he makes, viz., that the price offered for Indian products "depends especially on the need one has for Indian products, and this need depends on the available

346 STRAND

LONDON

volume of similar products in the rest of the world." Exactly, it does not depend on the absolute price level in the country of export, but on that level relative to the rest of the world. The gold-exchange system breaks down when the exchange parity over-values the local currency relatively to the purchasing power par, because then imports into the country are stimulated and exports are checked.

In the second part of the book the author stresses the importance to France of the speculative purchases of French currency since the Armistice, and shows how difficult the position of France would have been had these sales not taken place. He prints an interesting table (p. 376), from which it appears that during 1919 American goods priced in French currency were for the greater part of the year below French prices, that during the whole of 1920 American prices converted into French prices at current rates of exchange always gave an advantage to France. In the first six months of 1921, however, American prices were again below the French. This lack of adjustment between price levels is one of the less attractive aspects of the system of paper exchanges with which Europe is cursed at the present time.

COAL STATISTICS.*

AVAILABLE statistics of the coal industry are abundant, but scattered over numerous blue books and official or semi-official publications. To make the information more readily accessible to the inquirer, Mr Finlay A. Gibson, secretary of the Monmouthshire and South Wales Coal Owners' Association, has collated into one volume the principal figures relating to the industry in the United Kingdom since 1874, and in foreign countries since 1885. The work is divided into 12 sections. Of these one is devoted to the output, persons employed, and output per person in all the coal-producing counties of the United Kingdom since 1874; another deals with the exports, cargo and bunker, foreign and coastwise, from the various coal-exporting centres of the United Kingdom; and the destinations of our exports; another is devoted to wages, and gives complete details of wage variations since 1875 for South Wales, and since June, 1914, for the rest of the country; while the other sections are devoted to prices, the coke and patent fuel trades, mining accidents, production, and exports in foreign countries, and the costs of proceeds of the mining industry of the United Kingdom under the National Agreement of last June. In producing this comprehensive statistical survey, Mr Gibson has performed a task that is as useful as it must have been laborious, and the volume is one that should be added to the reference library of all students of industrial history.

STOCK EXCHANGE NEWS.

TICKET. April 12. ACCOUNT. April 13.

The first quarter of the year ended in a blaze of glory for the investment markets of the Stock Exchange. Business has been reviving during the past week, and in various directions, noticeably in the Home Railway market, more trade has come about on behalf of the public. The strength shown by the War Loan, Victory Bonds, Funding and similar British Government securities, proved to be a fine advertisement for all the investment parts of the house. People are buying investment shares of every kind. The cry continues that there is not enough stock to go round. Some shares, even in the ordinary lists, have been raised during the past few days to prices which look very fully valued. The Australian Commonwealth boldly offers £5,000,000 5 per cent. stock at 96; the underwriting was done readily.

Expectations of cheaper money in the near future helped to hoist the War Loan to 99, a premium of 4 points upon its issue price in January, 1917. Victory Bonds came into active demand by those who like the speculative chance of the drawings at par that take place in June. The Funding Loan easily regained most of the interest deducted earlier in the week. India Government stocks have recovered substantially. Colonials are becoming more and more difficult to obtain. The Home Railway prior-charge market, though tolerably well supplied with stock, has no difficulty in disposing of its supplies at rising prices day by day. There is no section of the gilt-edged market in which firmness is not the prevailing figure.

Most of the attention in the foreign bond market revolves, nowadays, around the French railway issues, P.L.M., Midi, Orleans, and Nord. After the Nord scrip had been down to a small discount, it rallied to a moderate premium, but it is clear that there are many stages still in these French railway stocks. Germans have gone back a little, on the slump in the market. Brazilians show a tendency to improve, though the market is irregular and narrow. There is not much doing in Far Eastern issues. Finnish and Helsingfors bonds are harder, on the idea that the restrictions at present laid upon encashment of coupons on the existing bonds will have to be removed before Finland can expect to get out her new three-million pounds loan.

The Home Railway market has been buoyant. Bare of stock as it is, a little demand serves to put up prices with a run. Heavies, Underground, Scottish, and Southern stocks all rose materially. It was not until Thursday morning that anything approaching a halt was called. Speculation and investment have run hand-in-hand in Home Railways. Possibly speculation has rather forced the pace. Canadian and Mexican issues are stagnant. Argentine Railways braced up on what was described in the House as speculative investment purchases. Brazilian Railway stocks remain dullish, owing to the reduction in the San Paulo dividend.

The rubber market is still asleep. In the oil department, Phoenix furnished the only excitement of the week, owing to the bringing-in of the new well on the property. Otherwise matters are very quiet, with Mexican Eagles lower. Electric lighting issues have spurred, for no other reason than that they are in eager demand amongst investors. Shipping debentures are good, though the ordinary stocks attract no particular notice. The experts expect a reduction in the previously paid dividend of 7½ per cent. on Cunard shares. The gas market is better. Imperial Continental rose 10 points on the increase of 2 per cent. in the dividend. In the bank group, the strength of Indian shares is a conspicuous feature, but London banks are also better, and the insurance market goes quietly ahead. Stores shares are firming up again, Harrods, Whiteleys, and others of this sort being wanted. A jump in British Cellulose reflected vague optimism on the part of those who look for early reorganisation of the capital without the shareholders being called upon to pay any assessment. But the rise was not fully maintained. Tobacco shares are decidedly better. The textile market is steady, the preference and debenture stocks being hard to get by the many who want to buy them. Coats have noticeably spurred. The wireless group keeps good, and cable shares, showing no particular change, hold most of their strength.

The Kaffir market is disappointing, in that the public decline to take any notice of it. The Cape sends an occasional buying order which has the effect of putting up prices to some extent, but the effect is transitory. Tanganyikas and Zambesias went ahead amongst Rhodesians, where the tone generally is rather better than it has been of late. Indian mining shares are steady, Broken Hills further improved, on the defeat of the Labour Party at the polls in New South Wales. The buying is said to come mainly from Australia. Tin shares continue in the cold, and Mexicans are torpid.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital, £	Cash Subscription, £	First Payment, £	Further Liability, £

Australian Commonwealth Government 5 per Cent.

Loan.—Issue of £5,000,000 registered stock at 96 per cent. Interest is payable in London. The principal is repayable in London at par on June 1, 1945, the Government having the option of redemption, in whole or part, on or after June 1, 1935, on giving three months' notice. The proceeds of this loan, it is stated, will be used to meet expenditure on development works, and for the redemption of Treasury Bills. This stock, when the property of persons not domiciled in Australia, is not subject to any Australian taxation. The revenues of the Commonwealth of Australia alone are liable in respect of this issue, and the British Treasury Commissioners are not responsible. This is a trustee security. The yield on this stock works out at just over £5 4s, and significantly reflects the improvement not only in the money market, but the growth in popularity of sound Australian investments.

Rosehaugh (Ceylon) Tea Company, Limited.

Authorised capital £200,000, divided into shares of £1 each. The vendors are to have 100,000 shares allotted in part payment of the purchase consideration, and the remaining 100,000 shares are now offered at par. The company has been formed to acquire from Rosehaugh Company, Limited, certain specified Ceylon tea estates, with a total area of 4,726 acres, of which 2,961 acres have tea in bearing. The purchase-price has been fixed at £175,000, of which £75,000 is payable in cash and the balance in shares. This works out at about £45 10s per acre for the planted area. Certain areas are laid out with rubber, and in 1921 the rubber crop amounted to 172,062 lbs. The prospectus states that "in spite of the abnormally low price the rubber is being sold at a profit." For 1921 the tea crop amounted to 1,018,431 lbs, and independent reports on the conditions of estates are submitted. The issue, however, is one which will only appeal to those with a knowledge of local conditions.

Argan Company, Limited.—It is proposed to increase the capital of this company from £40,000 in 400,000 shares of 2s each, to £100,000 in 1,000,000 shares of 2s each, by the creation of 600,000 new shares of 2s each.

Electrical Distribution of Yorkshire, Limited.—We are informed that the Electrical Distribution of Yorkshire, Limited, is offering 47,799 ordinary shares of £1 each for subscription at par to its own shareholders, and those of the Yorkshire Electric Power Company, with which it is closely allied.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

THE NATIONAL BANK OF EGYPT.

RESULTS OF DIFFICULT YEAR'S TRADE.

CHAIRMAN'S REVIEW OF CONDITIONS IN EGYPT AND SUDAN.

IMPORTS AND EXPORTS.

The twenty-second annual general meeting of the shareholders of the National Bank of Egypt was held on March 21st at the head office of the bank in Cairo, Mr B. Hornsby, C.B.E. (the Governor), presiding.

The directors' report was as follows:—

The directors present to the shareholders the balance-sheet and profit and loss account for the year ending December 31, 1921.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for bad and doubtful debts, amounts to:

After deducting from this sum:

For directors' fees.....	£11,666 13 4
For current expenses	421,607 6 2
	433,273 19 6

There remains 558,556 0 4

In conformity with Article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital 120,000 0 0

After this statutory distribution there remains 438,556 0 4

Adding to this the balance brought forward from last year..... 172,364 2 1

The amount available is 610,920 2 5

The directors consider it prudent to allocate to special reserve for contingencies a sum of 100,000 0 0

Which leaves..... 510,920 2 5

From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb 330,000 0 0

And leave a balance to be carried forward of 180,920 2 5

The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share, an interim dividend of 8s having been paid on September 5, 1921, the balance remaining to be distributed will be £1 2s per share.

BALANCE-SHEET, DECEMBER 31, 1921.

REPORT OF THE AUDITORS.

We have examined the books of the National Bank of Egypt, and, in our opinion, the above balance-sheet is properly drawn up, so as to exhibit a true and correct view of the state of the bank's affairs as shown by the books. We have also verified the cash, notes, and securities at the head office and the Cairo and Alexandria branches, and have found the same correct. The London returns have been audited and certified by Messrs Deloitte, Plender, Griffiths, and Co., chartered accountants.

F. H. RUSSELL.

J. GIBSON HARRIS.

Cairo, February 27, 1922.

GOVERNOR'S SPEECH.

TRADE AND FINANCIAL CONDITIONS IN EGYPT AND THE SUDAN.

The Governor said: Gentlemen,—We have the honour to submit to you the balance-sheet and profit and loss account for the year 1921. The gross profit for the year is £991,829, from which expenses amounting to £433,273 fall to be deducted, leaving an available balance of £558,556. We propose to place a sum of £100,000 to the special reserve, to pay a dividend of 15 per cent., requiring £450,000, and to increase the carry forward by £8,000, bringing it up to £180,000.

Our gross profit of £991,829, as mentioned above, compares with £1,269,000 for the year 1920, thus showing a marked decrease. This decrease is fully accounted for by the general conditions of trade and finance which prevailed during the year, and also by the

shrinkage in the figures of our balance-sheet, the probability of which I foreshadowed last year. On the other hand, we have not been obliged to set aside anything for depreciation in the value of our securities, so that the net result of the year's working is roughly the same as in 1920.

Our balance-sheet shows a decrease, as compared with 1920, of about eight millions. Public deposits have fallen by about six million pounds, of which some three millions is due to the final liquidation of the accounts of the Cotton Control Commission, the balance being probably accounted for by the favourable opportunities of investment which have presented themselves to our customers, and also by the gradual dispersal of funds accumulated during the war.

CORDIAL RELATIONS WITH EGYPTIANS.

I am happy to state that the movement recently organised against the National Bank as being a foreign institution—which we are not—has had little effect. We have a valuable *clientèle* among the Egyptians, with whom we always have maintained the most cordial relations, and we believe that our friends appreciate the valuable services which the bank has at all times and in various circumstances rendered to the country.

VALUE OF SECURITIES.

Our holding of securities is less than a year ago, and reflects naturally the decrease in the amount of deposits. For the first time for many years it has not been necessary to draw on our profits to provide for depreciation in securities. A considerable rise in value set in towards the end of the year, and has since continued, so that, thanks to past provisions, we have the satisfaction of knowing that to-day our securities stand in our books at a figure much less than their value at present market prices. It is true that the satisfaction is somewhat tempered by the knowledge that the rise in prices is in great measure due to the abundance of money set free for investment by the depressed state of trade and commerce throughout the world.

Our advances on the whole show an increase, due chiefly to the fact that we have a larger sum outstanding on merchandise, chiefly cotton.

CLAIMS AGAINST AUSTRIAN AND GERMAN BANKS.

You will notice, at the foot of our balance-sheet, there has appeared during the last few years a remark to the effect that a substantial sum—roughly £560,000—under the heading of "Bankers' Accounts," stands to our credit with banks in Austria and Germany. These banks are large and respectable institutions, who acted as our correspondents, and with whom we had considerable balances at the outbreak of war. We had hoped that during the past year we should have obtained a decision regarding our claim to be paid these sums at the pre-war rate of exchange. Unfortunately, such has not been the case. We have taken the best legal opinion, and we are assured that our claim is well founded, but it seems probable that we shall be obliged to have recourse to justice to obtain what we believe to be our rights. In the meantime we have taken all possible measures to protect your interests, and I should like to add that your directors have not failed, during the past few years of exceptional prosperity, to provide against the possibility, however remote, of an unfavourable issue.

NOTE ISSUE.

The figures of the note issue provide as usual an interesting commentary on the course of the country's trade. The year began with the issue standing at about 40½ millions, from which figure it shrank, almost without interruption, till the end of August, when it touched about 30½ millions; from this point the autumn demand for currency for moving the cotton crop brought it up again by the early days of October to just under 40 millions. The activity in the cotton trade proving only to be temporary, the increase was not maintained, and at December 31st it stood at 37 millions. The latter figure compares with 40½ millions at the end of 1920, and 67 millions at the end of 1919, the comparison showing a striking fall of 30 millions in two years.

I explained last year the mechanism by which the issue was regulated. I will confine myself this year to saying that, thanks to this mechanism, the country has enjoyed during and since the war a stable rate of exchange, which to-day is everywhere recognised as an extremely important element in commerce.

I saw it stated recently that our notes are guaranteed by the British Government. This is not the case; the fact is that, by agreement with the Egyptian Government, the issue is covered by the deposit of British Treasury bills, chosen because they represent practically cash in the country with which the larger part of Egypt's foreign trade is conducted.

If our currency system were not sound, it would not have been possible to meet the demand for redemption of notes which, as I

have stated, has amounted to 30 millions over the past two years, without any difficulty whatever, and without any effect on exchange. Moreover, the interest on the British Treasury bills, held in the note issue, has provided an important source of revenue to the Egyptian Government.

I give as usual the figures showing the various denominations of which the issue was composed at the end of 1920 and 1921 respectively:—

DECEMBER 31, 1920.		£
Notes of P.T.	25	402,906

		37,000,000

IMPORTS AND EXPORTS.

The following figures, showing the totals of imports and exports for the past five years (the year is taken from September to August), reveal the very important change in the commercial situation of the country which the last financial year brought about. During the four preceding years the balance of trade was strongly in favour of Egypt, whereas in the past 12 months the imports exceeded the exports (including re-exports) by some 34 millions, subject to some adjustment for invisible exports and imports, which would probably slightly reduce this balance. But these figures need cause no alarm, as the country had accumulated large reserve of profit; the greater part of which still exists, and the general financial situation of the country is undoubtedly sound.

	Imports.	Exports.
	£	£
1916-17.....	30,095,371	44,587,950
1917-18.....	47,285,226	48,019,952
1918-19.....	44,334,720	48,829,951
1919-20.....	87,577,985	113,461,806
1920-21.....	71,725,677	37,600,260

COTTON.

The high prices which cotton reached in 1920 unfortunately gave rise to the impression that Egyptian cotton was so indispensable that there was no limit either to demand or to price. It is, therefore, natural that the fall in prices and the restricted demand should cause great discouragement to the cultivator.

Moreover, the flat rate tax of PT.35 per cantar, introduced when prices were at a considerably higher level, presses to-day with undue severity on the cotton grower, more particularly with regard to the lower qualities. In addition to this, railway rates have been doubled since 1914, and it is to be hoped that, despite the large revenue which accrues to the Government from these two sources, some relief may be looked for in the near future.

There is one object to which the attention of cotton cultivators could profitably be turned. I refer to the serious question of the poor return in cotton which land has given in recent years. It is disappointing that so little progress should so far have been made in combating the various insect pests which every year destroy a large quantity of cotton, and a continuous effort on the part of the landowner could not fail to do good.

The import trade has inevitably suffered from the decreased purchasing power of consumers, due to the lower prices obtaining in combating the various insect pests which every year destroy a large quantity of cotton, and a continuous effort on the part of the landowner could not fail to do good.

THE SUDAN.

The Sudan has shared to the full the prevailing depression in trade, as the following table of imports and exports during the last five years clearly shows:—

	Imports.	Exports.	Total.
	£	£	£
1917.....	3,102,117	3,729,181	6,831,924
1918.....	4,024,582	4,210,384	8,234,966
1919.....	4,805,745	3,029,569	7,835,314
1920.....	7,006,865	5,075,971	12,082,836
1921.....	5,806,070	2,318,533	8,124,603

Exports show a marked decline of nearly three millions, and are the lowest of any years of the period. There has been no falling off

in the country's production; the reduction is entirely due to the lessened demand and to reduced prices. This is obvious from the fact that, whereas in 1920 the exports of cotton were about 88,000 cantars, valued at £1,600,000, in 1921 the quantity exported was about 110,000 cantars, valued only at £380,000.

Imports, though lower than those of the two previous years, are still high in comparison with exports. This is due to the importation of material for the irrigation works which are in progress.

To carry out these works, the Sudan Government has raised a loan of £6,380,000, the interest of which is guaranteed by the British Government. This sum will not be sufficient, and negotiations are in course with the object of raising a further loan. When the work is completed, an area of 300,000 fedans will be available for cultivation in the Gezira, of which one-third will be put under cotton. The cultivation of this large area cannot fail to give a considerable impetus to trade, from which the whole country will benefit.

The directors who retire by rotation this year are the Hon. A. Mills and Mr. Léon Suarès, who submit themselves for re-election.

In conclusion, the directors wish to express their thanks to the sub-governor, the managers, and the staff for their services during the past year.

IDEAL SEWING MACHINE COMPANY, LIMITED. COMPANY'S SPLENDID DEVELOPMENT.

The second annual general meeting of the Ideal Sewing Machine Company, Limited, was held, on the 27th ultimo, at the Hotel Cecil, Strand, London, Mr. Harry Stone (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that they were meeting that day under very different conditions from those which obtained a year ago. At that time they were not producing machines, and he was unable to give the shareholders any information as to their selling qualities. He did not think any useful purpose would be served by relating at length the innumerable difficulties which had had to be overcome in order to enable the company to produce on a commercial scale and at a figure which would yield a satisfactory profit. Suffice it to say that they were now producing about 8,000 machines per month at a cost which would ensure a very substantial dividend to the shareholders. Since the balance-sheet was made up their record had been one of uninterrupted progress, and there could be no shadow of doubt that the company was now solidly entrenched as a sound business proposition, and one that would continue to develop and improve. The machine had reached a very high standard of finish and mechanical perfection, and was an efficient worker. It had the further distinction of being the first sewing machine of British manufacture throughout to be sold at a price within the reach of all classes, and notwithstanding the disadvantages under which they laboured in consequence of the rate of exchange, they were able to sell it successfully in competition with producers in other parts of the world.

IMPORTANT DEVELOPMENTS.

It was since the commencement of the company's present financial year in November last that the real and important developments of the company's business had to be noted. These were the allotment for cash of 270,000 shares held in reserve on the capitalisation basis of £70,000, and the increase of capital from £70,000 to £100,000 by the creation of 600,000 new shares, which were subscribed by the existing shareholders of the company. This last issue had enabled the company to purchase the Sandycombe Works at Kew Gardens, where the Ideal Sewing Machine had been made from the outset. It had made them masters in their own house; but it was in the economic sense that the acquisition of the factory was of the greatest importance to the company. Previously the profits of manufacture went into other pockets; now they found their way into the coffers of the company. The company had still at its disposal cash resources approximating £25,000. It owned and ran its own works, and it had entered upon what the directors hoped and believed would be a long era of prosperity.

LARGE SALES AT HOME AND ABROAD.

They had selling agents in a number of countries all over the world, the creation of this position being due very largely to the initiative displayed by the firms who had taken selling agencies, and particularly Messrs. Selfridge, Limited. That company acquired the first selling rights for London in October last, and they had achieved an enormous success with the sale of the machines, and were continuing to dispose of them in large quantities.

The directors were confidently looking forward to doing considerable business with the Australian Commonwealth, to which country they had shipped during the last month over 4,000 machines, and these could have been increased but for the fact that there was a question of the Australian Government imposing an import duty of £2 10s per machine. They had now heard

that the duty had been postponed until September 29th next, and they were hoping for a further postponement.

Orders for the machines were coming from all parts of the globe. Amongst the countries which had so far purchased machines were Australia, South Africa, East and West Africa, West Indies, Mexico, Cuba, the Federated Malay States, &c.

A company had been formed in the United States of America with an authorised capital of \$1,000,000 for the purpose of manufacturing and selling the Ideal Sewing Machine in that country, and a company with an authorised capital of \$730,000 had been registered in Canada for similar purposes. Negotiations were also pending for the granting of licences and the disposal of the foreign rights in other parts of the world.

The position as a whole was eminently satisfactory. Prospects could not be more encouraging, seeing that, in spite of the trade depression which reigned throughout, they were engaged in a profitable and steadily extending business. The board confidently anticipated that the time was not far distant when they would be able to reward the patience of the shareholders with a substantial dividend. At an exhibition to be held at Brussels, beginning on April 3rd, the Ideal Sewing Machine would again be on public view.

The report was unanimously adopted, and the appointment of Sir Henry Lionel Galway, K.C.M.G., D.S.O., Lt.-Col. D. Abercrombie and Mr. W. Lewis to seats on the board was unanimously confirmed.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED. SATISFACTORY YEAR—INCREASED PROFIT.

The twenty-fourth ordinary general meeting of the London and Thames Haven Oil Wharves, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad street, London.

Sir Owen Philipps, G.C.M.G., M.P. (the chairman), presided. The secretary (Mr. J. C. Conoley) having read the notice convening the meeting and the report of the auditors,

The Chairman moved the adoption of the report and accounts, and in the course of his remarks said:—Ladies and gentlemen, this company was founded nearly a quarter of a century ago, during almost the whole of which period I have had the honour to be chairman. Our business has been steadily developed and is now on an enormous scale compared with what it was 20, or even 10, years ago. The accounts show clearly that the financial position of the company is both sound and satisfactory. After making ample provision for depreciation, the profits available at the end of the year under review are £18,000 more than at the close of 1920. We recommend the payment of the same dividend as for the past three years—namely, 10 per cent. free of tax; again adding the sum of £25,000 to reserve, and placing £10,000 to our employees' benevolent and superannuation fund. We propose that the balance remaining of £61,202 be carried forward, as against £55,050 last year. It is very satisfactory that we have been able to build up our reserve fund to the substantial figure of £300,000, or only £57,500 less than our present paid-up capital. During the twelve months ended December, 1921, we landed over 1,000,000 tons of bulky products. This is an achievement of which all concerned may feel justly proud.

Our new crude oil refinery commenced work towards the end of last year and fulfils all our expectations. We are constructing an additional deep-water jetty to cope with the natural increase in our business. This will give us six jetties, four of them each being capable of accommodating the largest vessels in the trade. To meet the consequent expansion of our business our tankage is being increased concurrently with this development, and we are continually providing for the requirements of our clients in other directions.

INCREASE OF CAPITAL FORESHADOWED.

Our business has continued to develop and prosper. We can confidently look forward to the prospect of the future with the knowledge that we are in a strong position and thoroughly well equipped to meet all demands that may be made upon us.

In order to make provision for further expansion, it is possible we may, in the not distant future, contemplate making a new issue of capital. You may rest assured that, in the event of your board deciding on such a course, existing shareholders will have a favourable opportunity of participating.

The casual observer might feel surprised that our shares can only be purchased on the Stock Exchange at a price which yields about 4 per cent., or a less return than can be obtained by investment in Government securities. In my view the average market price at which shares of any company stand over a number of years is a fair indication of the soundness of the business and of the wisdom of the policy by which it is managed.

Mr. Alfred C. Adams seconded the resolution, which was carried unanimously.

THE SCOTTISH PROVIDENT INSTITUTION.

MUTUAL LIFE ASSURANCE.

SATISFACTORY FIGURES DESPITE TRADE DEPRESSION.

The eighty-fourth annual general meeting was held in Edinburgh, on Wednesday, the 29th ultimo, Mr. James Maxtone Graham, C.A., in the chair.

YEAR'S FIGURES.

The report for the year 1921 states that new proposals were received for amounts aggregating £3,125,267, in respect of which 3,389 policies were issued for £2,735,235, whereof £465,000 was re-assured with other offices. The total premium income for the year, including the purchase price on annuities, but after deducting sums paid for re-assurances, was £978,348. The total receipts, including net interest, amounted to £1,658,947. The accumulated funds amounted at December 31, 1921, to £17,500,920, showing an increase during the year of £419,807. The claims arising under 900 policies by the deaths of 675 members were £754,573, inclusive of bonus additions, and endowment assurances for £125,551 were also paid at maturity. The aggregate amount of the claims in the year, less re-assurances, was thus £880,124.

The Chairman, in moving the adoption of the report, said: The report now submitted for your approval covers a year, the salient features of which were widespread political unrest and severe commercial and agricultural depression. Under such conditions it would not have been surprising to find that the number of policies issued and the new business completed had reverted to the net new business completed had never in any year touched the two million level, and it is gratifying, indeed, to report to you that, with the exception of 1919 and 1920, the figures of 1921 have never before been attained. Proposals for amounts aggregating £3,125,000 were made to the institution, and of these £2,735,235 were accepted and completed by the issue of 3,389 policies. You will observe the large amount of £465,000 which was re-assured with other offices. Proposals in certain cases were received for amounts larger than the maximum which the directors deem prudent to retain at risk on any one life, and the excess was re-assured with other offices of, I need scarcely say, undoubted financial standing.

BOARD'S COMMISSION POLICY.

Had a policy of "big figures" irrespective of cost ever been countenanced by the directors, we might have reported to you to-day a volume of new business even larger than that actually recorded; but this would have involved our yielding to what we considered to be unreasonable demands in respect of introductory commission. We have invariably set our face against purchasing new business at an extravagant cost, and last year, as in previous years, we have had to see business otherwise desirable go past us, because we could not in the interests of our members concede what, in our opinion, were the unduly high terms of commission involved. In combating this evil—for it is nothing less—our members can render us most valuable assistance, and as to this I shall have a word to say later on.

That annuity business should have assumed relatively small proportions was only to be expected in view of the high yields which have been obtainable from the various issues of Government securities; but, as the yield falls, we shall, doubtless, see an increase in this form of business.

EXPENSE RATIO.

The expense ratio of 15.9 per cent. of the premium income is practically identical with that reported last year. When touching on this point, let me again remind you that the rates of premium charged by our office are specially low when compared with the average rates charged elsewhere, and, further, that, owing to the popularity of our limited payment system, premiums totalling a large amount run off each year.

The ratio of mortality experience—63 per cent.—is lower by 3 per cent. than the very low ratio reported last year.

That the transactions of the year should have resulted in the funds being increased by close upon £420,000, will be viewed, I am sure, as satisfactory.

INVESTMENTS.

While no great change has taken place in the character of our assets, it will, doubtless, interest you to notice that during the year we added to our holding of British Government securities, which you will see stand in the balance-sheet at £6,749,000—an increase, as compared with last year, of over £450,000. The Stock Exchange securities shown in the balance-sheet are now represented as to 55 per cent. by British Government issues, and, looking to the appreciation which has recently taken place in these,

I scarcely think that the action of the directors will arouse adverse criticism. The day will no doubt come when, as in the past, a policy of wider geographical distribution of our investments may be made with advantage; but I think you will agree that the unsettled conditions of other countries and the instability of exchanges have of late years pointed more to a contraction than to an expansion of foreign investments.

The rate of interest realised on the funds was £5 5s 8d per cent., subject to deduction of income tax, showing an increase of 2s 4d per cent. over the rate reported for the previous year.

ASSURANCE WITHOUT MEDICAL EXAMINATION.

I do not think that your directors have ever been behind hand in the prudent adaptation of our methods to modern requirements, and as an instance of this I would refer to our scheme of assurance without medical examination. We have had this scheme in operation for some years, but have refrained so far from advertising it widely, as we desired to extend it gradually and with caution. To establish the scheme satisfactorily we deemed it advisable to do a certain amount of instructional work amongst our representatives, lest its objects should be misconceived and it should be viewed as a means of facilitating the entrance of under-average lives. This, you will understand, is far from being the case. It is, however, undoubtedly the fact that there is a large number of eligible lives who think they are too busy to spare the time to be examined, or who are possessed by a not uncommon dread of facing a doctor, and yet would willingly take out a life policy if they felt that they would not be subjected to what they regard as the ordeal of a medical examination. We were not the first in the field with such a scheme, but we began cautiously. We limited the amount of the sum to be assured to, I think, £300 on any one life, and we placed certain restrictions in the policy. Some time ago we removed these restrictions and extended our limit to £500. We have now still further extended that limit to £1,000. We obtain, of course, a more detailed proposal form than is required when a medical examination is to be carried out, and I need hardly say that right is reserved to ask for an examination in all cases where we do not think it can prudently be dispensed with. All reasonable precautions are taken against the admission of undesirable lives, and our experience has been entirely satisfactory. I should say that the scheme is only eligible to lives not exceeding 50 years of age, and policies issued under it are confined to whole life and endowment assurances to be effected at full tabular rates. The scheme has proved popular, is proving increasingly so, and I am sure that it will be a source of much benefit to the institution.

Last autumn Mr. Richard Alexander, our cashier, celebrated his fiftieth year of loyal and devoted service in the head office of the institution, and the directors had pleasure in signalling this event by presenting him with a testimonial, and recording in the minutes their high appreciation of his services, which I am glad to say have not yet terminated. I trust it may be long before Mr. Alexander expresses a wish to retire.

CO-OPERATION OF MEMBERS.

In conclusion, let me say a special word to the members in regard to co-operation. Although 1921 has not been a year of record figures, I think it must be apparent to all who take an interest in the subject that the habit of life assurance is yearly becoming more firmly established, and that a policy has come to be regarded as an essential factor in the equipment of a man to be against the changes and chances of this mortal life. I would, therefore, urge upon our members that they should not rest content with having made, by means of life assurance, such provision as they may deem adequate for themselves and their dependants. They are not merely policy-holders, but partners in a mutual society conferring benefits which attach from the day a policy is opened, and extend far beyond the duration of the individual life. Our members have in the past, as I gladly acknowledge, and I greatly assisted us in the extension of our connections, and I think I may say without exaggeration that those who advocate the principles of mutual life assurance in this practical manner are performing a social service of the highest possible order.

And now I beg to move the adoption of the report, and I do so in full confidence that the record presented therein will meet with the entire approval of our members.

The motion for the adoption of the report was seconded by the Right Hon. Thomas Hutchinson, Lord Provost of Edinburgh, and carried unanimously.

THE SALT UNION, LIMITED.

STRONG CASH POSITION.

CHEAPER PRODUCTION AS TRADE STIMULANT.

The thirty-third annual general meeting of the shareholders of the Salt Union, Limited, was held at the Exchange Station Hotel, Liverpool, on the 29th ultimo, Mr George H. Cox, chairman of the company, presiding.

In moving the adoption of the annual report and statement of accounts, the Chairman referred to the period of profound anxiety, both political and economical, through which the country had passed. The aftermath of the coal strike was still with us. One had hoped its bitter lesson had been learnt; but labour refused to acknowledge that it could not be allowed to dictate to management on what terms the work should or could be done. For many reasons, the Chairman declared, labour was not competent to take command, and if it was permitted to do so would bring disaster alike upon itself and capital.

The accounts did not call for much comment. Ample provision had been made for all liabilities, including heavy amounts for taxation. Considering the difficulties which beset the company, he thought the results might be looked upon as quite satisfactory. Fortunately the directors had foreseen the shrinkage in demand in good time, and to meet it had eased off production accordingly. Therefore they had not been caught with heavy stocks at high prices, which had happened in the case of so many other industries. Consequently they had no large sums to write off for depreciation.

It should be borne in mind that these results were the fruits not merely of the salt trade, but were contributed to by the subsidiary companies, the manufacture and sales of chemicals, and investments.

With regard to investments, owing to the rise in gilt-edged securities, these were now worth more than the figures at which they appeared in the balance-sheet.

The large amount of cash at bankers and on deposit and current accounts, amounting to £548,770, being an increase of £68,343 on the previous year, was partly due to less capital being required in the business under the conditions obtaining, and partly to the big sums which had to be provided to meet the heavy taxation. There were not many companies which could show such a strong cash position. He might say that since the turn of the year a quarter of a million in round figures had been absorbed in payment of taxes and debenture interest.

COMPANY'S EXPORT TRADE.

The remarkable prosperity which the Salt Union enjoyed in 1920 was mainly due to its extensive and profitable export trade. This has suffered a great reduction during 1921. The total exports of British salt had declined by nearly 130,000 tons. Former customers abroad had supplied their wants by cheap purchases of German and Solar salt, in which directions the company had been subjected to severe competition.

The spread of the non-co-operative movement in India had made the marketing of the company's salt even more difficult than it would otherwise have been, and the general political unrest in that country was the cause of grave anxiety to those who had to conduct business there. Recent events indicated that the Government was now more awake to the necessity of adopting a stronger policy. Difficult as the marketing of salt had been in India, it would have been rendered more so by the proposed increase of 100 per cent. in duty, which was happily rejected by the Legislative Assembly.

The Chairman referred to a tour which Mr J. Parke Jackson had made in the interests of the company to India, Rangoon and Ceylon, and expressed the belief that the information thus obtained would be most valuable. Mr Jackson was about to undertake a similar errand to Canada, Australia, New Zealand, Japan and South Africa, with the object of extending the export of salt to those countries.

HOME TRADE COMPETITION AND PRICES.

In the home trade they had been exposed to fierce competition from foreign salt, the imports amounting to 22,000 tons of German and 57,000 of Solar salt—a total of 79,000 tons. The Salt Manufacturers' Association had been maintained despite many difficulties, thanks to the ability and tactfulness of its chairman, Mr Clark, and to the wisdom and good will displayed by the members generally. Hence price-cutting had been prevented on the part of individual firms; whilst in its corporate capacity the association had freely met the new conditions, and had put down prices from time to time in conformity with the lower costs of production.

LABOUR AND PRODUCTION COSTS.

The Chairman went on to remark that the main items in the cost of manufacturing salt were coal and labour, and adverting to the latter topic, he said the position of labour during 1921 was a marked contrast to what it occupied in 1920. There had

been during the past year a considerable decline, and simultaneously a vast amount of unemployment and short time occurred. The object lesson of the coal strike and the cessation of orders for export had at last brought home to the labour mind the stern economic facts with regard to the situation of the salt industry. The problem still to be solved, however, was how could we regain our own position in the export markets of the world? This, he was convinced, could only be accomplished by a further substantial lowering of the costs of production. A beginning had been made by reducing wages last April, and in the following August, in conjunction with their allies in the chemical trade, the company asked its men to agree to another reduction. The result was a strike in most of the chief salt districts, which lasted for about three weeks, when the men reluctantly agreed to accept the terms offered by the Chemical Employers' Federation. They were well advised to do so in view of the fact, which was patent to all, that no employment whatever could be found for large numbers of men, and that the only chance of increasing employment lay in cheapening costs. This was the first occasion on which a serious strike had occurred amongst the salt-makers of Cheshire, and it was sad to think that it required the resultant suffering to enable the men to realise the altered conditions.

It was encouraging to note that costs had been favourably affected by the somewhat lower average price at which coal was obtainable, and the decline in this respect would certainly assist in the efforts to regain former markets for salt.

MERSEY POWER COMPANY.

The Chairman passed on to refer to subsidiary companies, and dealing with the Mersey Power Company, he said the further capital required to complete this undertaking had been secured upon debentures which, it was gratifying to find, were applied for several times over, and now stood at a premium. The managers of that company were sanguine of being able to get their new station fully loaded up before the end of the year. Other subsidiary companies had done very well.

He desired to take the opportunity of tendering, both on the shareholders' behalf and that of the board, thanks to the managing directors, district managers, and all other officials and employees of the Union and its subsidiary companies, for the efficient service they had rendered in every department, and he regretted that the state of the accounts had not justified the bonus which in several recent years had been granted.

TRADE OUTLOOK—NEED FOR STATE ECONOMY.

Referring to the general outlook, the Chairman regretted he could not encourage the shareholders to expect any great improvement in the near future. Lessened costs and consequent lower selling prices were already helping the company to obtain more orders, and cheaper freights were also assisting, and there were signs of returning life in some of the other basic trades of the country. He was afraid, however, in most instances business was being done more for the sake of endeavouring to keep the trade and workpeople together rather than with any anticipation of profits being earned. It must never be forgotten that the world was still suffering from poverty caused by the late war, and a long period of time must elapse before there was any permanent recovery from its effects. Rigid economy in expenditure would have to be practised by all classes, even in regard to what had hitherto been deemed to be necessary. In this respect the Government had been a notable sinner, and the electorate ought to insist that all extravagances should be stopped and many projects abandoned which under other circumstances might be justified. The present load of taxation was completely crushing the life out of industry, preventing the accumulation of fresh capital, either for development or maintenance of existing undertakings, and destroying all incentive to the creation of new enterprises.

Mr F. W. Clark (deputy-chairman) seconded the motion to adopt the report and balance-sheet, and on being put to the meeting it was carried unanimously.

The Chairman proposed dividends for 1921 at the rate of 2s 4d per share on the preference shares and 1s per share on the ordinary shares, less income-tax.

Mr Clark seconded, and this also was carried.

The director to retire by rotation on this occasion was the chairman, and his re-election was proposed by Mr Clark, who recalled that Mr Cox joined the board in 1898, and was appointed chairman in 1908, having held the position continuously for 14 years. Mr Clark spoke in high terms of the chairman's services to the company.

Mr F. Hickson (a shareholder) seconded, and the motion was carried with acclamation, repeated later when a vote of thanks was tendered to the chairman.

Mr Cox, in acknowledgment, said, while he was feeling the burden of his long service, he would continue to do his utmost for the company.

MIDLAND ELECTRIC CORPORATION FOR POWER DISTRIBUTION, LIMITED.

SATISFACTORY RESULTS—1920 DIVIDEND MAINTAINED.

NEW ELECTRICITY AREAS SCHEME.

The 23rd ordinary general meeting of shareholders in the Midland Electric Corporation for Power Distribution, Limited, was held, on the 27th ultimo, at the Exchange Station Hotel, Liverpool, Mr James Taylor, J.P. (chairman of the company), presiding.

In moving the adoption of the report of the directors and the accounts for 1921, the Chairman said last year when he had the pleasure of addressing the shareholders he was able to state that, notwithstanding many troubles, the profit for the year 1920 was the best in the company's history. This year it was not so good; at the same time he thought it would be very satisfactory to know that the profit amounted to £105,857, against last year £109,419—a reduction of only £3,562. He thought it only right to draw attention to the fact that the gross revenue from current sold was down about £51,000, but against this they had earned in interest on cash in hand £15,600, the one being gross, the other net.

To the net profit of £105,857 they had to add the balance brought forward from last year, which—after deducting the E.P.D. paid—amounted to £18,517, made a total of £124,375 to be dealt with, which, as set out in the directors' report, they proposed to allocate as stated.

Those items made a sum of £76,971, leaving a balance of £47,404.

RESERVES INCREASED.

Turning to the liabilities side of the general balance-sheet, account No. 6, it would be seen that the reserve account had been increased from £20,000 to £45,000. The addition was in respect of the usual item of £5,000 which was being provided in each year, and £20,000 transferred from credit balances. This was in respect of an amount which had in previous years been set aside for sundry liabilities which might have had to be met, but which the directors and auditors were now satisfied would not be required.

DIVIDEND.

The directors now recommended that a further dividend on the ordinary shares of 6 per cent. be paid, which, with the interim dividend of 4 per cent., made a total of 10 per cent. for the year, leaving a balance of £30,604 to be carried forward to next year's account, and this, he was glad to say, was not now subject to E.P.D. He would like to point out that the ordinary dividend of 10 per cent. last year took £17,711, against £28,000 this year; this was owing to the new shares issued last year being now entitled to a full year's dividend.

On capital account, during the year they had spent £193,946, and this would have been heavier had the new plant ordered been delivered to date. Because of this they had earned, as previously mentioned, a considerable sum in interest on the capital provided to meet the expenditure.

PAST YEAR'S DIFFICULTIES.

The year 1920 was one of difficulties, but 1921 had been one of greater difficulties. First, early in the year they had a serious breakdown at the generating station, but, thanks to the forbearance of their customers and the hard work of the engineers, they kept running, but with a reduced load. Then came the coal strike; again they kept running, but at a very heavy cost, and supplied all the demands made upon them. Then came bad trade, the result of which all were still feeling. Taking these facts into consideration, he trusted the shareholders would consider the results satisfactory.

Owing to the extra cost of coal, labour, &c., in previous years they had to increase their charges; but whenever possible, owing to the fall in prices, they had given consumers the benefit. Naturally, they could not satisfy everybody, but he thought that if those who grumbled had to generate their own power, and took the costs into consideration they would find it cost them more than what they were now paying. He was afraid that, owing to heavy taxation, imperial and local, labour charges, &c., it would be a long time—if ever—before they could come back to pre-war rates, and every business man must recognise that this fact applied to all industries.

NEW ELECTRICITY AREAS.

It would be remembered that reference was made at the last annual meeting to the fact that the country was being divided up into district electricity areas. The Midlands had been divided into Eastern, North-West, and South-West. The first did not concern their company. An inquiry by the Commissioners into the delimitation of the South-West area was held in Birmingham some little time ago, when it was proposed to include a portion of the company's districts in that area. In the interests of the company it became necessary to oppose that scheme. This was done successfully, but at rather heavy cost in legal expenses. The inquiry into the scheme for the North-West area, in which the company would be included, was completed on February 28th, and the decision of the Commissioners would no doubt be received in due course.

Under that scheme it was proposed to set up a Joint Electricity Authority to control the supply of energy for the whole area, and it might be necessary for the company to transfer its generating station to that body, on terms and conditions to be agreed, but the distribution of supply energy would remain in the hands of the company. If this happened the company would be represented on that board. The directors were carefully watching the company's interests, and if, and when, the scheme took definite shape full particulars of the steps to be taken would be laid before the shareholders.

In conclusion, the chairman, on behalf of his co-directors and himself, cordially thanked the staff for their loyal service, and especially Mr Saies, the secretary, and Mr Parkinson, the engineer; no one could have worked harder in the interests of the company.

Sir Harmood Banner, M.P., seconded the motion, which was carried unanimously.

A resolution for the payment of dividend was then passed.

Mr James Taylor was unanimously re-appointed to the directorate, and Messrs Chalmers, Wade and Co. were re-elected auditors.

The proceedings closed with a vote of thanks to the chairman.

An extraordinary meeting followed, at which a resolution was passed for an alteration in the company's articles of association providing for additional remuneration to the directors.

BRITISH TRADE CORPORATION.

BOARD'S NEW PROPOSALS.

The fifth ordinary general meeting of the British Trade Corporation was held, on the 29th ultimo, at the Institute of Chartered Accountants, Moorgate place, London, Lord Faringdon (the governor) presiding.

The secretary (Mr G. de B. Brounlie, A.C.A.) read the notice and the auditors' report.

The Governor, in moving the adoption of the report and accounts, said: It was extremely disappointing to the directors that, having had so much hard work, they had to present, as a result of the lock-

up of funds in connection with various trading concerns, the position disclosed in the accounts now submitted. Referring to the liquid position, he pointed out that there were cash and readily realisable assets amounting to £1,288,321, or 90 per cent. of the current liabilities—a position which the directors considered entirely satisfactory. When, a year ago, the directors paid a small dividend, there was little indication that the position to-day would be so different from what it then was, but it was impossible to realise that the demoralisation would be so rapid.

The directors had given much anxious thought to the position, and, after consultation with some of the large shareholders, had decided to recommend a drastic treatment of the figures, writing down the existing capital by £1,000,000, and applying such reduction to the wiping off of the debit balance on profit and loss account and to the reduction of various assets and the creation of reserves. They would also propose the creation of a corresponding amount, namely, £1,000,000, of preferential capital—shares entitled to a fixed rate of interest of 6 per cent. per annum, tax free, which would be offered to existing shareholders.

In further remarks, he announced his approaching retirement from the governorship, a position which he took at the request of the Board of Trade, and in which he had served the corporation in an honorary capacity. He was convinced that his place should be taken by a younger man. He had served the shareholders to the best of his ability for a longer period than he had originally contemplated, and would have retired some time since had he not been anxious to render assistance during a critical and difficult time. He added that, in order to give effect to the proposed reduction and increase of capital, it would be necessary to hold special meetings at a later date. They were unable to submit resolutions on the present occasion, as a preliminary was the obtaining of a supplemental charter, and they had only just heard that this had been granted.

The resolution was carried unanimously.

Lord Faringdon, in reply to requests that he should retain the governorship, promised that he would remain for a short time until his successor was appointed, but said that he would not be able to continue for very long.

BRITISH ALUMINIUM COMPANY, LIMITED. CONDITIONS IN THE INDUSTRY.

The ordinary general meeting of the British Aluminium Company, Limited, was held, on the 31st ult., at Winchester House, London, Mr A. W. Tait, C.B.E., chairman of the company, presiding.

The secretary (Mr G. W. Jeffery, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the net profit for the year was £221,506, as compared with £428,157 in 1920, and the trading profit was £183,041, against £373,779. This substantial decrease, while very disappointing, was not unexpected. The trading for 1920 was a record for the company and the industry, but at the last annual meeting he had said that a sudden falling off in demand had become evident in August of that year, due to the collapse, all over the world, of the motor car industry, which was a very large consumer of the metal. He had also mentioned then a considerable falling off in other channels of trade at home and abroad. This depression assumed serious proportions about the end of the year, and continued with increasing severity throughout 1921. The result was an over-production of metal. They had closed two aluminium plants and one alumina plant, and reduced production at the works in the early part of the year, these drastic steps being necessary to prevent accumulation of stocks at high prices and consequent locking up of resources. So far there had been no great improvement in the position, and the aluminium works in Norway were still closed down, although the output at the works in Scotland had been somewhat increased. He could not see how they could expect business to show definite improvement until there was a more or less general return to normal trading conditions.

Owing to competition, the price of the metal had fallen substantially, and was now practically on the pre-war basis. There was reason, therefore, to hope that the industry would recover fairly quickly should trade generally improve.

Costs were abnormal during the year through the falling off in production, and the closing down of certain works. They were increased also by the coal strike, which paralysed industry when there were some signs of improvement. Labour rates reached their high point last spring, but certain reductions had since been made, through the decrease in the cost of living. He believed there would be further decreases in materials and labour. The Lochaber Water Power Scheme had received the Royal Assent on July 28, 1921. The Act granted to a statutory company (which would be controlled by the British Aluminium Company) one of the largest water powers in the United Kingdom.

The year's profit was £221,507, and £19,534 was brought forward. The dividend on the ordinary shares was 5 per cent., leaving £14,791 to be carried forward. The report and accounts were then adopted.

At the annual general meeting held on March 20, 1922, the directors resolved to allocate the net profit as follows:—To reserve fund, 10,000,000 lire; to directors, 1,582,456.05 lire; to shareholders as dividend, 3,422,725.50 lire.

9 per cent., 27,000,000 lire; to balance carried forward, 3,422,725.50 lire; total, 42,005,181.55 lire.

MISCELLANEOUS.

BEYER, PEACOCK, AND CO.—4½ per Cent. Debenture Stock £300,000, redeemable January 1, 1952.—The directors have been asked to consider the modification of the sinking

giving consideration to a scheme for the modification of the sinking fund arrangements involving the surrender of the Sun Life policy, and submitting it to a meeting of the debenture stockholders.

are asking their views thereon. Briefly the scheme is as follows:—
To surrender the Sun Life Assurance sinking fund policy, which on

January 1, 1923, will yield £69,582. To cancel the debenture stock held by the company, totalling £41,915. To offer to the remaining debenture stockholders (representing £258,085 debenture stock) to

purchase out of the proceeds of the policy one-third of their holdings at £80, which will cost £68,822; these debentures will also be can-

called. To raise the rate of interest payable on the remaining two-thirds of the stock—viz., £172,057—from $4\frac{1}{2}$ per cent. to 5 per cent. per annum. The company to undertake to purchase and cancel a

per annum. The company to undertake to pay a minimum of debenture stock to the value of £5,000 cash per annum, beginning with the year 1923, either by purchase in the open market or by tender, the company having the right in any year

or by tender, but subject to the company having the right in any year in which they are unable to purchase the requisite amount of stock at or below par value to invest any balance not disposed of in trustee

securities in the names of the debenture stock trustees, the interest thereon to belong to and be paid to the company. The company

undertake to redeem the whole of the debenture stock outstanding on or before January 1, 1952.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Better weather prevailed during the week, and farmers, were able to proceed with sowings of barley and oats, while the usual restricted acreage is being laid under spring wheat. In some districts potato planting has been interrupted by adverse climatic conditions. Favourable reports continue to be received respecting autumn-sown crops. English wheat in quieter request and rates weak, best milling samples ruling at 52s to 56s, and inferior down to 48s per 504 lbs, free on rail. Imported descriptions were also dealt in quietly, and rates further eased. No. 1 Northern Manitoba quoted 64s, No. 3 ditto 56s 6d, Australian 58s 6d, and Argentine 55s to 56s, all ex ship to arrive per 480 lbs. A dull state of affairs prevailed in the floating and forward cargo market, buyers being very reserved in face of lower foreign advices and fewer offers of Argentine qualities, while further concessions in prices failed to stimulate trade. Steamers of Rosafé 63½ lbs, April shipment, sold 55s 3d, and part cargoes April-May shipment at 54s 3d per 480 lbs. With additional moisture in the United States winter belt, crop prospects are more promising. Latest advices from Australia and the Argentine point to disappointing yields in some districts, but Indian news continues favourable. Flour dull, and prices were reduced by 1s per sack for both home-milled and imported descriptions. London standard straight run quoted 50s, town households 48s, patents 53s, all-English straight run 47s per sack, delivered London area. English country straight run 42s to 44s per sack, free on rail at London stations. Of imported, Manitoba export patents quoted 48s, ditto straights 45s, Minneapolis first patents 48s, and Australian 46s per 280 lbs, ex store. On c.i.f. terms business was on a limited scale, and Kansas top patents, April seaboard, quoted 48s to 50s, Manitoba export patents 47s 6d, ditto straights 44s 6d, and Australian 42s 6d per 280 lbs. Millers'

offals quiet and easier. Broad bran quoted £8 5s, ordinary ditto £7 5s to £7 10s, middlings £7 10s per ton, ex mill, in bags. Of imported, fancy Plate middlings quoted £9, and Plate pollards £7 per ton, landed terms. Maize quiet, and again easier for most qualities. Yellow La Plata, ex ship, quoted 40s 6d, ditto landed 42s, yellow round African 38s, and American mixed 33s 6d, all landed terms per 480 lbs. The cargo market remained inactive, and rates quite nominal in the absence of buying interest. Parcels were dealt in quietly, prices being irregular and easier for new crop La Plata. South African maize meal, white, quoted £7 10s ex ship, and £7 15s ton landed. Barley remains dull. English malting ranges from 42s to 65s, and feeding sorts 39s to 42s, as to sample per 48 lbs. Of imported, Californian quoted 41s to 48s, Australian Chevalier 50s to 53s, Chilean ditto 48s to 56s per 48 lbs. Morocco 33s. 6d, No. 3 Canada Western 36s, No. 4 ditto 35s, all per 400 lbs, landed terms. Forward positions were scarcely dealt in, and prices largely nominal. Oats very quiet, and values moved in a downward direction. English ranges from 30s to 35s per 336 lbs. Of imported, Plate f.a.q. marked a sharp decline at 26s, but clipped steadily held at 28s 6d, No. 2 Canada Western quoted 32s and No. 2 Canada feed 28s 6d, with New Zealand held for 35s to 40s per 320 lbs, landed terms. Oatmeal quiet and easier. London made, all cuts, quoted £19, rolled oats £19, flaked oats £21, ordinary Scottish oatmeal £18 10s to £19 10s, and American ditto £18 to £18 10s, all cuts, per ton. English beans move off slowly. Springs quoted 57s to 65s, and new winters 50s to 53s per 532 lbs. Of imported, Chinese horse beans £10 10s to £11 10s per ton. English peas quietly steady. Maples quoted 85s to 93s, Duns 60s to 68s, and small blues 85s to 100s per 504 lbs. Of imported, Tasmanian best 23s to 25s, New Zealand blues 20s to 24s, Dutch blue 23s to 30s, and Japanese hand picked 44s to 46s per cwt, ex store. English rye quoted 44s to 48s per 504 lbs, free on rail. Lentils quiet. No. 1 split 29s to 30s, No. 2 ditto also Egyptian 23s 6d to 24s 6d per 100 lbs. Homeward grain chartering continues on a limited scale, and rates showed an easier tendency in most directions. The River Plate section remains at a standstill, merchants not being disposed to entertain tonnage offers in view of the dullness prevailing in the grain trade. Rates consequently are quite nominal on the basis of 25s from upper ports, prompt loading to United Kingdom-Continent. North America is also dull and easy, with charterers indicating 4s per qr Range to United Kingdom, 13 cents per 100 lbs to Continent, 23 cents Denmark-Sweden, 18 cents Bilbao, while 30 cents was paid on account of the Russian Relief Committee to Riga-Reval. There is some inquiry from the Gulf of Mexico at 18 cents Antwerp-Hamburg, and 21 cents to Marseilles. Montreal to United Kingdom-Continent, August, quotes 4s per qr, while 42s 6d can be worked for wheat from the North Pacific to United Kingdom. India quiet, and Bombay on dead weight nominally 23s home. There is a steady demand for rice tonnage and 28s 9d quoted from Burma, with 32s for similar cargoes from Saigon to United Kingdom option of meal to Germany at 40s ton. Madras coast kernels paid 30s, April, to Marseilles, and 32s Marseilles-Hamburg range. The Danube begins to display interest in grain vessels, and 19s is indicated to Antwerp-Rotterdam, April 15th loading. Time charter steady, and 5s paid for one States-River Plate round, delivery United States.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 30, 1922, is as follows:—Pig-iron: The demand for foundry pig-iron is very quiet. There are only six furnaces making this quality in the Cleveland district, and their output is barely absorbed. Hematite has been a better market, but is now easier. Prices are as follows:—No. 3 Cleveland G.M.B., 90s per ton; East Coast hematite, mixed No. 3 Cleveland G.M.B., 90s per ton; Manufactured iron and steel: Any possible improvement in the steel trade has been counteracted by the engineers' lock-out. Consumers have withdrawn all inquiries.

The Wealth of the Indies

was embarked in treasure galleons, forcefully manned and armed, for conveyance to Spain; but not infrequently it fell into the hands of the freebooters of the sea.

The robbers were more active and adventurous than those who guarded the treasure. The same thing often happens to-day. Our up-to-date burglar has no lack of enterprise and ingenuity, and science has equipped him with wonderful tools.

To produce a safe capable of successfully combating these ever increasing risks has occupied The Chatwood Safe Co. for nearly 70 years. How well the ingenuity of the inventor, the science of chemist, the finesse of the locksmith and the finest British Steel combined have achieved this object, is shown in The Chatwood Safe Book.

THE CHATWOOD SAFE

THE NEW CHATWOOD SAFE BOOK contains 58 pages, many in full colour, and includes the fullest particulars of each model of THE CHATWOOD SAFE and STRONG ROOM. A postcard brings a copy gratis.

THE CHATWOOD SAFE CO., LIMITED

BANKERS' ENGINEERS
Head Offices and Works: BOLTON, ENGLAND.

Branches: LONDON, 56, Gracechurch Street, E.C.4.
MANCHESTER, Royal Exchange, E.C.
GLASGOW, 19, Greenlodge Terrace, Greenhead.

Steel ship plates (home), £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: A small business is being done in imported ore, but for prompt cargoes. Best Bilbao Rubio ore, nominally 27s per ton.

Our Glasgow correspondent (writing on Thursday) says:—The non-settlement of the engineering-shipbuilding dispute has thrown business here in iron and steel well nigh into chaos. Down to the last moment, on Tuesday, say, it was hoped and believed that parties would come to some sort of working agreement, and, in a way, things carried on in the ordinary, but yesterday, when the worst was realised, active operations were at once suspended, and to-day they are practically wholly stopped, unless in several industrial connections, small ones, wherein the larger influences of the occasion do not come directly into play. The result is most unfortunate, for since this day week, when optimism in a measure held the field, there has been a distinct improving development in the demand—that on both home and export accounts—for material. India, Japan, and Australia have all been in the market for steel bars, plates, especially black sheets, and a variety of sections, to an extent, advised by several firms, that has not been experienced for a long time past. Now all this and other prospects have gone by the board, and not only so, but already arrangements are in course for transferring a large total of constructive ship work that is regarded as essential for execution from the Clyde to the Continent. The shut-down promises to be very general. Within a few days it is calculated that only 10 blast furnaces will be blowing on pig-iron in the North, and not more than a moiety of the mills in existence will be running. Neither buyers nor sellers, producers nor consumers, are prepared to proceed further in the circumstances, and willy-nilly, they must accept the situation. More favourable reports from the Continent and elsewhere count for nothing at the moment. It need hardly be added that prices are unnamed and unnameable; any little stock in hand is passing (for shipment) at negotiation figures, round where they have been of late, with naturally a tendency to stiffness. The demoralisation has struck the coal trade very seriously. In all the fields pits are being closed down—some permanently—and the railway lines running up and down the country are getting blocked by empty wagons. Altogether, a position is being created that gives cause for keen concern and anxiety, and from the evolution of which the one alternative remains, as before—to "wait and see."

Our Sheffield correspondent writes:—The extension of the engineers' lock-out to numerous other unions may bring to a standstill a very large portion of the steel trade, providing that all the firms employing members of the union participate in the employers' movement. At present the firms not included in the Engineering Employers' Association are working, and Sheffield is producing rather less than 30 per cent. of its capacity. The labour troubles have brought to an end buying of raw materials. With the outlook so uncertain, no manufacturer will risk having stock on his hands. Apart from the lock-out, signs of revival of trade are still to be seen, but now it is quite limited to export markets, chiefly in the Far East, where considerable tonnages of cheap steel are going. There is practically no demand for tool steel, although small orders continue to be booked for ordinary crucible quality. A new type of steel for permanent magnets has just been evolved, which is alloyed with about 15 per cent. cobalt instead of 5 per cent. tungsten. This change of composition enables a magnet of half the usual size to be used, and a corresponding reduction in the dimensions of magnetos and telephone instruments. The lighter trades of the city have undergone further shrinkage, and some of the large cutlery and plate houses are closing whole departments. Business is terribly flat in files and engineers' small tools. The number of unemployed entitled to relief has increased by 2,000 to a total of 51,000, the largest recorded since the coal strike last year. About 12,000 in addition are out of work as a result of the lock-out. The demand for best grades of house coal continues strong, and deliveries are getting in arrears. High prices are being secured. Industrials are competing in the market with second qualities, and there is some price-cutting. The steam coal market is quiet, and the working of the pits is being reduced. Export sales are also falling off somewhat. As a result, stocks are accumulating. Gas fuels are not moving off so freely as of late. The slack market is very irregular, but if the pits continue working short time, a firmer tendency is certain to manifest itself. There is a certain amount of selling pressure in the lower grades of quality.

CUMBERLAND IRON.

Any hopes of a real revival in the Cumberland and North Lancashire hematite pig-iron trade have been checked by the trouble in the engineering and shipbuilding industries, and business,

which at the beginning of the month was increasing steadily in volume, has fallen off until it has become almost non-existent. The two additional furnaces in the Furness district which were to have been relighted are still out of action, but otherwise the situation as regards actual production is the same as it was four weeks ago, and makers' books are sufficiently well filled to warrant the twelve furnaces blowing remaining in operation for some little time to come. In spite of the fact that deliveries are being stocked here and there, there is quite a considerable amount of iron being forwarded to the Midlands and to Scotland, and parcels are occasionally shipped to the Continent, but the greater part of the output is being absorbed by the local steelworks, and as regards ordinary iron, at all events, needs are not likely to be decreased during the spring. No movement has taken place in prices, Bessemer mixed numbers being quoted at the old figure of £4 18s 6d per ton at works, while ferro-manganese, for which there is a sharp American demand, commands about £14 10s per ton. The condition of the steel industry is unchanged, and no immediate reduction of production is apprehended, as makers have six or eight weeks' work on rails, fish plates, steel sleepers, axles, and tyres to execute. Some part of the output is being shipped overseas, mostly for the South American republics and for the Near East. There are such large stocks still of foreign ore that few of the mines in the Cumberland and Furness iron ore fields are raising full outputs, and it is only for high-class ores that there is any really satisfactory demand. The coal trade after three weeks of feverish activity is quietening down again. The disorders in Ireland having suddenly curtailed requirements, there is some fear that most of the collieries may within a week or two be compelled to work short time again. One satisfactory feature of the position is that no difficulty is being experienced in getting rid of the smalls, all the coking plants save one drawing full loads, and being able to dispose of their production to the local furnaces on ordinary iron. The entire make of benzol and sulphate of ammonia is being readily disposed of. East Coast coke supplies this week are 7,500 tons.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A little irregularity has developed in prices at the colonial wool sales, which close in London to-day, but it does not appear to have had much effect on this market. Indeed, prices on 'Change to-day are quite firm at late rates, and topmakers are fully aware of the strong position in which they are placed by the inadequate output of tops. If the combing operatives would agree to work overtime, as recommended by the Industrial Council, it might be possible to find cheaper tops, but as things are, output is booked for months ahead, and many who have bought wool are unable to get it through the combs. Topmakers could book plenty of orders for delivery right up to next September were they so inclined, but the majority decline to commit themselves so far ahead, there being a certain amount of risk at current values. Spinners have taken some fairly good orders during the past fortnight, but the higher quotations now ruling in sympathy with the advances in tops are checking business. A few manufacturers are in the fortunate position of being able to afford to-day's prices, but the majority cannot do business on this basis. There is, for example, an encouraging

expansion in the demand for the finest dress goods and fancy worsted suits, but this does not help the firms who are more interested in what used to be called the "bread-and-butter" lines. However, there is a somewhat better feeling generally, and if wool values can be maintained during the next few months holders of stocks of pieces should be able to dispose of them gradually without suffering the heartbreaking losses which have been so common in recent months. As regards home-grown wools, there is just a moderate demand for most sorts, but prices are firm. Stocks of the finer descriptions are not large, but some big weights of the lower qualities, and particularly deep lustres, are being held in the country.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The second series of London sales for the current year closed on Thursday, and when viewed from any standpoint they must be regarded as exceedingly good. After last Monday night many thought there was evidence of an ease, the sale being a little irregular. This was largely due to many Bradford buyers having gone home for the week-end, but they returned for the Tuesday's sale, and on that day practically all the irregularity disappeared, succeeding auctions being characterised by keen competition. Taking a general view of the market, values may be quoted 5 per cent. dearer all round than at the close of last series, with here and there a little more advance in evidence. This is a fine performance, and the range of values paid shows that merinos particularly are selling at big figures. As this is being written, the quantity absorbed by the Continent cannot be stated, but it will be surprising if their purchases are not found to be the largest for several series, the slump in the value of the German mark apparently having had little or no effect upon the extent of the purchases on German account. America has also taken some nice lines of the best and lightest-conditioned merinos, and, from all accounts, these wools are very urgently needed by American mills. There is no sign of a permanent tariff being introduced in the United States, Western State wool growers, who, through their Senators, hold the key to the position, declaring that there is to be no permanent tariff until their new clip has been marketed. Any unbiased person who knows the trade can see that the American woollen and worsted industries are feeling the need of an adequate supply of Australian merinos and New Zealand crossbreds, and a general closing down of textile mills in the United States is threatened if trade does not improve. This seems strange in view of the gradually improving textile conditions throughout England and the Continent, but to talk of imposing an import duty of 33 cents clean basis on wool is little less than suicidal. A greater handicap to the American textile industry could hardly be conceived, and the ultimate result can only be that the tariff will have to be revised afresh, in response to strong opposition from the public against the high cost of wearing apparel.

The close of the London sales, with values generally higher than at the close of the previous auctions, shows conclusively the sound standing of the raw material, and we think the outlook for trade is better than at any time since July, 1920. There is certainly much encouragement to be derived from an observation of the position in consuming centres, the only serious drawback being the inability of manufacturers to book orders on to-day's market prices for wool. The latter is a rather disappointing circumstance in view of the liquidation of stocks of dear cloths which has recently taken place, but wholesale fabric buyers, both at home and abroad, will be compelled sooner or later to pay prices which are in harmony with present conversion costs. There could be no sounder proof of returning prosperity in the trade than the application of 50 firms of worsted spinners and four manufacturers for an extension of permission to work protected persons overtime for a maximum of six hours per week until the end of June. Commission wool combers could follow a similar course but for the attitude of about two union leaders. Big weights of wool are being sent abroad to comb on commission, and French, Belgian, and German tops are being imported to supply spinners' needs.

MANCHESTER, March 30.

We continue to experience a more active market. Inquiry in most sections has been on a large scale. Certain cloth shippers to India have bought freely in grey shirtings and lighter fabrics, and manufacturers of such goods are now more favourably situated. Healthier clearances are taking place in the bazaars abroad. An increased demand has been met with for China in standard makes and fancies, and more orders have been given out. The Near Eastern outlets have not given much support, but there has been a welcome improvement in the offtake for South America. Goods continue to be sold fairly freely for European countries. Manufacturers tend to strengthen their position, and still more looms are being got to work in the chief weaving districts. Prices in American yarns have been firmer, and an encouraging business has been done. Twists are stronger than wets. Export yarns have been fairly active for India and the Continent. A steady business has been put through in Egyptian spinnings at firmer prices.

EMPLOYER'S LIABILITY INSURANCE.

Policies are issued by the "British Dominions" at most attractive rates. Each proposal is considered on its merits and special allowances in respect of premiums are made to employers who take precautions to ensure the safety of their employees. An enquiry involves no obligation; it may result in a considerable saving, more generous cover, and greater security.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE CO., LTD.,
HEAD OFFICE:—British Dominions House,
ROYAL EXCHANGE AVE., LONDON, E.C.3.
ASSETS EXCEED £19,000,000.

(BY OUR OWN CORRESPONDENT.)

The shoe trade is far from normal, but makers of ladies' turn shoes seem busy enough. The export trade seems a shade better, and it was good to hear Mr A. E. Marlow, the Coalition candidate for Leicester, state that he was doing quite a big trade with the United States, formerly our great competitors.

VEGETABLE OILS AND OILSEEDS

Crude Egyptian cotton oil has continued in fair request, but prices of both crude and refined are somewhat lower in sympathy with the fall in seed. Black Egyptian is now obtainable at £11 15s or under, and Bombay £9, with buyers bidding £8 10s. Crude

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue note in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Deposits are received for fixed periods on terms which may be ascertained on application.

Linseed cakes have been reduced a further 20s per ton, but this does not stimulate business. Cottons are easy, and a disappointing trade.

OVERSEAS PRODUCE MARKETS.

Mincing Lane. Friday, March 31.

SUGAR.—A fair demand was again experienced for spot lots of refined, chiefly British, as imported descriptions remain very scarce. Messrs Tate and Lyle's cubes, 52s 9d to 53s 9d; crushed, 50s 6d; granulated, 48s 6d to 49s; pieces, 36s 6d to 43s 6d; yellow crystals, 43s; castor, 50s 6d to 51s. Granulated, April, 48s 6d; May-June, 48s. Crystallised West India, sold, 42s to 44s, as to sample. American granulated, spot, changed hands at 47s 9d; ditto March, sold, 20s 3d to 20s 4½d; April-May, 20s 3d to 20s 4½d, c.f. and i, London. White Mauritius, spot, sold, 44s 6d to 45s as to quality. White Brazilian, April steamer, held for 18s 6d, c.f. and i terms, London. Dutch sugars for shipment, also Czech-Slovakian largely nominal. Terminal market rather irregular. White, May, sold, 19s 7½d to 19s 6d, and August, 19s 9d to 19s 10½d and 19s 7½d. Cuban stocks 930,000 tons, against 750,500 same time last year. Liquid Glucose, spot, 26s.

COFFEE.—A fair demand was again experienced for all the finer qualities, and steady prices were secured, but in the case of inferior sorts ea rier rates had to be accepted in order to induce business. Of East India, some fine bold Mysore, sold, 140s to 148s 6d; good to fine bold Costa Rica, 128s to 144s 6d. Futures ruled quietly steady. May, sold, 55s; July, 55s.

COCOA.—Market quiet and rather featureless, no auctions being held this week. West India descriptions remain in small supply. Butter, is 8½d per lb.

TEA.—About 44,000 packages Indian were catalogued in auction during the week, and while all the better qualities met with sustained support at a steady range, common denoted weakness. Some invoices of autumnal flavour fetched full values. 17,260 packages Ceylon were well competed for regarding parcels possessing flavour, and the finer kinds ruled distinctly dearer. Plain liquoring broken, however, tended in buyers' favour.

RICE.—Market steady on spot, and firm forward on stimulating cable advices from the other side. Two Stars Rangoon, spot, 13s 9d to 14s as to quantity. Ditto, afloat, Hamburg, sold, 13s 9d; and April-May, 13s 9d, c.f. and i. terms. Broken kinds quietly steady. Bran steady. Rangoon beans, spot, sold, 7s 6d. Madagascari butter beans, on spot, old, 12s to 14s; new, 18s. Japanese peas, on spot, 45s.

SPICE.—Pepper steady, but general trade quiet. Fair black Singapore, spot, sold, 3½d; ditto April-June, steamer, 3½d; Aleppy, spot, quoted 4½d; Tellicherry, 4½d; White Singapore, spot, 7½d; Mumtok, ditto, 7½d; ditto, April-June, sold, 7½d. Cloves dull. Fair Zanzibar, spot, 13½d; forward, 11d, c.f. and i. terms. Pimento, spot, 2½d. Tapioca steady, quiet. Fair flake, spot, sold, 1½d per lb; fair Penang seed tapioca, spot, fair, sold, 17s 3d. Sago flour rather unsettled. March-May, sold, 13s 9d. Desiccated coconut quieter this week. Spot

parcels found buyers at 43s 6d and March-April, 42s 6d. Ginger quiet. **FRUIT.**—Currants steady, with moderate transactions. Pyrgos quoted 54s to 55s; Amalia, 56s to 58s; Vostizza, 65s to 75s. Sultanas quietly steady. In auction, some 206 tons Valencia raisins offered met a quiet demand, and about 87 tons sold at about late prices. Half-boxes, 45s to 57s; quarters, 45s to 78s; seedless, 45s to 71s. Dates fully steady.

JUTE.—Actual dealings were confined to a narrow compass, though prices were firm. First grade, April-May, Continent, sold, £25 10s to £26. Lightning grade, ditto, £21 10s to £22. Hessians and twills held for steady prices, but buyers were not much in evidence.

G grade, April-June, sold, £35 5s; streaky threes, ditto, held for £35 10s. Other qualities were more or less nominal. New Zealand quite neglected. High point, fair, spot, offers at £32. African sisal dull. No 1 G.E.A. April-June, sellers, £35 10s.

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System

COPRA.—Market again dull and prices easier, though sellers were not unduly pressing. F.M.S. Straits, February-April, Rotterdam, sold, £25 3s 9d; March-May, £25 2s 6d; April-June, £25 to £25 2s 6d. F.M. Straits, March-May, Rotterdam, done, £24 10s to £24 5s; Ceylon, April-June, London, sold, £26 2s 6d; South Sea to Continent, April-June, £24 7s 6d; Cebu, ditto, quoted, £24 12s 6d. Palm kernels steady, quiet, April-June to Liverpool, sold, £18 15s.

MENTHOL.—Spot, 25s; forward, 23s. Japanese peppermint oil, spot, 5s; forward, 4s 9d; aniseed, spot, 1s 11d; slab camphor, spot, 3s 6d; crude, 3s 1d per lb. Japanese wax, spot, 97s 6d per cwt.

RUBBER.—Market quiet, and mostly featureless during the week. Standard crepe and sheet, spot, sold, 8d to 7½d and 8d; May-June, 8½d to 8½d and 8½d; July-September, 8½d to 8½d and 8½d; October-December, 9½d to 9d and 9½d. Fine hard Para, spot, 10½d; soft fine, 10½d; Caucho ball, 7½d.

EGG PRODUCTS.—Market steady, but trade ruled very quiet, on former terms.

OILS.—Linseed quiet and irregular. Spot, net, naked, 36s; April, 34s 9d; May-August, 34s 3d. Rape nominal. Crude, spot, 44s refined, 48s. Cotton easier. Crude Egyptian, 40s; Bombay nominal; common edible, 48s. Chinawood: Hankow, spot (barrels) 62s 6d; and shipment, 59s 6d. Coconut quiet. Ceylon, spot, 43s; March-April, 40s 6d; Cochin, ditto, 43s. Soya steady. Oriental, barrels, ditto, 37s 9d. Japan fish steady. March-April, cases, 21s. Cod steady. English, spot, 30s to 31s. Groundnuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 55s. Turpentine inactive and easier. American, spot, 66s 3d; April, 66s; May-June, 64s; July-December, 55s. Rosin quiet. American, grade B, 13s; F, 13s; G, 13s; WW, 19s. French, F/G, 13s; WW, 17s; extra pale, nominal. Petroleum quiet. American standard white, 18 44d; and water-white 15s 6d per gallon.

Oilseeds.—Lined quiet, and easier. Bold Bombay, afloat, £20 5s. Small Bombay, ditto, £19 5s. Calcutta, February-March, £19 5s; April-May, sold, £19 5s to £19. Plate, afloat, sold, £18 5s; February-March, £18 5s; April-May, sold, £18 7s 6d to £18 10s. Rapeseed firm. Toria, March-April, sold, £17 5s; April-May, £17 10s. Cotton seed easier. Egyptian black, March, £11 12s 6d; and white, sold, £11 7s 6d to £11 2s 6d. Bombay, March, £9. Gingly firm. Chinese, March-April, Continent, £24 5s. Castor, Bombay, March-April, £16 15s. Ground nuts firm. Coromandel, machine-dried, March-April, Hull, £23 to £23 10s; Continent, £23 to £23 10s; Chinese decorticated, f.a.q., February-March, Continent, £23 10s per ton.

METALS.—Tin continued an active market. After opening with an easier tendency, with dealings in cash until Tuesday at £142 10s. and three months' down to £141 15s. prices rallied during the middle of

the week, while these dates changed hands at £143 10s and £145 10s respectively. On Thursday rates declined. Cash changed hands at £144 to £143 5s; late May, £144 15s; and three months' at £145 10s to £144 15s. At Friday's session cash changed hands at £143 to £142 10s; late May, £143 15s; and three months' between £144 10s and £143 15s. English ingots £142 10s. Copper exhibited a firmer tone at the week's commencement. Standard cash sold at £58 to £58 2s 6d, and three months' chiefly at £59. A slight setback followed until last Wednesday, with business in cash down to £57 10s, and three months' £58 10s. A slight improvement characterised Thursday's movements. Standard cash changed hands at £58, and three months' at £58 15s. A quieter tone prevailed on Friday, late May being sold at £58 to £58 2s 6d, and three months' at £58 5s to £58 2s 6d, while finally registered at £58 7s 6d. Electros, £63 10s to £65 10s; best selected, £62 to £64; strong sheets, £60; wire bars, £65 5s to £65 10s per ton. Lead firmer at £22 to £21 10s, as to position. Spelter steady at £25 13s 9d. Antimony: English regulus quoted at £29 5s to £33. Aluminium unaltered. Home delivery, £120; export, £125 per ton.

TALLOW.—Messrs Colclathes and Woolner write on March 29th as follows:—The tallow market was quiet during the week, and prices are about 6d lower. There was a large supply of the best sorts, while the lower priced kinds were less required for export. At auction to-day 1,930 casks tallow were offered, and 328 were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s to 40s; dull to dark, 36s 3d to 34s; hard, 41s 6d. Australian beef: Fine, 41s 6d; good to fair, 40s 6d to 37s; dull to dark, 36s to 33s 6d; sweet, 41s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 39s 6d; and mixed, 43s c.i.f. London, 38s 6d. The market letter is unchanged. Town tallow, 34s 6d per cwt. PRELIMINARY ANNOUNCEMENT.**THE PORCUPINE-DAVIDSON GOLD MINES, Ltd.****CAPITAL - - £1,000,000**

(Divided into Preferred and Ordinary Shares of 5s. each).

Formed in 1921, this Company has acquired the whole of the property and assets of the Davidson Consolidated Gold Mines, Limited, owning the Davidson mine. This property has already been developed to a depth of 600 ft., and underground workings have proved the existence of an ore body of great width, value and persistency. While the full length of the ore body opened up has not yet been ascertained, the ore (including probable ore) already disclosed is estimated by Lieut.-Col. Rowland C. Feilding, A.R.S.M., M.Inst.M.M., the well-known Geologist and Consulting Engineer, at 350,000 tons, averaging \$11 per ton extractable value—equivalent to a gross gold content of approximately £1,000,000.

To equip this mine with a mill capable of crushing at the rate of 175,000 tons per annum, and to provide working capital for further development,

800,000 Preferred Shares of 5/- each

will shortly be issued at par. The Preferred Shares will carry the right to two-thirds of the profits distributed annually until 100 per cent. has been paid thereon, and thereafter are entitled to 20 per cent. non-cumulative dividend in priority to the Ordinary Share Capital, the whole of which has been subscribed for in cash by the Vendors.

Prospectuses and Application Forms will be obtainable on Monday, April 3rd, from the Head Office and Branches of the National Provincial and Union Bank of England, Limited; from the Head Office and Branches of the National Bank of Scotland, Limited; the Brokers, Messrs. J. Silverston & Co., 4, Copthall Court, London, E.C.2, and Messrs. Charlesworth, Bennett & Company, 3, Copthall Buildings, London, E.C.; the Solicitors, Messrs. Linklaters & Paines, 2, Bond Court, Walbrook, London, E.C., and the London Agents, Mitchelson Partners, Ltd., Pinners' Hall, Austin Friars, London, E.C.

MESSRS. OSTERER BROS. have removed from No. 2 White Lion Court, E.C.3 to No. 4 Broad Street place, E.C.2.

BIO TINTO COMPANY, LIMITED.

Notice is hereby given, that the Forty-ninth ORDINARY GENERAL MEETING of the Shareholders will be held at the Offices of the Company, 8, Lombard Street, London, E.C., on WEDNESDAY, the 15th April, 1922, at half-past twelve o'clock precisely, for the purpose of receiving the Directors' Report and Statement of Accounts, for the Declaration of a Dividend, and for other purposes.

Holders of Share Warrants to bearer who desire to attend can receive a Ticket of admission, on depositing their Warrants in accordance with the Articles of Association three days prior to the Meeting, at the Company's Offices in London.

The retiring Directors are The Earl of Denbigh and Sir Arthur Steel-Maitland, who, being eligible for re-election, offer themselves accordingly.

The retiring Auditors are Messrs. Turquand Youngs and Co., who, being eligible for re-election, offer themselves accordingly.

The Transfer Books will be closed from Saturday, the 15th, to Saturday, the 29th April, both days inclusive.—By order of the Board,

J. GORDON MACLEOD, Secretary.

RECONSTRUCTION IN EUROPE.**12 SPECIAL NUMBERS**

OF

The Manchester Guardian Commercial

Edited by JOHN MAYNARD KEYNES.

Reconstruction in Europe is the concern of the hour; without great and concerted effort there can be no return to industrial and financial stability, no recovery of trade and employment.

The *Manchester Guardian Commercial*, as a contribution to the settlement of these difficulties, has undertaken one of the greatest enterprises in the history of Journalism. It will publish, under the editorship of Mr. J. M. Keynes, a series of twelve special numbers, in five or six different languages, dealing with the financial, economic and industrial conditions of Europe and written by the chief authorities of Europe.

Special staffs of translators have been engaged and all arrangements made for the world circulation which the eminence of the contributors will ensure. Exchanges, tariffs, public finance and credit, communications, emigration, food supplies, raw materials, the prospects in Russia—these and kindred topics will be dealt with by some of the greatest living authorities and the whole series will be the most complete guide to the problems of reconstruction that has been anywhere attempted.

An important and novel feature will be the **BUSINESS BAROMETER**, which will consist of a series of charts and tables prepared by experts in Great Britain, the United States, and the chief European countries, setting forth the current and probable future tendencies of world finance, trade, prices, employment, and so forth. This barometer will constitute a new departure in the presentation of economic facts, and will be the most authoritative graphic survey published. The European sections will be compiled by the London School of Economics, assisted by correspondents abroad; the American section will contain the **BUSINESS BAROMETER** prepared by the Economic Research Department of Harvard University, which has an influential circulation among business men in the United States.

The list of writers so far arranged for the earlier numbers includes, among other distinguished public men:—

Mr. LLOYD GEORGE (who will contribute an introductory message).
Mr. ASQUITH,
M. PAINEVE (former Prime Minister of France),
Signor NITTI (former Prime Minister of Italy),

Lord ROBERT CECIL,
Dr. BENES (Prime Minister of Czechoslovakia),
Dr. WIRTH (the German Chancellor),
Dr. RATHENAU (German Foreign Minister),
M. LENIN,

Economic and business authorities like

Sir WILLIAM GOODE (late Chairman of the Austrian Section of the Reparations Commission),
Sir A. GOLDFINCH (late Director of Raw Materials at the War Office, now Chairman of the British-Australian Wool Realisation Association),
M. BUISSON (French ex-Minister of Mercantile Marine),
M. VINGENT (French ex-Minister of Labour),
Sir JOSIAH O. STAMP (late Assistant Secretary Board of Inland Revenue),
Sir LEO MONEY (late Parliamentary Secretary Ministry of Shipping),

Sir WESTCOTT ABELL (Chief Shipping Surveyor, Lloyd's Register),
Sir FREDERICK LEWIS (Chairman of the Furness, Withy Steamship Co.),
State Secretary SCHROEDER (of the German Treasury),
Professor CASSEL (Currency Expert attached to the Brussels Conference),
Dr. GIANNINI (Commercial and Financial Attaché to the Italian Embassy, London),
Dr. MELCHIOR (Head of the German Financial Experts at the Paris and Spa Conferences),
Dr. CUNO (Chairman of the Hamburg-America Line).

Other names will be announced shortly. Mr. Keynes will himself contribute a number of important articles on the subjects on which he is the leading authority in Europe.

The first number will deal mainly with questions of foreign exchange, the consideration of which will be among the chief tasks of the Genoa Conference. Its chief feature will be an article in which Mr. Keynes puts forward a definite scheme for the stabilisation of the chief European exchanges.

The numbers will be printed in English, French, German, Italian, and Spanish.

The first will appear on April 12th, and successive numbers at intervals of two to three weeks.

The price of each Reconstruction Number is 1s., post free, or from an agent; or an Annual Subscription to the *Manchester Guardian Commercial*: 16s. home, 18s. abroad, entitles the Subscriber to the 12 Reconstruction Numbers free.

To the Publisher,

THE MONEY MARKET.

WITH the check that usually comes after the end of the financial year to the taxgatherer's activity, money at once became more plentiful. Large interest payments had to be made by the Government on the 1st and 5th, and it appears from the figures of the Bank return that the

Treasury had to borrow largely from the Bank in order to make these disbursements. With the assistance thus provided, the market was enabled to repay the Bank; and it was thus once more shown that in these days either the market or the Treasury has to be in the Bank's clutches as a borrower. Money, however, though in comfortable supply, was by no means excessively abundant. Discount rates showed an easy tendency, on anticipation of a reduction in Bank rate, which were disappointed, presumably because the Bank Court, full of anxious care for the City's morals, did not wish to encourage speculation by making money cheaper. The reduction, however, is generally looked upon as imminent.

	Apr. 1, 1922.	Mar. 31, 1922.	Mar. 27, 1922.	Previous Rate and Date Changed.
Bank Rate	4½	4½	4½	5 (Feb. 16, '22)
Bank Deposit Rate	2½	2½	2½	3 (Feb. 16, '22)
Discounts	2½	2½	2½	3 (Feb. 16, '22)
Market rate (3 months' bills) ..	2½	3	3½	3½ (Feb. 16, '22)

The Bank return showed increases of £108,000 in the stock of gold, and £178,000 in the note circulation, and a consequent decrease of £79,000 in the Reserve. An increase of 13 millions in the Government securities may be inferred to have been caused by borrowing by the Treasury, and there was, nevertheless, thanks to heavy disbursements, a decrease of six millions in the public deposits. Thus the market was enabled to reduce the other securities by 17½ millions, through reduction of its debt to the Bank, and still show an increase of two millions in the other deposits. The circulation of currency notes was increased by £2,626,400 to £302,977,300, which includes £1,649,300 for notes called in but not yet cancelled. The fiduciary issue is £253,377,900, or £56,516,500 below the maximum.

The summary of the monthly statements of the joint stock banks for March is printed in full on a later page. Below we give a comparative table of the figures of the nine English banks, which shows that the weekly average deposits fell considerably last month:—

	March, 1921.	July, 1921.	Dec., 1921.	Jan., 1922.	Feb., 1922.	March, 1922.
Capital and reserves	1,156	1,159	1,153	1,159	1,159	1,159
Acceptances	1,754	1,754	1,754	1,754	1,754	1,754
Deposits (incl. indiv. public, &c.) ..	1,754	1,754	1,754	1,754	1,754	1,754
Total liabilities	2,910	2,913	2,907	2,913	2,913	2,913
Out: notes, balances at bank, and cheques in course of collection ..	2,913	2,913	2,913	2,913	2,913	2,913
Money at call	321	321	321	321	321	321
Investments	281	281	281	281	281	281
Discounts	281	281	281	281	281	281
Loans and advances	281	281	281	281	281	281
Cover for accept., premises, &c. ..	281	281	281	281	281	281
Total assets	2,910	2,913	2,907	2,913	2,913	2,913

Acceptances have also dropped, and the reduction of over £60 millions in liabilities has been balanced by a heavy decline in bills discounted, and by reductions in cash, and money at call. Investments have risen by over £7 millions, and it may be inferred that the banks have continued their policy of transferring their attention from Treasury bills to Treasury bonds.

THE STOCK MARKETS.

Although the Stock Exchange was disappointed at the maintenance of a 4½ per cent. Bank Rate on Thursday, prices only reacted to a very small extent, and there has been a general broadening of interest, the only section to be neglected by the public being the mining market, where dealings are still confined to professionalists. The week has seen a large number of new issues of capital. The Commonwealth 5 per cent. at 90 were fully subscribed by the public, while the Czechoslovak 8 per cent. at 90 were oversubscribed in a very short time.

The foreign market has been strong, and home rails have been active, though subject to profit-taking at times. Industrials generally have been firm, and the oil market has seen a sharp rise in quotations.

COMMODITY MARKETS.

Business in the cotton trade has not been so brisk, although Indian and China continue to take a fairly normal supply of piece goods; prices generally are inclined to be firmer. In the wool trade the raw material has been in good demand; at the colonial wool sales an all-round advance in prices occurred, best merinos showing a 5 per cent. increase, and crossbreds 10. There are no changes in quotations in the iron markets. Best Admiralty coal rose to 28s 3d per ton, and Monmouthshire was in demand. Trading continued quiet in the wheat markets, and prices showed signs of weakness. The lower price of raw linseed oil has created some demand, but conditions generally in the vegetable oil and oilseed markets have been fairly quiet. The position in the hide market is described as "puzzling"; prices are firmer. Merchants and tanners report a poor demand for leather. The boot trade is a little busier on account of Easter orders.

FOREIGN EXCHANGES.

The foreign exchange market has again suffered from the uncertainty preceding the Conference at Genoa, and business has been even quieter than before. The dollar, after climbing slowly up to \$4.40, again has been irregular within narrow limits, and is now back at \$4.39½. Forward dollars are still on a parity with spot. Paris movements have also been irregular, with a slight tendency towards appreciation, the rate yesterday morning being 48.10, as compared with 48.50 a week ago. Brussels at 52 shows a slightly wider margin over Paris. For French francs forward rates are unchanged at parity with spot, Belgian being seven centimes per month under spot. Berlin, after a recovery to 1,260 on the 31st, went up again on Tuesday to 1,430, and has now reacted to 1,310. So long as nothing is settled with regard to the recent Note of the Reparation Commission these quotations have little meaning. Should the Note be enforced, or should a real attempt be made to enforce it, further depreciation is inevitable. Should wiser counsels prevail, a sharp recovery may be expected. The lira, after some recovery in the early part of the week, relapsed again, but now at 83½ is a good deal better than a week ago, and the announcement of the proposed settlement of the Banca Disconto's affairs is a satisfactory feature. Amsterdam has moved rather rapidly against us, from 11.58 to 11.62½, and Switzerland is also slightly dearer. Madrid, on the other hand, has again depreciated a little. Among the northern countries, Christiania has moved slightly against us, Stockholm and Copenhagen slightly in our favour. Finland has also moved upward rather sharply, to about 230. Vienna, in spite of various plans for currency restriction, has again moved slightly upwards to 33,000. Warsaw has remained steady at about 17,000. Prague, Belgrade, and Bucharest show little change. In the East, India is a very little cheaper at 1s 3½d, while Yokohama has also fallen to just under 2s 3d. The silver market has been inactive, with a dull tendency. Shanghai is 1d cheaper at 3s 3d. In South America, Buenos Ayres has moved down to 43½, Monte Video is down to 44½, and Valparaiso to 39.70, Rio to 7½—all lower than the previous week.

THE EVE OF THE CONFERENCE.

THE British Delegation which leaves this week for Genoa will carry with it the sincerest wishes of all classes of the community for a successful issue to its labours. To the whole world and to Great Britain in particular, the solution of the problems which it is to discuss is of vital importance, for it has long been appreciated here that we cannot make real progress in dealing with our unprecedented difficulties at home until more normal foreign trade conditions return. It is true that our Index Number this month has at last shown a slight upward movement, following a similar turn in American prices six months ago, and this suggests that the bottom of the price depression has been reached. But the change is at present microscopic, and though economic affairs generally are undoubtedly better even in Europe than they were a year ago, the main stumbling blocks in the way of trade recovery have not yet been removed. In the House last Monday Mr Bonar Law seemed to think that the importance of restoring Central Europe to its normal place in the circle of commerce had been over-rated, and quoted the fact that only 30 per cent. of the produce of the United Kingdom was exported. What he probably meant was that 30 per cent. of the total goods produced and of services performed, including the work of shipping and of our financial institutions, was sold to foreign customers. He went on to say that if the Chancellor could reduce taxation "I think it is not at all improbable that we would have a revival of the home market quite equal to all we are doing with these countries." It has also at times been suggested that we may be able to make good the break in the circle caused by European conditions by restoring a larger direct trade between Great Britain and the extra-European countries of the world. We are, however, of opinion that the Prime Minister gave a sounder view of the situation. He pointed out that the whole world is suffering from reduced production, and that the volume of the foreign trade of Germany and France, as well as of ours, was enormously reduced, and that this affects not Europe only, but the world as a whole. "The world is one trade unit. Our customers depend upon the sale of European goods to pay for the goods that we sell them. India is not buying from this country what she bought before the war. No doubt the organised opposition to British trade there has something to do with it, but that is not the main reason. The main reason is that India

has always paid us for the goods we sell her by the proceeds of her sales to other European countries. She pays us what she gets from sales to Germany, to France and to Russia. What applies to India applies to Australia, Argentine, and other parts of the world." Mr Lloyd George might have added that this circular trade could not be replaced by direct commerce between Great Britain and these countries without altering in many respects the character of the goods dealt with. For example, short staple Indian cotton is adapted to Continental textile machinery, but could only be used in Lancashire after a considerable modification of plant had taken place. He might also have emphasised the point that a reduction in the volume of trade of, say, 5 per cent. to 10 per cent., is quite enough to upset completely the level of prices, and that while prices are on the down grade production is checked. Orders are postponed, and the volume of the world's trade reduced far more than in proportion to the original cause of the trouble. Without, therefore, taking too pessimistic a view we cannot foresee a sufficient trade revival to solve our internal problems until Europe resumes its place, and it is for this reason that the commercial community will follow with the closest attention the proceedings at Genoa.

But any hopes that may be entertained are not unmixed with anxiety. International goodwill is a tender plant, prone to wither in the chill air of suspicion or of jealousy; and discussions which engender these may be a positive danger, leaving us in a worse plight than if we stayed at home. Unfortunately, the atmosphere in which the present conference meets is far from satisfactory. In this respect, success depends not merely on the actual proceedings, but on the vital matters of procedure, and still more upon the agenda. It is in these respects that the Conference starts under somewhat doubtful auspices. Many of those who will be at Genoa—including Mr. Henry Bell, financial expert in the British delegation, Sir Henry Strakosch, and the Hon. R. H. Brand, advising the South African delegate, and Prof. Cassel, of Sweden—have had experience of the Brussels Conference of 1920, and it may be of interest to recall some of the features of that meeting, which was the first attempt to secure practical conclusions from a European International Assembly of so large a size. That conference endeavoured to follow as closely as possible Parliamentary lines. The first task was to introduce the idea of speakership, and the Council therefore chose as president not a financier or member of any delegation, but a man conversant with politics, who was at the same time removed from the political arena—an ex-President of the Swiss Republic. But how is it possible to organise debate in a Parliament consisting of 40 separate parties containing three members each, in which there is no leader of the House? This problem was solved by the Council appointing four vice-presidents representing the League as a whole, who formed, as it were, the Government bench, and introduced each his own subject on the agenda in the full Assembly, taking it thereafter, as is done by a Minister in charge of a Bill, into a committee of the House. Both in the Conference and in the committee each nation had equal representation. It was, of course, by no means true that the opinion of all was of equal importance, any more than it is true of opinion

in any democratic community. On the contrary, it is most noticeable in all recent international meetings that the representatives of small nations pay an undue amount of attention to the views of the Great Powers. But the form of equality is of the greatest psychological importance.

Again, it was the experience of inter-Allied bodies during the war, and has been amply confirmed by subsequent events, that the mere interchange of information between countries is not sufficient to secure a common basis of fact, and that it is essential for the data to be compiled by an international secretariat, so that everyone has before him the same standards of comparison—standards, moreover, which inspire general confidence. Though such matters may seem to be of minor importance, they are, in fact, the things which determine the tone, and therefore the results, of the discussions.

But Genoa, like Brussels, suffers from the drawback that it cannot deal with the problems of reparations and war debts or with political questions such as disarmament. Mr Bonar Law reminded us on Monday that unless these are settled, it is extremely difficult to reach any solution of financial questions; it is largely armaments which leave budgets unbalanced, and these in their turn create currency disorders. Mr Lloyd George rightly attaches the greatest importance to reduction of land armaments, but it is difficult to see how progress can be made if the French attitude is accurately represented by the *Temps*, which argues that "stability of exchange can be better sought by a loan to Germany than by such 'pressure' for a reduction in necessary military expenditure." Apart from the use of question-begging adjectives, this conception is deplorably remote from general financial opinion in Europe. The *Temps* is on safer ground in asserting that armaments are a symptom and not a cause of the troubles of Europe. In this, as in every other direction, we are driven back to the conclusions of Brussels, that financial problems lead at every turn to political considerations, and to the problem of security for France, for which the only sound solution is a pact of European nations under the ægis of the League of Nations. Since Reparations are not to be discussed, the proceedings will not be appreciably affected by the notification to the Allies by Great Britain that we may have to call for payment of the Allied debts as our obligations to U.S.A. fall due. Our declaration leaves the matter unchanged, but its effect will serve to emphasise—as no doubt it was intended to do—the urgency of rapid progress in settling the whole question of international indebtedness.

On the eve of the Conference French opinion betrays the same nervous fear of isolation which it has shown before all recent meetings of this kind. At Brussels the correct and courteous behaviour of her delegates towards the German delegates and their desire to assist in achieving positive results did a great deal to dissipate the conception of an uncompromising chauvinistic France, and to enhance her prestige for statesmanship. If the right atmosphere can be created, we are confident that history will repeat itself in this respect.

In these circumstances, what definite results are to be looked for from the Conference? If we exclude the possibilities in regard to Russia, which are dealt with in a later column, we fear the harvest will not be a very abundant one. With its limited agenda, it can do little more than reaffirm the Brussels principles. If the politicians will line up with the same unanimity as the financiers in support of these ideas, the restatement of sound doctrine will be of great use in strengthening the forces in each country, making for sane, if hard, financial orthodoxy. The discussion of devaluation between the experts will help to develop opinion on this difficult currency problem, and the meetings outside the Conference room of business men may carry a stage nearer completion many devices for co-operative effort. There remains as an incalculable factor the reaction of the meeting upon Mr Lloyd George, for whom this will be the first experience—except for the formal meetings of the Allies in 1919—of international conference on a Parliamentary scale. If he reacts favourably to his environment, it may greatly modify his conception of methods of carrying on international relations and direct his thought into new channels.

THE FUNDING PROBLEM.

In 1919, not much more than six months after the Armistice, the Government called on the people of this country for a great financial effort for the funding of the floating debt. It issued the 4 per cent. Funding loan and the 4 per cent. Victory bonds at 80 and 85 respectively, the former redeemable at par not before 1960 and not later than 1990, the latter carrying a spice of speculative adventure in the shape of annual drawings at par. It was calculated that both loans yielded on this basis 5 per cent. to the investor, and, as we pointed out at the time, it seemed at first sight rather profligate finance to pledge the country to the payment of such a rate for so long a period. But it was amply shown by the very unresponsive attitude of the public to the loans that any attempt to issue on a basis more flattering to British credit would have produced a still more chilling frost. If it was necessary to try to fund part of the floating debt it could not have been done more cheaply. In fact, as most of us remember, the investing public, already suspicious of official extravagance, shrewdly inferred that any money that it subscribed was much more likely to be used to fill the gap between revenue and expenditure than to pay off floating debt, and its suspicions were largely justified by the sequel.

Since then, in 1921, a conversion operation was carried out in order to relieve the anxiety of the Treasury with regard to maturing obligations in the shape of National War bonds, falling due between 1922 and 1925. This also was at first sight a highly expensive proceeding, since it added considerably both to the capital of the debt and to the total interest charge. Those who then exchanged their 5 per cent. War bonds into conversion stock surrendered the small prospective premium that would have been paid to them when their bonds fell due, but got a security yielding £5 12s to £5 14s per cent., free of corporation tax, and irredeemable before April, 1961. On these grounds the operation was effectively criticised, but it also could not then have been done more cheaply, as the result clearly showed. If the Treasury was right in thinking it necessary to deal with maturing obligations some time before they fell due, so that they should not in the meantime get out of the hands of investors and into those of professional dealers in money, who would not be willing to take a long-dated security in their place, the Conversion loan, with all its drawbacks from the point of view of the taxpayer, was an expensive necessity.

This 'twin problem of the floating debt—Treasury bills and ways and means advances—and maturing short obligations' is still with us, though there has been some change of opinion of late concerning its urgency, partly owing to the big reduction in floating debt that has been effected during the financial year that has just ended, owing to the eager swallowing power that the money market suddenly developed in the autumn of 1921 for short-dated Treasury bonds. This appetite was so keen, thanks to the comfortable profits made by those who indulged it, that Treasury bonds are no longer "on tap" in unlimited amounts, but are put up for tender week by week, and it is freely asserted by City gossip that our financial rulers are not nearly as enthusiastic as they were in the matter of floating debt reduction. The City, of course, finds it extremely convenient to have this mass of Treasury bills to handle at a time when commercial bills are lamentably scarce owing to the small volume of our trade. In fact, a widely current opinion was expressed by Mr O. T. Falk, in a paper read before the Royal Society of Arts on March 15th, and printed in the *Economic Review* of March 17th, when he said that "Treasury bills are now an essential element in our internal currency and banking system." One may, however, venture to question whether it is really necessary, in order to meet the convenience of our banking system, to keep in being a certain form of Government debt, if that form of debt is really as harmful and dangerous as it was thought to be in 1919. In the piping times of the 'nineties, when Consols soared to 114, it was seriously argued that the pace at which the Government was redeeming debt could not be continued because the banks must have Consols to hold as a reserve against demands on them for cash. The argument that the Government must now continue to have a huge mass of Treasury bills

outstanding because they suit the banks' portfolios is as good and as bad as was that Victorian contention that Consols must not be redeemed because they looked nice in balance-sheets. If it is possible and desirable from the point of view of the national finances to reduce the volume of Treasury bills by a funding loan, we can surely rely on the adaptability of our banking system to find a substitute for them for banking purposes.

The danger involved by the present volume of Treasury bills outstanding is somewhat academic and theoretical. It gives its holders the power, if they choose to exercise it, of forcing a policy of inflation on the Treasury, and it seriously weakens, on paper, the power of the Bank of England to control the operations of the money market. With nearly £900 millions of Treasury bills in the hands of banks, discount houses, shipowners, and other industrialists, it is in theory possible for the banking and commercial community, by refusing to take up new "Treasury bills" to replace those maturing, to compel the Government to borrow from the Bank of England in order to meet its daily liabilities, so creating new credit to be handed over to the holders of the maturing bills, who can then, if they choose, turn this new credit into new currency notes, and expose the officially fixed limit on the fiduciary issue of the latter as a piece of departmental bluff. In the same way, if the Bank of England thought it necessary, as it often used to do, to curtail the supply of floating money in Lombard Street, holders of Treasury bills could defeat its efforts by refusing to replace them, and forcing the Government to supply new credit as shown above. But it seems hardly likely that the Treasury and the Bank of England, and the rest of our banking system, will come so hopelessly to cross purposes that a state of things will arise under which Treasury bills will really be used in this manner to force the hands of our official and semi-official rulers; and if and when that day does come, this would only be one manoeuvre on a field in which there would be infinite possibilities of skirmishes, turning movements, and frontal attacks. The power that the existence of a huge mass of Treasury bills puts into the hands of its holders may be a reason why, others things being equal, it would be a good thing to reduce it. The real question is whether Treasury bills are a cheap and useful form of debt, and whether they can be replaced, through a funding operation, by one that is, in the long run, cheaper and better. The answer to this question depends on the view that one takes of the future value of short-period money as compared with the rate of interest on comparatively long-dated or undated securities. Except in times of acute and temporary stringency, the short security usually carries lower interest, and so is cheaper to the borrower than the long one; and if the Government is contemplating a funding operation it must try to avoid the expense to the tax-payer involved by its efforts of 1919 and 1921, by waiting for the right moment when it can issue a funding loan at a rate of interest that shall be lower than the average rate for Treasury bills is likely to be during the currency of the loan.

RUSSIAN PROBLEMS.—II.

(FROM A CORRESPONDENT.)

Is the Genoa Conference going to be a repetition of the Paris Conference, or is it to be conducted in the spirit of the International Financial Conference summoned by the League of Nations in September, 1920? On the answer to this question depends the solution of many of the problems of Russian reconstruction. In the concluding paragraph of their report the delegates to the Brussels Financial Conference, which included representatives of Germany, Austria, Hungary and Bulgaria, summed up the words of the Conference in the following words:—

"As the work of the Conference and its Commissions proceeded, there developed a spirit of close and intimate co-operation, such as might scarcely have been thought possible. That co-operation is in itself a factor of the utmost importance. Each country has had the opportunity of presenting to the rest of the world its special difficulties, its particular anxieties, and all have contributed towards finding a solution."

But the Brussels Conference was only a meeting of

financiers and business men. It would be a miracle if the words we have quoted should prove applicable to such a gathering of politicians and diplomatists as that which is now opening at Genoa. The American Government was right when it diagnosed the Genoa Conference as primarily political and not economic in character. It is to be feared that the chief concern of the majority of delegates will be not to contribute towards the finding of a common solution of European problems, but to prolong their tenure of office at home, and manoeuvre for selfish advantages abroad. The policy of the Soviet Government will be no different from that of other Governments in this respect.

The Soviet leaders are running big risks of internal upheaval in pursuing their new policy of conciliation. Not only has the new economic policy of restoring private enterprise in Russia alienated many of the more doctrinaire communists, but the plan of giving concessions to foreign capitalists to exploit Russian resources has many enemies, not only among Bolshevik extremists but among Russian Nationalists of the old school. One of the features of the war period was the growing unpopularity of foreign merchants and manufacturers established in Russia. In this matter the big industrial magnates and the Peasants' Co-operatives found common ground. Even before the Revolution the late Russian Government had so far yielded to the cry of "Russia for the Russians" as to grant a virtual monopoly of the flax export trade to a large Russian combine called Ralo, thereby ruining the trade of the British flax merchants, who had formerly done the bulk of the export. The Russian emigrés will have a new and more effective weapon against the Soviet Government if they allow Russia to be carved up into foreign spheres of influence and subjected to the sort of treatment which is meted out to China.

The Soviet Government will also have to walk warily in the matter of Russian debts. It is well known that in 1906 230 members of the Russian Duma issued a manifesto at Viborg declaring invalid all debts that might be contracted at home or abroad by the Czar after that date. But it is not generally known that the representatives of the White Russians in Paris also issued a manifesto last summer on the subject of debts and reparations. After expressing their indignation that under the London Agreement of May, 1921, Russia's claims to reparation from Germany under the Peace Treaty had been quietly annulled by the Allied Powers, they solemnly declared on behalf of any future Russian Government that they thereby repudiated Russia's debts to the Allies up to the full amount of reparations to which Russia would have been entitled under the Peace Treaty. The Soviet Government will be placed in an awkward position if it is expected to concede more than the Russian emigrés would concede. If it does so, we shall have the paradoxical result that it will be to the interest of the Allies to bolster up the Soviet régime against the more intransigent Nationalists of the counter-revolutionary parties.

Another question which is bound to cause complications is the way in which claims for compensation arising out of foreign intervention are to be settled. If as a condition of getting repayment of debts incurred by the Czar the Allies are compelled to recognise the present Government of Russia as the legitimate successor of the Czar's Government, will such recognition be held in international law to have a retrospective effect? If so, the Soviet Government will be able to present a claim for compensation for acts of hostility committed against Russia by the Allied Governments and their nationals without formal declaration of war. It is believed that Russia will base her claim for compensation on the principles of international law laid down in the Alabama dispute between Great Britain and the United States. In that case the arbitrators held that the British Government was liable to pay damages for the action of private British citizens who assisted the rebel forces during the American Civil War. But if Koltchak, Denikin, Yudenitch and Wrangel are now to be regarded as rebels against the legitimate Government of Russia, the Soviet counter claims will assume enormous proportions. The Allies will no doubt reply that there was no Government in Russia during this period, and that so far as there was any recognised successor of the Imperial Government

it was the Government of Admiral Koltchak. If the matter is to be decided in accordance with the principles of international law it might conceivably be referred to the International Court of Justice recently established at The Hague. The Allies have a way of referring their insoluble problems to the League of Nations; but we doubt whether either party will feel confident enough in the justice of their case or in the International Court to wish to have the question settled in this way. If any settlement is arrived at, it will be by a process of simple bargaining. We have even heard it suggested that the Allies should start off by claiming that the Soviet Government should compensate them for the expenses incurred in assisting the counter-revolutionary forces. Russia might as reasonably claim that the Allies should pay for the whole cost of the civil war.

The adjustment of governmental claims, however, is likely to prove less troublesome than the claims of private individuals. Many of Russia's loans, especially municipal loans, are expressed in roubles, and all claims for loss of property sequestered in Russia have to be calculated in Russian currency. What value can be attached to the rouble for this purpose, and at what date are the obligations and losses to be assessed? Russia is hardly likely to admit the principle of paying compensation on the basis of the pre-war gold rouble or to accept a pre-war valuation of claims; but on the other hand payment in Soviet roubles would be a farce. Some value will have to be given to the rouble intermediate between the 10 to the £ and the 5 million to the £. No logical solution of this conundrum which would be fair to all parties seems possible. To insist that rouble loans should be redeemed at pre-war parity would be an awkward precedent, which would logically have to be applied to foreign holdings of pre-war loans in other depreciated European currencies, including Italian lire and French francs. Again, it seems the only way to find a solution will be by bargaining as to the value to be given to the rouble. The Soviet delegates would be wise to offer a rate of depreciation not greater than that of the Austrian krone or Polish mark. If they should seriously propose to pay compensation at the rate of 5 million roubles to the £ the Conference is likely to break up in disorder.

Assuming that the question of debts and compensation are satisfactorily disposed of, there remains the problem of economic relations. Before Russia can be expected to meet all her pre-war obligations and to pay full compensation for damage done to foreigners, not to speak of paying interest on her war debts, she must be restored to some measure of prosperity. The essential condition, both of the payment of debts and of the re-opening of trade, is that Russia should have a stable Government and economic assistance from the West. Now that the idea of foreign intervention has been abandoned, the sole question which concerns foreign powers is whether the Soviet Government is in fact the Government of Russia; whether, that is to say, it is able to keep order, enforce its decrees, guarantee the rights and property of foreigners, and carry out the obligations which it assumes. So long as there was any possible alternative government, the Allies naturally refused to have dealings with the Bolsheviks; and until they showed a desire to establish peaceful relations and to provide facilities for the development of private enterprise it was useless to discuss the terms of recognition.

OUR INDEX NUMBER.

For the first time since September last wholesale prices, as reflected in our Index Number, have taken an upward turn, the figure for the end of March showing an increase of 38 points at 4207. It is too soon to assume that this marks a definite turn in the curve, for there has previously been a momentary break in the fall. But there are reasons for expecting a change in direction, notably the slow but steady appreciation of prices in America. This month's figure compares with 4357 at the end of 1921, 4344 at the end of 1920, and 8352 at the end of March, 1920, the highest point reached. The posi-

tions of the various groups may be seen from the following table:—

Date.	Cereals and Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oil, etc.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0

Unfortunately, the present movement is not one which indicates industrial recovery. A rise in coal or iron prices with a fall in food would have been a most welcome sign of improving industrial demand coupled with a prospect of lower cost of living. In fact, the present increase is entirely due to the rise in the two groups of foodstuffs, which amounted together to 784 points. The miscellaneous group, on the other hand, fell by 443 points. The items which caused these movements may be seen from the table below, in which the indices for each commodity are set out, together with the changes in comparison with the end of February figures. The figure 50 represents the average price during the base period, 1901-5, in each case:—

Meat is principally responsible for the rise in primary foodstuffs, movements in other commodities in this section cancelling one another. Home-grown wheat prices advanced sharply in the early part of the month, but although they eased in the second fortnight, they are higher on balance. More favourable crop advices are responsible for a slight decline in foreign wheat quotations. Flour, after an advance of 9s. in February, has dropped by 2s. In the second group the upward movements are substantial. In coffee there has been a slight improvement in the demand, while butter has reacted after its recent steep decline. In the textile group movements have been small, with the exception of a rise in flax and a decline in jute, which offset one another. According to Messrs W. F. Malcolm and Co.'s market report, the market for Baltic flax is depressed, and there is an absence of demand, and no improvement is likely until an improvement in the manufacturing end of the trade comes, or the raw material falls still further. The jute trade, however, has been fairly active, with an upward tendency in prices. Wool is unchanged on balance, and prices of cotton and cotton manufactures show but little movement. But cotton trade reports speak of a distinct broadening of inquiry, and signs of renewed buying from India have contributed to a healthier tone and a more encouraging outlook.

In the minerals section an advance in lead is the only change of importance. Orders for iron and steel are being suspended in consequence of the engineering dispute. Although makers were fairly well engaged on the

execution of old contracts until the last week of the month, works are now being closed down, and buying of raw materials has ceased. The principal changes in the miscellaneous group are declines in oilseeds and indigo, supplies in each case being more than ample to meet a reduced demand.

The net result of these changes is that the level of wholesale prices in this country is 67 per cent. above the pre-war level, as may be seen from the table below, in which the indices for each group at the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1918....	222	222	293	186	241	236
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
March, 1921....	209	206	167	216	203	198
June, 1921....	203	188	158	210	185	188
Sept., 1921....	193	195	204	189	178	192
Dec., 1921....	159	180	180	164	168	170
Jan., 1922....	167	186	173	158	167	167
Feb., 1922....	164	182	168	150	169	166
March, 1922....	169	195	168	151	161	167

Secondary foodstuffs, it will be seen, are still much above the average, while minerals are abnormally low.

We conclude with a comparative summary of commodity prices at the end of the month named in some of the principal foreign countries expressed as a percentage of prices in 1913:—

	Nov., 1918.	Highest.	End of 1921.	Latest.
United States	205	227 (1/20)	123	133 (2/22)
France	358	591 (4/20)	326	314 (1/22)
Italy	438	679 (4/20)	594	577 (1/22)
Germany	5899	5899 (3/22)	3348	5899 (3/22)
Switzerland	325	325 (1/20)	176	170 (2/22)
Sweden	367	366 (6/20)	172	166 (2/22)
Denmark	292	403 (10/20)	178	182 (3/22)
Japan	214	322 (3/20)	209	205 (1/22)

The upward movement in America has continued, but in other directions, with the exceptions of Germany, where a further large increase has taken place, and of Denmark, where a slight rise occurred in March. No check to the decline has yet been reported.

NATIONAL MONOPOLIES IN SHIPPING.

I.—EMIGRANT TRAFFIC THROUGH ITALIAN PORTS
In the course of a recent lecture to the staff of the Board of Trade, Mr C. Hipwood, the Assistant Secretary in charge of the Mercantile Marine Department, pointed out that there are two strong tendencies in shipping at present—the one widely international, the other rigidly national. The maritime nations were gradually evolving common standards of safety and comfort at sea, irrespective of flag. At the same time, the same maritime nations were attempting to buttress their own mercantile marines by excluding the "foreigner" from their carrying trades. The international movement was, as Mr Hipwood pointed out, one to be encouraged in every way. But the opposite tendency, that towards national exclusiveness, was very ominous indeed for the once all-pervading British mercantile marine. National monopolies in shipping cannot be established except at the expense of British shipping interests, which are in the widest sense British national interests. As a responsible official, concerned as an adviser in maritime diplomacy, Mr Hipwood could not give examples of national exclusiveness to an audience which included reporters for the official *Board of Trade Journal*. But we may suspect that the countries which were prominent before his mind's eye were Italy, Germany, and the United States.

Our readers scarcely need to be reminded that the emigrant traffic of Central, South-Eastern, and Northern Europe supplies the daily bread and butter to the great liners engaged in the North Atlantic trade. First and second-class passengers contribute jam, but jam is of little use unless we have bread and butter upon which to spread it. The emigrant traffic passes either by way of the North or the South—by the German Baltic and North Sea ports,

or through the Mediterranean. In the north Germany always has been a serious competitor, and a potential monopolist—in spite of the Versailles Treaty—in the South the principal competitor and potential monopolist is now Italy, through her inheritance of control over the late Austrian ports of Trieste and Fiume. We will take Italy first in these articles, since the recent action of Italy in establishing a temporary, and maybe, a permanent monopoly over the emigrant traffic passing by way of Italian ports, has fluttered the maritime diplomatists of this country, and has aroused grave apprehension in the breasts of Atlantic shipping companies.

The Italian Government has cancelled the emigration licences of all non-Italian shipping lines for the six months ended June 30th next, and has declared that the agents of non-Italian lines must not take part in any emigration traffic. This action amounts to a practical expulsion of British shipping lines from the emigrant traffic issuing from ports in the Italian Peninsula, and amounts to the establishment of a monopoly in the traffic for Italian lines. Seeing that Great Britain and France stood loyally by Italy through all her distresses in the war, poured men and munitions and money into the country during that bad time when the German-Austrian armies were on the point of overrunning the whole Venetian Plain, saved her, together with themselves, at the Armistice, and finally gave her control over Irredentist Trieste, and, practically, over Fiume, the monopolist action of Italy is not conspicuous for gratitude. We are suspicious of these "temporary" monopolies. Vested interests accumulate about them as bees about a patch of honey; in a short time "political exigencies" prevail, and the temporary becomes the permanent. For the moment we understand the Italian monopoly does not specifically apply to Trieste and Fiume, but there can be little doubt that once the ports of the Italian Peninsula have been secured against the ships of the obtrusive foreigner, the next step will be to drive the non-Italian lines out of the whole emigration trade of South-Eastern Europe which passes through the great waterway of the Adriatic.

The emigration traffic from the Italian Peninsula itself is of high importance. Some 300,000 third-class passengers were embarked in 1913. The emigration traffic of South-Eastern Europe, the traffic of Trieste and Fiume, is of even greater consequence. These trades are not only of importance in themselves, but are in the shipping sense "key" trades. If the British lines are excluded from their fair share in them, it will be almost impossible for our lines to maintain their fair share in the emigration traffic from Northern Europe. The emigration traffic of Europe is the backbone of our Atlantic shipping; without it the great liners cannot be kept up, and without the great Atlantic liners—both in peace as earners of "invisible exports," and in war as fast auxiliary cruisers and troop transports—the maritime power of Great Britain must most seriously decline.

The diplomatic struggle is embarrassed by the fact that the Treaty of Commerce and Navigation between Great Britain and Italy of 1883, does not supply us with a clear case which is necessarily capable of convincing the Italian Government of a *casus foederis*. Article I. is drawn in wide terms—it appears to a layman to grant to British subjects and ships the same rights to carry Italian emigrants as are enjoyed by Italian subjects and ships. But the lawyers, as usual, interpret it in a less sweeping sense than would the intelligent layman. Moreover, should Article I. of the Treaty be held by a judicial arbiter to give to British lines the rights which appear on the surface to be granted, the Italian Government—intent upon a shipping monopoly of the emigrant traffic—has merely to denounce the Treaty, and to carry on as it pleases after a decent interval for burial.

It may, therefore, be taken that no appeal to the Italian Government, based on the Treaty of 1883, will be of much avail. Reprisals might be threatened, but the worst of all economic reprisals—in the shipping as in other spheres—is that they are double-edged; they cut the hand that employs them as deeply as the body against which they are used. The appeal, it seems to us, must be wider. In the economic world Italy cannot stand alone. She is a poor country in the industrial sense, with no good coal and few raw materials. She is financially weak, and she owes Great Britain a great deal of money. If this matter

were to come to a sharp issue, these considerations alone would no doubt hold back the Italian Government from adopting an uncompromising attitude. But one hopes that the dispute will not come to an issue so crude and so pointed. Great Britain has been the cordial friend of Italy in peace and war for more than 60 years. We owe much to Italy in the intellectual and artistic sphere, and Italy owes much to us in the grosser spheres of commerce and finance. Great Britain and Italy are complementary rather than competitive nations. In skilful hands there is room for a diplomatic bargain, and there is, moreover, a favourable occasion ready for such a bargain in the friendly meetings which will take place this month between British and Italian statesmen and diplomats at Genoa.

LONDON GAS COMPANIES.

Most London gas companies have availed themselves of the provisions of the Gas Regulation Act of 1920 in the financial year under review. Section 1 of this Act gave power to the Board of Trade to substitute a unit charge based on the heat value of gas supplied, called a "therm," in place of existing charges based on volume and measured by cubic feet. The directors of the South Metropolitan state that "general satisfaction has been expressed with the new method of selling gas," and point out that "consumers are beginning to understand that the change is one which is wholly in their interest." This change in the measurement of gas makes comparative statistics of the quantity sold somewhat difficult to arrive at except in two cases. The Gas Light and Coke records a decrease of 5 per cent. in gas sales, which dropped from just over 155 million therms in 1920 to 144½ in 1921. The South Metropolitan is, however, more fortunate, a decline of 1.8 per cent. only being registered on the sale of 80 million therms in 1920 to 78½ millions last year. The South Suburban suffered a decrease of 8.26 per cent. Among the reasons given by companies for the decreased demand for gas are the coal dispute, the fine weather prevailing throughout the year, and the general depression in trade.

In the table given below we analyse the revenue and expenditure of a selected group of representative London gas undertakings for the past three years. The Act of 1920 provided for annual accounts and returns to be submitted to the Board of Trade. In consequence most companies now publish accounts for the whole year in the place of the half-yearly accounts previously issued. The half-yearly accounts of the South Metropolitan and Wandsworth companies for 1919 have been shown as annual returns in the undermentioned table for comparative purposes:—

Company.	Revenue.				Expenditure.				Bal'nce Net Rev.
	Sale of Gas.	Rentals.	Residuals.	Total Receipts.	Manufacture.	Distribution.	Total Expenditure.		
Gas Light and Coke—									
Year ended Dec. 31, 1921	8,045,069	658,468	2,497,838	11,201,375	7,497,611	1,366,920	10,134,881	1,097,479

South Suburban—									
Year ended Dec. 31, 1921	816,025	64,129	234,096	1,114,250	752,499	166,359	918,858	78,316	
1920	777,524	60,030	281,126	1,118,680	757,196	179,430	936,626	79,564	
1919	588,359	64,036	186,209	838,604	574,967	134,587	709,554	56,519	
Wandsworth—									
Year ended Dec. 31, 1921	754,155	96,314	231,618	1,082,087	787,733	171,028	958,761	82,906	
1920	675,125	99,521	361,696	1,136,342	825,868	174,806	1,000,674	65,438	
1919	563,630	77,806	223,460	864,896	630,471	101,536	732,007	68,806	

The results depicted above would have been probably better if it had not been for the coal dispute. Thus the Gas Light and Coke estimates that the cost to the company was not far short of £500,000, while the South Metropolitan was involved in an additional expenditure for coal of over £350,000. The Commercial Gas, while giving no figures, refers to the necessity of purchasing "large quantities of foreign coal at exorbitant prices." But, of course, the greater part of this increased expenditure was passed on to consumers. Returns from sales of by-products are much lower than in 1920, chiefly on account of acute foreign competition. Expenditure, however, has been greatly reduced, wages of the Gas Light and Coke falling from £3,415,706 in 1920 to £2,991,923 in 1921, while those for the South Metropolitan fell from £1,848,148 to £1,735,842.

The variation of prices charged for supplying gas to different parts of London is curiously illustrated in the figures given in the reports of these companies. The Gas Light and Coke began last year with a standard price of 1s 3.2d per therm. From December last it reduced its selling price to 1s 1d per therm. The South Metropolitan, the second largest undertaking in the group, claims to have the lowest price in the London area; up to midsummer this was 10½d per therm, but thereafter it was advanced to 11½d. The Commercial began on May 1, 1921, by charging 1s 1.8d per therm. It was subsequently advanced to 1s 3d, but reduced as from Christmas last to 1s 1d, and as from Lady Day to 1s per therm. The South Suburban began to supply at 1s 2.3d on April 21st; this was, however, reduced in the Christmas quarter to 1s 1.4d. The Wandsworth, which covers a large suburban area, at the end of last year quoted 1s 2d per therm for Wandsworth district, and 1s 3.2d for Wimbledon. It would be interesting to know the companies' reasons for these variations in supply charges.

We conclude with a table showing the pre-war price of London gas stocks, together with comparative dividends, prices, and yields during the past two years:—

Name of Company.	Price, July 27, 1914.	Dividends.		Price End of Mar., 1921.	Yield.	Price Mar. 29, 1922.	Yield.
		1920.	1921.				
Commercial Gas, 4% Stock.....	107	4%	4%	51½	7.8	80	5.6
Do 3½% Stock.....	104	3½%	3½%	49	7.2	54	6.0
Do 3% Debentures.....	70½	3%	3%	38	7.9	45	6.0
Gas Light and Coke Co., Ord. Stk.	103	3	4½	52½	6.1	55½	5.8
Do 3½% Maximum Stock.....	77½	3½%	3½%	41½	8.4	50	6.0
Do 4% Cons. Pref. Stock.....	97½	4	4	57½	7.0	75	5.9
Do 3% Irred. Debts.....	73½	3	3	47½	6.3	55½	5.8
South Metropolitan Gas, Ord. Stk.	112	5	5	63½	7.9	85	5.7
Do 5% P.F. Stk., Red. Dec. 31, 1924	73½	5	5	91	7.1	96	6.1
Do 5% Perp. Deb. Stock.....	73½	3	3	46½	6.5	55½	5.8
South Suburban Gas, Ord. Stk.....	115	3½	3½	58½	6.0	89½	5.1

In common with most other securities, gas stocks have recorded advances during the past few months, but many of the striking increases on ordinary stocks revealed in our table are due to the increased dividends made possible by recent legislative measures and orders, and better prospects consequent upon changes in methods of charging consumers rather than to the general Stock Exchange recovery. Fixed interest-bearing stocks, of course, improved as money became cheaper.

Holders of gas stocks, as investors, belong to a class of their own. They are naturally of a conservative type. Stocks usually only change hands on account of death, and in many cases transfers take place without the assistance of the Stock Exchange, beyond taking the ruling quotation into consideration. When electricity supply undertakings first took the field the days of gas companies were thought by many pessimists to be numbered. Many people, imbued with the progressive spirit of the age, sold their stocks. These clouds of depression were, however, gradually dispersed by increased efficiency of management, the better development of gas for lighting and heating purposes, together with increased utilisation of by-products. By diligent application to the needs of the people the recovery set in, and confidence was reflected in the gradual improvement in prices of gas securities. To-day gas as a cheap heating power holds a position which it may prove difficult to displace, while for commercial purposes there are still avenues unexplored.

Notes of the Week.

The Dispute in the Engineering Trade.—The lock-out notices against the members of the Engineering and Ship-building Trades Federation, the National Union of Foundry Workers, and the National Federation of General Workers have been withdrawn, and negotiations are to be opened between the 47 unions comprised in these bodies and the Engineering Employers' Federation on Monday next. The lock-out of the members of the Amalgamated Engineering Union continues, and immediate prospects of negotiations between the A.E.U. and the employers have disappeared. The 47 unions were in no way connected with the dispute in its first stages, and they only became involved when they declined to accept the employers' memorandum on managerial functions. Through the National Joint Council, representing all sides of the Labour movement, efforts were made at mediation. The mediators and Sir Allan Smith, on March 24th, agreed upon a basis for negotiations, which was submitted to the unions concerned. Difficulties arose on the interpretation of the terms of the suggested basis, but ultimately the unions agreed unanimously to a new basis, which, however, was rejected by the Employers' Federation. A further attempt was made to find a basis for the renewal of negotiations, and late on the evening of April 1st the Labour mediators and Sir Allan Smith put forward a memorandum recommending as a basis the acceptance of "the right of the management, pending negotiations, to give instructions, except where modified by agreement which may be entered into as a result of the negotiations which follow hereon." Throughout the whole of Monday this memorandum was under discussion by the union representatives, and it appears that the A.E.U. was opposed to accepting the new basis. On Tuesday the unions met the Prime Minister, who indicated his view that the notices running out against the members of the 47 unions should be withdrawn if they entered negotiations on the lines laid down in the memorandum of April 1st. He also stated that the employers were not prepared to withdraw the lock-out against the A.E.U. members. At the lengthy conference which took place later in the day between the representatives of the various unions, a final cleavage occurred between the A.E.U. and the other unions. The former regarded the basis of the document of April 1st as unsatisfactory. The latter submitted the view that it gave them freedom to negotiate on the application of "managerial rights." The conference broke down when the 47 unions decided to accept the new basis. It is probable that they will reach a settlement if once negotiations are opened. The struggle will then be confined to the original parties to the dispute—the Engineering Employers' Federation and the Amalgamated Engineering Union.

Hope for Mexican Bondholders.—At last there is a definite prospect of the resumption, at any rate in part, of the service of the Mexican External Debt. Last week it was announced that Señor de la Huerta, the Mexican Finance Minister, was to go to Washington early in this month to open negotiations with the International Committee, representing American, British, and French bondholders, and presided over by Mr Lamont, who visited Mexico last year in connection with the application for a loan from American financiers by President Obregon's Government. The negotiations have now been postponed until May, in order to ensure the presence of British and French representatives; and Mexican securities, generally, which were unaffected by last week's announcement, now show an all-round rise. The Mexican Budget, we believe, does not yet balance, but the entire revenue from the export duties on petroleum has been earmarked for eventual application to the service of the External Debt. Of the four direct External Loans, the capital now outstanding amounts to £34,141,813, on which the total annual interest should be slightly over £1,585,000. The arrears of interest, which presumably may be funded, amount to £12,377,496. The annual interest on them, at the rates promised originally on the various loans to which they belong, would be nearly £588,000, so that the total annual interest, if the arrears were respectively

added to the several capitals of the loans, would be about £2,173,000. The Report by Mr Norman King on Mexico, recently published by the Department of Overseas Trade, gives the yield of the export duty on oil for 1920 as \$45,355,871, or at the present rate of exchange rather less than £5,000,000. The unofficial figures of the export for the first seven months of 1921 indicate that the yield for that year has been considerably greater. The proceeds of the duties, therefore, when they can be spared, should suffice not only to resume the service of the four direct External Loans, but to do something for the holders of the six or seven other issues, amounting in all to some £31,500,000, guaranteed by the Mexican Government. But an adequate settlement is probably impracticable without the loan from American financiers which is expected to follow the recognition of President Obregon's Government by the United States, and which may possibly be hastened by the recent large purchases, on American account, of Mexican Government stocks. This, we need hardly say, has hitherto been delayed by the insistence of the U.S. State Department on the previous conclusion of a Treaty guaranteeing the American oil concessions, threatened by one clause of the Carranzist constitution, and apparently protected by another clause, and by at least two judicial decisions. President Obregon maintains that the Treaty must follow, not precede, recognition. It has been reported in New York that the two Governments are about to compromise by an exchange of notes making the promise of recognition and the undertaking by President Obregon to sign the Treaty simultaneous. It may fairly be expected that the Mexican Congress, whose attitude prior to recognition might be uncertain, would accept the Treaty after it as its price. The condition of the country shows no change. Disturbances have been reported, but it does not appear that they have much significance; and the death of Felix Diaz at the hands of his guards after his arrest in Sonora removes, if the story is true, a possible, though no longer a serious, danger to peace. Greater confidence would be felt, however, if the railways were restored to the companies by the Government.

Stock Exchange Dividend and Rules.—The trustees and managers of the Stock Exchange have declared a dividend of £5 per share, less tax, on Stock Exchange shares, equal to £3 10s net. This makes £8 for the full year ended March 25th, or £5 12s net, being £1 a share less than the dividend declared for the preceding 12 months, which, in its turn, went against £10 a share for the year 1919-20. The carry forward of £145,963 is equivalent to another £7 5s per share, and shows a small reduction as compared with a year ago. The revenue account has been increased by £20,000 transferred from the reserve, equal to £1 per share, and thus following the example set in the accounts of a year ago. A Stock Exchange correspondent writes: The Committee are working hard at the new Rules and Regulations that spring from the policy the principles of which they enunciated in February. The chief of these principles is, of course, the re-establishment of periodical settlements and the Clearing House, the restoration of contangoes, and the numbers of Rules that arise automatically from these considerations. It is fully expected in the Stock Exchange that a Clearing House will be set up by the end of next month, or, at latest, early in June. Under the new Rules, it is probable that members will be more or less obliged to join the Clearing House, though this is a point around which discussion clashes, with various opinions. Nor is it at all certain that an official benediction of contangoes will meet with unanimous approval either in the Stock Exchange or outside. The austere will see in any such permission a source of danger, moral and financial, and it is fairly safe to assume that, if the Committee in their Rules recognise the reinstitution of contangoes (as they are almost bound to do), there will arise an immediate chorus of opposition. However, if bi-monthly settlements are to come into force—and of this there seems to be no doubt—contangoes will follow as a matter of course. Some firms may decline to undertake carrying-over business, but the force of competition plays the leading part in questions of this kind. In the Consol market the jobbers present a nearly united front in declaring that they will not undertake any contango busi-

ness at all. No other market, however, is likely to make such a stand. Periodical settlements, if a guess may be ventured, will be divided into an even number of days, say 15 for each settlement, with the final account of the year a little longer, in order to round up the 365 days. The object would be, of course, to minimise the amount of work involved in working out contingencies and interest for differing periods that range from 13 to 19 days. Everything is being done to expedite a return to the pre-war position, but the war experience should prove of incalculable value to the Stock Exchange in enabling it to start a clean sheet when once the House is free from Treasury control, and to write its future history with a greater wisdom for the experience gained under war conditions. One of the matters in which the public is especially interested relates to the marking of bargains. Before the war brokers could record their transactions or not as they pleased. The Stock Exchange Official List came to be regarded as a record of bad bargains, it being argued that only transactions effected at unsatisfactory prices appeared in its pages. Upon the re-opening of the House after the outbreak of war in January, 1915, every bargain transacted in the Stock Exchange had to be marked in the lists, with the name of the seller provided on the same slip. The latter requisition was soon abandoned, and in course of time the Stock Exchange Committee relaxed the marking rule so far as it related to amounts of £100 money or less. It is left at the discretion of the broker whether he marks such bargains or not. Opposition has arisen in the Stock Exchange to the compulsory marking of bargains of any kind. The argument against such a record is that it frequently causes members of the public to fix such limits to their orders as prove to be impracticable. There is, however, very much to be said in its favour, and at one of the Stock Exchange Committee meetings this week the proposal to abolish compulsory marking of bargains was defeated after a fairly brisk encounter between those who support and those who oppose the present system.

Czechoslovak Budget for 1921.—During his recent parliamentary speech on the foreign currency loans Bill, with a special bearing on the recently granted English loan, writes a correspondent, Dr A. Novak, the Czechoslovak Finance Minister, stated that for the year 1921 the revenue from direct and indirect taxation, customs dues, monopolies, &c., amounted to 9,693 million crowns, as compared with the estimate of 9,051 million crowns in the supplementary budget. Thus the budget of the Finance Ministry shows an advance of 640 million crowns over the estimated revenues, and this amount almost balances the deficit of 728 million crowns in the supplementary budget. If it is further considered that the second largest item in the Czechoslovak revenues, the receipts from railway transport, reached a figure of 3,873 million crowns, as compared with the estimate of 3,850 million crowns, and, moreover, that the sums voted as expenditure have not all been fully drawn upon, it may be said that, apart from investment expenditure, there will be an actual surplus in the Czechoslovak State finances for 1921. It must not be overlooked, however, that the method by which this result was achieved was no easy one. During its summer session last year the National Assembly sanctioned a taxation scheme by which the resources of the country were strained to the utmost. It also handicapped the Czechoslovak industries in their competition with neighbouring States, where the progressive inflation produced a temporary export boom. The political events of the autumn, and in particular the mobilisation, brought about unforeseen expenditure to an enormous extent. The Czechoslovak State is hopeful of overcoming the present economic crisis shared by all States with a comparatively high currency, and that it will be able to cope with the severe burdens of taxation and assist home production to a new prosperity.

The Next President of Argentina.—A correspondent writes:—The figures of the election to the Presidency of Argentina are said to point to the success of the Radical candidate, Señor de Alvear, whose electors have a majority in Buenos Ayres and in most of the provinces

of the Republic. As in the United States, there are nominally two stages in the election, so that the actual choice of the President by the Electoral College will not take place till June, but practically the electors are pledged beforehand, and the second stage is a mere form. Of the four defeated candidates, Señor Pinero represents the old Conservative parties, Señor Repetto (a landowner) the Socialists, Señor Ibarguren the Democrats, and Señor Laurencena the Radical dissentients. A Radical now succeeds a Radical; probably foreign investors would have preferred a different result. But Señor de Alvear has been Argentine Minister in Paris since 1917; he is probably more in touch with European opinion than President Irigoyen, and as he was put forward as the result of a compromise between different sections of his party, he is presumably moderate in his views. It may be hoped that he will be more considerate towards foreign investors and firmer towards the extravagances of the labour unions than his predecessor was during part of his term of office.

Economics of Farm Labour.—The tenth table in the White Paper issued by the Ministry of Agriculture (LVI. No. 1) is new, and the insight which it affords into the economics of farm labour is valuable. Figures for 1908 and 1913 are referred to in the Introduction, but are not of much use, seeing that they exclude the occupier's family and household dependents, whereas the 1921 returns rightly give the workers on the land whether related to the farmer or not. The figures for 1913 appear to be erroneous with respect to casual workers; at all events a change of definition must be premised. The 1921 figures, therefore, are not considered on their own merits. They are more favourable than had been anticipated, there being more persons supported out of agriculture than had been supposed. They do not endorse the theory of the Agricultural Wages Board that arable employed three men to 100 acres, pasture only one. The average for all England exceeds three; the arable goes up in the most favourable circumstances to five, but this is very rare. As a rule, arable sustains four workers and pasture two, and the economists' scale must be altered from 3 : 1 to 2 : 1, actual figures per 100 acres from 3 : 1 to 4 : 2. The employed are not more than twice as numerous as the employers, so that a closer fellowship is seen to exist in agriculture than in other callings. The main divisions appear to be:—Employers, 420,133; workers, 685,252; aiders, 183,931; total, 1,289,316. The aiders are the casual workers, who, however, appear to be regularly depended upon in all the recognised exigencies of farm life. No grave complaints of short-handedness are heard from farmers at any time of the year. These aiders do not include hoppers, Irish harvest labourers, or other "excursionists." Economists will be on their guard against assuming that, say, four times the above total are kept out of agricultural work. The 125,000 women will include many wives and daughters, the 155,000 youths many sons. Of the 420,133 farmers, fewer than 13 thousand have farms large enough to warrant the supposition that a bailiff is kept, and with these 456,783 labourers in all-the-year-round employment constitute a solid nucleus of 876,916 persons directly sustained by agriculture. It is probable that at least 3½ million people are kept out of work on the farm. Farmers themselves are most numerous in Yorkshire, Lincolnshire, Lancashire, Devon, Norfolk, Somerset, Cheshire, and Stafford, adult male labourers in Yorkshire, Lincolnshire, Kent, Norfolk, Essex and Devon. So far from Kent being now a yeoman county, it is conspicuously one of good-sized farms, and a comparatively small number of farmers keeping an unusually good staff of men.

Labour Legislation in India.—The Indian Legislative Assembly and the Council of State have adopted resolutions recommending the ratification of the draft convention of the second International Labour Conference of the League of Nations, fixing the minimum age for the admission of children to employment at sea, subject to two reservations occasioned by the special conditions prevailing in India. The first is that it should apply only

to ships exceeding 300 tons, as it is only on such vessels that the Indian Shipping Law controls the engagement of seamen. The second, that ratification will not interfere with the Indian custom of sending young boys to sea on nominal wages with their fathers to serve as apprentices—the practice being regarded in the light of a privilege. India is amending her legislation in order to give effect to this convention, subject to these reservations. But as Article 405 of the Peace Treaty does not allow for reservations, the Indian Government has asked that the other members of the International Labour Organisation—54 in number—should be informed of the special conditions which prevent her from formally ratifying the convention. The Indian Government has been unable to ratify the convention concerning unemployment indemnity in case of loss or foundering at sea, as there is no machinery at present established in India for registering unemployment among seamen. But the Government has instituted an inquiry to ascertain whether the law should not be amended so as to provide (1) that any Indian seaman whose service is terminated before the period contemplated in his agreement by reason of the wreck or loss of the ship should be entitled to his wages until he is repatriated to the port of his departure from India; and (2) that he should be paid compensation for loss of his personal effects up to the limit of one month's wages. The Indian Legislature has recommended that, if practicable, the law should be amended on the lines indicated above—thus putting into effect the principle of this convention in a form adapted to Indian conditions. The Indian Government are not yet able to ratify the draft convention for establishing facilities for finding employment for seamen, but are examining the method of treatment of this question likely to be most suitable to Indian conditions. For that purpose they are proposing to appoint a Committee to inquire into the whole system of recruitment of seamen in India, whether abuses exist, and if so, whether they are susceptible of remedy. In notifying its present inability to ratify this convention, the Indian Government state that article 2 of the convention has their entire support. This article provides that "the business of finding employment for seamen shall not be carried on by any person, company, or other agency as a commercial enterprise for pecuniary gain; nor shall any fees be charged directly or indirectly by any person, company, or other agency for finding employment for seamen on any ship. The law of each country shall provide punishment for any violation of the provisions of this article."

Scotch Whisky Trade.—An Edinburgh correspondent writes:—During the past few weeks there has been a further striking exodus of wholesale blending firms from the Scotch whisky trade. In practically every case the stocks of matured whisky have been sold to big distributing firms, who have either more confidence in the future of the trade, or resources to enable them to face the uncertainties of the future with comparative equanimity. In any case, the result is that another batch of distributing firms disappears entirely from the industry. From some points of view this is a regrettable development, as it tends to concentrate at least one section of the trade in fewer hands. It would be quite incorrect to assume, however, that any group of interests are gradually acquiring a monopoly. In addition to some half-dozen very big firms whose organisations are admittedly widespread, there are innumerable smaller concerns who both export and supply the home trade. Those smaller firms may not be so well supplied with stocks of matured whiskies as the larger ones, but they have sufficient to make them quite formidable competitors, and have also substantial stocks of young whiskies which will be available for the vat in the course of the next two or three years. In addition to the proprietary brand owners, who constitute the firms whose names are best known to the public, there are many firms whose principal business is that of supplying whisky in bulk for retail over the counter in small quantities. With the proprietary brands always so much in the limelight, it is apt to be forgotten that the greater portion of the turnover in the Scotch whisky trade is still in bulk whisky, or, in other words, that the largest consumer is the

working man. It is upon this section of the trade that the high spirit duty of 72s 6d per proof gallon is bearing so heavily as to make the burden almost insupportable. The consumption of Scotch whisky, both at home and abroad, has been steadily falling ever since the last addition of 22s 6d per proof gallon was made to the spirit duty two years ago. The depressing effect upon the industry has been obscured by the advance in the prices of old single whiskies. This advance is due, not to any increase in the consumption, but principally to the fact that, as a result of the cessation of distilling for two years during the war, and the passing of the three years' age limit, the stocks of matured whiskies are insufficient to meet the demand. This deficiency in the supplies of matured whiskies has been accentuated by an increase in the demand for the highest class of proprietary brand whiskies consequent upon the diversion of such demand from wines dictated by the need for economy among middle-class consumers. If the retention of the high spirit duty depended upon its economic justification alone, then no doubt merchants would be content to wait until the existing unhealthy state of affairs worked its own cure. Unfortunately, there is a widespread feeling throughout the trade that political considerations are allowed undue weight in determining the duties on alcoholic beverages, and, accordingly, we have firms who prefer to take advantage of the present opportunity to realise their stocks and quit the trade rather than run the risk of "seeing it through." During the past few weeks old-established distributing concerns like William Ford and Son, Limited, of Leith, John Somerville and Co., Limited, of Edinburgh, Peter McPhail, of Edinburgh, and Henry Simpson and Co., of London and Glasgow, have sold out, and several other deals, involving the control of Highland distilleries, have either been completed or are under negotiation with a similar object in view. Powerful petitions have been presented to the Chancellor of the Exchequer by both the distillers and distributors, pointing out not only the hardship that the present high rate of spirit duty imposes on the industry, but also that the increase in duty imposed in 1920 has not justified itself by producing the anticipated additional revenue, and that it is the conviction of the trade that if the duty were reduced to 50s per proof gallon the consumption would be stimulated to such an extent as to benefit both the Revenue and the trade.

London Guarantee and Accident Company.—There are two ways in which a powerful accident and miscellaneous insurance company may turn itself into a composite office, transacting all branches of business. One is by way of purchase of the shares of successful specialist companies, the other is by way of development from within. The first, the quicker method, has in the main been followed by the Employers' Liability Corporation, which recently acquired the Merchants' Marine Insurance Company, and the Clerical Medical and General Life office, and has developed fire business on its own account. The second, the slower, but in the end not less sure method, is that of the London Guarantee and Accident Company. Both methods are quite sound, and have, in the case of those two strong companies, proved highly successful. The report of the London Guarantee and Accident Company for last year shows that in the marine department the premiums were reduced from £1,274,051 in 1920 to £732,590 in 1921. After providing for claims of £894,988, the whole of the marine fund of £880,826 (120.3 per cent. of the premiums) was carried forward. The general insurance revenue account—the solid backbone of the company—shows premiums of £3,793,054 for 1921, against £3,821,420 for the previous year, and after meeting claims and expenses, and crediting interest of £85,505, the sum of £212,380, as against £155,134 in 1920, was transferred to profit and loss. The general insurance funds were then £3,092,933, against £3,258,701 brought forward. The points of chief interest in the finance of the company are as follows:—Although the receipts from interest during 1921 available for profit and loss were £140,079, the amount paid in dividends was no more than £62,866; £125,000 was added to the general reserve fund, making it £550,000; £100,000 has been set aside as a reserve in connection with possible reinsurance losses, and £75,000 has been taken from the

investment reserve fund as being no longer required. The balance of the investment reserve fund, £125,000, is stated to be £27,645 in excess of the depreciation in assets at the end of 1921—a pleasant fact to record after years of long-drawn out shrinkage in investment values. The total dividend for last year is 10s a share, less tax, as against 9s a share for 1920, also less tax. The position reflects much credit upon Mr Thiselton, who is one of the very few actuaries who has had full opportunity of proving his capacity as a general insurance manager. It used to be said that no actuary was of any use outside a life office; that can no longer be said now that Sir Gerald Ryan and Mr H. C. Thiselton have demonstrated its fundamental fallacy. A highly scientific training should be—as it has been in the case of these gentlemen—an invaluable addition to the equipment of an insurance administrator.

Associated Portland Cement.—The report of the Associated Portland Cement Manufacturers for the year ended December 31st last shows a considerable shrinkage in profits. The trading profit fell from £681,600 to £477,400, a decline due to the decreased quantities shipped and lower prices obtained in the export markets, while income from investments produced £186,200, as against £270,000, the decrease being partly accounted for by the reduced dividend received from the British Portland Cement Manufacturers, Limited. A summary of the company's financial history since 1901 is given below:—

Year Ending June 30.	Profit.	Debtore & Mortgage Interest.	Preference Div.	Sinking Fund, Reserves, &c.	Balance.
1901.....	£ 226,707	£ 84,694	£ 91,213	£ 20,096	£ 30,704
1905.....	310,662	135,063	118,885	61,185	Dr. 4,471
1910.....	316,407	140,938	118,885	60,848	Dr. 4,864
1911.....	369,861	139,237	118,855	109,707	2,032
1912.....	355,507	186,974	122,324	51,751	Dr. 5,542
1913.....	585,646	235,114	124,220	116,292	109,817
1914.....	556,341	229,653	125,133	101,518	100,037
1915.....	450,712	222,335	125,660	101,262	1,455
1916.....	351,174	226,382	..	113,710	11,082
1917.....	367,612	221,381	..	126,641	19,590
1918.....	551,660	215,519	125,660	203,951	6,530
1919.....	683,761	209,859	376,979	161,478	Dr. 64,555
1919 (July to Dec.)	398,123	101,562	62,830	135,000	98,731
1920*	947,306	200,016	125,660	328,849	292,781
1921*	658,921	195,513	125,660	229,395	108,348

* Year ended December 31st.

The report states that profits have been arrived at "after taking credit for an amount previously reserved, and not now required for excess profits duty," but it is added that a still larger amount has been written off stocks of purchased materials to bring them down to market value. General depreciation is credited with £150,000, as against £250,000, but other allocations are on a similar level to the previous year. The ordinary dividend is reduced from 10 to 5 per cent., and absorbs £106,900, leaving £224,000 to be carried forward, as compared with £222,600 brought in. The balance-sheet shows that additions to the extent of £223,300, raising it to £7,790,900, have been made to the property item, which includes goodwill, while reserves are £245,100 higher. Creditors are £376,600 lower, and stocks-in-trade has been reduced by £161,600, debtors by £183,700, investments by £118,800, and cash by £91,400. The report mentions that since the end of the year a conditional agreement has been entered into with the Kent Portland Cement Company for the purchase of their works situated on the River Thames.

Sheffield Steel Products.—In view of the issue this week of a second debenture stock, the reports and accounts of Sheffield Steel Products, Limited, are of more than usual interest. Profits for the year ended December 31st last amounted to £229,609. Debenture interest absorbed £30,364, and preference dividends £50,715. To the various reserves £142,000 has been allocated, and the carry forward has been increased by £6,138, bringing this sum up to £178,092. Total assets are now given as £4,117,434. The auditors' report calls attention to the

fact that "no reserve has been made for taxation for the years 1920 and 1921," and it further states that "no charge has been made for depreciation." Property and plant are taken at valuation, made in September, 1920, as £2,619,049. Stocks are valued by officials, and "have been written down in view of the continuous fall in selling prices" to £736,307. Investments are taken at cost at £106,529. Trade marks, &c., are valued at £94,810, while costs of debenture issue at £111,734 appear under assets. Creditors are but £179,176, as against debtors of £268,673, but reserves only total £70,690, although the credit balance of profit and loss account amounts to £345,537. The balance-sheet will be found analysed in another column.

Rand Reports and Reserves.—Our Mining correspondent writes:—Of the trio of annual statements of Transvaal mining companies which have come to hand this week, two—although otherwise very different in their showings—present the common feature of the elimination of a substantial tonnage from the ore reserve estimates. By the exclusion of 233,300 tons, comprised in certain low-grade blocks, the ore reserves of the Modder "B" as on December 31st last were reduced to 2,773,300 tons, but, partly as a consequence, the average value advanced 1 dwt to 9.6 dwts. The quantity now reckoned upon represents about 3½ years' supply for the mill. For some time past the nature of the developments has been a source of considerable anxiety to the shareholders. The latter will consequently be much relieved to learn from the report of the consulting engineer that in two sections of the property where results had been disappointing the indications are now more hopeful. Expenditure upon shaft sinking and additions to the plant, which last year absorbed £139,000 of the profits, having now been nearly completed, the company will suffer less than most others from the decline in the gold premium. The Modder "B," of course, is one of the prosperous Far-Eastern Rand Group, and for 1921 paid dividends totalling 95 per cent. In the case of the Rose Deep—a Central Rand proposition—the "cut" in the ore reserve estimate would appear to be something like half a million tons, the present figures being 2,564,400 tons; the value at 5.2 dwts. is a trifle up. The ore now reckoned as payable would suffice to keep the mill employed for fully 3½ years. But for the gold premium the company would last year have made a working loss of £43,900, instead of a profit of £124,900, out of which dividends totalling 15 per cent. were paid. The chief ground for hope in regard to the future consists in the extent to which the concern will benefit from reduction in the working costs. A saving of 1s per ton under this heading would offset a decline of 4s in currency price of gold. The company is in a good financial position, having surplus cash assets equivalent to 3s 9d per share. A reduction in the ore reserve estimate also occurs with the Village Deep, but in this instance the shrinkage is due to the fact that the major portion of the material opened up last year was not fully developed, and therefore could not be taken into account. As the workings extend to a depth of more than 6,100 feet from the surface—the lowest level yet reached on the Rand—expenses are naturally heavy, and drastic economies will be necessary to permit the continuance of operations. Save for the gold premium, last year's accounts would have shown a working loss of £83,000, as against a profit of £113,000. A very clear little plan of the mine issued with the report indicates that from about 2,000 to 2,500 feet of ground yet remains to be exploited before the southern boundary of the property will be reached.

Brazilian Centenary Exhibition.—An International Exhibition, in which, at the invitation of the Brazilian Government, the British Government has decided to take part, is to be held at Rio de Janeiro from September 7th to the end of December, 1922, in connection with the celebration of the Centenary of Brazilian Independence. The British section of the exhibition is being organised by the Department of Overseas Trade. The expenses will be borne partly by the British Government, partly by British firms taking part, and partly by Anglo-Brazilian interests. It is stated that the site allotted for the British building is

one of the best in the whole exhibition, and that the work in its construction is well in advance of that done by other nations. All that is necessary to ensure the complete success of the British section is that British commercial and industrial firms should consider their own ultimate interests and those of this country by maintaining our position in the eyes of the Brazilian people and Government, our friends and allies.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION REPORT—JANUARY RAILROAD EARNINGS—NORTHERN PACIFIC DIVIDEND REDUCTION—FOREIGN BOND OFFERINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 25.

As the quarterly earnings statements had indicated, the annual report of the United States Steel Corporation, published this week, shows that 1921 was a very poor year. Gross business transacted amounted to \$986,749,719, as against \$1,755,477,025 in the preceding year, the decrease of \$768,727,306 being more than 43 per cent. After deducting federal taxes, but before charging interest on bonds of subsidiary companies, net earnings totalled \$100,791,279, as compared with \$185,095,359 in 1920, representing a decrease of \$84,304,079, or approximately 45 per cent. The balance available for dividends was \$35,617,017, as against \$109,694,227 in the preceding year. After paying preferred dividends the balance applicable to the \$508,302,500 common stock was \$11,397,340, equivalent to \$2.24 a share, as compared with \$84,474,550, or \$16.62 a share in 1920, and \$51,574,905, or \$10.14 a share in 1919. After meeting both preferred and common dividends for the year there was a deficit of \$14,017,785, compared with a surplus of \$59,059,425 in 1920, and of \$26,159,781 in 1919. As at December 31st last current assets were \$569,431,330, and sinking fund and reserve fund assets \$51,602,469, making a total of \$621,033,799. Current liabilities were only \$84,248,556, leaving net working capital of \$536,785,243, or \$59,172,380 less than at the close of 1920. Assets in cash or its equivalent included \$131,462,691 marketable securities (including Liberty bonds and United States Treasury certificates), \$116,856,843 cash subject to check, and \$6,924,463 time deposits.

During the year expenditure on new construction and property additions totalled \$70,091,866, making an aggregate outlay for such purposes since organisation of \$1,061,349,354, equivalent to \$209 a share on the common stock. The average wage paid per employee last year was \$1,736, as compared with \$2,175 in 1920, and \$905 in the years 1913 and 1914.

Of the \$248,669,420 decrease in the total pay-roll, as compared with 1920, approximately \$175,143,000 was due to the smaller number of employees in the service, while \$73,526,000 resulted from lower wages and salaries paid in 1921 than in the preceding year. The average salary or wage per employee per day was \$5.73, as against \$7.00 in 1920.

In commenting upon the operations of the past year, Elbert H. Gary, chairman of the board of directors, pointed out that subsidiary companies carried forward into 1921 a substantial tonnage of unfilled orders for steel products, which enabled them to operate at an average of about 70 per cent. of capacity during the first quarter. Thereafter the degree of operations dropped in succeeding months to the low point of the year in July, when the output was only about 29 per cent. of capacity. The average production for the entire year, he said, in rolled and other finished products for sale, was 47.5 per cent.—the lowest ratio of production to capacity in the corporation's history. Concurrently with the decrease in demand for steel products, there were marked declines in prices obtained for nearly all forms of output. These reductions generally exceeded the decreases which it was possible to effect in the cost of production through the reduction in unit prices of factors entering into the cost of operations, and the exercise of rigid economies. Chairman Gary empha-

National Bank of Commerce in New York

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE.
Gresham House, Old Broad Street.
London, E.C. 2

sised the fact that a number of elements in the cost of production showed little, if any recession from war-time levels, and especially that of railroad transportation, which on the basis of existing rate conditions averaged, in the case of subsidiary companies, more than 40 per cent. of the total cost of producing steel. Since the beginning of 1922, and to the date of writing the report, new business placed with the corporation was equal to about one-half of the total capacity of the subsidiary companies' plants. It is noteworthy in this connection that the corporation is now operating at more than 71 per cent. of capacity.

Practically complete reports filed by the principal railroads with the Interstate Commerce Commission show that operating revenues in January totalled \$394,941,500, or 14.9 per cent. less than in the corresponding month of last year, while operating expenses aggregated \$337,142,000, or 23.7 per cent. less. Net operating income in January amounted to \$29,604,000, which on the basis of their tentative property valuation would be at the annual rate of return of 2.60 per cent., compared with \$51,588,000, or 3.44 per cent. last December. Although gross earnings declined nearly 15 per cent., as compared with January of 1921, freight traffic fell off only 9 per cent. approximately. The difference is explained by the fact that, owing to rate reductions, the revenue for carrying a ton of freight one mile, in the case of various commodities, was less than in the like month of last year. Early in the present year the carriers put into effect a voluntary reduction of 10 per cent. in rates on agricultural products, and about the same time a reduction of about 16 per cent. in rates on hay and grain, ordered by the Commerce Commission, became effective in western territory. The net operating income for the first month of this year fell short by \$38,783,000 of the amount necessary to have afforded the railroads a 6 per cent. return.

The action of the Northern Pacific directors this week in reducing the quarterly dividend on the common stock from 1½ per cent. to 1¼ per cent. did not cause much surprise in the financial district, following, as it did, the recent announcement that the Great Northern had adopted

the policy of declaring dividends semi-annually instead of quarterly. Furthermore, it was known that the Northern Pacific had suffered considerably in recent months owing to the depression in mining, lumber, and agricultural industries in the North-West. Nevertheless, the cut in the regular distribution attracted a great deal of attention, for Northern Pacific stock is widely held by investors, and has long been regarded as a high-grade investment. The company since 1909 has regularly paid a dividend of 7 per cent. annually to common shareholders. In January of this year the company showed a deficit of more than \$600,000, and the result of February operations is expected to be about the same. Car loadings, however, are beginning to increase, and according to Howard Elliott, chairman of the board, the management considers the outlook for the remainder of the current year as encouraging. The Northern Pacific's property, he says, is in splendid physical condition, and the company is in a position to take advantage of any improvement in industry. In announcing the reduction, Chairman Elliott said the directors "feel they are best serving the interests of the stockholders, and are hopeful that conditions will warrant resumption of the rate of 1½ per cent. quarterly in the future." In June, and again in September of last year, the Northern Pacific had to dip into its surplus in order to pay the regular 1½ per cent. dividends.

Additional foreign securities floated here this week included \$6,000,000 City of Soissons, France, 15-year external reconstruction, secured 6 per cent. gold bonds, non-callable as a whole or in part. The French Government, it is announced, has contracted to make annual payments in sufficient amounts for interest and retirement of the entire issue at or before maturity. The bonds, which are dated November 14, 1921, were offered by White, Weld and Co., at 85½ and interest, to yield about 7.65 per cent. Subscriptions in excess of the amount available were received before the bonds were formally offered. Another flotation consisted of \$6,000,000 Government of Newfoundland 20-year 5½ per cent. gold bonds, which were priced to investors at 101, to yield about 5.40 per cent., and \$500,000 City of Toronto 31-year 4½ per cent. guaranteed gold bonds, offered at 87.81, to yield 5.30 per cent. Both of those issues were readily absorbed. In fact, there has been no slackening of investment demand for offerings of new foreign and domestic securities of merit, which afford an attractive yield. Two other foreign loans are understood to be under negotiation, namely, \$30,000,000 6 per cent. bonds of Czechoslovakia, and approximately \$25,000,000 bonds of the Paris and Orleans Railway Company.

FRANCE.—REPARATIONS — LOANS ABROAD—FREE RENTE MARKET.

(FROM OUR CORRESPONDENT.)

PARIS, April 4.

THE Senate, after devoting three whole sittings to the subject during the past week, has now passed, without a division, the Budget of Recoverable Expenditure for 1922. In his exhaustive report on the Bill, Senator Henry Béringier set forth that the expenditure provided for to meet the requirements of the devastated areas during the present year will amount to 22 milliards of francs. The Bill, as passed by the Chamber, provides for an estimated revenue of 25 milliards, made up as follows:—

	Francs.
Payments by Germany	7,000,000,000
Further issues of short-term Treasury bonds	6,000,000,000
Issues of Crédit National bonds	8,000,000,000
Loans issued by industrial and other groups against War damage payments due to them	4,000,000,000
	25,000,000,000

M. Béringier expressed strong opinion that every possible reserve must be placed on the hope that Germany will pay the seven milliards due from her during the current year. He pointed out that the payments already made by Germany have been utilised to meet the cost of the armies of occupation, and he estimated that France, during the present year, will have to advance to her debtor at least another 20,000,000,000 gold marks, in addition to the 50,000,000,000 gold marks previously advanced.

In view of the attitude assumed by the German Chancellor and Foreign Minister towards the last Note from the Reparations Commission, by which Germany is accorded a reduction of payments during the current year, on condition that she puts her financial house in order, by imposing 40,000,000,000 marks of fresh taxation, and taking other steps to guarantee her future payments, attention is now being drawn here to the possibility of arranging for the issue of a series of international loans by Germany, the produce from which would be utilised for reparation payments.

The Reparations Commission announces that it has adopted Sir John Bradbury's proposal for the formation of a committee of experts to consider the practicability of this step. The committee of experts, it is proposed, shall consist of M. Delacroix, the former Belgian Premier (as president), Signor d'Amelio (deputy-Italian delegate on the Reparations Commission), who will act as vice-president, and financial experts representing Great Britain, France, the United States, Germany, and "one of the nations that took no part in the war." These experts are all to be men who have had practical experience in the issue of State Loans, and they are to seek the opinion of other financial experts who have had the handling of international loan propositions in New York, London, Paris, Rome, Brussels, Amsterdam, and other money markets.

Meanwhile, a good deal of dissatisfaction is being expressed in French financial circles in regard to the recent issue of several fairly important French loans on the London and New York markets. A few months ago, it is pointed out, the Department of the Seine issued a loan of 350 million francs in America in connection with the re-equipment of the public transport services of the Paris area. Still more recently the Nord and P.L.M. railway companies issued loans in London for a combined total of between 400 and 500 million francs. For the near future an Algerian Loan of 580 millions, and a Moroccan issue of 300 millions, are foreshadowed. These various issues have been made at a cost of over 8 per cent., and generally unknown to the public, who will have to meet the heavy annual charges involved. The only reason, it is argued, that could justify such a policy, at a period when business on the Bourse is undergoing such prolonged depression, would be that it is impossible to procure the required money in France.

The facts, however, show that such a reason cannot be found. The latest balance-sheets of the great French banks disclose that the deposits held by them amount to over 20,000,000,000, the rate of interest paid on which does not as a rule exceed 1½ per cent. It would be easy, it is insisted, out of the money available, to cover an issue of 1½ to 2 milliards of stock guaranteed by the State at 6 per cent., which would be cheaper than borrowing the money abroad, and would not help to increase the burden of France's debt to the foreigner. These arguments, of course, must be regarded merely as a piece of special pleading by interested parties connected with the French stock exchange industry. The official French report will be found in referring to the figures set forth in the opening paragraph of this letter, showing the amount the Treasury will require to extract from the pockets of the French investor during the current year.

The event of the current week, from the Stock Exchange point of view, is the reopening of the Rente market, a step that has been contemplated for some time by the Minister of Finance, M. de Lasteyrie. Hitherto, as is known, there has been a free market, so far as French State Funds are concerned, only in the 3 per cent. Perpetual Rentes. With each successive war loan, the price at which the new stock could be bought or sold was fixed officially, soon after it came into the hands of the public after allotment, the reason, of course, being to prevent attacks on French credit by outside interested parties who might otherwise be able to take disastrous advantage of the exceptional circumstances due to the war. These fixed prices have from time to time been modified in a downward direction, during the past two or three years, in order to bring them more in accord with the steady rise in interest rates. The effect of this policy has been that it has been almost impossible for holders to dispose of War Loan scrip through the usual channels, and only possible at all after long intervals.

In order not to cause too much disturbance to the market, the various categories of Rentes are to be "liberated" in successive stages. A beginning will be made to-morrow with the 1915 and 1916 5 per cent. issues, the nominal total of which amounts to 15 milliards. The other categories will follow in order of seniority, namely, the 4 per cent. 1917 (400,000,000), 4 per cent. 1918 (946 millions), 5 per cent. redeemable, 1920 (694,000,000), and the 6 per cent. 1920 (1,673,000,000). In view of the new situation, the various categories of Rentes were unofficially quoted to-day as follows:—4 per cent. 1917, at 1½ discount, as compared with the official quotation; 4 per cent. 1918, 1½ discount; 5 per cent. 1915, 2½ discount; 5 per cent. 1920, at 3½, and the 6 per cent. at 3.

The week that has just closed has been marked by a further depression on the Bourse, due in general terms to the unsatisfactory situation of Europe, and more particularly to the elimination of Russia and Germany as possible purchasers. French Three per Cents. have fallen back from 58.15 to 56.90. Russian descriptions have also registered a sharp decline, Consolidated dropping from 20.70 to 18.25. Banque de France declined from 5,780 to 5,665, and other bank shares followed suit, Banque de Paris, for instance, falling from 1,215 to 1,177. French Rails were comparatively unchanged, but Shipping shares fell, Chargeurs Réunis being at 377 as against 394. Metallurgical undertakings followed the general tendency, Longwy, on its large increase of capital, decreasing from 850 to 720, and Micheville from 875 to 850. Creusots were unchanged at 2,200. Mines were depressed, Tintos dropping from 1,225 to 1,190, Boléo from 350 to 326, and Utah from 726 to 718. In Oils, Mexican Eagles closed at 168, as against 187, but Royal Dutch were firm at 17,700, as against 17,400. Bakus dropped back from 2,245 to 1,975, and in Rumanians, Colombias lost 30 points, and closed at 241.

GERMANY.—GENOA — REICHSBANK — EXCHANGE AND BOURSE—PRICES—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 4.

DR WIRTH obtained from the Reichstag a new vote of confidence, this time by 248 against 81 votes, with 43 withheld votes, for his Reparations policy, the only clear points of which are that the Reparation Commission's 60 milliard mark loan, and its claim to control finance, are rejected. The term, up to May 31st, allowed for execution of the Commission's measures, now apparently becomes a term for fresh negotiations. In these the Cabinet will make counterproposals which may propitiate the Commission, but the only vital question is whether a foreign loan can this year be obtained. Short of that, and without recourse to selling marks for better currencies, the reduced obligations cannot be met. Mr Lloyd George's speech of the 3rd, on the Genoa Conference, caused no disillusion here; it has been understood since shortly after Cannes that a radical treaty or reparations revision would be excluded from the Conference's programme, and although Genoa originated in a design to deal with Reparations on a general international basis, sound judges here did not believe that even the formal inclusion of Reparations in the programme could bring a settlement. This disbelief was based on the fact that Reparations are the immediate interest of only a few Powers; and that these Powers would be bound to maintain their interests against the recommendations of a Conference consisting largely of non-interested parties. Reparations, it followed, would be settled, if at all, through narrowly limited negotiations of the interested countries. The prospect is that Genoa, without itself doing anything directly to help towards solution, will delay a possible settlement elsewhere.

From Conference discussions on the Russian question not too much is expected. The doctrine that Germany could easily settle her liabilities if only Russia became prosperous sounds too much like politicians' magic to satisfy sceptical persons. Russia's recovery, it is admitted, would make Europe's recovery easier, but this is only a way of saying that each European country must recover if all are to recover fully, and the precise way in

which Russo-German trade would provide Germany with the necessary active payment balance has not been made plain. The granting of credit to Russia for the food, fuel, machinery, and transport, without which she cannot recover, would damage still further, at least at first, the creditor countries' payment balances; and in practice this is recognised in Ally countries when objections are made to the granting of credit by Germany. Germans cannot go into Russia with a reconstruction programme without bringing with them a vast quantity of capital in the shape of apparatus of production. Were Russian prospects better, Germans would do this with pleasure, but the immediate effect for Reparations would be the very flight of capital to which in its last Note the Reparations Commission objects. The dominant German view is that the Russian issue, vital in itself, is in its supposed relation to Reparations a red herring across the trail towards real solution.

The Reichsbank announces for 1921 a dividend of 10 per cent., against 8.7 per cent. in 1920. The report to the General Assembly states that clearings in 1921 totalled 20,090 milliards, against 12,770 milliards in 1920, and 422 milliards in 1913. Gross profits were 9.8 milliards. Against this was a loss of 8.1 milliards involved through meeting liabilities in foreign currencies guaranteed during the war. Administration costs were 339.4 millions, and the printing of bank notes cost 262.1 millions. Net profits were 64.8 millions, of which 5.8 millions go to reserve, raising the ordinary reserve to 127.2 millions, 2.41 millions go to the State, and 18 millions for dividends on a capital of 180 millions. The report ascribes the heavy mark exchange fall to the facts that the passive payment balance could only be corrected by sales of notes, mark securities, and mark credits abroad, and that this led to general mark sales by speculators. To obtain sufficient foreign currencies the bank had to pledge its silver of a value of 58 million gold marks, and to reduce its gold reserve by 68 million gold marks. The report describes the business boom of last year as delusive.

The Reichsbank's statement for March 23rd shows a decline of Treasury bill discounts by 6,681,507,000 marks to 132,060,584,000 marks, due to the usual reaction against the mid-month demand for credit. Note circulation increased by 783,167,000 marks to 122,903,538,000 marks; State deposits declined by 2,465,845,000 marks to 5,366,534,000 marks, and private deposits by 4,054,612,000 marks to 18,778,864,000 marks. The bank's holding of private bills is only 1,491,134,000 marks. The director of the Disconto-Gesellschaft, Dr Urbig, demands a return to the normal pre-war practice of financing business with bills of exchange. The trade bill has almost vanished, so that in the assets of the private commercial house it plays an ever smaller rôle beside Treasury bills. Business is largely done for cash, or even against payment in advance, this being a natural result of the disadvantage of being a creditor in times of depreciating currency; and often producers and buyers both require bank credits in order to keep to the cash system. For this Dr Urbig declares that bank deposits will prove insufficient if the inflation should cease without bringing an immediate decline in the demands of business. The total of new capital raised in March for stocks and bonds was 6,416 millions, against 893.62 millions in the same month of last year. In the first three months of 1922, 609 concerns increased their capital by 7,633.6 millions; 380 concerns with capital of 2,502.7 millions were founded, and there were 63 emissions of bonds totalling 3,211.2 millions.

Stocks last week had a moderate rise. The *Frankfurter Zeitung's* index for 15 dividend-payers for March 31st is 40,955, against 39,418 on March 24th and 5,424 on September 1st, 1919, when the index started. The upward movement for Home Loans continued, being mainly concentrated on Federal Threes, which to-day reached the extraordinary level of 150, the buyers being largely British and Italian. The better-secured Prussian 3 per cent. Consols sell at 64. German loans are properly an exchange speculation; their yield and capital value for all visible time must depend upon the mark exchange. Bull speculations in them can only be explained by the belief that if the mark currency is regulated by scaling down, or any other form of practical repudiation, State Loans will be differently treated, and recognised as gold liabilities at old mark parity. No competent German

expects this. It is true that the Republic's funded debt is, even at its full gold value, not very great; but there is a very much bigger floating debt, now not far short of 300 milliards, and a recognition of the whole debt as gold is hardly likely. The justification (apart from the sheer impossibility) of treating the note circulation as a gold liability is that the State (technically the Reichsbank) would be obliged to pay back an enormously greater sum than it ever got. But it is also not likely that the German State will pay foreigners 100 gold marks for a unit of stock which, even at 150, cost the foreigner about two gold marks. It is more likely that the currency reform will take a shape which, without formally repudiating State debts, will automatically reduce their gold total by expressing them in the new money. Meantime, any further mark exchange depreciation will reduce the interest yield and ultimate gold value of the capital. Foreigners who have so far bought marks or mark securities for long holding have steadily lost, the gainers being German citizens, or on the whole account with foreign countries, the German State and nation.

Prices continue to rise, influences being the weak mark and the State's policy in regard to railway rates, &c. The *Frankfurter Zeitung's* wholesale commodities index for April 1st (basis, 100 in January, 1920) is 525. In March food rose from 540 to 654, textiles and leather from 270 to 334, minerals from 365 to 418, and miscellaneous from 490 to 606. On the basis of 100 in 1914, the general index figure is 5,899 (1,123 on January 1st, 1920). On this basis the index figure for 18 standard finished industrial products is 2,729 (714 on January 1st, 1920). Industrial articles have, therefore, risen less than half as rapidly as the general commodities index, a fact to be explained partly by relatively low wages, but largely by the fact that the finished goods now being sold were produced when the raw materials on the commodities list were much cheaper. These figures do not confirm assertions of German trade journals that the export of many classes of wares is already threatened by foreign underselling. At a mark exchange depreciation of 1 to 70 or 80, commodities all round are cheaper in gold than before the war, while finished articles are little more than one-third as dear. The enormous rise in mark prices has, in fact, been outstripped by the rise in the foreign exchanges; and a world price-level, which would probably be an advantage to Germany, is as far off as ever.

The State and the interests are nevertheless doing their best. Postal rates, which were trebled on January 1st, are again to be raised; and railway freight rates have been increased 40 per cent. as against March, 70 per cent. as against February. Coal prices, also raised on March 1st, have again been put up, standard Ruhr (*Fettfoederkohle*) being now 699.80 marks per metric ton at pit's mouth, against 590.4 marks in March, and 13.75 marks in 1914. Foundry coke has been raised from 913.30 marks to 1,059.60 marks. The Eisenwirtschaftsbund and Stahlbund have raised iron and steel as follows (marks per metric tons).

Pig-Iron.	April 1.	March 1.
Hematite	6,264	4,744
Foundry iron I.	5,549	4,212
Do III.	5,473	4,136
Siegerland steel-iron ..	5,565	3,829
Spiegelisen	6,020	3,951
Ferro-manganese, 80 % ..	13,820	12,710
Ferro-silicium	7,450	5,720
Ingots	7,170	5,320
Blooms	7,775	5,770
Billets	8,010	5,945
Construction forms	9,325	6,920
Bar-iron	9,500	7,050
Thick plates	10,650	7,805

The workmen's representatives in the Eisenwirtschaftsbund are pressing for restoration of maximum pricing for the latter group of products. Maximum pricing was abolished during the price-fall of a year ago, and the present prices are merely "guiding." Manufacturing consumers of tin-plates are protesting against an alleged monopoly controlled by Otto Wolff, who is stated to control 80 per cent. of the output. Before the war, about 40,000 tons of English plates were annually imported. Herr Wolff, the consumers declare, attempted to impose the condition that no English plates should be imported, but the condition was rejected.

Foreign trade in February showed again an export

surplus, imports being 12 milliards and exports 14 milliards. Details have not yet appeared. The export surplus is ascribed to the fact that food was heavily imported last year, and, together with copper and some other metals, plays a small rôle in recent imports. The import surplus in May-February, inclusive, was 7.8 milliards.

HOLLAND.—GOVERNMENT LOAN—LABOUR DIFFICULTIES—RATES OF INTEREST—POPULATION.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February.

NOBODY expected the new Government loan of 150,000,000 fl (half of the authorised amount) in 6 per cent. bonds, offered at 96 per cent., to have the splendid success which it obtained. Half of the amount was offered to the public in New York and the other half was issued in this country, and had been taken over by leading banks. Owing to the good reception the bonds met with in America, where they immediately commanded a premium, the issue here was over-subscribed nearly 10 times, and the allotment was one of the most difficult bankers have ever met. The system of closing the lists when the amount required has been obtained does not prevail here. Each prospectus has a clause entitling the issuing bankers to preclude subscriptions without indicating the reason. This is a rather arbitrary system. Opportunity is provided, in theory, for eliminating subscriptions of premium hunters, but the consequence is that the process of sifting *bond-fide* subscriptions from "stag" applications gives rise to many grievances on the part of the subscribers. In this particular case, the whole Stock Exchange was up in arms, and at first rejected the demand for the official quotation, which, however, was granted later. The bonds stand now at 99½ per cent., and the loan is a great success for the new Finance Minister.

The depression is growing in this country. Some time ago there was a slight indication that the worst had been passed, but it appears to have been only a temporary recovery. In many cases the working-classes understand that in order to be able to compete with foreign countries costs of production have to be reduced. A curious instance of the contrary is the following:—A cigar manufacturer had received an important order from abroad which would enable him to employ about 3,000 labourers out of a total of 5,000 unemployed. The wages offered were 25f per week, whilst unemployment contributions by Government and municipality amount to about 15 fl. However, the collective wages agreement in this industry has to be renewed soon, and the workmen make out that 30f is to be the minimum. By accepting 25 fl, they would impair their chances when the negotiations for the collective agreement had to be begun. In Germany the wages are one-fourth or one-fifth from what they are here, and in Belgium about half. The trade unions decided to insist on the higher wage and to request the Minister to grant an export premium. This was not accorded, and the order is going to be executed abroad. The employers, in order to meet the employees in their claim for wages of 30 fl, requested the Government to suspend the legal eight hours working day and to sanction, for this order, a working day of 10 hours. This was approved at once, but the workers did not approve.

The rise of the rate of interest in this country is illustrated by the monthly publications of the Central Bureau of Statistics. Among the safest investments are the mortgage bonds of the companies lending money on land and house property. While in 1918 the 6 per cent. type for these bonds was not in existence, and 82 per cent. of the outstanding amount was at the rate of 4 per cent. at 6 per cent., the proportion is now one-eighth at 6 per cent., one-sixth at 5 per cent., and two-thirds at 4½ per cent.

Birth and death figures in Holland are favourable, the former rising and the latter declining. In 1921, births per thousand were 27, and deaths 11. The highest birth ratio was reached in 1876 at 37 per thousand. In that year, however, 23 per thousand died. The increase in population in 1921 was 112,000.

POLAND.—THE BUDGET FOR 1922—FOREIGN DEBTS.

(FROM OUR CORRESPONDENT.)

WARSAW, April 3.

MR MICHALSKI's budget estimates, presented on March 29th to the Diet, mark an important step forward in the direction of a reform of the financial administration of the country. For the first time the budget estimates were ready in the first quarter of the year. Hitherto the three Polish Budgets have only been laid before the House at the end of the Parliamentary session, so that they had only a historical and theoretical value. The present Budget gives very detailed data relating to the expenditure and revenues of the Government, and in this respect, too, it is different from the previous Budgets, which were based on very vague estimates. A third innovation consists in the fact that the present estimates contain the revenues and expenditure of almost the whole Polish Republic, with the exception of Vilno and Upper Silesia, while one year ago the former Prussian Poland had still a separate Budget.

Below are the principal items of the Budget for 1922, in million marks:—

	Revenue.	Expenditure.
President of the Republic	0.7	65.6
Diet	..	493.3
Board of Control	..	706.0
Cabinet	707.3	1,975.2
Ministry of Foreign Affairs	3,425.3	11,943.2
" War	10,581.9	152,849.2
" the Interior	6,227.6	29,764.1
" Finance	270,291.6	86,288.6
" Justice	1,186.3	10,449.6
" Industry and Commerce	7,644.0	3,328.6
" Railways	108,134.7	170,588.6
" Agriculture	2,720.8	15,038.0
" Education	492.5	49,166.2
" Posts	14,414.2	15,532.1
" Health	2,154.8	7,360.4
" Arts	25.5	336.5
" Public Works	1,823.8	23,666.8
" Labour	1,270.5	8,183.0
Board of Liquidation	564.0	668.6
Rural Board	1,816.1	2,990.2
Ministry of former Prussian Poland ..	8.5	240.2
Total	458,620.3	591,633.9

Mr Michalski, in his *exposé*, dwelt on the fact that the present Budget is a Budget of peace. The percentage of the outlay for maintaining the Army is steadily decreasing. It amounted in 1920 to 50 per cent. of the total expenditure, in 1921 to 30 per cent., and in 1922 to 25.83 per cent. "In this manner," said Mr Michalski, with special emphasis, "Poland gives a manifest proof before the whole world of her intention to live in peace. These peaceful tendencies are not only expressed in words, but they are the real foundation of the whole Polish policy."

The Budget for 1922 closes with a deficit of 133 milliards. Of this total, however, 112.5 milliards are due exclusively to extraordinary expenditure in the first instance to investments necessary for building new railways, offices, &c. After deducting this sum, the deficit is reduced to 20 milliards.

Mr Michalski, in developing his financial programme for the present year, expressed the opinion that only a foreign loan given for a longer period will entable Poland to cover the expenses necessary for the reconstruction of the devastated country. Steps for obtaining such an advance of funds from France have been undertaken already by the Ministry of Finance, and Mr Michalski is hoping that the negotiations will be successful. As long, however, as Poland is obliged to cover the expenses of the reconstruction of the country by her own resources, the Minister intends to resort to the issue of Treasury bonds. Hitherto from October to February 20 milliards of these bonds have been absorbed by the Polish market, and the issue of a new series of 30 milliards is announced.

During the last three years I have often dwelt on the discrepancy existing between the economic recovery of the country and the financial situation, which with every month was becoming less satisfactory. It may be said that in this respect, in October the turning-point had been reached. The state of the finances is now steadily improving, and this is reflected by the quotations of the Polish mark, as well as by the returns of the Polish

National Bank. According to the return of this bank for March 20th, the circulation of notes has decreased from March 10th by 1.2 milliards, and the advances to the Government by 3.5 milliards. For the first time since 1918 the accounts of the Polish National Bank reveal a reduction of these two items.

Mr Michalski's *exposé* contained many proofs of the amelioration of the Polish finances. Great economies have been effected during the last year. There is hardly any Ministry in which one or more departments were not abolished. The number of civil servants, which in 1921 amounted to 153,000, had been reduced in 1922 by 14,000. The policy of economy is energetically pursued.

Poland must seek a solution of her financial difficulties, not only in this direction, but in the first instance she must try to bring revenues and expenditure into equilibrium by an increase of taxes. A special memorandum prepared by the Ministry of Finance, and presented to the Diet together with the Budget estimates, contains a table showing the comparatively small burden of taxation in Poland at the present moment. Per head of the population the taxes, expressed in American dollars, amounted to:—

	Total.	Direct Taxes.	Indirect Taxes.
1913	60	20	40
1920	10	0.3	0.7
1921	1.4	0.4	1.0

The taxes paid in 1921 by the Polish citizen amounted to only 25 per cent. of the sum levied before the war.

In my letter of January 12th (*Economist*, January 21st, p. 90), I reproduced data relating to Poland's foreign debts. At that time the list was not complete, and only now a final return, reproduced below, has been presented to the Diet by Mr Michalski:—

POLAND'S FOREIGN DEBTS ON DECEMBER 31, 1921.

		Expressed in American Dollars.	% of Total Foreign Indebtedness.
United States	184,500	65.09	
France	63,100	22.24	
Switzerland	14	0.015	
United Kingdom	18,400	6.50	
Italy	788	2.82	
" gold francs	36,325	12.87	
Holland	18,218	6.700	2.37
Norway	16,497	5.83	0.93
Denmark	358	0.12	0.02
Sweden	173	0.06	0.02

The total foreign debts amounted to 283 million dollars, or to 1,449 million Swiss francs. Of this total, 59.2 per cent. were used for food supply, 28.3 per cent. for armaments, 7.7 per cent. for public works, 1.4 per cent. for private undertakings. At home, the Polish Government has contracted a debt of 251 million Polish marks, of which 221 millions are composed of advances made by the Polish National Bank.

NORWAY.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, March 28.

THE Norwegian Delegation to the Conference at Genoa, consisting of six members, headed by the President of the Board of Trade, has been nominated. It represents the various political parties as well as economic interests.

There has been in this country for half a dozen years a Compulsory Arbitration Tribunal. The term of years

originally laid down by the Government expired, and the present Government introduced a renewing Act. When this measure was first introduced both employers and employees resisted it, but as the Radical Government had a strong majority it was carried. This time the Socialists accepted it as an expedient, and one of the leaders openly said that he counted upon advantages accruing to workers from it. Consequently the Act was passed with difficulty, and it will be valid for one year only. It is maintained by the employers that the awards given when trade depression was just setting in established wages out of proportion to the possible results of the various industries. Everybody now hopes that the awards that may—and no doubt will—be made when the tariff agreements begin to mature will be in harmony with existing conditions.

A very important Act has been brought before the Storting by the Board of Trade, namely, for the establishment of a Compulsory Mutual Insurance Company for Norwegian vessels. Full details have not yet been divulged, but 50 per cent. of the insurance value of the vessel is to be covered in this State concern, while the owner may do what he pleases as to the remaining 50 per cent. The reason alleged for this official interference with what has hitherto been left entirely in the hands of the owners is to help shipowners to obtain cheaper insurance. The majority of owners probably are against the measure.

Centralbanken for Norge, one of the biggest banks in this country, has extended its capital by issuing preference certificates to the amount of 50 million kroner. The bank previously had 30 millions of certificates which sustained a heavy fall after this new capital arrangement was completed. It is stated that this fall is owing to a misunderstanding. The legality of this arrangement in as far as it prejudices the holders of the former certificates has been questioned, and may perhaps give rise to controversies.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

THE improved economic conditions in Central America are likely to be reflected in the next report of the United Fruit Company, whose securities are held to some extent in this country, where its products also are well known. The company owns over 350,000 acres of improved, and 1,150,000 acres of unimproved, land, situated in the States of Panama, Costa Rica, Guatemala, Honduras and Nicaragua, in addition to Colombia, Cuba, and Jamaica. The volume of trade done by the company in bananas and other tropical produce—coconuts, cacao, pineapples, and such citrus fruits—apart altogether from the important steamship business, lately established a record. Incidental to the agricultural operations is the raising and maintenance of cattle, horses and mules, the company owning about 27,000 of the former and 7,000 of the latter. The steamships are conducted under the flags of the United Kingdom (74,000 tons) and of the United States (136,000), the whole of this large tonnage, unlike that of other world shipping, having been kept employed during the past few years. Commercial and passenger traffics have contributed to the company's success, earnings having displayed a remarkable expansion in both sections during the past few years. Since 1914, working income has also steadily increased, advancing from \$3,500,000 to about \$45,000,000, in 1921; while net income on the ordinary stock, after allowing for taxes and interest charges, has advanced from \$2,265,000 to about \$30,000,000. While most other steamship companies were unable to maintain their dividends, the United Fruit Company succeeded in distributing 8 per cent., and early in 1921 a part of its large surplus was capitalised by the declaration of a 100 per cent. stock dividend, thus raising its capital to \$100,000,000. The company seems to be possessed of a large reserve power and a solid cash position, its funded indebtedness, amounting to over \$33,500,000, having been paid off, so that the benefit of all earnings now accrues to holders of the stock.

BRAZIL.—The much-desired success of the Brazilian Centenary Exhibition, to be held at Rio de Janeiro from September to December next, is being jeopardised by the somewhat uncertain political situation, coupled with continued depression in many of the State's industries,

such as sugar manufacturing, rubber growing, and a doubtful position for coffee. Trade remains in an unsatisfactory state, and, in some directions, appears to have come to a complete standstill. Not a few Brazilian customers have found themselves faced with the effects of a fall of 50 per cent. in the exchange value of the milreis, a fall of from 30 to 50 per cent. in British export prices, and a ruinous competition carried on by the Germans, in addition to heavy Customs duties and discriminating tariffs. Quite recently the Government made reductions in certain rates, substantially favouring no fewer than 16 United States manufactures as well as eight of Belgian origin, the United Kingdom being excluded from these—as from already existing tariff advantages. The British Government, according to the President of the Board of Trade, speaking in the House of Commons recently, considers our position so hopeless in this matter as to deem it useless to make any further representation or protest to the Brazilian Administration. An Anglo-Brazilian iron and steel concession, to which considerable importance was attached, has also latterly been refused registration papers, after but a few months' existence. These facts have had, not unnaturally, a discouraging effect upon the prospects of British participation in the Brazilian Exhibition; but there is still time for a betterment in the position—one which it is worth while to strive for, in view of the importance of our trade connections with the largest and, perhaps, the wealthiest of the South American States, in which British investments already reach a total exceeding 300 millions sterling. Under more favourable circumstances, the holding of the Exhibition might have the result of completely changing the aspect of affairs for British trade with Brazil, which has remained in a depressed condition, with only partial and short-lived relief, since the end of the war. The holding of the Brazilian Exhibition is likely to synchronise with the introduction of an important Canadian transport enterprise, having for its object the construction of a wide system of trans-continental railways in South America. If the plans are carried out, there would be provided railway communication between the north and south of Brazil, connecting Buenos Aires with the Caribbean Sea, and, by means of an additional transandine line, giving union with Peru and Brazil (via Sao Paulo and Rio de Janeiro), thus providing direct communication between the River Plate and Venezuela. The immediate object of the undertaking is the establishment of a merger of Brazilian railways and their co-relation into an economic whole, the keystone being the British-owned Sao Paulo Railway Company's line (from Sao Paulo to Santos), which would be acquired for the purpose. With milreis at their present level, it is believed that many shareholders would be willing to dispose of their property, or, at least, to share in a scheme of consolidation.

CHILE.—The revival of the nitrate trade is being watched anxiously in economic circles. The Government is itself dependent upon its prosperity for more than 70 per cent. of its taxable revenue; while it also owns nitrate properties worth several millions of pounds, and an enormous extent of agricultural and forest lands in the south, which by themselves should cover several times over the total amount of the public debt. The total of British investments in nitrates is extremely large, while the success of the industry means everything to some and a great deal to a number of traders. If the demand recently met with from Europe for nitrate products is maintained, Chilean finance and trade will soon begin to revive. An improvement in the value of the peso, which has already been noted. The troubles of Chilean commerce have seldom been more pronounced or widespread than of late. In the ordinary course of things, it must be some time before Chilean markets regain their buoyancy, and the capacity to buy largely from abroad is restored. The Government finances must be put in order; there has been insufficient in the treasury to pay the departmental accounts, and the public services are commencing to murmur. But a successful nitrate season might command all the energies of the financial world of Chile will be devoted. At time of writing prospects are improving.

NEW ZEALAND.—FALL IN EXPORT PRICES: EFFECTS ON TRADE AND PRODUCTION—THE PROPOSED MEAT POOL.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, February 14.

THE first result of any financial crisis, as far as New Zealand is concerned, is a sudden fall in the London prices of staple exports. This leads at once to a shrinkage of credits, and the check to purchasing power sets in motion in New Zealand all the familiar processes of financial readjustment. During the boom period preceding the fall in prices, traders are prone to import even more than the increased export values warrant, and so the fall catches them with heavy stocks. This is well illustrated by the following summary table showing changes in overseas trade:—

	Imports. Mln. £.	Exports. Mln. £.
1918	24.2	28.5
1919	30.7	54.0
1920	61.6	46.4
1921	42.9	44.8

The statistics of bank credits for the same period are equally illuminating:—

December Quarter.	Advances. Mln. £.	Deposits. Mln. £.	Proportion of Advances to Deposits. %
1918	39.1	41.9	93.3
1919	38.1	53.1	71.7
1920	53.5	54.6	98.1
1921	52.8	43.3	121.9

In a country where the sale and transference of land is as easy as it is in New Zealand, a sharp rise of prices is bound to lead to greatly increased speculation in land and to an inflation of land values even in relation to the high prices ruling for staple products. During the crisis period just past, both these effects were noticeable, and are reflected in the next table, which shows the total of mortgages registered and discharged monthly. Both rural and urban lands are included in the total figures, which reflect a boom in house property as well as in farm-lands.

	(000's omitted.)	Registered.	Discharged.
Monthly average, 1918	1,482	883	
August, 1919	4,454	2,144	
" 1920	7,223	3,092	
" 1921	3,908	1,193	
December, 1921	2,718	1,056	

When the boom period is over, therefore, the sudden fall in prices, such as occurred in the first wool sale of the season 1920-21, finds town traders very much overstocked and rural producers with their lands grossly overvalued. Reduced purchasing power means that traders are forced hurriedly to liquidate their stocks in an effort to get ready cash, while those farmers who have taken up land at high prices find great difficulty in carrying on at all. More established farmers, who bought at lower values, find the burden of taxation levied on present valuations crushing.

Fortunately for New Zealand, the fall in wool prices in 1920-21 was partly compensated by the rise in the price of dairy produce, the Government guaranteed price for wheat, and a steady meat market. But the season 1921-22, while bringing some recovery in wool, has brought heavy falls in the prices of other chief exports, particularly meat and dairy produce; while the guaranteed price of wheat has evoked a surplus estimated at two million bushels, to embarrass a Government already in difficulties. The whole farming community, already heavily taxed, is hit by reduced monetary yields, while the marginal farmers, who bought at high prices, are likely to be squeezed out. Such a check to prosperity occurred in 1908, but then the rising tide of prices carried the country on again. Now, with a prospect of falling prices, the position is very different. Some adjustment of land values is necessary before anything like stable conditions of production will be possible.

The country seems more disposed, however, to resort to quack remedies to tide over immediate difficulties than to get the inevitable readjustment of values over, painful as the process will be. After so long a period of rising

prices, even the leaders of commercial institutions and Parliament seem unable to visualise the prospect of prices falling for some time. All the plans for remedying present disorders seem to go on the assumption that the partial recovery now taking place is a prelude to better things, and that prices will go on rising as before the war.

It is, of course, natural that the comparatively small, but very vocal, manufacturing party in the towns, should utilise the difficulties of the crisis, and particularly those arising from over-importation, as arguments for high protection. They have been so far successful, by persistent lobbying, as to secure substantial gains in the progress of the Tariff Bill through Parliament. In particular, Australia has, in the meantime, been treated as a foreign country, and Australian goods are placed under the general schedule of the tariff until a reciprocity agreement can be reached.

The latest plan of the New Zealand Government to improve or get round economic conditions is the proposed compulsory Meat Pool. Already it is forgotten that the chaotic condition of the wool market was largely due to the mismanagement of the wool commandeer, which, even in a time of rising prices, led to an accumulation of stocks. The proposal just carried by the House of Representatives is to set up a Producers Committee of seven members, five to be elected in some way by sheep-farmers and two to be nominated by the Government, together with one member representing exporting interests. By the Bill, this committee is given a blank cheque to take control of as much, or all, of the buying, shipping, and marketing of part or all of the New Zealand meat as it may determine. The obvious dangers of such a proposal have led to the strongest opposition, not only from meat exporters, but from many farmers also, including the official delegates of the Sheepowners' Federation. The chief support comes from the North Island, and particularly from the smaller farmers. The main arguments for the scheme are partly inspired by a reasonable belief that shipping and marketing charges are extortionate, amounting, as they do, to half the value of the meat sold, partly to a lurking fear of the Meat Trust, and very largely to a belief that, if supplies are temporarily withheld from the market, prices will improve. The scheme is to be financed by a compulsory levy on all meat exported, but the Government is to guarantee it.

There is no indication of the policy the Government or the Board will pursue; indeed, the whole scheme is shrouded in mystery, and the empowering Bill simply sets up a board and gives it *carte-blanc*. It is claimed that the mere threat of control has already raised prices in the London market—the whole credit of the recent market improvement being claimed as the result of a successful bluff—but many people believe, and more hope, that the scheme will be dropped or considerably modified. It is rumoured, also, that financial pressure will be brought to bear on the Government, for trading firms cannot go on financing farmers if their business is closed to them.

Letters to the Editor.

RAILWAYS AND ROAD TRANSPORT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Charles Tennyson in his letter in last week's *Economist* gave the views of the Federation of British Industries with regard to the Bill promoted by the North-Western and Midland group of railways to empower them to engage in the transportation of goods by road within the area covered by their lines. May I be permitted to comment briefly on his letter?

The Federation of British Industries consider that it is "the proper and sole function" of the railway companies to transport by railway, that it was for this purpose that they obtained their powers, and that they should confine their attention to increasing their efficiency within that limitation. It is true that it was for transport by rail that the railways first obtained their powers. At the time these powers were granted, however, there were practically no alternative means of transport to be con-

sidered. To-day there is an alternative. Within the past five years the development of the motor lorry has made it a very serious competitor. To enable the railways to meet that competition is the object of the present Bill. Certain railways have enjoyed the right to engage in road transport since 1904 and 1905. The present Bill merely extends those powers to other railways. By so doing it will enable those railways to restore their efficiency, which the F.B.I. so rightly insists on.

At the present time all railways are losing a valuable source of revenue through the competition of road transport services. They cannot hope to recover that under existing conditions. Circumstances have so entirely altered that it is not economically possible to defeat competition by road by the existing railway services over short distances and for certain classes of goods. Railway efficiency was impaired by the war. No "more economic methods of working" and no group organisation will enable the railways to recover that efficiency sufficiently to defeat the new form of competition which has grown up since the war, largely as a result of experience gained during the war.

The Federation is apprehensive that the railways, if granted the powers they now seek, will be driven by force of circumstances to attempt to control the road transport system of the country. That fear, in my view, is groundless. Their railway systems would still remain the chief concern of the railway companies. Their road services would be subsidiary. They have lost custom, not through unduly high charges, but through the development of a new branch of transport which has put the railway out of date for certain work. The granting of the powers contemplated in the present Bill would undoubtedly mean increased competition on the roads, but it would be economic competition. The safeguards in the Bill provide that road transport accounts shall be kept separate from other accounts. There is no danger, therefore, that the railways might subsidise their road services in order to kill competing carriers.

I disagree with the view of the Federation of British Industries that there are at present on the roads sufficient motor lorries to meet all reasonable requirements in the near future. With the restoration of trade will come the demand for additional facilities which neither the railways nor the existing road carriers can meet.

Let me reply seriatim to the tabulated objections of the Federation.

(1) The Rates Tribunal, if fully occupied with railway matters, can be strengthened to deal with road affairs. No evidence is adduced to show that the machinery of the Railways Act of last year is inappropriate to road traffic.

(2) No reason is given for the statement that the efficiency of the proposal to enable the road transport interests to appeal is doubtful. In any case, this is a matter of detail which can be adjusted while the Bill is before Parliament.

(3) The railways in question undertake to keep their accounts separate. They will be prepared to adopt a system of accounting that will show clearly their profit and loss on all road transactions.

(4) This is replied to in 3. The accounts will show whether any services which the railways desire to discontinue are or are not profitable. Those classes of goods which could not, by reason of weight or bulk, be carried by road would not enter into the question.

I maintain that none of the objections put forward by the Federation of British Industries are of a kind which prejudice the case of the railways. The railways in question have already made concessions. In the views of some of the supporters of the measure they have made too many concessions. They are still prepared to discuss the points on which opposition interests see danger to themselves or to the public.

Finally, the Federation objects to the present proposal being made the subject of a private Bill. This objection will carry little weight with those who understand Parliamentary procedure. The present powers of the railway companies are all defined by Acts of Parliament passed under private Bill procedure. The question at issue is the extension of these powers. Clearly, therefore, a private Bill is the correct method to be adopted. A Select Committee can investigate the whole question in a way the House of Commons as a whole could never do. It can

hear all who have interests in the matter through counsel and witnesses. For opponents of the measure to criticise this course would seem to argue a lack of confidence in their own case, and a desire to rely on general assertions which could not be adequately answered on a second reading debate.

In conclusion, may I refer to the admirable article in the *Economist* of March 15th. You yourself, sir, supported the case of the railways. Your one objection was that in their own interests they should postpone asking for road transport powers for the next two years. The railways maintain that delay is dangerous, and that the flight from the railways may continue if they neglect the warning of the past year's experience. That is why they are seeking Parliamentary sanction for their proposals during the present session.—Yours faithfully,

House of Commons, April 6th, 1922. C. F. HIGHAM.

THE BANKER'S DIAGNOSIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have refrained from taking part in the interesting currency controversy going on in your journal as the distance prevents my doing it with any effect.

However, I notice in your issue of the 11th ultimo a statement by your correspondent, Mr Wigglesworth, the fallacy of which I wish to point out, as it is at the bottom of much of the reasoning of the so-called sound currency men. Mr Wigglesworth says:—

"The improvement in the £ sterling certainly *cheapens* our imports, and enables us to that extent to export more *cheaply*."

May I point out that such improvement makes imports dearer and exports still dearer.

Take the instance of cotton. A Manchester spinner imports a £ worth of cotton when exchange was 4.20. He puts in another £ of wages and expenses on it before he can sell it as yarn. Suppose the cross rate is 4.40 when he exports this yarn. He has now to charge £2 for the yarn to at least cover his outlay. If the cross rate had remained at 4.20 he would have to charge \$8.40, or its equivalent in other currencies. As cross rate is now 4.40 he must charge not \$8.40, but \$8.80 to cover his outlay of £2, and thus the rise in the cross rate actually compels him to ask 40 cents more for the same goods, and to that extent makes him unable to meet foreign competition. The disparity becomes even more remarkable as we go to highly finished goods, in which the expenses over raw material are much higher than on yarn, as all this addition has got to be paid for by the foreign buyer at 4.40, or its equivalent, instead of 4.20.

The above explains how exports are dearer, but it may not be so easy to see how imports can be dearer. The position, however, is that every manufacturer has to have some raw material in hand that it is not possible to immediately cover by the sale of finished goods. This man finds that the cotton he bought a month ago at £1 (on basis of 4.20) can to-day be had for 18s (on basis of 4.40), and that his raw material has been laid in too dear. The poor man must make up his mind to drop part of his capital, and accept 18s for the stuff if he wishes to retain his business. This disheartens and discourages him, and makes him prefer to do nothing while things are so uncertain.

The vicious circle does not end here. This spinner quoting 18s, where a month ago he was asking 20s, makes his buyers think that the spinner was weakening, and that if they only waited they could get in cheaper. And they wait. The spinner failing to get orders on to his books, thinks of short time or reduction of hands, and so we go to increasing unemployment.

This vicious circle must continue until we get back to par (4.86). Then the £ will not be allowed to go up, and trade will gradually pick up and become brisker, and your "sound money" men will then clap their hands and say they always said so, and that it was the return to par that did the thing. I would point out to them that it would be the stoppage of further fluctuations that would do it, and that the virtues attributed to a return to the pre-war par are really virtues flowing from a *stabilised rate*.

If this is understood it will be seen how foolish it is to continue to aspire to an early return to par, and to continue

to go through all the readjustments of employment prices and wages, and the concomitant suffering.

What England should do to-day is to stabilise the rate at 4.40 or 4.20, or any figure that may be actually ruling, and sell pounds against gold dollars or dollars against pounds sterling, as the occasion may require.

The trade balance of England is evidently now sufficiently recovered to make sterling very strong, and so the suggested operation should put a large gold dollar fund at the disposal of the Note Issue Department, and incidentally very much improve the backing of the whole circulation, as these dollars will be so much additional *gold* held by the reserve.

This need not bind you down to the stabilised rate. Sir Charles Addis was recently reported to have said that England must go back to the gold standard whether it took two years or twenty. When a patient had passed through a long and debilitating illness it would be only a very foolish doctor that would think of getting him to go about his normal activities in a few days; a good doctor would work for gradual but steady recovery. Let the financial doctors of England do likewise. Go gradually although aiming at recovery to normal all the time. Let the rate be pegged at, say, 4.20, and kept at that for twelve months, and then put up to 4.25, and so on by five points every year. Trade and industry will then get the necessary breathing time instead of being constantly upset by the fluctuations of the cross rate.

Stabilising your rate will have the further advantage of stabilising the exchanges throughout the Empire, and of the Empire with the United States of America, Japan, and many other countries, and set the wheels of commerce going more freely than they do to-day.—Yours faithfully,

Bombay, March 10th, 1922. B. F. MADON.

DEVALUATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of to-day you state that the argument which holds that to restore the gold currency of this country on any other basis than the old pre-war parity would be equivalent to a breach of faith is unsound. You endeavour to support this statement on the grounds of equity by urging "that a currency policy that would stabilise prices at about 75 per cent. above the pre-war figure, i.e., the level of 1917, would be the most equitable arrangement." In the first place, I would beg to point out that the British war debt was incurred at various rates of interest, i.e., 3½, 4½, 5, and 6 per cent., at steadily decreasing purchasing power of the £, owing to the rise in prices and owing to ever-increasing taxation at a steadily reduced yield to the lender. During many years, if he sold his war loan, as many were compelled to do, he had to face a loss of capital, and now that there is an appreciation in his capital and a fall in the cost of living, and a distant prospect of reduction in taxation, with a consequent increase in the yield, you grudge him this prospect, and suggest a forced curtailment of his income. This is not equity, but injustice. Further, will you allow me to point out that the lender's contract with the State was based upon the old pre-war parity, and money was readily advanced on that understanding, and to suggest that the endeavour to restore that parity should not be made is, I beg to state, unknowingly to suggest dishonour and repudiation. Certainly, devaluation, either here or on the Continent, is a sign of bankruptcy, as you state would be said if Great Britain declared for the old gold standard. I hope and believe it will be avoided in this country, but on the Continent in some cases I am afraid it must be faced, and surely it is better to admit it than to pretend otherwise. If good is to come out of the Genoa Conference, I venture to state that a bold and straightforward declaration on the part of this country will be of immense service in helping to restore British credit, and also encourage other countries to follow our example.

Is it too much to hope that the £40 odd million surplus realised for the end of the financial year will be used to contract gradually the paper money issue until the par of exchange has been re-established with gold standard countries like the United States of America. This would prepare the way for a resumption of specie payments. A

HARRISONS & CROSFIELD, LIMITED

date might be fixed for resumption, say, November 1st of this year. As Horace Greeley well said, the way to resume is to resume, and, with £159,000,000 of gold reserve now held in this country, there is no reason why the gold standard should not be made effective, provided equilibrium is established between gold and paper.—I am, Sir, your obedient servant,

D. M. MASON,
Chairman Executive Committee,
Sound Currency Association.

115 Cannon street, April 3rd, 1922.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S REVIEW.

THE outstanding feature of the books that have in the course of the last six weeks assembled themselves for survey is the very large proportion of them that are more or less, and generally more rather than less, political in character. It is true that, at the moment, the distinction between economics and politics is very hard to draw. Has not M. Poincaré expressed a willingness to accept Genoa on the ground that the Conference there is to be "economic and financial, and not political," whereas the objection of the United States to taking part in it has been laid on the ground that it is to be political, and not financial or economic? In this case, the explanation seems to be a disagreement as to the category in which the discussion of Reparations is to be placed. M. Poincaré regards it as a question of politics; the United States, with an equally good show of logic, as one of economics. Here, it seems more convenient, if not always more logical, to remit works dealing with matters of immediate controversy to the heading "Political," although the result of such a decision is to make that section appear unduly large. In so far, however, as it is so inflated, it registers, accurately enough, the actual tendency of economic writing. It is, at the moment, to a very large extent occupied with the actual as against the theoretical aspects of the subject.

(1) Elementary Books.

Students who have mastered the elements of economics will find much to interest and a good deal to stimulate them in M. Lewinski's "The Founders of Political Economy" (King, 6s 6d). M. Lewinski is Professor of Political Economy at the University of Lublin, in Poland. His object is, in the course of a survey of the writers who have formed economic theory, as it is nowadays accepted, to separate the chaff from the corn. Of the most modern writers, especially of the German school, he, perhaps out of patriotic motives, takes no cognisance. His general view is that "theoretical advances, since Ricardo, have been comparatively very irrelevant." To a large extent economic theory has, in his view, suffered from a want of contact with actualities. He cites, as indicative of this, the general view held in Germany, even by such men as Dr Helfferich, that, so long as a country went on borrowing from itself, it never became essentially any poorer. Dr Lewinski is interesting, not because he is always right, but because he has a way of putting his view that makes one stop and question.

A more solid, ample, and modern discussion of the same aspect of the subject is O. Fred Boucke's "The Development of Economics" (The Macmillan Co., New York). In this the century and a-half from 1750 is surveyed competently, but without any marked originality of treatment.

(2) *Advanced and Technical.*

First in this category, as almost the solitary work on "pure" economics in a month's list, must be placed Professor L. V. Birck's analysis of "The Theory of Marginal Value" (George Routledge and Sons, 14s). Fully illustrated with graphs, and largely mathematical in treatment, it looks more terrifying than in fact it is, since the author writes in a clear and orderly manner, and arranges his argument well. Professor Descamps' important work on the exchanges, "crowned" by the French Academy ("Les Changes Etrangers," Paris, Alcan, 20f), was reviewed in the *Economist* of April 1st. The latter part of the book is occupied with the effects of the war on currency, and in particular on the currency of France. M. Descamps does not deal with Reparations, but they are the pivot of Mr L. L. B. Angas' study, entitled "Reparations, Trade and the Foreign Exchanges" (King, 12s 6d).

Two useful books, somewhat hard to place, are "Capital Control in New York," by Donald C. Baldwin, of Wisconsin, published by the Collegiate Press, and "Business Administration," by L. Carroll Marshall, published by the University of Chicago. Both are advanced college textbooks, intended for students of business administration, a faculty as yet hardly recognised in our universities, but very important in the States. Dr Marshall's book is a model of its kind.

"The Law and Practice as to Fidelity Guarantees," by Christmas Evans and F. H. Jones (Pitman, 6s), is a handbook for insurance officials, to whom it should be exceedingly useful.

(3) *Descriptive, and Works of Reference.*

The student of economics who found indispensable material in the "Census of Production," of a character nowhere else obtainable, will, if he is lucky enough to be able to afford it, certainly want to keep the monumental survey of the United Kingdom's coal mining industry, prepared by Mr Finlay Gibson (see "Review," April 1st) (*Western Mail*, £3 3s). In this volume is contained practically all the statistical material existing on the subject, but not hitherto effectively available since it was scattered about in various Blue Books. Another work of reference, of a more specialised and business type, is the ninth issue of "Quin's Metal Handbook and Statistics" (by L. H. Quin, published at 7 East India avenue, 5s). Side by side with this may be placed Mr Sidney J. Johnstone's monograph on potash in the useful series of "Monographs on the Mineral Resources of the United Kingdom," published by John Murray, price 5s. In this connection, it is not out of place to mention that the National Federation of Iron and Steel Manufacturers is now issuing monthly, to the general public, and not, as hitherto, to members only, their "Statistical Bulletin," which summarises in each month the production of iron and steel in the various countries producing, as well as in the U.K.

A descriptive work of very considerable general interest is the study of the United States Civil Service, "The Federal Service," by Lewis Mayers, published in this country by Appletons (25s). Mr Mayers admits frankly that the great difficulty is graft. In the Federal service "the greater part of the directing personnel, and no small part of the subordinate personnel, is still selected wholly without formal methods or competition, and chiefly on political grounds." For any real reform the elimination of politics in the selection of personnel is a *sine qua non*, but no attempt has so far been made to exclude political influence, or to check the favourite device of an "increase of salary not involving increase of duties."

Another American work of wide general interest is "The International Protection of Labour," by Boutelle Ellsworth Lowe (the Macmillan Co., 12s 6d). This is a careful analysis and exposition of the International Labour Charter of the League of Nations, as consolidating what had already been achieved, and carrying on further the legislation now internationally accepted for the protection of the workers. Unfortunately, this country has not formally endorsed the charter. The position as regards the United States is further elucidated by two volumes issued in the excellent series of the

Bureau of Labour Statistics, one giving the Union scale of wages and hours, the other the wages and hours in cotton manufacture; and by Mr Lindley D. Clark's "Minimum Wage Laws of the United States," issued officially from Washington.

(4) *Political and Propagandist.*

No system of classification can hope to be watertight, and perhaps both Mr Bowrie's "Sharing Profits with Employees" (Pitman, 10s 6d), and Mr James Turner's "Production and Fair Profits—a Key to Industrial Peace" (Sherratt and Hughes, Manchester, 6s), might, as correctly be described as "descriptive." They are, it is true, largely descriptive, but at the moment the whole question of profit-sharing, especially when regarded as a way to Industrial Peace, is a matter of tolerably acute political controversy. The same may be urged in justification for placing here M. Roger Picard's acute and interesting discussion of workers' control, "Le Contrôle Ouvrier sur la Gestion des Entreprises" (Paris, Marcel Rivière, 4f 50c). M. Picard hardly touches, in his little volume, on the psychology of workers' control. This is, however, very suggestively handled by Mr J. A. Hobson in his "Incentives in the New Industrial Order" (Parsons, 4s 6d). His examination is by no means confined to the motives which must animate the worker if the net production under the new order is not to be less than under the old. The most striking part of his book is, in fact, that in which he considers how far the capital on which industry will have to rely will be forthcoming under a system of socialised control of major resources.

In "Agricultural Co-operation in England and Wales" (Williams and Norgate, 5s) Major W. H. Warman urges the necessity for farmers to provide working capital for co-operative associations. If they will do so English agriculture can flourish and expand. He surveys what has already been done, and argues, very sensibly, for a real spirit of "neighbourliness." Mr Robert Murray has a simpler and more direct solution. Quoting Mr Lloyd George, "the landlord is no more essential to agriculture than a gold chain to a watch," he argues that all land should be taken over by the nation on the basis of nine-tenths of the present valuation, and that compensation "should take the natural and simple form of a 50-years' non-rentpaying period for such owners as have purchased a good title to land within the limits of that time." His booklet ("The Land Question Solved," Labour Publishing Company, 2s 6d) has a brief preface by Robert Smillie. Likewise addressed definitely to the Labour party, and published for it, at 2s 6d, is Mr R. H. Tawney's "Secondary Education for All," an admirably written and powerful plea.

Major Douglas has reprinted, as a pamphlet, his answer to the criticism of his views, made by Mr J. A. Hobson, in the *Socialist Review* (Cecil Palmer, 6d). In the April number of that periodical Mr Hobson returns to the charge.

In the reviews the dominant economic issue is, of course, Reparations. Captain Wedgwood Benn deals with this in the April *Nineteenth Century*. With his article may be compared Sir Henry Penson's "Is Germany Prosperous?" (Arnold, 3s 6d). This is a really candid effort to arrive at the truth. Sir Henry's general conclusion is that "the outward prosperity has very little solid behind it."

Other articles in the reviews to which special attention should be drawn are that by Professor Pigou, on "The Private Use of Money," in the *Contemporary* for April, and in the *Economic Journal*, "The Definition of National Income," by Professor Bowley, and "Internal and External Purchasing Power of Paper Currencies," by Mr C. F. Bickerdike.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
April 11.	April 12.

FOR the Stock Exchange to be really busy on the eve of the Easter holidays is unusual enough to arouse comment in the House itself. Not that members have had very much time this week for the discussion of anything except business. Orders poured in from all parts of the country and from London, too. Every section of the industrial market, for instance, is receiving attention, while stocks and shares connected with investment are strong and active. Expectations of a fall in the Bank rate may be deemed the principal lever upon the strength of which prices advanced, but there is a broadening out of interest, which makes itself felt everywhere except, perhaps, in the markets for mining shares, where interest is scanty and the dealings mainly professional.

Men were looking for a reduction to be made in the Bank rate on Thursday, and when the decision of the Court was made known, prices dropped from the best. The War Loan touched 99½, but gave way to 99½. Home Railway stocks were unfavourably affected. It had little effect, however, upon the general run of markets. The Commonwealth Fives at 96 were subscribed in full by the public. The subscription lists of the Czechoslovak Eight, at 96½, closed within a couple of hours of their being opened. The Whitehall Electric underwriters, however, have been left with very substantial proportions of the debenture stock and preference shares offered.

The foreign market shows a good deal of strength. Brazilians are better as a whole, and in the Far Eastern group, Chinese came into further demand, the investor paying no particular heed to the uncertainty surrounding payment of the coupons on Chinese Vickers and Marconi loans. It is expected, indeed, that arrangements will have been made before long whereby the interest will be met on both loans. French bonds are quiet, though the French Railway newcomers have weakened, on continual streams of sales by the stags. Siamese, Norwegian, and

a number of foreign municipal bonds are better. Germans improved as the exchange hardened.

The Home Railway market has been more animated than has been the case for months, possibly years, past. Prices were run up at a rate which proved to be somewhat too rapid to last, and from the best levels touched some little reaction occurred in several cases. The preferred stocks, however, remain exceedingly good, the scarcity being emphasised by further inquiries on the part of investors attracted by the grouping prospects. The same reasoning applies to the support accorded to low-priced stocks, these having advanced sharply. The Scottish and Underground sections sympathised with the rest of the market, and amongst prior-charge stocks, something like 80 issues have gained from 1 to 3 points on the week. Indian railways have been similarly treated. Canadians are neglected, but Mexican Railways, in company with practically everything else connected with Mexico, are better on the week, owing to the revived impression that negotiations now proceeding in Washington and in Paris may eventuate in an early settlement of the matters in dispute between Mexico and the United States. Once these were laid to rest, recognition by the States and Great Britain would doubtless follow. The Argentine Railway market is also stronger. The supply of debenture and preference stocks in this market is very scarce.

Rubber shares are a little harder, and the oil market is much better. Prices in the latter have gone up with a run. A wild wave of gambling in Phoenix seemed to reinvigorate the fainting spirits of those who speculate in oil shares. The big oil shares, however, have fully kept abreast of the others in the general activity. The market throughout is good, only the Trinidad shares hanging back a little, owing to the disappointing report of the United British Oilfields of Trinidad. Shipping shares are better, on the maintenance of the P. and O. 12 per cent., free of tax, dividend. Engineering, coal and steel and armament shares advanced, the assumption being that the lock-out cannot last much longer. Although the textile trade is reported quiet, the North has been laying in textile shares, and Liverpool buying of Nitrates caused an all-round recovery in the list of producing companies' issues. The business in tobacco shares continues on a large scale, with prices steady to good. The Marconi market is waking up again, and amongst stores shares, a harder tone is perceptible in several of the principal examples. Dunlops are being left severely alone; motor shares as a whole remain out of favour. Insurance shares have gone ahead, together with the stocks in the Trust Companies group, in consequence of the remarkable appreciation in all gilt-edged securities. The feature amongst banking shares is the manner in which Colonial, Indian, and Foreign banks advanced, though the shares in British companies are also better on balance.

It is held in the Kaffir market that the result of the recent sanguinary strike on the Rand is a complete vindication of the employers' rights to run the mines according to their own ideas. Consequently, prices are inclined to be better, although there is no business worth mentioning. Several of the Rhodesians hardened a trifle, Tanganyikas being firm on the recent alluvial gold discoveries. De Beers moved up and down in somewhat aimless fashion on Paris advices. The French capital took a more definite lead, however, in Rio Tintos, where the price advanced smartly. Tin shares are quiescent, Anglo-Continental being almost the only West African to show signs of life, the price being assisted by the statement that the company owned a large block of Phoenix Oil shares. Russo-Asiatics improved to some extent. Broken Hills fluctuated irregularly and narrowly, but there is nothing much doing in any of the other mining sections.

Stock Exchange shares are steady at 97½, on the declaration of a final dividend of £5 per share, making £8 for the year, less tax at 6s in the £.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Czechoslovak State Loan of 1922 for £10,000,000, or \$50,000,000.—This is an issue in London of £2,800,000 8 per cent. sterling bonds, at 96½. The bonds are redeemable by means of a sinking fund, which begins to operate in 1923, and all bonds not redeemed before are "due and payable" on April 1, 1951. Right, however, is reserved to redeem bonds at 108 at any time after May 1, 1923, on giving three months' notice. Principal and interest are payable in London free of all Czechoslovak taxes. This loan is not only a direct obligation of the State, but it is further secured by a first specific charge, both on receipts from Customs duties and on the net profits from the tobacco monopoly, and it is provided that no further pledge of these revenues will be created ranking in priority or *pari passu* with this charge until all the bonds secured have been redeemed. We understand that the Reparation Commission took the view that the Czechoslovakia Government was perfectly at liberty to pledge its resources in whatever manner they wished, as far as they were concerned. An issue of \$14,000,000 is being made in the United States, and £500,000 in Amsterdam, both forming part of the above authorised loan. The issue was speedily over-subscribed, which is not surprising in view of the favourable terms offered.

Metropolitan Railway Company.—Issue of £600,000 5 per cent. preference stock at 87 per cent. This is the further part of £1,150,000 additional capital authorised by the Metropolitan Railway Acts, 1912 and 1913. The amount of net revenue, after providing for renewals and payment of all fixed charges and dividend on existing preference stock, was £185,202 for 1921. Thus the issue, based on last year's figures, is well covered as regards dividends. It will rank *par passu* with existing 5 per cent. preference stock. The issue has been underwritten for a commission of 1½ per cent. and an over-riding commission of ¼ per cent., and forms a moderately good investment. It should be noticed that it is a trustee stock under Section 1, paragraph (o), of the Trustee Act, 1893. The issue was quickly over-subscribed.

Whitehall Electric Investments, Limited.—Authorised and issued capital £6,500,000, divided into 1,500,000 7½ per cent. cumulative preference and 5,000,000 ordinary shares, all of £1 each. This is an offer for sale of £2,500,000 6 per cent. first mortgage debenture stock at 87½ per cent., and 1,500,000 preference shares at par. This is a company formed for the purpose of financing electricity supply undertakings. The basis of security for debenture stock holders is a big block of securities relating to electrical companies in Mexico and South America. These on paper work out at £3,825,725, and will be attached by a trust deed. The trust deed reserves to the company power to issue further debenture stock to an amount of £2,500,000 in all, ranking *pari passu* with the present offer, provided that the aggregate amount "of any such other issues shall not exceed the amount of additional share capital which shall have been issued and paid for in cash." It is stated that the trust deed will also constitute a floating charge upon other assets, including share capital in other companies. For ordinary investors this "offer for sale" is rather difficult to follow, and although the directors state that "the securities and shares acquired by the company" are "of a present value of more than three times the amount of the debenture stock" purchased by the concern making this present offer, the cautious investor will require some more detailed evidence on this point. Moreover, it will be noticed that the majority of the operating companies are registered abroad, and, of course, subject to the laws of their respective countries. As an instance of how involved affairs are, in the trust deed is included £636,000 of 5 per cent. debentures of General Securities, Limited, a company, we understand, which is registered in the Channel Islands. This company holds the common stock and certain bonds of the Puebla Tramway, Light, and Power Company, which, in turn, is registered in Canada, and operates in Mexico. Redemption of debenture stock will be by means of a sinking fund, and any remaining stock not so redeemed will be paid off at par in 1949. The consideration payable by the present vendors for the stock and shares now offered is stated to be £3,507,500. In place of the figures of "net income receivable by" the company, it would have been better, perhaps, to give a table of actual past earnings of operating companies, together with dividends and interest paid, the actual amounts received in bond interest and dividends by the owners of the securities offered in trust, and also the market price (if any) of various securities. It would be interesting to learn why the issue was made by way of an offer for sale instead of an informative prospectus. These offers will not appeal to conservative investors.

Swansea Gas Light Company.—Authorised stock capital £747,000, of which, including premiums, £380,895 has been issued. The authorised loan capital is £373,500, of which £61,275 is outstanding. This is an issue, at 98 per cent., of £200,000 6½ per cent. debenture stock, to be redeemed at par, on June 30, 1937, and £250,000 7 per cent. preference stock, to be redeemed at par on June 30, 1932. Interest on debenture stock now being issued will rank equally with interest on existing loan capital as a first charge on the profits of the company. The preference stock is entitled to a non-cumulative preferential dividend, payable out of profits each year in priority to dividends on ordinary stock, but the stock does not entitle the holder to voting rights. The Swansea Gas Company was formed in 1830, but the information given in the prospectus that "since 1861 the company has paid the maximum authorised rate of dividend of 5 per cent. on its ordinary capital, with the exception of the three years 1918-1920, when, owing to war conditions, the authorised rate of dividend was limited to 3½ per cent. per annum." This, however, cannot be regarded as a satisfactory substitute for a statement of past revenue and expenditure, and it would be interesting to know the reason for this omission. Sales of gas have increased from 549 million cubic feet in 1915 to 673 million in 1921. Under the Swansea Gas Act, 1921, the company is authorised to charge such a price for gas "as will produce the revenue necessary to pay debenture interest, preference dividend, and dividends on its ordinary stock at the basic rates, namely, 5 per cent. on the amount now outstanding, and 7 per cent. on any amount which

may hereafter be issued." The subscription of the issue has been guaranteed for a commission of 5 per cent., inclusive of all usual charges. A fairly good short-dated debenture, and the preference stock must be considered in relation to its high rate of interest and short life. It was well received by the public.

Sheffield Steel Products, Limited.—Share capital £4,000,000, of which 727,001 to per cent. cumulative preference and 1,730,700 ordinary shares, all of £1 each, have been issued. There is also outstanding £850,000 8 per cent. first mortgage debenture stock. This is an issue of £500,000 6 per cent. second mortgage debenture stock at 80, repayable on or before May 1, 1942, at par, by means of purchase in the open market or drawings at par. The stock will be secured by a trust deed as a specific second mortgage, subject to the existing first charge of £850,000 on property valued at £2,534,048. It should, however, be noticed that the valuation is dated September 30, 1920. Net assets available for security of this issue are valued at £2,332,635. Profits are shown from 1916, "and before fully providing for realisation of stock at December 31, 1921." On these figures, debenture service charges appear to be well covered. We refer further to this company's past financial year in this issue under "Notes of the Week."

Newport (Mon.) Gold Storage and Ice Company, Limited.—Authorised share capital £150,000, divided into shares of £1 each. This is an issue of the whole amount. The objects of the company are denoted by the above title. It is proposed to acquire a factory from the Government, and sell it to the company for £23,000. This is to be adapted for cold storage purposes and ice-making. The premises have been independently valued at £28,785. The issue is pre-eminently one for the consideration of those with knowledge of local people and conditions.

The Porcupine-Davidson Gold Mines, Limited.—(Incorporated in Ontario, Canada.)—Authorised capital £1,000,000, of which £225,000 in preferred shares of 5s each, and £450,000 in ordinary shares of 5s each, have been issued. This is an offer for sale in this country of 800,000 preferred shares at par. Preferred shares are entitled to two-thirds of annual profits until 100 per cent. in dividends has been paid on them, after which they are entitled to 20 per cent. non-cumulative dividend in priority to ordinary share capital. The company was formed in August, 1921, and although interesting independent reports are given, it must be regarded as a speculative venture.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

THE MERCANTILE BANK OF INDIA, LIMITED.

BANK'S SOUND FINANCIAL POSITION.

NEED FOR FIRM GOVERNMENT IN INDIA.

The twenty-ninth annual general meeting of the Mercantile Bank of India, Limited, was held, on the 4th instant, at Winchester House, Old Broad street, London, Mr R. J. Black, chairman of the company, presiding.

Mr P. Mould, the chief manager, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I hope you will allow me, as usual, to take the report and accounts as read. We are pleased to be able to submit them to you earlier than has been possible for some years past, and, considering the profound stagnation in trade during the past 12 months, I think we have every reason to be satisfied with them. They reveal a position of strength, soundness, and liquidity which, in times such as these, is so essential and necessary to withstand the strain of the world-wide collapse in commerce and the slow and difficult progress of its reconstruction. 1921 was a year of liquidation, not expansion, and until the wreckage of the boom of 1919 is completely swept away there can be no sound revival, and that will still require time. I think I may say that the general feeling is that the position has seen its worst, the process of thawing frozen credits is proceeding, and it is only a matter of time before the way will be clear for a revival of trade, other things permitting.

PROBLEM OF EXCHANGE.

Unfortunately, there are other intricate problems and impediments to be solved, the first among them being exchange. International exchanges have assumed a prominence never before experienced or realised by the ordinary trader, as fluctuations in pre-war days were so moderate as to cause little inconvenience and disturbance; but now, in many consuming countries of India's products, the gap between the value of their currencies and the pound sterling is, in many instances, practically unbridgeable, and it is difficult to see how a free interchange of trade can be restored until this most complex and involved question is adjusted, and it is to be hoped that the many international discussions may soon throw some light on this very difficult situation.

I think, however, that, apart from the matter of exchange, it should be borne in mind that the general impoverishment of the world must restrict the power of purchasing; it is the natural concomitant of war such as the last, and the only remedy for that is time, thrift, and patience. With one slight flicker of activity in the early autumn, rupee exchange has fluctuated throughout the year within moderate limits, i.e., between 1s 3½d and 1s 3¼d, and there is nothing at present, and with the existing outlook of foreign trade, to indicate any early advance. We are in the dark as to the policy of the Government in regard to the fixity of the value of the rupee at 2s, which for the time being is anomalous. The Finance Minister of India, in his recent Budget speech, carefully abstained from passing any opinion on the future, and the official estimates for 1922-23 were based on an exchange of 1s 4d, as against 1s 8d in the previous year.

POLITICAL UNREST AND ITS EFFECT ON COMMERCE.

I feel I must refer to another influence which is not helpful in the present time of difficulty in India, and that is the political unrest. It may not be the cause of our financial and commercial troubles, but it aggravates them, and I am sure, if allowed to continue, it will become a real menace and danger to the development of the country and revival of its commerce, when the present, though passing, difficulties are overcome.

Everyone who knows India must be aware that disaffection is growing, and it is a plant that expands very rapidly by neglect. The masses of India did not cry for reform of this far-reaching nature, and look, I think, with consternation on the latitude given to the so-called reformer or agitator in his reckless preaching of treason and sedition. They attribute it to weakness and want of governing power, a dangerous notion to allow to be disseminated throughout the country, and if not checked it will alienate their faith, loyalty, and respect for British rule—which was unbounded.

The evolution of self-government should be gradual in a country such as India, but the present tendency is to run before they can walk, and to introduce drastic and far-reaching measures before the country is ripe to receive them, and unless moderating influences are brought to bear, and the Government governs, we are on the high road to trouble. Progress by all means—it is right

and inevitable—but the pace is being forced too much for safety, and the ultimate peace and prosperity of India itself.

BALANCE-SHEET ITEMS.

The figures in the balance-sheet are based on the rupee at 1s 4d, and, as I told you last year, we have not varied that rate throughout, so there is no allowance to be made for exchange in comparison with previous years, except in the expenses of management, which show a shrinkage of some £20,000, owing to conversion of foreign payments at the lower rate. The contraction, therefore, in the figures before you is solely due to the restrictions of business, and, as is best described by the term I have already used, "the thawing of frozen credits"—i.e., "loans receivable and advances" have declined from £8,755,919 to £5,918,539.

You will notice, no doubt, the high ratio our liquid resources bear to current, fixed deposits, &c., about 75 per cent.; it is high and does not denote active trade, but in these uncertain and anxious days I think it is to be appreciated. For the same reason our holding of Government and other stocks has increased by £575,631. Our freehold premises stand us in less by £13,549, but we have still to meet the cost of our new buildings in Madras, Rangoon, and Kota Bharu.

On the other side of the account, our paid-up capital is unchanged at £1,050,000, and the reserve fund is now £1,150,000. The note circulation in China has increased by £127,583 to £284,888, and current, fixed deposits, and other accounts have declined £3,149,775, chiefly due to the withdrawal of short deposits in the East.

YEAR'S PROFIT.

Turning to the profit and loss account, the gross profits are £531,868, as against £549,123 in the previous year, but expenses of management are less by £20,080, as already explained. The allocation of the profits is fully described in the report, and you will notice that the interim dividend last year absorbed £84,000, as compared with £60,000 previously, owing to the issue of "C" shares in 1920 being in full operation during the year under review. We propose a final dividend of 8 per cent., for which a further £84,000 will be required, and the amount carried forward to this year will be £137,671 8s 10d, as against £127,638 7s 1d brought in.

TRIBUTE TO STAFF.

Our thanks are due to the staff, of all grades, for the very excellent work performed last year. Those in responsible positions have had anxious and arduous times, but, fortunately, we have men on whom we can depend, and we much appreciate their loyal service.

In conclusion, gentlemen, I hope that we may shortly receive some relief in taxation. If we are ever to make any headway in the liquidation of the debt that is hanging over us, the country must have some chance of prosperity and reviving industry; at present little, and in many instances nothing, is left for development and working capital. I cannot believe that policy is sound, or likely in the long run to be the best for the country. The simple lesson we have to learn is that if you cannot afford a thing you must do without it, however desirable it may be.

I now beg to propose: "That the report of the directors, with the audited statement of accounts, and balance-sheet at December 31, 1921, presented to this meeting, be and the same are hereby received, approved, and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of this bank of 8 per cent. be paid, making 16 per cent. for the year, less income-tax, as recommended in the report, and the same is hereby confirmed." I will ask Mr Ryrie to second this resolution, but, before putting it to the meeting, I shall be glad to answer any questions which may be asked.

Mr J. M. Ryrie: I have pleasure, gentlemen, in seconding that resolution.

Mr John Cutcliffe: Is there any reason, sir, why the "A" and "B" shares should not be consolidated; and is there any reason against letting us know how much of the "Government and other stocks" is in Home Government and how much in Indian Government stocks?

The Chairman: As to the first question, the "A" shares have a preference over the "B" shares, which I think it would be very difficult to remove. As to the second question, approximately—I only say approximately—two-thirds is in Home Government stocks and one-third in Indian Government stocks.

The resolution was carried unanimously.
Mr H. Melvill Simons: I propose:—"That Mr R. J. Black and Mr J. M. Ryrie, the directors retiring from the board in rotation, be and they are hereby re-elected directors of this bank."
Mr P. R. Chalmers: I have much pleasure in seconding that.
The motion was unanimously adopted.
The Chairman: I thank you, gentlemen, on behalf of Mr Ryrie and myself for this renewal of your confidence.
Mr E. Pinhey: I propose:—"That Messrs Cooper Brothers and Co. and Messrs W. A. Browne and Co. be reappointed auditors of the bank, and that their remuneration be 300 guineas each for each audit."

Mr J. D. Wilson: I beg to second that motion.

The motion was unanimously agreed to.

Mr H. A. Begg: I have pleasure in proposing that the hearty thanks of the shareholders be accorded to the board of directors, the chief manager, the managers, and members of the staff, abroad and at home, for the efficient services which have led to the entirely satisfactory report now presented to the meeting.

Mr E. J. Walker: I have great pleasure in seconding that.

The vote was unanimously accorded.

The Chairman: Thank you, gentlemen.

The proceedings then terminated.

BANK OF SCOTLAND.

SATISFACTORY RESULTS—INCREASED NET PROFIT.

BANK'S STRONG AND LIQUID POSITION.

The annual meeting of the proprietors of the Bank of Scotland was held within the head office, Edinburgh, on 4th inst., the Lord Elphinstone, deputy-governor, in the unavoidable absence of the governor (Mr W. J. Mure, C.B.), presiding.

In submitting the directors' report, the Chairman said: I assume that we may hold as read the report by the court of directors of the affairs of the bank as at February 28th last, a copy of which you have no doubt received.

THE LATE LORD BALFOUR OF BURLEIGH.

Before commenting upon the figures, I wish to make reference to the great loss sustained by the bank since we last met through the death of the Right Honourable the Lord Balfour of Burleigh, who for seventeen years was governor of the bank. His lordship had been a director for forty-one years, and became deputy-governor in 1883, and governor in 1904. I need hardly say to those of you who have been in the habit of attending the annual meeting how deep was his lordship's interest during his many years of office in all that pertained to the welfare of the bank, and how constantly he strove to further its progress.

THE BANK'S BALANCE-SHEET.

Turning to the report, I do not propose to occupy your time with an analysis of the financial and trade conditions that have ruled during the past twelve months. That has already been supplied more or less exhaustively by the chairmen of the large banks, and there is nothing to add to what has been said again and again. You are all aware of the collapse of the markets abroad, the consequent stagnation of trade and industry at home, the sequel of unemployment, and the substantial fall in prices. Industrial difficulties found their climax in the disastrous coal strike, and now we can only make our way back to prosperity along the old-fashioned lines—hard work, enlightened management, up-to-date organisation, and drastic economy both in national and personal life.

DEPOSITS.

In these abnormal circumstances, it is satisfactory to see our deposits at £38,624,814, which is £937,455 higher than last year. The attraction of Government securities has not been without effect throughout the year, and latterly revenue taxation has depleted some of our accounts considerably.

Note circulation is £752,746 down, but that is what might be expected from dull trade and lower wages and prices, which were bound to lessen currency requirements.

Our acceptances are £565,325 down, which indicates that foreign trade is feeling the universal depression. Our total liabilities to the public at £43,174,668 are within £100,000 of the figure of last year.

ASSETS.

On our assets side, cash and money at call and short notice, at £8,620,653, represent 20 per cent. of our liabilities to the public; the same ratio as last year. Bills discounted, £7,912,992, are fully £1,200,000 over the figures of February, 1921, and as they include £7,158,000 Treasury bills, maturing steadily during the next three months, we have in cash and what is equivalent thereto 38 per cent. of our liabilities to the public—a very strong and liquid position.

British Government securities at £16,818,316 are up £3,403,414, and include £12,943,481 falling due at varying dates from 1922 to 1930. The other securities show no material change.

ADVANCES.

Current accounts and other advances, £9,849,492, are £3,856,864 lower than last year. The latter figure includes some special loans, but the greater part of the decline is represented by a widespread and thoroughly satisfactory decrease of overdrafts and loans throughout the country. All through the year we have

seen a steady liquidation of stocks held a twelvemonth ago at high prices, and it reflects great credit upon the bank's *clientèle* that they have, on their own initiative, been able to reduce their commitments to more normal lines without any serious difficulties arising. Our losses have been on the most moderate scale, and the satisfactory condition is due largely to the prudent conservation of profits in past years by our customers which has enabled them to come safely through a time of severe strain.

FACILITIES TO CUSTOMERS.

The lower advances are in no way due to restricted facilities to our customers; they are the natural result of the industrial conditions during the year, and at present most of our customers have less opportunity for using their normal credits. These, however, are available and will be readily granted whenever trade revives, and with close on £8,000,000 lying meantime in Treasury and other bills and a large quantity of short-dated British Government securities, we have ample resources for all reasonable demands.

THE RESULTS OF THE YEAR.

Regarding the operations for the year I am sure you will be gratified that our net profits at £320,241 are fully £10,000 higher than in 1921, and with the substantial balance carried forward from last year of £76,136 we have £396,378 9s 1d available. Of this £25,000 has gone to write down bank premises account, and £25,000 to heritable properties account—a liberal allowance—and £125,000 has been placed to the reserve fund, increasing it to £675,000. This makes, with our paid-up capital of £1,325,000, a total of £2,000,000 of proprietors' funds.

Every known bad and doubtful debt has been fully provided for. Our investments in the balance-sheet at or under the market prices ruling on February 28th last show in our books a very satisfactory surplus.

BRANCH EXTENSIONS.

During the year new branches have been opened at Wishaw, West End Greenock, Rosyth, Muthill, and Grahamston, whilst others have been arranged for at Charing Cross, Glasgow, and Bonnybridge. These will be opened shortly.

BANK STAFF.

In conclusion, I wish to say how much the directors appreciate the excellent work that has been done by the treasurer, the head office executive, the managers, agents, and staff generally throughout the service during the past year. The results have been submitted to you to-day. The directors recognise that the prosperity of the bank depends in a special degree upon the agents all over the country, and they are confident that they can rely upon the continuance of their efforts to promote the bank's interests in the every way possible to them. I am glad to state that the staff council has proved of great value in affording opportunities for the friendly and frank discussion of all matters affecting the staff, and there is no doubt that the meetings have enabled directors, executive, and staff to realise the various aspects of these questions arising from different points of view.

DIVIDEND.

I have pleasure in moving the adoption of the report and balance-sheet as submitted to you, and that a dividend for the past half-year at the rate of 16 per cent. per annum be now declared, payable on April 17th, less income-tax.

Mr William J. Mure, C.B., and the Lord Elphinstone were unanimously re-elected governor and deputy-governor respectively for the current year, and Lieut.-Colonel J. M. Trotter and Mr William Whitelaw were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr C. E. W. Macpherson, C.A., were reappointed to conduct the audit of the bank's books for the current year, and a vote of thanks to the chairman terminated the meeting.

NATIONAL BANK OF INDIA, LIMITED.

"MOST SATISFACTORY AND ENCOURAGING RESULTS."

TRADE CONDITIONS IN THE EAST.

GOOD CROP PROSPECTS.

The ordinary general meeting of shareholders of the National Bank of India, Limited, was held, on the 4th instant, at the Wesleyan Hall, Bishopsgate, London, Mr Robert Williamson (deputy-chairman) presiding,

The General Manager (Mr C. Nicoll) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen, I presume that, as usual, the report may be taken as read.

I much regret that owing to long-continued indifferent health, making it difficult for him to move about either easily or with comfort, our chairman is obliged to be an absentee; and, I need not say, a very unwilling one, from to-day's annual meeting of shareholders. I would like, however, to tell you that he still takes a very keen interest in the affairs of the bank and its welfare, and is quite fit to do so. The telegrams received and dispatched from and to all our branch offices are sent to him every day, so that he is informed of all that is going on, and his advice is at all times at our disposal. We would be greatly delighted to see him in the bank again, and we look forward to having this pleasure by-and-by.

TRIBUTE TO LATE GENERAL MANAGER.

You will miss to-day our late general manager, Mr Henry Chalmers, who since June 8, 1920, was also a member of the board, and to our deep regret died in a nursing home in Aberdeen on August 31st last year. He was taking his usual summer holiday, during the last days of which he was seized with illness, necessitating a surgical operation—without, unfortunately, saving his life. Mr Chalmers had been connected with the bank for 44 years, for 16 of which he held the important position of manager of our office in Bombay, where his work for us was markedly successful. The last 19 years had been spent at the head office here, first as London manager, and since January 1, 1914, as general manager, both of them positions of great responsibility, and, as the chairman has often told you, these burdensome duties were at all times well and ably handled by him.

CHANGES IN THE MANAGEMENT.

A suitable expression of sympathy was sent to his widow and family by the directors, and, consequent upon his death, we have made the following appointments:—

Mr Charles Nicoll, who has successfully filled the post of London manager for nearly eight years past, was promoted to the post of general manager, and Mr J. Y. Munro to that of London manager, whilst Mr W. J. K. Hegarty, who was manager in Calcutta, has been made an inspector of branches, but is meantime retained in London.

These gentlemen are well known to us, have been in the bank's employment since the days of their youth, are experts in business of the type carried on by us, and we feel that our affairs have been entrusted to competent hands in all respects.

EASTERN MARKETS.

When I was addressing you 12 months ago I spoke of Eastern markets being overloaded with supplies of goods of a very miscellaneous character, also of stocks of produce from India and East Africa—skins, hides, cotton, &c.—stored in this country and in America waiting demand from consumers, and I expressed the opinion that the liquidation of these operations would call for the exercise of much patience and require considerable time before it was brought to a close. I am glad to tell you that satisfactory progress has been made in this work, and that any losses to us connected with it have been fully provided for.

To-day it will not be out of place for me to refer briefly to some of the figures in the accounts which are in your hands, and in doing so I would draw your special attention to the fact that, in view of the lower rate of exchange now ruling, we have considered it advisable to revert to our practice of converting all rupee assets and liabilities at an exchange of 1s 4d per rupee. Those rupee assets and liabilities appearing in the previous balance-sheet of 1920 were taken at the statutory rate of 2s per rupee, and this fact must be borne in mind when making a comparison between the figures of 1921 and 1920. The difference of 8d per rupee pretty well explains the disparity between certain items, and I may say

that, taking 1920 figures on the same basis as that adopted for 1921, there is really very little difference between them.

BALANCE-SHEET ITEMS.

Touching briefly on the principal items, our cash balance of £6,236,423 can easily be augmented from our holding of securities, which total £5,000,000, many of which are short dated, and I may also mention in this connection that we have a large holding of Indian and Home Treasury short-dated bills, so that a considerable proportion of our assets is in a very liquid form. Our securities, you will be pleased to hear, stand in our books at a figure materially below their present market value.

House property, as I explained last year, is an increasing item at present, but we are pursuing the policy of many years' standing, and are again proposing an appropriation from profits of £20,000 towards the reduction of the cost of same.

As regards bills of exchange and discounts, loans, &c., there is a reduction due to liquidation of outstandings on the other side and to the restriction in exports and imports, which has been a notable feature in the business of the last 12 months. For the same reason, acceptances on behalf of customers show a marked decline.

Turning to the other side of the balance-sheet, the only item—and that an important one—which calls for comment is that of current, fixed deposits, and other accounts, and there I am glad to be able to say that an actual comparison on a 1s 4d basis shows that the figure of £34,295,599 is within about £400,000 of the figure for 1920, a feature which altogether I look upon with satisfaction.

PROFIT AND ALLOCATIONS.

The final results of the year's business show a profit of £555,063 15s 8d after making provision for all bad and doubtful debts, to which there falls to be added £149,031 17s brought forward from our last accounts, making a total of £704,095 12s 8d. No half-yearly statement was issued to you in 1921—that practice is now at an end—but on September 20th last we paid an ad interim dividend of £1 5s per share, or 20 per cent. per annum free of income-tax, which absorbed £200,000. The directors now recommend payment of a final dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,600,000. They also propose to write £20,000 off house property account and to add £20,000 to the officers' pension fund, leaving a balance of £164,095 12s 8d to be carried forward.

I venture to suggest that the results which we have been able to place before you, considering the adverse conditions with which we had to contend, are most satisfactory and encouraging, and I feel confident that you also will so look upon them.

CURRENCY AND EXCHANGE.

I commented at some length at our last annual meeting on matters of currency and exchange. As regards East Africa, which is also a sufferer from acute depression in trade, a great change has taken place within the last 12 months. The rupee has been demonetised in the colonies of Kenya, Tanganyika, and Uganda, and the coins have already been returned to India. The silver florin—the successor of the rupee—has also been put aside, and the currency is now the "shilling"—a coin applicable to these colonies only. These changes have been made on the authority of the Secretary of State for the Colonies and his advisers, and nothing need be said on the subject. It remains to be seen what effect they will have on the prosperity of the colonies concerned.

As to India, it is sufficient to point out that the statutory rupee remains at 2s, with Rs.10 to the equivalent to the £ sterling. This was a part of the scheme of currency reform, the adoption of which was recommended by the Committee appointed to examine and report on the subject, and although the Government gave effect to it, on paper, perhaps fortunately it has never come into operation and might well now be replaced by the 16d rupee, with which we were familiar for so many years, and which, moreover, is the basis which the Government have themselves adopted in framing their Budget for the current year.

The statutory rate has, indeed, proved a real hindrance to trade, Indian merchants having frequently made use of it as an excuse for delay in taking delivery of goods which had arrived at their

destination in fulfilment of contracts previously entered into, which, in their view, might well be ignored until a purchase of exchange at the Government rate of 2s could be effected.

Free from Government interference, the sterling value of the rupee is left to find its own level, and to-day's T.T. quotation is 1s 3½d; a year ago it was 1s 3¼d.

FLUCTUATIONS IN EXCHANGE RATES AND SILVER PRICES.

Fluctuations in rates of exchange, also in prices of silver, have been much less violent than in 1920, and the market price appears to be settling down again to near 1s 4d.

EXCHANGE.					
	Highest.			Lowest.	
	s d			s d	
1920	10	Feb. 11		4½	Dec.
1921	6½	Jan. 8		2½	March
1922	3½	Jan. 3		..	..

SILVER, PER OZ.					
	Highest.			Lowest.	
	s d			s d	
1920	89½	Feb. 11		38½	Dec. 10
1921	43½	Sept. 27		30½	March 5
1922	35½	Jan. 9		..	..

With the Indian mints still closed to the coinage of silver to the public it is strange that the country should continue to import this metal so extensively as is being done, and this, too, in spite of a large trade balance adverse to India.

The figures for 1919 and the last two years compare thus:—

April 1, 1919—March 31, 1920 (12 months), Rs.88,00,00,000 in favour of India.

April 1, 1920—March 31, 1921 (12 months), Rs.50,00,00,000 against India.

April 1, 1921—February 28, 1922 (10 months), Rs.34,00,00,000 against India.

It is clear, I think, that the imports of silver—the figures of which are as follows—are not being paid for by exports of goods, and presumably must be increasing India's indebtedness to Europe, chiefly to this country:—

April 1, 1920—March 31, 1921 (12 months), in value Rs.11 crores.

April 1, 1921—December 31, 1921 (9 months), in value Rs.11½ crores.

And deducting Rs.6½ crores exported, the excess in imports is Rs.15½ crores.

In the same period the imports of gold were of the value of Rs.32 crores, and of the exports Rs.37½ crores, the bulk going to America and Japan, an excess in exports of Rs.5½ crores.

OUTLOOK FOR CURRENT YEAR.

On this occasion I am not able to describe our outlook for the current year as bright. So far as we have gone we have no reason to complain, but competition is keen and is more felt when the volume of business offering in the different markets is somewhat restricted, as has been the case in past months. Quite recently I have noticed a slight improvement in the finance aspect, both in imports and exports, and I hope for some further expansion in this direction. The balance of trade figures for February are only about Rs.60 lakhs adverse to India, compared with Rs.7 crores in January, and appear to be mainly due to a large falling off in imports. Last year's monsoon was particularly favourable in India, and very abundant crops of wheat, seeds, and cotton have been secured. From a cultivated area estimated at 29,000,000 acres in wheat a bumper yield may reasonably be expected, and after replenishing exhausted stocks in the country a fair supply should be available for export. In Burmah, too, the rice crop is good, and shipments are now being made.

As you all know, there is considerable unrest and discontent amongst the Indian population in widely separated districts, probably political in origin, but perhaps in some degree due to unsatisfactory economic conditions, extending over a considerable period of time, and I hope for a very marked change for the better to follow on the marketing of these large crops. This implies, of course, that buyers will be forthcoming, and that, again, is largely contingent on something like a settlement of the many difficult problems with which Europe is afflicted—all a legacy bequeathed to us by the Great War—but, slow though it is, progress is being made in this direction, and I am not without hope that the troubles now surrounding trade conditions may gradually pass away.

Letters and telegrams to the bank say little or nothing of this unrest, and nothing of the political movements in India, but in any case it is not in my province to discuss with you or comment upon matters of that type. Such knowledge of them as I possess is derived mainly from a perusal of our daily newspapers, which are available to you all.

Before bringing my remarks to a close I wish on behalf of the directors to give expression to our appreciation of the good services

rendered to the bank throughout the past year under difficult circumstances by our staff both at home and abroad.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1921, be received and adopted, and that a dividend for the six months to December 31, 1921, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income-tax, on and after April 5, 1922."

Mr Robert Miller seconded the resolution, which was carried unanimously.

The retiring directors (Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., Sir Charles C. McLeod, and Mr J. A. Toomey) were unanimously re-elected, and the auditors (Messrs Cooper Brothers and Co. and Messrs W. A. Browne and Co.) were reappointed.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr A. W. Martin: Ladies and gentlemen,—I beg to propose, "That a very hearty vote of thanks be given to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year." I do not think there can be anyone in this room who knows the condition of things existing in commercial affairs, especially in the East, who cannot feel what a deep debt of gratitude we owe to the gentlemen we see before us. We have heard from the chairman the difficulties the directors have had to meet, and we have heard how they have overcome them, and I think that we here must all feel that we owe to these gentlemen a very great debt of gratitude for the manner in which during these very difficult times they have helped and steered the bank to great success.

Mr J. J. Moore: I have much pleasure in seconding that resolution.

Mr F. Tomkinson: Mr Chairman, I rise to support the resolution which has just been proposed, because, knowing something of India, I do feel that the shareholders of this bank are indebted to the directors and desire to show the great appreciation which is expressed in the resolution. The strenuous times which have prevailed for years past, especially during the war, and in no small degree since peace was declared, have meant that business has been conducted under considerable difficulties. I was very pleased to hear the chairman make a comment on the prospects for the ensuing year. He said that the crop prospects were good, and I do think that if there should be a favourable crop a great deal of the discontent to which he has referred, and which we all so much regret, may be removed. I want heartily to support the resolution, because I feel that we are greatly indebted to the board and also to the managers, not only here, but also in India, where they are working under conditions which are very unpleasant.

The vote was unanimously accorded.

The Chairman: Ladies and gentlemen, on behalf of the board, I desire simply to return you our thanks. We will continue to do our best for you all, and I hope that if we are spared to assemble here next year we shall be able still to show you a fairly good state of affairs.

VOTE OF THANKS TO STAFF.

Mr J. Irwin-Davis: Mr Chairman and gentlemen,—Owing to the unfortunate illness, which I very much regret, of our good friend, Mr Nelson, I have been asked to propose a vote of thanks to the staff. Mr Nelson has proposed this resolution for a great many years, and I know that he took a very great pride in doing so, because he has always had a very high opinion of the staff of the bank, both at home and abroad. He has been good enough to send up the following resolution:—"That this meeting warmly recognises the good services rendered by the officers of the bank during the past very difficult year, and, lamenting the loss, by death, of our late esteemed general manager, Mr Chalmers, now accord to the general manager, the managers, and members of the staff at home and abroad their hearty thanks for the highly satisfactory report now presented and adopted."

Before speaking to this resolution, I would like to say that we extremely regret the enforced absence of our honoured chairman. I would also like to say how much we deplore the great loss we have sustained in the sad—almost tragic—death of our late general manager, Mr Chalmers. We shall miss his cheery and genial presence at these meetings. I need not remind you that the past year has been a very difficult and a very strenuous one for our staff. It has always afforded us a great deal of pleasure, year by year, to record how much we appreciate their efforts on our behalf, and I am sure that on this occasion it will give us a double pleasure to pass the resolution which I have just read.

Mr James Sheriff: I beg to second that resolution.

The motion was cordially approved.

The general manager: Ladies and Gentlemen,—On behalf of the staff and myself, I thank you very much for your kind vote of thanks.

The proceedings then terminated.

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

STEADY PROGRESS AND PROSPERITY OF THE BANK.

INCREASED PROFITS AND RESERVES.

CHINA'S VAST RESOURCES.

AN EFFECTIVE AND STABLE GOVERNMENT NECESSARY.

The ordinary yearly general meeting of the shareholders of the Hongkong and Shanghai Banking Corporation was held, in Hongkong, on February 18th last. Mr G. T. M. Edkins (chairman) presided.

The chief manager read the notice convening the meeting.

The Chairman said: Ladies and Gentlemen,

The report and statement of accounts having been in your hands for some time, I will follow the usual procedure and take them as read.

SUCCESS OF THE NEW ISSUE.

I am glad to announce that the new issue of 40,000 shares was readily subscribed, and the premia on them, viz., £2,000,000 and \$630,281.71, were brought into the accounts during the closing months of the year. I think the decision to issue these shares at £70 has been amply justified by the result.

PROFITS AND DIVIDEND.

The statement shows a net profit for the year of \$10,821,295.42, compared with \$8,841,166.30 for 1920.

In June we made an interim distribution of £3 per share, and, subject to your approval, we propose to distribute a final dividend of £3 and a bonus of £2 per share on the old shares, and a corresponding dividend and bonus on the new shares, viz., £2 5s and 15s.

RESERVES.

I am sure you approve of the policy we propose to continue, viz., the strengthening of the silver reserve, and we have allotted to that reserve \$1,369,718.29 from the year's profits and \$630,281.71 from the premium on the new shares, making the silver reserve \$23,500,000.

Gilt-edged securities in which part of our reserves are invested, have shown considerable appreciation during the year. The market value of our gold investments now shows a handsome surplus over the value at which they stand in our books. No provision for depreciation has therefore been necessary on this occasion. Our profits have suffered, in common with those of every British joint stock bank, for some years past from the depreciation of these gilt-edged securities, which are necessary in our business, but I think that in view of the considerable margins we now have in hand, there are substantial grounds for hope that we may have seen the last of these annoying calls on our earnings.

THE BALANCE-SHEET—BANK PREMISES.

Turning to the balance-sheet, you will observe there has been a considerable increase in the item of bank property. My predecessor in this chair foreshadowed this increase. Since we met last year new offices have been completed and occupied at Canton, Manila, Bangkok, Daien, and Sungei Patani, while Harbin office and the additions to head office are on the point of completion. Seven dwelling-houses for the staff at Singapore and Penang were also completed. Building operations are now in progress at Shanghai, Calcutta, Singapore, Johore, and Colombo. Although the total cost will be rather formidable, your directors are convinced that the policy of providing ample accommodation for the future requirements of our business is a sound one. At the same time, thanks to the purchases made by the bank in the earlier years of its history, it is now possessed of property of immense value in the principal ports of Asia.

Meanwhile we propose to allot one million dollars from the year's profits to writing down property account. We carry forward to next year \$3,331,778.59, compared with \$3,291,491.69 a year ago.

RATE OF EXCHANGE.

With regard to the other figures, the rate of exchange at which the sterling equivalents of our silver assets and liabilities, and vice versa, is calculated, is 2s 7d against 3s 2d at the end of 1920, so comparisons with previous years are not altogether easy.

INCREASED STERLING INVESTMENTS.

The outstanding features are decreases in bills payable, acceptances a/c constituents and bills receivable, and an increase in sterling investments—which increase, apart from new investments a/c the sterling reserve, is mainly in short date British Government Treasury bills. These fluctuations are eloquent of the great falling off of overseas trade, which statistics from all parts of the world

indicate is 35 to 50 per cent. below the figures of 1920. The figures of our bills of exchange in hand and rediscounted faithfully reflect this. We may have to wait some months before we can fully employ that part of our resources which is temporarily held in Treasury bills, but I think we have good reason to expect that the gradual improvement in trade will soon enable us to find a better use of these resources than Treasury bills.

PROSPEROUS LOCAL BUSINESS.

On the other hand, local business in the East has been prosperous; local companies generally have done well. Our silver deposits have increased considerably, as have our bills discounted, loans, and credits, and there has been a good demand for currency locally involving a considerable increase in our note issue.

Net profits are \$1,980,129.12 in excess of those of a year ago. Apart from the earnings of the new capital, three factors have helped towards this favourable result; one I have already mentioned, viz., the fact that no inroads on the profits have been necessary for writing down our securities, another is the activity in local trade in the East, the third and most important is that the full effect of the slump in trade was not felt till the second half of the year. During the first half we were still deriving benefit from the enormous trade of 1920. We have had to contend with constantly varying world exchanges, but our operations have been fortunate and otherwise the earning power of the bank rests on very solid foundations. All losses that have been ascertained or anticipated have been amply provided for out of the year's earnings.

APPRECIATION OF THE STAFF'S SERVICES.

We have again to record our appreciation of the zealous and loyal service of the staff from the chief manager downwards, which service, in view of the difficult year we have passed through, specially merits your recognition, and I am sure you will heartily approve of our action in awarding them a moderate bonus of 15 per cent. on their salaries.

FLUCTUATIONS IN THE SILVER MARKET.

The silver market during the year has not been free from substantial fluctuations, the price at the beginning of 1921 was 40½ and at the end of the year 34½, having been down to 31½ and up to 43½ in the interval. China, as far as we can make out from the somewhat unreliable statistics available, absorbed on balance 63 million ounces, compared with 98½ million ounces in 1920. In the Budget speech of the Governor-General of Indo-China it was disclosed that that Government had purchased 24½ million ounces during the year in the different markets of the world for the purpose of enabling it to resume specie payments, which has since been done. Our French neighbours are to be congratulated on having thus arranged their currency and on having carried out the large operation of buying 24½ million ounces of silver with so little disturbance to the market. Undoubtedly, however, this extra demand was the main factor which kept the market steady during the summer and autumn months.

FUTURE OF SILVER.

The Indian Government has silver reserves of about 74 crores of rupees, and should therefore be out of the market for many years. The immediate future of silver depends on the requirements of China and of the Indian bazaar—both very uncertain factors.

The United States Government is steadily carrying out the terms of the Pittman Act. Up to the middle of last December their purchases of domestic silver amounted to 84,800,000 ounces out of the total of 208,000,000 ounces required by that Act. If they continue to progress at this rate, it will take about two years from now to complete the operation. After that the domestic production of the United States will come on the market on the same terms as silver produced elsewhere. There should then be an overabundance of the metal, and it is very likely the Governments, including our own, which have abandoned their old silver currencies for unsightly substitutes, will regret their action.

LONDON THE CHIEF FINANCIAL CENTRE.

Trade and the money markets all over the world are still in a state of disorganisation, but there are encouraging signs that a more rational mood is beginning to prevail among workers, and

the British Government at last appears to be contemplating taking drastic steps towards economies in administration. We should, therefore, within a reasonable time, reach a healthier condition of affairs than prevailed during the years immediately following the Great War. The London money market is now about normal. A great number of home and colonial loans have recently been successfully floated there. In the months of November and December alone £80 millions sterling of new issues were placed. It looks certain that all Government restrictions will soon be removed, and that London will be free to all borrowers and will resume its place as the unquestioned chief financial centre of the world. In this connection it is gratifying to record an appreciation of the pound sterling compared with gold of nearly 19 per cent. during 1921. It may be appropriate to mention here that when China again appears in the foreign markets as a large borrower, which must be sooner or later, it is absolutely sure that London will be able to absorb as large a share of Chinese finance and on as favourable terms as can be obtained elsewhere.

EXTERNAL TRADE OF EASTERN COUNTRIES.

The external trade of China and all other Eastern countries has suffered in common with the rest of the world, and the year has been an unprofitable one for most merchants engaged in it. Very large losses have been realised on the expensive import goods ordered in 1919, but it is gratifying to know that these have been in a large measure liquidated, especially in North China, and that new and profitable business has been considerably in evidence in recent months. Hongkong, although satisfactory progress has been made in the liquidation of old stocks, has not been quite so fortunate. Our very important market—Kwongsi—has been in a disturbed condition during most of the year, and is still suffering extensively from brigandage and piracy, as is in a lesser degree our neighbour, Kwangtung. The authorities of these two provinces have our best wishes for success in their efforts to restore peace and order.

PROGRESS OF THE COTTON INDUSTRY.

Reverting to North China, the cotton industry continues to make rapid strides. It is estimated that over 2 million spindles and 9,500 looms are in operation, and it is certain that as time goes on China will herself supply a great proportion of her requirements for the coarser grades of cloth.

As regards the export trade of China, it has suffered generally from the world conditions, and particularly from the fighting and floods in the Yangtze Valley last summer; there has been no particular development in it calling for remark.

I will refer to political conditions later on.

EXPORT TRADE OF JAPAN.

In Japan, as elsewhere, overseas trade figures for 1921 show a very considerable falling off as compared with those of 1920. New business in imports has been hampered by the still considerable unsold stocks of high-priced imports carried over from 1919 and 1920, although appreciable progress in their liquidation has been made during the year.

On the export side, raw silk and silk goods have found good markets in the United States, but Japanese exports to other countries show a heavy decline, due to various causes, of which high manufacturing costs are not the least, and unless same can be very considerably reduced, the prospects of an early improvement in the export trade of the country are not very bright.

In the Straits the disastrous slump in their two principal products, tin and rubber, has had effects that are only too notorious, but the Government and the merchants are handling the situation courageously, and we have no doubt whatever but that these two industries will soon adjust themselves to the new conditions.

POLITICAL AND FINANCIAL CONDITIONS IN CHINA.

Of the political and financial conditions in China during 1921, I am afraid it can only be said that they have grown steadily worse. The reckless and improvident policy of the past is now bearing its inevitable fruits; and, for the first time, with an empty treasury and an exhausted credit, the Peking Government has been unable to meet the service of publicly issued foreign loans, concluded in recent years, without the safeguards in respect to security which were wisely regarded as indispensable in the past. The total debt of China, internal and external, taking the £1 at an exchange of \$7.50, is estimated to be not less than \$1,800,000,000, of which \$364,000,000 is for the most part entirely unsecured. Of this latter figure, \$216,000,000 represents foreign debt, and \$148,000,000 debts to native banks and individuals, arrears of pay due to Government departments, and the like. The salt revenue surplus available, after providing for the loans directly secured on the salt revenue, has been pledged for some of these obligations to the extent of \$74,000,000, a sum representing at least 18 months of the average surplus available in normal times, which, in the present disorganised state of the country, is almost the sole

source which the Peking Government can look to for its current administrative expenses.

POLITICAL AND MILITARY RIVALRIES.

The country is still being forced, by the exactions of political and military rivalries, to continue the struggle of maintaining, or attempting to maintain, a standing army exceeding in numbers the combined armies of all the other powers who have recently been sitting in conference for the discussion of disarmament. The constant demands on the two Government banks for funds with which to meet the ever-pressing needs of the militarists, depleted their reserves to an extent which recently seriously threatened the solvency of their northern branches. The same is true of every branch of the administration; education is at a standstill for lack of funds, railways have been depleted of their revenues to satisfy the general need, and are unable to meet payment of their contracts for materials, and the Ministry of Communications, which was once the wealthiest of all the Government departments, is now as straitened for funds as the rest.

HOW CHINA CAN RECOVER HER FINANCIAL STABILITY.

In striking contrast to this financial confusion stand out the older foreign loans secured upon specific revenues, administered under foreign supervision; they afford proof of the value of such supervision, and an indication of the only lines on which China can recover her credit and financial stability. China, in fact, has no justification for not paying her debts; no country with the area, natural resources, and population of China, and with a national debt of only \$4.50, or twelve shillings a head, should place itself in the position of being called insolvent. On the contrary, China's credit is capable of immense expansion, and there is no lack of native and foreign capital available for the development of the country so soon as conditions of security and good government are restored, and it rests with the people of China to accomplish this.

RECORD MARINE CUSTOMS COLLECTION.

The Maritime Customs collection for 1921 amounted to Tls. 54,500,000, an increase of Tls. 5,000,000 above the previous record collection of 1920. With one minor exception, every treaty port shows an increased collection, a fact which bears eloquent testimony to the vitality of foreign trade in spite of the disturbed state of the country, and to the certainty of an immense expansion were these adverse conditions removed.

SALT REVENUE.

The total salt revenue paid into the Group Banks, after deducting administrative expenses, was \$77,975,000, or a decrease of \$1,089,000, compared with \$79,064,000 in the year 1920. As a matter of fact the actual collections were greater than in 1920, but certain extra departmental expenditures were incurred during the year. Of the total sum of \$77,975,000 some \$18,452,000 were retained by local authorities, including those in Kwangtung, Szechuan, Yunnan and Hunan.

The collection of duty by the department in the Swatow area, which was voluntarily discontinued in January, 1919, owing to the introduction of objectionable monopolies by the Canton authorities, was resumed with effect from November 1, 1921, but the revenue is retained by the Canton authorities as in the rest of the province.

The actual amount released for the general purposes of the Chinese Government during the year amounted to \$51,981,000 as compared with \$40,108,000 in 1920.

Owing to the financial position and the fall in exchange, the reserve for the service of the reorganisation loan in the group banks was increased during the year from \$6,000,000 to \$7,000,000.

"JUSTICE FOR CHINA."

We have heard a great deal about "justice for China" and the "restoration of sovereign rights" to which her place among the nations entitles her, and we must all of us sympathise with these natural and legitimate aspirations; but before she can convincingly press these claims, China must first do justice to herself, and to the patient and industrious masses who have silently suffered under the misgovernment of the past few years. Let her leaders abandon political rivalries, and unite the country under one government, reduce her army to an efficient force, commensurate with the modern needs of defence and the maintenance of internal order, and introduce reform and honesty into her administration, and China will then not need to press for recognition of her claims. Such recognition will be spontaneous, and the assistance of her foreign friends will always be at her command on terms consistent with her national self-respect, and with the consideration due to the susceptibilities of a great people.

THE CONSORTIUM.

One other matter I may possibly be expected to refer to is the Consortium. I have little to add to what my predecessor said in some detail at the last meeting.

In the interval Consortium matters have furnished the press of the Far East with a good deal of copy, and there have appeared

reiterated and somewhat unnecessary explanations of its aims and objects. These are, and have been from the first, entirely obvious to every intelligent Chinese public man. They should require no elucidation, and, in my opinion, unnecessary and gratuitous explanations possibly do nothing but create an atmosphere of suspicion and distrust in Chinese circles.

We are as convinced as ever of the necessity in present circumstances of international co-operation in Chinese financial affairs. We believe we are serving the best interest of Chinese people by declining to support any particular faction, and by preventing recourse to further recklessness in borrowing foreign capital for unproductive purposes.

In the words of the resolution adopted at the Washington Conference, China must be provided with the fullest and most unembarrassed opportunity to develop and maintain for herself an effective and stable Government.

In the meantime, the Consortium is prepared to give the most cordial and effective assistance to China whenever it is called upon to do so, by co-operating with Chinese banks in any well-considered scheme for funding the floating debt of China by the issue of internal loans in silver, or by raising foreign capital on approved terms for construction purposes. It may take a long time to form an effective and stable government, but I myself see no reason why, in the important field of railway enterprise, for example, the development of China should be held up for an indefinite period of years, perhaps for a generation, while a new political system is being evolved in this vast country. It is, in my judgment, for Chinese public opinion to pronounce how soon the knowledge and resources of the Consortium are to be utilised for the country's good. If it should be decided that any autonomous province or group of provinces should be entitled to invoke the aid which it has hitherto been the principle of the Consortium to withhold from a divided country, the question might then come up for consideration whether in such circumstances it might not be possible to devise means to resume work on and complete as separate undertakings the more clamant demands for railway construction in China and to raise Chinese as well as foreign capital for that purpose.

I beg to propose the adoption of the report and statement of accounts. After the proposal has been seconded, and before placing the motion before the meeting, I shall be pleased to answer to the best of my ability any questions which shareholders may have to ask.

VIEWS OF SIR PAUL CHATER.

Sir Paul Chater said:—Mr Chairman, ladies and gentlemen.—In August, 1912, I had the honour to second the adoption of the report presented to the ninety-fourth ordinary half-yearly general meeting of this bank, and it affords me very great pleasure to have the privilege of doing so again at this our one hundred and sixth meeting. The profits on that occasion amounted to \$2,915,910.73 for the half-year, while to-day they reach the magnificent total of \$10,821,295.42 for the year, a sufficient evidence, I think, gentlemen, of the steady progress and prosperity of our institution.

The publication of the annual report of the Hongkong and Shanghai Banking Corporation, and still more of the chairman's speech thereon, is an event awaited with eager expectation, not alone by the shareholders and the public resident in the colony, but, I think I may say without exaggeration, by the whole financial world. It has been our good fortune for many years past to find therein material for very pleasant reading, and in all our history, perhaps, none more pleasant than that now before us, with its net profit for the year standing at so handsome a figure, a figure which deserves without stint our heartiest congratulations to the court of directors, the chief manager, managers, and every individual member of our staff, and I am sure we all heartily concur in the proposed bonus to staff.

I am sure you will all agree with our chairman in his statement that the decision to issue new capital was a wise one, and has been amply justified by the result, particularly as the issue was made at a very reasonable price, and that thereby the bank has brought its resources to a figure that compares most favourably with the greatest banks of the world. The allocation of the premium derived therefrom to sterling reserve is, I think, sound policy, while it is eminently satisfactory to note that no provision for depreciation of sterling and other gold securities has been necessary, and that in spite of the continued dullness of overseas trade, our net profits bulk so large.

The continuance of a cautious but liberal policy in the encouragement of local enterprise and overseas trade is the policy which our bank has pursued throughout its career; it is satisfactory to note a gradual improvement in local trade, which we trust may long continue.

APPRECIATION OF THE POUND STERLING.

It is undoubtedly pleasant to note the steady appreciation of the pound sterling, and the consequent resumption by London of its place as the chief financial centre of the world, a resumption which cannot but be materially assisted by the drastic economies now

being carried out or contemplated by the Home Government, and the general improvement in conditions prevailing at home.

PROSPECTS OF CHINA'S RECOVERY.

That China's financial and political condition is to-day in a very precarious state must be obvious to all, nor can we look for any improvement so long as the present struggle continues. Nevertheless, I have not yet lost faith in the possibility of her recovery.

With so large a territory and so large a population, once given a stable government all things are possible to her. Her vast mineral wealth alone has as yet been scarcely exploited, railway development is still in its infancy, while many other of her vast resources remain to all intents dormant. We have but to look at the Chinese Maritime customs and the Salt Gabelle to realise her possibilities under sound foreign supervision, so that there is no reason why under like conditions China should not attain to the recovery of her credit and financial stability, and take a leading position among the commercial nations of the world, nor have I any doubt but that on the cessation of her present suicidal policy she will speedily regain the confidence and goodwill of her foreign friends.

LACK OF KNOWLEDGE OF CHINESE AFFAIRS.

I am in entire agreement with the chairman's remarks about the Consortium, and regret that it has not been possible for it to make a commencement with its functions. To the man in the street it would appear that it has not been handled out here in a very judicious manner. We have been interested in Chinese loans for over forty years, and the bank has been instrumental in putting through a large amount of business on terms satisfactory to the Chinese and to the public, and we have hitherto been unaccustomed to the glaring publicity which has been in evidence in the affairs of this new Consortium. In this publicity it appears to me that there has been displayed a lack of knowledge of Chinese affairs and Chinese mentality, and, as the chairman has said, no other effect has been produced by this policy except suspicion and distrust among Chinese circles.

I now beg to second the adoption of the report and accounts.

The Chairman: There being no questions.

As proposed by myself and seconded by the Hon. Sir C. P. Chater, C.M.G., the motion now before the meeting is the adoption of the report and statement of accounts as presented.

The motion was carried unanimously.

The Chairman: The business now before the meeting is the election of directors.

Mr Lo Chung Wan proposed that the appointment of Mr D. G. M. Bernard and Mr H. P. White as directors be confirmed, and that the Hon. Mr A. O. Lang, Mr G. T. M. Edkins, and Mr A. S. Gubbay be re-elected directors.

Mr C. F. Hall seconded, and the motion was unanimously agreed to.

On the motion of Mr G. W. Barton, seconded by Mr H. B. L. Dowbiggin, Mr F. Maitland and Mr E. A. M. Williams were re-elected auditors for the year.

The Chairman: That is all the business, Gentlemen. Thank you for your attendance. Dividend warrants will be ready on Monday.

EXTRAORDINARY MEETING

MINUTES OF AN EXTRAORDINARY MEETING OF THE CORPORATION HELD AT HONGKONG AT THE CONCLUSION OF THE ORDINARY YEARLY MEETING ON FEBRUARY 18, 1922.

The Chief Manager read the notice convening the meeting.

INCREASE OF CAPITAL—NOTE ISSUES.

The Chairman said:—

It has become desirable to apply to the Government to amend the Ordinance under which we are working for two purposes—

(1) To enable us to further increase our capital from time to time from the present total of \$20,000,000 (now paid up) to a limit which we propose to put at \$50,000,000;

and (2) to make some modifications in the conditions which govern our not issues, particularly as regards the security deposited with the Crown Agents and others in respect of such issues.

As regards the first matter the shareholders' sanction has already been given, the necessary resolution for this having been passed last year when the new issue was sanctioned at the extraordinary general meeting held on May 28th—so that it is not necessary to trouble you now with that.

It is the other matter which I have now to bring before you, and which I will endeavour briefly to explain.

The increase of the capital has made it necessary to rearrange the limit of the ordinary note issue and the security we deposit with the Government against the same and the excess note issue.

These modifications are set out in the resolution, which also includes a provision enabling us to keep a certain proportion of our reserves at the offices where notes are actually issued. Formerly we had to keep the whole of our reserves either with the

HEAD OFFICES LIVERPOOL AND LONDON

ROYAL

INSURANCE COMPANY, LIMITED

ALL CLASSES OF INSURANCE EFFECTED

Hongkong Government or with the Crown Agents for the Colonies—an arrangement which might at times be obviously inconvenient.

We have taken steps to ascertain that these proposals will be favourably entertained by the Hongkong Government and the Secretary of State, and a draft Bill has already been prepared embodying them which has been tentatively approved and if you sanction our proceeding with it, it can be promulgated in the *Gazette* next week as required before introduction into the Legislative Council.

The following is the resolution referred to above:—

"That the directors of the Hongkong and Shanghai Banking Corporation be and they are hereby requested and authorised by and on behalf of the shareholders of the corporation to take the steps necessary for the introduction of an Ordinance into the Legislative Council of the Colony of Hongkong, and for the enactment of the same by the Governor of Hongkong with the advice and consent of the Legislative Council thereof to effect the amendments necessary to the Ordinances under which the corporation is incorporated and carrying on business so as to allow of the ordinary note issue of the corporation being increased to \$20,000,000 (being the amount of the present paid-up capital of the corporation), and to modify the existing requirements as regards the deposit of security in respect of its note issues in such manner as:—

"(a) To relieve the corporation from the necessity of keeping with the Crown Agents or with trustees appointed by the Secretary of State coin or bullion as security against any part of the ordinary note issue, and to give the corporation the option of securing such portion of the same as is required to be secured by the deposit (at the option of the corporation) either of coin or of securities approved by the Secretary of State.

"(b) To relieve the corporation of the obligation to keep at each of its establishments an amount of coin or bullion equal in value to one third at least of the notes issued from such establishment and actually in circulation, and to leave such matter to the discretion of the corporation.

"And (c) to allow the corporation to keep portions of the coin or bullion required to be deposited with the Colonial Secretary, and the Colonial Treasurer as security against its excess note issue (viz., the issue beyond \$20,000,000) in places outside the colony where its notes are issued to such amounts and subject to such conditions as may be approved from time to time by the Governor."

Sir Ellis Kadoorie seconded the resolution, which was carried unanimously.

SCHILL BROTHERS, LIMITED.

CHAIRMAN'S REVIEW OF ECONOMIC AND TRADE CONDITIONS.

CRITICISMS OF GOVERNMENT INTERFERENCE WITH TRADE.

The annual general meeting of the shareholders of Schill Brothers, Limited, was held at the Chartered Accountants' Hall, 60 Spring gardens, Manchester, on Friday, March 31, 1922, at 11 a.m., Mr C. H. Schill (the chairman and joint managing director) presiding.

The Chairman said: I fear that nothing I can tell you about last year's trading can be of an encouraging nature, the more so as we have no definite figures before us yet. There is no occasion to remind any of you of what a disastrous year it has been to traders in general and exporters in particular. When we met last year the reaction from war activity and war prices had already set in, and had, indeed, been going for some four to five months. A very low basis of prices had been reached, and many of the foreign exchanges had dropped to very low figures, which enabled us to judge pretty accurately what our assets were worth then, to write off a considerable loss out of the profits made during the early part of the year, and to carry forward a considerable reserve in case the situation should not improve soon after our meeting and further losses have to be incurred. I think every business man felt convinced at that time that the situation was so abnormal that it could not possibly become much worse, and the danger to the trade of the world and to the life of its various peoples so acute, that prompt and decisive action would have to be taken, with a view to re-establishing the economic position of Europe, effecting a sound and reasonable settlement of the question of war debts, indemnities, and other questions which would assist in stabilising the foreign exchanges and allow trade to gradually develop again. Unfortunately, that has not been done. No end of time and money has been spent over conferences and meetings of all sorts of experts, but no results have been achieved. Political consideration, and the stubborn insistence of what one or other of the nations consider their rights, have been allowed to play a greater rôle than the necessity of a quick and decided settlement. So matters have gone from bad to worse, and it is now difficult to foresee when a settlement will be effected, if, indeed, one is effected at all. It is true that the politicians who are at work on this question have had

their attention seriously diverted by harassing questions at home, both of a national and a semi-private character, such as—in our case—the Irish question, the Egyptian question, the settlement of strikes, lock-outs, &c. It is unfortunate that these large national questions should all have required settlement at the same time as the still larger international one, but it is almost more than a pity that some of the less important semi-private ones should have been pressed forward at such a time, when they could have been either deferred or settled without embarrassing our Ministers so much.

GOVERNMENT EXTRAVAGANCE AND INTERFERENCE WITH TRADE.

On the other hand, the Government have been very slow to realise the necessity for greater economy in the national expenditure, and excessively slow in ceasing their interference in commercial matters, which the war rendered necessary, but which now renders the possibility of reviving trade almost hopeless. We have a fatal habit in this country of giving undue consideration to certain minority sections of the community who think they have a grievance—if they only shout sufficiently loud and long. It leads to a terrible complication of both Government and private work, such as our income-tax system, our telephone system, and many others. But it has recently led to a far more serious step than these—the passing of the key industries legislation, which is nothing more than Protection pure and simple, and has already had disastrous results on certain sections of British trade. That, and the autocratic interference of the trade unions in certain matters quite outside their scope, will certainly prevent our trade from developing as it should do, and unless the aforesaid bills are repealed quickly, will kill some branches of our trade altogether.

RESULTS OF BAD ECONOMIC CONDITIONS.

The result of all this delay in re-establishing the economic position of Europe has been a year of most harassing worries and very serious losses to all traders. Orders on the books a year ago were not taken up even by some of the best firms abroad, and had to be taken into stock here and written down heavily. Goods arriving on the other side were refused, and only taken up with heavy reductions to meet the drop in prices and in the exchanges, and the stagnation of trade abroad prevented our customers from collecting monies due to them with which to pay us, or, in other cases, they did not do so because of the loss entailed to them through the ruinous rates of exchange. To try and force them to pay or to carry out their contracts by taking up their goods as contracted for would have been quite useless, and would have resulted in countless failures. We simply had to help them through, and take a share of the loss—and a large one. We, on the other hand, had to rely on help in one form or other from manufacturers, banks, and financing houses, which, on the whole, was ungrudgingly given and heartily appreciated. Relatively speaking, our particular losses from failures have not been extraordinary, considering the conditions. The losses arose chiefly from the other sources mentioned, against which we are, of course, entitled to claim for a return of E.P.D. paid in previous years. This claim has been duly made, and is a substantial one, but, owing to the enormous pressure of work in the Revenue Department, no settlement with the authorities has been made yet. We have no doubt whatever that it will be a perfectly satisfactory one when it is made, and we sincerely hope that it will be made before very long, as it will be a welcome relief to the financial situation. But until we know for certain that our claim has been allowed, we cannot put any definite figures before you.

To sum up, we have been doing our best to meet the difficult circumstances arising out of conditions over which neither we nor other traders have any control. I am, however, able to say that, assuming we recover the whole amount of our claim for the repayment of E.P.D.—and we have no reason to doubt that we shall—the whole of the paid-up share capital of £274,132 will be intact.

The following resolutions were passed:—

1. That this meeting be adjourned until the definite settlement over the return of the excess profits duty has been effected with the authorities, and definite figures can be submitted.
2. That Mr Wm. Melland, the retiring director, be re-elected a director of the company.
3. That Messrs David Smith, Garnett, and Co., chartered accountants, be re-elected auditors of the company for the ensuing year.

connection between the imposition and continuance of these duties, and the fact that the natives of West Africa have no vote or voice in the appointment of Colonial Ministers or in the election of the Government that imposed these duties?

HOLDINGS IN WEST AFRICAN COMPANIES.

With reference to the value of the company's holdings of shares in the Niger Company and all other of our West African companies, in valuing on a most cautious and conservative basis the shares in all of our associated companies, we have put no value on our holdings of shares in any of our West African companies.

Yet apart from mining interests and mining royalties, our fleet of river steamers, factories, and stations, we have in West Africa to-day some 20 companies purchasing raw materials for our business and trading.

These West African companies were profit-earners before the recent slump in trade, and must, sooner or later, regain their profit-earning position. We are putting the weight of our organisation into the problems which present themselves in West Africa. There are signs of improvement, and we anticipate continued improvement in the future.

It will be evident what a strong position Lever Brothers are in as regards West Africa. The company unquestionably owns most valuable interests of vital importance for the production and maintenance of its raw material supplies, and we are confident that as the West African trade recovers these assets will steadily improve in value, and the general position of the company will be strengthened accordingly.

VISIT OF DIRECTORS TO BRITISH WEST AFRICA.

Two of your directors, Mr Moseley and my son, accompanied by General McNulty, a director of the Niger Company, Mr Maidman, Agent-General, and other members of the staff of the Niger Company, visited Nigeria last year, and inspected all the principal mineral concession areas, stations, factories, river steamers, boats, and properties of the Niger Company, and of our other West African companies. We have their report confirming the immense potential value, under proper management, of our West African interests.

Mr Greenhalgh, vice-chairman of Lever Brothers, and vice chairman of the Niger Company, and Mr Simpson, a director of Lever Brothers, accompanied by Captain Powis, a director of the Niger Company, and also by members of the staff of the Niger Company, leave in June for Nigeria and other British West African Colonies in which this company is interested, and will thoroughly inspect and, as far as required, will reorganise your company's interests in West Africa in the best interests of permanent success.

ALLOCATION TO SPECIAL RESERVE.

You will note that, in accordance with the pledge given last year, the sum of £250,000 has been carried to special reserve, being £22,000 over the amount required in fulfilment of that promise. In my opinion, this really amounts to little more than window-dressing, and, as an old grocer, I have always had more faith in a well-filled cellar, which we always have maintained, than in a well-dressed window to meet the varying conditions and fluctuations of business.

If you will go with me down to our "cellar," I can show you that during 1921 the parent company and its associated companies expended out of profits on advertising, depreciation, repairs, and renewals the sum of £2,871,924, and in 1920 on the same items the sum of £2,934,966, and the total under these three heads, as far as is ascertainable, during the lifetime of your company, and its associated companies, exceeds £23,000,000.

In addition, there has been taken out of profits available for distribution amongst the ordinary shareholders of the parent company since 1909 the sum of £1,336,361, and distributed to co-partners as dividends on their co-partnership certificates.

The total nominal value of the co-partnership certificates, preferential and ordinary, issued and outstanding, January 1, 1922, was no less than £1,780,898.

These are our real live "cellar" reserves—co-partnership dividends, advertising expenditure, depreciation, repairs and renewals—and the total of these paid out of the profits of 1921 alone amounted to over £3,090,000. Add to this the £250,000 carried to special reserve and the £54,127 carried forward, and the total for 1921 alone comes to over £3,394,000. Compare these figures with the amount paid in dividends to the ordinary shareholders of £228,000, and you then can realise the soundness of the position of your company and the wisdom of a well-stocked "cellar."

PROPORTION OF DIVIDENDS TO EXPENDITURE, &c.

I have revised the chart of 1920 showing proportion of dividends paid to ordinary shareholders and to co-partners, as compared to expenditure on salaries, wages, bank interest, and charges, and for interest on capital, rents, rates, taxes, transport charges, and advertising, and for oils, fats, &c., &c., and find that it bears relatively the same ratio under the lower costs of raw materials and other expenses, and the lower selling prices for our products for 1921 as for 1920. There is no change in ratio, and as I had overstated in the diagram of 1920 the ratio of dividends paid to ordinary shareholders and co-partners, it is still overstated for 1921, and so I repeat the diagram herewith.

The total number of co-partners as at January 1, 1922, was 11,337.

The number of employees who have served over five years is 3,412. Of these 1,498 have served over fifteen years and under twenty-five years, and 328 have served over twenty-five years.

The total number of houses built and owned by your company in the village of Port Sunlight and the adjoining village of Bromboro Port is 1,144, and there are 111 houses in addition in course of erection.

The total area of freehold land to-day practically in a ring fence, including Port Sunlight, is about 3,000 acres, with one-and-a-half miles frontage to the River Mersey.

DEEP WATER DEVELOPMENTS AT BROMBORO PORT.

With reference to the proposed deep water developments at Bromboro Port, for the construction of which our Bill has been passed by Parliament, owing to the present high cost of construction, we have not commenced to act on the powers given us, and since the Bill provides for a time limit of five years in which to do so, we can consequently await a more favourable and less extravagant period for commencing.

In addition to the visit to Nigeria last year of Mr Moseley, my son and others, the following directors have visited the following countries:—

Myself to	Belgium, France, Holland;
My son to	Belgium, Holland;
Mr Greenhalgh to	Belgium;
Mr Buchanan to	Belgium, Germany;
Mr McDowell to	France, Germany;
Mr Tatlow to	France, Belgium, Holland, Germany, South Africa (1922);
Mr Simpson to	Germany, France, Belgium, Holland;
Mr Hart to	Holland, Germany, Switzerland, France;
Mr Moseley to	Belgium;
Mr Barnish to	Italy, Switzerland.

We hear much nowadays about lack of support by the workers of our hospitals, and we have, therefore, every reason to be very proud of the fact that our employees at Port Sunlight raised amongst themselves during 1921 for the hospitals of the district the record sum of £1,214 18s 3d.

The staff training college continues its invaluable service in the education of our staff under the able direction of Mr Knox. Over 500 juniors and apprentices engaged in the offices and works are attending the classes, and the results obtained are most encouraging.

The amount standing to the credit of employees in the Employees' Savings Bank at December 31st last was £110,789 16s 7d, held by 2,293 employees.

UNVEILING OF COMPANY'S WAR MEMORIAL.

A notable event during the year was the unveiling on December 3rd of the beautiful and inspiring war memorial designed by Sir W. Goscombe John, R.A., in the presence of a reverent assembly estimated to number at least 7,000 persons. The actual unveiling was performed by Sergt. T. G. Eames (who was blinded during the first battle of the Somme), assisted by Private Cruickshank, V.C., now in the London office of Planters Margarine Company, Limited, one of our associated companies.

VISITORS TO PORT SUNLIGHT.

The number of visitors to Port Sunlight during 1921 was 22,877. Many representative groups of visitors came to visit Port Sunlight, including members of the Bradford Textile Society, the Canadian and American Delegation of Dry Goods Merchants, and Mr Shelton, of Ohio, a member of same, declared that "the faces we saw in Port Sunlight Works this morning were the happiest, healthiest, and best contented lot of faces that we have seen in this country." In June 100 delegates to the World's Cotton Conference visited Port Sunlight. We had also visitors representing the Royal Institute of British Architects, the North of Scotland Agricultural College, and the lady members attending the Chester Conference of the United Kingdom Commercial Travellers' Association, and of over 640 members of the National Brotherhood Council. In May we received a visit from Captain Staveley and officers of H.M.S. "Valiant," then in the Mersey, followed the next day by a visit from the ship's company. We have had a steady stream of visitors from most countries of the world, especially from Japan.

The social activities of the members of the staff of Port Sunlight continue to flourish, as also the institutions to which they are attached.

The payment of wages to members of the staff by crediting the same to their own private account with their own bankers has been further adopted during 1921 by an increased number of members of our staff, and has proved a great success, and is fully appreciated by all members of the staff who have adopted it.

PROSPECTS FOR 1922.

And now as to our prospects for 1922. I always was, and I hope

ever will be, a confirmed optimist, and whilst it is always wisest never to prophesy—to which I believe a rider has been joined "until you know"—as we have completed the first quarter of 1922, and now know as an accomplished fact that the actual sales of Lever Brothers and associated companies, at home and overseas, for the first quarter of 1922, show a phenomenal increase over those for the same period of 1921, with a few unimportant exceptions, I hope you will share my optimism and agree there is solid basis for my views as to our prospects for 1922.

Our export trade is recovering from the slump, and, whilst not going so strong as we would like, the returns and statistics issued periodically by our Government show that your company and its associated companies are amongst them doing a larger proportion of the export trade in soaps from the United Kingdom than ever before in our history; so what little export trade is being done we are doing, and we are not losing ground to any competitor.

On the general position of the world's trade and finances I venture to state that optimism for 1922 is also well founded.

CAUSES FOR OPTIMISM.

As we business men are always being told that what business requires of us to-day is confidence, capital, and courage, the important rise in the value of most classes of securities—Government, railway, finance, and industrial—is all in the direction of supplying the business of the world with more ample capital, and must make for the restoration of confidence and courage. The cost of living has reached fairly reasonable limits, so have interest charges for floating capital, and also the rates of wages, and we are promised reduction in our burden of taxation on incomes. All these important factors justify a spirit of optimism for 1922, and, believe me, it is the development of a spirit of optimism that is the beginning of all periods of prosperity and business recovery. But it is only by consistent and persistent hard work and hard thinking by each and every one of us that this good old British Empire and this good old world, including Lever Brothers and associated companies, can win out and return to normal lines of national and international business prosperity.

THANKS TO CO-DIRECTORS, GENERAL MANAGERS, AND STAFF.

Before moving the resolution, I wish to express my profound and grateful thanks to all my colleagues on the board of Lever Brothers and the directors of all our associated companies. To the general managers, managers, foremen, and staff of the parent and associated companies at home and overseas, and to my co-partners, without whose strenuous hard work and loyal, devoted service the last year's difficulties could not have been successfully overcome. It would be bare justice to mention many by name, but it would be unjust to omit others, as I should have to do, owing to impossibility of naming even one-half of those entitled to be mentioned out of our over 11,000 co-partners, that in justice to all I must deny myself the pleasure of indulging my desire to mention many whom otherwise I would have wished to mention and who, had space permitted, ought to be mentioned.

I beg to move that the directors' report and statement of accounts for the year to December 31, 1921, now submitted, be received and adopted, and will ask Mr Greenhalgh to second the resolution.

Mr H. R. Greenhalgh: My, lords, ladies, and gentlemen,—Anything which I could say in regard to the resolution before you would only be in hearty support of the full and complete statement which our chairman has just made. I will, therefore, formally second the resolution.

REPLIES TO QUESTIONS.

Lord Leverhulme, replying to several questions asked by Mr W. Martland, said: Although the works are not going full time in all departments, their output of soap was never greater. As to the claim against the Government for excess profits duty, I do not think the amount ought to be mentioned, as our claim is at present being fully examined. Our original works in Germany are still in existence, and during the war Sunlight Soap made in Germany was in very high demand throughout that country, and still is to-day. The profits of the company include the dividends received from associated companies. With reference to the 3,000,000 20 per cent. "A" preferred ordinary shares, we would have liked to cancel them, as Mr Martland has suggested, but our legal advisers informed us this was impossible.

The motion to adopt the directors' report and statement of accounts was then put to the meeting and carried unanimously.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr Samuel Skelton, J.P., congratulated the shareholders on having a balance-sheet presented to them which showed a profit of over £4,000,000 made during a period of unparalleled trade depression, and desired that something more should be done than the formal passing of the report and balance-sheet. He proposed the following resolution:—

"That this annual meeting of shareholders in Messrs Lever Brothers, Limited, desires to express to the Right Honourable Lord Leverhulme and his co-directors our most sincere thanks for their splendid management of the company's affairs—during a period of unparalleled trade depression—which has produced such eminently satisfactory results, financial and otherwise, to all associated with the company, and to place on record our deep sense of obligation and our high appreciation of their services which have met with such marked success."

The motion was seconded by Mr Segar Owen, and carried unanimously amid applause.

Lord Leverhulme, on behalf of the directors, thanked Mr Skelton and the shareholders for the resolution which had been passed and the confidence expressed therein.

Lord Leverhulme proposed, and Mr Segar Owen seconded, "that the Most Honourable the Marquess of Carisbrooke, G.C.V.O., be and is hereby appointed a director of the company."

The motion was carried unanimously, the meeting extending a hearty welcome to Lord Carisbrooke.

On the motion of Mr Nathaniel Caine, seconded by Major B. M. Ormerod, Mr Charles Rowarth Baker was unanimously re-elected a director, and on the motion of Mr J. P. Brocklebank, seconded by Mr Simister, Messrs Cooper Brothers and Co. were reappointed auditors of the company.

Votes of thanks were passed to the chairmen and directors of the respective associated companies and the staffs and agencies abroad, also to the management, office staff, and employees of Lever Brothers, Limited, generally, for their zealous and efficient services during the year.

This concluded the business of the meeting.

SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY. SUCCESSFUL RESULTS DESPITE ADVERSE CONDITIONS.

The one hundred and eighth annual general court of the society was held in the society's office, Edinburgh, on Tuesday, April 4, 1922, Sir Henry Cook, W.S. (chairman of the ordinary court of directors), presiding.

In moving the adoption of the report and accounts, the Chairman said:

The year 1921 did not present the same highly favourable conditions for life assurance work which prevailed in 1920, and which enabled us to report for that year a record new business. Some reaction would probably have been natural in any case; but any such natural tendency was altogether overshadowed by the special events of the year, which will long be remembered as the year of the great coal dispute. Added to the resulting unemployment and general depression, there was political unrest in many directions, and the danger, hardly yet averted, of civil war in Ireland. These are not favourable conditions for business in general or for life assurance in particular; but notwithstanding these difficulties we granted during the year new life assurances for the satisfactory total of £2,455,000 gross, or £2,365,000 net after deduction of re-assurances, producing a net new annual premium income of £95,600. There was a considerable increase in the amount of the deferred annuities effected, the amount having risen from £3,500 in 1919 to £9,800 in 1920, while last year the amount was £14,700, bringing in new premiums of over £5,000 per annum. Thus the total new premiums placed on the books last year amounted to just over £101,000 per annum.

MORTALITY.

I am glad to say that owing to the careful selection of lives the amount of death claims was again well within that for which provision is made in our valuations. In 1920 the claims were particularly light, while last year, as though to restore the balance, they rose to rather above our average, namely, to £1,307,000, representing about 81 per cent. of the amount for which provision was made. A careful analysis of the claims shows that they were favourable in character, and that indeed the average age at death was higher than in the previous year. When due allowance is made for this fact, and for the release of the reserves held against the policies, the year's mortality shows a satisfactory profit.

The claims arising by matured policies—i.e., those payable in lifetime—showed a further increase, and amounted to £447,000. This increase is not unsatisfactory, for it is the business of the society to pay claims, and in cases of this kind the policies have run their full course, so that when the claims arise the society holds against the policies reserves amounting to the full sum payable.

PREMIUM INCOME.

last quinquennial period and of £1,311,000 for the previous five years.

The interest income shows an increase of about £45,000 gross, representing an increase of about 3s 6d in the gross rate of interest, and after deduction of income-tax the net interest income increased from about £908,000 in 1920 to £944,000 in 1921. Commission and expenses of management were both reduced, and the ratio of expense fell from about 13½ per cent. in 1920 to 12½ per cent. in 1921. The operations of the year resulted in a surplus of £287,000 of income over outgoings, and this sum having been added to the assurance and annuity funds they amounted at the end of the year to £22,820,000. These movements were all in the right direction, and they cannot, I think, fail to be satisfactory to the members.

INVESTMENTS.

The investment of the society's very large funds continually engages the most careful attention of the directors. I need hardly say that the security of the funds is the paramount consideration in our minds, and we are fully alive also to the importance of securing an adequate return and avoiding depreciation. The dangerously high and oppressive rate of income-tax bears heavily upon our finance, as you will appreciate when you see that the income-tax borne by the society last year amounted to over £261,000. The reduction of only 1s in the rate of tax would mean a saving to the society of over £40,000 a year, or with interest about £225,000 in a quinquennium. We can but hope that ere long some appreciable reduction in the rate of tax may be made.

The report and accounts were unanimously adopted, the re-election of directors was carried, and the thanks of the members were accorded to the directors, agents, and officials for their work during the year. The meeting then resolved itself into a special general meeting to consider the provisional order to which the chairman referred in his address, and on his motion, seconded by Sheriff J. A. Fleming, K.C., it was resolved that the provisional order should be consented to.

The proceedings terminated with a vote of thanks to the chairman.

BRITISH AND ARGENTINE MEAT COMPANY, LIMITED. SATISFACTORY RESULTS—GOOD PROSPECTS.

The annual general meeting of the British and Argentine Meat Company, Limited, was held, on the 6th inst., at River Plate House, London, Mr Sidney Young, O.B.E., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net result of the year was rather better than that of the previous year, although the gross result was not quite as good. Conditions in the Argentine had, generally speaking, been satisfactory. At the previous meeting he had mentioned that they had had a strike for two months, but that it was over; unfortunately, it had broken out again soon after the general meeting of the company, and continued until early in June. The directors had considered it advisable to hold out against the unreasonable demands of the men, who eventually came back on the company's terms.

The results shown in the report had not all been made out of their ordinary export business, and the directors would not have been able to make so good a showing if it had not been for the very conservative policy followed in previous years, which was, while paying a good dividend, not to pay all their profits away but to add to the company's resources. They had actually received £84,000 as interest on investments, and that alone was quite a substantial part of their profits. At the end of 1920 they had had £2,000,000 invested in stocks of meat, other produce and stores, as against £1,000,000 at the end of 1921 for practically the same volume of goods. That meant that they had £1,000,000 more invested. Lower working expenses in Argentina had also helped them, but working expenses in this country had been higher owing to increased railway charges. Those remarks might meet complaints from Argentina that they had been paying less than they ought for their meat, as he had tried to show that their profits had not been made out of this part of the business. They had also been helped by the rate of exchange.

The net profit was £534,904, and the dividend on the ordinary shares for the year was 10 per cent., with a bonus of 2½ per cent. They had placed £150,000 to the reserve fund, bringing it up to £925,000, and were carrying forward £77,274. As to the current year, as far as he could see, the prospects in the River Plate were quite good, and he did not think there would be any difficulty in obtaining all the cattle and sheep they required—he hoped at reasonable prices. In conclusion, he said there was no truth in the rumours that the company was being either amalgamated or taken over by any other company.

The report was unanimously adopted.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

SUCCESSFUL YEAR'S WORKING.

ECONOMIC AND TRADE CONDITIONS IN THE EAST.

POLITICAL UNREST IN INDIA.

NEED FOR FIRM GOVERNMENT.

The sixty-eighth ordinary general meeting of the shareholders of the Chartered Bank of India, Australia, and China was held yesterday on the bank's premises, 38 Bishopsgate, London. Sir Montagu C. Turner (the chairman) presided.

The chief manager (Mr W. E. Preston) read the notice convening the meeting.

The Chairman said:—Gentlemen,—Before dealing with the ordinary business of the meeting, I feel it would be only right to refer to the death, in October last, of our former chairman, Mr John Howard Gwyther. He first entered the service of the bank in 1865, and was on the court of directors from 1887 to 1904, being chairman for the last eight years of that period. Mr. Gwyther was held in high esteem in the City of London as a banker of wide experience, sound judgment, and of the highest integrity. The bank owes much to Mr Gwyther's sound, prudent, and able management. The report of the auditors was then read by the chief manager.

YEAR'S OPERATIONS.

The Chairman, continuing, said:—In moving the adoption of the report and balance-sheet, I think I am justified in saying that, considering the conditions of trade and commerce which prevailed in 1921, the results disclosed therein may be considered as satisfactory. We have been able to make good use of the increased resources at our disposal consequent on the increase of the bank's capital; we show a moderate profit on our operations, and we give shareholders a reasonable return on their investment. At the same time we can assure them that all possible contingencies have been amply provided for.

The year 1921 has been one of considerable anxiety, of hope deferred, of frequent disappointment, and of unavoidable losses to most of those trading with the East. In India the absorption of accumulated stocks which might reasonably have been anticipated has been hindered by two principal causes. Political agitation, with unfair pressure on innocent traders, has at many points been exercised to prevent consumption of British goods—an agitation which should never have been permitted to assume the proportion it attained. The second adverse factor has been the maintenance of the rupee at a low level.

INDIA'S TRADE PROSPECTS.

The inflexible law of supply and demand, the control on the export of rice and wheat, and the absence of European demand for other Indian commodities, resulted in an adverse balance of trade to India, and rendered a high rate of exchange absolutely out of the question. But this has not been an unmixed evil. A low rate of exchange, a rupee about 1s 4d, has been a real blessing to the great tea industry of India and Ceylon, and has rendered business possible in other lines of produce. India has had a very favourable south-west monsoon, good winter rains in the United Provinces and the Punjab, and, granted a return to normal peaceful conditions, with a good south-west monsoon this year, we may look forward to greatly improved trade conditions in the autumn.

As regards the position in India generally, I am disposed to take the view that, provided the Government of India act consistently with firmness and justice—as I believe they will—there is no reason to view the situation with undue apprehension.

POLITICAL UNREST AND DISCONTENT.

In all parts of the world, East and West, even in England itself, we have a widespread spirit of restlessness and discontent. There is a craving for change, a desire to attain what is in many cases unattainable, and a tendency to oppose all existing forms of government. This is an aftermath of the Great War, and only time, with universal peace and good will, can bring about the contentment and good fellowship which should prevail between nations and between the component parts of those nations. This is especially applicable to India, and I look forward with confidence to the time when we can say that the people of India are showing that spirit of loyalty, comradeship and good will which should exist between all members of the British Empire. But to effect this we must have consistency in policy and firmness in administration. I do not deny that there are troubles at some points, serious troubles, in India, but they are partly agrarian, and can be dealt with by a just and firm Government. The conclusion of a peace with Turkey on liberal lines, as recently outlined by Lord Curzon, will also help to alleviate the present strain.

CHINA.

In China the offtake of imported goods has also been interfered with by extremely unsettled conditions in the interior of the country, and by the comparative low rate of exchange. Serious losses have resulted, but the position has improved of late, and stocks are moving off gradually. Some time must elapse, however, before the position of the import markets, either in India or China, can be regarded with equanimity. It is satisfactory to note that the tea industry has wonderfully recovered from the position of adversity which overshadowed that most important asset in the trade of India and Ceylon.

RUBBER AND TIN.

Rubber, I regret to say, is still in a very unhealthy condition, and a return to paying prices has not yet been accomplished. Tin as a commodity has depreciated in value, and with the failure of these two principal sources of prosperity the financial position of the Federated Malay States and the Straits has suffered acutely.

Summarising the position of the Eastern markets generally, we may say that, while export markets mainly show very little life, import markets have improved to the extent that accumulated stocks are being gradually worked off, but it would be absolute folly on the part of shippers on this side to pour in fresh supplies which are not needed. The motto for all of us should be "slow and sure" until the dark clouds of depression have disappeared, and the purchasing power of consumers has attained more nearly to normal levels.

BALANCE-SHEET ITEMS.

Turning to the figures of the balance-sheet, I think we may congratulate ourselves that, in spite of the heavy decline in the world's demand for raw produce and resultant reduced volume of our Eastern and Far Eastern export trades, our total figures only show a fall of just over £9,000,000 as compared with the corresponding figures for the previous 12 months—viz., from £70,932,744 15s 10d at the end of 1920 to £61,767,780 18s 8d at the close of 1921, particularly having in view the very considerable fall in Eastern and Far Eastern sterling exchanges which has taken place during that period.

Our total cash and bullion in hand at the close of the year, which amounted to £7,138,300 1s 4d, represented a ratio of 27 per cent. as compared with our current account liabilities, standing at £26,301,204 12s 2d, whilst, in addition, we held Government securities to the value of £9,432,796 8s 8d, as against £3,081,090 10s 7d on December 31, 1920, and our policy in thus employing our surplus funds has, by course of events, been fully justified. Above and beyond this, our holdings of bills of exchange, including Treasury bills, amounted to £16,422,953 16s 10d, so that our liquid position was most satisfactory. Our bills discounted and loans outstanding, at £22,426,953 16s 10d, as against our total assets, showed a reduction of about 4 per cent. as compared with the same period of last year—viz., from 40 to 36 per cent.

Our fixed deposits, standing at £16,648,153 3s 9d as against £16,628,534 17s 4d as at December 30, 1920, show a slight increase, which, in view even of the fall in exchanges, is exceedingly gratifying.

DIVIDEND AND BONUS.

As regards the report, it will be seen that the directors recommend the payment of a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s 3d per share, making, with the interim dividend, 20½ per cent. per annum, free of income-tax, to add £100,000 to the reserve, £25,000 to the officers' superannuation fund, to write off premises account £50,000, and to carry forward £215,169 15s 5d.

We must all congratulate Mr Preston, and his colleagues, Mr Bruce and Mr Miller, on the results obtained. We thank them, and every member of the staff at home and abroad, for their loyal and devoted services to the bank.

With these remarks, I move, "That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted," and I will ask Lord George Hamilton to second it.

The Right Hon. Lord George Hamilton, G.C.S.I., seconded the resolution.

SHAREHOLDER'S QUESTIONS AND CONGRATULATIONS.

Mr Frederick Tomkinson asked whether the British Government securities held to such a large extent by the bank were valued as at December 31st last, or at the lower price at which they were purchased, because in the latter case that would mean the existence of a very large reserve for which there was nothing shown in the accounts. He added that he wished to express the appreciation which, he felt sure, those who were present must have for the lucid, clear, and very helpful speech which Sir Montagu Turner had delivered to the meeting. It was a great help to them in enabling shareholders to understand the position, and in throwing some light on the work of the bank, which had been so successfully carried on during a very difficult and a very strenuous year. He was sure they all felt deeply grateful to the management and staff, both here and abroad, for what they had been able to do. There was one comment he would like to make. The chairman had touched on the political position, and in that he (the speaker) thought the chairman was quite right. Quite recently he heard a chairman say that it was not his mission, as chairman of a bank, to make any reference to politics at all. In so far as politics were outside the bank's business, he quite agreed with that, but he was entirely with Sir Montagu, when the welfare of the people and the trade of the country, both of which were intermixed, were dependent on politics, and he thought the chairman was quite right in expressing the hope that firm government would be maintained in India for the good of that great Dependency. The agitators had certainly been somewhat less active since Gandhi's seclusion.

CHAIRMAN'S REPLY.

The Chairman, in reply, said that the Government securities appearing in the balance-sheet had been taken at the market price on December 31st last. The only criticism he had had was on a post-card received that morning from a lady, who suggested that the March dividend—he presumed by that she meant the dividend they were about to distribute—should be paid in March. Considering the accounts of the bank had to come right from the North of China, from Japan, Java, Manila, and America, shareholders would quite understand that it was impossible to expedite the receipt of those accounts more than was done at the present time. The meeting was called, and the dividend paid at the earliest possible moment. Another suggestion was that the interim dividend should be increased. He presumed that the lady shareholder forgot that they paid the same dividend in this half-year as in the first half-year, but in the second half-year the shareholders also received a bonus. They would quite understand that the bonus question could not be decided in the middle of the year, when they had only worked out six months of the full period. The lady very gratefully went on to say that all connected with the bank deserved the highest praise for the very excellent results shown.

The motion was then put to the meeting and carried unanimously.

On the proposition of the Chairman, seconded by Mr Thomas Cuthbertson, it was unanimously resolved:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31st last, together with a bonus of 6s. 3d. per share, both free of income-tax, be now declared, payable on and after the 12th inst."

Sir Duncan Carmichael proposed the re-election of the retiring directors (Mr W. Foot Mitchell, Sir Montagu Cornish Turner, and Mr. Lewis Alexander Wallace).

This was seconded by Mr J. M. G. Proffit, and carried unanimously.

On the motion of Mr H. B. Henley, seconded by Mr W. F. Green, the auditors (Mr D. C. Wilson, F.C.A., and Mr H. C. K. Stileman, F.C.A.) were unanimously re-appointed.

VOTE OF THANKS TO DIRECTORS AND STAFF.

Mr R. Fergusson Banks proposed a hearty vote of thanks to the chairman, directors, and staff of the bank for the successful way in which the business of the year had been conducted.

Mr. Tomkinson, in seconding the motion, said he would like to give one instance of the manner in which the shareholders were indebted to the management. He happened to send some tea people round to see the manager of the bank, and they had come away delighted with their reception. They said that, whenever the terms were equal, they would certainly come to the "Chartered" Bank. As a director of one of the oldest tea companies he had been delighted to hear the reference made by the chairman to the condition of the tea industry in India and Ceylon.

The vote of thanks was unanimously accorded.

CHAIRMAN'S ACKNOWLEDGEMENT.

The Chairman, in acknowledging the vote, remarked that he was bound to say, on behalf of the managers, that they deserved the grateful thanks of the shareholders. He had not dwelt much on the difficulties of the past year, but, speaking from an ex-

perience of 15 or 16 years as their chairman, he did not think they had ever passed through a more difficult, anxious, and troublous period than the past 12 months. It had been a great strain on the management, and it had meant their giving of their very best to the shareholders. All that had been done very willingly and cheerfully, because they had so great a pride in the good old "Chartered" Bank. Whatever had been said in regard to the staff was not more than they deserved.

The proceedings then terminated.

SHEFFIELD STEEL PRODUCTS, LIMITED. SUCCESSFUL YEAR DESPITE DIFFICULTIES. FURTHER ISSUE OF SECOND DEBENTURES.

The third annual general meeting of the shareholders of Sheffield Steel Products, Limited, was held, on the 31st ultimo, at Winchester House, London, Mr Alwyn H. Wild (chairman of the company) presiding.

The Chairman said that it was no small satisfaction to the board that in a year of unprecedented economic and trading difficulty the business had succeeded in practically maintaining its record of success. The chief reasons for this success were, first, the justification of the policy of combining the best of a number of old-established businesses with first-class reputations all over the world, and, secondly, in employing the most modern and economic methods of production. Both these factors had been the means of giving that measure of success which had not been common in allied trades, and having proved their ability to succeed in such times, it spoke well for the possibilities of success in the future.

Difficulties of finance, difficulties of foreign exchange, difficulties brought about in home trade were not always easy to cope with, but when one possessed the sympathy and support of a large number of shareholders such as they had in Sheffield Steel Products, Limited, it did assist one to go forward whole-heartedly and pursue the policy which was laid down for the company at its inception, which was to manufacture for the multitude efficient durable articles of everyday use at a price which would compare favourably with that of competitors in any part of the world.

When compared with the accounts of other leading companies engaged in the manufacture of kindred lines, they had certainly reason to be satisfied with the year's results, and he felt confident that as the general outlook improved the continued success of the company would justify the confidence shown in the directors by the shareholders, who had realised the potentialities and earning capacity of the business.

STAINLESS IRON.

He was pleased to inform the shareholders that the company had acquired valuable patents for the manufacture of carbon-free ferro-chrome, which was the essential ingredient used in manufacture of stainless iron. This material had received important attention from the Press, both in this country and America.

The purposes to which this material could be applied were enormous, especially if the cost of production could be reduced, and there was no doubt that the company's patents, combined with its facilities for manufacture, would assist very materially in bringing about this reduction.

The company could safely claim to be not only the largest manufacturers of table cutlery in the world, but also one of the largest file manufacturers. They had proved that large-scale production, combined with the advantages they possessed, had enabled them to increase the advantages they enjoyed over their competitors in the cost of production in this and all other countries.

Another interesting development at Templeborough was the installation of the Blue Water gas plant. This was completed about the end of last year, and was giving the utmost satisfaction. As an indication of its value, even at the present price of coke, when the whole of the plant installed was brought into full use, the price of gas would not exceed 1s per 1,000 cubic feet, as against 3s 6d per 1,000 cubic feet in Sheffield and 5s per 1,000 cubic feet which was the average price of gas throughout the country. The importance of using cheap gas as fuel in all the operations of melting, cogging, rolling, annealing, forging and hardening would be fully realised from the fact that the cost of fuel represented at least 30 per cent. of the total cost of manufacture of nearly all the goods they made. This was an important fact, which had been fully realised in the States, but appeared to have been ignored by our manufacturers in this country.

SALES.

Turning from questions of manufacture to that of sales, the conditions of 1921 were entirely different from the preceding years, and the only companies who could sell their goods at a profit were those who had put their house in order by introducing methods which enabled them to reduce their costs to a minimum, and by the extension of their sales organisation to cover all possible sources of demand.

With regard to the company's trade in this country, he was pleased to be in a position to repeat the statement he made to the shareholders of Sheffield Steel Products (Stores), Limited, that the sales of the branches already opened by that company had exceeded all expectations, and there was no doubt that when the public realised that British-made goods of the highest quality were being offered to them at prices reduced to the lowest possible limit they would continue to support the business of Sheffield Steel Products (Stores), Limited.

Having dealt with the individual items of the balance-sheet, the chairman drew attention to the fact that the value of the company's assets after deducting £100,000 stock reserve and £85,000 depreciation reserve, amounted to £3,725,889, and exceeded all their liabilities other than share capital, but including First Mortgage Debenture stock, creditors, bank loans, and provision for all taxation to December 31st by the sum of £2,332,635.

ISSUE OF SECOND DEBENTURES.

As to the future, already there were portents of a revival in the general trade of the country. Trade must be revived in gentle stages to be permanent, but he was convinced that, as and when the general trade did revive, no undertaking was better equipped for meeting the demands of brisk business than they were at their Sheffield and other works.

The company still required further capital in order to place it in a strong financial position. The funds coming into the hands of the company as a result of the last two issues were sufficient only to finance the immediate needs of the company at the time of issue. The issue proposed to be made would enable the company fully to carry out its programme, and leave it an ample margin for working capital.

Sheffield Steel Products, Limited, was a big business, and they must have adequate financial resources. They had come to the conclusion that a further sum of £400,000 should be raised to meet present and future requirements. Out of this sum they proposed to pay off the present temporary loans by the company's bankers, which had been secured by a second Debenture, and to use the balance for the general purposes of the company. They proposed to offer almost immediately £500,000 6 per cent. Second Debentures at 80, which would provide the company with £400,000 net. Although the issue would be offered to the public for subscription, it was proposed to reserve at least one-half for the shareholders and

First Debenture holders of the company. As an investment the Second Debentures would show a return equal to 7½ per cent. flat rate without the profit on redemption. A sinking fund would be started in the year 1923 to repay these debentures by 1942, and the first drawings were to take place in 1925, so that it would be the good fortune of some of the subscribers to have their stock drawn for payment with a profit equal to 20 per cent. at a comparatively early date. He had no doubt that the issue would be readily subscribed.

The turnover for the three months ending March 31st of this year exceeded the turnover for the same period of last year, despite the great reduction in prices, so that already they were beginning to feel the upward tendency in trade.

The resolution having been seconded and carried unanimously, after a number of questions had been answered, a vote of thanks to the chairman was carried by acclamation, and the proceedings terminated.

D. H. EVANS AND COMPANY, LIMITED.

RESULTS "MOST SATISFACTORY."

The twenty-eighth annual general meeting of the shareholders of D. H. Evans and Co., Limited, was held, on the 3rd instant, on the company's premises, Oxford street, London, Mr Ernest Webb (chairman and managing director) presiding.

The secretary (Mr R. Stannard) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to the late chairman, Sir Alfred Newton, said:

The result of the year's trading to February 19th last, which we review to-day, has been most satisfactory, notwithstanding the very difficult times through which we have passed.

Turning to the profit and loss account, our total expenses under the heading of salaries, rents, rates, taxes, &c., amount to £240,639, or an increase of £610 over last year's figure. Economies have been effected in many directions, but these have been swallowed up by increases in rates, taxes, insurance, postages, and health and unemployment insurance, items which we have to pay, but over which we have no control. Directors' fees, trustees' fees, auditors' fees, interest on debentures, and the provision for the redemption of debentures remain the same, but there is a saving

in the cost of repairs of £2,543. On the credit side of the account our gross profit shows a reduction of £26,592; transfer fees are less, but we have an additional item representing interest received, amounting to £1,909, on Victory Bonds and deposits. The final result is a profit of £115,182, compared with last year's profit of £134,719, or a reduction of £19,537 for the year, which, I think you will agree, is most satisfactory considering the times through which we have passed. This balance of profit is carried to the appropriation account below, which shows the interim dividends paid, the usual 10 per cent. to reserve fund, and the final dividends the directors now recommend.

I would like to call your special attention to the other items in the appropriation account. The balance of £31,237 brought forward from the 1921 accounts was more than absorbed by the payment of excess profits duty and corporation profits tax in respect of the period to February 19, 1921. At our last general meeting we could not say what the amount of those taxes would be, because it had not been settled with the authorities. The carry forward was not quite enough to meet the payment of those taxes, and consequently the year under review received no assistance from the carry forward from the previous year. The proposed dividend of 12½ per cent., making 17½ per cent. for the year, is paid entirely out of the past year's profits, and the substantial balance of the account, £22,179, which we consider it prudent to carry forward to next year, subject to corporation profits tax, also represents part of the profit earned in the past year.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, on the debit side the issued capital and the debentures remain unaltered. The debenture redemption fund shows this year's addition of £1,120 10s 4d from the profit and loss account, the cash in respect of which was paid to the trustees as usual, and appears in the similar item on the credit side of the account. The mortgage of £32,650 originally secured on the 999 years' leases when they were bought having now been repaid, it is proposed to transfer the mortgage redemption fund, £32,650, to the reserve fund, as shown in the balance-sheet, and the reserve fund will then stand at the substantial sum of £163,201, of which £40,267 is represented by Victory Bonds, the balance being invested in the business of the company. The sundry creditors show a reduction of £35,347. The staff pension fund remains the same, and the balance of profit and loss account I have already dealt with. On the assets side the property, leases, and goodwill account shows an increase of £10,254, representing further purchases of 999 years' leases on the remainder of the company's adjoining properties. The whole of the properties now held by the company are on 999 years' leases at very moderate rentals. We also have some valuable reversions. The fixtures, fittings, &c., show a reduction of £2,136, representing depreciations written off in excess of additional fixtures, &c., purchased during the year. A full and proper depreciation is written off this asset each year. Sundry debtors due to the company show a reduction of £13,410 after making full provision for bad and doubtful debts. The cash at bankers shows a small decrease, and the investment remains the same as in last year's balance-sheet. The stock-in-trade shows a reduction of £43,915, due to lower purchasing values, and not to any lessening in the variety, quantity, or quality of goods provided for our customers.

As regards the future, it is very difficult to speak with optimism. We shall, however, endeavour to serve our customers well and give them good value, and thus obtain at least our share, and more than our share if possible, of what the public is able to spend.

Sir James Boyton seconded the motion, which was carried unanimously.

ARGHAN COMPANY, LIMITED. EXPERTS' UNANIMOUS APPROVAL.

An extraordinary general meeting of the Arghan Company, Limited, was held, on the 3rd instant, at Winchester House, London, to increase the capital of the company from £40,000 to £100,000 in 2s shares.

Mr A. Montefiore, who presided, said: The position of Arghan itself was due to the unquestionable merits of the fibre, which had been proved, after every conceivable test by the Federated Malay States Government, and every other expert who had tested it, to be distinctly superior to every other fibre of its class. The Indian, Ceylon and other Governments had been no less alive to the great importance of Arghan, and the fibre expert of the Indian Government had offered every possible facility for planting it on a large scale in India. Tentative arrangements had been made to this end. The Ceylon Government was prepared to grant the company a concession of 30,000 acres, which it was estimated would cost from £1,000,000 to £1,250,000 to develop fully, and Mr Churchill last month notified by telegraph to the Governor of Ceylon that he saw no objection, from the financial standing of the company, to the

Governor of Ceylon negotiating with the company's representatives for this land grant.

Very exhaustive research work had been carried out and results of the greatest possible value obtained. Mr H. Wilson, managing director of the Belfast Ropework Co., Limited, reported that he had carried out exhaustive and reliable tests on samples of the fibre, and was thoroughly satisfied that it was a fibre of a very high order which should prove an asset of the greatest commercial value in the textile world. Its salt-water resisting qualities were remarkable, and its tensile strength abnormal, giving a breaking strain of more than 50 per cent. over that obtained in the same class of goods manufactured from the finest Italian hemp or the best flax. Messrs Cross and Bevan, the analysts to the Federated Malay States Government, reported that after full investigation they were convinced that Arghan stood out pre-eminent among the innumerable fibres submitted to them during their long professional practice. The structural qualities of the strands were remarkable, and the breaking strain, determined on silk testing machines, gave results superior to those of the staple textile fibres of all classes. The tenacity figures were quite remarkable, and established the Arghan fibre and fibre-substance as a new and exceptional type. In technical language this report acknowledged that the tensile strength of Arghan was three times that of silk, and weight for weight as strong as steel. Mr G. Smith, of the well-known textile firm of Messrs Hoyle and Smith, Manchester, had sent them a report which was the result of the joint deliberations of other important Lancashire manufacturers and spinners. It said that they considered there would be sufficient demand in Lancashire alone for Arghan for many purposes, such as twines, cordages, fishing-net yarns, tapes, and beltings, which would take up the production for a long time to come. They had hardly any doubt that, with an improvement in the spinning, Arghan fibre would take the place of cotton for all classes of heavy canvas woven in Lancashire, particularly where strength was the main concern. They considered that, given scope for experiments, it was within the bounds of possibility to spin Arghan fine enough to bring it within the range of Lancashire's most called-for counts. This showed its incalculable value to Lancashire, provided the price was reasonably stable and the production reasonably assured.

The Chairman stated that it was the intention of the board to issue 400,000 shares of 2s each at an early date on favourable terms to the shareholders. He went on to say that the progress at the plantation had been remarkable, and constituted a new record in tropical product transplantation, and what at the outset might have been looked upon as a mere speculation had now become one of the greatest commercial factors in the industry of Great Britain. He thought the company was fortunate in having reached their present position at such little cost.

The resolutions were carried unanimously.

MYSORE GOLD MINING COMPANY, LIMITED. PROSPECTS OF RICH ORE IN DEPTH.

The forty-second annual general meeting of the Mysore Gold Mining Company, Limited, was held, on the 6th inst., at the Cannon street Hotel, London, the Hon. Lionel Holland (the chairman) presiding.

The secretary (Mr F. H. William, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said that it was too early to speak with any assurance of the results of the further development of the mine

depth, decided upon two years ago, by sinking secondary shafts and by lateral extensions from them. They were pushing on with the new work, and the shaft-sinking had made excellent progress. He could safely affirm of the results obtained by the development of the past year that, whatever their bearing upon future discoveries, they had confirmed the directors' confidence in the value of the property. Two main results had been achieved. In the Kibblesdale section a body of payable quartz of good value had been proved extending from the 53rd to the 57th level; but the more important development was in the McTaggart section, where, below the 44th level to the south, and above the 44th level to the north, a valuable lode had been proved running up to an assay value of 2 ounces 10 dwts. A factor giving perhaps even more encouragement to expectation of good ore at depth was that in the neighbouring Oregum Mine considerable bodies of rich ore had been proved at a depth far greater than that reached in the Mysore. Meanwhile, it was wise to pursue a conservative policy and so avoid any undue depletion of their high-grade reserves. Curtailment of output was reflected in the accounts, the sales of gold, less royalty and refining charges, producing £648,762, as against £759,344 in 1920. The premium on gold, which more recently had dropped considerably, was fairly maintained during the year, and the smaller return was due to their having milled 30,000 tons of quartz less, with a slight decrease in the grade. The profit was £207,799, against £283,383 in 1920. The greater portion of the year's capital expenditure was represented by shaft sinking, and should therefore be regarded as part of the larger scheme of development, for which over £300,000 of capital had been provided by the shareholders. The final dividend was 1s per share, with a bonus of 6d, making altogether 25 per cent. for the year, the same as for 1920. Well over £9,000,000 had been paid by the company in dividends since its incorporation. Probably they would have to face for a time a period of lessened profit. The balance-sheet was sound and strong. The fluid assets were over £620,000, or more than the entire issued share capital, while the liability to sundry creditors was more than offset by materials in stores and goods in transit.

The report and accounts were unanimously adopted.

JAMES W. COOK AND COMPANY, LIMITED. COMPANY'S SOUND POSITION.

The 25th annual general meeting of James W. Cook and Co., Limited, was held, on the 7th instant, at the offices, 130-135 Minories, London, Mr William Clarke (chairman and managing director) presiding.

The secretary (Mr Ernest G. Devitt) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, in presenting to you our report and accounts for the year 1921 we make no apology because the returns are slightly less than last year's figures, for, if you will remember, one clause in our statement at the last meeting was that, owing to the very unsatisfactory state of the freight market, it was almost impossible for us to make a forecast for the year with which we are now dealing. But we are pleased to be able to record that, although circumstances and conditions have been against us, we think our returns to our friends will be gratifying. You will see that we have succeeded in placing a further sum to reserve, making that £100,000; we have also written off the balance of our tarpaulins account and made provision for a large repair account which we know is necessary because of the dilapidation that the war created. The days before us are full of difficulties—difficulties that are inevitable with all the readjustments downward that are taking place in every direction, so that the utmost moderation is necessary in our hopes for the future. But we have not stopped in our determination to do the very best we can for the company, and I may say that among our new additions are tank craft for the carrying of edible and bulk oils in the Thames and coastwise.

Whatever else may arise to warrant further extension, we hope, with the funds at our disposal, to embark on to our satisfaction and with your profit, and thus continuously broaden the basis of your business.

I have great pleasure in now proposing the following resolution:—"That the statement of accounts, the balance-sheet, and the report of the directors for the year ended December 31, 1921, be and the same are hereby received and adopted, and that a dividend at the rate of 12 per cent. per annum for the half-year on the ordinary shares of the company, making 10 per cent. for the year, less income-tax, and a bonus of 5 per cent. on the ordinary shares, free from income-tax, be now sanctioned and declared; also that the sum of £10,000 be placed to reserve to meet expenditure on buildings, plant, barges, &c., £17,500 to reserve for contingencies, £4,000 to plant, barges, &c., £17,500 to reserve for contingencies, £4,000 to plant, barges, &c., and that the balance of the year 1922." £94,374 18s 7d be carried forward to the credit of the year 1922."

Mr W. J. Clarke seconded the resolution, which was carried unanimously.

MAZAWATTEE TEA COMPANY, LIMITED. INCREASED PROFITS—RECORDED TEA SALES.

The twenty-sixth ordinary general meeting of the Mazawattee Tea Company, Limited, was held on the 7th instant at the Cannon-street Hotel, London, Mr Alexander Jackson, chairman and managing director, presiding.

The secretary (Mr William T. Rest) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: It will be seen from the report that the profit for the year amounts to £66,862 17s 6d, against £58,259 7s 4d for 1920, £74,220 17s 4d for 1919, £59,341 0s 3d for 1918, and £50,103 13s 1d for 1917—an average for five years of £61,757 11s 1d.

The main feature of the company's business is tea, and our sales in tea during the year under review have been the largest on record, and in these days of keen competition, I think this speaks volumes for the popularity of Mazawattee amongst the consumers of good tea in this country.

As regards our export trade, adverse foreign exchanges continued, but in spite of this, our business abroad has shown an improvement on the previous year.

Prices ruling to-day on the tea market are very high indeed, and taking common tea as an instance, there has been a rise of many pence per pound. This is no doubt due to a feeling existing that there may be a shortage in general supplies.

There certainly has been a falling off of 70,000,000 lbs of tea in the crops from Northern India as compared with 1920, and, in addition, it is estimated that there will be decreases in the output from other countries in the production of 1921 as compared with 1920 amounting to some 52,500,000 lbs of tea, thus making an aggregate falling off of 122,500,000 lbs.

The labour and other difficulties which have been experienced in India have interfered with cultivation, and for this reason the crops for 1922 cannot be expected to reach the level of those in 1920.

It always follows that common kinds feel the effects of a rise more than any other grade, but if the public keep to the higher grades of tea, such as Mazawattee, they will not feel the effect of the rise in the same way, because, as is well known, and is being demonstrated daily, a pound of 3s, 3s 4d or 4s Mazawattee tea will go twice as far as the common kinds referred to, and will certainly give greater enjoyment to the consumer.

As promised last year, your directors have paid the interim dividend on the preference capital, and they now recommend the payment of the final half-year's dividend. They also recommend the payment of 15 per cent. on the ordinary shares, which will leave £32,022 to be carried to the next account, subject to the provision for corporation profits tax.

Mr H. Rose seconded the motion, and it was carried unanimously.

† Rate for week-end.

SILVER.

Throughout the week the market has been comparatively inactive. Small sales were made by the Indian bazaars, and only moderate supplies were available from the Continent. China has not been much in evidence until to-day, so that the tone, on the whole, has been dull. Most of the buying was on account of bears, and a measure of support came from the United States of America. Owing probably to the difficulty of dealing with worn coins during the war, a large stock of silver bullion has accumulated in the Indian treasuries. The amount at the end of February was 46 lacs in Bombay and 409 lacs in Calcutta—4,55,67,211 rupees worth altogether. The total is significant of the big figures with which the Indian authorities have to deal, and explains how the Mints are kept at work, notwithstanding that no actual addition to India's volume of silver currency is necessary. The way in which 200 lacs of inland trade bills came to be included in the currency reserve is thus set out by the *Times of India*:—"The currency figures dated March 7th indicate that the Government has deflated further one crore, as required by the Currency Act. This deflation would have had a hardening effect on the market but for the inflation of two crores, as indicated in the Imperial Bank's return of the 10th instant, the bank having taken a loan from the Currency Department for that amount against the security of trade bills. This simultaneous operation of inflation and deflation has prevented any violent change in rates, and shows the anxiety of the Government and the Imperial Bank to meet the situation by conjoint action."

BANK OF ATHENS announce that a final dividend for the year 1921 of Dr.10 on the ordinary shares (coupon No. 43), and a dividend of Dr.10 on the Actions de Jouissance (coupon No. 5) will be paid at the current rate of exchange.

BROWN BAYLEY'S STEEL WORKS have decided to defer the question of payment of the preference dividend, and intimate that no interim dividend will be paid on the ordinary shares.

BURMAH OIL COMPANY have resolved to pay the half-yearly dividends on 6 per cent. preference shares of £1 each, 6 per cent. second preference shares of £10 April 29th.

CROSSES and WINKWORTH CONSOLIDATED MILLS have intimated to the holders of the cumulative participating preference shares that, although the accounts for the financial year ended March 31st have not yet been completed, owing to the remunerative state of trade, and with the object of conserving the resources of the company during the present difficult period, they have decided to defer payment of the dividend for the six months ended March 31.

DANIELSON FORBES state that, owing to the coal miners' strike and the unprecedented depression in the shipbuilding and engineering trades, they have, after the 7 per cent. dividend due to the preference shareholders for the half-year ended March 31, 1922, until the result of the year's trading to the same period has been ascertained. For the year 1919-20 the ordinary shares received 4 per cent., but in 1920-21 only the preference dividend was paid.

JAMES DUNLOP AND CO., LIMITED, propose to pay the preference dividend for the second half-year, leaving £16,727 to be carried forward. They are unable to recommend a dividend on the ordinary shares. For 1920 no dividend was paid on the ordinary shares.

JOHN MOIR and SON made a loss for the year 1921 of £37,503 (against a loss of £7,449). A dividend of 5 per cent. was paid in the previous year.

SULPHIDE CORPORATION.—During the four weeks ended March 25th, 10,060 tons of ore and 2,652 tons of slimes were milled at the Central mines, producing 2,461 tons of lead concentrates (including 244 tons from the deleading plant), which assayed 47 oz silver, 67 per cent. lead, together with 4,114 tons zinc concentrates, assaying 10 oz silver, 7 per cent. lead, 47 per cent. zinc per ton. At Cooke Creek 2,555 tons of lead concentrates and purchased ores were smelted, producing 1,727 tons of lead bullion for treatment in the refinery. The refinery products for the same period were 1,497 tons soft lead, 166,385 ozs silver, and 1,019 ozs gold.

Reports and Notices.

Messrs Price, Waterhouse, and Co. have taken into partnership Mr Walter Parker Rocke, A.C.A.

The Agent-General for Western Australia has received cable advice from the Government of Western Australia that for the month of February, 1922, 180 fine ounces of gold were entered for export, and that 42,842 fine ounces were received at the Perth branch of the Royal Mint.

We are informed that the City editor's office of the *Westminster Gazette* is now at 197-198, Palmerston House, Old Broad street, E.C.2. to which all company reports, dividends, and other financial matter should now be sent.

Mr William Exley Miller, C.A., who has filled the position of secretary of the Arizona Copper Company, Limited, for the past 33 years, has resigned as of date March 31st. Mr William Rintoul has been appointed interim secretary.

Major-General Sir Frederick Sykes, G.B.E., K.C.B., C.M.G., has joined the board of the Anglo-Argentine Tramways Company, Limited.

Mr G. A. Pike was re-elected a director of the Meadow Dairy Company, Limited, at a meeting of the preference shareholders held pursuant to the company's articles of association.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the April instalment of the Debt Service in respect of the half-year ending June 30, 1922.

OTTOMAN LOANS.—It is announced that British holders of certain Ottoman loans are given the option of a settlement of the arrears due on unpaid coupons and drawn bonds for the period from December, 1914, to May, 1920. The terms offered by the Ottoman Government are those agreed to on behalf of the French owners by the French Committee of Bondholders, i.e., a certificate, representing the full amount in francs, will be delivered in exchange for the overdue coupons and drawn bonds, and at the same time a payment in francs will be made on account, and the certificate marked to that effect. The payment made on each loan is in proportion to the funds actually collected for such loan. Payment to British holders would be in

francs converted into sterling at the rate of exchange ruling on the day when the certificates are received in London.

BANKS.

COMMONWEALTH BANK OF AUSTRALIA.—The balance-sheet figures of the Commonwealth Bank of Australia as on December 31st last have been cabled to the London office. Deposits in the general banking department stand at £26,556,692, or a decrease of £596,619 as compared with a year previously, while savings bank deposits show an increase of £1,971,832, and now amount to £37,278,788. Money at short call in London has increased during the year from £4,160,000 to £10,715,000. Coin, bullion, and cash balances stand at £4,872,995, while investments aggregate £35,661,900, the total assets of the bank being now £126,170,085. Bills discounted, loans, advances, &c., at £13,904,222, show a decrease, mainly in consequence of the receipt of wheat marketed under a pool representing all the growers under Government guarantee. Bills payable, standing at £2,734,942, reflect, on the other hand, the smaller volume of shipments of produce afloat. The profit for the half-year is £341,361, making £744,402 for the full year 1921. The Commonwealth Bank of Australia, which is owned and guaranteed by the Australian Commonwealth Government, has no paid-up capital, but has accumulated profits in less than 10 years amounting to £3,792,726, which sum is held at the credit of reserve funds.

LONDON JOINT CITY AND MIDLAND.—Average weekly position during March, 1922:—

MISCELLANEOUS.

EDISON SWAN ELECTRIC COMPANY.—The report and accounts for year ended June 30, 1921, shows that the balance standing to the debit of profit and loss is £344,720. The board recommend that the sum of £55,000, now standing to reserve, be transferred to profit and loss account, thus reducing the debit balance to £289,720. The directors point out that the general depression in trade has adversely affected all industrial undertakings, and the fall in values of all raw materials and manufactured goods has been unprecedented. The strikes of moulders, coal miners, and shipwrights were a serious drawback to the company. The report states that "a complete and searching valuation of stocks of raw materials and manufactured and partly-manufactured goods has been made, and it has been found necessary to write off as depreciation the large sum of £346,445, which accounts for the greater portion of the loss made. The directors point out that since November last the position of the company has slowly improved, and, with a moderate revival of trade, the outlook for the company should become much more favourable. Since the date of the balance-sheet loans from the company's bankers have been increased by £90,150, making the total loan advanced by them to date £313,950.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The condition of growing crops in the United Kingdom leaves little to be desired, but spring sowings have suffered interruption by heavy rainfalls, and unless weather conditions improve it is feared that the season may be late, as there is still a large area to be seeded. A generally quiet tone prevailed at market during the week, and prices, as a rule, moved in buyers' favour. Native wheat continued in fair supply, and suitable milling qualities slightly easier at 52s to 54s, with inferior grades down to 48s per 504 lbs, free on rail. Imported descriptions also met with quiet support, and late rates were barely maintained. No. 1

Northern Manitoba quoted 63s 6d, Australian 58s, and Argentine 54s to 56s, all ex-ship to arrive per 480 lbs. The cargo market opened firmer on improved foreign advices and better Continental support, but subsequently a quieter tone set in, and rates eased. Steamers of Australian afloat sold at 55s 1½d, and Rosafe, 63½ lbs afloat, 54s 9d to France. Some 20,000 tons of River Plate wheat sold to Germany, including Baril, 63 lbs afloat, at 53s 1½d, River Plate, 78 kilos, April-May shipment, 53s 3d, U.K. parity. West Australian, afloat to Italy, at 55s 4½d. To U.K. Rosafe, 64 lbs afloat, 53s 6d to 53s, April, 53s 6d, and April-May, 53s 9d per 480 lbs. Shipments to Europe are maintained, and U.K. arrivals continue on a liberal scale, of which, however, a good part is quickly absorbed by the mills. Crop reports from most exporting countries, though variable, are fairly satisfactory. Home-milled flour remains quiet of sale, and quotations were reduced by 2s per sack. London standard straight run rules at 48s, town households 46s, patents 50s to 51s, all English straight run 45s per sack, delivered London area. All English country straights,

VEGETABLE OILS AND OILSEEDS.

Market conditions throughout the week have been barely steady, and only a moderate amount of business has been put through. Raw linseed oil at the reduced level of prices induced buyers who had been holding aloof to enter the market, and a fair trade is reported to have been done on American account round £34, ex Hull mill, for early shipment. This has given steadiness, and values have stiffened somewhat, and at £34 15s for spot and April delivery, ex Hull mill, are approximately what they were a week ago. For May-August business has transpired at £33 17s 6d, the same also having been paid for September-December. The demand for crude cotton oil is not so insistent, and sellers are offering crude Egyptian at £38 ex Hull mill, and £40 ex London. Soya bean oil though quiet is steady, especially for prompt delivery, and rape oil is also quoted at a small premium over forward. Crude palm kernel oil is 20s per ton lower on the week, Hull offering extracted at £38. Ground nut oil: A fair trade at unchanged prices. First pressure castor oil remains at £52 per ton (barrels included), ex Hull mill. Coconut oil quiet and easier.

In the oilseed section very little has been done in Plate linseed, and quotations are not materially altered. A small trade has passed in Calcutta at £19, April-May loading. Egyptian cottonseed has attracted little interest. For Sakellaris for shipment, £10 17s 6d has been accepted. Some trade in Toria rapeseed is reported at £16 10s and £16 15s for shipment, and Antwerp has also been a good buyer at about the same price. The quantity of linseed (Indian and Argentine) on passage to Europe is 95,000 tons, about equally divided between the U.K. and the Continent.

The trade in oilcakes continues very poor, and further reductions in linseeds and cottons have been made.

HIDE, LEATHER, AND ALLIED TRADES.

The hide position is puzzling; tanners are in many cases selling leather at a loss, and yet they seem unable to force the value of their raw material down. Some take the view that holders, rather than sell at lower prices, are again salting down hides or sending them in quantities to Holland or Germany. Anyhow, at Thursday's Bermondsey auction all classes were firmer, best ox making from 6½d to 7½d, and showing an advance of ½d per lb over last rates. Cows at 6d to 6½d also shared in the advance, whilst light calf at 11½d to 12½d were a penny up. There is little doing in imported hides, tanners being out of the market at present quotations. This refers to dry hides also, although I hear importers are trying to sell dry salted Queensland hides at about 9d. New York cables the hide market as slow, with heavy packers selling at 13 cents, a decline of ½ cent on last week's prices. Cows are dearer, and are now selling at 11 cents as against 10½ cents.

Merchants and tanners report a poor demand for leather, although factors who have bought at low prices seem to be doing a fair turnover in some cases. Values are "anywhere," and the offers made by some big buyers simply ridiculous; still there are weak holders, and bends from dry hides are selling at a shilling a lb or even less in some cases, the demand ruling on low grade sole all the time. With the exception of suede and patent leathers business in upper stock is dull. Carriers are working very short hours, and they profess not to be able to see any improvement until the stock of Government kip leather is out of the way.

The boot trade is a shade busier, as retailers are filling up their shelves for the Easter trade. Women's wear seems the big thing, and large profits are being made on some of the rubbish which goes into the alleged "chic" shoe beloved of the ladies.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 7.

The markets in most instances presented quiet features, demand from consumers being largely measured by wants of immediate necessity, while export requirements count for little at the moment owing to the question of rates of exchange.

SUGAR.—The market opened the week quietly with a general reduction of 6d per cwt respecting refined goods, but closed firmer. Messrs Tate and Lyle's cubes sold, 52s 9d to 53 9d; crushed, 50s 6d; granulated, 48s 6d to 49s; caster, 51s to 51s 6d; yellow crystals, 43s; granulated, May-July, 48s 3d. West Indian crystallised, spot, sold, 42s to 43s 6d, as to sample. American granulated, spot, sold, 47s 3d to 48s; ditto, April-May, 20s to 20s 9d, c.f. and i. terms, London. White Mauritius, spot, sold, 44s to 44s 6d. White Brazilian, April, steamer, quoted 18s 9d; ditto, 80 per cent. April, sold, 9s. Cuban basis 96 per cent., April, done, 13s 9d to 14s, c.f. and i. U.K. Dutch and Czechoslovakian sugars nominal for shipment. Cuban stocks stand at 967,500 tons, against 833,800 at corresponding period last year. American syrup steady. Medium grocery, 26s to 27s; good to fine, 27s 6d to 28s 6d. Liquid glucose, spot, 26s per cwt.

COFFEE.—With liberal and well distributed inquiries, the market ruled firm to dearer, especially for the finer qualities. East India, good to fine bold, 123s to 124s; peas, 103s to 153s. Costa Rica, good to fine bold, 128s to 148s. Futures firmer, but general trade quiet. May, sold, 54s 9d to 55s; December, 56s 6d.

COCOA.—With no improvement in demand, the market remained more or less nominal. Butter steady at 1s 9d per lb.

TEA.—Public sales of Indian embraced some 44,200 packages. A fair demand was experienced at steady prices, with the exception of some medium plain parcels, and these disclosed some irregularity. 19,600 packages Ceylon offered received good support at full to dearer rates for the finer sorts, commoner invoices ruling about unchanged.

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

ing 147; late June, 147 1/2; and three months', 148 7/8. 6d. English ingots, 147 1/2. Copper: After opening lower last Monday the standard market rallied, when cash by the middle of the week found buyers at 158 to 158 1/2, and three months' up to 158 1/2 7/8. The market was again rather firmer at Thursday's meeting. Cash realised 158 1/2 to 158 1/2 1/2. At Friday's session, cash sold at 158 1/2 to 158 1/2 1/2; middle June, 159 1/2 to 159 1/2 1/2; and three months' at 159 1/2 to 159 1/2 1/2. Electro's, 164 1/2 to 166 1/2; best selected, 162 1/2 to 164 1/2; strong sheets, 168; wire bars, 166 1/2 to 166 1/2. Lead steady at 22 to 21 1/2. Spelter firmer, 26 1/2 to 26 1/2. Antimony: English regulus quoted at 29 1/2 to 33 per ton. Aluminium remains unaltered.

TALLOW.—Messrs Colchesters and Woolner write on April 5th as follows:—The tallow market was quiet during the week, and prices are about 1s lower. The demand from all quarters is slack and disappointing. The stock in London on March 31st, as returned by the wharves, amounted to 15,415 packages, showing a decrease during the month of 8,461 packages. At auction to-day 1,262 casks tallow were offered, and 526 were sold. Quotations are:—Australian mutton: Fine, 42s 3d; good to fair, 41s to 40s; dull to dark, 36s 3d to 34s; hard, 41s. Australian beef: Fine, 41s; good to fair, 40s to 37s; dull to dark, 36s to 33s 6d; sweet, 41s 6d. Present

shipment from Australia: Mutton, fair coloured, 48 degs., 39s 6d; and mixed, 43s c.i.f., London, 38s 6d. The market letter is lower. Tallow, 1s; stuff, 1s. Town tallow, 33s 6d per cwt. Rough fat, per 8 lbs, 1d; melted stuff, 23s per cwt. Quotations are:—Town: 33s net cash, naked, ex works. Country: Frait casks, 32s; home melted, shipping casks, net f.o.b., good coloured, 35s; fair to dull, 34s to 32s. Bone fat: White, none; pale, none; benzine, 29s; melted stuff, 28s, f.o.b.

DIRECTORS' REPORT.

Presented at the Sixty-eighth Ordinary General Meeting, 5th April, 1922.

The Directors have now to submit to the Shareholders the Balance-Sheet and Profit and Loss Account of the Bank for the year ended 31st December last. These show a net profit, after providing for all bad and doubtful debts, of £997,669 15s 6d, inclusive of £209,601 9s 11d brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £787,669 15s 6d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of Six shillings and three pence per share, making Twenty and a quarter per cent. per annum for the whole year, free of Income-Tax; to add £100,000 to the Reserve Fund, which will then stand at £3,700,000; to add £25,000 to the Officers' Superannuation Fund; to write off Premises Account £50,000, and to carry forward the balance of £215,169 15s 6d. Mr. W. FOOT MITCHELL, Sir MONTAGU CORNISH TURNER, and Mr. LEWIS ALEXANDER WALLACE, the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. DAVID CHARLES WILSON, F.C.A., and Mr. HENRY CROUGHTON KNIGHT STILEMAN, F.C.A., again tender their services. The Dividend and Bonus will be payable on and after Wednesday, the 12th April.

THE MONEY MARKET.

HOPES of superabundant money still await fulfilment, and borrowers, though they have supplied themselves without much difficulty, have continued to complain of the "patchiness" of the supply. For weekly advances the rate has varied from 2½ to 3 per cent., and day-to-day loans have been arranged at 2 per cent. in some case, though the more usual rate was 2½ per cent. The discount market was almost in a state of deadlock at a substantially lower level—2½ per cent. for three months' Treasury bills and 2½ per cent. for Bank paper. At this

point, in view of the average price of short money, purchases of bills were unattractive, and sales were equally so, owing to hopes of a reduction in Bank rate. Early in the week £4,000,000 Union of South Africa Treasury Bills, to be dated April 20th, and due on October 20th, were placed on a basis of 3 per cent. discount.

THE STOCK MARKETS.

The holiday feeling usual at this time has not made itself manifest in the Stock Exchange, and business has been on a heavy scale. Five per cent. War Loan has passed the 100 mark, and not been appreciably affected by the large volume of orders to sell at that figure, while other gilt-edged stocks have been equally buoyant. Markets are expecting cheaper money in the near future, and business is broadening. Home Rails have suffered slightly from profit-taking, but industrials have moved upward, and the oil market has attracted a good deal of attention, while mines show some improvement.

COMMODITY MARKETS.

Although the strength in the cotton markets continues to be maintained, there is no disposition to enter into transactions on a big scale. Colonial wool prices at Hull auctions advanced from 5 to 7½ per cent., there being a good demand for wool of all descriptions. No changes in quotations are reported in the iron markets. The wheat markets were quiet, sellers being inclined to hold back. A noticeable feature of the vegetable oils and oil-seeds markets has been an appreciation in the value of linseed oil, chiefly owing, it is stated, to buying on American account. Prices of hides remain steady, with a tendency to advance; the demand for sole leather is small, and though the boot trade has been not so busy as usual at Easter time, good business has been done. Further details will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

Although there has been rather more movement in rates, the foreign exchange market has again been very quiet, with some slight tendency towards better business in the last day or so. After moving up again nearly to 1,360 on Saturday, the mark recovered to about 1,239 on Tuesday, but yesterday rose again to 1,310 on the publication of the German reply to the last Note of the Reparation Commission. Forward marks are quoted at par to one point per month over spot. The other more important exchanges have appreciated on the general hope of something satisfactory being evolved in Genoa, the Paris rate falling from 48.12 on Friday to 47.90 yesterday, Brussels from 51.97 to 51.70, Italy from 83.30 to 82.15. The forward rate for French francs is par to one point below spot per month; for Brussels 7.8 centimes per month below spot. Among the neutral exchanges, Amsterdam, Switzerland, and Madrid have moved in our favour, as also have Stockholm and Copenhagen, while Christiania has gone against us. In Central Europe, Vienna at 32,500 is a little better, and Warsaw at 16,590 also shows some improvement. Prague, on the success of the London loan, has fallen rather sharply to 217½, while Belgrade also, for the first time for many weeks, is slightly better, as also is Budapest. Among the Eastern rates, the rupee is unchanged at 1s 3½d, Yokohama a little cheaper again at 2s 1½d, Hongkong and Shanghai are both slightly cheaper. In South America, Rio is lower at 7½, Buenos Ayres rather higher at 44½, while Monte Video has also moved up to 43.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the eight days ended April 8, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	31,237	Supply Services	7,000
Taken from Exchequer balances ..	8,119	Interest on Debt	31,331
		Sundries	336
		Reduction of Debt	339
	39,356		39,356

The revenue of the first eight days of the current financial year, at £31,236,705, compares with £30,697,834 in the first nine days of the financial year 1921-22. The expenditure, at £38,967,610, compares with £49,583,294 during the first nine days of the past financial year. The chief revenue-producing item was Property and Income-tax, which yielded £18,190,000 during the eight days, against £16,623,000 in nine days. Ordinary Receipts under Miscellaneous produced £3,650,214, against £1,330,834, while Special Receipts yielded £2,103,400, against £1,888,000. Customs produced £1,768,000, against £3,275,000, and Excise £1,408,000, as compared with £1,835,000. Estate, &c., duties yielded £1,671,000, against £664,000.

The eight days' operations reduced the National Debt by the sum of £388,662, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 18,550	Treasury Bills	- 56,463
Treasury Bonds by tender	+ 18,836	Surrenders of Bonds, &c.	- 121
Public Department Advances	+ 28,850	Unemployment Insurance	- 340
Bank of England Advances	+ 8,500	Exchequer Bonds Repaid	- 18,137
Sundries	+ 74,741		- 75,130

It is noteworthy that net sales of National Savings Certificates amounted to £18,550,000, which is undoubtedly due to the rush for Certificates before the rate was raised from 15s 6d to 16s on April 1, 1922. It will be observed that Exchequer Bonds amounting to £18,137,000 have been repaid. The floating debt was reduced by £19,235,000 to £1,010,285,500.

FINANCIAL YEAR, 1922-23 (April 1 to April 8, 1922).

THE INTERNATIONAL DEBTS PROBLEM.

THE curtain has at last rung up on the Genoa stage, and though the thousand actors do not yet know whether the play will prove a comedy, a tragedy, or a great historic drama, the eyes of the world will be upon them while they, according to their inclination, debate, intrigue, dream dreams, or conspire for the healing of the nations. One only of the Greater Powers is absent. But though with a gesture America stands aside, the unceasing flood of American books, pamphlets, and articles on the relation of the United States to the economic situation of Europe is proof that much thinking is going on across the water on world affairs. This voluminous literature is concentrating to an increasing extent on the problem of international indebtedness, and though it is evident that America's attitude will be largely influenced by the events of the next few months in Europe, it is clear that, under the educative stimulus of events, a great development is taking place in American opinion. In this connection a factor of importance is the view of Mr Vanderlip, whose latest survey of the European problem* betrays a keen appreciation of its world-wide reactions, and of the impossibility of American isolation. "In Europe and in the bordering Asiatic States," writes Mr Vanderlip, "including Asia Minor, there are half-a-billion people. We can hardly grasp the fact that the lives of more than a quarter of the world's population are being shaped by the events of the war, and even more by the developments that are growing out of the Peace. Discussions of trade conditions, currencies, Government Budgets, and Government debts, embrace incomprehensible totals. They form the background against which to view the gigantic human problem that is being faced by an entire continent. It is not merely a story of finance and economics, it is the most thrilling episode in the history of mankind. The vast numbers involved are for the greater part made up of the most cultivated, intelligent, and specially trained people in the world. The economics of Europe is not a subject to be left to technical experts. It is something that every intelligent person in the world should attempt to understand in its broad consequences to humanity."

We cannot here follow Mr Vanderlip in his survey, except to say that, in the main, he seems correctly to have diagnosed the currents of opinion in England, France, and elsewhere. His view on indebtedness is, however, of immediate interest. He will not countenance any "quibbling as to the basic facts of the obligations." No question of our ultimate intention to repay was raised when the loans were made, and if there were repudiation or an attempt to avoid repayment, American investment abroad would receive a fatal check.

He also dismisses the suggestion that as Great Britain is owed "by other nations a sum exactly equal to the amounts she owes the United States," these debts should be cancelled out. We may, perhaps, be permitted to recall that this understates Great Britain's contribution. Mr Hilton Young stated in the House on Monday that after America entered the war we borrowed from U.S.A. £876 millions at par of exchange, and that during this period we advanced £897 millions to our Allies. Our total advances to the Allies were, however, £1,838 millions, of which £584 millions are due from France, £503 millions from Italy, £655 millions from Russia, and the balance from minor Allies. But there comes quite a different point to consider, and Mr Vanderlip reaches the conclusion that if the debts were paid "both creditor and debtor would be seriously harmed." Faced with this dilemma, and even with the possibility of insolvency of certain of the debtors, Mr Vanderlip considers, but rejects, the suggestion that America should use the power of cancellation to extract guarantees of good behaviour. Any

* "What Next in Europe." By Frank A. Vanderlip. (London) George Allen and Unwin, Limited. 8s 6d net.

attempt to enter this field would involve "meddling with European political policy. To become so involved is opposed to every American national sentiment." His novel but we fear somewhat impractical solution of the problem is that the American people should collect their debts, but spend the proceeds upon the economic, intellectual, and scientific regeneration of Europe, since "it is only through the rehabilitation of European civilisation that America can ever conceivably realise in full measure her destiny." While Mr Vanderlip urges the collection of debts and the employment of the proceeds for Europe's welfare, another leading American financier takes a different line. In a pamphlet, "Europe and Ourselves,"* Mr Otto H. Kahn boldly advocates the cancellation of all Allied war debts to America, on condition that inter-Allied debts are cancelled, and that Europe takes certain obvious steps towards recuperation. It is very difficult to gauge how far the views of these two authorities represent either New York or general American banking opinion, but their advocacy is such quarters is a significant fact.

Meanwhile a leading English banker has made an important contribution to the discussion. At a luncheon given by the American Chamber of Commerce, in London on Monday, Mr F. C. Goodenough, chairman of Barclays Bank, reviewed the extent of international debts, their effects upon the international situation, and the impossibility of their fulfilment according to strict contract, and put forward a scheme for modification and solution. His scheme, briefly summarised, is:—(1) that the amount which each country can, and should, pay should be fixed as soon as practicable; (2) that, when finally fixed, the debts should be spread over as long a period as possible; (3) that bonds should be created representing the amount of the debt, and that these should be gradually offered to the public for investment, supported by national guarantees. Mr Goodenough proceeded to explain his bond proposal as follows:—"For instance, if France were paying a portion of her debt to us, she could endorse certain of her Reparation Bonds to us for this purpose. We, in our turn, could endorse them to America in discharge of our debt to her. America would thus have a Reparation Bond endorsed by both France and England, and, providing the amount fixed for Germany to pay were a practical sum, the contingent liability would not be a matter for serious concern. Nevertheless, the endorsements would be upon the bond, and in consequence it would find a ready market anywhere."

The suggestion that such bonds should be gradually placed in private hands is important and sound. Such transference would remove the international debt question from the sphere of inter-Governmental discussion, and what is now a formidable irritant in international politics would become a matter between Governments and private bondholders. But on two main points we find Mr Goodenough's proposals incomplete. In the first place, he makes no distinction between various items in Reparation, and contemplates the use of the Reparation bonds as a means of

paying Allied debts. But German debt for actual ravages committed on foreign soil is not morally or logically comparable with French or British debts incurred for the purpose of financing the victory in arms of the Allied and associated nations. In this respect we prefer the tentative proposal of Sir Robert Horne (see *Economist* of March 25th, page 575), which in effect aims roughly at dividing Germany's reparation debt into two parts, and leaves only the one part, which would roughly correspond with demands outside actual damage done, contingent upon a scheme for inter-Allied debt settlement. It would seem that under Mr Goodenough's scheme payment by Germany for repaired devastation might be used as an offset against debt to Britain or America, and that if Germany defaulted France would be liable for payment. The possibility of so unjust and indefensible a result mars the scheme, and must be presumed to put it out of court, so far as French acceptance is concerned.

Our other comment on Mr Goodenough's courageous and weighty contribution to this discussion is a corollary to this conclusion—namely, that war debts cannot and should not be fixed in amount and converted into securities which can be passed on to the public until the Reparation account is settled on a final and practicable basis. For when once a scheme like Mr Goodenough's is adopted and bonds begin to pass into private hands, no further adjustment or negotiation will be possible. Europe will have burnt her boats. This is, however, not a practical danger, for though American opinion is in a state of flux, it is certain that no action will be taken on the debt question until Europe makes more progress in her own affairs. This is implicit in the friendly but frank opinion of the *Saturday Evening Post*, of Philadelphia:—"It would perhaps be good policy to forget the 11 billions that Europe owes us, once we could feel sure that the old destructive policies had been abandoned, so that the cancellation of this debt would work to a constructive end. But there is nothing as yet to warrant the assumption that this would be the outcome." If Reparations can be once settled—and Sir Robert Horne's scheme is the most practicable basis for discussion which has yet been put forward—and other steps towards financial sanity developed in the near future, America may approach the problem of Europe from a different angle. Prominent American financiers and public men are, as we have seen, far in advance of public opinion in this matter. But their views can only find a favourable hearing if the evidences of good behaviour which Mr Vanderlip is unwilling to demand are in fact forthcoming. America has lately given tangible proof of her goodwill. The blame must be laid at Europe's door if the financial tangle is allowed to remain unravelled.

THE LITTLE ENTENTE.

In pre-war days few people in this country realised the political and economic importance of the Danube lands. The habit of regarding Nation and State as synonymous terms naturally concealed the true significance of the hybrid political organisation called Austria-Hungary; while the apparent stability of the Habsburg dynasty, consolidated to all appearance by nearly five centuries of continuous rule, prevented the casual observer from seeing and rightly appreciating the force of that underlying process of disintegration which led first to the loss of the Italian provinces, then to the compromise with Hungary, and finally, after four years of world-war, to the complete collapse of the Dual Monarchy. In October, 1918, Karl Habsburg had already fallen; the rule of this once mighty house of the "Eastern Realm" had definitely come to an end.

The principle of nationality, as applied to the German and Italian nations, had led in the nineteenth century to the creation of two large States; it had meant consolidation and had greatly simplified the map of Europe. As applied to Central Europe of recent years, it seems to stand for disintegration and a complication of the map. Thus many people will condemn it out of hand as a definitely retrograde step, and one out of harmony with

modern conditions and needs. This is certainly arguable from the economic point of view, and may be true in some measure; but in so far as this process of disintegration, for which much may be said from other points of view, was inevitable, and had, in fact, been accomplished before the Peace settlement of 1919, criticism of the treaties on these lines is neither constructive nor helpful.

The old Austria-Hungary, in spite of differences in excise and general taxation between the two member States, did provide a large area within which complete freedom of trade was more or less guaranteed. Further, a common political organisation had done much to determine the general economic orientation of all the Habsburg lands. At the same time, it must not be forgotten that the vital question of transport had been treated at least as much with a view to the political and economic interests of the dominant race as to the general economic well-being of the area as a whole, and this same tendency is apparent when we study the land and tariff policies of the old Monarchy. Thus, although we may regard the Habsburg hegemony as having made, in many ways, for stability, we cannot consider the former Austria-Hungary as constituting in any sense an ideal economic unit.

When we turn to the new Central Europe, conditions still leave much to be desired. Misery has been, and is still to some extent, acute, and trade is very much reduced even now, after three years of peace, when compared with pre-war days. To ascribe this change solely to the creation of new frontiers, or, more specifically, to the frontiers actually delimited by the Treaties of Peace, would be to give an explanation as simple as it would be inadequate. Four years and more of war told immensely on a country that never had been strong financially, and it is often forgotten that many of the difficulties that are now so acute in the currency position of the Succession States are largely due to war-time inflation. Similarly, the baneful effects of the war on the general economic efficiency of the Danube lands, and, more particularly, on their transport systems, can hardly be exaggerated. Nevertheless, the mere fact of political change—and this, as we have seen, was inevitable—made for instability; and this, in turn, was greatly aggravated by the erection of high tariff barriers across well-established trade routes, and the enforcement of prohibitions where trade had previously been free.

To Czechoslovakia, a country within whose limits are situated nearly 80 per cent. of the industries of the former Dual Monarchy, the dangers of such a state of affairs became at once apparent. Dr Benes, then Foreign Minister, realised to the full the need for some form of common organisation, but he realised also that any scheme for a Danubian Confederation was impossible of achievement. This was due to two main causes. In the first place, the new States were not prepared to make away in favour of any super-national authority the sovereign rights that they had only recently acquired. Secondly, all proposals for a Confederation had a sinister sound. The real, though concealed, object seemed to be either the restoration of the Habsburgs or the control of some foreign Power. To the new nationalities, a Danubian Confederation under the hegemony of France seemed hardly distinguishable from a German Mitteleuropa. The Great Powers might have stipulated some degree of sanity in tariff and currency policy in return for their financial assistance. Not only was this not done, but, even when dealing with the political problems of Central Europe, they proceeded in so dilatory and perfunctory a manner that it was soon abundantly clear that no salvation would come from the West. Dr Benes thereupon initiated that policy of self-help which has already led to the conclusion of a large number of important treaties.

The first essential for sound economic development is political stability. This, according to the Czech view, can only be achieved on the basis of the Treaties of Saint Germain-en-Laye and the Trianon. The Magyars made no secret of their opposition to the territorial settlement

embodied in the latter treaty, so Dr Benes, in the summer of 1920, opened negotiations with Yugoslavia and Rumania with a view to concluding a treaty guaranteeing the territorial *status quo*. A treaty on this basis was signed at Belgrade between Czechoslovakia and Yugoslavia, and this was followed almost immediately by an entente between Czechoslovakia and Rumania, which was formally embodied in a defensive alliance between the two countries in the following year. A treaty between Rumania and Yugoslavia, also signed in 1921, completed this series, which is concerned primarily with the fear of Hungarian aggression, and which together constitutes the Little Entente.

The conclusion of these political agreements was at once followed by the appointment of Commissions to discuss economic questions and to draft commercial treaties between the States concerned. As the final solution of the economic problems of Central Europe depends upon a large number of factors to a great extent outside the control of the States of the Little Entente and requiring a truly European settlement, these commercial treaties were to be of short duration, and were designed to meet temporary rather than permanent needs. They thus prepared the way for a more detailed solution at a later date, at the same time proceeding as far towards a permanent solution as was possible under the conditions then prevailing. Thus the commercial agreement between the Czechoslovak Republic and the kingdom of Yugoslavia, signed on October 18, 1920, recognised free exports in the case of both agricultural and industrial products to an extent in accordance with requirements. As the total abolition of export prohibitions, which seems so obviously desirable in principle, would then have been impossible of attainment, the realistic policy adopted by the Czechoslovak Minister at least secured the half-loaf in preference to "no bread."

It is impossible in the space of this article even to outline the various commercial treaties which have followed, and have already gone far to promote trade between the former Habsburg lands. Complete freedom of trade, however, seems at present out of the question, for a number of reasons. A country such as Czechoslovakia, which is endeavouring to follow a reasonable currency and financial policy and, be it added, with a considerable measure of success, as the exchanges and the national Budget show, would quite naturally be averse to throwing open its markets to the manufacturers of countries whose principal source of revenue seems to be the printing press. In Rumania, on the other hand, where the division of the land amongst the peasants has led, for the present at any rate, to a considerable diminution in the annual wheat crop, and where the demand for luxury goods is very great, the opinion of several competent authorities is that the abolition of Government control over imports and exports would of necessity lead to a serious food shortage—thanks to the great difference between the internal and external value of wheat—and to a large import of luxury goods which the present economic position of the country does not warrant. Again, opposition to freedom of trade comes on the Austrian side from the fear that the superior purchasing power of the holders of Czech currency would lead to the denuding of that country of essential commodities.

The fact remains, however, that the economic position of all the Danube lands depends ultimately upon the exchange of goods between the Succession States. The food and raw materials of Rumania, Yugoslavia, and Hungary are as necessary to Czechoslovakia and Austria as are the manufactures of these latter to the former. The treaties which laid the foundation of the Little Entente have been supplemented by the Treaty of Lana between Austria and Czechoslovakia. Dr Benes has thrice attempted to come to a commercial understanding with Hungary, and his efforts must ultimately meet with success, for reasons of economic necessity. Further progress may be slow, but, with the lapse of years and the death of the irreconcilables, royal or otherwise, the formation of the Little Entente cannot but appear as the first step towards stability and economic sanity in a region naturally rich and well endowed, but whose development has so long been retarded by dynastic ambitions and racial antipathies.

INDUSTRIAL PROFITS.

It is impossible, as we have often pointed out, to give an up-to-date statistical picture of the state of trade from the reports of joint-stock companies, for while some time has necessarily to elapse before accounts can be presented, many directors wait a long time after the financial year has closed before producing their annual reports. It is, however, possible to trace trade booms and depressions, a short time after the event, and three months ago we were able to show from an analysis of company reports published during the last quarter of 1921 (which mostly referred to the financial year ended June 30, 1921) that the earnings of industrial companies had fallen off enormously, the aggregate decline in the net profits of 311 companies being 52.9 per cent. as compared with their previous financial year. During the past quarter 442 reports have been analysed, and these show net profits, after payment of debenture interest totalling £26,785,952, a decline of £20,582,974, or 43.4 per cent., as compared with the net profits earned by the same companies in their previous financial year. From this it might be assumed that the depths of depression have been passed, but the comparison is with a period when profits, although still increasing slightly, were not advancing so quickly as in the last quarter of 1920, on which the decline of 52.9 per cent. was shown three months ago. In the third quarter of 1920 an increase of 41.9 per cent. was shown, and in the fourth quarter the increase was 27.1 per cent., but as will be seen from the following table, the increase in the first quarter of last year was only 3.5 per cent.:

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	No. of Cos.	Reports Published in		Increase.		Decrease.	
		1920.	1921.	£	%	£	%
First quarter	419	41,915,938	43,387,538	1,471,540	3.5	3,705,798	8.4
Second quarter	339	44,173,294	40,467,496	..	..	10,245,001	42.4
Third quarter	339	24,157,772	13,912,771	..	..	16,004,104	52.9
Fourth quarter	311	20,272,582	14,268,278	..	..	28,483,363	20.1
	1310	140,519,446	112,036,083	..	..	28,483,363	20.1
First quarter	442	47,368,926	26,785,952	..	..	20,582,974	43.4

The average profit per company has dropped from £107,000 to £60,500. The next table shows how the profits of the various groups have fluctuated:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Mar. 31.		Increase.		Decrease.	
		1921.	1922.	£	%	£	%
Breweries	17	£ 920,476	722,432	..	..	68,044	8.6
Electric lighting & power	28	1,937,021	2,004,884	67,863	3.5	..	..
Gas	32	1,366,819	1,653,153	286,334	20.9	..	..
Hotels, restaurants, &c.	11	326,931	148,015	..	..	178,916	54.4
Iron, coal, and steel	28	4,550,709	2,679,997	..	..	1,870,712	41.0
Land mortgage, &c.	21	1,021,584	911,029	..	..	110,555	10.8
Motor and cycle	6	570,660	540,170	..	..	1,110,831	..
Rubber, &c.	34	380,740	91,906	..	..	472,645	..
Shipping	8	1,067,853	907,338	..	..	160,615	15.0
Shops and stores	41	3,616,187	2,005,169	..	..	1,611,018	44.5
Tea	6	61,927	100,325	162,252	..	..	..
Textiles	26	4,323,975	2,124,558	..	..	2,199,417	50.7
Tramways	13	708,708	773,425	64,717	9.1	..	..
Trust companies	34	1,623,495	1,488,307	..	..	135,188	8.3
Waterworks	14	282,815	288,178	5,363	1.9	..	..
Miscellaneous	126	24,862,880	11,611,318	..	..	13,251,562	53.3
	442	47,368,926	26,785,952	..	..	20,582,974	43.4

Apart from the tea group, where a net loss of £62,000 has been turned into a profit of over £100,000, the only groups to show increases are those comprising public utility concerns, which are now beginning to feel the benefit of higher charges. During the war period these groups consistently recorded decreases. The motor and cycle group is a very dismal picture, and the rubber companies show very poor results. The profits of 26 textile companies have been cut in half, hotels and restaurants show an even larger decrease, while shops and stores are nearly as bad. The miscellaneous section includes the Dunlop accounts, which showed a loss of £8,320,000, as against profits of £2,163,900.

Methods of distribution in each of the past five quarters are shown in the following table:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Reserve, &c.
1921.	£	£	%	£
First quarter	43,387,538	24,377,364	56.0	6,357,529
Second quarter	40,467,496	23,732,561	58.8	8,028,662
Third quarter	13,912,771	10,646,266	76.6	2,834,955
Fourth quarter	14,268,278	11,464,889	80.4	3,386,145
1922.	£	£	%	£
First quarter	26,785,952	22,171,510	82.9	9,689,030

The last column of this and of the following table include, in addition to the amounts specifically allocated from profits to reserve, the amounts by which the balances carried forward exceed or fall short of the amounts brought into the accounts. In the past quarter balances brought forward and reserve funds have been heavily drawn upon to meet dividend payments, the decrease in the aggregate amounting to no less than £5 millions. Ordinary shareholders have taken nearly 83 per cent. of profits, while over 36 per cent. has gone to preference shareholders. The figures for the past quarter by groups read as follows:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Carried to Reserve, &c.
Breweries	722,432	335,153	46.3	212,195
Electric Lighting & Power	2,004,884	613,163	30.6	484,422
Gas	148,015	1,522,414	96.1	285,810
Hotels, restaurants, &c.	2,679,997	1,761,702	65.9	69,351
Iron, coal, and steel	911,029	589,385	64.5	460,902
Land, mortgage, &c.	Dr 540,171	9,000	..	202,102
Motor and cycle	Dr 91,905	71,066	..	137,102
Rubber, &c.	907,338	388,650	42.8	145,625
Shipping	2,005,169	1,367,093	68.1	1,008,724
Shops and stores	100,325	55,187	55.0	8,203
Textiles	2,124,558	2,165,875	102.0	377,834
Tramways	773,425	435,604	56.3	158,686
Trust companies	1,488,307	792,628	53.2	516,390
Waterworks	288,178	212,418	73.8	80,716
Miscellaneous	11,611,318	11,615,537	100.1	5,539,428
1922.	£	£	%	£
First quarter	26,785,952	22,171,510	82.9	9,689,030

The electric lighting and power group takes pride of place with reserve allocations and carry-forward increases, equal to over 45 per cent. of profits. The shipping and tea groups also show up well. At the other end of the scale come hotel, textile, and miscellaneous companies which have distributed to ordinary shareholders alone more than their net profits. In eight of the 16 groups reserves have been drawn upon to pay dividends.

The ratio to total ordinary and preference capital of net profits and of amounts added to or deducted from reserves is shown in the next table:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1921.	£	£	%
First quarter	365,534,600	43,387,538	11.8
Second quarter	336,719,100	40,467,496	11.2
Third quarter	166,443,500	13,912,771	8.4
Fourth quarter	218,246,700	14,268,278	6.5
1922.	£	£	%
First quarter	442,936,400	26,785,952	6.1

The steady fall in the ratio of profits to capital has continued, while for the past quarter a sum equal to more than 1 per cent. of capital has been withdrawn from reserves.

The average rates paid on each class of capital in the past five quarters is set out below:—

	Debt.	Preference.	Ordinary.
1921.	%	%	%
First quarter	4.43	5.0	10.3
Second quarter	4.61	5.6	12.6
Third quarter	4.45	5.0	9.7
Fourth quarter	4.52	5.1	7.6
1922.	%	%	%
First quarter	4.70	5.3	8.5

The average rate of debenture interest is the highest recorded, and indicates that the effect of borrowing at higher rates in the past few years is beginning to tell. The average rate paid to ordinary shareholders is higher than in the previous quarter, but below the average for

the past two or three years. We conclude with a table giving the average rates paid in each group in the last quarter, together with the figures given in our article a year ago of the rates paid on ordinary capital:—

	Debt.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
Breweries	£	%	£	%	£	%	%
Electric lighting and power	11,040,793	5.0	9,656,528	5.0	9,842,365	6.2	7.3
Gas	8,384,012	3.4	7,830,130	3.6	33,815,592	4.7	3.4
Hotels, restaurants, &c.	1,498,695	4.2	2,188,038	3.2	1,855,002	9.0	7.3
Iron, coal, and steel	7,897,727	6.3	9,390,648	3.9	28,571,252	6.2	10.5
Land, mortgage, &c.	4,166,018	4.2	5,257,096	3.9	7,284,978	8.1	6.8
Motor and cycle	52,350	4.5	3,084,800	4.5	4,310,368	0.2	..
Rubber, &c.	113,222	7.6	69,680	..	5,277,334	1.4	4.7
Shipping	960,000	5.0	2,375,000	6.1	4,145,100	9.4	9.9
Shops and stores	3,930,450	4.5	15,832,511	6.3	13,710,416	10.1	12.6
Tea	107,400	5.9	139,280	5.9	534,276	10.3	..
Textiles	2,034,090	4.1	6,534,410	5.7	25,052,270	8.6	11.8
Tramways	6,287,037	4.4	3,818,325	4.1	7,740,883	5.6	5.3
Trust companies	18,765,965	4.2	13,165,711	3.9	14,173,355	5.6	5.7
Waterworks	1,724,128	3.9	2,494,018	3.2	3,892,957	5.4	5.7
Miscellaneous	18,828,373	5.3	96,786,777	5.7	96,618,246	12.0	15.4
1922.	£	%	£	%	£	%	%
First quarter	30,820,848	4.7	183,183,346	5.3	259,753,011	8.5	10.3

As we have shown above, the average rate of ordinary dividend in the second quarter of last year was 12.6 per cent. The highest rate in any group in the past quarter was 12 per cent. for miscellaneous companies. The most pronounced declines in ordinary rates of dividend as compared with a year ago are in the iron and steel and rubber groups. The hotel group, where profits fell by 54 per cent., pays a higher rate of dividend, and three other groups show small increases, while the tea companies pay 10.3 per cent., as against nothing a year ago.

NATIONAL MONOPOLIES IN SHIPPING.

II.—GERMANY AND THE UNITED STATES.

IN our last issue we dealt with the temporary monopoly which has been established by the Italian Government over the emigrant traffic from ports in the Italian Peninsula. The danger was pointed out of this temporary monopoly becoming permanent, and of being extended to cover all the emigrant traffic of South-Eastern Europe for which the maritime gates are Trieste and Fiume. We will now pass to the traffic of Northern and Central Europe, for which the geographical outlets are ports in German territory.

The Germans, though pressure of many kinds—both diplomatic and commercial—is being laid upon them, are neglecting to carry out their obligations under the Treaty of Versailles to give fair play to British shipping lines. It is apparent that their object is to buttress their reconstructed post-war shipping trade by securing for it the bulk of the emigrant traffic, which is, as was explained last week, the bread and butter of the great Atlantic shipping lines. The German shipping companies have entered into alliances of partnership with some American lines, so that they can count upon sympathy and some veiled support in the United States. Shipping monopolies, so repulsive in British eyes, unless the result of untrammelled commercial competition—and even then regarded with grave suspicion—are consistent with the recent shipping legislation of the United States Congress. The American "Jones Act" is a measure designed to help the American Mercantile Marine at the expense of its foreign competitors, which in practice means its British competitors. It is true that this Act has not yet been put into operation, but it remains ominously on the Statute Book. Just as Italy and Germany are seeking to secure that emigrants from their respective ports shall travel in Italian or German ships, so the Americans are taking steps to secure that a substantial proportion of the immigrants reaching the United States shall have travelled thither in American ships. This double pressure upon emigrants on the one hand, and upon immigrants on the other, operates like the two jaws of an hydraulic press, and tends to squeeze British lines altogether out of the emigrant traffic between Continental Europe and America. It is clear that the recent legislation in the United States, limiting the admission of immigrants from any country to fixed quota according to nationalities, does give to the American authorities a very powerful stranglehold over the entire traffic. Germany has had assigned to it a large quotient,

and will struggle to retain as much of it as may be possible, whatever may be the treaty rights of British shipping companies.

Before the war there was in existence a system of control stations, established on the German Eastern frontier, and so administered by the German Government and the German lines as to divert the whole stream of emigrants crossing the frontier on to the gangways of the ships of the North German Lloyd and Hamburg-America companies. The definite provisions inserted in the Treaty of Versailles aimed at putting a stop to this administrative monopoly, but up to the present they have not been more successful than many other provisions in that unhappy instrument. The Germans are entitled to require British and other foreign steamship lines which do business from German ports to take out emigration licences; it is by the manipulation of these licences that they are now seeking to regain the position which they lost by war, and to insert conditions which will restore to them the privileges of monopoly which the Treaty tried to take away.

If the British lines could all be depended upon to stand solidly together—backed by Government diplomatic support—and if the British and foreign lines in the North Atlantic Conference also could be depended upon not to seek advantages the one against the other, then the problem would be simpler of solution. But with facts as they are and commercial human nature what it is, the Germans have some ground for their confidence that, if they can stave off the diplomatic pressure for a sufficient time, they can drive wedges between British lines and other foreign lines, and can even set individual British lines by the ears, and start them squabbling among themselves. Delay in settlement of the present difficulties will undoubtedly help the Germans to achieve success in this direction.

It is, we understand, the considered view of the North Atlantic Conference—which for the present hangs together lest the members of it become in peril of hanging separately—that the whole future position of the British North Atlantic lines will be gravely prejudiced unless the British Government speedily succeeds in bringing Germany to heel. The failure to compel her to carry out her obligations is encouraging other foreign Governments—notably Italy—to establish shipping monopolies or to impose licensing conditions which are not far removed from those of monopoly. New States like Jugo-Slavia and Poland are learning how to discriminate against our shipping by means of ingeniously drafted licences; Poland has brought into operation a measure which gives a preference to national shipping; and in South America there is a definite movement to exclude British ships from the coasting trade of the maritime Republics of Chile and Peru. We do not love Government intervention in matters of trade and commerce, but where distinct Government measures are taken in foreign countries to exclude our shipping, then counter-action must be taken by our own Government in support of the most vital of all British industries.

A NOTABLE contribution towards clarifying the discussion of devaluation is made by Mr J. M. Keynes in an article in the *Manchester Guardian Commercial* (April 6th). After summarising the arguments for deflation and setting against them the case for stabilising currencies, Mr Keynes sets out for consideration of the financial experts at Genoa a scheme in which the following are the main features:—Countries whose money has fallen to more than 20 per cent. below its 1914 value are advised not to attempt a restoration to pre-war gold value. Currencies should, however, become convertible into gold as early as possible at rates chosen on a basis which it appears practicable to maintain with reasonable certainty in the near future. But in order to avoid too serious a disturbance in the market for gold itself, the Powers should agree that while their banks will issue legal tender money against delivery of gold, they will not mint gold coin or allow them to circulate as legal tender. The scheme should be limited, in the first instance, to Great Britain, France, Italy, Belgium, the Scandinavian countries, Spain, Holland, Switzerland, and Czecho-Slovakia, and the rates to be fixed should be based on a conservative forecast of the probable exchange position in order to avoid a fiasco. If this is done, Mr Keynes would be prepared to make a "moderate concession to popular illusion" by permitting the rate of convertibility to move in the direction of the old gold par; but the central banks would guarantee not to raise the price of their notes against gold by more than 6 per cent. in any year. "The possibility of slow action on these lines would permit the satisfaction of national prestige without inviting speculation or depressing enterprise." The State banks of Europe would also be well advised to make a difference of 5 per cent. between their buying and selling prices for gold. This would not interfere with the free gold market, but this margin, which would permit of rather wider exchange fluctuations than before the war, would still be sufficiently restricted to enable the fluctuations to be readily dealt with by financial houses in the old way by the transfer of floating balances. Finally, Mr Keynes emphasises that gold reserves must be used and not hoarded. He therefore proposes that central banks should give a guarantee for five years to redeem their notes in gold at a rate not worse than the conversion rate originally fixed, so long as their notes in circulation exceed 80 per cent. of a standard determined when the scheme comes into operation, and provided that they have the necessary gold.

It is also proposed that in order to renew European reserves the Federal Reserve Board of the United States should agree to make temporary loans of gold at 10 per cent. interest to any of the participating central banks up to 15 per cent. of the standard note circulation, subject to a maximum both for the total loan and for the amount to each country.

The conversion rates to be fixed must depend on the exchange situation when the scheme is launched, but Mr

Keynes suggests certain rates by way of illustration, together with the extent to which the countries would have borrowing rights on the Federal Reserve Board:—

	Guaranteed Conversion Rates at which Notes will be Convertible into Gold Expressed in Terms of Dollars.	Reserves.	Borrowing Rights.
		(In Miln. \$)	(In Miln. \$)
Sterling	£1 = \$4.41	790	150
French francs.....	100 frs = \$8.4	770	150
Belgian francs	100 frs = \$8.4	50	75
Italian lire	100 lire = \$4.62	270	140
Swedish kronor	100 kr = \$26.80*	75	20
Norwegian kroner	100 kr = \$17.85	40	10
Danish kroner.....	100 kr = \$22.31	70	15
Dutch florin	100 fl = \$40.20*	245	60
Swiss franc	100 frs = \$19.30*	110	25
Spanish pesetas	100 pes = \$19.30*	500	100
Czech krone.....	100 kr = \$1.575	13	25

* Pre-war parity.

Notes would be issued against the delivery of gold at a 5 per cent. higher rate than the figures in column 2. Mr Keynes is opposed to linking the scheme with any internal control of public finance, on the ground that such conditions are "not the kind of thing about which a sovereign Power could properly be required to give a guarantee." Whatever view may be held about Great Britain's participation in a scheme of devaluation, this proposal is so important and well thought out that it deserves the most careful study. Mr Keynes, however, admits hesitation as to whether this stabilisation is possible so long as there are so many unsolved problems in Europe. Germany is definitely ruled out until reparations are settled, and the whole plan "depends on the assumption that there is a reasonable prospect of avoiding a further progressive depreciation of money as a result of Budget deficits." We come back, therefore, once more to the old conclusion that we cannot handle the purely financial side of the European problem until some, at all events, of our political difficulties are resolved.

RUSSIAN PROBLEMS.—III.

(FROM A CORRESPONDENT.)

In the last few months the Soviet Government has made sweeping changes in its economic policy. It has abandoned the attempt to regulate the whole economic and social life of Russia by bureaucratic methods. The Soviet leaders themselves admit that the experiment of Communism has failed, and that the abolition of private enterprise and private commerce has been a disastrous fiasco. They now see that their only chance of conciliating the peasants and of remaining in power themselves is to restore freedom of commerce and to abandon the compulsory requisitioning of the peasants' crops.

Instead of seizing the whole surplus in return for worthless paper-money, the State now collects a tax of 10 per cent. in kind, and allows the rest of the crops to be sold in the open market. The peasants' co-operative societies, which were formerly nationalised and placed under the control of Communist commissars, have now had their freedom restored to them. Factories that were nationalised are being returned to their former owners, both Russian and foreign. The activities of the Extraordinary Commission, or Cheka, which wielded unlimited powers of life and death and was the effective instrument of Bolshevik dictatorship, have been further curtailed. Speculation and private trading, which were formerly capital offences, are now encouraged as being the only means of restoring production. A new State bank has been established, which is intended to run on ordinary business lines and to provide the usual facilities for private trade at home and abroad. Originally it was proposed that the State bank should have a monopoly, but after three months' experience of its working this idea has been abandoned. The co-operative movement has been allowed to re-establish a bank of its own, a separate bank has been formed for promoting foreign trade, and endeavours are being made to attract foreign capital in the development of other banks for special purposes. In December, 1921, the Minister of Finance, M. M. Kres-

tinsky, presented a Budget for 1922, which showed a deficit of only 12.3 per cent. of the total expenditure, and stated that he intended to adopt the plan of restricting the issue of paper-money and adhering to the limits fixed in the Budget.

There is a big difference between promise and performance; but we are here concerned with the change of policy, not with its prospects of fulfilment. It is known that in carrying out this sweeping change, the more moderate members of the Communist party, such as Lenin and Krassin, have had a big fight with the extremists; but they have apparently won their way, and the march of events and the trend of popular opinion are clearly on their side.

Many British observers foretold at an early stage that the Soviet Government, if left alone and freed from the necessity of defending itself against foreign intervention, would inevitably tend to become more moderate, and would quickly be compelled by the pressure of events to abandon the impossible attempt to establish universal Communism. But there are still many sceptics who doubt whether there is anything tangible to be gained by negotiating with the present régime and trying to reopen commercial relations. Russia, they say, has lapsed into barbarism; her civilisation has been destroyed; her trading and manufacturing classes have been murdered or exiled; and the urban wage-earning classes, which before the war only formed a small portion of her population, have been demoralised by the revolution, and, owing to the collapse of large-scale industry, have deserted the towns and gone back to earn a precarious livelihood on the soil. The seizure of the land by the peasants and the abolition of large landowners have destroyed the possibility of a surplus of grain for export for many years to come. So far from Russia having surplus to export, she is now unable to feed herself, and is stricken with an appalling famine. So long as the Bolsheviks remain in power there is no hope of a change. Their new economic policy is a measure of the desperate straits to which they are reduced, and the pretence of reform will be discarded at once as soon as it has served its purpose. Bolshevism must be left to destroy itself, and Western Europe must wait for 10 or 20 years before she can expect to do any substantial volume of trade with Russia.

There is undoubtedly plenty of ground for scepticism of this kind. But practical policies must be based upon reasonable possibilities, and the risks of failure are not so great as to deter a number of Western capitalists from trying their luck. From a business point of view there are undoubtedly big possibilities. According to competent observers, Russia has probably just about turned the corner. She has recovered from the worst period of disorganisation and anarchy. In spite of the famine, her economic position is no worse than it was a year ago, and, largely owing to the change in the Government's economic policy, is in many respects slightly more favourable. If there is no repetition of the drought, this year's harvest is expected to show a slight improvement.

Figures of production in the Donetz Coal Basin show an increase from 4,500,000 tons in 1920 to 5,420,000 tons in 1921; 40 per cent. of the year's production was obtained in the last three months of the year. The monthly output increased from 160,000 tons in July to 700,000 tons in November, 1921. The output per hewer increased from 13 tons in July to 57 tons in November. The production of metal and textiles also shows a slight improvement. The linen factories are now said to be working up to 55 per cent. of their pre-war capacity. The transport system is still in an appalling state of paralysis, but carriage on the waterways has recently improved, and new locomotives are now beginning to be received from Sweden and Germany. Imports during 1921 were three times the total imports during the three previous years, and exports were four times as much. The actual figures for 1921, according to Lenin's review at the Soviet Congress on December 24th, were 833,000 tons of imports and 192,000 tons of exports. These figures are, of course, extremely small, and against the improvement noted we have to set the almost complete dispersion of Russia's gold holdings. It is doubtful if the Soviet Government has more than about £5,000,000 worth of gold left out of the £150,000,000 held by the former State Bank of Russia.

The main hope of the future lies in the possibility of restoring Russian agriculture and increasing its productivity. Before the war the productivity of Russian agriculture was lower than that of any other European country. The average yield of wheat in European Russia was about 7 quintals per hectare, compared with 13½ in France and 21½ in the United Kingdom. The Russian peasants use no fertilisers. In most districts there is no proper rotation of crops, and it is no uncommon thing for half the land to lie fallow at a time. The sandy soil of East Prussia produces two or three times as much as the rich black soil of South Russia.

Even with a change in the Government of Russia, the development of Russian agriculture is bound to be a matter of slow growth. The Russian peasant is intensely conservative, and is but slowly awakening from the deep sleep of the Middle Ages. But an undoubted change is taking place. Millions of peasants during the last seven years have been withdrawn from their primitive village life to serve in the Army. As prisoners of war in Germany, vast numbers have come in contact with Western ideas of material progress and the scientific methods of German agriculture. They have handled tools and domestic utensils which they had never seen before, and they have been initiated into the mysteries of agricultural machinery, mechanical power, and electric light. As a result of their varied experiences and the new ideas and new wants implanted by the revolution, the younger generation of Russian peasants has grown dissatisfied with the primitive life and simple traditions of their village communities. In addition to these sub-conscious influences, the Red Army has provided facilities for organised education. Every soldier is now taught to read and write, with the result that among the younger men the proportion of illiteracy is comparatively small. Another important factor has been the prohibition of vodka. Already before the Revolution foreign observers had noted the change in the habits and outlook of the peasants resulting from prohibition. They had acquired new wants, and spent their money, when possible, on better clothing, better tools, and better domestic appliances.

These facts all point to the same conclusion—namely, that the effective demand of Russia's vast population for the manufactured goods of Western Europe is likely to be greater than it was before the war. If the new wants can be supplied, partly by private trade and partly by the highly developed organisation of the Russian co-operative societies, their satisfaction will stimulate the increased productivity on which the recovery of Russia and of Central Europe depends. The Russian Revolution is like the French Revolution in one thing at least—that it has raised the status of the peasantry, and firmly established a system of peasant proprietorship on the ruins of feudalism.

Notes of the Week.

An Industrial Parliament.—The revival of the idea of a National Industrial Parliament for the discussion of Labour and other questions affecting industry is gathering force. In the first number of the official organ of the Industrial League and Council the case for such an organisation is put by Mr Clynes from the Labour standpoint and by Sir Wm. Noble, chairman of the Baltic and White Sea Conferences and of the Cairn Line of Steamships, on behalf of employers. Both writers point out that the way has been prepared by Joint Industrial Councils in various trades and by Works Committees in individual businesses, which have proved of the greatest possible value in improving relations during the years since the war. But Mr Clynes reminds us that we are concerned every day with sectional problems which it is impossible to solve unless we consider the national interest first. The inter-dependence of industries is now as close as the inter-dependence of nations. A body selected on a national basis and composed of men with a real knowledge of industry would be the best possible forum in which the rights and wrongs of industrial quarrels can be discussed. The present engineering dispute, in which it has become evident that the issues are much more

complex than the public was originally led to believe, is a remarkably apt illustration of the purpose which might be served by a body representing the industries of the country. The Ministry of Labour has considered, and Parliament has discussed, whether the Government's statutory power of investigation ought to be exercised in this instance. A Parliament of Industry would be a better organisation for advising on such a question. Again, it is a very striking fact that, apart from the Prime Minister himself, the only body which has had sufficient prestige to offer mediation in the last few industrial crises has been a committee of the Trade Union Congress. Both Sir Wm. Noble and Mr Clynes do not, however, confine the functions of a Parliament of Industry to discussing industrial disputes. On the contrary, Sir Wm. Noble declares that "It would gradually develop into a really constructive effort to improve industrial conditions generally. There are innumerable reforms which, if left to the initiative of either side alone, will take a generation to bring into being. Provision for unemployment in times of trade depression; improvements in factory and workshop conditions; the decasualisation of labour; questions of working hours; all these matters and many others would come within the purview of the Parliament of Industry. They would be discussed by people they most affect, the people who have the greatest interest in their solution. The case for an Industrial Parliament, in my opinion, is unanswerable. There is not a single person in the country who would not benefit by its work. As a nation we cannot afford to leave a stone unturned in our efforts to achieve industrial reform. Reform is bound to come. Whether it is constructive reform or destructive reform depends on the impetus behind it. A Parliament of Industry would give it the right impetus. Its success would be our greatest safeguard against the dangers that beset us."

The Position in China.—The news from Peking, judged by Western standards, is alarming; but Chinese ways are not those of Europe. Wu Pei Fu, formerly a liberal leader, now a militarist adventurer, who has been threatening to march on Peking since January, is expecting counter-attacks from the army of Chang Tso-Lin, representing the Peking Government, on his front, and in the rear from forces sent by the Government at Canton. He is said to be preparing for a desperate resistance, and to possess large quantities of modern war material and poison gas, with two German experts to direct its use. But it seems possible that the conflict may be settled without much fighting: the chief difficulty is that there is no money to pay off the troops. Chow Tze-Chi has been temporarily appointed Prime Minister in the place of Liang Shih-Yi, a former Monarchist, now superseded at his own request; and it is said that an attempt will be made to effect a compromise and raise money to enable the Peking Government to carry on. Meanwhile, the rest of the Ministers are at Tientsin. But another and less immediate danger is announced by the Peking correspondent of the *Times*. The majority of the students are strongly materialistic; they are attacking Christianity, partly as being allied with capitalism, and are telling the masses that Western capitalists intend to exploit Chinese cheap labour as a means of crushing the Labour movement in their own countries by the competition of cheaply produced Chinese goods. It seems probable that these efforts are called out by the activity in China of the Student Christian Union, which has just held a "world conference" in Peking, and which, it may be remarked, is by no means friendly to "capitalism"; but its opponents will doubtless be aided, if they are not already, by Bolshevik money and propaganda. But China is not a promising field for Bolshevism, and the students generally, whatever their religious views, are strongly opposed to militarism in any form, and in favour of internal peace. A Nationalist and anti-foreign rising, therefore, is in the last degree improbable. The anxiety generated by the political situation may well be modified by the facts brought out at the annual meeting of the Hongkong and Shanghai Bank, of which a full report appeared in our columns

last week. The total debt is only 12s per head of population, the Maritime Customs revenue increased last year by about 9 per cent., and in all the Treaty Ports but one; the gross receipts from the salt revenue increased likewise; and, if the internal dissensions should continue and the provinces should assert their autonomy, the Consortium may so far relax its rule against lending to any but a central government as to issue loans to the provincial governments, either singly or in groups, for railway construction, which will develop the vast local resources and afford an example of the advantages of internal peace. It must be noted also, that Japan is carrying out the recent Treaty by withdrawing her troops from Shantung; and that the External Loans secured on the Maritime Customs stand higher than they have for some years past.

Overseas Trade in March.—The official returns of overseas trade in March are not available as we go to press, but we have received an official summary of the figures. March imports were £87.9 millions, British exports £64.6 millions, and re-exports £10.2 millions, the month's excess of imports being £13.1 millions. Imports were £18.5 millions higher, and British exports £6.2 millions higher than in February, re-exports being almost unchanged. Despite the fall in prices, the value of March imports of raw materials is considerably higher than that recorded for March, 1921, and wheat imports were also heavy, while imports of manufactured goods are much lower than a year ago. For the first quarter of the year the import excess on the merchandise figures was £18.7 millions. The full returns will be available for discussion next week.

Coal, Iron, and Steel Output.—The production of coal in the mines of Great Britain for the week ended April 1st was 4,825,400 tons, which compares with 4,929,300 tons in the previous week, 5,046,600 tons in the week ended February 25th—the highest this year—and 1,950,100 tons in the week ended April 2, 1921, which was the last week before the coal strike. Statistics compiled by the National Federation of Iron and Steel Manufacturers show that the production of pig-iron in March amounted to 389,800 tons, as against 300,100 tons in February and 386,000 tons in March, 1921. The production of steel ingots and castings last month was 134,400 tons higher than in February at 549,400 tons, the highest figure in any month since December, 1920, when the output was 746,600 tons. The monthly average in 1921 was 302,200 tons.

The Quarter's Shipbuilding.—Lloyd's Register shipbuilding returns for the quarter ended March 31st show that the merchant tonnage under construction at the end of the quarter amounted to 2,235,998 tons, a reduction of about 404,000 tons as compared with the end of December last. The total includes 617,000 tons, on which work has been suspended for some time, quite apart from any delay arising from the present dispute in the shipbuilding and engineering industries. Deducting this amount in order to enable a comparison to be made with figures for normal times, the tonnage actually under construction in the United Kingdom now amounts to 1,619,000 tons. The average tonnage under construction during the twelve months immediately preceding the war was 1,890,000 tons, i.e., 271,000 tons more than the present figures. As compared with the figures for the quarter ended December 31, 1921, there has been a reduction of 133,000 tons in the tonnage launched in the United Kingdom during the past quarter. Although there was a slight increase recorded in the tonnage commenced during the quarter ended December 31, 1921, this progress has not been maintained, and the figures for the quarter under review are practically the same as that for the quarter ended September 30, 1921, namely, 51,000 tons. The total merchant tonnage building abroad is 1,443,624 tons, but this includes about 325,000 tons upon which work has been suspended, leaving about 1,118,000 tons actually under construction. The country where the largest amount of work is suspended is Italy. The tonnage building abroad is about 373,000 tons lower than the total building at the end of December, 1921. The de-

crease affects most countries, but specially the United States of America, in which country the tonnage now under construction is only 3½ per cent. of the total building there in March, 1919. The figures for the leading countries abroad are:—Italy, 311,888 tons; France, 286,255 tons; Holland, 258,240 tons; United States, 136,266 tons; and Japan, 117,312 tons.

Co-operators and Sugar Duties.—A correspondent writes:—Strenuous efforts are being made by West Indian planters and British Protectionists to secure further preference for British-grown sugar at the expense of the home consumer. The present tax on fully refined sugar is 25s 8d per cwt, and since September, 1919, one-sixth of this amount, say, 4s 3½d, has been allowed as preference on imported Empire-grown refined. The British Empire Producers' organisation is asking that this should be increased to one-third, or from 4s 3½d to 8s 7d per cwt. Simultaneously with this movement has come an agitation engineered by those concerned with the production of beet sugar in this country, which culminated in the announcement last week that the Excise duty is to be removed. There are two sugar factories in England—one at Cantley in Norfolk, and one at Kelham in Nottinghamshire. The former was started in 1912, closed in 1915, and re-opened in 1920, receiving an advantage of 2s 4d per cwt surtax, and of 3s 10¾d, the one-sixth preference of the Excise tax, an advantage of 6s 2¾d per cwt. At Kelham the factory was set up largely by the assistance of the British Government. It exhausted its capital by the end of last year. The directors have applied to the Government for permission to borrow a further amount up to £200,000 in priority to the second mortgage held by the Government. The Government holds 250,000 shares in the company—half the total capital—and has advanced a loan of £125,000 to the company on a second mortgage. A State guarantee has also been given for the payment of 5 per cent. per annum on the 250,000 shares subscribed by the public. This holds for ten years unless the concern goes into liquidation or ceases to manufacture sugar. The West Indian planters and a section of the British farmers are thus seeking from different angles, but in their own interests, to preserve the tax on sugar—with such a decided preference to themselves as will secure the advantage without any regard to the consumer. The adroitness of the combination has, however, been observed by the co-operative movement, and a protest against the agitation will shortly be made. It is claimed that the working classes, in proportion to their income, spend more on sugar than those in a better position, and that the consumers not only pay the tax of 25s 8d per cwt, but in addition a profit on the tax to the refiner, wholesaler, and retailer. At the present time the tax adds 115 per cent. to the c.i.f. price of imported refined sugar. The Government revenue from the sugar tax in 1920 was £40,887,584, of which £3,507,929 was paid by the English Co-operative Wholesale Society, Limited. The yield in 1921 is estimated to have been about the same as in 1920 (£40,887,584), and the share of the co-operative movement has been considerably larger. Last year the C.W.S. sold to the retail societies 3,182,484 cwts of sugar, and used 158,280 cwts in its own productive works—a total of 3,340,764 cwts. The Scottish C.W.S. sold 731,720 cwts to its societies, and used 47,360 cwts in its factories, a total of 779,080 cwts, so that the co-operators of Great Britain obtained 4,119,844 cwts through their two federations. Even this does not represent the full consumption, for many societies have obtained a proportion of their supplies from other sources than their own wholesales. The amount paid by the co-operative societies as war tax on sugar in 1921 was:—

Tax on sugar sold to English retail societies.....	4,059,972
Tax on sugar sold to Scottish retail societies	939,040
Tax on sugar used in English co-op. works	203,126
Tax on sugar used in Scottish co-op. works	60,780
	5,262,918

From this it would appear that co-operators pay at least one-eighth of the sugar tax—a proportion that they will shortly claim entitles them to oppose the preferential treatment of the West Indian industry and the Government-

bolstered factory at Kelham. They will demand the remission or reduction of the tax without privilege to any section of the community. Last year the English C.W.S. paid £4,263,098 as duty in the price of the sugar sold, £1,736,224 on tea, £46,963 on coffee, £88,539 on cocoa, £68,354 on dried fruit, and £1,979,945 on tobacco—a total of £8,183,123, equivalent to 37.77 per cent. of its trade in these particular articles. This is exactly 7s 7d in the £, and is a form of indirect taxation that would have been resented in the early years of the movement, and especially in Lancashire. It is now being made clear to the four million members of the distributive societies; and if the appeal for remission of this breakfast-table taxation in the interests of the consumers is not seriously considered by the authorities the co-operative movement may be driven further into the political arena than its best friends wish.

Stock Exchange Settlements.—The Chancellor of the Exchequer has concurred in the repealing by the Stock Exchange Committee of various temporary regulations and supplementary emergency rules which have been in force for the greater part since January, 1915. The actual control exercised over the Stock Exchange by the Treasury has been a comparatively light matter for some time past. By degrees the Treasury regulations have relaxed, until there remains little of the original harshness save the rule that all dealings have to be for cash, arising out of which came the further regulation that options will not be allowed. Both these have been repealed. The Stock Exchange Committee announce that, subject to confirmation on Monday, May 15th, they will bring into force various new rules which spring from the repealing of the temporary regulations just mentioned. In most respects these new rules will involve little more than the return of the Stock Exchange to the conditions which prevailed before the war. The rules contain many minor points of detail in regard to entrance of members, sureties, new issues, renunciation-letters, dividends, quotations, commission, buying-in, and similar domestic affairs. Where the public is particularly interested, however, is in the matter of resuming bi-monthly settlements. Both the repeal of the temporary regulations and the passage of new rules are subject to confirmation on the same date, May 15th, as already stated. If the confirmation is duly carried out on this date, there is nothing to stand in the way of the Stock Exchange reverting at once to its pre-war practices in regard to periodical settlements, contangoes, and everything which arises therefrom. As everybody knows, a certain amount of pre-war moratorium account still exists, and has hitherto loomed in the path as an insuperable obstacle to every effort made with a view to restoring Stock Exchange business and markets to their pre-war flexibility. Apparently, the Committee are prepared to face whatever liability or difficulty may arise in connection with the continuance of an account which need not be settled until the end of August, when the 12 months following the conclusion of official peace shall have run out. On the rules in front of us the Committee could, upon confirmation, immediately countenance resumption of contango business and fortnightly accounts. They could also retain the present hours of business, and keep the Stock Exchange closed on Saturdays, as they probably will do during the summer months, unless the view should be taken that, in order to set an example to the community at large, it may be well for the Stock Exchange to remain open for longer than it does now. Dealings for foreign clients resident abroad and foreign arbitrage business will only be allowed for cash, this being in consequence of the state of foreign exchanges. No member is to be allowed to do an option for a period longer than three months. All account business is forbidden in the Consol market, a rule which is bound to excite a good deal of opposition, and, possibly, a certain amount of resentment. In these matters there is wide scope for divergence of opinion, and the Committee invite their fellow-members to make observations on any of the alterations, and to bring forward the same in writing by Monday, May 8th. It may quite easily prove to be the case that so many recommendations will be made as to justify the Committee in postponing confirmation of the

rules until such time as the control of the Treasury—i.e., the end of August this year, shall automatically cease, though there are members of the House who look forward to a resumption of periodical settlements being put into force early in June. Nothing definite is known on the point, but it may be mentioned, as affording a very interesting sidelight on the subject, that arrangements are being made by the Stock Exchange Committee which will permit of the re-establishment of the Clearing House by the end of next month.

War Bond Conversion Rights.—Controversy has arisen as to the conversion rights accorded in the prospectus to the 5 per cent. National War Bonds, repayable on October 1, 1922, at 102. The prospectus said:—"Holders of £5 per cent. Bonds of this issue may convert their holdings within 14 days after any half-yearly interest date (viz., April 1st and October 1st), and as on such interest date into £5 per cent. War Loan, 1929-1947, at the rate of £100 £5 per cent. War Loan, 1929-1947, for each £95 nominal value (excluding any redemption premium) of 5 per cent. National War Bonds surrendered." The italics are ours; but some holders of National War Bonds have so italicised these words in their own minds as to claim that conversion rights may be exercised as late as October 15th next. The Treasury, on the other hand, state that to-day, April 15th, is the latest opportunity for conversion. Mr Hilton Young reiterated this official view in answer to a question in the House of Commons on Monday. Those who oppose this view claim that October 1st next, although it happens to be redemption day, is also a "half-yearly interest date," and therefore conversion rights continue for 14 days thereafter. Presumably the official reply to that would be that on October 1st next the bonds in question go out of existence, and their conversion rights with them. The point, which is not without importance, is essentially one for lawyers, and, although it is regrettable that the prospectus was not drafted so as to exclude all ambiguity, it must be supposed that the Treasury view of the matter was not stated without the support of legal advice. The matter might become the subject of an interesting test case.

British Banking in Spain.—The announcement of the London County Westminster and Parrs Bank that they will shortly close their branches at Barcelona, Bilbao, and Valencia, and centralise their Spanish business at Madrid, directs attention to the difficult conditions with which British enterprise is faced in that country. These branches, which were established during the war to facilitate the greatly increased trade between Spain and Great Britain, are to-day faced with four serious difficulties. In the first place, the reaction from the abnormal war prosperity has been very prolonged and severe. A British Consular official reports that, "Though Spanish industry had undoubtedly made some progress between 1914 and 1919, the period was more marked by profit-taking than by enterprise. Labour became dear without becoming efficient." Foreign competition had therefore become acute. In the second place, British enterprise is handicapped in competing with rival countries by the low exchanges of Central Europe. The third obstacle is the tariff, which as at present constituted almost amounts to prohibition for certain classes of British export trade. Spain's post-war tariff operations, which represent the attempt of native industrialists to meet the slump we have described, has brought the Spanish Government into friction with most of the countries with whom she has commercial treaties or agreement. These three influences apply to all British undertakings. Banking enterprise has encountered a fourth in a tendency on the part of the Spanish Government to give preferential treatment to Spanish banks as compared with foreign banks. In this connection a recent report of the Department of Overseas Trade calls attention to a Bill which is still before the Cortes setting up a Superior Banking Council which will control both foreign and private banks. Under the Bill the national banks will be given special discount rates, and can settle with the State special regulations for the

bringing into operation of crossed and travelling cheques and obtaining concessions with regard to stamp duties on cheques. In regard to the third and fourth of these difficulties, it is pertinent to recall that at the Brussels Conference the Spanish Delegation, consisting of the Marquis de Cortina, the Secretary General of the Finance Ministry, and a director of the Bank of Bilbao, subscribed to the doctrine that "Each country should aim at the progressive restoration of that freedom of commerce which prevailed before the war," and that efforts should be made to secure the reciprocal treatment of the branches of foreign banks in different countries.

Atlas Assurance Company.—The first of the reports of the old composite offices is always of interest, as giving some indication of the way in which the past insurance year has worked out. The figures of the Atlas show that 1921, in so far as that company is concerned, was a good deal less profitable than 1920. In the fire department the premiums were £2,123,300, against £2,339,761. The claims amounted to 54.2 per cent. of the premiums, against 41.8 per cent., and the total expenses to 45.3 per cent., against 41.9 per cent. After allowing for the reduction in the reserve for unexpired risks, the trading surplus was £97,525 (4.6 per cent.), as compared with £206,882 (8.9 per cent.) for 1920. In the employers' liability, accident, and general department, the premiums were £250,817 and the surplus £33,686. The marine premiums were £85,108, the claims £13,055, and the expenses £8,364. The balance of £63,778 was carried forward. The profit and loss account received £117,750 for interest, less tax, and profits from the departments of £141,665. Income-tax, corporation tax, and E.P.D. absorbed £92,308, and transfers were made of £11,584 to the fire fund, and of £10,917 to the employers' liability and general funds. The dividends paid to shareholders amounted to £132,000, and the interest on the debenture stock was £3,549. The final result was a credit balance of £124,376, against £115,634 brought forward. The dividend for 1921 is the same as for 1920—12s a share, free of tax, and costing £132,000. The total shareholders' funds on December 31st last were £2,744,823, and the life funds £3,231,389; in addition, policyholders had the securing of the paid-up capital of £264,000, and the uncalled capital of £1,936,000. The certificate of Messrs Price, Waterhouse and Co., the auditors, contains the following reference to the value of the investments:—"The investments on account of the shareholders' funds are entered at values which, after taking account of the investment reserve fund, are in the aggregate less than their market value. The life securities are taken at their market values at December 31, 1919, or at cost if purchased since that date." In regard to the life funds it should be pointed out that the company provided last year £104,697 written-off securities and loss on investments realised.

Union Corporation.—The first of the important South African mining-finance undertakings to issue their report for 1921, writes our mining correspondent, is the one for some years past known under the above title. The corporation's chief interests are in the Witwatersrand, the most important comprising shares in those highly successful Far Eastern mines, the Modder Deep and the Geduld Proprietary; it also possesses claims, and shares in companies operating in, Mexico. The corporation last year fared very differently from a similar organisation, which suffered so severe a depreciation in its holdings as to swallow up the whole of the profits and entail a heavy appropriation from the reserve. It is true that the net surplus of £179,500 falls somewhat short of the 1920 total, but the deficiency is only £11,500, and no difficulty is experienced in maintaining the dividend at the previous year's rate of 2s per 12s 6d share, equivalent to 16 per cent. On this basis the shares, at current price of 18s 6d, yield about 12 per cent.—a good, but not excessive return upon a security of the kind. The balance-sheet total has expanded from £1,941,500 to fully £2,350,000, equivalent to approximately 18s per share. This sum includes

£295,100 of advances to affiliated companies, which can scarcely be regarded as an immediate cash asset; on the other hand, the directors are able to make the pleasing announcement that the present market prices of the quoted securities held show a very substantial surplus over the figure at which they stand in the balance-sheet. Altogether, therefore, the shares may be regarded as reasonably valued, although under existing conditions there appears little scope for further appreciation. The report contains a succinct review of the position of the Transvaal gold industry, and of world conditions affecting the latter. Amongst the interesting points mentioned is that whereas in 1921 the United States took 95 per cent. of the total gold production and India 4 per cent., the last-named country has this year purchased about one-third of the supplies. Returns on the part of the two Mexican companies in which the Union Corporation has holdings will be awaited with interest.

Rio Tinto.—That there would be no dividend for 1921 was a foregone conclusion, having regard to the drop in the price of the metal; hence the official announcement to that effect only depressed the price of the shares to a trifling extent. Actually, the results for 1921 were a small improvement upon those of 1920, the gross profit figuring at £403,400. Of the net surplus of £128,800, the dividend on the preference shares absorbed £81,250, leaving the moderately increased balance of £47,550 to go forward. The directors intimate that although operations were resumed at the beginning of 1921, many of the contracts had been lost—surely an object-lesson to labour; while, owing to the diminution in world-trade, the sales did not much exceed half the pre-war quantities. However, encouragement was derived from the fact that an improvement occurred during the latter portion of the year, while fuel and stores are coming down to more reasonable prices. On the strength of this intimation, a recovery occurred in the share market. An important feature of the financial position is the repayment by the British Government—the exchange being favourable—of the 50-million 6 per cent. peseta loan issued in Madrid during the summer of 1918 at the request of the Home Government. So far it has not been considered wise to take steps towards the repayment of the loan in Spain. Allowing for this liability, the cash assets at the date of the balance-sheet showed a surplus of £1,382,000. Unsold stocks have been taken at cost, "which is well under the present very low price of copper." The apparent anomaly of the quotation of the £5 shares at about £27, in face of the absence of dividends for two years, is, of course, explained by the results of the past and hopes for the future. Part of the recent rise is due to the publicity regarding the company's claim against the Government. The position of copper just now is an interesting one. After having been on the down grade for three weeks, the price lately enjoyed a sharp recovery. The decline was due in part to the appreciation in the sterling exchange upon the United States, and partly to the resumption of operations, or preparations therefor, by nine of the leading American producers, including four of the "porphyry" mines. It was subsequently made known, however, that during March the stocks of electrolytic had been substantially drawn upon. This induced buying on behalf of consumers; simultaneously, sales were restricted. Naturally, in these circumstances, the tendency of the market underwent a decided change. The price of the metal is still several points below the bottom quotation of 1913, and a moderate improvement in trade would bring about a further recovery. Meantime, the sudden spurt has rather choked off purchasers.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that in March weather conditions did not delay field work to any great extent, and cultivation is well forward. The land has worked well, and is cleaner than usual, owing to the dry season last year. In the East and South a large amount of corn sowing has been done, and in some districts

nearly all the seed has now been drilled. Germination, has, however, been very slow, owing to the low temperature, but where any plant is showing it appears regular. In the North and West little seeding has yet been done, but the seed-beds are ready, as a rule. The preparation of the land for potatoes is also well advanced, and early varieties have been planted in most districts. In the Isle of Ely potato-planting is well forward, and in the Holland division of Lincolnshire most farmers are now doing this work, but it is not quite so forward as usual. The growth of winter corn has been checked very considerably by the frosts and cold winds of March, and, on the whole, these crops are now not at all forward for the time of year in most districts. Wheat is thick on the ground, as a rule, but some of the crops sown late have lost plant, and generally do not look so well as the earlier-sown crops. In many parts of the country the wheat has lost colour, but the crop is most healthy and promising. Some crops have been thinned by wire-worm, and frit fly has done some damage in a few districts in Norfolk. Winter oats have not lost colour to the same extent as wheat, and are good, healthy crops. Beans also look promising, being a good plant and healthy. Except in the case of the late breeds, lambing is now over or in full progress. The fall of lambs has been quite up to average, and the lambs are strong and healthy. Losses have been light. Prospects among hill flocks are considered favourable. Pastures are very backward, the cold weather having prevented growth, and in no part of the country is there as yet any young grass. Livestock have required much fodder during March, and farmers are anxious for the grass to come, the supplies of winter keep being nearly exhausted in many districts. The position as regards foot-and-mouth disease has improved. The supply of labour is in excess of requirements in practically all parts of the country.

Russia's Foreign Trade.—*Russian Information and Review*, a fortnightly journal published by the Information Department of the Russian Trade Delegation, gives some interesting details of Russian foreign trade in 1921. Imports rapidly increased from March to September, in the period following the signing of the trade agreements with Great Britain and other countries. From September to the end of the year there was a considerable contraction. Total imports for the year are given as 920,000 tons, and exports to 216,000 tons, but while the ratio of exports to imports was 15.7 in the first quarter, it rose to 37.4 in the last quarter. Foodstuffs accounted for 334,000 tons of the imports, of a value of 32 million roubles at the pre-war rate of exchange. In 1921 food accounted for 36.3 per cent. of the total imports, fuel, &c., for 29.6 per cent., and metal, ores, machinery, tools, &c., for 20.3 per cent. Great Britain supplied 35.2 per cent. of the imports, Germany 24.0 per cent., the United States 15.8 per cent., and Norway and Sweden 10.1 per cent. In pre-war years Russia imported from Great Britain coal, machinery, and textiles. Of the 320,000 tons imported from Great Britain during eleven months of 1921, 120,000 tons were foodstuffs, 170,000 tons coal, 5,900 tons textiles, and 3,000 tons metal manufactures. Of the imports from Germany in the first nine months of the year, 26.8 per cent. was metals and machinery, 47 per cent. agricultural machinery, 14.2 per cent. electrical engineering plant, and 3.8 per cent. seed. The bulk of the imports throughout the year consisted of coal, foodstuffs, boots and shoes, and drugs. The total value of Russian exports for 1921, calculated at pre-war prices, was 20 million roubles. Of the total exports, 4.5 per cent. was classified as foodstuffs, and 95.3 per cent. as "raw and partly manufactured material." The chief market for Russian exports was Great Britain, with 47.9 per cent. of total exports; 22.7 per cent. went to Latvia, 12.9 per cent. to Norway, and 5 per cent. to Germany. The total trade done by Russia in 1921 represents about 10 per cent. of the trade of 1913.

**UNITED STATES.—THE TEXTILE AND COAL STRIKES
—FURTHER ADVANCE IN DOMESTIC AND
FOREIGN BONDS—GERMAN MUNICIPAL BONDS
OFFERED.**

(FROM OUR CORRESPONDENT.)

NEW YORK, April 4.

Two big strikes, both precipitated by a reduction in wages, although other issues are involved in the disputes, are now in progress, with no indications of an early settlement being reached. One is the strike of union workers in textile plants in various parts of New England, and the other is the walk-out of coal miners in the bituminous and anthracite fields. According to latest figures, more than 70,000 operatives are now idle in New England as a result of the strike which began several weeks ago in cotton goods mills in Rhode Island and New Hampshire, and in Lowell, Mass., and recently spread to Lawrence, Mass., on the announcement of a 20 per cent. wage reduction by mills there, including some that produce woollen and worsted goods. Reliable estimates show that the lost production to date closely approximates 80,000,000 yards, and that the loss is being increased daily by more than 2,300,000 yards. Repeated efforts by State authorities to bring about arbitration have failed, and although the United States Department of Labour is attempting mediation, nothing has thus far transpired to indicate that such overtures will meet with any success. The effect of the vast curtailment of production is beginning to be felt in a number of directions, not so much in printcloths and other unfinished cottons as in finished goods, notably gingham, which had been extensively ordered for the fall season. One of the largest producers of the latter, whose plant in New Hampshire has been shut down on account of the strike, has been obliged to cancel one-third of the orders on its books which called for April and May deliveries, and there is every likelihood that further cancellations will be announced by that company and other manufacturers if the strike continues. In that event, it seems inevitable that buyers will sooner or later experience increasing difficulty in obtaining well-known, popular-priced brands of gingham, which have been, and continue to be, in great demand throughout the country. Merchants may be forced to turn to other and similar cotton goods, such as percales, which have been moving slowly, and the production of which has not thus far been affected to any extent by the strike. The heavy loss in the output of printcloths has not yet produced much effect in the primary market, but it will undoubtedly become an important factor eventually.

The nation-wide coal strike that began on April 1 involves approximately 450,000 bituminous miners in the United States and Canada, and 150,000 anthracite miners in north-eastern Pennsylvania, the total, including some non-union miners who are expected to join the walk-out, amounting to more than 600,000 men. The soft coal miners are demanding a continuance of their present wage scale, a 6-hour day, working 5 days a week, and the "check-off"; while the operators demand wage reductions of 20 to 40 per cent., abolition of the "check-off," and State agree-

ments. Anthracite miners, on the other hand, are striking for a 20 per cent. increase in pay for contract men, \$1 a day increase for day men, the "check-off," and an 8-hour day for all employees. The operators are seeking a lowering of wages, in order to reduce coal prices. Little information is available as to the total stocks of anthracite on hand, and such figures as are given are indefinite. In view of the large production during the past three months, however, it is believed that supplies are fairly large; but some estimates place the supply as only sufficient for six or seven weeks. Naturally, the approach of mild weather will serve to reduce household consumption materially. It seems to be the general impression that there is at least two months' supply of soft coal; railroads, industries and public utilities are known to have rather large reserves. According to the geological survey, the total quantity of bituminous coal in the hands of commercial consumers on March 1, 1922, was about 52,500,000 net tons, and it is estimated that this amount was increased to at least 63,000,000 tons by April 1, or about equal to the total at the end of the war. The weekly consumption in 1921 is said to have approximated 8,000,000 tons. Just what industrial needs will be during the next few months it would be difficult to state, since some lines, notably the iron and steel trades, are showing increasing activity, while textile trades have lately been slowing down owing to strikes. It should be remembered, however, that many textile plants have installed oil burners and therefore are not dependent upon coal. How long the coal strike will last is, of course, problematical; but, as *Bradstreet's* remarks, "a long-drawn-out, but in the end an unsuccessful, fight by the miners against the inexorable logic of events is apparently the most widely entertained view." That will apply also to the textile strike in New England.

In financial markets perhaps the most important development of the past week, or at least the one that attracted most attention, was the really enormous demand from investors for bonds, both old and new issues. The outstanding feature, in point of activity and strength, was the heavy and persistent buying of United States Government war obligations, particularly Liberty loan bonds, a number of which established new high records for the year as the result of gains ranging from $\frac{1}{2}$ to nearly 1 point. The Fourth Liberty $4\frac{1}{2}$ per cent., to mention one issue, moved up to 99.40, as compared with their low price of 82, reached in May, 1920. It will be of interest to note also that many foreign government bonds have shared in the sharp upturn of recent weeks, and have made a very substantial recovery from their lowest levels of 1920. During that period, the United Kingdom $5\frac{1}{2}$ per cent. of 1937, for instance, have advanced more than 17 points; while Canadian $5\frac{1}{2}$ per cent. of 1929 have risen over 12 points. Many domestic railroad and industrial bonds, also, during the past week passed their best previous prices for this year, which in most cases meant the highest levels touched since the latter part of 1918, or the first half of 1919. The continued broad and vigorous investment demand from both individuals and institutions is attributed to the easier conditions in the money market, and expectations of further relaxation, with a possible early lowering of Federal Reserve Bank rediscount rates in eastern districts. In some quarters the action of the Atlanta and Chicago Federal Reserve banks last week in cutting down their rates from 5 to $4\frac{1}{2}$ per cent. is regarded as foreshadowing reductions at other central reserve points. Seven of the 12 Federal Reserve institutions now have a $4\frac{1}{2}$ per cent. re-discount rate, the others still maintaining a 5 per cent. rate.

The flotation of new securities continues on an unusually large scale. Last week's offerings alone exceeded \$82,000,000, consisting of about \$19,000,000 State, municipal and county bonds, \$22,500,000 industrial, \$19,000,000 railroad, an equal amount of public utility, and \$2,000,000 farm loan bonds. All were readily absorbed. No new foreign issues have been placed here lately with the exception of 66,000,000 marks of the City of Elberfeld 5 per cent. municipal bonds of 1922, which are now being offered by Farson, Son and Co. to American investors. This is said to be the first offering

of German municipal bonds in this country. After April 1, 1932, the bonds are redeemable by annual drawings of at least 2 per cent., with a total redemption in 30 years. It is understood that the proceeds of the issue are to be used for municipal improvements. To protect investors in the event of any change in the financial system of Germany, the bankers handling the issue announce that the bond's indenture provides that "the payment of interest and principal of the bonds shall be made in the legal mark currency, or at the official rate of exchange and accounting in any new currency which might exist at the time of payment, against surrender of the respective coupon and bonds at the main paying station of the City of Elberfeld."

GERMANY.—GENOA CONFERENCE—FINANCES— EXCHANGE AND BOURSE—INDUSTRY—FOREIGN TRADE—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, April 8.

THE Genoa Conference continues to be the subject of some unfriendly newspaper criticism; but, in spite of the exclusion from the programme of the Peace Treaties and of Reparations, business circles hold that good may come out of the ventilation of connected questions. Doubt is felt as to whether the Conference can decide on any measures which will be effective and at the same time binding on the participating countries; and it is not believed that any organisation of international credit, whether with the aim of stabilising exchanges or, what is much the same question, compounding international debts, can be achieved without the participation of the United States. Regulation of the exchanges, of which the German is the most important, cannot, it is declared, take place until the Reparations, which mainly determine Germany's foreign payment balance, are settled.

German expert opinion is that the importance of the exchanges has been over-emphasised, or at least that this question has been put in the wrong order as a cause of the decline or non-revival of international trade. Experience here is that the unstable exchanges do indeed raise great technical difficulties in the conclusion of foreign deals; but that they are not the cause of the present bad condition of trade but the result. The lowest European exchanges are the most violently unstable; and here the lowness has been reached by the perfectly normal process of heavy passive payment balances, due to insufficient exporting to pay for imports and also (in Germany's case) for Reparations. In 1919 and 1920, the very high exchanges of the former neutral countries were brought down by the fact that these countries, denuded of food-stuffs and foreign raw materials during the war, had to import heavily, while for their particular exports there was a very small demand, and also by the fact that for long the gold prices of imports—in particular coal—were far higher than those of exports. Last year this process was in some measure corrected, because there was a heavy drop both in the volume of imports and in their gold prices. The cause of bad trade in general is here seen to be the diminished purchasing power of Europe owing to the war. The products, largely manufactured, which European countries formerly exported cannot be bought in the same measure as before the war; while the countries whose exports have for this reason declined cannot reduce their imports beyond a certain point, because these largely consist of absolute necessities. Import surpluses, sending down exchanges, are the result. Germans who so diagnose the situation do not expect any speedy recovery as a result of possible (but it is held not probable) exchange regulation measures. They hold that only long years of intense production and saving will restore the balance, and will so gradually re-establish stability in the exchanges, naturally at much reduced gold values, at least for the present low-exchange countries.

The "mantle Bill," by which the Forced Loan and the sixteen new taxation Bills together become law, has passed the Reichstag. The main changes from Dr Wirth's original programme are: The tax on post-war increment of wealth is abandoned; the Sales Tax, sug-

gested at 3, then at $2\frac{1}{2}$, per cent. on all turnovers, is reduced to 2 per cent.; and the Coal Tax is 40 per cent. on selling price, instead of 50 per cent. The 15 years' supplement to the new permanent Property Tax, by which the loss caused by abandoning the Emergency Levy is to be recouped, has been reduced to 100, 150 or 200 per cent. according to the value of the taxed property. The Eight Hours Day ordinance, which expired on March 31st, and several other temporary measures taken during the Revolution, have been provisionally prolonged. The Bill, already under consideration for some months, putting eight hours on a permanent legal basis has not yet become law. The Syndicus of the Chamber of Commerce of Minden, Dr Hoffmann, has published a book on the effect of eight hours on production. His conclusions in general are that no increased intensity of labour has taken place to compensate for the shortened working hours; he puts the decline in the national production due to shortened hours only (independently of other causes) at 15 per cent., and thinks that the minimum annual loss is $3\frac{1}{2}$ milliard gold marks—which figure exactly agrees with the original estimate of the annual cost of the Reparations fixed in the London Ultimatum programme.

The financial year, 1921-22, ending March 31st, shows the following results, it being noted that "general administration" includes the items booked in the new Budget, 1922-23, as "for execution of the Peace Treaty." Less than half the expenditure was covered by taxation:—

REVENUE.		Paper Marks.
Taxation	82,559,600,000	
Floating Debt increase	105,605,900,000	
Funded	126,300,000	
	188,291,800,000	
EXPENDITURE.		
General Administration	155,105,300,000	
Service of Debt	20,399,200,000	
Subsidies	12,787,100,000	
	188,291,600,000	

At the beginning of the past financial year, the floating debt of discounted Treasury bills totalled 165,346,187,000 marks; at the close the total was 271,935,165,300 marks, or with other short-term payment obligations 281,148,655,416 marks. In the last week of the financial year, as shown in the Reichsbank's statement for August 31st, the bank's holding of discounted Treasury bills increased by 14,470,663,000 marks to a total of 146,531,247,000 marks, both the increase and the total constituting new records; and in the same week note circulation increased by 7,767,814,000 marks to 130,671,352,000 marks. The total increase in circulation, including newly issued "Kassenscheine," was 3,496,500,000 marks, also a record. A small part of the bank's gold (the statement does not say how much) has been transferred to the Bank of England to serve as security for short-term advances; but until the advances are made, this gold, in accord with the law of last month, will continue to be booked as part of the metal reserve.

The main cause of the extraordinary pressure for credit is the usual demand for money for quarterly settlements. But in general money is getting tighter; the price rise causes an ever-increasing demand for working capital; and bank interest rates for advances have gone up. The Bourse this week was undecided and inclined to weakness, until yesterday, when outside speculators re-entered the field under the stimulus of favourable industrial reports and rumours of new capitalisation transactions. Mining, metal and potash papers were in demand; also, on the annual report of the United Mortgage Banks, land and building stocks. Federal Threes, after reaching a high point on the 5th of 153.50, on continued foreign buying, dropped yesterday to 141.60. War Loan was 77.50, Federal 4 per cent. 97.20, $3\frac{1}{2}$ per cent. 90.40, Colonial 4 per cent. 108, Savings and Premium Loan 81.30, Prussian 4 per cent. Consols 88.50, 3 per cent. Consols 66.90, Bavarian 4 per cent. 81.50, Hamburg 3 per cent. Staats-Rente 75, Berlin 4 per cent. (1904) 92.50.

The Prussian Trade Ministry's report on industry in March is almost uniformly good; but the only cause of this prosperity was the mark's continuing depreciation

at home and abroad. The iron industry has been somewhat hampered by transport difficulties, and successful Belgian competition is complained of; but the home market absorbs all the heavy iron and steel that it can get, and scarcity prevails. The boom in the small iron and hardware branches continues; large foreign orders for steel goods were given at Leipzig; the Berlin engineering trade reports great activity, and the Westphalian works in this branch are well occupied, but are hampered by insufficiency of materials. There is an active demand for light and middle weight locomotives; but a bad market for railway trucks. The shipyards report having sufficient foreign orders. The electrical branch is actively engaged, the demand for motors, transformers, installation material and meters being great, also for cables and wire; but for electrical railway and tram material there is hardly any demand. Textiles concerns report having orders for months ahead; all available cloth has been bought up, and already big orders have been given for next winter. Weaving firms are refusing to quote fixed prices, and they demand part payment in advance. The silk trade is flourishing; and leather and footwear active. Conditions in the chemical trades are described as satisfactory. The glass industry reports shortness of soda and fuel; and Belgian and Czech competition is reported; but home and foreign selling remains good. The pottery works are fully occupied; the demand for paper has increased; and in spite of shortage of fuel the rubber industry is abundantly occupied. The number of persons registered at the Sick Insurance Bureaux as employed increased in March. The live-stock census of December 1st last has yielded the following results, the figures for 1913 being for the present area of the Republic:—

	1913.	1921.
Horses	3,835,893	3,683,343
Horned cattle	18,570,591	16,839,559
Pigs	22,668,789	15,875,636
Sheep	4,988,953	5,882,272
Goats	3,197,275	4,337,299

The Foreign Trade report for February shows a new—the third successive—export surplus. Imports were 1,475,180 metric tons, of value 12,047,311,000 marks; exports 1,747,282 metric tons, of value 14,539,593,000 marks. The value of exports has been almost exactly the same in the last three months; but the value of imports has continued to decline, despite the mark exchange fall, the reason being a very sharp fall off in the quantity of imported food, minerals and base metals. Machinery and chemicals excepted, February shows a decline as against January in quantity of all important exports; in February 255,000 tons of chemicals were exported, against 226,470 tons in January and 200,600 tons in December. Value totals, since foreign trade statistics were resumed in May, 1921, are:—

MILLIONS OF PAPER M.		
	Imports.	Exports.
May, 1921	5,487	4,558
June "	6,410	5,433

February "	12,047	14,540

The rapid rise in prices of breadstuffs came to an end this week, quotations dropping slightly as a result of the

undecided mark exchange; and the price of the 2,000-gramme loaf in Berlin has been raised to 15.20 marks, on better reports of American crops. Home crop prospects are not favourable. Winter crops are described as mediocre. As against 57 per cent. last year, 34 per cent. of reports state winter crops to be good, 52 per cent. against 34 per cent. as middling, and 14 per cent. against 9 per cent. as bad. The condition of rye is considerably better than last year. Spring sowing is late. The potato crop promises better than last year.

DENMARK.—LOOK-OUT—PRICES—BANKING.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, April 3.

The big lock-out, which was referred to in a previous report, has not yet been settled. A further and very considerable extension of the conflict has been spoken of, and the trade situation as a whole has, of course, been strongly affected by these conditions. It should, however, be mentioned that the situation has developed quietly, and the serious labour conflict has not given rise to disturbances of any importance. *Finanstidendes'* last price index has risen 5 points to 182. Coal, petroleum, foodstuffs and other goods, which were affected by the ice difficulties in February, show the principal increases. On the other hand, prices for meat, butter and eggs have fallen. It must, moreover, be mentioned that the quotations for butter have just lately again indicated an upward tendency, and that agriculture is looking to the English market with greater reliance now that the import of colonial butter has decreased.

Considerable interest has been aroused in the numerous balance-sheets and reports which have appeared from the leading Danish trading companies, including the banks. The largest bank in the country, Den Danske Landmandsbank in 1921 made a total profit of 64.5 million kroner, in which is included 16.9 million kroner brought forward from last year. From this total amount must be deducted about 14 million kroner for expenses. The sum of 25.8 million kroner is employed in writing off for depreciation, and taxes amount to 3.3 million kroner. Of the remainder, 21.3 million kroner, a dividend of 10 per cent. is paid to shareholders. After transfers to the reserves and payments of statutory tantième the bank carries forward 9.6 million kroner to new account.

In spite of the unavoidable losses which unfavourable conditions have caused, Handelsbanken, whose share capital is 50 million kroner, has also had a satisfactory 1921 result. The net balance is 8.2 million kroner, to which must be added 7.8 million kroner brought forward. The dividend to shareholders is 10 per cent., and by further allotments to the reserves these are increased to 29 million kroner. Furthermore, 8.2 million kroner are brought forward to this year's balance-sheet.

The Privatbanken's accounts show a balance of 16.2 million kroner, including 5 million kroner brought forward. Shareholders in this instance also get 10 per cent. in dividend and about 1½ million kroner are placed to the reserve fund, while 6.9 million are carried forward. The bank's share capital is 60 million kroner, and the reserves now amount to 21½ million.

The 27th of March marked the day when the Danish East Asiatic Company, Limited, with its world-wide activities, commenced its operations 25 years ago. The company's balance-sheet and report, which includes a concise survey of the company's activities since 1897, has under these circumstances been received with all the more interest. The company is working at the moment on a share capital of 50 million kroner (originally 2 million), against which there is a reserve fund of 62½ million kroner, or 125 per cent. of the share capital. In 1921 the East Asiatic Company's total income was 45.6 million kroner, from which must be deducted 24.3 million kroner for staff and administrative expenses for the head office, branches and agencies, also 3.1 million kroner for depreciation. The net profits are therefore 18.2 million, and shareholders obtain a dividend of 20 per cent.

The United Shipping Company (Det Forenede Dampskibs-Selskab) has also published its 1921 report. The company, which is well known in England, had a total gross income from ships of 80.3 million kroner last year. After deducting all expenses, there is a balance of 12.4 million kroner from which a dividend of 10 per cent. is paid to shareholders. Apart from lighters, barges, &c., the company's fleet amounts to 201,589 B.R. tons, which are entered in the accounts at a total value of about 57 million kroner.

GREECE.—NATIONAL BANKS' MEETING—GOVERNOR'S REPORT—NEW TAXES.

(FROM OUR CORRESPONDENT.)

ATHENS, March 30.

At the annual meeting of the shareholders of the National Bank of Greece, held on March 25th, the governor, Mr D. Maximos, praised the economic staying-power of Greece, which participated in the European war with its own financial means, the only assistance obtained from abroad consisting in a quantity of war material furnished to Greece by the Allies up to the Armistice. Greece placed in the field for the Asia Minor campaign an army of 200,000 men, at a distance of hundreds of kilometres from its military bases. During that time the economic machine worked normally. The tables submitted to the meeting show that at the end of 1921 the public debt of Greece amounted to 1,491 million francs and 4,372 million drachmæ. The *per capita* proportion of public debt is £42 for Greece, as against £56 for Bulgaria, £67 for Roumania, £115 for Italy, £165 for the United Kingdom, and £286 for France. It is worthy of notice that nearly 50 per cent. of the public debt in gold, the service of which is effected by the International Financial Commission, is nationalised. The circulation of banknotes per head of population is larger than in the United Kingdom, but much smaller than in France, Italy, Roumania, and Bulgaria. The *per capita* taxation, direct and indirect, is much less than in the United Kingdom, France, Italy, Roumania, and Yugoslavia. Foreign trade for the last year shows a remarkable improvement. Despite the continued war, imports have decreased by 21.46 per cent., whereas exports have increased by 23.02 per cent. Remittances during 1921 from Greeks residing abroad through the National Bank of Greece only amount to 830 million drachmæ. The Bankers' Consortium, which had during the second half of 1921 a monopoly in foreign dealings, bought during that period £17 millions, of which sum it has disposed for the needs of the country. Agriculture is making progress, and agrarian credit, under the leadership of the National Bank of Greece, is being spread all over the country. From the data available, it is deduced that in a few years Greece will be self-sufficient. The bank's business increased considerably during the past year. The bank granted every possible assistance to the State. This has been rendered possible by the ample funds disposable by the bank. Deposits with the National Bank of Greece increased to Dr. 1,700 millions in 1921 from Dr. 1,200 millions at the end of 1920. On the other hand, deposits with the remaining banks reached Dr. 1,416 millions at the end of 1921, as against Dr. 1,100 millions on December 31, 1920. The profits realised during the year have been exceptionally large. During that period it has been added to the reserve funds of the bank the sum of Dr. 85 millions. The total of the capital and reserves of the bank amounts now to Dr. 155 millions. Finally, Mr Maximos laid stress on the fact that though Greece had been conducting during the period under review the Asia Minor campaign, which required from the country the greatest sacrifices, the economic machine has worked without any accident. Greece has displayed an economic staying-power which inspires an absolute confidence in the future.

The Minister of Finance deposited in the National Assembly a Bill providing for the payment of Custom duties—assessed in gold—at the current rate of exchange on London. At the present rates of exchange this means an increase of 60 per cent. over the rates hitherto charged. The Bill entered into force immediately upon its deposit in the Assembly. Moreover, it is expected that during the

present session of the Assembly a number of bills will be passed imposing new and considerable taxes for the purpose of increasing the public revenue. This was inevitable in view of the heavy expenditure incurred by the continuation of the war and of the fact that taxation in Greece is very slight in comparison with the other ex-belligerent countries.

CANADA.—THE FEDERAL ESTIMATES FOR 1922-23—RUMOURED TARIFF CHANGES—RAILWAY PROBLEMS—BUSINESS CONDITIONS—THE MERCHANTS' BANK.

(FROM OUR CORRESPONDENT.)

OTTAWA, March 25.

THE estimates for the financial year 1922-23 were tabled on March 24th, and show a substantial reduction from last year. They call for an expenditure of \$466,983,359, which is a decrease of \$138,452,291. However, over 100 millions of the decrease is accounted for by a much smaller capital expenditure on schemes for the benefit of ex-soldiers, and by the enormous diminution of the special vote inserted in last year's estimates to provide for the refunding of maturing railway obligations. Otherwise the reductions are meagre, and while Mr Fielding has done his best, the Departments have been very successful in their resistance to economies; in fact, there are increases in 16 items, and the general impression is that promises of economy have been very sparingly fulfilled. Mr Fielding will ask next week for an interim vote of supply to provide funds until the Budget is passed; the latter is not expected before the third week in April.

It is difficult to see how new taxation of some sort can be avoided, as the expenditure which should be paid out of current revenue is not materially less, and the revenue available from the existing taxation will certainly be much smaller. The Speech from the Throne foreshadowed some tariff changes, and the impression here is that Mr Fielding, with a view to conciliating the Progressives, will propose slight reductions of the duties on farm implements, on machinery used for productive purposes in mines and fisheries, on boots and shoes, and on certain articles of food. The reductions will be accompanied by a promise of an investigation with a view to a more thorough revision immediately after the House prorogues.

The promised statement by the new Minister of Railways is eagerly awaited. It is believed that the Government do not intend to consolidate the Grand Trunk with the rest of the national system. Their excuse will be a desire to avoid the risk of international complications which might possibly arise if they attempted to run a railway in American territory. But during the debate on the Address both the Progressives and the Conservatives, who between them control a majority of the House, strongly advocated immediate consolidation, and they may combine to force it. It is rumoured in Ottawa that a powerful syndicate in which American capital is interested have made overtures to the Government about buying the Grand Trunk, but the negotiations are still in an inchoate stage.

Just as the pulp and paper industry is beginning to recover from the slump of the last two years, there comes information from Washington that the Senate Finance Committee are likely to yield to the demands of the American pulp manufacturers for a duty of 10 per cent. on imports into the United States of every kind of wood-pulp. Such legislation would be a very heavy blow to the Canadian pulp and paper industry, which is dependent to a great extent on the United States market. There is a hope here that the newspaper publishers of the United States will combine to defeat a proposal which would leave them at the mercy of local manufacturers. However, there is also a suspicion that the proposed duty is another move in the campaign which certain powerful American interests have been carrying on for the removal of the restrictions placed by certain provincial authorities in Canada upon the export of pulpwood cut upon Crown lands. Two years ago a movement was initiated at Washington to prohibit the export to Canada of coal,

THE MERCANTILE BANK OF INDIA, LTD.

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

sulphur, and other raw materials which she needs unless the fullest freedom of export for Canadian pulpwood was accorded; but President Wilson vetoed the manoeuvre. One possible effect of a 10 per cent. duty on Canadian pulp would be to enlist the American newspapers on the side of a general reciprocity treaty, and to ensure for it likewise the support of influential interests in Canada.

The suggestions made in some British papers that the Grand Trunk shareholders are likely to receive some generous compensation from the new Federal Government are merely raising false hopes. People who make them simply do not realise the financial and political situation in Canada. It may be that certain Canadian financiers are pressing the King Government to offer some consolatory compensation, but the great mass of the Canadian people will be very hard to persuade that the Grand Trunk Railway, taking all the facts into consideration, did not receive generous treatment. In the coming financial year there will be only a meagre sum available for the numerous public works for which supporters of the Government are clamouring, and any proposal to divert funds for a charitable gift to Grand Trunk shareholders would arouse a revolt within the Liberal party. It is therefore very unfair to foster the delusion among Grand Trunk shareholders that the King Government are going to risk their political lives on their behalf.

The Federal Government has been compelled by pressure of public opinion to deal with the Merchants' Bank case, and proceedings are now being taken in Montreal at the instigation of the Department of Finance against Sir Montagu Allan, the president, and Mr D. C. Macarow, the general manager. The charge against the former is that he "falsely and negligently concurred in the preparation of the October financial statement made by the Merchants' Bank to the Department of Finance," and against the latter that "he falsely and wilfully made a deceptive return to the Federal Government on the bank's standing." Both defendants have pleaded not guilty. Speaking in the House of Commons on the subject, Mr Fielding evinced a desire to avoid a general Parliamentary inquiry into the affair, but many members are quite convinced that it is of sufficient importance to be thrashed out thoroughly before a Parliamentary Committee, and public opinion is restless upon the whole banking situation.

Despite the prosecution of Sir Montagu Allan and Mr Macarow, the Finance Department has given final approval to the absorption of the Merchants' Bank in the Bank of Montreal. As a result, Bank of Montreal stock has risen to 220, or 3½ points above the highest of 1921. For every two shares of the Merchants' stock, there is being given in exchange one share of Montreal stock and \$10 cash.

General reports on business conditions show a slowly improving sentiment in many localities, particularly in the Prairie Provinces, where the rise in prices for agricultural products, now checked for the moment, has generated a real note of optimism. But there is no indication that any real revival of prosperity can be hoped for till another crop is harvested, and meantime the readjustment of economic factors must continue. What promised to be a very early spring in Eastern Canada has been checked by a cold snap, which has had an adverse effect upon the market for seasonal goods. The stock markets are still very unsettled, and there are very serious labour troubles in the Cape Breton area, which will affect the fortunes of the British Empire Steel Corporation unless they are settled.

AUSTRALIA.—BANK RETURNS—GOVERNMENT RAILWAYS—TRADE IN 1921.

(FROM OUR CORRESPONDENT.)

MELBOURNE, February 23.

THE leading totals of the quarterly average banking returns to December 31, 1921 (not including the Commonwealth Bank of Australia), of liabilities and assets within Australia and New Zealand, compare with those for the previous quarter and the corresponding period of 1920 as follows:—

	December Quarter, 1920.	September Quarter, 1921.	December Quarter, 1921.
Deposits—			
Not bearing interest	£ 141,606,939	£ 128,416,680	£ 124,770,821
Bearing interest	128,738,584	131,581,848	128,316,369
Total deposits	270,345,523	259,998,528	253,087,190
Advances (including Government securities)	253,875,577	241,168,970	236,439,975
Cash items	27,435,184	27,559,664	27,521,008
Gold and bullion	28,020,849	27,955,160	25,978,540
Australian notes			
Legal tender notes of other banks (N. Zealand only)	1,008,656	643,773	912,619
Total cash	56,464,689	56,158,597	54,412,167

Deposits have decreased by £17,258,333 during the year, the decrease in Australia alone being £6,014,689, and in New Zealand £11,243,644. Part of the decrease has been due to the remittances made from Australia during last year of moneys in payment for imported goods, which moneys had had to remain here for a time when the exchange difficulty was experienced, bank deposits in Australia being thus maintained rather higher than would have been the case if the money could have been remitted promptly. Apart from this cause, there has been a tendency for deposits to shrink from the maximum point reached about the middle of 1920, the shrinkage being in current accounts, but fixed deposits showing a slight increase. The decrease in advances during the year has been largely the result of the reduction in traders' overdrafts as stocks of merchandise have been in process of realisation after the over-importation of a year ago.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the above table, compare as follows:—

	December Quarter, 1920.	September Quarter, 1921.	December Quarter, 1921.
Deposits—			
Not bearing interest	£ 14,205,502	£ 16,588,230	£ 15,425,621
Bearing interest	11,315,972	12,486,109	9,826,265
Savings Bank deposits	25,521,474	29,074,339	25,251,886
Discounts, loans, &c.	22,565,971	36,587,445	35,983,860
Government and municipal securities	16,281,439	13,678,539	14,652,186
Cash and bullion	21,781,067	33,575,297	34,537,456
Australian notes	1,703,759	1,718,611	1,955,451
Total	2,417,433	6,271,218	5,836,209

The increase in Savings Bank deposits of the Commonwealth Bank is principally due to the taking over of the Queensland State Savings Bank about the end of 1920.

Stocks of coin and bullion in Australia and New Zealand held by the ordinary banks for the December quarter, 1921, amount to £27,521,008, and by the Commonwealth Bank £1,955,451. Adding £23,600,000 for the gold reserve held in the issue department of the Commonwealth Bank against the note issue, the total is £53,076,459, against £52,538,943 for the December quarter 1920.

The Government railways in the six Australian States, together with the Commonwealth Government railways and those of New Zealand, showed a loss of £4,926,369 for the financial year 1920-21, after providing for interest

on railway debt, £11,878,757. The totals compare with those for the two previous years as follows:—

	1918-19.	1919-20.	1920-21.
Gross revenue	£ 30,221,989	£ 37,770,452	£ 42,743,932
Working expenses	22,478,317	29,030,148	35,791,544
Net revenue	7,743,672	8,740,304	6,952,388
Interest	10,661,531	11,368,903	11,878,757
Deficit	2,917,859	2,628,599	4,926,369

The gross revenue of £42,743,932 for 1920-21 is much the largest, and the final deficit is much the worst on record. Gross revenue has increased partly on account of increases from time to time in freights and fares, but against this has been the rapid increase in wages and other expenses.

The figures for 1920-21 are summarised as follows:—

	Gross Revenue.	Working Expenses.	Interest.	Deficit.
Victoria	£ 9,694,264	£ 8,021,146	£ 2,409,674	£ 736,556
New South Wales	14,267,205	11,032,677	3,811,560	577,032
Queensland	5,279,412	5,048,498	1,970,389	1,739,475
South Australia	2,942,028	2,655,465	847,867	561,304
Western Australia	2,720,032	2,422,004	716,398	418,370
Tasmania	600,045	476,187	205,765	81,907
Commonwealth Govt.	332,415	498,966	288,648	455,199
Total Australia ..	35,835,401	30,154,943	10,250,301	4,569,843
New Zealand	6,908,531	5,636,601	1,628,458	356,526
Grand total	42,743,932	35,791,544	11,878,757	4,926,369

Australian trade during 1921, according to totals unofficially compiled from the monthly official returns, compares with that for the previous year as follows:—

	1920.	1921.	Decrease.
Imports—			
Merchandise	£ 147,257,075	£ 119,831,647	£ 27,365,428
Gold	23,718	20,670	3,048
Total imports ..	147,280,793	119,912,317	27,368,476
Exports—			
Merchandise	£ 134,307,517	£ 123,581,500	£ 10,726,017
Gold (inc. premium)	4,240,197	4,098,243	141,954
Total exports ..	138,547,714	127,679,743	10,867,971

The reaction in imports is the effect of the restriction of ordering after the excessive imports towards the end of 1920 and in the early months of 1921. The imports for the first four months of 1921 showed an increase of about 20½ millions, as compared with the corresponding period of 1920, but in the following eight months a decrease of about 48 millions took place, leaving a net decrease of over 27 millions for the year, as above.

At present imports are still on a relatively moderate scale. Exports are being made steadily, and during the first half of 1922 wool should supply a good volume of bills on London, especially as merino wool has hitherto been realising high prices, while there are indications of a genuine improvement in the demand for crossbreds. Wheat and butter shipments are now going forward freely, but as prices are much lower than a year ago, these two articles mean less value in the aggregate. Between the steady flow of exports, the diminution of imports, and the amount of public borrowings in London to set against the annual interest to be remitted from Australia, there has been an improvement in exchange on London, and rates have eased correspondingly.

ARGENTINA.—PRESIDENTIAL CAMPAIGN—LOAN IN NEW YORK—PENSIONS—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, March 20.

OFFICIALLY proposed candidates for the Presidency and Vice-Presidency of Argentina have at last been named by the Union Civica Radical, Drs Marcelo T. de Alvear and Elpidio Gonzalez being the choice of the party. Other political elements have also announced their candidates. It is clear that Dr Alvear will, unless something unforeseen should occur, be the next Argentine President. He is a cultured and travelled person of liberal tastes and diplomatic reputation, preferring to employ tactful methods of settlement rather than the more abrupt

courses, which have during the last six years been noticeable in Argentina's handling of international questions. Moreover, while a fervent Radical, and as such dear to the fanatic element in what is unquestionably the dominant Argentine party, Dr Alvear, who is at present Ambassador in Paris, is popular in other political circles. Thus the political outlook may be considered promising, though much depends on the choice of the Cabinet, and the ability of the newcomers to deal with the financial and economic difficulties now pressing for urgent consideration.

News of the flotation of a further \$27,000,000 U.S. Argentine loan in New York does but draw attention to these difficulties, inasmuch as the terms are far from satisfactory. The Argentine Government sells its five-year bonds at 95, free of all charges save cost of inscription and printing, the interest yield being 7 per cent. on the face value. Price to public was 99, and within a few hours the amount was over subscribed, with dealings up to par, and a marked enquiry for other Argentine bonds now on the New York market. So far so good, but there is a considerable body of opinion which holds that Argentina's credit is being cheapened by these haphazard calls for ready money, especially when one bears in mind the fact that consolidation must be faced very soon if the position of the treasury is ever to be regularised. It is even alleged that better offers were made on behalf of European financial interests working jointly with New York, money being promised on a 6 per cent. basis for a larger sum and for a longer term than was embodied in the above-mentioned deal. The Government published a full transcript of the negotiations with the lenders, and also particulars of other New York offers which were not as favourable, but no reference was made to European proposals, notwithstanding it was well known that such existed. The proceeds of the new loan are officially said to be needed by the Banco de la Nacion in repayment of a portion of the Government's debts to that institution's funds.

Rightly or wrongly, there is a feeling abroad that under the new régime even the Radical party will adopt a more conservative treatment of the country's financial problems. Meanwhile, great electoral play is made of the social legislation which has been sanctioned during the actual presidential term. Minimum wages, maximum hours, indemnity and accident insurance, and pensions. In the matter of pensions Argentina indeed threatens to run riot; a fact which, in view of her need for further foreign capital investment, may call for modification. Railwaymen, tramwaymen, telegraph and telephone operators, Government and municipal employees, all are now pensionable. The expense falls on their employers, and to a lesser extent on themselves. Hence it will be understood that legislation on these lines is very effective as a means of securing the worker's vote in a country where the general public seldom, if ever, analyse financial matters at any length. Bank employees and journalists are next on turn to be favoured, years of service being computed irrespective of consecutive employment with one concern. Funds are administered by the beneficiaries, with an ex-officio president—in the case of the banks the manager of the Banco de la Nacion—and the general idea is that 30 years' service will entitle a man to retire on 85 per cent. of his final pay, with a maximum of approximately £1,500 a year. Such schemes, while reading well on paper, have yet to be proved efficient in practice. In the case of institutions employing foreign—i.e., non-Argentine—labour the objections are many. To begin with, their men are not permanently stationed in Argentina, and, as a general rule, banks, cable companies, mortgage and insurance concerns, shipping agencies, and, in short, all the chief representatives of foreign capital in the Republic, have definitely constituted and properly guaranteed schemes for pensioning their personnel, based on the natural wish of most men to spend their last days in the land of their birth. With these schemes the Argentine proposals must clash. It is to be hoped that the progress of such measures will be closely followed, and representation, polite but firm, be made in the proper quarter with a view to eliminating such clauses as may be prejudi-

cial to foreign interests, and modifying those in which both Argentine and foreign aspirations may be aided by a little judicious drafting.

Exports of Argentine produce continue to be brisk, and the price for both cereals and pastoral products has improved during the month of March. Wheat, which was at one time over \$14 Arg. paper the 100 kilos, has, however, fallen back a little, and is at present but \$13.50 spot, and there has also been a slight depression in maize prices, now quoted round about \$8.60 for prompt shipment. Linseed is reported largely in the hands of the speculative element. Spot seed is listed in the Buenos Aires futures market at \$20.55 Arg. paper per 100 kilos, with \$21.40 asked for May delivery. Two million tons of wheat and three million tons of maize are said to be the exportable surplus at present calculable, with about 600,000 tons of linseed in sight, which would leave 500,000 tons exportable. In wool and in hides there has been strong interest shown during the past fortnight. Prices for the latter are firmer all round, and exporters say that orders for prime camp hides flow in from both Europe and the States. In wool it looks very much as if Argentina was about to retrieve much more than she ever thought possible from the wreck of the last two years. There are but 11,000,000 kilos in the central warehouses, as against close on 17,000,000 kilos this time last year, and prices for the finest Southern wools are as high as \$16.70 Arg. paper per 10 kilos, coarse crossbreds being \$6.50. Flocks have in many cases been either killed off or neglected to a greater extent than is usual, and it is anticipated that the next clip will be small and poor, thus strengthening prices for those whose animals have been cared for and dipped in a satisfactory manner.

Letters to the Editor.

THE INVESTOR'S DILEMMA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The interesting article in your issue of April 1st suggests a fruitful field of discussion. I give below the yields corresponding to some of the prices you quote, with yields also on recent prices:—

	1890.	Minimum 1890-1913.	1913.	Tax Free Nov.	Highest Yield 1920-1.	Maximum Variation % of Lowest Yield.
Consols	2.7*	2.3	3.4	3.15	4	74
Glasgow 3½%	3.4	2.6	3.5	3.7	4.7	81
G.W.R. 4% deb.	3.1	2.5	4	3.4	4.4	76

* Yield at 2½% was 2.9—allowance has been made for reduction to 2½% after 1903.

Tax in 1913 reduces the net yield by about .2, so that Consols now yield a shade less than in 1913, Glasgow 3½ per cent. yields nearly ½ per cent. more, and G.W.R. 4 per cent. debentures nearly ½ per cent. less. Why? Consols were converted in 1888-9 from 3 per cent. to 2½ till 1903, and 2½ thereafter. The conservative class of

investor pinned his faith to a more or less permanent rise in value of gilt-edged securities; he backed his opinion, too, by continuing to buy Consols at increasing prices for some years after the fall in value of the other items had set in. In the great uncertainty as to the future that must last for some years, we may expect a similar attitude in the same class of investor.

Glasgow 3½ per cent. were held by solid Scotch investors, and were never much on offer. These felt the fall in values least in the period 1890 to 1913, and the rise in 1890-95 was the most ephemeral. There are many similar securities to-day in which the market is quite small, and in which the search for bargains has pushed up prices; such prices will fall most rapidly when selling takes place; the market in these is usually all one way.

G.W.R. 4 per cent. debentures always had a free market, and these showed the widest range of fluctuation in the period 1890-1913. It is noteworthy, however, that in the more serious crisis of 1920, which forced even cautious investors to realise good securities, the G.W.R. debentures stood up better than the Glasgow 3½ per cents. Again, to-day, realising to invest in trade would no doubt knock off the high prices of securities in which there is a free market first, but a crisis would more seriously affect those in which the market is very limited.

The outstanding feature of the present day, as compared with 1913, is the immense increase in the volume of high-class securities; in 1920 these were still largely in the hands of persons who had taken them up in war time with intent to realise as opportunity occurred. The crisis produced heavy selling; a large proportion has since found a more permanent home, at low prices, in the hands of financiers who will retain them till a real revival of trade makes it worth their while to take the risks attending the lure of large profits. The slump of 1920 is thus not likely to be repeated in any circumstances. Apart from the conditions of trade, the present high prices have been very largely brought about by foreign buying, both from the countries which made money out of the war, and now look upon British Government securities as the safest investment, and equally by rich men among the more or less ruined countries of Europe who have been saving what they can from the wreck by similar investments.

Great Britain is in a position to earn more than any other country by carrying out the financial re-organisation necessary for reconstruction of trade in Europe and the East, and it is likely to be a long time before the foreign purchasers of British securities will be tempted to a wholesale reversal of their policy, but sooner or later this must come.

An early general revival of the world's trade is out of the question, and for the moment some further rise in the value of British first-class securities is generally expected, while in the long run a fall seems inevitable. In the interval speculation is likely to cause large fluctuations, and the investor in close touch with the markets, and dealing only in securities which have a free market, will hope to cover the gradual fall in value by taking advantage of the fluctuations to buy and sell.

At the moment the position is largely dominated by War Loan, which is likely to be the first to feel the effects of a revival in British trade; this depends a good deal on conditions in India, China, and Egypt, and the holder of War Loan might do worse than cover by the purchase of a selection of the best securities of these countries which he can buy to yield about 5½ per cent., less tax.

The comparative value of irredeemable securities depends largely on income-tax. At present tax free 4 per cent. War bonds are at about par, and it would take a reduction of 2s in the £1 to bring the yield on 5 per cent. War Loan to the same level. This month's Budget will effect an adjustment of prices based on such an anticipation, but should it be realised it must necessarily involve some further Government borrowing, and he would be an incurable optimist who looked for a further reduction until the general revival of the world's trade materialises.

On that assumption securities redeemable in the next ten years or so should prove quite as good value as irredeemable securities based on the same yields, with the

additional attraction that in most cases they have a better market.

As to what will happen more than ten years hence, let us look back at the figures quoted at the opening of this letter and forbear to prophesy. There will be plenty of opportunities to exchange from securities which have a free market into others in the next ten years.—Yours faithfully,

H. D. C.

THE GOVERNMENT ACCOUNTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Has not the time come when his Majesty's Government might publish returns in a form more suited for public consumption? It takes an expert to find his way through the jumble of heterogeneous figures which takes up a column and a-half of your paper, and which can convey little but bewilderment to the mind of the ordinary man.

Revenue and advances in anticipation of revenue, money in the Treasury, money borrowed by the Government, and money repaid to the Government are all added together to form a grand total, which represents nothing real. All this may be in accordance with Acts of Parliament, and may be of interest to a professional accountant, but to no one else.

Curiously enough, the sum called total revenue does not appear to be quite correct. Dividends in the Suez Canal shares are presumably included in the miscellaneous receipts, but the dividends from the Persian Oil Company are found lower down, sandwiched in between Ways and Means advances and repayments. And at the end there is an item of interest, which appears also to be revenue.

What we, the public, want is a simple, clear statement of (1) the total revenue, (2) the total expenditure, (3) the surplus or deficit, (4) the total funded debt and the amount added or paid off during the period, and (5) the same for the floating debt. All the rest is mere encumbering detail.

No doubt the newspapers could, if they took the trouble, extract this information from the various published statements, but it would be more satisfactory to have it direct from the Government.—Yours faithfully,

A. MITCHELL INNES.

Travellers' Club, April 7th, 1922.

CITY EQUITABLE GROUP.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The failure of the companies in the City Equitable group is not a failure due to the insurance business carried on. The underwriting account would not in itself have brought the company down.

The collapse has been caused by mal-administration of funds. If the same dangerous freedom from control had been ceded to the managing director of almost any business such as a bank or a trust company as was allowed to the head of the group in question, similar disaster would have been equally possible.

Be the legal responsibility of directors what it may, it was within the powers of the other members of the board of this company to have made it impossible for any one man to dissipate the funds. No such preventive steps seem to have been taken; indeed, the opposite policy seems to have been followed, powers being gradually surrendered into one pair of hands.

Attempts to make finer the mesh of the Assurance Companies Act, 1909, will all fail to achieve the object aimed at if there be laxity in the board room. Whatever may be the strictness of the periodical review made of a company's assets, and however great the degree of publicity imposed upon the company when making its annual report, there must always be intervals during which manipulations are possible if the control be all centred in one person, and if that person prove to be unscrupulous.

The board of directors of an insurance company exists just in order to see that control does not pass into one man's hands. If it were not for this function, no small life assurance society would saddle itself with so expensive a body.

If a board ceases to take positive action, relapsing into a negative apathy, there is no hope of safety in an Act of Parliament.—Yours obediently,

"SECRETARY."

London, April 11th, 1922.

REPARATIONS.*

MR ANGAS is a pessimist *pro futuro*; our present troubles are nothing to what they will be if we do not revise our present reparations policy. The thesis is the author's deduction from a series of propositions which may be summed up thus: The indemnity can only be paid in goods and services, directly or indirectly. Thus unemployment is caused in this country, and this unemployment must progressively increase, for the credit policy of banks accentuates the depression even among those industries which are not directly attacked by German goods. To this must be added the further effects of the rate at which the Allies insist on the indemnity being paid. This pressure is causing the German Government to sell marks at prices suited to the speculative demand at a given moment. There arises undervaluation, and consequently "exchange-dumping." Present undervaluation will bring floods of goods into this country as soon as our present slump shows any signs of lifting. But Mr Angas does not believe that there is any obstacle to Germany being able to produce £6,600 millions in the period of time fixed under the London agreement of last year.

Though all forms of indemnity would seem to be bad from the standpoint taken up by the author, yet he is willing that the indemnity should be paid in the shape of capital goods to be furnished to the colonies, and even to foreign countries, for such capital goods would ultimately increase the market for British goods.

The assertion that an indemnity is a bad thing because it causes unemployment needs considerable qualification. It will cause a certain amount of dislocation, but to get something for nothing, even under the capitalist system, may free resources for other purposes. Mr Angas is on much safer ground when he ascribes the exchange muddle to the present Reparations policy, which takes no account of the real capacity of Germany to pay. But though an adverse exchange may improve things for Germany immediately, by transferring sums from speculators to the Allied treasuries, it does not follow that it will in the long run, or that an indemnity is impossible without depreciated exchanges.

The real difficulties of the Reparations problem lie elsewhere: in the reduced capacity to produce goods and services without a return. No doubt Germany could export a gross total of £6,600 millions in 42 years without overmuch difficulty, assuming that prices do not change very much. But that is not the problem. The real problem is to export a surplus of this amount over imports, and to finance it out of taxation. No doubt it is momentarily popular to argue that this is quite easy, but that in self-defence we ought to refuse the gift. But popularity and economic truth are not necessarily the same thing.

* "Reparations: Trade and Foreign Exchange." By L. L. B. Angas P. S. King and Son, Limited. 1922.

A WANDER YEAR.*

THE travels of an acute observer, moving in high places, make interesting reading at any time. Colonel Repington is an acute observer; in the course of the travels described in this volume he met and talked with the men who matter in a large variety of countries, and his experiences took place at a unique period. He is also a fluent writer, and the book would therefore in any case be interesting. But his freedom in recounting private conversations with all and sundry adds a piquancy which may be distasteful to the old-fashioned, but ensures that the average reader will not quickly lay his book aside. London, Paris, Rome, Athens, Prague, Vienna, Budapest, Bucharest, Berlin, Sofia, Coblenz, New York, Washington—it is an itinerary which, at a period when Europe was gasping from the shock of war, and America officially aloof but watching for the opportunity of useful help, could obviously teach unique lessons. Of many of those lessons we get bright glimpses through Colonel Repington's diary, which, though suffering, perhaps, from over-volubility, discloses a broadness of view not popularly attributed to military

* "After the War. 1919 to 1921." A Diary. By Lieut.-Col. C. A. Repington, C.M.G. (London) Constable. 21s.

critics. Thus we find him arguing that "economics lead politics," and that economics are "by far the most pressing matter." The book is full of side-lights upon the shortcomings of the Treaty of Versailles, and equally upon the complexity of the problems that baffled the statesmen, and the general tone is sympathetic treatment of hard facts, whatever country is under discussion. For America and the Americans Colonel Repington has a profound admiration, expressed in unsparing eulogy. Perhaps the most lasting impression on the reader's mind is the contrast between European tangles, mistakes, and suspicions and the bold, straight, effective work of the Washington Conference. Readable through its 470 pages, the book will give future generations an entertaining peep at the chaos into which great wars plunge continents and peoples.

FIDELITY GUARANTEES.*

COMMERCIAL fidelity guarantees, Government bonds and Court bonds are the main topics dealt with by the authors of this book, who have had in view mainly the needs of students and insurance officials. As a manual of instruction in every day routine the work may be commended. Messrs Evans and Jones understand what they are writing about, and give useful information on the actual practice commonly followed, but the severe practicality of their book detracts from its interest. One learns nothing from its pages of the extent to which fidelity guarantees enter into business, for instance, and there are no references to enable the student to follow up any question of detail. Thus, though particular attention is called to the point that, when a payment has to be made under a fidelity guarantee, the defaulter, in addition to the criminal responsibility, is a debtor, against whom civil proceedings may be taken by the guarantor, the book gives no glimpse of the historical setting of this rule. It tells what needs to be known in the rush of the day's work; but, for all one learns here, the rule referred to might have come into existence as inexplicably as Topsy. One recalls some statement in Blackstone that originally the private wrong was legally regarded as swallowed up in the public, and that there was no satisfaction for the individual, but that the freedom to resort to a civil remedy was enlarged in course of time. A bit of history worked into a passing phrase gives a wider view, but too many legal works, even when on a more ambitious scale than this one, are lacking in this respect.

FIRST STEPS IN ECONOMICS AND HISTORY.*

THERE is nothing on the world more difficult than to write a really good elementary text-book, an introduction, to a subject intrinsically hard, for those who are quite unprepared for it. Some very distinguished teachers have realised this, and make a practice, at the Universities and elsewhere, of taking the elementary class themselves, while allowing their assistant to deal with the more advanced students.

Older readers may, some of them, recall a little work by Mrs Henry Fawcett, which they were given by way of cutting their teeth in relation to the study of economics. Those who, nowadays, can begin on Mrs Fisher's "Getting and Spending" are certainly better off. It is interesting that she should have chosen this title, for it recalls vividly the first chapter in Mrs Fawcett's manual, of which what remains in the mind is a sense of the immorality of wasting pieces of string. Even in Mrs Fisher's skilled hands, however, one feels something of the old awkwardness which inevitably occurs when an effort is made, within a very small compass, to turn compact and concentrated technical terms

* "Getting and Spending." By Mrs H. A. L. Fisher. With an introduction by Sir William Ashley.

"Britain as a European Power." By Andrew Browning, M.A.

"XIXth Century Europe." By Professor Raymond Beazley. Collins, New World Series. 3s 6d.

"Industrial and Commercial Geography." By Arthur Radford. Collins. 3s.

back into simple language. The language is apt to get so much simpler than the ideas which it tries to convey. One feels this particularly in her sections on value and price, and on money in relation to wages.

At the same time, it should be said that, on the whole, Mrs Fisher has done her hard task well, and that her little book, thoroughly orthodox in its general outlook, can safely be recommended. Whether it will enable the teacher to meet the sort of questions that will be fired at him in the Adult or Continuation Schools or Study Circles for which it is, in part, designed, is more dubious. A good many of the things that will interest these young learners are left in what they may feel as rather a questionable shape.

In attempting to survey the development of Britain as a world power within the compass of a very small volume, Mr Browning has taken on a task which he admits to be almost impossible; his success is only moderate. In writing a history of Europe and Britain in the nineteenth century, Professor Beazley has, on the other hand, achieved a really interesting and singularly comprehensive statement, enlivened by a genuinely Liberal point of view. The fact that he has an unusually wide and deep knowledge of Russia enables him to give the whole survey a new and exceedingly interesting perspective.

Mr Radford's Industrial and Commercial Geography seems well designed for its purpose; the questions that follow the lessons are excellent. One's strongest feeling, however, in glancing through his survey, is that it is nothing short of a disaster that geography, however considered, should ever be taught except in the closest connection with history.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
April 26.

ACCOUNT.
April 27.

The main interest of the Stock Exchange week lies in the fact of the War Loan having crossed 100 for the first time since it was issued in January, 1917. At the round three figures there were hundreds of selling orders waiting to be executed, and during the clearing-off of these limits—some of them literally years old—the price remained close to the level of 100. Many thousands of people are willing enough to sell the War Loan if they can find something equally good into which to reinvest the money, but the advance in the war stock

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch 188, Fenchurch Street, London, E.C.3.
West End Foreign Branch 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch 49, Castle Street, Liverpool.
Manchester Foreign Branch Corner York St. & Fountain St., Manchester.

has brought about sympathetic appreciation in everything else of the same character. It is difficult to obtain securities which shall meet the demand for good return on the money plus the possibility of improvement in prices. Victory bonds, the Funding Loan, Conversion stock, India Government issues, and Colonials continue in the ascendant. This time last year, it may be recalled, the War Loan stood at 87½.

The Commonwealth Government 5 per cent. stock, offered at 96, looked dear last week, but it was fully subscribed, and the price rose to 15s premium. West Australia has followed with a loan of smaller amount on similar lines, and will no doubt be equally successful. Home Railway prior-charge stocks can scarcely be bought, so pronounced is the scarcity. The demand for investment stocks is absorbing everything of good class in the markets round the Stock Exchange, its effect extending even to what must certainly be deemed second-rate preferred stocks and shares which, six months ago, nobody would look at with any degree of favour.

Foreign Government bonds are mostly harder, and a sharp decline in French railway issues, P.L.M., Midi, Orleans and Nord, was followed by an upward reaction. The Midi and Orleans scrip are still at a slight discount. Chilean, Brazilian, and Argentines are good, with Chinese and Japanese somewhat neglected. Czechoslovaks spurred to 2 premium.

The Home Railway market is hesitating. A good deal of profit-taking on the eve of Easter served to reduce the prices from the best recently touched, but the undertone does not appear to be bad, and any support which comes in after the holiday should not fail to have a favourable influence over prices. Canadian railway investment stocks are better, and Argentines have been buoyant, taking in their train the leading Brazilian railway stocks, which have gone ahead briskly. Nitrate railways are also better, hardening in sympathy with the rises amongst the shares of the producing companies.

Rubber shares are firmer, owing to the produce improving a shade. The oil market remains the centre of the liveliest interest so far as industrials are concerned. Shells and Royal Dutch spurred on a report that the two companies had arrived at some agreement with the Standard Oil of America, but Mexican Eagles have been weak for the greater part of the time, on apprehensions of a new issue, details of which are expected immediately. Phoenix had a frenzied rise to 30s, causing other Roumanians to stiffen in company, but dropped back with a run. In other industrial sections the story is one of uninterrupted progress upwards. Advances are to be noted in textile, shipping, banking, insurance, breweries, iron, coal and steel, armament, stores, cable, trust companies, gas and electric lighting, tramway and industrial shares of every sort and description. All the Mexican utilities are better, rises ranging from 1 to 5 points. This is on the expectation that the long-expected settlement between Mexico and the United States is on the point of being reached. Amongst new issues, premiums are maintained upon most of the recent comers, but, as an exception, it may be mentioned that underwriters of the Whitehall Electric debenture stock were left with 75 per cent. of their obligations, while the preference underwriters got as much as 92 per cent. The prices opened at a discount in each case, but support was soon forthcoming, and the quotations are not far from par.

South Africans fail to make much headway; Diamonds, however, are better. Copper shares are decidedly harder. A general rise in tin mining issues followed Monday's advance in the metal market. Indian shares are quiet; Broken Hills, with Zincs, have hardened, and Burma Corporations rallied.

Business in many markets has been astonishingly active for this week in the year, and the Stock Exchange talks cheaper money as possible in the near, after-Easter, future.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital, £	Cash Subscription, £	First Payment, £	Further Liability, £
ISSUES OF THE WEEK—				
Amount previously recorded	312,178,381			

TREASURY BONDS.

5½% 1929 total receipts	283,752,539

1916	174,231,131	1915	686,236,326	
1915	51,199,436	1914	512,522,633	

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Western Australia 5 per Cent. Inscribed Stock, 1935-1945.—Issue of £2,000,000 at 96 per cent. Interest is payable in London. The principal is repayable at par on June 1, 1945, the Government of Western Australia having the option to redeem the stock at par on or after June 1, 1935, on giving three months' notice. A sinking fund at the rate of ½ per cent. per annum will be provided. The accumulated sinking funds invested in the names of trustees in London, it is stated, now amount to above £8,000,000. The proceeds of this issue will be used for railways, harbours, water supply, "land resumption for closer settlement, agriculture, goldfields, and settling ex-soldiers on land." This is a good trustee security, and when held by people not domiciled in Western Australia, free of the taxes of that State.

International Sleeping Car Company.—Incorporated under Belgian law. This is an offer for sale of £500,000 6 per cent. sterling bonds to bearer of the Compagnie Internationale des Wagons-lits et des Grands Express Européens at 87½ per cent., the proceeds being required mainly to pay for new rolling-stock ordered in England. The company, which is a Belgian undertaking, runs special cars on European railway lines. Principal and interest are payable in sterling in London, free of Belgian taxation. Redemption will be effected by a cumulative sinking fund beginning July 1, 1926, to be applied annually in drawings at par, and calculated to redeem the whole of the bonds by July 1, 1955. The company has the right to redeem at par on and after July 1, 1932, subject to three months' notice. Accounts published show that the bonded obligations of the company already amount to 57,862,500f. This issue will raise the total to approximately 82½ million francs. Gross assets are 222½ million francs, from

which must be deducted sundry liabilities of 40 millions, leaving a surplus of 182½ millions available as security. It should be noticed that no bonds issued by the company carry a preferential charge, and that the new bonds rank *pari passu* with existing bonds. The table of past profits shows that service charges on the bonded issue are well covered, the company having a successful record. The bonds now offered were purchased by the present vendors at 80½, the latter paying issue charges and commission. An industrial holding not without merit, but foreign incorporation, and the possible position of bondholders in the event of a serious decline in the company's prosperity must be considered in relation to the terms offered.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

	Price at Close	Week's Range	Latest Price	Rise or Fall
War 5½% 1925-28	94½	94½-95	94½	+

COMPANY MEETINGS, &c.

BARRY, OSTLER, AND SHEPHERD, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

CURRENT YEAR'S PROSPECTS.

The annual meeting of Barry, Ostler and Shepherd, Limited, was held at Kirkcaldy, on the 11th instant, Mr William Wright, the chairman, presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said: As these have been in your hands for some time, I, with your permission, will take them as read. The year just closed has been one of very general commercial depression, and, in common with other industries, our volume of business was much reduced. With us the falling off had begun to make itself felt in October, 1920, and when our last annual meeting was held we were just at the beginning of the coal strike, which had such a disastrous effect on general trade throughout the country. In spite of the great difficulties we experienced then in getting sufficient supplies of coal to keep our works going, we were only completely shut down for one week, and succeeded in continuing manufacturing operations (although at a reduced rate of production) during the remainder of the strike period. There was also more than usual difficulty in doing business in all our foreign markets owing to the fluctuations in exchange, which adversely affected our sales in these countries.

Considering all the difficulties we had to encounter, we may fairly congratulate ourselves on having before us to-day what I think may be looked upon as a most satisfactory balance-sheet, and this is to some extent due to the conservative valuation of our stocks at January 31, 1921, following the fall in prices of raw materials, a policy which we have adhered to in the year now under review.

PROFITS AND DIVIDEND.

The net profits for the year amount to £149,951 7s 3d. Out of this, with the amount carried forward from last year, the directors could have declared a larger dividend, but I am confident that shareholders will approve the policy of caution we have followed in restricting distribution to 10 per cent., less tax. With the anticipation that we have of adding to our trade in the current year—and our returns since stocktaking show a gratifying increase on last year's figures for the same period—we shall require to husband our cash resources so as to be able to meet the extra demand on them without asking for extra capital.

You will observe that at the date of the balance-sheet we still held £150,000 of 5 per cent. War Loan. This was written down to market value, £127,500 at January 31, 1921, and although the value at the date of our balance-sheet had increased to £139,500, we have not taken credit in our profits for that appreciation.

BALANCE-SHEET ITEMS.

Turning to the figures in the balance-sheet, you will observe on the asset side that our property accounts have increased from £238,965 to £243,947; the item "engines, machinery, working plant, and stocks" shows an increase of £7,164, from £824,802 to £831,966; and the amount at the debit of sundry debtors has gone down from £607,225 to £500,571, due, of course, to the falling off in business and to a reduction in our selling prices, which took place early in January this year; on the other side of the accounts the items of capital remain unchanged, and the amount due to sundry creditors has been reduced from £320,684 to £339,633. As you will see, there is no longer any necessity to include under this heading a liability in respect of excess profits duty.

THE RESERVES.

A feature in the balance-sheet which, I am sure, shareholders will note with much satisfaction is the total now reached by our various reserve funds. The premium account on preference shares is £25,000, the special reserve for preference shares £63,000, special depreciation and contingency funds £225,000—total £313,000; if we add to this the amount available after paying the proposed 10 per cent. dividend, £102,094, we have a total of £415,094, or nearly two-thirds of our ordinary share capital, making our financial position stronger than ever it has been.

COMPANY'S SPLENDID REPUTATION.

Looking at our competitive position in all our markets, and especially the home market, I am glad to say that the reputation of this company for quality and for excellence of design and colouring has never stood higher, both as regards our ordinary standard lines and the special articles to the development of which

in recent years we have devoted much time and attention. For the information of shareholders I may state that our manufactures include, in addition to the ordinary plain and printed goods, the Walton and other makes of inlaid linoleums, as well as several special qualities in the highest grade goods not made by any other manufacturer.

At our works in France, as explained in our report, trade was fairly good during the last few months of the year. This has been continued up to date.

THE FUTURE.

While it is difficult to prophesy with regard to the future, we feel that the worst of the trade depression is past. Orders are showing a large increase over last year's for the same period, and we hope that, although selling prices are lower, increased production, together with lower costs of raw materials, will enable us to have a satisfactory year's trading.

I have again to express my sense of gratitude to my colleagues on the board and to the staff and workers in every department for their cordial support and assistance during a very trying year.

I now have pleasure in formally moving "That the report and balance-sheet be adopted; that a dividend at the rate of 10 per cent., less income-tax, be paid on the ordinary share capital, absorbing £45,500, payable April 20th; and that the balance of £102,094 4s 4d be carried forward, subject to directors' fees."

The report was unanimously adopted.

The retiring directors, Mr William Sutton and Mr Andrew Alison, as also the auditors, Messrs Romanes and Aitchison, C.A., were re-elected, and a sum of £5,000, free of income-tax, was voted as directors' fees.

The proceedings concluded with a vote of thanks to the chairman.

EDISON SWAN ELECTRIC COMPANY, LIMITED.

LAMPWORKS' SPLENDID PROGRESS IN DIFFICULT YEAR.

The thirty-eighth ordinary general meeting of the shareholders of the Edison Swan Electric Company, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, Mr C. Jermyn Ford (the chairman) presiding.

The secretary (Mr R. H. Parker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, having referred to the slump in industry, the unprecedented fall in values, German competition, labour troubles, and excessive taxation, said:—

There is, amid the prevailing gloom, one bright spot, I am glad to say—our lamp works—which has been progressing most satisfactorily. We have, during the last few months, introduced to the public two new types of lamp. One is the "Fullolite," which is an opal lamp designed to obviate all glare, and this has caught on beyond our most sanguine expectations, and doubtless many of you have noticed it. The other is a daylight lamp, constructed of special tinted glass, which gives a daylight effect, and is of great use in all cases where the question of colours comes into play. Considering the slack times we are moving in, our lamp sales have been good, and this branch of the business should largely develop, and we are now thoroughly equipped to deal with it.

LOANS FROM BANKERS.

During the period covered by the accounts loans from bankers have been increased to £223,800, and since the date of the accounts they have been still further increased, and now stand at £313,950, but without our bankers' assistance we should have been placed in a serious position, and the thanks of all interested in the company are due to them for the manner in which they have helped us. We, naturally, had to provide them with security, and it will be within your recollection that a meeting of shareholders was specially called in November last for the purpose of increasing the company's borrowing powers.

You will note from the directors' report that, after providing for the adjustments shown in the accounts, the balance standing to the debit of profit and loss is £344,720, and that the board recommended that the sum of £55,000 now standing to reserve be transferred to profit and loss account, thus reducing the debit balance to £289,720. The board have been asked how they propose to treat this debit balance, and whether they intend to bring forward a reconstruction scheme, embracing a reduction of capital in order to wipe it out. They have given the matter full consideration, and have taken the opportunity of obtaining the views of some of the largest shareholders, and these latter feel that no good purpose would be served by bringing forward any scheme at this juncture, and in this view the board concur.

THE FUTURE.

In the depressing circumstances under which we meet, it is difficult to take anything but a gloomy view of the future, accentuated, as it is, by labour and political unrest, excessive taxation,

and slack trade, and he would indeed be an optimist who could take a reasonably cheerful view of the future. This company, however, has, I am convinced, a marvellous reserve of recuperative strength, centred mainly in its widespread sales organisation, represented by its 26 important depots in the United Kingdom and Australia. The heavy depreciation in our stocks, which we have had to face, after all does not prejudice the company's earning capacity, and I am convinced that with a moderate revival in trade we ought to do fairly well, and the whole crux of the position for this and almost every other industrial concern rests on this revival. The position in which trade finds itself to-day is the inevitable result of post-war deflation, but I think that we may safely assume that the worst is over and that the tide is on the turn.

The board have been unremitting in their efforts to steer the company through the industrial crisis in which it has been involved, and I need hardly tell you have been beset with endless difficulties and anxieties, and, in the position in which the company now finds itself, I beg of you as shareholders to support us, and you may rest assured that no stone will be left unturned to steer this ship into smooth waters, and it will be a great comfort and strength to us to feel that shareholders sympathise with us in our countless troubles and are out to help us.

Replying to expressions of the views of shareholders, the Chairman said it was hardly fair to try to drag out of him some eulogistic prophecy as to what might happen—a prophecy which, for some reasons quite beyond the control of the directors, might not be fulfilled. With the very best intentions, he did not think he could add anything in that connection to what was said in the report.

The motion was carried unanimously, and, the formal business having been transacted, a vote of thanks to the chairman terminated the proceedings.

BRUSH ELECTRICAL ENGINEERING COMPANY, LIMITED.

FURTHER SUBSTANTIAL IMPROVEMENT.

The thirty-third general meeting of the Brush Electrical Engineering Company, Limited, was held, on the 10th inst., at 88 Kingsway, London, Mr E. Garcke (chairman of the company) presiding.

The secretary (Mr F. M. Hodson) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the directors were glad to be able to report a further substantial improvement in the general prosperity of the company. Including the amount brought forward from the previous year, they had a total profit balance of £374,585 to deal with. It was proposed to apply to depreciation of buildings, plant, patents, &c., £15,000, to pay a further 4 per cent. interest on the prior lien participating debenture stock, and to add to the reserve fund £73,190, bringing it up to £150,000, and to pay a dividend on the ordinary shares of 15 per cent. for the year. The cash position was a strong one, and, taking it all together, he thought he might fairly say that the present balance-sheet was the best which the company had issued since its reconstruction 34 years ago.

They were fortunate in entering 1921 with a good order book, so that the trade depression which prevailed so generally during the year did not affect their activities in the same degree as those of many engineering undertakings. All departments of the works were fully employed, and they were concentrating on specialities which to some extent placed them outside the rigours of extreme competition.

At present they had a very substantial amount of work on hand, and with the anticipated revival of business they were justified in looking to the future with confidence, provided that the labour unions recognised the altered circumstances of to-day, and settled down to production under conditions which permitted of successful competition for work both at home and abroad.

On previous occasions he had referred to the development of the company's Brush Ljungstrom turbo-generator plant and had drawn attention to the change which the installation of this plant had brought about in the fortunes of certain electricity supply undertakings. The merits of the design were now generally recognised and evidence of the economies which it effected in steam consumption continued to accumulate.

They were well equipped for securing their fair share of any business offering, not only as regarded tramcars and trucks and motor-bus bodies, but also of railway rolling stock.

The report and accounts were unanimously adopted, and the Chairman announced that the dividend warrants would be posted that evening.

RIO TINTO COMPANY, LIMITED.

CHAIRMAN OPTIMISTIC OF COMPANY'S FUTURE.

The forty-ninth ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 12th instant, at 3 Lombard Street, London, Sir Charles W. Fielding, K.B.E. (the chairman), presiding.

The secretary (Mr J. Gordon Macleod) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that during the strike the demand for sulphuric acid all the world over had greatly fallen off, and, in some cases, brimstone and, in a few other cases, competitive pyrites had secured some of their customers for the time being.

While they expected to have to face somewhat low prices, the proportion of the market which they had already secured was at least as large as in years gone by, and as regarded the aggregate amount of pyrites sales, they believed they would gradually recover their former position. In regard to the demand for copper, and the price for that metal, the situation for all producers had been most unsatisfactory. At the end of the war the accumulation of stocks of copper in the hands of the Allied Governments had been exceedingly large, and consumers were still able to supply a large proportion of their wants from those old stocks. Over the last year or two most of the mines of the world had been closed down at least half the time. The remainder of the old stocks, together with the output of those mines which were able to produce at low cost, was more than sufficient for the world's use at its present rate of consumption. Unless copper became more in demand, and went to a higher figure, very low rates of output must prevail. Of all the large mines their company was able to produce its copper at the lowest cost per ton, and, therefore, while the market price of the metal reduced their dividends, the directors were able to carry on their operations without being too much influenced by the world's copper price.

He had recently returned from Spain, and he could assure them that, except for fluctuations in demand and market price, the company's affairs were in a sound, healthy, and improving condition. There were still several directions in which reduction in costs and improvements in process would be carried out to a not inconsiderable extent. Taxation in Spain, as in England and France, was very high, and the recent imposition of additional import and export taxes in Spain was adding to the weight of the company's burden. They could not expect any very great results from 1922

while the world was in such an unsettled condition, but he had a feeling of moderate optimism in regard to the company's prospects for the following 12 months, and had no doubt as to the ultimate return to dividends, which would compare not unfavourably with those of all but the very highest of pre-war years.

The report and accounts were unanimously adopted.

EGYPTIAN DELTA LAND AND INVESTMENT.—No dividend will be recommended for year to Dec. 31st last.

Reports and Notices.

Mr Alexander H. Dewar has been elected chairman of the Greenwich Inlaid Linoleum Company, Limited, in succession to the late Mr W. G. Rayner.

The directors of the Manchester and Liverpool District Banking Company, Limited, have elected Sir Christopher T. Needham as chairman of the board, in place of the late Sir Edward Tootal Broadhurst, Bart.

Mr Robert William Wilson has resigned the secretaryship, after 50 years of service, and was elected to a seat on the board of directors. Mr F. H. James, M.A., has been appointed secretary.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4d, being the moiety of the fifth fortnightly instalment of the Debt Service, payable to the council in respect of the half-year ending June 30, 1922.

BANKS.

INTERNATIONAL BANKING CORPORATION.—The semi-annual statement of this Corporation, to December 31, 1921, shows that the total assets, taken at exchange \$5 to £, amounted to \$3,164,911. The principal item in the assets is \$3,588,874 (demand loans and advances); bills, remittances, &c., are given as £4,701,303; securities and investments, £1,428,297; time loans and bills discounted, £2,278,283; cash amounts to £2,703,857, and acceptances to £4,922,171. With regard to liabilities, the capital is £1,000,000,

and reserve fund £1,000,000. Reserve for dividends is £120,000, and reserve for taxes, £300,509. Deposits (demand) are £8,050,311, and deposits (time), £5,916,707. Acceptances are £3,015,329, and bills payable, £1,739,620. The undivided profits are £1,084,953.

THE FARMERS' LOAN AND TRUST COMPANY.—Statement of March 10, 1922:—

LIABILITIES.	ASSETS.
Deposits	121,536,810
Accrued interest, &c.	1,995,126
Acceptances	1,474,173

RAILWAYS.

LIMA RAILWAYS.—The report for 1921 shows that the average rate of exchange at which the remittances of the company have been transmitted for the year, on which basis the accounts are prepared, has been 22.95d, as against 30.74d per sol in the previous year. The general results in Peru have been as follows:—

	Receipts in Peru.	Expenses in Peru.	Net Receipts.
	£ s d	£ s d	£ s d
1920	16,943 8 6	3,658 12 2	13,284 16 4
1921	16,301 4 6	2,346 11 10	13,954 12 8
	-642 4 0	-1,312 0 4	+669 16 4

The balance on net revenue account amounts to the sum of £8,048, from which an interim dividend of 1s 8d per share, amounting to £3,333, has been paid already, leaving a disposable balance of £4,715, from which the directors recommend a final dividend of 2s 4d per share, less income-tax, making a distribution for the year of 4s per share.

ASSURANCE.

LICENSES AND GENERAL INSURANCE.—The report for 1921 states net premiums, after deducting re-insurances, were £303,804, increase of £14,062; interest earned yielded £12,913, increase of £1,543; total income, £316,717. Net claims paid £138,025, being 45.4 per cent. of net premium income, and inclusive of provision for all outstanding, £144,205, or 47.4 per cent. of income. Expenses of management absorbed £86,008, being 28.3 per cent. of income, while commission payments amounted to £41,901, or 13.8 per cent. of income, giving combined ratio of 42.1 per cent., against actual ratio of 45.99 per cent. After providing for unexpired risks at 45 per cent., an additional £20,504 reserve for marine (making 79.3 per cent.), £11,069 to depreciation of investments, and £958 to superannuation fund, balance of profit was £24,521. Directors propose dividend of 6 per cent., making 11 per cent., free of tax, for year, carrying forward £17,233. Reserves total £290,016, or 95.4 per cent. of the premium income.

NATIONAL GUARANTEE AND SURETYSHIP.—The premium income for 1921 was £40,368, an increase of £1,116. The total profit for the year, including £4,969 from interest, was £7,272. The directors recommend a dividend at the rate of 10 per cent. per annum, less tax, absorbing £3,500, and leaving £6,585 to be carried forward to the credit of profit and loss.

SCOTTISH PROVIDENT INSTITUTION.—The report for 1921 states that new assurance proposals were received for amounts aggregating £3,125,266 15s, in respect of which 3,389 policies were issued for £2,735,234 15s—whereof £465,000 was reassured with other offices. The net new business completed was thus £2,270,234 15s. The new premiums were £116,483 15s 10d, or after deducting the premiums on sums reassured £92,247 5s 9d, whereof £10,460 10s 7d represented single payments, and £81,786 15s 2d annual premiums. Fifty-nine annuity contracts were granted for £3,196 14s 8d, in respect of which the sum of £23,758 0s 10d was received in single payments, and £330 9s 9d in annual premiums. On the other hand, 133 annuities for £6,589 4s have ceased to be payable by the institution owing to the deaths of the annuitants. The total premium income of the year, minus on re-assurances, was £978,347 11s 10d, while the total receipts, including net interest, were £1,658,947 3s 4d. Endowment assurances for £125,550 13s were paid at maturity. The aggregate amount of the funds amounted at December 31, 1921, to £17,100,919 18s 10d, showing an increase during the year of £419,807 2s 5d. The rate of interest realised was £5 5s 8d per cent., subject to deduction of income-tax.

UNIVERSAL AUTOMOBILE.—The report for last year shows in the general account net premiums of £31,377, claims of £15,644, and an increase in the reserve for unexpired risks from £7,032 to £10,426. In the profit and loss account interest yielded £1,130, the total profits on trading accounts, less tax, £2,038, and the dividends paid amounted to £907. The directors recommend a dividend for 1921 of 10 per cent.

and a bonus of 5 per cent.—the same as for 1920—carrying forward £13,837, as against £12,483 brought forward.

WESLEYAN AND GENERAL.—The total number of policies issued last year in the ordinary and industrial departments was 178,199, assuring £3,255,533. The premium income amounted to £1,450,237, and the gross interest revenue was £198,412, making a total income of £1,648,649, an increase for the year of £100,348. The assurance funds amounted to £4,370,861, showing an increase of £439,786. The general and investments reserves together amounted to £50,000. The valuation disclosed a surplus in each department, the total surplus amounting to £59,576, including £19,798 brought forward from 1920. Of this sum £38,784 is to be divided among the holders of with-profit policies in the ordinary department in the form of a reversionary bonus at the rate of £1 4s for each £100 assured, upon condition that such bonus will become an effective addition to the sum assured as soon as the policy has been two years in force. The balance of the surplus, £20,792, was carried forward.

MISCELLANEOUS.

CANADIAN GENERAL ELECTRIC COMPANY.—The report for the year 1921 has just been published. The statement of profit and loss shows that a profit of \$1,707,339 was earned, and that after deducting \$599,416 for interest paid on borrowed capital, and \$401,830 for depreciation, there remains a net profit of \$706,092. This, added to the undivided profits of \$778,672 carried over from last year, makes \$1,484,764 to the credit of profit and loss account. From this amount \$927,038 has been paid in dividends at the rate of 8 per cent. per annum on the common stock, and 7 per cent. per annum on the preferred stock, leaving a balance of \$557,726, carried to the credit of this account. The company had to draw on undivided profits to the extent of \$220,946 to provide for the above dividends.

MERCANTILE MARINE FINANCE CORPORATION.—The report for year ended February 28, 1922, states that the operations of the corporation for the period under review show a gross profit of £65,301 as compared with £51,611 for the previous year. After providing for all expenses, including directors' fees, corporation profits tax, and income-tax on all profits earned since the inception of the corporation to date, the net profits, with the amount brought in, amount to £98,068. The directors propose to write off the whole of the preliminary expenses, including brokerage and underwriting expenses, amounting to £62,024, leaving a balance available for appropriation of £36,043. The directors recommend the payment of a dividend of 6 per cent., absorbing £30,000, and that the balance of £6,043 be carried forward. The report states that the directors have continued the conservative policy adopted since the formation of the corporation, and notwithstanding further depreciation in the shipping industry during the past year, they are of opinion that all advances are fully protected.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Wednesday Evening.

Spring seeding and growth of winter cereals have been retarded by adverse weather conditions of late, but prospects are now more settled, which will enable farmers to proceed with wheat sowings, as drilling operations are somewhat backward, the area laid down under the all-favoured cereal, so far, being of small extent. A fairly steady tone prevailed at market, and buyers were more in evidence owing to the approaching holidays, though opening prices in some instances were not maintained, especially for breadstuffs. Native wheat continues in fair supply, and suitable milling qualities ruled at 52s to 55s, with inferior down to 48s per 504 lbs, free on rail. Of imported, No. 1 Northern Manitoba quoted 62s 6d, Australian 58s, and Argentine 54s to 56s 6d per 480 lbs, all ex ship to arrive. A better tone was noticeable in the floating and forward cargo section on improved Continental inquiries, and prices generally marked a slight advance. Steamers of Australian about due sold at 53s 6d, ditto on passage further distant 55s net to 55s 6d, a sailer of ditto arrived at Falmouth 56s 6d, and steamer of Rosaf, 63s 10s, May-June, 54s 10s per 480 lbs, all mostly to the Continent. Shipments continue on a fairly liberal scale, while crop news from most exporting countries are of a satisfactory nature. The demand for flour continues quiet, but prices ruled steady, in keeping with the wheat position. Of home-milled, London standard straight run quoted 48s, town households 46s, patents 50s to 51s, all English straight run 45s per sack, delivered in London area. Country straights from all English wheat 41s to 42s, free on rail at London stations. Imported makes remain unaltered, but in some

The Miser's Hoard was a curse to him

In the old days he was always in mortal fear of losing it. He knew that whatever man could hide man could find.

The miser of to-day is as miserable a being as his predecessors, but at least he can secure what he has been at such pains to collect. THE CHATWOOD SAFE will put the hoard beyond the reach of the modern burglar, and no fire can touch it or shock disturb it.

THE CHATWOOD SAFE is not offered on a price competitive basis, but to those who desire to have the greatest degree of security it is possible to obtain. It is constructed to a definite standard of excellence and is accepted by the Banker and all those who have valuables to protect with contented confidence.

THE CHATWOOD SAFE

SINCE 1858.

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."

—THE CHATWOOD TRADITION

OILS.—Linseed firmer, and a fair business transpired. Spot, net, naked, 38s; April, 37s; May-August, 35s 10½d; September-December, 35s 3d. Rape nominal. Crude, spot, 44s; refined, 49s. Cotton dull. Crude Egyptian, 40s; Bombay, nominal; common edible, 48s. Chinawood: Hankow, spot (barrels), 62s; and shipment, 64s 6d. Coconut quiet. Ceylon, spot, 42s 6d; April-May, 39s 6d; Ceylon, ditto, 41s 6d. Soya steady. Oriental, barrels, ditto, 39s 6d; Ceylon, ditto, 41s 6d. Cod steady. 37s 6d. Japan fish steady. March-April, cases, 21s. Cod steady. English, spot, 30s to 31s. Ground-nuts steadier. English crushed, naked, spot, 45s; deodorised, barrels, 56s. Turpentine firm for spot and near positions, but distant weak. American, spot, 71s 6d; April, 71s 6d; May-June, 67s 6d; July-December, 56s 6d. Rosin steady. American, grade B, 13s; F, 13s; G, 13s; WW, 19s. French, F/G, 13s; WW, 17s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed market firm, with a fair demand. Bold Bombay, afloat, £20 15s. Small Bombay, ditto, £19 15s. Calcutta, afloat, £19 15s; April-May, sold, £19 to £19 2s 6d. Plate, afloat, £19 2s 6d; March-April, £19 2s 6d. Rapeseed steady. Toria, March-April, sold, £16 17s 6d; April-May, £16 15s. Cotton seed dull. Egyptian black, April, £11 5s; and white, £10 15s, paid. Bombay, April-May, £8 15s. Gingly firm. Chinese, March-April, Continent, £24 10s. Castor, Bombay, March-April, £16 15s. Ground nuts quiet. Coromandel, machine-dried, April-May, Hull, £23 to

£23 5s; Continent, £23 to £23 5s; Chinese decorticated, f.a.q., April-May, Continent, £23 5s per ton.

RETAILS.—Tin: The market opened active and stronger last Monday, with business in cash at £153 to £152 10s, and three months' at £153 to £154 15s. A reaction followed on Tuesday, the tendency being somewhat irregular, while these dates settled down at £150 5s and £151 15s respectively. A further decline was established during the middle of the week, dealings being on a large scale. Cash changed hands at £148 10s to £148 15s; early May, £149 5s; and three months' at £150 10s to £149 17s 6d. English ingots, £149 to £149 10s. Copper: Dearer at the week's commencement. Standard cash changed hands at £59 10s, and three months' at £60 5s to £59 15s. On Tuesday values moved in a lower direction. Cash sold at £59 2s 6d to £59, and three months' down to £59 12s 6d. During the middle of the week cash realised £58 15s to £58 10s, early May £58 15s, and three months' chiefly at £59 10s. Electrodes, £64 10s to £66 10s; best selected, £63 to £65; strong sheets, £88. Wire bars, £66 5s to £66 10s. Lead firmer, at £22 12s 6d to £22 5s, as to position. Spelter dearer, £26 10s, both positions. Antimony, English regulus, £29 5s to £33. Aluminium, home delivery, quoted at £120; export, £125 per ton.

THE MONEY MARKET.

THURSDAY week's reduction in Bank rate has so far had little effect in the money market, but has rather produced the feeling that for the present "there is nothing to go for." General indications point to the likelihood that the market will sooner or later succeed in pulling Bank rate down again; but now that Bank rate is largely a moral weapon in the hands of a strict disciplinarian, the old-fashioned considerations and formulas by which its move-

ments used to be guessed at have lost most of their significance. In the meantime, money has been plentiful at the lower level, the clearing banks' rate for weekly loans being $2\frac{1}{2}$ per cent., while it was easy to borrow more cheaply in other quarters. Discount rates were very nominal at $2\frac{1}{4}$ per cent. for Treasuries and $2\frac{1}{2}$ per cent. for other paper. Yesterday the market was suddenly stiffened by the surprisingly high rate at which the Treasury bills were allotted. After the announcement there were buyers of Treasury bills at $2\frac{1}{10}$ per cent., and bank bills were quoted very nominally at $2\frac{1}{2}$ - $\frac{3}{4}$ per cent.

	Apl. 21, 1922.	Apl. 12, 1922.	Apl. 7, 1922.	Mar. 31, 1922.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	(Apl. 13, '22)
Bank Deposit Rate	2	2	2	2	(Apl. 13, '22)
Discount (Call)	2	2	2	2	(Apl. 13, '22)
Houses (Notice)	2	2	2	2	(Apl. 13, '22)
Market rate (3 mths' bills)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3	..

The Bank return showed a minute increase in the stock of gold, a decline of £800,000 in the circulation, and a similar increase in the Reserve. The proportion was appreciably higher at 19 per cent., owing to a substantial reduction in the deposits, due apparently to the repayment of advances by the Treasury, which had diminished the Government securities by over 8 millions. The currency note circulation was increased during the past fortnight by £4,323,000 to £307,300,300, which includes £1,641,600 for notes called in but not yet cancelled. The fiduciary issue is £257,708,800, or £52,279,600 below the maximum.

THE STOCK MARKETS.

The volume of business transacted on the Stock Exchange this week has shown a considerable reduction, and developments at Genoa have checked the upward movement. Gilt-edged stocks are a little better on balance, and War Loan has touched a new high record at 101 $\frac{1}{2}$, but the reduction in Bank rate last week had already been discounted. In the Foreign market, the recently issued French railway bonds have been dull, but Mexicans have attracted some attention. Interest in Home Rails has slackened, but some of the preferred stocks are higher. Rubber shares have eased on a decline in the price of the raw material, but oil shares have been active. Industrials have shown some strength, but the mining markets are heavy.

COMMODITY MARKETS.

The cotton trade was slow in recovering from the disturbing effect of the Easter holiday; business, however, has been moderately fair in grey shirtings and the lighter fabrics. In the wool trade, dealings have been few, on account of the holiday atmosphere, but prices finished firm, with a tendency to advance all round. Cleveland No. 3 is quoted at 90s per ton and East Coast hematite mixed numbers 66s in the iron market, but orders have been on a small scale. In the coal trade, best Admiralty is quoted at 28s 6d per ton, and orders have been booked up to the middle of May. Better prices were realised for wheat, but markets were inclined to quietness at the close. Sharp upward movements are recorded for linseed oil. Prices were lower for all classes of hides and skins at the Bermondsey auctions, while in the boot and shoe trade there is nothing of interest to report. Further details from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

Uncertainty as to the results of Genoa would seem to have been the main factor in restraining activity on the foreign exchange market, which has had an, if anything, quieter week than has been usual lately. The dollar, on the whole, has been firm, and moved up from 4.41 $\frac{1}{2}$ on

Saturday last to about 4.42 in the middle of the week, but has weakened very slightly again yesterday morning to 4.41 $\frac{1}{2}$. On the whole, however, there is a general feeling that for some time yet the tendency will be upwards. The forward rate for one month remains on a parity with spot; for two months it is $\frac{1}{4}$ cent over spot. Paris also has moved little, with a slight tendency towards appreciation, the alarms of Genoa having had little direct effect on the rate, which yesterday stood at 47.50, as compared with 47.55 on Saturday last, Brussels showing similar movements to 51.57 $\frac{1}{2}$. Forward francs in Paris remain on a parity with spot; in Brussels they are 6 centimes per month below the spot quotation. Italy, after improving, moved up again rather sharply on Thursday, for reasons not yet explained, and yesterday stood at 81 $\frac{1}{2}$, as compared with 81 $\frac{1}{2}$ on Saturday last. The mark has been more sensitive than other currencies, as was to be expected in view of the developments in Genoa and the outstanding Reparation difficulty. Even here, however, movements have been surprisingly small, and at 1.245 yesterday the rate was considerably better than the 1.275 of last Saturday. Forward marks remain on a parity with spot. Among neutral currencies, Amsterdam has moved very slightly against us, forward florins being $1\frac{1}{2}$ cents. per month over spot, Madrid and Switzerland slightly in our favour. Of the Northern currencies, Christiania has again appreciated slightly, while Copenhagen and Stockholm are on balance practically unmoved. Helsingfors, although at 237 $\frac{1}{2}$ better than the sudden leap to 243 $\frac{1}{2}$ on the 13th, shows an upward tendency. In Central Europe, Vienna is steady at 33,000 and Warsaw at 17,000. Prague shows at 222 $\frac{1}{2}$ a slight reaction from the recovery following the recent issue in London, while Belgrade, for the first time for some time past, is a little better at 335. Bucharest and Sofia are unchanged, Constantinople a little higher. In the East, the rupee is unchanged at 1s 3 $\frac{1}{2}$ d, the yen at 2s 1 $\frac{1}{2}$ d. Owing to disturbed conditions in China and the beginnings of a run on some of the native banks, there was a sharp demand for silver in the early part of the week, bringing up the rate on the 19th to 35 $\frac{1}{2}$ d, a higher figure than at any time since the end of last year. The demand, however, quickly brought out supplies, and the price reacted again. Hongkong, after being up to 2s 7d, fell again yesterday to 2s 6d, the same as a week ago, while Shanghai, after reaching 3s 6d, is back at 3s 4 $\frac{1}{2}$ d. In South America, Valparaiso is a little higher at 39.90, and Rio slightly lower at 7 $\frac{1}{2}$. Monte Video shows little change at 42 $\frac{1}{2}$, Buenos Ayres slightly lower at 43 $\frac{1}{2}$.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 15, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	15,069	Supply Services	4,100
		Interest on Debt	2,135
		Sundries	183
		Reduction of Debt	951
		Added to Exchequer balances ..	140
	15,069		15,069

The revenue of £15,068,947 for the week ended April 15th compares with £21,704,710 in the corresponding period last year. The week's expenditure at £6,417,766 compares with £13,253,011 in the same week last year. Property and Income-tax yielded £8,167,735, against £9,635,000 in the corresponding week last year. Customs produced £1,427,000, against £2,092,000 last year, while Excise, at £1,372,000, compares with £3,336,000. Estate, &c., duties yielded £1,270,000, against £884,000. The yield from Special Receipts under Miscellaneous was only £350,000, as compared with £3,000,000 in the corresponding period.

The week's operations reduced the National Debt by the sum of £8,511,352, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 1,260	Bank of England Advances ..	- 2,900
Treasury Bonds by tender	+ 15,113	Treasury Bills	- 25,410

FINANCE AND POLITICS AT GENOA.

EXCEPT in one important particular the Treaty of Rapallo, signed on Easter Sunday by the Bolsheviks and Germans, leaves the economic situation of Europe very much as it was. The possibility that either party would meet its obligations to the other within any reasonable period of years was negligible, and in this respect the Treaty merely wipes out a pretence. The undertaking by Russia to give Germany most-favoured-nation treatment in any concessions that may subsequently be granted for the exploitation of that country also confirms a situation which has long been seen to be inevitable. Even the Federation of British Industries, which included among its members firms who have hopes of extending their business in Russia, accept the fact that if Germany is to resume a permanent place in the world's economic life it will be less disagreeable for British industry as a whole if she turns her attention eastward rather than to overseas markets. In forgoing claims to the restoration of private property seized by the Bolsheviks the Germans have, however, created an awkward precedent for other negotiating countries. The one substantial concession which would do more than anything else to restore confidence and stimulate enterprise in Russia is some tangible compensation for the sequestration of factories and property of all

kinds owned by foreign capitalists. A pre-war Germany could no doubt have afforded to start in this way with a clean slate, relying on economic and military pressure to secure that the new undertakings of her neighbour were honoured; but this pressure cannot be so readily applied by the Germany of to-day, and we may hazard a guess that German capitalists are relying on other countries to pull these particular chestnuts out of the fire, since the Treaty provides that private property rights of Germans shall be admitted if they are recognised by the Bolsheviks in the case of any other Power.

But though economically the Treaty does not change the situation very much, and indeed is in accordance with expectation, the time and method of its signature have had deplorable political results. In this respect the Germans are seriously to blame. There is plausibility in the French argument that in surrendering any claims they may have in Russia the Germans are disposing of property which might go to reparation, and are therefore committing a formal breach of the Treaty of Versailles. A much more serious charge is that the Treaty is a breach not only in the letter, but still more in the spirit of the Cannes resolutions, and a disregard of the implication that, by inviting the Germans to Genoa, the Powers desired to deal with the European situation jointly and not individually. We believe Germany's action to have been a blunder rather than a deliberate attempt to create difficulties for the Allies or for the Conference. But Germany at Genoa should have been at particular pains, even under provocation, to observe the conditions on which the Conference was called, and the incident will, we fear, diminish the prestige both in Germany and abroad of Herr Rathenau, to whom we had looked for a wise direction of German foreign policy. But the blame for the incident cannot entirely be laid at the door of the German delegation.

Before the Conference was a week old, Mr Lloyd George's incorrigible propensity for cabals and private meetings had smashed the solidarity of the Conference. When we pointed out a week or two ago the danger of a Conference without a constitution, we did not expect that the lesson would be so quickly driven home. The immediate cause of the signing of the Treaty seems undoubtedly to have been the exclusion of Germany from some of these private meetings where the Russian question was discussed, and the suspicion that the Allies were about to make a separate arrangement. When the Treaty was announced, the pretence of consulting the neutrals was thrown overboard incontinently, and the Allies, assuming to themselves authority to speak for the whole Conference, presented Germany with an ultimatum either to withdraw from the Treaty or to be left in disgrace outside the door when the political Commission is meeting. But a formal disavowal of the Treaty would, of course, be useless, for the French Press has at once realised that an act of this kind cannot be undone. Nor do we think Germany is likely to withdraw on demand. On the other hand, the reprimand involved in exclusion from Commission I. is reasonable,

but should, of course, be administered by the Conference as a whole. At the moment of writing, the German reply has not yet been received, but it is quite evident that, however the matter may be patched up, the Conference has resolved itself into two antipathetic groups of victors *versus* vanquished, with an audience of disgruntled neutrals sore at having been ignored.

The technical discussions on currency and finance, which are more fully dealt with by our correspondent in another column, have followed the lines anticipated, and have proceeded so far that Sir R. Horne is arranging to leave Genoa this week with his work completed. The doctrines of the Brussels Financial Conference are, of course, strongly reaffirmed, but whereas the Brussels Conference spent a "certain amount of" time discussing the possibility of barter, finishing credits, and other emergency suggestions for dealing with the abnormal state of Europe, and regarded the question of stabilising currency as premature, the main consideration of the experts at Genoa has been the possibility of drawing up conditions which may make possible the restoration of a gold standard at an early date. In this connection an elaborate document issued by the League of Nations yesterday, containing all available currency statistics for the last two years and the first number of the *Manchester Guardian Reconstruction Supplement*, which is mainly a commentary by a number of highly competent writers upon the recent exchange situation, both point to the conclusion that, with the exception of certain countries where the value of money is still completely beyond control, prices and exchanges in Europe are to-day moving within comparatively restricted limits. In these circumstances, the Genoa experts are unanimously opposed to the attempt to restore by artificial means the old price-level, but look to a restoration of the gold standard by devaluing the currencies of Europe. We gave details last week of the scheme which Mr Keynes has recently propounded in this connection, but we think it will be found that the experts of Genoa have not gone so far as to lay down the conditions on which devaluation might take place, or suggested a new gold value for the currencies of various countries. They have, however, faced the gold problem, upon what Professor Cassel has hitherto laid so much stress, and are proposing an International Convention which will place the gold reserves of Europe to some extent under international control. This suggestion, which contains greater possibilities than any other which has emanated from Genoa, and was foreshadowed in the report of the experts who met at London, has led to the suggestion of a conference of central issuing banks, to which the United States Federal Reserve Board will be invited. This meeting is to be called as soon as possible on the invitation of the Bank of England. The details of the scheme in final form are not yet available, but it appears to be contemplated that only certain countries are to become free gold markets, and that the other parties to the Convention should, in effect, restore the gold standard on whatever new ratio is decided upon by means of approved assets deposited in these gold centres. The Committee of Experts, which includes no less than four members of the Finance Committee of the League of Nations, recognises, however, the necessity of first dealing with international indebtedness. An event which holds out some hope of making progress in this direction is the appointment by the Reparation Commission of an International Committee to advise as to the possibility of raising a Reparation Loan on German security in foreign countries. The Commission is to consist of M. Delacroix (Belgium), Signor d'Amelio (Italy), Mr Morgan (U.S.A.), Sir Robert Kindersley (England), M. Vissering (Holland), and Herr Bergmann (Germany). The present idea seems to be that there should be a loan to be guaranteed by the German Customs revenue, but it is difficult to believe that a body of this kind, including a leading banker of the United States and a neutral representative, as well as a representative of Germany herself, can advise on such a question without reconsidering the capacity of Germany to pay Reparations as a whole. Indeed, it may be hoped that the appointment of this Commission, which may see its way to offer France something in the way of ready money, may suggest a solution of the deadlock into which the Reparation question is

HOUSING PROSPECTS UNDER PRIVATE ENTERPRISE.

(FROM A CORRESPONDENT.)

Two years or even a year ago few prospects seemed more remote than that of seeing houses built once more on a substantial scale by unsubsidised private enterprise. It was never easy to determine the precise width of the gulf which yawned between an economic rent for the new houses which were being built and the actual rents at which they were being let. But it had become fairly common for calculators, with a taste for round numbers, to figure it out as follows:—A capital cost approaching £1,000, equivalent to a weekly cost to defray interest and maintenance of, say, 30s per house, the contribution from actual rents about 10s, leaving a deficit to be made good by the State subsidy of £1 per week, or (what was not less serious) two-thirds of the total cost. And this, if perhaps it exaggerates the average deficit, was a fair enough picture of the conditions in many districts, and was near enough to the truth to indicate the order of magnitude of the problem as a whole.

The last year has witnessed a remarkable change. The costs of building have fallen heavily. Sir H. Kingsley Wood has conveniently come forward to supply the calculator's taste for round numbers with a new figure of £400 as the present capital cost. This, of course, is an underestimate of average costs to-day, just as the £1,000 may have been an overestimate two years ago. But it is as natural now to speculate on the basis of the former figure as it was formerly to envisage dolefully the latter. For if the £400 house is still only an exception, it may easily very soon become the rule. Sir H. Kingsley Wood has given more detailed figures in a recent letter to the *Times*: "In December, 1920, tenders were being approved for non-parlour houses with three bedrooms at an average price of £841; in June, 1921, at £693; and in December, 1921, at £514." This is an extraordinary rate of fall; and it certainly did not cease with 1921. There have recently been substantial cuts in wages, and it is unlikely that bottom point has yet been reached. When, further, we take into account the marked decline in the rate of interest, it seems as though that enormous gulf of two-thirds between rent and cost was already within measurable distance of being spanned.

This gratifying result is evidently due largely to the curtailment of the housing programme under the new régime at the Ministry of Health. At the same time, however, the need for new houses seems to have become less urgent. In fixing the rents of their new houses, the authorities have already seriously to consider, not merely how much it is *fair* to impose upon a helpless tenant, but how much a hesitating tenant will be prepared to pay. The possibility, indeed, no longer appears fantastic that, before the restricted housing programme is completed, some of the new houses may be left, for a time at least, upon the hands of the authorities. The moral seems inevitable, and it is very widely drawn, that our grandiose housing schemes were a gigantic folly, and that the time is near when we may put the Rent Restriction Acts upon the scrap-heap, and return without uneasiness to our pre-war policy of private enterprise. This, however, is a conclusion which it would be rash to accept without a more critical examination.

In the first place, it must not be overlooked that the changes of the past year have largely sprung from conditions of severe and general trade depression. How much of the decline in building costs is attributable to this cause, and how much to the substitution of the economical Sir Alfred Mond for the idealistic Dr Addison, it is impossible to estimate. Nor is there any object in trying to do so. But industry will not always remain depressed; and the effects of a revived industrial demand for labour and materials must be taken into account in forecasting the future costs of building. To the trade depression must be attributed the useful fall in the rate of interest. The trade depression, again, has been mainly responsible for the apparent diminution of the housing shortage. "The effective demand to-day," writes Sir H. Kingsley Wood, "is not so high as the estimates of two years ago, when they were undoubtedly exaggerated by special circumstances, and represented maximum figures." But the circumstances of to-day may prove to

be as "special" as those of two years ago. The danger is still as great of attaching undue weight to momentary and perhaps ephemeral tendencies. We may get a better-balanced view if we turn to considerations of a more general and fundamental character.

When normal conditions are restored it seems reasonable to assume that building costs will bear, roughly, the same relation to prices in general as they did before the war. It is true that there has recently been much speculation as to the possibilities of more economical methods of construction; and many lines of development have been indicated, such as the erection of houses upon engineering principles, which may one day come within the sphere of actuality. But for practical purposes no expectations of substantial economy can as yet be based upon such projects. The future of the general price-level is uncertain; but, for various reasons, it is unlikely to settle (certainly no one with a concern for our national finances would wish to see it settle) at less than 80 per cent. above 1914. The rate of interest, moreover, seems likely to rule higher for many years than it did before the war. If, accordingly, we are in future to rely for our new houses upon unsubsidised private enterprise, we must face the prospect of rents at least 80 per cent. above their pre-war level. This must apply not merely to the rents of the new houses, but eventually to those of pre-war houses as well; and, inasmuch as the increases of rent permitted so far under the Rent Restriction Acts amount to only 40 per cent., this points to a further increase of rents of a far more substantial order than is generally contemplated at the moment. It does not follow that such an increase, occurring gradually, and accompanied by some recovery of purchasing power, would necessarily be undesirable. Houseowners have so far been unfairly prejudiced by the restrictions of the Rent Restriction Acts. There is no ethical reason why their money incomes should not have increased, like those of other people, with the price-level; and, as houses have not been sold since the war on a considerable scale, except to actual occupiers, it is improbable that many people would receive an unjustifiable bounty. The tenants, of course, would not like an increase in rents; but what real grievance would they have, it may be asked, if the increase is only proportionate to the decline in the value of money?

Here, however, a most important factor must be taken into account. The social importance of good housing conditions, and the argument which this affords for a policy of State subsidy, have been so much stressed that we have almost come to forget that the building industry has for long been subject to a very heavy tax, in the shape of local rates. Rates of 10s in the £, raised for "non-beneficial" purposes, are equivalent to a 50 per cent. *ad valorem* tax upon buildings of all kinds, and have precisely as much effect in checking building as would a 50 per cent. increase in the costs of labour and materials. In modern times there has been a great increase, not merely in the level of local rates, but in the proportion of them which is "onerous." Since 1914 the apparent increase in "onerous" rates has been particularly heavy. The real increase, indeed, has not been so great as the figures indicate; since the assessments of houses have not been increased as yet by very much, and a readjustment of assessments to correspond to the increased costs of building will permit a substantial reduction of the rate in the £. But, even so, rates are likely to remain above their pre-war level; and a prevailing upward trend seems likely to continue. An increase of rents by 80 per cent. will thus mean a more than proportionate increase in that combination of rent and rates which represents the real price which the tenant must pay for house room. Or, where rates are paid by the owner, the rents, if the foregoing analysis is correct, are likely to increase in greater degree than the general price-level.

It is a mistake to suppose that under pre-war conditions the supply of house-room was regulated by a really free play of economic forces. For years these forces have been impeded by our rating system in a manner which must have seriously affected both the number and the quality of the houses built. It is true that real property is selected as the basis of assessment, not for the express purpose of checking housing, but because of fiscal exigencies, which are still as cogent as they ever were; but

the discouragement to housing has been none the less on that account. It is not easy to devise a better rating system. The present state of things, under which a heavy local tax on houses is balanced by a large State subsidy, is confused, wasteful, and unsatisfactory. But it is pertinent to realise that a return to our pre-war arrangements must mean a return, not to natural, but to artificially restricted conditions of supply, and that, with every increase in local rates, this artificial restriction must become more formidable. With the leeway of the war still to be made good, this is not a prospect to be regarded without uneasiness.

RUSSIAN PROBLEMS.—IV.

(FROM A CORRESPONDENT.)

GRANTED that the potentialities of Russia are enormous, the question still remains by what practical means can any substantial improvement be brought about so long as the Soviet régime continues?

On the assumption that the counter-revolutionary forces have failed, and that there is no stable alternative Government to be looked for in the near future, it will be to the interests of Western capitalists to strengthen the hands of the Soviet Government in preserving order and protecting life and property. But beyond this it is sometimes held that the Soviet Government should be required to abdicate all authority in the economic sphere, or to exercise it merely in form, like the Government of China, under the effective control of an International Consortium. We believe that the analogy of China is mistaken, and that the most far-seeing financiers and industrialists in this country and in Germany realise that the effective co-operation of the present rulers in Moscow is essential to the solution of Russia's economic problem. Whether that co-operation can be counted on and trusted remains to be seen, but without it no progress seems possible. This is another reason why full political recognition is an essential preliminary to any programme of economic reconstruction.

Nor can the reconstruction of Russia be left entirely to the individual enterprise of small traders and speculators. Western capitalism must offer a concerted plan of co-operation. The needs of Russia must be considered as a whole, and if the best results are to be obtained there must be an agreed order of priority. The larger the organisation which is handling the problem, the smaller become the risks, and the greater become the chances of achieving a rapid and substantial improvement. This is the real argument for the establishment of an International Corporation to co-ordinate the plan of campaign. This will be specially important when the time comes for issuing fresh loans to Russia and extending long-term credits.

In the meantime, there is scope for individual enterprise on a smaller scale. The Soviet Government has announced its willingness to restore factories to their former owners, including foreigners. One British firm has recently restarted an agricultural machinery factory in South Russia, which was found to be intact, though the workers had been dispersed and the output had fallen to practically nothing during the period of nationalisation. Another British company is at the present moment arranging to establish agricultural machinery factories in one of the most fertile parts of Central Russia; and in order to make sure of being able to convert its revenue without loss into foreign currency, has taken the lease of a large tract of timber forest. Another plan which the Soviet Government is trying to realise is the re-establishment of British timber companies in the Archangel district, with Government participation in the share capital. This system of mixed companies with capital subscribed partly by foreigners and partly by the Soviet Government is one of the most important features of the new economic policy, and has interesting possibilities.

It has been mentioned that one of the plans which has been discussed, and is said to be specially favoured by the French, is to start reconstruction in limited areas in the richest and most accessible portions of Russia. Though politically the plan has dangers for the Soviet Government and is not likely to be accepted in the sense suggested in Paris, economically there is much to be said for treating different regions of Russia separately. Since the

available supplies of credit will be limited, progress will best be made by concentration rather than by dispersion over a wide area. An endeavour would be made, for example, in three large areas round Archangel, Pskoff, and Odessa to restore all the various elements on which their economic life depends, so that progress could proceed on parallel lines. First in order of importance comes transport. In most areas the limiting factor even now is not the shortage of engines but the shortage of fuel; but the two interact on one another. Engines and rolling-stock in large quantities will undoubtedly be required, though the contracts already placed abroad by the Soviet Government will reduce this item. While the railways and waterways are being improved, the terminal points and the great river ports will have to be repaired and developed. Next, the output of fuel must be stimulated; factories must be re-equipped and overhauled; raw materials must be made available for restarting the factories; attention must be given to the machinery of wholesale trade; the workers must be guaranteed sufficient supplies of food and clothing; and the peasants must be supplied through their co-operative societies with the machinery, seeds, and manufactured goods of which they stand most in need.

A programme of this kind depends upon the provision of adequate credit, and even under the most favourable circumstances loans to Russia are not likely to be an attractive investment until confidence has been restored by actual achievements. It is all the more important, therefore, that all the eggs should not be placed in one basket. The granting of credit for one purpose, however desirable, may be useless by itself; whereas if financial assistance is distributed over a number of different purposes in a limited area the general effect will be cumulative, and each application of credit will render previous investments sounder and more profitable.

We have left to the last the most difficult problem of all. So long as there is no currency worthy of the name progress will be blocked at every turn. It will be useless for a foreign company to put a railway into working order, or to start an agricultural machinery factory, or to establish an electric power station, if the revenue is received in the form of worthless paper roubles. This difficulty is not altogether removed by the same company taking a concession for the exploitation of forests, mines, or oilfields; it would probably pay better to take the concession and drop any idea of selling goods or services in Russia for roubles. For the value of the rouble (or, as we should now say, of a million roubles) is depreciating so fast that it would be quite impossible to make any public utility concern pay its way. You cannot alter railway tariffs and electric power charges every day to keep pace with the falling value of the rouble. The most vital of all Russian problems is, therefore, to restore a moderate degree of stability to the currency.

The present position appears to be that the total volume of paper money outstanding is more than 20 million million roubles, and that the rate of exchange is somewhere in the neighbourhood of 5 million roubles to the £. Yet even so, there are constant complaints of a shortage of currency, and the Soviet printing press finds it difficult to keep pace with the demands made upon it even when notes are printed in units of millions. Prices in the open market have been rising during the last three months at the rate of about 100 per cent. per month. Consequently, we may expect that the total volume of money will be nearer 40 billion roubles a month hence, and the rate of exchange 10 million roubles to the £. What is to be done when a currency has reached this stage of disintegration?

The view is sometimes put forward that the only way to establish a satisfactory currency is for the whole of the existing paper money to be repudiated, and an arrangement made with foreign capitalists to introduce a new currency quite independent of the old. This view appears to be mistaken. It is wrong to argue that because so much money has been issued it is therefore worthless. Paradoxical though it sounds, depreciation does not necessarily reduce the total value of the currency; it merely alters the value of the unit. So long as the currency is used at all, the value of the total volume issued remains much the same. If a cabman in Moscow will take a

million-rouble note where before the war he was content with a rouble, a million-rouble note has a definite value. All the evidence seems to show that though the Soviet rouble is worthless, the Soviet million-rouble note is by no means worthless. This is an important fact, which is apt to be overlooked by those who advocate repudiation. The right line of advance, therefore, in Russia, as in other European countries, is not repudiation, but drastic devaluation.

OVERSEAS TRADE IN MARCH.

THE official returns of the overseas trade of the United Kingdom in March reinforce the evidence recently available of an improvement in various branches of trade and industry—an improvement that might by now have become more pronounced had the dispute in the engineering industry been prevented. Exports of British produce and manufactures in March, judged by the value figures, were the highest since March, 1921, a feature that is the more favourable when the almost continuous decline in the general commodity price level over the past 12 months is taken into account. On the other side of the accounts, imports of raw materials were 20 per cent. greater in value than a year ago, when prices were very much higher. It is, of course, dangerous to deduce too much from the import figures of a single month, but these results suggest that manufacturers are purchasing more freely in preparation for a prospective growth in the demand for finished products. A summary of the value figures for the imports, exports, and re-exports of March, and the first quarter of this year and last reads as follows:—

MONTH OF MARCH.				
	1921.	1922.	Ino. or Dec. in March, 1922.	
Imports	£ 93,783,662	£ 87,879,424	£ 5,904,238	— 6.3
British exports	66,808,961	64,580,793	2,228,168	— 3.3
Re-exports	8,888,005	10,153,612	1,265,607	+ 14.3
Total exports	75,696,966	74,734,405	962,561	+ 1.3
Excess of imports over total exports	18,086,696	13,145,019	4,941,677	— 27.3

THREE MONTHS ENDED MARCH 31.				
	1921.	1922.	Increase or Decrease in 1922.	
Imports	£ 307,711,772	£ 233,709,547	£ 74,002,225	— 24.1
British exports	227,786,786	186,062,852	41,723,934	— 18.3
Re-exports	26,847,427	28,786,638	1,939,211	+ 7.2
Total exports	254,634,213	214,849,490	39,784,723	— 15.7
Excess of imports over total exports	53,077,559	18,860,057	34,217,502	— 64.2

The excess of imports in March approximates to the pre-war monthly average, while the import excess for the March quarter is far below the pre-war quarterly average. Both in March and the March quarter exports of bullion and specie exceeded imports, the figures being:—March, imports, £2,541,359; exports, £3,092,568; March quarter, imports, £9,495,464; exports, £11,942,072.

The rise in the quantity of coal exported is one of the most favourable features of recent trade statistics, and the exports of other leading British industries show signs of improvement, as will be seen from the following table:—

	March.			March Quarter.		
	1920.	1921.	1922.	1920.	1921.	1922.
Coal	Millions 2.4	Millions 2.0	Millions 5.2	Millions 8.4	Millions 5.4	Millions 13.2
Iron and steel and manufactures thereof	29	15	29	77	54	77
Machinery	0.26	0.49	0.45	0.78	1.46	1.19
Cotton yarn	10.1	8.8	18.7	38.4	24.6	49.5
Cotton piece goods (sq yds)	397.1	231.9	303.8	1,123.9	726.0	894.9
Woolen tissues (sq yds)	18.0	6.2	9.9	49.6	23.1	26.6
Worsted tissues (sq yds)	6.2	2.8	5.0	17.2	10.4	15.8
Linen piece goods (sq yds)	10.4	2.1	8.1	33.8	6.3	23.1
Soap	19	0.5	1.0	60	15	28

The general tendency shown by these branches of trade is one of substantial improvement over the figures of a year

ago, and in some cases a comparison with two years ago is not unsatisfactory. The improvement thus shown by exports is accompanied, as has been mentioned above, by an increase in the quantities imported of certain important raw materials of British industry. Thus of hard wood we imported in the March quarter 4,615,567 cubic feet, against 3,482,418 cubic feet a year ago; of raw cotton 3,169,042 centals, against 2,917,737; of sheep's and lambs' wool, 3,251,866 centals, against 1,900,005; of raw silk, 224,959 lbs, against 90,436; of cotton seeds, 122,901 tons, against 89,967; of wet hides, 122,987 cwts, against 58,849; of dry and dry-salted hides, 114,086 cwts, against 68,788. There are, however, instances to the contrary, of which the most prominent, perhaps, are iron ore, with imports of 640,995 tons for the quarter, against 1,110,678 in the first quarter of 1921; flax, hemp, and jute, with 57,919 tons, against 79,360; and rubber, with 365,698 centals, against 622,345. In connection with the last-named commodity, it is noteworthy that re-exports of crude rubber in the March quarter were 442,556 centals, against 114,629 a year ago. The evidence of improvement afforded by the raw material figures is decidedly patchy as regards the quarter as a whole, though fairly definite in the aggregate as relating to the past month alone.

Indeed, some statistics published this week by the Board of Trade Journal show that the volume of raw material imports retained in this country in the March quarter was below that recorded in the similar period of 1921. Calculating the trade in each period at the prices of 1913, our contemporary finds that on this basis raw material net imports for the past quarter would be valued at £33,791,000, against £37,020,000 a year ago, £53,180,000 two years ago, and £59,937,000 in the first quarter of 1913. On the other hand, the calculation of exports on the same basis of valuation reveals the important and encouraging fact that exports of British manufactures in the March quarter were 17 per cent. better than a year ago. At 1913 prices, exports of manufactured goods for the first quarter work out at £66,329,000, against £56,608,000 a year ago, £74,048,000 two years ago, and £102,514,000 in the first quarter of 1913. The list of manufactured goods contributory to this increase is varied and important.

The official figures of ships engaged in the foreign trade bear out other evidence that the general activity of trade is increasing. The following are the figures of tonnage engaged in the foreign trade entered or clearing with cargoes from British ports in March and the March quarter:—

Period.	Entered with Cargoes.		Cleared with Cargoes.	
	Tons.		Tons.

ITALIAN RAILWAYS.

At this moment, when railway men from all over the world are meeting in international congress at Rome, a sketch of the present position of Italian railways may have interest for our readers. Italian railways suffer from two inherent disadvantages. The geographical configuration of the country, mountainous in most parts, and with the chain of the Apennines dividing east from west down the whole length of the peninsula, makes railway construction, with innumerable tunnels, bridges, and viaducts, difficult and costly, and makes the working over the unavoidably steep gradients and round the unavoidably sharp curves difficult and costly also. Further, Italy possesses no coal. Not only does its absence deprive the railways of profitable traffic, but the cost of the imported fuel enhances the working expenses. Electrification, now under process of adoption on a large scale, will no doubt decrease working

expenses, but only at the cost of a very heavy addition to the capital account.

The Italian railways suffer also from a further disadvantage, not inherent, but the result of past history. Till 1860 Italy was only a geographical expression. It was not a nation, and so could not have a national railway policy. There were Piedmontese railways in the north-west, Austrian railways in Lombardy and Venetia, Neapolitan railways in the south, and so on. The constitution of the Italian Kingdom in 1860 was followed by the acquisition by the Italian Government of the bulk of the railways of the country, some from the former Governments, some from private companies. The new State had acquired the railways, and had strained its resources to do so. The question was what was to be done with them. A famous Railway Commission sat for three years, produced a monumental report, and recommended that the working of the railways should be entrusted to private management. The recommendation was adopted. Three companies were formed—the Adriatic, operating all the length of the east coast; the Mediterranean, similarly serving the west coast; and a third smaller company for Sicily. It was provided, however, that, either over its own road or by running powers, each of the two mainland companies should reach every important traffic centre. The Mediterranean, for instance, got to Venice; and the Adriatic both to Rome and Florence. The leases, which took effect in 1885, and ran for 60 years, with a break after 20 or 40 years, were very complicated. They guaranteed to the operating companies a minimum net revenue, and made elaborate provision for the disposal of a net surplus which was expected to increase rapidly. Things, however, turned out badly. Net revenue only increased very slowly. Large new expenditure for additions and improvements, and especially for new rolling stock, was urgently necessary. There were endless disputes as to how the money should be provided, and on what terms. The companies, tenants with only a short term to run, would only consent to find it on onerous conditions. The Government grudged investments in a property which they did not control. When the first period of 20 years was drawing to a close, and it had been impossible to find a *modus vivendi*, the rolling-stock was almost falling to pieces, and the railway servants, who asserted, probably truly, that they were overworked and underpaid, were out of hand, and conducting an intense political agitation in favour of State ownership. A new Committee of Inquiry again reported against it. But in spite of the Report, Parliament suddenly determined in April, 1905, to cut the knot which could not be untied, and to nationalise the whole railway system. And this decision, taken on the spur of the moment, was put into effect, without waiting to make provision for the necessary changes in organisation and administration, only two months later.

The whole of the railways of the country, with the exception of lines of purely local interest, which, however, are not without importance, especially in Lombardy, are now managed directly by a Minister in Rome. From the time the railways were taken over till Italy came into the Great War, 10 years elapsed, during which the results of the change had time to show themselves. Undoubtedly the public were better served. The old rolling-stock was largely reconstructed, and the number of engines and trucks was increased by 50 per cent. On the congested routes lines were doubled, and train services were improved and increased. But the financial results were disappointing. Italian railways have never been remunerative, but in the last year of the company régime the Government received on their investment of £200,000,000 a return of almost exactly 1 per cent. In the last year before the war the capital invested had risen to £275,000,000, and the return on it had fallen to 2.5 per cent. Political pressure had increased the number of the staff by 23 per cent., and their wages by 57 per cent., and had also defeated an attempt of the Government to impose an increase in rates adequate to meet the increased expenses. Moreover, the position was steadily worsening. In the first year of nationalisation the net income was 26.6 per cent. of the gross receipts. The percentage fell steadily, and for the three years 1911-13 it averaged only 15.6 per cent. Seeing that during this period the gross receipts had in-

creased by more than 50 per cent., while the length of line open had remained almost stationary, it is difficult to believe that the continuous increase in operating ratio was consistent with efficient and economical operation. The charges brought against the railway administration are the same as are always brought against Government management of commercial affairs. The service is, it is said, swathed in red tape, everything is controlled from Rome, bureaucrats are in the saddle where men with practical and commercial training are required, and so on.

The war was confined to the north-east corner of Italy. But its effect was felt very seriously throughout the peninsula. The foreign trade which was carried by the railways was mainly to and from Germany, and this, of course, came to an abrupt end. Further, rolling-stock, always inadequate, was so heavily drawn upon for military purposes that little was available for the domestic needs of the country, and there was neither time, materials, nor labour to keep in repair such rolling-stock as remained. The German coal supply was cut off. It was not easy to get cargoes of English coal to Genoa, and still more difficult to distribute them from Genoa when they got there. Engines had to use wood or peat, or anything else that would burn somehow. Permanent way repairs and renewals fell badly in arrear. Even since the war the difficulties are not at an end. The exorbitant prices charged for the famine supplies of coal which reached Italy from England in 1919 and 1920 are said to have roused a bitter feeling against us throughout the whole country, and, indeed, the workmen of a factory closed for want of fuel are hardly likely to be in a good temper. The difficulties of getting back the railways and the rolling-stock into a reasonable state of repair are still very great. Needless to say, the working expenses of the Italian railways are to-day much larger than the gross receipts. Italy shares, it is true, this unenviable situation with the whole of the Continent of Europe. Even in Great Britain the working expenses last year were £8,600,000 higher than the gross receipts.

The Government are now embarking on a bold policy of improvement, and especially of wholesale electrification. In one respect the Italian railways seem exceptionally suited for electric traction, for water power is abundant, and everywhere available. On the other hand, most of the Italian lines have but scant traffic. And the accepted opinion among railwaymen both in England and in the United States is that it is only on lines where the traffic is heavy that the reduction in operating cost is sufficient to recoup the additional expenditure of capital involved. It will be many a long day before the Italian railways can expect to be self-supporting. But every Englishman wishes well to Italy, and the English railwaymen who are now enjoying the hospitality of the Italian Government and the great municipalities will doubtless see much on their various excursions to interest and instruct them. And we may trust that when, if ever, passports cease to trouble and high fares and poor service no longer scare away the unprivileged traveller, the railways of Italy will again benefit by the presence of the crowd of visitors who would be only too glad to tour once more in that favoured country.

RAND REPORTS AND MARCH QUARTER RESULTS.

(BY OUR MINING CORRESPONDENT.)

THE annual statements of several important South African mining concerns are now in the hands of the shareholders in this country, and merit attention. First may be taken those of the Modder Deep and Geduld Proprietary companies, subsidiaries of the Union Corporation, whose position we discussed last week. Both show the satisfactory feature of a reduction in the working cost average, although the saving was insufficient fully to counterbalance the decline in the currency price of gold. In the case of the Geduld the economy on the whole year was 6d per ton—not a great amount; but there is the significant point that the average for the second half was 1s 7d below that of the first period. The working profit of £369,600 fell slightly short of the 1920 amount, but no difficulty was experienced in maintaining the dividend at 17½ per cent. On this basis the yield is barely 6 per cent., the shares

being quoted at about 2½; but allowance is made by the market for a further extension of the treatment plant, which is quite incommensurate to the size of the property. It is assumed that this extension will not be long delayed. Ample funds are now available, £303,600 having been brought in by the subscription of shares at £2 under options. During the year the ore reserves were increased, and now stand at 3,545,000 tons. This quantity would supply the present mill for over five years.

In the case of the Modder Deep a saving of 8d per ton in costs was accompanied by a small expansion in revenue due to the crushing of higher-grade ore. Thus the net profit came out £39,000 up at £767,000, and the dividend was raised to 150 per cent. This rate shows the high yield of nearly 17 per cent. on the current market price—45s for the 5s share. It is noteworthy that taxation absorbed £161,300. At 4,375,000 tons the ore reserves are up by more than a quarter of a million tons, the value of 9.3 dwts, although still high, showing a small decrease. The quantity represents nearly seven years' supply for the mill. Unfortunately, the mine, although rich, is somewhat small.

That big fusion, the East Rand Proprietary, whose shares at one time figured amongst the market leaders, last year again treated an increased quantity of ore. But as costs—contrary to the experience of the two companies referred to above—rose 1s 1d to 26s 8d per ton, comparing with 23s 6d no further back than 1919, and the gold premium brought in £100,000 less than before, the working profit amounted to only £78,300—insufficient to cover debenture redemption and other charges. This is a poor result from the crushing of a million and a-half tons of ore. Although a somewhat increased development footage was performed, the tonnage of ore opened up failed fully to replace that extracted; moreover, certain low-grade blocks had to be eliminated as unpayable under existing conditions. Hence the ore reserves estimate has been cut down to 1,946,650 tons—about 15 months' supply for the mill. Developments, except in one section of the property, were of a discouraging character. The company has a large cash reserve set aside for development, and the interesting question in the air is whether it be devoted to that purpose, having regard to the results of recent years.

A neighbouring concern, the New Kleinfontein, cut its costs down by 2s per ton; part of this, however, was due to the suspension of work in one section of the property. A profit of £65,000 was made on the treatment of the company's own ore, and £25,500 was received from the Modder East as rental for the use of the Apex plant. The dividend of 5 per cent. paid absorbed £57,600. Favourable developments are reported in the Benoni section, but the future of the company depends mainly upon the Apex section, where work has for some time past been suspended.

The City Deep, an important Central Rand consolidation, is able to report record results for 1921, this happy circumstance being largely due to the accession to the company's labour force secured through the absorption of the outcrop mine. The working profit of £711,500 compares with £457,700 in 1919, prior to the event just mentioned. Expenditure on capital account absorbed £96,200 and taxes £114,400. After payment of dividends totalling 37½ per cent. the increased balance of £326,300 remained to be carried forward. The absence of any response in the ore reserves to the greatly increased development footage is explained as arising from the large amount of dead work performed. The tonnage of 2,428,300 represents no more than two years' supply, and the grade is again lower at 8.8 dwts. On the basis of last year's dividends the shares yield about 16½ per cent.

As promised, all the leading groups have now cabled the results of operations during the quarter ended March 31st—it will be recalled that no monthly returns were issued owing to the strike. With operations in progress for less than one-third of the period, and expenses under several heads continuing all the time, it was a foregone conclusion that a bad showing would be made. Actually the figures are in some cases worse than looked for. Appended is a tabulation of the working results for the past two quarters. The figures for the March period

represent losses, unless otherwise stated; those for the three months ended December, profits:—

	Quarter Ended March. Loss.	Dec. Profit.		Quarter Ended March. Loss.	Dec. Profit.
Aurora West	13,020	2,180	New Modder	38,700	404,820
Brakpan	50,760	100,540	" Primrose	19,770	10,800
City Deep	33,470	170,180	" Unified	10,860	5,490
Cons. Langlaagte	32,420	41,400	Nourse	40,300	15,220
Cons. Main Reef	41,900	37,620	Randfontein	165,550	30,830
Crown Mines	89,660	163,840	Robinson Deep	46,580	46,710
Durban Deep	39,370	11,750	" Gold	24,200	16,500
East Rand Prop.	141,550	4,800	Rondelet United	15,200	1,640
Ferreira Deep	32,460	15,280	Rose Deep	3,820	23,830
Geduld	20,190	101,110	Simmer and Jack	36,660	15,420
Geldenhuis Deep	55,330	44,280	Springs	57,080	85,000
Govt. Areas	52,910	468,340	Sub Nigel	2,010	20,320
Knight Central	14,960	6,500	Van Ryn	19,290	17,690
Langlaagte Estate	41,740	39,510	" Deep	1,020	234,720
Meyer & Charlton	6,250	72,790	Village Deep	54,000	17,110
Modder B	7,200	200,350	" West Rand	39,840	9,830
" Deep	52,870	219,780	Wit. Deep	35,060	17,720
" East	33,080	13,600	" Gold	25,910	85,580
		Profit			Loss.

A study of these statistics will enable some idea to be formed of the dividend prospects for the current half-year. It will be seen that in only four cases are working surpluses shown for the past quarter, and that in not a few instances the losses substantially exceed the profits earned in the December quarter. Nevertheless, the Stock Exchange is in hopeful humour, talking of a substantial reduction in working costs.

WORK OF COMMISSIONS AT GENOA.

(FROM OUR CORRESPONDENT.)

GENOA, April 17.

THE Conference opened on the 10th, and resolved itself at once into Commissions. Of these there are four. No. 1 deals with the first three clauses of the Cannes agreement, and is in consequence mainly political; Nos. 2, 3, and 4, are concerned with finance, commerce, and transport. On each committee are represented the five inviting Powers, i.e., Italy, Great Britain, France, Belgium, and Japan, plus Germany and Russia. No. 1 Commission has four other members, viz., Sweden, Switzerland, Poland, and Roumania. Commissions 2, 3, and 4 number twelve members each. On each Commission the members, other than the five inviting Powers, Germany and Russia, were balloted for. In the balloting the Dominions voted.

Commission No. 1, on which the heads of delegations sit, may be expected to produce the excitements of the Conference. After a preliminary sitting it has adjourned whilst the Russian delegation considers the proposals of the Allied experts drawn up in London, and published this week as a White Paper.

At the moment there is something near a deadlock. Mr Lloyd George insists on the recognition of pre-war and war debts, together with indemnity for damages done to property under the Bolshevik régime, in all some 2,000 million pounds sterling, before further questions are discussed. The Russians put forward even heavier counter-claims for damages occasioned by Wrangel and Co. Both sides are playing with the fantastic. Whilst the Russians would probably accept arbitration, they require some *quid pro quo*, for any acknowledgment of debt, to put before their people, hence their delegates desire to discuss other matters first and the debts afterwards.

The work of the Finance Commission, under Sir Robert Horne's chairmanship, is divided, following the arrangement of the experts' report, into three sub-committees, to consider currency, credit, and the exchanges. The sub-committee on currency has entrusted to a body of international experts the consideration of the German and Russian amendments to experts' report. This body, presided over by Sir B. Blackett, consists of Messrs Vissering (Holland), Cassel (Sweden), Avenol (France), Havensstein (Germany), Bianchini (Italy), Dubois (Switzerland), Pospischil (Czechoslovakia), Cattier (Belgium), and Brand and Strakosch (South Africa). A Russian claim to be represented was set aside on the ground that experts only were required.

The report of the experts, as issued in the White Paper, does not contain the British Draft Amendments which were circulated on April 11th. These amendments are of importance as strengthening the project of a convention, and they raise the experts' report out of the realm of pious

hopes towards one of definite accomplishment. Thus the amendments lead up to the issue, which eventually must be faced, of the participation of America in any general return to the gold standard. If the assistance of America is essential then the most that can be hoped from the financial side of the Conference is that it may lead speedily to a successor in which the United States will be actively interested. The principal British draft amendment to Art. 36 reads as follows:—(a) It is not essential that the membership of the International Convention contemplated in the preceding resolution need be universal, even in Europe, but the wider it is the greater will be the prospect of success. Nevertheless, if the participating countries and the United States are to use the same monetary standard, no scheme for stabilising the purchasing power of the monetary unit can be fully effective without co-ordination of policy between Europe and the United States, whose co-operation, therefore, shall be invited. (b) It is desirable that the following proposals forming the basis of the international convention contemplated in Article 8, be submitted for the consideration of the meeting of central banks suggested in Article 2.

(1) The Governments of the participating countries declare that the restoration of an effective gold standard is their ultimate object, and they agree to carry out, as rapidly as may be in their power, the following programme:—(a) In order to gain effective control of its own currency, each Government must meet its annual expenditure without resorting to the creation of paper money or bank credits for the purpose. (b) The next step will be, as soon as the economic circumstances permit, to determine and fix the gold value of the monetary unit. This will not necessarily be at the former gold par. (c) The gold value so fixed must then be made effective in a free market. (d) The maintenance of the currency at its gold value must be assured by the provision of an adequate reserve of approved assets, not necessarily gold.

(2) When progress permits, certain of the participating countries will establish a free market in gold, and thus become gold centres. (3) A participating country, in addition to any gold reserves held at home, may maintain in any other participating country reserves of approved assets in the form of bank balances, bills, short-term securities, or other suitable liquid resources. (4) The ordinary practice of a participating country will be to issue additional paper money only against equal additions to its reserves of approved assets at the gold centres, and to offer exchange on other participating countries within a prescribed fraction of parity in exchange for its own paper money on demand. (5) The Convention will thus be based on a gold exchange standard. The condition of continuing membership will be the maintenance of the national currency unit at the prescribed value. Failure in this respect will entail suspension of full membership. (6) Each country will be responsible to the Convention for maintaining the international value of its currency at par, but will be left entirely free to devise and apply the means, whether through regulation of credit by control banks or otherwise. (7) Credit will be regulated not only with a view to maintaining the currencies at par with one another, but also with a view to preventing undue fluctuations in the purchasing power of gold. It is not contemplated, however, that the discretion of the central banks should be fettered by any definite rules framed for this purpose. Dr Hermes (Germany), at the opening discussion of the Experts' Report, entered only one amendment, which proposes to add to Article 6: "In countries with an adverse balance of payment, however, this step will be dependent on the re-establishment of the balance of payment." This is a scarcely veiled allusion to the effect of Reparation payments on the German Budget. M. Rakovsky (Russia) suggested the pooling of gold resources and the reassignment on pre-war proportions.

The Third Commission on Economics and Commerce, with M. Cobret (France) as President, is divided into two sub-committees, the first to consider tariffs, export and import restrictions, and equal treatment for traders, the second to discuss industrial property legislation. The latter body in its first sitting accepted Article 54 of the Experts' Report that "Foreign firms or individuals carrying on any permitted trade, profession, or occupation should be subject to no higher taxation than is borne by

nationals. The taxation of foreign companies should be based on similar principles, and the system of taxation so framed and administered that branches of foreign companies carrying on permitted trades, professions, and occupations in the territory of any country should not bear a greater burden of taxation in that country than the businesses carried on in the country by national companies."

The Commission No. 4, to deal with transports, has as its President Colonel Theunis (Belgium). Sir Francis Dent is the British representative. It also has resolved itself into sub-committees to deal respectively with rail and water transport. The question of the decisions of Porto Rosa has been raised. The forementioned Conference has been generally considered a success, but months go by without the Governments ratifying the decisions to which they are parties. The first step of the Transport Committee as a whole has been to ask each Government whether, and if so when, ratification is to take place.

It would be unfair to expect results from the first week's work of the Conference, and it is perhaps all to the good that there is little definite to report. The tense atmosphere of the opening days inclines the spectator to consider no news as good news. Presupposing the absence of dramatic developments, it will be possible for the Conference to fulfil the best that can be hoped of it. It should be considered a success if the recognition of Russia and a pact of European peace can be agreed upon, if a currency convention capable of being submitted to the United States can be adopted, and if the resolutions of Porto Rosa Conference obtain immediate ratification, and the decisions of that Conference be adopted by an enlarged number of States. The two controversial questions of Reparations and disarmament must if possible be kept out of discussion. If a European pact is accepted and a sane currency policy hammered out, then both Disarmament and Reparations will *ipso facto* have to be dealt with by other conferences in the early and more mature future. Whether these two skeletons can be kept in their cupboards remains to be seen.

Notes of the Week.

War Bond Conversions.—It was announced last night that holders of 5 per cent. National War Bonds maturing on October 1, 1922, and April 1, 1923, are offered conversion either into 4½ per cent. Treasury Bonds, repayable on April 15, 1932, at the rate of £100 4½ per cent. Treasury Bonds, together with £4 in cash, for each £100 nominal of War Bonds, or into 3½ per cent. Conversion Loan at the rate of £134 Conversion Loan for each £100 nominal of War Bonds. Conversions will be effected as on April 1, 1922, the latest date for application for conversion being May 15th next. Interest on the Treasury Bonds will be exempt from Corporation Profits Tax. National War Bonds outstanding which mature on October 1st next amount to £133½ millions, while those due on April 1, 1923, amount to £129 millions. This conversion operation will reduce the charge on the amount converted from 5 per cent. to a rate between 4½ and 4 per cent.

The Engineering Dispute.—Our Labour correspondent writes:—At the back of the minds of the engineers, when they rejected the memorandum on "managerial functions," there was more than a repudiation of the claim of the employers to determine overtime and similar questions without prior consultation with the men. There was the question of security and the future of the skilled tradesmen. Much has been made of the "split" between the Amalgamated Engineering Union and the remaining unions concerned either wholly or in part with the engineering industry. But, apart from the fact that the quarrel in the first instance was between the A.E.U. and the Engineering Employers' Federation, the truth is that the full enforcement of "managerial rights" by the employers means less to most of the other unions, and particularly to the unions of general workers, than it does to the Amalgamated Engineering Union. Indeed, the general workers have everything to gain by the employers exercising their managerial functions to the full; and the fact that but for a modification in the basis of negotia-

tions which seemed to offer to the unions some hope of an agreed settlement, the general workers would have been on the streets, is a tribute to Labour solidarity. The unions understand and appreciate the difficult situation in which the Amalgamated Engineering Union find itself. The A.E.U., notwithstanding its title, is not an organisation covering all workers in the engineering industry. It is an amalgamation of unions of relatively skilled workers, and it is to-day essentially a "craft" union. The development of specialisation had before the war begun to present a serious problem for the skilled men, and during the war well-established trade practices were suspended, and "dilutees" were admitted in large numbers. These "dilutees" were for the most part semi-skilled machine minders, working on specialised operations. And though after the war a Restoration of War Pledges Act was passed, it is obvious that the experience of the war period could not be forgotten. The engineering industry is changing as a result of the introduction of specialised processes and machinery and of methods of mass production, and the skilled workers are confronted by a new set of conditions which appear to endanger their calling. Immediately before the "lock-out" was carried into effect the chairman of the Engineering Employers' Federation in a published statement quoted as an illustration of the exercise of "managerial functions," not over-time, on which question the dispute had originally arisen, but the "right" of the employer to determine what kind of machines should be used and what kind of labour should be used to man them. The engineers were, of course, aware that by elevating the issue as regards overtime to the level of a general principle the Engineering Employers' Federation was raising an issue which included the question of the manning of machines and the future of apprenticeship. No one believes that the Employers' Federation is fighting to retain "managerial functions" unimpaired merely in order that its members may determine when overtime is to be worked. Overtime is a relatively small matter compared with that of machine manning, which affects the whole future of the industry, and it is reasonable to suppose that once the A.E.U. admit the unqualified "right" of the employers "to manage their works in their own way," the extension of semi-skilled labour to processes now confined to skilled workers will be forced. The two questions of machine manning and apprenticeship hang together, as the latter must become obsolete if there is no opportunity of all-round training and juvenile workers are employed on specialised jobs. Overtime, the manning of machines, and apprenticeship are all questions which might be appropriately and successfully dealt with in industrial agreements; and they should be included in the agenda for discussion when negotiations are resumed. The advantage of an inquiry under the Industrial Courts Act, such as has been suggested, is that general formulae such as that relating to "managerial functions" would need to be interpreted by application to workshop practice and problems. The result would be an understanding, probably of an elaborate kind, covering all the real questions on the minds of engineering employers and employees rather than one consisting in declarations of principles.

Allied Controls in Germany.—The *Times* has published a telegram from its Berlin correspondent announcing important changes in the plans of the Allies with regard to Control Commissions in Germany. According to this correspondent, an Allied note was received in Berlin on Monday in which the Council of Ambassadors informs the German Government (1) that the Inter-Allied Air Commission will cease to exist on May 5, and that its place will be taken by a small "Guarantee Committee," which will be charged with seeing that the obligations undertaken by Germany in restriction of the manufacture of aircraft are carried out. (2) That the Allied Powers have decided upon the regulations whereby a military aeroplane is to be distinguished from a civil aeroplane, and the differences are defined in an appendix to the Note. The Committee is to exist only until the beginning of 1925, that being the end of the first period of occupation. (3) That the Inter-Allied Military Commission of Control shall be

replaced by a similar small "Guarantee Committee" as soon as it has completed its more urgent tasks. (4) That the Naval Commission of Control is to be abolished and no guarantee committee is contemplated in its place.

Employment in March.—The position as regards employment last month is summed up thus by the *Labour Gazette*:—"Employment during March, though still bad generally, showed a further slight improvement on the whole, notwithstanding the adverse effect of the engineering dispute on employment in that industry and in the iron and steel trades." Better demand for labour was shown by the cotton and wool textile industries, iron mining, pig-iron manufacture, and the building and clothing trades. The Trade Union percentage of unemployment at the end of March showed no change as compared with the figure recorded at the end of February. The following table shows how the percentage has moved month by month in recent years:—

		TRADE UNION UNEMPLOYMENT PERCENTAGES.											
		1913.	1917.	1918.	1919.	1920.	1921.	1922.					
End of—		%	%	%	%	%	%	%					
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8						
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3						
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3						
April	1.7	0.3	0.9	2.8	0.9	17.6							
May	1.9	0.4	0.9	2.1	1.1	22.2							
June	1.9	0.4	0.7	1.7	1.2	23.1							
July	1.9	0.4	0.6	2.0	1.4	16.7							
August	2.0	0.5	0.5	2.2	1.6	16.3							
September ..	2.3	1.3	0.5	1.6	2.2	14.8

* Excluding coal miners. † Revised figure.

Improvement is, however, shown by the employment figures for the whole body of workers coming under the Unemployment Insurance Act. Of these 12,000,000 workers, 14.6 per cent. were unemployed at March 27th, as compared with 15.2 per cent. at February 28th. The total number of workpeople registered at the employment exchanges as unemployed on March 27th was 1,740,000, as compared with 1,837,000 a month earlier. The improvement extends also to the working of short time. At the end of February 155,000 males and 105,000 females were registered as working systematic short time in such a manner as to entitle them to unemployment benefit. At March 27th these numbers had been reduced to 132,000 males and 91,000 females. It appears, therefore, that if it had not been for the engineering and shipbuilding dispute, which involved about 240,000 workers, a substantial improvement in employment conditions would have been recorded in March. Changes in rates of wages reported as having taken effect in March in the industries covered by official statistics resulted in a reduction of over £223,000 in the weekly full-time wages of about 1,350,000 workpeople. Wage reductions took place in various coal-mining areas, in merchant shipping, dock labour, iron puddling, the heavy chemical trade, and other industries.

Cost of Living.—According to the official calculation of the *Labour Gazette*, there was a further decline during March in the cost of living for an average working-class family. The decline in the index number was 4 points, which brings the figure to a level 82 per cent. above that which was in force in July, 1914. As will be seen from the following table, the fall, which has been continuous since last August, has now brought the cost of living below the level recorded at the beginning of 1918:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914. (Food, Rent, Clothing, Fuel, and Light, &c.)

For food only, retail prices at April 1st were 73 per cent. above the pre-war level, as against 77 per cent. a month earlier. In food prices the most marked movement in March was the fall in the price of eggs. Milk and fish, and to a lesser extent bacon, became cheaper in March. On the other hand, advances took place in the prices of butter, mutton, bread, flour, sugar, and tea.

Another Brazilian Loan.—It is announced that a new loan will be issued, possibly next week, through Messrs Rothschilds, Schröder and Co. and Baring Brothers, for the purpose of paying off the credits for Brazilian coffee arranged last year with certain banks for the continuance of the scheme of valorisation. No further information is available at present, not even whether the loan is to be issued by a State Government or by the Federal Government, or, as may be more probable, by one or more of the Governments of the four chief coffee-producing States, backed by a Federal guarantee. Whether effective aid can be given to the coffee planters of San Paulo, in view of the greatly decreased purchasing power of their Central European customers, and the competition of other coffee-growing regions, is open to question. Brazil, for the last 30 years, has depended far too much on coffee and rubber, though during and since the war there has been a notable increase in the production of other commodities, particularly cotton, rice, maize, beans, sugar, and meat, and it seems at least doubtful whether the coffee industry should be artificially kept up by steadying prices in contravention of the ordinary principles of economics. But the coffee States are the most powerful in the Republic, and valorisation has evidently come to stay. It is noteworthy that Messrs Rothschild, whose chief opposed the scheme in 1908, are now taking part in issuing the new loan. And in any case the bank credits must be taken up. The State loans for valorisation purposes have hitherto been secured on export taxes on coffee, the revenue from which is reserved to the States; it remains to be seen whether there will be a Federal guarantee also, and whether it will be secured on general revenue or on Customs. The External debts of the four coffee States—San Paulo, Minas Geraes, Espirito Santo, and Rio Janeiro—in 1919 together exceeded £20,000,000. The total Federal foreign debt in that year was over 116 millions sterling; the loans quoted or known in London amount to £102 millions. Funding operations have twice been necessary in the last quarter of a century, and the sinking funds are suspended till 1927. An issue of \$75,000,000 8 per cent. bonds was made in New York last year, and the interest on these, on the Lloyd Brasileiro bonds guaranteed by the Government, and on the loans quoted or known in London, brings up the accrued interest charges to about £5,790,000. Two of the loans are specifically secured on the Customs duties, primarily those of Rio Janeiro. At present, of course, there is serious financial and commercial depression. The exchange last year fell heavily, and the London and Brazilian Bank, for the first time for many years, has found it inadvisable to pay a bonus in addition to its regular dividend. The political situation, too, has given rise to some disquiet, owing to the doubts as to the result and the regularity of the Presidential election.

Cunard Results.—A further decline in profits is recorded in the report and accounts of the Cunard Steam Ship Company, Limited, for the year ended December 31, 1921. Receipts from freights, passage moneys, &c., which in 1920 rose to the record figure of £12,260,662, fell to £9,286,027 for 1921. Fortunately working expenses also fell, and net profits at £947,771, although substantially lower, cannot be considered unsatisfactory in view of industrial conditions prevailing last year. The following comparative summary shows results for the past five years. Figures for 1913 are also given:—

	1913.	1917.	1918.	1919.	1920.	1921.
Freight and passages	£ 3,659,774	£ 3,999,917	£ 3,801,655	£ 9,201,728	£ 12,260,662	£ 9,286,027
Working expenses	2,468,467	2,890,991	2,594,530	7,476,808	11,079,042	8,336,256

Insurance premiums	66,736	..	..	..	..	..
Balance	851,374	1,108,926	1,207,125	1,724,920	1,181,620	949,771
Brought forward	88,964	151,474	157,552	173,237	144,187	169,075
Sundry receipts	63,249	..	..	..	..	..
Total	1,005,587	1,260,400	1,364,677	1,898,157	1,325,807	1,118,846
Deb. int., taxation, &c.	122,293	321,136	320,725	395,622	293,206	449,741
Depreciation	443,637	379,632	353,231	370,429	394,310	..
Insurance and reserve	188,528	135,000	135,000	135,000	135,000	135,000
Prof. dividend	56,750	(5 & 6%)	(5 & 6%)	(5 & 6%)	(5 & 6%)	(5 & 6%)
Ord. dividend	64,002	(10 %)	(10 %)	(10 %)	(7 & 8%)	(7 & 8%)
Carry forward	130,378	157,552	173,237	144,187	169,075	199,890

* Including repairs and renewals and insurance premiums.

The ordinary dividend is maintained at 7½ per cent., and at £199,890 the carry forward is a little higher than that of last year. No figures are shown for depreciation or reserve, although included in the item debenture interest, taxation, &c., is £60,000, being a proportion of the total discount of £520,710 on £4,000,000 7 per cent. mortgage debenture stock. In the balance-sheet steamer and shipping investments are valued at £16,358,031, and general investments, without further explanation or comment, are taken at £2,233,215. Cash in hand and at bankers totals £1,963,751. The balance-sheet will be found fully detailed and analysed in our usual column. The report states that "the services of the company, both for freight and passenger business, although considerably interfered with by labour disputes from time to time, have been maintained with a greater degree of regularity than was possible during the preceding year. While not yet normal, owing to the protracted delay in the delivery of new tonnage, they will be materially strengthened in the course of the next month or two. Freight rates continued to decline on the North Atlantic and in other trades in which the company are interested. The passenger carryings of the company have been satisfactory, although the West-bound movement generally was curtailed by United States legislation."

Birmingham Small Arms.—In the annual report and accounts of the Birmingham Small Arms Company for the year ending January 31, 1922, issued this week, the directors explain a loss of £469,168 on the year's trading by observing that, "unfortunately, not only did the slump come with unforeseen suddenness and unprecedented severity, but it has persisted ever since, and continues to dominate the industrial situation. In such circumstances," they continue, "a deficit in the year's accounts was inevitable." The sum brought forward from the previous year's accounts amounted to £510,818, and as £200,000 was transferred from the general reserve "to meet special expenditure incurred in the change over to, and development of, peace products," £219,816 was carried forward to next year's accounts after payment of preference dividends. Recent years' results are compared below:—

YEAR ENDING JULY 31.

	1914.	1915.	1917.	1918.	1919.	1920-21*	1921-22.
Net profit	£ 190,429	£ 408,465	£ 427,976	£ 435,207	£ 375,091	£ 566,881	£ 469,168
Preference dividend	19,694	25,230	21,118	20,649	19,710	133,471	31,834
Ordinary dividend	115,047	153,398	230,094	230,094	234,511	140,759	Nil
To reserve	50,690	133,491	150,000	155,473	100,000	5 %	Nil
Carried forward	£ 5,638	£ 96,346	£ 26,764	£ 28,591	£ 18,876	£ 29,265	£ 291,002

* 18 months ending January 31, 1921. + Including £100,729 interest on short term notes.

Total assets now amount to £8,064,174. Stocks, which a year ago stood at £1,434,994, now figure at £894,082, while sundry debtors are down from £725,079 to £455,755. Investments "at or under cost" are recorded at £3,992,323, and it is stated that these "are brought forward on the same basis as last year, and no adjustment in view of existing trade conditions has been made." Under liabilities, loans from two subsidiary companies have increased from £580,000 to £705,000, but sundry creditors have fallen from £544,957 to £400,085. The report states that "the contingent liability under guarantees to the bank in respect of the overdrafts of the Aircraft Manufacturing Company, Limited (in liquidation), and Peter Hooker, Limited (in liquidation), has been

reduced during the year from £950,000 to £596,063 (since further reduced to £550,600). The bank holds debentures from these companies as its primary security."

London and Lancashire Insurance Company.—For several years past the report of the London and Lancashire has been of outstanding interest, and the one issued in respect of 1921 will not disappoint expectations. The fire premiums were reduced from £3,668,249 to £3,007,501. The claims were 49.9 per cent. of the premiums, as compared with 40.9 per cent., and the expenses were 41 per cent., against 37.8 per cent. But the smaller premium income has meant a substantial reduction in the necessary provision for unexpired risks, so that the underwriting surplus of the year was £538,634 (17.9 per cent.), against £621,677 (17 per cent.). In the marine accounts there was the big cut in premium income which is now usual in insurance companies' reports for last year. The premiums were reduced from £2,669,516 to £1,383,306. The claims were £1,914,004, against £1,839,442. After the marine funds had been strengthened by a transfer of £110,773 from profit and loss, they stood at £853,500, against £1,368,000 a year before. In the accident and general account, the premiums were £1,630,724, against £1,746,672, and there was a transfer to profit and loss of £104,746. The underwriting surplus for all departments amounted to £511,526, to which falls to be added £228,000, provision for E.P.D. made in previous years in excess of ascertained requirements. Against the total of £739,526 comes a deduction of £308,288 for income-tax and provision for corporation tax. The net interest receipts on investments, after deducting £61,512 paid in debenture interest, was £337,095. After increasing the additional reserves in the fire and accident revenue accounts by £400,000, and transferring the sum of £20,000 to staff pension fund, the directors propose to pay a dividend of 6s per share, less tax, making, with the interim dividend already paid, a total distribution for the year of 12s per share, less tax, or £301,321, and to carry forward £1,026,431 to the next account. The reserve funds, excluding capital paid up, amounted on December 31st last to £6,098,287, being 101.27 per cent. of the premium income for the year. The company has come successfully through one of the most difficult insurance years. Mr Rutter, the general manager of the company for more than 20 years, is now its chairman and governor. He is the third general manager of recent years to pass from his office to the chairmanship of the board, the other two being Sir Gerald Ryan, of the Phoenix, and Mr Roger Owen, of the Commercial Union.

The "Old" Equitable and the London Life.—Just as one tends to group together the two eminent insurance survivors of the "South Sea Bubble," so one always thinks of the old Equitable and of the London Life Association in terms of one another. These two life offices have no shareholders, no branch establishments, and no agents. For a carefully selected class of policy-holders they supply life assurance on bed-rock terms. Two years ago the glory of the "old" Equitable was sadly dimmed by the passing of its bonus for the first time in a history of nearly 160 years. The depreciation of assets had eaten up its normal surplus. But now, as at the end of 1921, a fresh valuation discloses the grateful fact that its brightness has been restored. A severe re-valuation of assets and liabilities discloses a surplus of £667,392 on funds of £5,249,511. The actuary recommends—and the directors concur in his recommendation—the distribution of slightly more than half a million—leaving £160,000 to be carried forward—a sum which will provide bonuses on whole-life assurances for the past five years at the same rate as on previous occasions. The endowment assurances are to have in respect of the five years a compound reversionary bonus (bonus on sums assured and previous bonuses) at the rate of £1 10s per cent. per annum, and a 5s per cent. simple bonus at maturity. There is still an "unbonused" gap of two war years, 1915 and 1916, but the policy-holders have not much to complain of. The London Life Association pursues the even tenor of its way. War casualties and depreciation of assets to all appearance leave it unscathed. During last year the new business

amounted to £1,550,056 (costing not one farthing in commissions), and the funds increased by £490,572. The expenses of management were reduced from £6 8s 7d per cent. of premiums to £6 5s 11d per cent. The usual increase of 1 per cent. in the rates of reduction of premium has been made for the year beginning on July 1st next. This means that the reductions will range from the equivalent of 128 per cent. for the old first series to 51 per cent. for the sixteenth series. The reversionary bonus on policies entitled to participate in this way will be at the rate of 35s per cent. on sums assured and existing bonuses, being the same rate as that declared in each year since 1914. This is, perhaps, the most remarkable feat accomplished by a British life office. During all the years of war, and the more difficult years which followed the war, the annual rates of bonus on the London Life have been unchanged.

Two Insurance Corporations.—One inevitably deals with corporations of the London Assurance and the Royal Exchange as if they were twins. Although there is no real connection between them except their common foundation in 1720 and their successful development up to the present day, their historical association is too close to be lightly broken. The London has at last outgrown its Royal Exchange buildings, and left for new premises at No. 1 King William street, but its 200-year-old companion remains faithful to its rather inconvenient eyrie among the familiar pillars of the Exchange. The two reports have been issued almost simultaneously, and have some features in common. In the fire department the London Assurance has reduced its premiums from £1,603,063 in 1920 to £1,564,030 in 1921. The fire claims for last year were 51.5 per cent. of the premiums, against 46.1 per cent., and the total expenses 44.4 per cent., against 41.3 per cent. The net result, after allowing for unexpired risks, was a fire surplus for last year of £80,003 (5.1 per cent.), against £105,657 for 1920 (6.6 per cent.). The Royal Exchange's fire department also shows a reduction in premiums from £1,792,448 to £1,533,103. The claims last year were 54.9 per cent., against 46.2 per cent., and the expenses 45 per cent., against 41.6 per cent. After an adjustment for the unexpired risks, the surplus in 1921 was £103,952 (6.7 per cent.), as compared with £94,449 (5.3 per cent.) in 1920. In both marine departments considerable changes are to be seen, especially in that of the Royal Exchange Corporation. Here we have what is almost a voluntary liquidation, the reduction of the marine premium income from £1,070,952 in 1920 to £248,364 in 1921. The claims were £649,930, against £740,206, and after transferring £60,000 to profit and loss, the marine fund was reduced by £551,916 to £886,793. The London Assurance also cut down its marine account, though less drastically. The premiums in 1921 were £678,232, against £1,219,825 in 1920. After meeting claims and expenses and transferring £58,996 to profit and loss, the marine fund was £200,000 lower at £800,000. The London Assurance closed last year with a credit balance of £208,244 at profit and loss, after providing £100,000 for income and corporation taxes. A dividend of 28 per cent., tax free, is recommended, and is much more than met out of the receipts from interest. In the case of the Royal Exchange, income and corporation taxes absorbed £104,018, and the credit balance at profit and loss was £958,356. The total dividend for the year will be 16 per cent., less tax, which is also easily provided by interest receipts.

British Italian Corporation.—The report for the year 1921 of the British Italian Corporation, formed in 1916 under the auspices of certain leading British and Italian banks, shows net profits of £44,364, which compares with £62,927 for 1920, and £68,483 in 1919. Income-tax and provision for corporation profits tax required £33,100, as against £20,600 in the previous year. The dividend is maintained at 4 per cent., free of income-tax, absorbing

£40,000, and £27,700, or £3,400 more, is carried forward. Changes in the balance-sheet are set out below:—

LIABILITIES.		ASSETS.	
Amount.	Inc. or Dec.	Amount.	Inc. or Dec.
Share capital ..	1,000,000 ..	Cash in hand ..	760,394 ..
Reserve ..	233,418 ..	and at banks ..	262,364 ..
Sundry creditors ..	968,704 ..	Bills receivable ..	554,526 ..
Acceptances, &c. ..	4,601,409 ..	Investments ..	149,471 ..
Profit and loss ..	68,692 ..	Sundry debtors ..	764,430 ..
		Cover for acceptances, &c. ..	4,601,409 ..
		Premises ..	41,992 ..
		Furniture ..	1 ..
Total	6,872,223 ..	Total	6,872,223 ..

The reserve of £233,418 is the amount received from the British Government in previous years, which has now become the absolute property of the company, the contingent liability to the Government having now been cancelled. The sum of £50,000 paid by the Government in November last as final principal payment under the agreement of June, 1916, together with other amounts out of contingencies and trading profits, has been used to write off bad and doubtful debts. The Corporation has also received, and will receive, from the Government the sums necessary to meet income-tax and excess profits duty in respect of the amounts received from the Government. The Italian auxiliary—the name of which has been changed from Compagnia Italo-Britannica to Banca Italo-Britannica—distributed, as in previous years, a dividend of 4 per cent. The directors of the British Italian Corporation state that they have found it advisable to acquire those shares of the Italian company which were held by the Italian banks. The principal movement in the balance-sheet is the substantial drop in acceptances. This, however, follows an increase a year ago to the extent of £2,895,000. In view of the difficult financial conditions prevailing in Italy the results are not unsatisfactory.

Belgian Premium Loan.—We are informed that the Fédération des Co-operatives pour Dommages de Guerre, the Belgian organisation formed under the auspices of the Belgian Government to make reparation in anticipation of German payments, which successfully raised a loan of 1,000,000,000 in February of last year, is about to launch an appeal for a similar amount under the guarantee of the Belgian Government. The bonds will again be of the nominal value of 250f, but will bear interest at the rate of 5 per cent. (again free of coupons tax, present or future), instead of 4 per cent., payable annually on June 1st. The issue price has been fixed at 247.50f per bond (payable on subscription) instead of 200f, as on former occasions, but the bonds which do not gain a prize are all redeemable at 300f, or a premium of 52½f over the issue price. The loan will be redeemable by drawings within a period of 90 years, 12 in each of the first 20 years, and 10 in each of the 70 years thereafter, and authority is taken to redeem the loan at any time after June 1, 1922. In each of the first 10 years there will be 37 prizes, totalling 7,000,000f, in each of the next 10, 32 prizes, totalling 6,000,000f, and in each of the subsequent 70, 25 prizes, totalling

5,000,000. Bonds which do not gain a prize will be redeemed at 300f each. The subscription lists will be opened in Brussels on May 15th next, and closed as soon as the milliard is obtained.

Labour Ministry Estimates.—The Select Committee on Estimates has issued a first report (White Paper No. 70. Price 2d), which deals with the estimates for the Ministry of Labour. The report points out that the actual expenditure of the Department will this year be about £23,000,000, of which "no less an amount than £4,340,560 goes in salaries and administration." However, the only definite economies suggested by the Committee are that the £3,000 a year paid to the Chief Labour Adviser is excessive, and that the £3,000 a year paid to the President of the Industrial Court might be reduced to £1,500, which is the salary received by a County Court judge. A comparison is made in the report between the cost of the employment department of the Board of Trade before the war and the present cost of the Ministry of Labour. The old department in 1913-14 cost only £541,364 for administration. The Ministry of Labour, however, administers the following services, which the old department did not:—(1) Trade Boards, (2) Conciliation Act, 1896, (3) Industrial Courts Act, (4) Collection and Publication of Labour Statistics, (5) National Roll for the Disabled, (6) Professional Training for ex-Service Men, (7) Industrial Training for ex-Service Men, (8) Interrupted Apprenticeship Scheme for ex-Service Men, (9) Re-Settlement Grants for ex-Service Men. Moreover, the number of persons insured under the Unemployment Insurance has risen from 2½ millions in 1913-14 to 12 millions at the present time. Apart from reference to the two salaries mentioned above, no opinion is expressed as to whether the increase in administrative expenditure is in proper proportion to the increase in work.

Transvaal Output and the Strike.—The Transvaal Chamber of Mines have just issued statistics of gold output in the Transvaal during the first quarter of the year 1922. The Chamber have not published their customary monthly statistics since those issued for the month of December owing to the Rand strike. It is not surprising to find a marked decline in output. The total gold output for the quarter is stated to be 639,728 ounces of fine gold, which compares with 1,880,853 ounces in the first three months of 1921. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
January..	787,487	782,634	714,182	678,056	670,503	651,593	639,728

UNITED STATES.—STOCKS AND BONDS BUOYANT: GREAT INVESTMENT DEMAND—FOREIGN ISSUES—COMMODITY PRICES IN MARCH—INDUSTRIAL IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 10.

EXTRAORDINARY buoyancy characterises both the bond and stock markets. Every day during the past week transactions in shares on the New York Stock Exchange have been well above the million mark, which is always considered a big turnover, and the total in two different sessions exceeded 1,500,000 shares, the largest single day's dealings in about two years. Trading has been on a very broad scale; in fact, broader than ever before in the history of the Exchange. Under heavy purchases, representing not only hasty covering by an extensive short interest, but also considerable buying on the part of the outside public, whose speculative appetite has been whetted by the recent bull movement, prices have scored sensational advances to new high levels for the year in rails, industrials, and practically every group of stocks in the active list, as well as numerous issues heretofore relatively inactive, including high and low-priced dividend and non-dividend paying shares. Demand, however, has not been entirely speculative, for there have been evidences of substantial accumulation for the "long pull," and of investment buying, especially in well-seasoned preferred stocks. The marked increase in activity in iron and steel, better railroad earnings, present and prospective, and expanding business in automobile and various other trades and industries, are largely responsible for the recent outburst of bullish enthusiasm. But the market as a whole seems to be discounting an expected general revival in trade and industry later on, which, in former years, has always followed periods of depression, and, it might be added, has invariably been foreshadowed a number of months in advance by rising prices on the Stock Exchange.

Bonds, likewise, have been and continue exceptionally active and strong, many reaching new high levels for this year, and some passing their best previous records. United States Government war obligations have been conspicuous features, the First Liberty Loan 4½'s touching par for the first time, while the so-called first-second 4½'s again sold at par after ruling below that level for nearly three years. In fact, four out of the ten different issues of United States war bonds are now selling at or above their original subscription prices. United Kingdom 5½'s of 1937, Canadian 5½'s of 1929, and French and Scandinavian municipal bonds exceeded previous high records. Domestic railroad, industrial and other corporate bonds generally have likewise enjoyed a vigorous advance under an investment demand that seems almost insatiable. The amount of funds available for investment by individuals, institutions, and corporations has proved to be vastly greater than financial interests expected a few months ago; it no doubt represents, in large measure, money left idle as a result of the widespread industrial and business depression in this country during the past year and a half. Money rates have shown no material change in the past week or two; but a great deal of the recent investment demand is believed to have been based on expectations of further relaxation in money before long.

The really surprising feature is that the demand for outstanding bonds has not been checked in the least by the veritable flood of offerings of new securities. New bond issues last week alone totalled nearly \$112,000,000, and in the week before more than \$82,000,000; nevertheless, all of the offerings were successfully floated with no apparent effort. The entire offering of \$60,000,000 New York Central Railroad Refunding and Improvement Mortgage 5 per Cent. Bonds, priced at 94½, to yield 5.30 per cent., was taken up in half an hour, and the amount was

so heavily oversubscribed that allotments, it is understood, were made on a 30 per cent. basis. Other offerings consisted of \$14,955,000 public utility bonds, \$10,757,000 state and municipal securities, \$2,500,000 land bank bonds, and \$23,700,000 foreign issues. The largest piece of foreign financing was the \$14,000,000 8 per cent. bonds of the Czechoslovak Republic, which were offered at 96½, to yield 8.30 per cent., and were a part of the \$30,000,000 loan, the remainder of which was sold simultaneously in London and Amsterdam. They were readily placed here, where the issue attracted much attention, because it was the first financing for a Central European country to be undertaken in this market since the war. Another foreign offering consisted of \$6,700,000 5½'s of the Dominican Republic, secured by the Customs receipts of that country. They were promptly disposed of on a 6 per cent. basis. There was an equally quick response from investors to the Province of Alberta, Canada, \$3,000,000 30-year 5½ per cent. non-callable gold bonds, dated April 1, 1922, which were offered at 103 and interest to yield 5.30 per cent. The pronounced success of recent foreign loan flotations here will probably lead to several others within the next month or so. It is just announced that the Holland-America Steamship Line has sold to a well-known New York investment house 20,000,000 guilder bonds, which are about to be offered here on a basis slightly better than 6 per cent. This is the second guilder loan in this market during 1922, the other having been 75,000,000 guilders for the kingdom of Netherlands, but it is the first industrial loan of its kind to be undertaken here. Another house, dealing in investment securities, is offering for immediate delivery 5 per cent. bonds, in denominations of 1,000 and 5,000 marks, of the Bank für Industriewerte Actien Gesellschaft (the "B.I.A." of Berlin). The issue of \$13,000,000 Rio de Janeiro 8's, offered to-day at 103, was heavily oversubscribed.

During March there was a slight downward trend in commodity prices, as is indicated by *Bradstreet's* index number at April 1st—namely, \$11.5317, which compares with \$11.6001 on March 1st. This marks the second decline in the 10 months' period from June 1st to April 1st, during which the price-level, as a whole, advanced 7.9 per cent. The March decline was shared in by 10 out of 13 groups; 34 articles declined, while 19 advanced and 53 remained unchanged. As compared with the low point on June 1, 1921, the April 1st index number is 7.9 per cent. higher; it is 44.7 per cent. below the peak of February 1, 1920, but 32.4 per cent. above the August 1, 1914, level. The same authority reports that the rising tide of bank clearings, which began in February, was maintained in March. The total at 119 leading cities of the United States for that month, amounting to \$30,985,270,000, shows a gain of 6.6 per cent. over the same month a year ago, whereas the gain in February was only 2.2 per cent., and the January total showed an actual loss of more than 8 per cent. from that recorded in the first month of 1921. Cities in New England, the Middle West, and the Far West showed gains, but the heaviest increase last month, as in February, was at New York.

Some of the more important industries in this country have shown a decided turn for the better in recent weeks, but the most remarkable improvement is reflected in the statistics of building expenditures for March, as compiled by *Bradstreet's*. Such expenditures for which permits were issued last month at 109 cities aggregated \$194,600,000, approximately, as against only \$99,200,000 in February and \$91,800,000 in March of last year.

Improvement in the steel industry is strikingly indicated by the report of the United States Steel Corporation, showing unfilled orders on its books at April 1st of 4,492,148 tons, the largest since last September, and representing an increase during March of 353,079 tons, which is the first gain reported since last December, and is a much larger increase than was generally expected. About half of the gain is accounted for by the influx of new orders during the last week in March, before the advance in prices of certain products which became effective April 1st. Railroads and equipment companies were the largest buyers, although the building trades placed a substantial portion of the new business. Railroad earnings, as a whole, are showing steady improvement.

FRANCE.—DECISIONS OF REPARATIONS COMMISSION—GENOA—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, April 18.

THERE is some danger, perhaps, that the noise that has been made over the developments of the week at Genoa may cause to be overlooked the much more important circumstances attaching to the decisions that have meantime been come to by the Allied Reparations Commission here. The German Government, it will be remembered, replied flatly refusing to give the guarantees asked for by the Reparations Commission, in exchange for the temporary moratorium which the Allies, in certain conditions, were prepared to grant. The Reparations Commission, in its Note to Berlin on March 21st, in which it set forth the terms on which a moratorium would be granted, expressly stated that it proposed, in order to allow Germany ample time to come to a decision, to accord the provisional moratorium down to May 31st, but that it reserved the right to decide, on that date, whether the temporary respite should be confirmed or nullified. In the same Note the German Government was warned that if the decision is that the temporary moratorium shall be annulled, the whole of the sums due under the Agreement of May, 5th last, and so far unpaid, will become payable within 14 days after such annulment, under penalty of the stipulations laid down in the Treaty of Versailles, for application in case of default by Germany, being immediately put into execution. The stipulations referred to are contained in Chapter VII., Appendix II., Paragraphs 17 and 18 of the Treaty.

These paragraphs provide that in the event of Germany failing to carry out her engagements, the Reparations Commission will immediately notify the various Allied Governments of the fact, together with the proposals it suggests shall be put into operation to enforce payment. The Treaty further lays down that the steps which the Allies may take in these circumstances may include "acts of prohibition and of economic and financial reprisals, and, in general, such other measures as the respective Governments may esteem necessitated by the circumstances." This is interpreted here as giving France full power to take independent action against Germany, if circumstances should make it necessary, in order to secure payment. It is argued by a large section of public opinion that nothing but the seizure of the Ruhr area, which would both put an immediate stoppage to Germany's economic life and furnish France with all the coal she needs, would bring Germany into a frame of mind in which she would take the necessary steps to carry out the Treaty.

Such being the juridical and penal situation under the Treaty, it can easily be understood that the majority of people here are awaiting the advent of May 31st with

extreme interest, in the belief that the Allies will then take decisive decisions that will put an end to the uncertainty that has for so many months unsettled the whole economic, financial, and business outlook. It should be noted that in their Note to Germany the Reparations Commission intimated that the temporary moratorium can only be continued until May 31st on condition that Germany pays the agreed sums of 18,051,079 gold marks on April 15th and a further 50,000,000 gold marks on May 15th. It is reported that the first of these amounts was paid last Saturday.

Meanwhile, the French Press repeatedly insists that, whatever may be the opinion of Mr J. M. Keynes and a certain section of the British public, Sir John Bradbury, the British delegate on the Reparations Commission, is convinced, like his French and Belgian colleagues, that Germany can pay the sums demanded from her if she chooses to do so. In these circumstances, there is no sign of any tendency to making further concessions to the Berlin Government. At the same time, steady progress is being made by the special sub-committee appointed by the Commission, with a view to drawing up a comprehensive and practical scheme for the issue of an enormous international loan by Germany, the yield from which will be devoted, it is proposed, to the paying off of a substantial portion of the Reparation debt owing to the Allies.

The reconstruction of Europe at Genoa is dominating France, both politically and economically, and the eve of the Conference was auspicious, owing to the announcement that there was complete agreement between Mr Lloyd George and M. Poincaré as to the policy that was to be adopted. When the Conference actually opened there was a feeling of disappointment here because the inauguration speeches were all set and formal, and in the minds of the public and the business community the impression was very generally created that Genoa would result merely in one more Conference at which a large number of words had been delivered.

In France, as elsewhere, everyone is convinced of the desirability of reconstituting the economic position of Europe, but, as has been pointed out by the *Economiste Européen*, this can only be achieved by establishing a definite basis for Customs systems by the adoption of wiser fiscal measures, devised not merely in the interest of individual countries, but constituted by regarding the needs of Europe as a whole, and by the general improvement of international relations. As a preliminary to these measures, however, it is recognised here as fundamental that the monetary and budgetary equilibrium of the various States should be re-established. The pessimism with which the attempt at Genoa has been regarded here is now held to be justified, and there is profound disappointment at what has occurred in the opening days of the Conference. Russia evaded accepting a clear undertaking that she would respect the terms of the Cannes Convention, Germany has done her utmost to prove insolvency and to compromise the Conference by her *non possumus* Note to the Commission of Reparations, and on the top of this France has learnt with consternation of the Germano-Russian Treaty. From the French standpoint, the Genoa Conference has opened gloomily, and the *Temps* reflects public opinion by congratulating the Chamber of Deputies on having passed the 18 months military service law.

The French index figures for the first three months of 1922 show that the cost of living is still steadily, although very slowly, falling. The regional and local commissions, whose duty it is to control the cost of commodities, base their investigations on the 45 categories comprised in the two great divisions generally adopted by economists, namely, industrial raw materials, and foodstuffs of prime necessity. The former classification embraces 25 categories, and includes pig-iron, bar iron, copper bars, tin, English lead, London coal, raw cotton, flax, hemp, jute, Australian and English wool, silk, hides, skins, tallow, palm, olive, and linseed oils, petroleum, carbonate of soda, indigo, and building timber. The foodstuffs include English and American wheat, flour, barley, oats, maize, potatoes, rice, first quality beef, average quality mutton, bacon, butter, refined sugar, beetroot, Java sugar, coffee and tea.

The following figures show the recent movement in the

cost of living as compared with prices in 1914 (the base figure for which is taken as 100):—

	Food.	Heating.	Rent.	Clothing.	Sundries.	Total.
Paris—4th Quarter, 1921...	310	307	133	318	400	297
1st Jan., 1922...	301	302	140	312	400	291
Le Mans—Dec. 31, 1921...	368	362	167	331	407	331
Feb. 28, 1922...	367	338	167	329	407	329
Angers—June 1, 1921...	348	463	222	283	336	320
April 1, 1922...	348	464	222	283	336	320
Rouen—October 19, 1921...	321	311	200	320	322	309
January 14, 1922...	309	345	200	320	322	302
April 8, 1922...	298	335	200	320	326	296

So far as wholesale prices are concerned, inquiry has shown that, if the prices of the whole of the two categories in August, 1914, be taken at an index figure of 100, the corresponding index figure for the whole of France on March 30, 1921, is represented by 315. Prices as a whole are, therefore, still enormously higher than before the war. At the same time, there has been a very substantial decline during the past two years, since the index figure for these same articles in April, 1920, when high-water mark was reached, was 679. The fall of prices has been remarkably regular during the past six months; the index figure for October, 1921, was 355; for November, 350; December, 347; January, 1922, 342; February, 329; March, 315. A curious fact is that the present prices in Paris are relatively less high, in comparison with those of 1914, than anywhere else in France.

The Genoa Conference is the dominating factor on the Bourse this week, and in view of the feeling of optimism caused by the meeting at Genoa in the United States, there has been a sharp recovery here caused out of sympathy with the American market. As to how far this recovery can or cannot be regarded as permanent, must depend on the results obtained at Genoa. French Government securities remain satisfactory, the 1915 Five per Cents., under the influence of a free market, having risen from 76.20 to 78.50; there is an improvement also in Turks and Mexicans, Unified Turks having risen from 41.20 to 41.45, while Mexican Four per Cents. have advanced from 116 to 120. Banks are generally stronger, Crédit Foncier having gained some 40 francs largely as a result of the passing of the law authorising it to extend its issue of obligations from 25 to 50 times the amount of its capital. Banque de Paris is rather heavier owing to the new shares issued last September having now come officially on the market. Railways have been in demand with a general rise in consequence, the chief quotations being Est 677, P.L.M. 880, Midi 748, Nord 994, Orléans 860, and Ouest 658.

GERMANY.—GENOA — REPARATIONS — TAXATION REFORM—EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 18.

THE incident of the Russo-German Agreement has made a bad impression here. The German Press representatives at Genoa insist that the Agreement contains no harmful provisions, that it had been under negotiation for weeks, and was public knowledge before signing; but they add, as justification, that the "inviting Powers" were negotiating with Russia without participation by Germany's delegates, and thereby they present the Agreement as a German counter-measure, which is not consistent with the first three explanations. The feeling here is general that the Agreement, not through its provisions, but through the conditions and time of its conclusion and publication, was a serious diplomatic blunder, which could not be approved of by impartial judges, and was bound to be exploited in anti-German sense by any interests already prejudiced in that direction. Before this incident a fairly favourable view of Genoa's prospects was taken. The newspapers praised Mr Lloyd George's handling of the earlier threatening incidents, in particular of the conflict between M. Tchitcherin and M. Barthou; and it was felt that English diplomacy would at the worst prevent a formal collapse of the Conference, without necessarily ensuring the solution of those of the programme questions which by their nature are apparently beyond immediate solution. It is not even now believed that the Conference will break up, as quarrels, mistakes, and misunderstandings can hardly be presented to the European public as

good reasons for dropping problems which must sooner or later be handled. But the Conference is held to be weakened by the political groupings and secret negotiations, which seem to leave little scope for the influence of the expert financiers and economists who are supposed to be taking part.

The Reparation Commission's reply to the Note of April 7th is taken to foreshadow further negotiations, for which apparently six weeks remain. Although Genoa can do nothing in Reparations matters, only from it can come a clear word on the question of international credits, and this is the only immediate Reparations question. In reply to the Commission's statement that Germany cannot expect any considerable foreign loan as long as she does not make a better attempt to balance her Budget, newspapers point to the Bank of England's statement that loans are excluded by the Reparations obligations of May, 1921. In reality, this is one question, as the immediate balancing of the paper-mark Budget, if that were possible by means of a new levy, would only produce a new mark exchange fall as soon as the paper marks were realised for Reparations gold; and by the new price-rise which must result the Budget would be thrown out of balance again. The insistence in the Allied experts' programme for Genoa on Budget balancing as a cure for bad currency, while the vital foreign payment-balance factor is practically ignored, does not seem justified either by German experience or by that of low-exchange countries, which, though they have no Reparations to pay, cannot export sufficiently to pay for their necessary imports. The *Frankfurter Zeitung* points out that the real intent of the Note of April 7th was to request general reconsideration of Germany's payment capacity under Article 234 of the Versailles Treaty. As far as is known, the Wirth Cabinet has no plans either for raising a further considerable sum in taxes, or for meeting the Commission's demands for control.

The financial reform plan submitted last year has become law in a form which would have been fairly satisfactory then, but cannot be called satisfactory now, after State expenditure and the paper-mark cost of Reparations have been driven up enormously by the new mark exchange decline. The two main changes are the abandonment of the one-time levy on increment of wealth between July, 1919, and June, 1921, which was to yield 3 milliards, and the inclusion of a forced loan of 1 milliard gold marks, which at present exchange will yield about 70 milliard paper marks. With the exception of the one-time levy on increment, all 15 taxation Bills have become law, sometimes, however, with considerable amendments. The emergency levy of 1919, in so far as it has not been already paid, is abandoned, and replaced by a permanent triennially reassessed, annually collected, property tax. For this all the property, wheresoever situated, of foreigners resident in Germany is liable, with the exception of their land and working capital abroad. Property not exceeding 100,000 marks is exempted. For public companies and juristic persons the tax is 3½ per cent. For individuals in the first 15 years the rate on the first taxable 250,000 marks is 2 per mille, on the next 250,000 marks 3.75 per mille, on the second million 1.2 per cent., and so on progressively up to 3 per cent. on the sixteenth to twenty-fifth millions. Persons not resident in Germany, whose property in Germany only is taxed, do not enjoy the 100,000 marks exemption. Jewellery and works of art exceeding certain values count as taxable property. The second permanent property tax is on the increment of wealth. This will be assessed and collected triennially. Increment not exceeding 100,000 marks is exempt, after which the rates rise progressively from 1 to 10 per cent.

The coal tax has been raised from 20 to 40 per cent., but varies according to quality between 25 and 115.5 per cent. The sales (turnover) tax has been raised from 1½ to 2 per cent. The original plan was 3 per cent. Hitherto receipts from exports have been free; henceforth such receipts are liable when the exporter is also the manufacturer. The tax is payable at the close of each quarter. The corporation (company income) tax is increased from 10 to 20 per cent. (original plan 30 per cent.), plus 15 per cent. of the income paid in dividends. Only part of this tax is allowed against the individual shareholder's income-tax. The import duties on numerous semi-luxury goods

French American Banking Corporation

We transact a general foreign and domestic banking business and solicit your inquiries.

are doubled, and the import duties on certain fruits and spices are increased; also the duties on coffee, tea, and cocoa. The sugar tax is increased from 14 marks to 50 marks (original plan 100 marks) per 100 kilos. Chemical sweeteners are made a concession monopoly, with State participation in profits. The Excise duties on beer are quadrupled, the tax being distributed at different rates according to production of breweries, the lower rates being on small production. The taxes on mineral waters are also raised, those on matches doubled, and those on electric lamps and other lighting materials quadrupled. The tobacco taxes are radically altered. Of the price exceeding 3 marks of a cigar 40 per cent. is taken; for cigarettes 50 per cent., these in addition to the ground taxes on tobacco. The stamp duties on insurances are considerably increased: Life and certain other kinds of insurances hitherto exempt are made liable. The insurance tax does not apply to foreign insured property, but it applies to foreign insurances with German companies. Bookmakers' bets are taxed 10 per cent., and made lawful; the existing 16½ per cent. tax on totalisator bets remains unchanged. The tax on motor-cars is increased, the rates for private cars being 100 marks per h.p. for the first 6 h.p., and so on up to 400 marks per h.p. on more than 14 h.p. Commercial cars are taxed by weight, rates beginning at 300 marks for up to 500 kilos, and ending at 2,000 marks for more than 4,000 kilos. Some of the taxes on consumption are not unduly severe. This remark applies where the tax is assessed on weight or volume. The quadrupling of such taxes does not mean any real increase, as prices since the taxes were last fixed have, as a rule, risen very much more.

The Bourse last week was undecided, with only a slight rise in averages of dividend-payers, but a great demand for foreign loans, in particular 5 per cent. silver Mexicans. There was a moderate renewal of buying by the investing public, but reserve is shown by speculators. To-day stocks opened firm. Money for stock-buying is increasingly tight, owing to heavy demands on the emission market. Federal Loans last week mostly had slight drops. The buying craze for Threes seems to have subsided, and this bond ended the week at 140, or 13 points below its high record. Loan and stock prices to-day were:—War Loan, 77.50; 4 per cent., 97; 3½ per cent., 90; 3 per cent., 140; Colonial 4 per cent., 107.50; Savings and Premium, 82.30. The Verein-Glanzstoffe, which manufactures artificial silk and is a favourite speculative paper, announces net profits of 50 millions on a capital of 60 millions. Industrial reports continue good. The Federal Commissary for Import and Export Licensing complains that large quantities of goods which are being sold at cheap prices to low-exchange countries are being re-exported at much higher prices to high-exchange countries; and that firms have been specially founded for this purpose. As a result, high-exchange countries are getting goods cheaper than would be allowed if the goods were delivered direct, because minimum export prices about equal to those of the world-market are supposed to be a condition for granting licences for such exports. For low-exchange countries, which cannot pay world-market prices, export licences are granted at prices which are considerably lower than those of the world-market, but which, nevertheless, yield the German producer a profit. As a result of the resales, profits which should go into German pockets go into the pockets of the foreign middlemen, and Germany's markets in high-exchange countries are spoiled.

GREECE.—BUDGET STATEMENT—NEW TAXES—
FORCED LOAN.

ATHENS, April 11.

The provisional balance-sheet for the financial year 1920-1921, and the Budget estimates for the year 1921-1922, ending on March 30th, have been deposited in the National Assembly by the Minister of Finance. The figures for the first period show:—

(In Millions of Drachmæ.)			
	Revenue.	Expenditure.	Deficit.
Ordinary	633	759	126
Extraordinary	1,094	1,171	77
Total	1,727	1,930	203

Extraordinary revenue to the amount of Dr. 1,005 millions was raised by loans. On the other hand, the estimates for 1921-1922 are as follows:—

(In Millions of Drachmæ.)			
	Revenue.	Expenditure.	Deficit.
Ordinary	715	1,399	684
Extraordinary	1,003	1,997	994
Total	1,718	3,396	1,678

Of the amount of Dr. 1,003 millions, extraordinary revenue for 1921-1922, Dr. 918 millions represent loans. Almost the whole of extraordinary expenditure is due to the war, directly or indirectly. Among the items constituting ordinary expenditure, the service of the public debt (interest and sinking fund) figures for an amount of Dr. 407 millions. The net revenue raised by taxation or against services rendered by the State to the public, amounts for 1920-1921 to Dr. 609 millions, and for 1921-1922 to Dr. 689 millions. The Minister of Finance proposes to meet the deficit from ordinary expenditure by economies and new taxes. To that effect he will submit to the Chamber a set of Bills providing for new taxes and increasing those already existing, by which he hopes to increase ordinary revenue by 600 million drachmæ. To cover the deficit from extraordinary expenditure, he presented before the Assembly, and the latter has passed, a Bill authorising the Government to raise a forced loan. The principal provisions of this law, which has already come into force, are the following:—The loan will amount up to Dr. 1,600 millions, with interest at 6½ per cent. per annum, and ½ per cent. premiums, distributed by way of drawings, and is repayable by sinking fund instalments in 20 years. However, the loan may be repaid either wholly or in part at any time from the proceeds of the first external loan to be contracted in the future. The loan is obligatory to all holders of National Bank notes, and for an amount equal to the half of the sum held by each of them. In view of the urgency of the case, the notes will be cut in halves, the one half (on which is shown the portrait of the late founder of the bank, Mr. George Stavrou) circulating hereafter as money for half its face value, and the other half constituting a provisional bond of the State for half of the value of the note. Both halves will have to be exchanged for new notes and the final bonds respectively, within a period to be fixed by Royal Decree, after expiration of which, if not presented, they will be declared as void. The National Bank of Greece will place forthwith to the credit of the Government a sum equal to half of its notes circulation. The holders of the halves which represent provisional bonds of the State, or of the final bonds, when delivered, may, within six months, obtain a loan from the National Bank for half of the value of the bonds, by pledging them as security, at 6 per cent. interest annually. Debts existing before the passing of the law (among which are included deposits with the banks) may be repaid by the debtor, irrespective of their falling due, within three months after the date on which the law came into force, half in circulating money and half in bonds of the forced loan. An exception is made as regards payments of debts to foreigners residing abroad and payments for the service of the national debt, which will have to be made in full in circulating money. The half of the notes which will represent bonds of the State is not allowed to circulate as money under heavy penalty. The following revenues are assigned for the service of the loan:—(1) The surplus of revenues assigned to the International Financial Commission, and of the taxes and duties col-

lected by the latter. (2) The synthetical income-tax (assessed on a new scale) is doubled, and half of the proceeds will be deposited with the National Bank for the service of the loan. (3) On all direct and indirect taxes (with the exception of synthetical income-tax, monopolies, and tobacco tax) will be added an amount equal to 10 per cent. of the tax, and this amount will be paid to the bank for the service of the loan. (4) Public property not utilised for the service of the State will be gradually sold and paid for exclusively by bonds of the forced loan, which must be afterwards cancelled.

As was natural, the announcement of this drastic measure occasioned some excitement at first, until the public knew the exact implications of the law. Small depositors hastened in large numbers to withdraw their deposits from the banks and purchase various articles of personal use, while others thought it better to deposit their money at the banks or to buy Treasury bills in order to get rid of banknotes. However, once the unavoidable technical inconveniences arising from the application of the law have passed, it is believed that the necessary adjustment will take place without any serious disturbance to the economic machinery of the country.

SWITZERLAND.—BANK PROFITS AND BANKING
CONDITIONS—THE QUESTION OF FOREIGN LOANS.

(FROM OUR CORRESPONDENT.)

GENEVA, April 11.

THE annual reports of the leading Swiss commercial banks have now appeared. The uncertainty which ruled among investors during December and January proved not to have been justified. With only one exception—that of the Comptoir d'Escompte de Genève—the eight big banks distributed the same dividend as in the previous year. It must be stated, however, that the margin between the net profit published and the dividend distributed was, in some cases, and especially in that of the Banque Populaire Suisse, extremely narrow. In all cases it was smaller than in the previous year. When, at the beginning of February, it became known that dividends would be maintained, there was a certain rise in the value of banking shares in the Swiss stock markets. During the first two months of the year the shares of the Swiss Bank Corporation rose by 11.8 per cent., those of the Credit Suisse by 11.6 per cent., of the Banque Fédérale by 8.2 per cent., of the Swiss Banking Union by 7.6 per cent., and of the Banque Commerciale de Bâle by 13 per cent. The fact that the last-mentioned bank maintained the dividend of the previous year was an agreeable surprise for many holders of the shares. At the end of March, however, bank shares were cheaper than at the end of February, although the average price of money, and especially the interest for loans on securities at the end of March, was considerably lower than at the end of February. The shares of the Swiss Banking Union, in particular, sank again below par.

With the single exception of the Banque Populaire Suisse, the debtors of the leading Swiss banks are chiefly to be found amongst the ranks of exporters and merchants dealing with international transactions. It is self-evident, therefore, that the leading commercial banks have to endure comparatively serious losses in their loans. Unlike France, for example, Switzerland offers many credit facilities for middle-class people, and especially for the rural middle class, but this class of debtors, which is suffering less from the present crisis, resorts, in most parts of the country, with the exception of the large towns, to the cantonal states banks and local institutions. The slackness in industry had the effect that the turnover of all Swiss leading banks decreased in 1921 on an average by 20 per cent. What did not cease, even in 1921, was the growth of business expenses. The source of income for the meeting of rising business expenses, namely, exchange transactions, now yields less than in 1919. It must be remembered that even turnovers of hundreds of millions of German marks or Austrian crowns, such as were handled in Zurich and Basle, are not very profitable for institutions having their business expenses in Swiss francs.

The endeavours of leading Swiss banks to grant loans to various Eastern countries, provided the proceeds of these loans should be more or less reserved for purchases of Swiss manufactured goods, failed in practically all cases. The merchants of Eastern countries judge Swiss goods too expensive for them even when supplied against long-term loans. That is the reason why last week negotiations with Czecho-Slovakian banks fell through. The granting of loans without making adequate purchases of Swiss goods a necessary condition has not yet been taken into consideration, but there are many people who consider that the tight-fisted standpoint (Swiss money only to buyers of Swiss goods) will in the long run bring serious damage to Swiss commerce.

Books and Publications.

THE CONDITION OF GERMANY.*

AMID the confused and conflicting reports as to the internal condition of Germany, it is a relief to turn to the short but suggestive impressions recorded by the late chairman of the War Trade Intelligence Department in January of this year during a tour of the occupied areas. Sir Henry Penson's book is only a sketch, and does not attempt any elaborate statistical analysis, but he is a skilled observer, and his statements, particularly with reference to the relative economic position of the upper, middle, and lower classes, constitute a valuable addition to our understanding of a very complex situation. Sir Henry noted an absence of the old domineering manner on the part of Customs and railway officials, due perhaps partly to the fact that their uniforms are not so smart and new as formerly. In the railway train men and women of the professional classes who would formerly have travelled first or second class are now to be found in the fourth class. The old curiosity about the visitor's personal affairs was lacking, and replaced by a new passivity, and Sir Henry evidently thinks the condition of these classes would be deplorable indeed but for the remarkable aptitude of the German housewife. The position of the official classes in relation to the value of money was wittily expressed by one of Sir Henry's informants, who observed that before the war in his circle "We used to change our collars every day and a 100-mark note once a week; now we change our collars once a week and a 100-mark note every day." After examining the exchange and price figures he arrives at the conclusion that the internal value of the mark in January was three times its external value, but these prices are changing so rapidly that such calculations are out of date as soon as they are made. More permanent importance attaches to his study of German psychology and of the part which it plays in the question of Germany's ability to pay reparation. Summarising his impressions, he observes that Germany has all the outward appearance of prosperity, but that prosperity has very little solid foundation. The alteration in the external and internal value of the mark has added enormously to the difficulty of the problem, while the effect of the war upon the material condition of German plant and on the physiological condition of her people was not sufficiently considered in fixing the Reparation terms. "To recover the will to pay, which a spirit of hopelessness, a sense of ill-treatment, or a feeling of having had no say in the settlement have undoubtedly engendered, should not be beyond the powers of statesmanship."

consists in the reliability of its facts in the first place, materially also in their excellent marshalling. Mr Warman describes briefly but sufficiently the early labours of Holyoake, an "undifferentiated" worker for combination generally; of Greening, a champion of "one and all" within the wide field of silviculture, agriculture, and horticulture; and of Yerburgh, the first real founder of agricultural co-operation as it is now understood. The late member for Cheshire never rose to the political eminence that might conceivably have been his, and farmers' energies took for a spell that form of direct political co-operation which resulted in the National Farmers' Union. The business side of organisation found for the first decade of the present century its foremost advocate in Mr Nugent Harris, and for the last ten years the leading name has been that of the new Solicitor-General, Sir Leslie Scott, whose seat in the House of Commons has enabled him to take up the position of Mr Yerburgh, together with something more than Mr Yerburgh's influence.

Sir Leslie, in his well-reasoned introduction to Mr Warman's work, shows the potential advantages of combined action very clearly, but his insistence on a purely democratic control raises a business issue of some magnitude. If the co-operators must have equal votes, irrespective of how much money each puts in, will not the tendency be towards a minimum investment, and will not that restrict severely the scope of each co-operative group?

The present state of co-operation, as disclosed in Mr Warman's chapters, is alive with problems. On the whole, Denmark and New Zealand appear to tie for first place in his record of successful co-operation, but Denmark has developed on purely individualistic lines, New Zealand on those of State and compulsory socialism. In England the number of agriculturists using co-operation ranges from 12 per cent. in a district to 60 per cent.; but Devon and West Yorkshire, which show a minimum of combination in effort, are not conspicuously

either more or less prosperous than Lincolnshire and East Yorkshire, where co-operators are a clear majority. Hampshire is twice as "co-operative" as adjacent Berkshire, Wales much more devoted to combined effort than the well-farmed counties of the West English marshes.

The societies now existing consist of two well-defined groups, the first of which has a total of about 84,000 members and a turnover of £17,000,000 yearly, or a little more than £200 per member, and the second of which has about 116,000 members and a turnover of only 50s per member, £290,000 in all. Thus the experience of 50 years have crystallised into two absolutely separate types. There happily seems to be ample room for each type to extend, and do steadily increasing service.

Mr Warman is a chronicler rather than an apologist, but there is one point on which he insists, and that is the large societies having a skilful and well-paid manager to trade for them, whether they buy wholesale and divide up to members, or send their goods to a common store and sell them, graded, therefrom. Economists will appreciate the author's contention that the manager, as the servant of the co-operation, will become an asset of increasing value with continuance of service and acquired knowledge of markets. A matter which Mr Warman puts in a very clear and instructive light is that these co-operative efforts, bringing agriculturists together locally, educate them by observation, by comparison, and by the revealed need of all that he groups under the word "standardisation." The present volume, though unpretentious, is likely itself to become "standard," embodying, as it does, a brief and clear history down to date of what agricultural co-operation has thus far effected in England and Wales.

THE WORKS OF TURGOT.

"Œuvres de Turgot et Documents le Concernant, avec Biographie et Notes." Par Gustave Schelle. Tome quatrième. Paris: Librairie Felix. Alcan, 1922. Pages 723, 8vo. 40s net.

THE French *économistes* of the 18th century were the earliest apostles of what Adam Smith calls "the system of natural liberty" in trade, industry, and commerce. They hold a secure place in the history of economic theory, and in the memory of their liberty-loving countrymen. But it must be confessed that their writings are more praised than read, their principles more admired than practised. M. Schelle is one of the few enthusiasts still surviving to whom no detail of their lives and actions seems too trivial for record. He is now producing a complete edition of the works of Turgot, with a Life and notes. This is the fourth and penultimate volume.

Turgot, it is true, refused to be reckoned as a member of the school of *économistes*. His hatred of the sectarian spirit and the disfavour into which the *économistes* fell at Court sufficiently account for this formal disclaimer, but in all essentials he agreed with them, and if not a pillar was a powerful buttress of their edifice. Himself one of the noblest and purest figures in political history, spotless in life, vigorous and fearless in action, gifted with "a wise and understanding heart," Turgot filled with conspicuous success various offices, including the highest financial position in France. "Only Turgot and I really love the people," said Louis XVI. Voltaire's ode to Turgot outlasts brass and marble. Lord Morley's well-known essay depicts him in the most appreciative colours.

His friend and biographer, Du Pont de Nemours, collected nine volumes of his life and works in 1809-11. Some new matter was added in the edition in two volumes by Daire and Dussard in 1841, and a reprint of the collected works at the present time is somewhat surprising. The volume before us deals only with the period 1774-5, and includes a fine portrait and a few hitherto unpublished documents from the *Archives Nationales* and other sources, but, on the whole, we find nothing that is both new and important, and would have been spared much of the minute and ephemeral matter contained in the volume. In his celebrated *Encyclopædia* article on *foundations* or pious endowments Turgot wrote:—"If there were a tomb for every man who has lived, it would be necessary, in order to find land for cultivation, to sweep away these barren monuments and stir the ashes of the

dead to provide sustenance for the living." In the same spirit we are tempted to say that if the works and years of all great men were dealt with on the scale of this volume "even the world itself could not contain the books that should be written." Having said so much it is hardly necessary to add that the zeal and research of M. Schelle show an untiring enthusiasm for his great subject.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
April 26.

ACCOUNT.
April 27.

THE Stock Exchange is disappointed at the way in which business has fallen off during the present week. Members hoped to return after Easter to find markets buoyant under the influence of an abundance of buying orders. What checked the boomlet has been, of course, the unexpected developments at Genoa. These are causing the Stock Exchange a certain amount of nervousness, if not of anxiety, and have laid a check upon public buying in most markets.

The War Loan gave way to 100 before it recovered to 101, but gilt-edged stocks of most descriptions are better. The newly-issued West Australia and Commonwealth scrip stocks are both at a fair premium. The City of Wellington subscription lists were opened for barely ten minutes. New Zealand's bold attempt to raise money at 5 per cent. created a favourable impression, and the tendency of Home Railway prior-charge issues sympathised with that for Colonials, Corporation stocks, and British Government securities. In the foreign market, one of the features has been dulness in the recently-issued French Railway loans. German Threes dipped to 51s before recovering to 53s 9d. Chinese bonds are rather better. Czechoslovak Eights rose to 2 premium, dropped back to par, and then recovered to about 10s premium. Russian railway bonds are mostly lower. Mexicans have been moving irregularly.

Interest in Home Railway stocks has fallen to a lower ebb, and although the undertone of the market is described as firm, it cannot be said that business is by any means active. This is reflected in the comparative dulness of prices. Great Westerns, however, stand out with conspicuous strength, and the list, taken as a whole, is not bad. Preferred stocks in several cases show substantial improvement. Grand Trunks are better, moving up for the first time for many weeks. Mexican Rails cannot get started, but Mexican utilities are generally higher, rises of 3 to 10 points being common in today's quotations as compared with those of a fortnight ago. Argentine Railway ordinary stocks dwindled, but the debentures and preferences are all good.

Rubber shares, after showing a certain amount of firmness, eased off when the price of the produce was posted at 8½d per lb sellers. Oil shares are remarkably active. Not only the leaders, but a number of lower-priced shares have come this week into prominence, and there is a wide extension of gambling in the oil area. Shipping stocks and shares are good, the Cunard dividend having a strengthening effect. Banking shares show a number of rises, and the insurance market exhibits strength. Most of the iron and steel shares are better. A general rise in textiles was succeeded by something of a reaction, as sellers came in to take advantage of the improvement. Harrods and other stores shares are better, in spite of a disappointing dividend from the Army and Navy Stores. Electric lighting shares further improved, and gas stocks, while somewhat irregular, are higher on balance. Most of the industrial preferences are difficult to get at all. The list of trust companies' stocks shows rises in about 70 issues this week.

The Kaffir market is inclined to be heavy for lack of interest. Paris has been a seller of her favourite stocks and shares, the reason being attributed to the Genoa Conference. Diamonds managed to maintain a fairly firm front, but Rio Tintos gave way, together with a few other copper shares. Malayan tin varieties are mostly better, on a recovery in the price of tin. Russo-Asiatics dropped to 9s before regaining a shilling. Mexican mining shares have strengthened a little, by reason of the rise in the price of silver. In the miscellaneous mining shares there is not much going on, and interest in West Africans is still as dormant as ever.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED.

SURPLUS PROSPECTS FOR NEXT VALUATION.

The ordinary general meeting of the Law Union and Rock Insurance Company, Limited, was held on Thursday, the 20th instant, at 7 Chancery Lane, W.C., Mr Charles G. Hamilton, the chairman, presiding.

The secretary and actuary, Mr James Stirling, having read the notice convening the meeting and the report of the auditors,

The Chairman said:—In the life department the net new business amounted to £1,314,350. This is not equal in volume to the new business transacted during the boom years of 1919 and 1920, but it is much larger than the new business completed in any other year. Having regard to the great depression in trade during 1921, and the consequent decrease in incomes, new life business was bound to fall off in volume. The net premiums in respect of new assurances amounted to £40,703. The total net life premium income was £828,228, and the total life funds amounted to £8,849,109—an increase during the year of £187,605.

The expenses of the life department amounted to 17.53 per cent. of the net premium income, a reduction of 1.44 per cent. on the figures of 1920.

The claims by death were £434,122, an amount well within the mortality expectation; indeed, I believe the mortality experience of 1921 to be the most favourable the Law Union and Rock has ever had. The net rate of interest on the funds was £4 9s per cent.

PROSPECTS FOR NEXT QUINQUENNIAL VALUATION.

At the last quinquennial valuation, at the end of 1919, the Law Union and Rock fund—that is the going fund—showed a surplus of £331,938, which was not then divided. At the end of 1920 there was a considerable depreciation in the market value of our investments, but by the end of 1921 that depreciation had quite disappeared, and to-day the going fund shows a substantial appreciation; so the prospects for a large surplus at the end of 1924, the date of the next quinquennial valuation, are distinctly favourable. If we can only escape depreciation, there is bound to be a substantial surplus, for we base our tables on the assumption that

we only make 3 per cent., whereas, in fact, we are making nearly 4½ per cent. net on our funds. Again, if the income-tax comes down only 1s in the £, that, by the end of 1924, will make a substantial addition to our surplus.

Coming to the other departments, the figures in the fire department are very satisfactory, having regard to the adverse conditions prevailing in 1921.

The result, after putting aside 40 per cent. of the premium income for unexpired risks, shows an underwriting profit of £84,534.

The premium income shows a decrease of £61,019, but that was only to be expected, for manufacturers and merchants have been holding greatly reduced stocks of raw and manufactured materials, and at lower cost, and inevitably fire premiums have been correspondingly affected. The directors have decided to strengthen the fire reserve by adding £50,000 to it, bringing the total fire reserve up to £427,239, and to carry £50,500 to the profit and loss account.

The accident and general account is also satisfactory, the reduction in the premium income being rather less than 4 per cent. After adding an additional £20,000 to the reserve fund, bringing it up to £128,627, £13,596 was carried to the profit and loss account.

That account, after payment of the dividends and interest on debentures, closes the year with a balance of £341,490 to its credit, or about £10,000 less than the balance at the end of 1920; but as against this decrease you must remember that we carried from the profits earned in the fire and accident and general account £70,000 to strengthen the reserves in those accounts; but for this we should have shown a considerably increased amount at the credit of the profit and loss at the end of 1921.

SYSTEM OF CONTINUOUS AUDIT.

Before I sit down, I should like to mention that all our Stock Exchange securities in this country are kept at our bankers, and that we have a system of continuous audit—that is, the auditors have no fixed date for their audit; they come in when and as often as they like and audit our accounts.

The prospects of the current year are fair, but until trade improves our trading departments are not likely to show increases or large profits.

The Chairman concluded by moving the adoption of the report

HEAD OFFICES: LIVERPOOL AND LONDON

and accounts, which was seconded by Mr J. H. Clayton and carried unanimously.

The proposed dividend was approved, and on the motion of Mr F. W. Pascoe Rutter, seconded by Colonel A. G. Lucas, C.B., M.V.O., the retiring directors, the Earl of Middleton, K.P., and Mr C. W. Washbrough, were re-elected.

Messrs W. B. Peat and Co. were re-appointed auditors, and the proceedings terminated with votes of thanks to the officers and staff and to the chairman and directors.

NESTLE AND ANGLO-SWISS CONDENSED MILK COMPANY.

At a meeting of the board of directors held on April 11, 1922, the accounts for the business year 1921 were considered, and it is with much regret that the board have to inform the shareholders that for the first time since the foundation of the company, over 50 years ago, the business year closes with a loss.

The loss for 1921 is caused by the general economic crisis, enhanced by the recently developed crisis in the milk industry, which has been reflected so severely in the selling prices of dairy products.

The board, therefore, consider it necessary to make even greater depreciations of stocks of manufactured goods than were at first considered advisable. In consequence of this the total loss for 1921 amounts to 93,184,240.80 Swiss francs, consisting of the aforesaid depreciations of stocks amounting to 30,158,171.08f, loss in exchanges 30,884,792.47f, and trading losses 32,141,277.25f.

The exchange losses were due to the difference between the exchanges as at December 31, 1920, and December 31, 1921, on balances due to the company in foreign currencies.

The trading losses resulted from reduction of output following the decreased demand, necessitating during the whole business year the use of stocks of raw material previously contracted for at high prices, thus keeping the manufacturing cost at a high level as compared to the greatly reduced selling prices prevailing during the year.

Our associated companies in various parts of the world also show a loss totalling 14,116,335.71f.

The board propose to cover part of the loss shown above by appropriation of the profits carried forward from 1920, as well as the statutory and special reserves amounting in all to 25,508,355.47f.

In accordance with the Decree of the Swiss Federal Council of December 24, 1919, exchange losses can be carried forward in the balance-sheet subject to annual amortisation until 1940. These losses are already appreciably diminished by the rise in the exchange rates since December, 1921.

The directors, taking into consideration the fact that the sales are now more than double the highest pre-war figures, the undoubted value of the company's goodwill, and the energetic measures which are being taken to reduce the overhead charges, view with confidence the future of the company.

The board desire to remind the shareholders that the paid-up capital of the company is 205,000,000f, of which 160,000,000f is in ordinary shares and 45,000,000f in 8 per cent. cumulative preference shares. The assets after deducting all depreciation of stock and losses on exchanges exceed the total liabilities by 163,000,000f, which is more than three and a-half times the amount of the preference capital.

The board is at present carefully considering a plan for the financial reorganisation of the company, and will convene the annual meeting of shareholders as soon as possible, most probably early in May. Any such reorganisation will preserve the rights of the preference shareholders.

THE BOARD OF DIRECTORS.

Vevey, April 12th, 1922.

JOHN BARKER AND CO.

COMPANY'S SATISFACTORY POSITION—ANOTHER RECORD YEAR.

The 29th ordinary general meeting of John Barker and Co., Limited, was held, on the 21st instant, at the Town Hall, Kensington High Street, London, Mr S. M. Skinner, J.P., the chairman, presiding.

The secretary (Mr G. Wright Bellamy) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that he trusted that the figures before the shareholders that day, gratifying as they were to the directors, were not less acceptable to the shareholders. He was pleased to say that they had had another record year. It had been a most difficult period for retail trading. In the early spring they had thought that prices had become stabilised to some extent, and they had not

been alone in that opinion, but, unfortunately, prices had begun to fall very rapidly and had continued to fall for practically the rest of the year. Even now it was impossible to say what the future held in the way of prices and difficulties of merchandising, but the directors were decidedly optimistic as to the future of Bakers, and their policy was to go full steam ahead.

All their stocks had been taken upon a conservative basis; and whatever happened they could assure the shareholders that their customers would not suffer, as they were out to meet any fair competition, both in service and in goods, in whatever guise it might present itself. They had built up a huge business on bedrock values; their world-wide connection was proof of that, and it would always be the directors' policy to maintain that high standard of value and quality which had been the chief characteristic of their business for many years past.

BALANCE-SHEET ITEMS.

With regard to the accounts, the total assets now amounted to the splendid figure of nearly 3½ millions. The stock-in-trade stood at about £400,000 less than the previous year, and was constantly being reduced. All the directors were greatly averse from carrying unwieldy stocks, and the utmost was done, and would be done, to keep regular stocks at a merchandising level. They had, however, made a great name in the country for "stock" offers, and, in their opinion, it would be a mistake to ignore the opportunities that were offered them for big cash buying of factory and other stocks, which their exceptional resources enabled them to carry through—to the immense advantage of the public. The same argument also applied to large orders placed with manufacturers for goods specially made for them. If they had a huge turnover, they must have a big stock. An adequate stock, competing for every need, well bought and tastefully displayed, was the biggest asset of a distributive business, and it was certainly one of the secrets of any success which John Barker and Co. might have attained.

The general reserve fund almost reached half a million—a very gratifying figure—while they had a further £40,000 in reserve towards the rebuilding of Clarence Mews, the freehold of which they had secured. The rebuilding on that site would not be proceeded with until the cost of erecting business premises became more reasonable and building regulations less stringent.

In common with all business men, he would welcome the re-introduction of the Sunday collection of letters and the reduction in the cost of postcards to one penny; also the lessening of telephone charges. They were all looking forward to the Government in the next Budget doing something to alleviate the burden of taxation and the various bureaucratic exactions of the last few years. The next Budget should see a marked reduction in the rate of income-tax, as well as the entire abolition of the corporation profits tax, which bore so unfairly on limited companies. The present heavy taxation was crippling trade, and not only at home but export trade also. Local taxation also called for some redress.

GROSS PROFIT INCREASE.

The gross profit again showed further increase, but it was almost all accounted for by the increase in their expenses. Notwithstanding all the difficulties, their three businesses had done wonderfully well. The keynote of most company meetings had been the deplorable state of trade, due to falling prices. Such was not their keynote. They had practically maintained their trade, despite the fall in prices and all other difficulties. The sister firms of Derry and Toms and Pontings had shown a remarkable growth and expansion, standing up to the difficulties of the year in a very robust way. The figures of Derry and Toms steadily grew from month to month—a very healthy sign in business building—and the fact that Pontings had fully justified its title of "The House for Value" was shown in the crowds which daily thronged the place. Bakers as a firm was on the threshold of great things. Long since it had outgrown its environment and become a big business. In the last few years, with its sister shops and associated businesses, it had become a national shopping institution. The directors were called upon to legislate for a great future. Bakers had in it, they felt, all the elements of a business pre-eminently great. To work for that future, the re-arrangement of the management had been devised.

The report and accounts were unanimously adopted, and the formal business transacted.

BRITISH AUTOMOBILE TRACTION COMPANY, LIMITED. COMPANY'S SUCCESSFUL YEAR'S BUSINESS.

The 18th ordinary general meeting of the British Automobile Traction Company, Limited, was held, on the 21st instant, at 88 Kingsway, London, Mr C. Shirreff Hilton, the chairman, presiding.

The secretary (Mr W. E. Bennett), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that those documents showed a very satisfactory state of affairs. The past year had been one of the most successful in the history of the company, due to some extent, no doubt, to the fine weather, but due also to the very satisfactory progress and development of the business. Including the amount brought forward, there was a surplus of £49,637, out of which it was proposed to pay a dividend of 10 per cent. on the participating preference shares, and also on the ordinary shares.

During the year the authorised capital had been increased to £500,000, and 50,000 ordinary shares of £1 each had been issued at par. In July 200,000 cumulative 8 per cent. participating preference shares of £1 each had been offered to the public and 100,161 had been allotted, making the total issued capital at December 31st £300,161. Loans and deposits had been reduced; the cash position was very strong, and, if further capital was required, he believed there would be no difficulty in disposing of the balance of preference shares.

The net traffic receipts and other revenues amounted to £56,269, compared with £44,932 in the previous year. Administration and general expenses showed an increase of £867, which, in view of the largely increased turnover, was a very small percentage.

As a result of the increased fare the London omnibuses, which for some time past had been operating at a loss, now showed a reasonable profit. Fares had since been reduced, but it was hoped that with a revival of trade the results would still be satisfactory. The results at Macclesfield, the other undertaking worked directly by the company, continued to show improvement. Following a strike of employees at Barrow-in-Furness, it had been decided to close the business down permanently, and the omnibuses had been transferred elsewhere. The prevailing industrial depression was adversely affecting the revenue, but expenses of operation were falling, and would, he believed, continue to fall, so that there was every reason to hope that they would be able to maintain the satisfactory results of the past year.

One of the most difficult problems they had to deal with was the competition of the small driver-owned vehicles, and many of their companies were considering the desirability of running smaller and faster vehicles on pneumatic tyres, which might also enable them to get into districts not available for the larger class of vehicle owing to narrow and unsuitable roads. The report and accounts were unanimously adopted, and the formal business was duly transacted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the Economist, 3 Arundel Street, Strand, London, W.C. 2.

Messrs Samuel Montagu and Co. write on April 20th as follows:—

The small amount of gold available this week was taken for India. Gold to the value of £1,913,000 has been received in New York from Norway, and \$1,900,000 is said to be on the way from France. The following were the United Kingdom imports and exports of gold during the month of March, 1922:—Imports, total, £912,868; exports, £1,183,674.

Owing to a run (set in motion by the imminence of civil war in China), which some of the Chinese banks experienced, the market has been very agitated during the last few days by a persistent demand from that quarter. The inquiry was generally widespread. At first the impulse to rising prices

CLAYTON AND SHUTTLEWORTH.—In view of the uncertainty of the present trade and industrial position, the directors do not recommend the payment of an ordinary dividend, and they have agreed to the further writing down of stock values the profits which would have been available for this and other purposes. The balance of £54,915 is carried forward.

JOSEPH BUCKTON AND CO. announce that, owing to the present dispute with the engineering trade unions, the works are practically at a standstill, and it is necessary for them to put aside any consideration of an interim dividend.

MANGANESE BROWNE AND BRASS.—In view of present position of shipbuilding trade, due principally to the effects of the war and the cancellation of orders for war vessels resulting from Washington Conference, and the general unsettled conditions, directors do not recommend dividend on ordinary shares.

UNION INSURANCE OF CANADA.—Final dividend of 16s and a bonus dividend of 20s per share on account of the year 1920, with carry forward of £287,300 to underwriting suspense account; also an interim dividend of 24s per share and a bonus of 20 p.c. on contributory premiums on account of the year 1921.

UNITED ALKALI.—The directors agree to distribute the full dividend on the preference shares, but propose a dividend of 4s per share, less tax, making 4 p.c. per annum on account of the 7 p.c. due.

Reports and Notices.

Goldman, Sachs, and Co., who for many years have been located at 30 Wall street, New York City, will remove to their new offices at 30 Pine street on May 1st.

Mr Charles L. Dalziel has been elected to the vacancy on the court of directors of the Royal Exchange Assurance Corporation occasioned by the resignation of the Right Hon. Earl Winterton, M.P., Under-Secretary of State for India.

The registered office and life department of the Consolidated Assurance Company, Limited, has been removed to 37-41 Gracechurch street, London, E.C. 3.

The offices of the Profits and Income Insurance Company, Limited, are removed to 37-41 Gracechurch street, London, E.C. 3.

BANKS.

LONDON AND BRAZILIAN BANK.—The accounts for year ended January 31, 1922, have been audited, and show an available balance of £723,622 9s 7d (including £511,647 4s 8d brought forward from last year). An interim dividend of 14s per share, amounting to £105,000, was paid in October last. The directors now recommend a further payment of 14s per share, being a dividend at the rate of 14 per cent. per annum, less income-tax, but on this occasion do not recommend the payment of a bonus. The above payments will absorb £210,000, leaving a balance of £513,622 9s 7d, which the directors recommend should be carried forward to the credit of profit and loss new account. The principal liabilities are:—The capital paid up £10 per share is £1,500,000 and reserve fund is £1,500,000; current accounts and deposits amount to £20,030,777; bills payable to £2,924,931; agents and sundry accounts stand at £1,618,749; and bills for collection on account of customers at £6,950,763. With regard to assets, the following are the leading items:—Specie and cash, £10,360,489; bills receivable, £2,130,272; bills discounted, loans, &c., £15,064,020; bills for collection as per contra, £6,950,763.

ASSURANCE.

STATE.—The report for last year shows that in the fire account the premiums were £449,308, other claims £267,840. A surplus of £20,627 was carried to profit and loss, and £30,000 transferred back to strengthen the fire fund to £209,723. In the credit and general account the surplus was £20,605, of which £5,000 was transferred back from profit and loss. Interest, less tax, yielded £28,038. The dividend of 35 per cent., less tax, absorbs £24,500. The directors report that the position in regard to the company's securities has so far improved that they have felt justified in bringing back into profit and loss account the sum of £25,000 out of the £50,000 which had been appropriated as provision for depreciation up to the close of the year 1920. They state that at the present time, instead of a deficit, there is a substantial surplus in the market value of the company's securities over the amount at which they stand in the balance-sheet. The directors have retained the sum of £25,000 as a general contingencies fund.

WORLD MARINE AND GENERAL.—The report for last year shows that the marine account for 1920 was closed with a profit of £87,000. The premiums for 1921 were £254,106, against £435,475, and the claims on the first year's account £47,887, against £100,862. In the fire and general account the premiums were £177,614, and the claims £117,541. After meeting expenses and providing for the increase in the reserve for unexpired risks (on the basis of 50 per cent. of the premiums), a transfer of £29,510 was made from profit and loss to meet the deficiency for the year, the total interest receipts were £41,800; the 20 per cent. dividend, tax free, absorbs £20,000; the investments at cost £997,784 show a depreciation of £5,165 on December 31st last, which is provided for by the investment reserve fund of £83,000.

OCEAN ACCIDENT.—The report of this company, which is owned by the Commercial Union, shows that the premiums were £5,560,791, and the claims £3,008,342. After meeting all expenses the funds were increased from £3,662,096 to £4,247,244. The income from investments, less provision for depreciation of leaseholds, yielded £266,343.

RAILWAYS.

SAO PAULO (BRAZILIAN).—The receipts for 1921 of the main line (Santos to Jundiáhy) have amounted to Rs.41,905,550,010 (£1,398,269), being an increase in currency, as compared with the previous year, of Rs.3,422,083,480, or 8.89 per cent., but a decrease in sterling of £743,104. The working expenses were Rs.32,883,217,840 (£1,097,219), or 78.47 per cent. of the gross receipts, and the net revenue was Rs.9,022,332,170, which, at the several rates of exchange at which the remittances were made, amounted to £301,049 13s 3d, as against £365,167 12s 6d in 1920. The average rate of exchange for the year was 8.0082d, as against 13.3545d for the year 1920. The expenditure in England and the balance available for distribution, including £32,802 8s 6d. The balance available for distribution, including £32,802 8s 6d brought forward from the previous year and the sum of £100,000 transferred from reserve fund (after allowing for the interest on the company's debenture stocks paid in November, 1921) is £226,490. Of this sum the directors have set aside £100,000 as a provision for income-tax and corporation tax. They will propose at the general meeting the payment of a final dividend of 2½ per cent. on the preference stock, making, with the interim dividend, 5 per cent. for the year (less income-tax), and on the ordinary stock a dividend of 3 per cent., making, with the interim dividend, 5 per cent. for the year (free of income-tax), and to carry forward £11,490 to next year.

MISCELLANEOUS.

INDO-EUROPEAN TELEGRAPH.—The directors regret that it has not yet been found possible to furnish the accounts for 1921. They hope that they may be able to do so in the course of two or three months. They recommend payment of a final dividend of £1 2s 6d per share, free of tax, for 1921, making, with the interim dividend already paid, 7 per cent. for the year. The year 1921 was devoted to the organisation of staff and to the accumulation and dis-

tribution of material for the reconstruction of the line in anticipation of its re-opening as a whole, and there is little further of interest to report. There are, however, at this moment certain important developments which the directors hope to have in shape to report to the shareholders at the general meeting.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have continued unsettled, but generally fine, and farmers were able to make better progress with spring sowings. Quiet trading was witnessed during the week, the market being cereals, which also tended to check demand. English wheat in grades per 504 lbs, free on rail. Imported descriptions dearer in sympathy with higher c.i.f. offers, but a slow trade resulted. No. 1

Northern Manitoba quoted 64s, Argentine 64 lbs 58s 6d, Barusso 62½ lbs 57s 6d, all ex ship to arrive per 480 lbs, and Australian 61s 6d landed per 496 lbs. The market for floating and forward cargoes ruled firm, and holders more reserved in view of improved Continental inquiries. Steamers of No. 1 Northern Manitoba arrived at Queenstown sold at 58s 9d to 60s, Australian on passage 56s 3d to 56s 6d, Rosafe 64 lbs afloat 55s 6d to 56s per 480 lbs. The international position remains fairly satisfactory, with prices fluctuating slightly, while governed largely by the extent of Continental requirements. Meanwhile, crop prospects in the principal exporting countries are favourable, and the yield of winter wheat in the United States is expected up to average. Flour continues in quiet demand, but prices were advanced by 1s per sack for home milled. London standard straight run ruled at 49s, town households 47s, patents 51s to 52s, all English straight run 46s per sack delivered London area. All English country straights 42s to 43s free on rail at London stations. Imported makes steadily held, with a moderate trade in force for spot parcels. Manitoba export patents quoted 47s 6d, straight run 44s 6d, Australian 44s 6d to 45s per 280 lbs ex store. On c.i.f. terms there is only a small business passing at about late rates. Manitoba patents April seaboard quoted 46s, straights 43s, Kansas top patents 45s to 47s, Australian 41s per 280 lbs. Millers' offers firm to dealer. Broad bran quoted £8 10s, ordinary ditto £7 15s, middlings £8 10s per ton ex mill, bags included. Of imported, fancy Plate middlings £8 15s and Plate pollards £6 17s 6d per ton, both landed. Maize tends firmer, with rather more inquiry. Yellow La Plata quoted 43s, yellow round Africa, 37s 6d, American mixed 34s, all landed per 480 lbs. White African maize meal quoted £7 17s 6d per ton landed. Cargo market displayed firmer features owing to the wheat position, and holders required rather more money for new crop positions of Plate. A steamer of La Plata afloat changed hands at 40s 6d. Parcels irregular, but firmer on balance, with

a fair business reported in new crop. Barley dull and featureless. English malting ranges from 42s to 65s as to sample, and feeding sorts 39s to 41s per 448 lbs. Of imported, Californian quoted 41s to 48s, Chilean Chevalier 48s to 51s, Australian ditto 48s to 52s, all landed per 448 lbs. No. 3 Canada Western 35s, No. 4 ditto 34s, River Plate 34s, and Morocco 33s 6d per 400 lbs landed terms. Parcels of No. 4 Canada Western April-May sold at 32s 3d c.i.f. Oats firmer for imported descriptions on a better demand and lighter offerings. La Plata f.a.q. quoted 26s, ditto clipped 27s 9d, No. 2 Canada Western 31s 6d, New Zealand 35s to 40s, all landed per 320 lbs. Forward market also firmer and f.a.q. Plates afloat sold 24s to 24s 3d, April-May 24s 9d per qr. English ranges from 29s to 33s per 336 lbs. Oatmeal quiet. English all cuts quoted £18, rolled oats £18 10s, flaked oats £20, all ex mill. Ordinary Scottish oatmeal £18 10s to £19 10s, American all cuts £18 10s to £19 10s per ton. English beans quiet. Springs rule at 57s to 65s, and new winters 50s to 53s per 532 lbs. Chinese horse beans £10 10s to £11 10s per ton. Madagascar haricots old 12s to 16s, new crop 17s to 18s, Rangoon hand-picked 7s to 7s 3d per cwt. English peas steady. Maples quoted 8s to 9s, Duns 65s, small blues 8s to 10s per 504 lbs. Of imported, Dutch blue hand-picked sold 30s, New Zealand blue 20s to 24s, Tasmanian "A" grade 23s to 24s per cwt landed. English ryz quoted 44s to 48s per 504 lbs, free on rail. Lentils quiet. No. 1 split 29s to 30s, No. 2 also Egyptian 23s 6d to 24s 6d per 100 lbs. Homeward grain chartering was on a limited scale, but rates generally steady. The River Plate section displayed firmer features, and with charterers showing more interest, rates improved to 30s loading at upper ports to U.K./Continent up to June. North America quiet. Montreal to Antwerp/Hamburg quoted 16 cents, ditto West Italy 20 cents per 100 lbs. Northern States to U.K. indicates 4s. 3d. per qr, 14 cents per 100 lbs to Continent, 19 cents West Italy, and 24 cents Riga. Eastern markets quiet, and a large steamer cargo fixed from Bombay on deadweight at 20s. Rice ports dull, and rates nominally 32s 6d from Saigon, with option of meal at 35s to U.K./Continent. Australia quiet, but rates a shade firmer, and charterers have conceded 50s for wheat home, May loading. Danube steady, with 18s indicated for prompt loading to U.K./Continent, heavy grain.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated April 20th, is as follows:—Pig-iron: Business suspended during the holidays. Owing to the unsettlement caused by the engineering dispute a good many orders are doubtless held up or placed elsewhere. Prices are: No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast hematite mixed numbers, 96s per ton. Manufactured iron and steel: The steel trade is almost quite dead at the moment. Makers are hoping against hope. There are indications that orders would come out if labour troubles were cleared away. Steel ship plates, home, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: Inquiry small and for prompt cargoes. Prices steady.

Our Glasgow correspondent (writing on Thursday) says:—Quotations keep steady, but they are not being pushed by sellers, who unquestionably are in a conciliatory business mood. At the same time, Scotch Nos. 1 and 3 are dearer by 2s 6d a ton since last Thursday, and are to-day called £4 17s 6d and £4 12s 6d respectively, with hematite unaltered at £5 5s a ton. These are producers' f.o.t. figures at works. It is reported that founders are operating more freely in Scotch and Cleveland sorts, but though tested at the weekly meeting of the "Iron Ring" yesterday no tangible proof was forthcoming. No. 1 G.M.B. Scotch was given as at 97s 6d f.a.s. Glasgow one month; Middlesbro' No. 3, 90s f.o.t. or f.o.b. one month; and mixed numbers East Coast hematite at 97s 6d f.o.t. or f.o.b. Middlesbro'—makers' iron in each case—without business resulting. Talk is indulged in of a probable increase in local blast furnace power, but this is doubtful, even with outputs now being absorbed fairly well. Bar iron makers are short of orders for general material, but they are pretty well employed on one or two specialties, notably sheet bars, for which Beardmore have just booked one or two good lines. Common bars are now £12 a ton, and rivet bars £14. Conditions in the steel trade generally are very mixed. Yet, on the whole, there is more miscellaneous trade passing than was expected lately. This in a measure is due to the extent of the building operations proceeding in a several of the shipyards, where respectable squads of engineering apprentices and non-unionists are engaged. Repair work is being actively prosecuted, and in consequence a good tonnage in plates and angles is being utilised at steady values—say at, soft steel billets, £7 10s; medium, £8 15s; hard, £9 5s; boiler plates, £14 10s; ship, bridge, and tank plates, £10 10s; angles, £10; castings, £10 10s. There is not a great deal done in Scotland in steel rails, but an odd lot or two come along occasionally, and one for 1,500 tons has in the last few days been secured by Messrs Beardmore for an Irish railway company. The Beardmore firm has been laying down an entire up-to-date rail plant, and purpose competing with the rest of the United Kingdom for a share in this important trade. On the whole (the state considered) they presently are not badly off; but as regards other steel makers, sheet makers, &c., conditions are depressing and short working time common. There are many inquiries in circulation for both black and galvanised sheets from Australia, and works' managements are fearful of a proportion reaching this locality. It should be added, in purposes of comparison, that the export rate for ship plates is £9 5s per ton; angles, £8 10s f.o.b.; and for crown bars, £11 10s. Makers of castings, light and heavy, have hardly any orders in hand, but tube makers have just booked several fair lines for shipment. Another financial hitch has arisen over the German locomotive order, £2,000,000 of which was ear-marked, was understood, for Glasgow—and may yet be secured, the catch being being sound and substantial.

Our Sheffield correspondent writes:—That a distinct revival in the export trade of iron and steel manufacturers is in operation cannot be questioned. It is proved by successive Board of Trade returns, and, moreover, the coal trade is regaining its pre-war position. Unfortunately the revival has scarcely reached Sheffield up to the present time, and things here are about as bad as they possibly could be. Nevertheless, a slight improvement in a few local products can be recorded. South Wales and Cleveland are the most favoured districts so far. Our manufacturers, however, take comfort in the knowledge that the benefit of better trade is certain to come their way sooner or later. The chief weakness here is high-speed and other expensive tool steels. The exchanges preclude the buying of such materials by European countries, and America has done next to nothing for a long period. The home trade is still being affected by the sale of surplus war stores at less than cost price. The lock-out is hurting Sheffield indirectly, as the large engineers are buying no steel or small tools. The slump in the Lincolnshire iron and steel trade appears to be passed its nadir, and several large furnaces are to be put into operation shortly. Exports of iron and steel material during last quarter rose to the figures of corresponding period of 1920, when the slump had scarcely begun. India is by far the largest individual buyer. The importation of foreign pig-iron and steel has dropped one-half on the year. The cutlery trade is badly depressed, and prices are being severely cut to secure such business as is going. The coal trade has not yet recovered from the holiday stoppage, but there are prospects of the demand for manufacturing fuels exceeding the supply should the lock-out be settled, as there is a strong export business. As the home trade for house coals during the summer is likely to be poor some producers are lowering their prices. Coke is selling fairly well, and stocks of small boiler fuel have been greatly reduced of late.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The volume of business has naturally been less during the past week, but there is every prospect of the activity of recent weeks being maintained now that the holidays are over. Indeed, inquiry is already expanding, and on 'Change to-day prices were very firm with, if anything, a hardening tendency in merinos. There is evidently a world-demand for wool, and as the supply of tops is so restricted, top-makers are in a position to stand by their quotations. Moreover, most firms are very well sold forward, and in some cases it is difficult to place new orders for delivery before the end of July. Occasionally one meets with protective quotations—such as, for example, more than 4s 6d for warp 64's tops—but spinners can place business at the figure named, and, perhaps, in some cases at even 1d less. The increasing demand for cross-breeds is encouraging. Some good business has been done recently in carded sorts, and although prepareds are more easy to buy, it only needs a little better demand to put these qualities on a higher level. Worsteds spinners are busy, and although manufacturers are operating with extreme caution, there is just a nice steady flow of orders. The popularity of gabardines, whipcords, and similar goods for ladies' wear is causing quite a run on the yarn used in the manufacture of these fabrics. There is not much new in the hosiery section, and there is still plenty of room for improvement in coating yarns. The better feeling in the piece goods trade is being well maintained, and although many looms are still idle, the outlook is more encouraging than it has been for the last two years. Home trade is expanding, and the Far Eastern markets continue to place some very substantial orders. The mohair trade is steady, and the same may be said of alpaca. In home-grown wools, the finer sorts are moving freely at firm rates.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There are unmistakable indications in the Board of Trade returns of a recovery in the wool textile industry. To a close observer of manufacturing conditions this has been in evidence for the past three months, and unless the writer is greatly mistaken, this development will continue. British exports of wool, tops, yarns, and piece goods are increasing, and if normal trading relations

could be resumed with Central and Eastern Europe it would not be long before all the machinery in the wool textile trade would be able to run full time. As I have emphasised all along it is the piece end of the trade which is the worst, a good many looms still being standing. It does seem strange that there should be such a boom among combers and spinners, and comparative slackness among manufacturers, with hundreds of standing looms, in all districts alike. Huddersfield mills are certainly somewhat better off for work, but there are still many evidences of comparative quietness, and the difficulty of obtaining a margin is proverbial. Still, firms are prepared to work at bare cost rather than stand altogether, and the policy is the right one. Many worsted spinners have accepted prices which will barely cover actual costs, and if a firm has not largely anticipated the future, they cannot make a price compatible with the cost of the top. If 4s 6d has been paid for 64's tops, it is necessary to have at least 6s 1d to 6s 2d to get one's own back, and we only hear of 6s being made in a few cases, it being still possible to buy around 5s 9d. All this means buying tops on forward account, and many firms would to-day be in queer streets if they had not purchased fine tops when they were 6d to 9d below what they are worth to-day.

I think the future of the wool textile industry is going to be healthy and sound. Many are expecting that from now onwards there is going to be a scarcity of good combing merino wools. I cannot see eye to eye with those who take up this attitude. It is not the supply of good combing merino wools that is at fault, but the inadequacy of combing machinery to produce what the trade wants. Bradford wool combing operatives are to be blamed seriously for the present position; instead of the home trade being encouraged, it is being killed by union authorities, who care far more about their own name as officials than the good of the operatives or the trade as a whole. The Master Wool-combers' Federation is fully justified in claiming the right to employ such men as they think are best qualified to render them good service. To lose this right would result in a permanent weakening of their position, which would eventually reflect upon the general good of the industry, and even employees would be involved in a fashion which would be far from beneficial to themselves. By their refusal to hearken to common sense the officials of the Wool-combers' Society have shown that they are not qualified to sit in the councils of masters. The latter know their own requirements best. When thousands of bales of wool are going abroad in consequence of the policy of the union leaders, it shows conclusively where the entire business of the whole country would be landed if these short-sighted officials could have their way. The trade of the whole country would go to the wall, in which cases the operatives would suffer most.

MANCHESTER, April 20.

The market has been rather slow in recovering from the disturbing effects of the Easter holidays, but to-day quite a healthy inquiry has been dealt with in certain sections. Plenty of cloth offers have been about for India, the most encouraging outlet in our Dependency being Calcutta. Moderate lines have been booked in grey shirtings and lighter fabrics, and according to the advices being received, more business will follow in the near future. The China market has not been active recently, but the rise in silver should do good, and a few more orders have been put through in fancies and specialities. A fair sorting-up business has been done for several minor outlets East and West, and a little more demand has been about in home trade fabrics. Manufacturers as a body continue to present a firmer front to their customers. The wages question is considered practically settled. A steady demand has been met with in American and Egyptian yarns for home use at about late rates, without trading being important. Contracts have been arranged in bundles for India and for the Continent.

(I.) Comparative Statement of the Cotton Trade.

Hull, and £41 London, with late April done at about 10s. per ton less. May-August is not so strong, and quotations are about 30s. below prompt. America's heavy buying appears to be due in some measure to the report that the import duty on linseed oil into the United States is likely to be increased on May 15, though there is no official confirmation of this. At present the duty on linseed is 30 cents per bushel, and on linseed oil 10 cents per gallon. The duty has been ineffective in keeping out foreign oil, imports of which have practically doubled in the past year, much to the loss of American crushers, who on the Atlantic Coast are underbid by English and Dutch oil to the extent of 12 cents to 15 cents per gallon, and on the Pacific Coast to as much as 25 cents. American crushers are therefore agitating for a duty of 40 cents per bushel on linseed, and 26½ cents on linseed oil.

Sellers of cotton oil are scarce, and it is difficult to buy for April delivery. Prices for near positions are thus firmer, and about 10s per ton advanced. Rape oil dearer, and castor oil in steady demand, but palm kernel and ground nut oils are a poor trade. There is rather more inquiry for oilcakes, but trade is still very disappointing for April.

In the oilseed section Plate linseed is firm and dearer, but crushers at present level of prices follow very cautiously, and give preference for Calcutta, for which £21 has been paid for passage and April shipment to London, with £21 10s for Bombay to Hull. Only a small trade passing in cottonseed, principally Sakellarides at £11 for on passage and April loading. Manchurian soya beans loading for Hull have been done at £12 10s, and May-June at £12 7s 6d per ton.

Imports of oilseeds and oilnuts into the U.K. in March were above the average, and totalled 141,963 tons, against 80,242 tons in March last year. For the January-March quarter the figures are 344,691 tons, against 302,107 tons. The increase is due almost solely to larger arrivals of linseed and cottonseed from India. Linseed imports are 122,901 tons, against 89,967 tons, and cottonseed 95,682 tons, against 75,842 tons. Palm kernels and ground nuts together show a decrease of 20,000 tons. Exports of unrefined vegetable oils continue substantial, the aggregate for the quarter being 24,195 tons, against 14,697 tons same period last year. Linseed oil accounting for 17,584 tons, against 7,584 tons. The greater proportion of this has been shipped to America. Exports of refined were 3,626 tons, against 5,744 tons, 66 per cent. being cotton oil.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

All classes of market hides and skins were easier in price at the auctions held in Bermondsey on Thursday, best ox and heifers fetching from 6d to 7½d per lb., while seconds realised from 4½d to 6½d per lb. Best cows made less money, seconds, together with bulls, changing hands at the last sale prices. All classes of kips depreciated in value, as was also the case with calf skins, the falls in values for these latter goods ranging from 1½d to 3½d per lb. Sheepskins were easier by from 3d to 9d per skin. A little more interest has been taken of late in the foreign hide market, and although no large sales have been made to this country, fairly satisfactory clearances have been made to the States of Frigorifics. The home trade has bought a few parcels of Saladeros. Dry and dry-salted descriptions are not receiving much attention, and prices are, if anything, rather easier.

In the leather market a fairly satisfactory amount of business was put through right up to the closing down for the holidays, and although most of the orders were for small lots, in practically every instance delivery of the goods was required at once, which is fairly evident that the consuming end of the trade are very short of stock. Since the resumption after the holidays nothing much in the way of fresh business has transpired, but, generally speaking, there appears to be more confidence, and not a few traders in the Bermondsey leather district hold more optimistic views as to the future. What demand there has been during the week has come from the repairing end of the shoe trade, and is mainly for 12-16lb. second bends, the better grades being neglected owing to price. Common shoulders suitable for cheap soles are inquired after, but as most of the stock has been cleared, difficulty is experienced in meeting the demand at the prices offered. The same remark applies to bellies so far as value is concerned, some of the prices mentioned being lower than those at which the goods can be produced.

Business in upper leathers has been small on account of most of the shoe factories being closed until the commencement of next week. What inquiry there has been is still centred around suedes in browns and greys. This class of goods is as popular as ever, and it would appear that anything with a nap surface will fetch a decent price so long as it can be worked up into a suede shoe. Chrome patent sides also continue to receive a fair amount of attention, while waxed splits have been inquired for here and there.

While the outlook for the boot and shoe trade seems to be more hopeful, the pre-holiday business was not anything like normal, and, as previously mentioned, most of the factories closed down until Monday next. Retailers and distributors of footwear also report a lesser demand for their goods as compared with previous holiday periods, some of them attributing this fact to the lessened spending power of the general public. Possibly the exorbitant charge made for a decent-class boot has something to do with the reduced turnover, as there is no doubt prices for some of the higher-grade footwear could be brought yet lower and still show a fair profit to the distributor.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 21.

General course of trade moved quietly this week, while largely under holiday influence.

SUGAR.—A steady tone again pervaded this market, and a fair amount of business was concluded, chiefly in British descriptions, as imported kinds remain very scarce. Messrs Tate and Lyle's cubes sold, 52s 9d to 53s 9d, as to quality; crushed, 50s 6d; granulated, 48s 6d to 49s; caster, 50s 6d to 51s; pieces, 35s to 43s 9d; granulated, May-July, 48s 3d. Crystallised West India, 42s to 44s, as to sample. American granulated, spot, sold, 47s 6d; ditto, May, 20s 3d to 20s; June, 20s 4½d to 20s 3d, c.f. and i. terms, London. White Brazilian, April, sellers, 18s 6d, c.f. and i. U.K. White Mauritius, spot, 44s to 45s 6d, as to quality. Cuban basis 96%, April quoted 13s; and Brazilian basis 80%, April-May, 9s, both c.f. and i. terms, U.K. Cuban stocks stand at 1,039,340 tons, against 954,300 at same time last year. Terminal market generally quiet. White August sold, 20s 3d to 20s. Liquid glucose, spot, 26s 6d per cwt. American syrup sold to a moderate extent at late rates.

COFFEE.—The market opened with a firm tone, and there is a good demand, particularly from home trade buyers. Fair supplies were submitted to auction this week. Future delivery market firmer. December sold, 59s 6d to 60s 3d.

COCOA in quiet support, but sellers adhered to steady asking prices. Butter quiet at 1s 8d per lb.

TEA.—Private contract market remained in a quiet state at mostly unaltered prices.

RICE steadily held, but there was not much response from buyers. Rangoon two Stars, spot, 13s 6d to 13s 9d. Bran slow, unaltered. Beans quiet. Rangoon hand-picked, spot, sold, 7s 3d. Dutch hand-picked peas, sold, 30s. Japanese peas, spot, quoted 47s.

SPICE.—Pepper market steady, but trade proceeded quietly. Fair black Singapore, spot, sold, 3½d; April-June, sellers, 3½d. Aleppy, spot, quoted, 4½d; Tellicherry, 4½d; white Singapore, 7½d; Muntok, ditto, 7½d; and ditto, May-July, sold, 7½d to 7½d. Zanzibar cloves, spot, 1s 2d; ditto, to arrive, 1s 1d, c.f. and i. terms. Pimento, spot, 2½d. Flake tapioca, spot, 1½d per lb. Fair Penang seed pearl tapioca, spot, 17s 6d; sago flour, May-July, done, 14s 3d. Desiccated coconut quieter. Spot parcels sold from 43s to 42s 6d; afloat, 41s to 40s; and May-June, 40s to 39s 6d. Ginger slow, unaltered.

FRUIT.—Currants sold quietly on about former terms. Pyrgos quoted, 54s to 55s; Amalia, 56s to 58s; Vostizza, 65s to 75s. Valencia raisins steady. Halves quoted, 50s to 58s; quarters, 55s to 95s. Sultana met with but retail support.

JUTE.—This market steadily hardened under adverse crop accounts received by cable and marked diminution in supplies of present crop

now available. A good steady demand was experienced from spinners. First grade, spot, Hamburg, sold, £27 to £28 10s, as to quality; lightning grade, spot, Hamburg, £23 10s; first grade, April-May, Continent, £27 15s to £28 15s; ditto, May-June, £28 15s. Lightning grade, April-May, £24 10s; May-June, £24 17s 6d. Hessians firm, quiet for spot lots; 10-oz, 26s; 8-oz, 19s. A twills, spot, quoted 75s; B, 64s; and salts, 53s.

HEMP.—The market for Manila remained very slow and quotations quite nominal with regard to the finer qualities, but more steadiness was observable in medium. G grade, May-July, sold, £34 10s; and streaky threes, ditto, quoted £35. New Zealand still quite idle, and high point, fair, spot, offered at £32. African sisal steady, quiet. No. 1 G.E.A., May-July, quoted £35 10s. Indian hems slow at about late rates.

SHELLAC.—Market presented firm, but quiet features. Fair T.N. spot, quoted 38s; May, sold, 38s; and August, 36s 7s 6d.

COFFRA.—Business was on a more extended scale this week, and a steady tone prevailed. F.M.S. Straits, March-April, and also April-June, to Rotterdam, sold, £24 17s 6d to £25 5s; F.M., ditto, May-July, to Rotterdam, £24 5s; Ceylon, May-July, Hamburg, £25 17s 6d; Malabar, ditto, at £26 7s 6d; South Sea Islands to Continent, £24 2s 6d; Cebu to Hamburg, £24 10s. Java sold £25 5s. Palm kernels steady, and April-June, Liverpool, sold, £18 7s 6d.

RUBBER received quiet patronage, and prices eased slightly. Standard plantation crepe and sheet spot, and April, sold, 8½d to 8½d and 8½d; May, 8½d, 8½d, and 8½d; June, 8½d, 8½d, and 8½d; July-September, 9½d to 9½d and 9½d; and October-December, 9½d, 9½d, and 9½d. Fine hard Para, spot, 10½d; soft fine, 10½d; ball, 8d per lb.

MENTHOL.—Spot quoted 25s; Japanese peppermint oil, spot, 5s 6d; aniseed, 2s; slab camphor very quiet, with liberal supplies now available. Refined, spot, 3s 6d; crude, 3s 3d per lb. Japanese wax, spot, 97s 6d per cwt.

EGG PRODUCTS.—Market quietly steady. Prime liquid yolk, spot, 15s per cwt; albumen, spot, 2s 9d per lb.

OILS.—Linseed: A fair business transpired at again dearer prices. Spot, net, naked, 41s; April, 40s 3d; May-August, 39s; September-December, 37s 3d. Rape dull. Crude, spot, 43s; refined, 49s. Cotton dull. Crude Egyptian, 40s; Bombay, nominal; common edible, 48s. Chinawood: Hankow, spot (barrels), 63s 6d; and shipment, 63s. Coconut quiet. Ceylon, spot, 42s 6d; April-May, 39s 6d; Cochin, ditto, 41s. Soya steady. Oriental, barrels, ditto, 37s 6d. Japan fish steady, April-May, cases, 21s. Cod steady. English, spot, 30s. Ground-nuts steady. English crushed, naked, spot, 45s; deodorised, barrels, 56s. Turpentine firmer for spot and near positions, but distant dull. American, spot, 75s 6d; April, 75s 6d; May-June, 69s 9d; July-December, 57s 3d. Rosin steady. American, grade B, 13s; F, 13s; G, 13s; WW, 19s. French, F/G, 13s; WW, 17s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed market firmer, and holders reserved. Bold Bombay, afloat, £23. Small Bombay, ditto, £21 to £22 paid. Calcutta, afloat, sold, £21 5s to £22; April-May, sold, £20 5s to £21 7s 6d. Plate, afloat, £19 15s; April-May, £19 15s. Rape-seed firmer. Toria, March-April, £18; April-May, £18. Cotton seed steady. Egyptian black, April, £11 10s; and white, £11, paid. Bombay, April-May, £9. Gincely steady. Chinese, March-April, Continent, £24 10s. Castor, Bombay, March-April, £16 15s. Ground nuts firm. Coromandel, machine-dried, April-May, Hull, £23 10s; Continent, £23 10s; Chinese decorticated, f.a.q., April-May, Continent, £23 10s per ton.

METALS.—Tin: At the renewal of business on Tuesday the market continued active and firmer. Cash changed hands at £152 5s to £152 10s; and three months' at £153 10s to £154 5s; and since again at £153 10s. The tendency was easier on Wednesday, when these dates were sold down to £151 15s and £153 to £153 10s, while finally done at £153 5s. Thursday's movements were in an upward direction, when cash fluctuated to £153 5s, and three months' to £154 12s 6d. At Friday's session prices advanced on active supporting orders, although settling down below the best respecting forward positions. Cash sold at £156 to £156 15s, and three months' at £156 10s to £158, while ultimately registered at £157. English ingots £156 10s to £157. Copper: Lower until the middle of the week, when standard early May realised £58 15s, and three months' £59 11s 3d. At Thursday's market values tended rather dearer, only a small business being done, chiefly three months' at £59 12s 6d to £59 15s. At Friday's session prices hardened. Standard cash realised £59 10s to £59 15s, and three months' at £60 5s. Electro's, £64 to £66. Best selected, £63 to £65. Strong sheets, £88; wire bars, £65 15s to £66 per ton. Lead firmer, at £23 15s to £23 5s, as to position. Spelter dealer, £27 to £26 17s 6d, according to position. Antimony, English regulus, £29 5s to £33. Aluminium, home delivery, £120; export, £125 per ton.

OFFER OF CONVERSION TO HOLDERS OF £5 % NATIONAL WAR BONDS due 1st OCTOBER, 1922, and 1st APRIL, 1923.

Holders of the above Bonds may surrender their holdings in whole or in part and receive in exchange therefor:
either

£4 : 10s per Cent. TREASURY BONDS
Repayable at Par on the 15th April, 1932,

at the rate of £100 £4 10s per Cent. Treasury Bonds, with a cash payment of £4 (payable on completion of conversion), for each £100 nominal of £5 per Cent. National War Bonds surrendered;

£3 : 10s per Cent. CONVERSION LOAN

at the rate of £100 £3 10s per Cent. Conversion Loan for each £100 nominal of £5 per Cent. National War Bonds surrendered.

The GOVERNOR and COMPANY of the BANK OF ENGLAND are authorised to receive from holders of £5 per Cent. National War Bonds due 1st October, 1922, and/or 1st April, 1923, applications for the conversion of their holdings as above.

Conversions will be effected as on the 1st April, 1922.

£4 10s % TREASURY BONDS repayable 15th April, 1932.

The principal and interest of the Bonds will be chargeable on the Consolidated Fund of the United Kingdom.

If not previously redeemed, the Bonds will be repaid at par on the 15th April, 1932, but His Majesty's Government reserve to themselves the right to redeem the Bonds at par at any time on or after the 15th April, 1930, on giving three calendar months' notice in the *London Gazette*.

The interest on the Bonds will be exempt from Corporation Profits Tax.

The Bonds will be issued in denominations of £50, £100, £200, £500, £1,000 and £5,000, and the interest thereon will be payable by Coupon.

Bonds of this issue may be registered free of cost in the Books of the Bank of England as:-

1. "Transferable in the Bank Transfer Books," or
2. "Transferable by Deed."

Holders of Registered Bonds, which will be transferable in any sums which are even multiples of one penny, may be re-converted at any time in whole or in part (in multiples of £50) into Bonds to Bearer with Coupons attached.

Interest will be payable half-yearly on the 15th April and the 15th October. The first dividend on holdings issued in respect of converted £5 per Cent. National War Bonds will be payable on the 15th October, 1922, and will represent interest to that date from the 1st April, 1922. In the case of holdings issued in registered form, the first dividend will be forwarded to the holders (or their nominees) to whom the holdings were originally issued.

Interest on registered holdings will be subject to deduction of Income Tax at the source. Dividend warrants will be transmitted by post.

£3 10s % CONVERSION LOAN.

Stock issued in exchange for converted holdings of £5 per Cent. National War Bonds will rank *pari passu* and be consolidated with the existing £3 10s per Cent. Conversion Loan.

A full half-year's Dividend will be payable on the Stock on the 1st October, 1922.

Applications must be made upon the printed forms which, together with copies of this Prospectus, may be obtained at the Bank of England; of Messrs Mullens, Marshall, Steer, Lawford & Company, 15, George Street, Mansion House, E.C.4; or through any Bank or Stockbroker in the United Kingdom. Application Forms have already been sent by post to all holders of Registered Bonds (in the case of joint accounts—to the first holder).

A commission as under will be allowed to Bankers and Stockbrokers in respect of applications bearing their stamp, viz.:-

On applications received by the Bank of England not later than the 6th May, 1922, 5s per £100 nominal of National War Bonds converted

On applications received after the 6th May, 1922, 2s 6d per £100 nominal of National War Bonds converted.

The latest date for the receipt of Applications by the Bank of England will be Monday, the 15th May, 1922.

Bank of England, London,

21st April, 1922.

N.B.—National War Bonds of the Post Office Issue are not convertible at the Bank of England. They may be converted at the Post Office under the arrangements set forth in the separate Prospectus issued by H.M. Postmaster-General.

Plans have been completed for a plant capable of handling 50,000 tons per month. As the result of experiments, it has been decided to make some distinct departures from current practice. All sliming of the ore will be effected by means of a crusher tube mill combination. The stamp mill and amalgamated plates will be eliminated.

The work of erecting and installing the reduction plant will be proceeded with, and provided we can carry on the work without any unforeseen delays, it is hoped that the plant will be running in the early part of next year.

The full Reports and Accounts may be obtained from the London Agents, The Johannesburg Consolidated Investment Co., Ltd., 10/11, Austin Friars, E.C.2.

THE MONEY MARKET.

Now that the Government has almost extinguished its Ways and Means Advances from the Bank of England, it may be expected in the light of recent experience that the money market will not have much margin of credit available until it or the Government has borrowed again. For some time past it has been rare for both the market and the Treasury to be quit of debt to the Bank. Nevertheless, the end of the month brought hardly any increase in the demand for money, and on occasions when surplus

balances were rather less easy to find than usual, this feature was attributed by bill brokers to Stock Exchange demands in connection with large positions open in gilt-edged securities. Discount rates gave way slightly, and the extreme scarcity of bank bills again questioned the assertions of those who talk emphatically of trade revival. The week ended with money extremely abundant, and discount rates were easy at 2½ per cent.

	Apr. 28, 1922.	Apr. 21, 1922.	Apr. 12, 1922.	Apr. 7, 1922.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	(Apr. 13, '22)
Banks Deposit Rate	2	2	2	2	(Apr. 13, '22)
Discount Call	2	2	2	2	(Apr. 13, '22)
Household Notice	2	2	2	2	(Apr. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	(Apr. 13, '22)

The Bank return showed few and uninteresting movements. The stock of gold was practically unchanged, and a small decrease in the circulation produced a small increase in the Reserve. Government securities declined by less than a million, and Other securities rose by £360,000. About two millions were transferred from the public to the private deposits. The currency notes outstanding were reduced by £4,071,200 to £303,229,100, which includes £1,637,800 for notes called in, but not yet cancelled. The fiduciary issue is £253,641,300, or £56,347,100 below the maximum.

THE STOCK MARKETS.

The stock markets have been quieter this week, fluctuations and hesitation being caused in various sections by Genoa developments, Budget uncertainties, and the engineering crisis. War Loan, now quoted ex-dividend, was well supported early in the week, but heavy sales took place later, and British Government stocks finished the week below the best prices touched. Genoa proceedings caused weakness in French issues, and fluctuations in German Threes. Home railway prior-charge stocks rose day by day, but the ordinary stocks declined. Bank shares improved, and among industrials Courtald's made a smart. De Beers shares were well supported, but gold-mining shares generally were uninteresting, like rubber, while oil market interest is mainly confined to low-priced shares.

COMMODITY MARKETS.

A falling off in activity has been noticeable during the week in the cotton trade, business being confined to small dealings; from India there have been some inquiries, but apparently our prices have been too high, while the China market is at present under a cloud. In the wool trade there has been a strong and fairly active market, but more business could have been done in fine tops if early delivery had been assured. No change is reported in iron prices; the home demand for steel is bad, while foreign demand is fair. Best Admiralty coal has hardened to 28s 9d, and it is stated that supplies are scarce. The wheat markets were dull on account of the decline in American quotations, and prices here were slightly lower. A scarcity of supply in the timber trade is reported, and prices are said to be firm. A slight reaction this week has been noticeable in the vegetable oil and oilseed markets, and prices display tendencies to weaken. Quotations in the hide and leather trades are steady, and "calf" recovered some part of the previous week's fall. Conditions are better in the shoe trade. Further details of markets from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

Apart from excitement over the mark, the foreign exchange market has had another dull week, with relatively small movements. From 1,220, on the 21st, the mark recovered rapidly to under 1,090 on Monday, but

M. Poincaré's speech at the beginning of the week produced an instant reaction, on which the rate has risen steadily to 1,260 yesterday morning. The outlook is unsatisfactory. Should the Allies before the end of May force Germany into continuing reparation payments on the present scale, further inflation and a further depreciation of the mark would seem inevitable. Should Germany refuse the Allies' demands, and should measures of coercion be taken, it is impossible to say how far the rate may rise. Forward marks for the time being remain on a parity with spot. Paris also has shown the effects of the present uncertainties, and has risen from 47.50 on the 21st to 48.20 yesterday morning, after being down on Monday as low as 47.40. Although political considerations for the moment outweigh other factors, the unsatisfactory budget statement just published is also a bear factor. Brussels, as usual, has moved parallel with Paris to 52.40. After being for some time on a parity with spot, forward francs in Paris have moved to one-half centime for one month over spot, while in Brussels future rates remain 6 centimes per month below spot. The dollar rate has shown little movement, and having got up to 4.43, has been back again yesterday at 4.42½. There is at present an uneasy feeling in the dollar market, as, although the general economic position would suggest a further rise, a sharp reaction might come at any moment should the Americans decide to take profits on their recent foreign investments, while at the same time any revival of trade would also be likely in the first instance to cause pressure on the exchange. The rate for dollars one month ahead remains on a parity with spot, for two months ½ cent. above. Together with the other allied exchanges, Italy has continued to move upwards, and now stands at 83½, as compared with 81.95 the week before. Among the neutral exchanges, Amsterdam shows a slight move against us. Madrid, Switzerland, and Stockholm, Christiania and Copenhagen, have all, however, gone slightly in our favour. Helsingfors, on the other hand, for reasons not yet clear, but possibly on renewed rumours of loan negotiations, has had a sharp recovery from 240 on the 21st to 213½ yesterday morning. In Central Europe Vienna, in spite of the efforts that are now being made to improve its currency position, is rather higher at 34,000, in sympathy probably with the mark. It may be noted that in spite of the decision of America to release its liens on Austria, nothing has yet been heard of the proposed loan under the auspices of the League of Nations, and it would be interesting to learn whether, as was at one time reported, the Succession States have also on their part agreed to the release of Austrian liens. Warsaw also, after a slight recovery, is at 17,500, some 500 points higher than a week ago. Prague has moved up slightly to 227, and Bucharest is up to 615. Belgrade, however, and Budapest are both rather better. In the East the rupee at 1s 3½d is ½d more expensive than a week ago, but Japan at 2s 1½d is ½d cheaper. Speculation in the silver market has been far less active, and though the position is hardly sound, prices have shown only a very slight reaction. Hong Kong at 2s 6½d and Shanghai at 3s 4½d, are respectively ½d and ½d cheaper. In South America Valparaiso at \$39.50 is 40 points dearer than a week ago, Buenos Ayres at 44½d is ½d dearer, Monte Video has moved from 42½d to 43d per dollar, and Rio from 7 19-32d to 7 1-8d per mil.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 22, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	16,719	Supply Services	4,360
		Interest on Debt	23
		Grants	104
		Reduction of Debt	10,076
		Added to Exchequer balances ..	117
	16,719		16,719

The revenue at £16,718,741 compares with an expenditure of £5,926,300 during the week. This compares with a revenue of £21,026,757, and an expenditure of £15,352,826 in the same week last year. Excise, at £7,438,000, compares with £1,372,000 in the preceding week and £8,139,000 last year. Customs yielded £1,700,000, against £2,800,000 in same week last year.

Property and Income-tax brought in £4,172,265, against £8,167,735 in the previous week. Ordinary Receipts under Miscellaneous yielded £864,476, while Special Receipts brought in £513,000.

The week's operations reduced the National Debt by the sum of £10,675,027, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds by tender	+ 20,311	Bank of England Advances ..	— 3,500
Public Department Advances ..	+ 5,860	Treasury Bills	— 39,770
		Borrowers of Bonds, &c.	— 143
		Unemployment Insurance	— 190
		National Savings Certificates ..	— 300
		Housing Act, 1914	— 103
	+ 25,961		— 36,366

The repayments of National Savings Certificates at £400,000 exceeded the sums received under this head by £20,000. The floating debt was reduced by £30,725,000 during the week, and now stands at £955,475,500.

FINANCIAL YEAR, 1922-23 (April 1 to April 22, 1922).

	£		£
Total spent	51,311,676	Raised by revenue ..	63,024,393

ON THE NATION'S TAXABLE CAPACITY.

"The balancing of the Budget requires adequate taxation, but if Government expenditure is so high as to drive taxation to a point beyond what can be paid out of the income of the country, point beyond what can be paid out of the income of the country, taxation itself may still lead to inflation. The reduction of Government expenditure is the true remedy."—Extract from Report of the Financial Commission of the Genoa Conference.

We do not venture to prophesy which of the many possible devices the Chancellor of the Exchequer may adopt in order to show a surplus in his Budget which will justify a remission of taxation. But it is generally believed that the pressure to reduce the income-tax is proving irresistible, and that by allowing nothing for redemption of debt or for contingencies—a course the justification for which is presumably to be found in the peaceful state of Europe, Ireland, India, &c.—and, on

the other hand, by assuming that the arrears of taxation due in March will all be paid up and that reductions in the rates of taxation will improve their yield, he will see his way to make some small concessions. If reductions are made in the tea and sugar duties, a slight drop in the cost-of-living index will follow, wages governed by this index will fall, and a corresponding relief be given in the cost of production. On the other hand, income-tax remission may have some effect, almost entirely psychological, in encouraging business activity. But, in either case, the remission will be so small that it can have no important effect on the industrial situation.

This conclusion is by no means a comforting one to the payer either of direct or of indirect taxes, who will readily agree with the Genoa experts that there comes a point where taxation becomes an intolerable burden. The statement that taxation to-day is heavier than the nation can bear has, indeed, been in constant use during the last few months; but we doubt whether many of those who use it have a very clear idea as to its meaning. As the phrase is highly relevant to the Budget discussion which will take place next week, we would commend to our readers Sir Josiah Stamp's discussion of this subject in a book recently published. The answer to the question what is the nation's taxable capacity can best be sought by comparison, in the first instance, of the Budget with the total national income. Broadly, the total production of a country, less the consumption of the individuals who have a claim upon that production, furnishes a surplus which covers (a) the taxation, (b) the annual addition to the savings of the country. This surplus may be made larger either by increasing total productivity or by reducing consumption. But if the standard of consumption remains fairly stationary while the nation's production falls, the margin decreases, and if taxation is not reduced, it gradually eats into the normal annual savings of the nation. When taxation begins to absorb the whole of the surplus it can only be maintained by pressing upon consumption. This is also true even where a Government raises its revenue by means of the printing press; for inflation adds nothing to the nation's productivity, but merely alters the proportions in which the total purchasing power in the country is divided between the Government and the public respectively.

The methods adopted by Sir Josiah Stamp enable us to give these general ideas a concrete statistical form. Before the war Government expenditure amounted to about 200 millions and the estimated savings of the community to about 400 millions—i.e., the national income exceeded national expenditure, other than expenditure by Government, by 600 millions. But Sir Josiah does not think it necessary to assume that we must consume exactly what we did before the war. "I am going to assume that we might have saved 100 millions more, and that we could have spared 50 millions more in taxes, without having a really unhappy and down-trodden existence." This would have made the pre-war surplus 750 millions (taxation 250 millions and savings 500 millions), which is about 33 per cent. of the estimated total national income of 1913—viz., 2,200 millions. Assuming the value of money to be one-

half of its pre-war value, this is equivalent to a surplus of 1,500 millions to-day. "But," he continues, "we shall not collapse if only half the pre-war rate of savings is resumed," and he therefore allows 500 millions at 1921 prices for the amount to be saved, which leaves 1,000 millions for taxation. Moreover, he argues, and we think with justice, that interest payments are not entirely to be regarded as a charge on this surplus, but rather a transfer of consumable goods from one set of persons to another—or, to put the point in another way, that estimates of the national income may properly exclude incomes derived from interest on debt. This point is fully discussed in the current *Economic Journal* by Professor Bowley, who advocates the use of two estimates of the national income. But, as such incomes were negligible in pre-war times, Sir Josiah Stamp is right in adding them to the margin calculated from pre-war figures. The collection and redistribution of 350 millions in interest is, however, a disturbing factor which modifies the direct return secured by industry and economic effort generally, and he therefore assumes that it will diminish production by 100 millions, leaving only 250 millions to be added to his estimate of taxable capacity. His theoretical figure, therefore, which assumed that local taxation is not proportionately increased, yields for 1921 a possible Budget of 1,450 millions.

The assumption, however, that our pre-war production remains unimpaired is unfortunately far from the truth. If we assume that our pre-war income, estimated at £2,200 millions, has fallen by 80 per cent., and personal consumption, estimated at £1,600 millions, has fallen by 10 per cent., the margin is only £320 millions. Even if prices are 2½ times the pre-war level, this margin becomes £720 millions at post-war prices. If we allow only 50 millions for the actual savings of the year, the margin is only 670 millions. Adding £250 millions for interest charges, the available figure becomes £920 millions. If prices are twice pre-war, the figure is £840 millions, and at 75 per cent. above pre-war £760 millions. Moreover, the assumption as to local taxation is clearly optimistic, and Sir Josiah Stamp is disposed to allow 80 millions of the surplus to meet increased rates. This deduction leaves the surplus available for Budget purposes at 680 to 840 millions, according to the level of prices. If production can be screwed up to 85 per cent. of pre-war capacity, with consumption still at 10 per cent. below pre-war level, the margin would vary between 880 millions and 1,090 millions, according to the level of prices. These figures contain a large element of assumption, but they serve to show that even if present taxation is maintained, the Budget will only be comfortably covered if the level of prices is maintained at something like twice pre-war level, and if production does not fall below 85 per cent. of pre-war output. Indeed, Sir Josiah Stamp concludes that "if production can be maintained and prices do not decline, the Budget is just within our powers for 1921-22, but that 1922-23 will tell a different tale unless things rapidly improve in production."

This analysis emphasises the importance in the problem of the national finance of the price level, and even more of productivity. But, as the author points out, we are dealing not with a set of fixed conditions, but with a dynamic problem in which the factors are constantly changing. Taxation reacts both on production and on consumption, while national psychology, the distribution of wealth, the purpose for which taxes are used, and the progressive or decadent condition of a country's industries, are all elements which bear upon the extent of possible taxation. For these reasons the preceding figures give a false appearance of exactitude. In particular, we must scrutinise the assumption that consumption, which means not merely the standard of living of the working classes, but luxury and other consumption of the whole community, can be maintained at 90 per cent. of its pre-war level. A simple calculation will show that if consumption falls with national production, the problem becomes a much simpler one. Our Reparation policy towards Germany assumes that the German consumption can be sufficiently depressed by taxation to yield a large margin of production sufficient to meet the Allied claims. We must beware lest a reduction of taxation in Great Britain in response to popular clamour should encourage increased consump-

tion before the State of our finances justifies it. In this connection it has to be remembered that a lower income-tax means more money for trade only to a limited extent, and to an important extent will increase consumption. A far more important way of increasing capital as Sir Josiah Stamp points out, is by debt redemption, very little of which is likely to be spent on immediate consumption. Neither Great Britain nor any other country can avoid the necessity of maintaining a wide margin between its output and its consumption if it is to repair the ravages of war. The first step on the road to solvency is not to start by lowering taxes—though infinite pains must be taken to make their incidence as fair as possible—but to adopt a currency policy which will aim at stabilising prices, to foster production, and to cut expenditure so as to leave a margin for debt redemption. This will begin to restore the real savings of the country, and turn the stream into channels which will irrigate the fields of industry and trade.

NATIONAL EXPENDITURE.

WHATEVER Budget surprise may await us on Monday, public opinion has rightly fastened upon further reduction of expenditure as the only real solution of the critical state of public finance which we must face in the next few years. The Federation of British Industries, in their letter to the Chancellor, demand that the Geddes Committee, "or some equivalent body," should be immediately re-appointed in order to show the Government how to make further economies in the burden of the Budget, while Lord Inchcape, at the meeting of the Income-Taxpayers Association, though calling loudly for lower taxation, adds that "even worse than the burden under which the country is staggering at this moment would be the attempt to lighten it by the disastrous devices of shortsighted and cowardly finance." This sound conclusion has not been reached so much by hard thinking on the part of the man in the street as by painful experience, and by the terrible example of the results in other countries which follow attempts to avoid the issue by quack remedies.

In order to show how our present problem compares with the only other period in which we have had a burden of similar magnitude, we have extracted in summary form the Budget of 1818. This compares with the pre-war situation, and with that of the current year—as forecasted in our issue of March 25th, as follows:—

REVENUE AND EXPENDITURE in 1818-19 (Million £).	
REVENUE.	EXPENDITURE.

Sinking Funds and Debt Repayments	912½
	1,018½

It is difficult to give precise figures for a century ago, but the national income of 1818 is believed to have been in the neighbourhood of £400 millions. That of 1913 was about £2,200 millions, while that of 1921 was probably over £3,600 millions, though with falling prices it will be less in 1922. These figures are, however, sufficiently near the truth to give an approximate idea of the burden of expenditure which works out for the various periods at the following percentages of the estimated National income:—

RATIO of GOVERNMENT EXPENDITURE (EXCLUDING POST OFFICE OUTGOINGS) to NATIONAL INCOME.			
	1818.	1913.	1922.
	%	%	%
Debt	80	11	110
Defence	39	35	39
War Pensions	—	—	25
Civil Services	6	25	43
Other items	10	6	19
Cost of collection	9	2	3
Total	144	79	239
National Debt (million £)	791	600	7,900
Ratio to National Income	nearly 200%	26%	about 220%

It is interesting to find that interest on the debt was nearly as heavy a burden a hundred years ago as it is to-day. The problem was then solved, however, by the exceptionally rapid increase in productivity, and in population, which made the national income grow very fast, in spite of falling prices. Hence the debt, though reduced very little in the ensuing 50 years, dwindled in proportion to the nation's wealth. A second industrial revolution of similar magnitude and mainly confined to Great Britain cannot be expected in the twentieth century. On the contrary, we must assume to-day that the national income will not be much larger than the figure we have mentioned, and relief must therefore be found in reduction on the actual items of expenditure.

The detailed memorandum by the Financial Secretary to the Treasury on the Estimates for Civil Services for the current financial year throws little new light on the details already published, but is valuable as a comparative summary of expenditure in all branches of the Civil Services and Revenue departments for a number of years past. The reduction in the estimates for this year, as compared with those for 1921-22, including supplementary estimates, is given as £207 millions, made up as follows:—

(Million £'s.)			
	1921-22.	1922-23.	Decrease
Liquidation of War Commitments	99½	53	46½
Other Transitory Services	26½	10	16½
Ordinary Services	382½	254½	128
Revenue Departments	82	66	16
	590½	383½	207

It is explained that considerable transitory charges arising out of the war have still to be provided for in 1922-23, and a distinction is drawn throughout the Estimates between such services and ordinary services. "Services arising out of the war" is applied to transitory services, including resettlement and reconstruction. It is, therefore, wider than the term "liquidation of war commitments," which covers only the liquidation of charges arising directly out of activities entered upon during the war, and does not cover such reconstruction services as have since been undertaken. On the other hand, there are certain permanent charges due to the war, such as war pensions, which must remain a charge upon the State for many years to come, and are therefore included as ordinary Civil Services. The allocation to "War Services" has therefore been limited to certain types of expenditure definitely due to the war. Comparisons of the total expenditure are to some extent vitiated by the fact that the greater part of local Irish expenditure is no longer borne by the Imperial Exchequer, and it therefore disappears from the estimates, with a corresponding but rather greater diminution in revenue.

With the aid of the various departmental estimates made public within the last few weeks we have compiled the following comparative table, which shows actual expenditure in the financial years 1913-14 and 1920-21, the final estimates for 1921-22, and the estimates for the current year:—

(Million £'s.)				
	1913-14	1920-21	1921-22	1922-23
National Debt Services—				
Inside the fixed charge	24½	24½	24½	24½
Outside "	325	320½	320½	308

III. Law and Justice	4½	20	23½	15
IV. Education, Science, and Art ..	19½	59½	67	53½
V. Foreign and Colonial Services (Including Middle East) ..	1½	4½	33	14
VI. Pensions and Miscellaneous (Ministry of Pensions)	(nil)	137	151½	116½
VII. Health, Labour, & Insurance	14½	106	(111½)	(90)
Unclassified Services	6	49	52½	39
Customs and Excise and Inland Revenue	..	147	146½	58
Post Office Services	4½	12½	15	12
	24½	62	67	54
	197	1,193½	1,146	906

The actual expenditure in 1921-22, as shown by the revenue statement published on the last day of the year, was £1,179 millions, but no information is yet available as to how this amount was spread over the various services. Total consolidated fund services, however, figured at £359½ millions, and we have taken this amount as the probable expenditure for the current year, although there may, of course, be some further small saving on the debt charge, thanks to the low level of money rates. Interest for six months on our debt to the United States has to be included in the current year's liabilities. The comparison with the expenditure for 1920-21 shows that under each head of the Civil Services the estimate for 1921-22 was considerably higher, and that the estimates for the current year show a correspondingly smaller decrease in comparison with the expenditure of two years ago. As compared with the last pre-war year, there are enormous increases due in the main to new activities. In Class II. the Board of Trade requires £1,864,500, against £1,834,800, and the Ministry of Agriculture and Fisheries £1,834,800, against £264,300. In Class III. police in England, Wales, and Scotland are down for £7,048,700, against £109,000, while in Classes V. and VI. the figures in brackets show the reason for the largest increases. Old age pensions are estimated at £22,615,000 for the current year, as against £12,425,800 in 1913-14. In Class VII. the Ministry of Health is allotted £22,512,600, as against £6,008,300 in 1919-20, its first year of existence, and the Ministry of Labour £14,447,800, as against £906,900 in 1913-14.

The unclassified services include £33½ millions for Railways and Canal Agreements Liquidation, £5 millions for Coal Mines Deficiency, £5 millions for Compensation for Damage by Enemy Action, £2 millions for Compensation for Criminal Injuries in Ireland, £4½ millions for Disposal and Liquidation Commission, £3 millions for Shipping Liquidation. Of the £33½ millions for the Railways, £31½ millions has to be paid within 15 days of the end of December, 1922, the remaining £2 millions being provided to meet outstanding claims for deficiency of net receipts during the period of control. The provision of £4½ millions for the Disposal and Liquidation Commission is made to meet the expenditure necessarily incurred on the liquidation of war commitments, and on the sale of surplus stores and other assets. Gross receipts from this source during the current year are estimated at £42 millions, and this, it is unrepentantly added, "will, as in the past, be credited direct to the Exchequer."

THE STATE AND WAGES.

LORD CAVE's Committee upon Trade Boards, whose report has just been issued, was set the difficult task of determining what should be the duty of the State in regard

to wages. The principle prevalent in the nineteenth century—that the State should refrain from all intervention in such questions—was modified after many years of discussion by the Trade Boards Act of 1909, which is based upon the principle that in cases at all events where unduly low wages were being paid, the State should intervene, and, with the assistance of a Joint Board, should decree a certain minimum. Shortly, the philosophy behind this anti-sweating measure was that if economic conditions would not permit of even these minimum rates being paid, it was better that the trade should cease to exist rather than that these low wages should demoralise the labour market, and destroy the physique and morale of the present and future generations. The supporters of the Act added, with justice as events proved, that these industries would not, in fact, be driven out of existence, but that the enforcement of minimum rates was likely to improve their organisation, and make it efficient. The Act was administered with great discretion and care by the late Sir Ernest Aves, under whose direction and chairmanship less than a dozen boards, covering a-quarter of a million workpeople, were brought into existence. This situation was changed as a result of the war, during which the world got into the way of thinking that, because Governments were able to dictate wages and prices in the highly artificial circumstances then existing, a new economic era had dawned in which the fiat of the State would take the place of economic law. It was in this atmosphere that the Trade Boards Act of 1918 was passed, which authorised the Minister of Labour to create a Trade Board in any industry where the organisations of employers and employed were incapable of providing proper machinery for collective bargaining in regard to wages. It was thought that with Whitley Councils in all trades where organisation existed this provision would enable the whole industrial field to be adequately covered by comprehensive and orderly wage arrangements, and this view was endorsed by the National Industrial Conference of employers and workpeople which met in London in the spring of 1919.

Under the provisions of the Act of 1918, the Trade Boards system has enormously extended, until it now covers three million workpeople, and Trade Boards are contemplated which will bring the number up to five millions. These boards, which are now far too numerous to have their work co-ordinated by sharing the services of a single chairman, have not secured any substantial enlargement of their statutory powers. The circumstances of the post-war boom have, however, encouraged them to use their rights much more freely than the pre-war boards had done, and instead of fixing genuinely minimum rates, they have been fixing varying rates for different classes of workers, and giving the force of law to what were, in fact, the general current rates rather than minimum rates. They further appear to have shown a tendency to enforce flat rates all over the country. Thus we have stumbled, almost by accident, upon a complex system of State regulation of the wages of a large section of the population, including the distributing trades. There is, moreover, a possibility that this field may be further enlarged, since the Whitley Councils have begun to find, now that trade depression has followed the boom, that their decisions tend to become ineffective by the breaking up of the organisations on both sides. Consequently, those firms who remain loyal to their Councils desire to protect themselves against the competition of cut wages by procuring for their Whitley Councils the power to obtain legal sanction for their agreements, and they are therefore petitioning to be given Trade Board powers. In practice the Whitley Council movement mainly covers trades in which organisation is only moderately effective and, as these organisations tend to break up, it will be very difficult to refuse them Trade Board powers. The possibility that the millions of workpeople covered by the Whitley Councils may also before long be brought within the sphere of State-regulated wages, considerably magnifies the problem.

But State control, which is almost always cumbersome, in the case of Trade Boards, been deliberately made moving in order that every possible objector may be behind a given rate of wages. It can, therefore,

be well understood that the machinery proved thoroughly unsuitable to cope with the precipitate decline in wages and prices which the slump of 1921 involved. A large volume of complaints, therefore, arose which has occupied a great deal of the time as well as of the report of the Committee, and as the Committee unanimously decided against the abolition of the Act, a large number of the 34 recommendations are concerned with expediting the machinery of the Trade Board system.

The main point of public interest is, however, the Committee's view of the State's functions in regard to wages. They propose that the full machinery of the Trade Board system (under which members appointed by the Minister of Labour have a casting vote, and the rates so fixed become enforceable under the criminal law by Government inspectors, with a right of entry and power to examine books) should be confined to genuine minimum rates applicable to the lowest general grade of workers in any trade. As the actual lowest current rate is sometimes paid to a tiny group of ancillary workers, who do not properly speaking belong to the industry at all, the Minister of Labour is to be left to define the class of worker to whom the minimum is to apply in the Order setting up the Board. As regards piece workers, the Committee appear to think that it is not the function of a tribunal of an official character to fix elaborate piece price-lists, for they propose that the protection of the minimum should be given to piece workers by the Trade Board naming a minimum earnings standard. Piece rates must be such that they will yield to the ordinary worker at least this minimum standard. If it is admitted that the business of the community is to protect a minimum standard, this suggestion seems reasonable, for there is clearly the greatest difference between nominees of the State laying down that workers in a certain industry must be able to earn a given amount of wages, and their undertaking the highly technical task of fixing elaborate piece prices which may vary in every factory. The Committee makes an exception only in the case of home workers, for whom specific piece rates are to be fixed, since the home worker cannot possibly have his wages fixed on a time earnings standard. Within the sphere of minimum rates as defined by the Committee the Trade Board system is to remain as at present, subject to reforms designed to speed up and simplify their operation.

As regards wages, &c., outside this limited field, viz., the wages of semi-skilled and skilled workers, and the whole system of piece price-lists, the Committee propose that the two sides of Trade Boards should be entitled to fix rates by agreement; that these rates should then be submitted on the request of the parties to the Minister for confirmation; that if confirmed they should govern all wage contracts in the industry; that in the event of an employer failing to pay them, the worker, or a Government inspector on his behalf, should have the right to recover in the Civil Courts; that contracting out of this obligation in order to meet special circumstances will be subject to approval by the two parties on the board, or on appeal from the board, by a court of three impartial persons; and that such wage agreements shall be for any period, and subject to any arrangement as to permanence that the parties may decide. This scheme, which has the unanimous support of the Committee, is clearly an endeavour not merely to take the problem of wage regulation outside the sphere of the criminal law, but also to encourage the making of voluntary wage agreements in Trade Board industries, which will have behind them a carefully safeguarded machinery of civil enforcement. The Minister of Labour will have to see that the spokesmen on both sides are really representative; but it is thought that the scheme will strengthen the organisations in each industry by giving them more responsibility. As they will be able to vary the terms of their agreement as freely as is now done in the case of the organised industries of the country, the plan will have the necessary elasticity. This scheme, which it is thought will be welcomed by employers who naturally desire to be protected from the constant competition of cut wages, follows fairly closely on the lines of the system now current in the agricultural industry, except that contracting out to meet special circumstances is not left to the option of the individual employer and employed, but must be submitted

to the Trade Board, or to a Court of Appeal. It is an experiment which in the end may profoundly modify the system of wage bargaining in this country, and as such is worthy of very careful study.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THERE has been an appreciable improvement in the Lancashire cotton industry during the past quarter. As a result of the larger trade in both yarn and cloth, more machinery is now running compared with the beginning of the year, and there has been a decrease in the amount of unemployment in Lancashire. Owing to the severe depression which has lasted over 18 months, the increased activity has brought considerable relief for numerous firms. Now that the corner towards better times has been turned, it is not anticipated that there will be any setback, although it is likely that business for some time will be rather irregular. Owing to the absence of fresh contracts for so long, supplies in distributing centres abroad have been allowed to run very low, and dealers have found it necessary to replenish stocks. In certain quarters the financial situation is not all that could be desired, but difficulties which have arisen in connection with the liquidation of dear goods are gradually being removed.

Speaking generally, there has not been any marked change in raw cotton values since the beginning of this year. On January 3rd the quotation for fully middling American on the spot in Liverpool was 12.04d. By January 19th the price had fallen to 10.46d, and there was a further drop to 9.55d on January 31st, while on February 6th 9.51d was registered. An upward movement then occurred, and 10.83d was posted on February 20th. There was a decline to 10.24d on March 6th, but 11.30d was the figure on March 22nd, with 10.84d on March 31st. The quotation at the end of last week was 10.38d. Egyptian cotton prices are rather lower than three months ago. On January 3rd the quotation for fully good fair Sakellaridis on the spot in Liverpool was 22.25d. Early in February the price was 15.50d, but by the end of that month there was an advance to 18d. During March there was little or no change, and that month ended with the figure at 17.75d, whilst the quotation at the end of last week was 17.50d. More interest is now being taken in the prospects for the cotton crop in the United States for the season 1922-23. It is believed there will be an increase in the acreage of from 10 to 15 per cent. If supplies are to be adequate to the requirements of users, the growth will have to be about 50 per cent. larger than the current season. The weather conditions so far have been about normal for the time of year. It is now being realised that the Egyptian crop for this season will be much bigger than the official estimate of 3,300,000 cantars. There is every probability of a yield of about 5,000,000 cantars. The outlook for next year is not very promising.

During the past three months there has been a distinct revival in the inquiry for piece goods for foreign outlets. The demand has been led by dealers in India and Manchester merchants with connections there. An extensive business has been done in a variety of cloths, especially for Calcutta. The arrest and sentence of Gandhi have undoubtedly had a marked effect upon trade. The developments relating to the Indian Budget have caused much interest in Manchester, and there is satisfaction in the fact that the import duty and the Excise tax on cotton goods are to remain the same as last year. Certainly from a trade point of view there has been a decided change for the better with regard to India during the last month or two. Dealers in the bazaars have met with much larger clearances, and Lancashire manufacturers have been able to dispose of their stocks and book encouraging orders. Shippers to China have also done fairly well, but latterly the unfavourable political news from the Far East has had an adverse effect upon this trade. Irregular operations have occurred for Egypt and the Levant, but more orders have been about for Turkey. An improvement has recently shown itself in the turnover for the outlets of Central and South America, whilst active buying has taken place for European countries, especially Switzerland. Quite a

feature of interest has been the larger turnover for some of our Colonies, such as Australia. There has been a distinct increase in the amount of weaving machinery working in Lancashire. At the end of January it was estimated that in Blackburn and Burnley less than 50 per cent. of the looms were running. It is now reported that cloth production in those towns is about 75 per cent. of the full output.

The following is a table of cloth shipments, particulars being given for the past three months, and the comparative figures for the corresponding period of the two previous years and the last pre-war year:—

	Yards.	£
1914.....	1,861,700	26,009,060
	Square Yards.	
1920.....	1,123,885,200	65,792,540
1921.....	726,017,700	50,154,020
1922.....	894,929,700	34,463,325

The increased activity in the weaving section of the industry has been reflected in the spinning department, and a healthier business has been done in both American and Egyptian yarns. Numerous companies have been enabled to reduce their stocks at the mills, and owing to there now being less pressure to sell, a stiffer front is being presented to buyers when business is offering. Idle machinery has been restarted in many factories, and numerous mills are now running longer hours. Prices in most counts and qualities are still unremunerative, but definite relief has been obtained, and a further slight improvement would result in rates being obtained which show a profit. There has been considerable activity in yarns suitable for export purposes. A big business has been done for India, China, and European countries.

The following is a table of our shipments of yarn, particulars being given for the past three months, and the comparative figures for the first quarter of the two previous years and the last pre-war year:—

	Lbs.	£
1914.....	56,954,400	4,039,634
1920.....	38,433,800	10,528,635
1921.....	24,494,300	6,154,229
1922.....	48,470,100	6,811,612

The wages agreement between the employers and the operatives in the industry came to an end last December, and, according to the previous settlement, it was necessary for either side to give three months' notice of any further change. The masters' associations, however, had consultations with the trade unions, and it was ultimately agreed that one month's notice would be sufficient. On March 24th the employers gave notice to the workpeople of a reduction of 75 per cent. on list rates, or 6s 1½d in the £ on current wages. Joint conferences have since been held, and just previous to the Easter holidays it was officially announced that so far as the employers and the spinners and weavers were concerned a deadlock had been reached. This week, however, a settlement has been reached, which is described in a note on a later page of this issue.

There is ground for believing that a steady improvement in local industrial conditions will show itself during the next few months. As a result of the recent increased activity, spinners and manufacturers have obtained relief. There is less cheap stuff about, and when buyers want to place orders there are fewer weak sellers. Scarcely anybody anticipates anything approaching a boom, and a state of affairs similar to that existing in 1919-20, when prices were rushed up to a most abnormal level, is not wanted. Since then a very severe reckoning day has had to be experienced, and the depreciation in the value of stocks has been most serious. The general trade outlook is brighter. Decidedly more interest is being taken on the Stock Exchange in textile shares, and prices for shares in spinning companies are hardening. The world is not over-supplied with cotton goods, and it is reasonable to expect steady buying for some time to come if prices keep steady.

THE MEXICAN RAILWAY COMPANY, LIMITED.

(FROM A CORRESPONDENT.)

MEXICO CITY, March 31.

A STAY of 48 hours at Vera Cruz enabled me to verify the fact that the import and export trade through the port was practically non-existent in mid-March, 1922—a great change from the congestion which, I was informed, had existed there a few months earlier.

Vera Cruz is the ocean terminal of the Mexican Railway Company, Limited. This line is British-owned. It connects Vera Cruz (population 80,000) with Mexico City, the Federal capital, with a population estimated at 1,000,000, but probably considerably less. From Vera Cruz to Mexico City is some 264 miles by this company's track, and the journey is one of extraordinary beauty as one mounts from the torrid zone into the colder air of the mountains, in the midst of which is situated the City of Mexico. In addition to the main line this railway owns five short off-shoots, two of which are of great importance to it, as one serves the industrial city of Puebla, with a population of 150,000, and the other serves Pachuca, a great silver-mining centre, with a population of some 50,000. At both these places there are connections with other railway systems. On the main line, too, besides the two terminal cities, there are places of some importance from the railway point of view, such as Orizaba and Cordoba. The former has factories and a population of 40,000, whilst the latter has a most important connection with other railways leading to the south of the Republic, from which the Mexican Railway Company, Limited, derives considerable traffic.

The Mexican Railway Company, Limited, meets with competition between Vera Cruz and Mexico, as the Inter-oceanic Railway has a narrow-gauge line between these two points. Though the grade of the Inter-oceanic Railway is far less, it is not a powerful competitor with the Mexican Railway Company, Limited, as the latter is of standard gauge and is able to give a far better service.

Far the greater part of Mexico's external trade, when there is any, is with the United States. Hence the railways from the north to the south which connect the U.S. with the Republic are obvious competitors with the Mexican Railway Company, Limited, as regards trade with the capital, which is the centre of the Republic's most populated part. But the railways which run from north to south are operated by the Mexican Government, and many of the trading public prefer the Vera Cruz route, owing to the better service provided by the Mexican Railway Company, Limited.

Owing to its fine strategical position as the main connecting link between the ocean and the capital, together with the absence of formidable competition, it is sure that the Mexican Railway Company, Limited, whose total issued debenture and share capital is only some 8½ million pounds, would do a profitable business when trade with the outside world was not at a standstill, and when political and labour conditions were good. It has done so in past years before the revolutionary period, and there is no doubt that it would continue to do so again if only political and labour conditions remained good. It might be inferred, too, that when there was little through freight being hauled between the two terminals it would do a bad business. But Mexico is a land of surprises, and the traffics of the Mexican Railway Company, Limited, are very good just now, and have been good ever since the railway reverted to British management in June, 1920, after having been operated by the Mexicans from November, 1914. This satisfactory state of affairs, I think, may be attributed in the main to the line's efficient management. This is in violent contrast with the inefficient management of most of the other lines in the Republic, practically all of which are operated by the Mexican Government, even though the capital invested in them belongs, in many cases, to foreign capitalists. As a consequence, the latter are feeble competitors, and the local traffic being despatched at present over the lines of the Mexican Railway Company, Limited, instead of its competitors, tends to make up for the loss created by the paucity of through traffic between the two terminals.

The main trouble with the Mexican Railway Company, Limited, is the unsettled political condition of the Republic. The railway is all right from the operating point of view, and it is earning at present a good return on its capital. So good, indeed, that even under present conditions, when the external trade of the Republic is almost at a standstill, it would be able, if the country remained peaceful, to pay off all the debt which it contracted with its debenture-holders during the period 1914-20 in about two years, or in less if trade were to revive and

the country still continued peaceful. There is no doubt about the natural wealth of the Republic. It possesses great tracts of agricultural and timber lands, numerous prosperous mining camps, and great petroleum fields. It also has people who are capable of using their hands cleverly and making quite decent textiles, castings, and other goods made with tools. But the makings of further political trouble are very much in evidence, nor should I advise those interested in Mexico to place too much faith in the intervention of the United States as a happy way out of all difficulties. It is unlikely that the U.S. will intervene there so long as they can possibly keep out of it. Intervention is contrary to their policy. The common story among foreign residents in Mexico, where most of the English-speaking population seem to be optimists, is that all will be well as soon as the U.S. consent to "recognise" the present Mexican Government. And the Mexicans speak as though this failure to "recognise" them was holding back their development through no fault of their own. All seem to forget that the U.S. cannot possibly grant this "recognition" until certain preliminary conditions are complied with, the principal one of which is to enter into some arrangement to render non-effective Article 27 of the Constitution of February, 1917, whereby private property may be confiscated at the will of the Government without other compensation than certain bonds of meagre saleable value. It is probable that sooner or later the Mexicans will agree to this, at any rate so far as property acquired before February, 1917, is concerned, and that they will then obtain the "recognition" of the U.S. Doubtless this formal "recognition," when it takes place, will turn the public eye on Mexico, and the value of Mexican securities of all kinds will probably have a temporary rise. In my judgment this will offer a fine opportunity for those who hold them to get out of them, however promising they may appear to be.

OUR TRADE WITH THE CONSTITUENT STATES OF "AUSTRIA-HUNGARY."

Our help, so far as it has hitherto been given, has certainly assisted the States carved out of the Austrian-Hungarian Empire to help themselves. During the past year their total trade with the United Kingdom rose to £13,521,323 from £8,285,291 in 1920, an increase of £5,236,032, or 63.2 per cent. This progress was made whilst our trade with most of the other countries of the world was gradually decreasing.

For the purposes of the official trade statistics affecting countries shown in the Trade and Navigation Accounts of the United Kingdom for 1921, "Austria" and "Hungary," as newly constituted, have been shown separately, and Fiume, Liechtenstein, Czecho-Slovakia, and part of the Serb-Croat-Slovene State are no longer included therein. We may briefly dispose of Fiume and Liechtenstein, as our total trade with the Port of Fiume for 1921 amounted to £69—the value of our imports—and £12,283, the value of our exports of British produce and manufacture; and the value of our imports from Liechtenstein, amounted to £429, and of our exports only to £6. The small independent State of Liechtenstein has, we believe, an area of less than 100 square miles, and a population of between 10,000 and 12,000. Fiume, however, the chief town of the Hungarian "Littorale," was long ago recognised as the outlet of Hungary to the Mediterranean, and has been famous for the ships built in its shipyards of the oak conveyed across the Julian Alps from Carlsbad, by the roads constructed by the Austrian Emperors and Hungarian magnates at various dates from early in the eighteenth century.

TABLE SHOWING THE VALUE OF THE TRADE DONE BY THE UNITED KINGDOM WITH AUSTRIA, HUNGARY, CZECHO-SLOVAKIA, AND THE SERB-CROAT-SLOVENE STATE DURING 1921.

Value of U.K. Imports From—	Quarter Ended March 31.	Quarter Ended June 30.	Quarter Ended Sept. 30.	Quarter Ended Dec. 31.	Whole Year, 1921.
Austria	£100,552	£129,217	£237,581	£233,409	£700,859
Hungary	3,854	14,706	22,464	56,544	97,568
Czecho-Slovakia	1,048,097	1,755,291	1,535,855	1,359,440	5,698,683
Serb-Croat-Slovene State	256,593	261,182	63,239	128,128	759,142
Total value of imports	1,405,596	2,150,396	1,858,939	1,837,721	7,252,333

VALUE OF BRITISH EXPORTS TO

	1913.	1920.	1921.	1922.
Austria	558,047	545,611	303,739	320,780
Hungary	106,181	32,668	82,435	76,099
Czecho-Slovakia	356,285	607,116	138,059	210,668
Serb-Croat-Slovene State	512,479	180,059	222,694	130,433
Total value of British exports	1,532,992	1,365,494	746,927	747,980

	1913.	1920.	1921.	1922.
Austria	139,796	79,007	86,980	103,532
Hungary	9,581	2,740	7,581	6,459
Czecho-Slovakia	717,554	489,620	78,387	133,295
Serb-Croat-Slovene State	9,895	1,563	9,897	5,981
Total value of re-exports	877,236	572,930	182,845	249,267
Total value of exports	1,532,992	1,365,494	746,927	747,980
Total value of imports	1,405,596	2,150,396	1,858,939	1,837,721
Value of total trade	3,819,824	4,688,820	2,788,711	2,834,968

Of the total value of our imports for the year (£7,256,652), seven-ninths (£5,698,683) came from Czecho-Slovakia, rather more than one-tenth from the Serb-Croat-Slovene State, rather less than one-tenth from Austria, and only £97,568 worth from Hungary.

Of the total value (£4,383,393) of our exports of British produce and manufactures, Austria took £1,728,177, or 40 per cent.; Czecho-Slovakia took £1,312,128, or 30.5 per cent., the Serb-Croat-Slovene State £1,045,705, or 24 per cent.; and Hungary £297,383, or about 6 per cent.

Czecho-Slovakia took 75 per cent. of the total value of our re-exports, Austria took 22 per cent., and each of the other countries about 1.5 per cent. The values of our exports and re-exports did not increase during the year at anything like the rate of our imports. The relative importance of the four States, so far as our trade with them is concerned, is shown in the next table:—

TOTAL TRADE WITH THE UNITED KINGDOM.

	Quarter ended Mar. 31.	Quarter ended June 30.	Quarter ended Sept. 30.	Quarter ended Dec. 31.	Whole Year, 1921.
Czecho-Slovakia	£2,121,946	£2,852,027	£1,752,101	£1,703,603	£8,429,677
Austria	798,405	753,835	628,300	657,721	£2,838,351
Serb-Croat-Slovene State	779,367	432,844	295,830	324,542	£1,832,583
Hungary	120,016	50,114	112,480	139,102	£421,712

It will not be possible to discriminate between the constituent States of "Austria-Hungary" until the volumes for 1921 of the Annual Statement of the trade of the United Kingdom are published. Some idea of the importance of various articles may be gathered from the values for 1919 (the latest available in detail), as shown in the following tables of our imports and total exports for the years 1913 and 1919:—

Value of Imports by U.K. from Austria-Hungary.			Value of Imports by U.K. from Austria-Hungary.		
Values in £'000's.	1913.	1919.	Values in £'000's.	1913.	1919.
Sugar, refined	2,533.7	70.8	Linen yarn	123.0	..
unrefined	1,618.0	..	Poultry	96.7	..
Eggs	375.0	..	Boots & shoes (leather) ..	78.5	..
Gloves (leather)	461.2	..	Hops	..	137.1
Jewellery	203.7	8.7	Fancy goods (Paris goods) ..	56.3	42.5
Glass	179.5	159.6	Seeds	10.0	8.7
Wood and timber	146.1	..	Beads	..	16.1
Barley	125.5	..	Drugs	12.2	7.5

We can supplement these figures in a few instances. Refined sugar was imported in 1920 to the value of £5,000, and in 1921 to the value of £5,500. Eggs in 1920 were imported to the value of £14,500, and in 1921 to the value of £28,200. Jewellery was imported to the value of £11,900, glass to the value of £413,600, and wood and timber to the value of £155,500 in 1920. The value of our imports in 1913 was £7,505,909, and in 1919 was only £505,813, but rose in 1920 to £2,626,288, and last year to £7,256,652.

Value of Total Exports from U.K. to Austria-Hungary.			Value of Total Exports to Austria-Hungary.		
Values in £'000's.	1913.	1919.	Values in £'000's.	1913.	1919.
Coal and coke	859.2	432.8	Boots and shoes	64.2	31.6
Woolen and worsted yarn and manufactures ..	724.6	156.6	Rubber	50.2	22.2
Machinery	474.5	27.8	Fish, canned	47.6	40.3
Ships and boats	384.2	..	Tea	35.9	30.9
Feathers, ornamental ..	339.7	..	Cordage and twine	34.0	26.8
Cotton yarn manufactures ..	300.3	..	Apples	18.8	20.7
Coffee	250.6	34.5	Spices	10.8	11.6
Leather	155.5	..	Tallow	1.4	89.0
Iron & steel manufactures ..	125.4	49.3	Potatoes	..	88.4
Oil (U.K. manufacture) ..	121.3	62.5	Petroleum	..	81.0
Shells	90.2	..	Palm oil	..	38.8
Chemicals and chemical preparations	79.5	..			

The last four items in the table show that under the famine conditions then obtaining we supplied goods in

1919 for which there was no demand from us in 1913. The value of our total exports in 1913 was £5,780,320, in 1919 £2,080,000, in 1920 £5,659,000, and in 1921 £6,265,278.

The ancient kingdom of Bohemia (the cradle of the Reformation) and Moravia ("the orchard of Austria") form the main bulk of the State of Czecho-Slovakia. Both countries have long been famous for their manufactures (especially of glass and fine linens). A hundred years ago the great landed proprietors of Bohemia were engaged in manufacturing glass, colours, porcelain, and earthenware, and were among the first to manufacture sugar from beet. If the Succession States will abolish their tariff-walls and reduce their armies to merely sufficient police forces they will soon show a condition of prosperity exceeding that at any time known under the late Empire.

THE WORK OF THE CONFERENCE.

(FROM OUR OWN CORRESPONDENT.)

GENOA, April 24.

THE work of the Conference in its second week has been overshadowed and partly suspended by the disclosure of the Russian-German Agreement. Very little exception has been taken to the terms of the Treaty, but it is generally agreed on all sides, except, perhaps, by the Russians, that its signature at the particular moment was a tactical error. Fear of Article 116 of the Treaty of Versailles referred to in Article 6 of the experts' report undoubtedly precipitated the conclusion of negotiations which had been in hand for months. It was thought that reconstruction of Russia was to be at the expense of Germany. Whether the Treaty infringes that of Versailles remains for the Reparations Commission to decide. The Allied legal experts on the spot were unable to discover any contravention. A more doubtful point is its interpretation in regard to pre-war debts. The German delegates incline to the view that these are not included in the Treaty, but admit that Article II. cannot be properly interpreted without reference to Soviet Legislation. The political uproar which the incident occasioned seems now to have been appeased by the German reply to the note addressed by the five inviting Powers and the Little Entente. Germany withdraws all claim to participation in the labours of Committee No. I. so far as concerns Russia.

A lengthy counterblast to the London experts' report on Russia has been issued unofficially by the Russian delegation, in which extravagant claims are met with wilder counterclaims. This document is now, however, superseded by the Russian reply to the species of three-point ultimatum presented by the British Prime Minister on April 15th. The three points read:—(1) The creditor Allied Governments represented at Genoa cannot admit any liability with regard to the claims advanced by the Soviet Government. (2) But in view of the serious economic condition of Russia, such creditor Governments are prepared to write down the war debts owing by Russia to them (by a percentage to be determined later); and the countries represented at Genoa would be prepared to consider not only the postponement of the payments of interest upon financial claims, but also the remission of some part of arrears of interest or postponed interest. (3) It must be definitely agreed, however, that there can be no allowance made to the Soviet Government against:—(a) Either the debts and financial obligations due to foreign nationals; or (b) the right of such nationals with regard to the return of their property and compensation for damage or loss in respect thereof. They were replied to as follows:—".....the Russian delegation.....accept items 1, 2, and 3(a) of the above-mentioned annex, provided (1) that the war debts and the arrears of interest or postponed interests of all debts are written down, and (2) that adequate financial help is given to Russia, assisting her to recover from her present economic state in the shortest possible period. With regard to 3(b), subject to the above two stipulations, the Russian Government would be willing to restore to its former owners the use of property, nationalised

or withheld, or where this is not possible, then to satisfy the just claims of the former owners, either by mutual agreement with them direct or in accordance with arrangements, the details of which will be discussed and agreed during the present Conference." The answer is more conciliatory than was expected in many quarters, and the line taken is the obvious one. Firstly, no acknowledgment of debts which do not lead to credits are of any avail; and, secondly, "de jure" recognition of debts are to be honoured. There is a difference of intention in the term "writing down"; obviously the Russians infer cancellation.

A sub-committee of seven experts nominated by Committee No. 1 is to study the possibilities of agreement. On this sit the five Inviting Powers, one neutral (Holland), and one Little Entente (Roumania). The work of the Finance Commission—i.e., Commission No. 2—is terminated so far as currency and exchange are concerned. The same experts considered both these problems. The currency resolutions differ from the original London report (White Paper) and the British amendments on currency given in the *Economist* last week on two points in particular. Article 7 admits that certain States, despite economies and taxation, will be unable to balance their budgets without an external loan. It also states that taxation may be driven beyond the reasonable capacity of the country, and may itself cause inflation. This last sentence seems a concession to the theorists, and both it and the preceding admission are dangerous doctrines likely to be abused by any State in difficulties. The credits clause will, at any rate, serve Germany in forthcoming Reparation controversies.

The idea of a monetary convention has been retained, and with this end in view the Bank of England is to convene immediately a Conference of European Issuing Banks, to which the United States is to be invited. At the presentation of the Report devaluation was definitely scouted by representatives of Italy, France, and Belgium, whilst certain of the Central European States took occasion to relate their particular conditions.

The resolutions on exchange included Art. 39 of the London expert's report, but instead of Art. 40, Resolution 2 on forward exchange is inserted: "It is desirable that where no adequately organised market in forward exchange exists, such a market should be established. It has been suggested that in any country where private enterprise is found to be unable to organise such a market, the central bank, without itself incurring any uncovered exchange risk, should provide facilities. It might, for example, give facilities to approved banks and financial houses to convert spot transactions in foreign exchange into transactions for forward delivery by a system of 'contango' or 'reports' of foreign exchange, their quotations being for the double transactions of a spot deal one way and a simultaneous deal the other. The Central Banks concerned would agree to provide facilities for holding foreign balances (and securities) on deposit on account of other central banks under special guarantees from each bank, and from its Government as to the absolute liquidity and freedom of movement of such balances under all conditions, and their absolute exemption from taxation, forced loans, and moratoriums. It is recommended that this subject should be considered by the Conference of Central Banks referred to in a previous resolution."

The German delegation proposed an amendment for preventing the flight of capital to evade taxation. The Finance Commission resolved that this question, being closely connected with that of dual taxation, should be referred to the League of Nations, which is actually studying the latter problem. Reparations, though excluded from the Conference, are the subject of conversation between Allied, Neutral, and German financiers at Genoa. German opinion holds that a loan must be raised to cover the four annual payments of 710,000,000 gold marks. The amount to be raised varies between 2½ and 4 milliards of gold marks, according as to whether reparation payments alone or these payments plus a sum for supporting the mark and liquidating clearing house debts are intended. As paper marks are useless for any of these purposes, an internal gold loan in Germany could only come from private holdings of foreign currency. It is thought that

this source could be tapped if confidence were restored by the vision of a four years' uninterrupted reconstruction period. A large proportion of the loan would in any case have to be raised abroad, possibly with the guarantees of the Allied Governments to the extent of their several portions of Reparations claims which the loan would satisfy. Given some definite proposition of this nature, neutral bankers might be persuaded to supply part of the additional sums which Germany requires for currency support and clearing house debts.

A meeting has been held this week of the creditor States of Austria, who are all represented at Genoa, with the exception of the United States. Despite the efforts of the League of Nations, Roumania and Yugoslavia have not yet agreed to the postponement of the Liens. A technical sub-commission has been formed of seven members, comprising one each from Great Britain, France, and Italy, two neutrals, and two of the smaller Reparation creditors to deal with this question.

Notes of the Week.

The Demand for Lower Railway Rates.—We understand that formal application has been made by the Federation of British Industries to the Railway Rates Tribunal for a general reduction of rates to a level not more than 50 per cent. above pre-war level. The present rates, with the exception of certain concessions to the coal, iron and steel and chemical industries, are about 110 per cent. above the pre-war level, so that the reduction asked for is a little more than 25 per cent. off current rates. In addition to the arguments based upon the necessities of trade, the Federation will doubtless urge that the Government money which the railways have received this year, together with a further £30 millions which the hard-pressed taxpayer will have to find next December on the one hand, and the drop in the railway wages bill as the cost of living has fallen on the other, have placed the railways in a financial position which will enable them to make very substantial reductions. A remission of railway rates at the present juncture would give a definite stimulus to trade revival, and the railway boards would greatly enhance their prestige if they would abandon their fears and hesitations and come forward with a bold offer without waiting to be compelled by the tribunal.

The American Tariff.—As our New York correspondent explains on a later page, there is a prospect of a sharp fight between the two branches of the American Congress over the tariff legislation. The crux of the dispute is the question of valuation. The Senate dissents from the "American valuation" scheme approved by the House, and proposes instead that duties on imported goods shall be levied *ad valorem* with relation to the cost of production in foreign countries. In the original form of the Fordney Bill, Section 402 provides that "the word 'value' wherever used in this Act or in any other law relating to the appraisement or classification of imported merchandise shall mean the price on the date of importation of the imported merchandise at which comparable and competitive products of the United States were ordinarily sold or freely offered for sale in the usual wholesale quantities and in the customary wrappings, coverings, and containers, whether holding liquids or solids, to all purchasers in the ordinary course of trade, including all costs, charges, and expenses." In determining this value, appraising officers "may exclude or include all or any cost charges and expenses, including duties, and also profits and commission, if any, keeping always in mind the legislative intention that duties *ad valorem* shall be assessed upon the fair market value of the imported merchandise in the United States." There is no doubt, of course, that in practice these charges would always be included in the computation. This scheme has been severely criticised in America because of the "pyramiding" of prices that must inevitably ensue. Take, for instance, hair nets. Their price in China is \$2.50 a gross. The duty is 35 per cent., or 87 cents. That makes the cost to the wholesale

importer \$3.37. He must add to that 20 per cent., or 67 cents, to take care of his overhead charges and profits. The total wholesale price in the United States to-day is thus \$4.04 a gross. But on the first importation after the passing of the Fordney Bill the duty will be levied not on the \$2.50 invoice price, but on the \$4.04 American wholesale price, and the duty will thus be \$1.41, making the cost, including duty, \$3.91. Add 20 per cent. of that for overhead charges and profits—i.e., 78 cents, and you reach a wholesale price of \$4.69. On the importation next following, the duty will be \$1.64, and overhead and profits 83 cents, reaching a wholesale price of \$4.97. On the next occasion the duty will be \$1.74, the overhead charges and profits 85 cents, and the total \$5.09. After a time a price will be reached that will be prohibitive, and importation will cease—the revenue, of course, ceasing with it. As a corollary, whenever any American producer is in a position to control the market and fix the domestic prices, he will, in effect, fix the tariff duty payable by his only possible competitor, the importer. Under this "American valuation" scheme, therefore, the consumer will be more than ever at the mercy of price-fixing organisations. Further, the uncertainty of such a plan will make importing no longer a business, but a gamble. It will bring to utter confusion the existing system of giving orders, in many lines of commerce, for goods to be made up and delivered six months or a year later. Not only will the importing merchant be hampered through his ignorance of what the goods will cost him at the time of delivery, but the American manufacturer will similarly be at sea if he attempts to buy raw materials and half-finished articles from abroad in advance. The Democratic members of the Congressional Ways and Means Committee expressed in their Minority Report the conviction that this valuation proposal was inserted in the Bill "for the purpose of indirectly, covertly, and in a concealed fashion raising the duties beyond any point hitherto accepted as reasonable by the most ardent Protectionists." The *New York Evening Post* has described it as "the biggest 'joker' ever carried by a Tariff Bill." If, however, the method of foreign instead of American valuation is adopted, the whole Bill will probably have to be rewritten, for the rates imposed by its schedules are all predicated on the American valuation scheme.

The Economic Condition of Italy.—Some features of the economic position in Italy have recently been dealt with in these columns—the railways, the financial outlook, and the banking and political crises. The survey is completed, though only till the end of last year, by the Report just issued by the Overseas Trade Department from the Commercial Secretary of the British Embassy at Rome. The impression left is hopeful, though the recovery must be slow. Internal disorder is far less frequent than a year ago. The Budget deficit is greatly reduced; the adverse trade balance, formerly corrected in part by emigrants' remittances, which are now cut down by the obstacles to emigration in the United States and elsewhere, may be effaced by intensive production and much-needed rapid transport, especially to English Channel ports. The increase of the National Debt last year by nearly 12 per cent. is the necessary and preferable alternative to more currency; but the floating debt should be funded and the war debts cancelled, in the interest of Italy and her creditors alike. Taxation has reached its limit; the way of safety now is through retrenchment and strict economy. The industrial situation is improving; the Labour extremists are losing ground; wage reductions have been accepted in the textile trade, and the collapse of the Ansaldo and Ilva combines frees the steel and iron industries of unsound undertakings, brought down by their dependence on political influences and by financial mismanagement rather than by industrial causes. Agriculture is regaining, and in some cases passing, its pre-war level, though wine has suffered by last year's drought, and silk through the depression which began in Japan in 1920, and the scarcity of mulberry leaves and cocoons. Livestock, except milch cows, is at its pre-war numbers, and in a few years the export of dairy produce should be large. Agricultural co-operative societies are multiplying, but are prone to "land-

in FRANCE and ALGERIA.

hunger," to the detriment of intensive cultivation and sound finance. Co-operative producing societies are largely engaged in industry, and are preparing to take over dockyards and arms factories; consumers' co-operatives should help to reduce the profiteering which keeps up the cost of living, though many are too small to be financially strong. In all, the co-operatives number 20,000, as against 1,400 in Great Britain; they are financed by a central institute. The textile trades, especially cotton, are recovering, and new markets have been found in the Balkan States, while Italian shipping is again active in the Levant and the Black Sea. Some of the chemical trades are making great progress, and electric power (chiefly for the railways) is being largely developed, notably in Apulia, Calabria, and Sardinia. The unemployed, however, numbered 492,000 last November, besides 65,000 out of work through strikes or lock-outs; the Government is providing largely for public works. The housing difficulty is serious, and building is costly, but reconstruction in the devastated districts is rapidly progressing. Much is being done to improve primary, secondary, and technical education, but the proportion of elementary teachers to scholars is about 1 to 48, which is far too low. British trade is kept back partly by high prices and neglect to study markets, but mainly by competition from Germany and other countries with a depreciated exchange. But Germany will never be allowed to regain her former domination. The United States is also a formidable competitor.

Cotton Trade Wages Settlement.—Our Manchester correspondent writes:—After very protracted negotiations, the officials of the various organisations, both employers and operatives, in the Lancashire cotton industry have this week reached an agreement on the wages question. The original demand of the masters' associations was for a reduction of 75 per cent. on list rates, or 6s 1d in the £ on current wages. Last week the negotiations between the employers and the operative spinners and weavers reached a deadlock, but a little later the masters came to terms with the cardroom workers, the provisional agreement providing for an immediate reduction of 40 per cent. on list rates, or 3s 3d in the £ on current wages, and a further reduction of 10 per cent. on list rates, or 9d in the £ on current wages, in six months, the latter alteration to remain in force for six months. It was anticipated that the operative spinners and weavers would accept the same terms, but a little difficulty has been experienced in getting them to agree. However, on Tuesday last a definite settlement was reached with the trade union officials. So far as the Operative Spinners' Amalgamation is concerned, it is necessary that the terms should be ratified at a delegate meeting of that organisation, and a meeting for this purpose was called for yesterday (Friday). The agreement is on much the same lines as anticipated a month ago, when this question was raised. Present wages are 145 per cent. higher than the lists, and 140 per cent. above the level existing at the outbreak of war in July, 1914. The workpeople next week will be paid on a basis of 105 per cent. higher than the lists. It is estimated that the reduction about to come into force will mean a saving to the employers of about £150,000 per week, and about 400,000 operatives are affected by this fall in wages.

The Sugar Supply.—The proposal of the Government to relieve home-grown sugar from the Excise duty calls to mind some statistical facts relating to sugar supplies that are not without interest. The consumption of sugar in the United Kingdom is now only 80 per cent. of what it was before the war. The higher cost, including heavier duty, to the consumer, a smaller export trade in confectionery, and the habit of economical use cultivated by war-time restrictions, have all, no doubt, contributed to reduced consumption. The quantity entered for home consumption last year was 27,778,517 cwt, against 34,638,596 cwt in 1913. Nevertheless, the 1921 figure was over 5½ million cwt higher than that of 1920, when it was 22,120,067 cwt, the increase accompanying a very marked reduction in price, wholesale and retail. How marked has been this latter may be gathered from a reference to the Board of Trade returns of imports, which, of course, do not necessarily correspond to the quantities released from bond for home consumption. The figures of imports for the past two years, with 1913 included for the purposes of comparison, are:—

	Refined. Cwt.	Unrefined. Cwt.	Aggregate Value, c.i.f. £
1913	18,450,897	20,934,293	23,066,621
1920	2,396,238	25,030,878	73,104,456
1921	9,366,885	16,223,407	35,283,957

The average value c.i.f. of unrefined or raw sugar in 1913 was only 10s 2½d per cwt; in 1920 it was 53s 3d, and in 1921 it had fallen to 25s 2d. In December last, however, the average for the month was but 15s 9d, while in March of this year there was a still further decline to an average of 13s 2½d per cwt, the January-March quarter's average being 14s. It will thus be seen that the fall has not only been heavy, but rapid, and it has only a little way to go to get back to pre-war level. The sources from which we draw our sugar supplies has, of course, undergone a very great change. Whereas formerly approximately 50 per cent. was refined beet sugar from European countries, Germany contributing one-half, the quantity from these sources was, in 1920, only 75,178 cwt, which in 1921 had grown to 4,891,581 cwt, equal to 26 per cent. of the 1913 import of refined sugar from Europe. The great bulk of last year's import was from Holland and Belgium, the quantity entered from Germany being but 23 cwt, though it is possible that some of the sugar from the former was of German origin. Taking the Continent as a whole, there is not much surplus, if any, for export, notwithstanding that estimates of the 1921-22 crop at 81.55 million cwt show an increase of 7.61 million cwt over the immediately preceding season, and 29.22 million cwt over 1919-20. The total of refined sugar imported into the United Kingdom from countries not in Europe has increased from a negligible quantity (13,532 cwt in 1913) to 4,475,304 cwt last year, nearly 77 per cent. being derived from the United States. At the same time, unrefined sugar imported from Europe has fallen 13,654,597 cwt to 279,140 cwt. Imports of unrefined from countries outside Europe have more than doubled, last year's import reaching 15,944,267 cwt, which is, however, only 66 per cent. of the 1920 total. In the past few years there has been a big swing round from beet to cane sugar, and it is interesting to have the opinion of Sir Robert Park Lyle, president of the British Sugar Refiners' Association, that sugar produced from sugar beet in Europe will never again be able successfully to compete with cane sugar as produced in Cuba, Java, or Peru. The world's sugar supplies to-day are made up of more than 70 per cent. cane sugar, though while beet is regaining lost ground, cane production is estimated at less than in two preceding seasons, when the outturn was abnormally heavy. The following are the latest estimates of the world's sugar production in 1921-22, appearing recently in an article in the *Vossische Zeitung* (Berlin):—

(In Millions of Cwt.)				
	1919-20.	1920-21.	1921-22.	
Beet sugar—				
Europe	52.33	73.94	81.55	
America	13.39	20.08	18.46	
Cane sugar—				
Europe	12	14	10	
America	125.26	131.53	112.19	
Asia	97.56	90.93	90.52	
Africa and Australia	15.17	15.50	17.58	
Total	303.83	322.12	320.40	

It is commented that Czecho-Slovakia, and to a lesser extent Poland, are practically the only European countries exporting sugar; the other sugar-growing countries merely cover their own consumption. The late Russian territory is a striking exception in this respect. Notwithstanding the improvement in European sugar production, it is asserted that the Continent imports colonial cane sugar to the extent of several million cwt; chiefly for France and for Switzerland, *via* Holland. Russia is reported to have 150 sugar factories working, and to have an estimated production of 10 million cwt for the current season. Before the war Russia produced annually 30 to 35 million cwt of beet sugar.

War Loan Dividend Difficulties.—There has been no time since the War Loan was issued in January, 1917, when the various questions surrounding dividend payments on the stock have become so widely a subject of interest as they are to-day. Owing to the rise in the price of the stock—which stands 12½ points higher than at the corresponding period last year—investment interest is quickened to an extraordinary degree in this particular security. People have been buying and selling the stock freely within the past few months, writes a Stock Exchange correspondent, and stockbrokers find themselves faced with a very unusual crop of queries respecting the quotation of the price ex dividend on Wednesday morning last. The matter is simple enough in itself. The Bank of England, in order to cope with the vast amount of work involved in the preparation of the dividend warrants for the June 1st payment, closed its transfer-books on the night of Tuesday, April 25th, and everybody who was on the register that evening will receive interest cheques on June 1st next, whether those people have sold the stock or not. So long as it stood in their names, and has not been transferred to anybody else by April 25th, it is to those holders that the payment will be made. The Bank re-opened its books for transfer of the stock on Wednesday morning ex dividend; that is to say, the people into whose name the stock was transferred from Wednesday morning onwards will not receive the dividend, although they may have bought it earlier, and are therefore entitled to the payment. If the date of the bank books closing is kept in mind, many of the difficulties will resolve themselves. What sellers fail to appreciate, however, is the fact that if they sold the stock cum dividend, and it was not transferred until after the price went ex dividend, the buyer has the right to deduct payment of the interest when he hands over his cheque for the stock, although the interest itself will not reach the seller until June 1st, and therefore he is out of his interest-money for some five weeks. This is a Stock Exchange rule which cuts, of course, in both directions; the members of the public who bought the stock cum dividend, and who did not get it transferred into their name until it was ex dividend can claim the payment immediately, and will receive it as a matter of course. Indeed, it may be said that in most cases the interest cheque will accompany the Bank of England stock receipt, without the buyer being laid under any necessity for sending in a formal claim himself. Long Stock Exchange experience has shown this to be the most convenient way for dealing with deduction of dividends from sellers as soon as a price goes ex dividend, or as soon as the company's books are closed for payment of them. A shorter experience, however, has had to be applied to another point which arouses no small amount of dispute and, frequently, annoyance. This is the fact that the prices of the three classes of War Loan, bearer, registered, and inscribed, all go ex dividend at the same time, and the bearer bonds are not placed in that class by themselves, which payment of the interest on June 1st would seem to render desirable. The Bank of England sends out dividend cheques to proprietors of inscribed and registered War Loan without making any deduction of tax unless specially asked to do so. When coupons on the bearer stock are presented, however, the full 6s in the £ tax is deducted. In the Stock Exchange the seller of bearer bonds, cum dividend, who failed to deliver his stock before two o'clock last Tuesday, will find that his buyer insists upon taking delivery of the bonds ex dividend and deducting the full £2 10s per

cent., although the seller himself, when cashing the coupon on June 1st, will receive £1 15s per cent. Not only does the buyer get the dividend five weeks in advance of its proper date of payment, but he also takes 6s in the £, which the seller will not receive. Endless disputes arose around this point during the first few half-yearly payments of the War Loan interest. The Stock Exchange Committee, appealed to for a ruling on the point, laid it down definitely that if bonds were not delivered cum coupon, then the seller would have to submit to losing the tax if the buyer, on paying for the bonds ex dividend, chose to knock off the payment in full, as, of course, he had the right to do. The reason lies in the fact that, had the sold bonds been handed to the buyer in time for the latter to inscribe them into his name at the Bank of England, the interest payment would have been made to the buyer without deduction of the tax, and that this entitles the purchaser to knock off the full amount, in spite of the fact that the seller, in presenting his coupons, will receive only 35s per cent. instead of £2 10s.

White Star Line.—The report of the Oceanic Steam Navigation Company for the year 1921 shows a distinct recovery in profits. But with a concern of this kind it is impossible to ascertain whether the company has fared better or worse than in the previous year from a short profit and loss account. The report states, for example, that during the year several vessels have been thoroughly overhauled and reconditioned, part of the cost being charged against revenue account, while £50,000 of the general purposes fund has been used for the purpose. On the other hand, the number of passengers carried in the North Atlantic services shows a marked decrease, and the freight position generally has been disappointing. The profit, however, including £160,800 for interest, has risen from £1,372,200 to £1,630,000. The company's record for the past 14 years reads as follows:—

	Profit.	Interest, &c.	Depre- ciation.	Reserve, &c.	Dividend.	Balance.
1908	£ 306,242	£ 103,605	£ 416,882	£ ..	£ 75,000 (10 %)	£ -283,246
1909	620,245	118,890	356,932	..	150,000 (20 %)	- 5,477
1910	1,070,274	106,222	370,016	360,626	225,000 (30 %)	+ 8,410
1911	1,102,756	137,580	414,141	..	450,000 (60 %)	+ 101,035
1912	919,033	146,040	527,649	100,000	225,000 (30 %)	+ 79,656
1913	1,121,268	166,445	437,168	..	487,500 (65 %)	+ 30,155
1914	887,548	255,151	398,967	..	262,500 (35 %)	+ 29,070
1915	1,68,285	256,904	628,712	500,000	487,500 (65 %)	+ 95,169
1916	2,402,758	258,138	440,752	810,000	750,000 (20 %)	+ 143,868
1917	1,534,261	401,702	318,940	210,000	750,000 (20 %)	+ 146,320
1918	1,341,542	419,469	317,793	100,000	637,500 (17 %)	+ 133,220
1919	1,746,624	387,627	397,521	128,000	750,000 (20 %)	+ 83,476
1920	1,372,158	307,673	388,112	..	750,000 (15 %)	- 73,627
1921	1,630,037	346,510	438,967	25,000	750,000 (15 %)	+ 69,560

Debenture interest requires £78,300, and £266,800 goes in income-tax. The allowance for depreciation on fleet and buildings is £50,000 higher, and £25,000 goes to superannuation funds. The dividend is maintained at the reduced rate of 15 per cent., but it may be mentioned that the shares of the company, which was registered in 1869, are held by the International Navigation Company, which, in turn, is controlled by the International Mercantile Marine Co. The balance-sheet shows a reduction of £2,375,400 in creditors and of £1,699,400 in debtors, but the property item is £453,900 higher at £6,762,900. General investments are £699,000 lower. Trade bills, which appeared a year ago at £213,400, have disappeared, but acceptances and bank overdrafts now figure at £740,000. During the year debentures to the value of £124,600 were redeemed by purchases and drawings. The directors regard the outlook as still very discouraging, and anticipate a further reduction in third-class West-bound numbers to the United States during the current year, as a result of the restrictions placed on immigration by the American Government.

Pennsylvania Report.—The report of the Pennsylvania Railroad Company for the year 1921 states that no settlement has been made with the United States Railroad Administration for matters growing out of Federal control. The directors confess to great disappointment in view of their belief that a large sum is due "which could have been used for maintenance, replacement, and other necessities in 1921, and which would have assisted

in mitigating the effects of the business depression and unemployment." Operating income for the year 1921 amounted to \$500,175,100 and operating expenses to \$430,758,600, net revenue from railway operations being \$69,416,400. Operations during 1920 having been for two months under Federal control, for six months under the Government guaranty, and for four months without Government relationship, no comparison of railway operating revenues and expenses is given. Comparative figures for the remaining items of the statement are, however, shown as follows:—

	1921.	Inc. or Dec. on 1920.
Net railway operating income	\$ 41,221,968	—21,881,900
Non-operating income	38,036,467	+13,242,358
Gross income	79,258,435	— 8,639,542
Deductions from gross income	54,950,766	— 145,538
Net income	24,307,669	— 8,494,004
Sinking and other reserve funds	1,147,830	— 1,091,960
Dividend (4 per cent.)	19,966,936	— 9,983,468
Expenditure on leased roads	2,759,796	+ 2,759,796
Balance	433,107	— 178,372

While the net operating results show a great improvement, the net railway operating income of 1921, compared with the accrued compensation from the Government for the first eight months of 1920 and the remaining four months of that year, shows a decrease of over \$21,800,000, owing largely to decreased traffic and to high wages, taxes, and other costs. The dividend of 4 per cent. compares with 6 per cent. for the previous year, the directors having decided to reduce the distribution owing to general conditions and the continued recession in business. The balance at profit and loss account, including the transfer of this year's balance and after deducting \$2,854,000 for discount on bonds issued in 1921, amounts to \$47,083,400. The report mentions that thousands of rate reductions and modifications were made by the railroads during the year, including general reductions in rates on farm products, "and it is impossible to see how any further general reductions in rates can be made without corresponding decreases in the cost of labour." On the Pennsylvania system, total operating expenses were reduced over \$190 millions, of which over \$98 millions was in transportation expenses and the balance in maintenance and other expenses. Some part of this decrease was due to wage reductions of about 12 per cent. last July and to modifications of working conditions. The net railway operating income of 1920 was equal to only 2 per cent. upon the investment in road and equipment of the system.

The Legal and General's Valuation.—The Legal and General Assurance Society has been in the habit of publishing a complete list of its securities, so that shareholders and policyholders may see for themselves the valuation of its resources on specific dates. For the future the auditors are going to drop in when they please and make a surprise investigation, so as to ensure that no unauthorised changes are made between whiles. When companies of the first rank adopt precautions of this kind, other companies of lesser rank will be compelled to follow. The valuation of the liabilities has been made at 3 per cent., instead of at 2½ per cent., and a basis adopted in valuing the future premiums which is stated to require larger reserves than the more usual "pure premium" system. The net liabilities are shown at £12,309,266. The investments are taken as at December 31st last, which necessitated a writing off of £252,200 for depreciation. The reversionary interests, of which this society holds large quantities, have been revalued, and the results submitted to an independent actuary in addition to the regular consulting actuary. The life assurance fund is given as £13,431,201, and a divisible surplus shown of £1,142,828, leaving £60,000 to be carried forward. The participating policyholders get a reversionary bonus of 38s per cent. per annum on sums assured and existing bonuses, and the profit and loss account receives £121,299. The additions made to policies five years in force range from £95 per £1,000 to £279. This society has given up the issue of new

with-profit policies, yet its new assurances last year (all non-profit) numbered 4,655 for £3,073,575. The death claims of the past five years, including war casualties of £270,798, were 82 per cent. of the amounts expected under the tables employed. So far, the abandonment of with-profit assurances does not appear to have stemmed the flow of new business; yet we cannot feel that the needs of the life-assuring public are met by non-profit assurance. The passing of bonuses by high-class offices as the result of war depreciation of investments temporarily dulled the gilt on with-profit assurance, but under normal conditions—which are now rapidly returning—a bold with-profit policyholder in a really good office, who completes an average life-time, will get better value for his money than one who selects a timid non-profit contract.

Northern Insurance Company.—This company, which from its original home at Aberdeen has extended all over the world, issues consolidated accounts, and also statements, in regard to its chief subsidiaries—the Indemnity Mutual Marine, the World Marine, the Provident, Accident and Guarantee, and the White Cross. The fire premiums have been reduced from £2,851,011 in 1920 to £2,575,823 in 1921. The claims were 55.2 per cent. of the premiums, against 47.1 per cent., and the expenses 42.9 per cent., against 39.1 per cent. The surplus, after allowing 50 per cent. of the premiums for the reduced reserve for unexpired risks, is given as £48,299. If we take the usual basis of 40 per cent. of the premiums as the reserve for unexpired risks, the fire surplus of the Northern for 1921 would be £20,780, against £68,706 for 1920. Very little can be made of the Northern's marine account, except that the premium income was reduced from £3,491,354 to £1,986,789, and that the marine funds were reduced from £3,404,800 to £2,520,068, after £32,176 had been brought in from profit and loss. It is stated that the Indemnity Mutual Marine shows an underwriting loss of £80,000, after allowing for income-tax, as compared with a profit of £119,114 in the previous year, and that the World Marine and General made a profit of £57,489, and the White Cross a profit of £42,302. A surplus of £101,394 was carried to profit and loss from the accident department. Interest receipts, less debenture interest, amounted to £296,281, while income-tax on profits and corporation tax required £290,897. There was a profit on investments realised of £56,362. The net result, after paying £208,250 in dividends on the ordinary shares (17s a share, less tax), was a reduction in the credit balance at profit and loss from £377,314 to £259,525.

British Cellulose.—The unhappy fortunes of the British Cellulose and Chemical Manufacturing Company, Limited, appear to go from bad to worse. For the year ended June 30, 1920, the loss on the year's operations amounted to £237,739. The accounts for the year ended June 30, 1921, now issued, show a net loss of £758,415 on the year, and from the lengthy document which accompanies the account it would appear that the directors are in great trouble. The directors and Messrs Dunn, Fisher and Co., however, have succeeded in inducing the Fabrique de Soie Artificielle de Tubize—the well-known Continental makers of artificial silk—to take an interest in the undertaking, and it is to be hoped that some means for a satisfactory development will be found. Although the prospectus issued in March, 1920, held out promise of early success, and the board had "exact knowledge of the costs of manufacture," we ventured to point out at the time that the company had yet to prove that it could "produce artificial silk on a commercial basis." The fact that it was stated that the Government would take £1,450,000 in shares in payment of advances to the company no doubt influenced many unfortunate subscribers, who are now informed that if they wish "to save their property it is most important" that they should support certain resolutions put forward by the directors. The balance-sheet gives assets as worth £6,329,019, of which goodwill, patents,

and patent rights at cost figure at £1,885,738. We do not know the amount paid to the inventors for the process, but it is an excellent suggestion of Messrs Dunn, Fisher and Co.'s that "the inventors should compensate the company for the unexpected expenses it had had to incur in perfecting the processes." The value of compensation, however, offered by the inventors, as set out in the report, is difficult to appraise. The balance-sheet is fully analysed in our usual column.

The "Johnnies" Group in 1921.—Our mining correspondent writes:—In number and importance the Witwatersrand gold mining companies controlled by the Johannesburg Consolidated Investment Company rank second only to the Rand Mines-Central Mining combination; hence their results deserve attention both from an individual and a general standpoint. The average price obtained for the gold produced having averaged £5 5s 9d per fine ounce, as against £5 12s 9d for 1920, it follows that profits are proportionately lower, except in so far as the decline in revenue has been counterbalanced by the treatment of an increased tonnage of ore, reduction in working costs, or both. Appended are the salient statistics for the past two years with reference to the six leading producers:—

	Ore Crush'd	Results per Ton.			Working Profit.	Divs.	Ore Reserves.	
		Yield.	Costs.	Profit.			Tonnage.	Value.
Cons. Langlaagte	Tons.				£	%		Dwt.
1920	503,900	32/	24/8	7/4	185,110	12 1/2	1,339,000	6 1/2
1921	484,600	31/7	24/6	7/1	172,610	12 1/2	1,371,000	6 1/2
Govt. Areas								
1920	1,515,000	44/9	22/2	22/7	1,709,160	50	10,291,000	8 1/2
1921	1,625,500	43/4	21/7	21/9	1,762,490	55	10,232,000	8 1/2
Langlaagte Est.								
1920	465,300	33/3	26/9	6/6	152,350	10	1,016,800	6 1/4
1921	479,300	32/6	26/3	6/3	149,760	12 1/2	950,000	6 1/4
Randfontein Central								
1920	1,560,000	29/6	27/6	2/	158,100	..	3,593,400	6 1/2
1921	1,461,000	31/1	27/9	3/4	245,320	..	4,142,100	6 1/2
Van Ryn Deep								
1920	583,580	58/8	25/7	33/1	964,880	65	3,360,000	9 1/2
1921	611,400	56/8	26/6	30/	922,920	60	3,517,000	9 1/2
Wit. Gold								
1920	416,200	31/3	24/10	6/5	133,760	20	774,500	6 1/4
1921	448,300	27/10	23/9	4/1	91,050	25	547,300	5 1/8

It will be seen that two undertakings—the Government Areas and the Randfontein Central—last year earned larger working profits than in 1920, the gain being, in the first-named instance, due to the treatment of an increased tonnage of ore, and in the second to an improvement in grade. Four of the companies operated at a lower cost ratio, but despite this the profit per ton showed expansion in only one case—that of the Randfontein. The increase of the dividend on the part of the Witwatersrand Gold, despite a sharp decline in the profits, is due to the circumstance that the directors last year distributed more than the sum earned, whereas in respect of 1920 a contrary policy was followed. The Randfontein has been out of the dividend list since 1915, and its debt to the Estate company now stands at £1,120,000, irrespective of a debenture issue redeemable by annual instalments; hence the prospect of any return to the shareholders side the Consolidated Langlaagte is able to report a small increase in both the quantity and value of the ore reserves. The Government Areas also shows a gain in value; the absence of any expansion in the tonnage is attributed to large areas already exposed rather than opening up new ground. This company is faced with an expenditure of £125,000 for the sinking of an additional shaft, which may affect the dividends of the current year. The ore reserve estimate of the Randfontein Central has benefited from the inclusion of the material developed in what was formerly the Randfontein Deep, and that of the Van Ryn Deep from the work done in the Western section of the mine; in the latter case an appreciable decline in grade has to be noted. Costs last year were swollen by repairs and renewals. The consulting engineer looks for a reduction of waste ore sorted out—about 25—the ratio at this mine must always be comparatively high. At the Witwatersrand Gold "very little payable ore" was developed during 1921; hence the drop in the reserves. Prospects seem dubious. The affairs of the two

other producing companies—the Primrose and the Unified—are of little interest, the properties being nearly exhausted. Much importance, however, attaches to the position of the New State Areas, whose 50,000 ton reduction plant—based on the new "all-sliming" process, which dispenses with stamps—is expected to be running early in 1923. The present stage of the developments scarcely seems to warrant so large an equipment.

Crown Mines Position.—In regard both to the size of the property worked and of the capitalisation (including the debentures), this company is the most important enterprise of the Central Rand. Last year it milled nearly 2,200,000 tons of ore; yet, save for the gold premium, an actual working loss would have resulted. This arises, to some extent, from a small falling off in the value of the ore treated; in the main, however, it is due to the expansion in the working costs. For 1921 the ratio figures at 25s per ton, an increase of little short of 50 per cent. upon that of 1915. With the currency price of gold still lower, it is obvious that the position will become parlous indeed, unless substantial economies can be effected. The instance affords a striking exemplification of the fact that the alterations in pay and other matters recently decided upon by the Transvaal Chamber of Mines were, so far as the great majority of properties are concerned, sheer urgent necessity. That the shares should still be quoted at a premium of 250 per cent. argues considerable faith on the part of investors in a more reasonable state of affairs sooner or later. Last year's dividends, of course, aggregated 32 1/2 per cent., upon which basis the return is no more than 9 1/2 per cent. The company's future from the mining standpoint depends largely upon the southern section of the property, the development of which has been retarded by labour shortage.

Japanese Trade and Finance.—Cabled advices from Tokyo state that heavy revenue payments to the Treasury caused a severe limitation of loanable credit in the first half of April. The repayment of loans was slow, and the rate for short loans remained practically unchanged at 9.1 per cent. Loans from the Bank of Japan were increased. In the cotton yarn market the export position improved, but a decline took place in internal demand. In several directions the oppressive effect of the unfavourable balance of trade has become more pronounced. Generally speaking, industrial production has become more stagnant; stock market weakness has continued, and the present spirit of caution is expected to increase. The import and export figures of Japan for March, 1921 and 1922, compare as follows:—

	March, 1921.	March, 1922.
	Yen.	Yen.
Imports	136,000,000	205,000,000
Exports	94,000,000	115,000,000

The Bank of Japan's wholesale commodity price index number for March was 265.5, compared with 252.98 a year before and the basis of 100 in the year 1900. On April 15th the note issue of the bank was 1,114,000,000 yen, as compared with 1,015,000,000 yen a year ago, discounts and advances being 202,000,000 yen, against 85,000,000 yen.

At the Institute of Actuaries, Staple Inn, Holborn, on Monday, May 1st, at 5 p.m., Mr E. H. Brown will read a paper on "The Valuation of Endowment Assurances by Select Tables."

The fortieth annual meeting of the London Chamber of Commerce will be held at Skinners' Hall, E.C., on May 3, 1922, at 2.30 p.m., to receive the report and accounts for 1921, to elect a president and honorary auditors for the ensuing year, and to fill vacancies on the council, &c. Mr Stanley Machin, J.P. (retiring president), will occupy the chair.

The British Chamber of Commerce at Athens have telegraphed the London Chamber of Commerce to the effect that they have been authorised to undertake the collation

and protection of British claims for exemption from contribution in respect of the Greek Forced Loan, and that British firms having monies outstanding in Greece should forward declarations to them (the British Chamber of Commerce at Athens, 6A, Rue Dragatsaniou, Athens) without delay.

Oberzee Correspondence.

UNITED STATES.—SENATE TARIFF BILL.—TREASURY LOWERS RATE ON TREASURY CERTIFICATES.—FURTHER RISE IN BONDS AND STOCKS.—EASIER MONEY EXPECTED.—COTTON CONSUMPTION.—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 15.

The Finance Committee of the United States Senate reported to the latter body this week a general tariff revision Bill, designed to replace the Underwood Tariff Law of 1913. Generally speaking, it increases the rates of the Underwood Act, and appears to be based to a great extent upon the rates in the so-called Payne-Aldrich tariff law of 1909. According to experts, the rates of duty provided in the measure now before the Senate are, on the average, somewhat higher than those of the Payne-Aldrich statute. As compared with the tariff revision measure passed last year by the House of Representatives, the specific duties in the pending Senate Bill are higher, but the *ad valorem* duties are lower. The reductions in *ad valorem* rates are due chiefly to the fact that the Senate Finance Committee adopted "foreign valuation" as the basis upon which tariff rates are to be computed, instead of "American valuation," as provided in the House Bill. The Senate committee's valuation plan, however, contains several provisions to meet unusual situations arising from conditions abroad, particularly the depreciation of foreign currencies. In this connection, the measure now before the Senate confers extraordinary powers upon the President. For example, should conditions be found to exist enabling foreign countries to sell goods in the United States at prices below the cost of producing and marketing similar goods in this country, the President would have authority to increase the rate on any article up to 50 per cent. of the duty prescribed in the Bill. Should such increase be found inadequate to protect American industry, the President would be empowered to transfer the imported goods from the foreign valuation to the American wholesale selling price, and to increase the rates in the Bill up to 50 per cent. The President would also be authorised to change the classification in the Bill from the free to the dutiable list. The Chief Executive, furthermore, would be empowered to prevent importations from countries where there might exist unfair methods, charges, or regulations discriminating against products of the United States, until such discriminations should be removed.

As indicated, this Bill proposes many sharp increases in rates, not only over those in the Underwood law, but also over those in the House measure. In the agricultural schedule, for instance, wheat—which was free under the Underwood tariff and taxed 25 cents a bushel in the House Bill—is assessed 30 cents a bushel in the Senate Bill, while wheat flour, free under the Underwood law and dutiable at 50 cents per hundredweight in the House measure, is rated at 78 cents. Cattle, free in the Underwood tariff and rated at 1 1/2 cents a pound in the House Bill, are made dutiable at 1 1/2 to 2 cents, according to weight. Fresh beef and veal, formerly free, would pay 3 1/2 cents a pound, as compared with 2 cents under the House measure. Fresh mutton and goat meat, non-dutiable under the former tariff, would be dutiable at 2 1/2 cents a pound, or double the House rate, while fresh lamb is raised to 5 cents, as compared with the House duty of 2 cents, and bacon, hams, and shoulders would be assessed 2 cents a pound, against 1 1/2 cents in the House Bill. Noteworthy increases in the wool schedule, which has caused more controversy, perhaps, than any other schedule, are those affecting

Douskoy, South American, and similar wools. They were on the free list in the Underwood tariff, but are rated at from 12 cents a pound in the grease to 24 cents scoured, as against 7 cents in the House Bill. All other wools and the hair of Angora and Cashmere goats, the alpaca and like animals, formerly allowed free entry, would pay a duty when imported in the scoured state of 33 cents a pound, as compared with 26 cents in the House schedule. Long staple cotton, free under the House Bill, as in the Underwood tariff, would pay a duty of 7 cents a pound. Hides of cattle, instead of being free, as in the House Bill and in the Underwood law, would pay 2 cents a pound raw and 4 cents dried. Coal tar dyes would be dutiable at 7 cents a pound, with 60 per cent. additional, while the present embargo may be continued by the President under licence for a year. Much higher duties than have heretofore prevailed, and higher than those adopted by the House of Representatives, are contained in the Senate schedule covering silks and silk goods. The items enumerated give an idea of the very drastic increase made by the Bill now under consideration in the Senate. The measure is described by competent authorities as the highest tariff Bill ever written in the United States, and seldom, if ever, has a proposed tariff aroused such a storm of protests throughout the country; it has been received with widespread disfavour, even among staunch Republicans and high-protectionists, including some of the leading Republican newspapers. In many quarters it is asserted that the Bill pending in the Senate, if enacted, would greatly increase living costs, and would seriously affect our foreign trade. Indications are that it will be many weeks, and perhaps a number of months, before any tariff legislation is finally enacted by Congress. The Senate Bill, when passed by that body, together with the House Bill, will be submitted, in the usual course, to a conference committee representing both branches of Congress to adjust differences in the two Bills. How long it will take that committee to reach an agreement is problematical; the tariff measure which it finally decides upon will have to be accepted by both the House of Representatives and the Senate before it will become law. The chairman estimates the annual yield of the Senate Bill at \$350,000,000.

Financial circles were greatly surprised this week by the Treasury's announcement that the new issue of approximately \$150,000,000 United States certificates of indebtedness would carry an interest rate of only 3½ per cent. That is the lowest rate at which such certificates have been put out since September, 1917. The new issue is dated April 15, and will mature October 16, 1922. The previous offering, last month, bore 4½ per cent., although the maturity of that issue was one year. Bankers had looked for some reduction in the rate, but the 3½ per cent. was much lower than they had expected. This action of the Treasury Department is generally regarded as foreshadowing further relaxation in money in ensuing months. The announcement greatly stimulated investment demand for bonds of all descriptions, particularly the Liberty loan issues, with the result that seven out of the ten bonds in that group advanced to or above par, while the other three Liberty bonds moved up to within a small fraction of par. Foreign Government and municipal bonds shared in the vigorous rise, several reaching new high records for this year. Trading in bonds on the Stock Exchange this week was on a larger and broader scale than in recent weeks. The stock market also continued exceptionally active and buoyant. Numerous developments, such as the marked improvement in the steel industry, increased car-loadings as compared with a year ago, larger railroad earnings, expansion of trade in several lines, and easier call money rates, served to increase bullish enthusiasm.

Notwithstanding the fact that the number of cotton spindles in the United States operated during March was nearly 2,000,000 less than in February, owing principally to the New England textile strike, cotton consumption last month was approximately 46,000 bales more than in February, according to the latest report of the Census Bureau. With the exception of two months, the March consumption was larger than in any month since the summer of 1920, when the general trade reaction began.

Foreign trade returns for March make a better show-

ing than for some time past. Exports last month totalled \$332,000,000, the largest since October of last year, while imports, valued at \$258,000,000, were the heaviest since December, 1920. The excess of exports, amounting to \$74,000,000, was the largest trade balance in favour of this country reported since November, 1921, when the total was \$83,000,000. Last month's excess of exports compared with \$34,000,000 in February, and with \$135,000,000 in March a year ago.

Practically complete returns of railroad operations, filed with the Interstate Commerce Commission, show that the net operating income of the principal carriers amounted to \$47,700,000 approximately in February, which compares with an operating deficit of about \$5,100,000 during the corresponding month of 1921, and is equivalent to an annual return at the rate of 4.57 per cent. on the tentative valuation of the railroad property investment, as fixed by the Commerce Commission for rate-making purposes. Gross earnings for February totalled \$401,328,000, or 1.3 per cent. less than comparative revenues a year ago, notwithstanding an increase of 14 per cent. in the volume of traffic handled. Operating expenses of \$324,423,000 were 15.6 per cent. less. The gain in net income, therefore, was due chiefly to the cut in expenditure.

FRANCE.—M. POINCARÉ'S SPEECH—BUDGET—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, April 25.

FROM the economic standpoint, the event of the week has unquestionably been the speech delivered by M. Poincaré at Bar-le-Duc at the Conseil Général of the Department of the Meuse. Put in plain language, the statement of M. Poincaré means that if Germany fails to pay the instalment of her debt that falls due on May 31, and if she does not modify taxation on the lines that have been laid down by the Reparations Commission, she must expect a menace of further occupation, whether the Allies decide to co-operate with France or not. The speech interpreted plainly in this way caused perturbation in certain quarters here, despite the fact that one after another of the Conseils Généraux have passed resolutions strongly backing the French Premier in his utterance, and since the speech was delivered there have been explanatory notes to show that the truculence that was read into it by some of M. Poincaré's political opponents was not justified. The French Premier, it appears, in no way contemplates or contemplates independent action on the part of France, because he is quite convinced that if the Germans do fail to fulfil their obligations she will receive the co-operation of the Allies in enforcing the claims that are hers under the Treaty of Versailles.

The forecast of the new Budget is not a very satisfactory one. The Estimates will be ready in a few days, it is reported, and will be laid before the Chamber on the day the Session is resumed. Although they will be marked by a considerable reduction in estimated expenditure, it is feared this will by no means counter-balance the falling off in anticipated revenue, and it is probable that a deficit of about 3,000,000,000 will have to be provided for in respect of the coming financial year. The monthly taxation returns have been distinctly unsatisfactory for several months past. The receipts for the first three months of the present year, indeed, proved to be some 503,000,000 less than had been expected, this being largely owing to the world-wide depression in business (as shown by the fact that over 300 million francs of the falling off is in regard to Customs alone). The actual decline in Customs receipts for the single month of March was over 100 million francs. Then there is the fact that the revenue to be derived from the sale of army and other stocks can no longer be counted on, as these have been exhausted, or soon will be. Nothing, apparently, can be expected from Germany, as matters stand, and the 80,000,000,000 or more which this country has furnished for the restoration of the devastated area—which is really an advance that has been made to Germany, if the Treaty of Versailles means anything—will have to be still further increased during the coming year.

The limit of direct taxation is believed to have been reached, therefore the anticipated deficit can only be met by further borrowing, either in the form of continued further issues of Treasury Bonds or of Rentes.

The French foreign trade returns for the first three months of the current year, although showing a substantial falling off in both imports and exports, show a balance in favour of this country. The detailed figures are as follows, as compared with the corresponding period of 1921:—

	First Three Months of		Difference in 1922.
	1921.	1922.	
Imports.	Francs.	Francs.	Francs.
Foodstuffs	1,241,127,000	1,198,358,000	-42,769,000
Raw materials	3,115,136,000	3,030,571,000	-84,565,000
Manufactured goods	1,539,709,000	1,037,714,000	-501,995,000
Totals	5,895,972,000	5,266,643,000	-629,329,000
Exports.			
Foodstuffs	551,458,000	406,013,000	-145,445,000
Raw materials	1,360,839,000	1,363,845,000	+3,006,000
Manufactured goods	3,352,291,000	3,291,071,000	-61,220,000
Postal parcels	309,097,000	307,792,000	-1,305,000
Totals	5,573,685,000	5,368,721,000	-204,964,000

It should be remarked that the imports for the current year are no longer estimated according to the Permanent Valuation Commission of the Customs Department, but according to the declarations made by the importers themselves. The valuation of exports, on the other hand, continues to be based on the official bases fixed for 1919.

As a supplement to these figures, it is interesting to quote also those relating to the trade between France and her colonies and protectorates. These are now available for the year 1921, and they indicate in a striking manner how seriously trade between France and her own colonies has declined simultaneously with the fall in the amount of exports and imports as between France and other countries. The comparative figures for 1920 and 1921 are as follows:—

IMPORTS INTO FRANCE. (In Millions of Francs.)		
From—	1920.	1921.
Algeria	1,053,492	1,128,753
Tunisia	269,374	297,245
Morocco	193,596	114,033
Other Colonies and Protectorates	2,011,601	1,589,782
Total	3,528,063	3,129,813
EXPORTS FROM FRANCE.		
To—	1920.	1921.
Algeria	2,290,097	1,447,809
Tunisia	368,958	268,192
Morocco	649,674	455,869
Other Colonies and Protectorates	721,250	492,473
Total	4,029,979	2,664,343

The comparative figures show that, whereas in 1920 the exports from the Mother Country to the colonies exceeded the imports into it by 501,916,000f, the balance of trade was completely reversed during 1921, when the imports into France from the colonies exceeded the exports to them by 465,470,000f. The principal imports into France from the colonies last year were wines from Algeria (441,000,000f), cereals (43,000,000f), and oils (104,000,000f) from Tunisia, cattle from Morocco (15,000,000f), and from the rest of the colonies and protectorates: fish (509,000,000f), seeds and oleaginous fruits (2,769,000,000f), sugar (1,036,000,000f), and rice (1,271,000,000f). Exports to Algeria included textiles (165,000,000f), and clothing (84,000,000f); to Tunis, textiles (32,000,000f), and clothing (20,000,000f); to Morocco, sugar (102,000,000f); and to the rest of the colonies and protectorates textiles (87,000,000f), wines (29,000,000f), machinery (27,000,000f), tools and metallurgy (29,000,000f).

The Genoa Conference has produced the same effect on the bourse that it has in political circles here. So far there have been three main results, the exposition of the extravagant claims of the Bolsheviks for Reparations, the Germano-Russian Rapallo agreement, and the insistence of Monsieur Poincaré that the terms of the Versailles treaty must be complied with by Germany even if it is necessary to have recourse to the sanctions laid down in the treaty. There has been in consequence considerable hesitancy

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorized £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

on the Bourse, and early in the week there was a marked decline followed for no very apparent reason by a recovery. The most satisfactory feature of the market has been the buoyancy of French rentes. The 1917 and the 1918 Four per Cents, which are now free, have been largely dealt in at prices approximately the same as those that prevailed when there was a forced quotation, the 1917 stock closing at 63, and the 1918 stock at 62.75. The 1915-1916 Five per Cents that were opened to buyers earlier have changed hands at 78.15. Russians, under the influence of the news from Genoa, were less in demand, the 1891 Three per Cents losing 1f 30c, and the 1909 Four per Cents 3f 75c. French banks opened in demand, but were generally weaker towards the end of the week; Banque de France advanced from 5,665 to 5,730, but Banque de Paris et Pays Bas fell from 1,140 to 1,110, and Banque de l'Union Parisienne from 635 to 605. Transports have been stronger, Nord, for instance, improving from 990 to 1,010, but the group of Paris transports remained unchanged except for Omnibus that rose to 707 to drop back to 695. Suez Canal has declined from 5,850 to 5,740; the gross receipts for transit have been declared for 1921 at 149,251,000f, or 2,617,000 less than the previous year.

GERMANY.—GENOA—EXCHANGE AND PRICES—BOURSE—FINANCES—IRON INDUSTRY—WAGES.

(FROM OUR CORRESPONDENT.)

BERLIN, April 25.

AT the time of writing, newspapers here, and their representatives in Italy, deal with the Genoa Conference as a dead affair, destined to yield no useful results. The Russo-German Treaty, which, as I reported last week, was at first here regarded as a mistake, has since in public opinion been promoted to a necessary act of self-defence, and German and Russian negotiators are being exalted as the only participants who knew what they were about, and who were to be deceived neither by others nor by themselves. The very meagre prestige which the Allies or the Entente as a united institution enjoyed here has dwindled still more, and those unfriendly Germans who formerly proclaimed that there was a bad will in Western Europe have come to the conclusion that there is no will at all. In the Conference's remaining non-political work, if any there is, no interest is taken; it is concluded that the only results can be renewed affirmation of economic truths and good advice, and that if any attempt be made to give these binding form the political element will re-enter and produce further conflicts and scandals.

The effect of the Genoa impasse on business has so far been nil. In the past two years the mildest conflict between Germany and the victor countries has shaken the mark exchange; a mere pronouncement from the Ambassadors' Conference has been sufficient to create panic, and a semi-ultimatum from the Reparations Commission has wreaked as much havoc in finances as could the payment of Reparations for several months. But this time, the worse political appearances became, the firmer became the mark. In part this firmness is due to earlier causes—the demand for foreign bills for commercial purposes has been small; in part it is due to American Loan stories, and here the mark was led by New York; and in part

the cause is probably the exaggerated German hope of a formal break-up of Ally solidarity, resulting in new combinations. The dollar, which reached 339 on March 28th, yesterday sold at 237, with very little buying. Industry, it is stated, has more foreign currency than it needs, and speculative currencies acquired a month ago have been released. The mark recovery led to a sharp fall in prices. American cotton, 134 marks on April 5th, yesterday was quoted 105.25 marks; wheat has fallen from (April 8th) 807.50 marks to 677 marks; rye from 597.50 marks to 488.50 marks; maize from 505 marks to 395 marks. In metal prices there has been a considerable drop, and scrap iron, which owing to the fixed prices for pig and rolling mill products, is the day-to-day index of iron prices, has fallen since the 6th from 5,100 marks to 3,600 marks. A week ago a new increase in iron prices was being considered. Among the large class of "hamsters," mostly not regular business men, who buy up anything and everything in expectation of a continuing mark exchange depreciation, and consequent price rise, a panic yesterday prevailed, and efforts, mostly unsuccessful, were made to unload. The exchange market to-day was very irregular, the dollar varying between 230 and 252, and apparently for the present the American Loan reports will continue to dominate the exchange market.

The Bourse has been weak. Between April 13th and 21st the *Frankfurter Zeitung's* index for dividend-payers shows a drop of from 40,177 to 38,774. The main cause was the upward mark movement, but tight money has also had effect. Home Loans have been firm, but the upward movement has transferred itself from Federal to the formerly neglected State Loans. Federal Threes were to-day 143, War Loan 77.50, 4 per Cent. 96.40, 3½ per Cent. 89.50, Colonial 4 per Cent. 105.75, and Savings and Premium 82.30. While Federal Threes, the foreign favourite, are 10 points behind their highest price of this month, Prussian Consols rose between the beginning of April and the 21st from 80 to 90, Prussian 3½ per Cent. Consols from 65.50 to 72.75, 3 per Cent. from 64 to 86, and Bavarian 4 per Cent. from 74.75 to 88; but these bonds had yesterday a considerable set-back. Last week's Bourse event was the fusion between the Deutsche Bank and the Deutsche Petroleum Gesellschaft. The latter, which has a capital of 100,000,000 marks, divided the home oil business with the Deutsche Erdoel Gesellschaft, and had large foreign interests, chief of which was in the Roumanian Steaua Romana Company. Deutsche Petroleum has also home oil interests, and is engaged in brown coal distillation. Through the sale of its Steaua Romana shares to an Anglo-Franco-Roumanian syndicate, the company practically withdrew from the international oil market, and it announces its intention of not attempting to re-enter. It has very large resources, for which it has no use, its holding of foreign currencies being estimated at 75,000,000 Swiss francs, at present exchange about 3,750,000,000 marks. Through the fusion the Deutsche Bank gets the use of a great part of this capital. The bank, whose shares are quoted at 605, while D.P.'s stand at about 2,300, will issue four new 1,000 mark shares in exchange for one 1,000 mark share of the Petroleum Company, and will increase its capital from 400 to 800 million marks. The total capital and reserve of the bank after the transaction is carried through will be about 2,000,000,000 marks, and this will put it ahead of the Disconto and Dresdner banks, which at present lead. The transaction is of a kind entirely new in German private finance. It enables the Deutsche Bank to extend its operations enormously without resorting to the capital market. A new company will be formed to carry on the Deutsche Petroleum's home production and trade.

The Reichsbank report for April 15th shows an increase in Treasury Bill discounts by 6,435,737,000 marks to 149,182,551,000 marks, and of note circulation by 2,226,364,000 marks to 134,063,613,000 marks. The Finance Ministry's report for April 20th shows an increase in the floating debt during the preceding ten days of 2,798,590,000 marks, the total floating debt of discounted Treasury bills being now 276,544,815,000 marks. The expenditure classed as "for execution of the Peace Treaty" takes an even bigger share in new floating debt. The following table shows in milliards of

marks the distribution of the money borrowed on Treasury bills:—

	1920.	1921.	1922.
General Administration	44.9	20.5	58.0
State Services	18.7	40.9	112.4
Execution of Peace Treaty	3.1	19.4	176.0

The State finances proper, this means, are almost in order, and the sole question is reparations and other Peace Treaty costs. With the mark exchange in general falling, this tendency must become more marked, because while the home buying-power of the currency falls relatively slowly, and gives the Finance Ministry some chance of catching up by levying new taxes, the full increase in the paper-mark cost of reparations takes place at once.

In connection with the disappointing result of financial reforms, criticism is directed against the excessive number and unnecessary complication of taxes, many of which give an insignificant real yield and are hardly worth collecting. The bureaucratic financial machine suffers from overwork, but the time of officials and citizens alike is wasted ruthlessly. Some of the State's expedients for raising petty sums at great cost of labour and money are beyond all reason. (1) In 1920 the Postal Department imposed a forced loan of 1,000 marks on each telephone subscriber. An elaborate interest account is kept for this petty sum, which would hardly purchase a pair of boots; a special "payment postman" brings separately to each dwelling the interest on the 1,000 marks, which is 40 marks a year, or about 8d; and as every citizen has to pay 10 per cent. tax on all interest and dividends, an account for less than 1d annually has to be kept. Not only so, but the payments of interest tax have to be specially reported in income-tax declarations, and in at least some cases the non-statement of the 1d has been a subject of correspondence between the income-tax authorities and particular tax-payers. (2) The Government recently imposed a dwellings tax, the aim of which is to provide money for financing new building. This tax on 10 or 20 flats in a large house is as low as 300 marks, or 5s; but the house-owner is required to apportion the tax justly between his 10 or 20 tenants, and if one tenant finds his share of the 5s too high, he makes a formal appeal to a higher "instance," and the agreements of the whole 10 or 20 tenants must be produced and judicially examined, though, owing to the minuteness of the regulations, it is practically impossible that a tenant could be overcharged more than ½d. These are the most extreme cases, but there are many others much too extreme for common sense.

Ruhr coal output in 27 working days of March was 9,014,278 tons, against 7,737,974 tons in 24 days of February, and 9,181,430 tons in March, 1913. Coal prices have been again raised from (for *Foerdergrus-kohlen*) 699.80 marks to 890.30 marks, foundry coke from 1,059.60 marks to 1,355 marks, other qualities in proportion. These prices include 40 per cent. tax and 2 per cent. sales tax. The shortage of pig-iron is extreme. The *Eisenwirtschaftsbund* reports that were coke available, 20 blown-out blast furnaces might be fired, and there is a plan to take coke from the railways and supply them instead with English coal, it being cheaper, reasons the *Bund*, to buy English coal than English pig-iron, of which (together with Luxemburg) a considerable amount is being imported at prices very little above the native.

CANADA.—FEDERAL FINANCES—COMPARATIVE REVENUE AND EXPENDITURE—RAILWAY RETURNS—BUSINESS CONDITIONS—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 9.

The fiscal year closed on March 31st, and the Federal Department of Finance has now issued the balance-sheet for the year 1921-22. Revenue totalled \$371,519,454, as compared with \$451,366,029 in 1920-21. Ordinary expenditure, however, dropped from \$357,515,278 to \$324,758,377, and capital expenditure from \$48,316,807 to \$16,742,081. The figures indicate a nominal surplus of about 30 million dollars, but it is easily swallowed up by

the railway deficits, whose exact extent is not known. The estimates of last year provided for about 168 million dollars on the railway account, and while a considerable proportion of this sum was allocated to the refunding of maturing obligations, at least 60 million dollars of it should properly be charged to revenue. The accounts for the past two years are appended below:—

REVENUE.		
	Total to March 31, 1921.	Total to March 31, 1922.
Customs	162,812,951	104,420,451
Excise	36,699,474	36,581,356
Post Office	23,998,410	24,368,486
Public Works, including Railways and Canals	38,873,833	1,269,346
WAR TAX REVENUE.		
Inland Revenue	76,441,812	72,628,564
Business Profits Tax	37,601,512	22,680,383
Income Tax	38,814,496	78,392,562
Other War Tax Revenue	1,806,621	1,789,353
Other Revenue Accounts	34,316,920	29,388,953
Total	451,366,029	371,519,455
EXPENDITURE (ORDINARY).		
	Total to March 31, 1921.	Total to March 31, 1922.
Interest on Public Debt	129,118,279	130,912,906
Agriculture	4,746,670	5,176,505
Pensions	35,312,736	33,372,713
Public Works Consolidated Fund	8,816,177	9,272,061
Post Office	20,348,014	23,684,349
Dominion Lands and Parks	3,645,416	3,782,695
Soldiers' Land Settlement	1,924,978	2,024,922
Soldiers' Civil Re-establishment	31,796,932	15,339,049
Other Expenditure Accounts	121,806,076	101,193,177
Total	357,515,278	324,758,377

The Dominion Bureau of Statistics has published some figures about the Government railways which afford their champions some hope. There is a net operating deficit for the year 1921-22 of \$10,480,283, which compares very favourably with the deficit of \$31,796,033 for the previous year. Of the four groups of railways now operated by the Government, the Grand Trunk makes easily the best showing, with an operating surplus of \$5,678,739, as compared with \$5,328,832. Of course, when its fixed charges are taken into consideration, the deficit is very serious. The operating loss on the Grand Trunk Pacific has dropped from 10 to 4 million dollars, that on the C.G.R. from 10½ to 5½ millions, while the Canadian National group has lost \$6,574,000, as compared with \$16,440,476 last year. There has also been a welcome improvement in the operating ratio: Last year, for instance, the G.T.P. ran 170 per cent. over revenue, but it has now been cut to 124 per cent. The Grand Trunk figure is 92.61, or about 1 per cent. better than in the previous year. The Government have made no move in the direction of a policy of consolidation, and the expectation is that Montreal influences will be strong enough to prevent this being carried out, and that a loose co-ordination will be maintained.

A summary of the articles which have appeared in the *Outlook* attacking the Canadian Government and the arbitrators in connection with the Grand Trunk decision has been cabled over and reproduced in the Canadian Press. Mr Meighen protested strongly in the House of Commons against their tone. Such papers as have commented upon them have taken very strong issue with the temper and facts of the articles, and have expressed surprise that a responsible paper would publish such comments while the question is still *sub judice* pending the decision of the Privy Council. Some are urging the Government to issue an official reply. It cannot be too strongly emphasised that apart from a limited circle of financiers the people of Canada are solidly convinced of the inherent equity of the Grand Trunk decision.

The sudden return of winter in the closing days of March has had an adverse effect upon business. The seasonal trade of spring purchases was rudely interrupted, and the effects have been felt by retailers, wholesalers, and manufacturers. Houses, however, in Eastern Canada which deal in dry goods, hardware, and groceries find orders reasonably plentiful. The boot and shoe trade

CABLE ADDRESS: BANKTRUST, PARIS

is still very slack, and the iron and steel industries find difficulty in securing orders. Reports from the Maritime Provinces indicate a welcome revival in the fishing industry, which has been in a very unhappy condition for the last two years. Last year, owing to curtailment of operations through lack of markets, the catch was small, and at present the merchants have very little salt fish in stock. The exchange situation has practically ruined what used to be profitable markets for Canadian cured and salted fish in the Mediterranean countries, but there are signs of a revival on a modest scale of a demand from these regions. Merchants who have fish in stock are now getting better prices, and an increase is very unusual in the late winter or early spring. As a result of the diminution of stocks and rise in prices, the number of vessels going to the deep-sea fisheries this spring from our maritime ports is larger than in any year since the war.

The preliminary trial of the president and general manager of the Merchants Bank was fixed for April 7th, but has been postponed a week at the request of the Government's counsel. The stock markets have been generally quiet during the past fortnight. Among industrial stocks pulp and paper issues are reviving in popularity. Many mills are now operating to full capacity with a large volume of orders on hand for immediate delivery. Improved earnings have also given a fillip to traction stocks. There have been placed on the market lately a considerable number of comparatively small bond issues from counties and towns, and the close bidding which resulted augurs a plenitude of money. It is also reported that more money is now available for building mortgages in Ontario than in any year since 1914. Lower money rates are anticipated, and higher prices for securities will follow.

NEW ZEALAND.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, N.Z., March 9.

A POINT of some interest to English manufacturers, as well as to New Zealand importers in these days of fluctuating prices, is the lag or interval that is evident between the two countries. It is well known that any marked change of business conditions in the Old World takes some months to be reflected in the markets of the Antipodes, and by comparing the movements in prices and business activity during the recent abnormal period it is possible to get a fairly definite idea of the length of time that elapses before conditions change in New Zealand. Any investigation is, however, made difficult by the lack of adequate data in New Zealand, and also by the fact that the great marketable products of this country are seasonal in character, so that the continuity of production is less. Nor does speculative activity even up the seasons as in older countries, for the farming community as a whole is slow to move.

The importance of this lag is evident in such a situation as existed during the year 1920 and the early part of 1921. The level of prices, which had for some years been steadily rising, began to fall in England and the United States early in 1920, but wholesale prices con-

tinued to rise in New Zealand until October, 1920. This was a major reason why English exporters at the worst stage of the industrial depression were able to unload on to a market where demand was still keen and prices rising. Hence imports into New Zealand in 1920 were double the figure of 1919.

Similarly, it may be observed that the financial stringency, which was severe in the United States in February, 1921, and in England about the same time, did not become acute in New Zealand until June, 1921. The shorter interval in this case is apparently accounted for by the better organisation and more sensitive nature of the banking as compared with the commercial system.

The significance of these facts would seem to be that in a period of falling prices New Zealand will be an attractive market for British exporters. With prices lagging at least six months behind, demand will be relatively strong; the prospects of a steady flow of immigration will increase the purchasing power of the Dominion, and, compared with foreign rivals, British manufacturers will, under the new tariff, enjoy an exceptionally favoured position. The market is a small one, but apparently worth cultivating.

Books and Publications.

THE AMERICAN CIVIL SERVICE.*

NINETY-THREE years ago President Andrew Jackson reconstituted the Civil Service of the United States on the principle "To the victors belong the spoils." In 1883 admission was, for the most part, made to depend on examination, directed by a permanent Commission, a result achieved after six years of agitation, which split the Republican party and incidentally led to President Garfield's murder. But the reformers mainly concentrated on admission, and, though political influence has since been further eliminated by the prohibition of assessment of employees for campaign contributions and of their participation in the campaigns as workers, its exclusion has been made more urgent by the enormous increase in their numbers. The service has grown, chiefly by separate and unco-ordinated Acts of Congress, into a huge, unsystematised and heterogeneous mass, employed in the most varied capacities, and paid very differently in different departments for precisely similar work. On July 1, 1919, the Federal employees, including workmen, outside those of Congress, the judicial services, the army and navy, and the administration of the District of Columbia, numbered 757,095. Of these, about 85,000 were stationed in Washington, and were officially ranked in 1,702 "classes" and 376 "categories." Clerks were a minority; the remainder, besides workmen, postal sorters and postmen, included scientists, engineers, medical men, surveyors, agricultural and patent experts, inspectors, and others; and women, first tentatively admitted during the Civil War, made up some 62 per cent. of the more important classes. Entrance examinations are conducted at 2,150 centres all over the Union. As each of the 48 states and of the thousands of local authorities has also its own service, the total number of public servants is remarkable, especially in the most individualistic nation in the world. As a step towards getting the conditions of Federal employment and pay into some sort of uniformity, a Reclassification Commission was appointed, which, by ascertaining what each employee was expected to do and to receive, obtained a synthetic view of the conditions, and reported in 1920. Pending action by Congress on its conclusions, Mr Mayers issues his book. It is one of a series published by the Bureau of Social Service, a society for the study and application of sociology, and it gives a mass of interesting detail, rather obscured by lack of form and style. How to keep out political influence and how to get the best possible personnel are the two chief problems which it attempts to solve.

Some 85 per cent. of the employees in Washington and 63 per cent. outside are appointed after "examina-

tion," but the term sometimes only means "selection," and the test, when there is one, may be merely qualifying and non-competitive. The choice is hampered by the statutory requirements that appointments shall be distributed among the states in proportion to population, with a preference to former soldiers or naval men, their widows, or even their wives. Political influence may operate in the selection of qualified candidates, and in all promotions and transfers, which are never regulated by any rule. The higher officials are appointed by the President and Senate jointly—and the Senate's motives are always political—or by the President alone; some resign, by custom, at every change of the Administration; all are apt in dealing with their subordinates to take politics as their guide. Some appointments are only for a term of years; life tenure is popularly disliked, partly as interfering with "rotation in office," partly because it implies pensions; the lack of these involves keeping incompetent employees out of charity. Outside Washington, the employee is under the eye of the local politicians, and must please them or take his discharge. The Civil Service Commission has no power to enforce the laws regulating the service, and the public believes that "the average man" is good enough. Mr Mayers wants merit to be the only title to employment. The prestige of the service should be raised; promotion and transfers should be systematised; the highest posts should be obtainable by any employee, and educational facilities should exist within the service for that end; as in private concerns, "appointments clerks" should supervise entrances and promotions, and there should be retiring pensions. "Bureaucracy," he holds, was generated in Germany by social conditions; it does not exist in England and France, and will not in America. As the upper age limit for the entry of higher grade postmasters, for instance, is 65, and "business experience" counts for 50 per cent. in these marks, we think so too. His last chapter deals with employees' unions, affiliated either to the regular trade unions, or, through the National Employees' Federation, to the American Federation of Labour. We gather that he thinks their legitimate functions may be fully performed by bodies analogous to works committees in factories.

THE EXPANSION OF EUROPE.*

The first edition of this book appeared early in the war; the second in the summer of 1917. In the third, now before us, Mr Ramsay Muir has made fresh revisions and adds two new chapters on the world war and its relation to the expansion of Europe, and on the problems left behind by the war. The first of these two chapters gives a bird's-eye sketch of the world-wide extent of the war's direct consequences, and leads up to the point that "the Great War was the culmination of that vast historical process whereby the civilisation of Europe has won the domination of the world. It proved that this process had made the world economically and politically one, and demonstrated the interdependence and the mutual responsibility of all peoples. It was the first event in human history in which every tribe and people of the earth was manifestly and consciously involved." The significance of the final chapter lies in the author's vision of a completed and perfected League of Nations as the culmination of the historical process traced throughout the volume, namely, the expansion over the globe of the ideas and influences of Europe. The argument does not suffer from the admission that "the driving force which secured the acceptance" of the League came from a great statesman of the New World. As regards the aloofness from the League of America, whose President provided this "driving force," Mr Muir is hopeful. "By one mode or another," he writes, "America is bent upon playing once more the great part which ought to be hers in the councils of a unified world. Her help is needed; she desires to give it; the trend of the world's thought forbids her to return to an isolation which, however splendid, is sterile. And in these conditions the obstacles will sooner or later be overcome." Mr Muir's style is slightly rhetorical, but his rhetoric is as

* "The Federal Service." By Lewis Mayers, Ph.D., LL.D. (New York and London) D. Appleton and Co. 1922. 25s net.

* "The Expansion of Europe." By Ramsay Muir. Third revised and enlarged edition. (London) Constable and Co. 12s.

readable as his judgment of history is intelligent. All students of international affairs will find the volume stimulating and constructive, and if it is open to a charge of optimism, few in these pessimistic days will find this spirit other than refreshing. Foreign readers, no doubt, will find Mr Muir's laudation of the British Empire fulsome; but that it is not mere blind partisanship is proved by the fact that his belief in its survival is formed in spite of "all the blunders, and even crimes, that have been committed in its name."

ECONOMIC CONDITIONS IN SWEDEN.

THE number of documents issued by banks and commercial houses, as well as by Government departments, on economic conditions, has grown in recent years to such a volume that it is impossible to keep in touch with them all. The first English edition, however, of the *Economic Review of Sweden* (quarterly), compiled by the Swedish Board of Trade, in collaboration with economic experts, deserves special notice, not only because of the excellent style in which economic phenomena are presented, but also because of the significant fact that the Swedish Government has thought it worth while to reproduce an abridged English edition of this official publication. Though flattering to our national pride, this precedent, if widely copied, suggests a rather terrifying increase in the volume of literature that will pile up upon the table of the English student of economic affairs. The most significant graph in the document is that comparing unemployment in four countries of Europe. Of the countries shown Germany alone has less than 5 per cent. of its trade unionists out of work, though the figure for February is appreciably higher than at the end of 1921. Great Britain's percentage is approximately stationary at about 15 per cent.; Denmark's percentage is above 25 per cent., while Sweden is approaching 35 per cent., and appears to be increasing.

The review contains no real evidence that trade has turned the corner, but, as elsewhere, the reviewers show a hopeful spirit. Prices are still declining, as is also the cost of living, but the note circulation is now becoming stationary, while the dollar exchange, which has so long stood at a premium, is now at about par.

Letters to the Editor.

THE PRICE OF GERMAN PUBLICATIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is, perhaps, one aspect of the reparations problem which is insignificant if measured directly in money values, but of very great importance from other points of view. I refer to the cost of German books and periodicals in this country, and more especially scientific publications. Whatever may be said of the handing over by Germany of material goods, the same objections cannot be advanced in respect of scientific knowledge. It is quite possible, doubtless, that the world's indebtedness to German knowledge and scientific research has, in the past, been unduly exaggerated; but this does not justify the payment of extortionate prices for such scientific and technical information as may be available from that country. It cannot be disputed that German technical and scientific literature should be made as accessible as possible to all workers in this country; and yet, under the pernicious influence of powerful rings of publishers, in Leipzig and elsewhere, German books and periodicals are reaching ridiculous prices, whilst prices of the same journals in Germany itself are correspondingly reduced. It is only too likely, also, that the German Government and Customs officials are collaborating with the book trade in fleecing British students and research workers.

To give one or two examples of these high prices, I would like to draw your attention to the charges made for chemical literature. One of the most useful works of reference to the worker in organic chemistry is Beilstein's "Handbuch," of which, unfortunately, we have no equivalent in England. This book of 730 pages may be purchased from a bookseller in Germany for 412 marks, which may be taken to be about equal to 6s. The price to English buyers has been raised to 110s, and the corresponding price is 38s in France and \$22 in America. Another book, "Die Zwischenprodukte der Teerfarbenfabrikation" (Intermediates in Coal-Tar Dye Manufacture), costs 210 marks in Germany, whilst the price in England is 80s.—Yours faithfully,

STUDENT.

April 27th, 1922.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 17.	May 18.

THERE has not been so much excitement in the Stock Exchange this week, and, although prices have moved up and down with considerable variations, the proceedings at Genoa, the engineering crisis at home, and the Budget uncertainties have combined to encourage a good deal of profit-taking. The War Loan was quoted ex dividend on Wednesday morning. The last cum dividend price was 102½. Thousands of limits are in brokers' books to sell the stock at par or anything over. Knowledge of these has helped to hold the price back. Moreover, heavy sales of stock on Thursday afternoon, coming on top of the realisation of a large block of conversion stock the previous day, served to dull the market for gilt-edged issues generally. New Zealand had no difficulty in obtaining the £5,000,000 in 5 per cent. stock, for which she boldly and successfully demanded 100. Home Railway prior-charge stocks have mounted monotonously every day without exception, but the British Government stocks finished the week below the best prices reached.

Liverpool Foreign Branch 43, Castle Street, Liverpool.
Manchester Foreign Branch Corner York St. & Fountain St., Manchester.

In the foreign market, French Government and French Railway bonds are easier as a consequence of the attitude taken up by France at Genoa. German Threes moved up and down in accordance with the rise and fall in the mark. Chinese bonds, after showing weakness, rallied during the last few days, and a number of rises occurred in Chilean securities. Czechoslovak Eights touched $\frac{1}{2}$ premium, and then fell to a slight discount. Business has been quiet as a whole in this department.

Home Railway ordinary stocks are somewhat flabby and uninteresting. Prices have gone back, and there seems to be a disinclination on the part of the investor to follow up the recent improvement by making further purchases. Consequently, a little profit-taking rapidly reduced values, and the various groups are easier. Furness ordinary, exceptionally, has improved. Canadian Railway investment bonds and stocks have been advancing. Mexican Rails are heavy. Argentine Rails went back, on further pressure to sell, although for the debenture and preference issues there is sufficient demand to keep the list exceedingly hard, a good many rises being established on the week. Indian Railway stocks are better all round. United of Havana eased off, on the passing of the interim dividend. Brazilians are disposed to follow the lead of the Argentine list.

Rubber shares are quiet and uninteresting. The Anglo-Malay report is an exception to many other reports which have recently appeared, showing unexpectedly satisfactory profits for the past year. In the oil market the underwriting arrangements for a new issue of Mexican Eagle preference shares had no particular influence over the price of those existing. Shells, Anglo-Persian, Burmahs and Royal Dutch attract mild attention, but speculative interest has concerned itself more actively with a number of the lower-priced shares, those in the Roumanian group arousing a good deal of attention. Most of the shipping stocks are better, though prices left off well below the best. Banking and discount shares show good rises in many cases. The insurance market is steady. Amongst textiles, Courtaulds enjoyed one of their sharp spurts, and in the Stores group, Barkers and Harrods were prominently strong. A number of electric lighting shares have further advanced. Gas stocks maintained their rises. Premiums on new issues hold their ground with remarkable firmness. Stock Exchange shares, nominally $\frac{1}{2}$ paid, advanced to 111 after the annual general meeting last Monday. Marconis went ahead, and Radio Corporations were run up on American buying. Some of the hotel shares are materially better, on London season prospects. Apollinaris advanced sharply. Hudson's Bays and other land shares are higher.

Prospects of a reduction in the income-tax has had little effect upon the prices of stocks and shares, the dividends of which are paid tax-free. The cable group remains very firm; Underground income bonds are quiet, and War 4 per Cents. moved in consonance with other British Government securities.

Kaffirs present few points of interest. The exception to a prevailing dullness was provided by De Beers, persistent purchases of the shares being accompanied by statements that the trade in diamonds shows marked improvement. Apart from small spurts in two or three Rhodesians, the general list for such shares has sympathised with Kaffirs, and Chartered came on offer at 135. Russo-Asiatics moved up and down in accordance with Genoa hopes and fears. Several of the Mexican shares attracted interest from the advance in silver, but Broken Hill and shares in the tin companies continue languid. There has been a little improvement in copper shares. A feature in the Kaffir market, it may be added, is the strength shown by the preference shares of a few of the leading companies.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

£5 per Cent. National War Bonds, due October 1, 1922, and April 1, 1923.—Offer of conversion. Holders of these bonds may surrender their holdings in whole or in part and receive in exchange: (a) £4 10s per cent. Treasury bonds, repayable at par on April 15, 1932, at the rate of £100 £4 10s per cent. Treasury bonds, with a cash payment of £4 (payable on completion of conversion), for each £100 nominal of £5 per cent. National War Bonds surrendered; or (b) £3 10s per cent. conversion loan at the rate of £134 $\frac{3}{4}$ per cent. conversion loan for each £100 nominal of £5 per cent. National War Bonds surrendered. The latest date for the receipt of applications by the Bank of England will be Monday, May 15, 1922. Full details of the offer were given in the *Economist* for April 22, 1922, under "Notes of the Week" (see page 760).

New Zealand Government £5 per Cent. Inscribed Stock, 1935-1945.—Issue of £5,000,000 at par, repayable at par on July 1, 1945. The New Zealand Government has the option to redeem at par on or after July 1, 1935, on giving three months' notice. Principal and interest are payable in London. The statement of war and other debt contained in the prospectus would have been more informative if the total national debt had been given. Approximately, £3,000,000 of the proceeds of the loan will be applied to purchases of rolling-stock and materials for railways in the United Kingdom. The loan is a trustee security, free from all New Zealand Government taxation, and may be considered a sound investment for trustees, but the terms offered were not especially tempting. The issue was quickly oversubscribed.

New Zealand: City of Nelson.—Issue of £100,000 $\frac{1}{2}$ per cent. debentures at 98 per cent. The principal is repayable at par on May 1, 1932, and principal and interest are payable in London. The issue is subject to existing City loans, amounting to £137,350, and as the loan is secured by a special rate of 1s 3d in the £1 on annual rateable value, which amounts to £129,359, the issue is well secured. The loan is free from all New Zealand taxes by means of a sinking fund of 1 $\frac{1}{2}$ per cent. per annum. These facts and figures are extracted from an announcement made in the public Press to comply with the regulations of the Stock Exchange.

Felixstowe Gas Light Company.—Incorporated by special Act of Parliament, 1904. This is an offer for sale by tender of £15,000 7 per cent. redeemable preference stock. The minimum price of issue is par, and the stock is to be redeemed at par on July 1, 1932. The authorised stock capital of the company is £49,970, of which £30,161 has been issued. The authorised loan capital is £14,235, of which £9,303 has been issued. The net revenue of the company for the year ended December 31st last was £2,433, but it is estimated that if it had not been for the miners' dispute the net revenue would have exceeded £3,500. The interest on the loan capital amounts to £438, and as the dividend on existing preference stock and that now offered will only require £1,449, it will be seen that the issue is fairly well secured. It is intended to apply to the Stock Exchange Committee "to allow dealings in the stock now being issued." A good investment, but regard must be paid to the narrow market for such a security.

The Sheba Gold Mining Company, Limited.—Authorised capital £300,000, divided into shares of 5s each. This is an offer for sale of 300,000 shares, 3s paid, at 2s per

share. The liability of 2s per share is payable by the purchaser in calls of 6d a time at two months' notice. The prospectus states that "over a million ounces of gold have been extracted from the Sheba mines, realising over £4,000,000, of which nearly £900,000 has been paid in dividends." Whether the fresh discovery of "rich ore bodies" will prove as productive as those of the past is a speculation, the merits and disadvantages of which subscribers must carefully weigh up.

Mexican Eagle Oil.—An offer for sale will shortly be made of 7,000,000 7 per cent. cumulative first preference shares in the Mexican Eagle Oil Company. They will be offered by Messrs Higginson and Co. and Messrs Cull and Co. at 20s 6d per share.

COMPANY MEETINGS, &c.

BRITISH ITALIAN CORPORATION, LIMITED.

CHAIRMAN'S REVIEW OF ITALY'S FINANCIAL POSITION.

CHANGES IN ITALIAN AUXILIARY.

IMPROVEMENT IN NATION'S FINANCE.

The sixth ordinary general meeting of the British Italian Corporation, Limited, was held, on the 25th instant, at the offices of the company, 12 Nicholas Lane, London.

Mr J. Beaumont Pease, chairman of the company, presided.

The secretary (Mr A. R. Wheeler) having read the notice convening the meeting,

The Chairman said: Gentlemen, the report and balance-sheet having already been distributed, you will, no doubt, agree to take them as read. Before passing on to general considerations, allow me to comment on the figures given in the balance-sheet as compared with those of the previous year.

BALANCE-SHEET ITEMS.

You will have noticed a considerable reduction in the amount of the item guarantees, which I illustrated in my speech last year as being guarantees which were given by us, under the joint and several indemnity of the four major Italian banks, for the payment of instalments due by Italian shipowners to the Ministry of Shipping for tonnage purchased from this country.

The total outstanding on December 31, 1920, was	£ 4,501,394
The instalments remitted and paid off during the year 1921 amounted to	1,069,439

Leaving a balance of guarantees outstanding on December 31, 1921, of

Taking, as last year, the two items acceptances and endowments together, we again find a considerable reduction of our liabilities to the extent of £659,479.

Last year the aggregate figures were as follows:—

Acceptances	£ 999,412
Endorsements	829,520

1,828,932

As against this year:—

Acceptances	£ 901,365
Endorsements	268,088

1,169,453

This reduction, as in the case of the guarantees, is due to the paying off of the engagements by our Italian customers, and you will agree that it is a very satisfactory feature, considering the fact that, during the last year, the fluctuations of the exchange were again strongly adverse to Italy.

MEDITERRANEAN CARGO STEAMERS, LIMITED.

We have had only one serious disappointment in connection with financial assistance given to Italian shipping interests. This occurs in the case of a transaction initiated in May, 1919, for the carrying out of which we formed a separate company, the Mediterranean Cargo Steamers, Limited.

This company purchased a fleet consisting of seven cargo boats, aggregating 53,000 tons d.w., which was hired to an Italian shipping company under an arrangement providing for an indemnity against loss of capital, and for the guarantee of income, and these undertakings were backed by substantial collateral securities and guarantees, which, at the time, we could reasonably consider as ample.

Until early last year the arrangement worked satisfactory, but the slump in shipping values afterwards became so serious that the Italian company came to grief, and had to go into liquidation, and this involved the same fate for the Mediterranean Cargo Steamers, Limited. The disappearance of the shares of the latter accounts for the reduction you will notice in our investments.

Our claim against the contracting parties arising out of this misfortune has been valued in our balance-sheet at a figure which we confidently hope to realise.

The loss, together with a few other bad or doubtful debts, has been met to the extent of about half out of the profits of the year, and the balance by taking in the £50,000 paid to us by H.M. Government on November 30th last, and a further sum out of other available funds.

With these provisions, you can take it that the valuation of the assets of the company is established on a very conservative and sound basis.

As to the remaining figures of the balance-sheet, I will only call your attention to the liquidity of the company's resources, shown by the following items:—

By cash at call and balances with banks	£760,394
By bills receivable, including 425,000 of British Treasury bills	554,525

as against sundry creditors	£1,314,919
	£968,703

ITALIAN AUXILIARY.

I presume you would like to have some particulars in respect of the changes in our Italian auxiliary, which are mentioned in the directors' report.

You will remember that only three years ago the original distribution of the capital of the Compagnia Italo-Britannica was rearranged, on the occasion of the admission of three more of the big Italian banks into the concern. The advantages which we expected from this wider association were not obtained, owing, no doubt, to the peculiar conditions which have been ruling, and which did not offer sufficient prospects for a satisfactory rotation of transactions such as were considered suitable for a combination of forces of this kind.

On the other hand, the feeling was growing on this side that we should not be waiting for developments which might be very slow to mature, but pursue the object of our enterprise by assisting British interest in the field of their everyday business with Italy. This view, in which we were encouraged from many quarters in the banking as well as in the trading communities of our country, could, however, hardly appeal to our Italian associates. Meanwhile, the Compagnia Italo-Britannica was merely marking time and losing its usefulness owing to its activities being so largely restricted. We were not satisfied that this should become its normal condition. We, therefore, considered the advisability of bringing about a complete rearrangement by which we could purchase the shares in the Compagnia Italo-Britannica held by the Italian banks, whilst they would take over amongst themselves the 2,500 shares in this corporation held by the Compagnia. Our association with the Italian banks, in view of future developments requiring action in common, would thus be preserved and further maintained by their representation on our board. The suggestion was accepted by them, and became operative as soon as the arrangement with the Board of Trade referred to in the report had been concluded.

This coincided with the recent regrettable troubles in the banking world of Italy, and increased the demands which were made on the Compagnia Italo-Britannica for more extensive banking service. Prompted by these considerations, our Italian company was induced to embark on a more pronounced banking programme, and as an indication decided to change its name to Banca Italo-Britannica.

NEW ORGANISATION.

No time was lost in establishing a new organisation; a new board of seven directors was elected, and an efficient managing staff appointed. Appropriate premises were acquired for the head office of the bank in Milan. The results of the first few months of this year clearly show that our expectations were well founded.

It is not proposed that the bank should concern itself with local banking business, its chief object being the financial transactions connected with exports and imports between Italy and the British Empire, besides acting as agents in Italy for British, Colonial, and foreign banks generally. This latter activity will be made a special feature.

We do not anticipate that the programme of the bank will necessitate great requirements of capital; it has, however, been found advisable to authorise the extension of its capital from 10 to 20 million lire. This additional capital will be called up in accordance with requirements or convenience.

In order to place as complete services as possible at the disposal of customers, the extension of branches of the bank is contemplated, especially to the principal ports in Italy where British interests are mainly centred.

HEALTHIER ECONOMIC OUTLOOK.

The conditions which prevailed during 1921 were the natural consequences of the boom which set in after the end of the war. It was a year of general liquidation, and brought in its trail in all countries, and perhaps to a greater extent in the apparently rich ones, a sequence of serious embarrassments. A more healthy position has, however, resulted everywhere, and there are now signs of a healthier revival of trade.

None of the great economic problems which the world has inherited from the war has yet found its final solution, but facts and common sense have gradually forced their lesson upon the learned theorists, and the frame of mind in which discussions and negotiations now proceed is likely to bring about practical results in a not too distant future, in spite of the political passions and the reactionary tendencies which prevail here and there.

It seems now, at last, to be a case of bend or break for all those who refuse to adapt themselves to a world view.

Some of the theories which are now being accepted were those which we have been advocating since the Armistice, and which for a long time have been looked upon as heresy.

PROBLEM OF EXCHANGES.

The question of exchanges—that most important of all questions in respect of trade—is now discussed on a sound basis. The depreciation of currencies in terms of gold, save where all control over circulation has been lost, is no longer considered in the countries affected by it, as well as abroad, as a symptom of a hopeless state of things. The law of adaptation, gradually acting on values, has shown that wild fluctuations of the exchange, not their actual level of depreciation, are adverse to prosperity; once this is generally admitted, there can be only one obstacle, a false pride, to the acceptability of the next step towards stabilisation—namely, the adoption of a new relation of the currency to gold. What this relation is to be, in order to become effective and durable, is, of course, a matter of profound study, the manifold factors of which are well indicated in the resolutions of April 20th of the Financial Commission of the Genoa Conference, presided over by Sir Robert Horne, arising out of the experts' report on currency and exchange.

This problem involves the whole of the question of reparations and inter-Allied war debts, as well as that of internal financial and economic policy.

It is at last placed on its real basis, and we look confidently to its solution by the International Conference of Issuing Banks, which is to take place in London next month, for this purpose.

It is not too much to say that a relative stability of exchanges is the first consideration for a revival of trade, which is indispensable at the present juncture for the pacification of this tried world; no sacrifice should be deemed too great to achieve it.

FINANCIAL CONDITIONS IN ITALY.

Referring to Italy, which, apart from Great Britain, is the country in which this corporation is specially interested, I should like to draw your attention to the steadiness she has shown during the serious industrial and banking crisis which has affected her in these last 12 months. I have on many previous occasions expressed the confidence your directors have felt in the future of that country, and I must say that the absence of any apparent reflection of such grave economic events as those referred to, even in the exchange, is in the highest degree remarkable.

The exchange has actually improved from 96.50, at which figure it stood at the moment of the suspension of the Banca Italiana di Sconto, to the present figure of 81.

I have, however, a suspicion that too optimistic conclusions should not be drawn from this tendency of the Italian exchange, as, apart from the favourable causes, concomitant unfavourable factors might contribute to it.

There is no inconsistency in this observation; quite opposite factors might work towards the improvement of the exchange; on the other hand, the favourable factors, as, for instance, increased exports of natural and industrial products, reduced imports of foodstuffs and other articles of consumption, foreign investments and the expenditure of foreign visitors, remittances from emigrants, and the like. On the one hand, the economically unfavourable factors having the same effect on the exchange, as, for instance, the reduction of imports of raw materials consequent on the reduction of industrial output.

EFFECTS OF TAXATION.

I am afraid this last-named factor has been increasingly at work as a result of certain extreme measures in the fiscal policy adopted by the Government in its otherwise praiseworthy endeavours to raise the revenue for the purpose of balancing its Budget. We hear, in fact, of many plants which have come to a standstill in consequence of the last turn of the fiscal screw, by which the in-consequence excess profits due to the war were indiscriminately confiscated at the rate of 100 per cent. in favour of the State. Few, if any, industrial concerns had refrained from investing the said

profits in additional plant, in which policy they were expressly encouraged by the allowances to which, in such case, the original Act entitled them. Many of them, being unable to face their unexpected liability by borrowing, had no other alternative than to close down.

I think that already last year I expressed the opinion that, though the Italian nation had responded wonderfully to the call of taxation, its taxable capacity might already have been surpassed. Since then, the above-mentioned increase of the excess profits tax was introduced. In the matter of taxation, as in other matters, there are limits which cannot be surpassed or exceeded with impunity, lest the best of measures defeat their purpose.

The balancing of the Budget is undoubtedly one of the most essential conditions towards the solution of the present problems, and it would fall singularly short of its object if its price were the prostration of the nation.

"BEARER" SECURITIES.

Whilst I am on this subject, I might, perhaps, be allowed to refer to another example of regrettable disregard of consequences in fiscal matters.

In Italy, as in most Continental countries, the great mass of securities, including State securities, has always been "to bearer." It is probably true that this custom has favoured the evasion of death and succession duties, with very great damage to the revenue. If it is so, this is a lamentable enough state of things, but the remedy which pressure for revenue has suggested—namely, that the dividends on all securities which, by a certain date, have not been registered in the name of the owner, shall be subject to a 15 per cent. tax—is open to criticism as affecting a principle of good faith, a matter of special importance where State securities are concerned.

These were issued and subscribed on the understanding that the scrip should be at the option of the holder, either "registered" or "to bearer." Quite apart from any unlawful advantage which might be derived by the evasion of death and succession duties, such an option was of considerable value on account of the greater marketability which, under the old-established customs, "bearer" securities enjoyed, as against "registered" securities.

In effect, it constitutes a tax of 15 per cent. on securities, which were specifically free of any present or future taxes at the time of issue, and such course may be detrimental to the credit of the Italian State and Italian securities generally.

There is no doubt in my mind that, but for this innovation, the Italian markets would have profited to a very much greater extent than they have done by the present all-round reduction of money rates, which has attracted so much capital into the investment market in other countries.

ITALY'S FINANCES.

As last year, I shall review and compare the figures of the Budget, of the public debt, of the circulation, and of the commercial balance.

The Budget deficit exceeded 10,000 million lire for the fiscal year 1920-21. It is estimated that the end of this fiscal year (June 30th) will see it reduced to 5,000 million lire, and a further reduction to 3,000 millions is expected for the following year.

As to the revenue:—

	1918-19.	1919-20.	1920-21.
Final figures in million lire	5,365	8,956	12,250
For 1921-22 it is estimated at 12,500 millions, on the strength of the first eight months, which have yielded 8,514 millions—i.e., an improvement of 1,414 millions over the corresponding period of 1920-21.			

	Million Lire.
Public Debt:—	
Consolidated debt	49,000
3, 5, and 7 years' Treasury Bonds	5,700
War debt to Allies (at par exchange)	21,000
3-12 months' Treasury Bills, December 31, 1920	13,174
" " " " " 1921	24,500
Circulation:—	
Treasury Notes, December 31, 1920	2,268
" " " " " 1921	2,150
Notes of the three issuing banks:—	
For account of the State, December 31, 1920	10,743
" " " " " 1921	8,504
Against commercial assets, December 31, 1920	8,989
" " " " " 1921	10,704

TRADE POSITION IMPROVING.

The trade position continued to improve.	Million Lire.
The imports for the first 11 months of 1921 were	18,182
The exports	8,370
And the adverse balance	9,812

—an improvement of 3,806 millions, *i.e.*, 28 per cent., as compared with 13,618 million lire, the adverse balance for the corresponding 11 months of 1920.

These latter figures are official, and are based on 1920 prices; the figures I gave last year were also official, but based on the lower 1919 prices.

I am now at your disposal to answer any questions you may wish to ask. I shall then call upon our auditors to read their report, after which I shall request you to pass the resolutions.

The first resolution which I have pleasure in moving is as follows:—

"That the report and balance-sheet for December 31, 1921, be received and adopted, and that, in accordance with the recommendations of the directors, a dividend of 4 per cent. per annum, free of income-tax—namely, 16s per share of £20, be declared, and that the balance of profits of £27,723 12s 1d be carried forward to new account."

Mr Cooper said that, on the whole, he thought the shareholders must agree that the statement of affairs in Italy made by the chairman was of a reassuring character. The chairman had mentioned the Banca Italiana di Sconto, and it might interest some of the shareholders to learn whether the corporation's affairs were in any way affected or whether they had relations with that bank.

The chairman replied that that was a very pertinent question. He was glad to be able to assure them that the board had plenty of warning of the difficulties of the Banca Italiana di Sconto, and the only amount unsecured at the time of the suspension was a matter of about £100. With the exception of one exchange operation in which the Banca Italiana di Sconto was acting as agent for one of the big London clearing banks, which matter was under discussion at the present time between them, and of which he had every hope of a satisfactory conclusion, there was not a single thing that gave them the slightest anxiety in connection with the Banca Italiana di Sconto.

Sir Gilbert Garney then read the auditors' report.

Sir Guy Granet seconded the resolution, which was carried unanimously.

Mr Couper moved:—"That the Right Hon. Walter Runciman be elected, and that Mr L. G. Buxton, Brigadier-General Hugh H. J. W. Drummond, and Mr R. H. Tennant be re-elected directors of the company."

The resolution was seconded, and carried unanimously.

On the motion of Mr Ness, seconded by Mr Cambie, the auditors, Messrs Price, Waterhouse, and Co., were reappointed.

EXTRAORDINARY GENERAL MEETING.

An extraordinary general meeting of the company was next held, at which resolutions were passed to effect a number of alterations in the articles of the company.

A vote of thanks was accorded to the chairman and directors, and the chairman having briefly responded, the proceedings terminated.

LONDON TRUST COMPANY, LIMITED.

INCREASED VALUE OF THE TRUST'S HOLDINGS.

The thirty-third annual general meeting of the London Trust Company, Limited, was held, on the 27th instant, at Winchester House, Old Broad street, London, E.C., Mr William Douro Hoare, C.B.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said the total income of the trust during the past year was £94,272, and after providing for expenses, debenture interest, and the dividend on the preferred stock, which required £53,262, there remained a balance of £41,010. After meeting the corporation profits tax for 15 months to March 31, 1921, out of the carry forward of that date, there remained a sum of £45,623, so that they had now to deal with £86,633. The directors proposed that £10,000 be placed to reserve, while the dividend of 10 per cent. on the deferred stock would require £26,250, making together £36,250, and leaving to be carried forward to next year's accounts the sum of £50,383.

It might interest shareholders to know that, after providing for charges, the break-up value of the deferred stock of the trust, taking the values at March 30th last, worked out at about 134 per cent. He thought stockholders would be satisfied to know that the trust's holdings had appreciated during the year, and possibly during the next 12 months they would see still better prices, and he hoped, in due course of time, to be able to say that their reserve account was intact, as well as their capital. The past year had been one of anxiety in the commercial world, and this was a

matter which affected the trust materially, as they were interested in many commercial concerns. This was, to some extent, reflected in their accounts by a slight reduction in the revenue, due to the fact that many companies had had to curtail their dividends, and in some cases suspend making any distribution at all.

There was one matter which affected all, and that was the high rate of income-tax. This fell very severely on the community, and in his opinion at its present figure was a deterrent to business. The Chancellor would do well to seriously consider whether some amelioration was not necessary, and he hoped there might be some reduction in the forthcoming Budget, as otherwise they might run considerable risk of killing the goose.

The report and accounts were adopted, and the dividends recommended therein were agreed.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED.

INCREASED GOLD PRODUCTION AND GROSS PROFITS.

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 25th instant, at the Cannon street Hotel, London, Mr Malcolm Low, chairman of the company, presiding.

The secretary (Mr F. H. Williams, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said that his predictions of a year ago had been fairly well borne out by events. They had dealt with 314,820 tons of ore slimes and tailings, an increase of over 3,000 tons; while the underground development was not quite so much, being 10,209 feet, against 10,653 feet, the latter including a more than proportionate acceleration of the sinking of the circular shaft. Each of the two years was equally satisfactory in the amount of ore blocked out in reserve, the total at December 31, 1921, being estimated at 419,245 tons, or over two and a-half years' supply at the present rate of consumption.

When they came to gold production and gross profits, 1921 romped home the winner, the gold produced being 501,592 ounces, with a profit of £246,397, against 96,628 ounces, with a gross profit of £226,017 in 1920.

BALANCE-SHEET FIGURES.

The balance-sheet showed that the reserve fund of £100,000 was well covered by war stock and National War Bonds, and it was not thought necessary to increase this substantial figure. They had written off £21,000 for depreciation, as well as the expenditure of £37,036 on circular shaft, in profit and loss account. From the commencement of circular shaft its cost had been written off in this way, together with a considerable sum for depreciation. The gold produced realised £538,773, a record amount, reduced to £508,862 by royalty and refining charges; while £6,147 of interest was received and £1,435 for rents, &c., the total income being thus £516,446. The expenditure (£270,048) showed an increase of £17,765, due to the somewhat larger tonnage dealt with, the greater amount of ground broken in the stopes, and higher import duty and surcharges on railway freight on materials, while a very heavy rockburst, which severely damaged a section of the mine, occasioned exceptional expenditure.

Fortunately, in the lower levels they had grand runs of rich ore. They had the goods; but the goods needed careful and costly handling before they could be put on the market.

THE DIVIDEND.

The final dividend proposed made totals for the year of 32½ per cent. on the preference shares and 22½ per cent. on the ordinary shares. Last year shareholders were informed of the grant of a prospecting licence in respect of their copper area at Kharsawan. Many months had passed before they were in a position to enter upon the property, but at long last they had obtained proper legal possession, and active prospecting was now proceeding.

Mr Edgar Taylor, detailing the underground developments of the year, said that the developments of gold quartz during 1921 had been really very remarkably good. The rich values being found to continue at the depths at which they were now working, gave them cause for great satisfaction and confidence in the future. (Hear, hear.) The chairman had mentioned that the company made a new record in the £537,621 realised for the gold won. There were, however, two other milestones which the company had passed, in that it had now paid in dividends over £3,000,000, and had won from the mine gold of a value exceeding 10 millions sterling.

The report and accounts were unanimously adopted.

The Hon. Lionel Holland, Sir John D. Rees, Bart., and Lieut.-Colonel Sir Donald Robertson were re-elected directors of the company, and a cordial vote of thanks to the chairman, directors, managers, and staff terminated the proceedings.

ROYAL EXCHANGE ASSURANCE.

SUCCESSFUL DEVELOPMENT OF CORPORATION'S BUSINESS. EXTREMELY SATISFACTORY FIGURES IN MARINE DEPARTMENT.

CORPORATION'S SOUND POSITION.

The annual general court of the Royal Exchange Assurance was held, on the 26th instant, at the head office of the corporation, Royal Exchange, London.

Mr Vivian Hugh Smith (the Governor) presided.

The Secretary (Mr Percy F. H. Hodge) having read the notice convening the meeting and the auditor's report,

The Governor said: Gentlemen, before submitting to you the report and accounts of the corporation for the year 1921, I am sorry to have to inform you of the death of Lord Ebury, who had been a member of the Court since 1910, and who, for the preceding two years, had occupied a seat on our West End local board of directors. He is greatly missed by all of us, but I am sure you will all be glad to know that his brother, who succeeded him in the title, has become a local director attached to our West End branch.

I also have to announce that the Rt. Hon. Earl Winterton, M.P., has, greatly to our regret, had to resign his seat on the Court owing to his appointment as Under-Secretary of State for India.

CHANGES ON THE BOARD.

In order to fill the first vacancy Mr Edward Manville, M.P., was appointed. Mr Manville has been the chairman of our subsidiary company, the Car and General Insurance Corporation, for many years, and your directors had great pleasure in creating this further link between the largest of our affiliated companies and the corporation.

The second vacancy has been filled by the appointment of M. Charles L. Dalziel, a partner of Messrs Higginson and Co. We welcome him on our board and feel that he will be of the greatest assistance to our corporation.

You will remember that at the last general meeting I placed before you the figures of our bicentenary year, and I am glad to say that, taking into consideration the very difficult times that have been experienced in insurance during the past twelve months, we can, I think, again consider the results to be satisfactory. In view of the depression in trade and the very uncertain conditions generally prevailing, it was expected that insurance business would be affected, and this expectation is reflected in the reduced premium incomes of three of our largest departments. You may recollect that this reduction was anticipated in my remarks at the last meeting, when I made particular reference to the marine department, in which you will see later on, when I take the accounts in order, that there has been a very considerable reduction in income. In spite of this, the total premium income of over £3,000,000 and the results shown will, I think, prove that the corporation still maintains its position amongst the leading insurance companies of this city.

LIFE DEPARTMENT.

Dealing first with the Life Department, the proposals completed were £2,781, while the new sums assured were £1,615,000. The total premium income, after deducting reinsurance premiums, was £546,100, showing an increase of £18,700 over 1920. The interest earned of £237,100 gave a gross return of £5 9s 8d per cent. on the life fund, which was an increase of 4s 5d per cent. over the previous year. This increase in the rate of interest on the life fund—which in the last three years has been £5 9s 8d per cent., £5 5s 3d per cent., and £4 18s 9d per cent., and going backwards—is very satisfactory; but I am afraid that with the cheaper money now prevailing it may be difficult to maintain such a satisfactory yield in the future. The claims by death paid and outstanding amounted to £207,300, which was below the amount expected. Surrenders amounted to £47,360 and expenses of management and commission to £98,860. I am glad to say that this latter figure is nearly £13,000 less than last year, all items outstanding and accrued having been fully allowed for. The life fund now stands at £4,560,000, which is an increase of over £270,000 in the last twelve months. The annuity fund now amounts to £738,000 and the capital redemption fund to £265,000; while the trustee and executor department shows a profit of just over £1,000.

FIRE BUSINESS.

We now come to the fire department. The premium income at £1,533,000 shows a reduction of £260,000, but this, as I have already mentioned, was to be expected. I think it is well known that last year was not a good one from a fire insurance point of view. The losses were £842,600, but it is generally found that heavy fire losses run with a period of depression in trade, and last year was no exception to this experience.

You will see an unusual item in this and the accident account

in a provision for claims on reinsuring companies in liquidation. The corporation had, in common with the other big companies, placed certain business with the "City Equitable" group. It is unnecessary for me to discuss the details of the difficulties in which this group has found itself, as of course they are common knowledge, but it is hoped that the provision made in the fire and accident accounts and the reserves in the marine department will be sufficient to meet any claims for which we may be liable. The position, however, as disclosed at the recent meetings is so involved that it is impossible to make definite estimates. Still, the failure of the "City Equitable" and the other companies in the group must, in the aggregate, involve the companies reinsuring with them in a considerable loss, but, gentlemen, in my opinion, the failure is, after all, but a ripple on the waters of the insurance world. The losses incurred have not affected the credit or the stability of any one of the important insurance companies of this country. I hope this fact will cause the public which is entrusting its insurance business to British companies, both at home and abroad, to realise how great is the stability and how immense are the resources of the leading British companies.

After transferring to the profit and loss account £80,770, the fire fund amounts to £813,240.

MARINE DEPARTMENT.

In the marine department you will notice a very considerable reduction in the premium income, which, as you see, stands at £248,000. This is after deduction of discount, commission, brokerage, and reinsurances effected and returns for vessels laid up, the premiums for which appeared in previous years. You may like to know how an adjustment of these figures will affect the amount shown. For 1920 over £378,000 had to be deducted for this purpose, and a further £26,000 on account of previous years, making up a total of £404,700. If this amount is added to the net premium shown you will see that the normal net premium for 1921 was £653,000.

This department is the first to feel the effects of any depression in trade, and the utmost caution was needed last year in the selection of risks. The claims in respect of 1921 and previous years amounted to nearly £650,000, while the expenses of management were £108,000, which shows a reduction of £19,000 on the previous year. After transferring the sum of £60,000 to profit and loss, the marine fund stands at nearly £886,800. I think you will agree that these figures are extremely satisfactory; indeed, considering the times we have been going through, I think they are very remarkable.

GENERAL ACCIDENT FIGURES.

In the general accident department the premiums at nearly £742,000 were £150,000 less than in the previous year, while the losses were £446,000, and commission and expenses £298,000. After making the provision in connection with companies in liquidation already referred to, we have been able to transfer the sum of £75,300 to profit and loss. The general accident fund now stands at £511,200. Another very satisfactory result.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account the interest, less income-tax, amounted to £63,000, as against £80,500 in the previous year. This reduction is to a very large extent caused by the heavy payment of over £353,000 for excess profit duty and income-tax. You will notice that it is unnecessary for the former item to appear in this year's account, but the large sum of over £104,000 has had to be provided in the 12 months for income-tax and corporation profits tax. As I have mentioned already, £80,700 has been brought in from the fire account, £60,000 from the marine account, £75,300 from the general accident account, and £1,020 from the trustee and executor account, while we have an unusual receipt in a refund of excess profit duty amounting to £85,400.

After paying the dividend, expenses not charged to other accounts—which are considerably less, largely owing to the special bicentenary expenses last year—and the taxes which I have just mentioned, there is a balance of £958,300, which is an increase of £130,000 in the year. This result, I think you will agree with me, is very gratifying.

CORPORATION'S INVESTMENTS.

I should like to add a word as to the value of the investments of the corporation. You have seen from the certificate of the auditor that these were arrived at on the basis of the latest market

prices at December 31, 1921, less accrued interest and dividends. This valuation disclosed an appreciation of the value of the investments in all three accounts—fire, annuity, and general, particularly in the first named. Your investments, therefore, were actually in excess of the value at which they appeared in the books and balance-sheet, and you are, I am sure, aware that this margin must have been very considerably increased since December 31st last. Still, gentlemen, your directors have considered it wise to adhere to the practice which they have followed for so many years of not writing up the value of their investments.

DIVIDEND RECORD.

It has been suggested in many quarters that the dividend recommended by the court could well have been larger, but, gentlemen, a steady building up of reserves and a conservative policy is one that I feel sure you will agree with us ought to be adopted. May I remind you that the dividends in the last few years have been as follows:—For the year 1915, 11 per cent.; for the year 1916, 12 per cent.; for the year 1917, 12 per cent.; for the year 1918, 14 per cent.; for the year 1919, 16 per cent.; for the year 1920, 16 per cent., with an extra bonus of 5 per cent. (making 21 per cent.) to the shareholders on account of the bicentenary year; so that the increase in the dividend has been fairly rapid, and no one will welcome more than your directors the possibility of increasing it again in the future. At the same time, gentlemen, our business is growing very largely, and, notwithstanding the fact that our premium income this year is less than in 1920, we still show a net premium income of over £3,000,000 in all departments, and that is the Royal Exchange alone, and not any of its subsidiary companies. If we take the 1914 figure of £1,875,000, there is in the present accounts an increase of well over £1,000,000. Thus our business is everywhere showing satisfactory expansion, and this makes it more and more important for us to do everything we can to build up our reserves in all departments.

SUBDIVISION OF THE STOCK IMPRACTICABLE.

There is one other point which I think you will like me to mention, and that is the suggestion, which has been made from time to time, that our stock should be subdivided into shares. We are always extremely glad to hear any suggestions from the proprietors, as it shows that they take an active interest in the welfare of the corporation, and they have on one or two occasions made this proposal. Difficulties are created, however, by the curious alteration of our original share capital—with varying sums paid up—into stock in our early years, and the destruction of practically the whole of our records in the burning of the Royal Exchange in 1838. These are difficulties which, as far as I know, have not arisen in the case of any other company. Then, again, gentlemen, if you will allow me to say so, I really cannot see any particular point in splitting the stock into shares, even if it were perfectly feasible for us to do so, for you can go into the market and buy or sell any amount of our stock, however small. Of course, if any of our stockholders think that they can only buy £100 of our stock standing at over 400, I can understand their criticism, because it is a heavy stock for them to handle; but this is not the case, because it is perfectly easy for them to buy (say) £1 of stock, for which they would pay, at the present price, about £4.

TRIBUTE TO MANAGERS AND STAFF.

Now, gentlemen, before formally submitting for your adoption the printed report and accounts, I would like to say that the results shown are to a very large extent due to the care and attention shown by the managers of our various departments and the branch managers and the staffs at home and abroad, and I am sure you would like me, on your behalf, to thank them for the zeal which has consistently been directed by them to the welfare of this corporation. In view of the very difficult times which have been experienced during the past 12 months, and of which we have not yet seen an end, I feel sure you will agree that the report and accounts placed before you to-day show a satisfactory position. It is impossible to foretell the future—perhaps never more so than at the present time—but I am satisfied that after over 200 years of trading the Royal Exchange Assurance is to-day in an extremely sound position, and I look forward to its future with the greatest confidence.

Before putting the resolution to the meeting, I would ask any stockholder who wishes to do so to put any question or make any comments.

No questions being asked, the Governor moved the adoption of the printed report and accounts for the year 1921.

The sub-governor (Mr Seymour Grenfell) seconded the motion, which was unanimously carried, and the proposed further dividend of 9 per cent., less income-tax, making 16 per cent., less income-tax, on the capital stock for the year 1921, was agreed to.

A resolution for the reappointment as auditor of Sir Nicholas E. Waterhouse, K.B.E., having been passed, on the motion of Mr H. Gridley, seconded by Mr H. C. Sim, the court adjourned.

THE UNION BANK OF SCOTLAND, LIMITED.

BANK'S STRONG POSITION—DIVIDEND INCREASED.

The annual meeting of shareholders was held, on the 26th instant, in Glasgow, his Grace the Duke of Atholl, K.T., chairman of the bank, in the chair.

The Chairman, in submitting the directors' report, said: Since the shareholders met here a year ago a number of interesting events have taken place, and I would like to make passing reference to these. One of the most outstanding was the Washington Conference, and it is a matter of considerable satisfaction that an agreement was come to which will, we hope, through lessening expenditure necessary on naval developments, have the effect of lightening in years to come the very great burden of taxation that is weighing so heavily on all of us.

Another event of importance was the publication of the Economy Reports by the Geddes Committee, and I am doubtful whether sufficient credit has been given to the members of that Committee for the many hours of hard work which are represented by the three reports. It is hoped that the Government will give effect to such of the economies as are practicable, and that they will not be contented with these, but will endeavour even to better the recommendations of the Committee.

The third event is the Genoa Conference, which, at the moment of preparing these notes, is still in being. One had hoped for some limitation of land forces at this Conference, as it is very obvious that most of the European countries cannot afford to keep up large armies, and that it is absolutely essential that they should concentrate all their energies on the difficult task of putting their exchanges on a better basis.

The year 1921-22 has been a very black one industrially, and from a commercial point of view probably one of the worst within the memory of the present generation.

The strength of British banking has been shown very clearly in the industrial crisis through which we are passing, and this is largely due to the traditional prudence of British bankers, to the fact that banks do not have "boom" years in the ordinary sense, and that only a moderate part of their profits is distributed. It is probably a great safeguard, although trying to executive officers, that British banks never have an absolutely smooth path. When trade was booming we suffered from depreciation in gilt-edged securities; when bad trade came, with its accompanying worry of bad debts, which every bank has at present in varying degree, there has followed the recovery in security values as compensation I may say, in passing, that all bad and doubtful debts have been amply provided for by our institution out of the year's revenue.

BALANCE-SHEET ITEMS.

Turning to our balance-sheet, I would like to draw your attention to the very gratifying increase that has taken place in the amount of deposits, which, it will be observed, are at the highest point yet reached, and £2,500,000 higher than a year ago. The only other point that I would draw your attention to specially is the large increase in British Government securities. These are chiefly of a short-dated nature—in fact, £6,000,000 fall due within the next 18 months, and of the total, about £13,000,000 is repayable before the end of 1930. In addition, we still have a considerable holding of 5 per cent. War Loan, which has not been included in the foregoing figures, although the Government have the option of repaying it in 1929.

Loans and overdrafts show a large reduction—rather over £3,000,000 in all. This is due to natural liquidation, to the reduction of stocks, and to the carrying of stocks at lower values, not to the exercise of undue pressure on our part. It is, in fact, a sign of the healthy nature of our advances that such large reductions have been made. Bills under discount also show a decrease, but this is largely due to the smaller holding of Treasury bills, which amount to £6,285,000.

Our assets are really very liquid, over £14,000,000 being readily available, quite apart from the short-dated British Government investments, but including Treasury bills already referred to. This is a position of great strength to our depositors, and puts us in a position to finance any demands that may be made upon us when trade revives.

PROFITS AND DIVIDEND.

With regard to the year's working, the profits are just under those of 12 months ago, and we are glad to report that the total charges for the year have not increased. It is gratifying that we are able on this occasion to place £100,000 to rest account, bringing that item up to £1,100,000. We are also glad that we can recommend the payment of an increased dividend of 17 per cent.

The foreign branch which we opened in our property at 120 St Vincent street has had satisfactory results, and has been very useful to our clients. We are hopeful that the other two new branches will also be successful.

I shall now call on Mr Hutton to deal in detailed fashion with the balance-sheet figures, and to move the adoption of the report and accounts.

Mr Hutton, after dealing with the figures in the balance-sheet, moved the adoption of the report and accounts, which was carried, and the usual formal business having been transacted, a vote of thanks to the chairman terminated the proceedings.

THE LONDON ASSURANCE. RESULTS OF A DIFFICULT YEAR.

The annual general court of the London Assurance was held, on the 26th instant, at the offices of the corporation, 1 King William street, London, Mr Colin F. Campbell (the governor) presided.

The secretary (Mr S. I. E. Crouch) read the notice convening the meeting and the auditors' report.

The Governor, in moving the adoption of the report, said: I hope that you will agree with me in thinking that the corporation is much to be congratulated upon having secured a freehold site in the very centre of the City, where it can make its permanent home. It goes without saying that we have not made this change without a great deal of real regret, as the London Assurance has been connected with No. 7 Royal Exchange ever since 1845, and, even though it was not laid out on the most modern principles, there was a dignity and comfort about the old building which it may be difficult to transfer to a new one just put up.

The year 1921 has very little that is good to be said of it from the point of view of insurance, and in this respect it differs very materially from those through which we have recently passed. The prosperity of insurance companies during recent years had also led to a feeling in some quarters that insurance companies did nothing else but make profits, and that consequently premiums were too high. The year 1921 has, anyhow, buried that fallacy, for which I need hardly say there was never the smallest justification. Insurance companies are called upon to run great and increasing risks, and rates of premium in many instances are inadequate for the risks run; so much do I believe this to be the case that I feel confident that in some directions rates will have to be increased rather than decreased before insurance business is placed once again on a profitable and remunerative basis.

LIFE AND FIRE ACCOUNTS.

If you will turn now to the life account, the progress made during the year has been quite satisfactory, the premium income having been £332,379, against £308,699 in 1920, showing an increase of £23,680, and the life fund now stands at £3,155,338, against £2,947,729 a year ago. The rate of interest earned has also improved, being now £5 11s 1d per cent., as against £5 4s 6d per cent. in 1920. The mortality experience has been favourable, the claims being considerably below the amount expected.

As you are aware, it was found impossible a year ago to make any bonus distribution to the policyholders in consequence of the tremendous fall in the value of all securities during the quinquennial period which ended on December 31, 1920; consequently the shareholders have also to go without their share of the profits in respect of that period. We are, however, transferring to profit and loss account this year a sum of £10,000, which represents part of a balance remaining in the life fund belonging to the shareholders brought forward from previous quinquenniums; the total amount belonging to the shareholders in the fund is just under £60,000 after this transfer.

A pleasing feature about the fire account is that we have nearly maintained the premium income notwithstanding the world-wide depression prevailing—in fact, the reduction only amounts to £39,000.

UNITED STATES BUSINESS.

The year cannot be considered to have been a profitable one generally speaking, but we should have had nothing to complain about had it not been for the extremely bad results in the American field. For many years we have had a very important business in America, which has yielded very profitable results, but last year was an exception, and no profit was realised. From the figures which we have seen of some of the other companies operating in the States, the experience of most of them has been very much more unfavourable than our own.

I wish we could anticipate an upward bound in our premium income generally this year, but unfortunately our fire manager reports that at present he sees no indication of such taking place, as the volume of new business offering is still disappointingly small. There must first be a general revival in trade before we can look forward to improved conditions for ourselves.

THE MARINE DEPARTMENT.

We next come to the marine account, which will no doubt be examined with interest, for I indicated to you a year ago that in the opinion of our underwriters marine business was then passing through a very critical and anxious time. Two features of importance stand out in the account before you, one being the reduction in the net premiums from £1,219,000 in 1920 to £678,000 in 1921; the other being that the liquidation of a very big and difficult account has been accomplished with a small profit, and the marine fund, after the transfer of £58,996 to profit and loss, now stands at £800,000, against £1,000,000 a year ago.

You will thus observe that, although there is a reduction in premium income of £541,000, there is a reduction in the amount

of the fund of only £141,000, apart from the transfer to profit and loss.

With regard to the reduced premium income, it was only to be expected that, holding the views we did, we should curtail our operations, so that the material reduction in the figures is the result of a policy deliberately entered upon.

The present position of the account, with a fund of £800,000, apart altogether from any of the general reserves of the corporation, may be considered quite satisfactory from the marine insurance point of view. Our underwriters still regard the situation generally as being unhealthy, especially in hull insurance, and the dissolution of the committee of underwriters known as the Joint Hull Agreement Committee has merely tended to aggravate the position.

The cargo business is on a rather better basis, but it has been difficult to maintain our premium income in this direction owing to the downward trend of both export and import trade in this country.

We can only hope that, with a general improvement in trade, marine insurance will emerge from its condition of depression and that satisfactory results will again be secured.

Then, coming to the accident accounts, these have been divided this year into three sections—viz., accident, employers' liability, and general accident insurance. The results of last year were quite satisfactory, and an increased premium income is shown in each account, with the exception of employers' liability, which is slightly decrease owing to slackness of trade and a general reduction of rates.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, you will notice on the credit side interest and dividends not carried to other accounts, £101,009, and the transfers from the various accounts, making up a total, together with the carry forward, of £557,318. On the debit side the dividends absorb £189,517; income-tax and corporation profits tax again take £100,000; £10,000 is written off freehold premises; £6,208 represents the premium on a redemption policy we have taken out for the preference share capital, leaving an amount to be carried forward of £208,244, which shows an increase of £6,909.

We hope that this is the last occasion on which we shall have to transfer so large an amount as £100,000 for taxes, as after this year we shall begin to get the benefit of the smaller profits in the three years' average.

The provision of £10,000 for writing down our freehold premises will, I am sure, meet with your general approval, though it should not be forgotten that two years ago we wrote off £68,360 out of our war profits of that year.

The premium on the redemption policy calls for some comment, as it is an item that has never appeared before. The preference share capital of £250,000 matures, as you are probably aware, between the years 1943 and 1953, so we have taken out a redemption policy with our capital and leasehold redemption department to provide for the repayment of these shares in 25 years, and the annual premium, calculated at a low rate of interest, has been worked out for us by our actuary at £6,208. Consequently, you may expect to see this entry appearing at debit of profit and loss account regularly for some years, unless the directors decide, at some future time, to make any special transfer to this fund from surplus profits in any particularly good year.

THE BALANCE-SHEET.

Coming lastly to the balance-sheet, the capital remains the same at £873,275, and both the general reserve fund at £1,250,000 and the investments depreciation and contingencies account at £380,000 also remain intact, and I am glad to be able to tell you that at December 31st last less than £30,000 was required from the investments depreciation account to cover the depreciation in securities below the prices at which they stand in our books.

The freehold property at £541,000 is increased in consequence of the cost of our new building, and you will recollect that included under the heading of "railway and other ordinary stocks," the £835,734, is our investment in the Vulcan Boiler Company. The report and balance-sheet of this company is printed on the last pages of the statement in your hands, from which you will see that this very successful company has again had an excellent year.

The balance remaining of the cost of acquiring the British Law Fire Insurance Company of £200,000 will automatically disappear when the preference shares are paid off through the redemption policy, to which I have already alluded, and you will bear in mind that £51,665 has already been written off this account in 1919.

It again gives me great pleasure to repeat what I said last year, that we are very much indebted to the management and staff generally for the excellent work they have put in for the corporation, and the accounts which I have had the honour of submitting to you to-day will indicate with what measure of success their efforts have been attended.

The sub-governor (Mr C. S. S. Guthrie) seconded the resolution, and, in the absence of questions, it was at once put and carried unanimously.

The formal business having been transacted, a cordial vote of thanks to the governor terminated the proceedings.

THE AUTOCAR FIRE AND ACCIDENT INSURANCE COMPANY, LIMITED.

COMPANY'S STRONG FINANCIAL POSITION.
SUCCESSFUL YEAR—INCREASED PREMIUM INCOME.
DEVELOPMENT IN CANADA AND ELSEWHERE.

The second annual general meeting of the Autocar Fire and Accident Insurance Company, Limited, was held, on the 27th instant, at the registered offices of the company, 77 Cheapside, London.

Mr Edward M. Iliffe, C.B.E., J.P., presided.

The secretary (Mr A. W. Rosamond) having read the notice convening the meeting, the minutes of the previous meeting, and the auditors' report,

The Chairman said: I have much pleasure in presenting for your approval and adoption the report and audited accounts of the company's operations to December 31st last, being the second year of its existence.

Before formally moving their adoption, I would like to refer to one or two items in the accounts and to the progress which has been made by the company since the last annual meeting.

In the first place, it will be noticed that the net premium income in the fire and general departments has increased from £40,196 12s 3d for the year 1920 to £116,847 5s 11d for the year 1921. This increase of £76,650 13s 8d in our premium income will, I am sure, be regarded as eminently satisfactory, especially when it is realised that we have not attempted to show a large premium income, but have, on the other hand, carefully selected our risks in order to carry out the policy laid down when the company was inaugurated of developing on sound conservative lines.

It will be seen from a perusal of the accounts that the fire department is now our main sphere of operation, and that the increase in our premium income is entirely attributable to that department.

LOW LOSS RATIO IN FIRE AND GENERAL DEPARTMENTS.

I need hardly dwell upon the fact that the year under review has been an extremely difficult one, owing to the world-wide depression in trade. In times of commercial depression there are invariably two aspects which at once become manifest in connection with a fire insurance account unless exceptional care is exercised in the control and underwriting of the account. I refer to a decrease in premium income and increase in loss ratio. In the case of this company, however, not only has the premium income in our fire department increased very materially, but the loss ratio is one in which we have every cause for satisfaction, and for which we are indebted to the very careful discrimination which has been exercised by our fire manager. Our combined loss ratio in the fire and general departments, after fully reserving for all outstanding claims, stands at 39.48 per cent. It will be seen that, after reserving for unexpired liability 40 per cent. of our premium income, the fire and general departments, even in this most difficult year, show a small profit, which is carried to the profit and loss account.

ACCIDENT DEPARTMENT.

The accident business calls for no special comment. The premium income is almost identical with that obtained during the previous year, and the loss ratio in that particular section of our business may be considered as quite normal, having regard to existing conditions. During the present year it is confidently expected that considerable advance will be made in the accident department, and that the income derived from this particular class of business will be substantially increased.

During the year motor business, which forms a substantial part of our income in the accident department, required the exercise of great care. It is hoped, however, and I think quite justifiably, that the present year will show some little improvement in motor insurance generally.

CLOSING MARINE ACCOUNT.

You will remember that last year, when referring to the marine department, I was careful to point out that the marine market was one which was then calling for unremitting care and attention, and that so far as we were concerned we were keeping a very close watch on our marine account. Since that time, and after giving the matter very careful consideration, we came to the conclusion that owing to the conditions prevailing in that market the interests of this company would be better served were we to withdraw. Marine accounts in the normal way take some considerable time to run off, and, bearing this in mind, we decided to put a date to the period of liquidation so far as this company was concerned. With this end in view we specially reinsured with sound and substantial organisations all hull and time risks some short time prior to the end of the financial year, and the premiums in respect of the large bulk of these reinsurances have been debited in the accounts now before you.

Further than this, you will observe that we have transferred over £6,000 from the profit and loss account to the marine account, thereby creating a fund of £10,000, which we expect will be sufficient to meet all further contingencies likely to arise. Having regard to the somewhat unfortunate experience gained by other and older companies than ours in their marine departments, we hope you will consider that the action we have taken in regard to this particular section of our business is a prudent one and in your interests.

The profit and loss account is credited with dividends and interest not carried to other accounts, and after deducting the sum mentioned as being transferred to the marine account shows a small credit balance, which it is proposed to carry forward.

COMMISSION AND EXPENSES.

Before leaving the accounts, there is one other item to which I would draw your attention, and that is the item relating to commission and expenses of management. Having regard to the increase in our income, this item naturally shows an increase also, but this increase is due entirely to commission, which in turn, of course, is due to the advance in premium income. Expenses of management stand at practically the same figure as during the first year of our operations, and this, having regard to the increase in our income and that no sum has been charged during the year to preliminary or establishment expenses, you will regard as very satisfactory.

CANADIAN AND FOREIGN DEVELOPMENT.

The company has continued to develop both at home and abroad. Last year we made the necessary deposits in Canada, and are fully licensed in the Dominion for the transaction of fire insurance business. Our entry in the Dominion was too late in the year for any benefit to be shown in the accounts now before you, but we are hoping this year for quite an appreciable addition to our income in that area, and, speaking at this period, I am glad to be able to inform you that our progress in Canada is entirely satisfactory. Our representation is in very capable hands, and we are being well supported.

Our development in other places abroad is also proceeding satisfactorily, and we are gradually but surely achieving a reputation both for soundness of method and for prompt loss settlements.

COMPANY'S INVESTMENTS.

Mention has been made in the directors' report of the appreciation which has taken place in connection with our investments. In the early part of this year, and since, of course, the close of the accounts, the company still further invested a considerable sum in Government securities, so that the total appreciation in our investments at this date amounts to a very substantial sum. It will be noticed that investments stand at cost price in the balance-sheet, and it is not proposed at this juncture at all events to take advantage in our accounts of the appreciation which has arisen.

The financial position generally, having regard to our commitments, is a particularly strong one, and it is the aim of the directors that we should go on conserving our strength in this way and so merit the confidence of the policyholders both at home and abroad, and that of contemporary companies.

There is one other matter for congratulation, and that is that the various failures which have taken place in the reinsurance world recently can be viewed with equanimity so far as this company is concerned, and liabilities on such commitments as we had with those companies have been disposed of or adequately provided for in the accounts now presented.

TRIBUTE TO STAFF.

Before closing, I should like to add a word of appreciation of the work done by the staff at the head office and the branches, and the increasing support afforded to us by our agents, both at home and abroad, all of which is so essential to our progress. We are particularly indebted to Mr A. E. Morgan for the manner in which he is steering this company slowly and surely to success. That he is able to present so sound a balance-sheet at the end of a year which has been so full of pitfalls for insurance companies generally is a matter for congratulation.

I now beg formally to move the adoption of the report and accounts.

Mr W. Coker Iliffe seconded the motion.

Mr Arthur E. Morgan (managing director) said that he would like to thank the chairman for what he had said about his work, and to say that if he had been able to achieve anything it was due entirely to the support which he had received from the staff. The resolution was carried unanimously.

On the proposition of Mr A. D. Poulton, seconded by Mr Arthur E. Morgan, the retiring director, Mr Edward M. Iliffe, C.B.E., J.P., was re-elected.

The auditors, Messrs Mann, Judd, Gordon, and Co., were reappointed, and the proceedings then terminated.

JOSEPH TRAVERS AND SONS, LIMITED.

COMPANY'S "WONDERFUL POWER OF RECUPERATION."
SPLENDID RESULTS DESPITE YEAR'S DIFFICULTIES.

ROAD VERSUS RAIL TRANSPORT.

The annual general meeting of Joseph Travers and Sons, Limited, was held, on the 24th instant, at Cannon Street Hotel, London. Sir Edward Bowron, the chairman of the company, presided.

The secretary (Mr E. C. Watson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume you will, as usual, desire me to regard the report as read. The results shown in the balance-sheet before us to-day present a striking contrast to those of last year, which contained the inevitable aftermath of a period of extraordinary inflation of prices, and although the prospects at that time were never more difficult to predict, the business has again demonstrated its wonderful power of recuperation.

The change in the position is very great, and it would not be surprising to find an impression in the minds of shareholders that the difference may be largely due to fortuitous circumstances, such as the refund, or anticipated refund, of taxation. It is true we have received, or we are entitled to receive, certain sums from these sources, but it is also a fact that these amounts were not sufficient to wipe out the losses in stocks which we took over from last year, and which, owing to market depreciations, had to be disposed of at heavy losses, and, as I have just said, wiped out any help we received from returned taxation of all kinds. I hope I have made it clear that the results shown on the profit and loss account are quite fairly indicative of the trading of the year.

BALANCE-SHEET ITEMS.

Turning to the figures of the balance-sheet, you will notice on the assets side that the premises and plant show a slightly increased figure, due to additions being in excess of the amount written off for depreciation. The figures in this item still maintain a most satisfactory relationship to actual values. The stocks provide an interesting comparison in that the amounts closely resemble each other—namely, £586,541, compared with £583,254 for the year under review. This is the vital spot of every trading concern, and contains the hopes and fears of the future. Sugar, the largest article in which we deal, both from the point of view of weight and use of capital, has fallen in price from 72 to 46. The fact that our general stocks are heavier after such an important fall might reasonably be considered doubtful policy, but we have the best of all answers to give to such a criticism, in that our trade has increased and requires the additional stocks, and, what is more to the point, has greatly helped us to bring before you the satisfactory results we are showing you to-day.

Turning to the liabilities side of the balance-sheet, the reserve account now stands at £290,000, and, when added to the various special reserves, is over £300,000, equivalent to 150 per cent. of our ordinary share capital. You will remember that our losses in 1920-21 were almost entirely due to the misfortunes connected with our export trading, and we then intimated that we were taking steps to prevent the possibility of such recurrences. The response to our efforts has, so far, been quite satisfactory, and we have adopted the policy of cautiously plodding along waiting for our opportunity.

The abnormal state of exchanges completely excludes the possibility of working with some countries, and in others, affected to a less extent, the trade has been of a fragmentary character. There is, however, plenty of room in the British Empire for any amount of extension and development, and we are having sufficient encouragement from these sources to be confident of success.

POSITION OF THE SMALL TRADER.

The recurrent reduction in the Bank rate and the abundance and cheapness of money are conditions which, in ordinary circumstances, would immediately stimulate trade. This money can, no doubt, be obtained for trade purposes against actual security with a large margin for eventualities, but, with few exceptions, the small trader cannot be said to enjoy the financial facilities which he was able to obtain before the war. He is suffering for the sins of the speculator, for which he cannot, in any measure, be held responsible. Want of capital has made it necessary for him to carry smaller stocks, with the result of quickening the turnover and improving his business, both theoretically and in practice. After the expected further improvement in trade has become a fact, confidence will, doubtless, be renewed, and the small trader will once again resume his important position in the scheme of distribution. It is difficult to forecast the effect on future trade of the many changes which are occurring, and which must materially alter the character of our business, and, although we see no reason to anticipate a reduction of its earning power, yet the time may come when patience will have to be exercised until the many corners have been turned before we reach the main road again.

The fight that is quietly going on between road and rail transport must be evident to the casual observer, and which system will succeed it is impossible to say, but it is obvious that the railways have many untouched sources of competition, which, when released, will materially affect the whole question. The distribution of foodstuffs can never expect to have more than a narrow margin of profit, out of which there has to be found the money for all expenses, including a large sum for carriage, and we cannot afford to make mistakes in policy in the important question of transport. The developments of the last 10 years have left no room for doubt that the future has surprises in store for us. The railway companies seem to be handicapped in the matter of control of their labour, whereas the road transport is spread all over the country amongst so many small proprietors whose working conditions are much more elastic than old regulation-bound institutions. In any case, competition should result in reducing the rates from which we hope to benefit.

With the return of lower prices, less capital is required for our business. Our savings in interest this year have been considerable, and we hope to do still better in this direction. It is a subject for congratulation that we were able to steer through the treacherous time of 1920-21 without completing the addition to capital which, at one time, we were afraid would have to be done. Our financial facilities are, at present, sufficient for all requirements, and additional capital would have been a costly and heavy burden.

THE DIVIDEND.

You will observe that our recommendation of a dividend at the rate of 15 per cent. on the ordinary share capital, after adding £20,000 to the reserve fund, leaves us with a carry forward of £32,661. One of the reasons by which we have been actuated in proposing this substantial unappropriated balance is that we intend to use it to equalise dividends unless unforeseen circumstances should arise rendering this course inexpedient.

Before closing my remarks I would like to call attention to the loyal assistance we have had from our staff. After the return of men from the Army, the necessary adjustments were made with as much consideration as possible, and we are now settling down to normal conditions. I will now propose the adoption of the report, and ask Mr Travers to second it, after which I will endeavour to answer any questions that you desire to ask. The resolution is:—“That the report, balance-sheet, and profit and loss account for the year ended January 28, 1922, now laid before the meeting, be and the same are approved and adopted, and that the payment of a dividend of 15 per cent. on the ordinary shares of the company, as recommended by the directors, be and the same is hereby ratified and declared.”

Mr W. F. Travers (deputy-chairman) seconded the resolution, which was then put to the meeting and carried unanimously.

On the motion of Mr Travers, seconded by Mr E. T. Dottridge, C.B.E., the retiring directors, Sir Edward Bowron and Mr R. J. Harford, were unanimously re-elected.

The Chairman, on behalf of Mr Harford and himself, thanked the shareholders for the renewal of their confidence.

Mr R. R. Shaw proposed the re-election of Messrs Price, Waterhouse, and Co. as auditors for the ensuing year. He thought all the shareholders must realise how very fortunate they were in having the services of Messrs Price, Waterhouse, and Co. as their auditors, and he was sure they could not do better than ask them to do what they had done for the company this year—namely, to give them a clean bill of health in their balance-sheet.

Mr L. S. Gridley seconded the motion, which was unanimously agreed to.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr Oscar Berry said that the shareholders had heard from the chairman of the loyal assistance he and his colleagues had received from the staff, but he was quite sure that it was the wish of every one present to acknowledge the services of the chairman and the members of the board. He desired, therefore, to propose a hearty vote of thanks to the chairman and his co-directors, and to associate with them the staff who had so loyally assisted them and helped them through a difficult year, and had thus enabled the shareholders to receive the very handsome dividend of 15 per cent.

Mr George Ling seconded the vote, which was unanimously accorded.

The Chairman, in acknowledging the compliment, said that every member of the board had been trained in the business, and in his opinion this was a very great source of strength to the company.

The proceedings then terminated.

UNITED ALKALI COMPANY.

LAST YEAR'S STRUGGLE—WORST NOW PASSED.

MR MAX MUSPRATT AND TAXATION'S DRAIN.

The adjourned thirtieth ordinary general meeting, and the thirty-first ordinary general meeting of shareholders in the United Alkali Company, Limited, were held at Liverpool, on the 28th instant, Mr Max Muspratt, the chairman, presiding. Completed accounts for the year ending December 31, 1920, were now presented. Pending a final settlement in respect of war taxation, the accounts for 1921 could not be prepared, but the directors hoped that at a comparatively early date they would be presented.

The Chairman, in moving the adoption of the accounts for the year 1920, and the report of the directors for 1921, said:—Ladies and Gentlemen,—We are met to-day for the purpose of holding the adjourned meeting for the adoption of the report and balance-sheet for 1920, and the annual meeting for receiving the report for 1921. The account I have to give you is a depressing one, as you will all readily understand, aware as you are of the disastrous nature of last year for the whole of British industry.

I hope, however, to be able to satisfy you that from every sign we can read, the worst is now passed, and that in the absence of any great catastrophe, such as the coal stoppage of last year, we are on our way to recovery.

Dealing first with the profit and loss account of 1920; in spite of the slump at the end of the year, the gross profit was £710,000. This was largely made in the first nine months, and includes a considerable sum in respect of the writing-up of stock values, in accordance with the requirements of Somerset House for excess profit duty purposes, from the conservative valuations observed by us for many years past. This profit would have been very appreciably higher had it not been for the rapid falling off of trade and stock values, which afterwards became so much emphasised in the first half of 1921.

As explained on a previous occasion, the Inland Revenue Authorities insisted on our writing-up the values of the stocks, which really only express our working capital, to market price or cost, whichever was the lower, thereby magnifying our profits on paper.

At the same time, we have made provision for such contingencies, and the shareholders need not fear that these serious temporary difficulties will permanently affect the company.

INTOLERABLE TAXATION.

I would invite your attention to the item of taxation, which is nearly £296,000 for 1920, as such items are the chief explanation of the state of the company's present finances.

However necessary or fair this taxation is in principle, its incidence in times such as we have passed through is intolerable. It means that for every pound paid to our debenture holders and shareholders for 1920, we have to meet 2½ in taxation. Quite frankly, it is, under such conditions, an impossible task to do justice to shareholders without seriously crippling the permanent interests of the company, as you will doubtless have observed from the reports of many companies. The same conditions, in accentuated form, have affected the figures for 1921, but with the final cessation of excess profit duty, and an approximate stabilisation of values, we shall be near a conclusion of this deadly drain on our resources, and can expect to enjoy that degree of prosperity which our general position justifies us in expecting.

I think it fair to state that, although I have spoken strongly about the effect of taxation, the attitude of the Inland Revenue Authorities has been courteous and considerate, and, within the limits of the Finance Acts, they have met with patience and in a broad spirit the many points placed before them so painstakingly by our colleague, Mr Hewetson Nelson, resulting in considerable alleviation from original assessments.

NO DEBENTURE ISSUE NECESSARY.

I indicated at our last annual meeting that we had it in mind to ask our debenture stock holders to assent to proposals in connection with our debenture stock issue, which, without asking for any public money, would, if accepted, enable us to finance the company through a difficult period of readjustment.

I am glad to report that at the meeting of debenture stock holders which was held upon May 10, 1921, our proposals proved acceptable, and we received the assent of the meeting to increasing our authorised issue of debenture stock from the amount of £2,665,000 stock outstanding on December 31, 1920, up to £3,500,000.

This authority has proved effective in providing the accommodation we required without the necessity, up to date at any rate, of making any issue of such increased stock.

FEATURES OF 1921 TRADE.

The situation in 1921 may be summarised as follows:—The first three months we were struggling against the effects of the trade slump, reducing production, and trying to reduce costs of production to meet the changed conditions. Then came the great disaster of the three months' coal stoppage, which converted acute depression into absolute paralysis for four or five months.

In August we had turned the corner, but the results up to August 31st, accentuated by the writing down of stocks to which I have referred, showed a heavy loss. The remaining four months, though trade was still bad, were fairly satisfactory, particularly for export, but the result for the whole year, when we get our complete accounts, can only be described as bad. This will surprise nobody when the prolonged stoppage of our works, due to lack of coal, is borne in mind.

In the course of the year 1921 we paid no less than £500,000 in taxes, and although nearly half was covered by securities earmarked for that purpose, finding the balance in cash, in such a year, made it impossible to pay more than a portion of the preference dividend, and we ask the shareholders to be patient, with the assurance that we are doing, and will do the utmost for both their temporary and permanent interests.

All the fundamental plant alterations reported in recent years are working in a most satisfactory manner.

Our ammonia soda works extension was started in December last without a hitch, and the product is at present well absorbed by the market, or by the subsidiary plants for caustic soda and soda crystals, which are at present, at any rate, working at full capacity.

At Newcastle, the electrolytic plants are working almost full, but at Widnes the similar plants are still on reduced load, as the demand for chlorine products, owing to the depression in the paper trade and textile industry, is still far below the normal. The position is, however, improving week by week, if only slowly, and every increase in consumption represents a decrease in cost which we hand on to the consumer in the hope of further stimulating consumption.

SULPHURIC ACID.

The position with regard to another important product, sulphuric acid or vitriol, has been extraordinarily difficult for us, as for the many other makers of that product. The main consumption is for the manufacture of superphosphate and ammonium sulphate, important fertilisers, and the grave depression of agriculture, combined with other causes, has created absolute chaos in those industries.

The result was a reduction of consumption to about 30 per cent. of the normal, and as sulphuric acid requires large and expensive plant, the standing charges are heavy, with the result that all reductions in raw materials and labour were more than counter-balanced by the standing charges. We have met this problem by concentrating production in the most efficient works with most satisfactory results, retaining skeleton staffs in the plants that are idle, thus enabling us to make substantial reductions in our prices to consumers, and so stimulating consumption. The results of this policy have been a slow but steady improvement of the demand for this important product.

Our mines in Spain, which to a considerable extent supply the raw material for our sulphuric acid, have been badly affected by the abnormal reduction in the consumption, and our copper works, which play an important part in the complicated cycle of operations of which sulphuric acid is the main product, have been brought to a complete standstill through economic changes resulting from the war.

A deputation of directors has recently spent some weeks in Spain, and we are confident that we have adopted a policy suitable to the changed conditions, of considerable advantage to our present operations and future prospects.

DYE PRODUCTION DEVELOPMENT.

I have dealt with our main products, and the situation is not unsatisfactory considering the condition of world trade, but the minor products, which in the aggregate are not inconsiderable, require a few words.

The developments we have made in organic products to assist the dye industry are at present under a cloud, partly due to the great depression in the textile industry, and partly from the erratic policy of the dye producers, although individual members have welcomed our attempts to assist them in this problem. We appreciate the national importance of this question, and intend

to take a part in the solution of the many problems associated with it.

In another direction we have made developments. Many of our products are suitable for domestic consumption, but, apart from soda crystals, have not been available in convenient form. We have, however, had a small package trade at our Greenbank works, which had become obsolete on the technical side. This we have transferred to Widnes, and with up-to-date plant intend to develop it.

RETIREMENT OF MR EDWARD MOUNT.

Last year I had to regret the absence of our secretary, Mr Mount, owing to serious illness, and to-day I am pleased to state that he has been able to return, but has since decided, for reasons of health, to ask us to relieve him from his duties. Mr Mount has been associated with the industry for a long period. As assistant-secretary to the company at its start, and then as secretary, he has rendered long and faithful service to the company, and has acted most successfully as expert in the sale of copper, which in normal times plays an important part in our operations. I am sure you will join us in wishing long life and happiness to him in his retirement.

The Chairman concluded by moving the adoption of the report and statement of accounts.

Dr G. C. Clayton, C.B.E., in seconding, spoke of the happy relations which had existed with the employees of the company during the year in spite of reductions, which were accepted without complaint and without prejudice to the work done. Their workpeople, in fact, were working very well. During the period of slackness in the organic manufacturing department, great progress was made in developing new processes of manufacture, and they were well prepared to meet any demands that might be made upon the company when the dyeing industry revived. Those shareholders who visited the British Industries' Fair in London would have been impressed with the large range of products the company could now produce, and for which they hoped there would soon be a steady demand.

The motion was carried unanimously.

On the motion of the Chairman, seconded by Mr J. A. E. Rayner, a dividend of 4s per share was declared on the £10 preference shares, making, with the interim dividend paid in January last, a dividend of 4 per cent. on account of the 7 per cent. due for 1921, less income-tax.

Sir E. A. Brotherton, Bart., M.P., Mr Horace Muspratt, O.B.E., Mr C. Hewetson Nelson, and Mr William Windus, retiring directors, were re-elected.

The Chairman, replying to a vote of thanks which the meeting cordially passed, said they had real hopes they had passed through the worst of their difficulties, and were looking forward to prosperity.

The meeting was formally adjourned to a date to be fixed for the reception of the accounts and balance-sheet for 1921.

AFRICAN STEAMSHIP COMPANY. BOARD'S SOUND AND CAUTIOUS POLICY. HEAVY BURDEN OF TAXATION.

The annual general meeting of the African Steamship Company was held, on the 28th instant, at the company's offices, 23 Billiter street, London, E.C., the Viscount Pirrie, K.P., P.C., chairman of the company, presiding.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—I presume you will take the report as read. In my speech to the shareholders last year I pointed out that the West African trade, in common with the general trade of the world, was passing through a bad time. The enormous and sudden fall in the price of all commodities had the effect of almost closing down for a time the trade of the West Coast of Africa, and indeed of the trade of the world. The burden of taxation has pressed especially hard on the native producers, and it is to be hoped that in West Africa, as well as here, the Government will be able to effect such a saving in their expenditure as will lighten the burden.

IMPROVEMENT IN TRADE.

I am glad to tell you that latterly there has been an improvement in trade generally, and I hope with the gradual absorption of stocks and the reduction in taxation there will come a healthy and permanent revival of trade. We are not yet through the bad times, but I am sufficiently optimistic to feel that we have almost touched bottom, and if we could only have a period free from industrial trouble I feel sure the trade of the country would soon get back into a healthy position. In times like these a spirit of friendly co-operation between merchants, shippers, and shipowners should be fostered so that if possible ships should be fully loaded both outwards and homewards, which would inevitably lead to economy

of working and a cheapening of freights, and be advantageous to all concerned.

DIVIDEND.

We propose to pay a dividend for the year 1921 of 8 per cent., less tax. This is a drop from the dividend paid last year, but I think you will agree with the directors that in view of the lean period which may still be before us we are wise in not reducing this year the substantial carry forward of £156,618; in fact, there is a slight increase upon that, the present carry forward being £156,906, and I feel sure, having regard to the time we have gone through and the future, so far as it can be foreseen, you will consider that this is a most satisfactory dividend.

The ships are well written down, and, notwithstanding that a large proportion of our fleet has been acquired at the high prices ruling since the termination of the war, our whole fleet stands in the books at a price certainly not exceeding the present market values.

It is a great gratification to the board that we are able once more to announce that no serious casualty has occurred to any of the company's vessels. This reflects the greatest credit on the personnel of the fleet, and I am sure I am only voicing your views when I say we are all deeply indebted to the masters, officers, and engineers for the efficiency and care they show in handling the company's vessels, and for so ably supporting in every way the directors in guiding the company through a most difficult time.

CAPITAL—SUB-DIVISION OF SHARES.

Since we last met we have increased the company's capital from £2,000,000 to £2,500,000 by the issue of £500,000 6 per cent. cumulative preference shares. These shares were offered to the shareholders in proportion to the amount of ordinary shares they held. The whole of this issue was subscribed by the shareholders.

At the same time, we thought it was an opportune moment to carry out the scheme of sub-dividing the ordinary £20 shares of the company into shares of £1 each. We had been asked on more than one occasion by the shareholders to do this, and we decided to obtain the authority of the shareholders to effect this change. The authority was unanimously granted by the shareholders at the extraordinary general meeting on December 2nd last, and the £20 shares have now been divided into shares of £1 each.

In January last year your directors felt that the time had come, in order to provide additional capital to pay for new tonnage and in order to extend the company's operations, to make an issue of £1,500,000 debenture stock. This issue met with an instantaneous success from the general public, and was largely over-subscribed.

THE DIRECTORATE.

It is with very sincere regret that I have to report the death of our old friend and colleague, Sir Joseph Savory, on October 1st last. Sir Joseph Savory had been a director of the company since 1912, and had always taken a keen and intelligent interest in its affairs, and we shall miss him very much.

I am sure you will all be gratified to know we have induced our friend, Sir Owen Philipps, whom we are all pleased to see with us to-day, to fill the vacancy on the board. Sir Owen Philipps' intimate knowledge of the West African trade, and his sure judgment in all matters connected with maritime affairs, will be of the greatest value to his colleagues and to the company.

I have now much pleasure in moving: "That the report and accounts be received and adopted."

Mr G. W. Neville seconded the resolution, and it was adopted unanimously.

FORMAL BUSINESS.

The Chairman next moved: "That a dividend of 4 per cent. be declared for the six months ended December 31, 1921, which, with the interim dividend of 4 per cent. paid on October 28, 1921, makes a total payment of 8 per cent. for the year 1921, less income-tax."

The resolution was seconded by Sir Owen Philipps, G.C.M.G., M.P., and carried unanimously.

The Chairman moved: "That Sir Owen Philipps, G.C.M.G., M.P., be re-elected a director of the company."

Mr G. W. Neville seconded the resolution, and it was unanimously agreed to.

On the motion of Mr Picton Jones, seconded by Mr Leslie Couper, C.M.G., Messrs Cooper Brothers and Co., chartered accountants, were re-elected auditors of the company at a fee of £500 for the year.

Mr Leslie Couper, C.M.G., proposed: "That a vote of thanks be given to the chairman, the directors, the superintendents, officers, and engineers of the company." In moving the resolution, Mr Couper referred to the urgent necessity for a reduction in taxation on the Coast.

The Rev Gardner Preston seconded the resolution, and the vote was unanimously accorded.

The proceedings then terminated.

IONIAN BANK, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

The ordinary general meeting of the proprietors of the Ionian Bank, Limited, was held, on the 27th instant, at the offices of the company, Basilidon House, Moorgate, London, Sir John Stavridi, chairman of the company, presiding.

The secretary (Mr William A. Shaw, Litt.D.), having read the notice convening the meeting and the report of the auditors,

The Chairman said the year had been one of extraordinary difficulty and perplexity, causing the directors to act with the greatest caution. Nevertheless, the business had materially expanded and the profits had responded. Last year he warned the shareholders that, having regard to the financial boycott imposed upon Greece by the Great Powers and to the prolongation of the war in Asia Minor, Greece might find herself in such financial straits as would lead to disaster. Since then, war expenditure had continued, and no assistance from outside had been obtained. Those months had been a searching trial for the country. Since the autumn of 1912 Greece had never been at peace, and if her finances had withstood the strain it must be attributed to the inherent virility of the race and the adaptability of her public financiers. During these trying months the experience of the banking world in Greece had been one of almost uniform expansion and prosperity. So far, Greece had largely escaped the effects of the world-wide depression following the boom of 1920, and her temporary prosperity was reflected in the balance-sheet now presented. The trials of the Greek State had necessitated forced paper issues which had depreciated the drachma currency, reflected in Greek bank balance-sheets in inflated figures of deposits and profit. Further, the vagaries of Greek exchange had caused speculation in exchange, and at such a time the banks were bound to make the middleman's profit.

A WARNING.

These views made him utter a word of caution. They all looked forward to the time when Greece would be at peace, when demobilisation would have removed the one disordering influence in her finances, and when the drachma would return to par. The process of deflation would inevitably result in a contraction of the mere volume of the bank's business in the figures of the balance-sheet and the items of profit-and-loss account. While, therefore, he congratulated the shareholders on as prosperous a year as the bank had ever enjoyed, he must forecast the possibility of some contraction in the near future, but this outlook need cause them no apprehension. In proportion as deflation rehabilitated the drachma, so it would improve the sterling value of their Greek profits. For the moment, however, there was no question of contraction or deflation. Greece was being saved temporarily by the fall of the drachma, and as her chief exports were a virtual monopoly, she was able to exact to the full the advantages of a depreciated currency. The consortium established last June by the Government to regulate the export of capital, and thus to stabilise exchange, had operated in the direction of controlling imports and of checking exchange gambling. Inherently Greece was sound, and if she were at peace she would speedily right herself; but as these conditions did not prevail she had a daily increasing deficit, now amounting to Drs.2,547,618,110. All the new branches recently opened were developing very satis-

In Egypt they were on the threshold of a new era by the acknowledgment of the political aspirations of the people and the declaration of the country as an independent sovereign State. It was difficult to forecast the economic results.

EXPANSION OF THE BALANCE-SHEET FIGURES.

The expansion of the balance-sheet figures must have impressed itself upon the shareholders. It arose partly from satisfactory business in Greece, Egypt, and London, and partly from the conversion of the drachma accounts at the par rate of exchange. The adoption of the latter system swelled materially all the figures in the accounts, without affecting the sterling balance of profits. The directors were considering the conversion in future of the drachma assets at the exchange of the day on which the books were closed, at all events until the exchange was stabilised. If this alteration were made in the next balance-sheet, the figures would show a truer position in sterling, though they would not be properly comparable with those now presented. If the directors' recommendation were adopted, the reserve fund would be increased by £20,000, reaching £150,000, entirely in sterling. In cash notes, investments—mainly British Government short-term bonds—and bills receivable, the bank held £2,726,317, almost automatically realisable in case of need, showing a very strong position. All the investments stood in the books at considerably below market price, and there had been a further considerable increase in value since December 31. They showed a net profit of nearly £20,000 more than last year, with the result that, in addition to the usual dividend and bonus of 7 per cent., tax free, the board recommended the transfer of £20,000 to reserve fund, and of £5,000 to the pension fund.

The report and accounts were unanimously adopted.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.

CORPORATION'S JUBILEE—RECORD REVENUE.

The fifty-first annual general meeting of the Ocean Accident and Guarantee Corporation, Limited, was held, on the 27th instant, at the Institute of Chartered Accountants, Moorgate place, London, Mr E. Roger Owen (chairman of the corporation) presiding. The manager and secretary (Mr W. Singleton Hooper) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said: The revenue for the year amounted to £5,827,134, as against £5,730,054, an increase of £97,080, of which £65,784 is increase in premium income. The claim paid and provided for amounted to £3,008,341, representing 54.1 per cent. on the year's premium.

To-day we commemorate the fiftieth anniversary of the birth of our corporation, and we must all rejoice when we see what a mighty oak has sprung from the little sapling planted half-a-century ago.

The success of the corporation must have exceeded immeasurably the most sanguine hopes of its founders, and the following facts will, I think, be of interest to you.

ORIGINAL OBJECTS OF THE CORPORATION.

The original name of the company was the Ocean Railway and General Travellers Assurance Company, Limited, which was changed to the present one in 1890, when the business of the Ocean and General Guarantee Company, Limited, was amalgamated with it. Its objects were defined as "for insurance against accident by land and sea." It would appear that a voyage was then regarded as an adventure of considerable hazard, as also the original prospectus were devoted to quoting rates for insurance against "accidental death at sea" and against "railway accidents only," with a lower rate for the latter for suburban passengers travelling within a radius of 15 miles from the General Post Office.

Modern experience, however, proves that a train journey exposes anyone to less risk of accident than is incurred when at home.

Rates were also quoted for "railway and conveyance accidents" only. Finally, rates were quoted for insurance against "general accidents," and here, again, the fatal risk was evidently considered the important hazard, compensation for non-fatal accidents being offered merely as an addition to the fatal risk.

The policy was also limited to accidents occurring in Europe, and was full of restrictive conditions, which have long since been eliminated.

At the end of the first year the income was the modest one of £2,472, and 15 years later had only grown to £42,142; in the following decade it rose steadily to £334,075.

The Workmen's Compensation Act of 1898 then became law, and from that date we began to forge steadily ahead, and within a

year the income had more than doubled, and had increased to £727,637.

In 1901 we passed the million and in 1912 the two million mark, and in this our jubilee year we reach the record income of £5,827,134.

Figures of such magnitude are only obtained by a great deal of hard work, coupled with good organisation, and by giving to our insured efficient claims service, combined with prompt and liberal settlements. I venture to say that in this respect the reputation of the "Ocean" stands second to none.

Security is a vital factor in insurance, and I would like to emphasise to our agents and policyholders how strong the security is which we offer, as shown by our balance-sheet.

THE PAST YEAR.

Last year I indicated that this year would probably prove a difficult and anxious one in view of the great trade depression and the aftermath of the coal strike, and this has unfortunately proved to be the case, and we have to report a decreased profit as compared with 1920. Until trade becomes more settled and returns to its normal channels we must look forward to somewhat leaner years than those recently experienced, for it is a natural sequence that the prosperity of an insurance company and that of the mercantile world go hand in hand, for bad times must of necessity greatly increase the moral hazard, which is so important a factor in insurance. All possible precautions are taken, however, to safeguard our interests by careful selection and subsequent watch on the risks we undertake.

It will interest you to know that in 1920, to extend and to facilitate our operations in the U.S.A., we floated a subsidiary company, which has received the happily chosen and appropriate name of "The Columbia," and which has already so fully justified its formation that it has secured an income approximating £400,000 per annum, and gives every promise of proving in a few years to be a successful and important adjunct to the parent company.

The report and accounts were unanimously adopted, and the usual formal business transacted.

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED.

RESULTS OF QUINQUENNIAL VALUATION.

An extraordinary general meeting and also the annual general meeting of the Legal and General Assurance Society, Limited, were held yesterday at 10 Fleet street, London, Mr Romer Williams, D.L., J.P. (chairman), presiding.

The Chairman, in the course of his speech at the bonus meeting, said: In the previous quinquennium the dominant factor was the war, and again in this last quinquennium that same factor has been in the ascendant. But while at the date of the last valuation—December 31, 1916—the recent calamitous struggle was still raging, on this occasion it is behind us. The quinquennium now under review may in fact be approximately divided into two equal periods of war and peace. But, unfortunately, the succeeding period of peace has been fraught with grave problems, the aftermath of the war, and the conditions confronting us have throughout differed in almost every respect from what we looked upon as normal peace conditions prior to 1914.

The surplus shown is £1,202,828, and of this amount the directors recommend that the sum of £1,142,828 be divided, leaving £60,000 to be carried forward in the Life Assurance Fund. Since the last valuation the Society's Act of 1919 has come into force, and by its provisions the with-profit policy-holders are entitled to a first charge on nine-tenths of the total divisible surplus from whatever assurance fund it may arise up to such an amount as may be necessary to provide a compound reversionary bonus at the rate of 38 per cent. per annum. The sum required for the purpose is £953,705. Adding to this the amount already distributed in the quinquennium as interim bonus, with interest thereon, amounting to £67,824, the total sum divided among the policy-holders is £1,021,529. It is, I think, a matter of congratulation to these policy-holders that they should again participate in a bonus upon such a satisfactory scale—one that will now have been declared by the society for the sixth consecutive quinquennial period. In case anyone should question the comparative position of these policy-holders under the old and the new regulations, I may perhaps say here that under the previous system they would have participated to the extent of £1,016,783 only, as against £1,021,529 now divided.

DIVISIBLE SURPLUS.

The balance of divisible surplus amounts to £121,299, and this sum belongs to the proprietors in accordance with the society's regulations. It is therefore proposed to transfer this to the profit and loss account, which now appears in the accounts for the first time in lieu of the former proprietors' fund. The

available balance in this account thus becomes £131,984, and it is proposed to transfer therefrom the sums of £3,500 and £2,000 to the credit of the Fire and Accident Funds respectively, leaving a balance available for dividend of £126,484. The purpose of these transfers is to bring the reserves in the Fire and Accident Funds at the beginning of this year up to the generally accepted standard of 40 per cent. of the premium income.

THE DIVIDEND.

With regard to the balance available for the proprietors, you will have noted that no recommendation as to payments of dividends is made in the report, as on previous occasions. The reason for this is that, now the society undertakes classes of business other than life, the directors feel it would be wise to make a departure from the custom hitherto in force, and this in fact in some measure is a necessity. With the transaction of life business only, the dividend provided by profits available, once these have been ascertained, could safely be indicated over the quinquennium, although, as you will remember, the actual dividend has only been declared annually. The same procedure could have been adopted now, but, after careful consideration, we came to the conclusion that, with the greater uncertainty that must necessarily attach to the transaction of other classes of business, it would be better to adopt a more cautious policy and omit in the report reference to a dividend which might lead to misunderstanding. The sum available in the profit and loss account (if the transfers recommended are approved by this meeting), together with the natural accretions during the period, and on the assumption that no unforeseen liabilities have to be provided for, will admit of the payment of the dividend of 3s. per share free of income-tax for the present and four succeeding years, and at this meeting I propose to ask your approval of the declaration of a dividend at this rate for the current year. The valuation report was adopted.

THE ANNUAL MEETING.

At the annual meeting the Chairman said: The number of policies issued in the year was 4,655, as against 5,334 in 1920. The sums assured were £3,674,780, as against £3,655,826, and the new premiums £192,249, as against £183,727.

I would like to make a passing reference to the fire and accident accounts. In these we have, as you see, an increase of £52,377 in the net premium income over that of 1920, of which £39,757 is in the fire account. The progress in these new departments is necessarily slow, but I think it is satisfactory, and the results shown so far indicate that we have every reason to hope for profits from them in the future.

The report was unanimously adopted.

PHOENIX ASSURANCE COMPANY, LIMITED.

COMPANY'S POSITION IMPROVED—DIVIDEND MAINTAINED.

The one hundred and fortieth annual general meeting of the Phoenix Assurance Co., Limited, was held, on the 26th instant, at Phoenix House, King William street, London, Sir Gerald H. Ryan, Bart. (the chairman), presiding.

The General Manager (Mr R. Y. Sketch) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: Thanks to our abundant accumulations of past profits, the comparatively meagre profits shown in the present accounts cause us no anxiety. Our dividend is easily maintained and our position strengthened. Though the fire business has not yielded its usual percentage of profit and the marine business has not been good, an excellent accident account has served to make up much of the leeway. In the fire department there has been a drop in the premium income from £5,171,578 to £4,745,020, due principally to slackened trade and reduced values of insurable commodities all over the world, but at 55.4 per cent. of the premiums they cannot be said to be extravagantly high. The expenses work out at 42.4 per cent. of the premiums. The percentage would have been higher still had we not, after most careful consideration, thought it desirable to pass all foreign and colonial taxes through profit and loss instead of the several revenue accounts. Subject to the same reservation, we show a profit of £274,482. Last year we carried £328,321 to profit and loss. In the great continent of America the company has well maintained its high position. The marine department account presents the peculiar feature of a somewhat rapid return to normal conditions from the temporary exhilaration of war times. The premiums amounted to only one-half of the figure of the preceding year and about one-third of that for the year 1917. General business conditions were completely unfavourable, and we can only view the result as another instance of adverse experience which can never be eliminated from insurance operations. The small profit of £23,157 is the outcome of past accounts which have been closed. The marine fund is abundantly

sufficient for all our obligations, and we look forward to better times.

ACCIDENT AND LIFE DEPARTMENTS.

A moderate growth of our premium income from £1,565,909 to £1,666,263, and a very satisfactory increase in the profit from £61,161 to £103,364 are the main features of our accident account. Exceptional circumstances in one or two special branches of the business tended to reduce the profit we might otherwise have shown, but the account stands on a very sound footing, and we have by no means reached the limit of our expectations either as regards further improvement or resulting profit. The working of our life account in the past year has been extremely satisfactory, and the financial position greatly improved by the turn of the tide as regards the movement in the prices of securities. The new life business is of substantial and satisfactory amount, and the account altogether presents no unfavourable condition. I may call attention to the fact that our life funds realised interest at the rate of no less than 4½ per cent. after deduction of income-tax, and as we calculate our liabilities on an assumed rate of only 3 per cent., there is a large and favourable margin making for future profits. It is gratifying to the Board to be able to declare bonuses on the British Empire policies up to the highest level attained in the past.

Passing to the profit and loss account, our dividend requires £369,600, as against £338,800 last year, or if we add to these figures the sums paid away as interest on Debenture stocks, £419,216, as against £388,535. This year our free interest amounts to £335,914, being some £20,000 less than last year, due mainly to the diminution of the marine fund through payment of the heavy claims arising on past accounts when the business was so much larger than it now is. We cannot entertain any doubt that a well-established business like ours, carrying £8,200,000 in premiums, should produce a very much larger profit than will suffice to make good this relatively small balance in our dividend payment. A margin of 1 per cent. on the premiums would give us all that is necessary, and I need hardly say that the normal profits of insurance companies are much greater than this. Our dividend, therefore, appears to the directors to be abundantly well secured.

I have no doubt you will expect some reference from me to the liquidation of the City Equitable Fire Insurance Company, and some of the companies which were allied with it. The first question you will wish me to answer is whether our company stands to lose any considerable sum by these regrettable incidents. On this point I am glad to be able to give you reassuring information. Our advisers do not anticipate any substantial loss. Of the incident itself, I will only remark that it cannot be said to have any bearing whatsoever on the position or credit of ourselves or the other great insurance institutions.

It has not, as you will have gathered, been a very good year for us, but we have maintained our dividend, improved our position, and our prospects are undimmed, so I feel that the general result will be considered satisfactory.

The resolution, after some congratulatory remarks from shareholders, was carried unanimously.

THE WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.

"EXTREMELY SATISFACTORY RESULTS."

The third ordinary general meeting of the shareholders of the World Auxiliary Insurance Corporation, Limited, was held on the 26th instant, at Winchester House, Old Broad Street, London, the Hon. Sir Arthur Lawley, G.C.S.I., presiding.

The Chairman said: Ladies and gentlemen, I am sorry to say that our chairman, Sir John Wimble, is unavoidably absent. He was the victim of a very severe chill early in the week; the doctor packed him off to bed and is resolutely keeping him there. I am sure you will join with me in expressing our regret at the cause of his absence. In Sir John's absence it devolves upon me to try and fill his place and to read the speech which he has prepared.

In moving the adoption of the reports and accounts under review, I wish to say that the results shown have been obtained under conditions which may well be described as "unprecedented"—the depreciation in values and the general world-wide depression is such as has never been experienced before. Naturally, insurance companies have been seriously affected by the conditions which have prevailed, resulting in excessive competition for such business as has been available. In the circumstances I venture to think that the results which we are placing before you can be considered extremely satisfactory.

REVENUE ACCOUNT.

First, referring to the revenue account, the fire account shows that the net premiums underwritten amount to £172,499 16s 1d, which, with the amount brought forward, gives a total of

£238,547 0s 8d. Claims paid and outstanding amount to £113,492 14s 7d. Commissions and expenses amount to £59,594 19s 4d. After transferring £5,000 from profit and loss account, our fire fund stands in credit £70,459 6s 9d, which we carry forward as a reserve for unexpired risks.

The marine account shows that premiums, less reinsurances, amounted to £164,966 15s 11d, which, with the amount brought forward, gives a total of £294,917 5s 10d. Claims paid and outstanding on account of the period to December 31, 1920, amount to £64,603 3s. Claims paid and outstanding on 1921 account amount to £29,591 15s 10d. Expenses amounted to £10,887 6s, leaving at December 31st last a marine fund of £189,835 1s, or over 115 per cent. of the premiums written during the year 1921, which is a very satisfactory position and reflects great credit on our underwriter Mr Sharrman.

You will see that our total premium income on fire and marine accounts combined amounted to £337,466 12s, which is approximately the same figure as the period from the company's commencement to December 31, 1920. No doubt we could have very largely increased our premium income had we so desired, but in the state of the insurance market which existed both for fire and marine business, we deemed it advisable to exercise most careful circumspection in selecting the business offered us.

The profit and loss account, after writing off £6,489 12s 6d of our preliminary expenses, charging expenses not allocated to the fire or marine accounts, directors' fees and the amount of £5,000 I have already mentioned transferred to the fire fund, shows a balance of £7,371 5s, which we carry forward.

INVESTMENTS.

You will notice that the interest earned during the year amounted to £19,967 3s 1d. Our investments are fully classified in the balance-sheet, but if any shareholder would like to see a detailed list, one is available for his inspection. These investments cost £500,509 13s 10d, and at December 31st last (as the report states) showed an appreciation in value of over £15,000. To-day, I am glad to say, they show an appreciation of over £56,000, which I think we may say is a very satisfactory state of affairs. Our investments in America largely consist of British Government securities, part of which were issued in the United States, and, I am pleased to say, acquired on very favourable terms last autumn.

You will notice that a reserve of £2,600 has been made for bad and doubtful debts, which the underwriting management assures me is ample. I am glad to say that the company's transactions with the City Equitable and its associated companies were only of an insignificant nature, and the sum provided, as I have said, is considered more than sufficient to cover all bad and doubtful debts arising from the recent failures to which I have previously alluded, or any other causes.

The greatest asset any insurance company can have is the confidence of its policyholders and the insurance market in general, and I venture to think that the figures in our accounts and the cautious policy we are pursuing, both in the method of our underwriting and in not declaring a dividend on the present occasion, will go far towards attaining the object which we have in view.

Mr John Godwin seconded the resolution, which was carried unanimously.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.

DIFFICULTIES OF THE PAST YEAR'S TRADING.

The annual general meeting of the Army and Navy Co-operative Society, Limited, was held, on the 25th instant, at Caxton Hall, Westminster, London, Rear-Admiral J. de Courcy Hamilton, M.V.O., the chairman, presiding.

The general manager and secretary (Mr W. W. Workman) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said, in the course of his speech: When I had the pleasure of addressing you last year, the Board were in a position to recommend a dividend distribution at the same very favourable rate to which they had for so long been accustomed, notwithstanding the fact that the results for the year had not reached the high level of 1919 to 1920, which constituted a record considerably in advance of any previous year, and enabled us to add £60,000 to our reserve fund. That result, as also the results since 1914, was largely contributed to by special contracts and business incidental to the war.

We were encouraged to maintain our dividend last year, as our normal trade had shown a very satisfactory increase, and the society's financial position admitted of it. It was not, however, without some misgiving as to what the past year's results were likely to be, as, when we met at our last general meeting, the prospects of trade had assumed an unfavourable aspect, which

was unfortunately intensified beyond all reasonable expectation, and resolved itself into the most acute trade depression.

RESULTS OF TAXATION AND RATES.

I need not enter into the causes that have brought this about beyond referring to the impoverishing effect produced by the long-sustained and crushing burdens of taxation and rates, which had seriously diminished the spending power of the public. No class has been more severely hit in this respect than that which constitutes our membership, as, unlike many others, they have not been fortunate enough to have their incomes supplemented to meet the prevailing conditions. Your ability to spend has been seriously diminished.

To add to the difficulties of trading in the past year, the great slump in values of commodities had to be faced, and the consequent reductions in prices had a very serious effect upon our gross profits, which was only partly offset by our claim for refund of excess profits duty paid in previous year.

For some time past we have admitted officers, ex-officers, and cadets of all branches of H.M. forces to deal with the society free of charge, and in the past year we decided to admit nominees of shareholders as hon. members without payment of any subscription. This plan has been very successful, and as a result our orders are steadily increasing, and a large number of deposit order accounts have been opened by new members. Arising out of this, it became necessary to consider the claims of those who paid subscriptions for membership, and, although we shall lose an appreciable revenue by discontinuing the charge for tickets, and enfranchising members from future payments, we feel it is only fair to do so, and their tickets will be renewed without charge in future.

INDIAN BUSINESS AND VALUE OF RUPEE.

In considering the results of 1921-22, it is necessary to refer to some other causes which have operated against us. Our Indian business, which has contributed very materially to our prosperity in previous years, was not only hit by the fall in values of commodities, but had to bear the heavy drop of 33½ per cent. in the value of the rupee. Whilst the volume of trade actually showed an increase over that of the previous year, the net result has been seriously affected. The conditions of trade are still depressed, but it is at least satisfactory to know that those causes are not likely to recur in the current year. Another very important consideration which had affected trading results was the higher level of wages which had prevailed.

Dealing with the accounts, the Chairman said that he wished to call their attention to the very satisfactory financial position of the society, notwithstanding the trading difficulties which they had experienced. They had a cash balance of over £150,000, and their investments in Government and other securities amounted to over £300,000, apart from their debenture fund investment, which amounted to over £96,000. Their proposal was to pay a dividend of 10 per cent., which would leave £14,890 to be carried forward.

As regarded the current year, he could make no pronouncement. Many of the causes that had operated against them were unlikely to recur, and they were hopeful that the action they had taken would prove beneficial to the society's business. They had passed through a very anxious time, having weathered an economic crisis of extraordinary severity, and it was a relief to them to be able to present such a satisfactory and stable financial position as their balance-sheet disclosed.

After discussion, the report and accounts were adopted, and the formal business was transacted.

INDO-EUROPEAN TELEGRAPH COMPANY, LIMITED.

IMPORTANT DEVELOPMENTS.

The fifty-fifth ordinary general meeting of the Indo-European Telegraph Company, Limited, was held, on the 26th instant, at 18 Old Broad Street, London, Mr J. Herbert Tritton, the chairman, presiding.

The secretary (Mr John I. Bethell) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I have now to move that the accounts for the years 1919 and 1920 be and are hereby received and adopted; that a final dividend be and is hereby declared for the year ending December 31, 1921, of £1 2s 6d per share, free of income-tax (making, with the interim dividend already paid, 7 per cent. for the year), payable on May 1, 1922, subject to the Trading with the Enemy Act, to shareholders registered on April 13, 1922.

The report for 1921 contains a paragraph, "There are, however, at this moment certain important developments which the directors hope to have in shape to report to the shareholders at the general meeting." I am very pleased to inform you that the directors have at last good news to communicate.

The Polish concession was signed some time back.

Within the last few days we have been advised by the Russian Department of Posts and Telegraphs that our concession from the Moscow Government was signed on April 12th. This is, of course, a very important fact, as the concession covers the whole territory traversed by our line from the Polish frontier on the west to the Persian frontier on the east, transiting various federated States who have also approved the concession. We owe much to the efforts of our representative in Russia, Mr Watt, in this connection.

Our concession from Persia is already in existence, and that from the German Government, although not actually signed, owing to international politics, has for a long time been agreed in principle and should offer no difficulty. Shareholders will be glad to know that the condition of the company's line is more satisfactory than could, perhaps, have been expected. We are informed from a reliable source that the line is workable for a stretch of over 200 miles north-west of Odessa, whilst east of Odessa a similar state of affairs exists for 300 miles into the Crimea. Beyond the Straits of Kerch the line is in working order between Ekaterinodar and Tiflis. Between Tiflis and Erivan there is a short section where the repairs have not yet been completed. The section Erivan-Djoulfa, on the Russo-Persian frontier, has undergone repair, and is now in working order, as is also the company's Persian section, Djoulfa to Teheran.

Further, you will be pleased to hear that the Black Sea cable, Odessa-Constantinople, is again in working order, and, we understand, has already been officially opened by the Soviet Government representatives at Odessa. This cable will therefore shortly be able again to carry the classes of traffic formerly dealt with by it, and will, we hope, help to re-establish business relations generally with Southern Russia and the Black Sea ports.

We are also informed by the Indo-European Telegraph Department that their Persian lines are in good order and are available at any moment.

The most arduous part of our work is, undoubtedly, the section from the German and Polish frontier on the west to the Polish-Russian frontier on the east. Much of our line in that territory has absolutely disappeared as a separate international line, and where three or four wires were suspended there are now ten to twenty of all sorts, including telephone wires; we therefore, in

THE ANGLO-SOUTH AMERICAN BANK, LIMITED,

Capital and Reserves exceed £13,000,000.

accord with the Polish Government, arrived at the conclusion that our line must be rebuilt in a new location, namely, along the great chaussées or high roads. Our engineering staff is on the spot, as also the material required, but the work of building a fresh line of some 400 miles will occupy some months.

It may interest you to know that every detail for the constructional work has been elaborated here, in conjunction with our chief engineer, Mr Cook, and the variety of material and appliances that have been provided is legion; such things as specially constructed six-wheel lorries for transport of oak poles and other material, a motor caravan to enable the engineers to live on the spot, cars for travelling from one erecting gang to another, all tools and line tackle—in fact, a hundred and one items.

It is of the utmost importance to the shareholders that the Indo route should again carry international traffic, and the directors are making arrangements, where the company's line cannot at once be made available, to obtain from the Governments concerned the temporary use of a wire or wires to enable us to carry through traffic. This should offer no difficulty, and the directors hope before long to be able to announce that the Indo route is once more carrying international traffic, after being totally interrupted since July 31, 1914.

Sir William R. Brooke, K.C.I.E., seconded the resolution, which was carried unanimously.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

COMPANY'S NEW PROGRAMME.

The annual meeting of the Birmingham Small Arms Company, Limited, was held, on the 25th instant, at the Grand Hotel, Birmingham.

Sir Hallowell Rogers (chairman of the company), who presided, proposed the adoption of the report and balance-sheet and the declaration of the preference dividend (leaving £219,815 to be carried to the current year's account).

Having dealt with some of the details of the accounts and the report, the Chairman reviewed the trade of the B.S.A. Engineering group—namely, B.S.A. Tools, Wm. Jessop and Sons, and Burton, Griffiths and Co. He pointed out that the drop in the exports of the country as a whole had led to a greatly diminished demand for tools, high-grade steel and imported machinery, with the consequence that each of these three concerns had been involved in losses. But there was no loss of goodwill, and there was every indication that a revival of trade would restore them to a profit-earning basis.

Summarising his review of the past, Sir Hallowell Rogers said:—During the last 18 months we have been faced by a period of unexampled trade depression just when we had laid down a programme made in the expectation of a great trade revival, but it was to be ready for this revival that Jessop and Sons and Burton, Griffiths and Co. were acquired and the Coventry road shops built. The question which your directors have had to consider is, can we put these additions to our resources to profitable use to-day? I will proceed to tell you why we think we can do so. Our five years' war production of Lewis guns and military rifles gave us an exceptional experience in the most obvious method of reducing costs. We framed our 1919 policy, therefore, on this method. We planned to make the smallest possible range of products on the largest possible scale. At Coventry we had two types of touring car, the Daimler 45 h.p. and the Daimler 30 h.p. Each of these stood out pre-eminently, and the demand for them, both at home and abroad, seemed to be assured. Similarly, the 6-7 h.p. and four and a quarter motor-cycles that we had been making in Birmingham, with our full range of pedal cycles, were well-proved products, and we counted on a similar demand for these.

LARGER RANGE OF CARS.

With the practical closing of the export markets the period of depression in the home trade set in, with its consequent restriction in the spending powers of the public, and our products, because they are of the highest class and therefore of the highest price, suffered most. Just when people were compelled to be as economical as possible, the running cost of high-class large-power cars was exceptionally high. That a limited range was not sufficient to fill our factories became obvious to us, and accordingly last year we put upon the market a 20-h.p. Daimler and a 10-h.p. B.S.A. air-cooled car. The reception of both has been most gratifying, and we intend to carry this principle to its logical conclusion.

It is therefore our settled policy for the Daimler Company to put upon the market a complete range of cars. It will maintain an output of its present standard sizes, 45-h.p. and 30-h.p.; it will add to this cars of all sizes down to and including a 12-h.p. The B.S.A. Company will continue the manufacture of its 10-h.p.

air-cooled car, the success of which is assured. We shall thus be able to offer a car in every size for which experience shows there is a demand. Similarly the B.S.A. Company will also add to its range of motor-cycles.

In every field in which either Daimler or B.S.A. has yet competed, each company (so excellent is their reputation for design and workmanship) has received what may be called a lion's share of the market. We are not, therefore, uneasy as to the sale of our output when every agent can add to his own goodwill by making full use of ours.

This extension of our programme will occupy, we believe, the whole resources of the company. Though our car programme will mostly be a Daimler programme, its execution will demand the full employment of all our factories at Small Heath, Sparkbrook, Redditch, Coventry road, Coventry itself, and Radford, all of which will co-operate to make this programme effective. It will necessitate, too, drawing upon Jessops for its steel supply, and will, we believe, in spite of a temporary falling off in our export trade, completely vindicate the acquisition of the further facilities for manufacture which we recommended to you three years ago.

The Chairman concluded by moving the adoption of the report, Mr Edward Manville, M.P., deputy-chairman, seconded, and, after the chairman had answered several questions, the motion was agreed to.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Dudley Docker moved a vote of thanks to the Chairman. "I know," he said, "how difficult conditions have been. I know something of this board and this business, and I can assure you they have passed through a very difficult time, in my judgment, with great success. It is not satisfactory to know you don't get a dividend; but, in my judgment, it was impossible to earn it."

Mr Berkett Barker seconded, and expressed agreement with the remarks of Mr Docker. The resolution was carried unanimously.

FAIRBAIRN, LAWSON, COMBE, BARBOUR, LIMITED.

BEST RESULTS EVER SHOWN.

The twenty-third ordinary general meeting of Fairbairn, Lawson, Combe, Barbour, Limited, was held, on the 27th instant, at the Liverpool street Hotel, London, Mr J. Campbell Inglis presiding.

The Chairman, in moving the adoption of the report and accounts, said that the association with this company of the old-established businesses of Urquhart, Lindsay, and Co., Limited, and Robertson and Orchar, Limited, was a logical consequence of the establishment of this company in 1900, and would, the directors were convinced, be of great and permanent advantage to it. During the eight years prior to the amalgamation the Dundee firms proved their great earning powers, and the experience gained since the amalgamation confirmed that proof. The essence of the arrangement was that they had put the coping-stone on the edifice of their business. They had previously confined their attention to the preparing and spinning end of textile machinery, while their friends at Dundee had concentrated on weaving and finishing machinery. The whole range now came within the compass of the association.

Dealing with the accounts, he remarked that shareholders would have appreciated that the results shown were the best so far attained by the company. The item of sundry creditors included not only corporation profits tax—that grotesque and unfair imposition, the whole burden of which fell on the ordinary shareholders—but also the balance of the Dundee purchase money. The latter was a transitory item; and he wished he could think that the profits tax would likewise disappear. The directors, in recommending a final dividend of 13 per cent., making 18 per cent. for the year, were not only giving a good return to the ordinary shareholders, but, what was even more important, were adding to the permanent strength of the company by reason of the very substantial addition it enabled them to make to the reserve, with, in addition, a splendid carry forward. As in the case of their own company, the Dundee businesses had also done right well during the five months that they had been under this company's control, and they had the satisfaction of being able, out of the profits of those businesses, to write £50,000 off that part of the purchase money which represented the benefit of current contracts—a course which, he was sure shareholders would agree, was not only prudent but absolutely in the interests of their great undertaking. With regard to the Indian company, production should commence at a very early date, and Major Combe, the managing director, was full of confidence as to the future of the undertaking.

Mr H. L. Whalley seconded the motion, which was carried unanimously.

MONTE VIDEO WATER WORKS COMPANY, LIMITED.

EXCHANGE LOSSES—NEGOTIATIONS WITH THE GOVERNMENT.

The forty-third ordinary general meeting of the Monte Video Water Works Company, Limited, was held, on the 25th instant, at 52 Moorgate, London, Mr James Anderson (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts showed a less favourable result than any they had laid before the shareholders for many years past. That was entirely due to a heavy fall in the sterling value of the currency in which their income was received. Taking the Uruguayan dollar at par, their gross receipts were only £2,212 under those of the year preceding, and that small increase was more than balanced by a saving of £4,675 in the expenses, so that the net result for the year expressed in dollars at par was £2,462 over that of the year preceding. The total amount they had had to charge to last year's profits for loss in exchange came to £35,404. The result was that in the year under review they had nothing to put to reserve, and had even to trench on the carry forward to pay their usual dividend of 8 per cent. The loss on exchange was quite exceptional.

With regard to the working of the business, the progress during the year had been quite satisfactory. The number of services at the end of December was 40,991, an increase of 1,513. Every new customer added to their revenue, but they felt they were nearing a point where they would have seriously to consider whether they were justified in taking any fresh customers, as the maximum demand during the hot weather had almost reached the limit of their capacity to supply. Two years ago they had realised that the time had come when the question of the increasing demand for water should be studied, and in May, 1920, he had placed the whole position before the Uruguayan Government. At that time the Government was considering a canal scheme, under which water would be brought to the neighbourhood of the city by gravitation, and a supply secured at a price lower than that charged by the company. The Government support of that competitive scheme naturally made it impossible for the company to undertake a costly extension of their plant. That was made clear to the Government. Negotiations had arrived at a point where an agreement to sell the property to the Government had been practically reached, when the Minister of Public Works resigned. His successor had intimated that he would require a further technical inspection, and that was the position of matters at the present moment.

The report and accounts were unanimously adopted.

SCHWEPPE'S, LIMITED.

INCREASED PROFITS.

The annual general meeting of Schweppe's, Limited, was held on the 27th instant, at the offices, 1 Connaught place, London, Sir Ivor Philipps, K.C.B., D.S.O., M.P., presiding.

In moving the adoption of the report and accounts, the Chairman said that he thought, on the whole, they might look upon the balance-sheet as a fairly satisfactory one. So long, however, as they had the item of goodwill standing at over £300,000, it could not be said to be thoroughly satisfactory, because there was no getting away from the fact that the ordinary and deferred shares were at present represented by no asset other than goodwill. The gross profit showed an increase of £21,000 and the net profit of £96,722 was an increase of £2,600 over the preceding year. They had not yet been able to get the Government to settle upon the amount of compensation which they proposed to pay them for the use of their Hendon factory during the war, but they had received £4,000 on account, which sum had been included in the present accounts. He particularly desired to draw attention to their Colonial department, the development of which was a comparatively new departure, and was now rapidly increasing its sales. They were taking the very greatest trouble to ensure that the output should be of the very highest quality and made of the very best materials, fully upholding Schweppe's reputation for putting out nothing but the best. He would especially draw attention to their lemon squash, which was second to none on the London market, and by many was considered the best. As to the current year's trade, he did not wish to prophesy, as so much depended upon conditions that would prevail during the year. They were probably not so subject to weather conditions as other mineral water manufacturers, but 1921 was a specially good year, owing to the long spell of warm weather experienced during the summer, and it would have been better still but for the high cost of materials. The result of the year's trading would no doubt have been still better had not the export trade been so restricted. That was partly due to the exchange, which in almost every part of the world was against them, and made it almost impossible to do business. He expressed the hope that when the exchange and

other conditions righted themselves to be able to revert to their pre-war trade on the Continent and other parts of the world.

Mr Charles Williamson Milne (deputy-chairman) seconded the motion, which was unanimously adopted.

NUNDYDROOG MINES, LIMITED.

SATISFACTORY YEAR'S OPERATIONS.

The first ordinary general meeting of the Nundydroog Mines, Limited, was held, on the 26th instant, at Cannon street Hotel, London, Mr V. Herbert Smith (the chairman of the company) presiding.

The Chairman said that the scheme of reorganisation sanctioned by the shareholders in November, 1920, had proved a great success, the issue being considerably over-subscribed. During the re-organisation operations were continued without interruption, and regular monthly returns of gold had been obtained. In the year under review 105,682 tons of quartz were treated at the battery, in addition to which 53,520 tons of tailings and 108,970 tons of slimes were dealt with at the cyanide works, yielding a total of 63,022 ozs. fine gold of an estimated value of £333,829. Compared with the previous year the gold receipts showed a decrease of £32,941. The principal cause of the diminution in the proceeds was to be found in the grade of the ore treated, which showed a falling off of 1 dwt 7 grains per ton. Nevertheless, the profit for the past year amounted to £105,421, against £109,781 in the previous year, being a difference of only £4,360. This comparatively satisfactory result was to a great extent due to the fact that the costs for 1921 showed a decrease of £25,432. The favourable Indian exchange had played an important part in this connection, but every effort had been made during the year to economise where practicable and consistent with efficiency. With a deepening mine, such as they had, the board fully realised the necessity of keeping a vigilant eye on all expenditure, and the managers in London, as well as the superintendent and technical staff in India, were ever watching for improvements in methods of working which gave promise of assisting to bring down operating costs. They were still under the war's influence in the matter of costs of labour and material, which were adverse factors affecting mining enterprises throughout the world. Dividends amounting to 15 per cent. for the year, less income-tax had been paid. In addition a dividend of 10 per cent., less tax, was distributed out of the profits made in the previous year by the old company, the latter distribution being made in accordance with the terms of the reconstruction agreement.

The ore reserves had been well maintained and were estimated at 175,200 tons on December 31st last, showing an increase of 9,400 tons. Close attention had been given to the provision of suitable machinery and plant to permit of mining at greater depth. This, it would be remembered, was the primary object of obtaining fresh capital in the latter part of 1920. In view of the recent improvements which had occurred in the deepest levels the directors continued to take a favourable view of the future of the mines. He moved the adoption of the report and accounts.

Mr Edgar Taylor seconded the motion, which was carried unanimously.

HOPE BROTHERS, LIMITED.

BURDEN OF EXCESSIVE TAXATION.

The twenty-second annual general meeting of Hope Brothers, Limited, was held, on the 27th instant, at the Cannon street Hotel, London, Mr Thomas E. Goodyear (the chairman) presiding.

The secretary (Mr F. L. Brayne), F.C.I.S., having read the notice and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that in common with most other businesses in the country they showed a smaller amount of profit for the past year than they had done for several years. That, as they would judge, was due to the severe fall in prices, and a contributory cause was the heavy taxation to which they were subject. In cause was the heavy taxation, income-tax, corporation tax, local rates, Imperial Health and Unemployment Insurance they had paid more than three times the amount paid in the last pre-war year. He maintained that the present amount of taxation was altogether too excessive, and he expressed the hope that the efforts now being made to effect some relief to the taxpayer might be successful, but persistent and determined effort would be needed if a substantial reduction was to be effected. The present heavy taxation was draining the resources of the country, and was undoubtedly one of the factors which was hindering the general revival in trade. They had, of course, suffered in their manufacturing departments from the severe fall in prices, but their retail department, he was glad to say, had been entirely satisfactory. The total of their trade was slightly less than last year, the reduction occurring almost entirely in the closing weeks of the year, but the volume

of trade—that was, the quantity of goods sold—was largely in excess of the previous year. As to the future, it was, he said, impossible for anyone to prophesy with any degree of confidence. The past year had, he supposed, been the most anxious and difficult in the history of the company, and he did not think they could altogether count on smooth sailing during the current year. He was afraid they must still expect to be handicapped by excessive taxation, and there seemed little likelihood of a cessation of labour troubles and their accompaniment of unemployment. Those factors rendered it impossible to speak with certainty with regard to the future, but he had every confidence that at their next meeting they would be able to show substantially improved results.

Mr W. W. Greenslade seconded the motion, which was agreed to unanimously.

GOLDSMITHS AND SILVERSMITHS COMPANY, LIMITED. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The 23rd ordinary general meeting of the Goldsmiths' and Silversmiths' Co., Limited, was held, on the 28th instant, at the registered office of the company, 112, Regent street, London, Mr A. T. Isaac (the chairman) presiding.

The secretary (Mr James W. Rice) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said: In addition to the payment of 5 per cent. on the cumulative preference shares, they recommend the payment of 5 per cent. on the ordinary shares for the year, carrying forward, including the amount brought in, £22,690 16s 6d, to the new profit and loss account.

Our business is one which deals with objects of personal adornment and the innumerable accessories to a refined level of life. It is therefore not difficult to understand that heavy taxation and flagging industries have affected our returns very seriously. We need not assume, however, that the taste for beautiful things no longer exists, and it is more reasonable to believe that as times improve the old demands will re-assert themselves, and we shall not be behindhand in making up for lost time. In the more necessary articles of household use, such as table appointments, our sales have kept up well. This is satisfactory, as the goods we supply are of the finest quality, and it shows that the public are willing to pay for the best workmanship and the best materials. In fact, "good value tells."

Fine pearls still retain their pride of place. We have during the year sold some very important lines, and our reputation for a fine stock of the choicest pearls is becoming increasingly known. At the present time we are in a position to compete with any house in the trade for the finest quality of pearls. Our military department, which specialises in modelling of every kind, continues to grow, and we have supplied a great number of centre-pieces, guns, aeroplanes, and such like articles in silver and bronze. Our skilled artists have been much praised for their designs. Wrist watches are keeping well to the fore. We are continually improving our models, and are effecting economies in the manufacture which enable us to put them on the market at the lowest possible price. As regards jewellery generally, the lower-priced articles find a fairly ready sale, but the more highly-priced are not in such great demand at the present time.

The report and accounts were unanimously adopted, and the usual formal business transacted.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills dated from Monday to Saturday, May 1-May 6, were opened on April 28, 1922, and the total amount applied for was £81,875,000. Tenders for Monday to Friday bills at £99 7s 11d, about 65 per cent., above in full. Saturday bills at £99 8s 1d and above in full. The average rate of discount was £2 7s 5.81d.

New rules for issuing bank notes have been given by Statute of November 3, 1920. We are authoritative in informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921 until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

Messrs Samuel Montagu and Co. write on April 27th as follows:—

GOLD.

The price of gold on the 25th inst. reached a fresh low record since September, 1919 (when dealings in exportable gold were recommenced), namely, 93s, which represents a premium of 0.6 per cent. over the Bank of England pre-war buying price. The available supplies of gold were taken on account of India. Gold valued at \$2,000,000 has arrived in New York from London. The monthly trade figures for India (including bullion and rupee paper movements) show a balance in favour of that country for March last of 1,42 lacs of rupees, as compared with an adverse balance of 59 lacs in February.

SILVER.

During the speculative activity in China last week, the over-sold position in sterling exchange (tantamount to overbought in tals, i.e., silver) is said to have reached £2,500,000—say, an equivalent of 16,000,000 ounces of silver. Pending decisive developments in the strained political affairs of that country, speculation has now quieted down, and the reflex of this condition of affairs has been felt in the silver market. The bull silver position, naturally, is not an element of strength, and there is always a possibility of some speculators cutting their losses, but it should be remembered that stocks in Shanghai are inclined to shrink, and that some revival of trade had set in recently—a revival which in favourable circumstances might have been accentuated toward the close of next month when the silk crops will need financing. India has bought occasionally during the week, but the main support has come from "bears." The market has not been active, owing to some shortage of supplies, which have not been assisted by any eagerness on the part of American operators to sell, although the U.S. exchange has been, on the whole, firm in tendency, and free offerings of silver therefore might have been expected. The Toronto correspondent of the *Times* states, under date of April 18th last, that a big silver "strike" had been reported in the Yukon at Keno Hill, on the Erickson Gulch. The vein averages three to six feet in width, with ore yields assaying 500 ounces to the ton on the average, while in some cases as many as 6,000 ounces have been taken from one ton.

Reports and Notices.

Following the meetings of the shareholders and noteholders of Harris (Caine) and The General Produce Company, Limited, Mr J. S. Bodinnar, who presided at these meetings, owing to the retirement of the late chairman through illness, was unanimously elected by the board chairman of the company, and Mr Fernley Gardner, J.P., was appointed vice-chairman.

Mr Charles V. Sale has been elected chairman of Messrs Bessler, Waechter and Co., Limited, general merchants, Salisbury House, Finsbury Circus. The other directors are Mr R. M. Glover, Mr E. Ingram Johnson, Sir John Mann, K.B.E., Mr H. C. Ogilvy, Mr C. F. Riley.

Messrs Blades, East, and Blades, Limited, are removing on Monday next to their new offices at 17 Abchurch lane. The firm have carried on business in Abchurch lane for nearly 200 years.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for

£4,390 15s 4 1/2d, being the moiety of the sixth fortnightly instalment of the Debt Service, payable to the Council in respect of the half-year ending June 30, 1922.

MISCELLANEOUS.

J. MANDELBURG AND CO., LIMITED.—The annual report for the year ended December 1921, states that the net profits for the period amounted to £22,414 17s 10d, to which must be added £109,552 13s 6d brought forward from last year, making a total available balance of £131,967 11s 4d. There has been transferred to the depreciation fund the sum of £3,500; the dividend of 7 per cent. on the cumulative preference shares for the year amounts to £4,900. The directors recommend:—The payment of the dividend on the preferred ordinary shares of 8 per cent. for the year, less income-tax (including the interim dividend for the half-year to June 19, 1921, at the rate of 8 per cent. per annum already paid), £11,998; the payment of a dividend of 10 per cent., less income-tax, for the year on the ordinary shares (including the interim dividend for the half-year to June 19, 1921, at the rate of 10 per cent. per annum, already paid), such dividend being calculated in respect of partly-paid shares on the amount for the time being paid up thereon, £45,633 16s; and to carry forward £65,995 15s 4d. The directors report that the profits have been adversely affected by the depression in trade and the very serious fall in values. The whole of the company's works and machinery have been maintained in complete efficiency, the cost having been charged, as heretofore, against the revenue of the current year.

SWAN, HUNTER, AND WIGHAM RICHARDSON, LIMITED.—The report for 1921 shows that after providing for depreciation on buildings, plant, and machinery, and for all Government taxation, &c., there remains a net profit on the year's trading of £415,398, to which has to be added the balance brought forward from the previous year £53,882, making a total of £469,280. Out of this sum it is necessary to provide interest on 4 1/2 per cent. first mortgage debenture stock for the year ending December 31, 1921, £13,742; instalment for sinking fund account, £1,000, leaving a balance to be dealt with by the shareholders in general meeting of £454,538, which the directors recommend should be appropriated as follows:—Interim dividend of 3 per cent. on cumulative preference shares, paid August 31, 1921, £22,195; interim dividend of 3 per cent. on ordinary shares, paid August 31, 1921, free of tax, £51,332; further dividend of 3 per cent. on cumulative preference shares, paid March 7, 1922, making 6 per cent. for the year, £22,195; further dividend of 5 per cent. on ordinary shares, paid March 7, 1922, free of tax, making 8 per cent. for the year, free of tax, £85,553; reserve account, £160,000; reserve for equalisation of dividends, £50,000; for donation to Wallend War Memorial, £10,000; leaving a balance to be carried forward of £53,263. The report states that the ships launched from the company's combined shipyards during 1921 were of an aggregate gross tonnage of 158,632, which was less than the output of the previous year, but greatly exceeded the output of any other British firm or combination. The reduction was due to the prevailing economic depression and consequent fall in shipping freights, to labour troubles in the trades employed, and to the repeated strikes of the coal miners, which had very far-reaching and disastrous effects.

ASSURANCE.

LONDON AND PROVINCIAL MARINE AND GENERAL.—The sixty-second annual report for 1921 shows the balance at the credit of profit and loss as stated in the last report amounted to £27,685 6s 6d; to this has been added interest and dividends, £46,187 5s 11d, and £100,000 transferred from the marine account. After charging loss on investments realised £2,225 17s 10d, and bad debts £899 19s 3d, there remains a balance of £170,746 16s 10d. From this amount £96,000 has been transferred to reserve for Government taxation and other liabilities, and £30,000 to fire and accident account. The directors recommend the payment of a dividend of 2s a share, free of income-tax, being at the rate of 10 per cent. for the year 1921. This will absorb £10,000, leaving £34,746 16s 10d at the credit of profit and loss account. The investments amount to £1,107,299 8s 4d, which, since the last valuation, show a depreciation in value of under £20,000, which is covered by the investment reserve fund of £125,000.

CANADA LIFE ASSURANCE.—The report for 1921 shows that the volume of new business was considerably greater than in any previous year in the company's history. Policies issued during the year, including revivals, amounted to £14,582,626, exceeding the record of the past year by £1,529,636. The new paid-for business, exclusive of dividend additions, totalled £12,752,634, an increase over 1920 of £781,287. The total income was £3,293,831 18s 10d (after including premium income new and renewal of £2,212,023 11s 2d (after deducting payments to other companies for re-assurances); considerations for annuities £59,259 12s 3d interest income including profits from sale of securities £893,579 16s 8d; and income from other sources £128,968 18s 9d. The assets now total £16,458,541 9s, an increase of £819,718 15s 6d for the year. The valuation of the company's securities has been made on the same conservative basis as employed in past years. The policy reserves, computed under the strong and conservative basis of valuation adhered to by the company, amounted to £14,093,790 at December 31st, showing an increase of £1,011,994 as compared with the corresponding reserves of 1920. The surplus, including £383,630 2s 9d, payable to policyholders during 1922, amounts to £1,492,807 9s 9d, being an increase of £178,953 13s 9d over that of the previous year. In addition, the contingent reserve of £102,740 has been maintained. The net surplus earned in 1921 was £534,305 4s 8d, which exceeds by more than £80,000 the net surplus earned in any past year.

SCOTTISH UNION AND NATIONAL.—The fire premium income for last year shows a reduction as compared with that of 1920; the figures are £1,088,785, against £1,313,333. The claims were £633,384 (58.2 per cent. of the premiums), against £710,111 (54 per cent.). The expenses were 38.7 per cent., against 41.9 per cent. The surplus, on the usual basis of allowing 40 per cent. of the premiums as the reserve for unexpired risks, was £123,325, against £43,358. The marine account is that of the Maritime Insurance Company, which has

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

222,035 brought forward.

UNITED ALKALI COMPANY, LIMITED.— With regard to the accounts for the year 1921, the directors regret they are unable at the moment to present the same pending a final settlement in respect of war taxation; they hope, however, that at a comparatively early date these accounts will be presented. The directors take this opportunity of emphasising the difficulties which beset the company, in common with most industrial companies, during 1921. The strike on the part of the miners arrested most of the company's operations during many weeks, whilst the stagnation in trade prevailing throughout the world reflected adversely on the consumption of heavy chemicals, with the result that, even after the termination of the coal strike, much of the company's plant remained idle. Sales and deliveries of the company's products during 1921 hardly approached one-half of the 1920 quantities. Taxation and wages ruled at high figures, but the directors are glad to report that they have come to amicable arrangements with their employees for considerable reductions in the important question of wages. The directors regret their inability to distribute the full 7 per cent. per annum dividend upon the preference shares, but they will recommend to the shareholders at the annual meeting the payment of:—On the £10 cumulative preference shares a dividend of 4½ per share, less income-tax, making, with the interim dividend paid in January last, a dividend of 4 per cent. per annum, less income-tax, on account of the 7 per cent. per annum due for the year.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

COMPARATIVE AVERAGES OF GRAIN.

The following is a statement showing the Quantities Sold and the Average Price of British Corn (Imperial Measure) in the past week, and for the corresponding week in each of the years from 1918 to 1921:—

	QUANTITIES SOLD.			AVERAGE PRICES.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1922.	qrs buh	qrs buh	qrs buh	s d	s d	s d
April 15.....	44,862 6	14,701 0	10,590 4	50 9	41 0	29 0
22.....	37,172 2	8,977 2	7,567 0	51 3	40 2	29 6
1918.....	49,914 3	11,326 4	6,876 3	73 3	56 10	46 8
1919.....	44,459 1	8,894 5	9,737 2	73 1	62 9	48 1
1920.....	41,900 6	9,762 6	7,892 0	72 8	65 0	56 5
1921.....	49,235 1	14,453 7	11,560 1	87 3	46 7	36 10

Weather conditions have continued unfavourable for spring sowings, and work is backward in many districts, so that farmers are hoping for a favourable turn, otherwise fears are expressed that a full acreage may not be laid down. A spell of sunshine would now also greatly benefit growing crops. The general tone of the market ruled firm for breadstuffs, but feeders displayed slight irregularity, with a moderate trade in force. Native wheat continues in moderate supply at the principal statute markets, and prices ruled firmer owing to the general position, suitable milling grades ruling at 54s to 57s per 504 lbs, free on rail. Imported kinds were again dearer, though inclined to ease slightly at the close, with business on a limited scale. No. 1 Northern Manitoba quoted 65s, No. 2 ditto 63s, Rosafe, 64 lbs, 60s, Barusso 62½ lbs, 59s, all ex ship to arrive per 480 lbs, and Australian, ex quay, 62s, per 496 lbs. In the floating and forward cargo section a fair amount of activity was displayed, and prices were maintained, being supported by a fair inquiry from Continental countries, also U.K. millers. Steamers of Australian on passage changed hands at 57s to 57s 4½d, Rosafe, 64 lbs afloat, 57s, Entre Rios, 63½ lbs, arrived, 56s 3d, per 480 lbs. Parcels were also in steady demand, and a good business transpired, chiefly in North American and La Plata descriptions at full rates. The International position remains unaltered, crop reports from the chief producing countries being fairly satisfactory, while the market is largely influenced by the extent of Continental requirements. Flour remains firm, and prices were advanced by 2s per sack for home milled grades. London standard straight run quoted 51s, town households 49s, patents 53s to 54s, all English straights 48s per sack delivered London area. Country all English straight run 48s to 49s per sack, free on rail at London stations. Imported quiet, but rather more firmly held owing to the advance in home made. Manitoba export patents quoted 48s, straights 45s, and Australian 45s to 45s 6d per 280 lbs, ex store. Millers' offals firm and occasionally the turn dearer. Broad bran quoted £8 15s, ordinary ditto £7 15s to £8, middlings £8 15s per ton, ex mill, bags included. Of imported, fancy Plate middlings £8 15s, and Plate pollards £6 17s 6d, landed, per ton. Forward parcels of flour quiet of sale owing to high limits imposed. Canadian patents, April-May seaboard, quoted 47s 6d to 50s 6d, Kansas top patents, April, 47s to 48s, and Australian, May, 42s to 43s per 280 lbs, c.i.f. terms. Maize opened firm but easier since. La Plata 40s 6d, ex ship 42s 6d, landed yellow round African 37s, American mixed 32s 6d, both ex quay per 480 lbs. White African maize meal, spot, quoted £7 17s 6d, ditto, afloat, London, sold £7 8s 9d per ton, c.i.f. Forward maize cargoes remain neglected, and prices mostly easier, particularly for new crop positions. Parcels were dealt in to a fair extent at fluctuating prices. Barley steady, but quiet. English malting ranges from 42s to 60s, feeding sorts 40s to 41s per 448 lbs, free on rail. Californian 40s to 48s, Chilean Chevalier 47s to 52s, Australian ditto 47s 6d to 52s per 448 lbs, La Plata 34s, Tunisian 35s 6d, all landed per 400 lbs. Oats in better request at firmer rates. Native ranges from 30s to 34s as to sample per 336 lbs. Of imported, La Plata, f.a.q., 27s, ditto clipped 29s, No. 2 white clipped American (38 lbs) 26s 6d, No. 2 Canadian western 31s 6d, New Zealand 35s to 40s per 320 lbs, all landed. Oatmeal firmer. London made, all cuts, quoted £18 10s, whole groats £17 10s, rolled oats £19, flaked ditto £20 10s, ordinary Scottish oatmeal £18 10s to £19 10s, American all cuts £18 to £19s 10s per ton. Beans firm. English winters 52s to 54s, old 50s to 57s, good springs 65s to 66s, ordinary 54s to 56s per 532 lbs. Of imported, Madagascar haricot beans, old crop, 10s to 12s, and new crop 13s to 16s. Rangoon hand picked 6s 9d per cwt, and Chinese horse beans £10 15s to £11 15s per ton, ex store. English

peas are in fairly good demand, while supplies are in moderate compass. Choice maples rule at 90s to 92s 6d, ordinary to good 82s to 88s. Duns rule at 60s to 65s per 504 lbs. Of imported, Dutch hand picked 30s, ditto screened 25s, Japanese 47s 6d, Tasmanian best 24s to 25s, New Zealand blue 20s to 24s per cwt. English rye 40s to 50s per 504 lbs free on rail. Lentils, No. 1 split 29s to 30s, No. 2 ditto, also Egyptian, 23s to 24s 6d per 100 lbs. There has been a fair inquiry for homeward grain freights at generally steady rates. The River Plate section showed most activity, and numerous charters were effected at firmer rates. Steamers, up river loading, were fixed up to 32s 6d for May, and 31s 3d June for handy sizes to usual U.K./Continental range of ports. North America quiet, and Northern Range to U.K. quoted 3s 6d per quarter, ditto Continent 14 cents, Russian Baltic done at 25 cents per 100 lbs. There is an expanding inquiry from Montreal, and May-June loading quoted 15-16 cents, 23 cents four ports Denmark, and 26 cents Baltic per 100 lbs. Clipped oats from Northern States, May, done at 3s 3d per quarter, to Antwerp/Hamburg range. Gulf of Mexico to U.K., May, quoted 4s 6d per quarter. From the North Pacific a steamer, May loading, was taken at 37s 6d ton to U.K./Continent. Wheat: Eastern markets dull, and rates quite nominal at about 20s to 20s 6d, Bombay, on dead weight, and Saigon rice 32s, while Australian wheat was fixed at 48s 9d, at which further business is possible to U.K./Continent. Danube grain quiet, and 16s paid to Antwerp Rotterdam, prompt loading, with option Hamburg, at 16s 6d ton.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated April 27th, is as follows:—Pig-iron: The engineering lock-out is acting as a damper upon all enterprise, and is holding up a good deal of business. Prices are unchanged at 90s per ton for No. 3 Cleveland G.M.B. and 96s per ton for East Coast mixed numbers hematite. Manufactured iron and steel: Orders are still insufficient to ensure continuous working. Home demand for steel is bad, but foreign demand is fair. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: Business is very quiet, and only for a few prompt cargoes. Freights are tending lower.

Our Glasgow correspondent (writing on Thursday) says:—Though there was nothing done, holders of Scotch No. 3 G.M.B. asked 95s 6d, f.a.s. Glasgow (with 1s per ton less on trucks, Glasgow), while Middlesbro' No. 3 were 96s, f.o.b. Middlesbro', and mixed numbers East Coast hematite 95s 6d, f.o.b. Middlesbro'—makers' iron in each case. A moderate inquiry exists for pig-iron for Germany, which continues to place contracts through Hanover, instead of direct, for some reason that does not appear. Conditions in the steel trade are not satisfactory, though there is a good deal of rolling power running at certain establishments. Bridge-work contracts are said to have been secured by Sir William Arrol, Limited, and also by the Motherwell Bridge Building Company. This latter includes 2,000 tons for India, and with several other lines, the undertaking, which employs some 1,500 hands, it is stated will be well provided for for several months to come. There has been some talk of steelmakers cutting quotations, but from direct inquiries this seems to be a mistake. Boiler plates remain at £14 (home), £13 10s (export); ship plates £10 and up, £10 to £10 10s (home), £9 to £10 (export); joists, £10 to £10 10s (home), £8 10s to £8 12s 6d (export); angles, £10 (home), and about £9 5s and £8 10s, f.o.b. Glasgow. Malleable iron bars are quiet, all the works running short, at £11 for home, the last Black and galvanised sheets in increasing request for export, for the Far East and Australia especially. The rivet and bolt trade has received a fillip from the improvement in the bridge-building branch. Tube-makers are booking a number of orders for various sizes. In the iron and steel manufacturing departments generally prospects are described as rather better. The state of the coal trade this week is reported by both merchants and masters as nothing short of deplorable. Home inquiry is poorer than it has been for years—some authorities affirm that it never was as bad—and the export position all round is most disappointing, especially in Continental relations. However, an amendment there is looked for soon. Good sorts are selling at no better than about 20s a ton.

Our Sheffield correspondent writes: The decision to extend the lock-out to 47 unions other than the Amalgamated Society of Engineers has further clouded the industrial outlook, and if no settlement is arrived at before Tuesday, when the notices expire, most of the local steel works will be brought to a standstill. Business in the home market is now negligible so far as heavy steel, castings, forgings, and engineers' tools are concerned, nor is there any buying of raw materials. On the other hand, the recent improvement in overseas buying is being more than maintained, and symptoms of recovery of our export markets multiply every week. Ability to give prompt delivery, together with the lower prices current, are bringing in quite a nice crop of orders from various foreign countries, while inquiries have not been so numerous since the beginning of the slump. It is believed by some authorities that but for the intervention of the lock-out several branches of the iron and steel trade would by this time have been well on the way to a stable position. Prices of steel tend to stiffen, but owing to the general unwillingness to buy pig-iron is rather easier. A good deal of the business passing continues to be unremunerative, and firms consider themselves fortunate who are able to carry on even a part of their establishments without incurring actual monetary loss. The air is full of rumour of the impending placing in this

country of huge orders in connection with railway construction and maintenance, and important engineering products in various parts of the world. Cutlery makers are seeking to enforce lower piece rates in the spring knife department, and the operatives are faced with the alternatives of accepting the new list or losing their occupation a month hence. These prices average more than 100 per cent. above the pre-war basis, and their adoption will help the employers in their task of combatting the foreign competition which has captured the bulk of the trade. Inland business in steam coal is extremely quiet, consumption having dropped to a low level, while the uncertainty of the industrial outlook does not encourage buying except on a hand-to-mouth basis. The demand for slacks has fallen off. For the same reason competition is keen for the secondary classes of house coal, and prices are being cut, whereas quotations for best qualities are being maintained.

CUMBERLAND IRON.

Business in the Cumberland and North Lancashire hematite pig-iron market, in consequence of the paralysing effects of the trouble in the engineering and shipbuilding industries, is becoming more and more limited, and makers, though they have in hand sufficient orders to enable them to maintain the present production for this week and next, do not conceal from themselves the fear that a curtailment of activity is not far distant. Trade for months past has never been of a more than hand-to-mouth character. The outlook all along had been too uncertain to warrant users in buying forward, though when Bessemer mixed numbers were reduced to £4 18s 6d per ton at works, the figure at which ordinary iron still stands, there was more of a flutter in the market than was experienced during the whole of last year. Values cannot be said to be the obstacle to an expansion of business, though, as a matter of fact, the price has latterly had to be lowered somewhat to secure orders from the Continent. The position, it may be seen, then, is unsatisfactory, as it always is when only half the number of furnaces that are blowing in normal times are in operation. But for the circumstance that the local steelworks are rolling railway material, even this output of iron could not be absorbed. How much longer the Midlands and Scotland consumers can accept deliveries of special and semi-special qualities of iron no one can say. One thing, however, is certain, and that is that, keenly anxious as makers are not to damp down their furnaces, they will not smelt iron for stock. Rather would they choose the more drastic step, unless, indeed, it could be believed that the shortage of business was of a most temporary character. Of the 12 furnaces that are in draught, seven are in West Cumberland and five in the Furness district, and one of them is on ferro-manganese, for which there is a not inconsiderable export demand. The steel trade is dull, and makers have few orders on their books to execute. Some portion of the production of railway material is being shipped overseas. With a third of the furnaces on low phosphorus iron the needs of the best grade of local hematite ores are fairly substantial, and several pits are raising metal. Superior sorts of ore are quoted at 30s 6d to 34s 6d per ton. The coal trade likewise is dull. The political situation in Ireland and the boycott of North of Ireland boats in the South is responsible for the smaller shipment of Cumberland coal across Channel. Lancashire and Scotland are competing seriously for the diminished orders that are available, and owners in Cumberland are also underbidding each other. The result is that some round coal is being sent to Ireland at 32s per ton, delivered, and some at 28s per ton, f.o.b. It is a fortunate thing that the small coal is wanted for the local by-product coke ovens, and that the iron industry is absorbing practically all the coke that is being made. Certainly there is no other outlet for the Cumberland coke at the present time. East Coast coke supplies to West Cumberland and the Furness district, because of the considerable proportion of special iron being smelted, have risen to 10,000 tons per week. Benzol and sulphate of ammonia command a ready sale. Little is doing in the chemical industry. Sulphuric acid is a good market, but naphthalene and carbolic acid are difficult to dispose of.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market is strong and fairly active, and considerably more business could be done in fine tops if topmakers were in a position to give reasonably early delivery. Unfortunately, the inadequate output from the combs is becoming more acute every week, and constant complaints are being received regarding late delivery. As things are at present, this does not do anything more than cause great inconvenience and worry, but it is obvious that some firms would be placed in a very awkward position if any weakness developed in the wool market. In the meantime, however, there is not the slightest indication of any easing in wool values. Indeed, the general expectation is that prices will show a further advance at the Colonial sales which open in London next Tuesday, and most traders do not anticipate cheaper wool during the next few months at least. Some topmakers are so heavily sold forward that they are refusing to accept new orders, and where business is being done sellers are generally asking an advance of 1d on last week's quotations. This refers to merinos; in fine crossbreds there is also an upward tendency, while medium and low qualities are firm at recent rates. There is an increasing demand for crossbreds, and if this can be maintained it should tend to bring the lower sorts on to an economic level. There is a fair amount of activity in the yarn trade, and spinners report more business during the past week, including some fair weights of crossbreds. Prices are firm, on the whole, and in botanics it is less difficult to sell on the

The Head Office and Works, Bolton.

Faith and Work

When in the great years of Gothic architecture church and cathedral rose into a soaring splendour of pinnacle and spire, the thoughts of great architects became the deeds of great craftsmen.

This was possible because the same faith animated master and man. They had their wage, bed and board, and something over for the small but all-essential embroidery of living, but they wrought for more than this, and laboured for what they could put into their work, not merely for what they could get out of it.

The pride of The Chatwood Safe Company is that something of this fine spirit inspires their work, because most of the employees of the firm to-day are the sons and grandsons of the craftsmen who were associated with Samuel Chatwood in the pioneer days of almost 70 years ago, when he laid down the high standards upon which the great reputation of The Chatwood Safe has been made.

Work of quality, as represented by The Chatwood Safe or Strong Room, is in no way the result of chance. It is the result of the persistent pursuit of a definite aim, and the maintenance of the tradition of "Quality First"—"Quality Last"—and "Quality" all the time.

It is this policy that is the driving force behind the firm, from the Board Room where the Directors sit in conference, to the bench where the youngling apprentice first learns to work up to the Chatwood ideals.

The strong, deep hold that THE CHATWOOD SAFE or Strong Room has upon the Banker and those with treasures to protect, arises from a feeling of confidence that only work of quality and the test of time can give.

Take the first step to contented security to-day by posting a card for THE CHATWOOD SAFE BOOK.

Since 1858.

current basis of values. Steady improvement is also being maintained in the piece trade. The worsted section is more favourably placed than the woollen branch, but even in the latter there is more inquiry, and holders of stocks are less disposed to accept very low offers.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A lively time is expected at the opening of the third series of Colonial sales next Tuesday. The quantity of wool available is about 155,000 bales, arrangements having been made for the auctions to continue three weeks. Raw material markets everywhere appear to be very strong, users in practically all sections being keen to buy. There is just a little danger of too much of the spirit of speculation influencing the game. During the past two months great eagerness has been shown to buy merinos, because fears have been entertained that supplies of merinos were running short, but there is no justification for values being forced above the level of last series. There should be plenty of merino wool to supply all trade requirements, though the figures issued by the British Australian Wool Realisation Association, showing stocks at the end of March, indicate rather a small proportion of merino and fine crossbred combing wool compared with the weight of medium and low wools. Of course, nobody in the trade has any faith in this so-called merino "combing" being as good as it is described. Nevertheless, the writer's opinion is that no mistake has been made in buying, and the present feeling is such that a further appreciation of 5 to 10 per cent. is expected.

The reports of the Genoa Conference show that relations between France, Germany, and Russia are anything but satisfactory. There is trouble in Ireland, manufacturing conditions across the Atlantic are not what they should be, and the engineers' strike in this country will do no good to the general industry of Great Britain. All these things need to be taken into consideration in weighing up wool textile trade prospects, and at the very time they are in existence warehouse accommodation in manufacturing districts is taxed to the utmost, wool supplies being large enough to meet all immediate requirements. Much of the wool bought during the past three months is not yet consumed, but topmakers are forcing the pace for all they are worth, using the inadequacy of the supply as an argument for forcing up the price of tops. The woolcombing operatives, influenced by their leaders, are, however, largely responsible for this state of affairs. Their policy is short-sighted, for it is forcing up the price of clothing at a time when lower prices for piece-goods would stimulate trade with the outside world.

The above-mentioned statement made by the British Australian Wool Realisation Association, to which reference is made, shows stocks and sales of wool since December 31st. The stocks have been reduced about 300,000 bales during the past three months, which reduction can be regarded as very satisfactory. The remaining stock amounts to 1,590,589 bales, of which about 1,200,000 bales are crossbreds. It does not appear to be necessary for the association to make any effort to clear their stocks more rapidly than at present. As far as can be judged, there is every prospect of crossbred wool being absorbed in increasing quantities. The establishment of better trading facilities between Germany and Russia would result in higher prices for crossbreds. These two countries hold the key to the crossbred situation, for Germany is better able to sell crossbred yarns and fabrics to Russia and the Balkan States than any other country.

THE COTTON TRADE.

MANCHESTER, April 27.

There has not been much activity in the market during the past week, and for the most part business has been confined to small sales. A favourable feature has been the settlement of the wages' question. Shippers of piece goods to India have reported a very fair inquiry, but most of the bids have been unworkable. Scattered transactions, however, have been put through for Calcutta and Madras in greys and whites. The China market at the moment is under a cloud, and no trade of any importance can be expected until matters in the Far East are more settled. There has been some improvement in the advices from the Near East, and a few more contracts have been arranged for Egypt and Turkey. Developments in the home trade section are being held back by the unseasonable weather for the time of the year. The yarn market has been generally quiet throughout the week. Restricted operations have occurred in both American and Egyptian counts for home consumption. A fair turnover has been reported in bundle yarns for India.

THE TIMBER MARKET.

(FROM OUR OWN CORRESPONDENT.)

It is anticipated that the opening of navigation of the timber shipping ports of the North of Europe will be a late one this spring—an advantage to holders of building woods on the spot, and a disappointment to those who desire to see a fall in prices. There is already a scarcity of sizes constantly in demand amongst builders, and prices for these are firmer, but taking the building wood market as a whole, spot values have not shown the improvement expected in the early weeks of the year.

Needless to say, should a strong demand for building timber suddenly arise, prices would immediately stiffen, for the new season's arrivals are not expected for some weeks yet; but the future trend of prices for wood for building work next summer is not so much concerned as regards selling at home as of buying abroad. Though large quantities of wood have been purchased from Finland for early delivery, sales of Swedish timber to this country have been but few in consequence of high f.o.b. demands—a basis of £26 a Petrograd standard of 165 cubic feet for 3 by 9 unsorted red deals and £18 for 7 inch, with 20s a standard less for Upper Gulf stocks—quite £2 10s above Finnish basis prices.

FIRE! FIRE! FIRE!

Fire can be a relentless tyrant causing financial disaster to the uninsured or partial ruin to the inadequately protected. The only real effective financial safeguard is to be fully covered by insurance on the basis of present-day values. For attractive lowest rates consistent with soundest financial security please write to the "Fire Office."

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LTD.
41, THREADNEEDLE STREET, LONDON, E.C.2.
ASSETS EXCEEDED £10,000,000.

In the Canadian section of the trade the market is quiet, the trades using spruce as a raw material being in a bad way, whilst the engineering and shipbuilding industries are making but little call for the usually highly valued Canadian yellow pine, neither for American pitch pine and East Indian teak. The recent distribution of large holdings of Canadian spruce held some time ago by the Government has affected forward buying from Canada, but the spruce position is improving weekly, and will continue to do so as the old stocks here are gradually consumed. In the mahogany trade the demand both for logs and boards has been well maintained over the past month—compared with other woods, mahogany is cheap, all things considered. Of American furniture woods the arrivals have been heavy, and stocks have accumulated, with the result that values have weakened.

As regards the native wood trade, our prime productions of hardwoods are having the effect of keeping the foreign supplies down in price. It is gratifying to note that considerable attention is being given by merchants in the West of England to the advantages of wood for paving purposes. The difficulty of this kind of home industry, it seems, has been to guarantee a sufficiency of supplies to cover large contracts, but one presumes this has been overcome, thanks to co-operation and good organisation on the part of merchants.

VEGETABLE OILS AND OILSEEDS.

After a period of marked firmness and rising prices linseed oil has taken an easier turn after £43 paid for prompt oil, ex Hull mill. After recent heavy sales for immediate shipment, supplies, on spot and near, fell slack, but with less demand and improved seed shipments prices have eased off, £42 being current value on Thursday for "spot" and month. Forward positions were also easier, closing at £38 15s May-August, and £36 September-December, ex Hull mill, a decline of 60s per ton from the highest.

Cotton oils on scarcity have again advanced, crude Egyptian being held for £41 10s, and edible refined for £46 10s prompt. Crude soya bean oil is inclined easier for spot, and is steady forward. Little or no change is reported in the demand for rape, castor, ground nut, and palm kernel oils.

Plate linseed has been somewhat irregular, but on balance values are not much altered, spot being fully steady. A fair business has been done to Hull at £19 15s to £19 17s 6d for April, May, and down to £19 10s for May-June; while London has been a ready buyer of Calcutta up to £21 5s April shipment, £20 15s to £21 April-May, and £20 15s May-June. Cottonseed has rallied strong, current value of black Egyptian being £12 15s, May loading, and Bombay £9 2s 6d, April-May. Soya beans are quiet, and chiefly interest the Continent, as also does rapeseed, shipments of both to the U.K. this year being on quite modest lines.

A better demand for oilcakes has sprung up, and linseeds are firm at late rates. Cottons and meals have also moved off more freely.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains steady at recent prices, and at Thursday's Bermondsey sales ox hides sold from 6d to 7d, lights showing a fractional drop of 1d. Best cows sold from 6d to 6½d, and were an 1d up. Calf recovered to some extent from the spectacular fall of last week, heavies selling from 7½d to 8d, and lights 10½d to 11d, increases of 1d to 1½d being shown, as against last week's prices. There is rather more doing in imported hides, and prices are a shade firmer, as it is reported from the River Plate that big blocks of saladeros have been sold to this country and the Continent. The American position has improved, and heavy natives steers have advanced in Chicago to 14 cents, and light native cows to 12½ cents. Buffs are still offered at 8½ cents.

There is a slightly better tone in the sole leather market, and as several "dump" parcels of bends have been cleared, tanners are standing more firm on prices. There has also been a better demand for pinned offal and rough leather, and tanners and merchants are more hopeful. The question of the Government stock of tanned E. India leather has again come to the fore by the receipt of a circular from the Disposals Board, stating the schedule of prices is withdrawn, and that all allocations to factors are cancelled. The department is now open to consider offers for the kips in any quantities, but as there are about 17,000 bales to be disposed of, it will be some time before this stock is off the market.

Upper leathers are a steadier sale; the demand for suede has dropped off, but glacé kid seems inclined to come into its own again with the autumn demand from women. Patent is a good seller, the chief demand being for American sides of the medium grades.

The shoe section is better, and orders have been received in certain centres which will take some time to execute.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 28.

There was only a moderate amount of business stirring during the week, and as regards such articles as tea and sugar, buyers were not inclined to exceed pressing requirements pending the Budget statement.

SUGAR opened the week very quietly, but later a slightly increased trade resulted at a general decline of 6d per cwt for spot parcels. Messrs Tate and Lyle's cubes, sold, 52s 3d to 53s 3d; crushed, 50s; caster, 50s to 50s 6d; icing, 51s; ditto, in drums, 50s 3d; No. 3 crystals, 48s; granulated, fine and coarse, 48s 6d; London and No. 2, 48s; mineral water, 48s 6d; coffee crystals, 54s; yellow crystals, 42s 6d; pieces, 35s to 43s 3d. Granulated, second half May, sold, 48s; and July, 48s. West India crystallised met with but retail support, at 41s 6d to 43s, as to quality. American granulated, spot, sold, 47s 6d to 47s 4½d; Canadian, 47s 4½d. American granulated, arrived in River Thames, sold, 19s 9d; May, 20s to 19s 10½d and 20s 3d; June, 20s to 20s 4½d; with July, 20s 3d to 20s 6d, c.f. and i. terms. White Brazilian, due steamer, sold, 18s 6d, c.f. and i., London. White Mauritius, spot, 43s 9d to 44s 3d. Belgian crystals, October-December, quoted 18s 4½d, f.o.b., Antwerp. Czechoslovakian and Dutch sugars for shipment quite nominal as far as the U.K. market is concerned, also Java sorts. Cuban basis 96 per cent., April-May, sellers, 13s 3d; and Brazilian basis 80 per cent., May, 9s, both c.f. and i. terms, U.K. Cuban stocks, 1,053,700 tons, against 1,045,500 at corresponding period last year. Terminal market quiet. White, May, sold, 19s to 19s 1½d; August, 19s 10½d. Liquid glucose, spot, 26s 6d. American syrup steady, unaltered. Messrs Tate and Lyle's sugars closed 3d per cwt dearer.

COFFEE.—With sustained inquiries for all the finer qualities suitable to the home trade, these realised full prices, but medium and common experienced a rather slow market. Of East Indian, good to fine bold Coorg, sold, 129s to 138s 6d; fair bold Nairobi, 113s; Costa Rica bold, 120s to 136s. Future delivery market dealer, since easier. May, sold, 62s 6d to 60s 10½d; July, 62s 6d to 61s; September, 61s 6d to 60s; and December, 62s to 59s 9d.

COCOA.—Market featureless, actual dealings being of a retail character on about former terms. Supplies, however, are below the average. Butter quiet at 1s 7½d per lb.

TEA.—Public sales of Indian this week embraced some 36,700 packages. There was a fair demand for some invoices of autumnal flavour at steady rates, but otherwise a quiet and easier tone predominated. 24,250 packages Ceylon experienced a slow demand, and prices on balance ruled 1d to 1½d per lb lower.

FRUIT.—A steady but generally quiet tone prevailed with regard to currants. Pyrgos quoted 57s; Amalia, 59s to 60s; Patras, 60s to 62s; Vostizza, 65s to 75s. Valepica raisins steady, quiet. Only a limited inquiry prevails for sultanas at recent level of prices. Dates steady. Hallowee, spot, 44s; Siar, 28s 6d.

RICE.—Market firmer while influenced by higher advices from Rangoon, and where liberal operations have been carried through on Chinese account. Two stars, spot, sold, 14s; new, 15s; ditto, afloat and early May shipment to London at 13s 9d to 14s 6d. No 3 cleaned Rangoon, early May, sold, 14s 6d to 15s 3d, c. and f. terms Levant, double bags. Broken kinds steady, but not much inquired after. Bran steadiest, and May-June Rangoon held for 125s per ton, ex ship terms. Moderate transactions in Rangoon haricot beans on spot at 6s 9d to 6s 6d per cwt.

SPICE.—Pepper market ruled quite steady, and business on a moderate scale. Fair black Singapore, spot, sold, 4d; Aleppy ditto quoted 4½d; Tellicherry, 4½d; Ceylon black, 4½d; white Singapore, spot, 7½d; Muntok, 7½d. To arrive: black Singapore, May-July, 6½d; and Muntok, May-July, 7½d; June-August, 7½d. Zanzibar cloves, spot, 1s 2d; ditto, February-April, steamer, sold, 1s 1d; July-September, 1½d, c.f. and i. terms. Pimento, spot, 2½d. Flake tapioca, spot, sold, 1½d to 1½d per lb. Fair Penang seed pearl, spot, sold, 17s 6d; sago flour, April, steamer, changed hands at 16s; April-June, 15s; and May-July, 14s 7½d. Desiccated coconut: spot lots sold, 42s to 43s; afloat, 39s 9d to 40s 3d; May-June, 39s to 40s. Ginger quiet, but held for steady prices.

JUTE.—Business proceeded with general animation during the greater part of the week, and, though irregular at times, prices closed much higher all round, with consumers following the advance. First grade, spot, Dundee, sold, £29 10s; ditto, spot, Hamburg, £28 5s to £29; April-May, £29 7s 6d; May-June, £30 5s. Lightning grade, spot, Hamburg, £25; ditto, afloat, £25 10s to £26; ditto, April-May, £25 to £26; May-June, £25 15s to £27; Heart grade, April-May, £22 to £22 5s; Tossa No. 3, spot, Dundee, £27 10s. Hessians steady, quiet on spot and firmer forward; 10-oz, spot, 27s; April-May, 27s; 8-oz, spot, 19s 6d; April-May, 20s 6d per 100 yards. A twills, spot, 75s; B, 64s; and sugars afloat, sold, 76s per 100 bags.

HEMP.—Manila very quiet, only G and streaky three qualities meeting with any tangible support. Fine qualities largely nominal. G

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

Advocates of a further reduction in Bank rate point to the late reaction in gilt-edged securities as evidence that some such tonic will be necessary if the Government's conversion schemes, present or expected, are to be made effective; but increases in the Treasury's demands on the Bank for accommodation have not in the past tended to bring Bank-rate down. Yesterday, transactions in commercial bills were done at $2\frac{1}{2}$ per cent., following the announcement of the low rate at which Treasury Bills were allotted.

	May 5, 1922.	Apr. 28, 1922.	Apr. 21, 1922.	Apr. 12, 1922.	Previous Rate and Date Changed.
Bank Rate	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	(Apr. 13, '22)
Bank Deposit Rate	2	2	2	$2\frac{1}{2}$	(Apr. 13, '22)
Discount Call	2	2	2	$2\frac{1}{2}$	(Apr. 13, '22)
Household Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	(Apr. 13, '22)
Market rate 13 months' bills	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	(Apr. 13, '22)

The Bank return was unfavourable. Cash demands at the end of the month had expanded the note circulation by £785,000, while the stock of gold was unchanged, so that the Reserve was £785,000 lower. Its proportion to liabilities had fallen by over 2 to 17.2 per cent., owing to the increase of £16 millions in the Government securities, offset by a decline of only £3½ millions in the Other securities. There was thus an addition of £12 millions to the deposits, the whole of which went to Other. Currency notes outstanding were reduced by £1,900,900 to £301,328,200, which includes £1,634,400 for notes called in but not yet cancelled. The fiduciary issue is £251,743,800, or £58,244,600 below the maximum.

THE STOCK MARKETS.

The Budget was too closely in accord with expectation to exert much influence on the Stock Exchange, but Genoa developments caused uneasiness, which was reflected in the weakness of French issues, while Chinese bonds fell on the war news from that country. War Loan declined on heavy sales, but the Conversion Loan rose to a new high record, partly on the re-investment therein of proceeds of War Loan sales. British Governments stocks, as a whole, were irregular, but closed above worst. Home railway prior charge stocks progressed, and the ordinary stocks, after early depression, closed firmer. The rubber market was dull, oil shares were inclined to droop; and apart from De Beers and Russo-Asiatics, the mining markets showed little vitality. Speculators' attention is mainly absorbed by low-priced industrials, but iron, steel, and engineering shares were weak, owing to the unpromising outlook in the industrial dispute. The Index Number compiled by the *Bankers' Magazine* shows that at April 18th the market value of 387 representative securities had risen to 13.3 per cent. above the level of mid-December, 1921. Up to the middle of March the rise had been 7.3 per cent. Taking mid-December values as 100, fixed-interest security values rose from 108 to 112.9 between March 20th and April 18th, while variable-dividend securities showed a far greater rise—namely, from 105.9 to 114.1. These figures reveal a significant broadening in Stock Exchange business. The net increase in the market value of the 387 securities between March 20th and April 18th reached the large figure of £324,506,000.

COMMODITY MARKETS.

The price of fully middling American raw cotton advancing to 11.18d per lb caused a sympathetic hardening tendency in yarn and cloth quotations. Our Manchester correspondent reports that a larger turnover has taken place in grey shirtings and light bleaching cloths. At the third series of London wool sales last Tuesday, best merinos appreciated from 5 to $7\frac{1}{2}$ per cent. in value,

"tops" improved 10, and scoured merinos 15 per cent. There are no changes in iron quotation, though it is stated that the market for steel is slowly broadening. Best Admiralty coal remains firm at 28s 9d per ton, while house coals are quoted at 30s per ton at pit. Quotations for wheat were slightly easier, and business was dull. Linseed oil advanced in price. In the hide markets there was a decided hardening tendency at work. Trade in the shoe industry is better. Further details of markets from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

In spite of continued uncertainty as to the outcome of Genoa, the foreign exchange market, after a quiet opening, has had a rather more active week than for some time past. The mark has again shown most movement, rising from 1,256 on the 28th up to 1,333 on Wednesday, after having been considerably higher during the day, from which, on a rather more optimistic judgment of the outlook, it has fallen again to 1,270. Future rates remain on a parity with spot. No stability at any level can be looked for until more is known as to the issue of the reparation crisis, which will come to a head on May 31st. In the meantime, reports that America is now considering favourably the possibility of a German loan, should the reparation liability be fixed at a reasonable figure, may explain the recent slight tendency towards recovery. The Paris rate, as was to be expected at this period of strain, has shown a distinct upward tendency, having risen on the week from 48.26 to 48.50, while Brussels has gone up more sharply, from 52.56 to 53.02. From one-half centime last week forward Paris has moved up to one centime per month over spot, while forward Brussels is also one point higher at seven centimes per month over spot. From 4.42½ the dollar, after weakening a little, has moved up to 4.44. It is difficult to foresee future movements, but it should be remembered that prices are still rising in the States more rapidly than here, and that the manufacturers there seem bent on a continuance of this upward movement. Should the disparity continue we may look for higher rates, but it is not easy to judge when the effect of rising prices of raw materials may drive rates in the other direction. Forward rates, at parity for one month and $\frac{1}{8}$ cent over spot for two, remain unchanged on the week. Italy, which reached 84.06 on the 28th, has shown an improving tendency, and is now down to 83.12. It will be interesting to see whether the improvement in the lira, which since the war has generally taken place about this time of the year, will again make itself felt. Among neutral exchanges, Amsterdam has fallen from 11.60½ to 11.57½, after being on Tuesday at 11.56, possibly in connection with recent new flotations in Holland. The Scandinavian currencies have moved in our favour, Stockholm more sharply than usual, to 17.15½. Madrid also shows a higher quotation. Helsingfors at 212½ remains wanted on persistent rumours of a loan. In Central Europe Vienna has started on a new upward movement, rising during the week from 34,000 to 35,500, after being up to 36,500, probably in sympathy with the mark. The Polish mark is also some 500 higher at 18,000. Prague shows little change. Budapest is rather higher, but there is a distinct improvement in Belgrade down to 280 (from 320 last week) on reports of a probable loan in the United States. In the East the rupee is slightly dearer at 1s 3½d, while the yen has also fallen to 2s 1½d. The silver market has been disturbed owing to war in China. On the whole, there has been buying from that country, and some little demand from India, with a consequent small rise in price. The outlook, however, is uncertain. Hong Kong and Shanghai remain unchanged at 2s 6½d and 3s 5d respectively. In South America movements have been small. Valparaiso is unchanged at 39.50, Buenos Ayres a little dearer at 44½d, and Montevideo at 43½d, while Rio is slightly cheaper at 7 15-32d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 29, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	11,190	Supply Services	7,074
Taken from Exchequer balances	199	Interest on Debt	2,200
		Sundries	36
		Reduction of Debt	1,999
	11,389		11,389

The total revenue for the week of £11,489,838 compares with £17,222,528 during the corresponding week of last year. The expenditure for the week was £9,690,218, as compared with £13,575,137 in the same week a year ago. Estate, &c., Duties was the largest item of revenue at £2,210,000, which compares with £610,000 in the previous week. Customs yielded £1,984,000, against £1,700,000 in the previous week, while Excise yielded only £437,000, as compared with £7,438,000 in the preceding week. Property and Income-tax amounted to £1,820,000, as compared with £5,119,000 in the same week last year. Ordinary receipts under Miscellaneous yielded £800,086, while Special Receipts amounted to £1,444,272. In the corresponding period Special Receipts yielded £2,768,000.

The week's operations reduced the National Debt by the sum of £1,998,396, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds by tender	+ 7,163	Public Departments Advances	- 7,850
Bank of England Advances	+ 12,250	Treasury Bills	- 8,565
National Savings Certificates	+ 370	Surrenders of Bonds, &c.	- 104
Sundries	+ 200	Unemployment Insurance	- 200
	+ 19,913	Other Debt	- 4,752
		Exchequer Bonds repaid	- 500
			- 21,911

The receipts from National Savings Certificates at £1,200,000 exceeded the sums repaid under this head by £300,000. The floating debt was reduced by £4,105,000 during the week, and now stands at £951,370,500.

Total Floating Debt	1,390,025,000	1,029,570,500	951,370,500	1,050,000,000

A MAKESHIFT BUDGET.

THE reduction in the standard rate of income-tax by 1s in the £ and the remission of 4d per lb in the standard rate of duty on tea were so close to current forecasts that Monday's Budget was robbed of any element of surprise. Nevertheless, Sir Robert Horne's first Budget speech is one on which he is to be congratulated. Sir Robert is a clear and fluent speaker, and, in pleasing contrast to some previous finance statements made in the House this spring, his matter was well arranged and expounded in a way that could be followed without confusion. In view of the numerous changes made in the estimates for the past year, and the still more varied figures in the Geddes report and elsewhere that have been made public during the past three months in respect of the current year, it is a relief to be able to make a completely fresh start with a clear and definite balance-sheet, the figures of which are discussed in the succeeding article.

But the merits of the speech are not confined to the Chancellor's gift of exposition. It must also be said that the statement is based upon fair and honest estimating, and, subject to one very important qualification, to which we refer later, the difficulties of the position were frankly faced. The Chancellor estimated that on the basis of existing taxation there would be a substantial diminution in Customs and Excise amounting to 10 per cent. in the former case and 17 per cent. in the latter. Under the head of Income and Super-tax, he anticipates a drop to a figure of £362 millions, which, though rather above our forecast of £350 millions, is at the same time 9 per cent. less than the yield in the past year. Altogether the Chancellor expects to lose £87 millions from taxation, in addition to the loss of £81 millions under the head of special receipts (war stores, &c.), which yielded £171 millions last year. The last item remains the most mysterious in the revenue account, for the Chancellor did not explain where he will get 90 millions of special receipts in view of the facts that war stores will only yield 42 millions and that the Government does not propose to count upon any receipts at all in respect of reparations. Except as regards this special item, the revenue appears to us to have been conservatively estimated at 956 millions, and if trade maintains its slightly upward trend, we shall be disappointed if the forecasts are not realised. These estimates of revenue give a surplus of 71 millions over expenditure.

But the Chancellor did not attempt to disguise the fact that on this basis of existing taxation and of our statutory obligations as regards Sinking Fund, and after making the very modest allowance of 25 millions for contingencies, and reductions in postal and telephone rates which will reduce the revenue by 5 millions this year, there would be no surplus at all. The statutory Sinking Fund liabilities are 9 millions for the "New Sinking Fund of 1875," which, together with casual surpluses and annuities, was the means of repaying debt before the war. The amount required for securities tendered for Death Duties and Excess Profits Duty is between 10 and 15 millions, and the Special Sinking Funds attached to the Victory Bonds and 3½ per cent. Conversion Loans require a further 10 millions, making for the year from 30 to 35 millions in all. If these obligations are met out of revenue, the surplus would disappear. The Chancellor, therefore, finds means for a small remission of taxes by suspending all these funds, and by arranging to borrow in order to meet his contractual liabilities under them. This decision, though politically irresistible, is a most unfortunate lapse in our financial record. As Mr Hopkinson pointed out in the House, it is "humbug" to suggest that trade is benefited by withholding money which is due to the investor in Government loans and leaving it with the taxpayer. On the contrary, expenditure upon debt reduction is, as we showed last week, more likely to add to the capital available for trade and industry than remission of taxation. Again, the suggestion that the Government is not going back on its obligations to the investor because the Sinking Funds will be in form maintained is specious but inaccurate. The Sinking Funds were represented by the Government as a means of aiding capital appreciation. But if the Government issues more Conversion Loan in order to secure the funds to carry out its legal obligation to buy up a cer-

tain amount of this very stock, the object of the fund is neutralised. These considerations are of less immediate significance than they might be under other circumstances, since Government securities are high and money cheap. But if the State's obligations to the investor are regarded as subsidiary to the needs of the taxpayer, why boggle at borrowing to pay the interest on the debt as most of the States of Europe are doing? Sir Robert Horne's Budget means that it will be harder to revert to sound finance in the years immediately ahead, and for this reason it would have been better that the taxpayer should have been refused relief until expenditure had been reduced. For the burden of taxation is the most efficient force for compelling Governments, whose natural instinct is to spend money, to curtail their activities.

But the Budget is open to other objections. In the first place, the remission of taxes has only been secured by the assumption that only 25 millions will be needed for supplementary estimates. This compares with an average for the last three years of 100 millions a year. It is true that a large part of last year's supplementaries arose out of the coal dispute, and that in previous years various military operations were on hand, the course of which could not be forecast. In fact, we were to some extent in the realm of war finance. But conditions are still so unsettled both at home and abroad that a margin of only £25 millions is optimistic. It is true that in the ordinary estimates the Government make provision for spending as much on unemployment benefit as in the current year. But we start, as a year ago, with another big industrial dispute in progress, with a shadow of possible heavy expenditure in Ireland, and with none too rosy prospects in India, Egypt, and Mesopotamia. The Chancellor could not have been accused of being pessimistic if he had allowed 50 millions for supplementary estimates.

But the most serious criticism of the Chancellor is that in the course of an hour and a half's review of the country's finance Sir Robert Horne never carried his vision beyond the next twelve months, and though he is well aware that his present effort is but the first of a series of critical Budgets, he never invited the House to take this longer view. Had he done so, he would have had to remind them that the concessions which he now proposes will lose 20 millions more of revenue next year than they do in the current year. That, whereas it is now estimated that special receipts will exceed special expenses by 29 millions (90 millions of receipts to 61 millions of special expenditure), this margin will almost certainly disappear entirely next year. That we shall have to find 50 millions for the American debt next year instead of 25 millions, and that the income of the nation assessable for income-tax will show a still further decline in 1923. In other words, without allowing a penny for debt redemption and though borrowing to meet the statutory Sinking Funds, next year's Budget will show a deficit of at least 100 millions. The Chancellor of the Exchequer may well declare that the Treasury will continue without relaxation its efforts to reduce expenditure, for it has to find this 100 millions out of 823 millions of ordinary expenditure. Even under the most favourable circumstances the consolidated fund and interest charges, which absorb 363 millions of this amount, can hardly be reduced by more than 20 to 25 millions through falling rates of interest, since interest on the bulk of the debt is not capable of modification for several years. Of the remaining 460 millions, 66 millions are the expenses of the Post Office, whose economies must go to the lowering of postal, &c., rates, and of the Revenue Departments, while 90 millions represent pensions, which will fall automatically, but only by a few millions a year. The problem of next year's Budget therefore reduces itself to the necessity of saving 75 millions out of an expenditure on Civil Services and Defence amounting to 304 millions in the current year, or an all round further cut of 25 per cent. If the statutory Sinking Funds, which have this year been suspended are replaced, the cut will have to be over 100 millions, or 33 per cent. Moreover, even these difficulties would be further increased if the general level of prices continues to fall, for the revenue would dwindle while a large part of the charges would remain fixed. Some such picture as this should have been before the House on Monday, when the Government invited it to lower the rate of taxation. Sir Donald Maclean,

it is true, ventured to suggest that the condition of commerce is so parlous that a 5s tax may yield actually more than a 6s tax. But this we do not believe, for the stimulus to enterprise and production which the concession can provide is very small compared with the underlying conditions which determine the state of trade. The Budget is a speculation in the sense that we may be able to retrace our steps if our trade and industry in 1922 encounters fairer weather. The best that can be said for it is that it might have been much worse.

THE YEAR'S BALANCE-SHEET.

THE Treasury are to be congratulated on the clarity of the papers issued this week in connection with the annual budget. One or two obscurities still remain, but with these exceptions the "Financial Statement (1922-23)" gives the general public all the information needed to enable a proper understanding of the year's accounts. The expenditure side of the balance-sheet amounts to £910 millions, in which is £25 millions for contingencies. The net figure is thus £885, which is £20 millions less than the forecast given in our last issue. The difference comes under the head of debt interest, which the Treasury estimates at £310 millions, against an actual expenditure in 1921-2 of £332 millions, the decrease being the amount of the "New Sinking Fund" which is suspended plus the saving from a fall in the rate of interest. There are also minor changes in connection with payment to the Northern Irish Parliament. The final estimates are as follows:—

Service.	Estimate, 1922-23.	Estimate for 1922-23 more (+) or less (—) than 1921-22.
CONSOLIDATED FUND SERVICES.		
National Debt Services.....	£ 335,000,000	— 10,000,000
Payments for Northern Ireland Residuary Share, &c.....	2,500,000	+ 2,500,000
Road Fund	10,000,000	+ 1,600,000
Payments to Local Taxation Accounts, &c.....	9,788,000	— 1,327,000
Land Settlement	3,500,000	— 1,500,000
Other Consolidated Fund Services.....	2,650,000	+ 893,000
Total Consolidated Fund Services	363,438,000	— 7,834,000
SUPPLY SERVICES.		
Army (including Ordnance Factories).....	62,300,000	— 44,365,000
Navy	64,884,000	— 17,595,000
Air Force	10,895,000	— 7,516,000
Civil Services	317,455,000	— 61,580,000
Customs and Excise and Inland Revenue Departments	12,275,000	— 2,426,000
Post Office Services	53,822,000	— 13,343,000
Provision for Supplementary Estimates	25,000,000	— 72,000,000
Total Supply Services	546,631,000	— 218,825,000
Total	910,069,000	— 226,659,000
Estimated Expenditure chargeable against Capital	10,050,000	— 422,000

The Army figures are, of course, affected by the transfer of the Middle East vote to the Civil Services. The remaining figures have been previously commented upon in the *Economist*.

As regards revenue, the Chancellor assumes that on the existing basis the following will be the yield from the revenue:—

	Estimate for 1922-23 on Basis of Existing Taxation.	Estimate for 1922-23 More (+) or Less (—) than Receipts in 1921-22.
Customs	£ 117,250,000	— 12,802,000
Excise	160,750,000	— 33,541,000
	278,000,000	— 46,343,000
Motor Vehicle Duties	10,600,000	— 496,000

The New York Trust Company

	Estimate for 1922-23 on Basis of Existing Taxation.	Estimate for 1922-23 More (+) or Less (—) than Receipts in 1921-22.
Estate, &c., Duties	£ 48,000,000	— 4,191,000
Stamps	18,250,000	— 1,388,000
Land Tax, House Duty, and Mineral Rights Duty.....	3,000,000	+ 410,000
Income Tax (including Super-Tax) ..	362,200,000	+ 36,687,000
Excess Profits Duty, &c.	29,800,000	— 652,000
Corporation Profits Tax	19,750,000	+ 2,234,000
	481,000,000	— 40,274,000
Total Receipts from Taxes	769,600,000	— 87,113,000
Postal Service	40,517,000	+ 517,000
Telegraph Service	5,230,000	+ 670,000
Telephone Service	14,528,000	+ 4,028,000
	60,275,000	+ 3,875,000
Crown Lands	750,000	— 70,000
Interest on Sundry Loans	14,000,000	+ 193,000
Miscellaneous:—		
Ordinary Receipts	22,000,000	— 4,334,000
Special Receipts	90,000,000	— 80,806,000
Total Receipts from Non-Tax Revenue	187,025,000	— 81,142,000
Total Revenue	956,625,000	— 168,255,000
Borrowings to meet Expenditure chargeable against Capital	10,050,000	+ 2,005,000
Borrowings for Advances under Unemployment Insurance Acts, 1921 and 1922	14,500,000	+ 1,550,000

† Included with Income-tax in 1921-22.

Comparison of these figures with the expenditure items shows that the Post Office, which was expected to have a deficit in 1921-2 of £7 millions, and actually had a deficit of £9.6 millions, hoped to convert this into a surplus of £6.45 millions. The major part of this surplus was given away by the Chancellor in the form of reduced letter and postcard rates, lower telephone charges, and the restoration of Sunday collections of letters. These concessions are estimated to cost £6,250,000 in the current year. Inland letters not exceeding 1 oz are to pay 1½d instead of 2d, and postcards 1d instead of 1½d. The reduction in telephone charges disclosed by the Postmaster-General in the House of Commons on Thursday consists mainly of a reduction of £1 10s in the rental charge, and of ½d in the charge for local calls. All these concessions are wise, and should prove helpful to the business community.

Inland Revenue concessions are calculated to absorb £35,200,000 out of the Chancellor's supposed surplus of £46 millions on the old basis of taxation. Of this amount the reduction of one shilling in the £ in the standard rate of income-tax accounts for £32,500,000, and it will cost £53,700,000 in a full year. The remaining £2,700,000 to be lost to Inland Revenue is due to minor charges con-

nected with income-tax, super tax, and excess profits duty. All salaried employees are to be assessed for income-tax on the emoluments of the year of assessment without having the option of assessment on the three years' average. The Exchequer will lose on the change this year, but it is, on the whole, a fair and reasonable proposition, although, like most changes, its initial effect may be unpleasant in some cases. A further provision, on which the Exchequer will lose for the present, embodies the Chancellor's promise that "in suitable cases" the payment of E.P.D. arrears should be spread over five years from January 1, 1922, and yet further loss will accrue from the reduction of the farmers' assessment basis to one-third of annual value of agricultural land. On the other hand, legislation is proposed to stop up various loopholes by which income-tax and super-tax evasion has been recently practised. Finally, it is proposed that income falling within Case iii. of Schedule D shall be made "assessable for the first year of receipt on the basis of the amount of income in that year." This will affect interest on bank deposits, profits from discounts, and some minor items.

The remainder of the concessions come under the heading of Customs and Excise, and will cost £5,000,000, of which the 4d per lb off tea accounts for £4,400,000, and the readjustment of duties on cocoa, coffee, and chicory £440,000, £140,000, and £20,000 respectively. It might at first sight be supposed that the loss from lowering of the tea duty would be largely made up through increased consumption. But of this there is little likelihood, for consumption is already at a level which appears to leave little room for expansion. Tea imported for home consumption in 1921 was 410,717,753 lbs, against 392,823,610 lbs in 1920, 305,690,543 lbs in 1913, and 293,502,382 lbs in 1911.

The final balance-sheet (in millions £) may be summarised in the following form:—

Customs and Excise	273	Debt (including U.S.A.) ..	335
Motor Vehicle Duty	10.6	Other Consolidated Fund	
Inland Revenue	445.8	Charges	28.4
Post Office	54.6	Defence	129.7
Other ordinary non-tax		Civil Services	264.6
revenue	36.7	Revenue Departments	12.3
Special receipts	90	Post Office	53.8
		Special expenditure	61.2
		Contingencies	25
			910.0
		Surplus	.7
			910.7

The crux of the position lies in the last item on each side of the account. Disappointment over special receipts, or the failure to restrain the flow of supplementary estimates within the narrow limit set down, would effectively destroy the Chancellor's projected equilibrium.

THE PROBLEM IN PALESTINE.

THE immediate origins of the problem with which the British Empire is confronted at this moment in Palestine are to be found in the following declaration, made on November 2, 1917, by the British Government, and subsequently endorsed by the Governments of France and Italy:—"His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country."

This declaration was intended to conform to the aspirations, if not to serve the objects, of at least four parties. The British Government hoped, by means of it, to divide the allegiance of the German and Austrian Jews, and thus to sow confusion in the ranks of the enemy during the war. This was their immediate object; but they also looked forward to bringing under British control, by this avenue, a zone of territory covering the eastern approaches to the Suez Canal, in the event of a partition of Asiatic Turkey—a step which would prevent any other Western Power from becoming a dangerous neighbour to one of the "vital arteries" of the British Empire. The Zionist Jews (the other party to the compact) looked forward to turning Palestine into a country with a Jewish population, organised politically as a Jewish national State. On the other hand, the two conditions inserted at the close of the declaration were intended respectively to reassure the local Arabic-speaking population (and also the other Arabs of Asia, whose aspiration for national independence we had already pledged ourselves to recognise and support); and to allay the uneasiness of that party among the Jews of Western Europe and America which regards political and social assimilation to the surrounding Gentile majorities as a better solution for the Jewish question than the establishment of a Jewish territorial sovereignty elsewhere.

These immediate and concrete factors, however, do not go to the root of the Palestinian problem. The fundamental factor is the simultaneous germination of the Western political idea of nationalism in the minds of two utterly different bodies of people—the sedentary Arab population in the southern half of what used to be Asiatic Turkey, and the Jews scattered throughout the world. The essence of Western nationalism is that it conceives national existence as impossible, or at any rate unsubstantial, without a local habitation under the sovereignty of a national State; and, unfortunately, the Palestinian Arabs and the Jews of the Dispersion have set their hearts upon the same territory for their "national home"—the Arabs because they live there now, and the Jews because their ancestors lived there long ago. The British Government have committed themselves not only to giving moral support to both these two incompatible aspirations, but to carrying both into effect under their own aegis, as the local mandatory Power (administering a class "A" mandate).

It must be noted at once that the simultaneous presence of Jewish and Arab inhabitants in Palestine is not an impossibility under non-Western conditions. Hitherto, in the vast region extending between (while excluding) the Western world on the one hand and the Far East on the other, mixed populations have been not the exception but the rule. The Arabic-speaking people of Palestine are not themselves united, except in respect of language. The present impasse arises from the fact that the existing and the prospective inhabitants of Palestine have all alike been impregnated with the intransigent Western ideal of what the political conditions of national existence ought to be. The growing ascendancy of this ideal in Near and Middle Eastern countries has been working havoc for a century past. It has been disentangling mixed populations in which the several nationalities represent mutually indispensable economic classes, and it has been doing this, not by friendly adjustment through peaceful inter-migration, but by the hideous processes of massacre and deportation. A hundred years ago, the population which covered the East was a coat of many colours, and at the

same time a coat without seam, woven from the top throughout. But the men of war who have parted it among themselves by cutting it up into "self-coloured" national units after the Western fashion, have stained it all with blood. Everywhere the minorities have been, and are being, exterminated by the dominant majorities, fanatically determined to carve out national States of some particular uniform hue, produced by a greater or less infusion of red. The protection of minorities is, indeed, one of the most acute and the most difficult problems left by the war, and though projects have been formulated and treaties signed, no practical solution has been found so far. National fanaticism carries all before it, and where minorities still survive under its régime, it is becoming evident that the only possibility of preserving their existence lies in interchanging them geographically on such lines as to concentrate each, as far as possible, within the frontiers of its respective national State. This is the last resort which is more and more finding favour in the case of the Greeks, Armenians, and Turks, and in view of this unmistakable and irresistible current in Eastern affairs, the policy to which the British Government have committed the Empire in Palestine looks extraordinarily hazardous. At a time when old-established minorities in Eastern countries with mixed populations are being ruthlessly killed out, the British Government have pledged themselves to inoculate the comparatively homogeneous Arabic-speaking majority in Palestine with a fresh minority gathered from all the quarters of the earth. A way, therefore, has to be found out of a dangerous situation. In this difficult task the Cabinet will have the benefit of direct consultation with Sir Herbert Samuel, who has recently arrived in London.

STATE SHIPPING PROBLEMS.

THE entry of governments into commercial competition with shipowners since the war is an objectionable development. Apart from the competitive aspect, and looked at by themselves, the experiments have not had satisfactory results. The attempts to operate State ships commercially have shown the inability of bureaucrats to enter with any degree of success an international business requiring for its conduct highly specialised knowledge and experience. In a broader view, taking into account the effect on private enterprise, the development presents itself even less favourably. Government shipping concerns possess unfair advantages over ordinary shipowners, not only because of immunity from taxation, but also in other ways, and it is undesirable that individual initiative should be hampered.

Before 1914 State-owned ships other than war ships were few. During the war the Governments of the United States, France, Australia, and Canada, as well as Great Britain, and certain other countries acquired merchant fleets. This was done primarily to meet war conditions, but since the conclusion of hostilities these ships have (with the exception of the British, which were transferred as soon as possible to private ownership) been maintained and used in trading on Government account. This State trading is being in part terminated or reduced. The indications are, however, that it will be continued for some time on a temporary footing in America, and as a possible permanency in Australia and Canada. The objections to the system, therefore, demand—indeed, they are receiving—attention.

France, after sustaining heavy financial losses, has taken steps to dispose of her commercial fleet. The United States has declared the same policy as her ultimate object, though, for reasons which it is not necessary to recapitulate here in detail, the Shipping Board is still confronted with the problem of attempting to persuade investors to relieve it of the majority of its huge number of war-built ships. President Harding has endorsed the policy of gradual disposal, and has declared that the future must be built solidly on the development of private initiative and operation. Meanwhile, nearly a thousand of the ships are laid up, while 421 are trading for the Government. So far from making any profit, they are causing a loss estimated at 50 million dollars per year. The Government, it may be noted in passing, has a State subsidy scheme under con-

sideration. The Australian Commonwealth Government ships are being worked, though many of them are, like those of private owners, out of commission, and the enterprise has not escaped the world-wide depression. In Canada the building of Government ships was started relatively late. No ship was actually launched till after the armistice, but the programme of providing ships to enable Canada to expand her export trade has been proceeded with, and the ships have been operated—at a loss, it is almost needless to say—by the Canadian Government Mercantile Marine, Limited. Seventeen out of the fleet of 65 are laid up. Ex-enemy ships taken by way of reparation from Germany have contributed to the total of Government-owned trading vessels. Though the British policy has been for the State not to enter into the shipping business, a number of ex-enemy ships are still being run by the Indian Government. From the reply to a recent question in Parliament, it appears that this is not to continue indefinitely, though for the moment it is "convenient."

Though by no means alone in the opinion that the entry of governments into shipping business is inadvisable, shipowners have naturally been the most active in pressing this view. More than a year ago the Chamber of Shipping of the United Kingdom adopted a resolution recording its conviction that the best interests of the communities of the world would be served by leaving shipping entirely to private enterprise. The Chamber has now issued a statement putting forward the view that the immunity of public ships from various obligations gravely threatens the shipping industry, and, indeed, the prosperity of overseas trade as a whole. The extension of immunity to taxation is especially serious. It is impossible (it is pointed out) for private shipping, often paying income-tax in two or more countries, to compete with State-owned shipping paying no income-tax to its own and successfully claiming immunity from taxation in every other country.

Immunity from taxation is only one of the advantages enjoyed by State ships. There are others which it may be easier to level, and to these particular attention is being directed. The principle is established that a State cannot be made subject to the jurisdiction of its own courts either in respect of its property or otherwise, unless it chooses to submit to the jurisdiction. This rule, which prevails in England, and, subject to variations, also under some other systems of law, is applied not only to the home Government, but also to foreign States, which consequently cannot be proceeded against in respect of their maritime property. The practical result is that no claim can be enforced for collision damage, salvage, or towage against a ship owned by or in the service of a sovereign State, nor can cargo owners sue the State as carrier for short delivery or damage. Bankers, underwriters, harbour and dock authorities, ship repairers, and a variety of other interests are, of course, affected equally with shipowners and merchants.

In view of the importance of the matter, the Comité Maritime International has decided, at the suggestion of the Chamber of Shipping, to make this the sole subject for discussion at its next conference, which is to be held in London in October. In the meantime comparative information is being obtained from the various maritime countries, and with the questionnaire which has been issued is being circulated a valuable memorandum on the subject prepared by Mr Justice Hill, one of the Judges of the Admiralty Court.

It is suggested that steps should be taken to lead to the signing of an international convention recognising the principle that State maritime property other than ships of war should be placed on the same footing as that of privately owned, and that ships of war should, to a limited

extent, be made subject to the jurisdiction of the courts. The movement should certainly command support, and indeed, at the annual meeting of the Association of British Chambers of Commerce a week or two ago, a resolution was passed deprecating the extension of the doctrine of the immunity of sovereign States in respect of maritime property, whether cargoes or vessels, to such property when employed for ordinary commercial purposes. Other commercial organisations which have signified their intention of supporting the Chamber of Shipping in its campaign include the Bankers' Association, the Committee of Lloyd's, the Dock and Harbour Authorities' Association, the Manchester Association of Importers and Exporters, and the Shipbuilders' Federation.

THE INVESTMENT VALUE OF LIFE ASSURANCE.

THE instinct of the public is sound sometimes. We had a striking instance during 1919 and 1920, when young men released from war service disregarded omens which superficially were unfavourable, and plastered the life assurance offices with proposals for assurance. At a time when some of the best offices were compelled through the depreciation of investments to suspend bonus distributions, they were subjected to a barrage of new entrants. It was a remarkable exhibition of prescience on the part of all those who contributed to make 1919 and 1920 the most flourishing years for new business which the British life offices have ever known. Since then there has been some falling off; many of those who would wish to insure their lives are out of a job; many others have so much difficulty in keeping up their existing policies that they cannot contemplate any further assurance. But even in 1921 the general level of new business was much in advance of that of the average pre-war years.

What we propose to do is to indicate how rapidly the clouds which overshadowed life offices during the years of war and of uneasy peace are passing away, and how bright are the prospects of those who had the good sense to insure when they could, however unfavourable may have been the outlook at the moment. We are not concerned at present with life or endowment assurance under definite fixed contracts—"non-profit" assurance. A "non-profit" contract must be discharged in full, however much a life office may suffer from war or other losses. The public, which pays the premium, is concerned merely with security. But the co-operative system of assuring "with profits" has taken so strong a hold upon public imagination that it may be depended upon to recover from any temporary setbacks, and to appeal once more to all those who love to give hostages to fortune, and are prepared to lay out immediate cash in the hope of future gain. For all those who have adopted, or intend as soon as maybe to adopt, life assurance on a with-profit co-operative basis, the first consideration is the likelihood of substantial profits being earned by the companies of their selection. And, happily, there are nowadays so many good life offices that the selection of a thoroughly bad one for a with-profit assurance may be left out of account.

Life assurance companies were rarely, if ever, in a better position to earn profits for their policyholders than they are just now. We shall see this as we come to examine the sources whence flow their profits. They are: first, the margin of net interest earned by the funds above the rate assumed in the valuation of liabilities; secondly, the margin between the death rate assumed in the calculations and the death rate actually experienced; and, thirdly, the margin between the allowance made for expenses and the actual expenditure. The principal positive source of loss is the decline in the value of investments, a decline which compels life offices to write down the book values of their securities which are unsold, and to meet the deficiency on those which are sold. At present the sources of profit—except that which springs from diminished expenditure—are open and flowing strongly,

while the chief source of loss, the deadly continuous depreciation in investment values, has been dammed. And behind the dam the reservoir of investment values is rising.

Let us look for a while at the first two sources of profit—the margin of interest earnings and the savings on mortality. The rates of interest assumed at the valuation of the strong and prudent offices remain much the same as they were before the war—usually 3 per cent. The 2½ per cent. rate, though maintained by a few offices, is out of favour, and a rate of 3½ per cent. does not take sufficient account of the uncertain future. The actual net interest earnings of the offices on their large funds are higher than they were before the war. The greater yield upon new and revised investments more than compensates for the increased rate of income-tax. The actual rate earned ranges from 4 to 4½ per cent. net. The life offices receive an income-tax abatement in respect of the expenses of carrying on their business, so that they have not paid the full 6s rate, and will not pay the full new 5s rate. But they will, of course, get the Budget remission of 1s in the £ on the tax which they have been charged. This will give them, in respect of the current financial year, an addition of from 3s to 4s per cent. on their net rates of interest earned. If, then, we take the valuation rate at 3 per cent., the net average rates earned will range this year from about £4 3s 6d per cent. to £4 8s 6d per cent. under the reduced rate of taxation. This profit margin of £1 3s 6d to £1 8s 6d per cent. calculated on millions of funds, amounts to a very large sum indeed; on say five millions and extended over a valuation period of five years, it amounts to a profit from interest earnings of £293,000 to £356,000.

Then we come to the profit on mortality. The life tables employed by the offices get out of date very quickly. The latest one—the British Office's table—expresses the mortality experienced by assured lives during the generation which ended in 1893. Since the data were collected the conditions of daily existence in this country have become more and more healthy among the classes with which life offices are chiefly concerned. Medical science, by enabling offices to select their risks more carefully, and by protecting us from the malevolence of the microbes which slew our fathers, has reduced the death rate most materially. Even war casualties were not able to catch up with the normal improvement in the mortality rates of the newest of the life tables. The experience of life offices varies; taking it generally one may say that the death claims paid are not more than three-quarters of those "expected" by the tables, and in some recent years have been no more than two-thirds. One cannot put the profit on mortality into figures, but it is obviously great and increasing. The margin between expenses calculated for and expenses incurred tends to be a diminishing source of profit. Premium rates remain unaltered, but the ratio of expenses to premiums rises. This tendency towards a higher cost of administration is the one fly in the ointment of "with-profit" policyholders.

The most favourable feature of all is, of course, the damming of that open drain upon profits—the continual depreciation in investment values. But now that investment values are rising, the heavy writing down of the past seven years is all in favour of future profit earnings. The valuation reports which have been issued this year tell the same story—the appreciation instead of the depreciation of investments, and the resumption of bonuses where they had been suspended. Life offices do not write up the book value of their securities, yet they benefit directly by appreciation. They make judicious sales and reinvestments, they are able to release funds set aside as an investment reserve, and so long as they have in hand, as it were, a hidden appreciation they are independent of market fluctuations. It is not too much to say that the end of depreciation—if we have really come to the end—together with the opening of the sources of profit described in this article, will enable life offices generally to restore their pre-war rates of bonus distributions. No one doubted the value of life assurance as an investment before the war; no one, should the present favourable conditions continue, will have reason to doubt it in the future for so far ahead as we can now see it.

OUR INDEX NUMBER.

AFTER the upward movement for March, our index number of prices of wholesale commodities has fallen back slightly for April, the actual decline amounting to 12 points, making the total 4285. This compares with 4929 a year ago and 4357 at the end of December last. Last month's movement is of no economic significance, and prices may perhaps be described as steady, though not yet stable. The comparative table below shows that there have been no wide fluctuations in the various groups, the largest movements being a rise of 28 points in primary foodstuffs and a decline of a similar amount in textiles. The end of April figure, it will be seen, is 26 points higher than the lowest point touched recently, namely, 4259 at the end of February:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Oil, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	879	352	616	464	553	2865	118.8
Dec., 1915....	897	446	731	711	848	3634	165.2
Dec., 1917....	1286	686	1684	839	1348	5845	265.9
Nov., 1918....	1289	782	1848	908	1389	6212	282.6
Dec., 1918....	1303	782	1805	866	1337	6094	277.0
Dec., 1919....	1441	881	2442	1145	1453	7364	334.7
Mar., 1920....	1808	914	2974	1246	1709	8382	379.6
Dec., 1920....	1344	805	1284	1216	1275	5924	269.8
Dec., 1921....	921	636	1106	762	931	4357	198.0
Jan., 1922....	907	654	1066	730	925	4284	194.7
Feb., 1922....	948	640	1037	696	936	4259	193.6
Mar., 1922....	980	687	1038	700	892	4297	195.8
April, 1922....	1008	667	1010	709	890	4285	194.8

Cereals show a very slight decline, but meat and potatoes have risen, the latter quite substantially. In the second group of foodstuffs tea, sugar, and butter are lower, but there was a slight rise in coffee. With the exception of an increase in jute, movements in the textile group were all in a downward direction, the largest being in silk and flax. Movements in cotton prices during month have been small and unimportant, the net result being a very small decline on balance. The rise in jute is attributed by Messrs Hindley and Co. in their monthly trade review to "reports of unfavourable weather for sowing the new crop coming on top of the short crop available this season."

In the minerals group iron and steel were unchanged, but the minor metals moved up slightly. Steam coal was higher, but this was more than offset by a decline in household coal. In the miscellaneous group the only movements of consequence were a rise in oilseeds and a decline in indigo. Movements in the various groups are set out in tabular form below, the figure 50 representing the average price during the base period 1901-5 in each case:—

Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.
Wheat—For... 108	+	Cotton A... 94	—	Copper... 49	+
English... 93	+	Cotton B... 120	—	Minerals... 709	+
Flour... 100	+	Yarn... 106	—	B. timber... 103	—
Barley... 88	—	Cloth... 125	—	Leather... 127	—
Oats... 84	—	Wool, Eng... 92	—	Petroleum... 137	—
Potatoes... 106	+	Aus. Wool... 91	—	Oil... 79	—
Rice... 102	—	Silk... 112	—	Tallow... 60	—
Beef... 102	—	Flax... 121	—	Indigo... 127	—
Mutton... 112	+	Hemp... 47	—	Crytals... 125	—
Pork... 113	+	Jute... 100	+	Rubber... 11	—
Cereals & Meat... 1008	+	Textiles... 1010	—	Miscellaneous... 890	—
Tea... 106	—	Pig-iron... 97	—	Total... 4285	—
Coffee... 102	—	Steel rails... 79	—		
Sugar cane... 150	+	Iron bars... 92	—		
Sugar beet... 106	—	Coal, steam... 125	—		
Butter... 86	—	House coal... 107	—		
Tobacco... 116	—	Lead... 101	—		
Other foods... 667	—	Tin... 59	+		

The position of the totals for the various groups compared with that obtaining at the outbreak of war

may be seen from the next table, in which the indices for the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1918....	226	222	293	186	241	236
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
June, 1921....	203	188	158	210	185	188
Dec., 1921....	159	180	180	164	168	170
Jan., 1922....	157	186	173	158	167	167
Feb., 1922....	164	182	168	150	169	166
March, 1922....	169	195	168	151	161	167
April, 1922....	174	189	164	152	160	167

A levelling process has recently been observable between the groups, but secondary foodstuffs are still much higher than any of the other groups.

The final table shows how the latest price index numbers of some of the principal countries compare with pre-war levels:—

	Nov. 1918.	Highest, 1920.	End of 1921.	End of Feb., 1922.	End of Mar., 1922.
United States..	205	227 (Jan.)	123	133	132
France.....	358	591 (Apr.)	347	329	315
Italy.....	438	679 (Apr.)	594	562	534
Germany.....	..	5899*	3348	4888	5899
Switzerland....	..	325 (Jan.)	176	170	163
Sweden.....	367	366 (June)	172	166	164
Denmark.....	292	403 (Oct.)	178	177	182
Japan.....	214	322 (Mar.)	209	205	200

The latest figures are those referring to the end of March, and are therefore a month behind those given above for this country. The downward tendency is in most cases still continuing, but in the case of the United States there was only a very slight movement, which has followed an upward trend in previous months. In the case of Denmark the increase is due to coal, petroleum, and foodstuffs, which were affected by ice difficulties in February. Prices in Germany continue to mount, but the enormous rise in mark prices has been outstripped by the rise in the foreign exchanges.

THE WORK OF THE CONFERENCE.

(FROM OUR OWN CORRESPONDENT.)

GENOA, May 1.

As was anticipated last week, there was a confusion in the Russian mind between "Writing down" and "Writing off." The Russian reply meant cancellation of War Debts. This was not, however, the intention of the Allies, and though Mr Lloyd George is probably prepared to accept writing off, yet, in view of the precedent which would thus be created, he is in difficulties as to complete annulment. About 85 per cent. of the War Debt is owing to Great Britain. A result will probably be arrived at by admitting equal counter-claims from the Soviets arising out of Allied campaigns against them.

Apart, however, from this difference of interpretation, progress has been held up by the unsatisfactory attitude of the Russian delegates when their reply came to a verbal discussion. They are clearly determined to secure credits and "de jure" recognition before admitting claims.

To avoid endless discussion, a species of second "Ultimatum" is to be handed to the Russians, and the acceptance of the contents is to be *sine qua non* of further negotiations. This document will be, in fact, the London experts' report—reduced and revised to a preamble and ten clauses. At the time of writing, it has not yet come into existence. The preamble, which contains the benefits that will accrue to Russia, has been agreed upon. The clauses, however, cannot be drawn up until the very divergent Franco-Belgian and Anglo-Italian versions have been reconciled. The French have published the version which they wish adopted, but their views are too reactionary to stand any chance of success. They have, in fact, ignored the Russian reply of April 15th, and re-

verted to the London experts' programme already in part abandoned. In consequence, Tchicherin has published a note in which he warns the Commission that if his conditions of the 15th are not accepted, he will feel himself at liberty to withdraw the concessions he made in the note of that date.

When the new "Ultimatum" is finally presented, the same three issues will be raised. Firstly, the Russians will be asked to re-confirm the recognition of pre-war debts in return for a reasonable moratorium (not 30 years, as they suggest). Secondly, war debts are to be offset. Thirdly, compensation to private individuals for damages suffered under the Soviet régime must be acknowledged.

On this 3rd point the inviting Powers are not unanimous. Whilst rejecting the Soviet propositions, they are divided as to the extent of compensation. Italy and Great Britain would accept restitution of property and concessions in the form of fresh leases, but this does not satisfy the French and Belgians, who want actual compensation, or, at least, the power to realise through mortgaging their holdings. The Russian solution falls far short of satisfying either; all it concedes is a prior right to former concessionaires to repurchase their concessions. The chief obstacles are the Soviet laws and principles as to nationalisation, the right of inheritance, and alienation of property.

On the other side of the picture, the Russian delegation will probably be quite shrewd enough to question the *real* benefits which the preamble offers. Apart from the International Corporation, the only offer of credits comes from Great Britain, who proposes that the Export Credits and the Trade Facilities Acts will meet the case. The exports credits scheme has not hitherto proved attractive for risks in better-known European countries, so that without amendment British traders are not likely to use it for Russia. The Trade Facilities Act enables money to be borrowed cheaply, but it does not absolve the borrowers of risk. It is extremely doubtful whether either of these measures will appreciably meet the situation, whilst the International Corporation will firstly have to begin operations on a small scale, and, secondly, has no intention of pledging itself to work in Russia.

The Russians talk of £50,000,000 as their first year's requirement, but it seems unlikely that even a very much smaller sum will be forthcoming from any or all of the alternatives given. The meetings of the Economic and Transport Sub-commissions have been marked by opposition on the part of the Succession States of the Austro-Hungarian Empire to the clear-cut doctrines laid down in the London experts' report, and their refusal to ratify the Porto Rosa conventions unless these conventions are accepted as applicable to the Conference as a whole. Thus Articles 41 and 42* have been redrafted so as to avoid the binding convention of Porto Rosa, and to recommend only that the Porto Rosa decisions should serve as examples for individual agreements. Articles 46, 47, 48, and 49† are reduced to three clauses devoid of the original fundamental principle that restraint of imports and exports should be exercised through tariffs instead of by prohibitions and permits. M Yankovitch (Serbia) protested in no mild terms against the blessings of free trade being forced on the Succession States and the Succession States alone. Article 43‡ gave an opportunity for the Roumanian delegate to touch the sublime by protesting against adequate publication of Customs Tariffs—such an obligation being an infringement of sovereignty! Both Austrian and Hungarian representatives advocated a uniform tariff for Central Europe, a suggestion which was opposed by the Serbian delegate.

* These Articles suggested that the signatories of the Porto Rosa agreement relative to restrictions and prohibitions should take measures to give effect to the recommendations of that Conference, and that Customs duties and restrictions should be governed by principles set forth in following articles.

† The general purport of these articles was as follows:—Import and export restrictions and prohibitions are harmful, and such as are established for special purposes should be limited and publicly announced; as instruments of restriction Customs duties are preferable to prohibition modified by licence; pending the abolition of the latter system conditions for granting licences should be uniformly applicable, and clearly announced; licensing systems should permit no discrimination.

‡ Suggesting that all Customs tariffs should be clearly and fully published.

The work of the Commission No. 2 (Finance) is completed with the exception of the question of credits. On this subject Italian proposals were heard on the 25th. The fourth and last clause of these proposals contains something fresh in that States should agree to adopt uniformity in the publishing of their accounts, these accounts to be received by a central organisation. This central body should be given powers to ascertain that measures for the rehabilitation of national finances are actually put into operation, and that the States observe the conditions under which loans have been granted to them. These proposals were accepted, and the League of Nations is to be charged with their application. Whether the Conference as a whole will endorse them remains to be seen. The same meeting rejected the idea of an International Bank, presumably Mr Frank Vanderlip's conception.

The Credit Sub-commission heard also an exposé by Rakovsky of the Russian economic situation. Even outside the famine areas the crops are but 60 per cent. of the pre-war normal. The use of agricultural machinery and manure has been reduced by from 80 to 90 per cent. The total value of the paper roubles now in circulation is little more than £5,000,000. These conditions, it is claimed, are the result of the prolonged state of war. The Sub-commission has had in hand also the International Corporation. The formation of this body has been approved, and in addition to the four inviting Powers, Germany, Canada, Holland, the Scandinavian countries, and Japan have signified their intention, subject to final confirmation after the Conference, of taking shares in the original company. The strongest point in favour of the Corporation is that under it European creditors will for once provide a united front, and States which default to it will find borrowing a difficult matter.

The Transport Commission has presented its resolutions, which have been arrived at with comparative ease, due, no doubt, to the greater number of technical delegates and to the quiet determination of Sir Francis Dent. The Barcelona and Porto Rosa findings are re-endorsed, but more important still is the decision to convoke in Paris, as soon as may be, a conference of technical representatives of all the railway administrations of Europe, including also China and Japan. Among other matters, this conference is to consider "the creation of a permanent conference of railway administrations for the assimilation and improvement of the equipment and operating methods of the railways with a view to international traffics. Among the principal items on the agenda of this conference shall be the question of direct tariffs and the mitigation of the impediments to international transport occasioned by exchange fluctuations.

A plenary sitting of the Conference is to be held on Wednesday to pass the resolutions of the Finance, Economic, and Transport commissions. This will leave only the Russian question and the Pact of Non-aggression on the agenda.

GENOA, May 2.

The following resolution was passed yesterday (Monday) at a meeting of the Economic Commission:—"The Conference recalls the principle of the equitable treatment of commerce set out in Art. 23 of the Covenant of the League of Nations, and earnestly recommends that commercial relations should be resumed upon the basis of commercial treaties resting, on the one hand, upon the system of reciprocity adapted to special circumstances, and containing, on the other hand, so far as possible, the most-favoured-nation clauses." To this was appended this note:—"The majority of the countries represented on the first sub-commission, while recognising temporary difficulties which may preclude the general adoption of the most-favoured treatment, declared that this was the goal at which they should aim."

This is the outcome of a discussion on tariffs, and particularly of a strong speech by Sir Philip Lloyd Graeme on the advisability of the universal application of the most-favoured-nation clause. A motion to this effect was introduced by Germany, but met with unyielding opposition by the French. Hence the note appended to the resolution. The motion received the support of the Succession States and Japan, but the French point of view

seemed to be favoured by the Dominion representatives alone. It is one of the interesting sides to the economic discussions which have taken place—this attitude of the Dominions, and especially of India, to be bound by none of the resolutions relating to trade and tariff, their views conflicting in many cases with those of the United Kingdom.

Notes of the Week.

Labour Views on the Budget.—In Labour circles, the Budget is regarded as a rich man's budget, writes our Labour correspondent. The reduction of the income-tax by a shilling is deemed to be a much greater concession than 4d per lb off tea. The theory that the income-tax reduction will assist in revival of trade and thereby benefit the community as a whole is not accepted. The Labour movement does not believe that a shilling off the income-tax will do any more to provide markets for British goods than drastic wage reductions have done. It is conceived to be merely a sop to those who have for long clamoured for reducing income-tax. The Budget is regarded as bad finance, and strong objection is taken to the reduction of the income-tax at the expense of the Sinking Fund, especially having regard to the size of the national debt. The general Labour view is that though relief for the taxpayer is desirable, the financial situation is such as to make any real diminution of taxation impracticable, and that reduced taxation merely means postponing and not relieving burdens. The Labour Party still looks to a special war debt redemption levy as being the main plank in a national financial programme, and it is held that sooner or later the State must inevitably proceed on some such lines.

Engineers and the Industrial Court.—Our Labour correspondent writes:—"After a month's lock-out of the members of the Amalgamated Engineering Union and the final breakdown of negotiations between the Engineering Employers' Federation and the other unions, the Government decided to hold an enquiry under the Industrial Courts Act, 1919. The breakdown resulted from disagreement as to who was to determine what was a "material change" in working conditions. The employers claimed the right to determine this question; the trade unions naturally resisted this claim. Whilst conversations were proceeding, the lock-out notices against the members of the forty-seven unions did not operate; but when the discussion was broken off, the notices began to run, and over half-a-million more men are now locked out. The employers have, however, posted notices intimating that workers who return individually and accept the terms of the Federation's memorandum will be taken on, provided, of course, work is available. Notwithstanding the protest of Sir Allen Smith against any intention to break the unions, which was repeated at the first day's proceedings of the Industrial Court, the men feel that this step is an attempt in that direction; for clearly, men cannot return to work under the conditions laid down by the employers and at the same time remain members of their unions. A preliminary meeting of the two sides together with Sir William Mackenzie, president of the Industrial Court, was held last Saturday, and the first meeting of the Court was held on Wednesday. Though it is clearly the business of the employers to justify their attitude, Sir Allen Smith has taken the extraordinary line of merely putting in the documents, making a short statement to the Court, and declining to call any witnesses. On the men's side, the case is in the hands of Mr Brownlie and Mr Smethurst for the A.E.U., whilst the other unions are represented by Mr H. H. Slessor, Standing Counsel to the Labour Party.

Local Rates.—The Ministry of Health has just issued a White Paper (Cmd. 1633, price 1s) which gives important statistics of the amounts collected in rates during recent years by local authorities in England and Wales, and of the assessable value of rateable property. Rate collections, it is shown, rose from £71 millions in 1913-14 to

£173 millions in 1921-22. Statistics for each year since 1913-14 are compared below:—

Year Ended March 31st.	Receipts from Rates.	Assessable Value of Rateable Property.	Average Amount of Rates Collected.	
			Per £ of Assessable Value.	Per Head of Estimated Population.
	Mln. £	Mln. £	s d	s d
1914	71.3	211.6	6 8½	38 11
1915	73.7	214.3	6 10½	39 11
1916	75.9	216.3	7 0½	40 8
1917	72.9	217.1	6 8½	38 10
1918	75.4	218.6	6 10½	40 1
1919	84.7	219.6	7 8½	45 2
1920	105.6	220.7	9 6½	56 4
1921	148.7	223.7	13 3½	79 1
1922	173.0	234.0	14 9½	91 4

It will be seen that assessable values have risen very little in the nine years, and, therefore, that the major portion of the great increase in rates per £ is due to the fact that assessments have not been readjusted to follow the course of prices and values. The Ministry of Health states that the part of the increase in rates which is due to the undertaking of new services by local authorities is very small.

By far the larger part of the increase in recent years in the amount of the rates required by the local authorities is attributable to the increases in the cost of living, salaries and wages, and the prices of the materials required for the carrying on of the local services. Some part of the increase is traceable to the fact that the non-rate income of the authorities (rents, fees, recoupments, &c.), out of which a considerable part of their expenditure is met, proved less expansive than the corresponding expenditure, and the difference had to be made good out of the rates. Moreover, great arrears of work (especially on the roads), which necessarily accumulated during the war, have been put in hand and paid for since the Armistice; and the industrial depression has, especially during the year 1921-22, been accompanied by an abnormal increase in the number of persons receiving relief at the expense of the rates. The part of the increase in rates which is due to the undertaking of new services by local authorities is very small.

The purposes to which the £173 millions of rates in England and Wales are applicable are analysed as follows in the Financial Statement issued by the Treasury:—

	£
Poor Relief	35,700,000
Education	35,600,000
Police	10,200,000
Other Services	91,500,000

Generally speaking, the average of rates per £ reached its peak in the first half of 1921-22, and in the second half of last year there was a marked decrease in many places. Present indications, it is comforting to read, point to a further and more widespread decrease in the current half-year. Some of this decrease is attributable to increase in valuations, but "it would seem safe to assume that in many instances there is a fall in the amount required from the ratepayers, and that this is due to a reduction in the expenditure of the authorities." The re-assessment of profits proposed by the Chancellor in his Budget for purposes of Schedule A will presumably encourage rating authorities to follow suit. When the stage of price stability is reached re-assessment will be fair and desirable; but it will perhaps carry with it this danger—that when a penny in the £ yields more, small extravagances will be looked upon more light-heartedly by local authorities.

The Austrian Problem at Genoa.—During the Conference it was proposed that the Finance Committee of the League of Nations, most of whom were present, should meet to carry a stage further the plans for assistance to Austria. The task of getting the liens on Austrian assets withdrawn was undertaken by the Supreme Council, but Roumania and Jugo-Slavia have not yet given their consent. A meeting not of the Finance Committee, but of Austria's creditors, was therefore called, but as the nations mentioned showed reluctance to agree there and then to waive their claims, a small committee of the creditor nations was appointed to endeavour to arrange matters with these two States. If these efforts succeed, and if the Austrian Government can obtain conditional promises of further advances, the moment will be ripe for the League of Nations scheme to come into operation by the appointment of a Control

Committee, or of a single trustee to supervise the carrying out of any internal conditions that may accompany the loans and to be responsible for seeing that any assets that may be pledged are made available. In this connection it may be anticipated that the Ter Meulen bond scheme which was originally intended for use as collateral for private credits may be modified to suit the case of money loaned to the Governments themselves of the countries concerned. In any case, whether the Ter Meulen bond is employed or not, it is extremely desirable from all points of view that the League recommendations should be put into effect under its auspices. At present the situation is not altogether satisfactory. The only actual loan made to Austria is the two millions advanced by Great Britain, who has appointed Mr G. M. Young to see that the conditions are carried out. Mr Young was formerly attached to the British Embassy, but is now a director of the Anglo-Austrian Bank. This institution, in which the Bank of England has a considerable interest, is in competition with other Austrian banks, and the peculiar position in which Mr Young is placed may well lead to difficulties in Austrian banking circles. But the trouble goes still deeper. Mr Young's negotiations have exercised a very important influence in the internal politics of Austria, and his responsibilities have temporarily placed him in the position of dictatorship. We have no reason to doubt that Mr Young has been exercising these great powers with discretion, fairness, and tact, but it is thoroughly bad in principle that the representative of any single country should be placed in such a position. For the sake of avoiding international jealousy it is particularly important that Great Britain should not become involved in such a manner, but that any control which has to be exercised should be in the hands of a nominee of the League.

British Control in Mesopotamia.—A correspondent writes:—"The announcement that Mesopotamia was to be administered by Great Britain under a mandate from the League of Nations was bitterly resented by the Arab Nationalists, and was one of the causes of the abortive rising of 1920. The mandate is in its essence a temporary arrangement, but it was regarded as implying a British Protectorate, and the insurgents demanded complete and immediate independence. Since the establishment of the native State under King Feisal with British advisers, it has been arranged that the mandate shall be supplemented by a treaty recording the consent of the people to the present arrangement, and Mr Churchill stated in the House of Commons on February 11th that the Treaty was in preparation, but would in no way modify the obligations undertaken to the League of Nations by Great Britain. The leading sheikhs, however, appear to have believed that it would supersede the mandate, and the Baghdad correspondent of the *Times* reports that a number of them have petitioned for the retention of the mandatory system as a better security for British control. The petition also prays that only efficient Arab officials should hold appointments, and that the religious leaders should be prohibited from taking part in politics. This last demand appears to have been occasioned by a meeting recently convened by these leaders at the holy city of Kerbela, in consequence of the recent raids by the Muntafik Arabs from the south-western desert, which, though probably of merely local importance, were ascribed in some quarters to the instigation of the Emir of Nejd. But the result was entirely favourable to the maintenance of order. The sheikhs, though many of them were led by the holy men in question to join in the rising of 1920, are known to be profoundly impressed with the prospect of an increase of their wealth and comfort by the railways and roads which they owe to the British administration, and through the extension of cultivation, which is best ensured by the assistance of the British advisers in the fair distribution of the work among the tribes concerned in the reclamation of the necessary land. The insurgent sheikhs have been amnestied and have returned; the wealthier classes, whether sheikhs or Baghdadi landlords, were seriously alarmed at the prospect of disorder and anarchy opened up by the rising, and they have had ample experience of official incapacity and corruption under Turkish rule. It is quite natural,

therefore, that they should prefer peace and welfare under British supervision to the satisfaction of a sentiment of nationalism which is very faint among them. There is no sort of doubt that the petition is an absolutely spontaneous expression of their wishes, and that they desire that political and economic progress shall not be interfered with by Muslim fanaticism.

Dutch Finance and Trade.—The salient features of the economic situation in Holland are set forth in the report from H.B.M. Commercial Adviser at The Hague, just issued by the Department of Overseas Trade. The National Debt on January 1, 1922, stood at 2,500,150,000 fl, or about £208,500,000; the Floating Debt exceeded 855,000,000 fl, or about £71,000,000; and the deficits on ordinary, extraordinary, and East Indian revenues will bring it up this year to 1,265,000,000 fl. Of this \$100,000,000, or about 250,000,000 fl, has been borrowed at a little over 6 per cent. through the Guaranty Trust Company of New York, and it is proposed to fund 300 millions. Deficits existed before the war, but the ordinary revenue, in 1914 174.3 million florins, was last year 438 millions. But taxation was stated by the Minister of Finance in his Budget speech to have reached its limit, and absorbs, according to his calculation, 35 per cent. of the national income; and decreases last year, chiefly on Customs, stamps, and the Excise on imported meat, foreshadow a decline in revenue from direct taxation also. Stocks and bonds in the year ending last October depreciated by some 1,500,000,000 fl; capital issues fell off nearly 40 per cent., and certain insurance companies, whose assets no longer cover their liabilities, are being administered by the State. Some of the banks were severely shaken, but the strength of the Central Bank of the Netherlands kept them up. The area under cultivation declined except that devoted to potatoes and green fodder; fruit and vegetables require new markets, and the export of dairy produce decreased. That of bulbs is recovering, and there is a notable increase in that of pork. The fisheries suffered heavily. More coal was exported, but it was raised at a loss. Industry has suffered through the fall in foreign exchanges, the restriction of credit, and the eight-hour day; this last also hampered railway working through shortage of employees. German competition was encouraged by the exchange, and by the lower standard of life set in Germany by the war. The German printers, for example, worked rather longer hours than their Dutch competitors at a fifth of the wage, and in three shifts, which in Holland is impossible. But protection against such competition is not favoured, and readjustment is hoped for through a fall in the home purchasing power of German currency, reduction of the Dutch wage, and relaxation in practice of the Eight Hours Act. Eleven German banks are established in Holland, but are not at present doing purely Dutch business, and Dutch shipping is being transferred largely to the German flag. The cost of living has not followed the fall in wholesale prices; retail prices, rents, and the cost of labour are still high. The house scarcity continues, but the effect on public health is not apparent. The Dutch East Indies do not pay their way, and their produce has suffered, with the partial exception of sugar and tobacco. The Report and some of the figures, however, indicate that the worst is over, though recovery must be slow.

U.S. War Finance Corporation.—The April issue of the *Index*, published by the New York Trust Company, gives in some detail an account of the operations of the War Finance Corporation. This organisation, in its report of operations up to April 1st, shows advances made this year under the heading of "Assistance in financing exports" at \$50,250,000. Of this amount \$33,572,000 was employed in financing cotton exports, \$5,000,000 for grain exports, and \$3,596,000 for tobacco exports. Under another section of the law which set up the corporation, advances are sanctioned to banking and financial institutions and co-operative associations for "agricultural and livestock purposes." Under this head

advances of \$268 millions are chronicled on the following commodities:—

	Mln. \$		Mln. \$
Cotton	23.4	Dried fruits	1.2
Grain	21.3	Peanuts	1.1
Live stock	67.6	Tobacco	10.0
Sugar beets	10.0	General agricultural products	131.2
Rice	2.5		
Canned fruits	0.3		

The corporation, which was set up as an emergency organisation, draws its funds from the national Treasury. The total amount so drawn this year up to April 1st was \$322.8 millions, of which \$210.2 millions had been advanced to banking institutions. Up to March 25th, funds for export and for agricultural purposes had been advanced as follows:—

	Mln. \$
To co-operative associations	63.6
To banking and financing institutions	246.2
To exporters	9.0
	318.8

An amendment of the Farm Loan Act has now been proposed, which, if carried, would involve the setting up of a farm credits department in each of the Federal Land Banks, and presumably, in the course of time, the elimination of the special agricultural financing now done by the War Finance Corporation.

Stock Exchange Settlements and Contangoes.—The Stock Exchanges of the United Kingdom continue to be a good deal exercised over the matter of bi-monthly settlements and introduction of contangoes, both of which have already been crystallised into Rules passed by the London Stock Exchange Committee, but which do not come into force until they are confirmed. The meeting for this purpose is set down for Monday week, May 15th, writes a Stock Exchange correspondent, and, as already stated, petitions are in circulation amongst Stock Exchange circles praying there may be no reversion to the pre-war system of contangoes. The petition lays stress on the inadvisability of reinstituting contangoes under similar conditions to those which prevailed before the war. There would appear to be a suggestion that, with due safeguards, the signatories might be less hostile to the proposal. Members of various provincial exchanges have fortified the opposition by adding their protests to the petition just mentioned, and the Stock Exchange Committee will certainly take into account the weighty body of support which the anti-contangoes proposal has revived. The observer, thoughtfully considering the opposition, can see is placed. From the point of view of safety of the community and of their own members, the Stock Exchange Committee might well declare that, having regard to the undoubted danger of continuation business, this form of dealing should remain banned. There are, however, various points to be urged in its favour. Apart from the obvious argument that contangoes provide an exceedingly useful adjunct to the profits of a broker's or a jobber's business. While contangoes undoubtedly encourage speculation of an undesirable order, they also give facilities for such dealing as appears to be appropriate to what is still the chief market for Stock Exchange securities. It is at this last aspect of the case where the road sharply forks, and takes a very definite direction. For the Stock Exchange to remain the chief market in the world, it is necessary that there should be freedom of dealing as complete as possible. Under the cash system, it has been proved beyond dispute that such elasticity as the markets enjoyed before the war is impossible. If jobbers had a fortnight, or thereabouts, in which to undo their bargains, they would be much more willing to make close prices, to buy and to sell, to take reasonable business risks, than they are when they may be called upon within five days, to deliver stock which they have sold, and which they do not happen to have on their books, or to be able to buy straightaway. This really is the essence of the matter. To get back to flexible markets it is necessary that there should be bi-monthly settlements. With bi-monthly settlements, contangoes will creep in more or less as a matter of course. The suggestion that contangoes should

be allowed only when the orders are accompanied by a margin of cash or security is not generally regarded as being practicable, although it is backed by powerful firms in the Stock Exchange. The Stock Exchange Committee, in recognising the essential need for bi-monthly accounts, see also that under this pre-war system, contangoes must follow almost inevitably. The present petitions are apparently willing to admit the principle of settlements. What they object to is the re-introduction of contangoes. To the onlooker, the two things seem to be so closely interlaced that, if one is passed, the other follows as a matter of course; if contangoes are forbidden, then a system of bi-monthly settlements can only be instituted under conditions of such limitation as will thwart the intention of restoring to the London Stock Exchange its pre-eminence as a market for stocks and shares in the fullest sense of the word.

The World's Gold.—The pronouncement of the Financial Commission at Genoa that gold is the only common standard which all European countries could at present agree to adopt, lends interest to an article in the "Reconstruction in Europe" number of the *Manchester Guardian Commercial*, by Mr Joseph Kitchin. The writer points out that since 1830 there has been an enormous increase in the world's output of gold, the total for the decade 1830-40 being £28 millions, and that for the decade 1910-20 £876 millions, but that since the maximum of 1915 there has been a serious decline, amounting six years later to 30 per cent. A further decline will be shown in 1922, which, allowing £30 millions to the Transvaal, should total about £44 millions for the British Empire, and about £65 millions for the world. "After that it can be assumed that a moderate recovery will take place, but also that the output for some time to come will range at about the level of the last three years." The Witwatersrand probably reached its zenith in 1916, while as regards the rest of the world, the output is probably most promising in Canada, the United States, Mexico, and Russia—in the last three cases by recovery from the reduced figures of the last few years. It is estimated that the world's production will average about £70 millions per annum. The demand on the output by the industrial arts, India, China, is put at £22.1 millions for 1915, £15.9 for 1916, £25.5 for 1917, £38.1 for 1918, £14.1 for 1919, £61.2 for 1920, and £23.4 for 1921, at the price of 85s per fine ounce. In the five years to 1908 the average annual demand from these sources was £29 millions, and £48 millions for the five years to 1913. Assuming that industry, India, China, and Egypt will together require £40 millions per annum, the balance left for addition to the stock of gold money in the next few years will probably be reduced to an average of £30 millions, or as much as in the 10 years to 1902, but £20 millions less than the average for the ten years to 1913. On this assumption the world's stock of gold money will reach £2,277 millions in 1930, as against £1,916 millions in 1918, £733 millions in 1891, and £160 millions in 1810. During the eight years 1914-21 the gold held by the principal central banks and treasuries of the world increased by £561 millions, the new production added during the same period being about £440 millions. The world's stock of gold at December 31, 1921, is estimated at £2,025 millions, of which £751 millions (£621 millions in the Treasury), or 37.1 per cent., is in the United States, £613 millions, or 30.2 per cent., in the 13 central banks of Europe, and £261 millions, or 12.9 per cent., in the central banks or treasuries of Japan, Argentina, Canada, and Australia, the remaining £400 millions being undisclosed holdings of central banks, holders of banks other than the principal central banks, hoarded and in circulation.

Two Insurance Reports.—The experience of the North British and Mercantile Company, as shown in its latest report, resembles that of the other large composite insurance offices. There has been a considerable reduction in the fire premium income, and an increase in the proportion of claims and expenses to premiums. The marine accounts have not yielded profits for 1919 and 1920, and the pre-

miums for 1921 have been heavily cut down. Taxation has wiped out a large proportion of the underwriting profits of the successful departments. The fire premium income was £3,546,153, against £4,171,720 for 1920. The claims were 55.1 per cent. of the premiums, against 46 per cent., and the expenses were 43.3 per cent. against 38.3 per cent. The fire surplus, after adjustments for unexpired risks, was £306,507 (8.6 per cent.), as compared with £445,720 (10.7 per cent.) in 1920. The marine premiums for last year were £358,435, as against £760,178 for 1920, and the whole remaining balance of the underwriting years of 1919 and 1920 was carried forward. The total underwriting profits of the North British and its subsidiaries were £472,022, of which £195,773 was absorbed by income and corporation taxes. Interest receipts were £309,696, and the dividends paid £263,586. The net gain in the profit and loss balance was £298,329. The Alliance showed an increase in its fire premium income from £1,945,110 to £1,966,478. The claims were 48.2 per cent. of the premiums, against 40.9 per cent.; other expenses were 46.6 per cent., against 45.3 per cent. After allowing for unexpired risks, the surplus was £91,540 (4.6 per cent.), against £176,101 (8.1 per cent.). In the marine department the premiums were reduced from £1,352,414 to £550,819, and £57,464 was transferred to profit and loss on account of 1919. The appreciation of investments has released the investment reserve fund of £250,000, which has been carried back to profit and loss. The receipts from interest were £270,467, and the dividends cost £343,013. Income and other taxes took £92,740, and the profit and loss balance showed a net increase of £239,605, not quite as much as was brought in from the released investment reserve fund.

Pease and Partners.—The report of Pease and Partners for the eleven months ended March 31st last makes a dismal story. Owing to the coal stoppage, nearly the whole of the company's undertaking was at a standstill at the beginning of the financial year, while the stagnation in the iron and steel industries has deprived the company of its natural markets for coal, coke, ironstone, limestone, &c. The position, however, has been showing substantial improvement in recent months, and this presumably accounts for the fact that the directors pay an ordinary dividend of 5 per cent., free of tax, although the accounts show a net loss of nearly £100,000, as against a profit of over £500,000. A comparative summary of results for the past 15 years is given below:—

April 30.	Gross Profit.	Net Profit.	Dividends paid.	Rate.	Special Expenditure.	Reserve.	Carry Forward.
	£	£	£	Ord.	Def.	£	£
1908	288,624	216,779	125,000	12 1/2	12 1/2	47,291	35,000
1909	160,389	97,782	80,000	8	8	34,278	Dr. 16,116
1910	207,759	143,417	100,000	10	10	23,917	Dr. 12,372
1911	233,933	158,033	90,400	8	8	27,951	Dr. 30,000
1912	18,850	90,365	92,000	8	4	34,662	Dr. 30,000
1913	417,005	314,802	156,000	12	12	86,484	50,000
1914	412,110	315,154	156,000	12	12	25,036	115,000
1915	285,069	171,100	130,000	10	10	45,845	62,843
1916	285,015	356,467	195,000	15	15	25,469	115,000
