IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 10th, is as follows:—Pig-iron: Prices are still depressed, and the outlook is by no means reassuring. Business is very limited. There have been some inquiries for foundry iron from America. Current quotations are:—No. 3 Cleveland G.M.B. pig-iron, 87s per ton; East Coast mixed numbers hematite, 90s per ton. Manufactured iron and steel: Steel prices are expected to fall shortly, as makers are now free from control and orders are scarce. Steel ship plates, home, £9; steel ship angles, home, £8 15s; iron bars, home, £11; steel rails, home, £8 15s net. Iron ore: Hematite makers are rather indifferent about buying, as orders for pig-iron are scarce. Bilbao Rubio is inactive, with sellers at 25s and rather lower.

Our Glasgow correspondent (writing on Thursday) says:—During the past week some interesting changes have been introduced into the steel and iron trades position. For a number of years back the steelmakers of England and Scotland have worked under an agreement which, amongst other conditions, fixed a common standard of prices for material for both divisions of the United Kingdom. Since the slump of two years ago the arrangement has not given satisfaction, and it became apparent that the bargain would not hold, and last week it was broken or abandoned, and it was determined that producers North and South of the Tweed should have a "free hand" in the disposal of all their manufactures in the home and foreign markets, the associations in both districts remaining as such (combined) in their respective localities. Following thereon, the Scotch steelmakers last Thursday intimated various reductions in quotations—20s on ship plates, 15s on sections, and 20s on boiler plates, at £9, £8 15s, and £12 10s respectively, delivery on the Clyde. These cuts brought

the concessions from the beginning of the year up to £2 10s on boiler plates, £1 10s on ship plates, and £1 10s on sections. Simultaneously, the shipbuilding firm of Messrs. Lithgow, Port Glasgow, approached their hands, and stated that they were prepared to build four large cargo steamers, which would give for the time being, the rate of pay which obtained immediately prior to the war. The Messrs Lithgow took all risks involved in plating that Messrs Lithgow are also makers of hematite and of steel material, and are therefore in an exceptionally strong position for giving effect to their building proposal, which, however, has not as yet been acquiesced in. But the general body of steel-makers felt that they would be at a disadvantage if they continued

to observe the combine rate of quotations, and so it has gone by the board. All concerned have now, therefore, a free hand to buy and sell, produce, use, and distribute steel material as they see fit, and in any and every market. How things will work out remains to be seen. It is reported that already there are quite a number of inquiries on circuit relative to the building of new boats, but so far it does not appear that any contracts have been placed on the river. Expert opinion is satisfied that these will come—once those concerned (shipowners, shipbuilders, and steelmakers) find their footing in the new circumstances which have been created.

Our Sheffield correspondent writes:—The last few weeks have furnished indications of further improvement in the conditions of most branches of the steel trade; nevertheless, the recovery is painfully slow, and the position continues unsatisfactory in the extreme. There are still 40,000 persons in the city drawing relief under the National Insurance Act. Engineering and shipbuilding works are buying steel material on a very limited scale, nor have the British railways discontinued their policy of buying on hand-to-mouth lines. Practically no business is coming forward from the South American railways, who have large contracts placed in Germany and Belgium. The heavy steel branches are looking up, and the position of pig-iron has improved a little. The tool steel branch is still in a condition of extreme stagnation. Very little is doing in steel castings, whether light or heavy. Ferro-alloys are steady in price, with buying at the minimum. The light steel trade continues to suffer from the existence of surplus war material in most of the colonies as well as in this country. The dead season in plate and cutlery has now arrived, and there will be little buying by the large home distributors until next month. Overseas demand for such goods is poor. This holiday stoppage has been less than at Whitsuntide. The American demand for coal has led to the re-starting of a number of idle pits, and many are now working full time. Prices of steam coal have hardened, and best South Yorkshire qualities are quoted at 21s or 22s at the pits. The home consumption is increasing somewhat. The increased working of the pits has relieved the scarcity of stocks, which, however, are still none too plentiful. Railway companies are ordering liberally to build up stocks. House coal is quiet, and best South Yorkshires are quoted at from 30s to 34s at pits.

Our Cardiff correspondent writes:—There has been no change this week in the situation on the Cardiff coal market. The docks were idle on Monday and Tuesday, and the collieries until Wednesday, and these holiday stoppages have meant a considerable reduction in the volume both of production and of exports. The resumption of work in the coalfield was complete on Thursday, and since Wednesday the tipping facilities at the docks have been worked up to their maximum capacity within the existing two nine-hour shift systems. The arrival of tonnage since last Saturday has been exceptionally heavy, and the docks are in a state of congestion. The Great Western Railway Company, which is now in complete control of all the South Wales docks, except that of Swansea, is strictly regulating traffic between the pit and the port, in order to minimise the evils of an over-supply of prompt tonnage. Coals are not released from the various junctions, except in those cases where there are vessels either in dock or under tip to receive the coal, and these regulations have already had the effect of increasing the volume of shipments. In the week ending August 5th more coal was shipped at the Cardiff, Penarth, Barry, and Newport docks than in any other week since the war. It amounted to 596,000 tons, representing an increase of nearly 50,000 tons on the shipments in the preceding week. Production in the coalfield has also been stimulated, and the latest Board of Trade returns report an output once more of over one million tons per week. With the collieries fully stemmed, and with tonnage so abundant, there has been very little new business passing, but prices have been very strong at the pre-holiday figures. America is still in the market. Reports are prevalent of the conclusion of additional contracts, but these are not confirmed, although the United States has been directly represented in South Wales this week by a leading American coal merchant, who has been in active negotiation with local firms. The following were the current market prices on Thursday:—Best Admiralty large, 30s to 32s 6d; seconds, 29s to 30s; best drys, 29s to 30s; Black Veins, 29s to 30s; Western Valleys, 28s 6d to 30s; Eastern Valleys, 27s 6d to 30s; best bunker smalls, 21s to 22s 6d; cargo smalls, 19s to 21s; coke for export, chiefly foundry, 40s to 45s; inland blast furnace coke, 25s to 26s, atovens; patent fuel, 27s to 30s; pitwood ex-ship, 40s to 42s 6d.

In the tinplate trade all work has been suspended this week for the usual August week's holiday, but it is reported that most works are booked up well into next month, and favourable conditions are anticipated in the autumn.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market presents a somewhat quieter appearance on account of the will be closed next week, and in the circumstances there is a general disposition to mark time. There is, however, no indication of any weakness; indeed, prices are firm all round, with, if anything, a hardening tendency in merinos. Toprakers are so few are anxious to consider new business where delivery is required at about 4s 7d per lb, and some firms are not prepared to sell big weights even at that figure. In crossbreds, also, there is a

somewhat better feeling, especially in the finer sorts. The strength of the raw material market is helping topmakers to stand out for prices more in keeping with wool values, though in medium and low sorts it is still possible to buy from stock at about late rates. Spinners are well employed, and a fair amount of new business has been booked in botanies during the past week or two. Prices are firm, especially in botanies and fine crossbreds. A reduction in dyeing and finishing charges has been announced by the B.D.A., and this is expected to help both manufacturers and merchants, many of whom have complained of the high charges in this section of the industry. Meanwhile there is just a steady trade passing in piece goods, but improvement is expected after the holidays. There is not much activity in home-grown wools, but the finer sorts are selling moderately well, and lustre hogs are wanted. Some improvement is noted in the demand for Cheviots, but blackface wool is less active than was the case a few weeks ago. Prices of practically all descriptions are firm.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

After the stirring times in the recent sales in Coleman street buyers are glad to have a month respite from sales. The next series is to begin on September 4th, a day earlier than originally decided upon, and there will be ten selling days, with a total offering of 113,700 bales, including Puntas. It seems to many that another full week might have been added to dispose of surplus crossbreds and also help forward the merinos which are available both from importers and B.A.W.R.A. It certainly is surprising to the majority why the list of arrivals is being closed so early, and we think that selling brokers have little knowledge of the grumblings which shippers constantly make about the early closing of the list of arrivals. In pre-war days the lists were closed at 4 p.m., eight days before a series was to commence, whereas the list was closed last May 28th for the series beginning on September 4th, while for the series opening on October 10th the list was closed on July 6th. If this is not playing into the hands of Colonial selling centres, one wonders what is. There is no encouragement to-day to send wool to London when a grower has to wait from May 28th until the end of September before his cheque can be paid into the bank for the sale of his clip. We know that advances can always be obtained against consignments, but not everyone cares for that operation, while importers are having to wait an unreasonable length of time before they can realise anything on the London market. The sooner this state of affairs can be remedied the better, for London selling brokers have lost business on account of such an inordinate length of time having to elapse before imported wools can be offered.

The sales last week finished remarkably well, and we think that merinos occupy an unusually sound position. The fact is now generally conceded that there is going to be no reduction on current values for a considerable time; in fact, the universal demand seems to be for fine classes, and crossbreds are not moving into consumption on anything like the same big scale as merinos. A clean combing merino wool is selling all round on a basis of about 48d to 50d clean, which compares very badly with 9d to 10d for 40's to 44's crossbreds, the gap being extraordinary. Neither can we see any reasonable possibility of that difference being lessened; in fact, a settlement of the American Tariff should lead to a bigger demand for merino wool, for all over the world fine goods seem to be fashionable. This month should see a considerable business done by West Riding manufacturers for next spring, and August, although usually a quiet month, has at times been a busy time on account of manufacturers purchasing yarns by way of covering their spring sales of goods. We certainly think that wholesale

piece merchants and clothiers will do a bigger winter trade than last season, and this should pave the way for a decent business for next spring.

MANCHESTER, August 10.

Although towards the close of the week rather more inquiry has been experienced in the market, the trade done has been on a limited scale. Conditions generally have been too unsettled for active operations. The falling tendency in prices and the uncertain political situation in Europe have resulted in merchants being cautious. A few more transactions have occurred in piece goods for India when makers have been prepared to meet buyers in price. Only occasional contracts have been mentioned for China. Shippers to the Near East have given out gloomy reports, and goods are being sold in Egypt at below replacement values. Standard makes have attracted some attention for the home trade. Manufacturers as a body are passing through a trying time, and in certain sections engagements are running down rather rapidly. Yarn prices have given way in sympathy with the further decline in the raw material. Home users and exporters have purchased sparingly. Spinners have again tended to lose ground.

CHEMICALS.

The report of Sir S. W. Royle and Co., Limited, dated August 2nd, reads as follows:—During last month the home demand fell away somewhat, influenced no doubt by the holiday season, but prices on the whole have remained steady. The reduction of 25 per cent. of the increase in rates of railway carriage came into force yesterday, and should assist business. The export inquiry has been only moderate, and the erratic courses of exchange continue to hinder overseas trade generally. Sulphate of copper has been in regular request for both home and export account, but there is little change in values. Green copperas has been in better demand, but competition continues keen. Acetates of lime have been quiet, and prices have a lower tendency. Acetic acid has been freely offered from recent arrivals at low prices. Acetate of soda is in short supply with values well maintained. Acetates of lead and nitrate of lead are firmer with the advance in the metal, which has also affected the values of litharge and red lead. Carbonate of potash has an improved inquiry, and prices are well maintained. Caustic potash is in only moderate request. There is nothing doing in Montreal potashes. Yellow Prussiate of potash is in short supply, and again dearer; soda is more plentiful, but values are unchanged. White powdered arsenic has been moving freely, but in the demand for tartaric acid and cream of tartar, and holders of stocks have been realising at lower prices, but the raw material position is very firm. Makers of citric acid are well booked ahead. American bichromates are still offered freely, and British makers have reduced their prices, but the consuming demand is only moderate. Chlorates of potash and soda have been in only limited request. There is no change to record in borax and boracic acid. Phosphate of soda is quiet. Continental supplies of alum and sulphate of alumina are still offered at low rates, but makers here have been meeting the position. Oxalic acid is scarce, but values are unchanged. A steady export inquiry has been ruling for alkali for the home trade has been again reduced, and there is a fair inquiry. White caustic soda continues in good demand for to report in the tar products market, but it is interesting to note that several large coke ovens have actually restarted, and that others contemplate working at an early date. Benzole and toluole moment, but consumers are well covered, and new business is scarce and competed for. Creosote oil remains unchanged, but with the bulk of the season's requirements in dehydrated tar covered, larger supplies are anticipated. Very little is doing in carbolic acid. Naphthalenes are again easier, with no demand. There is little change in the position of pitch for next season's delivery. There has been a certain amount of Continental business, which has been readily taken up, but, in general, foreign consumers, by reason of their position, are not disposed to pay prices now being indicated. In South Wales consumers appear well covered, and deliveries are no longer being pressed forward, and briquettes having fallen off. The anticipation in some quarters of a considerable advance resulting from the American coal strike has not so far been realised. Sulphate of ammonia remains unchanged.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The imports of building and furniture woods have been of good volume over the month, and considerably larger than the imports a twelvemonth ago. The demand on the spot, however, has shown but little improvement, though a change is anticipated as soon as the holiday season is over and business is set going. As regards here and there for certain sizes and qualities, but this is not the result of any active demand, as already intimated, but from the fact that the shippers have been able to effect a considerable amount of their holdings have increased their quotations, which has restricted forward business. This latter cautious policy on the

part of importers seems to be well justified, inasmuch as in the Port of London, for a good example, the smaller stocks in the docks than last year are estimated at present rates of demand to last longer than those held in August, 1921. This accounts for the keen competition for orders and the difficulty of holders on the spot to educate consumers to the higher f.o.b. quotations of Swedish and Finnish shippers. By the end of July the Swedish sawn wood manufacturers had disposed of about 600,000 standards, about 60,000 standards more than they shipped during the whole of 1921, and roughly about two-thirds of their this year's estimated stocks. The unsold balance, however, is still a cause of anxiety to importers, although it must be admitted on behalf of the shippers of Sweden and Finland that the demand is much better and wider than in 1921, which facts their financiers are well aware, and that any rush at the near close of the season to realise their remaining stocks by consignments to this country would be disastrous to the trade here and to themselves. Importers would like to renew business, and if the shippers were a little more amenable to the present timber trade conditions in the United Kingdom, and priced their goods accordingly, further large business should immediately result. Like the building woods market, the furniture wood section is waiting for larger housebuilding operations, which are already showing stronger signs of revivification. Mahogany, both in log and lumber, is still maintaining a fair price, as prices go nowadays, and the demand has been considerably better than last year. For cedar the market is quieter, and stocks are sufficient. The American furniture woods are not meeting with a large call at present; imports have been heavy, but hopes are engendered that the demand will improve within a few weeks. Prices for these woods have weakened. Timber for the ship-builder, generally speaking, is on the quiet side, but promises improvement. Prices for same are easier, owing to this lack of demand. For teak timber and converted wood there is little inquiry, and the call for Canadian spruce and American pitch-pine is only fair. Long prime cedar is in request for small boat building. To sum up the position, the demand all round is so unsatisfactory that consumers are unable to respond to f.o.b. and c.i.f. prices.

VEGETABLE OILS AND OILSEEDS.

The easier feeling in vegetable oils and oilseeds has been accentuated, and following the holiday markets are slow in recovering momentum. Raw linseed oil, though held for £43 5s for prompt delivery, ex Hull mill, has receded to £41 for August and £37 for September-December, whereat demand is only slow. Inquiry for export is limited, the American demand being largely governed by the new tariff and the approach of the domestic crops. Cotton oils are again lower, crude Egyptian offering at £37 and ordinary refined (soap-maker's grade) at £41, ex Hull mill. Most other crude oil are quiet and prices without material change, with ground nut oil quieter and selling at £45 spot.

In the oilseed section Plate linseed has sharply declined, both on spot and for shipment, seed on passage and July-August now offering at £18 ros. A fair business has been done in Calcutta, £20 17s 6d having been paid for "on passage" to London and £20 15s to Hull, since when value has declined to £19 15s for shipment to Hull. Cottonseed quiet and lower. Black Egyptian quoted £11 5s, and for Sakellariadis £10 5s has been accepted. Rapeseed continues in most demand for the Continent round £18 paid for bold Feropore.

According to advices from Washington the Senate has accepted an increase from 25 cents to 40 cents per bushel in the tariff on imported linseed, and an increase from 10 cents to 20 cents on linseed oil. The proposed rate on castor oil has been reduced from 4 1/2 cents to 3 cents per pound, and on rape oil the rate has been posed rate of 2 cents per pound to 6 cents per gallon. The pro-oils, also that of 2 1/2 cents per pound on ground nut oil, have been struck out. From this it is inferred that these crude oils will be admitted free of duty, but subject to a certain quantity to be fixed by the Secretary of the Treasury, and under such regulations as he shall authorise.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains steady at the slightly lower range of values recently established, as best ox made from 6 1/2d to 9 3/4d at the Bernandsey auction this week. Changes generally were devoutly hoped the raw material market will remain stabilised for a time.

The imported hide market seems improving, although little has been done in actual trading during this holiday week. British tanners are buying very cautiously, but news from the River Plate frigorifics at advancing rates. Dry and dry-salted hides are in better request, but there are still parcels of old stock yet to be obtained at a very low price.

This being holiday week the turnover in leather has been small, although the wet weather has driven repairers to replenish their scanty stock of leather. As competition and pressure by the public is forcing repairers to lower their charges, it is not very light bends of a common quality have been in most request. Prices of bends are firm, but tanners are not insisting on full rates if a

big deal is in sight. The export trade remains quiet, but the outlook is slightly better, as South Africa is now wanting certain grades of stock.

Upper leather business has been almost absent this week, and kip carriers are hard put to find work, as there is little demand for wax or semi-chrome stock. Inquiries for light chrome sides and calf are frequent, whilst it looks as if there will be a big winter demand for glacé kid.

The boot trade has not yet opened up, most factories being closed for the week. The retail trade has only been of moderate dimensions, the wet weather curtailing the demand for seaside and sports wear.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 11.

A quiet state of affairs was observable in most directions, holiday influence being felt, and auctions in several cases were postponed.

SUGAR.—A good steady inquiry predominated with regard to spot parcels of refined, and prices in most cases are 4 1/2d to 6d per cwt dearer. British in particular accorded support. Messrs Tate and Lyle's cubed sold, 59s 6d to 60s 6d; crushed, 58s; nibs, 58s 6d; fine granulated, also coarse, 53s 3d; London and No. 2, 52s 9d; No. 1, 52s 6d; caster, 55s 9d to 56s 9d; yellow crystals, 47s 3d; pieces, 37s to 39s; fine white, 48s; granulated, September, 53s 3d; October, 53s; November-December, 52s 3d. West India crystallised ranges from 44s to 47s, as to quality. White Mauritius, spot, 49s 6d to 49s 9d; white Brazilian, prime dry white, spot, 49s 6d; damp, 48s 6d. American granulated, spot, sold, 51s 6d to 51s 9d; afloat, 24s 3d; August, 25s to 24s 9d. White Java, arrived, steamer, sold, 24s 3d; July, 22s to 22s 1/2d, and 22s; August, 22s to 21s 9d, c.f. and i. terms, London. Belgian crystals, November-December, 21s 3d; granulated, 21s 4 1/2d, f.o.b. Antwerp. Czechoslovakian granulated, November-December, 22s 6d, f.o.b. Hamburg. Cuban, basis 96 per cent., August, 19s 6d. Java, No. 17, Dutch standard, August, 20s. Brazilian, basis 80 per cent., August-September, 9s 1/2d, all c.f. terms, U.K. Terminal market presented quiet features. White, August, sold, 24s; December, 22s 6d to 21s 10 1/2d. Cuban stocks stand at 590,080 tons, against 1,372,600 tons same time last year.

COFFEE.—Spot goods changed hands quietly on about former terms. Little or no interest is shown with respect to forward positions.

COCOA.—Market quiet and without new feature. Butter slow at 1s 7d per lb.

TEA.—Private contract market steady, quiet, pending resumption of auctions.

RICE in quiet demand, particularly from home-trade buyers. Two Stars, spot, 15s 3d to 15s 6d; August-September, 14s 4 1/2d, c.f. and i. Broken kinds dull of sale. Beans steady, and Rangoon hand-picked, spot, 7s 3d per cwt.

SPICE.—Pepper met with slow patronage. Fair black Singapore, spot, 4d; August-October, sellers, 3 1/2d; Aleppo, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 6 1/2d; August-October, 6 1/2d; Muntok, spot, 7 1/2d; August-October, 6 1/2d. Zanzibar cloves, spot, 1s 3 1/2d; October-December, steamer, 8d. Tapioca remains dull. Fair flake, spot, 2 1/2d, buyers; ditto, August-September, steamer, per cwt, sellers, 22s 9d, London. Fair Penang seed pearl, spot, 20s; August-October, 20s; small sago, spot, 25s; sago flour, September-November, sold 14s; October-December, 13s 9d. Desiccated cocoanut, spot, sold, 35s; afloat, 34s to 32s; August-September, 35s to 34s. Ginger slow.

FRUIT.—There was no new feature to record in this market, business being carried on quietly at easy prices for most descriptions. Of currants, Patras in half bags, on spot, quoted 51s; Amalia, quarter cases, 51s; Gulph, 54s; Vostizza, 57s to 58s. Cape raisins range from 50s to 62s 6d, according to grade; Smyrna from 110s to 125s. Regarding sultanas, Australian three crowns, 103s; Cape cleaned, 95s. Dates quiet. Siar, spot, 27s. Dried plums continue to sell fairly well.

JUTE.—General quietness again pervaded this market with regard to usual groups, and trend of prices ruled easier. There was a moderate inquiry from Dundee spinners, however, for marks. First grade, July-August, usual continental ports, sold, £31 to £29; afloat, down to £28; new crop, August-October, £32 10s; lightning grade, afloat, £26; July-August, £26; new, August-October, £29. Hessians quiet. 10 oz, spot, 35s; August-October, 34s 6d; 8 oz, spot, 26s 6d; August-October, 26s; A twills, spot, 77s 6d; August-October, 76s; B, spot, 65s; August-October, 65s 6d.

HEMP.—Manila qualities were firmer, with sellers reserved, and fair inquiries were in circulation. G grade, August-October, quoted £34 15s; H, £34; J sold, £32; K, £31; L, £30; M, £29. New Zealand firm, though quiet. H.P.F., on spot, £34. African sisal, No. 1, G.E.A., August-October, £37, and B.E.A., £36.

SHELLAC.—Market firm. Fair quality T.N., spot, quoted 330s; August sold, 300s to 315s, and October down to 295s to 315s. COPRA continued very quiet, and prices are easier on the week.

The Sixty Policy

rs 50 per gallon.

OILSEEDS.—Linseed market lower, but a good business at the decline. Bold Bombay, afloat, £20 15s. Small Bombay, ditto, sold, £19 15s. Calcutta, afloat, £19 15s; July-August, £19 15s to £19 5s and £19 10s; August-September, £19 10s to £19 5s. Plate afloat, sold, £18 15s to £18 10s; July-August, £18 12s 6d to £18 5s; August-September, £18 5s. Rapeseed quiet. Toria, July-August, sellers, £18 7s 6d; real bold Ferozepore, July-August, quoted £17 7s 6d. Cotton-seed easier. Egyptian black, August, sold, £11 10s to £11 5s; and white, sold, £10 7s 6d to £10. Bombay, July-August, sold, £8 15s. Gingly easier. Chinese, August-September Continent, nominally, £25 10s; large Bombay, ditto, £25 5s. Castor, Bombay, August-September, sellers, £18 15s, to Hull. Groundnuts dull. Coromandel, machine-dried, August-September, £21 10s; ordinary, £20 10s; East African, £21 2s 6d; Nigerian, £21 10s; bold Bombay, £21 10s. Soya beans, Manchurian, August-September, £13 per ton.

METALS.—Tin commenced the week with a firmer tendency, but with holiday conditions prevailing only a small turnover resulted. Standard, August, was dealt in at £161 15s; September, £161 15s to £161 17s 6d; and three months, £162 to £161 15s. The improvement, however, was not maintained, and by the middle of the week values showed a decline of about 30s for both cash and forward, though with buyers more attracted at the lower level increased dealings transpired. Cash sold, £160 12s 6d to £160 5s; August, £160 15s; September, £161 to £160 5s; three months, £161 5s to £160 3s. At Thursday's market a substantial decline was registered, but with fair support forthcoming a reaction set in, though lower on balance with the previous day's close. Cash sold at £158, then up to £159 2s 6d; At Friday's market values were again easier, with only moderate dealings. Cash, sold, £158 15s; September, £158 15s to £158 10s; October, £159 to £158 15s; three months, £159 to £158 15s. English ingots, £158 to £158 10s. Copper : Opened quietly, buyers evincing little disposition to operate, but on the other hand sellers were not disposed to press, and values remained steady. Standard, August, sold, £65 3s 9d to £65 5s; September, £65 5s; three months, £65 5s. Subsequently values gave way slightly on freer selling orders, which were fairly well absorbed. Standard, cash, sold at £64 15s; August, £64 17s 6d; September, £64 15s to £64 17s 6d, and finally at £64 16s 3d; and three months, £65 2s 6d to £64 15s. An easier market at Thursday's session, cash being handled at £64 2s 6d; October, £64 6s 3d to £64 8s 9d, while finally registered at £64 7s 6d; and three months, £64 12s 6d to £64 2s 6d to £64 8s 9d. At Friday's market business proceeded quietly, with very little alterations in quotations. Cash sold at £64 3s 9d; August, £64 6s 3d to £64 7s 6d; and finally at £64 6s 3d; three months, £64 8s 9d. Electrode, £70 10s to £71 10s; best selected, £66 10s to £68 10s; strong sheets, £94; wire bars, £71 10s per ton. Lead easier at £24 7s 6d to £23 12s 6d, as to position. Spelter lower, £30 17s 6d to £30, according to position. Antimony : Ordinary, £27 to £29 10s. Aluminium : Home, £100; export, £105.

THE MONEY MARKET.

ANOTHER week of inconvenient stringency has harassed those who rely on cheap and plentiful money for their comfort and profit. Apparently the market last week paid back to the Bank of England more than it could afford to be without, and consequently found itself borrowing again on Monday and Tuesday, while on Wednesday some borrowers thought it advisable to discount September bills, so as to make themselves comfortable over the turn of the month. Much ingenuity was expended in endeavouring to account for the scarcity of short credit, but the mystery is, perhaps, not really very obscure. The Government has

Correspondent of the Royal Italian Treasury.

Telegrams: "Italocredi, Cannon, London."

Telephone: 7802-7803 City.

for some time past been free from indebtedness to the Bank of England on Ways and Means, and recent experience has repeatedly shown that when this is so there is a very narrow margin between the market and penury. The outward movement of cash for holiday and harvesting purposes and the usual temporary lock-up in connection with the railway dividend payments easily ate up the margin, and the market was penurious. The Bank return, however, and the currency note return show that holiday money is coming back to town, and as official support has also been reported in the Consol market, it seems likely that conditions may be rather less uncomfortable next week. Discount rates hardened rapidly under the stimulus of stringency. When the results of Treasury bills were known yesterday, commercial bills were quoted at about 2½.

	Aug. 18, 1922.	Aug. 11, 1922.	Aug. 4, 1922.	July 28, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	1½

The Bank return showed an increase of £6,000 in the stock of gold, a decrease of £1,282,000 in the note circulation, and a consequent increase of £1,288,000 in the Reserve. Borrowing and repayments left the Other securities 4 millions higher, and the Public deposits declined by 2 millions, the Other deposits being increased by 7 millions. There was a reduction of £3,167,800 to £298,926,600 in the circulation of currency notes outstanding, which includes £1,576,400 for notes called in, but not yet cancelled. The fiduciary issue is £249,200,100, or £60,788,300 below the maximum.

THE STOCK MARKETS.

Disappointment over the abortive result of the Downing Street Conference failed to cause any reaction in the stock markets, and fears of heavy Paris selling proved unfounded. On the contrary, support came from Paris for the markets in which Paris is chiefly interested. This relief counterbalanced the effect of monetary stringency in Lombard Street. Gilt-edged quotations have moved within narrow limits, with business quiet. Activity in the Home Railway market has not been great, but, despite profit-taking, quotations are, on the whole, firmer. The foreign bond market has been singularly little disturbed. Among foreign rails, Leopoldinas have risen sharply on the news of tariff concessions, while Argentines have been unsteady. In the industrial markets business has again been restricted, with Calico Printers a feature, the latter rising on dividend expectations. Oil shares have been very irregular, while Kaffirs have strengthened on purchases from Paris and the Cape.

COMMODITY MARKETS.

Although unsettled conditions continue to prevail in most markets, prospects are rather more encouraging than a week ago. In the cotton trade the lower values have been maintained, but yarn quotations remain very irregular; inquiries from India have been received, but trade with China is quiet. The annual holiday in the wool industry has prevented wool prices being seriously tested during the week, but the few dealings effected reveal no weakness in values. In the pig-iron market, quotations for East Coast mixed numbers hematite at 89s per ton are a shilling lower, and although our correspondents refer to more hopeful prospects in the iron and steel trades, it is stated that rolling-mills can only be kept going with difficulty on orders in hand. The recent higher prices are being maintained in the Cardiff coal market, and, in spite of strike settlement rumours, coal shipments for America were more considerable than those for any

other destination. Optimistic views on the new American crops caused further weakness in wheat prices, which had already shown signs of fitfulness during the past week or so.

FOREIGN EXCHANGE.

After a certain steadiness at the beginning of the week, the foreign exchange market, on the break-up of the Reparations Conference, has become even more demoralised than before, and dealings in the more disturbed currencies have become more and more restricted. The mark, which on the 11th stood at 3,780, and showed considerable recovery on the following day, has fallen away with increasing rapidity, until well over 5,000 was reached during the opening hours of yesterday, while future quotations are now 50 to 100 marks per month over spot. It may be recalled that a month ago the Berlin rate was about 2,000, and two months ago about 1,400. For the time being, there seems no prospect of an escape from the panic movement which has set in in Germany, and the possible results of this currency disturbance not only on economic, but also on political conditions in Germany, are increasingly grave. In Paris the franc, from 54.72½ a week ago, reached 56.37 on the 16th, and although yesterday it was back at 56.20, there is no reason to expect that this recovery is more than temporary. Brussels at 59.20 yesterday shows, as is perhaps only right, a tendency to draw rather nearer to the Paris rate. For forward francs the rate in Paris is 7 to 12 points over spot, in Brussels par to 1 point under. Another striking feature of the week has been the further collapse of the Austrian krone, which at 320,000 is becoming almost unmarketable, while the desperate condition of the Vienna Government makes a political crisis in the near future very probable. Warsaw also, after a slight recovery, shows at 32,500 a further decline. With improved political prospect, the rise in the Italian rate to 98½ from 97½ a week ago has been rather less rapid. Madrid and the three Scandinavian countries have moved slightly against us, but both Amsterdam and Switzerland have gone well in our favour, while the New York rate shows a remarkable improvement in view of general European conditions, from 4.45½ on the 11th to 4.48½, forward rates being ½ to ¾ cent per month above spot. In the absence of any decisive market factors, the only explanation for this movement would seem to be a confidence in British determination to face the facts of the European situation. Among the minor European currencies, Helsingfors at 210 shows little change, Prague at 160 shows further recovery, Budapest is steady at about 6,500, Belgrade at 365, while Bucharest, after its recent recovery, has fallen away rapidly again to about 625. In the East the rupee is fractionally cheaper at 1s 3½d, the yen also at 2s 1½d. Silver rose slightly in the middle of the week on buying from China, but orders were easily satisfied, and a further increase in price for the time being is unlikely. Hong Kong at 3s 5d is unchanged. Shanghai at 2s 7½d is ½d dearer. In South America, Rio is very slightly cheaper, Buenos Ayres about ½d dearer, while Monte Video has moved rather more than ½d in our favour.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 12, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	13,722	Supply Services	6,850
		Interest on Debt	295
		Sundries	502
		Added to Exchequer Balances	661
		Reduction of Debt	6,014
	13,722		13,722

The total revenue for the week ended August 12, 1922, amounted to £13,722,000, which compares with £17,558,228 in same week last year. The total expenditure at £7,647,720 compares with £8,989,867. The principal revenue-producing item was Property and Income Tax, which amounted to £7,112,000, against £5,877,000 in the same week last year. Customs yielded £2,038,000, against £2,635,000 in the same week last year. Excise produced £1,154,000, against £1,455,000. With regard to expenditure, it is noticeable that interest, &c., on war debt amounted to £287,384 against £1,018,711 in the same week last year. The week's

operations reduced the National Debt by the sum of £6,013,645, and caused the following changes:—

	Min. £		Min. £
Public Department Advances	+ 1,450	Treasury Bills	— 13,783
4½% Treasury Bonds	+ 6,019		
National Savings Certificates	+ 300		
	+ 7,769		— 13,783

The floating debt was reduced by £12,340,000 to £892,660,500 during the week ended August 12, 1922.

ALLIED SUPERVISION OF GERMAN FINANCES.

No eleventh-hour surprise saved the Downing Street Conference from the complete failure which last week was obviously threatening. That agreement was found to be impossible on the subsidiary question of methods of making Germany pay is less serious than the fact that the Conference, in atmosphere created by the Balfour Note, found it impossible even to approach the fundamental problem. If the break-up of the Conference does not mean—as in some quarters has been too rashly predicted—the end of the Entente, it does mean an indefinite continuance of drift in the critical matters of international finance. Apprehensions of what this may mean in terms of aggravated financial chaos in Europe have found their expression in a further great plunge in the exchange value of the German mark and a simultaneous depreciation of French, Italian, and Belgian currencies. Meanwhile, the Reparation Commission, upon whom once again the onus is thrown of stepping in where politicians fear to tread, is debating the question of a moratorium. The Reparation Commission on Monday sent the following letter to the German Government:—"Notwithstanding the hope expressed in its letter of July 13th, the Commission is not in a position to notify to you before August 15th its decision upon your memorandum of July 12th. It will, however, acquaint you of this decision at a very early date, and will at the same time settle the question of the payment due on August 15th, which will be suspended until the decision has been taken." It is, apparently, to hear the German

delegates' exposition of the German position before coming to a decision.

While awaiting this decision students of the problem would do well to study the formidable array of special conditions actually secured by the Committee of Guarantees. Dr Wirth accepted these on July 21st on the understanding, as expressed in his letter of that date, that the provisions of the Committee's Memorandum "form a definitive settlement of the questions dealt with in the letters exchanged (by the Reparation Commission and the German Government) between March 21st and July 14th," and supply a basis on which the Reparation Commission can decide with regard to Germany's letter of July 12th, asking for a moratorium. He has since explained that these conditions represent the extreme limit of what the German Government can accept in the way of internal financial supervision and control, and that the Government had the greatest difficulty in forcing them through the Reichstag. These guarantees are, it should be remembered, the *quid pro quo* agreed to by Germany in return for the revision of the Reparations Bill conceded by the Allies last spring. So far as we are aware, they have never been published in any detail in this country, and we think it worth while therefore, to summarise at some length the official text of the correspondence and memoranda that have led to their adoption.

The guarantees accepted may be summarised under three main heads: (1) Supervision over the Budget and the Floating Debt, (2) the Flight of Capital, and (3) Foreign Trade Statistics. As regards the first, two representatives of the Reparation Commission are to be accredited to the Finance Minister, one to deal specially with receipts, the other with expenditure. Both are to be put by the Finance Minister in touch with all heads of departments; they are to see the draft Budget, estimates for supplementary credits, and the drafts of any fiscal Bills. Any additional grants made to departments, if amounting to more than 500,000 marks, are to be seen by them monthly. They are to receive, at regular intervals, the reports of the new Economy Department and the instructions sent out to the provincial Governments and departments; they are to have power of inquiry into the whole machinery of revenue collection, including access to the reports of the new travelling inspectors (to start work on November 1st), whom they may accompany from time to time, and to whom they may suggest visitations and tests. In making such tests the officers of the Committee of Guarantees "shall bear in mind the necessity of not disturbing the work of administration and of respecting the secrecy of the fortune and of the private affairs of the taxpayers." In all this, as in the other two main departments of their activity, the Reparation Commission's officers will be assisted by, and kept in touch with, the new Department for the Supervision of Accounts and Undertakings (Buch und Betriebs Prüfungs Dienst), which audits all books. As to the Floating Debt, daily and ten-daily statements are to be furnished, in addition to monthly financial reports, on income-tax, turnover tax, corporation tax, &c., yields. Here, again, the whole machinery of collection is to be tightened and supervised from end to end. The German citizen was

always more fully docketed and card-indexed than that of any other nation; now all precedents in this direction are to be left behind.

Under the second main category, the flight of capital, a draft bill has been drawn up, after discussion with the Committee of Guarantees, to supplement the laws already in force (December, 1920, and March, 1922), with instructions as to its application. Under this, by Art. i., a visa from the Finance Office is required, save where a transaction is authenticated by a Chamber of Commerce certificate, such certificates being valid only for payments made regularly in the ordinary course of business and requiring to be endorsed by banks. But, according to Art. III. of these instructions:—"If the counter-value of any goods exported is left abroad by an exporter, in whole or in part, to the detriment of German economic life, and intentionally withheld from the national economic system, the competent authorities may prohibit all further exportation of goods by the exporter in question, and he shall not be allowed to export even such goods as are not included in the general prohibited list, without special permission from the departments specified as competent. The granting of this authorisation may be made subject to the fulfilment of certain conditions." "Intention," it is provided, is normally to be presumed, in the case of an inquiry into suspicious transactions, when the exporter has used false invoices, declarations, &c. There are heavy penalties for infringement of Art. I., up to deprivation of civic rights and the confiscation of securities: penalties extending to bankers and their agents. The Department for the Supervision of Accounts is to be specially instructed to exercise watchfulness in this regard, and the Reparation Commission's delegates are to keep in touch with it.

As to statistics, the monthly foreign trade returns are to be supplemented by special tables, showing trade with various countries and distinguishing goods invoiced in foreign currencies from those invoiced in marks. The publication of quarterly statistics of production—e.g., metallurgic—is further to be considered. The fact that all these conditions had been already accepted by the German Government in return for former concessions explain the unsuccessful search at last week's Downing Street Conference for further guarantees that might be demanded in return for a moratorium. It is a testimony to their fulness in the direction of possible supervision that, when seeking to amplify them, M. Poincaré was obliged to turn his eyes in a very different direction, and propose the control of mines and forests, to which other Allied Ministers were unable to agree.

DOMINION CURRENCIES.

In last week's *Economist* a very interesting letter was published from Mr J. F. Darling, advocating what may be called the mutual stabilisation of the currencies of the British Empire by giving them Imperial Treasury bills to serve as their basis. In view of the inconvenience that has in recent years been caused to trade between the different members of the Empire—especially between Great Britain and Australasia—by the breakdown of exchange facilities, it is certainly desirable to explore every avenue by which inter-Imperial monetary arrangements might be improved; and there is an additional reason for doing so in the fact that if any genuine improvement can be arrived at on the system laid down by Mr Darling or anybody else, there is always at least a good chance that the same principle might be applied in a wider sphere, and that inter-Imperial currency conveniences might be ultimately spread out so as to stimulate the exchange of goods between the whole of the economically civilised world. Moreover, as our readers need hardly be told, Mr Darling is a persistent champion of the reform, or experiment, to which his letter refers, and is no armchair theorist rearranging the monetary world in the test-tube of his imagination, but a practical banker who brings years of seasoned experience to bear on his problem. For all these reasons, his letter deserves the most careful scrutiny and consideration.

The peg on which he hung it was the articles that have lately appeared in our pages on the subject of Africa, Australia, and the Gold Standard. Mr Darling had hoped

that this question would be pursued to what he considered to be its logical conclusion if trade within the Empire is to recover that entire freedom of movement which is so essential. He credits us with having pointed out very clearly the cause of the disorganisation—namely, the absence in the currency arrangements of the Dominions of any link between their currencies and the Bradbury note, and he asks whether the real remedy is not to be found by providing this link. He shows, or maintains, that Egypt has done so, "with the result that alone among the exchanges of the world the Egyptian exchange with Britain has remained absolutely stable, and that in the face of widely fluctuating trade balances and large movements of currency. The reason is that from the early days of the war Egypt adopted the British Treasury bill as the basis for its currency." If that were all, it would seem to be a simple remedy for a puzzling problem, and one that is within the reach not only of our prosperous and opulent Dominions, but of any impecunious Power that could beg or borrow a balance in London and then invest it in Treasury bills. But one cannot help feeling that something more is needed. M. Charles Rist, in the pamphlet that he lately published on the Return to Gold, very opportunely observed that for America to lend gold to the problem unless the gold could somehow be persuaded to stay there. So with Egypt, or any other country, and excellently as long as the Treasury bill reserve holds out—sense of the phrase, between Britain and the country in question, enables the latter to meet British claims on it without having to melt its holding of Treasury bills into cash in London. As Mr Darling most truly pointed out, a stable relation between her currency and the Bradbury note in the face of widely fluctuating trade balances and large movements of currency. As long as the trade balance was in Egypt's favour the problem was simple. The Egyptian Government, or the banks that acted for it, only had to purchase drafts on London by the issue of notes printed for this purpose and then invest the proceeds of the drafts in British Treasury bills. So the pressure of a one-sided trade balance could not affect the exchange, because Egypt was, in fact, lending the money to Britain, wherewith to pay for her surplus exports, and borrowing it from her own citizens by the issue of notes in payment of their drafts on London. Thus the Egyptian piastre was most effectively linked to the British Bradbury, and, incidentally, the blessings of inflation, which may have been inevitable in war-battered Britain, were inflicted likewise on Egypt. But if the tide of trade had flowed fast enough and long enough in the other direction, the mere holding by Egypt of Treasury bills as backing to her currency obviously could not have sufficed to keep the exchange value of her currency stable, except as long as the stock of Treasury bills held out. If British exporters had presented enough claims on Egypt to absorb the stock of Treasury bills it seems evident that the system must have broken down, unless Egypt, by borrowing or otherwise, had been able to get a fresh supply. In other words, as far as it goes as a defence against sudden demands, indebtedness that rains continuous blows against a currency system that is based on it.

In fact, it does not seem essentially to differ from the system, commonly called the Gold Exchange Standard, used by India, Brazil, Mexico, and other countries, under which a nation maintains its currency at parity with that of a gold standard country such as England or America by being prepared to exchange the local currency into sterling or dollars at a fixed rate. This system also implies the holding of a reserve fund in London or New York, and it works perfectly well, and provides a duly regulated currency as long as that reserve fund remains no longer. Under this system the rupee and the Brazilian milreis were for many years maintained within a fraction to this day if the war had not come, with its cataclysmal effect on all rates of exchange. As it was, both in the case of India and Brazil, the system broke down—as it

did likewise in the case of Mexico under the stress of revolution.

In the light of these experiences, there seems to be some reason to doubt whether Mr Darling's suggestion for an Imperial currency would necessarily have worked in the case of Africa and Australia with the success that he claims for it in Egypt. Moreover, when one comes to examine the details of his scheme, it seems to involve more difficulties and complications than are associated with the ordinary working of the Gold Exchange Standard. For he thinks that there may be reasons against the adoption of British Treasury bills as a basis for Dominions' currencies, but urges that there can be no real objection to the use for this purpose of "an issue of Imperial Treasury bills in which each country in the Empire could share." He says that such an issue, which could be fixed in amount, would, of course, not be in addition to, but in substitution for, existing debt. Each country would be free to join in such an issue, and free to withdraw from it on giving adequate notice. Each country would both receive and confer a benefit, the result being a benefit all round. "In effect, each country would say to the other participating countries: 'If you will agree to admit a portion of our debt as a basis for your currency, we will agree to admit a portion of your debt as a basis for ours.' Such portion of the Empire's debt could be placed in commission in the hands of Imperial Treasury Bill Commissioners representative of the countries interested. This portion of the debt would be pooled, and the Treasury bills could have marked on them the percentage for which each country is responsible." If we could imagine all the obvious initial difficulties involved by the scheme to have been overcome, it is a little hard to follow Mr Darling's argument that, with a common basis for the currencies of the Empire, the credit-controlling factor would normally be the rate of interest, and that the rate of exchange between the different countries of the Empire would remain at parity. For example, he assumes that in the case of Australia there was a consistent excess of imports. "The Australian banks," he says, "could handle the situation for a time by allowing their Treasury bills to mature, which the banks in London would be in a position to take up." If the excess of imports were persistent, the banks in Australia, finding their position weakened by the diminution in their holding of Treasury bills and by a probable increase in their advances, would be compelled to raise the rate of interest and to restrict their advances. The rate of exchange, however, "would probably not come into play unless the banks found their holdings of Imperial Treasury bills greatly depleted, and this they would have taken steps to avoid." But it is rather difficult to see what effective steps the banks in question could take to avoid the depletion of their Treasury bills on the assumption, which Mr Darling has made, of a persistent excess of imports. In other words, the system that he proposes would keep the exchanges stable, just as the Gold Exchange Standard does so, as long as the economic conditions which produce an adverse balance

of trade are not sufficiently powerful and persistent to overcome the rather modest automatic correctives which such systems afford.

THE MODERN NEWSPAPER.

LORD NORTHCLIFFE, whose death is recorded this week, was one of the outstanding figures of contemporary life. In a comparatively short career, which started from nothing, he achieved for himself enormous wealth and a world-wide reputation, and produced a revolution in British journalism with which his name will always be associated. A man of great imagination, foresight, and overpowering energy, he was fortunate in knowing from boyhood the profession that he wanted to follow, and in having a genius perfectly adapted to its pursuit. His technical achievement is best proved by the fact that in his early days with *Answers*, in the middle part of his career with the *Evening News* and the *Daily Mail*, and in the later stages with the *Times*, he managed to adapt each paper to the needs of its particular market. In the whole range of his effort there is, judged by the standards with which he was content, scarcely a single failure, and, despite the strength of his own personality, every one of his papers was encouraged to achieve and retain an individuality of its own which kept the whole group full of life. Moreover, he never tired of work or fighting, but sought the thick of the battle right up to the time of his fatal illness. His papers must never rest on their laurels, but must always lead the way for others to follow. How many of the new ideas and new policies were his own no outsider can say, but the inspiring personality was certainly his, and to him, at least indirectly, we must attribute that constant progressive policy which keeps the rivals of the Northcliffe Press always on the defensive. Lord Northcliffe's success in attaining the objects he sought is beyond challenge by his most severe critics.

But there is another side to the picture. When a weapon as powerful in its influence as the modern Press has been found, its controller must also be judged by the use made of so great a power. It is useless to cavil at modern methods of publicity. A newspaper proprietor who sets out to raise the circulation of his evening paper to 1,000,000 a day must necessarily consider the tastes of the populace and concern himself rather with what they do want than with what they ought to want. Those whose appeal is to the multitude must suit their methods to the multitude, and the less they heed the criticism of the cultured few the more likely are they to be successful. The revivalist whose passion is to save souls in thousands will employ tricks and devices that shock the old-fashioned religious member of society and make the scholar shudder, but a born evangelist, with his eyes on the salvation of the many, is indifferent to the feelings of the few, and will not abate his methods for their convenience. The motives of Lord Northcliffe were not those of an evangelist, but he had in him a passionate

ve of power and success which made him no less indifferent to the chiding of his critics.

To those whose intelligence had been ordinarily well trained, there was more than the mere form that was tasteful. Unless the moulder of public opinion has before him a clear and lofty ideal of public policy, his power may become a most dangerous instrument, and a pursuit of journalistic success it may end by ebauching instead of developing the intelligence of the public. The inconsistency of opinions, the exaggeration of argument, the impression constantly given that whole aspects of a question were being deliberately obscured, left any reader of critical faculty with a feeling that he was being played with, and that wherever truth might be found, it was not in such writings as these. In his more popular papers the appeal to prejudice always overlaid the appeal to reason, and the most effective device was the short, sharp, staccato catchword which struck the eye without making any serious demand on the intelligence. It was in war-time especially that these methods succeeded, for the nervous atmosphere in which a democracy lives while engaged in a life-and-death struggle is peculiarly suitable to an appeal which neglects the intellect and aims straight at the emotions. Of Lord Northcliffe's enthusiasm for the Allied cause there can be no question, but it is still too early to estimate the value of his newspapers' service during and immediately after the war. There were moments at which they certainly did their work in forcing on the public imagination the gravity and uncertainty of the issues, but there were others (notably after the Armistice) when popular passion was stirred up to force the Government on to wrong lines, and some part at least of our present difficulties is due to the furious propaganda of revenge which called for impossible indemnities and demanded such injudicious action as the trial of the Kaiser. It is perhaps their surest condemnation that never at any time in their history had this group of papers such influence over public opinion as when passions ran high and the voice of reason was drowned in the cry for revenge. As passion has subsided the power of this section of the Press has declined, and, in spite of ever-rising circulations, it has probably less direct influence on public policy to-day than at any time since 1914.

The new journalism is essentially unmoral, with no care for consistency and no fixed point of principle from which it can win the respect of its readers. Both its strength and its weakness lie in its adoration for visible material success. To do something bigger than has ever been done before and make your achievement known to the widest possible public—that is the aim of the Press on its own account and the thing that it values most in others. It thinks and deals in records, and trains its readers to do the same—the record circulation, the record fortune, the record number of performances, irrespective of the quality of the work and the means by which the goal of bigness is attained. Success is the only test, and whatever postpones or impedes success must be jettisoned without scruple. Perhaps it is the reader's consciousness that this is not a complete theory of life which prevents the modern newspaper, despite its tremendous circulation, from attaining all the influence that one would expect it to possess. Deep in our common human nature there may be a finer something which instinctively rejects this standard and judges things by values of its own—recognises that the most dazzling success is often not worth while, and that the ordinary decent man who is never successful enough to win publicity, but does as he would be done by and tries to leave the world better than he found it, may be more admirable than the man who tramples his way to fame and fortune. "To fly high is less than to walk orderly" is a doctrine overlooked in the limelight of modern journalism, but still by most of us unconsciously accepted.

AGRARIAN REFORM IN EASTERN EUROPE.—I.

(FROM A CORRESPONDENT.)

ALL along the Western border of Bolshevik Russia a peasant proprietary is either established, or in process of establishment, partly to serve as a pillar of the social order as strong as its analogue in France. In Bulgaria

and the former Serbian Kingdom it existed before the war; in Roumania its institution, contemplated in 1914, was enacted by the Parliament in refuge at Jassy during the German occupation as a measure of national defence; and it is now being extended to Transylvania. In Czechoslovakia agrarian reform Bills have been enacted, in Hungary stifled by the Conservative reaction. In Lithuania foreign complications delayed the reform, but its lines are those of the Estonian and Latvian laws. In Latvia, Estonia, and Poland it is being carried out, as the result of laws passed during the Bolshevik invasion of 1920. The hope which has inspired it is partly due to the successful resistance of the Russian peasantry to the Bolshevik efforts to set up a new agricultural Communism. The old Communism of the Russian village, subjected to the disintegrating influences of M. Stolypin's legislation of 1908-1910, permitting the withdrawal of holdings from periodical redistribution, was further weakened by the peasants' seizure of the great estates after the fall of Tsarist rule. Incidentally, no doubt, this seizure destroyed some of the best extant examples of large-scale scientific agriculture, and thus contributed to that decline of production which has caused the most terrible famine in history. But the determination of the peasants to stick to their newly-acquired property has proved too much even for Soviet despotism; and their example has inspired and encouraged the land reforms of the Governments of the States which separate Russia from Western Europe. Two other influences, however, have also been at work; in Latvia, Estonia, Czechoslovakia, and Transylvania the desire to get rid of an alien and hostile landlord class; and the land-hunger of the peasantry everywhere.

In all the countries concerned (with certain local and partial exceptions) the land had been mainly in the hands of large landowners. In Poland and pre-war Roumania they were of the same race as the peasants; in Transylvania largely Magyar, in Estonia and the Livonian section of Latvia German or Swedish by descent, in Czechoslovakia mostly Austro-German; but in all these countries they were practically an exclusive and privileged caste. In Latvia and Estonia they were descended from the Teutonic Knights who had conquered the countries in the twelfth and thirteenth centuries, or from Swedish immigrants in the seventeenth and eighteenth, during the period of Swedish rule. From first to last they had treated the Esth and Lettish labouring population as an alien and inferior race. Under the Swedish rule the great majority of their titles were found to be imperfect, but after the Russian conquest their privileges were confirmed. In both the areas which now form Estonia and Latvia there is much land outside the great estates. In Courland, now part of Latvia, there are many large farms of about 500 acres which are left untouched by the reform, and in Latgolia, the Eastern district of Latvia, the land is still held by village communities of the Russian type; so that the problem there is the creation of unified and permanent individual holdings by the re-arrangement of the strips in the common fields. But in Livonia, and in Estonia generally, the bulk of the land (in Estonia nearly 58 per cent.) was held by large landlords. The largest single estate was 60,000 acres in extent, and some families held several at once. All the estates, however, consisted largely of forest land. The peasants, while cultivating their own holdings, were bound to pay certain dues in kind and labour to the landlords; they eked out their own subsistence by renting further land from them, and they seem to have borne the chief burden of the local taxation for roads and schools—though the landlords often held the view, not unknown in other countries, that illiterate peasants are the best. Actual serfage, indeed, was legally abolished in 1816, but its conditions seem to have persisted in fact, and in 1841 and at various times afterwards reasonable reforms had been suggested, but the barons had always met the proposals with furious and effective resistance; they had even managed to increase their own estates by reducing the peasants' lands. Their power as rulers of the countryside was somewhat diminished about the end of the last century by "Russification," i.e., the encroachment on their judicial

and administrative functions by Russian bureaucratic rule. But their economic predominance remained untouched. After sanguinary risings, following the Russian revolution of 1905, fresh attempts were made at agrarian reform; but the influence of the "barons" stifled a Reform Bill in the Duma. Then came the war; German troops occupied the provinces, and plans were made to "colonise" them with 2,500,000 German immigrants, to be settled not only on the untitled portions of the great estates, but on part of the actual peasant land. These plans were cut short by the armistice, but a fresh attempt was made by the German force under Von der Goltz to restore the barons' rule. It failed; but in 1919 and 1920 the Bolshevik army invaded both Provinces and Poland, and appealed to the landless peasants for support. Why, its leaders asked, should you peasants defend countries in which you have no part nor lot? Thereupon the Governments of all three countries promised that all who resisted the invaders should receive land as their reward. The promise was fulfilled last year by the Constituent Assemblies, and the distribution is well on its way to completion.

In Latvia and Estonia its outlines are roughly as follows. Russian Crown lands, corporation and glebe lands, the lands which had been allotted for German colonisation, and the settled estates of the "barons," have been taken over by the Government. Everything seems to have been settled except the question of compensation, but, in any case, those "barons" who aided the Germans, either during the war or in the subsequent occupation by the filibusters under Von der Goltz, will certainly get nothing; nor will those whose titles were found imperfect under Swedish rule. Compensation will be payable for farm buildings, implements, livestock, and all necessary means of cultivation; but the precise terms are as yet unsettled, and the political parties differ as to compensation for the land itself. Probably what is awarded eventually will be paid in bonds redeemable at a date still remote. The land thus acquired is being cut up into holdings, varying in size in the different districts according to its productiveness. In Latvia they range from 37 to 50 acres: the size is limited to that which a peasant family can manage, and they must be cultivated by the owner. In Estonia the tenants are perpetual leaseholders, paying rent to the Government; in Latvia they are freeholders, paying by instalments. In Estonia the holding cannot be permanently alienated, but may be let for a term of years, the new tenant purchasing the livestock and implements of cultivation. In Latvia it can be sold, with the proviso that during the next ten years adjacent holdings cannot be combined. Subdivision—e.g., between a father and a grown-up son—is not actually prohibited in Estonia, but has never been the custom. It is, we believe, prohibited in Latvia, but in both countries the reserve of cultivable land is so large, and the opportunities for industrial development so numerous and so vast, that no fear is entertained of that congestion of the rural population which formerly caused so much suffering in Ireland. In Latvia, moreover, much marsh land and peat-bog awaits reclamation. Ex-soldiers have a preference in the allotment: as a rule, no holding may be retained exceeding 100 hectares (247 acres), a provision which leaves the large farms frequent in Courland untouched. Former "barons" (if not banned for their German sympathies) may take up this amount and a farmhouse; but Latvia has followed Estonia in enacting that the house must not be the ancestral mansion, and the upkeep of this would be beyond the "barons'" present means. These historic mansions, held by the same family for centuries, and full of ancestral relics and memories, will be converted by the Government into hospitals, asylums, and agricultural schools; and the few remaining "barons," from whose class Russia has for two centuries derived many of her ablest generals, diplomats, Ministers, and bureaucrats, will sink to the level of large farmers. The reform has been bitterly assailed in the German Press as confiscation, and with truth. Its defenders reply that the barons' titles rest on conquest, that they have always despised and ground down the real original peoples, that they have invariably refused even the most moderate concessions, and that their presence is now a national danger, owing to

their German sympathies and their affinities with Tsarist Russia.

In Poland, except perhaps in parts of Galicia, Posnania, and the eastern districts, there is no such racial or political difference, and the redistribution is less harsh. The great landlords are left to the last. In principle, individual holdings are limited to 180 hectares (445 acres), in industrial or suburban districts to 50, in Volhynia and Podolia to 400. The land is classified serially in 11 categories, the lands of the Russian Crown or members of the Imperial family coming first, corporation and church lands (subject to an understanding with the Vatican) next, the large estates owned by individuals last; and of these latter, those suffering from neglect or mismanagement are taken before the rest. These lands (except, presumably, the two first categories) are paid for in State bonds at the full pre-war value, and individual landlords, when their estates are reached, will be offered time and inducement for voluntary sale to small holders. Sale of the new holdings is prohibited, but not subdivision; and congestion is not expected. Many of the purchasers are returned emigrants from America. The earlier categories are being distributed, but in the next Parliament the bourgeois parties may probably be stronger, and the Act may be so amended as to be less drastic. It applies to all Poland; but in Galicia the land is for the most part already held in small lots by peasants, some holdings, indeed, being hardly sufficient for a maintenance, while in Posnania the farms are mostly well below the limit of expropriation.

The changes in Czechoslovakia and in the old and new territories of Roumania must be left to a subsequent article.

PUBLICITY AND LABOUR STATISTICS.

(BY OUR LABOUR CORRESPONDENT.)

READERS of the *Labour Gazette* will have observed that the Ministry of Labour has discontinued the publication of particulars of employment in the chief industries of the country. These monthly reports have been a regular feature of the *Labour Gazette* for many years, and the announcement that this information is not to find a place in the columns of the *Gazette* in future is due to a desire to save money. In an answer to a question put by Mr Hannon in the House of Commons (July 26th), the Minister of Labour admitted that "the decision to discontinue these reports and statistics was taken, after careful consideration, with the object of reducing expenditure on the Ministry of Labour *Gazette*, and on the statistical work generally of the Ministry." No one to-day will for a moment defend unnecessary expenditure, and there is every reason for a most careful scrutiny of public expenditure. But it is possible that a curtailment of expenditure in some directions may be no saving. The suppression of industrial information falls into this category. We have no means of knowing how much the Government will save by cutting down the *Labour Gazette*, but the sum cannot, however, be large. On the other hand, the real loss resulting from the restriction of industrial information may be considerable, especially if curtailment is to be carried still further. Unfortunately, this is not the only instance of the suppression by the Ministry of Labour of essential information of a kind which it has been the practice of the Government to publish periodically. During the war, of course, the publication of annual and other reports was largely discontinued. Staffs were depleted, and those who were left were absorbed in urgent war work. But since the return of peace the Ministry of Labour has not resumed the publication of some of the most valuable Government publications, notwithstanding that the material is in the possession of the Ministry of Labour.

It is 36 years since the House of Commons resolved that "in the opinion of this House, immediate steps should be taken to ensure in this country the full and accurate collection and publication of Labour statistics." In accordance with this resolution, the Board of Trade undertook the work, and in 1893 a separate Labour Department was created within the Board of Trade to carry on these activities. Within ten years the work of the Labour Department had resolved itself largely into the collection and collation of information necessary for the regular issue of the follow-

ing publications:—(1) The *Labour Gazette* (monthly). (2) An annual Abstract of Labour Statistics. (3) An annual Report on Changes in Wages and Hours of Labour. (4) An annual Report on Strikes and Lock-outs. (5) Periodical Reports on Standard Time Rates of Wages in the principal industries. (6) A triennial Report on Trade Unions. (7) An up-to-date Directory of Industrial Associations. (8) A periodical Abstract of Foreign Labour Statistics. In addition to this, special investigations were made from time to time into various industrial questions. The more important of the volumes issued may be conveniently set forth in the following order:—(1) A Report on Agencies and Methods for Dealing with the Unemployed (1893). (2) Two Reports on Alien Immigration. (3) A Report on Profit-Sharing (1894), and one on Gain-Sharing (1895). (4) Two Reports dealing with Standard Piece Rates, one relating to 1893 and the other to 1900. (5) A Report on Contracts given out by Public Authorities to Associations of Workmen (1897). (6) Two Reports on the Employment of Women and Girls. (7) A Report on the Wages of Domestic Servants (1899). (8) A Report on Provision for Old Age Abroad (1899). (9) A Return of Employment of Children on Leaving School (Upper Standards) (1899). (10) A Report dealing with the Wages and Earnings of Agricultural Labourers (1900). (11) A Report on Workmen's Co-operative Societies (1901).

But, impressive as the two foregoing lists are, they do not exhaust the activities of the Labour Department before the war. A series of reports on wages in various industries in 1886 and 1891, a report on cost of production, and other special reports were published between 1886 and 1893. More recently, there were published the results of the inquiries into the relative level of the cost of living in the principal industrial towns in 1905 and in 1912; the census of wages in 1886 and in 1906-7, and the volume of collective agreements between employers and work-people (1910). The practical importance and economic value of these various documents are obvious.

During the war, as has already been pointed out, the publication of the regular volumes of the Labour Department was almost entirely suspended. Since the war broke out two editions of the Industrial Directory have appeared (1916 and 1919), one edition of the Report on Standard Time Rates of Wages (1921), and one edition of the Report on Profit Sharing (1920). The rest have not appeared at all, though presumably the collection of the necessary statistics has been continued and all the material which is required is available. When Mr Lloyd George succeeded to the Premiership in 1916 he established a separate Ministry of Labour, into which the Labour Department of the Board of Trade was absorbed, and it is the Ministry of Labour which is now responsible for the non-publication of the reports and documents referred to above. Some of these papers are badly needed. The Industrial Directory, which is of greater economic importance than many year-books which find a ready public, was last issued in 1919, and is now hopelessly out of date and quite useless, and a new volume is required. The "Annual Abstract of Labour Statistics"—one of the most valuable volumes issued by the Ministry of Labour—has not been issued since 1915. The Report on Trade Unions has not been published for the last ten years, notwithstanding the great changes which have taken place. Very many modifications in standard time-rates of wages and hours of labour have been made since 1920, when the last report on this subject was issued. A good deal has happened also since the last report on changes in rates of wages was published in 1914, and the system of collective agreements has been extended and developed out of all recognition since the last report on this subject published 12 years ago. The report on strikes and lock-outs, which was formerly issued annually from 1888 to 1914, has not been published since the beginning of the war. These various volumes would to-day be welcomed by those engaged in industry and by economists and publicists.

The worst fears of economists, employers and Trade Union leaders have now been realised. For some months, according to answers made by Dr Macnamara to questions asked in the House of Commons, the question of re-issuing the periodical reports which were suspended during the war has been "receiving consideration," a euphemism for gradual strangulation or slow starvation.

The Minister of Labour recently announced the decision "to effect a substantial reduction in the statistical branch of the Ministry." In face of this, resumed publication is an impossibility, and it is ridiculous, therefore, for him to make any pretence of continuing to "consider" the question.

The suppression of information on the wide range of questions which the Ministry of Labour has dealt with in the past will be nothing short of a national disaster. The national interest demands the compilation and publication of records of industrial changes and developments, whilst economists, historians, politicians, and those directly concerned with industrial questions—whether as employers or workers' leaders—will be seriously handicapped by lack of knowledge. A good deal, indeed, the greater part, of the information previously published by the Ministry of Labour is of a kind which cannot be collected effectively except through official channels; and, even if it could, it is important that it should be published by an impartial and authoritative organisation such as a Government Department. It is doing an ill-service to the community to substitute conjecture and prejudice for knowledge. Our industrial problems will be multiplied and intensified by the suppression of the knowledge. Force will tend to take the place of reason. Orderly progress must proceed on the basis of tested experience and record of fact, and the need of the age is not less light upon the problems of industry, but more. We could indicate several important pieces of work which might well be put in hand. As soon as more normal economic conditions return, there should be an inquiry into working-class expenditure to serve as a basis for a new cost of living index number, and an inquiry into the relative costs of living in different areas. Further, a new census of wages and hours of labour is overdue; the results of the pre-war inquiries are entirely obsolete, and though at the present time such an investigation would not be desirable, the preparatory work could be undertaken at once.

The general restriction of industrial information is a short-sighted policy. If there must temporarily be any curtailment, it would be well for the Ministry of Labour to take into consultation economists and industrial representatives with a view to the maintenance of the maximum service of labour information, having regard to existing financial considerations. It is possible that ways and means could be devised of providing the necessary information at less cost than in the past. Anyhow, there ought not to be a sweeping reduction of statistical and other work until the question has been more fully explored.

OUR TRADE WITH RUSSIA, POLAND, AND THE BALTIC STATES.

THE area of the Russian Empire before the war was estimated at 7,889,000 square miles, with a population of 175,000,000. By various treaties the area of Russia has been diminished by about one twenty-fourth, and its population by one-fifth, among which fifth may probably be found the most highly industrialised portions of the former Russian Empire. In 1913 Russia stood second only to the United States in the list of countries from which we drew our supplies of raw materials, and was fourth in the value of the combined food supplies and raw materials which we imported. She was the chief source of our supply of imported eggs, and second only to Denmark in supplying us with butter, and second to the United States in supplying us with barley. She stood easily first in supplying us with wood and timber, more than half of our total imports, valued at £13,622,000, coming from Poland, and the Baltic Provinces, which until lately formed part of Russia, has fared of late years is seen from the following table:—

Values in Thousand £.	1913.	% of Total.	1919.	% of Total.	1920.	% of Total.	1921.	% of Total.
U.K. imports from Russia	40,300	5.2	16,400	1.0	33,500	1.7	15,000	1.4
U.K. total exports to Russia	27,700	4.4	17,600	1.8	16,800	1.1	16,500	2.0
Total value of trade	68,000	4.84	33,900	1.31	50,300	1.44	31,500	1.66

Although the reconstituted Poland comprises the greater part of West Prussia and part of Eastern Silesia, the main bulk of it has been shorn from the former Russian Empire. In our trade returns our imports from, and our exports to, Dantzic (which has been neutralised) are included in the values of our trade with Poland. For the purposes of comparison we can most conveniently classify our trade with Poland in connection with that with Russia and with the Baltic States, although a considerable portion of it is probably derived from localities formerly incorporated in the Empire of Germany. The percentages given in the above table are those of the imports of the United Kingdom and of the combined values of our exports and re-exports.

The following table is based upon the figures given in the quarterly volumes of the "Trade and Navigation Returns":—

(000's omitted.)

Value of U.K. Imports from—	Quarter Ended Mar. 31, 1921.	Quarter Ended June 30, 1921.	Quarter Ended Sept. 30, 1921.	Quarter Ended Dec. 31, 1921.	Whole Year, 1921.	First Quarter, 1922.	Second Quarter, 1922.
Russia.....	£ 251	£ 47	£ 123	£ 2,280	£ 2,701	£ 543	£ 703
Finland.....	1,159	1,174	2,489	2,865	7,728	879	1,879
Estonia.....	129	129	315	133	739	187	343

Value of total trade	7,805	6,140	7,507	10,040	31,492	4,738	8,459

The value of our total trade during the first six months of last year was £13,945,000, and in the last six months £17,547,000; and for the first six months of this year was £13,197,000. Our imports from the six countries during the first three months of last year were valued at £2,495,000; in the second quarter the value fell to £1,990,000, but in the third quarter it rose to £4,008,000, and in the last quarter to £6,473,000. There was a steep fall in the first quarter of this year, but a great recovery during the second quarter.

The value of our exports of British produce and manufactures fell last year from £3,930,000 in the first quarter to £2,875,000 in the second quarter and to £2,221,000 in the third quarter, but rose by nearly half a million pounds in the last quarter. This year the value of our exports in the first quarter was only £1,743,000, but rose to £3,347,000 in the second quarter. The relative importance of our trade with Russia, the new Baltic States, and Poland during last year is shown in the next table:—

VALUE OF TOTAL TRADE WITH THE UNITED KINGDOM IN 1921.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Finland—called by its inhabitants the land of lakes, or marshes, and formerly known as the granary of Sweden, having been conquered by the Swedes in the twelfth century—was partly annexed to Russia by Peter the Great in 1721, and the remainder conquered in 1809. It has very extensive forests, and its chief products are timber, potash, pitch, tar, and resin. The value of our trade with Finland last year rose quarter by quarter, and for the whole year exceeded £10½ million, or rather more than one-third of our total trade (£31,492,000) with the six States. Our total trade with Latvia (whose chief cities are Riga, Libau, and Mitau, and whose chief products are flax and timber) also rose each quarter, and exceeded £2½ millions for the year. Our trade with Russia fell in value slightly in the second quarter, but rose by more than a million pounds in the third quarter, and in the last quarter was nearly three times the value of the third quarter. Our trade with Lithuania fell slightly in the second quarter, but rose in the third quarter, and in the last quarter was almost double the value of the first quarter. The value of our trade with Poland fell each quarter, and for the whole year was little more than thrice that of the first quarter. And our trade with Estonia also fell each quarter, and for the whole year was much less than twice the value of the first quarter. For the first six months of this year Finland retains first place in the list, with a total trade value of £4,360,000; Russia stands second, with a value of £3,196,000; Poland is third, with a value of £2,190,000; Latvia has risen to fourth place, her value being £1,635,000; and Estonia is fifth, value £1,357,000; and Lithuania remains last, with a value of £470,000.

TABLE SHOWING THE VALUES OF OUR IMPORTS FROM and of OUR EXPORTS TO the SIX COUNTRIES.
(000's omitted.)

Trade of the United Kingdom With—	Quarter Ended Mar. 31, 1921.	Quarter Ended June 30, 1921.	Quarter Ended Sept. 30, 1921.	Quarter Ended Dec. 31, 1921.	Whole Year, 1921.	First Quarter, 1922.	Second Quarter, 1922.
FINLAND—Imports from	£ 1,199	£ 1,174	£ 2,489	£ 2,865	£ 7,728	£ 879	£ 1,879
Total exports to	639	960	703	602	2,904	360	1,243
LITHUANIA—Imports from	68	67	66	144	344	114	309
Total exports to	17	5	20	13	55	7	40
LATVIA—Imports from	388	211	524	497	1,620	478	599
Total exports to	161	370	167	247	945	186	372
POLAND—Imports from	437	362	491	553	1,843	376	609
Total exports to	1,793	1,401	1,009	706	4,909	419	785
ESTHONIA—Imports from	152	129	315	133	730	187	343
Total exports to	2,645	1,187	260	238	4,330	363	464
RUSSIA—Imports from	251	47	123	2,280	2,700	543	703
Total exports to	56	227	1,340	1,761	3,384	837	1,113

In the case of Finland our imports exceeded in value our exports in each quarter, and for the year were more than two and a half times as great. Lithuania showed the same result quarter by quarter, and for the whole year the value of our imports was more than six times as great as that of our exports. In the case of Latvia our exports exceeded the value of our imports in the second quarter, but were much less in each of the other quarters, and for the whole year our imports were nearly twice the value of our exports. In the case of the other three countries the values of our exports exceeded the value of our imports. Poland shows an excess each quarter, and for the year the value of our exports was nearly thrice that of the value of our imports. In the third quarter Estonia showed an excess in the value of our imports, but for

the year the value of our exports was about six times as great as that of our imports. Russia shows an excess in the value of our imports in the first and fourth quarters, but for the whole year an excess of more than half-a-million pounds in the value of our exports. For the first half of the current year the same relation between our imports and exports appears to prevail.

TABLE SHOWING OUR PRINCIPAL IMPORTS FROM and EXPORTS TO RUSSIA in 1913 and 1919.

U.K. Imports in £'000's.	1913.	1919.	Exports and Re-exports from U.K.	1913.	1919.
Wood and timber	13,622	11,669	Coal and coke	4,441	561
Eggs	4,745	..	Machinery	4,408	554
Butter	3,831	88	Cotton, raw	3,852	848
Flax	2,807	726	Rubber	2,505	..
Wheat	1,985	..	Herrings	1,988	374
Barley	1,847	..	Manufactures of iron and steel	1,010	350
Petroleum	1,028	60	Woolen and worsted yarn and manufactures	845	2,835

			Value of total exports and re-exports	27,694	17,494
Value of total imports ..	40,271	16,370			

From the first table in this article we see that the value of our imports from Russia, Poland, and the Baltic States rose to £33,500,000 in 1920 and fell last year to £15,000,000, a result largely due to the decline in prices and to the stagnation of our trade resulting from the three months' dispute in the coal industry. The value of our exports and re-exports fell from £17,494,000 in 1919 to £16,800,000 in 1920, and was of almost the same value (£16,500,000) last year.

The statistics set out in the tables are more reassuring as to the future than the reports from Russia proper would lead us to expect, and certainly warrant our hoping that we are slowly progressing in the direction of regaining much of our former comprehensive trade in the import of food and raw materials, and in the export of manufactured goods. The most necessary step in this direction lies in the immediate reduction of the enormous armies maintained in Russia and the adjoining Baltic States, as well as in those of the little Entente Powers.

RUBBER-PRODUCING COMPANIES IN 1921.

In 1920 conditions in the rubber-growing industry became so bad that it was generally thought that matters could not very well be worse. By some it was considered at the close of that year that the end of the depression was at hand, and the prophets were even moved to tell us tales of the good days to come. During 1921, however, the ardour of these prophets was severely damped by watching conditions develop from bad to worse and the financial side of the industry reduced to a position of great difficulty.

The year 1920 finished up with quotations for standard crêpe rubber fairly firm at 11½d per lb, and ribbed smoked sheets close to 10½d per lb. The early part of the new year—1921—saw comparatively high prices, crêpe being marked up to 1s 3½d and sheets 1s 2d per lb. Unfortunately the price, owing to the depression in the motor industry, both here and in America, gradually fell, until in June crêpe sold for 8d and sheet 7d. In July there was a recovery of 2d per lb, but this was partly lost in the following month. An improvement in the motor industry a little later caused a fresh buying impetus, and from September a gradual rise took place, until at the end of the year 11½d per lb was the spot quotation for both crêpe and sheet. These low quotations are the more remarkable when the Continental demand for rubber during 1921 is taken into consideration. It is stated that Germany took as much, or more, rubber in 1921 than before the war, the amount being estimated at 25,000 tons. France absorbed about 14,000, and Italy 6,000 tons, while it is estimated that Japan imported direct 20,000 tons. Restriction of output, as will be seen by studying the statistics given below, is still the main plank in the platform of the various rubber-growing interests, and the policy has been loyally adhered to by the majority

of British undertakings. As far as immediate profits are concerned, however, no great measure of success can be claimed on behalf of this policy if the figures given below represent a fair picture of the state of the industry; indeed, these results may possibly cause interests to arise in the rubber world which will favour a return to the law of natural supply and demand and the liquidation of inefficient interests.

A more detailed story of the year may be gathered from the accounts of a few representative rubber-growing undertakings, and for this purpose we have selected eleven companies, which include some of the most important concerns in the industry. In our first table we set out the production of rubber during the past three years, together with the price per lb at which crops were sold. Figures for 1914 are also appended:—

Company.	Production.				Price per lb.		
	1914.	1919.	1920.	1921.	1914.	1920.	1921.
Anglo-Malay	Lbs. 1,384,382	Lbs. 1,662,991	Lbs. 1,430,807	Lbs. 814,209	s d 2 1½	s d 1 7	s d 0 8½
Chersonese	537,646	665,165	653,267	504,891	2 1½	1 7	1 5
Cons. Malay	684,050	1,002,435	1,070,989	842,805	2 2½	1 5	0 8½
Golden Hope	174,133	376,849	461,824	233,446	2 0½	1 6½	0 7½
Highlands & Lowlands	1,137,858	1,504,374	1,533,919	1,215,779	2 2	1 5	0 11½
Linggi	1,389,290	2,804,960	2,804,217	2,175,728	2 1½	1 8½	1 0½
London Asiatic	1,131,430	1,615,566	1,605,830	1,426,257	2 1½	1 6	0 9
Selangor	614,199	888,830	868,833	656,554	2 2½	1 6	1 9
Shelford	157,130	343,279	360,915	325,525	2 1½	1 7	0 8½
Sungei Kapar	658,616	842,556	905,883	722,467	2 2½	1 4	0 9
United Serdang	1,827,943	3,084,945	3,789,951	2,876,188	2 3½	1 11	0 9½

It is instructive to make a comparison between the prices obtained for rubber and production costs. For this purpose we set out below the cost of production per lb over the past seven years of a few companies:—

COST OF PRODUCTION PER LB.									
	1913.	1914.	1917.	1918.	1919.	1920.	1921.		
Anglo-Malay	s d 0 38	s d 0 45	s d 0 21	s d 0 25	s d 0 21	s d 0 17	s d 0 17	s d 0 17	s d 0 17
Consolidated Malay	1 0 61	0 11 93	0 11 52	1 1 17	0 7 70	1 2 63	0 10 78	0 9 24	0 9 24
Golden Hope	1 2 18	0 11 23	0 11 87	1 2 87	0 8 11	1 2 11	0 11 11	0 11 11	0 11 11
Highlands & Lowlands	0 11 53	0 9 29	0 9 42	0 10 83	0 7 52	0 10 95	0 7 20	0 7 20	0 7 20
Linggi	1 0 73	0 9 54	0 10 15	1 2 20	0 11 21	1 0 43	0 8 00	0 8 00	0 8 00
London Asiatic	1 4 76	1 0 83	1 0 36	1 1 64	0 10 12	1 0 14	0 9 33	0 9 33	0 9 33
United Serdang	1 4 56	0 11 84	0 11 64	1 1 88	1 0 86	1 2 22	1 1 97	1 1 97	1 1 97

It may be noticed that, with the help of the companies concerned, we are able to supply in the two above tables statistics which cannot be found in reports. We would suggest, however, that another year this information might be made available to shareholders in the annual accounts. It should not be overlooked that a frank publicity is the best way to keep the confidence of the investor. It is certainly all to the good that directors have in most cases been able to make such striking reduction in production costs, although the figure for Golden Hope may cause some comment, especially when the reduced selling price, as shown in the previous table, is considered. In connection with effecting economies in management, a perusal of the report of the directors of the Consolidated Malay Rubber Estates makes interesting reading. Shareholders are informed that "various schemes for economy have been put into practice," and the visiting agent, in reporting that "though the numbers of both European and subordinate staff have been reduced," refers to "the generally good all-round standard of work to be found in the estates during the year."

The next table shows net trading results over a number of years:—

NET PROFITS after PROVIDING for all EXPENSES.						
	1912.	1913.	1918.	1919.	1920.	1921.
Anglo-Malay	£ 123,206	£ 104,583	£ 51,359	£ 92,048	£ 44,617	£ 4,161
Chersonese (F.M.S.)	20,764	29,081	28,668	67,234	29,253	34,207
Consolidated Malay	58,265	34,712	18,472	39,438	75	Dr 16,500
Golden Hope	20,318	12,254	6,857	15,080	9,872	Dr 4,962
Highlands & Lowlands	136,441	79,079	48,168	99,056	37,712	23,187
Linggi	147,814	89,680	36,778	123,607	52,410	17,159
London Asiatic	86,202	61,274	36,368	87,725	35,612	5,761
Selangor	82,300	50,263	33,357	63,661	28,712	36,496
Shelford	22,104	10,363	3,524	15,791	4,986	Dr 5,982
Sungei Kapar	65,867	42,364	24,652	47,700	16,534	2,852
United Serdang	72,596	112,813	76,878	107,726	98,225	Dr 60,607

It would, we venture to think, be difficult to find another raw material industry which reveals such deplorable results. It will be noticed that five companies out of the twelve have made a loss on the year's working. But Chersonese and Selangor stand out prominently with

increased profits, while Highlands and Lowlands has made a brave attempt not to be left behind.

Our final table shows the trend of rubber share prices during the past few years. Quotations in July, 1914, are added for comparison:—

Name.	Prices of 1920.		Prices of 1921.		Price July 27, 1914.	Price July 12, 1921.	Price Aug. 16, 1922.
	H'gst.	L'wst.	H'gst.	L'wst.			
Anglo-Malay (£1)	4/11	2/3	1 1/4	5/2	4	1 1/4	2 1/4
Chersonese (2)	14/7 1/2	5/1 1/2	7/4 1/2	2/4	7/4 1/2	3/	2 1/2
Cons. Malay (2)	85/	30/	36/3	18/6	1 1/2	1 1/2	1 1/2
Golden Hope (£1)	65/	28/9	38/9	21/7	1 1/2	32/6	1 1/2
Highlands & Lowlands (£1)	94/4 1/2	36/	48/3	26/3	4	1 1/2	1 1/2
Kapar Para (£1)	74/4	27/5	40/3	18/3	13/	3/6	2/10 1/2
Linggi (2)	83/	3/1	5/5	2/3	5/9	3/6	1 1/2
London Asiatic (2)	68	14 1/2	48/9	27/9	3	1 1/2	1 1/2
Malacca (£1)	69/1	22/6	27/6	12/6	3	1 1/2	1 1/2
Rubber Estates of Johore (£1)	30/11 1/2	15/	19/	7/6	8 1/2	4/	4/6
Selangor (2)	10/6	4/4 1/2	6/6	3/2	25/1 1/2	9/9	13/3
Shelford (£1)	45/	20/	24/8 1/2	7/6	12	3 1/2	3 1/2
Sungei Choh (£1)	34/8 1/2	22/	25/	10/	18	3 1/2	3 1/2
Sungei Kapar (2)	10/6	4/4 1/2	6/	2/1 1/2	7/	3/	2/7
United Serdang (2)	17/	3/11	5/3	2/	7/	3/	2/7

A perusal of the above table will probably surprise most people not intimately connected with the industry. That prices in August, 1922, should show such comparative strength when compared with those prevailing just over a year ago, speaks volumes for the ultimate faith in the industry held by shareholders in well-established companies.

For ourselves, we think that this faith in the future is justifiable if carefully tempered with reason. The flutter of hope consequent upon the Dutch meeting has died down, and the prospect of harmonious and complete agreement on restriction of production still appears remote. But it may be contended that, if left alone, it can only be a matter of time before the rubber-growing industry finds its own level, and that any policy which aims at artificially prolonging the life of inefficient producers is not good in the long run for affecting economies in management. If economic forces are permitted to operate, in the absence of adequately wide restriction, obviously, weak and inefficient producers will go under; and the most optimistic followers of the industry should carefully restrict purchases to the shares of the strong and well-managed companies, whose financial position will enable them to weather a prolongation of the present crisis. It must not be overlooked that there is a certain amount of truth in the contention that as the price of rubber falls, and providing there are reasonable prospects of the lower prices being stabilised, fresh outlets will be found for the commodity. But this, we know, is cold comfort for rubber shareholders while producing costs are at the present level and the price of the raw material daily touching new low levels.

Notes of the Week.

Overseas Trade in July.—The official returns of British overseas trade in July afford some grounds for encouragement, though not perhaps to the extent that a casual glance at the figures would suggest. Exports of British produce and manufactures at £60.4 millions were £8.3 millions higher than in June and £17.2 millions higher than in July, 1921. In connection with the comparison with July, 1921, two conflicting influences have to be remembered: first, a year ago trade had scarcely emerged from the clutches of the coal stoppage, and, secondly, prices of British manufactures have been in many instances severely cut this year. When these influences have been weighed up, the comparison may be regarded as moderately satisfactory. The export increase on the June figures is a welcome evidence of progress from the worst of the depression, although it must not be forgotten that July had one more working day than June. In value imports were £2.5 millions lower than in June and £1.2 millions lower than in July, 1921. A comparison of the summary figures for July and the first seven months of 1921 and 1922 reads as follows:—

COX & CO.

ESTABLISHED 1758.

MONTH OF JULY				
	1921.	1922.	Increase or Decrease in 1922.	
Imports	£ 80,501,863	£ 81,783,534	+ 1,281,671	+ 1.6
British exports	43,172,399	60,418,626	+ 17,246,227	+ 39.9
Re-exports	9,361,556	8,316,638	- 1,044,918	- 11.1
Total exports	52,533,955	68,735,264	+ 16,201,309	+ 30.8
Excess of imports over total exports	27,967,908	13,048,270	- 14,919,638	- 53.3

SEVEN MONTHS Ended JULY 31.				
	1921.	1922.	Increase or Decrease in 1922.	
Imports	£ 562,276,868	£ 568,970,159	+ 6,693,291	+ 1.2
British exports	412,067,426	412,180,431	+ 113,005	+ 0.0
Re-exports	59,047,245	63,988,158	+ 4,940,913	+ 8.3
Total exports	471,114,671	476,168,589	+ 5,053,918	+ 1.0
Excess of imports over total exports	181,162,197	92,801,570	- 88,360,627	- 48.8

The movements of the merchandise trade balance are important. The import excess in June was £23.4 millions, in July, 1921, £28 millions, and last month only £13 millions. On the seven months the import excess has been reduced by £88.3 millions, or 48.8 per cent., as compared with the corresponding period of 1921—a comparison that flatters, since the coal stoppage worked havoc with the 1921 figures. Nevertheless, the merchandise balance should now be very well within the covering scope of invisible exports. A welcome feature of the returns is a rise in exports of British manufactures, which is illustrated below:—

	Total Wholly and Partially Manufactured Goods.	Cotton Yarn and Manufactures.	Woolen and Woollen Manufactures.	Iron and Steel ..	Machinery.	Woolens.	Vehicles.
June, 1922..	Mln. £ 40.6	Mln. £ 14.0	Mln. £ 4.9	Mln. £ 4.3	Mln. £ 2.3	Mln. £ 4.9	Mln. £ 2.3
July, 1922..	48.5	18.0	5.4	4.6	3.2	5.4	4.5

The bullion and specie returns for July show imports of £3,292,092, against exports of £10,400,720, gold to the amount of £8,590,941 having gone to the United States. The usual tables analysing imports and exports under a number of classifications will be found towards the end of this issue.

Mr Griffith's Death and the Irish Outlook.—The death of Mr Arthur Griffith, writes our Dublin correspondent, is a factor of much importance in the Irish situation. There is personal tragedy in the premature cutting-off of a vigorous and disinterested career: there is national loss in the sudden elimination of a trusted leader in time of acute crisis. But this is more, and the realisation that it is more has tended to increase the depression which a fortnight ago was beginning to affect the minds of the thoughtful. Mr Griffith was but 50 years of age, yet he represented, almost alone amongst the foremost figures of Sinn Féin, that maturity of judgment which only long study and experience of affairs can bestow. He might almost be said to have belonged to the generation before that of his colleagues and political associates. His presence amongst them contributed the element of continuity to the recent direction of Irish affairs, because as a hostile critic of the Irish Parliamentary Party since the beginning of the century he was fully familiar with the developments of

contemporary politics, and had devoted much time and labour to the economic aspect of Ireland's fortunes. Of his surviving colleagues not one had really trodden the political stage before 1916—not one was known as a serious student of public affairs. In an increased degree, therefore, all eyes are turned upon Mr Collins, who is now left in a position of eminence and responsibility not easily distinguishable from an isolation to be regretted on several grounds. He has shown courage and perspicacity, self-reliance and resource, and he has the gift of leadership. But he is to-day head of a Provisional Government and Commander-in-Chief of an army on active service. For all the multifarious problems that will daily clamour for treatment, what helpers and advisers is he going to summon to his aid? The organised military resistance of the Irregulars has now been practically dissipated by the capture of the City of Cork and of Clonmell, and everywhere the end is not yet. Organised military resistance in the field is giving place to systematic crime, manifesting itself sporadically—to surprise outrages aimed at the community throughout the settled areas and in Dublin itself. But the public is aiding the Government with information, and this parricidal type of disorder will gradually be suppressed. Already the rank and file of the Irregulars are showing a progressive tendency to melt away and even in certain cases amongst genuine if misguided patriots to be converted by what they have seen to saner counsels. But the destruction of property and the dislocation of business are by no means finished yet. It is now clear that the Irish Free State's finances will be crippled for at least a generation, for although the productive power of an essentially agricultural nation may be rapidly restored, the loss of fixed capital, of wealth in the form of buildings, machinery, bridges, roads, railways, piers, and the like, as well as the compensation to all the private victims of civil strife, must necessarily involve a very heavy burden upon the Free State Exchequer—a burden the amount of which no one can foresee, nor even estimate approximately under existing conditions. The long-heralded development of Irish resources is thus handicapped before it is started by this compulsory hypothecation of its revenues in advance to the needs of reconstruction. In addition to these calls upon the public purse, it is clearly realised by most thinkers that it is indispensable for the welfare of the social organism that the general standard of living, particularly in the towns, shall be raised, and a broad policy of social reform, involving housing, public health, and education will mean large annual expenditures for a very long time before the resultant increase in the earning power of the community can bring relief to the Exchequer.

The Future Constitution of Palestine.—Now that the terms of the British Mandate for Palestine have been settled by the League of Nations, the Constitution under which the Mandatory Power will carry out its terms of reference comes up for consideration. If the complicated situation in Palestine is to be understood rightly, these two questions of Mandate and Constitution must be kept as distinct in the public mind as they are in law and fact. The principal parties concerned in the drawing-up of the Mandate were the League of Nations and the prospective Mandatory. But the Mandate, while safeguarding certain interests and laying down the general principles on which Palestine was to be governed, did not, of course, provide for the practical details. These have to be settled by the Mandatory Power, in agreement (so far as possible) with the present and future inhabitants of the country—the purpose of a Mandatory being to give practical expression and executive force to the principles of government which the League of Nations lays down. The publication of a Constitution for Palestine by the British Government is therefore the next stage in the process of settlement and reconstruction. At the moment of writing no official text of this forthcoming document has appeared, or could have appeared, seeing that the text of the Mandate, as approved by the League of Nations, was only published the other day. This does not mean, however, that the Eastern Department of the Colonial Office have not been giving their mind to the matter. As early as February 9th last, an abstract of the Draft

Orders in Council, by which the Constitution was eventually to be promulgated, was communicated to the Press and published the next day; and, since then, the full drafts have been communicated to the Secretariat of the League of Nations (in connection with a letter addressed to the latter by Cardinal Gasparri, on behalf of the Holy See), to the Palestine Arab Delegation which recently visited London, and to the Zionist Organisation (see Cmd. 1708-1922). The correspondence which passed on the subject between the Arab Delegation and the Colonial Office has also been published (Cmd. 1700-1922), and this throws further light upon the points that will create the chief difficulties. The draft Constitution is evidently modelled on that of certain British Crown Colonies—not those of the lowest rank, but such as have a certain number of elected members on their legislative council. The choice of this model is in no sense derogatory to Palestine. Indeed, it is just because Great Britain has had experience in administering every variety of Constitution, from the most paternal to the most democratic, that she is qualified to be a Mandatory Power. The real question is whether the model chosen is best suited to Palestinian conditions, and if once the conferment of the Mandate, and the terms on which this has been done, are taken as existing facts, the British Government's case, on the question of the Constitution, seems a good one. In brief, the Constitution will provide for (i) a High Commissioner with wide powers of appointment to posts and granting of concessions, subject to the Home Government's control; (ii) a legislative council with a maximum of 27 votes, including the vote and casting-vote of the High Commissioner; (iii) a two-storied electoral system under which the primary electors will elect 12 secondary electoral colleges, and each of the latter a single member of the Council. The franchise is to be very wide, every male Palestinian citizen over 25 years of age being qualified to be a secondary elector as well as a primary one; and the religious and national divisions in the population are to be provided for by a proportional allotment of electoral colleges to each religious community. The composition of the Council is the really controversial issue, for the 12 votes of the elected members, plus the one vote of the nominee of the Associated Chambers of Commerce, are outnumbered by the votes of the 10 official members, the High Commissioner's two unofficial nominees, and the two potential votes of the High Commissioner himself. If this were a Constitution for Iraq or Syria, it might be cavilled at. But considering that the Mandate definitely established "bi-nationalism" in Palestine, and that such an arrangement runs counter to the present political tendencies of all communities in the Middle East—not excepting either the Arabs or the Jews—it would be opening the door to deadlock or anarchy if, in the last resort, the representatives of the Mandatory were not given the means of control. One may or may not approve of the Mandate, but it is surely difficult to argue that it could be carried out except under the safeguards and limitations which the Constitution, as now drafted, will provide.

The Economic Position of Czecho-Slovakia.—This State is by far the most prosperous and promising of those created by the Peace treaties, and the Report by the Commercial Secretary to H.B.M. Legation at Prague, Mr Bruce Lockhart, well known for his work as Consul in Bolshevik Moscow, shows that her Government is determined that, even at the cost of considerable sacrifices at present, the hopes entertained of her future shall be fulfilled. She is the one State in Europe who has set her currency in order, and prints no uncovered bank notes; but the consequent rise of nearly 100 per cent. in the crown has seriously hampered her export trade, on which her future depends, and also her industry, which represents some 70 or 80 per cent. of the whole of that of the former Austro-Hungarian dominions. It is hampered also by the increased cost of living, by high taxation, and by the habit of her manufacturers of working on a much higher margin of profit than is customary in England; and it is now faced with the competition of neighbours with a greatly depreciated exchange. Wages, and possibly protective tariffs will have to be lowered, and methods and organisation altered, but Mr Lockhart predicts that the strong common sense of her people will bring her through her economic

and political difficulties, and confirm her in her policy of reducing expenditure, and of stabilising her currency even at the cost of an intermission of the industrial prosperity which she enjoyed in the past three years of her independence. Nor can her unemployed (over 78,000 even last December) be much helped by emigration, for only 17,612 emigrants left the country in 1921. Her Budget deficits were covered for the first two years by internal loans; that of 1921 may be found on the final figures to have been wiped out; for 1922 the estimated deficit exceeds 928,750,000 kronen, or about £37 millions at par; but a considerable reduction in expenditure is expected in 1923. Her national debt was estimated approximately last November at somewhat over 46 million kronen gold, but her first foreign loan, issued last April, was oversubscribed in New York and London, and, like the City of Prague Loan of £3,000,000, is to be spent exclusively on needed public works. The exchange last Christmas was 313 kronen to the pound sterling, now it is 181. Her banks for the last three years have been very prosperous. A State Bank is contemplated, and the new Anglo-Czech Bank will develop her trade with Great Britain. Her foreign trade, hitherto chiefly with Germany, is likely to shift chiefly towards the "Succession States," which have obtained territory from Austria-Hungary. With Great Britain it must be on both sides chiefly in raw or "semi-raw" material; finished products can nearly all be made as cheaply here, and glass, though the sale all round is vigorously pushed, may be kept out by the Protection of Industries Act. But there is great scope for British contractors in the projected public works, and for British capital. The coal and lignite trade is seriously depressed. The railway system is being adjusted to the new orientation of foreign trade, and the rolling stock renewed. The river ports at Bratislava (Pressburg) and Komorn (Komorn), and the navigation of the Elbe and Moldau, are being improved. Czech companies are providing services on the Elbe and Danube with steamers taken over from Germany and Austria, and a quick service will shortly be inaugurated from Hamburg to Prague. A Czech line of seagoing steamers will shortly ply between Rumanian ports and the Black Sea.

Iron and Steel Production.—The National Federation of Iron and Steel Manufacturers has issued the following table, showing the average monthly production of pig-iron and steel ingots and castings in 1913, 1920, and 1921, and in each month since July, 1921:—

		Steel Ingots and Castings.	
		Pig Iron.	Tons.
1913—Average monthly	855,000	638,600	
1920—	669,500	755,600	
1921—	217,600	302,200	
July	10,200	117,200	
August	94,200	434,100	
September	158,300	429,300	
October	235,500	405,400	
November	271,800	443,800	
December	275,000	381,000	
1922—January	288,000	327,500	
February	300,100	418,800	
March	389,800	549,400	
April	394,300	404,200	
May	407,900	462,300	
June	369,200	400,200	
July	399,100	473,100	

The production of pig-iron in July amounted to 399,100 tons, or 30,000 tons more than in June. The furnaces in blast at the end of the month numbered 117, or two more than at the end of June. The production included 111,400 tons of hematite, 147,100 tons of basic, 91,000 tons of foundry, and 21,000 tons of forge pig-iron. The production of steel ingots and castings amounted to 473,100 tons, a figure only once exceeded since the conclusion of the coal stoppage—viz., March, when production was 549,400 tons—but still only 63 per cent. of the average monthly production in 1920.

Anchor Line Results.—It is, perhaps, not surprising to find that the accounts of the Anchor Line (Henderson Brothers), Limited, for the year ended April 30th last show a substantial decrease in profits, and the directors, in contrast with the policy followed in 1919, when a 20

per cent. distribution was made on ordinary shares, have wisely followed the cautious policy of reducing the ordinary dividend to 5 per cent., free of tax. The following table compares results over a number of years:—

Year Ended April 30.	1914.	1917.	1918.	1919.	1920.	1921.	1922.
Working profit...	£ 311,573	£ 366,955	£ 309,399	£ 89,193	£ 258,937	£ 205,245	£ 151,738

Ordinary div....	37,500	50,000	50,000	(20 %)	(20 %)	(10 %)	(5 %)
Carry forward ..	86,962	146,912	130,113	144,974	141,399	109,132	135,858

* Deducted before arriving at profits.

It is difficult to follow with any degree of exactness the financial progress of the undertaking from our table on account of profits for the last half-dozen years being shown after depreciation and amounts for "other contingencies" have been deducted. For instance, for the directors to distribute £50,000 to the ordinary shareholders in 1919 out of total profits of £89,193, as against a similar distribution for the previous year, when profits were £309,399, would be a matter for reasonable comment, unless one were acquainted with the handsome past record of the company. But if the profit and loss account is somewhat laconic, the directors are to be commended upon giving us more information in the balance-sheet than that usually vouchsafed in this direction by shipping undertakings. The value of the company's fleet, less depreciation, is only included with payments made on account of new tonnage, interests in various other companies and properties. This item is valued at £6,006,010, as against £4,041,969 for the previous year. Cash and investments are taken at £924,009, as against £1,357,833, and total assets are up by £1,065,826 to £7,328,271. Amongst liabilities, a huge composite item is shown of £5,011,042, and the reserve fund has now increased to £1,500,000. The balance-sheet will be found analysed in our usual column. An interesting sidelight is revealed of the view taken in some quarters of the industrial situation by the statement in the report that "owing to the continued high cost of construction, the directors have deemed it prudent to suspend all work meantime on the.....vessels which have been contracted for."

General Mining and Finance.—Our Mining correspondent writes:—If, as appears to be the case, some of the shareholders in this Kaffir undertaking had expected the report for 1921 to contain interesting items relative to the financing of the dormant subsidiaries, they were disappointed. The directors do, however, make the important announcement that the 800,000 shares acquired from the Union Custodian of Enemy Property are to be utilised in writing down the capital of the company; they add that the difference between the purchase price (2s per share) and the par value (£1) will be available for writing off depreciation of assets. The decline which has taken place in the market value of the company's holdings is, of course, a salient point in the position. On December 31st last investments figuring in the balance-sheet for nearly 1½ millions were really worth not much more than half a million. In some cases the depreciation which has occurred must be regarded as permanent; in others it will be recovered in whole or part when conditions permit the raising of fresh capital for the resumption of operations. In point of fact, the improved outlook for the Rand mining industry has already been reflected to an appreciable extent in the quotations for the shares of some of the dormant companies. In this connection it is interesting to recall that the company also took over from the Union Custodian large blocks of shares in eight of its subsidiaries—including 48,000 Meyer and Charlton, 500,000 Cinderella Consolidated, and 750,000 West Rand Consolidated. If these shares were secured as cheaply as the General Minings themselves, the appreciation which has since occurred should go a long way towards making good the balance of the depreciation. The great bulk of the advances to the Roodepoort United—not very far short of £400,000—must, however,

be regarded as a bad debt, that mine having just shut down. Last year's accounts, which now seem rather belated, show a net profit of £40,350, as against £53,900 for 1920. With the decks being cleared and the crushing companies doing better, shareholders in the General Mining Corporation might even indulge in hopes of a dividend.

Transvaal Output in July.—A further marked improvement is noticeable in the July statistics of gold output and labour in the Transvaal issued by the Chamber of Mines. The July output at 730,635 ounces of fine gold compares with 675,697 ounces produced in June. In July last year the output was 689,555 ounces. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January..	787,467	782,634	714,122	676,059	670,503	651,593	639,728
February..	753,594	781,321	699,759	636,728	625,330	558,137	511,338
March ..	796,689	787,094	696,281	712,379	707,036	671,123	629,786
April	754,672	742,778	717,000	694,944	686,979	681,382	675,697
May	777,681	779,385	741,317	724,995	699,041	687,776	675,697

Totals ..	9,296,618	9,018,084	8,418,292	8,330,091	8,153,625	8,114,516	3,187,185

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	Oct., 1921.	Nov., 1921.	Dec., 1921.	March, 1922.	April, 1922.	May, 1922.	June, 1922.	July, 1922.
Gold mines....	175,331	176,410	177,836	124,169	138,277	155,425	170,464	172,886
Coal mines....	13,936	13,465	13,230	11,155	11,385	11,525	12,117	12,371
Diamond	1,223	1,217	1,224	1,204	1,232	1,219	1,211	1,221
Total	190,490	191,092	192,290	136,528	150,894	168,169	183,792	186,468

The number of natives employed at the gold mines show a further improvement.

Broken Hill Proprietary.—In view of the prospect of a gradual eclipse of this company's original enterprise by its iron and steel undertaking, the shareholders a year or two ago began to look upon the company as an industrial rather than a mining concern. They omitted to take into account, writes our mining correspondent, a further tightening-up of the already onerous labour conditions. The latter, in conjunction with a general decline in trade, exerted so adverse an effect upon the company's affairs that the quarterly dividends were first reduced from 1s to 9d, and then suspended altogether, the last payment being made in August, 1921. In these circumstances it is no matter for surprise that a large portion of the cabled summary of the directors' report for the year ended May 31st is devoted to a strong protest against compulsory arbitration and the enforcement of such conditions as regards hours and wages as to hamper and threaten destruction to industry. All efforts to meet the position having proved unsuccessful, the directors reluctantly decided to suspend operations. The profit made during the first half of 1921-22 was for the most part wiped out by losses during the second, the accounts showing a surplus of only £103,300—a miserable sum to set against a capital of about 2½ millions. For 1920-21 the net profit was £351,000, the bulk being placed to reserve, and for 1919-20 £518,000. Last year's expenditure on plant, &c., exceeded a million, bringing the total up to over £6,000,000. The net liquid assets at the date of the balance-sheet amounted to £1,016,500, irrespective of shares in other companies, so that the position in this respect is satisfactory. There are two issues of debentures totalling nearly 2½ millions, the interest upon which has so far been duly met. In view of the advance which has taken place in the price of lead and zinc, the prospects for a reopening of the company's Broken Hill mine would be favourable—if only labour could be brought to accept reasonable terms. To assist the operation in its works at Newcastle, N.S.W., the company has been endeavouring to secure protection in respect of iron and steel manufactures. A far better solution of the difficulty would be the arrangement of the workers' remuneration upon an economic basis. A cable to hand yesterday stated that the Victorian Government

had accepted the company's tender for 2,700 tons of 60-lb steel rails at £12 per ton. This will lead to the reopening of the steel works. It is significant that a similar quantity has been ordered from a British firm at £11 per ton. Thus the Broken Hill Proprietary Company is, in effect, receiving a bonus.

Obersee Correspondence.

UNITED STATES.—GOVERNMENT COTTON REPORT—EXPORT TRADE FOR FISCAL YEAR—PROPOSED TARIFF RATES ON WOOLLEN GOODS.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 7.

THE Department of Agriculture's report last week, giving an exceptionally low estimate of the condition and probable yield of this year's cotton crop, was a complete surprise to the trade. The Government placed the condition as 70.8 per cent. of normal on July 25th, against 71.2 on June 25th. The latest figure compares with a condition of 64.7 on July 25th of last year, and 74.1 on that date in 1920. The loss last month compares with a ten-year average depreciation in July of 3.9 points. The great majority of private estimates had previously reported a decided improvement in the condition of the crop during July, many of them ranging as high as 72 or 73 per cent., while few, if any, made a percentage condition so low as the Government's. Based on the condition of 70.8 on July 25th, the Department estimated a total production of 11,449,000 bales. Naturally, such an unexpectedly bullish report by the Government caused a wild buying movement on the cotton exchanges, and prices advanced \$8 or \$9 a bale. During the past week, however, the market has lost more than that advance. Partly because the Department's report was so out of line with private forecasts, and partly because even its latest figure last year fell so far short of the actual yield, its estimate last week has, on maturer thought, been received with a great deal of scepticism. It is realised that the size of the crop will depend largely upon conditions and developments between now and harvest, and there is always the uncertainty as to how extensive the weevil damage may prove to be.

Details, which have just become available, of this country's export trade in June and in the past fiscal year show what products were chiefly responsible for the expansion in such trade during that month, as compared with May, and those in which there was the heaviest decline in the 12 months ended with June. Shipments of foodstuffs in June, including grains and preparations thereof, meats, dairy products, canned vegetables and fruits, were valued at \$60,796,428, representing a gain of \$7,800,000 over the preceding month. Exports of coal, coke, petroleum and products, cotton and cotton cloths, amounted to \$93,801,882, or \$8,348,000 more than in May. The increase in those two groups, therefore, account for \$16,148,000 of the \$27,000,000 gain in all exports in June over May. According to the Department of Commerce figures, the food exports for the fiscal years 1920-21 and 1921-22 were valued as follows:—

	Twelve Months Ended June, 1921.	Twelve Months Ended June, 1922.
Grains and preparations	1,032,270,325	591,295,498
Meats	186,846,799	131,952,791
Dairy products	47,970,030	36,375,122
Canned vegetables	4,634,183	3,719,512
Canned fruits	13,128,053	16,367,874
Total foods	1,334,849,390	779,710,797

The above five classes of exports combined account for \$779,710,797 of the total exports, valued at \$3,770,220,971 in the past fiscal year. In this food group alone, as the figures indicate, there was a decline of \$556,000,000, as compared with the previous year, or approximately one-fifth of the total decrease in all exports. Of the decline in food exports, wheat and wheat flour contributed \$467,000,000, or about 84 per cent. Exports of rye also fell

off heavily, but corn showed a marked increase in both quantity and value. In meats, the outstanding feature was the general decrease in value of beef and hog products, with the exception of hams, from the preceding year. Bacon exports were more than \$50,000,000 below the total for 1920-21, while lard exports showed a big drop in value, but were larger in quantity. Condensed milk increased in quantity, but lost in value. In both respects cottonseed oil declined, but canned salmon increased. The returns of exports of coal and coke, mineral oils, cotton, and cotton cloths for the past two fiscal years compare as follows:—

	Twelve Months Ending June 30, 1921.	Twelve Months Ending June 30, 1922.
Coal and Coke	361,019,247	102,723,425
Petroleum and products ..	555,668,479	329,600,605
Cotton cloths	141,403,000	76,934,000
Cotton, raw	600,000,000	596,000,000
Total	1,658,090,726	1,105,258,030

These four groups of exports combined show a decrease of \$553,000,000 from 1920-21, or approximately one-fifth of the decline in all exports. Exports of foods and of the last-mentioned products combined thus show a loss of \$1,109,000,000, or 40 per cent. of the total decrease of \$2,746,000,000 in all exports from the preceding fiscal year.

The prolonged debate over the wool schedule in the proposed tariff came to an end last week, when the Senate finally adopted the Finance Committee's rates, all efforts by Republican insurgents and Democrats to secure lower rates being defeated. In the schedule as approved by the Senate, the duties on blankets, including automobile robes and steamer rugs, range from 20 cents a pound and 25 per cent. *ad valorem* to 40 cents a pound and 35 per cent. *ad valorem*. The woollen felt trade is given protection by duties ranging from 20 cents a pound and 30 per cent. *ad valorem* to 40 cents per pound and 40 per cent. *ad valorem*, while fabrics from which are manufactured braids, garters, tubings, laces, veils, belts, suspenders, and so on, are to be assessed at the rate of 40 cents a pound and 50 per cent. *ad valorem*. In the knit fabrics schedule, the rates, decided upon by the Senate, on hose, half-hose, gloves, and mittens, are 39 and 49 cents per pound and 35 and 50 per cent. *ad valorem*. The duties on underwear range from 39 to 49 cents a pound and 30 to 50 per cent. *ad valorem*, while on outerwear garments and apparel the specific duties are also 39 to 49 cents a pound, plus 40 to 55 per cent. *ad valorem*. According to one of the framers of the wool schedule, the high duties imposed on clothing are aimed at Americans who purchase their apparel abroad. On clothing not knitted or crocheted, the duties range from 26 cents a pound and 40 per cent. *ad valorem* to 49 cents a pound and 50 per cent. *ad valorem*. Axminster, Oriental, and other carpets and rugs are to be dutiable at 55 per cent. *ad valorem*, while on screens, hassocks, and all other articles composed wholly or in part of carpets or rugs, the duty is 40 per cent. *ad valorem*; on all other manufactured articles not specially provided for, the rate is 55 per cent. *ad valorem*.

The silk schedule was also disposed of by the Senate, the high rates proposed by the Finance Committee all being approved in spite of efforts to reduce them. The duties on silk goods, admittedly designed to make up revenue lost through prohibition, as well as to protect the domestic industry, range from 35 to 60 per cent. *ad valorem*.

FRANCE.—THE LONDON CONFERENCE—FRANCO-GERMAN ECONOMIC UNDERSTANDING—WHOLESALE PRICES INDEX NUMBER—TAXATION RETURNS—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 15.

THE failure of the London Conference caused no surprise in Paris, but has been welcomed rather with relief, as it was regarded as impossible, from the outset, that M. Poincaré could make further concessions in regard to reparations. At the same time, the deepest possible satisfaction is felt that, if the two Governments have felt them-

selves compelled to disagree, it was also found possible to bring the conference to an end without any fatal prejudice being caused to the Entente. Whatever opinion may be on this point in England, there can be no possible doubt that any breach in the Entente would be regarded here as disastrous, not only to the two countries concerned, but also to the whole immediate future of Europe. In this connection it is advisable that too much emphasis should not be laid on the supposition that there is a strong desire in this country for France to be free to take independent action against Germany. M. Poincaré is far too wary a statesman to regard any extension of the policy that was adopted a year or two ago, when the French troops occupied Frankfurt, as in the least degree desirable, and there need not be the slightest fear that France will be betrayed into anything like precipitate action.

The whole question of the German payments has now, after the failure of the London Conference, automatically gone back into the hands of the Reparations Commission, and it is too early to predict what line that body is likely to adopt. Quite apart from the general question of having to decide what reply shall be made to Germany's latest request for a moratorium, however, it is probable that the German failure to pay more than £500,000 on account of the £2,000,000 due to-day on account of debts owing in Germany to private creditors in Allied countries, will enable the Reparations Commission to find a way out of the deadlock set up by the failure of the London Conference.

There are renewed reasons for believing that the pourparlers that are known to have been going on for some time with a view to a Franco-German economic and industrial rapprochement are making steady progress. These negotiations, if they may be so termed, are, of course, quite independent of the two Governments, and are being conducted between the leaders of the great industrial interests of the two countries. The basic idea is the co-operation of French capital with German industrial organisation, and of a consequent economic alliance that would cover not only merely local industrial efforts, but also take into its purview the much more grandiose scheme of the industrial reorganisation of Russia and similar matters. Little that is definite can be said about the proposals at present, but there is undoubtedly good reason to foreshadow important developments in this direction in the near future.

The index figures for wholesale prices in France during the month of July, which have just been issued by the Statistique Générale, show that while the prices of foodstuffs fell appreciably, there was a corresponding rise in the cost of industrial materials, the nett result being that the general index figure for the month was for all practical purposes unchanged. The detailed figures for July, together with the corrected numbers for June, are as follows (the base figure of 100 representing the prices that prevailed from 1901 to 1910):—

	June, 1922 (Corrected).	July, 1922 (Provisional).
General index figure (45 categories)	375.7	375.8
Foodstuffs—		
For the whole 20 categories	394.8	381.6
For 8 categories of vegetable foods	381.1	351.2
For 8 categories of animal foods	428.6	423.2
For 4 categories of sugar, coffee, cocoa	354.4	359.4
Industrial materials—		
For the whole 25 categories	360.5	371.1
For 7 categories of minerals and metals	306.2	317.5
For 6 categories of textiles	435.8	459.0
For 12 categories (various)	354.5	358.6

The index figure for the retail prices of 13 categories of foodstuffs in Paris during July last is given as 3,186 (or an increase of 197 per cent. on 1914), as compared with 3,297 for June (which was equivalent to an increase of 207 per cent. on 1914).

The taxation returns for last July have been published and show a yield of 1,471,959,000f, constituting an increase of 20 per cent. on the same month of last year, and falling only 2 per cent. below the Budget estimates. In other words, the improvement that was a marked feature of the last two months' returns has been maintained and accentuated. The figure reached approached more nearly to the Budget estimates than has been the case since August, 1920. Coming to details, the tax on busines

turnover amounted to 196,812,000f, constituting an advance over last July of 50,419,000f. Stamps are 13 per cent. over the Budget estimates, but Customs that have brought in 214,428,000f are 15 per cent. below the estimates. This, however, is a favourable result as compared with the first two quarters, where the deficits were 38 and 24 per cent. Income-tax brought in 116,059,700f, and the war profits tax 169,964,400f.

Despite the alarms of the Conference, the Bourse has remained firm, and there has been generally a rise in the value of securities. This was particularly marked in the early part of the week, but towards the close before the four days' holiday there was a slight tendency towards depression. Though there was an improvement in the value of certain French Rentes, as, for instance, in the 3 per cents., that moved from 58.85 to 58.90, there was for the most part a decline. Thus the 1917 4 per cents. moved back from 63.15 to 62.45, the 1918 4 per cents. from 63 to 62.05, and the 1920 6 per cents. from 91 to 90.65. Banks for the most part remained unchanged, but the Banque de France advanced from 5,780 to 5,818, and the Banque de Paris from 1,179 to 1,210. Railways lost a certain amount of the ground they have been gaining steadily for the last few weeks. Est moved from 799 to 795, Metropolitan from 430 to 428, Midi from 820 to 808, Nord from 1,720 to 1,730, Orléans from 975 to 960, and P.L.M. from 960 to 950.

GERMANY.—POLITICS—REPARATIONS—STATE MEASURES—EXCHANGE AND BOURSE—PRICES—EIGHT HOURS DAY—CURRENCY DEPRECIATION AND CONTRACTS.

(FROM OUR CORRESPONDENT.)

BERLIN, August 13.

THE quarrel between the Republic and Bavaria has been compromised by a formal signed agreement between the Chancellor and the Bavarian Minister-President. Bavaria had refused to put into force some provisions of the "Law for the Defence of the Republic," and had refused to allow the local execution of other provisions by Federal authorities, as the law provided, but undertaken to execute them herself. She had entirely rejected the new Political Courts for trial of conspirators against, and critics of, Ministers and ex-Ministers; denounced the law as a violation of the spirit of the Constitution; and declared the objectionable clauses suspended on Bavarian soil on the ground that they menaced the public security which they were ostensibly framed to protect. She had also objected to the new Federal Criminal Police. In correspondence with Berlin, she had demanded guarantees against further centralisation. Under the compromise she agrees to put the law in force, but gets a modification of the obnoxious provisions. The Government declares that the Political Courts will be resorted to only in very important cases, and gives (what ought not to have been necessary) an assurance that the laymen—who instead of judges and juries are to try citizens for their lives—will be chosen for impartiality. The Federal Criminal Police will work through the State Police. The Federal Government further guarantees that the centralising tendencies which Bavaria resents will not be pushed further. This guarantee binds only the present Chancellor, as the Constitution gives the States no guarantees against centralisation, which can be carried to any length against the opposition of individual States if only the necessary Reichsrat and Reichstag majorities are found.

The Reparations negotiations in London attract very little interest, and have so far had no visible effect upon business. The suggested measures of control and sequestration of revenue are not considered a good exchange for the short moratorium, which is all that is expected. Some of the English suggestions, as reported from London, seem to have the old academic character. There is no sense in talking of the autonomy of the Reichsbank, which means nothing unless the bank's obligation to finance the State without limit is revoked, and this is impracticable. The reported suggestions that the Guarantee Committee be given authority to reduce the floating debt, and the suggestion of "putting in order of the Budget," are for the same reason meaningless. The hope here, but not the expectation, is for both a pro-

longed moratorium and an international loan. A moratorium alone would not establish a foreign payment balance. With a sufficient loan it would; but, even then, the prospects after the termination of the moratorium would be doubtful. There is a growing feeling here that the worse things get the better, as a crash would at last raise the whole Reparations question in imperative form; but the daily predictions of a crash show no sign of realisation, and the theory upon which they are based seems to be mistaken.

The stock market, which before last week failed to respond to the rise in the foreign exchanges, has had an unexpected and violent boom. It was helped by the slight improvement in the money market, and by numerous reports of fusions of large concerns. The boom, with slight reactions, continued throughout the week, and took on a stormy character on the 9th, when some shares rose 600-700 per cent. Leaders were Harpener, Mannesmann, Hohenlohe, and Riebeck. The first-named stock rose from 749½ on September 7, 1921, to 5,300 on August 11th. There was also a great demand for A.E.G., Siemens and Halske, and other electrical shares, and, as the outcome of a new increase in prices, for potash stocks. The Bourse ended the week firm; but at present quotations and exchange stocks are still far below their gold values, though much above their dividend-capitalisation values. The bond market has moved little.

The price-rise continues. The Eisenwirtschaftsbund raised prices as follows (in marks per metric ton):—Hematite, from 11,317 on August 1st to 13,267 on August 11th and 16,767 on August 21st; foundry iron No. 1, from 10,481 to 11,784 and 13,989; do. No. 3, 10,411 to 11,714 and 13,919; Siegerland steel-iron, from 10,649 to 12,472 and 14,295; Spiegeleisen, from 11,763 to 13,501 and 15,239. Cellulose prices have been raised to nearly double the prices of May, rates now being, according to quality, 2,550 marks to 3,550 marks per 100 kilos. The new potash prices are between about 45 and 60-fold those of June, 1916. Bread prices will be raised to-morrow by about 50 per cent., the price for the 1,350-gramme loaf being 45 marks. The German Agricultural Council and numerous local bodies representing farmers have protested that the prices allowed by the State for that part of the harvest which is requisitioned are much too low. On August 3rd the wheat and rye sold in the open market fetched four to four and a half times as much as the official prices—6,900 marks per ton for rye, 7,400 marks for wheat—of requisitioned grain. In Bavaria the tilled area this year is considerably smaller than in 1921.

Hamburg shipping statistics for January-July, inclusive, show:—Arrivals, 6,100 vessels of 7,268,255 net tons, against 4,716,652 tons in the same months of 1921 and 8,199,312 tons in the same months of 1913; departures, 7,243,295 tons, against 4,698,734 tons and 8,379,248 tons. A Cologne court has given a decision (not the first) that the violation of the Eight Hours Law by employers is not punishable if the employees consent. As it is practically impossible to exceed eight hours without the employees' consent, such decisions seem to make a breach in the law.

It is necessary to return to the subject of the *clausula rebus sic stantibus*, under which the Federal Court of Appeal has decided that a contract may be repudiated if, owing to the fall in the value of the mark currency, the payment agreed upon for a delivery of property or commercial wares has fallen materially below the value of the my purpose was to record a fact of legal-commercial interest and of bearing upon the currency question, and not to express the view that this decision might or might not be applied to international commercial deals. In fact, earlier such decisions were made in international deals, with the difference that not the mere *clausula rebus sic stantibus*, as in the new decisions, was applied, but a special law enacting that contracts might be declared null or the revolution. The report in the *Economist* has attracted a great deal of attention in England, and (again without expressing any judgment as to the applicability of the new decisions to export and import deals) it is, therefore, necessary to warn English business men against taking advice on the matter from unqualified or interested Germans. In one case, an English firm which asked for further information from a German public body, whose

special function it is to deal expertly with such matters, received the reply that the *Economist* report was entirely wrong, and received therewith the public body's own lawyer's judgment that the decision could not be extended to international transactions. The statement that the report in the *Economist* was entirely wrong is untrue, but it is of small importance. Important is the attitude assumed in the two supposedly expert opinions. While rejecting the *Economist* report as either an invention or as a genuine decision which had no general applicability, both authorities wrote in a tone of surprise, plainly implying that the decision, in so far as it was an invention, was something new and exceptional, and a revelation to German legal-commercial circles.

I have since gone further into the matter, of which, owing to the German newspaper practice of not reporting civil lawsuits, I had little general knowledge, and must report (1) that there have been numerous recent decisions either by subordinate courts or by the Court of Appeal in the same sense; (2) that every German business man and commercial lawyer is familiar with these decisions, which are a burning polemical question both in legal and commercial spheres; and (3) that a German commercial organization or legal firm which, professing to advise English business men, expresses surprise at the *Economist's* discovery, is grossly ignorant. The matter has now invaded the daily political Press, which, as a rule, ignores such issues; and if any English reader believes the German story that nothing, or nothing worth mentioning, has happened, he should read the article, "Einen Punkt hinter die Clausula!" published by Herr Erich Pitsch, a lawyer, in the Berlin *Tageblatt* of August 13th. He will find Herr Pitsch discussing a whole series of judicial decisions that contracts may be annulled for no other reason than that the mark's value has fallen, and that the party required by the contract to accept payment in marks did not foresee the fall. He will further find references to other recently published articles on the same question by distinguished jurists.

Herr Pitsch, like most, but not all, of the jurists, condemns the decisions. He notes that whereas the Court of Appeal declared that a party to a contract signed in 1919 could not be expected to foresee the fall in the value of the currency, and should therefore be released from his contract, the present judicial trend is to extend the right of repudiation to recently concluded contracts, contracts concluded, Herr Pitsch points out, years after every business man learned from experience to protect himself against future currency depreciation. (Herr Pitsch aptly asks, What would happen if the currency recovered: would a buyer then be allowed to repudiate his contracts?) "To-day, almost everywhere," writes Herr Pitsch, "interested parties are asserting as obvious, and the courts, in particular the Courts of Arbitration, are admitting, that the price-revolution of the second half of 1921 could not have been foreseen, and that therefore the application of the *clausula*" (i.e., annulment of contract) "is justified." Whether the Court of Appeal will confirm such extended applications of the *clausula* is doubtful, says Herr Pitsch.

This quotation will be sufficient to warn English business men against the assurances of some German Chambers of Commerce that they are surprised to find Englishmen debating a German problem of which Germans themselves have never heard. When some German Chambers of Commerce address the home public they are not so innocent as to pretend they never heard of the decisions. A report of the Chemnitz Chamber giving its interpretation of the decisions appears in the *Deutsche Allgemeine Zeitung* of the 9th inst.

ITALY.—CABINET CRISIS—SOCIALISTS AND GOVERNMENT—COMMODITY AND SHARE PRICES.

(FROM OUR CORRESPONDENT.)

TURIN, August 2.

WHILE I write, a general strike is being proclaimed by the Labour organisations as a protest against the assault and burning down of co-operative and Labour houses in Cremona and Ravenna at the hands of Fascisti. The

INTERNATIONAL BANKING
IN ALL ITS BRANCHES
**BANKERS TRUST
COMPANY**
16, WALL STREET, NEW YORK
PARIS OFFICE

CABLE ADDRESS: BANKTRUST, PARIS

result of the strike may be slight, but the air is full of bad temper and uncertainties. The Cabinet crisis has been patched up, after twelve days of negotiations, by a revision of the Facta Ministry. On the eve of the Genoa Conference, a Government was constituted in a hurry under the presidency of Signor Facta, for the sole purpose of having a Government when the assembly of nations met on Italian soil. Anyone who tried to form a Government was welcome. To-day the same story is being repeated, Signors Orlando, Bonomi, Meda, De Nava, De Nicola being offered the premiership in turn. The political groups of the Chamber are unable to agree. The proportional representation system has split the Chamber into 12 groups, which cannot be moulded into a stable majority. The Liberal-Conservatives are split into three groups (Liberals, Nationalists, and Fascisti), the Democrats into five. Besides them, there are the Communists, the Socialists, and the Catholic Populists. As the Populists number 105 and Socialists 125 out of a total membership of 535, it follows that no Government can be formed in which one of these parties does not participate. Hitherto the Populists alone were willing to go into office. But now a new development has occurred: 70 members out of 125 of the Socialist party have declared themselves willing to take office. Their leader, Signor Turati, after 40 years of fight against monarchy and so-called capitalism, has been received by the King, and istic constitution, has been received by the King, and has officially given him the advice of the Socialist group on the political situation. The Socialist Labour party is transforming itself from a revolutionary into a constitutional party. Signor Giolitti says that the change was prompted, not by a change in ideas, but by the fear of the Fascisti. Socialists hope to use the Government weapons—Royal Constabulary (*guardia regia*) and the army—to repress the aggressions of the Fascisti on Labour organisations. If the accession of the Socialist party to office merely signified better public order, it would be generally welcomed. Many fear, however, that the economic policy of the Socialists in office would be dangerous—public works for unemployed, doles out of public purse to Labour organisations, and a new vast army of followers to be satisfied at public expense.

Professor Bachi's commodity index number (based upon the average price for 1920, equals 100) shows an increase for June:—

	Number of Commodities	Oct. 1921.	Dec. 1921.	Mar. 1922.	April 1922.	May 1922.	June 1922.
Vegetable foods.....	25	116.4	113.7	106.7	104.9	106.3	108.7
Animal foods.....	13	125.1	116.9	95.7	102.5	93.9	97.4
Chemical.....	11	75.0	74.0	71.8	69.5	67.3	67.4
Textiles.....	12	73.2	77.0	64.9	63.3	65.7	73.1
Minerals and metals.....	16	63.0	64.1	59.2	57.6	57.5	57.7
Building materials.....	6	90.3	87.9	84.1	81.5	78.7	75.7
Vegetables.....	5	116.0	112.4	102.8	92.2	96.4	104.7
Miscellaneous.....	12	94.7	93.9	87.2	88.4	87.9	87.7
General index (basis 1920).....	100	95.0	93.9	85.4	84.4	83.3	86.5
General index (basis 1901-1905).....	100	747.2	739.1	672.1	663.8	659.6	677.7

The rise is due partly to the rise in the staple prices in foreign markets, but perhaps more to the rise in Italian exchanges, and it is to be feared that July figures will be worse than those for June.

Figures on the cost of living of a working-man's family of five in Turin show that the improvement reaches a

climax in April. Since April, every month has marked an increase in retail prices:—

	Food.	Cloth- ing.	Rent.	Fuel and Light.	Miscel- laneous.	Total.
First half of 1914.....	100	100	100	100	100	100
June, 1920.....	410	434	100	385	425	374
June, 1921.....	485	433	110	358	538	429
January, 1922..	524	454	120	435	591	465
April, 1922.....	470	433	120	378	587	424
May, 1922.....	473	433	120	351	583	428
June, 1922.....	484	432	120	358	586	435
July, 1922.....	487	433	120	365	584	437

Financial markets are not so bad as they might be; the general index number which Professor Bachi publishes for share prices (price of December, 1918, 100) fell from 63.84 at the end of last year to 56.70 at the end of March, but has since recovered to 60.54 at the end of June. The most favoured group has been the textile, which has been encouraged by the rising prices of the raw materials and by the expanding consumption. Stocks have been reduced to a very low ebb, and want replenishing. Motor cars, chemicals, sugar, and food shares are also better. After the long-drawn-out crisis of the Banca Italiana di Sconto, the leading banking shares show some signs of vitality.

Rent restriction laws keep shares of building companies low. Generally speaking, the most noticeable fact about share prices is that the depreciation of the lira has not resulted in a great rise in share quotations. "Valuta" booms are ignored in Italy. Limitation by decree of dividends during the war, taxation or confiscation of war profits after the war, fear of new taxation and of compulsory registration of shares, are perhaps the most potent causes of this interesting phenomenon.

AUSTRIA.—FINANCIAL POSITION—FORCED LOAN—EXCHANGE DEMORALISATION—ISSUE BANK—PRICES.

(FROM OUR CORRESPONDENT.)

VIENNA, August 8.

THE seriousness of the political and financial situation can best be described by the words of the Finance Minister used at one of the last sittings of the National Assembly, "The greatest and last efforts must be made in order to prevent the chariot of State whirling headlong into the abyss." It is generally recognised that Austria is now playing her last card. The organisation of the new bank, the placing of an internal loan, and the drastic reduction of officials is intended to carry the Ship of State over the next four or five months in the hope that during that period the scheme for supplying foreign credits will have matured, thus assuring Austria's future for four or five years and giving her breathing time to recoup her strength. If foreign credits are not granted, and the larger scheme has not been completed within the next four or five months, it seems almost certain that Austria must cease to function; there may then follow a further disruption, which must seriously affect the stability of her neighbours and lead to acute political crises until the next stage of so-called self-determination has taken definite shape.

The financial reconstruction programme has now been passed by Parliament. Its essential provisions are for the foundation of a new issue bank, an internal loan, and effective increases in the direct and indirect taxes. The critics of this programme, however, are divided even in Parliamentary circles. The Christian Socialist Party alone considers it a permanent solution. The Socialist Party declares it is the last "bourgeois" reconstruction programme to be tried in Austria; the next one will be a "proletarian" programme. The German Party, on its part, declares that this programme will be of no assistance to Austria, but that it is to be considered a stepping-stone towards the coming union of Austria and Germany. There is little doubt that it is Austria's last trump card. The financial panic has abated for the time being. The Government reckons that after the realisation of the French and Italian credits, and the remainder of the English credit, which represent together a total of about 230,000 million

kronen, and the proceeds of the Internal Loan, another 400,000 to 500,000 million kronen, it will be able to carry on the administration till the beginning of next year. The large foreign credits which are expected, now that the rescission of the general lien has been accorded, ought to have taken effect by then. Should these credits not be granted, and should internal conditions show no change for the better, a very unfavourable situation will recur next January. Even if the most decisive measures for the reduction of the Budget are taken, the deficit may be estimated at at least 300 million gold kronen. As the net national income amounts to 2,000 to 2,400 million gold kronen, the standard of life of the whole population will have to be lowered by another 12 to 15 per cent.

The new Issue Bank is expected to begin operations in the course of the month of August. Since it is clear, however, that the internal loan will only be feasible if the Issue Bank makes large advances to commerce, industry, and the banks, the first result of the financial reconstruction programme will be a further inflation of the currency, because the State will indirectly draw on the new Issue Bank by demanding the Internal Loan from commerce, industry, and the banks. The statutes of the new bank allow credits to be granted to the Government only against deposit of the full value of the credit in foreign currencies, but State enterprises are entitled to lodge bills at the Issue Bank for discount. The banks are being compelled to participate in the foundation of the new Issue Bank by subscribing in foreign currencies to the capital of 100 million Swiss francs. Now the bankers see that they must not merely place at the disposal of this bank a large part of their holdings in foreign currencies, but must also take up the new Internal Loan, and will therefore be still closer bound up with the fate of the country's finances. Another important point is that the customs and liens on real estate, which after the renunciation by the Entente of their claims to these properties ought to become security for a foreign loan, will now be hypothecated for the Issue Bank and for the Internal Loan, so that a valuable guarantee for the expected foreign credits disappears. The Finance Minister hopes by means of a compulsory loan based upon the entire real and personal property in Austria to obtain an influx of cash that will enable him to refrain from making demands upon the Issue Bank for some time, and, secondly, to prevent a further rise in prices. It is doubtful, however, if he will succeed. The compulsory loan is of such a high figure that the money can only be obtained by a still larger circulation of notes. For example, the eight large Viennese banks (amongst which are the Anglo Bank and the Laender Bank, which are respectively English and French concerns) have to take up 9,300 million kronen of the Internal Loan, which represents 175 per cent. of the nominal value of their total capital.

The Bill lately passed for the reduction of the State employees is the only ray of hope seen as a result of the work of Parliament. However, the agreement of the representatives of the officials' trade unions is necessary to carry out this measure, and there will probably be difficulties. Besides this, the officials who are to be dismissed must get high payments in lieu of notice. How much this will cost (probably many thousands of millions) is still unknown to the Government.

The terrible advance in the prices of foreign currencies during the last week has caused a new rise in the cost of living, and social disturbances have been feared. Under pressure of the Socialist Party and demonstrations by workmen, the private exchange of money has been absolutely forbidden. Banks and bankers have been practically excluded from trade in foreign currencies, which has been reserved exclusively for the State Clearing House (Devisenzentrale). In consequence of this measure, the prices of foreign currencies have been forced down, because speculation has been completely stopped, but commerce and industry can only satisfy their needs for the greatest imaginable amount of red-tape. The interference by the Government in exchange operations has already acted as a boomerang, and by preventing industrial firms from acquiring the necessary raw materials is compelling them to consider the closing down of their works.

The price of a loaf of bread has again risen from 1,790

to 2,170 kronen. The index figure for the period June 15th to July 14th shows a rise of 41 per cent. The gold parity has been increased during the same period from 4,670 to 7,500. The salaries of all State officials and of most private employees had to be increased in the same proportion. All other classes of the population who do not earn their living by trade are on the point of complete impoverishment.

On July 13th the rate of exchange was 123,600 kr, on July 17th 164,875 kr, on July 25th 148,650 kr, and on July 31st 189,000 kr to the pound.

Books and Publications.

THE DEVELOPMENT OF ECONOMICS.*

Two things strike one at once about Professor Boucke's book: first, his partiality for such words as Smithianism, physiocratism, historism, associationism, phenomenalism, &c.; second, the author's amazing erudition. This very erudition, however, makes the book difficult reading for the average person. Professor Boucke assumes a great deal of knowledge in the reader—knowledge not only of economic theory, but of political philosophy, psychology, logic, and ethics as well.

Those who look to this book for a careful and elementary statement of the various economic theories which have ruled from Sir William Petty and Quesnay to Irving Fisher and Pigou will be disappointed. Professor Boucke deals rather with the assumptions underlying economic theories. Economic method rather than conclusions and results is his main concern. His field is chiefly the border-line between economics on the one hand, and systems of ethics, psychology, and political philosophy on the other.

Both Adam Smith and the Physiocrats were influenced in their assumptions by the prevailing philosophy of natural law, Smith chiefly by Hume and Locke, the Physiocrats by the static outlook of the French Rationalists. J. S. Mill was an eclectic, profoundly influenced by Comte, Bentham, and Hume. "Comte's sociology and Mill's 'Logic' give the finest proof of the philosophical foundations underlying much economic theorising." The historical school, on the other hand, was a reaction against the static concept of the Naturalists, and was largely a product of the new dynamic and evolutionary concept being developed by Hegel in philosophy and Lamarck and Erasmus Darwin in biology. It taught that "Economic laws were invalid if not related to the social process as a whole.....Law was born of circumstances in time and space." Finally, about 1870 came the new doctrine, which Professor Boucke calls Marginism, with its "explanation of exchange values by states of feeling and of consciousness in general," and its "use of least ('marginal') fractions as a standard for determining the value of aggregates."

Professor Boucke leaves us with a conviction of the relativity of economic theory, and the need for a work of scientific synthesis, hitherto lacking—a synthesis, maybe, of the subjective outlook of the marginal theorists with the social relativism of the historical school. He succeeds well in whetting our appetite for that "critical estimate of present economic theories" which he promises us in his preface, and to which this work is "prefatory."

MONEY AND THE MECHANISM OF EXCHANGE.*

THIS is the sixth edition—revised and brought up to date by the inclusion of much matter relating to the financial and monetary history of the war—of a work which was originally published many years ago. The author is a member of the Institute, a professor at the Ecole des Sciences Politiques, and a former director of the Administration of the Currency; and he brings to his task a great fund of learning and research. The aim of the book is, in the first instance, to explain exactly the nature of the various instruments in circulation—money, bank-notes,

* "La Monnaie, le Crédit et le Change." By Aug. Arnauné. Paris) Félix Alcan. Sixth edition. 15 francs net.

cheques, bills of exchange, &c.—to define their functions, and make clear the particular qualities which enable them to fulfil these functions. M. Arnauné then proceeds to examine the circulation itself, with a view to showing how each instrument of exchange assists, according to its nature and special functions, in the movement of capital and transference of wealth. Within a sound framework of theory the book contains a mass of practical and historical information, much of which is not readily obtainable elsewhere. Occasional doubts assail us on particular points; for example, the author's view that bank-notes may cease to be depreciated even while the foreign exchange remains well below par, and his contention that the inter-relation of the European fiduciary exchanges at the present time is determined by the value of each currency relatively to gold—i.e., to the dollar. It seems to us that the value, e.g., of the franc relatively and sterling is not determined by the position of the franc-dollar and sterling-dollar exchanges, but that all the exchanges are determined by the balance of payments and purchasing power parities. In general, the author confines himself to explaining the way in which the mechanism of exchange works and the present position, and does not seek to suggest remedies for the existing disorganisation. It is of interest, however, to note that he apparently still considers a return to the pre-war gold standard within the bounds of practical politics. No economist, he says, doubts that every effort ought to be made to restore the pre-war gold standard "except those who delight in paradox."

The book, as a whole, forms an admirably lucid and comprehensive text-book of the subject with which it deals.

EDUCATING INDUSTRIAL ADMINISTRATORS.*

THIS book was written with the object of presenting in simple form a general survey of industry suitable for those who are undergoing some form of training for the purpose of fitting them ultimately to occupy positions of responsibility in industry, and is intended to form an introduction to the more specific aspects of the problem of industrial administration. After a general discussion of the function and character of industry, of its historical development and method of organisation, the authors deal with factory location and design, the manufacturing, commercial, and financial organisation of a factory, labour, management, and the State in relation to industry. A concluding chapter discusses the trend of industry—including the question of shorter hours, changes in the control of industry and education.

It cannot be said that the book successfully carries out the very ambitious purpose which the authors had in mind. This was impossible within the scope of a book running to only 138 pages, and we have before us what is essentially a smattering of a number of subjects connected with industry. An adequate course of training for men who are going to occupy positions of responsibility in industry should include, we suppose, a grounding in such subjects as economic history, theoretical and descriptive economics, commercial geography, business methods, accountancy, commercial and industrial law, &c., and we doubt whether, in any case, much advantage is to be gained by concentrating several of these studies into a subject called "Industrial Administration." The present book may possibly be of some use in arousing interest among a certain class of student, but it will clearly not meet the needs of all the various categories of students enumerated in the preface.

THE A B C OF STOCKS AND SHARES.*

INTENDED primarily to guide the first steps of inexperienced shareholders unversed in the technicalities of investments, this little volume should command a ready sale. In simple language the reader can follow the story of stock and share from beginning to end, with excellent explanations of Stock Exchange jargon. It may be questioned if the risk referred to on page 2, where it is suggested that a rich country might seize the

* "The Shareholders' Manual." By Herbert H. Bassett. (London) Sir Isaac Pitman and Sons, Limited.

land of a poorer country for the non-payment of debt incurred in the ordinary way of borrowing, is to-day a serious consideration. Students with an inquiring turn of mind might wonder, if this held good, why the creditors of Russia or Honduras do not satisfy themselves in this way.

In connection with companies formed under special Acts of Parliament, it is possible that the statement on page 4 that such companies may be regarded from the investor's standpoint as similar to an ordinary public company might in certain circumstances mislead readers. Of course, of necessity the information contained in a book of this description is very much condensed, although in describing the various classes of prospectuses it might have been better if some lines had been devoted to "offers for sale," a type of, or, rather, substitute for a prospectus which is becoming increasingly popular with promoters. The author should have made it clear on page 27 that it is only certain assets in a balance-sheet which are usually valued by independent valuers, however much it may be the pious contention of reformers that all assets ought to be so valued. The cryptic entry in many balance-sheets, "shares in other companies," and other similar items which so intrigue the financial critic, are specially singled out by the author as items for independent valuations. It is to be hoped that the author will enlighten us as to the methods by which this desirable objective may be attained. It is good advice to tell novices on page 118 that in analysing balance-sheets they should be careful to investigate the item "loans" in assets, and investigators should not be disheartened in their quest if they find company secretaries somewhat reticent. The walls of Jericho did not fall at the first blast of the trumpets, and company secretaries may probably require further pressing when it comes to a question of more publicity.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 23.	August 24.

THE chief influences in the Stock Exchange during the past week have been the failure of the Conferences on the Reparations question and the tightness of credit in Lombard street. Up to the last moment the Stock Exchange clung obstinately to the hope that the all-important conference would result in some agreement. The feeling since the result was known has been that of deep disappointment and not dismay. Strangely enough, instead of markets becoming more depressed and prices dropping as a result of general liquidation of a nervous order, they have been fairly bright, and towards the end looked cheerful. This is because of the calm attitude of Paris. It was reasonably feared that Paris would depress markets by heavy selling. But the Paris Bourse has supported, in confident manner, the markets here in which it is largely interested. In view of the relief afforded by the attitude of Paris, the stringency of money in Lombard street has been a subordinate influence in the Stock Exchange, and it has not been an obstacle to a recovery of prices in several markets, the Kaffir section being notable in this respect.

Prices in the gilt-edged market have fluctuated throughout the week within small compass, and on balance the changes are not material, whether up or down. Business has been very quiet, for there has been little demand from the public,

while professionals themselves have not been active. There has been much activity, however, in the Home Railway market, which, despite much profit-taking on occasions and irregularity of movements in consequence of this, has been on the whole firmer and more confident. The "heavy" stocks have been the strongest, while in the Scottish group Caledonian stocks, in the last day or two, have come in for strong support. Business has been quiet in the foreign bond market, but underlying conditions have shown no marked trace of weakness, for where prices have given way it has been to an immaterial extent. Even French issues and German bonds have been but slightly disturbed by the wild fluctuations in the currencies of those countries. Indeed, the French railway scrips have shown a tendency to rally. Brazilian and Argentine bonds have been quietly firm. The Roumanian loan is expected shortly. The amount will be £2,500,000, and will probably be offered in London and New York. The continued firmness of this market will largely depend upon the future international developments and their effect upon French sentiment.

Leopoldinas have been the most prominent stock in the Foreign Railway market. They had a good rise before the official announcement that the tariff concessions have been agreed upon and only await formal ratification. The price has gone back slightly from the best, but the announcement has, of course, given general satisfaction. Argentine rails have been a most uncertain market and prices have been unsteady, being rather lower on balance. But there are all the possibilities of a good recovery here in the near future.

Business has again been restricted in the industrial market. Calico Printers have had a good rise on confident expectations of a dividend of 10 per cent. for the past year, against 5 per cent., and this has helped to keep other textile shares moderately firm. Tobacco shares have been speculated in from day to day, as usual, and have fluctuated in price constantly, for professionals have taken their profits on the rise. Hence there is not much change on the week. Marconis have been able to recover to a modest extent on the meeting and on broad-casting possibilities, which may bring some prosperity to the company. But, all the same, the market for these shares looks unsteady. Nitrate shares are reviving on rising hopes regarding the prospects of the industry, and there have been several good recoveries in the list. At the moment, this group shares, Furness, Withy have been steadily bought, and the price is better, allowing for a moderate reaction on the inevitable profit-taking.

Oil shares have been a most uncertain market, hopeful one day and depressed another, with the public taking no active interest in it and leaving the market to professionals. Continental liquidation was feared, but such fear has not been realised, and the market has shown a little more firmness. Trinidad Centrals have had a sharp recovery, and Mexican Eagles have rallied modestly. The price of rubber has fallen unrelievedly depressed.

After being a hesitating market in the early part of the week, Kaffirs have recovered again, helped by some buying from Paris, which has influenced sentiment here favourably. The Cape has also been a small buyer. Central Minings have been prominent. De Beers have rallied on French buying. Other sections have been quiet. Chartered have been alternately weak and firm, according as they have been affected by alternating sentiment.

The Committee of the Stock Exchange have issued brief regulations for the settlement of the pre-war account on September 1. All tickets will be passed on August 31. It is not expected that this account will involve serious difficulties.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hand.

NEW ISSUES.

Michael Nairn and Greenwich, Limited.—Authorised capital 2,200,000 shares of £1 each, of which 1,993,601 have been issued as fully paid. The company was incorporated last July "to acquire all or any of the ordinary shares" of Michael Nairn and Co., Limited, and the Greenwich Inland Linoleum Company, Limited. The position of this latter undertaking is shown in its latest balance-sheet, published in March last, and no dividends have been paid on the ordinary shares since 1914. The Nairn Company, however, is a private concern, and no balance-sheet is available to the public. The following particulars, however, are taken from an advertised statement:— "The Nairn Company was incorporated under the Companies Acts in 1893. The present nominal capital of the company is £1,450,000, divided into 15,000 cumulative 6 per cent. preference shares of £10 each, 20,000 preferred ordinary shares of £1 each, entitled to a preferential non-cumulative dividend at the rate of 10 per cent. per annum, and 220,000 ordinary shares of £5 each, all of which shares have been issued and are fully paid up." The capital of the Greenwich Company is £443,640, divided into 100,000 cumulative 6 per cent. preference shares of £1 each, all issued and fully paid, and 687,280 ordinary shares of 10s each. Holders of ordinary shares in the Nairn Company receive 15 fully-paid £1 shares in the new company for every two fully-paid shares of £5 each. Holders of ordinary shares in the Greenwich receive five fully-paid £1 shares in the new company for every nine fully paid 10s shares. The object of this advertisement is to comply with the Stock Exchange Committee requirements in connection with an application for permission to deal in the shares, and intending share purchasers who have no other source of information than this Press statement may reasonably require further particulars of the Nairn undertaking before making an investment in the new company.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED.

INDUSTRY'S BURDEN OF TAXATION.
NATION'S REVENUE FROM LIQUOR INDUSTRY.
PROHIBITION AND RELIGION.

The 35th annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 17th instant, under the presidency of Mr W. Waters Butler.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and Gentlemen,—I trust, as stated in the report, the shareholders will consider that the balance-sheet which is to be submitted for your approval to-day may be looked upon as satisfactory, considering the stagnation of industry which has prevailed throughout the year, and particularly in the area in which the trading operations of the company are mainly carried on. No district has felt more acutely the steep and sudden slump which has followed the short period of trade boom after the war.

The items of the balance-sheet call for no special mention by me, but I shall be pleased, at a later stage in our proceedings, to give information upon them should any shareholder desire it. You may rest assured that every normal contingency in connection with our liabilities has been provided for, and that the assets are taken at less than present-day market valuations.

IMPROVING LICENSING CONDITIONS.

Notwithstanding the depressing trade conditions, the company has maintained its properties and plant in the highest state of repair and efficiency. We have continued to collaborate with the Licensing Justices in Birmingham in bringing about improved licensing conditions and better service to the public, by the closing of smaller licensed properties, the structure of which is not up to modern requirements, and in return facilities have been granted for the provision of larger and more modern premises. As evidence of the extent of this work we have, during the past five years, voluntarily closed, or agreed to close, no fewer than 103 licensed houses in addition to the licences which have been scheduled by the Licensing Justices under the Compensation Act. Our large ownership in the City of Birmingham makes it possible for us to facilitate this better distribution of licences, but such operations entail very heavy expenditure, particularly in these days of high building costs.

The decline in general trade has not only resulted in a great increase in total unemployment, but also has brought about much short time accompanied by a heavy reduction in the rate of wages, consequently greatly decreasing the spending power of consumers. Unfortunately, with this severe depletion of the consumer's pocket, the burden of war taxation, and, in the case of this trade, of post-war taxation, has not been lightened, as it was confidently anticipated would take place in the last Budget.

It is quite true, as stated by the Chancellor in his Budget speech, "The burdens of taxation which have been borne by the British people, both during and since the war, in a degree that has excited the admiration of the whole world, are now felt to be so oppressive as to check enterprise and deepen despondency."

TAXATION AND THE INDUSTRY.

To no industry do these words apply in greater measure than to that in which we are engaged, and to no section of the community more particularly than to the consumers of beer. The demand for our goods fluctuates with the state of industry generally, although the decline in the output of beer falls more rapidly than the reduction in the earning power of the consumer, for the reason that whether the consumer is earning much or little, the first claim upon those earnings is the cost of the home, and this is further accentuated if his requirements during the time of short earnings are being sold at the same unit of price which prevailed when his earnings were much higher. Beer occupies this position, in consequence of the maintenance of the heavy duties imposed upon it, and which, if they could have been justified at the time they were imposed, under the prevailing conditions make the purchase of the article almost prohibitive. This is readily understood when it is realised that at the time of the last addition of duty, namely, in April, 1920, when the duty was raised from £3 10s to £5 per standard barrel, as against a pre-war duty of 7s 9d per standard barrel, making the duty nearly thirteen times greater than pre-war, the amount of trade union unemployment was then less than one per cent. of the membership of the trades unions, whereas, at the time of the introduction of the Budget last year, the figure rose to over 17 per cent. This appalling percentage has been maintained practically throughout our financial year, with a far lower rate of wage prevailing than in 1920.

There is no doubt that when the latest agreed reductions of wages in the engineering trades are in full operation, a workman, even on full time, will have, after meeting the other requirements of his household, a mere fraction of what he had to spend when beer was a penny a pint cheaper than to-day, namely, before the increase in beer duty from £3 10s. to £5 per standard barrel in April, 1920—a date when he was fully employed. How he is now, working short time, to obtain his heavily taxed tobacco, beer, and amusements is difficult to discover. Mr Lloyd George a few days ago stated as a favourable fact "that high taxation has made excessive drinking more inaccessible." It would have been more correct if he had said that the present onerous taxation had almost made prohibitive the purchase of alcoholic beverages by the most temperate consumer.

DROP IN OUTPUT AND CONSUMPTION OF BEER.

Consequently, one is not surprised at the big drop in the annual output of beer throughout the country, with very little indication of that downward tendency being checked; so much so that the Chancellor, in his Budget statement, appears to anticipate a reduction of 15 per cent. in the consumption of beer, and also a small decrease in spirits.

It was confidently anticipated that the Chancellor of the Exchequer would see his way clear to effect a reduction of 30s per standard barrel, which would not only have permitted the consumer to have had his beer at 1d per pint less, but also of a better quality, as the increased consumption which would have resulted from a reduction in the retail price would have enabled us by the consequent reduction in overhead charges to have improved the strength of beer to a greater extent than the lower costs of manufacture are enabling us to do at the present time.

And here let me say the opponents of the trade are giving the impression that the consumer is not benefiting by the reduction in the cost of brewing materials and other costs of production. This company alone, during its past financial year, has improved the quality of its beer at an additional net cost of more than £150,000 without any increase in the prices to retailer or consumer. Your board will continue to maintain their practice of giving the quality of the article their first consideration, and that quality is improved as diminishing costs of production permit. Reports from traders and consumers indicate that our ales and stouts, both in cask and bottle, are unexcelled in quality.

REDUCTION OF BEER DUTY.

The Chancellor gave as his reason for not being able to reduce the duty on beer that it would probably result in a decreased revenue to the State of £22,000,000, even if the reduction of the duty resulted in an increase in consumption of 10 per cent. But surely against this theoretical loss of £22,000,000 should be set the fact that such increased output would have necessitated not only the production and use of at least 10 per cent. more brewing materials, but also a large increase in the number of persons employed in breweries, maltings, transport, and the allied trades, thereby decreasing unemployment doles and Poor Law relief. Furthermore, it would have checked the rapidly decreasing fall in the rateable value of licensed premises, thereby avoiding the diminution in the local rates, which must inevitably continue unless sales can be increased by the removal of the present prohibitive duties.

I have not the slightest doubt that had the Chancellor not have said that if he granted the 30s per barrel reduction in beer duties, he would have to withdraw the relief of 1s in the £ off income-tax, the large number of members of Parliament who had pledged themselves before this declaration to vote for a reduction of the beer duty would have done so.

I take the view that the heavy duties on beer and spirits were imposed during the war as an easy method of indirectly collecting income-tax from the working classes. If it were contended that at that time the earnings of the workers justified the imposition, to-day means be looked upon as occupying a position of ability to pay income-tax, and the levy of income-tax, I have always understood, is based and scaled upon ability to pay.

While all agree that the annual national expenditure should be balanced by the revenue of the year, and that a high rate of income-tax does check enterprise, it is equally certain that beer—which, no matter what our teetotal friends may say, is looked upon as a

necessity by the workers—when so costly as now, tends to the creation of unrest rather than the fostering of goodwill, which is so essential.

THE CHURCHES AND PROHIBITION.

I hope that the campaign of the Prohibitionist party which is to be put into operation mainly through the churches and chapels during the coming autumn will meet with the strongest opposition from the congregations, who have not been consulted as a body, nor their approval obtained for such a contentious matter as prohibition being promoted from the pulpit under the cover of temperance.

The moment our places of worship are used for propaganda in connection with acute contentious matters rather than for the promotion of a spirit of unity and Christian charity, then the power of such churches and chapels in their proper sphere of work must assuredly be weakened. One cannot imagine that the clergy of the many denominations whose aid is to be sought in this hypocritical work will fail to realise the false character of "local veto," or that they will be parties to its advancement.

CHURCHMAN'S VIEWS ON PROHIBITION.

Why I so emphasise the hypocritical character of this movement is that temperance is to be used to cover up Prohibition or compulsory abstinence. Seeing that the clergy are to be recruited for this propaganda work, it may interest them and others to know the views of a clergyman of high standing, which he has expressed as follows:—

"What is the altogether untenable position of the Prohibition advocates? It is this: If they argue that wine (alcoholic drinks) is an evil in itself, then absolute Prohibition, even for sacramental purposes, should emphatically follow; but this argument transfers responsibility from the agent to the instrument, and so destroys morality; moreover, it is contrary to Scripture, and the emphatic teaching and example of Christ, who used wine Himself."

If they argue that wine, or alcoholic drink, is not an evil in itself, then regulation of its traffic is surely the moral course to adopt. But if Prohibition is urged on account of the misuse which some make of it, then, on the same principle, printing, the theatre, and dancing should be prohibited. All this, of course, is absurd. The position of the prohibitionist is accordingly against logic and common sense.

REFORM, NOT PROHIBITION, NECESSARY.

Reform is needed—not Prohibition—reform, wise and moderate and patient in the light of experience, education, and true morality; in the interests of the great body of the public, and especially of moderate men, who constitute the majority of the people. The whole scheme of National Prohibition is a great step backward; it would be an odious and inquisitorial tyranny, foreign to the basic principle and spirit of British Law.

Prohibition is indeed fatal to Liberty, because it involves a serious outrage against the natural rights and liberties of individuals, and contemptuously disregards the claims of dissenting minorities. It is also fatal to Temperance, though not a few ingenuitously confound Temperance with Prohibition. Temperance is a growth, like all moral laws, in the individual and the community. Temperance is positive and appeals to man's sense of self-control, to his reason and conscience. Prohibition is of self-control, to his reason and conscience. Prohibition is negative and appeals to the sense of fear, to pains and penalties, and utterly ignores man's habits and education. Temperance is and is utterly ignores man's habits and education. Temperance is the development of man's righteousness and self-control. Prohibition is the reduction of man to a position of compulsory abstinence by the Criminal Law. Temperance is national total abstinence by the Criminal Law. Temperance is the heritage and blessing of a free people. Prohibition is the yoke which a country constructs for itself when it confesses its inability

to self-control, and from which it will take long years to free itself. Temperance is the badge of self-respect and orderliness. Prohibition is the symbol of hypocrisy and deception. All the secret encouragement to sly drinking, the utter lack of control, the absence of all authority, the vile decoctions served, are sure to generate a low moral atmosphere of great mischief. And such places of sly drinking greatly appeal to the young. Once let a young man become contaminated by the moral tone of the "sly grogs," he will be damaged morally, if not utterly ruined. Prohibition will undoubtedly generate lawlessness. Its extreme character, its far-reaching measures, its enormous penalties, stamp it as a grinding despotism—the fruitful parent of disorder. Prohibition is as despotic as any law of the worst despot. It utterly disregards and tramples under foot the undoubted rights of minorities, whom it grossly insults by the way it flaunts their wishes and destroys their privileges. The minority under it would obey, or suffer outrageous penalties. Wherever it prevails it is monstrous in every way and grossly insulting to the intelligence of the large minority. One extreme begets another. Prohibition will plunge us into a course of folly, bringing turmoil into the politics of the country, perjury and evasion into the courts, and deception into the people."

THE POWER OF ORGANISED MINORITY.

I think all will agree that it would be difficult for anyone to more fully state what Prohibition stands for and would result in. The *Daily Chronicle* rightly says one of the weakest points of democracy "is the power which a small organised minority has to injure the great inert majority while the latter are napping." This is well illustrated by the declaration of Americans who confess that indifference and failure to organise against the methods of a highly organised and abundantly financed movement permitted Prohibition to come about, which would never have happened had they been awake to what was developing.

It behoves each shareholder and everyone directly or indirectly interested in the trade, and all who value personal liberty, to render the fullest support by personally combating teetotal propaganda, no matter whether it may appear in church, chapel, or market-place, for it must be fully realised that the forces of our opponents are being concentrated for a big attack.

STATE'S REVENUE FROM THE INDUSTRY.

Outside the question of the value and need of the licensed trade in meeting the daily requirements of the majority of the people of this country, few realise the amount of net revenue the State derives from the consumers of alcoholic beverages. Last year the net revenue from beer, spirits, wines, and licences was £191,870,000, in addition to which large sums were paid in the form of income-tax, corporation profits tax, and local rates, the latter based on annual values largely in excess of ordinary property. The contribution to the national revenue alone represents a sum nearly equivalent to an income-tax of 4s in the £, and is far in excess of the amounts necessary to pay not only the pensions brought about by the war, but also the old-age pensions and the greater part of the cost of public education. Although one cannot put forward the amount of revenue derived from the trade as a reason for its continuance, still, it is well, particularly in these times of excessive taxation, that taxpayers should realise how this huge loss of revenue could be made good if Prohibition came about, and be as readily collected as to-day. Although, as on previous occasions, I condemn indirect taxation as being very costly from the consumer's point of view, I must agree that it is easier to collect beer and spirit duties than it would be to exact income-tax, say, at the rate of 9s. in the £, even if accompanied by the doubtful blessings of Prohibition.

THE ANGLO-SOUTH AMERICAN BANK,
LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

I hope the lengthy remarks I have made this morning will not make the shareholders feel in a pessimistic mood. I can assure them that our business was never in a sounder condition than it is today, and its prosperity will be increased with a revival in the general trade of the country, which I trust will be soon apparent, and thereby alleviate the suffering brought about by unemployment which, unfortunately, is so prevalent.

With these remarks, ladies and gentlemen, I beg to move the adoption of the report, and will ask Mr H. W. Bainbridge to second the resolution.

Mr. H. W. Bainbridge seconded the resolution, which was carried unanimously.

The retiring director and the auditors having been re-elected, the usual formal business terminated the proceedings.

GOVERNMENT RETURNS.

SIDNEY TURNER, Accountant-General.

India Office, August 11, 1922.
Messrs Samuel Montagu and Co. write as follows on August 17th:—

GOLD.

A considerable amount of gold came on offer. Indian requirements being small, the bulk of the supplies was taken for the United States of America. Gold to the value of \$1,290,000 has arrived in New York from London. The following were the United Kingdom imports and exports of gold during the month of July, 1922:—Imports, £2,817,880; exports, £9,514,655.

SILVER.

As a consequence of sales by the Indian bazaars and the easier tendency of the Chinese exchanges, the price receded to 34 1/2 on the 14th inst., for both cash and forward delivery. At this point, a sharp recovery was brought about by active sales of sterling by Chinese speculators (the equivalent of buying silver), and quotations yesterday reached 35d for both positions. America has been more inclined to buy than sell, leaving the onus of providing supplies to the Continent and outside sources. The market rather lacks confidence, its prevailing factor having been mainly speculative, and not the requirements of trade. Business between America and this country has become temporarily more difficult, owing to the delay in cable communications caused by the seizure of the Irish cable stations by the Irregulars. Silver acquired under the Pittman Act amounted to 122,246,506 ounces on the 4th inst., including a purchase of 300,000 ounces on that date. It is reported in the Press that the financial commissariat of the Soviet Government has approved a proposal to issue a new currency, consisting of bank notes and silver, beginning on January 1, 1923. In this manner the commissariat proposes to use the silver confiscated from the churches "to relieve the famine." The amount of silver obtainable from such a source is probably a drop in the bucket compared with the currency needs of Bolshevik Russia.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	July 22, 1922.	July 31, 1922.	Aug. 7, 1922.
Notes in circulation	17,895	18,041	18,061
Silver coin and bullion in India ..	8,363	8,509	8,525
Silver coin and bullion out of India ..	2,432	2,432	2,432
Gold coin and bullion in India	6,515	6,515	6,519
Gold coin and bullion out of India ..	585	585	585

The silver coinage during the week ending 7th inst. amounted to three lacs of rupees. The stock in Shanghai on the 12th inst. consisted of about 38,200,000 ounces in sycee, 33,500,000 ounces in sycee, 32,500,000 dollars, as compared with 37,600,000 the 5th inst. The Shanghai stocks have so increased that they compare favourably with any recorded this year.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1922.	Gold.	Silver.	Date.	Silver.
	Per Ounce.	Cash Per Ounce.		Cash Per Ounce.
Aug. 12 ..	92 5	34 1/2	Aug. 25, 1916	31 1/2

Poderosa	..	550 metric tons, assaying 27 per cent. copper. Estimated profit, £1,800.	..	..

BRITISH BROKEN HILL.—Mill returns for fortnight ended August 12th:—8,303 tons crude ore produced 1,290 tons lead concentrates, containing 822 tons lead and 34,701 ozs silver; also 1,175 tons zinc concentrates, assaying 86 per cent. lead, 10 ozs silver per ton, and 44 1/2 per cent. zinc. 220 tons carbonates raised. One day's stoppage.

BRITISH PLATINUM.—Cable from the mines' manager states:—"For the four weeks ended August 12th 386 hours' dredging produced 172 ozs platinum and 52 ozs gold. Owing to necessary repairs dredging was suspended for one week."

FALCON.—July:—Crushed, 16,850 tons of ore, producing 27 1/2 short tons of blister copper, containing 2,862 ozs of gold and 5,781 ozs of silver; estimated value copper at £60 per short ton, gold at 90s per ounce, and silver at 3s per ounce, £29,920. In addition to above, concentrates on hand valued at £2,156 unsold, owing to breakdown crane, since repaired.

OROVA LIXES.—Output from June 17th to July 31st:—Tonnage treated, 3,321; total receipts, including royalties, £15,082; expenditure, including purchase of plant, ore, £15,740; expenditure on supervision and maintenance of property and plant, £2,449. Gold premium not included in above receipts. (Office note—The manager explains that the operations during June were unproductive, but that for July they showed a profit on treatment, and that an increased tonnage was expected for August.)

WALT.—Bullion return for the period ended August 5th:—15,342 tons crushed and 4,419 fine ozs of gold and 29,577 fine ozs of silver produced.

Reports and Notices.

Mr James S. Proctor, who has been associated with the Refuge Assurance Company for over 30 years, and who has occupied the position of joint managing director since February, 1914, has been elected chairman of the company, in succession to the late Mr R. Wm. Green.

The Meadow Dairy Company, Limited, have opened a branch at 120 Northcote road, Clapham.

GOVERNMENT STOCKS, &c.

ORIENTAL REPUBLIC OF URUGUAY 3 1/2 PER CENT. DEBT.—Tenders of bonds of the above debt for redemption were opened at the office of Messrs Glyn, Mills, Currie, and Co., 67 Lombard street, London, E.C., on August 11th, the amount available being £63,558 2s 4d. Tenders received ranged from £56 5s to £63 10s per cent. Tenders at £57 and under were accepted in full.

RAILWAYS.

LEOPOLDINA RAILWAY COMPANY.—It is officially announced that this company has received information by cablegram from their representative in Rio de Janeiro, stating that Congress has now passed the Budget containing the Federal Project of Law, including Port of Victoria, both referred to at length in the chairman's address to the shareholders on June 7th last. The cablegram adds that the Project of Law has been sanctioned by the President of the Republic. The agreement to increase the tariffs has been signed by the authorised representatives of the Federal Government and the Governments of the States of Minas and Rio de Janeiro, and now only awaits formal ratification.

The NEW Chatwood Safe Book

British firms are often criticised abroad that the catalogues issued by them leave much to be desired, since they in no way convey to prospective customers the dignity and standing of the firm and the high standard of their work.

The guiding factor in the preparation of this new catalogue has been a desire to convey something of the quality of work and high ideals of the firm, in the hope that their worth may be gauged in some measure by their aims as well as by their achievements.

We shall be pleased to send a complimentary copy to all those having in their keeping gold, silver, precious stones, securities or records of vital kind—possessions which the lust of thieves, appetite of fire, or destruction by violence may cause to be lost.

THE CHATWOOD SAFE

Since 1858

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."
THE CHATWOOD TRADITION.

MISCELLANEOUS.

CLAUDIUS ASH, SONS, AND CO., LIMITED.—In presenting the accounts for 1921 the directors regret the adverse results, which are due to the severe depression in trade throughout the year, to the prolonged depreciation of foreign exchanges which have made business impossible in several countries (where the company previously had a ready outlet for its manufactures), and to the general fall in values, stocks having been taken at cost or market price, whichever is the lower; these factors are seriously reflected in the accounts, but the directors look forward with confidence to the future when more normal conditions are established. Effect has been given in the accounts in accordance with the resolution passed at the extraordinary general meeting of the company held in March last, to the transfer of the company's business in France and Belgium to a company called "Etablissements Ash, Caplain Saint André"; the directors feel that this amalgamation rests upon a sound commercial foundation, and will further strengthen the company's position in those countries. The net profit, as shown by the accounts, is £498; add balance brought from 1920 accounts, £37,378—£37,876; deduct income-tax, £31,473; balance to be carried forward, £6,403. Certain of the pre-war assets in the ex-enemy countries have been realised, but, unfortunately, the agreed award of the Anglo-German Mixed Arbitral Tribunal remains unsettled, and forms part of the outstanding balance of £104,309 15s 8d. In view of the present economic conditions and pending settlement of the company's claims, a transfer of any loss from the general reserve has been made on account of any loss from the pre-war assets in Austria, Hungary, and Turkey. With the sincerest regret, the directors record the death of their esteemed colleague, Mr Claudius James Ash, who had an intimate life-long association with the business.

WALTER SCOTT, LIMITED.—The report for year ended June 30, 1922, shows that the balance of profit brought forward from last year's accounts is £10,826. The operation of the several departments of the company's business for the 12 months, including interest on investments, and after taking into account adjustments on account of war taxation, have resulted in a surplus of £13,430, making £24,256 for disposal. Out of this the following amounts have been provided:—Directors' fees for year to June 30, 1922, £12,000; amount cent. debenture stock for year to June 30, 1922, £2,225. The association, £7,531; leaving to be carried forward, £2,225. The report states that on the conclusion of the national coal strike on June 30, 1921, it was anticipated that there would be a revival in the steel and coal trades, but, unfortunately, this expectation was not realised. The Leeds steel works, after having stood for four and a-half months, was started up in the middle of August on orders that were then in hand, but have only been in operation intermittently during the remainder of the period, owing to the general absence of orders for steel. The result has been that the works have produced less than one-half of their normal output, and this, added to the depreciation in the value of stocks in hand last year, has resulted in a considerable loss. The collieries, with the exception of a few days' standing for want of waggons, have worked every available day, and the output has been largely increased, but not with any satisfactory result. The bye-product plant has been operated with satisfactory results, and has mitigated to a certain extent the loss on the collieries. The trading in all departments of the business in the

second half of the financial year has been distinctly more favourable than in the first six months of the period. The directors have to record with deep regret the death of their esteemed colleague and chairman, Mr J. T. Middleton, which occurred on June 22nd last. His assiduous services in the interests of the company have been invaluable, and his loss will be greatly felt. It is not proposed to fill up the vacancy on the board at present.

Reconstruction in Europe
NO. VI.

Editor - - John Maynard Keynes.

1. The Problem of Population

as viewed by an Economist, a Philosopher and an Historian.

Articles by J. M. Keynes, Benedetto Croce, G. Ferrero.
Articles on the Post-War Population and Vital Statistics of Great Britain, France, Germany, Czechoslovakia and Austria.

"The Problem of Population is going to be not merely an economist's problem, but in the near future the greatest of all political questions."

11. Agriculture and Food Supply.

The World's Grain Supplies by Sir Henry Rew;
Articles on Agricultural Conditions throughout Europe.

111. The Peasant Revolution in Eastern Europe.

A series of Striking Articles on the Agrarian Revolution in Russia, Roumania, Jugo-Slavia, Poland and the Baltic States, which, scarcely noticed here, is perhaps the most important economic event since the Armistice.

Although an uncertain feeling continues to prevail in most quarters of the market, the prospects are rather more encouraging. The opinion is gaining ground that it is now safer for merchants to secure supplies, in view of the fall in values since a month ago. In the cloth section this week the feature of interest has been the revival of inquiry for India. Buying has been patchy, but here and there substantial contracts have been arranged in standard makes for Calcutta and Bombay. Shippers have been stimulated to purchase more freely by the healthy trade advices from the other side. No increased activity can be recorded for China, and buying has been confined to small lots. Demand for most of the minor outlets has been quiet, but a few more orders have been booked in home trade fabrics. Yarn quotations remain very irregular. Spinners are expecting to obtain some relief from the Oldham holidays and the extended stoppages. Although rather more demand has been dealt with in American and Egyptian counts, the turnover shows very little improvement.

Although the improvement in the Lancashire cotton industry has met with a set-back during the last few weeks, the Board of Trade returns reflect the activity which showed itself in the spring. It may be recorded that shipments of cotton piece goods during July were larger than in any month for five years back. The total was 443,609,800 square yards, against 311,907,300 square yards in June and 177,530,400 square yards in July, 1921. These figures are

certainly noteworthy. Owing to the excellent monsoon reports, there are great hopes of India providing a considerable business this autumn.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Mills in the Bradford and Halifax districts have been closed this week for the annual holidays, and the local market has therefore presented a rather quiet appearance. A moderate amount of business has been done in some cases, but, on the whole, values have not been seriously tested. Judging from the little that has been done, however, there is no weakness in any section of the industry. Topmakers are in a strong position, and most firms are well sold forward. In both merino and crossbred tops prices are firm at about last week's rates, good warp 64's being very firm at about 4s 8d for November delivery. There is not a great deal of business in crossbreds, but topmakers are showing more firmness, and will not consider the very low prices that were current for medium and low qualities before the last series of auctions in London. The yarn trade is quietly steady, spinners being well employed on old crossbreds, and although prices are not quotably dearer, the position is regarded as sound and in sellers' favour. The unsettled conditions on the Continent are interfering to some extent with the export trade, and business with Germany especially is being held up. There is nothing new in the piece goods trade. Most firms are fairly well employed for the present, and it is expected that increased activity will be seen after the holiday season. A steady trade is passing in most qualities of home-grown wools, but in many cases it is difficult to make a profit on the high prices paid at the recent country fairs. Downs and the best half-breds are sound, and good lustre hogs are wanted, but wethers remain rather neglected.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

There is nothing particularly new in regard to Colonial wool. Many City offices being temporarily closed, and throughout the current week Bradford mills have been closed for Bowling Tide. This has come to be a general thing, and mills in all manufacturing districts now close for a full week for the annual holidays. B.A.W.R.A. have this week issued their usual monthly statement, giving a summary of stocks and disposals of wool from December 31, 1921, to July 31, 1922. The figures show that stocks of merinos have been reduced from 202,527 bales at the end of June to 162,268 bales at the end of July. At the end of last December stocks of merinos in B.A.W.R.A.'s hands were 419,673 bales, which all goes to show that by the end of the year the Association will practically have got rid of their surplus merinos. Then, too, the sales of Australian crossbreds were 1,175,533 bales, compared with 785,054 bales at the end of July last. When we come to New Zealand crossbreds the disposal of these is proceeding much slower than in December 31st being 634,053 bales, compared with 418,995 bales at the end of July. We expect these to sell much more slowly than announced that it will be their policy to market these as occasion demands. South African wools have gone off like hot cakes, and whereas last December 31st the British Government stock of these, which means that the next two series of sales will see these entirely gone. No matter what adverse criticism has been levelled against B.A.W.R.A.'s action by a certain section of the Yorkshire Press, it may be re-affirmed that B.A.W.R.A. have pursued the right policy, and need not be the least uneasy regarding the future of wool markets. I certainly think that B.A.W.R.A. has the British Government, and as things are, there need be no undue desire manifest to get rid of even New Zealand crossbreds. One regrets very much the existence of trouble among the shearers in Australia, but as far as one can see they are hoping to per too sheep. Strikes always dislocate business, and no one need be surprised if the forthcoming Australian season is later than it ought to be, because of the foolish action of a certain section of if Australian selling markets could get back to pre-war conditions this season, but everything points to this being prevented by the

Deposits are received for fixed periods on terms which may be ascertained on application.

shearers' strike. If the demand of the shearers was granted, there would be another strike next season for a further 5s per 100 sheep, so the issue might as well be brought to a final conclusion to-day as twelve months hence. It is a fact well worth noting that here in England every strike that has taken place since the armistice has resulted in the workers being the losers, sometimes disastrously so. Sensible men to-day recognise that war conditions obtain no longer, and that if the world is to be put back again into a really sound economic position, the relationship between its various sections of trade enterprise must be fully recognised.

VEGETABLE OILS AND OILSEEDS.

Partly owing to Continental holidays and absence of buying interest, market conditions generally have continued quiet. The sharp setback in values of Plate linseed led to a little buying at the lower level, from which there has been little or no favourable reaction. About £19 is current value of Plate on spot, and £18 10s for seed afloat and for shipment. Calcutta is also easier round £19 10s for July-August loading. The outlook with regard to linseed is very obscure. On the basis

dull. August-October, Liverpool, sold, £17 7s 6d to £17 2s 6d; and September-November, £18 8s 9d to £17 5s.

RUBBER.—Easier on the week, and trade ruled very quiet. Standard plantation crepe and sheet, spot, also August delivery, sold, 7d to 6½d; September, 7½d to 6½d; October-December, 7½d to 7½d and 7½d; January-March, 7½d to 7½d and 7½d; April-June, 8d to 7½d. To New York, standard sheet, August-September, sold, 7½d; and October-December, 7½d, c.f. and i. Fine hard Para, spot, quoted 10½d; soft fine, 9½d; cauchó ball, 7½d.

MENTHOL.—Spot, 2½s; forward, 2½s. Japanese peppermint oil, spot, 6s 3d; forward, 6s 6d; aniseed, spot, 2s 3d; forward, 2s 4½d; slab camphor, spot, 3s 6d; forward, 3s 3d; crude, spot 3s 4d; forward, 2s 11½d per lb. Japanese wax, spot, 8s; forward, 7s 5d per cwt.

OILS.—Linseed market quiet and easier. Spot, net, naked, 4½s; August, 39s 9d; September-December, 36s 4½d; January-April, 34s 6d. Rape dull. Crude, spot, nominally 43s; refined, 46s. Cotton quiet. Crude Egyptian, spot, 40s 6d; common edible, 47s 6d; deodorised (in barrels), 53s. China-wood quiet. Hankow, spot (barrels), 63s; shipment, 62s. Coconut lower. Ceylon, spot, 39s 6d; August-September, 38s 6d; Ceylon, ditto, quoted 44s. Soya easier. Oriental, barrels, August-September, 38s 6d. Japan fish quiet. July-August, cases, 22s. Cod steady. English, spot, 3½s. Ground nuts quiet. English crushed, naked, spot, nominal; forward, 48s; deodorised, barrels, 56s. Turpentine dearer. American, spot, 97s; August, 97s; September-December, 98s; January-April, 99s 6d. Rosin firmly held. American, grade B, 14s; G, 14s 9d; H, 15s; N, 15s 6d; WG, 18s; WW, 20s 6d. French, F/C, 15s; WW, 18s 3d per cwt. Petroleum steady. American standard white, spot, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed market dull and easier. Bold Bombay, afloat, £20 15s. Small Bombay, ditto, £19 15s. Calcutta, afloat, £19 15s; July-August, £19 10s; August-September, £19 5s. Plate afloat, £18 15s; July-August, £18 10s; August-September, £18 5s. Rape-seed quiet. Toria, July-August, sellers, £18 5s; real bold Ferozepore, July-August, quoted £17 15s. Cotton-seed dull. Egyptian black, August, sold, £11; and white, sold, £10. Bombay, August-September, £8 12s 6d, sellers. Gingelly quiet. Chinese, August-September, Continent, nominally, £25 10s; large Bombay, ditto, £25 5s. Castor, Bombay, August-September, sellers, £18 10s, to Hull. Groundnuts dull. Coromandel, machine-dried, August-September, £21 10s; ordinary, £20 10s; East African, £21 2s 6d; Nigerian, £21 10s; bold Bombay, £21 2s 6d. Soya beans, Manchurian, August-September, £13 per ton.

METALS.—Tin opened the week with a rather firmer tone, buyers being more prominent, and a fair turnover resulted, cash being dealt in at £159 to £158 15s; September dates, £158 15s; October fluctuating between £159 and £159 10s; with three months, £159 5s to £158 17s 6d to £159 2s 6d. Increased firmness was apparent by the middle of the week, owing to higher Eastern advices, combined with the American position, and a fair demand prevailed, especially

for forward positions. Cash sold at £159 10s to £159 17s 6d; early September, £160 15s; October, £160 to £160 15s; and three months, £160 to £161, while finally registered at £160 15s. At Thursday's session values ruled firmer, and a good business transpired, though some irregularity was apparent for three months. Cash sold at £162 5s to £161 15s; early September, £161 17s 6d; mid-October, £161 10s to £162 5s; end October, £161 15s to £162; and again at £161 15s; three months, £161 10s to £162 15s; and to £162, while finally registered at £161 12s 6d. On Friday very little change occurred, the market ruling steady, with moderate transactions. Cash, sold, at £162 to £162 10s to £162; early September, £162 10s to £162 2s 6d, while finally £161 15s. English ingots, the influence of good buying orders, and a fair business transpired. Cash sold at £64 2s 6d; October, £64 5s; November, £64 6s 3d; and three months, £64 7s 6d to £64 5s. On Tuesday the demand slackened off, and holders were forced to grant slight concessions in prices. Cash sold, £64 to middle of the week values, however, displayed an upward tendency, due to higher cable advices from the United States, and a good business was effected, comprising cash at £64 5s to £64 2s 6d to £64 3s 9d; October dates, £64 6s 3d to £64 2s 6d to £64 7s 6d to £64 6s 3d, and again at £64 7s 6d. At Thursday's session the tendency of prices was weaker, with a fairly good trade in mid-October, £64 5s to £64 1s 3d; mid-September, £64 3s 9d; to £64 3s 9d. On Friday a quieter tone prevailed respecting forward positions. Cash sold at £64 1s 3d; early October, £64 to £64 2s 6d, and three months, £64 2s 6d to £64 3s 9d to £64 1s 3d. Electrodes, £70 to £71; best selected, £66 10s to £68 10s. Strong as to position. Spelter dearer at £31 10s to £30 15s, according to home, £100, and export, £105.

THE MONEY MARKET.

MONEY was more plentiful this week, but not plentiful enough to enable the market fully to meet its indebtedness to the Bank of England. Business in discounts was difficult, buyers and sellers of bills being equally shy, largely owing to bewilderment caused by the Government's policy with regard to its sales of Treasury bills. On Tuesday the tap was turned off, and the market rate weakened, only to be stiffened next day by the inability of borrowers to get clear of the Bank. Bewilderment was increased on Thursday by the revelation, from the Bank

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

INDIA RUBBER.—	
----------------	--

return, of the large amount of money that the Government was sitting on.

	Aug. 25, 1922.	Aug. 18, 1922.	Aug. 11, 1922.	Aug. 4, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	..

The Bank return showed an increase of £11,000 in the stock of gold, a decrease of £807,000 in the note circulation, and an increase of £818,000 in the Reserve. Repayments by the market reduced the Other securities by four millions, but Government securities rose by a million; Public deposits had expanded by 4½ millions, and Other were thus diminished by six millions. Currency notes outstanding were reduced in the week ended August 24, 1922, by £3,796,800 to £295,129,800, which includes £1,572,800 for notes called in, but not yet cancelled. The fiduciary issue is £245,406,000, or £64,581,500 below the maximum.

The monthly statement of average weekly balances of the London clearing banks is printed in detail on another page. The aggregate figures of the nine English banks for July are compared with those of previous months in the table below:—

	June, 1921.	Dec. 1921.	March, 1922.	May, 1922.	June, 1922.	July, 1922.
Capital and reserves	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	57.7	57.7	57.7	57.7	57.7	57.7
Deposits (incl. undiv. profits, &c.) ..	1,768.4	1,818.6	1,746.9	1,745.3	1,755.2	1,729.7
Total liabilities	1,942.0	1,990.8	1,919.9	1,918.2	1,926.3	1,898.7
Coin, notes, balance at bank, and cheques in course of collection ..	265.1	273.5	245.8	250.5	251.3	243.5
Money at call	98.0	105.7	102.5	109.0	113.0	116.1
Investments	335.9	343.3	327.7	315.7	312.0	312.2
Discounts	346.2	424.3	350.5	325.1	346.2	333.2
Loans and advances	815.4	762.3	746.2	735.7	723.3	721.2
Over for accept., premises, &c. ..	8.4	90.7	82.2	82.2	80.5	78.5
Total assets	1,942.0	1,999.8	1,919.9	1,918.2	1,926.3	1,898.7

The feature of the figures is a considerable drop during July in deposits. Loans and advances are again lower, but last month's decrease is trifling. Discounts, which rose substantially in June, dropped again. The banking figures in relation to the monetary position are discussed in a leading article in this issue.

THE STOCK MARKETS.

On the whole, the tone of the stock markets has been good, considering all the circumstances of the week, but gilt-edged stocks have naturally shown some slight signs of relapse in view of the exchange market demoralisation and the stringency in the money market. Foreign bonds have been under the spell of the exchange market. Home Railway ordinary stocks are dull, and prior-charge stocks have in many cases been marked down a point. Among oil shares, Anglo-Persian and Burmah Oil have spurred. Rubber shares, with the price of the raw material at or below 7d, remained stagnant, while tobacco shares, after early strength, eased off a little. The Kafir market was the most active spot in the markets until Thursday afternoon, when a relapse was caused by news from France.

COMMODITY MARKETS.

The flight from the mark and the general weakness of continental exchanges caused much uneasiness towards the end of the week in many markets, and dealings were inclined to be sporadic. Prices of raw cotton being marked up during the week perhaps helped to stimulate inquiries for yarn and cloth, but sellers were not able to transact much business at the higher values. Quotations for wool remain remarkably firm, and our correspondent reports that "there is a very general feeling throughout the industry that merino values will again advance." Nominal quotations are recorded for pig-iron on account of local holidays, and the same remarks apply to prices for manufactured iron and steel. There is no falling off from the new level of prices in the Cardiff coal market, probably because collieries are not inclined to add to their already heavy commitments. Wheat is lower on the

week, on account of the weakness in the foreign exchanges. Linseed is down from 20s to 25s per ton on the week; it is stated that there are large supplies on hand and good crop reports. Cattle hides have been, on the whole, firmer during the week, although prices for some descriptions are lower. In the shoe trade orders are scarce.

FOREIGN EXCHANGE.

Again the main feature of the week has been the demoralisation of the German mark. The seriousness of the situation, not only for Germany, but for Europe and ourselves, is at last being realised; but, so far, no constructive effort of any kind has been made to stop the débâcle, the visit of Sir John Bradbury and M. Mauclère to Berlin, on the search for productive guarantees, being from the first little more than a forlorn hope, in view of the reiteration with increased vehemence of his original attitude by M. Poincaré at Bar-le-Duc. On the 18th the mark ran away to about 5,500, and although Monday showed a temporary recovery to 4,920, by Tuesday evening, after M. Poincaré's speech, the rate had leapt up another thousand points, by Wednesday it had reached 6,540, and by Thursday, on gloomy reports as to the negotiations in Berlin, it reached 9,000, but closed finally at 8,000. On Friday it opened at 10,000 and rose rapidly to 11,000, but during the morning moved back again to 8,500. The complete breakdown of confidence is shown by the rates for forward marks, about 400 marks over spot for one month ahead, as compared with even 50 to 100 marks last week, and it should be added that even these rates are little more than nominal. In this breakdown the franc has also, of course, been included, the Paris rate rising from 56.27½ on the 18th to 58.60 yesterday, the Brussels rate from 59.20 to 61.80. Forward francs in Paris are 10 points over spot, in Brussels 2 points under. The lira also has not escaped, having risen on the week from 98.95 to 102.50. Warsaw has again shown its dependence on Berlin by a further fall from 33,000 to 40,000, while Vienna, after some slight recovery, has continued its inevitable depreciation from 345,000 to 390,000. In spite of this general confusion and of the rapidly-increasing lack of confidence in the European situation, sterling has again remained remarkably firm, having moved on the week only from 4.48 to 4.47½. The continually decreasing export surplus of the U.S.A., as shown by last month's trade returns, and the heavy coal exports from the U.K. to America may, in part, account for this position, but the breakdown on the Continent, and the rapid approach of the autumn season, might have been expected to have far more than counteracted these influences. Among the other exchanges Prague continues its surprising and, in view of the competition of its immediate neighbours, one would have thought extremely inconvenient appreciation, the rate having again fallen during the week from 158 to 126 kroner to the £. Bucharest, after a considerable improvement on the definite announcement of the consolidation of Roumania's external Treasury bill obligations, has fallen back again somewhat, so that at 575 the gain is only some 45 points. Belgrade, after going of the funds said to have been received out of the dollar loan. Among the neutrals, Amsterdam has moved sharply against us, from 11.49½ to 11.45, while Switzerland also is a little less in our favour. Of the Scandinavian countries, Stockholm and Copenhagen have appreciated slightly, but Christiania has again depreciated. The Helsingfors quotation, on the other hand, at 207½ is a little lower. In the East, the rupee at 1s 3½d is unchanged, while the yen is worth a little more at 2s 1 23-32d. The silver market has been irregular, within narrow limits, on speculative dealings from China. India has done little, met by Continental selling. The outlook is extremely uncertain; but higher prices are hardly possible. Hong Kong and Shanghai are slightly cheaper at 2s 6½d and 3s 5d respectively. Among the South American exchanges, Buenos Ayres and Montevideo are unchanged on the week, Rio slightly cheaper, while Valparaiso has dropped sharply from 32½d to 30.80d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 19, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	22,249	Supply Services	2,000
		Interest on Debt	2,100
		Sundries	1,238
		Added to Exchequer Balances ..	555
		Reduction of Debt	10,796
	22,249		22,249

The total revenue for the week ended August 19, 1922, amounted to £22,249,416, as compared with £24,473,400 in the corresponding week of the year 1921. The total expenditure during the same period was reduced from £17,625,197 to £11,398,105. This reduction in expenditure is primarily due to the payment of interest, &c., on War Debt amounting to £2,100,277, as against £8,540,464 in the corresponding week last year. The principal item of revenue was Excise, which amounted to £19,675,000, as compared with £12,280,000 a year ago. Receipts from Property and Income-tax amounted to £5,322,000, against £6,960,000 in the corresponding week last year. The yield from Estate duties during the week was £2,300,000, as against £815,000, which makes the amount received from this source to date £26,071,000, as compared with £17,414,000 for the corresponding period in 1921.

The week's operations reduced the National Debt by the sum of £10,795,817, and caused the following changes:—

	Min. £		Min. £
4½% Treasury Bonds	+ 2,504	Treasury Bills	— 5,074
National Savings Certificates ..	+ 400	Public Department Advances ..	— 12,850
Issues under Section 59 (4) ..	+ 6,562	War Loan Surrenders	— 1,338
Finance Act, 1920	+ 9,466	Unemployment Insurance	— 400
		Funding Loan, &c., Skg. Funds ..	— 550
			— 20,262

The floating debt was reduced by £17,915,000 to £874,745,500 during the week ended August 19, 1922.

FINANCIAL YEAR, 1922-23 (April 1 to August 19, 1922).

	£		£
Total spent	275,229,547	Raised by revenue ..	317,355,680

THE MONETARY PUZZLE.

At the moment the collapse of the mark and its economic effects, which are discussed on later pages by our Paris and Berlin correspondents, overshadow every other financial subject, but on the general position there is little at the moment to add to the views already expressed over and over again in the *Economist*. There are, however, other topics of more domestic interest which are exercising the minds of the money market. Since the gold standard has been abandoned—or, as perhaps we should say, suspended—in this country, *de facto* during the war and *de jure* by the prohibition of gold exports except under licence, our credit system was to a great extent based on the failure or success of the Government in making both ends meet out of revenue, or sales of capital assets or genuine borrowing of saved money from investors. When these expedients fail, and the Treasury has to raise the wind by Ways and Means advances from the Bank of England, this process supplies the banks of the country with an addition to their balances at the Bank of England, which they can use in this form as the basis of credit creation for their customers, or can, if they prefer to do so, turn into currency notes or Bank of England notes, to be used for the same purpose, or to meet increased demands for circulation. This new and temporary ordering of our monetary affairs has made their course more than ever difficult to trace, and their future more than ever obscure and elusive. Expectations of cheap and plentiful credit, owing to the needs of the Government to meet a large interest payment by flying kites in Threadneedle street, may be disappointed by some ingenious device on the part of the Treasury, which, as happened at the time of the War Loan interest payment last June, may succeed in raising most of the sum by sales of Treasury bills and Treasury bonds to outside buyers, and so induce dealers in credit to lend the money which they had hoped to see provided by the fountain head. If the lending is done in the form of Treasury bills, the process can be reversed as bills fall due, but as everyone knows, the tendency for the best part of a year has now been in favour of purchases of Treasury bonds, by the issue of which the Government has in twelve months reduced by £455 millions the volume of outstanding Treasury bills. This artificial state of things, by which the money market is dominated by the opulence or neediness of the Government, is common, of course, to all countries which have been obliged, or have thought themselves to be obliged, to put their currencies on to a paper basis. Abroad, the Government simply takes notes from the central bank against discounts of Treasury bills or whatever the form of borrowing may be. Our more elaborate and complicated system makes the process more difficult to trace, especially when it is veiled by official or semi-official machinations, which the market describes as the operations of the "hidden hand." For it has to be remembered that the present state of affairs presents difficulties not only to the dealers in credit, but also to the Treasury, which is apt, if it is too successful in placing Treasury bills and bonds and collecting revenue, to corner the market against itself by setting so much money into its own hands that the bill brokers, fearful of having to borrow from the Bank of England, put up the rates at which they make their weekly tenders for Treasury bills. On such occasion it sometimes happens that the market is relieved by purchases on a large scale of bills of short maturity, or by the discovery that there is a mysterious lender of large amounts of cash. And so complication is still further complicated by the Treasury, or the Bank of England, or some other institution on its behalf, lending with one hand so that it may borrow more cheaply with the other.

In recent weeks these "hidden hand" operations have not been evident, and there have been some violent jerks in the rates at which the weekly batch of Treasury bills has been sold. Last week, for instance, the average was £2 11s, against £2 2s in the previous week, plus a minute fraction of a penny in each case, the market having in the

meantime been obliged to borrow heavily from the Bank of England. It did not see why it should have to submit to this unprofitable inconvenience, and some of its members protested that the Government ought, in its own interests, to make money cheaper, and avoid the penalising of the taxpayer involved by the high price that it had to pay for discounting Treasury bills; just as in old days before the war they were wont to contend that money ought to be made cheap, so that the trade of the country should not be penalised; there always seems to be a reason why in the interests of somebody else money should be made cheap for bill brokers. At the same time, much ingenuity was devoted to the evolution of theories to account for the scarcity of short money that was afflicting the market. The daily papers have been explaining it by the decline in bank deposits caused by the payment of the second instalment of income-tax. The figures of the London clearing banks for July, however, show that during that month the decline in their deposits came to 25½ millions, while the Public Deposits in the Bank return, which stood at 16.3 millions on June 28th, had fallen to 15.3 millions on August 2nd, showing that the Government had paid out more than it had received during the period. Another explanation found the cause of stringency in the replacement of Treasury bills held by banks by Treasury bonds subscribed for by investors. This process would certainly tend to decrease the deposits of the banks, but hardly seems to tend to produce monetary stringency. The effect of it would be to cancel a deposit on the liabilities side and a discount or investment, in whichever category the cancelled Treasury bills stood, on the other, leaving the banks' cash holding unaltered and consequently giving them a higher proportion to liabilities, and so increasing the banks' lending power. But if we examine, in a table printed on another page, the movements in the aggregate items of the clearing banks' assets, we find that the chief declines are of 13 millions in the discounts, presumably representing matured Treasury bills, eight millions in the cash in hand, three millions in the "money at call," and two millions in the loans and advances. It is surely in the decreased holding of cash and money at call that the cause of stringency is to be found. Less "money at call" means less money placed in Lombard Street, and less cash in hand means less power to place money there, or with other users. Owing to the confusing obscurity of our banking figures, it is difficult to trace exactly the process by which the banks' cash has been reduced, but we know that in the last days of June 40 millions were borrowed by the Government from the Bank of England on Ways and Means advances, and that in the first two weeks of July the whole of this credit was cancelled. These movements were not fully shown in the Bank return, but on July 5th it gave Government securities at 68 millions, and Other deposits at 133 millions, while on July 19th these two items had shrunk to 47 millions and 104 millions. As soon as the Government was thus "clear of the Bank," with the consequent reduction of the bankers' balances, scarcity became evident in the market, and it was obliged to begin borrowing in Threadneedle Street—a process which was quickened later by the usual movement of cash into the country for holiday and harvest purposes.

Thus a closer examination of such figures as are to be had seems to confirm the view expressed in the money market paragraph of last week's *Economist*, that the recent stringency was merely an aggravation, owing to holiday demands for cash, of the penalty that now afflicts the market whenever the Bank of England is not lending either to it or the Government. Taxation was not the cause, for tax payments, as long as the Treasury is paying out as fast as it receives them, produce a merely temporary disturbance, and a decline in bank deposits does not necessarily mean a decline in the cash that the banks have to lend, but may more probably increase its amount. But the problem is not yet solved, for why should the market be pinched whenever it and the Treasury are both clear of the Bank of England? This used not to be so before the war, when the market normally had a considerable surplus which the Bank of England often had to borrow so as to get control. We have got back to the state of affairs described by Bagehot, who says that "at all ordinary times there is not money enough in Lombard Street to

discount all the bills in Lombard Street without taking some money from the Bank of England." Why is this so? As usual, lack of banking information makes it difficult to be sure about the answer. But we have groped towards one by taking the aggregate figures of the Big Five Banks (including at the earlier periods those of the banks that they have absorbed) at the end of 1913, 1918, and 1921, and finding the following results, in millions:—

	1913.	1918.	1921.
Deposits	660	1,328	1,644
Cash	192	396	351

The "cash" figure has to include money at call and short notice, because some of the returns did not separate these items, and the information given by the figures is to this extent blurred. For what it is worth, however, it shows that during the war period these banks doubled their deposits, and rather more than doubled their cash. In the after-war period, when chronic dependence on the Bank of England has appeared, or reappeared, there has been an increase of 316 millions in deposits and a decrease of 44 millions in cash. In other words, it appears that the great banks are working with a smaller proportion of cash, in hand, at call, or short notice, to the deposits that they have built upon its foundation, and so naturally are less able to meet the needs of Lombard Street.

THE DIRECTION OF OVERSEAS TRADE.

THE recently published Returns of the Board of Trade, showing for the first six months of the year the countries from which our imports come, and the destination of our exports, are still largely affected by the fall in prices. For the first half years of 1919 and 1920 the imports showed large excesses over the value of the exports, except in the case of Europe. But in the first half of 1921 excesses in the value of the imports were shown on a much smaller scale, and Europe was no longer an exception to the rule. In the present year Europe again shows an excess of exports, but the total excess of imports—which in 1919 was £326,700,000, in 1920 £260,000,000, and last year was £153,100,000—now amounts only to £79,600,000, and but slightly exceeds the excess of imports (£61,100,000) shown in 1914. The following table (in which the values of our trade with foreign countries are shown under the headings of the countries to which they belong) compares the balance of our trade with Europe, the United States, other Foreign Countries, and our Overseas Dominions for the first half of the years named. The re-exports are included in the values of the exports.

	JANUARY to JUNE.							
	1914.		1920.		1921.		1922.	
	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports
Europe	Min. £ 29.4	Min. £ 34.5	Min. £ 230.6	Min. £ 107.4	Min. £ 20.2	Min. £ 118.3	Min. £ 77.0	Min. £ 18.9
U.S.A.	..	..	..	..	..	..	..	..
Other Foreign Countries ..	..	..	..	..	..	..	..	..
British Dominions	..	..	..	..	..	..	..	..
	61.1	..	260.0	..	153.1	79.6	..	..

A striking feature of the table is that we continue to sell goods to the countries of Europe to a greater value than our purchases from them; the fact that the British Empire sells more to the United Kingdom than it buys from her should shake the confidence of those who continue to preach the doctrine that we must look to our Dominions to help us to recover our normal trade, rather than to waste time and money in trying to re-establish satisfactory trading arrangements with the countries of Europe.

The changes in the values of our imports from and of our exports to the principal countries of Europe are shown in the next table. The countries are placed in the order of the value of our imports from them this year.

	JANUARY to JUNE. (000's omitted.)							
	Imports from				Exports to			
	1914.	1920.	1921.	1922.	1914.	1920.	1921.	1922.

Greece	676	2,136	1,477	1,523	1,851	7,247	2,446	2,178
Russia	15,282	12,210	298	1,246	8,505	5,087	186	1,764
Latvia	..	..	..	1,077	..	..	285	491
Poland	..	..	799	985	..	..	1,675	910
Austria	3,803	1,561	230	745	2,168	1,509	1,104	685
Hungary	..	..	19	173	..	..	139	102
Roumania	1,770	138	1,840	662	1,573	2,491	3,394	1,034
Turkey in Europe	652	2,266	359	616	1,833	7,039	2,446	2,017
Estonia	..	..	282	531	..	..	3,615	640

France stands easily first in rank, followed by the Netherlands and Denmark. Spain, Germany, Switzerland, and Belgium come next, closely together. Sweden, Norway, and Italy are also close together; and Czecho-Slovakia (standing thirteenth in the list) comes close on the heels of Finland and Portugal. Russia—bereft of Finland, Latvia, Poland, Estonia, and Lithuania—is next to Greece, and Austria and Hungary together show a lesser value than that of the imports which we received from Poland.

Comparing the values of our exports of British produce and manufactures for the first six months of the year with the values of our imports from the countries of Europe, it will be seen that the value of our imports from ten of the 22 countries, viz., Switzerland, Spain, Austria, Hungary, Sweden, Denmark, Finland, Latvia, Poland, and Czecho-Slovakia—was higher than the value of our exports to them, but that from the remaining countries we received imports less in value than the exports we sent to them. For the first six months of the year our imports from and exports to nine countries, viz., Netherlands, Germany, Switzerland, Norway, Italy, Portugal, Finland, Russia, and Latvia, were both higher than for the first half of last year. From four countries, France, Denmark, Belgium, and Sweden, our imports were lower, but our exports higher than last year; from seven other countries, viz., Spain, Greece, Poland, Austria, Hungary, Turkey, and Estonia, our imports were higher but our exports lower than in 1921; and only in the case of Czecho-Slovakia and Roumania were both our imports and exports lower than they were a year ago. The principal increases in the values of our exports this year, compared with the values of last year, are in the case of the Netherlands, £9,602,000; France, £7,557,000; Germany, £7,273,000; Belgium, £3,384,000; Switzerland, £2,268,000; Portugal, £1,761,000; Russia, £1,578,000; Italy, £1,309,000; and Denmark, £1,295,000.

The next table shows the values of our imports from and exports to the foreign countries of the world other than European:—

	JANUARY to JUNE. (000's omitted.)							
	Imports from				Exports to			
	1914.	1920.	1921.	1922.	1914.	1920.	1921.	1922.
United States	70,447	311,332	152,295	112,451	17,769	42,282	23,184	25,120
Argentina	18,004	70,004	37,720	30,418	9,645	18,260	16,332	10,993
Cuba	2,724	21,637	3,218	7,159	890	2,557	1,461	626
Brazil	5,183	8,290	3,011	4,776	4,034	9,784	6,404	4,636
Mexico	985	6,401	5,782	4,524	389	1,567	2,496	955
Japan	2,047	12,853	4,968	4,149	5,146	14,454	9,610	13,745

Chile	2,996	7,263	3,345	2,399	2,569	3,390	3,574	2,217
Uruguay	1,564	3,411	4,705	2,296	1,127	2,543	1,881	1,353
Colombia	..	1,259	1,402	1,210	..	2,902	807	1,013
Turkey in Asia	..	3,984	138	149	..	9,332	75	104

Japan and China are the only two countries shown in the table above in which the values of our exports to them exceeded the values of the imports we obtained from them. Our exports to four countries, viz.: The United States, Japan, China, and Colombia, were higher in the first half of this year than they were last year, but our imports in each case were of a lower value. In the case of four

other countries, viz., Cuba, Brazil, Persia, and Peru, the value of our imports was higher than last year; but the value of our exports was lower. In four countries, viz., Argentina, Mexico, Chile, and Uruguay, both our imports and exports were smaller in value; and in the case of Asiatic Turkey only was there seen a trifling increase in the value of both the imports and the exports.

The principal changes shown this year in the value of our imports compared with last year consist of decreases of £39,844,000 in the value of our imports from the United States; of £7,302,000 in the case of Argentina; of £2,362,000 from China; and of £2,009,000 in our imports from Uruguay. On the other hand, our imports from Cuba are higher by £4,141,000, and from Brazil by £1,765,000. The chief losses shown by our exports are £5,339,000 in the case of Argentina; £1,941,000 in the case of Mexico; of £1,708,000 in the case of Brazil; and of £1,357,000 in the case of Peru.

The chief increases in the value of our exports are shown in the case of China, which took our goods to a value of £4,194,000 higher than last year; in the case of Japan, which shows increased purchases, to the amount of £4,135,000; and by the United States to the value of £1,936,000.

The changes in the direction of our trade with our Dominions is shown in the next table:—

	JANUARY to JUNE. (000's omitted.)							
	Imports from				Exports to			
	1914.	1920.	1921.	1922.	1914.	1920.	1921.	1922.
Australia	21,431	59,906	41,997	38,815	17,711	24,336	24,898	27,569
New Zealand	16,068	25,795	29,438	27,443	4,689	9,378	8,332	7,148
India & Ceylon	22,615	68,723	29,270	22,625	36,676	86,056	60,749	7,91
Canada	9,899	33,974	23,051	18,997	9,580	21,170	10,265	11,619
Egypt	11,858	51,170	12,153	15,872	4,936	20,389	8,466	7,706
Bh. Sth. Africa	7,179	13,658	9,302	10,068	10,830	16,306	12,664	5,799
Bh. West Africa	5,394	19,367	5,709	5,685	3,931	11,354	5,830	5,799
Straits Settlements	7,134	10,090	3,751	3,637	2,612	7,381	4,924	3,620
Bh. West Indies	1,373	8,831	3,707	3,007	1,233	2,222	2,078	2,486

Our imports from the Channel Islands were valued at £2,014,000, from Mauritius at £1,704,000, and from the Federated Malay States at £1,433,000; whilst our exports to Hong Kong were valued at £3,314,000; to Mesopotamia at £1,965,000; and to the Channel Islands at £1,361,000. In the case of four countries, viz., New Zealand, India and Ceylon, British West Africa, and the Straits Settlements, our imports and exports were both lower than in 1921. In Australia and Canada and the British West Indies our imports showed lower values this year, but our exports stood higher; and in the case of Egypt and British South Africa, our imports stood higher, but our exports were less in value.

In a final table we show the chief countries of the world to which we re-export foreign and colonial merchandise, arranged in the order of the value of our re-exports for the first six months of 1922:—

	JANUARY to JUNE.				
	1914.	1919.	1920.	1921.	1922.
United States	18,210,000	7,520,000	38,449,000	10,783,000	10,376,000
Germany	11,396,000	1,591,000	14,106,000	10,374,000	10,225,000
France	6,205,000	13,605,000	28,368,000	4,657,000	10,224,000
Belgium	4,140,000	5,424,000	12,095,000	3,815,000	5,973,000
Netherlands	2,615,000	11,159,000	6,925,000	3,885,000	3,512,000
Australia	..	..	2,666,000	1,281,000	2,695,000
Canada	..	..	3,628,000	890,000	1,529,000
Italy	507,000	2,275,000	3,392,000	695,000	863,000
Sweden	452,000	1,979,000	2,901,000	871,000	825,000
British South Africa	..	..	1,413,000	602,000	605,000
Denmark	261,000	3,645,000	2,348,000	649,000	556,000
Norway	..	883,000	970,000	334,000	377,000
Japan	108,000	637,000	1,289,000	427,000	189,000
Russia	4,556,000	1,411,000	2,956,000	98,000	186,000
China	..	..	190,000	103,000	100,000

Of the total value of our re-exports of foreign and colonial merchandise (£55,671,520), the table shows that the United States, Germany, and France took more than 30½ million pounds worth.

Adding the value of our re-exports to that of our exports for the first six months of the current year, we find that India and Ceylon took total exports to the value of £47,048,000, France took £38,630,000 worth, the United States £35,496,000 worth, and Australia £30,264,000 worth. Our next best customers were the Netherlands (£26,024,000), Germany (£24,457,000), Belgium (£19,003,000), China (£18,985,000), Japan (£13,934,000),

British South Africa (£13,269,000), Canada (£13,148,000), and Italy (£11,657,000). It must not be forgotten that the latest six months' figures compare with a period in 1921 when the great coal stoppage played havoc with our export trade. Nevertheless, the returns provide some evidence of real improvement within the bounds unfortunately imposed by the failure to approach any settlement of the grave outstanding problems of international finance.

AGRARIAN REFORM IN EASTERN EUROPE.—II.

(FROM A CORRESPONDENT.)

IN the new States of Eastern Europe, as we saw last week, three motives have inspired the agrarian reforms now in progress: the land hunger of the peasantry, the political danger created by the presence of a powerful class of actual or possible opponents of the new order, and the desire to shut out Bolshevism. In Latvia and Estonia all three motives have been visibly active; in Poland, the second, though perhaps felt, has not been seen; the first and second have been dominant in Czecho-Slovakia, and also in the territories acquired by Roumania from Austria and Hungary through the Treaties of Peace. But the third has probably been more or less operative in both; and a similar feeling has served to justify the reforms enacted in the old territory of Roumania during the war.

The Czecho-Slovakian Republic found itself burdened at its inception with a small class of large landowners, almost all Austro-German in sympathy and German in race and speech. Their ownership dated from the great confiscations after the victory of the White Mountain in 1547; they had formed an estate in the Bohemian Diet, and had not always sided with its anti-Czech fanatics; but during the war, with very few exceptions, they had been strongly pro-German. In Bohemia, Moravia, and Silesia 236 owners held more than 2,150,000 hectares, or about 28 per cent. of the whole territory; in Slovakia and Carpathian Ruthenia the proportion of large estates was even greater, but exact figures cannot be given. In the three first-named districts the holdings of less than 10 hectares numbered 1,349,780, and took up 23.30 per cent. of the area; those from 10 to 20 hectares 94,960, or 17.46 per cent.; those between 20 and 50 hectares 51,813, or 18.65 per cent. of the whole. From all five regions before the war there had been much emigration, chiefly to America. The reforms began* in 1918 and 1919 with what may be called *Suspensory Bills*; the first forbade the sale, mortgage, or sub-division of the large estates, the second the alienation of estates exceeding 150 acres of arable land, or 250 hectares of any sort, without leave from the Land Office, a Board controlled by the Ministry and elected by the Legislature. This body was authorised to supervise estate management, and to purchase land compulsorily, leaving, however, from 250 to 500 hectares to the owner. The compensation, fixed in 1920, is based on the average prices of land in 1913-15; the sums paid are registered, and the claims are transferable, so that it resembles inscribed stock; they carry 3 per cent. interest, and $\frac{1}{2}$ per cent. is paid to a sinking fund, but they may be paid off at a quarter's notice in securities and cash. Charges on the states are safeguarded, and there is an appeal from the Land Office to the Courts. The land purchased may be sold or leased in holdings of from 6 to 15 hectares (9 to 23 acres) on very easy terms; ex-soldiers, war widows or orphans, and the "legionaries" who fought for the Allies may be aided to become holders out of special funds, but only if they or their families can cultivate their holdings themselves. Or it may be leased or sold to actual cultivators, or in larger amounts to individuals, co-operative societies, and public bodies. But the actual distribution has not progressed very far as yet, and some of the land taken has been let provisionally, to new tenants or to former holders, during the period of transition.

In the Roumanian kingdom before its recent extensions agrarian reform had been undertaken in two stages, under laws passed respectively in 1907 and 1917-18. Before 1907 about 40 per cent. of the arable land was in holdings ranging from half a hectare to 7 hectares (about $1\frac{1}{2}$ to $10\frac{1}{2}$ acres), 13 per cent. in holdings between 7 and 100 hec-

tares, and the remaining 47 per cent. in large estates, some of them of 50,000 acres or more. Legal serfdom had been abolished in 1848 and 1864; economic serfdom remained. The peasants paid for their holdings (which they had often sub-divided) in produce and labour, and eked out their livelihood by working on the great estates under very onerous contracts, and by hiring additional land. Their condition was perhaps worst in Moldavia, where many large estates were let by their absentee owners to middlemen—individuals or syndicates, the latter often Galician Jews; one such syndicate alone held 259,400 hectares (640,718 acres) in 1907. These sub-let the lands to the peasants or hired them as labourers, in both cases on very harsh terms. Sanguinary risings in 1907 were ruthlessly suppressed, labour contracts were regulated, money payments substituted for produce and labour rents, common pastures were provided for the small holders, and a Land Bank was established, through which the peasants might purchase land by gradual payment. But the penalties for infringement of this law were no deterrent to the landlords, and its enforcement practically rested with them. Further efforts to promote land purchase were cut short by the war; but in 1917 the Roumanian Parliament, in its refuge at Jassy, decided that small holdings should be created as an inducement to the people to resist the invader. The law regulating their formation was passed late in 1918. This should extend the area held by the peasants to 75 per cent. of the total arable area of the old kingdom; but it was only after the peace that the process could begin. Lands owned by the Crown, corporations, foreigners, and absentees are taken first; the balance is obtained from estates containing more than 100 hectares of arable land, but the scale of expropriation is progressive, the smaller estates giving up least, and no owner can retain more than 250 hectares of arable land. Preference is given in the distribution to ex-soldiers and the dependents of those killed in the war. Cultivation by the holders is compulsory; but voluntary sale is allowed, on the ground that properties of medium size are economically desirable. The landlords receive compensation in 50-year bonds, carrying 5 per cent. interest, and representing 20 years' purchase of the rental value from 1917 to 1922. Of the capital value of these bonds, 35 per cent. is found by the State, which also, we believe, pays the interest; the peasants pay off the balance at their convenience, and we understand that many have already done so. A central office finances the transaction, and communal and district committees, representing the landlords, the peasants, and the Government, select the land to be taken. The holder may mortgage, but this is usually done through a land bank or a mutual credit society; in any case, the homestead and one hectare is exempt from foreclosure. It is stated that the supply of land for distribution has outrun the demand—which may be attributable to the rooted dislike of the Roumanian peasant to settling at a distance from the place of his birth.

In the new Roumanian territories small holdings are recognised as the basis of the agricultural economy, but this is more varied than that of the pre-war kingdom. In Bessarabia after the Russian revolution, as in Russia, the peasantry seized and divided the large estates; they accepted union with Roumania only on the condition that they should keep their new holdings, and the Roumanian Government, we believe, is to pay the former landlords some compensation. In Transylvania and the other regions acquired from Hungary by the Peace Treaty of 1920, there are peasant owners—the Szeklers—akin to the Magyars in race, and German-speaking Saxons, a thrifty and prosperous people, whose holdings are fairly large; but much of the land is owned in large estates, and often by Magyar landlords, and its actual tillers are mostly Roumanian in race, especially in the south. Since the cession, expropriation and peasant proprietorship have been enacted by various decrees and laws. The National Assembly of Transylvania at Gyulaféhervár (Karlsburg) demanded agrarian reform in 1918, and the final stage was embodied in an Act passed last year. It is described elaborately, in a learned historical treatise*, by a Magyar, and therefore a hostile critic. The unit of land is the yoke, roughly equivalent to about one and

* They are fully described by Mr Joseph Macek, in the first number of the *Slavonic Review*.

** Landownership Policy of New Roumania in Transylvania." By Dr Dennis Sebess. Budapest, 1921.

one-third acre. The total amount to be expropriated is 1,600,000 yokes, or about 2,133,000 acres. No estate exceeding 500 yokes (666 acres) is left intact, but the limit varies with the local need of land; estates of 200, or, in some cases, 100 yokes may be taken, or, where pasture land is needed for the joint use of small holders, even of 50 yokes. The peasant holdings range from 7 to 16 yokes (say, 9 to 21 acres), the larger amounts being allotted "where settlements are desirable." The holdings may be mortgaged, but only to institutions authorised by the Government; sub-division is forbidden, but sale is not, and the *exposé des motifs* recognises the need of farms of medium size, and as the recipients may include Roumanian ex-soldiers, or their widows, the distribution might act as an inducement to Roumanian immigrants, or a reward for their services in the war. Compensation is paid in 50-year 5 per cent. bonds, and based on a valuation of the land, of which an important element is the price of similar land in 1913; and it is calculated at the pre-war value of the krone. A Central Bank finances the transaction. Corporation and Church lands are included, but certain portions are exempted, and the distribution gives a preference to the former tenants and to those who have fought for Roumania in the war, disabled men coming first, while deserters, defaulters, betrayers of the Roumanian cause, and persons of bad character are shut out altogether. The land to be taken is selected by committees, which, according to Dr Sebess, burden Transylvania with a costly and occasionally corrupt alien bureaucracy. His chief aim is to show from history that the agrarian conditions in Transylvania are so far ahead of those in old Roumania that no reform was necessary, and that the measures now taken are economically unsound, and devised to get rid of the Hungarian population, especially the great landlord families, mainly of Magyar origin. But the example of the adjacent countries (except Hungary, where the movement has been checked) has made the change inevitable; some of the framers of the law, Roumanian in race, were also great landlords in Transylvania; and the great Magyar families, from whom have come some of the ablest of Hungarian statesmen, could hardly have been left with their economic power undiminished on the Roumanian side of the new Hungarian frontier.

Of course, such redistribution schemes, hurriedly passed by legislatures hostile to "landlordism" must entail much hardship and injustice, especially where landlords are regarded as an alien and dangerous class. But the outside world is more concerned with the effect on the export of agricultural produce. Some of the largest estates in all these countries appear to have been models of highly organised agriculture, with beet sugar factories (in Poland), distilleries, costly steam ploughs and tractors, and all the latest appliances of scientific tillage. Are these to be cut up? It appears, however, that in all these countries estates thus highly organised may be preserved intact, and either left to their owners (in Poland) or leased to co-operative societies or even to individuals. In Latvia and Estonia co-operative organisation in all its forms is greatly developed already; in Poland it is spreading through the example of the Catholic societies in the region formerly German. In Czecho-Slovakia, we believe, it is likely to be strong, and in Roumania it is developing; and in the form of purchasing societies and (e.g.) creameries it can do much for the small cultivator. Still, it does not seem that even "the magic of property" can enable a given number of peasant holders to produce as much grain by the labour of themselves and their cattle as might be produced on a similar area cultivated by modern methods. Supporters of the reform in Latvia, Estonia, and Poland maintain that the produce for export is increasing, but the comparison is not with the pre-war period; and a recent British official report on Roumania predicts that the peasant there will not plough deeply enough to grow wheat, but will substitute maize. But even if such fears are falsified, peasant proprietorship has other dangers. Subdivision may be remote, and in Roumania it is believed that the extension of land-holding will cause population to increase; but a thrifty and prosperous peasantry, it is argued, might limit its offspring. The French peasants do so, and the well-to-do

Saxons in Transylvania. Apart from the moral question, surplus populations will be needed for some considerable time to people the waste places of the world, and emigrants—notably from Italy and Poland—give financial strength to their country by the remittances they send or bring home. And many among mankind will not exert themselves to improve their condition unless they are spurred by the need of finding additional means of subsistence.

FRENCH REVENUE AND TAXATION.

(BY OUR PARIS CORRESPONDENT.)

IN view of the whole situation of the reparations and inter-Ally debt questions, and of the pending discussions at Brussels and elsewhere of these closely interconnected problems, it is important that exact information should be available as to the principal features of the French financial situation. To this end it may be interesting to set forth the following details of the actual receipts from taxation by the French Ministry of Finance, for the first seven months of the current year, as compared with the Budget estimates:—

	Budget Estimates for the Seven Months. Francs.	Actually Collected. Francs.
Registration duties	1,833,467,500 ..	1,778,628,000
Stamp duties	315,744,500 ..	360,457,000
Tax on Bourse operations	21,268,500 ..	11,180,000
Income-tax on shares and bonds	529,456,500 ..	704,632,000
Luxury tax	7,584,500 ..	12,337,000
Tax on business turnover	1,775,250,000 ..	1,275,088,000
Customs (exclusive of sugar and salt)	1,528,534,000 ..	868,213,000
Indirect taxation (exclusive of sugar and salt), alcoholic beverages, mineral waters, railway tickets, theatres, bicycles, motor cars, playing cards, &c.	1,397,910,000 ..	1,474,412,000
Colonial foodstuffs	93,605,000 ..	102,911,000
Salt (customs and indirect)	20,118,000 ..	18,672,000
Sugar and saccharine	369,744,000 ..	357,658,000
Motor spirit and petroleum	56,468,000 ..	125,596,000
Benzol	3,810,000 ..	6,636,000
State monopolies (matches, tobacco, gunpowder, posts, telegraphs, telephones)	1,642,819,293 ..	1,637,972,000
Exceptional receipts (war stock), &c.	230,170,650 ..	689,597,400
Produce and revenue from public domains	59,014,350 ..	51,365,400
Total	9,826,944,443 ..	9,433,989,400

The most striking increases or decreases, as compared with Budget estimates, were as follows:—Increases above estimate: Stamp duties, 44,712,500; income-tax on shares and bonds, 157,062,000; luxury tax, 4,753,000; surtax on alcoholised wines, 25,875,000; railway tickets, 22,528,000; motor car tax, 31,159,000, over an estimated revenue of 55,691,000; customs duty on mineral oils, 67,491,000; telegraphs, 5,935,000; telephones, 36,029,931. Decreases below Budget estimates: Registration duties, 54,839,000; tax on stock exchange operations, 10,282,000; turnover tax, 501,162,000 short of estimate of 1,776,250,000; Customs, 660,321,000; 25 per cent. tax on spirits and 15 per cent. tax on fine wines, 20,730,000; posts, 45,678,000. The tax on turnover, it is seen, still remains the weak spot in the French taxation plans.

There remain two other important sources of revenue—that from the income-tax and from the tax on war profits—which have yielded large sums during the first seven months of the current year, but which cannot practicably be expressed in the same tabular form. The total revenue received by the French Government from taxation of all kinds during the first seven months of 1922 is shown by adding the amount received from income-tax and the tax on war profits to the amount actually collected during the same period from the sources included in the above table, namely:—

	Francs.
Income-tax actually recovered	1,119,046,800
Tax on war profits paid January-July, 1922 ..	1,190,301,400
Other taxation recovered as per above table ..	9,433,989,400
Total revenue for the 7 months	11,743,337,600

In forming any opinion, from the figures available, as to the extent to which the French income-tax payer is fulfilling his duty, it is necessary to remember that the financial year, although nominally beginning with January 1st really depends to some extent on the date on which the Budget is passed into law, which is only rarely on or before December 30th. Further, income-tax payers are allowed until March 31st to send in their declarations in respect of their income during the previous year, so that as during the current year, the assessment lists are not

completed until, say, the end of July, after which the demand notes have to be sent out. It is obvious, therefore, that in considering the relations between the amount recovered from income-tax during the first seven months of the year and the Budget estimates, only a very approximate result can be arrived at. Allowance must also be made for the fact that income-taxes have only very recently become part of the French fiscal system, and that, in view of the rooted objection of the French to direct taxation, this form of impost has only just—even if yet—passed out of the experimental stage. The success that has attended the new taxation may be judged from the facts that whereas the Finance Minister included in his estimates for 1921 the sum of 1,893,000,000 of income-tax (with the sequel that demand notes were issued later in that year for a total of 2,127,957,400), M. de Lasteyrie, in his Budget estimates for 1922, raised the amount he expects to recover from this tax to 2,389,800,000. Any opinion arrived at as to the relation between the 1,119,046,800 paid by the French income-tax payer during the first seven months of 1922 and the Budget estimates must necessarily be affected by the fact that during 1921, in addition to calling for the payment of 2,127,957,400 for income-tax in respect of that particular year, the French Treasury authorities also served demand notes for 664,291,300 in respect of assessments made in regard to previous years. The lists of assessments for 1922 are not yet completed. (It should be noted that these figures in regard to income-tax refer to France proper, and do not include Alsace-Lorraine.)

The special tax on war profits, it should be recalled, is now approaching vanishing point. Its yield in France may be gathered from the following figures:—

	France.
Budget estimates of total yield (1917-1922) ..	12,730,000,000
Total assessments levied for.....	13,826,316,500
Instalments due to date.....	11,905,466,000
Total amount actually recovered to date	8,768,684,900

The amount levied since the beginning of the present financial year has been 1,606,299,600. The Budget estimate of the yield from this tax for 1921 was 4,000,000,000; the amount actually recovered during 1921 was 3,313,000,000. This tax is payable by quarterly instalments, with the proviso that the third instalment could not be demanded before September 26, 1920, or the fourth before March 26, 1921.

THE KAFFIR MARKET.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THERE is some pause to the buoyancy in the Kaffir market, a buoyancy which has been brought about mainly by purchases emanating from Johannesburg and the Cape. Supplementing these Cape purchases, a good deal of money has been given for the call of Kaffirs in the Stock Exchange. This caused purchases of the shares on the part of people who took the money for the call of the shares, and who, in accordance with sound Stock Exchange tradition, bought half of the stock in respect of which they took the call money. The gold returns for the March quarter of the Transvaal mines were very poor; those of the June quarter showed a recovery, which has been substantially improved upon by the returns for the past couple of months. That this should be the case was only natural, in view of the more settled conditions that have prevailed as a consequence of the Transvaal strike-fever's abatement. Three months ago the Cape was far too interested in politics for it to pay any particular attention to shares in South African mining companies; but politics having lost their savour, speculation has stepped into the breach, and the Johannesburg share market took on a new phase of activity. The animation found quick reflection in London, where prices of the principal shares had fallen to levels that offered a good deal of temptation to people who had bought shares higher up. These people were waiting an opportunity for making purchases to average, when the tide of the mining industry indicated the possibility of taking a turn for the better. So the strength of the Cape has attracted, and continues to attract, a fair measure of buying on this

side, although, curiously enough, the greater part of the support of the genuine kind comes from the provinces.

In London, the activity is largely due to the speculation that has arisen in connection with options. This speculation, as already observed, led to purchases of shares wherewith to protect the takers of the option-money, who, of course, conduct their operations on lines quite different from those of the bucket-shops which run the shares against their clients, and are willing to plead the Gaming Act if the client happens to come out on top. This week's carry-over in the Kaffir Circus showed that there is a moderate increase in the bull account, as compared with the position of a fortnight ago; but of any real demand on the part of the ordinary speculative public no great evidence can be found. From the physical point of view, in the market itself, the strength of various shares comes spasmodically, so that there will be violent scenes of excitement, followed by such placid dealing as would lead the observer to suppose that there is really nothing much going on. In other words, the activity in Kaffirs hinges upon the Cape, and it is the Cape favouritism which have been especially conspicuous in the latest revival. It is too early to attempt forecasts of dividends in respect of the current six months, and the Kaffir market can, therefore, claim all the attraction which comes from uncertainty as to the dividend outlook. Nevertheless, the gold-mining industry is in a better position now than it has been for some time past, and, what is more, the unhealthy, artificial strength produced by the effect of what is called the gold premium is almost a thing of the past, thanks to the greater regularity of the New York exchange. What the Cape may continue to do in connection with the Kaffir market, it is no use attempting to forecast, but those who regard the Kaffir Circus as offering a reasonable field for speculative investment need scarcely be reminded that the best-class issues are likely to prove the cheapest in the long run. From these—and the shares in the Modderfontein group can be used to illustrate the point—good dividends are obtainable, and with the greater favour into which the industry has been thrown owing to reduction in working costs, the incidence of further support during the autumn may perhaps flatter the hopes of those who concentrate their attention upon the good shares. Discrimination is the more necessary just now, because most of the shares in the Kaffir list stand at materially higher prices than those which prevailed last month, when the *Economist* published from the pen of its mining correspondent a tabulated list of striking examples to illustrate the manner in which working costs per ton have fallen during the present year.

LATIN-AMERICAN NOTES.

(BY OUR OWN CORRESPONDENT.)

CUBA.—Recent reports from Cuba tend to show that the adverse financial and economic conditions which have prevailed during the past 18 months are gradually clearing. The serious falling-off in the Republic's foreign trade between 1920 and 1921 is shown by official figures. While, during this period, exports fell from \$794,008,788 to \$278,130,740, imports declined from \$557,016,692 to \$356,435,099. The strict supervision maintained by the United States Presidential representative (General Crowder) accounts, in no small measure, for the improved condition of the island Republic's economic conditions; and although strained relations appear to exist between President Alfred Zayas and his newly-appointed Cabinet, it is believed that the intervention of the American agent will serve to prevent an open rupture. The Executive is meeting with deliberate obstruction in his expressed determination to reduce public expenditure, and to bring this within the budget limits, which have been set at \$55,000,000. The most favourable factor in the position is the gradual (and now almost completed) marketing of last year's surplus sugar crop, while prospects for the current year are considered exceptionally good. The yield is expected to amount to 3,500,000 tons, or, perhaps, even more. Whatever the crop may amount to, little difficulty is anticipated in marketing it—a favourable contrast with last year's conditions, when complete demoralisation set in.

the price of sugar declining, within a brief period, from 23 cents to 2 cents per lb. Another advantage is the lowering of agricultural labourers' wages. Two years ago these amounted, per man, to \$6 per day, whereas at present the rate averages \$1.50, the earnings of other manual workers having fallen proportionately. The long-sustained period of gambling and reckless speculation, which brought more than one flourishing financial institution to grief, has apparently completely disappeared, giving place to normal economic conditions.

PERU.—The negotiations entered into by the Peruvian Government for a further loan appear to have been successful, and once again resort has been made to New York financiers for assistance. The need for a loan became urgent owing to the Government being unable to meet some of its most pressing obligations. The funds now received, which include the proceeds of a loan of \$2,500,000 (£570,000), raised through the Trust Company of New York, and secured by the petroleum revenues, also comprises profit on exchange derived from the transfer of reserve funds in New York to London; the profits of the debased currency bill, and purchase of silver transactions connected with that operation; the payment of \$1,000,000 (£200,000) by the London and Pacific Petroleum Company, in consideration of an adjustment of the export tax on petroleum, together with a small advance on petroleum export taxes made several months back. In a new effort to control foreign exchange, the Peruvian Government has published a decree requiring a State licence for exports, which will be granted only on delivery to Customs authorities of drafts for 70 per cent. of the value of goods to be exported. The new Reserve Bank appears to be functioning satisfactorily. A clearing-house system among the local banks participating as shareholders in this institution has been inaugurated. Hitherto, at the close of daily banking operations, cheques were interchanged between the various banks by means of messengers, and the respective balance cleared by the same method. Under the new system, however, all cheques cashed through the respective banks are forwarded to the offices of the Reserve Bank, and are duly credited or debited to their several accounts. The establishment of the new institution has inspired renewed confidence, and had a stabilising effect which has afforded a fillip to banking transactions and local investments, while a stronger movement in sugar and other native products is reported.

HAITI.—Anxiety is being experienced by coffee planters in Haiti regarding the prospects of the coming crop. As in other Latin-American countries, the economic prosperity of the people depends largely upon the supply and price of the berry. Although the season is yet insufficiently advanced to allow of any accurate forecast, it is believed that the current year's crop will fall about one-fourth short of that of last year, while the price f.o.b., Cape Haitien, was quoted round about 16½ cents per lb. It is not expected that this price will be maintained when the new crop comes to hand. In the meantime the financial condition of the country remains very unsatisfactory, notwithstanding the strict supervision of American officials. The Administration is endeavouring to raise a further loan of \$15,000,000 (£3,000,000), part of which would be allocated to the redemption of the outstanding French indebtedness. Owing to the advantage of present exchange discounts the present time is considered particularly favourable for such a transaction, which would not only relieve the Government from many of its present necessities, but would serve to circulate in business circles new money which would become available for the increase of stocks, which have fallen very low and need replenishment.

COLOMBIA.—British oil interests in Colombia have met with considerable competition upon the part of the Royal Dutch Shell Company, especially in connection with the Diégo Martínez concession, in the Sinu, but it is now learned that this competition will come to an end with the withdrawal of Dutch interests from the neighbourhood. The option over the properties granted to British interests still remains in force. In connection with this an initial payment of \$40,000 has already been made, while the balance of \$60,000 still outstanding is expected to be paid forthwith. While considerable energy and enterprise have been displayed by the British syndicate, which

is said to be using rotary drills and employing American drillers on its properties located near Puerto Colombia, so far no confirmatory report has been received of the success of the operations, which have been in progress for some months. On the other hand, considerable prosperity seems to have attended the operations of the Tropical Oil Company, the products of whose refinery at Barranca Bermeja are on sale at several Colombian towns at prices considerably cheaper than those hitherto quoted in that country. As an example may be cited the price of kerosene, which has hitherto sold in Cartagena at \$6.30 the case of 10 gallons, but which is now being offered by the Tropical Oil Company at \$2.95. In the case of gazolene, hitherto selling at \$6.60 the case, the price quoted is \$4.35. If these prices can be profitably maintained, it is understood that the large number of Magdalena River steamboats, most of which are run by a British transport company, will adopt fuel oil in place of wood, which has hitherto proved a very expensive item, and thus effect very substantial economies in the company's working expenses.

Notes of the Week.

Ireland's Tragedies.—A malign fate still pursues Ireland. Every hope, every new opportunity is followed by a series of tragic events calculated to thwart achievement. Of these the assassination of Michael Collins is the latest and most grievous. The fervent hopes aroused by the signature of the Treaty last December were tempered by the realisation that to bring the Irish Free State into being and Ireland into calm waters would tax to the utmost the strength, courage, and resourcefulness of the two chief Irish signatories, Mr Arthur Griffiths and Mr Michael Collins. After months of bitter struggle it recently began to appear that at last rebellion was waning and the goal of peace in sight. At such a moment natural death removes Mr Griffiths, and after a few days Mr Collins, now bearing more than a double load of responsibility, falls to the bullet of a rebel. Thus once again Ireland faces an hour of acute trial. We are by no means without hope that the people of Southern Ireland will produce the men and the spirit necessary to meet it. The great majority of the people of the nascent Free State have, by their suffrages, shown that they were ranged behind Mr Griffiths and Mr Collins in their support of the Treaty and in their work of pacification. The latest tragedy will serve to strengthen their support and fire their determination that Ireland's new hope shall not be blighted by the work of rebels and gunmen. The misguided fanatics who slew Sir Henry Wilson did Ireland the most signal disservice by embittering the age-long feud between North and South. Those who killed Michael Collins have for the moment dealt a very grievous blow at the Irish Free State; but from their act may arise a resentment among the law-abiding majority that will gather in force till it sweeps away the obstacles that hold the Free State back from peace and prosperity, and so complete the tremendous task towards the accomplishment of which Mr Griffiths and Mr Collins have given their most valiant efforts and finally their lives. Such is our hope, but for the moment the position is pregnant with anxiety.

The Porte and its Creditors.—To the report of the Ottoman Debt Council for 1920-21 Sir Adam Black contributes an introduction dated April, 1922, showing the injury inflicted by the prolonged state of war in Asia Minor on the revenues and credit of the Porte. Nearly all that region is controlled by the Angora Government, which has "borrowed" the revenues assigned to the Debt service, to the amount last spring of about £T16,000,000, apart from those which have fallen to it through the retirement of the French from Cilicia. Thereby it has seriously weakened Turkish credit by taking a course never adopted at Constantinople even under the stress of the world war. It acknowledges its liability, but it has hardly enough for its own needs, and the country will not recover for years. Of the revenues now available for the Debt service, however, the gross and net totals

for 1920-21 show a slight increase over those for 1919-20. It comes mainly from tobacco and Customs, and is offset by the fall in exchange. Of the revenues directly administered by the Council (from salt, stamps, spirits, fisheries, and silk), only that from fisheries shows a real increase; this is due to higher prices and a larger supply. Yet in August, 1921, the price of salt was tripled, and the penalties for evasion are to be heavier. Foreign intervention has delayed the projected modification of the stamp duties and hampered the collection of the duty on imported alcohol. The silk tithe had increased largely from 1915 to 1920, but only through a rise in price; the actual production has declined heavily through the lack of hands and devastation of the silk-producing districts, and cannot revive for years. The Custom House staff of the Council cannot prevent the frauds which certainly take place. The exchange in March, 1920, was 405 piastres to the £ sterling; in April, 1922, it was 700; now it is 725. The control over Government expenditure exercised by the Provisional Financial Commission (consisting of the British, French, and Italian members of the Debt Council) seems to be purely advisory, and the Government shows no disposition to retrench. Its one financial merit is that it has not met its difficulties by issuing notes. The deficit last year was £T9,720,000, and the officials received only seven months' pay; the cost of living is tenfold more than before the war. But the Council has been able to increase the 1s 3d paid last year on each of the 11 coupons (nominally of 8s each) of the Unified Debt from 1915 to 1920 to 2s; and 6s is to be paid on the coupons of 1920-21 and 1921-22. These payments are independent of any sum that may fall to the bondholders out of the deposits placed during the war in German and Austrian banks, when it is decided what rate of exchange is to be adopted in their repayment. The net receipts for 1921-22 show an estimated decrease as compared with 1920-21 of £T455,290, but after deducting the fixed sum for the service of the Unified Debt and the Lottery Bonds, there will be a balance of about £T15,574,700 for the Special Reserve Fund covering the loss on exchange, which will then exceed £T17,580,000. The bondholders are at least faring better than the Turks.

Employment and Wages in July.—July saw a continuance of the slight decline in unemployment which had been in progress during May and June. The *Ministry of Labour Gazette* records that the percentage unemployed among members of the trade unions from which returns are received fell from 15.7 at the end of June to 14.6 at the end of July. How this percentage has moved recently and how it stood before the war is shown in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.											
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1913.	1917.	1918.	1919.

October	2.0	1.1	0.5	2.9	3.7	15.9	..	..	2.6	1.4	1.2
November ..	2.6	1.4	1.2	3.2	6.0	16.5	..	..	* Excluding coal miners.		

The improvement previously recorded in the textile, tin plate, and steel sheet trades was maintained, and there was also some improvement in the coal mining industry and in the engineering and shipbuilding trades. The percentage unemployed among workers coming under the Unemployment Insurance Act was 12.3 at July 24th, as compared with 12.7 per cent. at June 26th. In the industries and services for which statistics are compiled by the Labour Ministry the changes in rates of wages reported as having taken effect in July resulted in a total reduction of nearly £490,000 in the weekly full-time wages of over 2,360,000 workpeople, and in an increase of nearly £13,000 in the weekly wages of nearly 330,000 workpeople. The principal reductions affected coal miners in Yorkshire and the East Midland area, workers employed in the engineering industry generally, and railway ser-

vants. In the case of coal miners in the above area there was a decrease of over 6 per cent. on current rates; engineers had their wages reduced by 5s 6d per week; and the wages of railway servants in most grades, except engine drivers and firemen, were reduced by amounts varying from 2s to 4s per week. Since the beginning of 1922 the changes in rates of wages reported to the Department have resulted in a net reduction of nearly £3,200,000 in the wages of 7,350,000 workpeople, and a net increase of nearly £3,500 in the wages of 18,000 workpeople.

Cost of Living.—The *Ministry of Labour Gazette* records a fall of 3 points in its cost of living index figure during July, which leaves it 81 per cent. above the pre-war level. The following table traces recent movements in this figure:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914. (Food, Rent, Clothing, Fuel, and Light, &c.)					
	1918.	1919.	1920.	1921.	1922.
January 1st	85.90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90.95	110	132	133	82
May "	95.100	105	141	128	81
June "	100	105	150	119	80
July "	100.105	105.110	152	119	84
August "	110	115	155	122	81
September "	110	115	161	120	..
October "	115.120	120	164	110	..
November "	120.125	125	176	103	..
December "	120	125	169	99	..

The figure for food alone, which had advanced from 70 per cent. at June 1st to 80 per cent. at July 1st fell back to 75 per cent. at August 1st, the decline being due to a large fall in the price of potatoes. Small average decreases in the prices of meat, fish, flour and bread were rather more than counterbalanced by increases in milk, eggs and sugar. Our contemporary hazards an estimate that clothing now costs 140 per cent. more than before the war.

Australian Public Finance.—Our Melbourne correspondent writes:—The preliminary statement of Commonwealth revenue and expenditure presented to Parliament by the Treasurer, Mr Bruce, on July 5th, shows gross totals (inclusive of transactions on both sides with the States) comparing with the previous year as follows:—

	1920-21.	1921-22.
Revenue	£ 65,517,608	£ 64,913,085
Expenditure*	64,624,087	65,118,265
Surplus	893,521	..
Deficit	..	205,180

* Exclusive of loan expenditure.

The revenue for 1921-22 has been credited with £835,000, payment received on account of the army of occupation (this item not being set against war loans), and but for this the deficit for 1921-22 would be £1,040,180. The decline in revenue is mainly the result of reduced Customs receipts, which had been swollen in 1920-21 by excessive importations, together with lessened receipts from the War Time Profits Tax. The Customs revenue, however, has been maintained at a higher level than was anticipated, as large Australian borrowings in London have helped to facilitate import trade. The increase in expenditure has led to much adverse criticism, as although less was spent upon repatriation and other war services, there has been an increase under almost every head of ordinary expenditure, in addition to the increase in interest on public debt. The hope of relief in taxation has thus practically disappeared, apart from readjustments probably in detail. The Commonwealth revenue for 1921-22 includes taxation £49,677,980. Allowing for direct taxation by the six States, the total Australian taxation for 1921-22 is between 68 and 69 millions, or approximately £12 10s per head of population. In 1920-21 the total taxation was £70,318,921, against £55,328,307 for 1919-20, and £44,305,501 for 1918-19. The foregoing figures do not include New Zealand, where taxation receipts rose from £16,458,329 in 1919-20, to £22,453,077 in 1920-21.

id then fell to £16,639,641 in 1921-22 (the financial year ending March 31st), the latter figure being equivalent to about £13 6s 8d per head. The total New Zealand revenue for 1921-22 was £28,127,007, against £34,260,962 in 1920-21, and the expenditure £28,966,837, against £28,568,729, inclusive of £500,000 in each year transferred to public works account.

The Outlook in New Zealand.—Our Auckland correspondent, writing on July 10th, reports steady improvement in the financial outlook. The labour world is quiet: in spite of recent wages reductions there have been no strikes. The banking returns for the June quarter show an excess of £4,767,048 of advances over deposits—£1,363,878 less than in the previous quarter, owing to an increase in deposits and reduction in advances; not much more than half the excess of advances for the June quarter last year (£8,874,390). As regards public finance, it is hoped that, within a measurable distance of time, the Budget may balance. Public expenditure is still increasing, but Mr Massey, the Premier, has shown that he intends to meet these expenses by a policy of retrenchment rather than through new loans, which only give temporary and illusory relief. A second reduction in the wages of all public employees (some 50,000) is now announced, while retrenchment is also being followed on other lines. A report from the Secretary of the Treasury shows that the expenditure for the financial year 1921-22 increased over that of 1913-1914 by £16,341,000— an increase mostly due to the war. Nearly £5,000,000 of this is interest and sinking fund on war loans. A proposal to suspend the sinking fund was rejected by Mr Massey, as implying a breach of faith. Although there has been some improvement during the last few months, it is not yet shown in the latest Treasury returns. As a large proportion of the revenue, especially the land and income-taxes, did not come in till towards the end of the financial year, special arrangements had to be made to meet current requirements. During the year Treasury bills amounting to £1,155,453 were issued in anticipation of loan moneys and revenues, upon the receipt of which they were redeemed. No Treasury bills were outstanding on March 31st, nor have any been issued since. In spite of the heavy taxation on companies, business on the Stock Exchange shows a continued firmness, quotations showing, on the whole, an upward tendency. Heavy taxation has not resulted in any serious reduction in dividends. It is true, in some cases, the usual rate of interest has only been maintained by trespassing on the reserve fund, but this is exceptional; in most cases the increased charges have been passed on to the public. Another reason for the firmness of Stock Exchange quotations is that many investors have been driven to seek these securities in preference to house property (formerly a favourite mode of investment), owing to the rent restriction legislation of the last three years. This anti-landlord legislation has had the very opposite effect of what was intended, by discouraging house-building, and has already been modified. Doubtless it will soon be totally repealed, as has already been done in Australia. Owing to the onerous restrictions on company profits already referred to, high rates of wages, general depression and want of capital, very few new industries have been started lately in New Zealand. On this account, old-established industries already in possession of the field have enjoyed a virtual monopoly; this is another cause which has tended to counteract the excessive financial burdens of taxation of profits. It is the general belief that these burdens will soon be lightened, when a further improvement in Stock Exchange quotations may be expected.

American Cotton Season, 1921-22.—Our Manchester correspondent writes:—The mail to hand this week from the United States has brought fuller details of the annual report on the American cotton season 1921-22, published by Mr H. G. Hester, the secretary of the New Orleans Cotton Exchange. The actual growth for the season is given as 8,442,000 bales, and the commercial crop as 11,653,000 bales. The carry over on July 31st was 4,904,000 bales, against 9,363,000 bales twelve months previously. The grade of the crop was middling. A feature of the year's production was that it was one of the

most even running growths on record. There was very little low grade cotton, and the same may be said to a great extent of the previous year. The superabundance of low and undesirable descriptions in the 1921 carry over was, therefore, mostly accumulations from prior seasons' growths. The way in which these low grades have been absorbed, says Mr Hester, is one of the most interesting features of the year. Many of the mills, especially in the Southern States, awoke to the real value of the so-called unspinnable cottons at the discounts at which they were being sold, and quite a number of them used those descriptions for the first time during the past year. The value of the commercial crop was 1,173,833,582 dollars, as compared with 1,076,380,710 dollars in 1920-21, and 2,516,544,520 dollars in 1919-20. Mr Hester closes his report with the following significant comment: "Notwithstanding the rise in value of raw cotton there is a hopeful feeling and a disposition to discount an expectation of increasing scarcity of raw material, and the probable straightening out of the European crisis leading to an increased demand from foreign quarters." For a long number of years manufacturers of cotton goods in the United States have made great efforts to increase their foreign trade, but it is doubtful whether any real progress is being made, and the shipments from year to year vary considerably. It is now stated that the exports of cotton piece goods from America during the twelve months ended June 30th last were 603,786,485 yards, against 543,026,622 yards in the previous year, and 444,729,241 yards in the year ended June 30, 1913. Business with foreign outlets is chiefly in unbleached cloths, and last year the shipments in grey goods were about 35 per cent. of the total.

Wool Stocks and Disposals.—From statistics issued by the secretary of the British Australian Wool Realisation Association, Limited, we have compiled the following summary of wool stocks and disposals at December 31, 1921, and July 31, 1922:—

Description.	Stock and Afloat, Dec. 31, 1921.	Disposals, July 31, 1922.	Stock and Afloat, July 31, 1922.
Australian—	Bales.	Bales.	Bales.
Merinos	419,673	257,405	162,268
Crossbreds	755,860	133,074	622,786
Total Australian	1,175,533	390,479	785,054
New Zealand—	2,738	224	2,514
Merino	377,486	126,581	250,905
Crossbreds (bulk combing) ..	126,061	40,154	85,907
Slipes	127,768	48,099	79,669
Scoured	..	..	..
Total New Zealand	634,053	215,058	418,995
South African—	80,647	65,819	14,828
Crossbred, medium	..	..	..
Grand total	1,890,233	671,356	1,218,877

The grand total of 1,218,877 does not include 16 bales of reconditioned wool. Of the stocks of wool shown above, one-half of the Australian wool and the whole of the New Zealand and South African wool belongs to the British Government. The other half of the Australian wool belongs to the British Australian Wool Realisation Association, Limited.

African and Eastern Trade Corporation.—For 1920 profits of the African and Eastern Trade Corporation, Limited, amounted to £854,499. Of this sum £300,000 was allocated to investment depreciation account, and the investments of the company, mostly in allied and subsidiary undertakings, were recorded in the balance-sheet as £8,293,215. Reserves, however, fortunately had been accumulated to an extent of £6,914,358. This report and accounts of the previous year—1920—was issued in July, 1921, and records the intention of the directors to make a final payment of 5 per cent. on the ordinary shares, which would absorb £124,219. In the report and accounts just published for 1921, the attention of shareholders is called "to the unprecedented world-wide depression in trade during the year under review," the consequences of which are that results for the year show a heavy "loss in trade and a depreciation in values of stocks and of forward commitments." The directors, after payment of the final

ordinary dividend in 1920, found themselves in 1921 with a balance of £207,597 in hand. But to make provision for trading losses and depreciation of stocks, it was decided to take £1,750,000 from reserves. A further sum of £1,500,000 was also taken from reserves to write down investments in allied and subsidiary companies. The balance-sheets record that reserves have been reduced in one year from £6,914,358 to £3,729,509, while investments in allied companies are now £6,849,459, as against £8,232,942 a year ago. It would perhaps have been clearer to shareholders if the depreciation of security holdings in allied undertakings had been more fully explained in the report. If these "investments" have been written down by £1,500,000 on account of asset depreciation, then a loss to this extent might have been shown in profit and loss account. If, on the other hand, the depreciation is for securities which are merely depressed in sympathy with prevailing conditions, then perhaps the directors could see their way clear to explain what hope there may be of an improvement in values. It is a matter for comment that the auditors' report is made "subject to the value of the shares in subsidiary and allied companies." Properties are taken at cost—two items of £972,849 and £387,398 respectively. Various creditors total £3,364,602, including an advance by bankers of £490,275, as against comparative liabilities of £1,619,836 in previous accounts, while debtors have increased from £2,796,900 to £2,891,309. Total assets are down from £15,621,680 to £13,595,415. The directors have a stiff task before them to bring this once profitable undertaking once again into the dividend-paying lists. It is to be hoped that the chairman at the annual meeting next week will make a clear and complete statement of the position, and deal with those points to which we have alluded. The balance-sheet will be found analysed in our usual column.

Furness, Withy's Year.—A further decline in profits this time of £127,737 is shown by the report of Furness, Withy, and Co. for the year ending April 30, 1922. From the following table can be traced the financial history of the company since 1908:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1908-9	267,075	114,897	..	166,361	5
1909-10	332,992	145,417	..	183,302	5
1910-11	440,732	179,603	50,000	220,620	7½
1911-12	653,207	240,000	125,000	270,620	10
1912-13	756,141	350,000	125,000	270,620	10
1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	456,250	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10
1920-21	782,914	300,000	..	452,500	10
1921-22	655,207	..	200,000	452,500	10

* After payment of two years' Excess Profits Duty.

Allocations to reserve and depreciation are £100,000 less than a year ago, and the directors maintain the ordinary dividend at 10 per cent., including a 5 per cent. bonus, while carrying forward £206,055 as compared with £203,348 a year ago. The text of the report states that owing to the continuance of depression "only a small portion of the profits are derived from the earnings of the steamers. They mainly arise from other branches of the company's business, and from dividends on investments." It will be noticed from the above table that, despite the depressed conditions, profits exceed those of the last pre-war year. The balance-sheet, which is analysed in the usual column, though still less laconic than the balance-sheets of some shipping concerns, unfortunately shows signs of compression this year. On the liabilities side three items, "Reserve fund," "Reserve account for insurance and repairs," and "Trade contingencies fund," have now been telescoped into one item, "General reserve account"—a proceeding which admittedly is clearly explained in the report, but for which no reason is given. On the assets side the £500,000 of National War Bonds hitherto shown separately is included in a general asset

item of £7,836,934. We hope this is not a first step towards adopting the extreme uninformative nature of certain other shipping concerns' accounts. Sundry creditors are down by £678,766, and sundry debtors £332,193 higher, while the item "bankers' balances on current and deposit accounts, Treasury bills, cash and bills of exchange on hand" is £1,118,723 lower at £1,722,612. Shareholders have reason for satisfaction in the way in which the company is ploughing its way through the period of shipping depression.

Ebbw Vale.—"The whole of the collieries were idle during the national dispute in April, May, and June; the Abercarn group resumed in July, but the Ebbw Vale group remained idle a month longer owing to a local dispute. The iron and steel departments, which were rendered idle by the coal strike of October, 1920, resumed work in October, 1921. The wages paid during the year in respect of the Ebbw Vale Company's operations amounted to £1,336,195, as compared with £4,168,015 during the previous year." This brief introduction to the report and accounts of the Ebbw Vale Steel, Iron, and Coal Co., Limited, serves as a prelude to statement showing a net trading loss of £320,870 on the year ended March 31st last. The directors, however, consider that they are justified in taking £421,329 from reserves to clear this off, and to distribute £84,000 to the 7 per cent. cumulative preference shareholders in payment of dividend for the year under review. In the balance-sheet, cash in hand amounts to £3,728, but there is £860,179 due from debtors. Stocks at £782,478 are valued at cost or market price, whichever is lower. Interests in associated companies are taken at cost at £2,802,974. Property and plant appears at £6,912,513. It should be noted, however, that the auditor draws attention to the point that "No amount has been provided during the year for depreciation of capital outlay." Comparatively considered with balance-sheets of companies representative of other industries, the accounts before us are informative, and interesting statistics are included.

Japanese Trade and Finance.—Cabled advices from Tokyo record a continuance of stringency in the short loan market, the rate for day-to-day money being quoted 7 per cent. The money market resources have been strained by large and popular issues of new debenture stocks, by the efforts of the tax-collector, by the demand for accommodation by silk-reelers, by the half-yearly settlement in the Provinces, and lastly by preparations for paying up subscriptions to the new Government loan. The cotton yarn market is inactive, while the silk market shows a tendency to weakness in spite of the enforcement of limitation of production. No general improvement is visible in foreign trade. Various plans for the regulation of prices, the reduction of railway rates, the raising of the rate of interest on postal savings bank deposits, the lowering of monopoly prices of salt and tobacco are reported as likely to be gradually put into force. On August 15th the note issue of the Bank of Japan was 1,108,000,000 yen as compared with 1,119,000,000 yen a year ago, while discounts and advances at 152,000,000 yen compared with 84,000,000 yen at August 15th, 1921. The Bank of Japan's index number of wholesale prices for July was 266 as compared with 259 for July, 1921.

Obersea Correspondence.

UNITED STATES.—FAVOURABLE CROP OUTLOOK—COMMODITY PRICES—TARIFF DEVELOPMENTS—JUNE RAILROAD EARNINGS—COAL AND RAILROAD STRIKES.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 14.

PRESENT indications point to unusually heavy yields of all crops with the exception of cotton and sugar beets, while the production of corn, white potatoes, and hay promises to be close to the largest on record. The crop of sweet potatoes may exceed all previous yields. The

Government's August report forecasts a three-billion-bushel corn crop for the fifth time in this country. Thanks to favourable weather, corn and various other crops made remarkable growth in July.

The indicated yield of tobacco, totalling 1,425,000,000 lbs, if realised, will be the fourth largest crop ever grown, while the prospective harvest of apples, 200,000,000 bushels, is more than double that of last year. Owing to the promise of liberal harvests of corn, oats, barley, rye, and other crops there is likely to be plenty of feedstuffs for fattening livestock, with a prospect, therefore, of a large supply of meat at possibly lower prices. The promise of bountiful harvests this year encourages expectations of some lowering of living costs. Estimates of yields, based on the August 1st condition of the crops, compare as follows with those actually gathered last year, and with the record harvests of the past, the figures being in bushels unless otherwise indicated:—

PRODUCTION IN MILLIONS OF BUSHELS.

	1921.	1922.	Past Records.	Year.
Winter wheat	587	542	760	1919
Spring wheat	208	263	356	1918
All wheat	795	805	1,025	1915
Corn	3,080	3,017	3,208	1920
Oats	1,061	1,251	1,593	1917
Barley	151	192	256	1918
Rye	58	79.6	91	1918
Rice	36.5	38.7	51.7	1920
Buckwheat	14.1	13.8	23	1866
Total seven cereals	5,195	5,397	5,896	1915
White potatoes	547	440	442	1917
Sweet potatoes	98.7	112	104	1920
Tobacco, pounds	1,075	1,425	1,582	1920
Flax	8.1	11.4	29	1902
Hay, all, tons	96.8	110.3	111	1916
Cotton, bales	8.0	11.4	16.1	1914
Apples	98.1	202	253	1914
Peaches	32.7	56	64	1915
Peanuts, pounds	816	679	1,234	1917
Kaffirs	115	114	137	1920

The value of 17 leading crops, based on the Government's August crop report and on August market prices, is figured by the Department of Agriculture at \$7,134,654,000, or approximately \$1,200,000,000 more than the same crops were worth a year ago at the prices then prevailing. The figures are predicted, obviously, upon favourable conditions continuing until harvest time.

During July the net movement in prices of commodities was negligible, judging from *Bradstreet's* index number as of August 1st, namely, \$12.0688, which shows a decline of only three-tenths of 1 per cent. from July 1st. The number marks a decline of 42.1 per cent. from February 1, 1920, and of 36.1 per cent. from November 1, 1918, but an advance of 9.1 per cent. over August 1st a year ago, of 14 per cent. from the low point of recent years on June 1, 1921, and of 38.5 per cent. from August 1, 1914. Changes in the various groups of commodities since July 1st were exceptionally small; seven groups showed decreases as against six that advanced.

Possibly before this article is published the United States Senate will have taken a final vote on the Tariff Bill, which for four months has been the subject of heated debate. Assuming that the Senate will pass as a whole the Bill, which it has approved piecemeal, that measure, together with the Bill passed some time ago by the House of Representatives, will be submitted to a Conference Committee, whose task will be to draft, if possible, a compromise Bill acceptable to both the House and Senate. How much time the conferees may require to complete such a tariff is wholly problematical, especially since the two Bills are radically different in many respects. During the past week the Senate disposed of the sugar schedule by fixing rates of 1.84 cents a pound on sugar imported from Cuba and 2.3 cents on imports thereof from other countries, both rates representing increases over those provided in the House Bill. The Senate Finance Committee had recommended 1.60 and 2 cents respectively; much higher duties had been proposed, but were defeated by the narrow majority of two votes. The Senate also put hides on the free list, rejecting the rates of 4 cents a pound on dried hides and 2 cents a pound on raw hides, which the Finance Committee had recommended despite the practically unanimous protest of leather goods manufacturers. Boots and

London, E. C. 2

shoes were likewise placed on the free list, as was potash.

Unfinished business on the books of the United States Steel Corporation at the end of July amounted to 5,776,161 tons, representing an increase of 140,630 tons during that month, and the largest total of unfilled orders reported for any month since the end of April, 1921; it compares with 4,830,324 tons at the close of July a year ago. It seems that the demand for steel is now about equal to the capacity of this country's mills. The corporation's July operations ranged from over 76 per cent. to about 71 per cent. of capacity. Its production in that month is estimated at approximately 1,000,000 tons of finished steel.

Practically complete reports of railroad earnings for June show that the net operating income of the first-class carriers amounted to \$76,470,500, equivalent to an annual return at the rate of 4.78 per cent. on their tentative property valuation. That rate compares with 4.36 per cent. in May of this year, and 3.18 per cent. in June, 1921. Gross earnings in June totalled \$472,880,600, representing an increase of 2½ per cent. over the corresponding month of last year, while operating expenses of \$363,335,000, showed a decrease of 4½ per cent., as compared with June, 1921. For the first half of 1922 net operating income for all roads, with the exception of two rather small lines which have not yet reported for June, amounted to \$348,387,400, or at an annual rate of 4.43 per cent., as against \$145,639,800, or at an annual return of only 1.85 per cent. during the first six months of 1921. Operating revenues decreased 2½ per cent., and operating expenses 12.1 per cent., as compared with the same period of last year. Owing to the coal and railroad strikes, relatively poor earnings reports are expected for the months of July and August. The coal strike seems likely to be terminated in the near future. All efforts on the part of the Government as a "voluntary mediator" to end the railway shopmen's strike have proved futile, as have similar efforts by the Railroad Labour Board. One of the main issues in-

volved, and probably the most important remaining obstacle to a settlement, is the question of seniority rights. The strikers still insist on the full restoration of such rights if they return to work, that is, they are demanding that they be restored in all respects to their former status. President Harding's latest peace proposal was that the strikers should return to work, that the railroads should assign them to work, and that both sides should submit the dispute over the restoration of seniority rights to the Railroad Labour Board for decision, which should be accepted as final and binding by all parties concerned. The great majority of the carriers accepted that plan, while the minority also accepted it to the extent that they agreed to take back as many of the strikers as possible, and to leave the seniority issue to the Labour Board for settlement. The shopmen, however, flatly rejected this proposal, presumably because the Railroad Labour Board has already ruled that the strikers are no longer railroad employees; as they apparently view it, the seniority issue would be decided by a tribunal which has declared that the strikers have no rights to such privileges. Present indications are that strong measures may be adopted by the Government to end the strike if the situation becomes much worse.

FRANCE.—REPARATION CRISIS—GOVERNMENT ATTITUDE—POSSIBLE ECONOMIC RAPPROCHEMENT WITH GERMANY—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 23.

FOR the moment, awaiting the return from Berlin of Sir John Bradbury and M. Maucière, the French Government is refraining from any definite action and is merely marking time. It is now announced that the embargo placed on the banking accounts of German nationals in Alsace-Lorraine has been removed, and for the moment, at any rate, there need be no expectation that this country will take independent steps against her creditor on any of the lines which it was seriously feared, immediately after the failure of the London Conference, might be adopted. M. Poincaré's latest speech—at Bar-le-Duc yesterday—however, clearly indicates that the French Government has absolutely come to the end of its patience in respect of any further concessions to Germany, and that the Poincaré Cabinet is fully resolved that no further moratorium shall be given to Germany unless accompanied by specific and productive guarantees. The manner in which the Bar-le-Duc speech has been received here leaves no possible doubt that in adopting this line M. Poincaré's Government has the whole strength of French public opinion behind it.

Coupled with the firmer tone in French opinion is the fact that the idea that it might be advantageous to try and arrange some kind of economic alliance with Germany (to which I referred last week) has made substantial progress here of late. With the exception of a certain group of the French industrial leaders, perhaps, the French as a nation have no real liking for anything in the way of an entente with Germany, whether of an economic or any other form. The idea is by no means a new one, however. It has been advocated for years by M. Caillaux, and has long been regarded with a kind of sneaking affection by the now greatly diminished Radical-Socialist party, which he led triumphantly for some years before his fall. The argument has often been put forward that the best policy France could adopt in regard to Germany would not be to crush her politically and economically by force of arms and insistence on extracting the last farthing of the reparation debt from her, but to form an economic alliance with her, with the hope that, by the combination of French savings and German enterprise, the two nations might secure the preponderating influence in the reconstitution of Russia and the moribund States of Central Europe. By partnership in such a combination, it is insisted, French finance would be able to bring about the domination of Germany in quite another and much more profitable form than she can ever hope to do by confining herself to the sterilities of the Versailles Treaty or by imposing sanctions by the force of her "mailed fist." The revived interest in this idea that has been displayed lately is perhaps to some extent a natural rejoinder to Mr

Lloyd George's reported reference to the possibility that Great Britain might find it necessary, in certain events, to seek "other friendships" than that of France. The friendly welcome that has been given to the idea in Germany itself has naturally caused many people here to hesitate seriously in considering it; nevertheless, the fact that such an alliance is now regarded here as possible, and that, although one writer describes the suggested Franco-German entente as "an alliance of despair," and another as "a return to an old (i.e., Caillauxist) insanity," it is recognised here that "if it must some day be concluded, thanks to Mr Lloyd George, it must necessarily be directed against Great Britain," ought surely to have some influence in their dealings with Franco-British relations on those who at present guide British opinion.

As was to be expected, the failure of the London Conference resulted in a depression of the Bourse, but this effect was only temporary, and the market closed firm, the depreciation of the franc favouring foreign securities. French Rentes continued in demand, and the Three per Cents. gained three-quarters of a point. Banks were markedly stronger than last week; the Crédit Lyonnais advanced to 1,365 and the Banque de Paris to 1,240, while the Crédit Mobilier that opened at 410 closed at 425. In transports the most interesting quotation is that of the Suez Canal, that under the influence of the exchange was advanced to 7,200. Chargeurs Réunis also improved and the Voitures à Paris on the news that they had sold their premises for five millions moved from 930 to 950. Electrical undertakings shared in the general advance, Thomson going from 783 to 805 and the Parisienne de Distribution from 555 to 585. Breguet, however, declined from 825 to 793. Metallurgical shares were for the most part unchanged, but there were certain sharp rises. Thus Micheville moved from 670 to 700, Chantiers de St. Nazaire from 550 to 569, Chatillon from 1,510 to 1,535, and Denain-Anzain from 1,510 to 1,530. Both on account of the exchange and the favourable news regarding the coal strike in America there was a marked improvement in copper. Tintos after certain fluctuations moved from 1,549 to 1,555, and Bolée from 450 to 466. Oil shares were also sought after. Royal Dutch, for example, gained 900 points at 20,500, and Mexican Eagles were advanced to 174.

GERMANY.—REPARATIONS—STATE MEASURES—EXCHANGE AND BOURSE—PRICES—CONTRACTS.

(FROM OUR CORRESPONDENT.)

BERLIN, August 19.

THE Reparation Commission's plan to continue negotiations at Berlin did not stop the rise in the foreign exchanges, and yesterday again New York took the lead and quoted the mark at a parity of about 1,400, against a Berlin official dollar rate of 1,158. On the 16th Dr. Wirth made a long and very pessimistic statement to foreign Press representatives, ascribing the mark's fall directly to the last two French "notes of menace," and foreshadowing the following results: "Further impoverishment of large classes, destruction of the Budget balance, the cutting-off of necessary food and raw materials imports, the selling-out of reserves of goods, hunger, revolts of despair by the masses, subversion of all Government authority, and (especially for German industry) destruction of working capital and laming of production." While the mark's new collapse is, indeed, no more sign of the predicted catastrophes than there was after former heavy mark declines, when similar predictions were made. As has been earlier shown from here, finances rapidly adapt themselves to the currency depreciation; and the chief ultimate effect on the substance of wealth is the impoverishment of the purely capitalistic (rentier) class, and of foreigners with German interests. Dr. Wirth a second time laid stress on the ruin brought on certain German classes. But the purely capitalistic German, whose wealth consists of bonds and (though in somewhat less measure) of dividend-paying stocks, has already been so fully ruined that, if he is fit for work, he has been forced into the earning classes, so that, with

certain exceptions, the only class feeling extreme need consists of persons who cannot work. For the plight of these, Government policy, and not merely the currency depreciation, is responsible. Government policy has aimed at taking the actual substance of Reparations deliveries, whether cash or goods, out of the pockets of the mere mark interests; and the present aggravation of the Reparations crisis results ultimately from the fact that, with the mark interests fallen to about 1-300th of their nominal value, nothing worth taking is left for further Reparations. No post-Revolution Government made any attempt to distribute the burden more justly. In all taxation, the paper mark is still treated as a full gold mark; and this in the taxation of capital increment and in the real estate increment tax leads to anomalies which, when contrasted with the big profits earned by the secured debtor class from the same currency depreciation, are unjust to the point of absurdity. Concrete cases, of which details have appeared in the newspapers, are: (1) A landowner whose estate in 1913 was valued officially at 1,640,000 gold marks, with a mortgage thereon of 1,100,000 marks, paid off his mortgage out of the profits of three harvests; and so, at no capital cost, became full owner of an estate in which he formerly held only a one-third interest; (2) the owner of a villa which, before the war, cost about 40,000 gold marks, who lately had to sell for 120,000 paper marks, worth 600 gold marks, had to pay in unearned increment tax 61,644 marks, his nett receipts being about 300 gold marks, so that, whereas the currency depreciation trebled the real worth of one citizen, it reduced the wealth of another to about 1-130th.

This is not a result of Reparations, as Dr. Wirth declared, but a result of the Government's indolent policy of taking the line of real resistance. Only when crash or scandal is threatened does the Government intervene, and then only in so far as is necessary to prevent crash or scandal. Owing to their inability to pay gold insurance liabilities to Swiss citizens, several insurance companies are threatened with bankruptcy; and as bankruptcy would mean a crash and scandal, the Government, in addition to helping the companies itself, proposes to put some of the burden on companies which have no foreign currency liabilities, thus further impoverishing home insurers, whose interest in their policies has already been almost wiped out. Similarly, the Government, having favoured the complete ruin of mortgage-bond holders (with, of course, all other bondholders), passed a law authorising the hypothecation banks to break their agreements and raise their interest rate, the aim and effect being to prevent a formal crash and scandal, but not to compensate the real losers. The Housing policy is on the same basis. The latest House-Rent law makes it impossible for the houseowner to get more nett rent in paper marks than he formerly got in gold marks, so that at present exchange all but about 1-300th of his interest has been expropriated; but to prevent the open scandal of further ruin of the houses, the tenant is to pay for repairs. Before March last, when money was plentiful, the Government could easily have raised a Funded Loan if it had guaranteed capital and interest in paper marks on an index-system based either on the mark's future gold-exchange, or (as would have been more reasonable) its future buying-power (as the new Russian State Bank has been obliged to do in order to attract deposits). The present common German practice of hoarding goods and foreign currencies, which the Government denounce as dishonest and unpatriotic, would cease were only some such guarantee given that the burden of further mark-depreciation would not be thrown on certain classes, while other classes profit.

The Government has been obliged to raise salaries, wages and pensions by around 38 per cent. The cost is estimated at 125 milliards a year. The floating debt on August 10th was 312,380,525,000 marks, of which 297,032,535,000 marks were discounted Treasury bills. The increase since the beginning of the financial year is 40,445,360,000 marks, of which 31,466,344,000 marks went on fulfilment of the Peace Treaty. The Customs gold supplement for the week August 23-29th is 17,400 per cent., or 175 times the nominal. Railway freight rates will be raised 50 per cent. on September 1st.

The Bourse this week was active and rising, but showed yesterday a certain reserve. In connection with foreign buying of metal and coal stocks, various reports are circulated as to supposed French plans to collaborate with the German heavy industry, and these measures are represented as being in some way an alternative for new French Reparations sanctions, but it is not very clear what France as a whole would gain. The *Boersen Courier* states that a French group is negotiating with Hugo Stinnes, with aim of getting influence on Stinnes' Deutsch-Luxemburg Company, which was the nucleus of the Rhine-Elbe Union, and of seven important concerns which the Deutsch-Luxemburg controls or owns. Stinnes is reported to need capital (part of his expansion plans has been postponed owing to money market stringency), and owing to the loss of the Deutsch-Luxemburg's smelting works at Differdingen, in Alsace, he is interested in having good relations with French business, and with the Lorraine minette proprietors. The cotton manufacturing industry is threatened with difficulties owing to the coincidence of the new exchange crisis with lessened reserves of raw cotton at Bremen. American cotton yesterday was quoted at 692 marks per kilo, against 1 mark or less before the war. At a price of 500 marks, a middle-sized spinnery consumes cotton worth 75,000,000 marks per month; and the 9,000,000 spindles at present estimated as being worked would consume 162,000,000,000 marks worth in a year. Some other industries which import most of their raw material are facing similar troubles, and if foreign credits are not obtained, a new recourse to home credits, with corresponding inflation, must be the result. Similar difficulties have, however, been overcome after past heavy mark declines.

A new further decision by the Federal Court of Appeal on the question of contract keeping in time of currency revolution is as follows. An automobile manufacturer contracted to deliver cars within a fixed time and at a fixed price. A fall in mark exchange made it difficult to obtain raw material, and by the time the cars could be manufactured, after the contracted delivery date, production cost was three or four times higher than the contract price. The manufacturer refused to deliver at the contract price. The Court of Appeal confirmed decisions of earlier courts, which declared that the contract need not be kept, and declared that to force the keeping of the contract would be "against loyalty and faith," all the more so because the parties, when signing the contract, did not mean to provide for an obligation by the manufacturer to deliver goods at a fourth of their cost. The Court here seems to have applied a general provision of German law that "loyalty and faith" (*Treu und Glauben*) are an essential part of a business deal, and to have reasoned that the demand for fulfilment of a contract which has turned out to be one-sided is against "loyalty and faith."

CANADA.—CROPS—WHEAT BOARD IN TWO PROVINCES—GRAND TRUNK APPEAL—THE RAILWAY PROBLEM—THE CATTLE EMBARGO—FUEL PROBLEM—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 14.

THE wheat harvest has now commenced in earnest in the prairie provinces, and weather conditions are very favourable for cutting operations. Good rains have fallen throughout Manitoba, and conditions in that province are generally favourable. In the southern half of Saskatchewan they are almost uniformly good, but in the central and northern districts the crops have suffered from drought at a critical period, and the yields indicated on August 1st

will not be up to the average. A parallel lack of moisture in northern and central Alberta has not been remedied in time, but conditions in the district south of Calgary are better than for many years. British Columbia has now had welcome rains, but the drought did a lot of damage. On the other hand, conditions throughout the eastern provinces continue to be very satisfactory, and very substantial yields in every line of crop are reported. The forecast of the Dominion Bureau of Statistics of the chief crops, together with the actual figures for the 1921 crop, read as follows:—

	1921.	1922 (Estimated).
Wheat	299,670,000	320,968,000
Oats	426,232,900	509,752,000
Barley	59,709,100	64,881,000
Rye	21,455,260	37,848,000
Flaxseed	4,111,800	4,530,000
Potatoes	107,346,000	102,974,000
Hay and clover	11,366,100	15,545,000
Alfalfa	662,200	483,000

Two-thirds of the increase in the wheat crop is accounted for by the good crops in Manitoba, where there will probably be a gain of 14 million bushels, and the benefits of the very pronounced increase in the hay and clover crop will enure chiefly to the provinces of Quebec and New Brunswick.

The provincial Governments of Alberta and Saskatchewan, after considerable hesitation, decided to go ahead with the Wheat Board scheme, and their Legislatures have held special sessions and passed legislation conferring the additional powers without which it was stipulated that the Federal legislation could not come into effect. The powers bestowed upon the Board by the concurrent legislation are exceedingly drastic, and give it the most complete control over the marketing and movement of all wheat grown in the provinces of Alberta and Saskatchewan, which produce between them four-fifths of the total crop. It is given the fullest investigatory powers, and can take possession of, sell, and deliver wheat stored in elevators or anywhere else in the province "on such terms as it may direct." It can prohibit any individual firm or corporation excepting itself or its licensees from buying or handling wheat, and can order any person holding wheat to sell it to itself. It is clothed with full powers to enter into contracts and agreements about the purchase, handling, storage, transportation, and insurance of wheat, and, as if these powers were not sufficient, the local Cabinets are empowered to add such others as may be necessary. The Manitoba Legislature, which has just been elected, contains a majority sympathetic to the idea of the Board, but it will not be able to meet in time to pass the necessary legislation to make the Board applicable to that province. However, the grain trade are sufficiently perturbed by the prospect of the Board's operations in the other two provinces, and gloomily predict their own ruin unless the Board proves a failure. For the moment, the fortunes of the Wheat Board have received an unexpected setback through the refusal of Messrs James Stewart and Riddell, the two men chiefly responsible for its previous success, to accept their former posts.

There is general satisfaction in Canada at the failure of the appeal of the Grand Trunk shareholders, especially as the cabled reports of the hearing had almost prepared the country for an adverse verdict. The King Government are known to be mightily relieved, for they knew that a pro-Grand Trunk verdict would at once give irresistible force to an agitation, which has many supporters already, for the complete abolition of the Privy Council's jurisdiction over Canadian cases. Moreover, the further revelations made last session of the real financial condition of the Grand Trunk seemed finally to dispose of the charge that any injustice had been done, and to show that the earlier shareholders got a very fortunate bargain. The process of the amalgamation of the Grand Trunk with the rest of the national railway system is now being tackled by the Minister of Railways. For the time being, however, all the Canadian railways, and particularly the Grand Trunk, are reaping a temporary harvest from the American railway strikes, and traffic which would normally go over American lines is being despatched through Canada.

Gratification is also felt at the recent vote in the British Parliament which removed the stigma resting upon

Canadian cattle by the embargo regulations, and it is hoped that it will soon be implemented by legislation giving free access to Britain for Canadian store cattle. But doubts are expressed in some quarters whether the removal of the embargo will see a renewal of the store cattle trade on a large scale. With the virtual disappearance of open range which could be leased at a few cents per acre, the cost of raising young cattle in Western Canada has risen enormously, and freight rates are much higher, both on land and sea, than in the old pre-embargo days. There used to be a very serious wastage in connection with the store cattle trade, and it was only the low cost of production which enabled it to be faced. Attempts will, of course, be made to revive the trade, but, at least, it would not have been profitable last spring.

The very serious American strikes have, so far, only directly affected the western coalfields of Canada, though they menace her with many grave difficulties, but the industrial situation is very precarious. The railway shopmen of Canada, following the example of their American brethren, have resisted the cut in wages announced by the railways, and a Conciliation Board appointed under the Industrial Disputes Act is now sitting in Montreal to decide the merits of the case. But the railways have insisted upon interpreting the Act as allowing them to put in force the reductions without awaiting the decision of the board. The Department of Justice has supported the contention of the workmen that the *status quo* in wages should be maintained till the Board announces its decision, but the Government has not yet seen fit to force the railways to such a course. So a deadlock has arisen and halted the arbitration proceedings in Montreal. Perhaps the most serious problem confronting the Government concerns the fuel situation for the winter. At this date central Canada has usually secured ample supplies, both of bituminous and anthracite coal, from the mines of Ohio and Pennsylvania, but the stoppage of production there through the strike has left Canada with very meagre reserves. The Government have established a fuel committee, which, however, will only have advisory functions. Two of its members have been to Washington and have obtained a promise that Canadian claims for coal will receive some consideration when priorities on distribution are being settled. The City of Toronto is reported to have ordered 100,000 tons of Welsh anthracite, and other communities are debating similar steps. Unless a strike in the Nova Scotia mines is averted, the Government will be compelled by public opinion to set up a system of control and rationing.

Mr W. S. Fielding, the Finance Minister, has disclosed part of the Government's plan for taking care of its maturing obligations. A five-year loan of 5½ per cent. bonds issued in 1917, and now amounting to \$178,000,000, will mature on December 1st, and it is proposed to provide for retiring these bonds by a domestic issue on November 1st, which will take the form of a conversion loan. Holders of the maturing bonds will be offered a new issue bearing the same rate either for five years or for ten, and as an inducement to convert, the bondholders will be given a bonus of a month's interest, the coupons of the new bonds being payable on November 1st instead of December 1st. Bonds, whose holders do not desire to convert, will be redeemed in cash. There is, however, one important difference between the two sets of bonds. The 1917 issue was tax-free, but Parliament decided that all future issues should be shorn of this privilege. The Government had taken authority to borrow \$350,000,000, but all this sum is not immediately required. The Federal finances are by no means in a satisfactory condition; an increase in the Customs returns has been balanced by serious declines in other items, and the increases in the cigarette taxes have, as many people prophesied, produced a serious slump in the revenue from that source. The burden of local taxation is proving very oppressive, and all the provincial treasurers, save one, find their abilities strained to raise the funds necessary for current administration. The treasurer of Quebec is in the happy position of being able to record a most substantial surplus, which is largely due to the very large profits of the Government's liquor system. Their extent arouses the wrath of the temperance party, but is the envy of all other provincial treasurers.

POLAND: POLITICS—THE FINANCIAL SITUATION—THE CROP OUTLOOK—NEW CAPITAL.

(FROM OUR CORRESPONDENT.)

WARSAW, August 9.

For nearly two months Poland was without a Government. After protracted debates and discussions, Marshal Pilsudski succeeded at last in finding a Premier who has the support of the majority of the Diet. The new Cabinet is in composition similar to that which was obliged to tender its resignation at the beginning of June. As Premier, Mr Ponikowski has been replaced by Mr Norwak, Rector of the University of Cracow. Most of the Ministers belonging to the former Cabinet remain at the head of the respective departments. Only Mr Michalski and Mr Skirmunt have not been included in the new Cabinet. The portfolio of the Ministry of Finance has been taken over by Mr Jastizebski, and that of the Ministry of Foreign Affairs by Mr Narutowicz.

For two months the Polish mark has been steadily declining, and the printing press is working with an increasing speed, but we are kept in the dark as to the measures which the new Minister of Finance intends to adopt in order to balance the Budget. In the beginning of July Mr Jastizebski, in criticising the financial policy of his predecessor, pointed out that instead of the estimated 132 milliards, a deficit of 400 milliards must be expected. He dwelt on the necessity of increasing the income-tax by 10 milliards, the railway fares by 62 milliards, indirect taxes by 17 milliards, the ground-tax by 47 milliards, &c. Even if these measures were realised, the uncovered deficit would amount to 273 milliards. Mr Jastizebski said nothing about his plan of dealing with this situation.

The downward movement of the Polish mark is illustrated by the following figures:—

	July 27.	August 7.
London.....	26,250	29,500
Paris	499	534
Zurich	1,120	1,250
New York	5,910	6,640
Berlin	1,175	8,90

With the exception of the German mark, all foreign exchanges have risen.

While the financial situation is far from being satisfactory, the economic conditions of the country continue to improve. The crop outlook is very satisfactory. The area under cultivation has increased in comparison with last year by 22.5 per cent. for wheat, by 22.1 per cent. for rye, by 12.3 per cent. for barley, by 20.3 per cent. for oats, and by 10.6 per cent. for potatoes. The most marked improvement may be observed in the Eastern districts, which are only now beginning to recover from the Bolshevik invasion. In that part of Poland the area under cultivation has increased by more than 100 per cent.

According to the estimates of the Office of Statistics, the yield per acre of cereals will this year be similar to that of a year ago, and for potatoes a much better result is expected. As after the last harvest import requirements of cereals were very small, it may be assumed that a part of the new crop will be available for export.

New capital issues during the first six months of this year amounted to 9.4 milliard marks, as compared with 8.2 milliards during the same period in 1921. This is a very small increase, if we take into account the depreciation of the Polish mark. (The average quotation of the dollar rose from 1,000 marks in the first period to 3,000 in the second.) A slackening in the creation of new undertakings is observable, as shown by the figures below:—

NEW JOINT STOCK COMPANIES CREATED.

	First Half-year, 1921.		First Half-year, 1922.	
	Number.	Capital.	Number.	Capital.
		Mln. Marks.		Mln. Marks.
Industry and agriculture	96	3.75	71	3.25
Trade and transport	19	0.30	21	1.26
Banking	10	0.63	3	0.38
Insurance	1	0.01	1	0.01
	126	9	96	4.90

OFFICES IN ALL THE CHIEF COMMERCIAL CENTRES

The number of companies which have increased their capital has also decreased from 153 in 1921 to 95 in 1922. This slackening of the economic activity is due to the famine of capital from which the country is suffering. The recovery of Polish industry would be much quicker if Poland could succeed in obtaining the necessary foreign capital. Even under present conditions, some industries have already reached the pre-war level. For instance, the Polish coal production (without Upper Silesia) was, during the first four months of this year, equal to that of the same period in 1913. Strikes in April have prevented the output from surpassing the level in 1913. Employment statistics in other branches of industry also reveal a steady improvement.

JAPAN.—TRADE BALANCE—GOLD HOLDINGS.

(FROM OUR CORRESPONDENT.)

TOKYO, July 5.

THE foreign trade of Japan for the six months ended June 30th shows a steadily increasing adverse balance, and there is little prospect that trade currents will be reversed during the second half of the year. Of the 28 principal articles of export, some 14 registered gains during the period, especially rice, starch, tea, refined sugar, raw silk, cotton yarns, cotton hosiery, caps, hats, and buttons, but of these only raw silk, cotton yarns, cotton cloth, and silk fabrics registered any substantial gains. Tea also showed considerable increase. Of the 28 principal articles of import, 15 showed increase, particularly rice, wool, Chilean saltpetre, oil cake, soda, leather, dyes, pulp, pig-iron, leather, cotton cloth, woollen cloth, paper, nails, and machinery. The trade balance for the six months ended June 30th now totals some 368,370,000 yen, as against 223,888,000 for the same period of last year. The figures for the half-year are as follows:—

	January to June, 1921.	January to June, 1922.
Exports.....	573,493,000	735,196,000
Imports.....	797,381,000	1,103,566,000
Total.....	1,370,874,000	1,838,762,000
Balance	223,888,000	368,370,000

From the point of view of a general increase in the nation's volume of trade the situation seems encouraging, but the steady increase in the unfavourable balance of trade is having its effect upon national finance, and the specie holdings are already declining.

Before the war Japan's total gold holdings amounted to no more than some 353,000,000 yen. At the close of the war the amount had swollen to more than 2,000,000,000 yen. In June alone there was an export of over 2,000,000 in gold, the adverse balance for the month amounting to 1,972,000 yen, and for the six months the adverse balance stands at 1,458,000 yen. The national specie holdings have now been reduced to 1,877,000,000 yen in round numbers. Of this total the

amount held by the Government is 634,000,000 yen, and that owned by the Bank of Japan amounts to 1,243,000,000 yen. The amount of this gold abroad totals 655,000,000 yen, leaving 1,222,000,000 at home.

Letters to the Editor.

DOMINION CURRENCIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to thank you for the attention you have given to the proposal for an issue of Imperial Treasury bills, and for your criticism thereupon. Perhaps you will be kind enough to afford me space to reply.

First of all, with regard to Egypt. The notes of the National Bank of Egypt form now the sole currency of that country, and they are wholly covered—by British Treasury bills—for much the greater portion, by short-dated securities, and by a comparatively small amount of gold. I am unable to refer to the exact proportions, but all are easily realisable into sterling. When, therefore, you say that Egypt could not have kept the exchange value or her currency stable had the tide of trade flowed fast enough and long enough in the adverse direction, “except as long as the stock of Treasury bills held out,” is it not tantamount to admitting Egypt’s ability to keep her exchange stable? Her stock of Treasury bills must hold out as long as her currency notes remain out. It would be extremely difficult for an Egypt denuded of currency to go on buying British goods without selling something in exchange.

Then with regard to Imperial Treasury bills. I am afraid I have failed to make clear the reasons which led me to substitute Imperial Treasury bills for British Treasury bills as a proposed basis for the currencies of the Empire. Hence, perhaps, there has been some confusion of thought. I referred to the political reason in my letter, but not to the economic reason. It is the difficulty which would be experienced by the Dominions and India in acquiring sufficient British Treasury bills, not only to cover the fiduciary portion of existing currencies, but to give the necessary elasticity to movements of trade and currency. British Treasury bills could only be acquired by an excess of exports from the respective countries.

Had the proposal been that British Treasury bills were to be used as a currency basis, it would have been difficult for me to answer the criticism in the latter part of your article, and your reference to “the rather modest automatic correctives” would have been warranted. But the proposal is not for the countries in the Empire to acquire Imperial Treasury bills in the first instance. These, although in a different form, may be said to be in their possession already, for it is a proportion of the existing debt of the different countries in the Empire that is to be converted into Imperial Treasury bills. What this proportion should be is a matter for discussion. It should cover the fiduciary issue of existing currencies, and, in addition, there should be sufficient to afford quite a considerable measure of elasticity for trade and currency movements. No great harm would be done if a very liberal interpretation were put on what is necessary to afford this elasticity; for while the bills would be convertible into currency, currency would also be convertible into bills—into what would probably be the most acceptable security in the world, having not more than three months to run, freely negotiable, exchangeable into the currencies of the different countries in the Empire, and bearing interest at the current rate as determined by the free play of competition. There is a further very important condition that, with the exception of gold and (for India) silver, legal tender would only be obtainable against Imperial Treasury bills.

Under the above conditions, there must surely be parity of exchange as between the participating countries. I also venture to think that the Imperial Treasury bill would form not a modest but a very powerful corrective, which would not be controlled by, but which would control an adverse balance of trade in any part of the Empire. It would do so by the recognised methods of contraction of the credit base and the rate of interest. The credit base

would, however, be not actual legal tender alone, but legal tender plus Imperial Treasury bills, so freely would they be interchangeable. Let us follow, as briefly as may be, the operations. An excess of imports to any country in the Empire would mean one or more of three things—a contraction of currency in actual circulation, a diminution in the deposits of the banks of that country, and an increase in their advances. A return of currency would not diminish the reserves of the banks (currency plus Imperial Treasury bills), but it would not increase them. Exports from Britain to Australia, for example, would be met in the first place by a diminution in the Australian banks’ holding of Imperial Treasury bills in order to pay for the exports. To the extent that in Australia the banks received payment, directly or indirectly, in currency, they would be in a position to replace the Treasury bills, while the issue department of the Commonwealth Bank (the sole issuer of notes in Australia) would hold so much less. But to the extent that the excess of imports were met by deposits being drawn upon or by an increase in advances, the banks would not be able to replace the Treasury bills, and their position would be weakened. Sooner or later this must lead to a raising of the rate of interest, and a curtailment of advances, thus checking imports and stimulating exports. But under the conditions I have mentioned, there would be very considerable elasticity, which should enable mere seasonal movements in trade to be dealt with without much, if any, disturbance. Elasticity, especially at the present juncture, is most essential.

It is not only in inter-Empire trade that this elasticity is desirable. We need it also to aid production in the Empire. As we experience the weight of the American debt, the importance of increased production will become more and more apparent. In normal times the harvesting and moving of crops have been one of the main causes of movements in the demand for money and in interest rates. And yet it is a most beneficent operation, which everything possible should be done to help and nothing to hinder. The geographical position of the Empire, with its diversity of crops harvested and moved at different periods of the year, affords a great opportunity for co-ordinated Empire finance. Thus, when currency is required for harvesting in one part of the Empire, it is being set free in another part, because the harvest there is over. But if each country in the Empire has its own currency arrangements with no connecting link between them, how is advantage to be taken of such a unique situation? Imperial Treasury bills would form the connecting link, and through the London money market it would be very easy for one part of the Empire to help another in both production and trade.—I am, yours faithfully,

J. F. DARLING.

Aviemore, N.B., August 21st, 1922.

THE FUTURE OF BRITISH MALAYA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Many years have passed since Sir John Anderson, when High Commissioner in the Federated Malay States, warned Malaya about “putting all its eggs into one basket,” and in a country such as Malaya, which is practically becoming in every way as civilised as any portion of the British Empire, it is to be regretted that little has been done in this matter. During recent years, companies have been formed for the purpose of the extraction of oil from rubber seed and the local manufacture of matches. Much was expected of the latter proposition. Experiments in certain forest reserves have proved that the right type of wood for match-making industry is prevalent in large quantities. It is, however, regrettable to have to record that little or no progress has been made in the development of these industries, and I am compelled to admit that the whole future of Malaya hangs on the success of the rubber-planting industry. It is true that it was tin-making that gave the States their first big step forward, but to-day the known tin-bearing lands of the Federated Malay States are being rapidly denuded of their metalliferous contents, and unless the rubber industry can sail safely through the troubled waters of the present chaotic condition of things in the rubber world, we will very soon see the sign “Bankrupt” hanging over the portals of that country.

Whilst I would urge that this is a matter upon which the Imperial authorities should wake up and take something more than an academic interest, I must add that it is a matter of profound consternation to those who have the future of the Empire’s trade foremost in their thoughts.

I am never pessimistic, and I will hope that a day may come when tin and rubber will fade into comparative insignificance against the potentialities of Malaya, which are at present unknown. I am, Sir, your obedient servant,

L. E. HAYNES.

Books and Publications.

THE HISTORY OF THE PORT OF LONDON.*

In 1700 the total imports of England were valued at £5,970,000, of which £4,785,000, or upwards of 80 per cent., was the value of the imports by London. Of the £7,302,700 worth of exports from England, London contributed £5,388,000, or nearly 74 per cent. The proportion of the whole foreign trade of the kingdom done by London was 77 per cent. By 1737 the total foreign trade of England had risen to £18,914,000, of which London’s share was £12,698,000, or 67 per cent. The great increase in trade was due to a development of the exports, in which the outports had gained most of the additional trade. In 1756 the imports had gained 12 per cent. in value, and the exports rather less than 6 per cent., and the imports of London were slightly lower than in 1737. A steady rise in our trade then set in, and by 1792 the imports by England reached £17,898,000, and the exports £23,674,000, of which London’s share was £12,072,000 and £14,743,000 respectively, amounting to 65 per cent. of the whole, as compared with 67 per cent. in 1737, and 77 per cent in 1700.

These are a few of the stages in the growth of the Port of London, traced in Sir J. Broodbank’s interesting volumes. The compilation of the history has evidently been a work of love; and the two volumes should be welcomed by students of all ages, and by everyone who takes a pride in the great history of London. It is clearly shown, at epoch after epoch, that legislation in favour of selfish interests has inevitably resulted in loss and suffering to the community, and that only by working for the good of all classes can it be hoped to benefit the community at large.

To show the magnitude of the subject dealt with in the history, the two statements set forth in Appendix I. are arranged below, in the shape of a table, showing the growth in the value and the tonnage of the trade of the Port of London since 1700:—

A. Tonnage of Shipping (Foreign and Coastwise) Entering the Port with Cargoes.				B. Statement of Values of the Foreign Trade of the Port.					
Year.	Tons.	Value.	Percentage.	Imports.	Exports.	Total Trade.	Percentage.	Value.	Percentage.
1700	435,000	£4,785,000	80.0	£4,785,000	£5,388,000	£10,173,000	77.0	£10,173,000	77.0
1750	746,000	£5,541,000	78.5	£5,541,000	£8,415,000	£13,956,000	74.6	£13,956,000	74.6
1795	1,775,000	£14,863,000	83.8	£14,863,000	£16,579,000	£31,442,000	85.2	£31,442,000	85.2
1913	2,008,000	£25,879,000	89.1	£25,879,000	£15,791,000	£41,670,000	89.1	£41,670,000	89.1

The percentage increase in the value of the total trade in 1913 (1,209.7) was much greater than the tonnage increase (1,031.7). The reverse had been the case in 1750 and 1795. It should also be noted that the statement of values is of the foreign trade of the Port, whereas the statement of tonnage includes coastwise shipping.

* “The History of the Port of London.” By Sir J. Broodbank. Two Volumes. Chairman of the Dock and Warehouse Committee of the Port of London Authority. (London) Daniel O’Connor, 1921.

CZECHO-SLOVAKIA TO-DAY.*

PROBABLY few people have yet realised the significance of Czecho-Slovakia in the redistribution of political power in Central Europe. This work gives very full information on the history and resources of the new State, its ethnical and political structure, its literature and art, and its economic and financial condition. The union of Czech and Slovak, unforeseen by most foreign observers before its actual achievement, is here justified on the threefold ground of race, language, and history. The two tongues are variants of one; the Slovaks were described in the seventeenth and eighteenth century as “Bohemians,” the term “Czecho-Slovakia” was actually coined in 1839, and the Magyars recognised the affinity by forbidding Czech books in Slovakia during their prolonged efforts at “Magyarisation.” Of a population of nearly 13,600,000, some 67 per cent. are Czechs and Slovaks, 22 per cent. German, 5.5 per cent. Magyars, 4 per cent. Ruthenes, and about 1.5 per cent. Poles. But the Czechs and Slovaks are gaining on the rest. The State is a Parliamentary Republic, with a very liberal Constitution, interpreted by a Supreme Court, women’s suffrage, compulsory voting, proportional representation (which has made the Czech minorities visible in the most German districts), Home Rule for Ruthenia, and concurrent endowment for the churches, coupled with full religious freedom. It has nearly the area of Great Britain; it contains the chief main routes between North-West and South-West Europe, and till quite recently it was practically the sole manufacturing region of Austria-Hungary. It has every useful metal except platinum; its mines have been worked from the early Middle Ages, and it contains the oldest mining school in the world. Its agriculture is highly developed; its forests vast and well managed; it is the only European country which exports sugar. Its resources of waterpower, which the State is helping to utilise, are enormous; its health resorts are famous, and the Tatra mountains will become a new playground for tourists. The book describes fully its trade, industry, and finance, and the land reform now in progress, all recently dealt with in these columns; its new commercial agreements are summarised, the co-operative movement in it is described in an appendix, and there is a useful map. The volume is of high value to exporters and intending investors, as well as to students of the new Europe.

ACCOUNT.
September 8.

Rubber having remained a trifle under 7d per lb, nothing of any interest has transpired in the course of market prices. Several companies' reports appearing during the past few days have testified to the difficulty experienced by producers in the face of the present price of the produce. Amongst oil shares, Anglo-Persians and Burmah Oil spurred, the former on expectations of a good report in the near future. Shells and Mexican Eagles have been dealt in but mildly, and the general dullness of markets influenced the oil market with the rest. Uroz were run up to 10s 6d, to drop back to 9s in less than 24 hours later. In the tobacco market, both Imperials and British-Americans have been going ahead again, rumour toying with the idea that a bonus on Imperial shares is near at hand. Textiles are firm, though the Calico Printers' figures were not deemed entirely satisfactory by some. Courtaulds went better, which led to revival of the old rumour about division of the Viscose holding. Imperial Continental Gas regained 8 or 9 points of its recent loss. Furness, With; eased off, on issue of the report, but recovered later on. African and Eastern shares went flat, the report showing a heavy loss for last year. Electric lighting stocks keep good, and the cable stocks are better on balance. Radio Corporations came into a little demand from America. Other members of the wireless group showed a firmness, during the early part of the week,

Death has been busy recently amongst Stock Exchange members. The House sustained a heavy loss this week through the death of Mr Alexander Thomson, one of the best known jobbers in the colonial market. His geniality and benevolence caused him to be well known throughout the City; with his passing away the Stock Exchange loses one of its old school of perfect gentlemen. The assassination of Mr Michael Collins (who served at one time as a clerk in a Stock Exchange office) served to accentuate the dullness in Irish stocks, the 2½ per cents. shedding a point.

Roumanian Government Consolidation Loan.—The following particulars, while of more immediate interest to holders of Roumanian Treasury bills, are also noteworthy as revealing an earnest attempt to straighten out the external obligations of a Continental country—legacies of the war and post-war period. With a view to proceeding with the consolidation of Treasury bills, issued by the Roumanian Government in pounds sterling, United States and Canadian dollars, French and Belgian francs, and various other currencies, the Roumanian Government has created a Consolidation Loan of a nominal amount of £35,000,000, or \$175,000,000 (United States gold), bearing interest at the rate of 4 per cent. per annum and dating from October 1, 1922. Amortization will be effected by purchases in the market below par, and, when bonds cannot be purchased, by half-yearly drawings at par, commencing on April 1, 1928, the sum devoted to this purpose being approximately 2.5 per cent. The amortization fund is calculated to redeem the whole of the bonds not later than the beginning of April, 1968. Sterling bonds and coupons attached will be payable in London at the office of the British Overseas Bank, and in New York in dollars at their correspondents at the exchange of the day, and dollar bonds and coupons attached will be payable in dollars in New York at banks appointed by the British Overseas Bank, and also in London in sterling at the British Overseas Bank. Under the provisions of the general bond, the Consolidation Loan is a direct obligation of the Roumanian Government, and is specially charged, subject to a prior charge given to the Roumanian 4 per cent. External Loan of 1922, limited to £2,500,000, or \$12,500,000 U.S.A. gold, *pari passu* with the present and future Roumanian funded external loans (but in priority to all other external or internal loans or indebtedness). It is further secured against the proceeds of the export taxes, which are payable in foreign currencies or gold. These are estimated to produce not less than £4,000,000 per annum. The Government has arrived at an agreement with the National Bank of Roumania for the formation of a special account into which the payment of sums necessary for external debt services will be made. This agreement is a highly interesting document, and confers wide powers on the National Bank. At the time

Bingo Gold Mines, Limited.— Authorised capital £500,000, in shares of £1 each, divided into 125,000 cumulative 10 per cent. participating preference and 375,000 ordinary shares. It is stated that all the preferred shares have been issued and paid for in cash, and 312,500 ordinary shares have been issued and credited as fully paid. The company was formed in July, 1922, for the purpose of acquiring gold-mining rights. The purchase price has been fixed at £325,000, of which £75,000 is payable in cash. These and other detailed matters are given in a Press announcement, made to comply with Stock Exchange regulations. Apparently the vendor will make £25,000 in cash and £50,000 in shares over the promotion. For a gold-mining proposition, the information, while being voluminous, is, we presume, not an attempt to convince

COMPANY MEETINGS, &c.

WARING AND GILLOW, LIMITED.
DRASTIC WRITING DOWN OF STOCKS.

The annual general meeting of Waring and Gillow, Limited, was held on the 22nd instant at the company's premises, 164-182 Oxford street, London, Mr W. J. Jennings, the chairman of the company, presiding.

The secretary (Mr Joseph Ritson) having read the notice convening the meeting and the report of the auditors,

The Chairman moved the adoption of the report and accounts, and in reference to the amount of £1,128,669 carried forward from the previous year, subject to taxation, explained that it had been agreed with the authorities that the company's liability for taxation would not exceed £807,457. If that sum, together with the preference dividend for the year—£45,000—were deducted, it would be seen that they had started the year under review with a credit balance of £186,210. The loss of £71,293 shown on the year had been clearly foreshadowed at the last meeting, and everyone engaged in business was well aware that the country had been passing through probably, from the business point of view, the most difficult of modern times. The extremely rapid fall in the value of stocks had more than absorbed any trading profit, and the drastic writing down thereby entailed had been a most vital matter adversely affecting profits. It was reflected in the figures of stock-in-trade and works in progress, standing to-day at £557,314, as against £875,361 the year before. The board had met the fall in values to the full, and were advised that a heavy sum must ultimately come to the company in that connection in respect of refund of excess profits duty. Nothing had been included in the accounts, however, in anticipation of that, and, on the contrary, the board believed that a substantial portion of the reserves which had been made for every contingency would also ultimately fall in to profit. Meanwhile, the company's customers were receiving the full advantage of the fall in values. The company's general trade was showing a steady increase in value and volume week by week.

The cash position had improved by about £100,000 during the year, but generally the accounts were still greatly influenced by war taxation and the reserves it had been thought fit to make in connection with the special war work the company had done. The company had come through the worst of the depression with its credit unimpaired, and with cash and liquid assets in a far better position than before the war, and he thought they might certainly claim to have enhanced the reputation of the firm. Last year his final words had been: "The considered view of the board is that we must be prepared for a more or less prolonged period of depression," and those remarks applied to-day. Apart from the fact that there was now nothing to be feared in regard to falling prices, and that the improvement in general trade the board thought they saw had materialised, he did not think he could add anything of a helpful nature.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills dated from Monday to Saturday, August 28-September 2, were opened on August 25, 1922, and the total amount applied for was £55,590,000. Tenders for Monday to Wednesday bills at £99 7s 9d will receive about 43 per cent. and above in full. Thursday to Saturday bills at £99 7s 11d and above in full. The average rate of discount for Treasury bills was £2 7s 9.28d. The amounts allotted were as follows:—In bonds, nil; in bills at 3 months, £45,000,000.

Messrs Samuel Montagu and Co. write on August 24th as follows:—

GOLD.

Indian requirements again being small, most of the gold on offer was taken for the United States of America. Gold valued at \$4,691,000 is reported as having arrived in New York—\$4,215,000 from London and \$476,000 from France. We have remarked on occasion in connection with gold currency reserves that, in order to afford effective support to foreign exchanges, they must be available—either actually or potentially. When gold in reserve is known to be held immobile as a policy, it ceases to function. The situation of Germany is an emphatic commentary upon this fact. The value of the gold held in the Reichsbank, if sold in the world's market, is about £54,000,000. On the 14th instant the notes in circulation amounted to 205,275,349,000 marks. The value of currency marks in British currency sank by noon to-day to 8,400 marks to the pound. On this valuation, the entire Reichsbank issue, calculated in British currency (allowing for some increase subsequent to the 14th instant), is worth only about £24,500,000. Theoretically, therefore, the Reichsbank may be said to hold the foreign value of its entire note issue in gold, and to have a gold reserve of £29,500,000 to spare. As a fact, however, this statement is incorrect, for the value of the mark abroad would be improved instantly and powerfully if the Reichsbank gold reserves were applied to the payment and cancellation of its notes.

SILVER.

The market has been mainly occupied with speculative business. Native operators in China exchange continue to swing to and fro in their operations—now as buyers and now as sellers of sterling—and silver orders corresponding to these movements have been sent to London. A measure of support has come from America—bear covering and otherwise. India has been a free seller. Notwithstanding that the outlook is not promising, the strong speculative influences at work render it unwise to be dogmatic as to the future, though, of course, the power of speculators to maintain prices in the long run is limited. The value of the silver mined in Mexico from the first years of the Spanish conquest—1521—to January, 1922, reached the enormous total of 6,000,000,000 pesos, or \$3,000,000,000 in American currency, according to figures made public by the Mexican Embassy. Considered by weight, Mexico has produced somewhat more than 155,000 tons of silver. Over the 40,000,000 pesos; since 1900 the average has been 74,000,000 pesos; this includes the 10-year revolutionary period of 1911-21, when silver-mining activities were greatly hampered, and in more peaceful state, it is expected that production will mount to general merchandise during July has again turned the balance of trade in favour of India by Rs.32 lacs from an adverse balance of Rs.111 lacs in June, 1922.

The silver coinage during the week ending the 15th instant amounted to 1 lac of rupees. The stock in Shanghai on the 19th instant consisted of about 39,800,000 ounces in sycee, 33,000,000 dollars, and 5,300 silver bars, as compared with bars on the 12th instant. The stock on the 19th instant is the largest reported since May 21, 1921.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

NOTICES.

It is officially announced that an agreement has been concluded for the old-established banking businesses of Messrs Dingley and Co., bankers, of Launceston, and Messrs Dingley, Pearce and Co., bankers, of Okehampton, to be amalgamated Limited. The arrangements provide for the retention of the present staff and for two of the partners, Messrs John Dingley and E. D. Pethybridge, to become local directors. The directors of Lloyds Bank, Limited, announce that Mr J. W. Beaumont Pease, formerly deputy-chairman, has been elected chairman of the bank, in the place of the late Sir Richard Vassar-Smith, Bart., and that Sir Austin E. Harris, K.B.E., has been elected deputy-chairman.

The London Joint City and Midland Bank, Limited, announce the opening of new offices at 25 New Cut, Lambeth, S.E. 1; in High street, Honiton, and at Hockley Heath, Birmingham.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at Market Place, Woodstock, the resident officer being Mr C. H. Tolley.

Barclays Bank, Limited, announce that they will open on Monday next, the 28th instant, a new branch at 52 King street, Penrith, under the management of Mr A. H. Page. A new sub-branch has been opened at Abersoch, under the control of Mr D. L. Jones, manager Pwllheli branch.

Hambros Bank, Limited, have received the following telegram from the head office of Den Danske Landmandsbank, Copenhagen:—"At a meeting of our board of directors Mr Ernst Meyer, president of the Merchants' Guild, Copenhagen, was appointed a manager of our bank, owing to the resignation of Mr Harhoff, who has been a manager since 1872."

THE UNITED NITEL COMPANIES, LIMITED.—The directors have decided, owing to the continued trade depression, to postpone payment of the half yearly dividend, due on the 1st proximo, on the 6 per cent. cumulative preference shares. They very much regret having to arrive at this decision, but are satisfied that it is the best course to adopt, taking into account the bad state of trade.

SUMMARY OF COMPANY PROFIT AND LOSS ACCOUNTS.

[illegible]

(t) Royal Brewery, Brentford.—This dividend absorbed £10,500.

* Half-year.

† Free of tax.

wheat of the old crop was offered at 45s to 47s, and larger supplies of new range from 42s to 44s for suitable milling qualities per 504 lbs, free on rail. Imported irregular, but closed steady in sympathy with higher c.i.f. offers. No. 1 Northern Manitoba 53s 6d ex-ship, 50s landed, No. 3 ditto 48s, No. 2 Hard winter 46s 6d, Australian 53s, Rosafe 64 lbs 49s 6d ex-ship, and ditto landed 52s, all per 496 lbs. The cargo section proved dull, owing to a falling off in Continental demand due to Exchange difficulties, and rates declined in sympathy with lower foreign advices. The small business effected comprised steamers of New South Wales afloat at 50s to 49s 9d, Barusso 62 lbs shipping/shipped 46s 6d, Rosafe 63½ lbs afloat 46s 9d, all to the Continent. Parcels in generally quiet demand, and values easier. Flour dull and easier. London standard straight run reduced to 43s, patents 45s to 46s, town households 41s, all English straight run 41s per sack delivered London area. All English country straights (new) 36s 6d, free on rail at London stations. Imported weak. Manitoba top patents 42s 6d to 44s, export patents 40s to 43s, Pacific 37s 6d to 38s, Australian 38s 6d to 39s 6d per 280 lbs ex-store. On c.i.f. export

Rangoon spot 7s 4½d, Madagascar haricots old crop 9s to 12s, new crop 14s to 16s per cwt, Chinese horse beans £10 15s to £11 15s per ton. Peas steadily held. English maples 75s to 90s, dumplings 58s to 63s, spot 38s, Tasmanian A grade 22s free on rail. Imported, Japanese 22s, Dutch 21s to 26s per cwt. English rye quoted 38s to 40s per 504 lbs free on rail. Lentils steady. No. 1 split 22s, No. 2 ditto 21s 6d, Egyptian 21s to 22s per 100 lbs. Homeward grain charter-paid for early September loading to U.K./Continent, heavy grain clipped oats 2s 6d extra, ordinary oats 3s 9d extra, heavy grain steady for August loading, but forward easy. North America Bordeaux/Hamburg September done 3s per qr, America Northern Range to Mediterranean August 17 cents, and Gulf to West Italy to U.K./Continent, and 2s 6d extra Mediterranean. Easterns quiet and Bombay on deadweight paid 21s to U.K./Continent per ton. Australia inactive and nominal. Danube chartering at the moment is restricted owing to adverse weather and at the conditions.

COMPARATIVE AVERAGE

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21.

	1921-1922.	1920-1921.	1919-1920.	1918-1919

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated August 24th, is as follows:—Pig-iron: Owing to the local holidays, the weekly pig-iron market was not held on Tuesday. Business is held up for the time being, and the nominal quotations are unchanged at 87s for No. 3 Cleveland G.M.B., and 90s for East Coast mixed numbers hematite. Several lots of both Cleveland and Hematite pig-iron have been sold to America for prompt shipment, and this business is very acceptable to ironmasters at a time when the home demand is very quiet. Manufactured iron and steel: All the local steel works are closed this week, but a few more orders have been placed at current prices. Steel ship plates, home, £9; steel ship angles, £8 15s; iron bars, £11; steel rails, £9 10s net. Iron Ore: Only a small business has been done, restricted to odd cargoes for prompt delivery. The nominal quotation for best Bilbao Rubio is 24s 6d, but buyers expect to cover their requirements at something below this figure.

Our Sheffield correspondent writes:—The recovery of trade, while it certainly exists, progresses in a very patchy manner, and in some important departments it has scarcely been felt up to the present time. In fact, cases of reaction can be found. In this respect the Sheffield district is less fortunate than the other great centres of iron and steel manufacture, and there are still nearly 50,000 persons unemployed. All kinds of crucible steels are stagnant as ever, and the average working of the mills and forges does not exceed half time. The improvement in the cheaper grades of mild steel continues, the demand for these increasing in both the home and export markets. Current prices have now reached a level to tempt buyers in most parts of the world, and, moreover, British makers can give better delivery than Continental works. Basic pig-iron is being imported freely to the United States and the Continent, but home trade in foundry and hematite qualities is extremely quiet, and stocks are accumulating at some of the furnaces. Cut prices will be accepted for actual business. There is growing activity in the electrical department, and the outlook for it is decidedly hopeful. Locomotive engineers have booked some good overseas orders lately, and are fairly well provided with work for the coming winter months. British railways have not yet departed from their hand-to-mouth policy of buying steel for rolling stock and general purposes. Extreme depression obtains in shipbuilding material. A moderate amount of business is being done in some kinds of hand tools, other kinds being quiet. There is universal complaint of unprofitable working. Wages continue to be reduced in all trades. The strike of cutlery operatives has not been settled. In the coal market steam hards are in fair demand at about 20s or 21s per ton at pits, and there is a better sale for cobbles, nuts, and slacks, while cokes are scarce and dear. Gas coal is also going out more freely. Buying of house coal for the winter has begun. The demand for best qualities exceeds the supply, and there is an increasing call for seconds. Best South Yorkshire hand-nicked branch commands 36s per ton.

Our Glasgow correspondent (writing on Thursday) says:—Boiler plates, heavy rails, and sections keep exceptionally steady, especially boiler plates. Of the latter Messrs Yarrow, at Scotstoun, have booked sufficient to enable them to re-open their yard—after being closed down for a year. The fixed charge for boiler plates is £12 10s, exclusive of extras. Steel (black) sheet makers have lowered quotations by 10s a ton, and the new list gives—under $\frac{1}{4}$ to $\frac{1}{8}$ inches size, £10; $\frac{3}{8}$ to $\frac{1}{2}$, £10 10s; $\frac{1}{2}$ to 1 inch gauge, £11 15s; 1 to 2, £12 15s; 20 to 24, £13 5s; 24 to 27, £14 5s; 14 gauge nail sheets, £9; 15 gauge, £9 5s; 16 gauge, £9 10s; corrugated, 24 gauge, £17 12s 6d. Inquiry is chiefly for thin sheets, and that from India, China, and Australia, and it is believed demand will be maintained, and extend to the heavier sizes, which just now are rather neglected. The United States continue to purchase good quantities of Scotch foundry iron, which is going out by several thousand tons per week. If it were assured that the States would remain favourable for a period (some months) producers round here would put a number of their idle furnaces on blast, for they are getting rid of all stocks, but there is a doubt, and they hold off from increasing outputs. It is understood that the shipments to the States are being executed at quite 100s a ton for No. 3 f.o.b. Glasgow. One calculation puts the despatches already at about 25,000 tons. For home, pig-iron inquiry is most inactive. Scotch hematite is stagnant at £5 7s 6d (1s 3d back since last week); No. 1 foundry £5 a ton (2s 6d up); No. 3 foundry, £4 15s (also 2s 6d up), and Crown bars £10 10s (unchanged). Demand for bars is unsatisfactory from all points of view. Bridge builders continue well engaged on old contracts. Amongst the inquiries in the market to-day are one from the Indian Government for corrugated steel sheets, galvanised pipes, gas and water tubes (black); and one from the Great Indian Peninsula for steel rails, &c. The coal trade position varies with the tenour of the strike reports from the States. To-day the tone is strong, and prime qualities are commanding 27s to 30s a ton for shipment to America. Scotch collieries are more fully employed than they have been for over a year.

Our Cardiff correspondent writes:—As indicated last week, the partial settlement of the coal strike in the United States has had absolutely no effect on the Cardiff coal market. As a matter of

fact, it is doubtful whether there would be any immediate effect even if a complete settlement was effected. Collieries are so fully booked up that they are not anxious to add to their commitments for a couple of months ahead, and consequently there is no sign of relaxation in prices. There is, it is true, a lull in the demand on American account, but there is every indication that Canada will soon be in the market for supplies. Representatives of Welsh firms have already reached Canada, and are in consultation with coal factors in that country. At present anthracite coals are practically out of the market, and dry coals are being purchased as a substitute. The result is that the prices of these latter have mounted up to pretty well the same level as the leading Admiralty descriptions. The paucity of inquiries from the Continent continues, but this does not cause any perturbation in the existing circumstances. The full effect of the American shipments was felt at the South Wales docks last week, and the quantity exported easily constituted a record for this year. The Customs returns showed that during the week there was exported nearly 600,000 tons—a figure which approximates that of pre-war days. In the open market charterings have been reported from Cardiff and Swansea for the United States and Canada aggregating over 1,150,000 tons. The stringent measures taken by the Great Western Railway Company in the regulation of traffic has proved successful in preventing any congestion in the dock areas, and bearing in mind the unexpected rush, the complaints made as to delays are remarkably few and insignificant. Although Germany is reported to be getting heavy supplies from this country, South Wales has not yet benefited. In fact, not a single inquiry on German account has been reported and presumably all the German contracts have gone to the North. The output of coal was adversely affected by the holidays, but the miners promptly resumed work, and the rate of production is probably now approximately about one million tons per week. Coke is in fair demand, and prices tend to harden. On the other hand patent fuels are dull, and several of the works are on stop through lack of orders. Prices continue at recent levels, consequent upon the fact that costs of production are so high. Current market prices are as follows:—Best Admiralty, large, 31s to 32s 6d; seconds, 30s to 31s; best drys, 30s to 31s; black veins, 30s to 31s. Western Valleys, 30s to 31s; Eastern Valleys, 27s 6d to 30s; best bunker smalls, 22s to 23s; ordinary cargo smalls, 20s to 21s; coking for export, 40s to 45s; inland blast-furnace coke, 27s to 27s 6d; a ovens; patent fuel, 28s to 30s; pitwood, ex ship, 34s 6d to 35s.

MANCHESTER, August 24.

Prices in the market during the past week have gone against buyers. The upward movement has stimulated inquiry in yarn and cloth, and although in many instances buyers have not been in a position to pay the figures required, a fairly healthy trade has been done in some sections. In cloth circles the chief activity has been for India, there being an encouraging turnover in grey staples and bleaching cloths, chiefly for Calcutta. The trade outlook in our dependency is healthy. A little more inquiry has been mentioned for China, but transactions of importance have been quite isolated. News from the Near East remains poor. A few more lines have been put through for South America. The home trade houses are hampered by heavy stocks of summer goods.

Yarn prices have been firmer. Business has been irregular, but a fair turnover has taken place in American and Egyptian counts for home use. The export yarn department remains dull.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is just a nice, steady business passing in tops, and the market remains remarkably firm. Topmakers are well booked forward, and are not disposed to press business, especially as there is a very general feeling throughout the industry that merino values will again show an advance when the auctions are resumed in London on September 4th. Really superior wools are scarce, and even the continued slump in the German mark does not counterbalance the keen demand for raw material. The unsettled conditions in Germany are naturally causing a certain amount of anxiety, but trade is still being done on a sterling basis, and payment is being made on the due date. The trade in tops is more or less of a hand-to-mouth nature at present, but prices are exceedingly firm, with, if anything, a hardening tendency. Good warp 64's tops are quoted as high as 5s per lb, but some firms are still willing to accept anything from 4s 9d for a standard article. Average 64's are available at from 4s 6d to 4s 7d, and 60's super at 4s 3d to 4s 4d. Cape tops are very scarce, and are making prices fully equal to Australian. There is not much change in crossbreds, but quotations for all qualities are firm, and against the buyer. A fair amount of new business is being put through in yarns, and prices show a distinct hardening tendency. Spinners are well employed both on home and export account. There is not much change in the piece goods trade, but the outlook is fairly satisfactory, and renewed buying is expected in the course of a few weeks, especially if values are well maintained at the next series of colonial wool sales in London. Most descriptions of home-grown wool are moving, and quotations remain very firm. The finest sorts are favoured, and there is rather more doing in Cheviots, good half-breds, and lustre hogs.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There is no strikingly new development in the wool trade, but everything appears to be intact. Prices in consuming centres, particularly for merinos, are still showing an upward tendency, and everything appears to indicate a continuance of the sound factors which are now being revealed. Both spinners and manufacturers appear to be somewhat concerned about the present high market values of merinos and fine crossbreds, and are certainly looking forward with some anxiety to the prospect of a new selling season opening in Australia with merinos on a basis of 4s 9d for good 64's tops. There are firms in Bradford to-day who are asking as much as 5s for really good 64's for December delivery. One might assume that this is entirely a protective price, but some firms are so sanguine regarding the future that they are unwilling to accept less until they can buy wool to produce this quality of top at a lower price. Quite a number are so optimistic regarding the future that they are freely prophesying a further advance at the next series of London sales, which are expected to begin on September 4th, and judging from the prices they are quoting, are "banking" upon this advance being realised.

It is perhaps a little too early to speak definitely about the future, but everything indicates a continuance of the present sound manufacturing conditions which are found everywhere in the worsted industry. Recent information from Roubaix is equally satisfactory, first hand news intimating that mills are very busy, consumption being at the maximum in combing, spinning and weaving departments. There is no mistaking the tenor of the reports

received from Germany and Switzerland, and in whatever direction one may turn, the same tale is told respecting merinos.

Perhaps one may venture to suggest that Messrs Dalgely and Co. or the N.Z. Loan and Mercantile Company would be conferring a real favour upon the trade if they would ask their head office in Australia to cable some definite information respecting the shearers' strike, and what is likely to happen in connection with the shearing of the new clip. Such information would be heartily appreciated at the present time. Some are of opinion that the shearers' strike is general, though we scarcely think this is so, and we have received information from at least one source which indicates that not all the shearers are participating in the strike. Evidently some are prepared to stand by the decision of the Arbitration Court. However, more definite information respecting the general state of affairs would be welcome.

The forthcoming clip should be a good average one, though we have received several letters this mail which speak of it as being somewhat more waxy than the last. Generally speaking it should be fairly well grown. We know that several New Zealand pastoralists are resorting to the use of merino and Corriedale rams, all the direct outcome of the low prices ruling for medium and coarse crossbred wool. The use of the rams mentioned should make the fleeces much finer, and one has often regretted the almost complete absence of comeback wool from New Zealand. However, we think this move for two or three years would be an advantage where it could be adopted, and as far as one can see, there is every prospect of fine crossbred wool maintaining to day's profitable prices.

VEGETABLE OILS AND OILSEEDS.

Large supplies of linseed near at hand and good crop reports, coupled with the pressure of re-sellers of Calcutta, had the effect of depressing the market to the extent of 20s to 25s per ton on the week. As low as £16 17s 6d was accepted for July, August Plate to Hull. Prices have, however, rallied somewhat, Plate on spot at Hull quoting up to £18, and "afloat" £17 10s. Trade in the new Plate crop has begun, a steady business being round £15 12s 6d to £16 10s to Hull and £15 15s to £16 10s to the Continent, January-February loading. Calcutta to London has been freely done at £18 5s and £18 10s for shipment, £19 now being current market value for afloat. Cottonseed has been irregular and weak. Black Egyptians easing off to £10 5s at Hull, with £10 10s paid for September shipment to Liverpool. Bombay quiet, and £8 5s accepted for seed on passage to Hull. Soya beans are lower, Manchurian offering at £12 5s, Hull or Hamburg, with sellers of new crop 10s below this figure. Rapeseed and most other seeds dull, and in poor demand.

In consequence of the small trade passing, and of lower seed values, raw linseed oil has sharply declined, £39 being the Hull price for prompt delivery, or 60s to 80s drop on the week. Forward positions have also declined, but are steadier round £34 10s for September-December, a fair business having been done in the vicinity of this figure. The unsettled conditions on the Continent and the effects of the new American tariff have been adverse to trade in this commodity. Cotton oils remain dull and neglected, with prices weak. Crude Egyptian freely offering at £35, and soapmakers' grade of refined at £39, ex Hull mill. Soya bean oil is also easier at £39 ex Hull mill, and palm kernel at £36 and ground cut at £44 are each 20s lower, and very little actual trade passing.

Linseed cakes are in moderate supply, and rather more business is reported, late rates being fully upheld. Cotton cakes are in fair request, and meals are inclined dearer.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Cattle hides were firmer at the auctions held this week in Bermondsey, and most classes of ox and heifers made advances ranging from 3/6d to 3/8d per lb. Cows were unchanged except for 59 lbs and under firsts, which class made 3/6d per lb less money, while seconds bulls depreciated in value by 1/2d per lb. Kips were firmer, seconds and thirds making 3/6d per lb more money. Calf skins were slightly easier on the balance by about 3/6d per lb. Sheep skins realised more money, pelts selling at from 3s 5d to 5s, and lambs from 2s to 6s 4d per skin. There is not much activity in the foreign hide market so far as the home trade is concerned, on account of the high prices ruling for most descriptions. The few Campanas which have changed hands during the week made \$46, with Swifts Montevideoes fetching as much as \$46 1/2. Australians and Capes are neglected in the salted descriptions, with Saladeros only offering in small lots. A few small sales have been effected in dry and dry salted descriptions, but business is restricted on account of the prices being asked.

Sole leather has shown a slight improvement during the week, although most of the trade continues to be done with the repairing erd. In this direction bends averaging from 8 to 10 lbs are most in request, shoe manufacturers being interested in the lighter weights of common stock at round about 16d per lb. Common bellies are receiving more attention, and anything up to 7 1/2d usually finds a buyer. Shoulders are a poor sale, and little business has been done in this direction during the week.

Distributors of upper leathers report a little more enquiry for the box and willow calf, with prices slightly firmer for some of the imported goods, particularly German. Glace kid in black is also receiving more attention, and plump skins at from 10d to 15d are enquired for. Coloured kid leathers, however, are not so much in request, and shoe manufacturers are only covering themselves as orders are received. Carriers report a trifle better call for waxed kip butts and splits.

Shoe manufacturers still find the orders for footwear on the small side, and rather slow in coming to hand. In fact, some of the factories have found it necessary to close down for a long week-end on account of the scarcity of orders on the books.

JUTE.

Messrs W. F. Soutar and Co. write, on August 23rd, as follows:—Since our previous report the market has continued lifeless, except during the disturbing influence of the acreage forecast in July, indicating only 1,456,000 acres under jute cultivation, which, if correct, will mean a considerable shortage, even against present consumption, before another season's crop can be provided. However, weather conditions for the crop have been good since the acreage forecast was issued, and in consequence the outturn per acre will be larger than was at that time estimated. Unfortunately, during the same time trade conditions have become worse, and the sanguine estimates of consumption have naturally shrunk. Prices during the forecast spurt reached £39 for old crop and £42 for new crop first marks on Dundee contract, and are now at £32 10s to £33 for actuals, with a drooping tendency. Exchange has remained remarkably steady notwithstanding the extraordinary fluctuations of Continental exchanges. The rate has ruled between 1s 3 1/2d to 1s 3 3/4d for telegraphic transfers, and at the close is 1s 3 1/2d. Freight rates have been still further reduced, and are now at 3s 6d per 50 c.f.t. less the usual 10 per cent. rebate. Stocks of jute in Dundee we estimate at 700,000 bales (including unsold in and there brokers' hands and standing stock in spinners' hands), and there are 49,500 bales of old crop still to arrive in Dundee. The consignment in Dundee and district for season 1922-23 we estimate at 800,000 bales, which means that the trade of the district requires 750,000 bales of new crop jute if stocks are to be maintained at present level. Cloth and yarns: For a time in May, June and July, stimulated no doubt by reports regarding shortage of the crop and advancing prices for raw material, large orders were placed for Hessian, and prices advanced from 4d to 5 1/2d per yard, and are now 4 1/2d per yard. Eight-pound cops, at the same time, advanced from 3s to 3s 8d per spindle, but are now 3s 3d per spindle. At the close large sales are being made of Hessians, and stocks of such are being rapidly cleared. New crop 1922-23: There is no eagerness to sell at present values, as the general expectation is that prices are bound to be higher, and that the Calcutta mills will try to secure the bulk of the limited crop that will be available. New jute is not being pressed by Calcutta, although quantities are now reaching the bazaars, and the yield of fibre per acre will likely, with recent favourable weather conditions, be estimated at fully three bales per acre.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 25.

With no appreciable recovery in demand, business in most commodities proved very quiet, but more particularly so with regard to raw products.

SUGAR.—Prices are easier on the week, mostly 1s 6d per cwt in the case of refined descriptions, and actual transactions were confined to a moderate compass. Messrs Tate and Lyle's cubes, 58s to 59s; crushed, 56s 6d; granulated, 52s to 52s 9d; caster, 55s 3d to 56s 3d; yellow crystals, 46s 9d; pieces, 36s to 40s for yellows; and fine white, 46s 6d. Granulated, October, 51s 3d; November-December, 50s 9d. Crystallised West India ranges from 42s 6d to 45s 6d as to quality. American granulated, spot, sold, 50s 6d to 49s 6d; ditto, afloat, 23s 6d to 23s; August, 23s 3d; September, 23s; white Java, arrived, steamer, 21s to 20s; July, steamer, 19s 6d; August, 19s 3d, c.f. and i. terms, London. White Mauritius, spot, 47s to 48s 6d; white Trinidad, 49s; white Brazilian, 47s 6d to 48s. Cuban, basis 96 per cent., August-September shipment, sellers, 18s; Java, No. 17, Dutch standard, August-September, 19s 9d; and some Brazilian, basis 80 per cent., September-October, sold, 9s 3d, all c.f. and i. terms, United Kingdom. Dutch granulated, prompt, 26s, f.o.b., Amsterdam, Czechoslovakian granulated, November-December, 22s, f.o.b., Hamburg. Cuban stocks stand at 513,200 tons, against 1,308,500 tons same time last year. Liquid glucose, spot, 28s. Term market, December, sold down to 20s 6d.

COFFEE.—Spot market steady, and all home trade qualities met with fair support, but export descriptions still hang fire. Nairobi, bold sizes, sold 95s 6d to 102s 6d. Costa Rica, 100s 6d to 112s 6d. Futures nominal, while more or less neglected.

COCOA.—There was only a limited trade effected in spot parcels, but prices showed no particular alteration. Accra to arrive, F/F quality, October-December, sold 38s, f.o.b. terms. Butter quiet at 1s 7d per lb.

TEA.—Indian auctions this week embraced some 29,884 packages, of which 22,400 consisted of new season's. All the better qualities experienced active competition at full prices, but common and some medium sorts disclosed slight irregularity, with a tendency on balance to favour the buyer. A brisk demand ensued for the 27,478 packages Ceylon catalogued, and prices ruled dearer all-round, being in the case of fine qualities 14d to 2d per lb higher on the week.

RICE.—Market very quiet, and general situation nominal at the moment. Two stars, spot, 15s 3d to 15s 6d; August-September, 14s 4 1/2d. Broken descriptions in poor support. Beans steady, and Rangoon hand-picked, spot, sold, 7s 3d. Japanese peas, after a heavy decline, engaged more support, and prices improved, but manifested some irregularity. Spot lots sold, 36s to 37s; September-October, from 23s 9d to 27s, and later at 25s 6d; December-January, down to 22s, 25s 6d, and later at 24s.

SPICE.—Pepper market remains quiet and without new feature. Fair black Singapore, spot, sold, 4d; August-October, steamer, 3 1/2d; Lampung, spot, quoted 4 1/2d; Aleppy, spot, 4 1/2d; Tellicherry, 4 1/2d; Ceylon, 4 1/2d; white Singapore, 6 1/2d; August-October, 6d; Muntok, spot, 7d; August-October, 6 1/2d to 6 3/4d. Zanzibar cloves, spot, 1s 3d; October-December, 7 1/2d. Pimento, spot, 2d; flake tapioca, spot, 2 1/2d per lb; ditto, August-September, steamer, London, 21s 6d; fair Penang seed pearl, spot, 19s 6d. Sago flour, September-November, 13s 6d; October-December, 13s 3d. Desiccated coconut, spot lots sold, 34s 6d to 34s; afloat, 33s to 32s 6d; August-September, 33s. Ginger quiet, unaltered.

FRUIT.—The market continues in a generally quiet state, and of currants Patras half-bags quoted 55s; quarter cases ranging from 52s to 56s. Australian three crowns attract attention at 65s to 67s. Sultanas.—Australian three crowns sell at 10s, but there is no interest shown in other growths. Cape raisins vary from 50s to 60s, as to grade. Evaporated fruits quiet, though plums meet with moderate support. Oregon, 30-40, 94s. Star dates, on spot, 27s 6d.

JUTE.—Only quiet trading was in force this week, and with some pressure to sell, prices suffered a further decline. First grade, spot, Hamburg, sold, £31; ditto, August-September, ditto, £26 to £25 15s; October, Continent, £28 10s; lightning grade, ditto, £26 to £25 15s; ton. 10-oz Hessians, spot, 35s 6d; forward, 34s; 8-oz, spot, 25s; forward, 24s. A twills, spot, 77s; forward, 76s; B, spot, 64s 6d; forward, 64s 6d; salts, 59s 6d; sugars, 76s.

HEMP.—Manila was dealt in quietly, and prices showed little or no alteration. G grade, September-November, quoted £34 10s; J, £31 10s; K, £30 10s; L, £29 10s; M, £28 10s. New Zealand quiet, but steady. H.P.F., spot, £34; forward, £32 10s; fair forward, £31. African Sisal firm, with few sellers. No. 1 G.E.A., September-November, quoted £37 10s; B.E.A., £36 10s. Indian hems slow at about steady prices.

SHELLAC.—Market dull, but prices tolerably steady. T.N., spot, quoted 320s; August, sold, 290s; October, 290s; and December, 280s to 275s.

ALEXANDERS DISCOUNT Co., Ltd., 24, LOMBARD STREET, E.C.3.

Telephones: 1832 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL AUTHORISED £1,250,000 CAPITAL PAID UP £600,000
CAPITAL SUBSCRIBED £1,100,000 RESERVE FUND - £320,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

ates were kept firm by doubts as to plentiful money next week, and after the Treasury Bill result was announced, the three months' rate was nominal in the neighbourhood of 2½ per cent.

	Sept. 1, 1922.	Aug. 25, 1922.	Aug. 8, 1922.	Aug. 11, 1922.	Previous Rate and Date Changed.

Market rate (3 months' bills)	2½	2½	2½	2½	2½

The Bank return showed an increase of £465,000 in the circulation, a decrease of £6,000 in the stock of gold, and a decrease of £471,000 in the Reserve. There were small increases on balance, both in the Government and Other securities, but the most notable feature was an increase of 7½ millions in the Public deposits, with an almost equal decline in the Other deposits. There was a reduction of £1,818,000 to £293,311,000 in the currency notes outstanding on August 31, 1922, which includes £1,569,600 for notes called in but not yet cancelled. The fiduciary issue is £243,591,700, or £66,396,700 below the maximum.

THE STOCK MARKETS.

In the early part of the week the stock markets were under the influence of such unfavourable factors as the reparations crisis, the Turkish advance in Asia Minor, the settlement of the pre-war account, and monetary stringency. Under these circumstances prices in the Consol market weakened, and a very little selling was sufficient to send quotations down. On Thursday afternoon a better tendency in investment stocks set in, and yesterday morning's news of the Reparation Commission's unanimous decision was very well received. French and German securities moved up and down with the exchanges, while a fall took place both in Greek and Turkish bonds. Home railway ordinary stocks have been neglected, and the prior-charge stocks are mostly easier. The oil share market is dull, and rubber shares gave way a little on the Dutch Government's decision, referred to in a Note of the Week. In the industrial markets textile shares are a strong feature, but the recent activity in tobacco shares has waned. For most of the week the Kaffir market was held in check by developments abroad, but during Thursday afternoon and yesterday there was a decided recovery.

COMMODITY MARKETS.

The commodity markets are still under the influence of the home holiday season, while overseas business is mainly restricted on account of the European and Near East political outlook. There is a disposition in the cotton trade to mark time pending the official report on the American crop and Continental political developments. In consequence, price changes have been few. Transactions were scarce in the wool market, but prices remain firm, with quotations for merinos moving higher. The home demand for Cleveland pig-iron is poor on account of the holiday season; a welcome demand, however, is reported for American account, and prices are inclined to be firm. With a free market in manufactured iron and steel, competition is keen, and our correspondent states that it is difficult to fix prices. In the South Wales coal markets new business has been on a small scale, although inquiries for America are still being received. A fair business has been done in oilseeds, following the sharp fall in linseed values.

FOREIGN EXCHANGE.

After the wild movements which culminated at the end of last week, rates in general have shown rather more steadiness, in anticipation of a decision by the Reparation Commission, and, in spite of many disquieting reports which were reflected in hour-to-hour fluctuations, there was a growing feeling that France would not force the issue to the full length indicated in M. Poincaré's speeches. At the end of the wide fluctuations on the 25th the mark settled down to about 9,000, from which it further recovered sharply on the following day, until by Wednesday it had again reached 6,200. On Thursday a new outbreak of uncertainty, mainly coming from Berlin, brought it up again to 7,300, but on the

announcement of the decision of the Reparation Commission the market yesterday morning opened not above 5,000. This rate, however, did not hold during the morning, and by midday it was up again to 6,200. Although the present compromise offers a more or less satisfactory way out for the moment, the position is still very obscure, and there is a good deal of uneasiness as to the attitude of both the German and French Governments. The Paris rate has moved in the same way as the mark, from 59.20 on the 25th to about 57.65 on Wednesday, 58.17½ on Thursday, and, after being about 57 at the opening of yesterday morning, to 57.30 by midday, Brussels, as usual, showing similar fluctuations from 62.30 to 60.45. The forward rate in Paris narrowed to five points per month over spot, while in Brussels it moved somewhat the other way, from two points to three points per month under spot. Italy, after moving in much the same way, ended up at 101½, about 2 lira better than a week ago. After maintaining for some time a surprising steadiness, the New York rate has given way somewhat to the combined effects of seasonal demands, the slackening off of coal imports on the settlement of the strike, and the unsettled state of Europe, and has dropped away from 4.47½ to 4.46. A movement of this kind is only to be expected, and all that can be said is that the rapid growth of inflation in the States and the decline in American exports may counteract to some extent the general adverse influences. The rate for futures is ½ cent per month over spot. The movements during the week in neutral currencies have been somewhat irregular, going in our favour in the early part of the week and against us in the middle, but in the end rates have ended up much the same as a week ago, with Amsterdam at 11.44½, Switzerland at 23.46, Madrid at 28.78, Lisbon, also, which has fallen rather rapidly during recent weeks on unfavourable views as to its position, has been more or less steady at 2½. Stockholm and Christiania have moved somewhat in our favour, Copenhagen somewhat against us. In Central Europe Vienna, after reaching about 425,000 on the 25th, reacted sharply on Monday to 320,000, and shows now a slight improvement on this figure. While the apparent solution of the difficulties in the way of the new bank of issue may be taken as satisfactory, it would seem, on the other hand, that the negotiations for close co-operation with Italy are having less success than was at first expected, partly owing to the determined opposition of the Little Entente, partly to the fears of Italian industrialists of Austrian competition. Warsaw also, which on the 25th had reached 42,500 marks, has recovered again to 38,000, but the close sympathy of this rate with the German mark is still proving a difficulty. It is to be hoped that an effective scheme of financial reform will be inaugurated by the new Government. Prague, after being as low as 117½ on Monday, has risen again to 132½, a welcome reaction to Czech industrialists. It is suggested that a good deal of the recent rapid appreciation in this currency has been due to heavy purchases by Austrian and Germans determined to escape at all costs from the wreck of their own "valuta." Belgrade, after its recent recovery, has depreciated again a little, and Bucharest is also somewhat higher. Helsingfors, at about 209, is very much the same as a week ago. In the case of Greece the defeats in Asia Minor are reflected in a rapid rise from 142 to 152½. In the East the rupee is about the same as pushed up a little on American and Chinese support, the silver market became quiet again later in the week, price ending the same as last week. Yesterday morning, however, both Hong Kong and Shanghai showed weakness. In South America, Buenos Ayres moved up to 44½d, Rio de Janeiro was unchanged, Monte Video at 42½d was ½ cheaper, as also was Valparaiso at 31.50 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 26, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	14,195	Supply Services	14,195
		Interest on Debt	
		Grants	
		Added to Exchequer Balances	
		Reduction of Debt	
			14,195

The total revenue during the week ended August 26, 1922, amounted to £14,195,380, which compares with £13,533,103 during the corresponding week of 1921. The expenditure for the same week amounted to £7,048,183, as against £13,190,737 in the corresponding week last year. The chief item of revenue was Property and Income-tax, which yielded £5,048,000, against £4,254,000 in the corresponding week last year. Customs yielded £3,114,000, against £3,311,000. Estate duties produced £1,160,000, against £1,586,000.

The week's operations reduced the National Debt by the sum of £6,577,738, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 100	Treasury Bills	- 6,364
Unemployment Insurance ..	+ 180	Public Department Advances ..	- 472
		War Loan Surrenders	- 402
	+ 280		- 6,838

The floating debt was reduced by £6,812,000 to £867,933,500 during the week ended August 26, 1922.

A BREATHING SPACE.

ONCE more the experts of the Reparation Commission have come to the rescue of the politicians and patched up an arrangement which prevents a definite breach between the Allies on the Reparation question, and gives the politicians a breathing space in which to make fresh efforts at concerted financial policy. We do not claim for these gentlemen any intellectual or moral superiority over the Cabinet Ministers of their respective countries, but they happen to work under conditions more favourable to international harmony than have obtained at the many abortive conferences which have discussed this question. In the first place, they have the great advantage of possessing a thorough understanding of the problems with which they deal. Secondly, they are happily free from political pledges and the necessity of considering electoral chances, and finally they have the

benefit of many months of personal acquaintance and co-operation. We may perhaps add that they seem to have been actuated by a determination to reach a solution and to endeavour to meet one another's difficulties, a condition which we fear has not actuated all parties at the last two or three conferences.

In form the Reparation Commission have rejected the request of Germany for a moratorium in respect of cash payments, but in effect they have granted this concession indirectly for the rest of this year. It will be remembered that the experience of 1921 proved the impossibility of Germany's meeting in full the schedule of payments agreed upon in May of that year, and that the Conference at Cannes very nearly agreed upon a reduced schedule of payments for 1922. That conference broke up prematurely owing to the French political crisis, and after much negotiation, in the course of which Germany proceeded with payment on the hand-to-mouth basis of 31 million gold marks every ten days and a plan was made for the tightening up and supervision of Germany's finances, the Commission finally approved the payment in 1922 of 1,450 million (gold) marks in kind and 720 million (gold) marks in cash. Of this latter amount 450 millions have been paid, leaving 270 millions to be paid before the end of the year. Practically the whole of the cash due in 1922 is payable to Belgium under the clause of the Treaty which gives her priority of payment up to two milliard marks, and as Belgium is anxious not to drive her debtor into default, she has suggested, and the Commission has unanimously agreed, that the outstanding balance of cash shall be paid by means of Treasury bills due six months hence. As no moratorium has been asked for in regard to deliveries in kind, which go in the main to France, no further question should arise on the payments for this year.

Like all the devices invented from time to time by the Reparations Commission, however, the settlement is only a make-shift; for it does not touch the problem of scaling down and fixing on a definite or permanent basis the payment for reparation. This could only have been done with the concurrence of the Governments, and as part of a general settlement, which would include the question of the Inter-Allied debts. Moreover, the respite is only a short one. If no further step is taken Germany will automatically become liable in 1923 to meet the full schedule of payments, which proved impracticable last year. Incidentally she will have to meet the added burden of the bills about to be issued when they mature six months hence. The Commission will, therefore, have to get busy almost at once on the problem of the amount and methods of payment which Germany is to make next year. On this question the problem remains substantially where it was before the abortive conference last month in London. Its outstanding feature is that, however willing France may be to scale down Germany's debt, it is politically impossible for her and, as the Bankers' Committee evidently considered, it would be unreasonable to expect that she should agree to a radical reduction, unless the claims against her are also reduced in accordance with equity and her ability to pay. We need hardly repeat that in our view this means that, however sharply we may criticise France's subsequent attitude either towards Germany or to other powers,

ical questions of the day, on any basis of justice France owes the world nothing in respect of the Great War. To make the settlement of the Reparation problem and with it the rebuilding of the commerce of Europe contingent upon a change in attitude of the American nation towards the British debt is a counsel of despair, and we can see no prospect of approaching a solution of the vicious circle within which Europe's trade is being throttled and her political stability menaced, until Great Britain is willing in effect, if not actually in name, to reverse the disastrous policy of the Balfour Note.

In this connection, we are glad to see that though the Note was not actually addressed to America, the Secretary of the Treasury in Washington has issued a statement with regard to America's loans to Great Britain, which sets right the unfortunate misrepresentation which was made in that historic document. "It should be said," Mr Mellon states, "that the obligations of the foreign Governments in question had their origin almost entirely in purchases made in the United States, and that the advances made by the United States Government were for the purpose of covering the payment for these purchases by the Allies. The statement that the United States Government virtually insisted upon a guarantee by the British Government of amounts advanced to the other Allies is evidently based upon a misapprehension. Instead of insisting upon a guarantee of any transaction of that nature the United States Government took up the position that it would make advances to each Government to cover the purchases made by that Government, and would not require any Government to give obligations for advances made to cover purchases of any other Government. Thus the advances to the British Government were to cover its own purchases!" It appears from the statements made in Washington that about 28 millions of the British debt in America were incurred to pay for deliveries on contracts placed in America before April, 1917 by us on behalf of Russia, but this is the only sum spent in America on goods supplied to the Allies. It is true that in 1917 and 1918 we lent to our Allies between 800 and 900 millions to enable them to buy goods in Great Britain, and it is on this basis that Sir Robert Horne stated that if we had not had to lend to France, we should not have had to borrow in America. Even this statement, which makes some very drastic assumptions, is open to discussion, but it is very different from the statement of the Balfour Note that America was unwilling to lend to the Allies, and would only lend through Great Britain. The statement is unjust to both France and America, whose direct transactions must have exceeded by a considerable amount the total sum lent to Great Britain. The Government has so far refused to give adequate details of these debts. It is to be hoped that the House of Commons will insist on the fullest information at the earliest possible moment. In the meantime, the mark exchange is thoroughly demoralised, and its future course quite incalculable. What are the effects of the slump on the economic situation? In the first place, the reaction of the recent movement upon the trade of the world is not as serious as was the case a year ago. The phenomenon of depreciation is now well understood, and by means of index numbers wages and internal prices more promptly adjust themselves. The business world is not afraid that the slump will once more demoralise the international price level. Again, though the slump affects Germany's power of making cash payments, it has not yet seriously undermined her economic strength, and if the debacle can be checked, Germany in a comparatively short time would be as capable of paying reparation as she has ever been.

On the other hand, we have seen in Russia and Austria that if the depreciation continues indefinitely, Civil Government becomes impossible, and economic relations so disturbed (in spite of such devices as using foreign currency in trading transactions, &c.) that there is something very like political and economic disintegration. Germany, with her great traditions of organisation, will make a much stiffer resistance to such a tendency than Russia has done, but, on the other hand, her large industrial population constitutes a very serious

danger if the nation is thrown back on its own resources. The depreciation of the exchange means that everyone converts marks into consumable goods, and saving is completely stopped. It means in business that only hand-to-mouth transactions are carried on, whereas long-period transactions are the essential conditions of a highly organised State.

Finally, the danger to Germany is, therefore, to be treated with all seriousness. If Germany and Central Europe are more completely eliminated from international commerce than is the case at present, we cannot hope to escape the most serious repercussion. We are grateful to the Reparations Commission for saving us from a breach which might well have led to the break-up of the Versailles Treaty, and thrown back the settlement of Europe once more into the melting-pot; but even on the most selfish grounds, we must regard this question as one of the utmost urgency, and cannot afford to retire into isolation and leave the European tangle to unravel itself.

THE RUSSIAN FAMINE AND THE REVIVAL OF RUSSIA'S AGRICULTURE.

(FROM A CORRESPONDENT.)

INFORMATION is now to hand which enables a fairly reliable estimate to be made of the extent to which the food position in Russia has been improved. For Russia and the Ukraine it is calculated that the cereal crops (wheat, rye, barley, oats, millet, and buckwheat) to be harvested this year will approximate 39,250,000 tons on an area of 40,170,000 dessiatines. This compares with 26,789,000 tons on 49,114,000 dessiatines in 1921, with 28,966,000 tons on 56,842,000 dessiatines in 1920, and 65,930,000 tons on 82,550,000 dessiatines in 1916. Expert observers consider that this expected crop of 1922, after necessary deductions for seed, tail corn, animal consumption, and carry over, should, under an effective scientific scheme of distribution throughout Russia, enable an average ration to be given to the population in town and country in the greater part of Russia on a perhaps somewhat reduced scale to that in force in, for example, Italy during the war, but sufficient to satisfy the minimum requirements of the bulk of the population. Although it is true that the primary cause of the famine, which, in spite of the relief afforded to 8,000,000 people by the American Relief Administration and to 1,500,000 by the societies represented on the International Russian Relief Committee, has caused a loss of about 2,000,000 Russian lives, was the intense drought in the summer of 1921; yet it should also be remembered that the reports received from relief experts of various nationalities contain continued reference to the lack of foresight on the part of the Russian Government in the scheme of tax levy in kind on the peasants to satisfy the needs of the towns. It is to be hoped that the lesson of 1921 will have been taken to heart by the Russian Food and Relief Authorities, and that in the cereal year 1922-1923 they will not only have the wisdom to secure over the enormous area for the feeding of the population of which they are responsible, a reasonable distribution of the available food supply, but will also invite the assistance of foreign experts in the coming year to help them in facing a most difficult problem.

Attention has been drawn recently to the decision in London of the Council of the League of Nations to examine through its secretariat, and report upon the relation of the Russian famine to economic conditions in Europe, and the need for taking a more constructive view of the question of Russia's agricultural production. The anticipated increase in the Russian 1922 harvest has perhaps encouraged the representatives of the Russian Government to adopt a more independent attitude at The Hague and elsewhere towards the demand of the European Governments for explicit guarantees to enable free trading relations to be established between West and East. The Soviet representatives are correct in their view that the restoration of Russia to full economic relations with the world is contingent on the revival of Russia's agriculture, and pinning their faith on an immediate good fortune, they are

mind to allow a policy of *solvitur ambulando* to govern the question of external credits for agriculture and industry. In this view they are only to a small extent right, inasmuch as it would appear that at the beginning of the solution of Russia's difficulties will rise from an early granting of private credits to some industries in which the Russian Government can guarantee that a profit on exports can be realised by foreign trading companies. But large scale transactions will only be effected when the Western world has a more accurate idea of present economic conditions in Russia (state of rail, road and river transport, agriculture, finance, currency and taxation, vital statistics, and epidemics), and is satisfied that the Russian Government is pursuing a long-sighted policy in regard to reconstruction and not basing its attitude on a temporary advantage. The back of the Russian famine has certainly been broken, except in certain outlying parts of Russia—such as the Urals and South Ukraine—yet the progressive diminution in the land under cereal cultivation (of the 99½ million hectares under crops before the war, 90 per cent. were devoted to cereal cultivation) point to the danger of the present situation. The great bulk of the Russian population is on the land, and the immediate future of Russia depends largely on the policy which is adopted towards her peasants. If the peasant is not helped before the sowings next spring with seed and with working animals (the number of horses and cattle in 1920 had decreased by about 25 per cent. as compared with 1916, and the figures for 1921 and 1922 show further great reductions), or with tractors and ploughs; if he is not given some indication in advance of the extent of this help, and some reasonable assurance in regard to taxation, and not merely of his right to sell such surplus produce as he may have, but also of the prospect of his being able to turn the roubles he receives in exchange into something quite tangible—for instance, clothes and tools—the prospect of there being a harvest in 1923 equal to 1922, even with satisfactory climatic conditions, is remote.

The Soviet Government would be well advised to consider now the whole question of their future agricultural policy and the extent to which they may call in assistance from outside in the shape of technical advice and financial help. As regards the former question, the door has been thrown open to them by the recent decision of the League of Nations to collect information with a view to the early setting up of an expert commission composed of men well known in their respective countries who have had experience in handling in a practical manner questions of production, transport, and distribution. As regards the second point, it is for the Russian Government to consider whether they would not be well advised to make use in Russia of some intermediary bodies who might act as trustees towards corporations or firms in America or Europe who may be disposed to send seed and agricultural machinery through them to the Russian peasants against delivery of a percentage of the crop, which might, if the position within Russia allows, be exported, or, in the alternative, sold, and invested in Russia or used in the purchase of other goods for export. It is understood that of the 400 or so representatives of the American and European relief societies now working in Russia there are many men of real practical ability who know Russian trade conditions and the language well, and who are acceptable to the Russian authorities.

Mr Hoover, Dr Nansen, and other public men, who have taken a leading part in the solution of the difficulties attending the Russian famine, should be in a position from this material to organise as between the federations of national industries and merchants in America and Europe on the one hand, and the Russian Government, the Russian trusts and co-operative societies, and the peasants on the other, a medium which would enable a start to be made before the spring of 1923 in reconstruction work in Russian agriculture, without which any real attempt to restore Russia's economic relations with the rest of the world is not possible. When Russia has resumed in some small measure the position which, in spite of undeveloped conditions of agriculture, she occupied before the war, as one of the most important granaries of the world, there should be no reason to fear a delay in the resumption of extended relations in other fields.

THE TRADES UNION CONGRESS.

(BY OUR LABOUR CORRESPONDENT.)

NEXT Monday the 54th Annual Trades Union Congress will open at Southport, and continue during the remainder of the week. In addition to the chairman's address, the election of officers, and 68 resolutions which find a place on the agenda, the consideration of the annual report of the General Council and of the report of the National Joint Council (a new item at the Congress) will take a good deal of time.

It is significant that no less than a dozen resolutions and four amendments deal directly with the organisation, structure, and powers of the trade union movement. One of the most important is a motion instructing the General Council "to make a report to the next annual Congress showing the extent of trade unionism in this country, the present organisation of the trade union movement, the number of amalgamations which have taken place in recent years, the number of federations in existence, and the powers they possess, and any other information likely to be of use to the Congress in shaping a policy for the closer unification of trade union forces." What appears to be aimed at is a sort of trade union Domesday Book. The General Council has itself submitted a resolution, which, if it is adopted, will have far-reaching consequences, though its acceptance is doubtful. The effect of the resolution, if carried, will be to establish a new standing order, making it an obligation on all affiliated unions to keep the Council informed with regard to matters arising between unions and employers or one union and another, in particular where such matters may involve, directly or indirectly, large bodies of workers. Except on request of the union or unions concerned in a dispute the General Council would not intervene, so long as there is a prospect of settlement. If, however, negotiations break down and end in deadlock, and large bodies of workers affiliated to the Congress are likely to become unemployed, and if standard wages, hours, and conditions are imperilled, "the Council may take the initiative by calling representatives of the unions into consultation and use its influence to effect a just settlement of the difference." After examination of the facts the Council may tender its advice to the union or unions implicated in the dispute, and if such advice is rejected, "the Council shall duly report to Congress." The resolution continues, "Where the Council intervenes.....and the union or unions concerned accept the assistance and advice of the Council, and where, despite the efforts of the Council, the policy of the employers enforces a stoppage of work by strike or lock-out, the Council shall forthwith take steps to organise on behalf of the union or unions concerned all such moral and material support as the circumstances of the dispute may appear to justify. For this purpose the General Council shall, if it deem necessary, raise funds by a call upon the affiliated unions proportionate to membership to meet the expenditure of the Council in relation to the dispute." This resolution arises out of an inquiry into the joint defence of trade union standards, and it is an attempt on the part of the General Council to secure greater consolidation and stronger discipline in the trade union movement. It is expected, however, that some unions will be inclined to oppose the proposals as infringing the sovereign rights of individual unions.

Another important resolution stands in the name of the General Council. It asks that "in order to enable the labour movement to acquire and run its own newspaper and any other publication considered necessary by the national committees" (i.e., the General Council and the Labour Party Executive), "the annual affiliation fee be increased from 1d to 3d per member." This motion really has reference to the *Daily Herald*. At the Labour Party Conference at Edinburgh in June a policy was agreed to, subject to the approval of the Congress in September. If the Labour movement decides finally to accept responsibility for the *Daily Herald*, the levy will be used to subsidise the paper in the early stages. Other resolutions on trade unionism deal with the Joint Committee of Trade Unionists and Co-operators, appointments on the General Council staff, the promotion of amalgamation and federations, the transfer of members from one union to another when they change their occupation. The various resolutions for the better organisation of trade unionism are part

of the general movement which is now taking place, and which has already achieved some measure of co-ordination between the Trades Union Congress and the Labour party.

There are eight resolutions on the agenda dealing with the National Insurance Acts, and five devoted to workmen's compensation. Three resolutions refer to unemployment, two of them condemning the Government's policy. Of special importance are the resolutions dealing with the legal minimum wage. There are no fewer than five resolutions on the agenda dealing with trade boards, whilst a further resolution calls for the re-establishment of the agricultural wages board. The National Union of General Workers submits a reasoned resolution asking the Congress, "while acknowledging the service rendered by the Cave Committee in dispelling the unfounded and exaggerated allegations against trade boards," to record its emphatic disapproval of the recommendations of the Committee on grounds which are set forth in the resolution.

Professional and clerical workers are obviously perturbed, as the National Union of Clerks, the Engineering and Shipbuilding Draughtsmen, the National Foremen's Association, and the Railway Clerks' Association have resolutions down dealing with alleged attempts on the part of employers to break trade unionism amongst the black-coated workers. It is urged, to quote the words of the resolution, that efforts are being made by employers "to prevent trade union organisation amongst professional, technical, supervisory, clerical, and other workers by the institution of superannuation, pension, and benefit schemes, membership of which is conditional upon such employees undertaking not to become members of a recognised *bona fide* trade union." It may be anticipated that the trade union movement will hear more of the question in the future, and also of the movement amongst employers to secure for health insurance approved societies, subsidised and controlled by employers, powers to administer the Unemployment Insurance Acts—a matter which will come up for discussion at the Trades Union Congress next week.

Though the agenda of the Congress is primarily industrial in character, there are some resolutions which are political or social in character. They range from the welfare of the blind and the extension of the Rent (Restriction) Acts to the Japanese in Siberia and electoral reform. Four resolutions are devoted to education, two of them condemning the "economy" proposals of the Government. Formerly, it was almost impossible to judge from the agenda whether it was intended for the delegates of the Trades Union Congress or the delegates of the Labour party. Now, however, the Congress agenda is less political than industrial, though many of the resolutions, as, for example, those dealing with legislation, call for co-operation with the Labour party. For the most part the agenda for the Southport Congress is severely practical, dealing almost entirely with immediate questions of interest to the trade union movement. It is unlikely to be a "high falutin'" Congress, but it will be none the worse for that.

TEA PLANTATION COMPANIES IN 1921.

As a preliminary study to an examination of results of tea plantation companies during 1921, a perusal of some board of Trade figures makes interesting reading, and we therefore reproduce total tea imports and re-exports for 1920 and 1921, together with figures for 1913:—

IMPORTS AND EXPORTS OF TEA.

From—	1913.	1920.	1921.	1913.	1920.	1921.
	Lbs.	Lbs.	Lbs.	£	£	£
India	203,459,657	190,347,245	285,308,460	7,839,223	15,576,903	14,812,697
Ceylon	110,936,427	123,348,642	118,190,558	4,179,462	7,923,617	6,626,043
Siam	16,272,548	15,928,282	4,569,074	613,147	1,106,298	244,787
Other India	32,052,717	39,867,273	36,896,148	1,072,515	2,241,427	1,305,738
Other countries	2,322,115	1,704,794	555,362	78,558	109,557	28,160
	365,043,464	431,196,236	445,519,602	13,782,905	26,957,802	23,017,425
Re-exports	57,555,651	41,281,335	34,741,183	2,808,940	3,432,835	1,964,368

These figures are unusually significant. Firstly, there is a remarkable change in public taste, which only an extreme enthusiast would lay at the door of the small difference in the duty on foreign tea. China sent us approximately only 4½ million lbs, as against nearly 5 million lbs in 1920 and 16½ million lbs in 1913. India,

however, where most British companies operate, sent us over 285½ million lbs, as against 250½ million lbs in 1920 and merely 203½ million lbs in 1913. These figures form the keynote to the better results in tea company finance in 1921, although, of course, the more favourable exchange ruling and also reduced shipping freights were potent factors; while no doubt economies in management and cheaper rice helped to reduce the expenditure side.

As usual with our company group articles, we have selected a few representative undertakings, and from the information revealed in reports and accounts, and also with the aid of that gleaned from other sources, attempted to survey the financial side of the industry for 1921. It was decided by the large tea producers to continue the system adopted in 1920 of finer plucking. This, it should be observed, while referred to in some quarters as restriction of crops, is, it is contended, mainly to meet the demands of the market for better quality teas, or no demand. It is reported that the non-co-operative movement in India, beyond unsettling workers, caused no serious troubles, and there has been apparently little difficulty in obtaining labour in most cases. The directors of the Lungla, however, in their report call attention to labour unrest, which resulted "in strikes and slackness in work."

The following table shows crops and financial results over a period of three years of 14 selected undertakings:—

	Crop.	Net Profits.	Crop.	Results.	Crop.	Net Profits.
	1919.	1919.	1920.	1920.	1921.	1921.
	Lbs.	£	Lbs.	£	Lbs.	£
Amalgamated Estates	6,184,410	144,644	5,442,184	89,423 Loss	4,381,050	44,634

	478,452	19,598	620,161	30,559 "	460,017	14,956

* Loss.

Although it has been stated that the finer plucking process is reckoned to be equal to a reduction of 20 per cent in the crop yield, most companies report an unfavourable season, with excessive rain at one period, and in district complaint is made of a severe mosquito blight. Thus to what extent finer plucking is responsible for the smaller crops recorded above it is difficult to say. An examination of the financial results shows that the disastrous season of 1920 has been completely left behind, and that the industry is once again on the path to prosperity.

Some companies in the tea industry follow the commendable practice of giving shareholders interesting table of comparative results over a number of years, while a few others supply working costs and selling price per lb. Thus we find that for 1917 the Jokai company was able to record production costs at 7.73d per lb, which, however, by 1920 had grown to 14.75d, although for the year under review reduced to 12.25d. In 1917 this company sold its tea at 11.31d, showing a profit of 2.18d per lb. The selling price was nearly the same in 1920—11.41d—and the result was a serious deficit, but with the price in 1921 increased to 16.67d per lb, a profit of 4.42d is obtained. The past year's figures are the more remarkable, when it is considered that the total production for 1921 at 5,807,528 lbs is 1,836,398 lb below the previous 12 months' figures. The average price realised by the Jhazie company works out at 14.75d, as compared with last season's average of 12.19d per lb, while the cost of production was 10.65d, as against 9.07d for 1920. Dooars in an interesting table records in 1921, but with the selling price changed from 9.07d to 15.60d a loss is now converted to a profit, which is given in detail in our table above. The British Indian works out gross sales at 13.28d, and total expenses as 10.19d, leaving a profit of 3.22d per lb. The Ceylon Tea Plantations gives an

excellent statement showing working results for the last 35 years. In 1904 the yield of tea per acre was 446 lbs, and the sale price in London 7.41d per lb. For 1920 the yield per acre was 656 lbs, with the sale price 12.77d, and last year the yield fell to 486 lbs and the price to 14.22d. The sale price is, however, not strictly comparable, as in 1911 the returns in the company's statement changed from gross to net. The table would undoubtedly be of considerably more value if production costs were included.

In the following table we analyse the balance-sheets of the companies included in our group:—

	Capital, including Deben- tures.	Reserves and Undivided Profits.	Debtors Bills Payable.	Estates and Pro- perty.	Cash and Invest- ments.	Total Assets.
	£	£	£	£	£	£
Amalgamated Estates	898,350	318,290	298,980	772,650	491,244	1,556,538
British Indian	77,325	52,215	8,882	57,147	28,876	138,421
Ceylon Plantations	527,120	191,843	105,174	468,231	208,947	821,149
Chargola Association	163,017	39,361	19,598	153,020	37,410	261,976
Chubwa	106,000	54,418	48,842	106,000	5,066	206,260
Consol. Tea and Lands	2,550,000	801,464	407,520	2,026,644	860,258	3,760,272
Dooars	348,000	134,048	47,952	286,252	66,722	530,000
East Indian Tea and Produce	249,250	nil	178,428	281,006	3,546	427,678
Eastern Produce	405,000	171,595	94,542	412,930	85,706	679,929
Jhazie	115,000	116,070	36,813	128,533	31,119	281,207
Jokai	350,000	307,140	130,175	361,730	85,234	787,315
Lungla	375,000	nil	55,601	275,322	23,166	430,601
Nedem	540,000	65,448	71,488	456,061	62,378	678,337
Yatiantota	221,630	17,500	2,143	201,868	7,048	242,919

It may be complained that this is a very rough-and-ready method of measuring the position of these companies. The most we claim for these figures is that it enables a comprehensive view of the financial trend, position, and methods of finance to be examined, and also places the inquirer on the path to follow up any unusual method of accounting revealed by our figures.

Our final table shows recent dividends, the trend of share prices, and present yield:—

Company.	Am't of Share.	Dividend for 1919.	Dividend for 1920.	Dividend for 1921.	Price End of July, 1914.	Price End of Aug., 1921.	Price Aug. 21, 1922.	Present Yield.

(b) On new capital.

The unusually high yield shown for Dooars is on account of a distribution of an amount recovered for E.P.D., which, of course, will not occur again. This, we understand, represents approximately 7½ per cent. There has been some activity of late in the tea share market, and it is possible that prices may tend further to rise; but, as will be seen from our table, substantial improvements are already recorded in many shares on prices in 1921.

MARKET RIGHTS.—I.

(BY A CORRESPONDENT.)

THE problem of market rights and market facilities is one that presses for an immediate solution. Before the war, when prices were low and while such vast quantities of food supplies came in bulk from other countries, restrictions imposed by ancient charters and privileges were felt only to a limited extent. Both producers and consumers were heavily taxed, but there was no actual pressure. With the advance in prices and restricted margins owing to the higher cost of living, the necessity for curtailing intermediary expenses and profits becomes of urgent importance. So also does the need for simplifying the process of sale. Whatever has the effect of checking freedom of sale imposes a serious burden, particularly in the case of feeding stuffs.

Markets existing to-day are, in the main, merely duplications on a larger scale of a system in vogue for centuries, the chief variation being that they are conducted on wholesale rather than retail lines. A hundred years

ago sales in markets throughout the country were probably more numerous between producers and householders than through traders. In the London markets the proportion of retail trade is now infinitesimal; the markets are run by traders for traders. The reasons for this change are the huge increase of population in suburban areas which are non-productive of food; the pushing farther back of the productive land, making it unprofitable for smaller producers to take their supplies to large central markets; the vast increase of distant or overseas supplies as a result of improved intercommunications by rail or water, and the marvellous development of distribution by retailers.

What was common at one period, and still is so in the smaller provincial towns and on the Continent, namely, housewives regularly attending market for the purchase of supplies, is practically unknown in London. Provisions are purchased in shops, or householders are called upon daily for orders, and the goods are delivered to their doors. Retail markets in London have gradually declined, or have failed when established.

The same process is at work in other large centres of population. How far it might have been arrested had changing conditions been recognised, and local markets opened as the towns and cities extended, need not be discussed. Concentration has created a system in which practically all the business is done by wholesale dealers or salesmen in central markets, and by retailers attending these markets to purchase supplies which they dispose of in the various localities. Thus the character of markets is totally different from the original intent, when Islington and Kensington and nearly all the outer Metropolitan areas consisted of market gardens or cultivated fields. Now their vast populations consume a thousandfold more than was ever produced in them.

With the rise of towns and the imperative necessity of organising food supplies, the responsibility for providing centres at which buyer and seller could meet was recognised. These centres for regular sale developed around market crosses or upon open spaces, many picturesque examples of which can still be seen, whilst fish markets were placed by the water side. Such was the case with Billingsgate, the history of which goes back a thousand years, practically on the same site as now occupied by it. The Smithfield Market (Smoothfield) appears to have been established in 1253, then, and for long afterwards, conveniently situated on the outer boundary of the City and for the great arterial northern and western roads. Leadenhall and others, whether under private or corporate control, were founded at later periods. Several names of streets are indicative of association with the various markets.

In the report of a Royal Commission on Market Rights and Tolls (1887) it was stated that "the English Market System grew up by means of Royal grants of Monopolies to individuals; even when the practice was enjoyed by a Corporation its origin was independent in theory of the ordinary Municipal privileges." It may be assumed that in most instances the market was in being before a Royal Grant or Charter was made, for, as has been observed, "Markets cannot be established at the caprice of individuals; they must grow." Consequently, public authorities acted when success was assured, and the clamant demand for permanency of facilities could not be resisted. The risks involved led to monopolistic charters. Henry III. issued the first of these, which was re-enacted by Edward III. (March 6, 1326), who gave to the City of London Authorities the sole right of establishing markets within seven miles of London Stone, which stone is now embedded in the wall of St. Swithin's Church, Cannon street. Considering the wide range, nearly equal to the present Metropolitan area, then mainly fields interspersed with small villages, either the citizens had re-

markable prevision of the Greater London yet to be, or were determined to provide against every contingency.

Whilst other monarchs confirmed the Market Rights of the City, the Charter named is the keystone of the arch. In a trial between the Great Eastern Railway Company and the late Sir Julian Goldsmid, then lessee of Spitalfields Market, the Lord Chancellor (Selborne) stated that the claim of the City to Market Rights, as expressed by the Grant of Edward III., was absolute, although it has been waived by the Corporation in several instances, such as Spitalfields, Covent Garden, the Borough and Hungerford Markets. The Grant is not on the Statute roll, but in the judgment referred to the assumption was accepted that it was granted by the Crown with the assent of Parliament, and has, therefore, the full effect and operation of a private Act of Parliament. Whether that be true or not, there is no contesting the powers of the City in respect to markets.

Charles II., however, did not accept this view, for he seized the City's Rights and Liberties, which were restored by an Act of William and Mary declaring such action illegal and arbitrary. Evidently the power of the Crown at that time was able to compel acquiescence, for in 1682 the Merry Monarch granted the Covent Garden privileges to the Earl of Bedford, and also to John Balch and his heirs to hold two markets every week at Spitalfields. James II. extended this latter privilege. Not only has the Spitalfields Market been held to the present time, but further rights have been maintained. The Great Eastern Railway Company have had to pay tolls to the lessee of Spitalfields Market amounting to thousands of pounds per annum on goods entering its Stratford Market. Recently these Spitalfields Rights have been taken over by the City Corporation at a cost of nearly £300,000. The tolls collected there within a few years have advanced from £750 to £25,000 per annum.

THE PRE-WAR SETTLEMENT.

(BY A STOCK EXCHANGE CORRESPONDENT.)

SEPTEMBER 1st (yesterday) was a date awaited with undisguised anxiety by a good many circles in the City which feared lest the final settlement of the pre-war liabilities might disclose unexpected obligations. Not only in the Stock Exchange, but in other directions as well, the official end of the war, fixed a year ago for yesterday, September 1st, re-aroused the latent feelings of apprehension which had slumbered during the war—indeed, throughout the whole period of eight years during which borrowers were protected by the various emergency rules set up during the latter half of 1914. So far as the Stock Exchange is concerned, the first impression of stark ruin which international war produced in the very early days of the struggle gave way to a growing feeling of confidence in the outlook as, in market after market, prices reached the levels at which they stood on the outbreak of war, and at which prices lenders of money could call upon the borrowers to liquidate engagements or take up stock. Estimates of the account open in Stock Exchange markets at the end of July, 1914, ranged from 80 millions to 200 millions; probably the latter figure was considerably nearer the mark than the former. Under the influence of war conditions, when prices recovered after the first clash of arms, these liabilities had become whittled down to about three million pounds, and had the markets this week been in anything like a normal condition, such an amount would not have worried anybody. It is only because of the slump in foreign exchange, the renewal of war between Greece and Turkey, and the generally unsettled condition of affairs throughout the world, which lent to the Stock Exchange position a threatening air, and caused the nervousness already mentioned. Amongst some of the markets in which the making-up prices of July, 1914, had not been reached were the Home Railway, the Grand Trunk, Mexican Railway, and foreign railway departments. The Grand Trunk is the worst sufferer; to take only a couple of examples, the first preference stock has fallen some 84 points since war broke out, while the second preference, which was then quoted at 72, is now about £3. Nor have there been any dividends worth mentioning during the period to help matters, for Trunk

firsts and seconds have received nothing since April 1917. Mexican Railway first preference has fallen from 104 to 39, and the second preference from 65 to 25. Both in Trunks and Mexicans, however, the bull and bear account was of comparatively modest dimensions on the outbreak of war, and it is only the extraordinary severity of the slump which throws these prices into such sharp relief. The actual amount of money involved cannot be very large. In the Home Railway market, although North Westerns, Great Westerns, Brighton Deferred and several others are still below the pre-war making-up figures, this is of little moment to bulls of the stock who have been carrying over their commitments for the past eight years and who are now entitled to all the dividends that have accrued during the period. Taking North-Westerns as an example, the present price of 102 goes against the pre-war making-up price of 124½, but as the dividends for the eight years on North-Western ordinary come to over 50 per cent., less tax, the actual position is that bulls of the stock would have money to receive. In some cases values have shrunk to nothing at all; instances may be found in the oil market, as well as in some of the other sections.

To meet the necessity for raising cash in order to take up these stale stocks, sales of other securities have been in progress during the past few days. People have been selling Conversion stock, War Loan, and other gilt-edged securities. The settlement, however, has passed off without any untoward incident, and the Stock Exchange is once more back in much the same position as it was before the war started. Some few remnants of the war regulations are left—such, for instance, as that Rule which forbids contangoes in the Consol market. It was in June this year that the Stock Exchange Committee practically abolished the restrictions which fettered business; which prohibited contangoes, options and other such methods of speculative dealing. If the sweeping away of these restrictions has failed to produce that increase in business which had been expected, it may be urged, on the other hand, that the House has come to no harm through the change-over period, and that, clear of all its pre-war obligations, the Stock Exchange is now able to face the outlook with as much serenity and composure as it is able to command, having regard to the chaotic conditions prevailing in foreign quarters. To sum up the whole matter, the House can cordially congratulate itself upon having come through the financial effects of the war with so small a degree of damage. Members acknowledge that the fetters imposed upon their business through the Temporary Regulation and other like measures, have turned out to be a blessing in disguise by protecting markets, and in raising to a higher point than has ever before prevailed the standing and the credit of the Stock Exchange itself.

Notes of the Week.

A Dutch Banker on Free Trade.—The Annual Reports of the Netherlands Bank, signed by the president, Dr Vissering, are always worth reading, and the latest issue, recently to hand, is no exception to the rule. Dr Vissering, it will be remembered, was a member of the Bankers' Committee which met at Paris a few months ago, and what he has to say on international finance and economics is always deserving of attention. We commend to our readers the following passage:—"It is necessary," writes Dr Vissering, "not only to set one's face sternly against an international policy of suspicion, but also to plead for the removal of the obstacles in the way of free international trade and exchange of commodities. In every country stress is laid on the necessity of increasing exports by means of hard work, but customers in other countries are necessary for such exports, and these customers can in the long run only pay if they are afforded an opportunity to export, i.e., to import into other countries. International trade is only to a small extent settled in money; the main settlement is always effected by exchange of goods. There is all the more reason, in face of the present disorganisation, to promote such free exchange as far as possible; any obstacles to it must have a much more adverse action than before the

war. We are at the present time not so much in presence of a problem of over-production as of under-consumption; considerable markets for commodities are greatly impoverished, or have practically disappeared. These markets must be again nursed until they become consumers as formerly, and, if it cannot be accomplished in any other way, by helping them to become good debtors by means of well-considered credits. That is the great problem with which we are faced, and to solve which all nations must put their shoulders to the wheel. We should strive for prosperity not only in our own country, but co-operate in creating it in the neighbouring ones. The solution of the problem of the reconstruction of Europe cannot therefore be brought about by the recovery of Western Europe alone; it embraces in no less degree the recovery of Central, Eastern, and Southern Europe." Thus the voice of responsible banking opinion abroad comes to reinforce last year's manifesto of the London bankers.

The Burden of Iraq.—No doubt the trouble in Mesopotamia, or Iraq, as officials now style it, is not unconnected with the long delay in making official peace with Turkey and with the vacillation of policy. But the British taxpayer is more concerned with another aspect of the matter. To him Mesopotamia is a heavy burden, and he begins to wonder more and more whether his bearing of that burden is of any real use and service. If under British supervision the population of this fertile land can gain happiness, prosperity, and good government, and if the great resources of the country can be developed for the benefit of them and of the world, then there is something to put against the burden of expenditure. But at the moment, one year after the establishment by the British of King Feisal on the throne, discontent in Iraq is bubbling to a head, and trade and commerce are stagnant. Having recently taken up the responsibility for the good government of Iraq, the British Government cannot, as some critics advise, retire to Basra and leave the country to govern itself. But in view of the immense sums which the British taxpayer has poured, and is pouring, into the country, the public surely has a right to expect from Mr Churchill or the Prime Minister a clear explanation and justification of the acts of administrative severity recently reported, and a categorical assurance that British money is being employed in the only way which could reconcile the public to the burden—that is, in the deliberate pursuit of the liberal policy of establishing a régime of justice, liberty, good order, and prosperity in this famous territory, which, before it suffered the blight of Turkish rule, was known as the granary of the world.

The Greco-Turkish War and Greek Finance.—The striking successes of the Turkish troops in Asia Minor force upon public attention once more the dangerous position in the Near East, and the lamentable results of the long-continued failure of Allied statesmen to arrange and ratify formal terms of peace. The recent announcement that a conference on the Near Eastern situation may be held shortly at Venice gives hope of relief for Greece from the strain put by the retention of Greek forces in Eastern Thrace and Anatolia on the finance and foreign trade of the Greek kingdom. The severity of the strain, now increased by the military necessities caused by the new Turkish successes, may be apprehended from the Report (to April, 1922) just issued by the Overseas Trade Department, from the Commercial Secretary of H.B.M.'s Legation at Athens. The daily cost of maintaining the 220,000 troops mobilised was estimated in April last year at five million drachmas; in October it had risen to eight millions. Of the Budget figures it need only be said that deficits are increasing, and that for the last two years more than half the total "revenue" has been derived from internal loans. In May, 1921, the Government took steps to cope with the situation, both by a further issue through the National Bank of 550 million drachmas paper—partly to guarantee the Bank's loans to it—and by the ingenious forced loan, which takes over half the currency held by the public, doubtless as a basis for a further issue. This loan was designed to cover the extraordinary deficit, i.e., the cost of maintaining the 220,000 troops; the ordinary de-

Correspondents in all parts of the world.

ficits are being met chiefly by an increased and progressive income-tax and higher Customs duties, which, however, have not helped to check importation. But severe checks have been imposed by the fall, and still more by the fluctuations, in exchange. The rate on January 1, 1921, was 47.80 drachmas to the £; on December 31st it had fallen to 99.25; the reports in May that free dealing in exchange would be prohibited sent it for a short time from 65 down to 120 drachmas to the £. The prohibition consisted in giving to a Consortium, originally consisting of four leading banks, but later incorporating various local ones, a monopoly in exchange dealings; its committee fixed an official rate daily, and apportioned the amount of exchange among its various members, but, though it sold more exchange than it purchased—the deficit being made up out of the capital subscribed by the constituent banks—it could not fully enforce its monopoly or supply the demand. It necessarily gave priority to purchases for army supplies, for imports of prime necessity, and for goods already landed, so that little was available for payment for further imports, and, with the drachma fluctuating, but in the long run falling, and prices outside going down likewise, the importers postponed their orders and often refused to take delivery. Imports in 1920 were in value 2,131 million drachmas; in 1921 only 1,674 millions; those from Great Britain fell more heavily—from 391.8 to 157 millions. Moreover, the competition of German, Czechoslovakia, and Italy is stimulated by their low exchange. The German trade has suddenly risen beyond its pre-war level. But British exporters who know the market are urged in the Report not to withdraw, and advised as to the means of promoting trade. Particulars are given of fresh industries, and of the great resources in metals, lignite, and water power. An Appendix gives interesting particulars as to the urgent need for facilitating business in Salonika, and especially the transit trade with Serbia, by simplifying Customs formalities and instituting the free zone authorised in 1914.

Latvia To-day and To-morrow.—The condition and prospects of Latvia are fully described in a statement prepared last April for the Genoa Conference. Traversed as it is by the chief railways connecting the Baltic with Russia, formerly its main market, a recovery in that country must give it great commercial importance. Windau and Libau (now Ventspils and Leipaja) have practically ice-free harbours; Riga is closed, on the average, 37 days in the year. Windau harbour is being dredged to admit the largest liners, and a railway of Russian gauge will shortly connect Libau and Riga, where great facilities exist for storing and loading freight. Thus the capacities of all three ports will be fully utilised all the year round, and a law provides for the establishment of free ports. Pending a Russian recovery the export of flax and timber is reviving. During the war the production of flax and linseed fell off 60 per cent., and the 275,000 acres previously devoted to it shrunk to 75,000. One-fourth of the whole country is forest; the annual supply of timber, allowing for forest conservation, might reach 150 million cubic feet, but through shortage of labour and rolling stock, and the demand for reconstruction and for railway fuel, only 14 million cubic feet were exported in 1921. The timber also supplies the material for the manufacture of furniture, paper, matches, wood, alcohol, and tar. Dairying is also important. Half the population is agricultural, one-fourth

industrial; in 1910 the metal, chemical, and textile industries employed more than 50,000 workmen, and one-fourth of the whole Russian metal industry was concentrated in Riga and Libau. But Latvian industry can do without Russian raw material, and will be aided by freedom from the high Russian tariff and by the electric power to be obtained from the Dvina. The currency has been stabilised, and the issue of paper money stopped. The internal debt is small; the foreign debt slightly exceeds £2,040,000, or about 22s 6d per head of population, mainly to the United States for food and military stores. The Budget deficits of the last four years have been caused mainly by the needs of reconstruction and of national defence against filibusters from Germany and Bolsheviks; for 1922-23 the deficit will be about £600,000, but in 1913 the country paid its way and contributed £3,600,000 to the Russian Treasury, so that surpluses should again become the rule. Banking, well developed before the war, has since made progress; a State Bank is projected with a capital of £3,000,000; two-thirds may be foreign, and foreigners will be eligible to its board; the Government will be a shareholder. The country has suffered from the war even more severely than Belgium; it urgently needs foreign credits and foreign capital, the latter for advances, through a Land Bank, to agriculturists, to revive industry, to improve railways and harbours, and to support the State Bank. Four-fifths of the population are Letts, a vigorous race, nearest of kin to the Scandinavians, and speaking the oldest language in Europe. The standard of education and culture is high, and it is predicted that Latvian modern literature, music, and art will yet astonish the world.

Conditions in Esthonia.—A Reval correspondent writes: The General Election held towards the end of 1920 was in reality the first election of a regular Parliament, as the former was one made merely to enable the members to found a Constitution for the country. They, however, did not limit themselves to this work, but entered upon legislation, passing the Land Bill, which has given cause to so much criticism and discussion. As space will not allow me to dwell upon this law I will merely mention that it confiscates and distributes amongst the peasants the Baronial estates (Rittergute), but not the smaller properties (Landstelle and Gesinde). No compensation has been paid to the landowners, and great abuses have been committed by the peasants and the persons named to administrate the estates taken from the proprietors. This law has not given particularly good results, and many people anticipate its revision. However unjust this law may seem, it is generally believed that it put an end to the rising Bolshevism in Esthonia, and had it not been for this, it is quite possible that the Constitution might have been considerably altered. The present Government is a Coalition of several parties, but the Social Democrats or Radical parties do not belong to it. The Government consists of the Farmers' party, Labour, Peoples, and Christian parties, with Mr Constantin Paets as Prime Minister. There being no President in Esthonia, the Prime Minister takes his place for all practical purposes. This country was recognised *de jure* by the Supreme Council on January 26th of last year, and this act called forth great rejoicing. The present Government has been in office much longer than any previous one, and Esthonia has made great strides towards order and commercial improvement under it. The Government have dealt very firmly with the communistic or revolutionary parties, and have consolidated their position. It is hoped that, for the first time, the Budget of 1922 will not show a deficit. The factories in Esthonia are mostly working, partly or wholly, and trade is no longer so severely hampered by Governmental restrictions as it was two years ago. The army has been reduced to a peace footing, but its influence is still felt strongly in politics. Trade now is brisk. An English firm has taken over the old Russo-Baltic Works, the largest shipbuilding concern on this coast, which used to employ 20,000 workmen. As yet they have done little, but Messrs Vickers have apparently associated themselves with this company, called the Anglo-Baltic Works, and developments are pretty sure to take place. Their first general meeting has been allowed by the Government to take place, and will be held very

shortly. Most of the trade here is done with Germany, and the shops are all full of German goods. It seems that owing to the depreciated exchange Germany can supply goods much cheaper than the United Kingdom. The feeling here is certainly not in favour of Germany, but there has been a great influx of German agents here, who offer credits to the merchants and compete successfully in prices with other countries. Trade agreements have been negotiated with France and Finland, besides other countries. There are several banks here, one is under foreign control, and the British Overseas Bank is interested in another. The railways are in good order and trains run now with great regularity, which is a marvellous improvement on the times following the great war. Exchange, which has varied very widely in recent years, falling from 85 to 1,500 Estonian marks to the £ sterling, seems pretty stable now, and with slight variations has remained at the present price for the last year. When the port is closed through ice, which usually occurs about February, and no goods are ordered, there is generally a recovery in exchange.

French Promoting Banks in 1921.—Details are now available as to the operations during 1921 of the principal French banks (*Banques d'Affaires*) which specialise in promoting and underwriting industrial and other enterprises and securing a market for the shares and bonds in such undertakings (as distinct from the ordinary deposit and discount banks). These banks, which play a very prominent part in the French economic system, rely largely upon their own proper resources, and on the large amounts of ready cash represented by the current accounts of other banks and important industrial and commercial concerns, for the money they require to carry on their operations. Their special function is confined to the flotation and underwriting of industrial issues, on the system adopted by them before the war in regard to the issue of foreign loans. These banks, as a rule, possess no branches in France, and themselves place directly in the hands of the public none of the shares in which they are interested, but distribute them through the medium of the ordinary and local banks who sell such scrip on an agreed commission basis. The following table includes the principal items in the balance-sheets of the more important of these banks for the past year, together with the comparative totals of each category of account for 1918, 1919 and 1920, and for 1913. The balance-sheets are for the year ending December 31, except in the cases of the *Crédit Mobilier Français*, which was dated June 30th, and the *Banque Française pour le Commerce* (July 31st):—

(In Millions and 100's of Thousands of Francs.)							
	Cash in Hand and at Bank.	Bills and Dividends.	Dr. Current Accounts.	Cr. Accounts, & Correspondents.	Profits.	Paid-up Capital.	Reserve.
<i>Banque de Paris et des Pays-Bas</i>	247.9	631.7	255.0	1,027.0	25.8	200.0	137.7
<i>Banque de l'Union Parisienne</i>	35.0	242.0	238.0	512.1	0.4	150.0	94.9
<i>Société Centrale des Banques de Province</i>	6.3	27.6	316.0	121.9	..	85.5	18.8
<i>Crédit Mobilier Français</i>	8.5	83.7	77.4	90.9	7.2	100.0	9.3
<i>Banque Française pour le Commerce</i>	109.0	305.1	94.3	414.0	..	100.0	17.4
<i>Banque Transatlantique</i>	3.7	65.5	40.6	71.1	4.6	40.0	10.1
<i>Banque des Pays du Nord</i>	58.3	232.6	68.0	334.1	4.3	50.0	4.1
<i>Crédit Français</i>	12.0	40.6	98.8	150.7	..	50.0	3.2
Total, 1921.....	480.7	1,628.8	1,188.1	2,721.8	42.3	775.5	297.6
" 1920.....	612.6	1,876.8	1,125.5	3,280.5	75.3	647.3	265.5
" 1919.....	369.5	1,299.7	815.5	2,263.2	49.2	513.6	215.6
" 1918.....	201.4	740.8	519.7	1,225.3	39.1	445.0	177.9
" 1913.....	155.5	439.3	666.9	909.7	46.3	437.5	230.7

The above figures include no deductions for losses experienced by the *Banques de Province*, 124,400,000 frs., the *Banque Française*, 1,800,000 frs., and the *Crédit Français* 300,000 frs.

Dutch Free-trade in Rubber.—The decision of the Dutch Government not to take any action in the way of coercing restriction of rubber output in the Netherlands East Indies cannot be considered very surprising, in view of the manner in which the Dutch themselves voted against the resolution in its favour at the Hague in July. The matter was discussed at length in the *Economist* of

July 29th. The effect of the meeting was to cause a smart rise in rubber shares, followed immediately by reaction. Luckily, the advance lasted so brief a time that the public were not attracted in any measure, but to holders of rubber shares, who have been hoping for some assistance from the Dutch Government in the matter of rubber restriction, the decision will come disappointingly. Holland has always of late years been a staunch supporter of Free-trade, and Dutch industries look with dislike and suspicion at any interference with their liberties by their own or any other Government. This it is which has caused the Dutch rubber-producing interests to decline so resolutely to come into any kind of combination or ring for the support of the price of rubber. The Dutch grower's attitude is that he wants to manage his business in his own way, and if he can see the present crisis through in the rubber industry, it is of no particular interest to him whether weaker companies go to the wall or not. In fact, if they failed, it would leave the air clearer for those concerns which remain standing. Thus the Dutch and the American points of view have a good deal in common. It is proposed that there should be an Anglo-American Conference between rubber growers and consumers, to be held in New York at an early date, and rubber shareholders will have to consent once more to carry over their expectations of a better time coming until the result of this conference shall be made known.

Central American Affairs.—A correspondent writes: President Orellana's Address to the Guatemalan Congress is substantially an appeal to his fellow-citizens to suspend political agitation until the next general election, and meanwhile to support his efforts for educational, social, and economic reconstruction, for the improvement and extension of communications and the maintenance of order, so as to secure respect for the nation abroad. He announces his determination to use his full legal powers in securing order and checking disturbances which would tend to interrupt the progress of recovery and would act as a deterrent to foreign immigration and foreign capital. He guarantees the maintenance of all civic rights, and promises full political and religious toleration; and he hints at the need of "abundance of currency," a phrase which may seem ominous, but probably refers to the scheme of financial reconstruction with aid from the United States, delayed at present through the rejection by the Guatemalan Congress of the plan submitted to it recently. No doubt the country will profit by the proposed assistance, but such proposals are sure to meet with considerable opposition in any Spanish-American Republic. Guatemala, however, already merits the respect of foreign nations by her habit of providing for her debt service a year in advance; she will merit it still more if the scheme in question enables her to pay the arrears due under the agreement of 1913. It is to be hoped that order will be maintained by other methods than those adopted by President Cabrera. Reports of disturbances, drastically suppressed, in various outlying districts are discredited in authoritative quarters in London. Advances through New York suggest that the Clericals may make trouble. In Honduras, it is stated, the party is promoting disturbances with money subscribed by sympathisers in Mexico; and it is alleged to be attempting to impose obstacles to American penetration by the revival of the federation scheme frustrated last year by the Guatemalan revolution. But no such scheme can succeed without Guatemala, and her consent is now less likely than ever. And Honduras, Nicaragua, and Salvador have just renewed the treaty of amity and friendship made in 1907 with the United States.

Flax Developments.—A Belfast correspondent writes: Though the present flax area in Ireland is very small, only 25,000 acres or so, the operations of the flax-pulling machines just now are attracting so much notice that farmers will have greater incentive to grow this crop to a larger extent. As flax must be pulled and not cut, like grain, in its harvesting, in order to get the fibre in best condition and length for spinning, the cost for manual labour has hitherto been very expensive—about £3 per acre—and not always obtainable. Now three new inven-

tions—one from Canada—are now in operation, making it possible for two men to harvest up to six times as much fibre per day as eight labourers hitherto. Of course, climatic difficulties and soil conditions may affect output figures considerably. Nevertheless, the economy and success is such that Irish farmers must gradually employ machinery, just as the reaper and binder superseded the hand sickle. Cheapening of flax means also cheaper linen, and still another greater gain will be the use of special pedigree flax seed giving 100 per cent. more fibre from the same area. Even in England hopes are entertained in some quarters of a revival of flax growing. A thousand acres are being harvested near Selby in Yorkshire. Linens raw material stocks are very low now, and it seems absurd that we must rely on foreign countries for 90 per cent. of our total requirements.

Some Statistics of the American Farm.—A correspondent writes:—A sheaf of buff and white and grey pamphlets is before the writer, and there is nothing particular to distinguish them from those other pamphlets in blue which Englishmen doomed to peruse official publications dignify by the name of books. There is the same prevailing indigestibility, there is the same want of correlation of statistics which mark the home product. Yet somehow some new facts manage to emerge, facts new, at least, to him whose fortune it has been to turn over the pages of American official information. For one thing, we get at the important circumstance of there being 10,583,000 adult males living by agriculture. This is of itself impressive. Then we find that there are 4,034,000 labourers, a striking proportion on a land which most of us figure as cultivated by owners of the soil which they till. Of these 4,034,000, however, it is probable that a considerable proportion of sons and nephews of the owners for the Government classification will be seen to include three classes only—the owners, or yeomen, who number 3,995,000; the tenant farmers, 2,454,000 in number; and "all others." There would be great and real gain to our essential knowledge of the agricultural problem if we could be told, not of the United States only, but of European countries, including our own, how many of those living by the land are relatives of the owners or farmers. Many Englishmen will probably be surprised to learn that there are now 2,454,000 tenant farmers in the United States; that, in fact, there is in existence a powerful and numerous class preferring, like the typical British farmer, to pay rent and keep his capital as material wherewith to stock and cultivate the farm. Mortgages now subsist on 29 per cent. of United States farms, and so far from the great war profits having been devoted to paying off mortgages, the extent of these was only 27 per cent. in the year before the war. The American cultivator has still a truly vast task before him. He has taken up 955,000,000 acres, but as yet only 507,000,000 are actually cultivated. Clearly there is an almost indefinite area for expansion. A separate return in a different buff book gives the cultivated area at 82 acres, and the not-yet-improved at 78, on the average American farm of 150 acres. The "not-yet-improved" area appears to be land reduced into possession and individual ownership, or tenancy, but not yet regularly tilled or laid down to grass. A good deal of it is uncleared woodland not definitely scheduled as forest. The creatures of the States are little known outside America, but it may be worth noting that Iowa is the champion State for pigs, horses, beef cattle, and poultry, a commanding position, though Texas has the greatest number of farmers (327,000), and is the leading State for wool; California, however, has the greatest number of sheep (2,500,000), and is also the great honey State. In timber the chief States are Louisiana (pines), Washington (spruce and cedar), Michigan (maple). The returns give Wisconsin as "the champion hemlock State," which sounds strange till we remember that the American hemlock is a soft wood tree and a conifer. A natural result of English settlers preferring Canada as under the Flag is none the less in some respects disconcerting. There are only 27,000 English-born farmers in America to 141,000 Germans, and the three States of Iowa, Wisconsin, and Minnesota form a regular German enclave, with 45,000 Germans to 2,800 Englishmen. The State where Englishmen predominate most is Utah: 1,216

A decree that has now been published in the *Journal Officiel* stipulates that on and after September 1st nothing but "whole meal" flour shall be milled in this country. This measure arises from the fact that the present year's wheat harvest is by no means as abundant as that of 1921. Last year the French wheat crop amounted to nearly 88,000,000 quintals, which was approximately equal, in spite of a smaller acreage sown, to the pre-war total. This year the yield is much less satisfactory, and there was a risk, unless steps were taken to make the available crop go as far as possible, that France would be compelled to buy some 20,000,000 quintals of corn in the foreign market to meet the needs of her population. The probable effect of such purchases on the already depreciated value of the franc is obvious. It is regarded as questionable whether the measures adopted will meet the object in view. At the best it is considered that the amount of economy effected will be unimportant. With flour at from 100 to 110 of the quintal, and bran, which is the chief by-product, selling only at 40s, the millers may be relied on, quite apart from the new regulations, to get as much flour as possible out of the grain. Further, even if it be exact that the French wheat harvest is below

that of last year, the reports of the International Agricultural Institute indicate that the world's wheat crop for 1922 will be equal to 107 per cent. of the yield of last year, so that there need be no fear of any real shortage. As to the effect that purchases of foreign wheat might have on the exchange, this might be a serious factor, as the *Temps* points out, if France now suffered from the enormous adverse trade balance registered in 1919 and 1920. The adverse balance for the first half of the current year, however, was only 1,300,000,000f, or barely equivalent to 12 per cent. of the total imports, whereas in 1913 the deficit reached 19 per cent. Finally, so far as the purchase price of foreign wheat is concerned, the French Government would always be master of the situation, as it would be able to remove the import duty of 14f per quintal imposed on this cereal at any period it thought fit.

The French foreign trade returns for the current year, as issued month by month, show that the increase in the quantities of merchandise imported is much greater, as compared with the figures for 1921, than the increase in values. It is also noticeable from the latest available figures that imports continue to increase, while exports are still on the decline. The most striking feature of the import returns is that while imports of foodstuffs and raw materials have increased largely during the first seven months of the current year, the imports of manufactured goods have fallen off by 907,946,000f, or nearly 33 per cent., as compared with the corresponding period of 1921. The detailed figures are as follows:—

IMPORTS.				
(In Thousands of Francs.)				
	First Seven Months. 1921.	1922.	Inc. or Dec. for 1922.	
Foodstuffs	2,832,032	3,100,474	..	+ 268,442
Raw materials	6,065,076	7,292,648	..	+ 1,227,572
Manufactured goods	3,182,162	2,274,216	..	- 907,946
Totals	12,079,270	12,667,338	..	+ 588,068
EXPORTS.				
Foodstuffs	1,283,523	960,070	..	- 323,453
Raw materials	2,453,237	2,341,693	..	- 111,544
Manufactured goods	7,145,674	6,798,488	..	- 347,186
Postal parcels	670,898	701,457	..	+ 471
Totals	11,553,332	10,801,702	..	- 751,630

The weights of the goods imported or exported during the same period were as follows (in tons):—

IMPORTS.				
(First Seven Months.)				
	1921.	1922.	Inc. or Dec. for 1922.	
Foodstuffs	1,916,484	2,681,362	..	+ 764,878
Raw materials	17,085,494	25,016,106	..	+ 7,930,612
Manufactured goods	950,418	969,874	..	+ 19,456
Totals	19,952,396	28,667,342	..	+ 8,714,946
EXPORTS.				
Foodstuffs	779,251	478,226	..	- 301,025
Raw materials	7,291,487	9,933,755	..	+ 2,642,268
Manufactured goods	1,181,437	1,287,887	..	+ 106,450
Postal parcels	13,419	13,890	..	+ 471
Totals	9,265,594	11,713,758	..	+ 2,448,164

The total exports for the month of July were valued at 1,433,042,000f, and the total imports at 1,995,746,000f, or an excess of imports over exports of 562,704,000f. Raw materials alone were imported to the value of 1,200,000,000f, as compared with an average of 1,000,000,000f during the previous months.

The position on the Bourse continues favourable, and the profits made during the last few weeks appear to have encouraged speculators, while the decline in the value of the franc has increased the interest taken in foreign securities. A further element tending to strength has been the favourable position in the United States, where the prospects of the harvest are such as to justify the hope that a record crop will be reaped. French rentes have risen sharply, the 1915 5 per cents. moving from 75.90 to 76.55, the 1917 4 per cents. from 62.50 to 63.55, and the 1918 4 per cents. from 62 to 62.95. The other rentes have remained virtually stationary or have declined slightly. Banks, generally, have maintained their position, with a tendency to increasing firmness, *Crédit Lyonnais* advancing from 1,360 to 1,410, and *Crédit Mobilier Français* from 415 to 450.

The steady advance in railways has largely been checked. Thus *Est* at 780 has lost 20 points, *Metropolitan* at 434 has gained five points, *Midi* at 815 10 points, *Nord* at 1,259 24 points. *Orleans* at 950 has lost 20 points, *P.L.M.* at 955 is unchanged, and *Ouest* at 680 has gained five points. Shipping has advanced, *Chargeurs Français* going from 574 to 610, *Chargeurs Réunis* from 370 to 390, and *Messageries Maritimes* from 189 to 190.

GERMANY. — CURRENCY VICISSITUDES AND ECONOMIC SUBSTANCE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 29.

IN view of the excitement caused by last week's heavy fall of the mark exchange, I propose to treat the question in its permanent aspects, and to postpone the usual account of immediate conditions. In the height of last week's mark panic, Berlin newspapers devoted what space they could spare from their own catastrophe to the Czechoslovak catastrophe. They dealt with the 250,000 Czech unemployed, told how nearly all workmen in important Bohemian industries have been served with notice of discharge, and explained that the Czech "catastrophe," "crash," and "disaster" (all words used also to describe the mark fall) were due to the rapid rise in Czech crown exchange. Taken alone, there is no novelty in a currency improvement bringing "catastrophe" to an exporting industrial country; but doubt concerning the doctrine of a necessary connection between exchanges and prosperity is raised when economic ruin of the same kind is ascribed at once to currency deterioration and to currency improvement. The doubt is strengthened by the fact that the stable-exchange countries are also deep in industrial-commercial crises of a kind which diminish the real substance of wealth. It appears that no one of the three possible states of an exchange ensures real prosperity; and, if that is so, the depreciation of the German mark, taken alone, is not even *prima facie* proof of injury to the real substance of German wealth.

But if the German catastrophe cannot be proved by the mark-exchange depreciation alone, it cannot be proved by anything else. True, the Wirth Cabinet and its supporters keep up the catastrophe panic, and tell of the dreadful things that have happened, or are going to happen, to the economic substance. The best comment on this is to recall the recent panic concerning the Republic's peril from a Monarchist counter-revolution; the Republic, the Cabinet declared, was at death-grips, and a dreadful banquet of blood was promised by a rushed-out decree legalising summary executions. All that happened only a few weeks ago; but already the comedy of nerves has been forgotten, nobody has been summarily executed, and to-day one can read 50 newspapers without finding one reference to the fact that the Republic is at death-grips. The mark catastrophe is like the Monarchist catastrophe, even to the repetitions, for Herr Erzberger's assassination provided an earlier Rathenau crisis, and early 1920, when the dollar reached 100, and late 1921, when it reached 300, produced earlier mark "catastrophes." In the first lull, when no Minister is killed, and in the first lull when the mark ceases falling, everyone forgets both kinds of catastrophe; and intelligent citizens observe that just as the Republic was not, and could not be, endangered by the death of a Minister, so the economic substance of the nation was not, and could not be, impaired by speculative selling of marks at a fraction of their worth.

That a German economic catastrophe might conceivably go together with mark-currency depreciation is not denied. But the certain symptoms, independent of the mark exchange, of such an economic catastrophe would then be visible; and they are not visible. Symptoms might be (1) an aggravation of the State finances, probably due to national inability to bear the necessary taxation, or (2) an aggravation in the nation's material condition, due to exhaustion of real capital and failure to earn sufficient real incomes. Probably the two would go together; and with the second would go declining production, unemployment, and probably also numerous bankruptcies as an expression of individual increase of

consumption over production. Of neither aggravation is there the least sign. With the dollar at 2,000 marks, the State finances are far better than with the dollar at 50 in 1919; and the condition of the people as regards feeding, clothing, regularity of employment, and individual solvency is beyond comparison better. The mark exchange is therefore an entirely worthless indicator of the nation's economic substance.

The State finances, to repeat, have not got worse. The Government has not failed to extract from the people the revenues necessary for administration and service of debt. An increase in revenue far exceeding the increase in expenditure was lately reported by me, with figures, to the *Economist*. The connection between the mark exchange and revenue and expenditure has been repeatedly misjudged. The real process is: 1. A mark exchange fall causes (is not caused by) internal currency depreciation and prices rise. 2. Expenditure increases, and vast supplementary Budgets have to be submitted. 3. At first, until new revenue is got in, current deficits increase, and they are met by floating debt operations and by inflation. 4. During the mark exchange recovery, or relative stability, which follows every bad fall, revenue, now based on a higher level of values, rapidly catches up, so that Budget equilibrium is again attained, and the net result is a large nominal increase of floating debt, which does not embarrass the finances because the ratio of interest charges to revenue becomes ever smaller and smaller. Apart from Reparations, one can therefore say: the more the mark has depreciated, the better have grown the State finances. The debt burden, it is true, is merely transferred from the State to the public; but there is a certain real relief. 1. Part of the debt burden is transferred to foreign creditors' shoulders, and here mark depreciation brings a direct calculable increase of German national wealth. 2. The native pure capitalist (the mere currency and bond interest) is ruined and driven into the producing army, becoming a wealth-producer. Only the invalided pure capitalist becomes a public burden.

This process has been repeated again and again, and again and again prophets of the ruin of the State finances by the currency depreciation have proved mistaken. In 1919 Herr Erzberger produced a balanced Budget. The mark exchange collapsed immediately afterwards, and his Budget was ruined—the mere additions to official salaries exceeded his whole estimated revenue. In the next two years supplementary Budgets followed in quick succession, revenue increased, the mark fell again, and revenue again increased. After the mark collapse of June-November last the Budget seemed hopeless. The increase in expenditure again far exceeded the originally estimated revenue. But in the mark exchange lull, which lasted from November until the Rathenau murder, revenue caught up; and, like Erzberger, Dr Wirth last spring could present a balanced Budget, also without Reparations. During the present mark fall Dr Wirth has had to grant salary increases again exceeding his whole estimated revenue of the spring; his Budget is, therefore, worthless, and a new vast increase of the floating debt is inevitable. But already revenue is rising headlong, and there is no reason at all why a Budget balance should not again be restored, as after last year's mark collapse.

The State finances could not have been saved by the automatic reduction of the real debt alone, most of it, as stated, having merely been thrown back upon native private shoulders. They were saved by the flourishing condition of trade. English financiers know how rapidly trade reacts on revenue, and except for a few months in mid 1920 Germany has had an uninterrupted trade boom. In July there were 19,000 unemployed, and an unsatisfied demand for about 50,000 workmen by the iron and coal industries alone. Bankruptcies are one-seventh of the pre-war normal, and this, in general, proves that citizens are producing more than they consume. The profits of capital are small, but the real wages of most earners have kept up, and if not provably higher than in 1913, they are certainly higher with the dollar at 2,000 marks than they were in 1919, with the dollar at 50 marks. The real substance of a nation incessantly and efficiently at work could not possibly be impaired by a mere revolution in values.

These facts could not be denied by the catastrophe ex-

ponents. But after every mark fall is repeated the prediction that *this time* the catastrophe has really come. The nation survived because production was active, but with its currency unit at x to the dollar no nation could continue producing. The reasons why production should cease are two: 1. The buying power of the home population is exhausted, and as the trade boom is mainly a home boom, production will cease when buying power declines. 2. If the buying power does not first decline production will cease, because with a dollar at 2,000 marks the importing of food for the worker and raw materials for his looms and blast furnaces must cease. Both these arguments are wrong in theory and disproved by fact. In theory, buying power is a result of production, and buying power cannot cease first; in fact, there is no sign whatever of a decline in buying power. The second prediction was heard in 1919, 1920, and 1921; it was made by the Chancellor last week; it was made by him during the June-November mark collapse of last year; and again and again it was proved by other experts that whereas Germany had easily imported wheat, cotton, and copper when the dollar cost only 100 marks, she could not import when it cost 200; and, later, that though she had nevertheless imported when the dollar cost 200, she could not possibly import when it cost 400. And so on. In theory, this is baseless. Except to lower exchange countries, which welcome the mark currency, Germans export in exchange for dollars, pounds, guildens, and other high currency, and the American who is invoiced \$100 for Solingen penknives and transfers the \$100 to another American who sells Germany copper has no need even to ask what is the day's mark quotation. In practice, the falsity is even more glaring. For as the following table, which begins on the eve of the mark fall of 1921, shows, imports have greatly increased, and in July this year, with the mark depreciated to 525 to the dollar, it was possible to import more than three times as much goods as 14 months earlier with a mark eight times more valuable:—

	Approx. \$ Exchange.	Imports in Metric T.
1921 May	65	1,534,000
November	260	2,534,000
December	190	2,085,000
1922 January	190	2,310,000
February	220	1,475,000
March	285	2,644,000
April	290	2,888,000
May	290	3,809,000
June	320	4,030,000
July	525	4,800,000

A final proof of the confusion prevailing on this point is that the same catastrophe prophets who declare daily that production must cease because the more the mark falls the harder it is to import necessities also declare daily that ruin is impending because of the threatening surplus of imports over exports. The two arguments actually follow one another in a recent Ministerial speech.

The proposition which the above arguments and facts are designed to support is that Germany is suffering mainly from a currency crisis, and not from a crisis of economic substance, and that the international mark panic and the predictions that Germany will be ruined and will drag down all Europe have, if they have no other basis than the mere mark exchange depreciation, no basis at all.

ARGENTINA.—ECONOMIC RELATIONS WITH BRITAIN — PUBLIC FINANCE — BANKING POSITION — TRADE OUTLOOK.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, July 24.

WRITING at the very moment that the Argentine Press is full of glowing accounts of the reception given to Dr Alvear in London, it is not easy to comment as freely as one might otherwise do on the question of Anglo-Argentine relations in commercial and financial affairs. That the importance and cordiality of Great Britain's greeting to Argentina's President-Elect is not likely to be forgotten by Dr Alvear himself, when he assumes office next October, is reasonably certain; but, from the very nature of his position, an Argentine President is not in a position to exercise much personal influence, if the

object aimed at does not appeal to the ideals of the party who have elected him. Were it possible to say that there was a manifest desire to extend financial and commercial relations with Great Britain on the lines that characterised the Governments of 20 years ago, the practical importance of Dr Alvear's visit to London would be vastly greater. As things are, one inclines to the belief that the effect on commercial and financial relations will be practically nil. It has been freely remarked that an almost immediate result of the visit will be an Anglo-Argentine loan of 50 million sterling. That is the Argentine point of view; whether the City holds a similar opinion may be doubted. Unfortunately, there is a want of breadth in the views of even the most enlightened Argentine statesmen, who, obsessed by their quite warrantable convictions regarding the immense potential wealth of the Republic, are lacking in a sense of proportion. They cannot, or will not, see that unless Argentina is in a position to offer special terms, both as regards interest and guarantees of stability, she is but one borrower among many.

The Irigoyen Government took over a big debit balance; took over also the facile system of getting ready money by short-date loans to keep the administrative machine running smoothly. Dr Alvear assumes office under almost worse financial conditions than did President Irigoyen. During the war taxation of exports and additional dues on certain luxury goods brought in immediate, and for a time important, sums to the national treasury, but those sources of income are now closed. Financially, Argentina does not know where she stands to-day. Her last officially sanctioned Budget dates from 1912! For, incredible though this may seem, subsequent annual accounts have been but modifications of the Budget Estimates discussed and passed in due and constitutional form in the year named; the Radical party having never yet accomplished even the complete discussion of all the clauses in any Budget Estimates introduced by President Irigoyen's Government.

As a proof of the inherent vitality and prosperity of Argentina, the chaotic state of the official financial system is hard to beat. This country goes forward in spite of, and not on account of, its official methods; though it is clear that this paradoxical state of being cannot continue indefinitely. It must also be borne in mind that, while some few private fortunes have been made and retained owing to the benefits derived by Argentina from war conditions, in general the position of the producer in 1922 is not altogether as favourable as it was in 1914. "Argentina," as one of her leading statisticians, Ingo, A. E. Bunge, recently Director-General of Statistics, remarked in a study of production costs worked out in 1917, "has produced much and capitalised little. Nevertheless, for many years she has lived in the belief that she was accumulating considerable wealth in the form of reproductive capital. But this new capital all came from abroad." This sane and eminently accurate view of the situation is rarely held, even by Argentines, who are otherwise commercially well informed. Not only is their attitude frankly antagonistic to foreign capital extant in the Republic, but they are immediately ready to support any measure which professes to limit the gains of such capital for the benefit of "national industry." One firmly believes that much of this mistaken opinion can be traced directly to the delusive policy which has characterised Government finance for close on ten years. Short-date borrowing, which might perhaps have been passed as excusable in war-time, stultifies itself very soon when used as a means of financing either general expenditure under normal conditions, or non-reproductive public works such as railways in the outlying parts of Argentina must certainly be considered. Broadly speaking, no private capital has been invested in Argentine enterprises since 1912; not only that, but one may also add that no Argentine capital has been diverted from the customary channels in which it flows, namely, agricultural and pastoral production. Individual industrialists who had plant and expert knowledge before the war have seen their capital increase rapidly by sheer accretion of undreamt-of profits, but, as a nation, Argentina stands much where it did in 1914, except as regards its official debts, which are some \$800,000,000 Arg. paper higher than they then were, if one includes internal and external loans, all of which are

for periods ranging between five years and six months.

General business in Argentina is manifestly improving, the steady shipment of all classes of exportable produce and the rise in the price obtainable for meat, wheat, butter, wool, and hides reacting on trade in general. The steady diminution in the total of banking deposits which marked the first five months of 1922, changes in the June total to an increase of some fifty million dollars, and although home readers may assume that the subsequent diminution in the Bank of England rate will react in an unfavourable sense, the paradoxical fact is that under present-day conditions this does not occur. The increase goes wholly to Argentine banks; some thirty-six million dollars thereof swelling the funds of the Banco de la Nacion, which now carries 40 per cent. of the total bank deposits in this Republic and does 38 per cent. of the advances figuring under the heading of discounts and loans. A large addition to available funds is also provided by the issuing of still more Cédulas through the Hypothecary National Bank, the latest series, No. 13, being already in circulation. This makes \$150,000,000 Argentine paper issued in Cédulas during the current year, hence, cattle crisis notwithstanding, private business in Argentina is by no means pinched for loanable capital. Indeed, the private mortgage companies are complaining that their business is suffering severely from the competition of the National Mortgage Bank, which makes it all the more remarkable that an American concern should propose to enter this market at the present time. Cables from New York, however, state that various American financial interests are about to inaugurate such an institution, which will be known as the "Compania Hipotecaria Americana." Competition in general banking business has, indeed, driven one American institution out of the market, the American Foreign Banking Corporation closing its doors at 24 hours notice, paying off its staff, and announcing by circular and through the columns of the Press that its liquidation would be carried out by the local branch of the First National Bank of Boston, which would pay all cheques, drafts, &c., actually outstanding. The long and short of the Argentine banking position is that prospects of profit on the scale which was considered normal prior to 1910 are very distant. Between the Banco de la Nacion Argentina, which scarcely professes to show profits, and explains a lavish liberality on the ground of attention to the best national interests, and the 33 banks who are trying to earn dividends, the Argentine borrower and banking customer generally is well catered for at very favourable terms. Meanwhile the outlook for trade is healthy. Cattle have improved a little in price. Wheat is distinctly firmer, and wool and hides are a firm market. The ultimate sanction of the increased railway tariffs was so generally expected that it has passed almost unnoted in Argentine business circles, but when the new rates come into force after the statutory notice has been given, that is to say in the first fortnight of August, complaints may be looked for, and it is quite on the cards that an attempt will be made to reopen the whole question, cheaper coal and the example of the British and American authorities in their dealings with the railways being the prepared by the Socialist Deputies. Ocean freights have been down to unheard-of figures, parcels of grain to United Kingdom-Continent being booked at as low as 12s 6d, with a round pound sterling for a prompt 5,400 steamer grain generally, is to some extent accountable, but even so it is evident that the Plate market is once more becoming as uncertain as it is competitive for all owners whose vessels are consigned to these parts of the world.

SWITZERLAND. — EIGHT HOURS DAY — CAPITAL LEVY PROPOSAL — RHINE NAVIGATION — A GOVERNMENT LOAN.

(FROM OUR CORRESPONDENT.)

GENEVA, August 14.

On July 1, 1921, both Houses of the Swiss Parliament accepted a modification of labour legislation which authorised the Swiss Government to abolish the eight hours working day in times of general economic crisis.

The labour unions have now begun to collect the necessary signatures for an appeal to a referendum. Of course, they will get them within a few weeks, and we shall have at the latest next spring a popular votation on the subject of maintaining the eight hours day. Half of the voters are peasants, and in all probability they will vote against this social progress. The majority will, however, be a very small one, so that the Government will be careful in granting exceptions. One remembers that the eight hours day in Switzerland was not the outcome of the strength of the labour unions, but rather a result of political bargaining. This is why the attempts to do away with it have had a measure of success. In a certain number of trades, especially in engineering, and probably also in all public transport services, the eight hours day will be maintained independently of the Government attitude.

At the same time, Swiss people will have to vote on a socialist proposal, namely, that of a levy on capital. This votation will be rather a touchstone of the political education of the Swiss people. The Socialist proposition, which is backed by 87,535 signatures, only affects people with more than 80,000 Swiss francs capital, and married people with 110,000. That is to say, according to the message to Parliament, only 0.6 per cent. of the population will have to pay, or, in other words, 99.4 per cent. of the citizens will have to decide whether such a levy shall be paid by the others or not. The proposed levy will ask up to 60 per cent. of capital. The smallest levy is proposed to be 8 per cent., and the progression a very rapid one, so that the maximum of 60 per cent. must be ceded to the State by people having three millions of francs. All the limited companies will be taxed not according to their reserves, but according to their nominal share capital, so that every industrial concern of any importance is supposed to write down its share capital to 40 per cent. of the present face value, and to hand to the State 60 per cent. of the shares. Thus the State would have 60 per cent. of the voting power in all industrial and commercial and financial concerns, of more than three millions paid-up share capital. Only these exaggerations so far as limited liability companies are concerned guarantee that the proposal will not get through. For the overwhelming majority of the citizens, though having no fortune of 80 thousand francs, have sufficient mistrust of a majority of 60 per cent. of State votes in all limited companies. The aim of this levy on capital will not be a general redemption of all Federal war debts, but the creation of a fund for social assistance. The latter aim will be the tombstone of the proposal, for the peasant voter is not willing to supply further money to support lazy town folk.

The Swiss Government, in a message to the Federal Parliament, proposes adhesion to the international agreement of Strasbourg. By this proposal the Government abandons the Swiss attitude of free Rhine shipping from Strasbourg to Basle in the natural bed of the river. The French proposal of exploiting the water power between Basle and Strasbourg for the purpose of electrical energy necessitates the creation of lateral canals with sluices. The lateral canals must necessarily be in Germany or France, that is to say, not in the internationalised river, but under foreign denomination. But the theoretical freedom of the Rhine bed becomes practically useless when none of the riparian States is willing to perform regular dredging. Switzerland herself has neither the competence nor wants to spend the necessary money for dredging regularly between Basle and Strasbourg. Therefore, Switzerland's insistence on using the free bed would be simple obstinacy. In agreeing to the French project, Switzerland obtains the internationalisation of the canal in spite of the fact that it is entirely on French territory.

At the end of this month the Swiss Government will issue a loan of 125 million francs. This loan will probably be the first Swiss Government loan issued at the rate of 4 per cent. The original proposal was 4½ per cent., but during the last fortnight the price of all securities dealt with on the Swiss stock markets has risen so rapidly that their average yield is now 4.2 per cent., so that an issue of 12-years bonds, as forecasted, 5 per cent. below par, will be willingly accepted. The money market is still very easy, and one may expect for this autumn a series of loans of all kinds of public bodies which will profit by the easiness of money for the purpose of consolidating their floating debt.

CZECHO-SLOVAKIA.—FOREIGN TRADE—PUBLIC FINANCE—STATE ENTERPRISES.

(FROM OUR CORRESPONDENT.)

PRAGUE, August 19.

THE trade returns for Czecho-Slovakia for the first five months of the year 1922 show exports at 37,915,987 qs, against 36,495,389 qs for 1921, and imports at 15,216,806 qs, against 17,858,440 qs for 1921. Thus there is an increase of exports amounting to 1,420,148 qs and a decrease in imports of 2,641,634 qs. The latter is easily accounted for by the rise in value of the Czecho-Slovak crown. But the destination of the exports and their nature deserve study. Germany accounts for 14,716,263 qs, or, roughly, two-fifths of the whole. Austria comes next with 12,903,571 qs, Hungary third with 3,642,705 qs. So it is seen that Germany, Austria, and Hungary have taken about six-sevenths of the whole, France coming next with the amount of 871,984 qs. The German mark is now worth one-twentieth of the Czecho-Slovak crown, while a Czecho-Slovak crown equals 2,000 Austrian crowns. How, then, are Germany and Austria to pay for their coal and sugar? Austria certainly has to receive 300 million crowns as part of her loan from this country, and this will be paid her at the rate of 30 millions a week, which again will be earmarked for the payment to Czecho-Slovakia for coal and sugar. How the principal and interest of the loan is to be repaid is another story. It is probable that many Continental buyers, especially in Germany, have meanwhile taken advantage of the previous low rate of the crown, and laid up reserves in the country banks with a view to the contingency that has now become a fact. Indeed, one of the causes to which the first rise of the crown was attributed was the buying up of crowns for short credits by Continental speculators. Of the imports, the greatest amount came from Germany, which accounts for 8,095,550 qs, about half consisting of domestic coal from Upper Silesia. Again a long way after come Austria and Hungary with 833,285 qs and 877,232 qs respectively. Great Britain and the United States have sent very much less than last year, the latter having come down to 864,484 qs from 1,488,859 qs in 1921, and Great Britain from 843,228 qs in 1921 to 232,876 qs only for this year. The reason given for this falling off is that less flour has been purchased from England and America. But the imports from all countries have fallen, with the exception of France, Holland, and Switzerland. Those from France have nearly doubled, the increase in the other two countries being slight only. But from such countries as Austria and Hungary that the decreases should exceed in the one case upwards of half-a-million and the other over a quarter of a million is surely significant.

To give an idea as to the difficulty of gauging the economic position of this country from ordinary sources of information, it may be mentioned that a Government paper a short time ago pointed triumphantly to the almost unflinching success of Government enterprises, mentioning a coal mine, a radium mine, and other industries, showing one only, the iron works at Podbrezov, as not paying expenses. From a speech by Dr Rasín, who was thought likely to be the next Finance Minister, it appears that these iron works alone show a loss of 131 million crowns yearly; the Government munition works at Brno likewise show a huge loss, while the great private works show a profit, and while the private coalowners make profits, the

State mines make a loss. He grants that the railways are expensive and the freights high, but declares that such obstacles to business therefrom cannot account for the loss, amounting to a milliard of crowns. There must be something amiss, and he states his intention to run these State concerns in future on business lines, and that they must pay their way or be given up. Dr Rasín looks facts in the face. He is determined to balance his Budget, but will inaugurate a new system. He is even convinced that the nationalised properties will eventually pay for themselves, notwithstanding the dismal prophecies of pessimists. Turning to the export trade, he makes a very important announcement when he says that if Germany is compelled to raise her tariff and taxes, Czechoslovakia is in a position to reduce her taxes, tariff, and Customs duties, and so enter the world markets without regard to the rise or fall of the mark. Dr Rasín's abilities are well known, and when he makes such a pronouncement as to his future policy, he may be trusted to carry it out if given the chance; but it is now stated that he will not be Financial Minister in the new Parliament. The post is to go to Dr Pospíšil, expert financial adviser to the Genoa Conference and director of the Prague Savings Bank.

The figures of the importation of flour and corn for the five months of 1922 show that 866,410 quintals only were imported, against 2,201,450 quintals for the same period of last year. Flour alone shows a diminution of 951,550 quintals. Corn has been imported chiefly from Roumania, the Argentine Republic, and the United States.

Books and Publications.

COLONIAL TARIFF POLICIES.*

A TARIFF Commission may be supposed to have a prejudice in favour of tariffs, for without them it would have no reason to exist, but we have failed to find any signs of bias in this lengthy and laborious survey—860 pages of close print—of tariffs as they affect the colonial possessions of the chief countries. This Report briefly traces the growth of the colonial possessions belonging to the European countries, first Spain and Portugal, then Holland, and finally France and England. Nearly one-half of the world's area now consists of colonies, using that word in its broadest meaning.

In the early period colonial rivalry was dominated by the theories and practices of mercantilism and monopoly. "The chief object of early colonial enterprise was the acquisition of treasure in the form of precious metals." The principle of monopoly applied to all phases of the colonial trade; but after 1815 the colonial Powers "loosened, in different degrees and with unequal promptitude, their restrictions on colonial trade." People felt that the expenses of colonisation were "certain and burdensome," while the profits, if any, were uncertain and transient. For all that, France and England went on adding to their territories. A third theory began about 60 years ago, when the development of industries and large scale production forced a keener competition to secure markets for manufactured goods. Nearly all the great expansion of colonial holdings in Asia, Africa, and Oceania, measured in square miles, have been secured by the seven chief empires since 1877, though Spain's Empire dwindled.

Protection, as the Report says, in theory and practice may be regarded both as a cause and effect of nationalism. Most colonial Powers turned Protectionists, adding differential or preferential tariffs for the trade between themselves and their overseas possessions; but Great Britain and Holland stuck to Free-trade (or, at least, until Mr Chamberlain's Budget of 1919), and Germany used to maintain the principle of the "open door" in the territories which she has now lost. One of Bismarck's motives in acquiring colonies "was undoubtedly to prevent the erection of protective barriers by other nations," and in

agreement with Great Britain the two Governments were able to impose a Free-trade policy throughout Central Africa.

Of late years tariffs have been springing up all over the world like the magic hedge round the castle of the Sleeping Beauty. Only in Class "B" of mandated territories—e.g., in Central Africa—is the principle of the "open door" recognised, and even here it is only guaranteed, as in the case of the draft mandates for Class "A," for the benefit of other members of the League. In Class "C" territories the "open door" is not required, and it is not pleasant to read in this Washington Report that "in fact, differential duties have been introduced into South-West Africa and Samoa, and by discrimination of other kinds Australia has effectively monopolised the trade of the territory entrusted to her control."

While nearly every country likes to secure a preference for itself in its overseas possessions, it does not like other countries to do the same; the report describes how recent Treaties have tried to maintain general trading rights—e.g., by the Congo Agreement at Berlin and the Act of Algéciras, while others have given "open door" pledges for a limited time—e.g., the Anglo-French Treaty in Central Africa (30 years), the Spanish-American Treaty for the Philippines (10 years), and in the Japanese annexation of Korea. "Assimilation" is of little advantage to the colonies because they export raw materials and food, which usually get free entry everywhere, except that tea and tobacco are taxed for revenue purposes. There is, we are told, always a tendency to favour the mother country, even where there are no preferential duties or where the "open door" continues; "trade follows the flag," and the influence of shipping, a common language, and the investment of national capital act as a natural preference.

The Report discerns a reaction from Free-trade everywhere; the "open door" has been losing ground for 20 years, Preference has been advancing steadily for 30 years; attention is called to the growth of tariff preferences between France and her colonies, and the authors think that if our Government maintains the preferential duties of 1919 it "can scarcely fail to lead to the extension of such a policy among the Crown Colonies." After this the Report gives a detailed review of the policies adopted by the various colony-owning countries. The volume cannot be called light reading, but it should be invaluable as a book of reference.

BIRMINGHAM'S BLUE-BOOK.*

THE annual accounts published by municipal corporations contain masses of detail, but the accounts are not well set out. They do not enable even the capable student easily to obtain a clear view of the financial position of a municipality. This defect is not the fault of the treasurers who compile and issue these accounts. They are considerably hampered by requirements in the nature of statutory and departmental returns and regulations—and are thus sinned against rather than sinning. The publication of statutory returns by municipal corporations is very necessary. But these returns should be in form less unsuitably to the great trading enterprises now commonly undertaken by municipalities. For instance, at present two balance-sheets for each department are involved—one relating to loan and capital accounts (actually including "Debt extinguished or provided for" as a liability), and the other relating to income accounts. These two balance-sheets are unnecessary except in order to comply with the present system, and they cause much trouble and confusion. The whole system of municipal returns and account-keeping urgently needs revision.

The financial statement of the City of Birmingham—Birmingham's Blue Book—for the year ended March 31, 1922, compiled by the acting treasurer, has been completed, and published with most commendable diligence. In the aggregate the loans outstanding at March 31, 1922, amount to £28,992,785. The assets consist of capital expenditure on undertakings deducting amounts already provided from rates for repayments of loans—£4,012,216; and capital expenditure

* "U.S.A. Tariff Commission." (Washington) Government Printing Office.

* "City of Birmingham's Financial Statement, 1921-1922." (Birmingham) The Council House.

on trading or reproductive undertakings—after deducting repayments of loans provided from income—£17,671,803. There is a net balance of cash in hands of treasurer, £2,760,576. Total assets, £31,444,157. The reason why such a large amount should be in the treasurer's hands is not clear. The treasurer had actually in his custody at March 31, 1922, according to the accounts, no less than £3,710,182 belonging to various departments; but out of this sum he had advanced to other departments £949,606, including £667,701 advanced to the gas department. The authority for these advances is not stated, and the interest charged for them does not appear separately in the accounts.

Of the capital expenditure on trading undertakings, nearly one-half, viz. £7,606,980, is in respect of water. The profit and loss account of the water department shows that the revenue from water rates and charges was £572,773, and required a contribution, which was granted, from the borough rate of £255,000 to meet revenue charges, including interest and redemption of debt. The electric supply, gas, and tramways undertakings are paying their way, supposing always that the amounts charged to the profit and loss accounts for redemption of loans are sufficient to cover expired capital outlay on plant (depreciation). This cannot be determined under the present system. The electric supply capital alone was raised by upwards of 130 separate loans, varying in amount from £150 to £500,000, and varying in period of repayment from 5 to sixty years. It is obvious, therefore, that the annual sum provided for redemption of loans may be either more or less than the actual expired capital outlay on the plant if the amount of this was properly measured.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET.	ACCOUNT.
September 6.	September 7.

It has been a week of alarms and excursions in the Stock Exchange markets, excitement being accompanied by comparatively little business. Contrary to all expectation, the pre-war account which came up for settlement yesterday, Friday, turned out to be a troublesome one, and it is known in the Stock Exchange that the open stock required a certain amount of assistance for it to get placed. The hostilities between Greece and Turkey added to nervousness, engendered by the implacable attitude of France and the helter-skelter drop of the mark. At one time, the War Loan dropped to 99½ sellers, German Threes gave way, and French bonds were especially flat. The House, as a whole, hung upon the movements of the leading markets, and when, on Thursday afternoon, a brighter atmosphere prevailed in gilt-edged stocks, the general disposition of markets became more cheerful. Everyone will be relieved when the pre-war settlement is out of the way, though its after-effects may possibly make themselves felt for some time to come even yet.

The War Loan dominated the situation in the Consol market, and prices weakened every day until Thursday afternoon, when a few buyers came in, the position was declared to be over-sold, and prices accordingly recovered. Home Railway Guaranteed and preference stocks are down in some forty or fifty cases.

CABLE ADDRESS: BANKTRUST, PARIS

Colonials hold their prices. National War Bonds are mostly easier. French bonds, after being acutely weak, recovered noticeably, the French railway issues following in the same track as that of French Government bonds. German bonds moved up and down according to the fluctuations in the mark. Chinese Eights are easier. Greek bonds are mostly down a point or two, and Turkish Unified also fell by reason of the military developments in the Near East. Czechoslovaks are harder. Argentines and Chileans advanced, but Brazilians continue to be pressed for sale upon an unwilling market.

Home Railway stocks are somewhat neglected. Dividends are out, prices are ex dividend, and there is nothing to arouse interest in the situation for the moment. Consequently, prices have been jogging along very quietly. Grand Trunks are again lower. In these, as in Mexican Rails, the losses to be settled this week on account of stock open on the pre-war settlement are extremely heavy. Argentine railways continue on an even keel, and the October dividends are being discussed with interest. No material changes occurred in Nitrates.

Rubber shares gave way a trifle, owing to the Dutch Government's refusal to use coercive measures for the restriction of rubber production in the Netherlands East Indies. The Oil market is uninteresting, from the fact of the changes on the week being so comparatively small. Textiles, as a section, make the best showing in the industrial market, a number of rises occurring under the genial influence of good reports and vague statements as to the industry having returned to something like normal conditions. Shipping stocks are steady. A few small rises occurred in the London banking shares. Insurance issues scarcely move. The Iron and Steel market is, on the whole, somewhat heavy, recent dividend declarations having disappointed a good many people who had been holding their shares in the hope of a trade revival. Dunlops went a little better; the directors seek power to use the remaining three million pounds 8 per cent. debenture stock as collateral security against an issue in America that will enable the Dunlop-America company to start work. Some of the stores and catering shares have improved. The Wireless market is extremely placid, and nothing of fresh interest has occurred in the cable group. Amongst land shares, Hudsons Bays, both ordinary and preference, are better. Interest in tobacco has somewhat waned.

The Kafir market has been over-shadowed by the developments abroad. Prices yielded a trifle, and the market took on a languid appearance, which was not wholly dispelled by the recovery which started on Thursday afternoon. De Beers are the strongest spot in South Africans, the prices of both ordinary and preference spurring by reason of optimistic statements that are being made in regard to the returning prosperity of trade. Tin shares are neglected, nor can it be said that there has been any animation worthy the name in the mining sections devoted to Russian, Mexican, Indian, Broken Hill or West Australian shares.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

1916	658,773,876	1914	512,522,633

The Devon General Omnibus and Touring Company, Limited.—Authorised capital £110,000, divided into 100,000 7 per cent. cumulative preference and 10,000 ordinary shares, all of £1 each. The 10,000 ordinary and 87,000 preference shares have been issued. This is an offer for sale of the 87,000 preference shares at par. It is stated that there are no debentures or charges on the company's assets, "except a mortgage of £10,000." It will be noticed that the preference issue is top heavy, and as the advertised "offer for sale" does not make it clear as to the extent to which assets could be charged, the term "preference" is of more theoretical than practical interest. Payment of capital and dividends on the shares are guaranteed by the Torquay Tramways Company, Limited, a prosperous undertaking, which should be able to find the necessary money. Apparently this is the omnibus undertaking of the Torquay Tramways Co., which has been formed into a separate, although subsidiary concern. The shares may enjoy a local market, but the general investor will probably not be attracted by the offer.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

ANCHOR LINE (HENDERSON BROTHERS), LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

ENCOURAGING DECREASE IN OPERATING EXPENSES.

The 24th ordinary general meeting of the Anchor Line (Henderson Brothers), Limited, was held on Tuesday, August 29th, in the offices of the company, 14 St Vincent place, Glasgow. Sir Thomas Royden, Bart., C.H., M.P., chairman of the company, presided.

DIRECTORS' REPORT.

The report of the directors for the year ended April 30, 1922, states that:—

The directors, in submitting to the shareholders the usual audited balance-sheet of the company for the year ended April 30, 1922, wish to express their regret that, owing to continued ill-health, Sir Alfred Booth has found it necessary to resign the chairmanship of the company, which he had held since September, 1912.

Having regard to the conditions which have ruled, the various services of the company have been well maintained throughout the year.

The freight business during the year has been carried on at a very low level of rates, especially in the Indian trade. The directors regret that there are no apparent signs of improvement in the immediate future. The passenger carryings of the company, both to the United States and the East have been satisfactory, despite the continued operation of the U.S. Act limiting immigration.

Delivery of the new steamer "Tuscania" from the Fairfield Shipbuilding and Engineering Company, Limited, is expected in September, 1922, and of

meantime. The "Tuscania" from Fairfield will be delivered on September 11th, and the "California" from Stephens about the middle of next year. Both steamers are well adapted for their trades, and we hope will be a great success. You will realise, however, that the great cost of these vessels is a severe handicap, and that it is a serious problem to do business with ships costing roughly a million and a-half, which in 1914 would have cost about £600,000. This, however, is not a problem which affects us alone, but is what every liner company in Great Britain has to face for many years to come.

I should like to refer to one very satisfactory part of our accounts. As you are aware, during the war all operating expenses increased enormously, largely owing to the state of hostilities existing. Since their cessation we have made constant endeavour to return to a normal basis, and not without success, our present basis being very much below the existing general increase over the year 1914.

DIFFICULT CONDITIONS.

I cannot foretell the future, gentlemen, nor can I pretend to forecast what will happen in the next twelve months. We have many difficulties to meet, not included in the bad trade which now exists. Financial conditions are abnormal, as exemplified by the large difference between long loan rates and bill discount rates, and future finance is difficult to estimate. Capital expense is another question which gives your directors constant anxiety, whilst the burden of heavy taxation is always with us. The sooner this country can return to a sane and normal Budget the better it will be for every business enterprise in Great Britain.

The company is in a good position, and has an excellent organisation, and whilst our shipbuilding liabilities are large, we possess great possibilities of earning, and in these abnormal times I consider we are in a very good position to take advantage of whatever the future may offer.

VOTE OF THANKS TO MANAGEMENT AND STAFFS.

Before proposing the adoption of the accounts, I should like to take this opportunity of thanking the management in Glasgow and the staff generally, both ashore and afloat, for all their work and effort during the past year. Without this continued effort and goodwill we could not present to you so satisfactory a statement of affairs as we have done to-day.

Gentlemen, I have much pleasure in proposing "That the report of the directors and statement of accounts for the year ending April 30, 1922, submitted to this meeting, be hereby received and adopted, and that, as recommended by the board, a dividend of 5 per cent. on the ordinary shares for the year ending April 30, 1922, be and is hereby declared upon the 25,000 ordinary shares of £10 each, payable, free of income-tax, on and after the 31st inst."

I will ask Mr A. C. F. Henderson to second the resolution.

Mr A. C. F. Henderson, deputy-chairman and managing director: I have much pleasure in seconding this resolution.

The Chairman asked if there were any questions to put regarding the report, and none being forthcoming, he submitted the resolution to the meeting. There was a unanimously favourable response, and he declared the resolution carried.

Mr Robert Clark proposed the re-election of Sir Thomas Royden, Bart., and Sir Percy E. Bates, Bart., as directors of the company.

Mr J. F. N. Graham seconded, and the proposal was unanimously carried.

Sir Thomas Royden: I thank you very much.

The Chairman then moved: "That the vacancy caused by the retirement of Mr Richard Henderson (who does not seek re-election) be not filled up, and accordingly that the number of acting directors be reduced from nine to eight." He said: "It is a matter of great regret to everybody connected with the Anchor Line that Mr Richard Henderson, who has been so closely and successfully associated with the company for so many years, is retiring, and not seeking re-election. He is taking up his residence abroad, and finds it impossible to attend any of our meetings. I am sure I am only expressing the feeling in the minds of everybody connected with the company when I say how much we regret this decision."

Mr A. C. F. Henderson: I beg to second.

The resolution was unanimously adopted.

Mr David Meikler Reid proposed the re-election of Messrs M'Clelland, Ker and Co. as auditors of the company, which was seconded by Mr William Adshead and carried unanimously.

Mr David M'Cowan: Before we part I have a pleasant duty to perform, and that is to invite you to give a hearty vote of thanks to our chairman. I am sure we all consider the balance-sheet a most satisfactory one, considering the trying times shipping is going through just now, and it reflects the greatest credit on the management and the chairman.

The Chairman: I thank you very much. I am much obliged to you.

The meeting then terminated.

FURNESS, WITHY, AND COMPANY, LIMITED.

SATISFACTORY DIVIDEND DESPITE YEAR'S DIFFICULTIES.

AMERICA'S SHIPPING LEGISLATION.

The thirty-first annual general meeting of Furness, Withy, and Co., Limited, was held, on the 1st instant, at the registered office of the company, Furness House, Leadenhall street, London, Sir Frederick W. Lewis, Bart., presiding.

The secretary having read the notice convening the meeting, Sir Frederick W. Lewis, Bart., in moving the adoption of the report and accounts, said:

When I addressed you last year I indicated that a difficult period lay ahead of us, and I think everyone who knows anything about shipping will agree that the past 12 months have been just about as depressing as they well could be. I think, therefore, we may congratulate ourselves upon the results shown in the accounts before us. Naturally, the figures are reduced in comparison with previous years, the profit, including the carry-forward, being £858,554 19s 4d, as against a corresponding figure of £955,848 4s 6d last year. This is the net profit after charging up all expenses and making provision for taxation. After allowing for the dividend on the preference share capital and for the interim dividend already paid on the ordinary shares at the rate of 5 per cent. per annum, we have transferred £200,000 to general reserve, and I will submit to you at the close of my address a resolution that a bonus of 5 per cent., free of income-tax, be paid to the ordinary shareholders, making a return for the year of 10 per cent., free of income-tax. The allocation to reserve will bring that fund up to an amount of £2,000,000, or 50 per cent. of our issued ordinary share capital. As regards the dividend, I think it is at a time like the present that our shareholders will appreciate the result of our past policy of endeavouring to pay a consistent dividend at a fair rate rather than distributing a few high dividends when trade happens to be good, and then falling from grace by paying nothing at all during bad times. These proposals will leave £206,054 19s 4d to carry forward to the current year's accounts, as against £203,348 4s 6d brought in.

"BALANCE-SHEET" ITEMS.

Turning to the balance-sheet items, I do not think there is a great deal that need be specially commented upon. Our capital account remains unchanged; sundry creditors are down by £700,000 at £3,963,292 8s 3d. These are the only items on the debit side, as we have no debentures, loans, or secured liabilities. On the credit side, our property and assets are increased by about £300,000. Sundry debtors are up by £330,000, and our cash and bills on hand stand at £1,722,612, as against £2,841,334 last year.

It must not, however, be assumed that because we have not raised any new capital during the past years we have either gone back or stood still in development. After all, to use a contradictory expression, to stand still is to go back in business affairs. As a matter of fact, we have added many fine vessels to our fleet and those of our subsidiary companies, and we have now taken delivery of the greater part of the vessels that were contracted for during the war, all of which have been achieved without any addition to our capital or that of our subsidiary companies. I think, therefore, that the shareholders cannot but feel satisfied with the position I have outlined, and, much as we dislike the depressed trading conditions, we are well prepared for the present situation.

I have already alluded to the fact that we have no charges of any kind upon our assets. This also applies to our associated companies, Prince Line, the Houlder Shipping Companies, Johnston Line, Rio Cape Line, Manchester Liners, Norfolk and North American Steam Shipping Company, Warren Line, Gulf Line, the Neptune Company, and a number of our smaller subsidiaries.

Before passing on I would like to mention that, as must necessarily be the case, a very small percentage of our income this year is derived from the earnings of the steamers owned by the company. The remainder of our revenue represents interest and dividends on investments, the trading of our branch offices, and profits earned in various ways.

SHIPPING INDUSTRY'S OUTLOOK.

None the less, shipping is our main business, and I am not going to disguise the fact that the outlook is anything but encouraging. The situation is no better than it was when we met last year, with one exception that a good deal of progress has been made in reducing expenses. Freight rates usually are, on an average, only about one-fifth of what they were during 1920, which, of course, is simply the reflection of falling trade, and the result is that there were on July 1 laid up in our home ports alone no less than about 532 vessels of just over 1,000,000 tons net register, or, say, 2,500,000 tons d.w., lying idle for lack of profitable employment.

During the year that has passed since I last addressed you, a good deal of progress has been made in the direction of reducing

operating costs. Our efforts have not always met with as much success as we had wished, but still, under existing conditions, there is very little more that shipowners can do by themselves. We have to wait for the general restoration of the trade of the world, but, in the meantime, the problem to which we have to address ourselves is to take the utmost possible advantage from such business as is being done.

AMERICA'S MERCANTILE MARINE.

I have on many occasions, both in my capacity as chairman of a number of representative British shipping companies and as president of the Chamber of Shipping of the United Kingdom, made a point of explaining what I conceive to be the attitude of British shipping towards the United States mercantile marine. Yet I am afraid that attitude is still misunderstood in certain quarters, as I am repeatedly hearing reference to the propaganda which it is alleged British shipping interests are directing against the growth and development of the United States mercantile marine. I desire to state publicly and emphatically that there is no such propaganda on the part of British shipowners, and any reports to the contrary are calculated to create an unfortunate atmosphere.

We have these definite conditions to face, that Great Britain has no increase in her mercantile marine as compared with pre-war, whilst the United States has increased in ocean-going shipping from under 2,000,000 to 12,500,000 gross tons. That problem seems to me to be only capable of solution by friendly co-operation with the object of increasing the trade of the world. I would be the last one to suggest that any stranger has the right to interfere in a nation's domestic affairs, and consequently, British shipowners do not claim any right to express an opinion upon the direct subsidy proposals which the United States are contemplating for the benefit of their mercantile marine, but when these proposals extend to the point of discrimination against British and other foreign shipping in United States ports, then quite different considerations arise.

NEW LEGISLATION.

If the citizens of the United States consider that the payment of a subsidy is the best method by which to establish and maintain their mercantile marine, and to encourage private ownership, and incidentally, perhaps, to rid themselves of a cumbersome national fleet, that is entirely a matter for them to decide, and time alone will show whether that policy is right or wrong, but the legislation which is at present being considered goes a great deal further than this in seeking to control and direct international commerce in favour of the vessels of the United States at the expense of all others. The only true basis of international shipping is that the vessel that can carry the goods most cheaply, without any artificial restrictions or incentives, shall do the trade. Any other policy adopted by any country simply means unnecessary taxation to its citizens, and higher costs for the commodities it imports and exports. Great Britain has for a great many years past not only upheld but also given practical effect to the doctrine of freedom of the seas by giving in her ports equal treatment and opportunities in every respect to the vessels of all flags, whether the foreign vessels comply with the British standard or not. The legislation that is now being considered in the United States would entirely destroy the principle upon which the present relationships between the mercantile marines of the British Empire and the United States are founded, and it certainly appears to be inconsistent with the spirit of the Washington Conference. After enumerating the restrictions in the proposed legislation, the Chairman continued: As a nation, we find that we are expected, and rightly expected, to meet heavy obligations on the one hand, and, on the other hand,

we are expected to forgo financial obligations due to us, whilst we have to face formidable tariff walls against the entry of British goods into those countries, but I have every confidence that in the long run common sense will prevail and that with a full and frank exchange of views between all parties that policy which is best for the common good of all must emerge.

It is my custom at these meetings to give you a résumé of the various ramifications of our business. I am glad to be able to report that every section of the business is in very good trim and our subsidiary undertakings continue to develop and extend their activities. So far as it is possible for one to speak with confidence in such circumstances, I do most emphatically feel confidence in the continued prosperity of our company, and during this trying time we are on the look-out to take advantage of any favourable opportunities for development that may present themselves.

The resolution was seconded by Mr R. E. Burnett and carried unanimously.

Mr J. A. Harradon proposed a hearty vote of thanks to the chairman, directors, and staff, which was seconded by Mr Walter Lee, and carried unanimously.

The Chairman having briefly replied, the proceedings terminated.

EBBW VALE STEEL, IRON, AND COAL COMPANY, LIMITED.

RAILWAY CHARGES AND LOCAL RATES.

The fifty-fifth ordinary general meeting of the company was held, on the 29th ultimo, at the Cannon street Hotel, London. Sir Frederick Mills, Bart. (chairman and managing director), presided.

The Chairman said the tale he had to tell was not so much one of industrial operations, but rather of extricating a great concern from the difficulties into which the Government, on the one hand, and labour, on the other, had precipitated it during recent years. Having commented on certain items of special interest in the balance-sheet and in the profit and loss account, he expressed the regret felt by the board that, for the first time for over twenty years, they were not able to recommend a dividend on the ordinary shares.

Proceeding, he said: Perhaps the less said about the doings in the coal mining industry in the spring of last year the better. It remains a catastrophe from which the industry will be long in recovering. Employees of the collieries have already appreciated the difficulties of the case, and have in part met the position, but until there be a reversion to the eight-hour day and railway rates, and Imperial and local taxation are reduced it is not possible to expect a reduction in the cost of coal. At the moment the American demand for coal is in being, but it must be recognised that this is an adventitious circumstance.

When the collieries restarted in the autumn of last year the directors were confronted, in a period of rapidly falling prices and inadequate demand, with the problem of the iron and steel departments. They were gradually restarted in October and November, 1921, and whilst a loss was not unnaturally the result of the actual working, the general results were not discouraging for the reason that departments ancillary to the iron works could be run at a profit. Taking the company's operations as a whole during the last six months of the financial year, a working profit was made. It is worthy of note that the increase in railway charges and of local rates current during the year under review had a surprising effect upon our cost of manufacture. Direct railway charges on a ton of finished steel have increased by no less a figure than 15s., and, in turn, local rates, which ten years ago amounted to 1s 5½d per ton on finished steel, amounted during the period under review to no less a sum than 7s 6d, and I need hardly point out that it is necessary that very considerable reduction in

these two important items shall be brought about with as little delay as possible.

NEW STEEL-MAKING PROCESS.

The shareholders will recollect that, very largely at the instance of the Government, this company acquired large interests in Northamptonshire, and the shareholders will doubtless be interested to know that our importation of foreign ore has ceased, and that we are now working wholly on Northamptonshire ores. This has involved a change in our steel-making process, and we have adopted a modification of the basic Bessemer process as being the most suitable. A change-over of this character, on so large a scale as we usually operate, cannot be accomplished all in a moment, and must be accompanied with some expense. Accordingly, the board have proceeded along the line of rather proving the process than in endeavouring to achieve a large output, which, under the conditions ruling, would have been difficult to dispose of. The by-product coke oven plant at Ebbw Vale has now a capacity of 11,000 tons a week, probably the largest in the kingdom, and the two new blast furnaces are in every way remarkable. The first of them was tested in the manufacture of hematite pig-iron, and produced as much as 3,039 tons in one week, which we believe to be the largest output of hematite in this kingdom, and since turning to the manufacture of basic pig-iron the maximum output so far has been 1,741 tons in one week, which is believed also to be the largest output of pig-iron made from Northamptonshire ores, and considerably in excess of that for which the furnace was designed. The new pig-iron is of excellent quality, the resulting steel is everything that we hoped for, and apparently suitable to our customers. As I have already said, hitherto we have sought rather to prove the process metallurgically, and that we have done. We now propose to test it commercially. Your board is so far satisfied that as soon as the last of the new blast furnaces is completed in a few weeks' time it is proposed to run the works to their fullest extent, should the condition of trade permit.

TRADE OUTLOOK.

The shareholders will no doubt expect an expression of opinion in regard to trade outlook, and I am bound to confess that, notwithstanding the many evidences that have been observable from time to time during the last 12 months, there has not been that revival of industry in general which would justify me in saying that we are out of the wood. There is certainly a greater demand, but it is clear that the several conditions that all commercial people are continually calling for must be forthcoming before a general resuscitation of industry can be expected. These conditions are well known. Having detailed them, he moved the adoption of the report and accounts.

The resolution was unanimously adopted and the other formal business transacted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

Hungary	7,500	Other Countries	87
Other Countries	3,712		
Total value of imports of gold	833,491	Total declared value of exports registered in the week	338,6

Messrs Samuel Montagu and Co. write, on August 31st, follows:—

GOLD.

A fair amount of gold has been on offer, and has 90 absorbed on account of India and the United States of America. Gold valued at \$4,280,000 has been received in New York, 358 London. Although in the middle ages Bohemia was famous for its gold mines, the working is at present restricted.

gold mine at Roudny. On an average the ore contains 10.5 grammes of gold per ton, about 80 per cent. of which is extracted. The annual output of ore and pure gold is illustrated by the following figures:—

	Output of Pure Gold.	Output of Ore.
	Kilogrammes.	Tons.
1913	325	35,994
1921	256	30,260
1922 (up to May 31st)	111.5	13,035

In spite of certain difficulties, experts predict that the mine has a promising future. At present, however, the undertaking is handicapped naturally by the high cost of production. Wages and the cost of materials necessary for working the mine have increased to such an extent that the Government has been asked for a grant in aid. (The prices of timber have increased by 1,194 per cent., benzine by 2,971 per cent., coal from 2.50 crowns to 54.50 crowns, &c.) The undertaking at present employs over 400 people.

SILVER.

The market has been quiet; support has come mostly from bears and speculative quarters connected with China. America has not been a seller, and supplies from the Continent have been scanty. Had offerings been larger, the demand—which has not been keen—would not have sufficed to hold up prices. India has been more inclined to sell than to buy. The U.S. mint report for 1921 specifies the production of silver in France for 1919 and 1920 as 12,000 ounces in each case. These figures are probably conjectural. We have heard on excellent authority that the actual output each year was about 10,000 kilos, or 321,500 ounces. It will be seen from the statistics that follow that coined silver is still flowing strongly into the Indian currency chests. Fresh record holdings are being shown each week. The amount of notes in circulation is still somewhat below the record total of 18,691 lacs on January 15, 1920. The ratio between the note circulation and metallic reserve was then 46.5 per cent., as compared with 61.2 per cent. on August 22nd last. The ratio between the note circulation and silver reserve alone on the latter mentioned date was 47.9 per cent., and therefore larger than the ratio of the whole metallic reserve on the earlier date.

INDIAN CURRENCY RETURNS.

	Aug. 7, 1922.	Aug. 15, 1922.	Aug. 22, 1922.

The silver coinage during the week ending 22nd inst. amounted to 3 lacs of rupees. The stock in Shanghai on the 26th inst. consisted of about 40,300,000 ounces in sycee, 33,000,000 dollars, and 4,840 silver bars, as compared with 39,800,000 ounces in sycee, 33,000,000 dollars, and 5,360 silver bars on the 19th inst. The Shanghai exchange is quoted at 35 1/4 d the tael. Statistics for the month of August are appended:—

	Per Ounce Standard.	Per Ounce Standard.

† Free of tax.

steady rates. English old ranges from 40s to 55s, New grinding 35s to 43s per 448 lbs free on rail. Imported, Californian quoted 37s to 45s, Australian chevalier 47s to 55s, Chilean brewing 45s, all per 448 lbs ex-store. No. 4 Canadian Western ex-ship 32s, landed 34s 6d, American ex-ship 48 lbs 32s, ditto landed 33s, Persian ex-ship to arrive 28s, all per 400 lbs. Maize cargoes attracted very little attention, but with adverse Argentine weather reports holders refrained from pressing, which resulted in a steady price level. Parcels were in fair request, and prices, while irregular, showed a firmer tendency. The spot demand also proved quiet, and in some instances slightly lower prices were accepted. Plate yellow 40s 3d ex-ship, 42s 6d landed, No. 2 mixed American 33s 6d ex-ship, 35s landed, No. 6 yellow African 35s ex-ship, all per 480 lbs. Oats in quiet request, and English 1s to 2s per qr lower. New English whites ruled at 25s to 28s, grey and black ditto 23s to 26s per 336 lbs, free on rail. Imported dull. Plate f.a.q. quoted 26s, ditto clipped 27s, No. 2 Canadian Western 30s 3d, No. 2 white clipped American 38 lbs 25s 6d, ditto 36 lbs 25s, British Columbian 42s, all landed per 320 lbs. Oatmeal quietly steady. London-made all cuts £18, rolled oats £18, flaked £21, ordinary Scottish oatmeal £21 to £21 10s. American all cuts £18 per ton. Beans remain quiet. English springs 56s to 63s, winters 51s to 53s per 532 lbs, free on rail. Imported: Rangoon spot 7s 3d to 7s 6d, Madagascar haricots old crop 8s to 11s, and new 13s to 14s per cwt. Chinese horse beans £10 15s to £11 15s per ton. Peas steady. English maples 70s to 80s, duns 52s to 55s, small blues 65s to 75s per 504 lbs, free on rail. Of imported, Japanese spot quoted 37s, Tasmanian A grade 22s to 23s, New Zealand blue 20s to 23s, Dutch blue 21s to 27s per cwt. English rye quoted 35s to 39s per 504 lbs, free on rail. Lentils quiet. No. 1 split 22s 6d, No. 2 ditto 21s, Egyptian 20s to 21s per 100 lbs. Homeward grain chartering was of fair extent, though mainly confined to cargoes from North America. Montreal to Avonmouth September paid 2s 10d, ditto Hull 3s per qr, Continent 11½ cents to 12 cents per 100 lbs., and Mediterranean November 1st-15th 4s 3d per qr, ditto four ports Sweden/Norway 18 cents October, and Greece 21 cents September. Gulf to West Italy September 16 cents, Northern Range to Continent 11 cents, West Italy 16 cents, Greece 20 cents per 100 lbs. North Pacific quiet, and 35s per ton quoted to U.K./Continent, and 37s 6d to Mediterranean September-October. River Plate chartering was mostly at a standstill, the only fixture recorded being at 22s up-river loading to U.K./Continent September-October, less 6d to direct port U.K./Continent with Mediterranean and Adriatic options. Eastern markets quiet, but Bombay steady at 20s on deadweight home. Australia nominally unaltered, while Danube business is in abeyance pending the decision of the Roumanian Government with regard to maize exports.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated August 31st, is as follows:—Pig-iron: The demand for Cleveland pig-iron from America is very welcome to local ironmasters, as, this being the local holiday season, the home demand is very slack. A fair quantity has been sold for export, thus relieving makers of their stocks. Prices are inclined to be firm, and 87s 6d per ton is quoted for No. 3 Cleveland G.M.B. The demand for hematite is not so great, but the price of mixed numbers is still maintained at from 89s to 90s per ton. Manufactured iron and steel: Most of the local steelworks have restarted after the holidays, and although orders are not plentiful, a few have accumulated during the stoppage. With a free market, competition is very keen, and it is difficult to fix prices, but the following are about the general quotations:—Steel ship plates, £9; steel ship angles, £8 15s; iron bars, £11; steel rails, £8 15s net. Iron ore: No new business is reported, but the nominal price for best Rubio is still 24s 6d sellers, whilst buyers are holding off in the hope of procuring what they require at a lower figure.

Our Sheffield correspondent writes:—The recovery of the steel trade is scarcely perceptible in several important local branches, and hopes of autumn activity are fading. Experiences of individual firms are sharply contrasted, as those producing the cheaper

steels are undoubtedly booking increased business in both the home and export markets. There is a tendency to put further blast furnaces into operation, but this is to meet the demand from America and the Continent. Basic pig sells fairly well, but there is little demand for foundry, forge and hematite sorts, the prices of which are steady, but would be shaded in some cases to effect sales. The tool steel branch is more stagnant than ever, there being practically no overseas demand, while a considerable part of home requirements are being met out of surplus war stocks. The demand for tools of some kinds is a little more brisk. Sheffield makers of steel tramway points and crossings have lost a contract worth about £18,000 in Glasgow, which was placed in America at £3,000 less. The successful contract, however, was for a cheaper kind of material than that of the Sheffield houses, who only supply the all-manganese trackwork. The transaction does not, therefore, mean that America can supply tramway steel here at a lower price than the home makers. Plate and cutlery makers have not yet discerned any signs of buying for the Christmas season, which should now be beginning. The electrical branches are booking orders fairly well. The financial resources of local firms are so strained that a sudden access of new business on a considerable scale would cause embarrassment. The coal trade is rather stronger, and some pits are advancing prices of household sorts. But qualities are abnormally dear. Steam coal is selling rather freely, and there is a considerable export business doing in this and blast furnace coke. Makers can get 22s for the latter for export, but 17s 6d at the ovens is the home price.

Our Glasgow correspondent writes:—The business feature of the week has been the disclosure of the placing with shipbuilders on the Clyde of orders for five large steamers, two with Messrs John Brown and Co. (of Sheffield and Glasgow), two with Messrs Connell and Co., and one with Messrs Barclay, Curle and Co. With the four vessels arranged for by Messrs Lithgow and Co., Port Glasgow, it follows that the contracts for the month reach to nine boats, with probably an overall tonnage of 50,000 tons. Matters are appreciably better in the pig-iron trade, thanks, however, and only to the demand which is in force for Scotch brands from America. A number of sales have been effected since Monday, and shipments are regularly going forward. The price for Scotch No. 3 is now up to 105s per ton f.o.t. at makers' works. No. 1 is higher, how much so is not declared, being a detail of negotiation between buyers and sellers. For home business makers are asking £5 per ton for No. 1 and £4 17s 6d for No. 3 f.o.t. sellers' works. Scotch hematite idle at £5 7s 6d. For both hematite and Scotch foundry the inquiry is exceedingly light, purchases being fully 50 per cent. below the normal standard. On the pig-iron "ring" on Wednesday sellers of Scotch No. 3 were firm at 102s 6d f.a.s. Glasgow (mixed numbers). For No. 3 Middlesbro' 87s 6d f.o.b. Middlesbro' was asked; and for mixed numbers East Coast hematite 91s f.o.b. Middlesbro' was named. In the finishing departments business during the week has been slow, slacker than it has been since the month came in, and so-called official quotations for most kinds of stuff have been with difficulty upheld. Thus, boiler plates are no better than £13 10s; ship plates, £9; and sections, £8 15s. Good specifications executed at fractions off. Sheet bars and billets off a bit at £7 and £7 2s 6d respectively. Coals keep firm, and the exports are on a bigger scale than has for a while been experienced. At the various Fife and Clyde ports about seventy boats are waiting on cargoes, a large proportion being destined for the Continent.

Our Cardiff correspondent writes:—There has been a lull in the local coal markets during the past week, and new business has been on a small scale. Inquiries on American account are still circulating, but a comparatively few are now materialising into orders. Apparently buyers are holding off on the present enhanced level of prices. Business is momentarily expected on Canadian account, but so far this has not been forthcoming to any material extent. Trade with the Continent, too, has declined, and France appears to be pretty well out of the market for the moment. It seems that she is buying heavily in Belgium, and that this accounts for the paucity of orders from that country. At the same time, colliery salesmen are not perturbed at the present quietude, as collieries are in not in any immediate need of orders, being fully booked up in many cases up to the end of September, and even well into October. The traffic at the docks continues very heavy, and this week additional coal-trimmers have been put on in order to cope with the situation. Fortunately, the precautions taken by the Great Western Railway Company have prevented anything in the nature of inconvenient congestion. The Customs returns for the week ending August 25th showed exports amounting to nearly 500,000 tons, but there is every indication that this week's shipments will be appreciably higher. Some excitement occurred during the week consequent upon an embargo being issued by the transport workers on the loading of the Fascist-manned Italian ship "Emanuel Accame," and the incident caused some local anxiety as to the continuance of smooth working at the docks. As a result of negotiations conducted by the local leaders, and investigations as to the personnel of the crew of the Italian ship, and the circumstances under which she arrived at Cardiff, it was arranged on Thursday that the embargo should be lifted. The vessel, by the way, has been chartered to convey South Wales coal to the United States. During the week there has been an easier tendency in regard to prices generally, with the exception of dry coals, the firmness of which is still fully maintained consequent upon their being taken in substitution for anthracite coals, which are pretty well out of the market. Of the best grades of coal, leading Monmouthshires are the weakest spot, and values have a downward tendency. Current market prices are as follows:—Best Admiralty large, 30s to 31s; seconds, 29s to 30s; best dries, 30 to 31s; black veins,

28s to 29s 6d; Western Valleys, 28s to 29s; Eastern Valleys, 26s 6d to 28s; best bunker smalls, 21s to 22s; ordinary cargo smalls, 19s to 20s; coke for export, 40s to 45s; inland blast furnace coke, 27s to 29s 6d at ovens; patent fuel, 28s to 30s; pitwood (ex ship), 32s to 33s. The tinplate market is quiet, present rates of exchange having an adverse effect as far as Continental business is concerned.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although business in tops is being conducted more or less on hand-to-mouth lines, the market remains exceedingly firm, and quotations for merinos are moving to a still higher level. To some extent this may be regarded as a protective measure, for most topmakers are heavily sold forward, and the general impression is that merino values will again advance at the Colonial wool auctions which open in London next Monday. Some quotations to-day are frankly protective, but warp 64's tops are worth at least 4s 10d per lb, and good average 64's are quoted at 2d less. A feature of the market is the scarcity of good Cape tops, and quotations for these are now fully on a par with Australian. There is a moderate amount of business in crossbreds, and for the fine sorts quotations are firm at late rates. In some cases, however, users have lost confidence on account of the holding up of business with Germany as a result of the financial crisis, and some considerable weights of crossbred yarn originally intended for the Continent can be picked up at prices well under the market level. There is a fair inquiry for Botany and fine crossbred yarns, and spinners are advancing their quotations in sympathy with the rise in tops, but the trade as a whole is somewhat spotty. While some firms report good orders, others assert that manufacturers are inclined to hold off. The general feeling is that, with values steady on to-day's level, some good business could be done, but any further advance in quotations may check demand. The piece goods trade presents no new feature. Orders coming to hand are comparatively small, but the outlook generally is regarded as favourable. Home-grown wools are selling well, and prices remain very firm.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Next Monday another series of London sales will commence. The quantity available is 128,000 bales, the auctions being arranged to last two weeks. In view of the financial position on the Continent, there is a good deal of surmise as to what will happen to values, the whole trade being concerned to know whether the financial crisis will bring about a reaction in wool. It cannot matter a great deal whether Germany is a buyer or not, for the home trade and other sections of the Continental trade will be quite capable of lifting the wool catalogue. It is not so much a question of German buying being stopped as the effect of the slump in the mark upon the value of the franc and lire, it being well known that practically all other Continental countries besides Germany are keen to purchase the raw material. So long as the German money crisis continues, it is certain to operate adversely upon all other Continental exchanges, and a great deal will depend upon the result of the attempts to settle the reparations question, and the attitude Germany takes up in regard to paying dues and demands. So much raw material has been bought for Germany during the past two years that if that country were to drop out now, some effect would be produced upon values, and although German spinners and manufacturers have not exhausted their sterling resources, the value of the mark being so low cannot but prevent a large volume of business being done, which would have been executed under more favourable financial conditions. We may not see big operations on the part of that section of the trade, but we shall be greatly surprised if a moderate amount of buying is not done during the next fortnight in London. Under any condition we do not expect a big onslaught until the outlook clears, but Germany wants wool, and will exhaust her sterling resources in London before finally retiring, which we do not believe will be the case.

The home trade are looking forward to the forthcoming series of sales with feelings of optimism. It would suit the book of practically all buyers if, instead of an advance in merinos, as expected, there were to be a decline of 15 to 20 per cent. A rise at the present

uncture is very undesirable, and we consider that on to-day's market values for fine wools, it will be impossible to lift another 1,000,000-bale clip. The forcing-down tactics adopted in June ought never to have been used, for there are good 64's tops to deliver that were sold at 4s, a price which was never justified. Starting a new season in Australia at current values must put the entire trade upon tenter-hooks. One of Yorkshire's biggest spinners emphatically stated this week that yarn business had practically stopped in merino qualities, simply because manufacturers and wholesale fabric buyers affirm that trade is being killed on account of to-day's very high prices. We see that Sir John Higgins repeats the recent statement of Sir Arthur Goldfinch that there will be an acute shortage of merinos within 12 months. If that is so, it may convince the buying public that it is high time they turned to something more reasonable in price, and quite as serviceable. While we certainly do not favour any lower prices for crossbreds, we cannot see how the world's textile trade can be re-established with merinos at a famine price. The economic position is such that no higher prices ought to be paid for merinos. Reasonable values would help to set going some thousands of looms which are still standing, because there is still such a large section of the world's population which cannot afford to buy the cheapest wool fabrics produced to-day.

LONDON COLONIAL WOOL SALES—SEPTEMBER SERIES, 1922.

The following are the approximate quantities of B.A.W.R.A. wool to be offered in London during the auctions which commence on September 4th:—

	Bales.
Australian—	
Greasy merino combing	23,000
Ditto carbonising	100
Ditto lambs	150
Scoured merino combing	500
Ditto clothing	2,200
Ditto clothing skin wool	300
Ditto carbonising	150
Greasy crossbred combing	14,300
Ditto combing skin wool	200
Ditto clothing	200
Ditto carbonising	300
Ditto lambs	1,150
Ditto carbonising lambs	950
Scoured crossbred combing	1,100
Ditto combing skin wool	1,100
Ditto clothing	1,000
Ditto clothing skin wool	400
Ditto carbonising	1,800
Ditto carbonising skin wool	150
Ditto lambs	800
Ditto carbonising lambs	150

In addition to the above, about 78,000 bales of privately owned wool will be offered during the series, say 24,000 bales Australian, 40,000 bales New Zealand, 2,000 bales Cape, and 12,000 bales South American.

MANCHESTER, August 13.

The conditions prevailing in the market during the past week have shown very little change. There has been a disposition in many quarters to mark time pending the official report on the American crop and developments relating to political and financial matters in Europe and the Near East. Miscellaneous sales have occurred in piece goods for India and the undercurrent of demand keeps up fairly well. Isolated transactions have occurred in grey shirtings for China, and fancies have not been altogether idle. Operations have been very restricted for Egypt and the Levant. Finishing cloths have been in moderate request for South America. There has been no activity in home trade circles. A firmer tone has prevailed in the yarn market. Spinners have obtained some relief as a result of the Oldham holidays and the extra week's stoppage of the mills. A fair turnover has taken place in American and Egyptian counts.

EGYPTIAN COTTON CROP.—ANNUAL STATISTICS.

Details have just been received of the Egyptian cotton crop for the season ended July 31st, the growth being 5,488,025 cantars (a cantar is about 100 lbs.), against 4,876,500 cantars in the previous season, and 5,642,560 cantars in 1919-20. The largest crop ever grown was in 1913-14, the total being 7,684,172 cantars. Shipments from Alexandria during the past 12 months amounted to 749,181 bales, against 428,470 bales in the previous year and 841,707 bales in 1919-20. During last season Great Britain took 339,252 bales, against 220,223 bales in the previous year and 408,063 bales in 1919-20. Shipments to the United States during the past 12 months were 168,843 bales, against 49,722 bales in the previous season and 291,496 bales in 1919-20. The acreage last season under cotton in Egypt was 1,291,778 feddans, and for 1922-23 the area under cultivation has been estimated at 1,465,135 feddans. The new crop is reported to be doing very well, and there is a possibility of a large output.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

The advance reported in the Bermondsey hide market last week seems to have been a temporary flutter, as values were steady on Thursday, best ox making from 6½d to 9½d per lb. Fluctuations in other grades were unimportant, calf being slightly firmer.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

Lambs sold from 2s to 6s 9d each, and pelts from 3s 8d to 5s 6d each. Tanners are buying imported hides very sparingly, and the trade in S.A. hides is rendered difficult by the chaotic exchanges. Dry hides are wanted in the cheaper grades, as tanners are still being pressed to deliver same very low priced bonds for the "stunt" boot trade. The American hide market is reported firm, with best heavy Chicago packers quoted at 20 cents.

Whatever the reason, or reasons, there is a better tone prevailing in the Bermondsey leather market. The optimists seem to feel the trade has tided over the worst period, and this seems supported by the fact that inquiries for leather have come in much better of late. True, the actual purchases are for small quantities, but these make up quite a respectable total at the end of the week. Light bonds of 6/8 lbs are the chief want, repairers asking for weights up to 10 and 12 lbs. Tanners are fairly firm on prices, but some of them complain loudly of the low-priced rubbish which some makers of boots seem to favour.

The demand for upper stock is improving, and holders of the better classes of box and willow calf, glacé kid and chrome sides report a better inquiry. American leathers are much in request, and prices are decidedly firmer. German leather seems out of the market for the moment owing to the collapse in the exchange. Curriers are short of orders, although there seems a better demand for semi-chrome of late.

The shoe trade is slowing down after the autumn holiday demand, and more short time is reported. Schemes are being promulgated to produce a stamped "All-British Boot," made from British leather, but I fear American and Continental leathers have obtained too great a hold in our market to make any such scheme a success.

VEGETABLE OILS AND OILSEEDS.

After the sharp fall in linseed values, during which a fair business was done at the decline on crushers' account, there is a steadier feeling, though prices are still 10s to 15s per ton lower on the week, and reflect the small prompt and near demand and the uncertainty which exists as to the extent of the Argentine surplus. Arrivals at the seaboard are already in excess of the estimated total for the whole year, and a good deal of linseed is at up-country stations, and has yet to come forward. In these circumstances, coupled with the extremely poor demand for the oil product, it is not surprising that crushers are buying only from hand to mouth, and when the market is in buyers' favour. Plate linseed on passage has been bought at as low as £16 10s, with slightly more paid for August-September shipment, though values have since hardened to £17 for on passage and for shipment. New crop continues to be dealt in round £16 and £16 5s. For Calcutta to London £17 17s 6d was accepted for afloat and £18 for shipment, but current values are 10s to 15s above these figures. Black Egyptian cottonseed slumped to £10 accepted, but is slightly firmer round £10 10s (sellers), as is also Bombay, but actual trading is small.

Very little business has been done in linseed oil, the cessation of the American demand and the unsettled situation on the Continent proving very depressing factors. The inquiry in the home trade is fair, but comparatively little business has been done, notwithstanding a further decline in values, spot now offering freely at £37, and September-December at £3 10s, ex Hull mill. Raw linseed oil on spot has fallen £6 10s since August 1st and forward £5 10s, a very sharp decline in the course of a month. Cotton oils are down 50s to 60s on the week, current value of crude Egyptian being £31 10s and ordinary refined £36, whereas a better demand. Very little inquiry for crude soya bean oil is reported, and together with palm kernel oil is quiet and lower. Rape oil is very quiet, but ground nut oil is in fair request, and late value about maintained.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 1.

SUGAR.—Only a moderate amount of business was effected in most kinds during the week, demand being largely confined to wants of immediate necessity. Prices show a decline of 6d per cwt for refined parcels on spot. Messrs Tate and Lyle's cubes, 57s 6d to 58s 6d; crushed, 50s; granulated, 50s 6d to 51s 3d, according to quality; pulverised, 53s 3d; caster, 53s 9d to 54s 9d; yellow crystals, 45s 3d; pieces, 35s 6d to 38s 6d; fine white, 45s 6d; granulated, October, 50s 9d; November-December, 50s 3d. Crystallised West India, sold, 42s to 44s 6d, as to sample. American granulated, spot, changed hands at 49s 6d to 50s and 49s 9d; afloat parcels, 23s 1½d to 23s 3d; August-September, 23s 3d; white Java, spot, sold, 48s 10½d to 48s 6d and 48s 9d; afloat, 19s 7½d to 20s 3d, c.f. and i. terms, London. White Mauritius, spot, 47s 6d to 48s; white Brazilian, 47s to 47s 6d. Cuban, basis 96 per cent., August-September, quoted, 18s; Brazilian, basis 80 per cent., ditto, 9s 3d, both c.f. and i., U.K. Cuban stocks stand at 495,300 tons, against 1,256,700 same time last year. Liquid glucose, spot, 28s per cwt.

COFFEE.—Spot market without new feature, business proceeding quietly at mostly previous prices. Export demand is still very slow. Futures dull.

COCOA.—Market quiet, but prices regarding spot parcels show no material alteration. Forward, Accra, F/F quality, October-December, sold, 41s to 42s, ex quay terms, Liverpool, and ditto, 36s to 35s and 37s per cwt, f.o.b.

TEA.—Quantity of Indian brought to auction this week totalled 32,332 packages. Brisk competition ensued for medium to fine qualities, and previous values were easily secured; but in the case of common demand was rather quiet, and trend of prices against the

seller. 25,564 packages Ceylon aroused active support, particularly where run of quality marked an improvement, and prices were dearer, about 1d per lb on average in the case of good to fine invoices.

RICE.—Market steady, but trade moved quietly. Two stars, spot, 15s 3d to 15s 6d; August-September, 14s 6d, c.f. and i. Broken kinds quietly steady. Siam C.I., August-September, 10s 10½d, c.f. and i. Rangoon beans quiet, with small sales in spot parcels at 7s 3d, Japanese peas, spot lots, sold, 36s to 37s; September-October, 25s 6d to 27s, and 25s 6d; October-November, 26s, and December-January, 23s 3d to 25s. Madagascar butter beans, spot, old crop, quoted 8s to 10s; new, 12s to 14s.

SPICE.—Pepper market presented quiet features, with rates moving in favour of buyers. Fair black Singapore, spot, sold, 3½d ditto, August-October, steamer, 3½d; Aleppo, spot, quoted 4½d; Tellicherry, 4½d; white Singapore, spot, 6½d; August-October, white Muntok, spot, 6½d; August-October, 6½d; October-December, 6½d. Zanzibar cloves, spot, 1s 4d; October-December, 1s 4d. Flake tapioca, spot, 28d per lb; October, steamer, 21s; fair Penang seed pearl, flour, August-October, sold, 13s 6d; October-December, 13s 6d. Desiccated coconut, spot, sold, 33s; afloat, 31s; October-December, 31s. Quiet at recent prices.

There was a fair inquiry for other growths, but other growths were not so steady. Australian copra, spot, 10s 10½d; quarter cases, 10s 10½d. The market is quiet, but other growths are not so steady. Dates quiet. Spot, 27s 6d.

WHEAT.—The market improved sharply in the early part of the week, a good many covering orders were in circulation, but later a much quieter tone prevailed, and prices gave way, closing firm. First grade, September-October, and also October-November, to usual Continental ports, were sold up to £31 10s, and later £30 10s, then £31 10s. Lightning grade in these positions at £26 10s to £28 10s, £27 10s, and £28. Hessians ruled steady. 10 oz, afloat, were dealt in at 35s 6d; 8 oz ditto quoted 25s; A twills, spot, 78s; B, sold, 65s 9d.

HEMP.—The market for Manila presented very quiet features, but prices were without material alteration as sellers were not pressing. G grade, September-November, sellers, £34 10s; H, £33 10s; J, £31 5s; K, £30 5s; L, £29 5s; M, at £28. New Zealand dull. H.P.F., September-November, £32 10s; fair, £31. African sisal, No. 1, G.E.A., August-October, £37 sellers, and B.E.A., £36. Indian quiet and featureless.

SHELLAC.—Market dull and prices tended easier. T.N., spot, 310s to 315s; October, 265s; December, 260s.

COPRA.—Market quiet, and rather unsettled at times. F.M.S. Straits, July-August, Hamburg, sold, £22 12s 6d; ditto, September-November and October-December, Rotterdam, £23, £23 5s; Ceylon, September-October, London, £24 10s to £24 6s 3d; ditto, Genoa, £23 17s 6d; South Sea Islands quoted £22 5s; Cebu, £22 5s;

THE MONEY MARKET.

LAST week's revenue return indicated that the Govern-
ment had borrowed £7½ millions in Ways and Means
Advances from the Bank of England in order to finance
the interest payment due on September 1st; but this
creation of new credit appears to have been a very short-
lived transaction since Thursday's Bank return showed
a decrease of nearly a million in Government securities.
In the early days of the week, owing to the scarcity of
maturing Treasury bills, and large repayments to the
Bank of England, money was far from plentiful in the

Lat. 23 10s; Dutch East Indies, £23 2s 6d. Palm kernels,
November-November, Liverpool, sold, £16 10s, and October-
December, £16 12s 6d.

RUBBER.—Market rather featureless, general trade being quiet, and
prices easier on the week. Standard plantation, spot and August,
sold, 6½d to 6½d; September, 6½d to 6½d; October, 6½d to 7d; Octo-
ber-December, 7d to 7½d; January-March, 7½d to 7½d; April-June,
7½d to 7½d. Fine hard Para, spot, 10½d; soft fine, rod; ball, 7½d
per lb.

MENTHOL.—Spot, 30s; forward, 24s 6d. Japanese peppermint oil,
spot, 6s 9d; forward, 6s 3d. Aniseed, spot, 2s 3d. Slab camphor,
spot, 3s 6d; crude, 3s 6d; and forward, 3s 4d and 2s 11d respectively.
Cassia oil, spot, 5s 6d; forward, 5s per lb. Japanese wax, spot, 85s;
forward, 75s per cwt.

EGG PRODUCTS.—Market quiet, steady. Prime liquid yolk, spot,
per cwt. Albumen, spot, 3s 2d. Dried yolk, spot, 6½d per lb.

Standard market easier. Spot, net, naked, 34s 6d; September,
October-December, 33s 14d; January-April, 32s 14d.

Crude, spot, nominally 40s; refined, 44s. Cotton
seed, spot, 34s; common edible, 45s; do, do, 46s.

Egyptian, spot, 34s; common edible, 45s; do, do, 46s.
China-wood quiet. Hankow, spot, 63s; do, do, 63s.

Shipment, 63s. Coconut steady. Ceylon, spot, 43s; do, do, 43s.

September, 37s; Cocchi, ditto, quoted 43s. Japanese oil, spot,
barrels, August-September, 36s. Japan, spot, 36s.

cases, 22s. Cod steady. English, spot, 45s; do, do, 45s.

English crushed, naked, spot, 45s; do, do, 45s.

Turpentine firmer. American, spot, 95s; do, do, 95s.

September-December, 95s; January-April, 95s 9d. Rosin firmly held. American,
grade B, 14s; G, 14s 9d; H, 15s; N, 15s 6d; W, 15s 6d;

WW, 20s 6d. French, F/G, 15s; WW, 18s 3d per cwt. Petroleum
steady. American standard white, spot, 1s 4½d; and water-white,
1s 5d per gallon.

OILSEEDS.—Linseed market quiet and somewhat irregular. Bold
Bombay, afloat, £19. Small Bombay, ditto, £18. Calcutta, afloat,
£18; July-August, sold, £18 to £18 2s 6d; August-September, £18 5s;
September-October, sold, £18 5s. Plate afloat, £17; July-August,
£16 15s; August-September, sold, £16 15s; January-February, new
crop, £16 2s 6d. Rapeseed easier. Toria, August-September, sold,
£17; real bold Ferozepore, August-September, quoted £16 10s;
Cottonseed steadier. Egyptian black, September, quoted £10 10s;
and white sold, £9 2s 6d to £9 12s 6d. Bombay, August-September,
£8 5s, sellers. Gingly quiet. Chinese, new, October-December,
Continent, £23 5s; large Bombay, August-September, £22. Castor,
Bombay, August-September, sellers, £17 10s, to Hull. Ground nuts
easier. Coromandel, machine-dried, August-September, £19 7s 6d;
ordinary, £18 17s 6d; East African, £19; Nigerian, £21; bold
Bombay, £19 10s. Soya beans, Manchurian, August-September,
£12 10s per ton.

METALS.—Tin opened the week with a steady tone, and after a
slight downward movement subsequently became firmer on buyers

showing more interest. Cash sold at £158; September, £158 to
£158 10s; October at the same figure; November, £158 to £158 2s 6d
to £158; and three months, £158 10s to £158 to £158 15s, while
finally at £158 10s. The firm tone was maintained, and a further im-
provement registered in sympathy with higher American advices and
stimulating cables from the East, while buying orders were well in
evidence. By the middle of the week standard cash stood at £160 15s
to £160 12s 6d; September, £161 10s to £160 10s; October,
£161 to £160 12s 6d; November, £161 5s to £161; and three months,
£161 5s to £160 10s to £160 15s to £160 12s 6d. At Thursday's market
values ruled rather firmer, with a fairly good inquiry. Cash sold at
£160 5s to £160 12s 6d; and three months, £160 15s to £160 10s to
£160 5s; and finally registered at £160 15s. On Friday the tendency
was firmer, and trading resulted in cash at £160 12s 6d to £161, and
three months £161 to £160 15s to £161 2s 6d. English ingots, £161 10s.
Copper commenced the week with a firmer tendency on sellers
showing more reserve. A fairly good business transpired, however,
chiefly for forward positions. Standard, cash, sold, £62 1s 3d;
September, £62; October, £62 2s 6d to £62 5s to £62 2s 6d;
November, £62; and three months, £62 2s 6d to £62 5s. Firmness
characterised subsequent movement, due to higher advices from the
United States and covering orders for distant positions, while cash
and near maturities were also dealt in. On Wednesday, standard,
cash, ruled at £62 17s 6d to £63; September, £63; October,
£63 2s 6d; November, £62 15s to £63 5s to £63 2s 6d; and three
months, £62 17s 6d to £62 15s to £63 5s. At Thursday's market
rates were rather easier, and a large business transpired. Cash sold
at £62 12s 6d to £62 17s 6d; and three months, £62 15s to £62 12s 6d
to £63. On Friday the tendency was firmer, with a good demand.
Cash sold at £63 3s 9d, and three months £63 6s 3d to £63 7s 6d to
£63 8s 9d. Electro, £69 10s to £70 10s. Best selected, £66 to £68.
Strong sheets, £94. Wire bars, £70 10s. Lead firmer at £24 2s 6d
to £23 10s, as to position, Spelter dearer, £10 5s to £10 10s,
according to position. Antimony, ordinary, £27 to £29 10s.
Aluminium, home, £100; export £105.

METROPOLITAN CATTLE.—AUGUST 31.

market, and it had some difficulty in clearing itself of debt. On Thursday, however, when the Bank return showed a very large increase in the bankers' balances, money suddenly became much more plentiful, and bills, which had been difficult to dispose of, were in much keener demand. Yesterday, however, the demand for money was quite keen again, and the three months' rate was quoted firm at $2\frac{3}{4}$ per cent. A good deal of stress has been laid by the French Press on the transfer of some gold from safe custody at the Bank of England to the vaults of the Bank of France. Such a movement can evidently have no effect on the exchange or on the real strength of the position of either of the banks.

	Sept. 8, 1922.	Sept. 1, 1922.	Aug. 25, 1922.	Aug. 8, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$	$1\frac{1}{4}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	..

The Bank return showed a minute decrease in the stock of gold, and a decline of £1,039,000 in the circulation with a corresponding increase in the Reserve. Government securities were £910,000 lower, and Other showed a net increase of £669,000, the market's borrowings having apparently exceeded repayments. Interest payments had reduced the Public Deposits by $12\frac{1}{2}$ millions, and added $13\frac{1}{2}$ millions to Other. The circulation of currency notes was reduced by £223,000 to £293,088,200, which includes £1,566,400 for notes called in but not yet cancelled. The fiduciary issue is £243,371,800, or £66,616,600 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange has been on the dull side, and although the pre-war settlement last week was successfully carried through, the after-effect upon the gilt-edged market has been one of depression. British Government stocks are mostly lower on the week, but India stocks have been firm. French bonds have improved on buying from Paris, and Mexicans have risen on the publication of the details of the new debt scheme. Home Rails have been quiet and industrials fairly steady, while oil shares have been doing well. Interest in Kaffirs is drifting in other directions, but there have been some sharp rises in diamond shares.

COMMODITY MARKETS.

The commodity markets have been fitful during the week, probably reflecting in many cases after-holiday moods. Fully middling American raw cotton fell from 13.76d to 12.70d per lb, and in consequence buyers of yarn were inclined to adopt a waiting policy. But at the wool sales combing merinos and fine crossbreds realised about 5 per cent. above July prices, and wool of all other descriptions maintained its value. American demand for pig-iron stimulated home buyers, and prices were raised, Cleveland No. 3 G.M.B. now being quoted at 90s per ton. There are signs of improved demand for manufactured iron and steel, although many works are idle and others are only working part time. The termination of the coal strike in the United States has been followed by a fall in coal values in the Cardiff market, best Admiralty declining to 28s 6d per ton.

FOREIGN EXCHANGES.

However unsatisfactory in tone, the statement issued by M. Poincaré at the end of last week at least gave assurance of the French Government's adherence to the decision of the Reparation Commission agreeing to an actual, if not a formal, moratorium for Germany, and the further French request for another Conference in the near future points to the possible reconsideration of the British attitude as expressed in the Balfour note. The result has been the return of a slightly less pessimistic feeling, which has gone some way towards stopping the recent rot in Continental exchanges. For the solution of the immediate

crisis there remains only the provision by Germany of satisfactory guarantees to Belgium, and there is every probability that these will be forthcoming. The German mark has been steadier than for some time past, although the figure of 5,750 on the 1st has not been maintained, the rate having risen again to 6,375 on Tuesday, and although since then there was some recovery, it still stood yesterday at 6,000. What movements will take place in the near future it is difficult to say. A large part of the recent rise in quotation was, of course, due to panic; but in the meantime internal prices have risen very rapidly, and the scarcity of actual currency is causing notes to be issued as rapidly as possible, so that it is hardly possible even to guess at what figure a relative equilibrium in rates might be expected. The rate for forward marks remains nominal at some 200 to 600 per month. The Paris rate has been somewhat irregular, but on the week is some 30 centimes higher at 57.50. Apart from the more fundamental influences, the falling off in tourist traffic and the necessity for autumn imports are likely to make their effect felt, nor is it easy to see that the reports that the Bank of France is preparing to redeem its gold now deposited in the Bank of England are to be interpreted, as has been suggested in the French press, as a bull point. The spread between Brussels and Paris has again widened a little, the quotation having moved during the week from 60.35 to 60.85. The quotation for francs one month forward is in Paris 3 points above and in Brussels 4 points below spot, as compared with 5 points above and 3 points below respectively a week ago. Sterling in New York has moved somewhat irregularly, having on Tuesday been up to over 4.47 $\frac{1}{2}$. Since then, however, there has been a distinct downward pressure, as was only to be expected, and the rate stood yesterday at 4.46 with the likelihood of going weaker. The Italian rate has moved up rather more than 1 lira during the week to 102 $\frac{1}{2}$. Among the neutral exchanges, Amsterdam has moved rather strongly in our favour to 11.46 $\frac{1}{2}$, while the Swiss rate has also risen somewhat to about 23.50. In Scandinavia, Stockholm has remained almost stationary, while Copenhagen and Christiania have again depreciated a little. Helsingfors, on the other hand, shows a slight recovery to 207. In Central Europe the Vienna rate has steadied somewhat on the hope that assistance may come from Geneva, and now stands at 310,000. The rumours of an external loan, however, guaranteed by the chief Allies, are at least premature. Warsaw also shows distinct signs of recovery, and at 33,000 is some 5,000 points better than a week ago. Prague, after recovering from last week's sudden rise, is up again to about 132 $\frac{1}{2}$. The rate, however, is still so low as to have most serious effects on Czech industry, and complaints are growing still louder of increasing bad trade and unemployment. Belgrade this week shows a decided recovery to 350, but Bucharest is again rather worse at about 630. The Athens rate, on the collapse of the Greek armies in Asia Minor, continues to move up rapidly and is now quoted at 177, as compared with 158 a week ago. In the East the rupee rate is very slightly firmer at 1s 3 $\frac{3}{4}$ d than a week ago, while the yen is also $\frac{1}{2}$ dearer at 2s 1 $\frac{1}{4}$. Silver in the earlier part of the week went higher with buying from Calcutta and little offering. Later, however, both China and the Continent were sellers, and prices came down again to much the same as last week. On balance the Hong Kong and Shanghai rates also show little change. In South America, Buenos Ayres was $\frac{1}{2}$ d cheaper at 44 $\frac{1}{2}$ d, Montevideo unchanged at 42 $\frac{1}{2}$ d, Rio $\frac{1}{2}$ d cheaper at 7 $\frac{1}{2}$ d, while Valparaiso at 32p was $\frac{1}{2}$ p cheaper.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 2, 1922:

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,139	Supply Services	12,358
Taken from Exchequer Balances ..	1,275	Interest on Debt	13,940
Increase of Debt	8,950	Sundries	1,225
	26,364		26,364

Customs yielded £2,022,000, as against £2,596,000, and Excise £1,099,000, against £925,000 for the corresponding period last year. Property and Income-tax brought in £7,100,000, as compared with £6,818,000, and Miscellaneous receipts provided £2,316,102, as against £3,695,055 a year ago.

The week's operations increased the National Debt by the sum of £8,949,499, and caused the following changes:—

	Min. £		Min. £
Advance Bank of England ..	+ 7,500	Treasury Bills	- 2,724
Public Departments	+ 6,950	War Loan Surrenders	- 972
	+ 13,550	Surrenders	- 904
			- 4,600

The floating debt was increased by £10,805,000 to £878,738,500 during the week ended September 2nd.

FINANCIAL YEAR, 1922-23 (April 1 to September 2, 1922).

THE DEBT PROBLEM ONCE MORE.

We regret that M. Poincaré should have considered it necessary to issue the reply to the Balfour Note, which was published last Saturday. M. Poincaré reiterates most of the arguments which have constantly been urged in these columns in favour of a policy of cancellation of the Allied debts by Great Britain, and with the substance of his main thesis we have no complaint. But the tone of the Note and the way of presenting many of the subsidiary arguments is unfortunate and thwarts his intention. Indeed, we may doubt whether it will have any more influence in affecting the policy of the British Government and opinion in this country than the Balfour Note itself has had in moving American opinion in the direction of cancelling the British Debt. We have repeatedly urged that the case for our conditional cancellation of the European debts, while we continue to pay America, is based first on the ground that it would be a sound business proposition for this country, and second that, while the argument on grounds of equity are overwhelmingly in favour of our foregoing any claim against our European Allies, these arguments do not apply with the same force to our debt to the United States; for no amount of argument can really represent America's part in the war as being exactly on all fours with that of Great Britain. M. Poincaré puts these arguments, but in a curiously distorted form. "It cannot be forgotten," he says, "that the United States came into the war, without its existence

being directly threatened, to defend the principles which lie at the basis of civilisation—whereas Great Britain, as had France, had to safeguard not only her independence and her territory, but also the life, the property, and the means of existence of her nationals." This is an unfortunate way of drawing the distinction by a writer who is endeavouring to appeal for a high-minded and far-sighted outlook in this country, and it is unfortunate that M. Poincaré should appear to minimise the idealistic impulses which were so great a factor in uniting Great Britain in support of the war. The truth is that Great Britain could not possibly ignore the outbreak of international lawlessness which occurred in 1914 at her very door any more than a householder can be indifferent to a mob of hooligans threatening life and destroying property in his own street. But one can hardly expect people in another town some distance away, even though actuated by the same desire to see law and order observed, to feel the same necessity to intervene unless the disturbance spreads. The impulse actuating American opinion was the same as in Great Britain, but her interest was more remote. The difference is one of degree, not of kind. But the difference is so great that the distant friend who lends a hand will decide for himself how much of his resources he will contribute. But the householders in the danger zone must if necessary contribute all they possess. If we meant what we said when we spoke during the war of pooling our resources, we should deal with Allied debts on the basis of distributing the burden in proportion to ability to pay. M. Poincaré shows an almost equal lack of understanding in cumbering his Note with arguments as to the price at which goods were invoiced to one another by France and Great Britain. Such matters can have little effect on opinion in this country, and only tend to distract attention from the chief issue and create the impression that the whole matter is one of haggling over detail.

If these blemishes had been removed, the Note would have been a powerful statement of arguments which, in our opinion, are incontestable. M. Poincaré can properly point out that "no assimilation can be established between the war debts which the Allies contracted between themselves and Reparation Debts. If the Allied Governments had not afforded one another the reciprocal financial aid, out of which arose the war debts, either the war would have ended badly, or it would have lasted longer, and in any case it is the lending countries which should have made, either by their industries or by the despatching of larger effectives, the effort which the borrowing countries made in their stead.....As Lord Balfour so excellently says, the inter-Allied debts were contracted, not for the individual benefit of particular States, but for the great aim common to all, an aim which, as a whole, was attained. From a moral point of view, such a realisation would justify a cancellation of these debts. At the least, it cannot be contended that it does not give to these debts a character different from that of ordinary international debts."

It is eloquent proof of the widening breach between Great Britain and France that it should be necessary for our late allies to remind this country of such points as these. We sincerely hope that the unfortunate expressions which the Note contains will be forgotten, and that the substance of the situation, which more than ever calls for wise policy on our part, will be remembered.

A contribution towards sound thinking on these problems is made by a Committee of the British Association, which has just reported on a series of questions relating to finance, currency, and credit. In the main, this Committee of dons, financiers, and ex-civil servants add the weight of their opinion to the views that are now almost common form in this country. But they also have some comments of a less obvious kind in answer to the various questions which they have set themselves. In contrast, for example, to M. Poincaré, who observes that "in drafting the Treaty of Versailles, the victorious countries declined, for the first time in history, to demand from the defeated countries the costs of the war," the British Association Committee point out that, "If we turn back to the nearest parallels which history offers and compare the late war with the cognate balance-of-power wars against Louis XIV. and Napoleon, we find that

Louis XIV. was never left at the mercy of the Allies as Germany has been, and that in the case of Napoleon, the consummation of the war was a restoration of the French monarchy, which had then to be treated as a friendly Power." The Committee observes that the effect of a reduction of principal or interest or of cancellation to some extent depends upon whether the debt is good, bad, or doubtful. In the latter event, they think that any composition or writing-down would injure the debtor's credit as being indication of a weak financial position; and they contrast this with the cancellation of the British debt, which they suggest would have a beneficial effect on the debtor as well as on other parties. Such methods of analysis may be useful in clearing the ground, but they are hardly applicable to the Allied debts to Great Britain or America; for the cancellation of these, if ever carried out, will be done as much as a matter of justice as of business, and is, in our opinion, likely to be followed by a general improvement of credit. The Committee add a very important argument which has a practical bearing. It is pointed out that the payment of debts or indemnities necessarily involves disturbances to the natural course of industry both at the beginning and at the end of the period of payment. If after an initial dislocation the payments were suddenly stopped by cancelling the balance of the debts, "the men employed in the export trades in the debtor countries would find their occupation gone, and the same kind of thing would happen to the men in the creditor countries who had been employed by the specified purchasing power hitherto free because of the receipt of the gratuitous imports; there are certain to be effects of dislocation through the sudden disturbances of supply and demand in the home market. So much unemployment might follow on both sides that neither creditors nor debtors would be willing to wipe the slate. Where no payments have been made, the considerations point to the desirability of cancellation without delay." It is to be hoped that this sound argument will be well digested by those who are at close grips with the debts problem.

THE WAR AFTER THE WAR.

At the moment of writing, it is impossible to forecast the dimensions to which the Turkish military successes in Asia Minor will attain. His Majesty's Government (whose views are expressed in certain inspired statements that have been appearing in the Press) seem to expect the fall of Smyrna itself—a foreboding that is full of significance, coming, as it does, from a party to whom this *dénouement* would be odious, and who have not been inclined to face unpleasant facts (at any rate, in regard to the Near Eastern situation). For the Greek Army in Asia Minor the fall of Smyrna would mean the difference between an armistice and a capitulation. In the Anatolian territory which they have occupied, they possess no other port with facilities for embarking large numbers of troops at short notice, and, if they were deprived of this one possible avenue of retreat, they would be caught on the Asiatic Continent like rats in a trap. Yet even supposing that the Greek forces make a stand, and that an armistice is then arranged for the immediate evacuation of what is left of them from Asia Minor, that will not modify, in essentials, the new situation which the Turkish victories, up-to-date, have already created. Bereft of its strategical positions, munitions, transport, discipline, and, above all, of its *moral*, the Greek Army has ceased to be a military factor in Anatolia. The Turkish Army is left undisputed master of the field, and this means that the Turkish Government at Angora are masters of the political situation, and that the last pretence of Allied control has come to an end.

The realities of control in Anatolia (which fell into the lap of the Allied Governments, as a result of General Allenby's victory in the autumn of 1918) were, of course, sacrificed long ago by the Allied Governments themselves—first at the Peace Conference of Paris, when they utterly failed to agree upon any common Eastern policy, and then in May, 1919, when they sent the Greek Army to Smyrna to guard the spoils while they continued to quarrel over the division of them. By sending a Greek Army to Smyrna from overseas, they caused a new Turkish Army

to spring out of the ground, and abandoned the settlement of Anatolia (and possibly of the whole Middle East) to the blind issue of a "war-after-the-war." For more than three years now this internecine struggle in Anatolia has gone on, producing its inevitable harvest of hate, cruelty, agony, and devastation, and reacting even upon those Englishmen, Frenchmen, and Italians who have business interests in this part of the world, by paralysing their trade. All this is on the heads of the three Allied Governments, and ultimately on the heads of their respective nations, who have allowed them, through ignorance and indifference, to behave as they have done. From the moral point of view, there is nothing to choose between one Power and another. Great Britain, France, and Italy—they have all been sacrificing the unfortunate populations of Greece and Turkey to their own rivalries and ambitions. The difference in their respective policies is one not of the heart, but of the head, and here, unfortunately, our own Government has suffered discomfiture. Mr Lloyd George, like his French and Italian colleagues, has indulged in the immoral practice of playing a small Near Eastern people as a pawn in the game of British Foreign policy, but (in the teeth of his expert advisers) he has chosen the wrong colour and made the wrong moves, with the consequence that, at this moment, his pawn has been swept off the board, while the French pawn is approaching the eighth square.

The British Government have throughout adopted an almost incredible attitude, and plunged deeper, at every movement, into the morass, through a sullen determination not to admit that the path they have chosen is muddy. During the last six months, when it was obvious that the Greeks could neither destroy the Turkish Nationalists nor permanently stand between them and the Straits, our Government have twice over deliberately rejected an opportunity of coming to an understanding with Angora while the Greek army still remained in being. Last spring the Nationalist Foreign Minister, Yusuf Kemal Bey, came to London. He was received by official circles, but the conversations broke down over the freedom of the Straits. A few weeks ago, there came a second emissary from Angora—Fethi Bey, the Minister of the Interior—with conciliatory proposals, including an important concession on this vital question. Angora was now prepared for the complete demilitarisation of a zone of territory on either shore of the Bosphorus and the Dardanelles. But Fethi Bey did not even get so far as Yusuf Kemal. He was kept waiting on the doormat, in the outermost court of the Whitehall temple, and was informed that the necessary diplomatic ritual could only be performed by the three Powers officiating together. The excuse was insolently inadequate, for an exploration of the ground by informal discussion need not have involved any separate engagement disloyal to our Allies, nor would the latter (who had been acting independently themselves, and who would have welcomed any approachable or anxious to protest if such discussion between London and Angora had taken place. But the British Government were in a sulky mood. Fethi Bey's efforts to arrive at a peaceful solution without further bloodshed were frustrated. He left London for Paris and Rome; the Turkish offensive was launched; and His Majesty's Government, having refused to secure the freedom of the Straits by agreement with the Turks, and having now been getting the job done vicariously, have to rack their brains in order to improvise an alternative. Obviously, no alternative can be found. The Greek army has broken down; we cannot and will not send a British army to replace it; the Turkish army is therefore master of the situation; and the future status of the Straits will substantially be decided at Angora and not in London. The British Government have missed their last opportunity, and many will hold them responsible for this bout of bloodshed and destruction in Asia Minor, which would have been averted if Fethi Bey's mission had been given a chance of success.

How will Mr Lloyd George attempt to cover this egregious failure? Probably by raising a hue and cry against the "disloyalty" of France, because French statesmen

The New York Trust Company

Capital, Surplus & Profits - \$26,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

have played with greater decision and ability a game which he has not been too proud to play himself. If the Government adopt this expedient, it is important that the public should see through it, for it would play straight into M Poincaré's hands. If the Entente is to come to an end, nothing would suit France better than that it should be broken by Great Britain, and that over the Near East, where the two Powers are pot and kettle, instead of being broken by some lawless action of France in regard to Germany. This hole must be stopped, before the Government can slink out through it, but it is also desirable that the public should keep a close watch on the Government's policy towards the Greeks.

"Save me from my friends!" must be the feeling of the unfortunate Greeks at this moment, and indeed Mr Lloyd George has proved a worse friend to Greece than any previous British Prime Minister of either party. While professing (and probably, in his confused way, feeling) solicitude for the Greek nation and for the Christian minorities, he has exploited them and led them on to destruction. His Majesty's Government are now bound in honour to give practical proof that their solicitude is genuine, and of this there will be two "acid tests." First, in attempting to negotiate an armistice, will the Government place the real interests of Greece and the minorities before their own selfish policy? The Turks will certainly not grant an armistice except on the basis of their "National Pact," which includes the retrocession of all Eastern Thrace up to the River Maritsa. The British Government have intimated to the Press that they will not contemplate an armistice on these terms, and that the Greek troops evacuated from Asia will come in handy for maintaining the present military position on the Straits and in Europe. Such a policy, at this juncture, would be not only selfish but ineffective. It would place the Greeks and the minorities, who need an armistice at any price, between the devil and the deep sea, for the Turks on their side would never consent to it. The public must remember that the Turks thoroughly distrust our Government, with the same good reason with which the Greeks distrust Italy and France. The Turks did not fail to notice how, "on grounds of humanity," we saved the remnants of Denikin's army from the Bolsheviks and evacuated it to the Crimea, whence it afterwards emerged as a military force again under General Wrangel. That is not a move that any Government can play twice over.

The second test will be whether our Government are willing to give Greece that compensation for the losses in which they have involved her, that lies to their hand, namely, the union of the Greek island of Cyprus with the Greek national State. Four-fifths of the Cypriots are Greek-speaking Christians, who have unmistakably demonstrated their desire to be united politically with their kinsmen. Our original occupation of the island rested on a shady transaction with Turkey, every article of which is now obsolete. The annexation of Cyprus in 1914 was an act of war, the confirmation of this in the peace settlement a defiance of that principle of self-determination, to which we have expressed such devotion in Europe and

Asia Minor. If "Ionia" and Thrace are restored to Turkey without Cyprus being united to Greece, not only the British Government but the British nation will be put to shame. The public must rouse itself from its indifference towards the Near East to a sufficient extent to defend its honour, if not to control in other respects the policy of the Government, in which, after all, important national interests are concerned.

OUR INDEX NUMBER.

AFTER being practically stationary for two months, our Index Number has dropped substantially in August, the total falling by 139 points to 4257. This figure is actually two points lower than was recorded at the end of February, hitherto the lowest point reached since the end of the war. The August decline is principally due to substantial falls in the prices of primary foodstuffs, which are not unusual at this season of the year, while minerals have also registered a further reduction. The table below shows the movements of the five groups since the beginning of the year:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	579	352	618	464	553	2566	116.6

Wheat and oats are very largely responsible for the drop in the first group, which has also been assisted by a heavy seasonal decline in potatoes. There has been a reduction in flour after a slight rise in July, and beef and mutton are lower, but pork has risen. In the second group the principal change was an advance in tea, there having been good competition at the auctions. Coffee has fallen, but butter after last month's relapse has rallied a little.

In the textile group fluctuations were far smaller than usual, there being no changes beyond small increases in cotton and cotton manufactures, and a decline in jute. The small advance in American cotton is to be traced to

the slightly poorer showing of the second crop report of the Census Bureau. So far as cloth is concerned, Messrs Robt. Barbour and Brother, Limited, write that—

For all practical purposes India has been almost the sole contributor to the month's turnover. Calcutta has been actively engaged in attempting to place lines of Grey Shirtings, Dhooties, Mulls, and Jaconets, but offers, for the most part, have proved too low for acceptance, and much cabling and counter-cabling have transpired in consequence. Bombay, Karachi, and Madras have all been nibbling, but nothing of any consequence has found its way into the order books. Cheaper cotton would probably make all the difference, for there is a limit to India's capacity to pay, and the present high level of prices must be perilously near it, whilst any further advance would most likely bring things to a dead stop.

Further reductions in steel rails and iron bars and a fall in lead account for the bulk of the reduction in the minerals section, while a reaction in oilseeds, by which the July advance is wiped out, is the only change of importance in the miscellaneous section. Below we set out the month's changes of each commodity's index number as compared with the level at the end of July, the figure 50 in each case representing the average price during the base period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	86	- 18	Cotton A.	125	+ 5	Copper	53	- 3
English	77½	- 18	Cotton E.	124	+ 3	Minerals	691½	- 21
Flour	80	- 11	Yarn	122½	+ 1½			
Barley	80	- 24	Cloth	130½	+ 1½			
Oats	73	- 24	Wool, Eng.	113	..	Baltic timber	105	+ 1½
Potatoes	50	- 31	Aus. Wool	97½	..	Amer. timber	128	+ 2½
Rice	110	- 2	Silk	132	..	Leather	137	..
Beef	97	- 9	Flax	132	..	Petroleum	77½	..
Mutton	101½	- 10	Hemp	44½	- 6	Oilseed	72½	- 12½
Pork	125½	+ 12½	Jute	102½	- 6	Tallow	69½	- 4
Cereals & Meat	880½	- 114	Textiles	1,123½	+ 3½	Indigo	127	..
Tea	108	+ 8	Pig-iron	94	- 6	Crystals	125	..
Coffee	89½	- 4½	Steel rails	84½	- 7½	Rubber	11	..
Sugar cane	156	- 1	Iron bars	84½	- 7½	Miscellaneous	887½	- 12½
Sugar beet	106	- 1	Coal, steam	125	..			
Butter	98	+ 2½	House coal	97	..	Total	4,237	- 139
Tobacco	116½	..	Lead	102	- 6			
			Tin	65	+ ½			
Other foods	674	+ 5						

As a result of these changes, the increase in the total index number as compared with the pre-war level has dropped from 71 per cent. to 66 per cent., as may be seen from the figures below, which also trace the movement of each group:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1918	226	222	293	186	241	236
Dec., 1919	249	250	396	247	263	287
March, 1920	261	260	484	269	309	325
June, 1920	261	263	415	278	281	305
Dec., 1920	233	229	209	261	230	231
June, 1921	203	188	158	210	185	188
Dec., 1921	159	180	180	164	168	170
Jan., 1922	157	186	173	158	167	167
Feb., 1922	164	182	168	150	169	166
March, 1922	169	195	168	151	161	167
April, 1922	174	189	164	152	160	167
May, 1922	180	186	175	153	159	170
June, 1922	174	192	184	149	160	171
July, 1922	172	190	181	153	163	171
Aug., 1922	153	192	183	149	160	166

The minerals group has fallen back to the end of June figure, and remains the nearest to the pre-war level, while cereals and meat are not much higher. Subsidiary food and textiles are still further above the average than they were a month ago.

We conclude with a table showing the percentage as changes in indices of wholesale prices of commodities as compared with the pre-war level for several important foreign countries:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	..	325	366	292	214
Highest, 1920	227	591	679	..	(Jan.)	366	403	322
End 1921	123	326	594	3,585	176	172	178	209
End Jan., 1922	124	307	562	4,888	171	170	177	206
Feb., 1922	126	314	577	3,955	170	166	182	205

June, 1922	131	326	537	13,935*	..	..	..	201
July, 1922	131	326	..	..	..	..	..	..

* Altered to include 16 finished industrial products.

There was practically no change in the United States and France in July, but Japan shows an increase, while there has been an enormous rise in the figure for Germany.

CENTRAL EUROPE III.—CZECHOSLOVAKIA.

(BY OUR SPECIAL CORRESPONDENT.)

THE rapid rise of the Czech crown in the last two months has made many Czechoslovak hearts fill with pride and satisfaction, but has, nonetheless, made conditions very difficult in this essentially exporting country. The causes of the rise may be briefly summarised:—(1) The export figures for the early part of the year show a very considerable advance in most articles, as compared with 1921. This was particularly noticeable in the month of May. (2) Imports have fallen off as compared with the same period. (3) The catastrophic fall of the mark resulted in an increased demand for sound currency, and this was intensified by German purchases for reparations purposes. (4) The Czech Government is in possession of dollars and sterling as a result of the recent loan, and is determined not to buy goods in England and America, but to spend the money directly in the Czechoslovak republic. This rise in the national currency can hardly appear, therefore, as an unmixed blessing to the Minister of Finance.

The rapid appreciation from about 230 = £1 to somewhere near 150 has quite naturally given the Czech manufacturers something to think about. Unemployment, or, rather, short time, has become general, and attempts are being made to readjust costs of production to the new level of the crown. But it is hoped in some circles that manufacturers will now give more attention to efficiency—a quality somewhat rare in minds trained in the atmosphere of a Polizeistaat such as was the old Austria. Thus the abandonment of the sugar cartel may lead to greater care being taken in respect to the quality of the product itself. White dust at a high price can no longer be passed off on the international market as in the good old days of 1919. Almost everybody pays lip service to the ideal of stability, but vague references to "the natural level" and suchlike phrases seem to imply that national prestige is associated in the minds of most people with a high rate of exchange. A general readjustment of prices has now become necessary, and it may be interesting to observe that one of the reasons given for maintaining the salaries of officials at a low level was that a future rise in the exchange would lend a different complexion to the whole question.

The more interesting question is whether the present higher level can be maintained. It is true that about half the country's debt is held abroad, and that this, in the long run, will not be affected by the level of the crown. It is also true that the finances of the country are essentially sound. Indeed, the need for high taxation was somewhat exaggerated in the period immediately following the war, with the very gratifying result that a reduction in taxation may confidently be predicted in the next Budget. And in this connection the wisdom of the policy initiated by Dr. Rasin becomes abundantly clear when we compare the financial position of Czechoslovakia with that of its neighbours. In Hungary, for instance, at long last, it seems that a really energetic system of taxation is about to be introduced by Finance Minister Kallay. But it would have been on the whole easier to make people make sacrifices in the interest of national rehabilitation in 1919 and 1920 than it is to-day.

In any case, the Czechs, unlike some of their neighbours, have something of the German capacity for work, and, given a greater degree of efficiency in industrial leadership, and a desire—which probably exists in labour circles—for a peaceful readjustment of wage rates, this present crisis may be overcome, and even lead the way to more stable conditions of economic life.

At the same time, Czech efficiency reminds one somewhat of the old Austria. The bureaucratic tradition seems to belong to the birthright of the new Republic, and hardly makes for the maximum development of national resources. Officialdom needs restraining, unless a new "Polizeistaat" is to take the place of the old. Dr Rasin's insistence on the need for Government undertakings to be administered on the lines of efficient private exploitation

seems to be well placed. Incidentally, however, as the tobacco monopoly and the railways show, much has already been accomplished in this direction since the Armistice.

National hatred seems to be encouraged in some circles in order to take the mind of the "man in the street" off social antipathies. It is, at any rate, certain that in the world of "high finance," at least, Czechs and Germans co-operate on the best of terms. Finally, one cannot help being struck by the almost universal belief amongst the Czechs in the future of their country, and this feature, combined with the will to work, affords a strange contrast to the observer who comes to Prague from Vienna.

THE HOSIERY TRADE.

(BY A LEICESTER CORRESPONDENT.)

THE unemployment returns compiled by the Ministry of Labour furnish ample testimony to the activity of the hosiery industry. For a considerable time now the monthly percentage figure has been the lowest of all the industries scheduled, and at the beginning of last month only 1.7 per cent. of the 82,000 workers registered as belonging to the industry were reported to be totally unemployed, and only .3 per cent. were reported as on systematic short time. Consequently, with the bonus on the sliding scale in accordance with the index figure of the cost of living restored to 9d in the 1s (which, in view of advances given in many departments during the war, represents considerably more than 75 per cent. increase on pre-war earnings) operatives have reason to be well satisfied with their position.

On the other hand, while manufacturers are gratified to see the results of their policy in meeting the abnormal conditions attendant upon the general slump in trade, they complain that their rate of profit has not as yet reached the level of 1913, which was by no means unduly high. The industry, indeed, is to be congratulated upon the manner in which it has weathered the storm. There have been very few derelicts, and though there may still be a few outstanding differences on contracts with spinners to settle, the rapid and sustained revival of trade should enable most firms to enter smoother waters and steer clear of the difficulties which still beset their course.

It is true that in the fancy section of the trade there has been a noticeable falling off in demand, due to the unseasonable weather we have experienced; but this branch has enjoyed a lengthy run of good business, and can be relied upon to provide novelties which will fill in gaps in the order books.

The output in fabric costumes increases steadily, and this comparatively new outlet for the energies of the industry has not been exploited to anything like its fullest extent.

The sale of children's socks, for the production of which in very large quantities a few leading firms are mainly responsible, continues uninterrupted, and in the hose and half-hose departments the welcome improvement which set in about three months ago is well maintained. The supply of good brands of artificial silk hose has been hardly equal to the demand, notwithstanding the inclement weather, and makers of these goods will be fully occupied till the end of September at least.

The heavy underwear section of the trade has at last come into its own, and order books are well filled. In all probability, however, many buyers will suffer disappointment over deliveries, owing to their failure to place their orders earlier in the year, which has been their custom. Several factors may have contributed to this unfortunate departure from precedent. First of all, there was uncertainty as to the quantity and prices of German goods which might be dumped on the home market. Then rumours were rife as to the amount of surplus Government stocks in the hands of the Disposals Board. These

rumours, however, have been effectually met by an assurance from Sir Maurice Levy that surplus Government stocks have been practically absorbed. The policy may also have been dictated by fears existing at the time when orders should have been placed as to the financial situation likely to obtain when the goods fell due for payment, or more probably by the hope that prices would go in favour of buyers if orders were withheld. If this hope was entertained, it has not been, nor is it likely to be, realised, and, as indicated, buyers are likely to suffer for their temerity, for manufacturers were not to be cajoled into making for stock simply on assurances that the goods would be wanted.

It is in this section of the trade that the only cloud on the industrial horizon has arisen. For some time now an endeavour has been made to carry out a decision of the Industrial Council that new wage lists should be prepared for the various districts. In some districts considerable progress has been reported, but Leicester and Leicestershire have done very little in that direction. The union submitted a revised price list for the Leicestershire country districts, where most of the underwear is made on Cottons Patent machines, but this called for advances which manufacturers could not see their way to grant. In return the latter submitted a list which they claimed removed most of the anomalies to which exception could be taken, and put all the country firms on the same level. The manufacturers' suggestions were not acceptable to the operatives, who considered that the prices they were receiving called for considerable advances. A deadlock seemed to have been reached, the manufacturers contending they had never agreed to consider the question of advances, and pointing out that goods made on Cottons Patent machines were meeting with serious competition from fashioned goods made from circular web fabric. It is hoped that the two parties will come together and arrive at an amicable settlement, but the situation is a delicate one, calling for the exercise of a great deal of patience and forbearance on both sides. Much capital is locked up in the district concerned in Cottons Patent frames, and notwithstanding the low rate of unemployment in the industry many of these costly machines are to-day standing idle. *Ex. facie*, therefore, it looks as though any attempt to increase the wages of operatives on these particular machines would, if successful, in the long run react to the detriment of the operatives themselves, as the manufacturers contend that it is only by keeping their cost of production down they can keep these machines going and provide work for the country districts. The result of a round table conference which is in course of arrangement is awaited with much interest by the trade generally.

Reports on overseas trade are encouraging, orders are coming to hand much more freely, while inquiries have increased to an extent sufficient to inspire the hope that ere long normal activities with the majority of our principal markets abroad will be resumed.

Naturally, the fate of the application of the fabric glove manufacturers under the Safeguarding of Industries Act aroused considerable interest in the trade. The general opinion seemed to be that the treatment accorded to the recommendation of the Committee set up to hear the application furnishes an illuminating example of the manner in which industry is treated as the shuttlecock of politics. In view of the fact that practically no new evidence was adduced, it was felt in hosiery circles that the Committee could not very well amend its recommendation without stultifying itself, but what surprises hosiery manufacturers more than anything else is the inference which Lancashire spinners and trade unionist officials would have the man in the street draw from their statements. To read the evidence of some of these gentlemen one would come to the conclusion that the fate of the whole of Lancashire's great industry is involved in the decision. It is known that this is far from being the case, and that the opposition was engineered mainly by merchants who can see more profit out of handling German gloves than in assisting to find a fellow-countryman work, and who, realising that the Committee appreciated their opposition at its real value, as a last resort, sought to strengthen their case by appealing to the well-known political leanings of Lancashire.

THE STOCK EXCHANGE COMMITTEE'S WAR WORK.

(BY A STOCK EXCHANGE CORRESPONDENT.)

TWELVE months after the official conclusion of peace, the Stock Exchange decks being finally clear of pre-war wreckage, it is appropriate to review part of the work that went on at home while land, air, and water forces were pressing the war to its final victorious conclusion. The Stock Exchange was ill-prepared for a crisis. A long period of previous depression had served to build up a stale and rather shaky bull account. The failure of the King to prevent the Irish rupture had filled men's minds with foreboding; business in stocks and shares fell away to a minimum. Big firms in the House were known to be embarrassed. The hammer fell several times during the week previous to the declaration of war, but the worst was known to be in store. The Committee met hastily on the morning of Friday, July 31st, and members found the Stock Exchange closed as they came to town at ten o'clock. The New York Stock Exchange promptly followed suit. From that date until the House reopened five months later, the Committee sat nearly every business day; sometimes two and three times a day, dealing patiently with the shoals of questions that arose, and legislating with a wisdom which subsequent events fully justified. The first important decision was that of fixing minimum prices. The next was the carrying-through of a partial settlement in November, 1914. Both steps aroused strenuous opposition, outside the House as well as from members. Yet the result brought nothing but good. While the difficult settlement was in course, the Stock Exchange Committee were engaged in long and weary negotiations with the Treasury and the banks in connection with the re-opening of the House. Nobody imagined in those days that the war would last four years and more. Fresh rules and regulations were all framed on the assumption that they would prove as temporary as their name implied. When the House re-opened, a bitter cry arose that the Committee had sold the Stock Exchange into the hands of the Treasury for the sake of a shelter over members' heads; so onerous appeared the terms upon which the Government consented to allow a phantom freedom of dealing to be restarted. In spite of the ring drawn around facilities, however, the Stock Exchange Committee were constantly consulted by the Treasury for the devising of ways and means in order to defeat the efforts of friendly neutrals to sell, in this country, enemy-held stocks and shares. In their spare time the Committee fought, up to the House of Lords, their contention that they had the right to re-elect, or not, any members whom they chose, and the Committee won their case in every Court.

Various departments of the State came to the Committee for aid in clerical work connected with National statistics; for months the Settling Rooms beneath the House were filled with members, every night, who made out thousands of forms—of which one whole batch turned out to be useless, owing to some departmental error in printing the particulars. The Committee took an active part in urging the mobilisation of securities when the latter were required for collateral against obligations contracted abroad. At home everything was done to assist the national weal by holding the delicate balance between the really indispensable, and the man who could be spared. The Stock Exchange Military Tribunal won its good name by strict impartiality and fair dealing; Lord Derby came, at the Committee's invitation, and addressed the House in a strong and businesslike speech, upon the chief points of his recruiting policy. Hardly a week passed without the Committee having to meet some new point in connection with the system of cash dealings; each point was faithfully faced, and, where occasion demanded, was dealt with by rule or resolution. As the weary war went on, the Committee bent their energies towards securing some relief for members through the mitigation, or entire removal, of business restrictions that experience proved to be unnecessary. The prohibition of contangoes, options and other speculative facilities turned out to be salutary in unexpected ways. It raised the credit of the Stock Exchange. It won new confidence from the public. It banished fortnightly alarms. The "hammer" was super-

seded by a milder "liquidation" which, in its early days, received every help from the Committee in averting failure and softening unmerited hardship.

As the House began to press for a return to normal conditions after the war, the Stock Exchange Committee took one census, in November, 1921, and another in January this year, of stock still open on pre-war account. The statistics thus obtained were considered encouraging enough to justify permission being given to begin dealing, in May last, for the fortnightly settlement once more. Provincial stock exchanges, relations with whom were sorely strained when war broke out, fell readily into line with the mother Stock Exchange, which had guided the exchanges skilfully and sagaciously across the quicksands of debt to the firm ground of public respect. Cordial relations had been established with the Treasury and with the banks. Mr Austen Chamberlain and Sir Robert Horne were two of the war-time Chancellors of the Exchequer who dined, in the Stock Exchange, with Committee and managers. Only last month the Bank of England presented the House with a magnificent piece of plate in remembrance of the close association between them, and of the assistance rendered by the Stock Exchange to the Bank during the war. The Stock Exchange Committee have been one of the best-abused body of men in the City of London; it is but fair to place upon a printed record, necessarily brief and incomplete, some of the multifarious labours which engaged their unceasing attention during the war. By reason of their legislation, there was not a single hour of panic throughout the period. Public welfare has been scrupulously consulted and protected. The Stock Exchange has emerged from the frightening shadow of the war and the pre-war account, with its credit higher than it has stood for half a century or more, a state of affairs for which the House has to thank, above all, the 30 men who form its unpaid Committee.

Notes of the Week.

Ireland's Finances.—Thanks to the attentions of the Military Censor, our Irish correspondent's articles have been much delayed. Writing last week, our Dublin correspondent, after a reference to the solemn pageant at the public funeral of Mr. Michael Collins, says that the feeling of apprehension, particularly on the economic aspect of the situation—the gradual development of which has been indicated more than once in the *Economist*—is now finding open expression, and the public is being brought to a more vivid realisation that something like national bankruptcy has been wafted over the horizon into full view by the cyclonic blasts of fanatical folly and partricial hatred which Messrs. Childers and de Valera have let loose. The morning Press is warning its readers in emphatic terms of the financial burdens which are being hung round Ireland's neck by the wanton destruction of wealth and of the machinery of production and distribution. There are no definitely-ascertained figures, or even approximately-ascertained figures, as to the damage already done, but it is unquestionably enormous; and it is entailing a great deal of unemployment. This, in turn, tends towards an increase of disorder and brigandage. The question arises whether Messrs. Childers and de Valera are merely trying to blackmail Ireland into agreeing with them, or whether, in themselves become converted to his principles and aim as a prelude to the building up of the polity of their own Ministry of Finance, receipts into the Irish Exchequer for the period April 1, 1922, to August 26, 1922, amounted to £10,487,076, and issued thereout to £6,903,308—leaving a balance of £3,583,768—on the latter date. Inquiry figures are prepared on the basis of the old system, and of moneys actually collected without any of the adjustments with which students of the White Papers were familiar. Thus, there may be considerable debit and credit

items before the *true* revenue can be ascertained as distinguished from the *true* revenue of Great Britain. In addition, there will have to be also a corresponding adjustment in reference to the Six Counties of North-East Ulster—and in this connection the Joint Exchequer Board established under the Government of Ireland Act of 1920 will presumably have to function until, at any rate, the new political and fiscal systems come into complete operation. The figures now furnished show that the Provisional Government is paying its way and has sufficient funds to carry on with, but they are not a safe basis for comparison or inference as to the past, the present, or the future. In the meantime, the meeting of the new Dail Eireann has been postponed again until September 9th, and the Irish Labour Party, having threatened action by way of protest if the meeting were postponed beyond August 26th, is considering its plans. Its extreme wing is almost avowedly in sympathy with the rebel irregulars and demands a Workers' Republic. Mr. Cathal O'Shannon, the Chairman of the Recent Trades' Union Congress, in Dublin, commented severely on the action of the Provisional Government and described as an illegitimate attempt to induce citizens "to sign away their personal liberties" its action in requiring captured rebels, as a condition of their release, to sign an undertaking not to take up arms against the Free State. The more moderate and more ably led section of Labour professes to view the struggle between the Provisional Government and the rebel irregulars in the spirit of "a plague on both your houses." This expresses and symbolises its policy of seeking to stand astride of the saw between the two and to control their oscillations for the aggrandisement of its own interests and importance.

Austria's Progress.—With the financial position of Austria on the agenda paper of the League of Nations Conference at Geneva, a report on the Economic and Commercial Situation of Austria to July, 1922,* by Mr O. S. Philippotts, Commercial Secretary to the British Legation at Vienna, makes an apt appearance. The writer states that during the last twelve months considerable progress has been made towards a normal economic life, the contrast between the sad state of the public finances and the currency and the improvement in the condition of most of the population being still more marked than in previous years since the breakdown. Despite the slump in exports, statistics are produced to show that on the whole Austrian industries are producing about 60 per cent. of their capacity, an improvement of 10 per cent. over 1921. The food, and consequently the health of the population, has shown a marked improvement, and 1921 is the first year since the war when the births exceeded deaths, chiefly owing to the fall in the death-rate. There is also a large increase in foreign trade. "Force of habit and old connections, good communications and a central position, the attraction of a beautiful and pleasure-loving city, a widely known language, and the necessity of a commercial centre for this much-divided part of Europe, have all had a share in bringing this about, and have proved more potent than national antipathies and even the handicap of the fluctuating exchange." British exports to Austria considerably exceed those to Czechoslovakia and Yugo-Slavia as well as Hungary, although the two former States are much more populous and richer than Austria. It is calculated that the value of British products imported per 1,000 of the population into Austria is £297, as compared with £97 into Czechoslovakia, £86 into Yugo-Slavia, and £40 into Hungary. The industrial position is, of course, still very far from satisfactory, as the improvement in the majority of the people is not only a result of increased production, but is partly at the expense of the capital of a minority, including many of the aged, the widows and orphans. Nevertheless there has been an advance on the whole, particularly in the material aspect of the situation as contrasted with the political and psychological. There is still a gap between production and consumption, but they are at least on converging lines. In answer to the fundamental question, "Can Austria live?" Mr Philippotts is of opinion that it can "if it is given and gives itself a chance," and that

* Stationery Office. 1s 6d net.

from the material point of view the economic existence of Austria as an independent State is possible. But the problem of Austria is not only economic, it is largely a political and psychological one, because part of the population has to adapt itself to new conditions, has to content itself for the time with a lower standard of life and find new work, and above all the Austrians have themselves to acquire confidence in the future of their country. The upper and middle classes, and, indeed, all but those actually earning weekly wages or enjoying the profits of successful speculation, have already been compelled to reduce their standard of life, often indeed to the level of extreme penury. Vienna must live largely by international finance and commerce, and freedom from excessive interference and taxation is an absolute necessity for these, otherwise they go elsewhere. In agriculture, too, the all-important side of the production of wealth has been sacrificed to the supposed political exigencies of its distribution. A revival in agriculture is Austria's most urgent need, probably the migration of some of the superfluous population of Vienna to the country which has begun, will have to go somewhat further until a balance is reached. The psychological difficulty is the prevalent pessimism which inhibits initiative on the parts of the Austrians themselves and makes them look solely abroad for salvation. "The amount of foreign credits generally estimated to be necessary to place Austria on its feet again by stabilising the currency and founding a new bank of issue is about £10,000,000. It is an open secret that, despite the law to the contrary, very much larger sums in foreign currencies than this are hoarded by Austrians, both inside and outside the country; the amount lying in Swiss banks alone has been estimated at £18,000,000. But these resources lie idle because the owners have no confidence in the Government or the future of the country." There seems no reason to doubt that Vienna will continue to expand its commerce and remain the great trading and financial centre of this part of Europe. British traders, therefore, should not be deterred by the vagaries of the exchange from cultivating a market which affords the key to trade with so large an area.

The Mexican Debt Settlement.—Further details of the Agreement arrived at in June between the Mexican Secretary of the Treasury and the representatives of the International Bankers' Committee have reached London, and were fully summarised in the morning papers of Tuesday last. The settlement covers 28 loans and issues, or groups of issues, of bonds or secured notes, including four External and two Internal loans, the Mexico City Sterling Loan of 1889, the Irrigation bonds (Caja de Prestamos), five State loans, a number of bonds and secured notes of the National Railways of Mexico and the companies absorbed by it, and two bond issues of the Tehuantepec National Railways, now owned by the State. The total debt amounts to a milliard of pesos, or about £100 millions, and the arrears of interest to about 400 million pesos, or about £40 millions. As was stated in June, the funds for the payment of current interest are to be provided by the whole proceeds of the oil export tax imposed last year, together with 10 per cent. of the gross revenues of the National Railways of Mexico, and their entire net revenues; the Government undertakes to furnish at least 30 million pesos for 1923, and an additional five million pesos in each of the following four years, so that in 1927 the interest fund will be 50 million pesos, or £5,000,000. After 1927 the cash service on all the obligations included in the settlement is to be resumed in full. The cash payments during 1923 will be from 50 to 100 per cent. of the interest on the external loans and the secured Railway Notes, 25 per cent. on the Internal 3 per cent. and 5 per cent. bonds, 50 per cent. on the State bonds, and from 50 to 65 per cent. on the other railway loans. In 1926 the funds should permit of the full cash payment of interest on all the bonds scheduled, except the 3 per cent. and 5 per cent. Internal Loans and the State bonds. Interest not paid in cash will be paid in scrip or certificates maturing in 1943, but redeemable before that date at 105 and accrued interest, or by purchase, and bearing 3 per cent. interest annually from January 1, 1928. No interest will be paid on the

coupons in arrear from 1914 to January 1, 1923, but they will be exchangeable for certificates redeemable by the Government, by purchase or payment at par, during forty years from January 1, 1928. These will be of two classes, A and B, class A being redeemed in its entirety before class B is begun. The external loans of 1899, 1910, and 1913, and the secured railway notes are to receive the full face value of the arrears in A certificates; the other railway issues and Government loans (except the 3 per cent. and 5 per cent. Internal Loans) 35 per cent. in A and 65 per cent. in B certificates; the Internal 3 per cent. and 5 per cent. loans, 100 per cent. in B certificates. The A certificates will probably be all paid off before 1948. The National Railways are to be controlled by a Board agreed on with the Government, and restored to their condition when taken over. Two bond issues of the Mexican Packing Company, the Treasury Notes of 1913 after series A, and the De Kay Bonds, are tacitly excluded from the settlement as having been issued by President Huerta's Government. Their inclusion would probably lead Congress to reject the plan, but the present Government seems clearly liable for them, and their repudiation would injure Mexican credit hereafter, so that it need not be regarded as final. The settlement has been favourably received, and Mexican descriptions have gone up. It is now before Congress, and will probably encounter opposition. Its acceptance would help towards American recognition, but here, judging from the President's Message, there is still a deadlock.

The "Egypt" Inquiry.—The judgment delivered on Monday at the conclusion of the Board of Trade inquiry into the loss of the P. and O. liner "Egypt" was for more than one reason a notable pronouncement. The hearing of evidence by Mr Butler Aspinall, K.C., and four assessors concluded early in August, after lasting nine days, and the Court sat again specially to give its judgment, which took over an hour in delivery. The liner, a steamer 500 feet long, was run into near Ushant in foggy weather last May, when outward bound from London, by the "Seine," a smaller French steamer, which was specially strengthened at the bow for ice. The "Seine," going 6 to 8 knots, crashed bow-on into the port side of the "Egypt," which had stopped engines and slowed down to 4 or 5 knots. The liner listed heavily, and sank in 20 minutes. Out of 338 persons on board 87, of whom 16 were passengers, were lost. A large quantity of bullion was also lost with the ship. At the time alarming accounts were published of misconduct by lascars members of the crew, who were alleged to have fired on passengers in a struggle for the boats. At the inquiry the representative of the British seamen pressed the argument that Asiatic crews are unsuitable, but the judgment attributed the loss of life mainly to default on the part of the master and chief officer in failing to take proper measures to ensure good order and discipline, and to failure on the part of the owners, through their officials, to take effective measures to ensure compliance with their regulations as to boat drill. The suddenness of the disaster, the heavy listing over of the ship, and the fog helped to cause panic. Though the boats were ample and the officers were active, there was much confusion. The lack of order, which contributed largely to the loss of life, was attributed by the Court to no definite orders having been given by the captain and officers at the time of the collision. The passengers and crew did not go to their correct places for boat stations. Some of the non-European members of the crew did crowd into boats without orders, but used no violence, and they were, in fact, without weapons. Their action, while not justified, could only be accounted for, the judgment declared, by the fact that they were not properly led, and, like others, were ignorant of where to go or what to do. Two of them, it came out in evidence, were wounded by shots fired by a passenger. The Asiatics are, therefore, exonerated from the charges levelled against them. The Court suspended the master's certificate for six months, and severely censured the chief officer. In expressing the opinion that there was failure on the part of the owners, the judgment reflects on the P. and O. Company, which has a great record for the safe carriage of passengers, and the findings as to the cause

of the loss of life come as a shock. Effect was not given to the regulations issued to commanders, and the shore officials, as well as the ship's officers, were blamed. The judgment recommends an increase of Board of Trade supervision and inspection, but it is permissible to doubt whether this would avail much. The great shipping companies are bound, for the preservation of their good name, to take all possible precautions. Probably boat-drill will now be more seriously regarded. If, as the Court remarked, the European members of the crew had shown more alacrity in going to their allotted boats, the Asiatics would probably have assisted, instead of hindering, in the saving of life. The apportionment of blame as between the colliding vessels was, of course, a question which did not come before the Court.

Cotton Trade Organisation.—Owing to the severe depression which still exists in the spinning branch of the Lancashire cotton industry, the Federation of Master Cotton Spinners' Associations has recently had under consideration certain proposals for the purpose of obtaining relief. In the past, when demand for yarn has not been equal to the production, the members of the Federation have decided to curtail output on an organised scale. In this connection the industry has been divided into two sections—one comprising users of American cotton and the other consisting of users of Egyptian cotton. According to the rules of the Federation, restriction of production cannot be put into force unless the owners of 80 per cent. of the spindles in a particular section are in favour of the scheme. It is now being suggested that the industry should be divided into several departments, the basis for each section being the counts and qualities spun. It is at a meeting of the General Committee of the Federation, circles there is much difference of opinion as to whether the Federation will be able to organise the trade on the lines indicated. There is a feeling, however, that more drastic action should be taken for the purpose of limiting yarn output, as the amount now being produced is in excess of the requirements of users, and spinners are being compelled to sell at prices which mean a definite loss. There has been mention of some arrangement being come to similar to the regulations of the Cotton Control Board during the war, when, owing to the smaller imports of raw cotton as a result of the activity of enemy submarines, supplies of the raw material were rationed, and the regulations of the Board, however, were compulsory and sanctioned by the Government, and there is little forward a scheme which would have the adequate support of all the employers.

American Cotton Crop.—Our Manchester correspondent writes:—In cotton trade circles at the end of last week there was great interest in the official report of the United States Government on the crop for 1922-3. The condition on August 25th was given as 57 per cent., against 70.8 per cent. a month previously and 49.3 per cent. at the same time last year. The statement, on the whole, was slightly better than anticipated, and on the report in a few minutes there was a decline of over a farthing per pound. The downward movement has continued, and matter is, growers in the United States are more prepared to sell their cotton at current prices rather than hold it in expectation of higher values. Unfavourable features at the moment are the political situation in Europe and lished indicates a crop of 10,575,000 bales. Some authorities, owing to the unsettled state of affairs on the Continent, are inclined to revise their forecast of requirements of users being nearly 13,000,000 bales; so that before July 31st next stocks will have to be called upon to meet the deficiency.

The Outlook for Tin.—A correspondent writes:—After the severe depression witnessed late in August, sentiment in the tin market has veered round, and since the opening of the new month the undertone has been hard. Chief interest has centred round the monthly figures. These were expected to show Straits shipments of fully 6,000 tons, but as matters turned out the actual tonnage only amounted to 5,405 tons, against 4,045 tons in July. The supplies of Banka and Billiton tin amounted to 1,235 tons, against 840 tons, the shipments from China for the month being heavy at 1,440 tons, of which 1,340 tons went to the United States. Thus the total monthly supplies aggregated 7,386 tons, as compared with only 5,515 tons for July, and the deliveries were down to 6,382 tons, against 7,771 tons in the previous month. The American deliveries showed a shrinkage of 440 tons at 4,150 tons, this being due to the coal and rail disputes in the United States, while the United Kingdom deliveries dropped from 2,414 tons in July to 1,424 tons, due to the fact that the consuming industries, such as tinplate mills, were closed down for the holidays for a good part of the month. The visible supply thus stood at the beginning of September at 21,233 tons, against 20,229 tons in the previous month and 18,969 tons at this time last year. When the fact that the F.M.S. Government holds an unsold surplus of 12,500 tons of tin, for which a much higher rate than current market value was paid, is taken into consideration, it must be admitted that tin has held up wonderfully well during the recent depression seen in the non-ferrous metal group generally, and this no doubt has given rise to the impression which prevails in metal circles that the price will go ahead later on in the autumn, especially if there is anything like a trade revival towards the close of the year. Statistically tin may be regarded as quite sound despite the unsold Eastern surplus, although obviously while this large tonnage remains undispersed for consumptive purposes, and the policy of the F.M.S. Government is unknown, there is always the possibility of it being marketed. In metal circles it is understood that a meeting took place recently between British, American, and German tin operators, and the decision came to was to hold up the market and resist any bear attacks that might be attempted. The setback in the American deliveries during the month of August was rather a discouraging factor, but the demand for the United States has since come on very considerably, and this is bound to have good effect. The average cash price for standard tin on the London Metal Exchange during July was £156 4s 4d, but some improvement was made last month when the average for cash was £160 1s, and that for three months tin £160 3s 4d. The British tinplate industry is well engaged, with specifications coming in more freely. A prominent Welsh company recently booked up one order for 250,000 boxes of oil sizes for Eastern account, and there is more inquiry about. Thus the consumption of tin for home use should be larger in the near future, and it is only reasonable to expect that the improvement made last month should continue. Nothing of the nature of a runaway market is expected, not is it wanted, but with users everywhere working with light stocks, and the possibilities of the Continental demand improving, there is certainly some justification for the quiet optimism which prevails.

Port of Para.—We have received a full report of the meeting of the holders of Port of Para 1st Division Bonds, held at Brussels on August 30th. Mr J. de Decker, vice-president of the Port of Para, made a detailed statement of the history of the company, and of the vicissitudes of the traffic of the Port of Para in connection with the collapse of the rubber industry. He said that the fixed charges of Port of Para could only be met if the guarantee is regularly paid by the Brazilian Government. In the Budget for the year 1922, no credit had been inserted for the payment of that guarantee, and, moreover, the Minister of Public Works, when approving the accounts of the company, had declared that, notwithstanding this approval, the Government did not intend to accept liability for the amounts of the guarantee exceeding the

proceeds of a certain 2 per cent. gold tax levied on imports through the Port of Para. Mr de Decker further stated that not only this contention was absolutely contrary to the text and to the spirit of the company's concession, but that in the past the Government had always paid the total of the guarantee without any relation to the 2 per cent. gold tax. The board, relying upon the good faith uniformly shown by the Brazilian Government, expected that after reconsideration of the matter, this erroneous decision would be rescinded. A bondholder proposed to take advantage of the mission of Mr de Decker to request him to present to the Brazilian Government the following protest under form of a resolution that "(a) the holders of bonds of the First Division of the Company of Port of Para, assembled in meeting at Brussels, August 30, 1922, in view of the fact that the Brazilian Government has stopped making the payments due from it upon the guarantee, which payments are essential to assure the service of the obligations of the company, hereby unanimously direct Monsieur J. de Decker, vice-president, who is about to depart for Brazil to represent the company there, to express in their name the proper Government authorities that it was in reliance upon the good faith of the Brazilian Government that they have subscribed for their bonds, and had agreed in 1920 to the plan of reorganisation of the company; (b) that the default in the payment upon the guaranty is causing the most serious injury to the 80,000 bondholders of the company; and (c) that they appeal to the high spirit of justice of the Brazilian Government to the end that, after further consideration, it will take measures necessary to assure the service of the guaranty due to the Company of Port of Para in the same manner as it has always been paid in the past." This resolution was unanimously passed.

Modder East.—Our mining correspondent writes:—In connection with the announcement of the August crushing—which, by the way, shows a profit of £15,160, as against £9,050 for July—the management of this Eastern Rand undertaking notify an important change of policy as regards the working of the mine. The company, it may be recalled, commenced production in April, 1920, by utilising the Apex plant of the New Kleinfontein Company. Advantage was subsequently taken of the opportunity to acquire the joint reduction works of the Jupiter-Simmer Deep companies, which had shut down, but owing to the heavy expense which would have been entailed the removal and re-installation of the machinery was postponed. This decision was dictated partly by the high charges for labour then current, and partly by the financial position of the company, which had become difficult. During the year ended June 30, 1921, the capital was increased by 373,800 shares, about half being called under options at par, and the other portion subscribed in response to an invitation made at the end of 1920. Of £500,000 debentures issued, £89,240 had been converted into shares; the balance fell due for redemption on July 1, 1921. To meet this obligation a loan of £400,000 was obtained from the Central Mining and Investment Corporation, and in respect of this loan fresh debentures were issued, carrying 8 per cent. interest, principal redeemable at the end of 1922, if not previously converted into shares at par. The shares for a long time past having been about or under 10s, there is no prospect of the debentures being reduced by conversion into shares; consequently in a few months the company will find itself once more under the necessity of dealing with its first charge indebtedness. In these conditions the directors announced that work will be confined to the richer section of the mine in order that higher profits may be earned, and in the hope that an extension of the rich zone may be found. "Should further substantial areas of high-grade ore be disclosed, and the present debt be wiped out, the company's circumstances would justify an appeal for funds necessary to erect the company's own plant of 50,000 tons monthly capacity, for which the large tonnage standing developed in Nos. 2 and 3 shaft sections would be then available for treatment." The change of policy has met with a very mixed reception on the Stock Exchanges both

of London and Johannesburg. Something, it is obvious, will have to be done soon, but the new procedure partakes largely of the nature of "gutting" the mine to the ultimate disadvantage of the original shareholders.

The Dutch East Indies.—The immense resources of the Dutch East Indies in native or acclimatised agricultural produce, in petroleum, and in minerals, together with the great opportunities offered for British trade, are described in the very full Report just issued by the Overseas Trade Department from Mr H. A. Bluett, the British Commercial Agent at Batavia. The Report covers the period of depression and revival following the prosperity of the war years and the glut of exports released by the coming of peace. During the war new markets were found, and of these Australia is likely to be of increasing importance. The recovery in the export trade began just a year ago, and this year a considerable expansion is probable; and there is an increasing demand for imports, including textiles, clothing, electrical apparatus, earthenware, and porcelain, glass, chemicals, provisions, and drugs, but competition, especially from Germany, is keen. Much detail is given for the benefit of British exporters, and manufacturers are strongly recommended to organise local branches, to keep stocks on the spot, to study and to meet the local demands, and to quote prices including the cost of delivery to the purchaser. The Javanese are thoroughly progressive, the country is carefully administered, and possesses all the conditions of rapid development; even during a time of stress there will be many potential buyers, and any firm with capital can create a magnificent and permanent demand for a "branded" article, provided it is well packed and sold at a reasonable price, and with due consideration for the buyers' tastes and the local conditions of trade. Very full particulars are given of the chief products and the conditions of the export trade in them—sugar, rubber (mainly Brazilian), coffee (now almost entirely an African variety), tobacco (which supplies the outer leaves of Havana cigars), cocoa, cinchona (of which, with its derivative quinine, 95 per cent. of the world's output comes from Java, while its cultivation is increasing in Sumatra), pepper, tea, palm oil, copra, kapok, and other products; and we gather that the last two, which are in the hands of native producers, are doing well, and that the others, which are grown mainly under European direction, have passed the worst of the depression. The numerous mineral products are also dealt with at length. Of petroleum the supply, though not "spectacular," is expected to be steady and lasting. Foreigners can only obtain long agricultural leases in partnership with citizens, and mining licences only if they have obtained the right of residence; and the cost of living for Europeans is very high. The potential wealth of the country is colossal, and the Government is educating and encouraging the natives to develop it as much as possible themselves.

Conditions in Japan.—Cable advices from Japan state that the stringent conditions of the money market which existed throughout the first half of the month have been aggravated by the payment of the new Government loan, and the partial repayment by the Imperial Silk Company of the loan from the Government. Towards the end of the month the flow of money to the country was much larger than anticipated, on account of the usual monthly settlement, together with the half-yearly settlement-day in the provinces. Thus the keen demand for short loans on the one hand, and the reluctance of lenders to use money cheaply on the other, forced the rate up to over 12 per cent. at the end of the month, but with the turn of the month it dropped to 9½ per cent. by the repayment of some of the Government loans, and the payment of interest. In the silk market export business was small, although there has been every possibility of some orders forthcoming from Europe and America on account of the poor prospect of the autumn cocoons harvest. The stock markets have been dull. Various schemes to put prices down, either Governmental or otherwise, are now being put into practice, and the question of the removal of the embargo on the export of gold has again been discussed.

Anglo-Polish Trade.—A correspondent writes: It is significant, in view of the previous food shortage in most of the countries of the Middle East, that Polish food products occupy a prominent place in the International Food Exhibition at Olympia. This is due to the fact that a large additional area has been brought into cultivation in that country owing to the peaceful conditions of the last year, and there is a big surplus available for export. The organised unions of manufacturers in the different trades affected, and in all the divisions of Poland, have never lost heart, even in the darkest days during the war, in the possibilities of Anglo-Polish trade, and great hopes are entertained that mutual trade relations will help in introducing conditions of greater peace and stability in countries that still suffer from the prevalent uncertainty and unrest.

UNITED STATES.—STEEL COMPANIES INCREASE WAGES—RAILROAD AND COAL STRIKE CONFERENCES FAIL.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 26.

WITH the 20 per cent. increase in wages of day labour in the plants of the United States Steel Corporation, announced this week to become effective September 1st, the daily wage for common labour will be raised to 36 cents an hour, as against 30 cents an hour, which the corporation has been paying since August of last year. Under the new scale the wage for a 10-hour day will be \$3.60, or 80 per cent. higher than the pre-war level of \$2 for 10 hours' work, but about 29 per cent. below \$5.06 rate established February 1, 1920, which was the highest wage ever paid by the Steel Corporation for common labour. The present increase follows a series of reductions which began with a cut of approximately 20 per cent. in May, 1921. In July of that year wages were further reduced by about 8½ per cent. through abolishing time and one-half for any work done over the basic eight-hour day, and on August 29, 1921, another cut, amounting to 20 per cent., brought the pay down to the present rate of 30 cents an hour. The increase, it is understood, will affect some 156,000 men of the 220,000, approximately, who are on its pay-roll; the remainder, about 64,000, are in the transportation and mining departments, and therefore will not receive the increase. A like increase in wages, to take effect also on September 1st, has been announced by most of the independent steel companies. When wages were cut last year prices of steel products were also lowered. Conditions in the industry are entirely different now, and for some time past it has been expected that wages would be advanced. Mills, in some cases, which have been seeking employment in other lines where the pay was higher. In the iron and steel industries especially there appears to be an increasing scarcity of labour, which is attributed largely to the restrictions placed upon immigration, and to the unprecedented building activity. Another in favour of raising steel wages was the agreement reached at the recent Cleveland conference, whereby soft coal miners will resume work at the same wages that prevailed before the strike. Furthermore, prices of iron and steel products have been advanced, on the average, about 16 per cent. from the low point of last February, while on certain advance has been close to 50 per cent. During the past week pig-iron in some centres has risen \$4 a ton, and \$2 advanced from \$2 to \$10, and finished steel prices have risen. Further price increases are considered likely in the near future, since, excluding wages, production costs have been greatly increased, it is said, owing to the fuel shortage. The movement to increase wages or to grant rates of pay in effect before the labour strikes began is not confined to the steel and coal industries. Although the New England textile strike is virtually broken, some mills

in that section, which for months past have been insisting on a 20 per cent. reduction in wages, have unexpectedly abandoned their position, and offered to take strikers back without any reduction. In the case of mills producing woollen and worsted goods, difficulty was probably experienced in getting sufficient numbers of operatives to run their plants at the lower wage scale, especially in view of the fact that the leading producer, the American Woollen Company, did not reduce its wages. The action of some cotton goods mills in that section in agreeing to resume operations at the same wages that prevailed before the textile strike began is harder to understand, the more so because they have contended all along that they could not afford to pay the old wages, and because raw cotton is much higher than it was at the outset of the labour controversy. Furthermore, consumers of cotton cloths continue to resist efforts to advance prices. Strange to say, a marked revival in trade and industry in coming months is quite generally being predicted, notwithstanding the decided trend toward higher operating costs, whereas only about two years ago trade slackened, and prices collapsed because operating costs had soared to abnormal heights. In view of the reduction in railroad wages, and downward revisions elsewhere, the action of the steel companies, as well as the other wage developments mentioned, is perplexing and greatly complicates the economic situation and outlook.

Further conferences to end the railway and anthracite coal strikes have failed to result in any settlement, and it now looks like a "fight to the finish." There is some talk of the Government taking over coal mines and railroads, to operate them temporarily in the present emergency, but such a step would meet with widespread opposition throughout the country.

FRANCE.—THE WIESBADEN AGREEMENT AT WORK—THE STINNES CONTRACT—BOURSE.

(FROM OUR CORRESPONDENT.)

Paris, September 6.

THE problem of extracting from Germany payment of reparations in kind (as distinct from cash) has now, as I foreshadowed last week, assumed prime importance, not only by reason of the fact that all hope of obtaining, so far as France is concerned, payment in cash has now vanished for some time to come, but because the Wiesbaden and supplementary (Gillet and Bemelmans) agreements are now in operation. I gave last week such details of the first month's working of the agreements as were then available, and since then no further information has been obtainable. The Minister for the Liberated Regions, M. Charles Reibel, has convoked for this afternoon a meeting of the Comité Consultatif pour les Prestations en Nature (Consultative Committee for Payments in Kind), however, and is expected to lay before this body something in the way of a detailed report of the extent to which the new agreements have been applied during the past month. A summary, at least, of this report will doubtless be made public within a day or two. It is understood, however, that one of the chief subjects that will be considered by the meeting referred to will be the vexed question of the rate of customs duties to be applied in future to goods entering France from Germany. The Committee, which is a mixed body, composed both of Government officials and representatives of the great industrial and trading groups of the country, is known to be by no means unanimous on this question of customs duties, but it is generally considered as probable that the Government will insist on maintaining the régime of comparatively low duties (based on the French minimum tariff, plus co-efficients), which have been in force experimentally during the first month of the operation of the Wiesbaden Agreements, and that it will continue to resist the pressure that has been brought to bear upon it for the purpose of imposing the much higher duties (subject to reduction by rebates) of the French General Tariff (which were intentionally fixed at prohibitive rates as regards certain categories of German goods).

So far as I have been able to gather from inquiries made in official quarters to-day, the first month's work-

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

ing of the Agreements has resulted in orders being placed to the amount of about 3,000,000. This is, perhaps as satisfactory as could be expected, and the number of orders passed to German firms is steadily increasing. The results attained would have been much more substantial, probably, but for the fact that the number of *mandataires*, or authorised buying agents, is still extremely small, and that some time must yet elapse before the very strict regulations that have been drawn up concerning the appointment of these intermediaries can be carried out to the extent necessary. In view of the opportunities that might obviously be given for illicit profit-making in connection with the operation of the Wiesbaden Agreements, the appointment of buying agents has been surrounded with exceptional safeguards. Agents must be of French nationality, and companies acting as agents must have registered offices in France while the majority of their officials must be French. *Sociétés en participation* are not accepted as *mandataires*. The maximum rate of commission allowed to the official *mandataires* (or commission agents)—and no person is allowed to act in this capacity unless formally authorised by the Government—has been fixed at 6 per cent. of the price actually paid to the German firm from which the goods are obtained. The amount of this commission paid by the purchaser out of his indemnity. Out of the commission the agent must pay all expenses connected with his own travelling, with the reception of the merchandise in Germany, seeing it through the custom verification on arrival in France, and checking on delivery the payment of customs duties, cost of transport, &c. being, of course, at the charge of the actual purchase. The regulations provide further that special books of account must be kept by a *mandataire*, and be subject to inspection by the State. So far, some 150 applications for appointment as *mandataires* have been sent in, whom about half-a-dozen have received certificates of appointment.

The first cheque drawn by the German Government

payment for an order placed under the Wiesbaden Agreement reached the Ministry for the Liberated Regions this morning. According to the procedure agreed upon by the two Governments, this cheque must be forwarded by the French Government to the *sinistré*, by whom the goods were ordered. The latter, in turn, will pass it on to the German firm from whom he received the goods, who will obtain payment of his bill by presenting the cheque at one of the German banks selected for this purpose.

The most interesting recent development in this connection is the announcement that agreements have been signed between the Marquis de Lubersac, as President of the Confédération des Co-opératives de Reconstruction, and Herr Hugo Stinnes, for the supply of an enormous amount of building materials. The Confédération of Co-opératives in question has a total membership of 130,000 sufferers, holding recognised claims to indemnity to the value of over 13,000,000,000. The contract signed by M. de Lubersac and Herr Stinnes states at the outset that at an interview that took place between the two signatories on August 14th, M. de Lubersac "set forth the peculiarly critical situation in which the sinistrés of the devastated regions who are still without shelter find themselves to-day, and emphasised the appeasing influence on Franco-German relations that would result from an effective participation by Germany in the reconstruction of the devastated regions. Herr Stinnes, taking the same point of view as M. de Lubersac, and wishing to show his desire to contribute to this reconstruction, agrees as follows with M. de Lubersac" (then follow the terms of the contract).

Under this contract it is agreed that the Stinnes building company, Aktiengesellschaft für Hoch-und-Tiefbau, of Essen, shall act as intermediary or buying agent for the Confédération of Co-opératives for the devastated regions, in return for a commission of 6 per cent., "this company being specially qualified in construction matters, and in direct relation with the German building industry." "The amount of commission paid to the company in respect of its purchases is to be included in the sum with which Germany will be credited by reason of its deliveries of merchandise," which is also to include "the expenses incurred by the Hoch-und-Tief (*sic*) for the purpose of financing the execution of the contracts with a consortium of banks under the direction of the Dresdner Bank," with which a representative of the co-operatives will enter into relations. German experts are to be attached to the various co-operative societies, it is stipulated, which will also, in their turn, have representatives in Germany, and particularly on the commission of control in Germany, which will have the duty of accepting or refusing materials. Further, the Hoch-und-Tief will be responsible for distributing the orders, and Herr Stinnes claims to be allowed to take out of the coal to be delivered to France by Germany an amount of combustible sufficient to meet requirements for the fabrication of the cement, bricks, tiles and lime to be delivered under this contract, on the ground that this will enable him to increase the deliveries of these materials. "The distribution of this coal among the various German industries will be entrusted to the firm of Hugo Stinnes, in conjunction with the Westphalian Rhine Syndicate," and Herr Stinnes makes himself responsible that the coal so handed over by the French Government shall be used solely for the purpose of speeding up deliveries under the system of payments in kind.

Other clauses of the contract provide that in no case must the prices of materials delivered under it exceed those prevalent on the French market. The contract is to hold good only as long as these payments in kind benefit from the minimum French customs tariff, and its duration synchronises with that of the Wiesbaden and supplementary Berlin agreements. Finally, MM. de Lubersac and Stinnes undertake to lay the terms of the contract and their reciprocal declarations before their respective Governments.

There, for the moment, the matter rests, and it remains to be seen whether the contract will receive the sanction of the French Government. It will be noticed that there is no reference in it to the employment of German labour

in France. It will also be realised that such an arrangement, although undoubtedly beneficial in many respects to France, would confer immense advantages on German industry, and particularly on the concern with which Herr Stinnes is himself personally identified. It is estimated, in fact, that Herr Stinnes's own profits, in view of the magnitude of the affair, would be in the neighbourhood of £7,000,000.

It may be stated as significant that, so far there has been little public criticism of the Lubersac-Stinnes contract in Paris. In Berlin, on the contrary, the Press was at first furiously opposed to the arrangement, but twenty-four hours later many of the newspapers began to take a very favourable view of the stipulations, on the ground that the contract must inevitably prove beneficial to German interests. French opinion has apparently not yet made up its mind on the matter, or is, perhaps, awaiting a lead from the Poincaré Cabinet. On the face of it, the country should welcome the adoption of a method that will undoubtedly offer a solution of one of the most serious problems with which France is faced.

The decision of the Reparation Commission, while in many ways unsatisfactory to France, has been welcomed on the Bourse in so far as it has avoided all danger of a rupture of the Entente, and, on the whole, markets have been a trifle harder than they were last week. French rentes have improved, the 3 per cents. moving from 60.15 to 60.25, the 1915-16 5 per cents. from 76.55 to 76.65, and most of the rest similarly, though the unredeemable 5 per cents. dropped from 90 to 88.80, and the 1920 6 per cents. from 91 to 90.75. Turks were generally lower, though the Unified 4 per cents. advanced from 77 to 77.50. Banks were either stationary or harder. Banque de France remained unchanged at 5,815, but Banque Nationale de Crédit strengthened from 638 to 640, Banque de Paris et des Pays Bas from 1,265 to 1,275, and Banque de l'Union Parisienne from 615 to 630. Railways for the most moved up a few points, with the notable exception of Nord, that fell from 1,259 to 1,240, and Métropolitain, that fell from 434 to 425.

GERMANY.—REPARATIONS—CURRENCY PROBLEMS—EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 2.

The Reparation Commission's decision brought a sharp fall in the foreign exchanges, and in commodity prices, on the ground, apparently, that the threatened immediate crisis has been avoided. In general the decision is ill taken, although it was long ago foreseen that a really effective Moratorium, much less a revision of Reparations mission's conditions will not be carried out. It is true (and this shows a healthy disbelief in itself by the Commission) that the Moratorium decision is postponed until Germany merely "prepares" a "plan" of financial reform, and this time the actual execution of the plan is not demanded as a condition for considering a Moratorium; but the Note's text indicates that the Commission measures listed as essential to a "plan" of financial reform are impossible.

The Commission puts "balancing the Budget" as first and unconditional, but, curiously enough, puts "a currency reform" third, and between the two, and as a condition precedent of the second, it puts the prospect of a mean Reparations. The Commission must know that "balancing the Budget" is impossible without currency reform coming first, because currency reform is, or at least involves, full stabilisation of the Reichsmark. Without full stabilisation by technically dependable means, there can be no guarantee against a fresh exchange collapse, with renewal of the familiar effect upon the price-stabilise the mark exchange? By establishing an active Gold exporting as a corrective, in the way of pre-war Europe, is impossible, and gold export was never, and

short of an inexhaustible stock of gold, never could be anything more than a remedy for temporary deficits in the payment balance. The other remedy (also at best temporary and not inexhaustible) is a foreign loan, but the Commission unreasonably puts the foreign loan in order after the stabilisation, and not before it, and as its necessary condition. But the currency reform, though a "plan" may be drawn up, cannot be carried through. As stated, the "currency reform" involves a stabilisation of the mark exchange (naturally at any gold value, if only a really stable value); but how can the Commission expect from Germany currency reform in this correct and only effective sense when the richest States in Europe, including States which would have no difficulty in getting loans, have themselves not achieved currency reforms, when the exchanges of these States are liable to be any day sent down sharply, if not into collapse like the German, by a mere disparity between imports and exports which may any day occur. Germany, the Commission proclaims, is to do what the best financiers, with the counsels of half a dozen conferences of experts, failed to do in countries without war debts, and without Reparation liabilities. But here rises another question. Reparation payments are suspended, and the "plan" demanded can be launched. Suppose relative stabilisation to be carried through by means of a foreign loan, or by an at present unexpected improvement in the trade balance. The foreign payment balance will thereby be created. What is to happen when Reparation payments are again demanded even if only on a reduced scale? The currency reform (stabilisation) will come incontinently to an end. If the currency reform is liable to be overthrown by a mere increase on the passive side of the payment balance caused by a drop in the ratio of exports to imports, how much more disastrously will it collapse when considerable Reparations payments begin?

The above leads back to the old consideration, which nobody denies when the question is put directly, but which practically never appears in Ally notes and speeches, that only a big German export surplus can provide Reparations without aggravating the present bad mark exchange or upsetting a stabilised mark, if stabilised mark there is. And this in turn leads back to the Reparation Commission's first condition, a balancing of the Budget. As long as the currency reform is impossible, the balancing is impossible. The Budget, as shown lately from here, is by no means as hopeless as German officials rehearse, and as Ally economists believe it to be. But present it, and as Ally economists caught up on expenditure when the mark ceased falling, Revenue was always again thrown behind expenditure when the mark again fell, and each fall is accompanied by new price and value revolution, by unreasonable displacements of real wealth at home, and by wholesale expropriation of the foreign mark-interests. In theory the Government could balance its Budget first, and have its currency reform later, but its cause at present, by means of inflation, the whole real substance of State expenditure is annually extracted from the nation quite as surely as if by means of taxation; and the nation quite as surely as if by means of taxation; and the burden than it imposes under the present system, and while distributing the burden more fairly. But the re-curring mark exchanges collapses, and price-rises have hopelessly dislocated all plans for such a sensible method, and there are further the two factors of official indolence, and popular passivity and ignorance of currency questions. The effect of the passivity and ignorance is that while plans to increase a property tax by a mere 2 per cent. are enough to cause a Cabinet crisis, it is possible to tax away 499-500ths of a citizen's wealth by means of currency depreciation without even evoking a protest. In these conditions official indolence naturally does not hesitate which path to choose.

With regard to what was stated last week, that the mark depreciation does not threaten the import of necessities, I may note that both Herr Schroeder, addressing the Reparations Commission at Paris, and the Reichswirtschaftsrat, in a formal resolution, have expressed agreement with Dr Wirth and all other authorities that the

depreciation does actually prevent import. So far these statements are untrue; and it will be a puzzle if after imports increased threefold in a period in which the mark fell 90 per cent. (May, 1921, to July, 1922), imports will suddenly decrease because the mark has again fallen 60 per cent. (July-August). The expulsion of the mark from foreign trade, to which, as stated last week, is largely due the fact that imports do not decrease, is now being followed by its expulsion from home trade. No day passes without some firm or industrial association proclaiming for, and even practising, the charging of dollars or pounds to home customers, and the system is being applied at the Leipzig Fair, and has there led to violent protests. Where high currencies are not actually charged, the dollar exchange of the day, and not the home production cost in marks, is taken as basis for the mark price. The official Eisenwirtschaftsbund has formally adopted this method, and even petty tradesmen cite the day's dollar exchange to explain sudden increases of their mark prices for home-produced goods. Insurance companies are issuing policies—fire, accident, and others—for which the premiums and capital sums will vary automatically with the exchanges. The charging of dollars or the calculating of home charges on the dollar basis is more reasonable than the protesters believe. The seller knows from experience that though he may reap a normal mark profit on his mark production cost, the value of his mark receipts for financing new transactions depends not upon their percentage to the past cost of production, but upon the exchanges. If the dollar has just fallen, he must exact an abnormally big profit, and his only way of calculating how big the profit ought to be is to follow the dollar. The Federation of German Industries has, however, for reasons which seem sound, rejected a suggestion that commercial-industrial balances should be drawn in goldmarks.

The Forced Loan of 70 milliard paper marks (which was originally to be 1 milliard, and is now worth about 200 million goldmarks) has yielded so far 1,835 millions paper. The Socialists are agitating for reintroduction of State food and industrial control, for a compulsory exchange-rate for the mark, and other chimerical measures. While the credit need has long been acute, the new currency need almost threatens a trade breakdown. The Reichsbank, whose note reserve was depleted by a recent strike, could not meet this week's enormous demand for currency; its private bank clients were rationed to one-tenth of what they asked for, and private banks in turn refused to pay out more than 3,000 marks, not always that. The result is an increase in the use of cheques, and the good effect of this will remain. The demand for currency is a result of the price rise. If, with prices rising rapidly, the volume of business done remains unchanged, the amount of currency needed must increase rapidly, and the recent inflation is a mere trifle compared with the rush up of prices during the past month, and is therefore inadequate. Further, the volume of business has actually increased, as the certainty of still higher prices ("Flight from the Mark") has set the public buying everything it can lay hands on. This involves a demand for credit as well as a demand for cash, and on the 28th the Reichsbank raised its rate another 1 per cent. to 7 per cent., the rate for advances being raised to 8 per cent. In the third week of August, private bills discounted increased by 4.463 millions, and Treasury bills by 6.044 millions; and in the eight weeks preceding the last Bank statement private bills discounted increased by

12,570 millions, or 13 times the whole holding of private bills a year ago, while Treasury bill discounts increased by nearly 57 milliards. The Bank's report for August is likely to show much the greatest credit strain so far recorded, and probably also to show record inflation. On the basis of the latest mark fall, increased inflation is not only inevitable, but is even necessary for the smooth conduct of business. It is announced that of the Dutch 140 million gulden credit granted in 1921, only half has been exhausted. This credit can be utilised for payments in any currency for imports from any country, and the fact that it has not all been taken up is another proof that the great mark fall has not reduced the ability to import from native payment resources.

The Bourse was this week very active and rising, and yesterday, the last open day of the week, moderately firm but quiet, the influence being the drop in the exchanges. The *Frankfurter Zeitung's* index shows that on August 25th, when the mark was about at its worst, the industrial stocks index was 82,599, or only double the 40,250 of November 10th (highest of 1921). While, therefore, the mark's gold exchange fell to one-seventh, stock quotations only doubled, and even if a certain allowance be made for increases of capitalisation, it is clear that the gold prices of stocks at current quotations are far below the values of the properties owned. The gold dividend-yield is, however, ever smaller and smaller, averaging (again after increase of capital is allowed for) about one-forty-fifth of the dividend of 1913. Reichsbank shares have had a big rise. With the extraordinary price increases of single commodities in August I shall deal next week, when the general indexes for September 1st will probably have appeared.

ITALY.—THE CRISIS ABATES—FASCISTI IN GENOA —ITALY'S NATIONAL WEALTH AND TAXES.

(FROM OUR CORRESPONDENT.)

TURIN, September 5.

WHEN I last wrote (August 2nd) Italy was approaching a crisis. The Facta Ministry was hurriedly reconstituted to meet the growing danger from the Fascisti. There were indeed rumours that the Fascisti were to march on Rome to dissolve Parliament and set up a dictatorship. The rumours proved, as generally in Italy, unfounded. The Government laid on the military authorities the duty of maintaining order in the disturbed provinces; and all ended in nothing. The country is to-day peaceful and contented. The Chamber has given a large vote of confidence to the same Facta Ministry, of which it endeavoured to get rid a few weeks before. The great topic to-day is the General Election. The Fascisti claim that their representation—about 20 Deputies—is too small; that the trend of public opinion is against Socialism and in their favour. Therefore a General Election is due, notwithstanding that the Chamber is only one year old. Liberals and Democrats hesitate, and say that the proportional system should be abolished before going to the constituencies. Proportionalism was undoubtedly favourable to the great mass parties, i.e., Socialists and Populists, and fatal to the old non-organised Liberal parties.

Meanwhile, under the pressure of Fascism, Municipal Socialist and Communist councils are resigning or being dissolved; first among them, the Socialist council of the great northern capital, Milan. Socialist administration in Milan was of the worst species. The number and salaries of public employees were raised without regard to economy and even decency, and the city was almost bankrupt. The cry for economy in State and local Budget is at last loud, and we may hope that a new era of retrenchment is in sight.

Another result of the Fascist movement is the dissolution of the authority of the Port of Genoa (Consorzio del Porto di Genova). On August 5th, Palazzo San Giorgio, the magnificent old building where the Genoa Conference sat, was occupied by Fascisti. Senator Ronco, president

of the Port Authority, was compelled to sign a series of decrees dissolving the monopolistic Socialist co-operatives of working men, to whom the operations of the port were entrusted, and was ultimately compelled to resign. The closed lists of the workers (all Socialists) authorised to work on the port were reopened, and new nationalist workers admitted. True, the cost of operations in the Genoa port were going up, but it is doubtful if this was due more to the high wages paid to monopolistic red co-operators than to the exactions of various classes of middlemen bent upon squeezing the utmost farthing from every ton of merchandise passing through the great Italian port.

Signor Matteotti, M.P., has presented an interesting report to the House Committee on Finance. The following table gives the yield of State taxes before and after the war:—

	1913-14.	1920-21.	1921-22.
(In Million Lire).			
Ordinary Taxes.			
On incomes, capital, and wealth ..	607.7	2,021.0	2,908.9
On transactions (stamp and registration taxes) ..	261.5	1,471.8	1,612.0
On consumption ..	1,138.9	5,555.7	6,179.8
	2,008.2	9,048.5	10,700.7
Extraordinary Taxes.			
All on income and capital ..	..	2,156.0	2,071.1

Even leaving out of account the extraordinary taxes (excess profit taxes, war income-tax, exceptional increase of capital levy) the tax yield increased more than five-fold, and, including extraordinary taxes, more than six-fold.

The increase was highest on transactions and consumption, almost from 1 to 6, while the direct taxes on income and capital increased less than 3½ fold. But if we add to the ordinary taxes on income the extraordinary taxes, we see that the increase of direct taxes was from 607 to 4,170 million lire, or almost from 1 to 7. Thus all classes of taxpayers are to-day more severely hit by taxes than before the war. The lira has depreciated from 1 to 0.21; but taxes having risen from 1 to 6, the real burden is increased by 50 per cent. And we are only at a beginning. A report by Signor D'Aroma, Director-General of Direct Taxes (on income, capital and wealth) to the Ministry of Finance is illuminating. Our most productive ordinary tax is called *imposta di ricchezza mobile*, and corresponds closely to your income-tax, except in so far that it leaves out, for separate taxation, net rents accruing to land and house proprietors. The total income assessed to the *imposta di ricchezza mobile* was in 1918 only 2,030,774,117 lire. In 1921 it rose to 3,974,277,318 lire, and in 1922 to 6,002,747,033 lire. This huge increase signifies that more and more incomes are brought into the fiscal net. The administration, somewhat lax before the war, is becoming more and more severe. Signor D'Aroma hopes to be able, in a few years, that only 1 billion lire annual income is assessed to the land tax, 0.8 to the house-tax, 6 to the income-tax (*ricchezza mobile*), 4.5 to the direct income-tax (income-tax on State servants' salaries and other incomes paid by the Government, which are not assessed, but directly taxed at the source), making 12.3 billion lire of income assessed and taxed. The true national income is much higher, it is true, is a country of small incomes, which should be exempt from direct taxation; but if 30 out of 60 billions distance between 12 billions taxed and 30 billions which ought to be taxed. Even allowing for 6 billions legally exempt (interest of public debt issued under the clause of tax exemption and other similar items), the administration has a large virgin soil left to till to the benefit of the exchequer.

One potent cause of tax evasion, however, is the extravagant method of putting up tax rates, so that the taxpayer is bound to minimise the income assessed to save himself from utter ruin. Land income assessed to save 1 billion, but upon this paltry sum is laid from State, Provinces and municipalities a tax burden of 876 millions lire. A rate of 88 per cent. cannot be paid; the only way of escape for the taxpayer is to understate his assessed income. The burden of the house tax is 620 millions lire

SPAIN—POSTAL STRIKE—COMMODITY PRICES— TRADE AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

MADRID, August 20.

As often happens in Spain, the month of August has not been free from disturbing influences. Congress had barely adjourned for the holidays, when a serious conflict broke out amongst the Post Office employees. Not receiving immediate attention from the Minister of the Interior, they abandoned work, and business was practically paralysed for three days. The Prime Minister returned in haste from San Sebastian and stifled the strike temporarily by promising that after they had returned to work he would study their claims and would give them all possible justice, but he is firm in his contention that public servants should not use strikes as an instrument to enforce their aspirations. This has brought the postal clerks again on strike. Señor Sanchez Guerra has replied to this by a lockout of the whole of the staff, the Royal Decree suppressing the rights of seniority of all those who do not re-enter immediately. Those who delay in so doing will take rank from the date of their return, thereby losing the benefit of their previous years of service in connection with the Government Pension Fund. The situation at the moment is critical, as neither side seems disposed to give way; in the meantime, public opinion, which was at first rather inclined in favour of the employees, is now highly irritated against them. A large number of volunteers have offered their services to the Government, and it would seem that the strikers are losing ground, especially as both the postmen and telegraph operators have refused to join them.

The index numbers of the cost of living in Spain, compiled by the Geographical and Statistical Institute, start from the year 1913 only. The Institute calls attention to the fact that owing to the influence of exceptional disturbing factors, such as lack of transportation facilities, Government restrictions, rise in wages, and the reduction of working hours, speculation, clandestine exports, &c., the index numbers cannot be relied upon to the same extent as would be the case in normal times when the quotations would be governed by free offer and demand. These index numbers have been compiled to cover the most important articles consumed in this country, and any deficiencies in them are due to lack of reliable sources of information and to the fact that it is the first time that work of this kind has been undertaken officially in this country. The following are the classification and index numbers for the different groups:—

Years.	FIRST GROUP.			Index Number for Group.
	Animal Food-stuffs.	Vegetable Food-stuffs.	Liquid Foods, &c.	
1913	100	100	100	100
1914	102	102	99	102
1915	110	121	106	114
1916	121	127	115	122
1917	142	144	118	137
1918	181	172	135	165
1919	204	177	152	179
1920	215	201	197	204
1921	203	176	159	180

The foregoing figures give an idea of the rapid increase in the cost of living during and since the war. The limit appears to have been reached in 1920, when the difference attained 104 per cent. for the total section when compared with 1913.

During the same period of nine years the figures for the other group were as follows:—

Years.	SECOND GROUP.					Index No. for Group.
	Combus-tibles, Gas, Electricity.	Textiles and Hides.	Metals.	Building Materials.	Chemical Products.	
1913	100	100	100	100	100	100
1914	107	100	94	101	98	100
1915	118	105	167	112	107	123
1916	166	120	210	129	144	155
1917	194	166	202	151	197	182
1918	304	221	240	197	242	242
1919	269	234	147	194	224	211
1920	294	239	184	230	243	238
1921	212	151	168	261	187	199

HARRISONS & CROSFIELD, Ltd.

1-4 GREAT TOWER STREET, LONDON, E.C.3.
EASTERN MERCHANTS.

SHIPPING AND INSURANCE AGENTS.

With Branches and Associated Companies throughout the Far East and in North America, Australia and New Zealand.

In the group of combustibles the year which saw the highest prices was 1918, when the increase reached 204 per cent., whilst the greatest increase in the textile group was 139 per cent. in 1920. The total increase for this section reached its maximum in 1918 with 140 per cent. over the prices of 1913. The general index numbers of these two sections together give the following:—

1913	100	1918	204
1914	101	1919	195
1915	119	1920	222
1916	139	1921	190
1917	160		

The commercial agreements, first with France, then with England, have caused business to be a little more brisk during the past month, although the commercial situation still leaves much to be desired. The exports from Spain during the first four months of this year declined to 34,627,000f, as against 141,370,000f during the same months of last year, whilst the imports from France to Spain in the same period descended from 228,465,000 in 1921 to 87,920,000 in 1922. Exports therefore showed a reduction of 107 millions and imports 141 millions for the months in question. Exchanges have been very erratic in the past month, in harmony with other European centres, and there has therefore been a small revival of speculation in foreign currencies on the Madrid and Barcelona Stock Exchanges.

ROUMANIA.—FLUCTUATION OF EXCHANGES.—ITS EFFECT ON TRADE—PRICES AND EXPORT TAXES —THE AGRARIAN REFORM—IMPROVEMENT OF TRANSPORT SYSTEM—ELECTRIFICATION SCHEME—NEW OIL POLICY.

(FROM OUR CORRESPONDENT.)

BRASOV, August 25.

THIS month experienced the widest fluctuation of the lei rate registered ever since the existence of the country. The Bucharest quotations of all foreign currencies declined by about 50 per cent. within a few days. At the middle of July the sterling attained its high record at 800, while at the beginning of August it was quoted at 400. Though a considerable improvement of the lei was generally expected, in consequence of the favourable crop reports, still such a rapid advance was regarded as unnatural. The disappointment caused by the postponement of the 2,500,000 loan, which was regarded over here as already concluded, and the failure of the London conference, gave rise to a marked reaction, and the lei receded the greater part of its advance. During the last few days a new improvement has been noticeable, though much less sharp than the previous one, which was succeeded by another decline.

The rapid decline of foreign rates affected the timber trade in the first place; several big timber firms intended to declare bankruptcy, and it is only through the rapid recovery of foreign exchanges that the timber trade escaped a severe crisis. The carefulness of banks when restricting advances to timber merchants was thus more than justified by events. The effect of the fluctuation was less threatening but more permanent concerning the corn trade. The improvement of the lei brought with it a decline of corn prices, owing to the rigidity of the system of export taxes. The original purpose of export taxes on corn has been the compensation of the difference between world market prices and home prices, created through the low rate of Roumanian exchange. For this purpose it would be necessary to adjust the taxes according to the fluctuation of home prices, world market prices, and exchange rates. Instead of this, definite taxes have been fixed in gold lei and in foreign currencies. For instance, rye pays 795 gold lei (or 28 or 120 dollars, or 640 Swiss francs, &c.) per 10 metric tons. It is true that the paper

lei equivalent of this amount varies directly with the fluctuations of the Roumanian exchange; yet it does not follow the fluctuation of the difference between home prices and world market prices. If the lei rate would improve to such an extent that the price of corn in Roumania would become equal to the world market prices, the export taxes would still exist, completely stopping exports. In the present case the improvement of the lei was not as great; still, it was sufficient to render export taxes a serious obstacle to exportation. Thus a fall of inland prices took place.

Of course, the succeeding decline of the lei rate soon enhanced corn prices again; however, the fluctuation has largely discouraged buyers as well as sellers, so that at present only professional gamblers dare to undertake any transaction in corn. The well-established export houses prefer to wait until the lei has become more steady. Consequently, the activity of exporters is much inferior to that of the corresponding period of last year, though the quantities available for export are much larger, and transport conditions have also undergone an improvement. The greater part of the corn exported at present is being sent to France and Switzerland, in payment of the loans contracted in 1920 and in 1921 respectively.

Foreign exchange transactions which were excluded from the official market since the beginning of the war have been readmitted to the Bucharest Bourse on August 21st. This will, at least, prevent the uninitiated public from being misled by unscrupulous private exchange agents.

The Government is endeavouring to accelerate the carrying out of the agrarian reform. This year's big crop is held to cast doubt upon the pessimistic prophecies concerning the unfavourable effect of the distribution of land in production. As the transition period is necessarily detrimental, the Government attempts to shorten that period.

The Government also intends to eliminate another handicap to export—i.e., transport difficulties. Agreements have been concluded with Germany, Austria, and Czechoslovakia, in virtue of which these countries will lend to Roumania the rolling stock required for the transportation of Roumanian corn to those countries. The seaports of Constanta, Galati, and Braila are being extended, and a second railway line will be constructed between Constanta and Bucharest. A committee has been appointed to elaborate a scheme of electrification of State railways with the aid of hydraulic forces and natural gas. It is expected that the transformation work will begin next spring.

According to recent information, the Government intends to adopt a more liberal attitude towards foreign undertakings in the matter of oil concessions than the policy adopted since the war. Seemingly, they begin to realise the urgent need for foreign capital, for at present only a small fraction of the total oil areas—estimated at 150,000 hectares—is being exploited. In connection with this, it is interesting to note the suggestion made by Mr Aristide Blank, a leading banker of the country, who proposes to grant a concession for 25 years concerning

the entire unexploited oil territories to a group composed of foreign capitalists, against 55 per cent. of the profits and the granting of a loan enabling the Government to consolidate its internal and external debts and to reorganise the transport system of the country.

The textile industries are having a prosperous time, especially since the recent appreciation of the Czechoslovak kronen, which eliminated the competition of Bohemian industries. The raw material used by cloth factories is at present pure wool, instead of the wool and cotton mixture used before the war, for Roumanian wool is at present cheaper than cotton imported from countries with appreciated currencies.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

AGAIN one has to start with the statement that in the publications of the last month pure economics is to all intents and purposes unrepresented. Of applied economics in its narrower sense, as applied, that is to say, to commerce and the mechanism of business and finance, there is very little. Such books as these all fall mainly into that large class, so difficult to define with any exactitude, where economics mixes itself up with history, with geography, with politics, above all, with industrial politics. There are, that is to say, a considerable number of descriptive books, ranging from Latvia to Bolivia; a certain number dealing with labour as politically organised to-day; and a very few whose standpoint is that of theory. Among these latter may be mentioned two volumes by M. Henri Lambert, that enthusiast for Free Trade, who sees it as the key to the whole problem of European reconstruction, and the one safe road to peace. "*Il Nouveau Contrat Social*" and "*Pax Economica*" (both published by Alcan of Paris, at 7f 50c) are expositions of this theme, to which this Charleroi manufacturer has, ever since the war, been devoting himself with the ardour of an evangelist. Another synthetic effort—it sounds better in French—is "*Le Mutualisme essai de Synthèse*," by Arthur Travers-Borgstroem (Alcan, 6f), a translation from English. The author is all against economic nationalism; he has to struggle, there, against a tide of new nationalist feeling. Little of this, fortunately, finds expression in the admirable description of the *Czecho-Slovak Republic*, written by Messrs Paroslav Cisar and F. Pokorny, and published in this country by Fisher Unwin (9s), a book which contains some admirable chapters on the art, music, literature and the new Republic, but not as much as one might wish on the difficulties met with by a country which, surrounded by neighbours of precipitously depreciating currencies, struggles manfully against inflation. There is much of interest in the Swedish Traffic Association's "*Book about Sweden*"; and in Mr A. V. L. Guise's "*Six Years in Bolivia*" (Fisher Unwin, 21s, in which country the author spent six years as a mining engineer. The same may be said of Mr Owen Rutter's "*British North Borneo*" (Constable, 21s), though Mr Rutter's interest is mainly geographical and anthro-

As a description of the mechanism of the French Budget, and of official public finance, the little book which Mr Harvey E. Fiske has edited for the Bankers' Trust Company of New York, on *French Public Finance in the Great War and To-day*, is extremely valuable. In addition to the chapters dealing specifically with public finance, from the Treasury point of view are a series of others describing the mechanism of local and municipal finance, the banking system, the savings banks, &c., and the whole is illustrated by excellent tables and graphs. One can at least discover what the French income-tax, for instance, actually amounts to, and who pays it.

Publications like the *Stock Exchange's Ten Years' Record* (F. C. Mathieson, London, 20s) and *Tolley's Tax, &c.* (Waterlow, London, 2s 6d) explain themselves, as does *The Shareholders' Manual*, by H. H. Bassett

(Pitman, London, 3s 6d), and the *Annual Statistical Report of the American Iron and Steel Institute* for 1921 (New York, 40 Rector street). Statistical discussions, of a kind interesting to actuaries, as bearing on the incidence of casualties at sea and elsewhere, are contained in the *Statistical Journal* for the July quarter (9, Adelphi terrace, 7s 6d).

Like Mr Fiske's work on French finance, Mr B. G. Montgomery's study of *British and Continental Labour Policy* (Routledge, 21s) is almost purely documentary in its sources. He surveys the position and programmes of Labour parties in Great Britain, France, and the Scandinavian countries, and reveals, incidentally, a very interesting connection between actual progress in the improvement in social conditions and "reformism" as a political theory. The French socialists are the most "advanced," i.e., the most revolutionary, in theory; but when one turns from general declarations to actual programmes, one finds them including elementary reforms long ago secured, for example, in this country. Mr Montgomery's book (he is a Frenchman) is curious, especially in the sections describing British conditions, by its complete elimination of the human factors. It is a useful work, the more so that it is rigorously descriptive and non-argumentative. He says nothing on the topics which, for instance, occupy Sir Lynden Macassey in his *Labour Policy False and True* (Thornton Butterworth, 7s 6d).

RUSSIA THROUGH GERMAN EYES.*

GERMANY, having direct experience of revolution—though there are many who would deny that the fall of Kaiserism in 1918 constituted such in the strict sense—and being, thanks to geographical circumstances, in close and constant touch with Communism in its varying phases, are in better position than inquirers from happier and more distant countries to report on Russian life. The author of this book was in Petrograd and Moscow from September, 1921, to January, 1922, for the *Frankfurter Zeitung*, in whose columns its chapters appeared in the form of special articles. He is a Socialist, not a Communist, but he went to Russia to see a country, not a Communist experiment, and he has kept that intention very loyally in the front of his mind throughout. Whatever one's judgment on Bolshevik ideas and policy—Herr Schotthöfer is inclined to think that the *coup d'état* of October, 1918, was premature, that Russia was not ready, industrially, for Marxism—the existence of Lenin's Government is a fact, an element in the picture of the Russian nation. He agrees with most other impartial observers in holding that there is no effective alternative to it. Although, as he says, the Communists are not popular with the peasants, as were the Bolsheviks, who in 1918, promised them land and peace. Among the facts that have forced the new economic policy on Lenin's Government, the resistance of the peasants to requisition, &c., is among the most important. The effect of that policy is, of course, that the *régime* is no longer, in any strict sense, Bolshevik. It is now grappling with the same problem as every other war-shattered country, a problem presented in Russia in an aggravated form: the problem of economic reconstruction—only it is definitely trying to solve it from the bottom up, on the basis of certain assured minimum conditions for the under-dog. In this connection he makes one significant remark. Alexander Hertzén remarked of the Russia of his day that its deepest failure lay in the fact that "behind the visible there is no invisible State.....no ideal that, ever sought, is never fully realised." Czarism, Czaropapism, had no aim beyond its own aggrandisement. But the Soviet Republic, says Mr. Schotthöfer, has given Russia an "invisible State." This ideal is there, and is felt. Whether the present *régime*—as to whose miseries he is quite frank—can be transformed into Socialism is dubious; he does not discuss that. But the feeling about it is a fact he records. His book is not an argument, so much as a series of pictures. They are not extremely well done, but their honesty gives them a claim. His picture of the famine is quietly done; but the facts are so frightful that "writing up" is superfluous.

* "*Sovijsk Russland im Umbau*." Von Fritz Schotthöfer. Frankfurt: Frankfurter Societäts-Druckerei.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
 September 20. September 21.

The awkward settlement of September 1st, which cleared up the last of the war position in the Stock Exchange and elsewhere, has been successfully surmounted, but left an aftermath of unpleasant, rather than bitter, effects from which the gilt-edged markets are suffering. For the War Loan to dip below 100 was due to fairly substantial realisations of the stock, accompanied by rumours that some of these sales were forced, and were on behalf of people who had not yet settled up in full their pre-war obligations. Vague talk of a possible rise in the Bank rate, and of an approaching number of new issues, served to emphasise the dulness of the Consol market. India Government stocks, however, are not at all bad, and these, together with certain other securities quoted this week ex the interest payments due early next month, have started to recover part of the deductions. National War bonds, however, are dull, and the tendency of the gilt-edged market, including the stocks in the Home Railway prior-charge list, is somewhat subdued.

French bonds, Government and railway alike, gave way during the earlier part of the week, but made a rapid recovery as the sentiment changed and Paris sent buying orders. The French capital has been a buyer also of Rio Tintos and De Beers. German bonds have been comparatively quiet, though the agreement to postpone the question of reparation payments till the end of the year infused a more cheerful tendency into the foreign market as a whole. Mexican Government bonds have mounted by several points, in consequence of the scheme just propounded for the settlement of the country's debts. Turkish and Greek bonds have remained curiously quiet, having regard to the developments in the Near East. Argentines are steady, no particular heed being paid to the rumour which sported with the idea that the republic may be raising a new loan in order to build a railway line to come into competition with those already existent. Brazilians have been erratic, Russians are better.

GUSTAV CASSEL'S Important Book

Money and Foreign Exchange after 1914

Demy 8vo. 10/6 net.
 Dr. Cassel has been described by Mr. Lloyd George as "one of the most brilliant economists in the world."

CONTENTS OF THIS BOOK:

Abolition of the Gold Standard—Creation of Artificial Purchasing Power—The Rise in Prices—The Growth of the Volume of the Means of Payment—Arithmetical Expressions for Increase in Circulation and Rise in Prices—Scarcity of Commodities and its Bearing on the Rise in Prices—The Influence of Inflation on Gold—The Exclusion of Gold—The Discount Policy and its Efficiency as a Regulator of the Monetary Standard—The Exchange Rates—Deviations from Purchasing Power Parities—Popular Misconceptions—Relations to Earlier Theories on the Exchanges—Inflation after the War—Reform Programmes—The Actual Operation and Effects of Deflation—The Retarded Diminution of the Circulation—The Problem of Stabilisation—Index.

CONSTABLE 10-12 Orange St. LONDON W.C.2.

Dissatisfaction is arising at the onerous charges imposed upon bulls of Home Railway stocks, and the market has relapsed into a quietude in which any such complaint has a good chance of making itself heard. The Undergrounds are better, Districts spurring strongly; otherwise no feature stands out in this department. Grand Trunks have gone back a trifle. Mexican Rails were disposed to harden, but no particular strength has developed yet. Argentine Rails, at first somewhat perturbed by the rumour mentioned above, rallied partially on the assumption that the Argentine Government is not at all likely to build a competing line, although it might be willing to develop the railway systems by the addition of supplementary lines of its own. Cordoba Central stocks are substantially higher. Leopoldinas, after touching extremes of 42 and 37½, finished the week above the worst.

The rubber market is dormant, but oil shares are giving a much better account of themselves than they have been doing of late. The bringing-in of new wells on the Mexican Eagle property stimulated the market in these shares, and led to recovery in others of the same group. The dramatic rise in Anglo-Persian ordinary was started by favourable statements as to the amount of profit which the company is said to be making. Several of the lower-priced oil shares have come into renewed prominence, and speculation appears to be drifting from Kaffirs into oil shares. The textile market is generally hard, with Courtaulds a strong spot. Banking shares have begun to improve, and the insurance group is good, with Royal Exchange shares about 10 points up. Few alterations of note have occurred in the shipping market. P. and O. gave way a little after the finding of the Commission on the loss of the "Egypt." Imperial Continental Gas strengthened, and several rises have taken place in the electric supply group. Stores shares are better, with John Barkers, Whiteleys, and others of this class in considerable demand. Wireless shares are better. The cable market exhibits no animation. In the brewery list, Meux preference improved on the payment of the first instalment of the arrears of dividend. The iron and steel market moves narrowly and without a special tendency, losses of a few pence being balanced practically every day by gains of equal amount in other shares. Weakness in Armstrongs is ascribed to fears of a poor report in the near future. Brunner Monods were strongly supported by the provinces.

Interest in Kaffir shares, as already mentioned, is disposed to veer into other directions, and prices sagged a trifle from the best. Broken Hills are being taken by the Colony, and Rio Tintos advanced by reason of Paris purchases. Diamonds came in for sharp rises, the trade conditions being said to have altered materially for the better. Tin shares are uninteresting.

Lord Balfour has consented to unveil the Stock Exchange War Memorial, in the House, on October 27th.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

1915	658,773,876			512,522,633
1914	172,585,827			

Manchester Corporation Bills.—Tenders will be received at the chief cashier's office, at the Bank of England, London, on Thursday, September 14, 1922, for Manchester Corporation Bills to be issued under Manchester Corporation Acts, to the amount of £1,000,000. The bills will be dated September 19, 1922, and will be payable 12 months after date. They will be issued and paid at the Bank of England, London.

Port of Karachi.—This is an issue of £330,000 6 per cent. sterling debentures by the trustees of the Port of Karachi. These debentures are repayable at par in 1952 in London in sterling, and interest is also presumably payable in sterling in London. The Karachi Port Trust was constituted under an Act of the Government of Bombay, and the trustees have the exclusive right to levy charges in connection with the port. The present debt of the board amounts to £1,702,667, calculating the rupee as equal to 1s 4d. Against this liability it is stated that the board have assets valued at £3,779,500. An interesting table is given in the advertisement made to comply with Stock Exchange regulations, showing revenue and expenditure for the past six years. These debentures were offered at £99 10s per cent., and they appear to be a good investment in their class.

Crosses and Heatons' Associated Mills, Limited.—Authorized capital £1,000,000, divided into shares of £1 each, of which 906,093, credited as paid up 8s per share, are to be issued to Crosses and Winkworth Consolidated Mills, Limited. This is an issue of £1,600,000 6 per cent. first mortgage debenture stock, of which £1,203,620 is now offered for subscription at 98 per cent. The remaining £336,380 is being issued at par in part payment for certain properties now being acquired. The issue is repayable on September 1, 1963, at 103 per cent., but it may be redeemed by the company after authorised debenture issue is limited to £3,000,000, and is to be secured by a trust deed constituting a specific first charge on property and plant and a floating charge on other assets. The statement as to assets for the remaining unissued portion of £1,400,000 of debentures is rather vague. It might be taken to read that the company has the option of providing chargeable assets are independently valued at £1,731,397, and £543,650, representing uncalled liability on shares to be allotted to Crosses and Winkworth. It is a matter for comment that assets to the value of £2,456,424 should be represented by such a small share capital. Also the fact that average earnings over a period of only five years are shown calls for notice. Principal, interest, and premium upon the debentures are, however, guaranteed by Crosses and Winkworth Consolidated Mills, Limited, and this additional safeguard may attract some investors who consider that the guaranteeing company are now on the road to prosperity.

The Inveresk Paper Company (1922), Limited.—Incorporated in Scotland. Authorized share capital £250,000, divided equally into 8 per cent. cumulative preference and ordinary shares of £1 each. Applications are invited for and 125,000 8 per cent. cumulative preference debenture stock at 95 each at par. The directors and others, it is stated, have applied to the vendors. The debenture stock is secured by a trust deed constituting a specific first charge on property and plant. It is to be redeemed at 103, and during 1927 and each succeeding December 31, 1947, will be applied in redemption of the stock price. The company has been formed to acquire the business wards of 50 years ago. Profits are, however, only at £279,983. Independent and dated valuations are given of the property and plant. The purchase price is £175,000, of which £135,000 is payable in cash, but exactly what the company obtain for this amount is difficult to understand from the prospectus. In addition to and 5 per cent. for underwriting preference shares, the company is paying £20,500 for preliminary expenses. Subject to the fact that future prospects of the paper-making industry merit in their class, while the debentures are not without shares would depend on the investor's long view of the industry.

Omnium Oil Development Company, Limited.—Incorporated in Canada. Authorized share capital £250,000, divided into 1,000,000 shares of 5s each, of which 358,142 shares have been issued. The company was formed in September, 1920, in and Trinidad. This is a Press announcement made to comply with London Stock Exchange regulations, but the shares will only appeal to those with some knowledge of the directors, and advertisement of more details than those vouchsafed in the

Isis Chemicals and Dyes, Limited.—Authorized capital £30,000, divided into 300,000 ordinary shares of 2s each. The whole amount has been issued and the shares are fully paid. This is an announcement made in the Press to comply with Stock Exchange regulations. The company was incorporated on June 1, 1921, to acquire certain processes used in the production of dyes. It is stated that application will be made to the London Stock Exchange for permission to deal in shares of the company, but it is hoped that purchasers will exact much more information from the directors than that contained in the advertisement before parting with their money.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.
RESULTS OF A DIFFICULT YEAR.
ABOMINATION OF THE EXPORT DUTIES.

The 34th ordinary general meeting of the African and Eastern Trade Corporation, Limited, was held, on the 1st instant, at the Banqueting Hall of the Exchange Station Hotel, Liverpool, Mr J. H. Batty (chairman of directors) presiding.

The Chairman, in moving the adoption of the report and accounts, said the total of the authorised capital was not altered from that of last year, viz., £13,000,000. The 5,000,000 15 per cent. cumulative preferred ordinary shares were now changed, and were shown as "shares authorised but not issued." In accordance with the special resolution confirmed on August 4th, the rights to be attached to these shares were to be determined before or at the time of issue. There was a small increase of £14,862 in the ordinary shares, which now stood at £3,560,368, in connection with the completion of previous agreements, and the acquisition of a small concern to ensure the supply of packing cases and boxes required for A. J. Caley and Son and other subsidiary companies. The next item of importance on the debit side of the balance-sheet was sundry creditors, £2,417,208 14s 2d; included in this was about £1,500,000 for contingencies, excess profits duty, and income-tax adjustments, and when the final settlement with the Government was made this should show a corresponding decrease. The advances by bankers, £490,275 4s 10d, was a fluctuating amount. The whole of the company's assets were free from encumbrances.

AFRICA HOUSE.

They had during the year, when conditions were most difficult, provided the moneys required to take up their commitments, including the payments on the construction of Africa House, without occasion to resort to the hypothecation of properties, produce, or merchandise. Whenever they required help in that direction their bankers had assisted them with a readiness which they most cordially appreciated, and he thought he could assure them that they continued to enjoy their full confidence. There was a new item, Allied Companies, £139,424 16s 6d, consisting of internal adjustments between the subsidiary and parent companies, and these were liable to fluctuation. The depreciation fund showed an increase of £36,687 3s 4d. The insurance fund was increased by

£10,618 2s 1d, which was the profit on the underwriting by the company during the year. General reserve stood at £3,220,045 8s 8d, the balance remaining after transferring £1,750,000 to profit and loss account and writing off £1,500,000 from investments. On the credit side the value of buildings, lands, steamers, &c., was £972,849 5s 4d, an increase of £265,395 0s 11d, mainly explained by the transfer of certain properties of subsidiary companies, the completion of one new bar steamer, another in the course of construction, and properties purchased in other markets than West Africa. The properties in London and Liverpool showed an increase of £201,910 8s 6d, which was accounted for by the additional expenditure on Africa House, Kingsway, London. He thought they would all agree with him that it was not the time to consider selling a property of that kind even if it was decided to do so. The showed a decrease of £790,397 2s 1d as compared with last year. Produce in transit and in store in U.K. and elsewhere was somewhat less than last year. Sundry debtors and payments in advance, £252,884 1s 10d, and advances to Allied Companies, £2,638,424 13s 4d, would be very materially reduced when E.P.D. and income-tax adjustments were fully completed.

TRADE CONDITIONS.

Trade conditions in 1921 throughout the world were disastrous, and West Africa was still suffering from over taxation, and the natives were discouraged. The abomination of the export duties was having a very detrimental effect on trade in the British West African colonies, and they were determined not to rest until they got these duties removed altogether. Arrangements had been made for Major-General Grey and Mr A. A. Cowan to visit West Africa shortly. During the year the corporation entered into agreement with the Société Française de Pétrole, Limited, for the option of four concessions in the district of Half Assinie in the Gold Coast Colony, comprising an area of about 150 square miles. The directors wishing to show their sympathy with the shareholders in the unfortunate results of the year's trading suggest that the amount of directors' fees for this year should be £1,500 instead of £3,000.

Mr Robt. Miller seconded, and the resolution was unanimously adopted.

The retiring directors, Messrs T. Rowland Hughes, J.P., H. C. Hutchinson, J. Pickering Jones, and M. H. McNeill were re-elected, and the auditors (Messrs Harwood Banner and Son) re-appointed. A resolution fixing the directors' fees at £1,500 was also adopted.

rupees) imported into India during the period October, 1921, to June, 1922, was as follows:—

	Gold.	Silver.
October, 1921	1.92	1.41
November, "	2.03	1.64
December, "	42	67
January, 1922	82	1.66
February, "	1.10	1.84
March, "	2.76	2.02
April, "	1.82	2.03
May, "	3.50	1.09
June, "	3.45	66
	17.82	12.02

During the nine months under review, therefore, India acquired precious metal to the value of about £20,000,000, the greater portion being in the form of gold. The *Times* Toronto correspondent, under date September 5th, states that the gold production in Northern Ontario during August is estimated at \$1,840,000 (£408,000). Three mines in the Porcupine District and five in Kirkland Lake contributed to the output. There is a prospect that the total production in the Province will soon reach \$25,000,000 (£5,550,000) per annum.

SILVER.

The Indian bazaars have been the main factor in the market. Buying orders from this quarter at the beginning of the week, coming on a poorly supplied market, gave it a firm tone, and the prices rose gradually to 35½d on the 5th inst. Yesterday offerings from the Continent and America, with some re-selling on Indian account, caused a sharp fall to 35¼d for both quotations. Calcutta and Bombay bazaars were reported as buyer and seller respectively on the same day. To-day there was renewed buying by the Calcutta bazaars for prompt shipment, causing an advance in prices, the spot quotation going to a premium of ½d over that for forward delivery. After the departure of this week's steamer, however, it does not seem probable that this difference will be maintained. The following interesting remarks as to the period over which purchases under the Pittman Act are likely to extend appeared in the *New York Times* of August 20th:—"If the Government continues buying silver at the rate prevailing during recent months, it will take at least another fifteen months to replace the 208,000,000 ounces sold to Great Britain during the war, according to N. H. Lawrie, managing director of the American Gold and Silver Institute. The purchases are being made under the Pittman Act, which guarantees domestic producers \$1 per ounce. "The Act went into effect in May, 1920; since then the monthly averages of purchases," according to Mr Lawrie in the *Engineering and Mining Journal Press*, were as follows:—"In 1920 they were 3,738,420 ounces, in 1921 4,888,544 ounces, and in 1922 4,798,770 ounces. The total silver purchased to July 25, 1922, was 119,960,506 ounces, leaving a total of approximately 87,000,000 yet to be purchased. The monthly average for the 26 months is 4,513,943 ounces. At that rate the 87,000,000 ounces would be purchased in a period of 19.3 months. At the monthly rate of purchases for 1922, however, the period of purchase would be shortened to 18.2 months. With the increasing production of copper and lead, the production of silver will increase this year, it is estimated, by about 6,000,000 ounces. If the probable increase in production for 1922 is maintained during 1923, it will decrease the duration of the Pittman Act by about three months, indicating a total remaining period of 15.2 months. To protect their interests, silver producers should be guided in their operations and plans for the future marketing of silver by the minimum estimated life of the Pittman Act of fifteen months from July 25, 1922, or to about November 1, 1923." Including a purchase of 350,000 ounces on August 23rd, the total amount of silver purchased under the Pittman Act up to that date was 126,434,506 ounces.

The silver coinage during the week ending 31st ult. amounted to three lacs of rupees. The stock in Shanghai on the 2nd inst. consisted of about 40,200,000 ounces in sycee, 33,000,000 dollars, and 4,100 silver bars, as compared with about 40,300,000 ounces in sycee, 33,000,000 dollars, and 4,840 silver bars on the 26th ult. The Shanghai exchange is quoted at 3s 5½d the tael.

BROKEN HILL SOUTH.—Output for four weeks to July 1st:—16,250 tons crude ore were treated, assaying 13.8 per cent. pb., 6.7 per cent. zn., and 13.0 per cent. cu. The concentrates, assaying 66.5 per cent. pb., 25.7 per cent. zn., and 8.5 per cent. cu. Of the foregoing, 2,472 tons came from the lead concentrating mill, 68.0 per cent. pb., 28.5 per cent. zn., and 8.1 per cent. cu., and 412 tons were produced from current slime, assaying 57.3 per cent. pb., 38.3 per cent. zn., and 9.6 per cent. cu. 11,287 tons dump slime were treated, assaying 11.0 per cent. pb., 6.8 per cent. zn., and 13.1 per cent. cu., and produced 1,841 tons concentrates, assaying 48.1 per cent. pb., 32.7 per cent. zn., and 14.3 per cent. cu. The despatches of zinc tailings were:—To Zinc Corporation, 29,045 ozs.; to Amalgamated Zinc, 8,461 tons.

and 13.1 per cent. zn., and produced 1,841 tons concentrates, assaying 48.1 per cent. pb., 32.7 per cent. zn., and 14.3 per cent. cu. The despatches of zinc tailings were:—To Zinc Corporation, 29,045 ozs.; to Amalgamated Zinc, 8,461 tons.

BURMA CORPORATION.—No. 7 level:—West crosscut, 1,137 ft south: from 40 ft to 55 ft, 30 ozs silver, 45 per cent. lead, 9 per cent. zinc; from 55 ft to 65 ft, 13 ozs silver, 25 per cent. lead, 7 per cent. zinc; from 65 ft to 70 ft, 14 ozs silver, 33 per cent. lead, 12 per cent. zinc; from 70 ft to 75 ft, 11 ozs silver, 15 per cent. lead, 5 per cent. zinc; from 75 ft to 80 ft, 37 ozs silver, 47 per cent. lead, 12 per cent. zinc.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA, LIMITED.—Production during August:—1,943 tons zinc; silver lead product for shipment to Port Pirie for realisation containing 218 tons lead, 46,359 ozs silver.

SULPHIDE CORPORATION.—During the four weeks ended on Aug. 26, 1922, 9,574 tons of ore and 2,241 tons of slimes were milled at the Central mine—producing 2,350 tons of lead concentrates including 403 tons from the de-leaching plant, which assayed 40 ozs silver, 66 per cent. lead, together with 3,588 tons zinc concentrates assaying 11 ozs silver, 7 per cent. lead, 47 per cent. zinc per ton.

Reports and Notices.

Messrs Higginson and Co. and Messrs Cull and Co. notify subscribers that the definitive certificates of the Mexican Eagle Oil Company, Limited (Cia Mexicana de Petroleo, "El Aguila," S.A.)—certificates for 7 per cent. first preference shares, will be ready for delivery on and after October 2, 1922, in exchange for fully-paid letters of acceptance and/or scrip certificates. The exchange will be made at the head office of the London Joint City and Midland Bank, Limited, 5 Threadneedle street, London, E.C.2, or may be effected through any branch. It is pointed out that under no circumstances should letters of acceptance or scrip certificates be sent by post. To facilitate the collection of dividends it is stated that arrangements have been made to issue all definitive certificates in the name of the London City and Midland Executor and Trustee Company, Limited (affiliated with the London Joint City and Midland Bank, Limited), endorsed in blank by that company. Dividends will be payable at any branch of the bank upon presentation of the share certificates for this purpose.

The Marine Insurance Company, Limited, has appointed Mr George Aubrey Thomas Darby as manager to succeed the late Mr H. F. Kingdon.

Brigadier-General B. R. Hepburn, C.M.G., has been appointed chairman of the General Petroleum Company of Trinidad, Limited.

Mr Geo. W. Paton (d-puty-chairman and managing director of Bryant and May, Limited) has been appointed chairman and managing director of Maguire, Paterson, and Palmer, Limited.

At a meeting of the council of the Rubber Growers' Association, held on September 4th, it was decided to convene a special meeting of the council to be held on Monday, September 11th, at noon, for the purpose of considering, and if thought fit, adopting the following resolution:—"That this council is of the opinion that the Colonial Office Committee should proceed to the introduction of a scheme as set out in the report of the Stevenson Committee with the voluntary

assistance of the British and other interests operating in the Netherlands Indies."

The Banco di Roma has increased its capital from 150 million lire to 200 million lire.

The La Guaira and Caracas Railway Company, Limited; the Dorada Railway (Ropeway) Extension, Limited; the Dorada Extension Railway, Limited; the Puerto Cabello and Valencia Railway Company, Limited, have removed to Moorgate Hall, London, E.C.2.

Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 20th to the 30th instant, both days inclusive, for the preparation of the warrants for the interest due October 1, 1922.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the September instalment of the debt service in respect of the half-year ending December 31, 1922.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the third fortnightly instalment of the debt service payable to the council in respect of the half-year ending December 31, 1922.

RAILWAYS.

NATIONAL RAILWAYS OF MEXICO.—The report of the National Railways of Mexico for the year ended June 30, 1921, shows a debit balance of 23,464,658 Mexican gold pesos, raising the debit balance in balance-sheet to nearly 300,000,000 pesos, after charging interest on bonds. The President's report explains position of company's lands at Port Tampico. An arrangement has been come to with the local Government whereby the company will be compensated for lands by the payment over a period not exceeding five years.

BANKS.

COMMERCIAL BANK OF AUSTRALIA.—The report of the Commercial Bank of Australia for the year ended June 30, 1922, states that net profits amount to £228,081, plus £13,322 brought in, making in all £241,403 available for distribution. The directors have placed to reinstatement of capital £66,726, reduction of bank premises £10,000, a further dividend on ordinary shares at 15 per cent. per annum, carrying forward £42,209. In addition to the above amount of £66,726 applied towards reinstatement of capital, £134,275 (being premium received on new issue of shares) has been applied to that purpose, which has completed the reinstatement of the bank's capital.

§ Approximate receipts.

COMMERCIAL BANKING COMPANY OF SYDNEY.—The profit for the year ended June 30, 1922, amounts to £397,885, and together with the £85,185 brought forward from previous accounts, shows a balance of £483,070. Payment for the first half-year's dividend, at the rate of 10 per cent. per annum, absorbed £147,335, and it is now proposed to place £100,000 to reserve, paying a further dividend at the same rate, which will take £149,314, and carry forward £86,421 to next year's accounts. The reserve fund now stands at £2,460,000, and total assets amount to £38,902,633. Deposits are £31,493,201, and cash in hand and at bankers £7,473,873.

ALLIANCE BANK OF SIMLA.—The accounts of the Alliance Bank of Simla for the year ended June 30, 1922, including Rs3,31,154 brought forward and after contributing to staff provident fund and rebating current bills, show a profit of Rs14,45,584. The interim dividend at rate of 14 per cent. per annum, free of tax, on ordinary shares, and at rate of 6 per cent. per annum, free of tax, on preference shares absorbed Rs4,07,039. The dividend for the half-year ended June 30th at rate of 6 per cent., free of tax, on preference shares, absorbed Rs1,62,293, and the directors propose to set aside to reserve for debts considered doubtful or bad Rs8,00,000, leaving to be carried forward Rs76,251. The directors also deem it expedient to transfer to reserve for debts considered doubtful or bad Rs42,00,000 at credit of reserve fund.

IMPERIAL BANK OF INDIA.—The report for the half-year to June 30th last states the net profits amounted to Rs.63,52,242, and Rs.12,74,494 was brought forward, making Rs.76,26,736. This sum the governors of the bank disposed of as follows:—In payment of a dividend at the rate of 16 per cent. per annum, free of tax (Rs.44,98,300); to reserve fund, Rs.10,00,000; to pension funds, Rs.5,00,000; and carried forward, Rs.16,28,435. The report states that money was in strong demand throughout the half-year, considerable pressure being experienced in March and April, when it was found necessary to obtain relief by borrowing to the extent of Rs.2,00,00,000 from the paper currency reserve against trade bills. The rate of interest was raised to 8 per cent. on February 15th, at which figure it stood until April 26th, when it was reduced to 7 per cent. It was further reduced to 6 per cent. on May 31st, and again to 5 per cent. on June 14th. The average rate for the half-year was 7.132 per cent.

average rate for the half-year was 7.132 per cent. The profit and loss account of THE NATIONAL BANK, LIMITED.—The profit and loss account for the half-year ended June 30th last shows a balance of £168,235 for the available for distribution, including £27,604 brought forward. The board declared an interim dividend for the past half-year at the rate of 12 per cent. per annum, or 12s per share (£10 paid), less income-tax. The dividend absorbed £65,250, leaving a balance of £102,985 to be dealt with. Of this sum the directors have transferred £75,000 to the income-tax and contingencies account, and £27,985 has been carried forward. Total assets now amount to £51,256,295, while deposits are recorded as £45,346,612. Cash in hand and at Bank of England amounts to £4,057,871.

MISCELLANEOUS.

TATA IRON AND STEEL.—The report of Tata Iron and Steel Company for year ended March 31, 1922, states that as new ordinary and deferred shares are not entitled to participate in any profits earned prior to June 30, 1921, two statements have been prepared, one for three months ended June 30, 1921, and the other for nine months ended March 31, 1922. The net profit for three months was Rs23,49,933, plus Rs3,54,693 brought in and Rs1,10,699, being managing agents' commission for three months, which they have to go, making Rs28,15,386. The directors have resolved to place to depreciation fund Rs19,00,000, to income-tax and super-tax Rs2,12,261, dividend on first preference shares for three months at 6 per cent. per annum, dividend on second preference shares for three months at 7 per cent. per annum. The net profit for nine months ended March 31, 1922, was Rs54,87,571, out of which depreciation fund received Rs26,00,000, income-tax and super-tax Rs3,50,000, leaving Rs35,37,571. The directors recommend dividend on first preference shares for nine months at 6 per cent. per annum, on second preference shares at 7 per cent. per annum, leaving Rs5,31,321, which the directors recommend be carried forward.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of August was 83,592 barrels, equal to approximately 11,900 tons, and the oil delivered to Trinidad Leaseholds Limited, amounted to about 10,100 tons.

LOBITOS OILFIELDS, LIMITED.—The production for August is cabled as 9,371 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during August 9,500 tons. Oil purchased during August from other companies 10,100 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, August 30, 1922 amounted to 1,101 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane Friday Evening.

Harvesting operations are proceeding steadily in the United Kingdom under more favourable conditions, although recent rains have made hand-cutting necessary in some districts. A continuance of fine dry weather during the next week or two is eminently

desirable in order to cart grain lying out in the fields. Wheat is expected to show a good yield generally, though quality may fall below last year. Barley is rather under average, while the out-turn of oats is appreciably lighter and short in straw. New crop grain is offering in larger quantities at the Statute markets, but good dry samples are by no means easily obtainable, a considerable proportion being damp. Millers so far show very little interest, and in order to effect business growers were obliged to make slight concessions. Best samples were held for 42s, with inferior at 38s to 39s per 504 lbs, free on rail. Imported varieties also moved off slowly at a further reduction, the decline being due to weakness in North American markets and pressure to sell, though later a steadier tone prevailed. No. 1 Northern Manitoba quoted 50s. No. 2 hard winter, 47s, Australian 52s 6d, Rosafe 64 lbs 48s, all ex ship to arrive per 496 lbs. The cargo section remained in a dull state, as buyers evince little confidence in present prices owing to excellent crop reports from North America, while the immediate outlook would certainly appear favourable to importers. European countries will be able to carry on for a while with home crops, which proves a depressing factor on the other side, though no doubt prices will react when export buying is seriously attempted. Moderate cargo sales include Rosafe 64 lbs arrived at 44s 6d, No. 1 Northern Manitoba October-November 44s 4½d to 44s 6d, No. 2 ditto 43s 6d to 43s 7½d, and No. 2 hard winter afloat 44s 3d per 480 lbs. Flour prices suffered a further reduction owing to the wheat position and lack of buying interest. Home milled declined 1s per sack, London standard straight run now ruling at 40s, town households 38s, patents 42s to 43s, and all English straight run 37s per sack delivered to London bakers. Imported easier, while difficult to vend. Manitoba patents range from 38s to 41s, Pacific 36s, and Australian 37s to 38s per 280 lbs, ex store. Barley quiet and without new feature. New crop English shows variable quality, and ranges from 36s to 41s per 448 lbs free on rail. Foreign malting sorts, however, meet with a fair inquiry owing to indifferent samples of native on offer. Chilian quoted 54s to 57s, Australian 47s to 56s per 448 lbs ex store, American malting 29s 9d ex ship per 400 lbs. Maize quiet but firmly held, holders being more reserved owing to adverse Argentine weather, which is interfering with shipments of this cereal. La Plata ex ship quoted 40s 6d, there being very little on landed terms, No. 6 yellow African ex ship 35s 3d, American mixed landed 35s 3d, while a cargo of La Plata August-September sold at 37s per 480 lbs. Fairly good supplies of new winter native oats and a few lots of spring are on offer, prices ruling steady at 24s to 28s per 336 lbs free on rail. Imported firm. La Plata f.a.q. 26s 3d, clipped 27s, No. 2 Canada Western 30s 9d, No. 2 white clipped American 38 lbs 25s 9d, all landed per 320 lbs. Oatmeal in good demand, and prices 10s. ton dearer for home milled at £18 10s, all cuts. English beans move off quietly, but prices are about steady. English peas experienced a better demand, while imported for shipment were freely dealt in at full to dearer rates.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 7th, is as follows:—Pig-iron: The American demand for pig-iron, both ordinary Cleveland G.M.B. and Basic iron, has stimulated home buyers, and ironmasters have made a good number of sales during the past week. Prices have consequently been raised, and Cleveland No. 3 G.M.B. is now quoted at 90s per ton. The hematite market is very quiet, and stocks of East Coast mixed numbers hematite are increasing in makers' yards. The price is weak at 90s per ton, and business could not be carried through at a less figure. Manufactured iron and steel: There are signs of an improved demand, but some works are still idle, whilst others are only working part time, and the approximate quotations are as follows:—Steel ship plates, £9; steel ship angles, £8 15s; iron bars, £11; steel rails, £9 10s net. Iron ore: Stocks at works are still heavy, and new business is very scarce. The price of best rubio is firm at 24s 6d, c.i.f. Tees, but Mediterranean ores are obtainable at 1s to 2s per ton less than quoted for best Bilbao rubio.

Our Sheffield correspondent writes:—The improvement now in operation in the steel trades is only partial, as several local branches of industry report that the amount of business moving has tended to fall off during the last month. While the outlook continues to brighten, therefore, Sheffield as a whole is not much better off than it was six months ago. As may be imagined, there is a good deal of pessimism in local trade circles, and quite a number of old-established firms are finding it extremely difficult to keep their heads above water as regards finance. Money is so stringent that some of them would be embarrassed by a sudden access of new business. For this reason, and also because of the danger of prices being forced up, people generally would prefer a steady and gradual recovery to an immediate boom. Things are extremely bad in alloy steels for cutting purposes, and it is doubtful whether one-tenth of the crucible steel furnaces are working. As regards the heavy steel branches, about one-fifth in five is in operation in Sheffield itself, but the Rotherham district furnaces, where the output is chiefly basic steel, the output has gone up to about 60 per cent. of its capacity. Business is increasing in the Lincolnshire district both for basic pig-iron and basic steel, and the output is not far short of normal. A large part of the production is going to the United States. Business in hematite pig continues very quiet in the home market, but the position is rather better. Engineering and ironfoundry continue depressed, nor is there much enquiry likely to result in early business. Buying of steel for the motor industry and by the railways is increasing steadily, but the volume of trade is still relatively small and unsatisfactory. The demand for steel tools is mixed, some kinds being in request and others neglected. The season for farm tools and steel for implements has ended rather earlier than usual, and has been a very poor one. The usual Christmas buying of cutlery and electro-plate has not yet begun and these trades are only working three days a week on the average. Prices of these goods are being severely cut by firms that badly needed orders. The coal trade in South Yorkshire is a good deal more active than it was three months ago, as the district is obtaining some of the American trade. Best steams are now quoted 27s 3d per ton f.o.b., the home prices being 21s at pits. Railway companies are taking increased supplies, and small steam fuels are going away rather freely, as are nuts and cobbles. For gas coal there is a more active inquiry. House coal is in better request, best qualities being scarce and commanding high prices. Best hand-picked branch is quoted 36s at pits and Silkestone 33s. Furnace and foundry coke are in active request, especially from the Continent.

Our Glasgow correspondent (writing on Thursday) says:—The one actually hopeful outlook is that having relation to demand for pig-iron from America. It is calculated that fully 70,000 tons of Scotch brands have in recent months been sold here for despatch to the United States, and there is an inquiry in force which may last till the end of the year. As a result of this demand surplus stocks have been licked up, yet makers, not sure as to the future, are slow in relighting furnaces and so adding to production. This week 110s a ton is being named for No. 3 at makers' yards for shipment. Home demand is weak, and No. 1 commands no more than 105s, with No. 3 100s. Steelworks, taking them all in all,

are badly off for orders; some of them are wholly idle. Black sheets (thin) are in healthy inquiry for the Far East. Tubemakers are much better off than they have been for a while, and so are re-rollers of steel bars. Official returns give the launches on the Clyde for last month as 17 vessels, of 53,849 tons, bringing the aggregate for the eight months up to 90 vessels, of 254,303 tons, against 165 vessels, of 298,864 tons last year. And the boats "in hand" are fewer in number and bulk than has ever been known in the history of Scotch shipbuilding. Coals remain in active demand for the States and for the Continent. At present there are 100 steamers waiting at different Scotch ports for cargoes.

Our Cardiff correspondent writes:—The termination of the coal strike in the United States has been quickly followed by a reaction on the Cardiff coal market. The situation to-day in the South Wales coal trade is very considerably better than it was in the second half of July, when the American demand first became active on an extensive scale. The orders placed by the United States and Canada during August were very heavy. The tonnage already chartered for the shipment of South Wales coals exceeds 1,400,000 tons, according to the fixtures which have been reported on the market, and the stems of a large number of collieries are full up to the end of the present month, and in some cases up to the end of October. It is from these contract commitments that the market derives its chief, if not, indeed, its only, support. Current inquiries are scarce. Orders from France and Italy are very fluctuating. During the past month shipments to France have ranged from 108,000 to 156,000 tons per week, and those to Italy from 38,000 to 95,000 tons. Buying from the United States has been almost entirely discontinued, and in these circumstances prices are once

3025, 3027, 3029, 3031, 3033, 3035, 3037, 3039, 3041, 3043, 3045, 3047, 3049, 3051, 3053, 3055, 3057, 3059, 3061, 3063, 3065, 3067, 3069, 3071, 3073, 3075, 3077, 3079, 3081, 3083, 30

ek have been exceedingly good, and it is to be hoped that merinos will advance no further.

Judging from the cable reports of the meetings held in Melbourne between the directors of the B.A.W.R.A., selling brokers, and representatives of growers, the association is again on the war-path. Taking an impartial view of the situation, we are not at all surprised with the programme announced by B.A.W.R.A. to take off the hands of growers all medium and coarse crossbreds at liberal advances, and not to reoffer until July, 1923. This action has, however, quered the pitch, Australian selling brokers have announced that they are prepared to give reasonable advances on all consigned clips of crossbreds, offering also to warehouse these wools free of charge until September, 1923. It is quite plain that the selling brokers in Australia are not going to accept the B.A.W.R.A.'s policy quietly. Australian selling brokers are acting well within their rights, for the association was only formed to supervise the sale of the old wool belonging to the British Government when the previous form of control was abandoned. The directors of B.A.W.R.A. appear to be animated by good motives in propounding their scheme, for it is certainly necessary that growers should receive a paying price for their medium and low crossbred wools, but circumstances are such that it is advisable for them to a large extent to leave well alone.

MANCHESTER, September 7.

The feature of interest in the market this week has been the slump in raw cotton rates, sentiment being very bearish. As is usual in a falling market, buyers of yarn and cloth have adopted a waiting policy, and in the opinion of most people the bottom in values has not yet been reached. Less demand has been experienced in piece goods for India. No improvement can be recorded in the offtake for China. Restricted operations have taken place for the minor outlets, East and West, and home trade buyers have purchased from hand to mouth. There is no probability of increased activity until values are stabilised. Yarn quotations have been easier in sympathy with the drop in the raw material, and home users have purchased sparingly. Slightly more demand has been met with in bundle yarns for India.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

Building timbers have been arriving much more largely than a year ago, and the docks in London and around the coast have been kept well employed in storing for stock or sending off by lighters or on to rail. For this late period of the season stocks are by no means heavy, but quite sufficient when the poor state of the demand is considered. The Finns have placed almost all their stocks at what importers consider good prices, and the Swedes have been so successful in their sales here and on the Continent that the balances that will remain unsold by the end of the season will not be of any serious moment—that is provided they do not send them on consignment to this market! Russian goods have increased largely in import in comparison with last year, and though small compared with pre-war times, more is expected this season; and what has come, writing generally, has arrived in that condition and cut approaching those of the old Russian shippers of ante-Revolution days. Had Russia since the Armistice been able to present f.o.b. prices of Swedish wood producers (L26 for unsorted red deals and L18 for battens) would never have been obtained, and of the high timber costs.

The furniture wood market is keeping up remarkably well considering the state of the furniture and cabinet trades, and the poor, but fortunately slightly improving, shipbuilding trade, where hardwoods are used for interior and decorative work. For prime making from 8d and African 4d and upwards per foot super from first hands, but the poorer qualities are not in so much request; are not in any great demand. For American furniture woods the market is still slow. For cedar there is now little demand. Teak, both in the log and converted, is still in the dumps, but there is hope that when the shipbuilding trade improves holders of teak and pitchpine will get some relief.

VEGETABLE OILS AND OLSEEDS.

Trade during the week has been very quiet indeed, and only a minimum of actual business done. Linseed is steadier, but prices have shown little movement. Crushers about cleared Plate afloat at L16 10s, and L17 7s 6d is now quoted for old crop all positions to October, while new is steady round L16 5s, January-February loading. Calcutta has been done at L18 5s on passage to London, and this remains the value for "afloat." Cottonseed has again eased off to below L10 for black Egyptians and L8 5s for Bombay, but buyers evince no interest. West African cottonseed recently arrived at Liverpool has commanded L7 10s. Increasing quanti-

ties of this seed are also arriving at Hull. Soya beans and other oilseeds are all more or less neglected.

Pressure to sell in near position has caused raw linseed oil to further decline about 50s per ton on the week, values ex-Hull mill now being L34 15s spot and L33 5s month. Forward the position is steady round L32 for January-April delivery, and has invited some speculative interest. Cotton oils are down 30s to 40s on the week, as is also soya bean oil, crude Egyptian cotton quoting L30 and soap makers' refined L34, ex-Hull mill, with crude soya bean offering at L37 10s. Rape oil quiet and palm kernel and ground nut oils steady, and values about maintained.

The shipments of linseed (Plate and Indian) from January 1st to September 1st were:—To the U.K., 311,200 tons; the Continent, 413,275 tons; together 724,975 tons, against 837,600 tons same period last year; and of Plate to North America 200,000 tons, against 152,000 tons. The world oversea movement of linseed thus far this year is thus 924,975 tons, against 989,600 tons a year ago. The surplus of the Indian crop for export is estimated at 126,000 tons, and of Plate 57,000 tons. A private estimate puts the latter at 300,000 tons, thus confirming the suspicions which European buyers have entertained for several weeks that the linseed in Argentina yet to come forward was considerably in excess of the official estimates.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Fortunately for tanners the hide market shows no sign of any further advance, as all classes sold at Bermondsey on Thursday remained steady. Best heavy ox sold again at 9 1/2d, lights going to 6 1/2d as last reported. Cows made from 6 1/2d to 7 1/2d for best, and kips from 3d to 6d per lb. Calf were also steady, best lights making 12d to 12 1/2d and heavy 7 1/2d to 10 1/2d. Lambs sold from 3s 2d to 6s 9d each, and sheep pelts from 4s to 6s each. The imported hide market shows no important features, holders' ideas as to value not yet squaring with those of the tanner, who finds it practically impossible to get any increase on his leather.

Although trade in leather cannot be described as brisk, yet there is a much better tone prevailing, and quite a fair amount of leather has been seen out from Bermondsey this week. Northern tanners are also sharing in the improved demand. Repairers are buying 10-12 lb bends, but manufacturers seem content with 6-9 lbs in order to keep the cost of the boot down to as low a limit as possible. American sole has advanced in price to such an extent that competition with English is not possible for the moment. Rough dressing leather is dull, although in spite of the exchange a fair quantity is still being sent to the Continent.

The demand for upper stock has improved, and fair sales are reported of chrome sides and glacé kid. Prices are firming up, and shoe manufacturers will, I think, be wise if they soon cover and requirements. Many, however, are waiting for the Shoe and Leather Fair, which opens in London early next month, to test the market.

Reports from the leading shoe centres are cast in rather a gloomy vein, as orders seem to have fallen off of late. The home demand for winter has, however, hardly set in, whilst business with the Continent still lags owing to the instability of the exchanges.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 8.

The markets for the chief part remained in a quiet state, demand, especially for most raw materials, being measured by wants of immediate necessity.

SUGAR.—There was a fair inquiry for refined descriptions, particularly British, and market ruled steady. Messrs Tate and Lyle's cubes sold 58s to 59s; crushed, 56s 6d; granulated, 51s 3d to 51s 9d; castor, 54s 3d to 55s 3d; yellow crystals, 45s 9d; pieces, 36s 6d to 39s 6d; fine white, 45s 6d; granulated, October, 51s; November-December, 50s 6d. Crystallised West India ranges from 42s to 45s 6d as to quality. American granulated, spot, sold, 49s 10 1/2d to 50s 3d, and to quality. Western American granulated, spot, sold, 22s 9d; White 49s 10 1/2d; afloat, 23s 3d to 22s 9d; September, 22s 9d; Java, spot, 47s 6d to 48s; afloat, 20s; August, steamer, 19s 10 1/2d, c.f. and i. terms London. Belgian crystals, October-December, sellers, 19s 6d; granulated, 19s 9d, f.o.b., Antwerp. Czechoslovakian and Dutch sugars quiet, but steady for shipment. Cuban basis 96 per cent., September, quoted 18s 9d. Java No. 17, Dutch standard, ditto, 19s 3d c.f. and i., United Kingdom. Terminal market quiet. White, November, sold, 21s 4 1/2d to 20s 6d; December, 21s 4 1/2d to 21s 6d and 20s 6d; March, 21s 7 1/2d to 20s 9d; May, 22s to 21s. Cuban stocks stand at 453,000 tons, against 1,225,300 at corresponding period last year.

COFFEE.—There was a moderate business doing during the week, chiefly in home-trade qualities, and a steady tone characterised the market. Bold Nairobi, sold, 8s to 10s 6d; Uganda Robusta, 68s to 73s. Future delivery market remained in a dull state. December, sold, 60s 3d.

COCOA.—Actual transactions in spot parcels were of retail propor-

tions, on about former terms. Forward quiet. West Coast African, October-December, quoted, 36s 6d, f.o.b. terms, for F/F quality.

TEA.—Some 35,800 packages Indian were catalogued in auction during the week, and for which a fair demand prevailed. Good to fine qualities realised steady rates, but common went off in favour of the buyer. Ceylon sales of 24,000 packages disclosed some irregularity, with slight weakness discernible in common and medium qualities.

RICE.—Market very quiet, but prices steady, as sellers do not press. Two stars, spot, 15s 3d; August-September, 14s 3d. No. 1 garden Siam, September-October, double bags, 16s 6d, c.f. and i. terms. Beans quiet. Rangoon, spot, 7s 3d. Japanese peas irregular and easier. Spot lots quoted, 35s; September-October sold, 28s to 26s 6d; December-January, 26s to 24s 9d.

SPICE.—Pepper market quiet, and without new feature. Fair black Singapore, spot, quoted 3 1/2d; October-December, 3 1/2d; Aleppy, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 6d; Muntok, 6 1/2d; ditto, October-December, 6 1/2d. Zanzibar cloves, spot, 1s 4d; October-December, 7 1/2d. Pimento, spot, 2d; flake tapioca, spot, 2 1/2d per lb. Ditto, August, London, 26s; September, 23s; fair Penang seed pearl, spot, 19s; sago flour, October-December, 13s 1 1/2d; desiccated coconut, spot lots sold, 33s to 32s; afloat, 31s; September-October, 33s. Ginger quiet, unaltered.

FRUIT.—Market steady but quiet for currants regarding spot lots. Patras quoted, 55s; quarter cases, 52s to 56s; Vostizza, 56s to 58s; Australian three crowns, 67s to 68s; two ditto, 62s to 63s. Australian sultanas steady, and three crowns sell at 105s, other growths ruling slow. Cape raisins, 40s to 60s, as to grade. Dates quiet. Siam, spot, 27s; new crop Hallowee, October shipment, 32s 6d, c.f. and i., London, was asked, but later business resulted in ditto via Bombay at 35s, landed terms, London.

JUTE.—Market opened the week with a firm tone, but developed irregularity and some weakness later, improving later. First grade, September-October and also October-November, Continent, sold, L35 to L33 10s, L33, and L35 10s; lightning grade, L32 to L30 10s and L32 10s; and old crop firsts, spot, Hamburg, L31. Hessians steady. 10-oz, spot, 35s; 8-oz ditto, 25s. A twills, 78s; B, 67s. Flour sold, 77s.

HEMP.—With a continued quiet demand from ropemakers, and some increase in selling orders, prices gave way. G. grade, September-November, sellers, L33 10s; J, L30 15s; K, L29 15s; L, L28 15s; M, L28. New Zealand dull, and high point fair, spot, quoted L33 10s; fair, L31 10s. African sisal, No. 1, G.E.A., September-November, sellers, L36, and B.E.A., L35.

SHELLAC.—Market very quiet, and quotations in a great measure nominal, closing dearer. Fair free T.N., orange spot, 300s; October, 265s; December, 245s to 250s 6d paid.

COPRA.—Market quiet, and prices tended in favour of the buyer. F.M.S. Straits, August-September, Hamburg, sold, L22 5s; ditto, August-October, Rotterdam, L22 15s; ditto, October-December, L23, L23 10s, and L23 5s; F.M., ditto, September-November, Marseilles, L22 10s; Ceylon, September-October, London, L24 7s 6d; continent, L24 5s; South Sea, ditto, quoted L22 10s; Java, L23 12s 6d; Dutch East Indies, L23; mixed, excluding Padang, L22 5s. Palm kernels, October-December, sold, L17 2s 6d.

RUBBER.—Market steady, and there was a fair trade effected this week. Standard crepe and sheet, spot, also September, sold, 6 1/2d to 7 1/2d; October, 7d to 7 1/2d; October-December, 7 1/2d to 7 1/2d, and 7 1/2d; January-March, 7 1/2d to 7 1/2d; April-June, 7 1/2d to 8d. To New York, standard sheet, October-November, sold, 7 1/2d to 7 1/2d; and November-December, 7 1/2d, c.f. and i. terms. Fine hard Para, spot, 10 1/2d; soft fine, rod; Caucho ball, 7 1/2d.

EGG PRODUCTS.—Market quiet, but steady. Prime liquid yolk, spot, 75s 6d per cwt. Albumen, spot, 3s 2d; forward, sold, 2s 10 1/2d lb paid and buyers.

MENTHOL.—Spot, 30s; forward, 24s 6d. Japanese peppermint oil, spot, 6s 9d; forward, 6s 3d. Aniseed, spot, 2s 3d. Slab camphor, spot, 3s 6d; crude, 3s 4d; and forward, 3s 4d and 2s 11d respectively. Cassia oil, spot, 5s 6d; forward, 5s per lb. Japanese wax, spot, 85s; forward, 75s per cwt.

ISINGLASS.—At the seventh auctions of the year the larger supply of 773 packages was offered, against 480 in July last. A slow demand prevailed generally, and to effect sales lower prices had to be accepted, with few exceptions. Para lump, 3d to 6d down; tongue, 1s to 1s 6d, and honeycomb easier. West India lump, 3d to 6d lower, while purse ruled in favour of buyers. Maracaibo showed some irregularity; good stout pale brought firm rates, whilst skinny showed a decline. Bombay: Kurrachee leaf was 3d to 6d down; tongue ruled firm; purse lower, and bladderpipe steady. Penang leaf showed a decline of 1s to 1s 6d; tongue commanded firm prices, whilst purse was rather cheaper. Saigon long leaf firm to rather dearer, whilst round was 1s to 1s 6d lower.

THE MONEY MARKET.

By comparison, conditions in Lombard Street this week have been comfortable, the market having repaid all its debts to the Bank on Monday. On the other hand, there has been nothing in the way of a surplus, the making up of weekly balance-sheets by some of the banks having absorbed any margin, while the effect of tax collection is still being felt. Discount rates have been fairly well maintained, and were unaffected by the competition for the Manchester Corporation yearling bills on Thursday, allotments for which were made at an average of

OILSEEDS.—Linseed market quiet, but prices closed firm. Bo'd Bombay, afloat, £19 10s. Small Bombay, ditto, £18 10s. Calcutta, afloat, £18 7s 6d; August-September, £18 7s 6d; Sept.-Oct., £18 7s 6d to £18 10s. Plate afloat, £16 15s; August-September, sold, £16 17s 6d to £17 1s; January-February, new crop, £16 5s. Rapeseed dull. Toria, September-October, quoted £17 5s; real bold Ferozepore, September-October, quoted £16 15s. Cotton-seed weaker. Egyptian black, October, quoted £10 10s. Bombay, August-September, £8 5s, sellers. Gingly quiet. Chinese, new, October-September, £22 10s; large Bombay, August-September, £21 5s. Castor, Bombay, August-September, £17 5s, to Hull. Ground nuts easier. Coromandel, machine-dried, August-September, £19 10s; ordinary, £19; East African, £18 10s; Nigerian, £20 15s; bold Bombay, £19 10s. Chinese, November-December, sold £21. Soya beans, Manchurian, August-September, £12 10s per ton.

OILS.—Linseed market irregular. Spot, net, naked, 34s 6d; September, 33s 9d; September-December, 33s 6d; January-April, 32s 6d. Rape dull. Crude, spot, nominally 40s; refined, 44s. Cotton lower. Crude Egyptian, spot, 33s; common edible, 44s; deodorised (in barrels), 49s. China-wood quiet. Hankow, spot (barrels), 63s; shipment, 63s. Coconut steady. Ceylon, spot, 39s; August-September, 37s; Ceylon, ditto, quoted 43s. Soya quiet. Oriental, barrels, August-September, 36s. Japan fish quiet. July-August, cases, 22s. Cod steady. English, spot, 31s. Ground nuts quiet. English crushed, naked, spot, 45s; deodorised, barrels, 54s. Turpentine irregular and easier. American, spot, 99s 9d; October-December, 99s; January-April, 100s. Rosin steady but quiet. American, grade B, 14s; G, 14s 9d; H, 15s; N, 15s 6d; W, 18s; WW, 20s 6d. French, F/G, 15s; WW, 18s 3d per cwt. Petroleum steady. American standard white, spot, 1s 4½d; and water-white, 1s 5d per gallon.

METALS.—Tin: The market opened the week with an easier tone due to selling pressure, though offers were fairly well met. Sales included standard September at £160 10s to £159 15s; October and November dates at £160 10s to £160, and three months £160 10s to £159 17s 6d to £160. Subsequent movements were attended by slight irregularity, and while cash and three months remained about steady, further weakness was noticeable with regard to intermediate dates. At the middle of the week standard September sold at £159 15s to £159 12s 6d, with November £160, £160 2s 6d, £159 17s 6d, three months being registered at £159 10s to £160, £159 17s 6d. At Thursday's session the tendency was firmer, but only moderate sales were effected in cash at £160 5s to £159 12s 6d, and three months £160 5s to £160 2s 6d to £160 5s. On Friday value tended easier. Standard, cash, sold, at £159 10s; October, £160 5s to £159 15s; and three months, £160 5s to £160 to £160 2s 6d. English ingots, £159 5s. Copper: After a quiet opening ruled fully steady, moderate dealing being chiefly confined to distinct positions. Business comprised standard, cash, at £63 5s; September, £63 5s; December, £63 7s 6d; and three

months, £63 10s. Values continued to rule weak, as buyers showed marked reserve, though holders were reluctant to give way to any material extent. Small dealings transpired on Wednesday to standard September at £63 7s 6d to £63 3s 9d, and three months £63 10s to £63 12s 6d, and finally at £63 8s 9d. At Thursday's session a very steady tone prevailed, with a fair inquiry. Standard, cash, sold at £63 5s to £63 3s 9d; and three months at £63 12s 6d to £63 11s 3d. On Friday the market ruled about steady, with fair trading. Standard, cash, sold, at £63 5s; October, £63 10s; and three months, a £66 to £68; strong sheets, £94; wire bars, £71 5s per ton. Lead firm at £24 5s to £23 7s 6d, as to position. Spelter firmer at £31 10s to £30 15s, according to position. Antimony, ordinary, £27 to £29 10s Aluminium, home, £100; export, £105.

TALLOW.—Messrs Colchesters and Woolner write on September 6th as follows:—The tallow market was quiet during the week, and prices are 6d lower to-day. There is insufficient demand to clear supplies as they come forward. The stock in London or ages, showing a decrease during the month of 571 packages. At auction to-day 1,706 casks tallow were offered, and 579 were sold. Quotations are:—Australian mutton: Fine, 41s 6d; good to fair, 40s to 39s; dull to dark, 35s to 33s; hard, 40s 9d. Australian beef: Fine, 40s; good to fair, 38s 6d to 37s; dull to dark, 35s 6d to 32s 6d; sweet, 41s 6d. Present shipment from Australasia: 37s. The market letter is unchanged for tallow: stuff 6d. lower. Town tallow, 34s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 24s 6d per cwt. Quotations are:—Town, 33s 6d net cash, shipping casks, net, f.o.b., good coloured, —; fair to dull, 35s to 34s. Bone fat: White, none; pale, none; benzine, 30s; melted stuff, 29s, f.o.b.

Market rate (3 months' bills) ..	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	..

Thursday's Bank Return showed a slight increase in the gold stock and a reduction of £817,000 in the active circulation, the Reserve being £826,000 higher. Repayment of advances to the market is reflected in a decline of £5 $\frac{1}{2}$ millions in Other securities, while Government borrowing has increased Government securities by £3 $\frac{1}{2}$ millions. Deposits were thus £1 $\frac{1}{2}$ millions lower, Public being reduced by over £3 millions, and the balance going on to Other. The circulation of currency notes declined by £1,503,000 to £291,584,900 which includes £1,563,500 for notes called in, but not yet cancelled. The fiduciary issue is now £241,871,400, or £68,117,000 below the maximum.

The monthly statement of average weekly balances for August of the London clearing banks, printed in full on a later page, is remarkable for a further heavy decline in deposits. As will be seen from the table below, which gives the aggregate figures for the nine English banks, deposits declined by over £41 millions, making a drop of nearly £67 millions in two months:—

(Million £'s.)

	June, 1921.	Dec., 1921.	March, 1922.	June, 1922.	July, 1922.	Aug., 1922.
Capital and reserves	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	57.7	65.3	57.7	41.2	53.2	50.3
Deposits (incl. undiv. profits, &c.) ..	1,768.4	1,818.6	1,746.9	1,755.2	1,729.7	1,688.3
Total liabilities	1,942.0	1,999.8	1,919.9	1,926.3	1,898.7	1,854.6
Coin, notes, balance at bank, and cheques in course of collection ..	265.1	273.5	245.8	251.3	243.5	239.1
Money at call	98.0	105.7	102.5	115.0	110.2	105.0
Investments	355.9	343.3	327.7	312.2	312.2	312.2
Discounts	346.2	424.3	350.5	346.2	333.2	305.8
Loans and advances	815.4	762.3	746.2	723.3	721.2	714.3
Cover for accept., premises, &c. ..	8.14	90.7	82.2	80.5	78.5	76.0
Total assets	1,942.0	1,999.8	1,919.9	1,926.3	1,898.7	1,854.6

The reduction in deposits has been balanced principally by decreases of £27 $\frac{1}{2}$ millions in discounts, of £7 millions in loans and advances, and of £5 millions in money at call. Investments have increased slightly. The ratio of cash and money at call to deposit liabilities is the same as in July, namely, 20.4 per cent.

THE STOCK MARKETS.

The Stock Exchange has been unsettled and mildly depressed by developments in the Near East, and by the breakdown of negotiations between the Belgian delegates and the German Chancellor. There has been considerable selling of gilt-edged stocks, producing dullness which affected the House as a whole. In the foreign market Chinese bonds have been heavy, and Mexicans have reacted after last week's rise, but there was a little improvement in Russians, as a result of the Russo-Asiatic agreement. Apart from strength in Undergrounds and a small rise in some of the Southern passenger stocks, the Home Railway market has been featureless. Rubber shares have improved a little, and oils are mostly higher. Kaffirs have been affected by Paris selling.

THE COMMODITY MARKETS.

In the cotton trade merchants have been discouraged by the unsettled political situation, and quotations have been irregular. A demand for piece goods for India has been noticeable, but buyers and sellers cannot agree over prices. Wool values were well maintained at the London sales, in spite of the apparently adequate stocks already held by users. Our Bradford correspondent, however, hints out that the position "is one of some delicacy, and spinners are not disposed to add to their already heavy commitments," except at favourable prices. With the decline in the exchange wheat prices were inclined to firm. There has been a satisfactory demand for pig-

iron, and prices are firm, No. 3 Cleveland G.M.B. being quoted at from 92s 6d to 95s per ton, and a slight improvement has been noticeable in the demand for manufactured iron and steel, but prices are nominal. Best Admiralty coal was lower in the Cardiff market, quotations ruling from 27s 6d to 28s 6d per ton, and our Cardiff correspondent reports a perceptible improvement in business during the week. Prices of vegetable oils and oilseeds fell a little.

FOREIGN EXCHANGES.

During the past week the volume of exchange business has again been on the decline. Speculators seem to be holding off pending the further developments of the Reparations question. The German mark opened on Monday at about 6,550, and after various fluctuations consequent upon favourable or adverse reports in reference to the vexed question of Reparations, now stands at 6,400, having been seen as high as 6,975. Conditions in Germany are undoubtedly bad, the cost of living having risen enormously during the last few weeks, and the winter months are looked forward to with a great amount of apprehension. Germany has notified the British and French Governments that on September 18th £500,000 will be paid on account of the Clearing House instalment due on the 15th, the payment of the balance being made as soon as circumstances allow. The Paris rate has fluctuated considerably since our last issue, when it stood at 57.60, and now stands at 58.25, after having been at 58.35 on the 13th. The Belgian franc has risen to 61.70. The weakness of sterling in New York, which we have predicted for some time past, was followed yesterday by a considerable rally, after an early movement adverse to this country, and the rate now stands at 4.43. The Italian rate has been influenced by the weakness of the franc, and has risen as high as 104. Apart from this influence, the usual autumnal demand for imports is bound to have its effect. Amongst the neutral exchanges Amsterdam has risen from 11.45 $\frac{1}{2}$ to 11.45 $\frac{1}{2}$, but is now down at 11.43, and the Swiss rate has risen from 23.50 to 23.64. In Scandinavia, Stockholm has fluctuated considerably, and after rising to 16.77, is now at 16.74. Christiania has appreciated from 26.65 to 26.42, and Copenhagen has remained practically stationary. Hel-singfors has again appreciated; trade reports generally in regard to that country appear to be favourable, and it is possible that the rate may still further recover, in view of the loan of F. mks. 200,000,000, which has been arranged by the Finnish Government through Scandinavian banks. In Central Europe the Vienna rate has remained fairly steady on the rumoured loans, the latest being one from the United States. Warsaw again shows signs of improvement, and is 3,000 down, as compared with the quotation last Friday, viz., 32,000. It is, however, difficult to explain the cause of this appreciation. Prague, after being up to 134 during the week, is now seen at 131. We have already mentioned that the present appreciation is causing a great deal of uneasiness in Czecho-Slovakian business circles. As recently as August 10th the rate was 180, and the highest quotation during the first six months of this year was 275, in January last. Belgrade again shows a decided depreciation to 670. The Athens rate has fallen to 185, and this rate is purely nominal, very little business being transacted. The rupee rate is slightly dearer, at 15 3 $\frac{1}{2}$ d, while the yen is slightly cheaper. The Hong Kong-Shanghai rates have remained practically stationary. In South America, Buenos Aires is cheaper, at 43 $\frac{3}{4}$, and Monte Video, at 41 $\frac{1}{2}$, but Valparaiso is dearer, at 32.10.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 9, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	13,818	Supply Services	7,116
Taken from Exchequer Balances ..	451	Interest on Debt	3,019
		Sundries	146
		Debt Reduction	3,988
	14,269		14,269

The principal contributors to Revenue were Customs, £2,590,000; Excise, £1,214,000; Estate Duties, £1,310,000; Property and Income-tax, £5,745,000; and

September 16, 1922.]

Special Receipts under Miscellaneous, £1,346,900. For the corresponding period last year Customs yielded £2,811,000, Excise, £1,520,000, and Property and Income-tax, £4,351,000.

The week's operations increased the National Debt by the sum of £3,987,678, and caused the following changes:—

	Min. £	Advance Bank of England ..	Min. £
Treasury Bills	+ 1,741	Do Public Depts.	1,666
Savings Certificates	+ 300	Surrenders of War Loan ..	311
		Sundries	302
	+ 2,041		6,029

The floating debt was decreased by £3,661,000 to £875,077,500 during the week.

FINANCIAL YEAR, 1922-23 (April 1 to September 9, 1922).

THE CONTROL OF CURRENCY AND CREDIT.

At a meeting of the economic section of the British Association, whose sittings at Hull concluded this week, the report of the committee of economists and financiers on the effects of the war on credits, currency, finance, and foreign exchanges was delivered. This year the committee has devoted its attention to seven questions, and has arrived at a greater measure of agreement than was the case a year ago, when the report was largely a symposium of individual opinions on thirteen different controversial questions. Last week we referred to some of the opinions expressed by the committee on the subject of international debts and reparations. The second question is devoted to domestic finance, and relates to the problem of redemption of the National Debt. The committee think that immediate reduction is not very important, in view of the present heavy burden of taxation. But they think specific sinking funds useful because the Government "is forced to retrench somewhere" if it has to provide so many millions a year for these funds. Incidentally there are considerable sinking funds attached to more than one of the large Government loans, although their value as a deterrent to extravagance is minimised if provision for

them is met by borrowing and omitted from the ordinary budget. Little importance is attached to the argument that, as long as prices are above the normal level, there is an advantage in debt redemption at those higher prices, in so far as fewer goods have to be surrendered to effect a payment of a specified amount of debt expressed in money. "There is a certain amount of truth in this, in so far as the enhanced prices are wholly due to inflation of the currency." But it is claimed that the burden of the payment of the debt in goods is also related to the total quantity of goods comprising the national dividend. "As that quantity increases the burden of debt redemption (as also of the interest on debt) decreases, that is, if it be assumed that interest and debt redemption require in goods one-tenth of the national dividend, and if at a later date that dividend in goods is increased by one-third, then the proportion of such dividend required to meet the same debt charge will be reduced from one-tenth to about one-sixteenth." The arithmetic here seems slightly at fault, but the argument in brief is that as the quantity of goods produced increases the burden of the debt is lessened. Few will quarrel with the statement that reduction of debt is most intimately related with economy in public expenditure. "With economy reduction on a satisfactory scale is possible; without it such reduction will always remain subject to doubt." The method of the 3 $\frac{1}{2}$ per cent. conversion loan is wholeheartedly condemned as "fundamentally bad," but the report does not make any suggestion as to what alternative the Treasury could have adopted at the time it was floated.

Four of the remaining five questions are connected with currency and credit problems, and here there is less sign of unanimity and definite conclusion. It must be admitted, indeed, that complete unanimity on these complex questions would be too much to hope for. Government manipulation of the currency is characterised as mischievous, and likened to "moving the regulator of a watch with a pitchfork," but the committee rightly points out that we have to face the results of such manipulation. How disturbing its effects have been, and how much more difficult it has become to attempt to read the future were at pains recently to point out. The committee thinks that to cause the minimum of disturbance further contraction of the currency should be gradual until an effective gold standard is restored, but to attain stability "it is really more important to act on credit than on currency, and accordingly the banks can do more than is possible by the Government." "If the banks as a whole could be brought to see the advantage of joint action in the control of credit at the beginning of a period of active trade considerable permanent advantages would be likely to result." The banks certainly made no conspicuous attempt to use their influence at the beginning of the post-war boom, and even encouraged inflationary borrowing in more than one instance which has been brought to our notice, but whether inflation could have been stopped by united action on their part is another matter. The committee considers a further limitation in the fiduciary issue of currency notes desirable, and tentatively repeats the suggestion made in 1915 that the currency note issue should be taken over by the Bank of

and, with a consequent fusion of the two gold reserves.

Considerable differences of opinion manifested themselves on the question whether all restrictions on the movement of gold coin and bullion, and on the melting of coin, should be removed at once, and the answer given is: "Only if conditions seem to be so favourable that we can re-establish a gold standard without grave risk of having our gold reserves too heavily depleted. Such a policy might be very risky if gold prices were likely to fall heavily, or if our balance of trade seemed likely to become unfavourable." This is certainly a cautious answer, but we should like to have seen some of the arguments on the point set out. On the question of devaluation the report is also rather non-committal. "Evidently there are some currencies—the rouble, the Austrian crown, the Polish mark, and the German mark—which have lost all relation to their pre-war value, and must undergo a process of devaluation. There are other currencies, such as the Greek drachma and the Italian lira, which still have a substantial value, though it does not seem conceivable they should ever again be worth 25.22½ to the golden sovereign. That the rouble, the crown, and the Polish and German marks must be scaled down to an enormous extent if they are to have any relation to gold seems beyond question. For complete recovery of the drachma and the lira appears highly improbable; but the real problem is that offered by the French (and Belgian) franc. On the whole, we think that the policy of the Bank of France, aiming at the ultimate restoration of the franc to its old gold parity, is an unwise and probably impossible one. When countries whose currency is depreciated on so considerable a scale see their way to balancing their budgets regularly they should consider means of giving the currency unit a gold value lower than its nominal gold equivalent." This last remark does not, of course, apply to this country, whose currency stands at a relatively small discount in relation to the dollar. Whether or not we could or should return to a gold par depends, as we have said before, upon the movement of prices in the United States.

A RAILWAY VIEW OF THE RAILWAYS ACT.

THE latest of the *Manchester Guardian* Reconstruction Numbers contains an interesting article by Mr R. L. Wedgwood on the future of British railways, which naturally deals mainly with the new order established by the Act of 1921. As Mr. Wedgwood was the chief organiser of the railway case in Parliament last year, and has since become general manager of the N.E.R., his views are of particular significance.

It is noteworthy, in the first place, that Mr Wedgwood attaches more importance to the rating and wages sections of the Act than to the amalgamation plan which compels the railways to do what they have desired to do for years past. In his view the answer to the question, "What saving will be made by grouping?" is both unanswerable and unimportant. Unanswerable because the only savings that really count must be spread over years, and cannot by any ingenuity be isolated; unimportant, because "savings" to be permanent can only flow from a sound basic organisation, and are entirely dependent upon the establishment of the industry in a satisfactory relation to the trading public on the one hand, and to its employees on the other. These relations are fundamental, and if they are neglected, "savings" realised in one year will be wasted in useless friction in the next, or swallowed up in the loss due to the progressive discrediting of the industry.

He does, however, recognise that there is uneasiness in the public mind as to the effect of the greater concentration of power in a few hands, and that the results have still to be tested by experience. "In these enlarged concerns there is an evident tendency for the central management to fall out of touch with local sentiments and requirements and to disregard local differences in the application of general rules of action. Moreover, big concerns, by reason of their strength, have it in their power to override the claims of smaller interests, without regard to the justice of the claims put forward.

"Let it be admitted at once that such developments are possible. It remains true, none the less, that they are improbable, if only because they are altogether against the interests of the group companies themselves. The difficulty of maintaining touch with local requirements and conditions is a real one, but for that very reason it cannot be overlooked, and it will become one of the most important tasks of the new managements to provide against it."

The difficulty Mr Wedgwood foresees is not merely a theoretical anticipation, but has already proved a stumbling-block, for in the negotiations with the traders the difficulty of maintaining touch with local requirements and conditions is a real one, but for that very reason it cannot be overlooked, and it will become one of the most important tasks of the new managements to provide against it."

With this sentiment we are disposed to agree, subject to one very vital proviso, namely, that public pressure will only be intelligently applied if the railway companies put the public in possession of the facts. We have still not been told the working costs and net revenue of the policy of publishing promptly monthly figures of net as well as of gross revenue, public criticism will be ill-informed and likely to do less than justice to the effect of the very real economic difficulties—the increased wages bill, road competition, &c.—with which the companies have to cope.

Mr Wedgwood's defence of the standard revenue clauses of the Act is not very convincing. Indeed, he starts by hinting at two very damaging criticisms. In the first place, he admits that "the provisions with regard to the fixing of rates are no doubt open to objection; the burden of railway charges is felt most keenly in periods of bad trade, and is least galling when times are prosperous; yet the Act, rigidly interpreted, would increase the burden in the first instance and lighten it in the second." It is suggested that this is, however, a matter of detail, and that the common sense of railways and bad and lowered when it is good. Probably. But it is for automatically securing a fixed revenue to say, in effect, that they will work reasonably well by being ignored. Secondly, Mr Wedgwood observes that "the establishment of the Railway Rates Tribunal, if, as is to be hoped, the Tribunal succeeds in maintaining its non-agree, but we are not quite satisfied that the condition will be fulfilled. If the Tribunal will put the Act out of its mind and endeavour to fix rates on a basis that will foster traffic and give the railways as much revenue as economic conditions permit, there is much to be said for Tribunal, with a legal chairman and with most elaborate becoming a second Railway and Canal Commission, and limiting itself to the task of trying to interpret an unwieldy Act of Parliament. On this point we can only take the plunge and bring the rates question before the Tribunal, and the Ministry of Transport has not seen fit unfortunately, increased by the sudden and tragic death of Sir Francis Gore-Browne, who has been equipping Rates Advisory Committee for his task as Chairman of the Tribunal. The success or failure of the Act will largely turn on the appointment of his successor.

But though we have grave doubts about the functioning of the Tribunal under the provisions of the Act, we entirely support Mr Wedgwood when he argues that "two things are wanting to complete the new structure—first, a principle in accordance with which the broad general movements of wages may be regulated, and

secondly, a procedure for linking the decisions of the Rates Tribunal with the findings of the National Wages Board.

"It is evident that the two bodies will deal with two sides of the same problem; other things being equal, increased wages can only be met by increased rates, and a reduction of rates will entail a corresponding reduction of wages. If this were all, the problem would be relatively simple; it would be a mere question of addition or subtraction. But it is common knowledge that you may increase charges without increasing revenue; the manufacturer and the traveller have the last word, after all, and no tribunal can compel them to use the railway if the charges are more than they are willing to pay. The old principle of 'what the traffic will bear' provides a very efficient maximum limit, which cannot be disregarded either by the railways or the tribunal. And at the other end of the scale contrary forces come into play. Wages may be reduced to a point where the reductions no longer give reduced costs. To fix charges and wages in harmony with these two opposing forces will be the joint task of the two tribunals; and it is not likely to be discharged to the best advantage of the public, the railways, and their employees unless some procedure is evolved which will enable the two tribunals to take full counsel with one another." We are under the impression that the traders proposed an amendment in Committee of the House to bring the work of these bodies more closely into harmony, but that the Minister of Transport was not anxious to risk his bargain with the N.U.R. by tinkering with the Wages Boards. But Mr Wedgwood is perfectly right in urging that the two problems cannot be settled independently, though we are not quite convinced that this flaw in the Act can be put right by agreement and without an amending Act.

The railways are fortunate in their advocate. Mr Wedgwood does not ignore some of the fundamental issues, such as the possibility that the field of transportation by rail may in the future be greatly diminished. But, in claiming that the new régime is a beneficent one, Mr Wedgwood is looking at the future rather than the present, for what it has, in fact, done is that it has given the railways practically a free hand within a maximum which is at the highest boom level, for the administrative machine which is supposed to adjust this maximum to changing conditions has not yet begun to function on the problem of either rates or fares.

OVERSEAS TRADE IN AUGUST.

THE August returns of overseas trade are as satisfactory as could be expected, in view of the fact that it was a holiday month and the number of working days were reduced by the Bank Holiday period. As compared with July imports were nearly one million higher in value, while British exports and re-exports were both down by about half-a-million each. The surplus of imports in August was thus £2 millions higher than in July at £15 millions. The comparison with August of last year makes a better showing, but it has to be borne in mind that twelve months ago the trade of the country was still suffering from the effects of the coal stoppage. Imports last month were valued at over £82½ millions, as compared with £88½ millions a year ago, a reduction of nearly £6 millions, while British exports were over £8½ millions higher at £60 millions. Re-exports declined by £2½ millions, total exports being thus £6 millions higher. This means a reduction of £12 millions in the visible adverse trade balance. A comparison of the August figures and of the totals for the first eight months of the year with those of the corresponding periods of 1921 reads as follows:—

	MONTH OF AUGUST.		Increase or Decrease in 1922.	
	1921.	1922.		
	£	£	£	%
Imports	88,554,663	82,661,405	- 5,893,258	- 6.6
British exports	51,346,307	60,032,237	+ 8,685,930	+ 16.8
Re-exports	9,997,779	7,503,925	- 2,493,854	- 2.5
Total exports	61,344,086	67,536,162	+ 6,192,076	+ 10.1
Excess of imports over total exports	27,210,577	15,125,243	- 12,085,334	- 44.4

EIGHT MONTHS ENDED AUGUST 31.

			Increase or Decrease in 1922.	
	1921.	1922.		
	£	£	£	%
Imports	740,803,626	651,656,527	- 89,147,099	- 12.0
British exports	463,413,733	472,212,668	+ 8,798,935	+ 1.9
Re-exports	69,045,024	71,492,083	+ 2,447,059	+ 3.5
Total exports	532,458,757	543,704,751	+ 11,245,994	+ 2.1
Excess of imports over total exports	208,344,869	107,951,776	- 100,393,093	- 48.3

The decline in imports in August as compared with August, 1921, is due to a reduction of £12½ millions in the value of food imports, the bulk of which occurs under the head of cereals and meat. A reference to the detailed figures reveals the fact that this drop is mostly accounted for by the decline in prices, the quantities imported being but very slightly lower. Imports of raw materials increased by £4½ millions, principally as a result of higher takings of timber, cotton, and wool, while imports of manufactured goods rose by just over £2 millions, increases being fairly generally spread throughout the list. On the export side the bulk of the increase, namely, £7½ millions, is in manufactured goods. Exports of iron and steel and manufactures thereof rose from £2½ millions (an abnormally low figure, reflecting the coal stoppage) to over £5 millions; exports of cotton goods rose by over £4½ millions, and of woollen goods by nearly £2 millions. The value of vehicles exported, which includes locomotives and ships, declined by £3½ millions, of which ships account for £3 millions, the tonnage having dropped from 78,900 to 8,550 tons. Coal exports increased by £1½ millions, namely, from £5½ to £6½ millions, the tonnage increasing by nearly 100 per cent.

So far as the figures for the eight months are concerned, there is a decrease of nearly 50 per cent. in the total visible adverse balance, but this is, unfortunately, due not to a great increase in exports, but to a diminution in imports. The latter, however, has been made in the right direction, for while food imports have declined by £8½ millions, largely owing to declining prices, and imports of manufactured goods are £20½ millions lower on the period, imports of raw materials are £15½ millions higher, in spite of a reduction of £12 millions in coal imports. The increase shown in exports is largely due to an expansion of £20½ millions in coal, of £3½ millions in non-ferrous metalliferous ores and scrap, of £2 millions in wool, and of £8½ millions in cotton manufactures; these increases are counterbalanced by a decrease of £18½ millions in exports of machinery. The bullion and specie returns for August show imports of £5 millions, against exports of £3½ millions, gold to the value of £2½ millions having gone to the United States, as against £8½ millions in July and £6½ millions in August, 1921. The shipping figures for the eight months show an increase of 3½ million tons in ships entered with cargoes and of 17½ million tons in ships cleared, as compared with the corresponding period of 1921. Detailed figures of merchandise imports and exports are set out in a later page of this issue.

NOBEL INDUSTRIES.

INCORPORATED in November, 1918, as Explosives Trades, Limited, Nobel Industries, Limited, is one of our largest industrial undertakings. In it is merged the interests of shareholders in a number of companies engaged in manufacturing explosives, ammunition, chemicals, gas mantles, electric bulbs, varnishes, motor accessories, and various metal goods. According to a prospectus issued in October, 1920, the financial scheme of combination adopted "was an exchange of shares, a uniform method of capitalisation being applied to all the companies concerned in the merger; the values of pre-war plant and buildings were fully and systematically written down; goodwill was computed entirely upon pre-war results; and extensions for all purposes made during the war period were taken at one-fifth of their cost, and satisfied by the issue of deferred shares." The company now holds almost the entire capital of Nobel's Explosives Company, Limited, Kynoch, Limited, Bick-

ford Smith and Co., Limited, Birmingham Metal and Munitions Co., Limited, British South African Explosives Company, Limited, Curtis's and Harvey, Limited, "E.C." Powder Company, Limited, Eley Bros., Limited, King's Norton Metal Company, Limited, and many other companies which space will not permit us to mention. With a view to finding a wider basis for its industrial activities substantial interests were, however, acquired in a variety of undertakings, among which were the British Dyestuffs Corporation, the British Cellulose Company, and the Dunlop Rubber Company.

In a report issued by the directors in March, 1919, it was stated that if the whole of the shareholders of the various constituent companies surrendered their shares in exchange for capital in the new company the issued capital of the company would be £15,247,458, and the estimate of preliminary expenses was put at £145,200. In the balance-sheet published in June, 1920, preliminary expenses incurred to date amounted to £127,775, a figure, considerably under the estimate, which those responsible may well be proud of. Moreover, this item was written off out of profits in that year. The issued share capital was given at this time as £14,844,926, and the main item under assets—Investments—is recorded at £15,708,437, being further described as the "cost of shares in constituent companies and other allied interests." The capital exchanged has now reached, we are informed, over 98 per cent. of the maximum possible total. The issue of £3,000,000 8 per cent. notes in October, 1920, enabled those with an inquiring turn for details to glean a few further particulars about the undertaking, an informative statement of affairs being published. This prospectus was interesting, inasmuch as specific security was offered note-holders consisting of a big block of shares in one of the subsidiary concerns, namely, Nobel's Explosives Company, Limited. The shares which were to be transferred to a trustee for note-holders were valued at the date of their acquisition at £6,623,000, and, moreover, the company undertook to maintain the value of the security pledged. Instead, however, of the shares depreciating in value, they have appreciated. This prospectus also informed us that 60 per cent. of the capital of the company was at that time (October, 1920) employed in the manufacture of commodities other than explosives, and it was this fact that encouraged the directors to drop the old title of Explosives Trades, Limited, which they felt had become misleading.

The authorised share capital of the undertaking is £18,000,000, of which £15,818,654 has been issued. The issued capital consists of 7,958,872 ordinary, 6,414,305 6 per cent. cumulative preference, and 1,444,941 deferred shares, all of £1 each. The ordinary shares are entitled to a non-cumulative dividend of 10 per cent., and then the deferred to a non-cumulative dividend of 5 per cent., remaining available profits being divisible *pari passu* between ordinary and deferred shareholders. The accounts of the company for 1921 have been published during the week, and it certainly must come as a surprise to many to find that the company has been able not only to maintain its position, but to make a distribution once again to ordinary shareholders. For 1919 ordinary shareholders received 10 per cent. and deferred shareholders five. The following table shows how the company has fared during the past two years:—

	1920.	1921.
	£	£
Amount brought forward	230,389	757,498
Profits	849,996	809,242
Total available	1,080,385	1,566,740
Interest on 8 per cent. notes, less tax	22,923	167,693
Writing off cost of note issue, &c.	38,266	37,285
Special investment reserve	..	350,000
Preference dividend	261,698	269,243
Ordinary dividend	..	279,170
Rate	..	(5%)
Brought forward	757,498	463,349
Carried forward	1,080,385	1,566,740

It is an important fact to remember that the above profits are after income-tax has been deducted. The results for 1919 are not included in our table, as

various dividends were included in that year's accounts received from constituent companies out of trading profits for 1918. In view of the figures given above it is only reasonable to find the directors consider that results for 1921 "as a whole give considerable ground for satisfaction." It should be noted that the interest on the 8 per cent. notes is shown less tax, and therefore the full weight of the burden of this note issue may escape attention. The company has to find £240,000 each year for interest alone on these notes, and in addition, beginning in 1923, it has undertaken to buy in notes to the extent of £200,000 per year. As the company has the right to redeem these notes at 101 at any time after November, 1922, on giving three months' notice, it will not be surprising to find that the directors will consider ways and means for lightening their present burden.

In an analysis of the balance-sheet which appears on another page in this issue, no striking changes are revealed. Total assets have fallen from £23,500,298 to £23,105,979 in the year. The secured bank loan of £307,232 has disappeared, although it is to be noticed that sundry creditors have increased from £132,006 to £241,736. Perhaps the most serious point about the balance-sheet is a reserve fund, which is noteworthy by its absence. It may be, however, that the constituent companies have their own reserves. Possibly the directors will enlighten shareholders upon this point. Investments now amount to £21,043,040, and are grouped under two heads: (1) Cost of shares in constituent companies, and (2) other industrial investments at cost. On the vexed question of valuing investments, it is better to quote the words of the directors. They state that: "While the market value of quoted industrial securities held by the company or its constituents as at December 31, 1921, stood materially below their cost to Nobel Industries, Limited, it has since been steadily recovering, and with improved conditions we anticipate a continuance of this movement. In order to be fully protected, however, against such temporary fluctuations in the market values of the company's permanent industrial interest, the directors have decided to recommend the building up of a special investment reserve account and the allocation thereto, out of the present amount available, of £350,000." At least, it must be admitted that the directors have been perfectly candid, although to what extent the actual assets of the controlled undertakings are represented by the present value placed upon the shares is a matter upon which more light may be shed at the third annual general meeting on Friday next.

THE TOBACCO TRADE.

TOBACCO was brought to this country in Elizabethan days, when the seeds of the smoking habit were sown. For many years smoking gained ground against opposition, until now tobacco cultivation and manufacture form one of the principal industries of the world. There are four broad historical epochs: one when tobacco was enjoyed by the merchant adventurers and Empire prospectors, who knew and appreciated its virtues, while at home it was looked upon as a medicine or a vice; another when King James thought to kill the noxious weed with his counterblast; a further period takes us up to the world war; and then we have the more interesting experiences of the present time. Men's taste for tobacco and the prevalence of the habit were enhanced by the war, and a very appreciable increase in output has come about through the conversion of women to the cult of the cigarette. The total effect of the war upon tobacco growing and manufacturing was expansive to a notable degree. Such civilians alike, during hostilities and in the uncertainty which followed, that it may be said that if Sir Walter Raleigh saw the angel of death less terrible through a cloud of tobacco smoke, so do modern men fly to the same panacea in their troubles. The war, so to speak, rediscovered tobacco; it increased the volume of business; it altered to a considerable extent the character of the output from the factories.

To give the matter a moment's statistical attention from the point of view of the volume of trade, between

1912 and 1913 (year ended March 31st) the unmanufactured tobacco cleared for consumption in the United Kingdom showed a slight drop from 93,269,277 lbs in 1912 to 92,913,652 lbs in 1913, although there was no duty change to account for this. The consumption went down from 2.05 to 2.02 lbs per head of the population. However, in the year ended March 31, 1914, there was some recovery. In that year the weight of tobacco cleared for consumption was 98,412,412 lbs, which mounted to 104,291,478 lbs in 1915 and 110,193,407 lbs in 1916. After a slight set-back in 1917 and 1918 it rose to 114,254,900 lbs in 1919 and 148,786,891 lbs in 1920, this being an absolute record, and the high-water mark which we look back upon now that the tide of consumption is receding. There was a drop to 136,746,683 lbs in 1921, and for the first six months of the present year the total amount of tobacco of all sorts retained for home consumption was 65,340,248 lbs. The marvel is, in view of the general trade depression which the country has been experiencing, that a more decisive falling-off has not to be recorded. Things are not what they were, and tobacco companies are now having to fight and to exercise constant care to make satisfactory balance-sheets. That these desirable documents are being produced speaks well for the business management of the companies concerned.

It is difficult to refer to the tobacco trade of this country as a whole; to mention it without making due reference to the preponderance of the Imperial Tobacco Company would be absurd. The Imperial Tobacco Company is credited with some 80 per cent. of the home trade, the other 20 per cent. being divided among independent firms. The great strength of the "Imperial" does not consist solely in its size and its assets totalling £63,380,108. The net trading profit of £6,927,641 for the last financial year (to October 31, 1921) compares with £6,659,791 for the previous year, an increase of £267,850. Investors will have agreed with the chairman when he stated at the annual meeting in February last that the profit could be regarded as a subject for congratulation, having regard to the difficult business conditions which obtained during the year throughout the country. The year's profits had been relieved of the burden of excess profits duty, the company's last accounting period being the year to October, 1920. It is only fair, however, to point out that the profits of the home trade suffered from the smaller spending power of the public. The company has the advantage of possessing many brands covering the whole gamut of choice which the smoking public enjoys; it can boast sound business management, together with a fine accumulation of technical experience. That sort of experience is not lacking, too, which, apart from factory processes, is gained by closely studying the leaf market, watching opportunities, and generally doing the "paying" thing at the right moment. The Imperial Tobacco Company is aided in its grip upon business by its bonus agreements with tobaccoists. A large number of wholesale and retail tobaccoists are signatories of a bonus agreement by which the tobaccoists make window displays of "Imperial" brands, and in their turn receive a bonus, which is paid twice a year in the form of a percentage on their turnover in bonus-bearing goods. For the origin of these bonus agreements we have to go back to the period preceding the formation of the Imperial Tobacco Company, when the Americans attempted to capture the market. The "tobacco war," as the struggle was called, was fought partly by rival bonus agreements. It will be remembered that the Americans, who had bought up the well-known house of Ogdens (now a branch of the Imperial Tobacco Company), directed operations from Liverpool, and obtained the signatures of tobaccoists to a generous bonus agreement. The agreements, which existed at the time of the liquidation of the American business, were considered to have ended with that liquidation. However, the tobaccoists who had signed this American agreement did not think so. The litigation, which reached the House of Lords, ended in a triumph for Sir Rufus Isaacs (now our Indian Viceroy) and the then Mr F. E. Smith (the present Lord Chancellor). They won the day for the tobaccoists. But many dealers preferred to sign the rival bonus agreement of the Imperial Tobacco Company, that company having been formed with the patriotic

object of repelling the American invasion. The bonus agreement has become a well-recognised part of the tobacco trade to-day, and it helps to build up prosperity for the great company, who would probably not have thought of instituting such agreements had they not been compelled to fight the Americans with a weapon somewhat similar to their own.

Outside the two giants, the Imperial Tobacco Company and the British-American Tobacco Company (the latter do export trade), substantial businesses run on independent lines keep the edge of competition keen. Unduly high prices, laxity of management, or partially thought-out experimentation are impossibilities. The firm who indulged in them would be snuffed out. The trade, during the war and immediately after it, experienced a fine time financially, because of increased turnover. The slump, however, which followed the post-Armistice prosperity, left some of the firms with heavy stocks of leaf bought, in many instances, at high prices. The carrying of these large stocks was a source of weakness. Now, however, stocks are being dealt with, and most of the companies are getting on to a more normal basis. Good dividends were and are being paid, and a conservative policy has been possible in most cases. What might be looked upon as a luxury trade, and as one which would suffer most in bad times, whether in war or peace, has proved that it can hold its head above the waves, whilst some of the industries producing what might be considered more essential commodities have had many of their units submerged.

An interesting bone of contention between the public and the tobacco trade is that of prices. The matter became the subject of acute controversy. The chairman of the Imperial Tobacco Company, at the annual meeting in February last, said that "failing a substantial reduction in the tobacco duty, which now stands at 8s 2d per lb, compared with 3s 8d at the beginning of the war, I see no possibility whatever of a reduction in prices." He might have added that had such a reduction been feasible it would already have taken place, a necessary corollary to the competition which exists. It has been stated by responsible people in the trade that if the Control Board existed the data upon which retail prices used to be fixed by them, including, as they did, the cost of the raw material, would have justified higher prices than those now ruling.

The character of the output has been modified in recent years. Before 1914 a very important trade in cigarettes made of Turkish tobacco was done both at home and for export. The demand for H.M. Forces and for the well-paid civilians depleted stocks; the raw Turkish tobacco went overland to Dresden for our ex-enemies. As a consequence, the Turkish cigarette in this country temporarily deteriorated. The larger stocks of American tobaccos enabled Virginian cigarettes to be kept up to something like standard quality. That state of things partly accounts for the fact that Virginian cigarettes took the lead. A more powerful reason is habit. Men got accustomed to smoking Virginian, and "carried on" even after the time when excellent Macedonian tobacco was available, as it is now. The Macedonian cigarette is in the hands of a number of high-class firms, whose task it is to woo smokers back to their old love. The phenomena outlined had a marked effect upon business. Firms who had made the Turkish variety only began to turn out cigarettes of American tobacco, and many installed machinery who had previously relied on hand work.

A recent chapter of tobacco trade history has to do with cigars from Cuba. For the first six months of this year 207,741 lbs of cigars were imported into this country from Cuba. In the corresponding period of last year the weight of Havana cigars brought in was only 18,939 lbs. These moderate figures compare with 671,491 lbs for the first six months of 1920. Students of taxation will be interested in this brief statement, because the variation in the figures is due in large measure to the 50 per cent. ad valorem tax imposed by Mr Austen Chamberlain on April 20, 1920. Added to this adverse influence was the trade slump and the consequent disinclination, or inability, to purchase cigars. The 50 per cent. was looked upon in trade circles as the death knell of the cigar trade, so far as imported

cars were concerned. Every endeavour is being put forth to recover the ground lost, and recent reports indicate a little more life in this branch of the trade.

It is anticipated that in the next Budget there may be a reduction in the tobacco duty. The arguments recently used by the brewers in favour of a reduced beer tax apply also in several respects to the tobacco trade. The revenue from tobacco was £60,857,917 in 1920, and only £55,520,658 in 1921. It is now accruing at the lower level to which it descended in that year. But nobody imagines for one moment that the Chancellor of the Exchequer will abate the duty unless he is convinced that cheaper tobacco would so increase the consumption of the article as to make the step financially wise. As the duty has, with one slight exception, consistently gone up for many years, there would have to be a material falling off in revenue before Sir Robert Horne or any other Chancellor of the Exchequer was converted to cheaper tobacco, brought about by a substantial duty reduction.

ELECTRICITY SHARES.

AMONG the various sections in the industrial market of the Stock Exchange, one of those which has kept most consistently firm during the past six months is that for electricity supply shares. Month by month it has become increasingly difficult to obtain stock in this department. Holders are disinclined to part with their investments, and, as a rule, it is only when deceased accounts come to market that anything like a reasonable amount of supply is available. There are, of course, smaller quantities which can be picked up from time to time as proprietors require the money, or are tempted by the high prices ruling. The principal quotations for the ordinary shares have now reached a level at which the yield on the money, as compared with that offered by a good many other industrials, is by no means liberal. The fact that prices keep up as they are doing is evidence of the faith which holders of the shares feel in the future of their industry, and it may be useful to set out the list of ordinary shares in the London electricity supply companies, with a table showing yields at to-day's prices. We take the middle quotations in each case, but must add that the prospective purchaser may find it difficult to get stock at these figures:—

	Nominal		Price.	Yield.
	Value.	Dividend.		
Ordinary Share, £	£	%	£	s d
Brompton and Kensington....	5	12	8	7 10 0
Charing Cross	5	9	7½	6 2 0
Chelsea	5	6	6½	4 16 0
City of London	1	14	42½	6 13 4
County of London	1	8	28/6	5 12 3
Kensington & Knightsbridge..	5	10	7½	6 13 4
Metropolitan	5	7	6½	5 14 3
St James's and Pall Mall	5	12	8½	6 15 2
South London	4	7	4	7 0 0
Westminster	5	10	7½	6 9 0

A number of companies increased their interim dividends last month, though this, according to some of the announcements, is not to be taken as affirming the certainty of an increase in the dividend for the full year. It is done with the intention of equalising the half-yearly payments in accordance with the wishes of the proprietors. The County of London company recently issued new ordinary shares at 22s 6d, which now stand at 26s 9d, and new preference at 20s, the present market value of which is 2s 3d premium, both issues being heavily oversubscribed. It is thought that in the near future there may be shares offered by some of the other companies.

In reviewing the outlook for the electric lighting industry of London, it is safe to assume that the present year will prove a good one for the companies, and for several reasons. In the first place, the cost of coal is substantially less. Labour also is cheaper, and material of all kinds no longer costs the famine prices that prevailed two years ago. Meanwhile, however, the companies are getting a good price for their supply, so that the probabilities point to some increases in the full year's dividends, in spite of the warnings which have been circulated in regard to a possibility of ultra-optimistic views being entertained on the subject. The addition of 1 per cent. to the above dividends would make, of course, a good deal of difference to the yields, and this has to be taken into consideration by those who are interested in this subject. Since

the appointment of the Electricity Commissioners, a good deal of speculation has been rife as to what will be the ultimate fate of the undertaking companies. According to the Act of Parliament under which they were formed in 1888, most of them can be taken over by an Authority in 1931, and the terms upon which the properties can be acquired have never been settled in such a definite manner as would enable the precise value of the undertakings to be determined from time to time. Developments of the past few years have, however, tended to increase the strong probability that the companies are not likely to be turned out of their present position when their rights expire in 1931. To take them over would mean the raising of an enormous sum of money, and although, in the past, some of the companies were very chary about spending fresh capital in view of the 1931 provision, of recent years a more courageous policy has been pursued by those who foresaw the striking developments of which electrical power is capable in London. It may be supposed, therefore, that there is a prospect of the companies' tenure being extended well beyond the time at which it is supposed to terminate. In spite of the strides made by the industry in London during the past half decade, it may be said that the field for further extension is wide enough to absorb all the knowledge, sagacity, and capital that can be applied to it. The various schemes for electrification of railway lines in and around London are yet in their infancy, but the London supply companies have given incontestable proof that they are capable of dealing with whatever claims may be made upon their resources in order that the required current can be supplied. Holders of electricity supply shares are justified in the attitude which they adopt of refusing to part with shares in an industry that, paying well at the present time, promises larger rewards in the future, although the cautious will recognise that conditions may not always be as favourable as those which the present year provides.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

HONDURAS.—The decision of the Government to convert the Bank of Honduras into the Bank of the Republic and the fiscal agent of the nation, conferring upon it for a period of 25 years the right to supervise the collection of revenue and disbursements of expenditures, appears to have elicited far from unanimous approval. The opinion is expressed that, while official salaries were in arrears, the finances of the State were hardly of a sufficiently adverse character to warrant such exceptional privileges being conferred upon a monetary institution of whose capital the Government proposes to hold but 20 per cent. Upon its new capital of 2,000,000 silver pesos the bank has the right to receive from the State annually, for the service of interest and amortisation, a fixed sum equivalent to 10 per cent. until the debt is completely liquidated, although, in the preliminary agreement between the bank and the Government, 8 per cent. interest was decided upon. It would appear, however, that the Government had little option to accept the terms demanded, since it was in debt to the Bank of Honduras for nearly 450,000 pesos for advances made in the past. Under the new arrangement the bank agrees to open with the Government a current account of 552,189 pesos, with interest at 6 per cent., revenues collected will have to be deposited in the bank, its branches, or to its credit abroad, while all payments by the Government to the institution will be absolutely in silver currency in circulation in the Republic or in American gold, excluding all paper money, either convertible or inconvertible, even though it be legal circulation. The present minimum proportion of 50 per cent., with 5 per cent. additional in American gold, will be maintained in payment of import and export duties, while as national currency received and exchanged in the principal office at the rate of 50 cents American gold for each peso in bank-notes, exchange with the branches and agencies being regulated accordingly.

Official trade figures of recent issue are seldom to be expected from Central American Governments, the latest

available from Honduras being those of 1919-1920. From these, however, it seems that the adverse trade balance rose to £1,219,801 sterling, imports for that period having been £2,651,703 and exports £1,431,902, the total figures, £4,083,605, showing a considerable advance over those of 1917-1918, which, representing both exports and imports, did not much exceed £2,580,000. The adverse balance then was no more than £216,657, while that of the previous period (1916-1917) had been £82,093. Trade between Honduras and Great Britain has substantially improved since 1915, the imports from this country having risen nearly 100 per cent. Unfortunately, the exports to Great Britain are still negligible, although it would not be difficult to suggest in what direction they might be improved, since Honduras is possessed of valuable natural resources, not the least of which are its mahogany forests, which might be exploited to advantage.

URUGUAY.—Whichever of the two opposing candidates for the Presidency of the Banda Oriental (Señor Lussich and Señor Serrato) is elected will have to give prompt and careful consideration to the national finances, which must still be regarded as unfavourable. The 1921-1922 Budget shows the considerable deficit of 8,502,049 gold pesos, to cover which it is proposed to raise a loan of 10,000,000 gold pesos, or the equivalent thereof in pounds sterling or dollars. Any balance remaining would be used for the same purpose next year, when a deficit is also anticipated. In the meantime, the Banda Oriental is endeavouring to consolidate and extend economic relations with its immediate neighbours, especially Brazil. The National Administrative Council has recently submitted to Congress a Bill authorising the Bank of Brazil to establish a branch at Montevideo, and, at the same time, to so alter the charter of the Bank of the Republic of Uruguay as to enable that institution to establish a branch in Brazil. This measure of reciprocity, it is thought, will tend to stabilise the exchange rate between the two countries, which has lately proved a great detriment to their mutual trade.

COSTA RICA.—The default and disappearance of the Banco Comercial, already reported in these columns, have been followed by a new law, becoming immediately operative, providing for the unification of the paper currency of Costa Rica and the withdrawal from circulation of the bills of the defunct bank. The important financial position once held by the Banco Comercial has now been taken by the Banco Internacional, which at one time was under the direction of General Juan Bautista Quiros, lately appointed Chief of the Office of Public Control, established to regulate financial matters connected with the Government. The Banco Internacional has been authorised to increase its issue of bank notes by 4,282,250 colones (1 colón = 1s 10.9d). This new issue, it is stated, will be employed for the sole purpose of retiring the bills of the Banco Comercial and the silver certificates of 0.50, 1 and 2 colones denominations, bank bills being exchanged for those of the new issue. In November next these bank bills will cease to be regarded as legal tender, but the Banco Internacional will still be obliged to exchange them. Fractional currency of the denominations of 0.25 and 0.50 colón will cease to be accepted by the Government in payment of amounts of over 25 colones, nor one and two colón bills for sums over 100 colones, private individuals being likewise entitled to refuse acceptance of such payments. The position of Costa Rican exchange is still weak, the recent rate being round about 4.35 colones to the dollar against the normal rate of 2.15. Local speculation is thought to have accounted for this wide fluctuation; the drop in the value of the colón has prevented merchants from heavy buying where payments must be made in gold. The general conditions of the country may be described as prosperous, the banana industry, in particular, having proved this year exceptionally remunerative.

PERU.—The high hopes, entertained both locally and abroad, of the Reserve Bank of Peru, established about two months ago, seem to have been justified, more particularly in connection with the clearing-house system which it has inaugurated among the native banks participating as shareholders in the institution. A strikingly improved tone in the business situation has been noted, commercial transactions and local investments being

reported upon a wider and more active basis. These encouraging conditions are likely to lead to a successful termination of the Government's negotiations for a foreign loan, amounting to \$50,000,000 (£10,000,000), in addition to an irrigation loan of \$10,000,000 (£2,000,000) said to have been contracted through a New York firm, for which Congress had given the necessary authority. The Government has meanwhile received about £1,000,000 from various successful operations recently entered into, thus enabling it to meet some of its most pressing obligations, especially that contracted with the Peruvian Corporation, which has recently received the first payment of £80,000 on account of annuity arrears; apart from interest, these have now been satisfied up to and including January of the current year.

Notes of the Week.

Conditions in Ireland. — Our Dublin correspondent writing on Thursday, says:—Mr William Cosgrave has been appointed President of the new Dail Eireann and head of the new Government. His statement of policy, brief and businesslike, bore out his previous reputation as a skilful debater and an experienced administrator. The absence of the extreme Republican element was signalled by a marked contraction of the output of controversial, hysterical, irrelevant rhetoric, for which Ireland was duly grateful. The Government, rightly interpreting the desire of the electorate, insists upon getting on with the business of the community, and shows a praiseworthy disinclination to submit to bullying or blackmail. But its difficulties are enormous. The guerilla attacks of the rebel irregulars continue all over Ireland, and the destruction of property goes merrily on—in Dublin itself bombings and shootings are of daily occurrence. The political stock of the Republic is lower than ever, but its activist tactics furnish an opportunity and a pretext for everyone who has a private quarrel to pursue, or who covets his neighbour's goods, or who feels himself in any other way at odds with the Ten Commandments. In the Dail itself, Labour ostentatiously washed its hands of all responsibility for the measures taken since the end of June for the preservation of the embryo Free State. This was rather to be expected, but, singularly enough, some Independent members, elected by bumper majorities to support the Treaty, associated themselves with the Labour attack on Mr Cosgrave and his colleagues. However, Mr Cosgrave got his vote of approval by a majority of about three to one, and his Government emerged from its first debate with a marked increase of prestige at the expense of the malcontents. Scarcely had the Dail met when the whole postal, telegraph, and telephone services of the Irish Free State were paralysed by a strike. The Government had decided to reduce wages according as the cost of living reverted to the normal, and the usual negotiations had taken place, and an elaborately compiled "cost of living" Report was produced by the combined efforts of the Ministries of Agriculture, Finance, Economic Affairs, and Labour. Round this Report controversy wages. The Government takes its stand on the principle that civil servants must not strike, and that it will not permit such a strike. It also points out that the postal officials in Great Britain and in N.-E. Ulster have accepted greater reductions; that the Free State postal officials are paid at a considerably higher rate, and have better conditions as to holidays and sick leave, than the corresponding grades of railway employees; and that the Post Office cannot afford to pay excessive wages, as it is at present being run at a rate representing a loss of £1,500,000 per annum. The Dublin Chamber of Commerce has pledged the support of the sorely harassed business community to the Government, and the general public quite appreciates the irony, in a city of dreadful slums and heartrending poverty, of processions of prosperous-looking, well-fed, and well-clothed men and women bearing placards denouncing their "starvation wages." A strike has already been started in the building trade upon somewhat similar grounds. Wages are 4½d per hour higher than in London, and the master builders want reductions. It is admitted that the cost of living has fallen since the higher rate of wages

ted, but the Transport Workers' Union, the principal organisation of militant Labour, opposes any reduction. The builders' labourers went out on Monday; the tradesmen necessarily will follow. It is easy to realise how grave are the perils which may beset the Government, embarrassed in Dublin itself by masses of strikers, with armed revolutionaries behind them, using them at once as a screen, and as the potential fuel for a general conflagration. The Opposition in the Dail demanded, somewhat crudely, immediate schemes involving public borrowing for reconstruction enterprises which might provide work for the unemployed, of whom there are, according to Government figures, 250,000. The Government, in pointing out the futility of building up until the processes of blowing up and pulling down by the rebel irregulars have been summarily terminated, made certain facts clear. Firstly, peace and order are the all-important economic assets for Ireland at the present moment. Secondly, taxation is not being fully collected. "In one very important commercial centre not a shilling of income-tax was paid," said Mr Cosgrave. "Were they going to borrow on that security?" Thirdly, financial relief will be given to local authorities by paying to them the grants under the Local Taxation Account during the financial years 1920-21 and 1921-22, which had been withheld by the Local Government Board during the struggle with the British. The agricultural grant for 1921-22, however, was to be held up "in connection with the Land Purchase Act." This means the diversion of the agricultural grant for application under the Act of 1903 as a guarantee fund to meet defaults in Land Purchase annuities. The local authorities will thus have occasion to realise that ratepayers lose when farmers do not pay their debts to the State. It is, of course, notorious that, owing to the recent disturbances, there has been a very general abstention from payment of all lawful debts, whether taxes, rent, purchase annuities, or ordinary simple contract debts. The Government estimates are not due for a fortnight yet. To sum up, the most promising feature of the week has been that the Government is facing the facts and telling the truth to the public.

The League on Disarmament.—So far as they have gone the discussions at Geneva on the report on disarmament presented by Lord Robert Cecil on behalf of the Temporary Mixed Commission have been encouraging, but that is not very far. The plan outlined in the report is of a very limited character; although some measure of disarmament is posited as a condition precedent to the entry of any Power into the regional pact suggested, the emphasis is rather on the idea of international insurance against attack. The French representative, M. Jouvenel, made a conciliatory speech, which has done something to clear off the bad impression made by the earlier reply to the British Memorandum, but he had much to say on France's need for security—a security apparently conceived of throughout as based on material means. This is, perhaps, inevitable so long as Germany, Russia, and the United States remain outside the League; but it suggests that M. Jouvenel has not thought out the implications of his reiteration of the argument put forward by M. Noblemaire last year, that moral disarmament must precede material. The essence of moral disarmament is the recognition that not armies, but co-operative activities give security. The existence of great military and naval establishments helps powerfully to create the war mind. Nor can it be hoped that Lord Robert Cecil's scheme will appeal sufficiently to the people of the United States to induce them to resume European co-operation. They need—as to this all observers agree—to be convinced of something wider in scope: a readiness to make sacrifices in the sphere of land armaments at least as comprehensive as was shown by the U.S. and British representatives in the case of navies at Washington. It looks as though the main concrete result of the Geneva discussions were to be an agreement to summon an International Conference next year to complete the work of Washington in the naval sphere, with arrangements

for inquiries as to the facts of land armaments in the different countries, leading up to a later conference on that vital issue.

Turkey and the Allies.—Smyrna fell last Saturday and is now a scene of conflagration and massacre; the northern portion of the Greek Army has reached the Sea of Marmora, but the southern portion is cut off, and no armistice is yet arranged; the whole of Turkey, and, indeed, of Islam, is exultant; militarism in Germany and elsewhere has received a stimulus; Soviet Russia demands a voice in the settlement; and France, while understood to be supporting the British insistence on the freedom of the Straits, holds that the Turks may now reasonably demand much more favourable terms than the Treaty of Sevres gave them. France, moreover, profits considerably by the Turkish victory, not only because of its advantage to the financial interests which promoted the Franklin-Bouillon Agreement, but because the largest portion of the Turkish Unified Debt is in French hands, and its full service will be resumed much sooner if the Porte recovers all or part of its lost territories than if the bondholders have to await the partition of the obligation between the various States which have acquired Turkish territory since the conclusion of the Balkan wars. The Turks now claim full power over Constantinople, and propose to recover Eastern Thrace, by force if necessary. But Serbia and Roumania are claiming a voice in the settlement, and, obviously, if Turkey recovers Eastern Thrace on conditions difficult of enforcement by the Allied Powers, she may join hereafter with Bulgaria in imperilling both the safety of the other Balkan nations and the freedom of the Straits, which the Allies propose to secure. The stimulus given to Pan-Islamism by the victory sets up serious dangers for France in Syria and Morocco; and for Great Britain its possible consequences in Palestine, Egypt, India, and Irak may be even graver. On the northern border of Mesopotamia Kurd bands have been in conflict at intervals with King Feisul's Arab troops, which are under British officers and supported by the British Air Force; Turkish Irregulars have recently aided the Kurds to constrain the British forces to withdraw southwards; British and Indian troops are being sent to Irak to avert a possible recurrence of the religious and Nationalist rising of 1921, and, while the great bulk of the tribal population values the security and improvement in communications and production ensured by British advice and assistance, the Baghdad Nationalists and the fanatics of the holy cities desire to get rid of the mandate, and still cherish the delusion, recently exposed in the *Times* by Sir Arnold Wilson, that the native State can stand alone. The Franco-Turkish Agreement facilitates a Turkish invasion of Irak along the Baghdad Railway from Anatolia; and Turkish rule in Irak means a return to disorder, oppression, and partial anarchy, and eventually, in conjunction with Bolshevik influence and Greek army, used by the British Government as an instrument for overthrowing the Kemalist supremacy, has inefficient control by officers without war experience, and aided by artillery and munitions obtained from France through Mersina. Great Britain has now to avert as best policy—first, by maintaining the Entente; next, by securing Eastern Thrace, through other means than the use of Bulgaria; and, finally, by giving Greece such compensation as is now possible by the cession to her of Cyprus in themselves. Bulgaria may fairly be compensated for her claim on Thrace by giving her an unrestricted outlet to the Aegean Sea.

The Russo-Asiatic Agreement.—The agreement signed on September 9th at Berlin by M. Krassin and Mr Urquhart, chairman of the Russo-Asiatic Consolidated, is another Bolshevik compromise with "Capitalism." It also marks an important stage in the revival of Russian industry and trade. Full details will shortly be laid before

the shareholders, but the outline has been published, and subsequent interviews with the company's officials here, and in Berlin with M. Krassin, have more or less filled it in. It "saves the face" of the Soviet Government, first, by converting the Kyshtim freehold portion of the company's property into leasehold, while returning the whole on a 99 years' lease—an arrangement which liberates the freehold from the onerous conditions of its former tenure, and extends by about 39 years the leasehold term of the rest; and, secondly, by granting compensation for disturbance, disguised as aid towards the resumption of working, to an amount equivalent to £150,000 in cash and a maximum of £1,850,000 in 15-year gold bonds, the precise amount of which is to be determined shortly by a mixed Commission. These bonds may serve as a basis for borrowing here, and, in any case, will be receivable for the Russian royalties and taxes, which together are not to exceed 8 per cent. of the gross profits; and so, unless prices fall heavily, should not constitute a heavy burden. The Soviet Government take a percentage of the output, which comprises timber, copper, gold, silver, coal, steel and iron products, sulphuric acid, and dynamite; the company guarantees a certain minimum production, and expects to exceed the very large pre-war output at an early date. It accepts the wage-scales to be fixed by the local authorities, but it will have full freedom to engage and discharge its employees, and they are not to interfere with its management. Herein the Agreement differs from its abortive predecessor of last year, which the company eventually rejected as unworkable. But their sanitary and medical welfare and other conditions of employment will be subject to arrangement between their own consultative committees and the local managers. Disputes are to be submitted to an arbitration council of two Russians and two foreigners, with some eminent foreigner as chairman; apparently its operation will be extended to all foreign undertakings in Russia. Should private ownership hereafter be re-established, the property of the company will be returned. No legislation is to be introduced modifying the Agreement, but the Government reserves the right to buy back the property after 40 years on payment of 20 times the average net profits for the last five years of that period. Ratification (except possibly as to minor details) seems certain, as each clause has been passed by the Soviet Government, and M. Krassin has flown from Berlin to Moscow to hasten its conclusion. It has been said to mark the collapse of Bolshevism. It does not do that, for it gives the company, and by implication other foreign companies, a strong interest in maintaining the present Government of Russia, at any rate against a Communist revolution; and it shows both that the Government is sufficiently secure to be worth dealing with, and that it still hopes, like Socialists outside Russia, to convert private capitalism into State capitalism gradually hereafter. This interpretation is supported by the statement of the company's secretary that the Government does not desire to grant new concessions to Herr Stinnes, the Krupp works, or other foreign capitalists. But the realisation of the hope is postponed for 40 years or more.

A New Loan for China?—Civil war in China is not anything like so serious a business as it appears in the newspaper reports: the country is enormous, and armed demonstrations by rival generals are often hardly more serious in China than are political manifestoes by impassioned party-leaders in Europe. The great difficulty of the new Peking Cabinet, in which Wang-Chung-hui is Premier, is that of finance. The military chiefs have promised, according to a recent Peking message in the *Times*, not to interfere with the revenues of the Central Government, and to secure the resumption of the provincial contributions; but the Chinese treasury is depleted, and the burden of foreign loan obligations heavy. The other day, however, Mr Paul Reinsch, an ex-American Minister to China, speaking in Peking at a gathering of notables at the house of the Foreign Minister, Mr Wellington Koo, said, as reported by *Reuter*, that if Chinese financiers would bend their minds to self-help, they could count on international support. The report, on Thursday, that Chinese banks are arranging to lend the Government a million sterling as a short term loan on the security of the unencumbered portion of the Boxer

Indemnity, suggests that he was not speaking without his book. Moreover, Mr Reinsch made a positive suggestion: as to which it is inconceivable that he was speaking casually or without assurance that his words could be made good. He proposed a constitutional interim loan of two million gold dollars a month for ten months; such assistance given now might save China, which, without it, might relapse into a condition whence extrication would be impossible. Meantime, he suggested that the Financial Commission should, with the co-operation of national and foreign bankers, draw up a scheme of revenue reform and on its basis propose to the Consortium to make this loan. If the Consortium declined or delayed, banks outside would have to be invited. The difficulty about action by the Consortium is, of course, the attitude of Japan. There is reason for believing that the assistance which Mr Reinsch desires is available, and that those interested in the plan regard it as important that the Chinese Government should resume the obligations (on the Marconi and Vickers' bonds and the bonds floated contemporaneously in the U.S.) on which it was allowed to default. With regard to the Vickers loan, indeed, the Chinese Government has stated its willingness to secure payment on the increase in the Maritime Customs Duty; but its power to act in this way seems at present blocked by the delays of the International Commission. It looks as though China must seek help outside the official circle.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that wet, sunless weather generally prevailed throughout August, which retarded the ripening of the corn and hindered harvesting, while the ripening of the corn and hindered harvesting, while heavy crops have been badly laid in places. Roots have benefited, and aftermaths have made good progress, but dry, sunny weather is much needed for all crops and farming operations. Crops have ripened slowly and unevenly owing to the wet weather and lack of sunshine, and the grain is likely to be under-average both in quality and in condition. Wheat is less promising than a month ago in all parts of the country, and the average yield on the whole is now established at just under 31 bushels per acre. In the southern half of England the greater portion has been cut, but except in some districts in the south very little had been carried by the end of August. There are many reports of sprouting in barley, and the quality of the grain is expected, on the whole, to be only moderate. The average yield for the whole country is estimated at about 30 bushels per acre. Harvesting is more backward than in the case of wheat, and in the majority of districts very little had been cut at the end of August. Winter oats generally are a fair crop, but spring-sown are poor, and, as in the case of barley, there are many reports of sprouting. The yield on the whole is estimated at only 34.6 bushels per acre. Good progress has been made with the harvesting of winter oats. Winter beans, on the whole, are a fair crop, but spring-sown are poor, and yields on the whole will be light. Peas, also, are only a moderate crop. The forecasts given last month of the production of this year's corn crops have been revised in accordance with the later information available, and the revised figures are set out in the table below. It is to be borne in mind, however, that these forecasts are based on estimates made at the beginning of September, and are consequently subject to modification. The area of beans

104

and peas is that returned as being for harvesting as corn:—

	Area.		Production.	
	1921.	1922.	1921.	Forecast, 1922.
	Acres.	Acres.	Quarters.	Quarters.
Wheat	1,976,000	1,969,000	8,722,000	7,600,000
Barley	1,436,000	1,362,000	5,309,000	5,110,000
Oats	2,149,000	2,161,000	10,035,000	9,350,000
Beans	237,200	272,000	778,000	890,000
Peas	105,700	123,000	313,000	310,000

Main crop potatoes are healthy and vigorous generally. In one or two districts, more particularly in the south-east, there are some reports of disease, which may become more prevalent unless drier weather comes. On present appearances, the yield of potatoes is expected to be over-average in nearly all districts, and on the whole is estimated at about 10 per cent. above the average of previous years. Roots improved during August, but sunshine is now much needed. Turnips and swedes, especially where sown late, are still backward and patchy in several districts. Owing to the continuous wet weather the hay harvest has been very protracted, and in most districts was not completed at the end of August. The yield of seeds hay is estimated at 20 per cent. and of meadow hay 15 per cent. below average. From most districts it is reported that dessert apples are slow in maturing and generally are not colouring well, while yields are likely to be below average. All varieties of cooking apples show a wide variation in different districts, and are generally below average, although average crops of most varieties are reported from the principal districts in the West of England. Crops of pears are generally above average. Plums are a very heavy crop in all districts except in Middlesex. Damsons are a prolific crop.

The U.S.A. Harvest.—The production of winter wheat in the United States is estimated at 569,000,000 bushels, 38,000,000 bushels less than was anticipated earlier in the season. In 1921, winter wheat produced 587,032,000 bushels. Spring wheat is estimated at 248,000,000 bushels, 1,000,000 more than was expected. Thus the total wheat production in the United States this year amounts to 817,000,000 bushels, 22,000,000 bushels more than in 1921, and 18,000,000 bushels more than the average for the last five years. Oats are estimated at 1,187,000,000 bushels, compared with the production of 1,061,000,000 bushels in 1921—an unusually small crop—and the average production for 1916-1920 of 1,413,000,000 bushels. Barley production is estimated at 182,000,000 bushels, 31,000,000 bushels more than in 1921, but 15,000,000 bushels below the average crop for the previous five years. Rye is estimated at 82,000,000 bushels, an exceptionally large crop. The average crop for the previous five years stands at 67,800,000 bushels. Maize is estimated at 2,860,000,000 bushels, compared with 3,080,000,000 in 1921, and an average of 2,831,000,000 for the five years 1916-1920. The enormous production of potatoes (white) is estimated at 429,000,000 bushels, the five-year average being only 373,000,000 bushels. Sweet potatoes are estimated at 111,000,000 bushels, compared with 88,800,000 bushels for the preceding five years.

Iron and Steel and Coal Output.—The monthly statistics of the National Federation of Iron and Steel Manufacturers show that the production of pig-iron in the United Kingdom in August reached 411,700 tons, the highest monthly total since the coal stoppage of last year, which compares with 399,100 tons in July and 94,200 tons in August, 1921. The monthly average this year for the first eight months is 370,000 tons, as against an average of 217,600 tons for the twelve months of 1921, 669,500 tons for 1920, and 855,000 tons for 1913. Furnaces in blast at the end of August numbered 126, or 9 more than at the end of July. Steel production for August was 520,800 tons, as against 473,100 tons in July, 434,100 tons in August, 1921, and a monthly average of 302,200 tons for 1921, 755,600 tons for 1920, and 638,600 tons for 1913. Coal output for the week

ended September 2 was 5,203,600 tons, the highest weekly figure so far recorded this year, and comparing with 5,148,000 tons for the previous week and 4,141,900 tons in the corresponding week of last year. Since the beginning of August the weekly output has four times exceeded 5 million tons, there being a drop to 3,623,200 tons in Bank-holiday week.

Cotton Trade Short Time.—Our Manchester correspondent writes:—At the end of last week there was a special meeting in Manchester of the general committee of the Federation of Master Cotton Spinners' Associations for the purpose of considering the state of trade. It was reported that the recommendation to users of American cotton to close their mills during August for a full week of 48 hours, in addition to the holidays, had been generally carried out. The question of a further curtailment of production was then considered, and it was decided to take a ballot of the members spinning American cotton on the advisability of stopping the mills on Saturdays and Mondays for a month, beginning on September 23rd. The result of the ballot will be announced on Tuesday next. In order to put the scheme into operation, it will be necessary for the owners of 80 per cent. of the spindles in the American section to vote in favour of the proposal. Although most firms are doing very badly, and selling yarn at a loss, there is some doubt in trade circles as to whether the necessary majority will be obtained. There is jealousy between the owners of old mills and the proprietors of the reconstructed concerns on a high capital basis. The former contend that they should not be asked to make sacrifices in order to bolster up the extravagantly financed companies. The Masters' Federation has disclaimed responsibility for reports which have appeared in the Press relating to proposals for setting up a systematic organisation and control of the trade with a view so to regulating the supply to the demand that satisfactory profits might be assured. The inquiry which is now proceeding is simply to consider the advisability of still further sectionalising the mills spinning American yarns in any future short time movement.

Calico Printers' Results.—Again the directors of the Calico Printers' Association, Limited, publish accounts for two years. This is the twentieth report of the company, and covers the period of the two years ended June, 1922. As will be seen from the table given below, gross profits show a substantial reduction when compared with previous accounts. But allocations for depreciation have been on a generous scale. The reserve account obtains nothing, the small sum shown in our reserve column being set aside for the benefit of employees. The following table shows results since 1906:—

Year Ended June 30.	Gross Profit.	Maintenance and Depreciation.	Net Profit, Less Depreciation Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	£	%
1906.....	682,160	200,120	354,040	150,000	201,074	4
1907.....	776,752	224,711	424,041	150,000	276,476	6½
1908.....	383,612	212,237	93,375	150,000	150,805	nil
1909.....	448,880	207,565	163,315	Dr 50,000	150,805	nil
1910.....	723,953	201,615	394,338	200,000	201,073	2½

Some striking changes are revealed in the full analysis of the balance-sheet, which appears in another column. Stock-in-trade is down from £5,025,057 to £1,949,669, although sundry debtors show little change at £3,148,265. The debit side of the balance-sheet is difficult to analyse. In the previous account an item was shown of "Sundry creditors and reserve for contingencies" at £3,994,123 in addition to depreciation account, reserve account,

capital reserve account, and reserve for equalisation of dividends. In the fresh balance-sheet we get an item, "Sundry creditors and other credit balances" of £1,982,849, and the various reserves as enumerated above now total £2,517,208, as against £2,308,694 two years ago.

William Beardmore.—It may be recalled that the previous accounts of William Beardmore and Co., Limited, for the five years to December 31, 1920, were submitted in December, 1921, and that net profits for these five years were then shown as £2,411,020. The directors, however, getting back to more normal conditions, have now published accounts for one year only, and that the year ended December 31, 1921. The report strikes a pessimistic note by stating that "the extreme depression in trade generally, the unsettled conditions of foreign exchanges and the resultant effect upon export markets, the prolonged coal strike and other labour troubles, with their consequent effect upon production, and the abnormally heavy taxation which industry has been called upon to bear, have all combined to make the period under review one of the most difficult ever experienced in the history of the company's trading." But, in spite of these prefatory remarks, profits for the year, after providing for depreciation—which "necessitated heavy writing down of stocks and work in progress" to "realisable values" and allowing for other charges—amounted to £127,288. Fortunately the directors, with considerable prudence, had put by from the previous accounts £711,909, and the sum now brought forward gave them an available balance of £839,197. The preference dividend distribution, absorbing £86,400, has been maintained, and again the directors are showing reasonable caution in carrying forward the balance of £752,797. Total assets amount to £9,940,569, of which one item, "land, buildings, house property, fixed plant and machinery, docks, goodwill and patent rights," is valued at £5,450,407. It is a pity that the value of goodwill and patent rights could not be separately shown. There is a general reserve fund of £1,000,000 and a special "preference dividend reserve" of £250,000. As the preference issue only requires an annual service of £86,400, this fund forms a pleasant pool for preference shareholders, although there are £1,000,000 8 per cent. notes, loans for £1,396,571, and 4½ per cent. debentures for £485,400 outstanding.

Tankers.—In accounts which are not noteworthy for lucidity, the directors of Tankers, Limited, announce that the profits of the company for the year ended March 31, 1922, amounted to £93,308, which sum is, however, subject to income-tax and Corporation Profits Duty. The company has now taken over the undertaking of the Scottish American Oil and Transport Company, issuing in exchange 4,771,455 ordinary shares of 5s each. Under the chartering contract with the Scottish-American Oil for the period to June 30, 1921, £59,789 came into the accounts, profits on steamers' voyages, &c., brought in £32,118, while "interest on bank deposits, treasury bills, &c." yielded £25,158. It is proposed to carry the net profit forward. The report states that "owing to the depression in the oil market and the serious drop in the quotation for freights, the directors regret that it has been impossible to obtain continuous employment for the whole of the vessels of the company." Total assets now amount to £4,571,725. The chief item on this side of the balance-sheet is the cost of five completed steamers, which is given as £3,106,277, less £60,000 for depreciation to March 31, 1921. Included in the cost of steamers are "amounts paid in respect of four vessels under construction, including adjustments for cancellation of two other vessels." This item is further complicated by a note which states that "Four completed vessels are mortgaged, three to secure bills payable as per contra," and on the other side of the balance-sheet bills payable are given as £371,299 "secured by mortgages on steamers." It will be noticed that depreciation has only been budgeted for up to March 31, 1921, for the comparatively small amount of £60,000, and the auditors in their report specifically draw attention to the fact "that no provision has been made for depreciation on

steamers" for the year ended March 31, 1922. Surely it would be better if the directors could see their way clear to unravel this tangle. Amounts paid for cancellation of contracts are a direct capital loss. These might be divulged and written off. The steamers could also be revalued in accordance with to-day's values to enable shareholders to know how they stand with regard to their assets. The investments of the company also call for notice. The holding in the Southern Oil and Transport Corporation is valued at £774,821, while those in the British Equatorial Oil Co., Limited, appear as £123,478. The auditors pertinently point out with regard to these investments that "we have no evidence as to the present value of the investments in other companies." It will also not escape the attention of the discerning investor that the British Tanker Company who assumed the technical and commercial management of the company, representing Anglo-Persian interests, ceased to act as managers on March 31st last.

Indian Gold Mine Dividends.—In our issue of June 17th a leading article was devoted to the position and prospects of the Kolar group of Indian gold-mining companies. By way of conclusion, it was pointed out that reduction in earnings must follow the decline in the gold premium, and some figures were given showing the extent to which each of the companies would be affected. Investors who allowed themselves to be dazzled by the past performances of these undertakings have now had a somewhat unpleasant experience in the shape of a general reduction in the rate of dividend. The appended table contrasts the distributions just announced—or passed—with the three preceding announcements:—

	1921.		1922.	
	Sept.	March.	Sept.	March.
Balaghat Pref.	1/6	1/3	1/	1/9
Ditto Ordinary.....	1/6	1/1½	nil	1/9
Champion Reef.....	1/	1/4	1/	1/6
Mysore	1/	1/9	1/	1/6
North Anantapur Pref. ..	1/6	4/	1/	4/
Ditto Ordinary.....	1/6	1/	1/	1/
Nundydroog	1/6	1/	1/6	1/

It will be seen that the Nundydroog provides the only example of maintenance of the rate. The Orregram declaration is not due until next month. Any shareholder unable to comprehend the absence of the return on the part of the lately reconstructed Champion Reef Company will find a ready explanation upon working out the results on the basis of last year's costs and the present price of gold.

Transvaal Output in August.—A further marked improvement is noticeable in the August statistics of gold output in the Transvaal issued by the Chamber of Mines. The July output at 730,635 ounces of fine gold compared favourably with 675,607 ounces produced in June. But the August figures, at 752,490 ounces, are even better. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.

UNITED STATES.—GOVERNMENT COTTON CROP REPORT—ANTHRACITE COAL DISPUTE SETTLED—RAILWAY AND TEXTILE STRIKES WANING.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 4.

THE Government's cotton report last Friday, giving the condition of the growing crop as 57 per cent. of normal on August 25th, and estimating the prospective yield as 10,575,000 bales, was about as unfavourable as the trade generally had expected. Both the condition percentage and the indicated yield came close to the average of recent private estimates. The cotton market's immediate response was a violent break of some \$4 or \$5 a bale, with irregular recoveries from the lowest points before the close. The sharp decline was attributed more to the technical position of the market itself than to anything in the Government's report, which could be construed as an argument in favour of lower prices. The report seems to have been discounted largely in the recent vigorous advances; the short interest had been practically eliminated, and the market, therefore, was in no position to absorb the flood of profit-taking and fresh short-selling which developed following publication of the Government's estimates. Furthermore, many speculative buyers had placed numerous "stop loss orders" to sell their cotton contracts at certain levels, in order to prevent all of their profits being wiped out by any sudden slump. The execution of such orders naturally increased the selling pressure, which caused a precipitate drop of about 100 points before the decline was checked. The condition of 57 per cent. compares with 70.8 per cent. on July 25th, with 49.3 per cent. on August 25th a year ago, and with the ten-year average, as of August 25th, of 65.3 per cent. The yield now forecast is 874,000 bales less than the Government estimated a month ago, and contrasts with last year's actual crop of approximately 8,000,000 bales. Much can happen to the growing crop between now and harvest, and it is, of course, impossible to tell how close the present estimate may come to the actual production. Even should the prospective crop of 10,575,000 bales be fully realised, it would fall about 2,500,000 bales short of the 13,000,000 bales of American cotton which trade authorities have figured will be needed this season by domestic and foreign mills. It will be recalled that the deficiency between last year's exceptionally small crop and actual consumption was met by drawing on the unusually big carryover from preceding crops. The surplus was accordingly reduced from around 9,300,000 on August 31, 1921, to 4,900,000 bales on July 31st this year. While the latter carryover is more than sufficient to meet the shortage in the new crop as now estimated, there would remain a much smaller reserve at the close of the season than the 4,000,000 or 5,000,000-bale carry-over which the trade usually counts on, assuming that consumptive requirements will be as large as estimated. Furthermore, it is by no means certain that the crop will be as large as now promised. A great deal depends upon weather conditions, but more, perhaps, upon the extent of the damage that may be done by boll weevils. Some interests are disposed to stress the fact that the Government has not infrequently underestimated the actual yield in its forecasts, and they call attention particularly to last season's yield, which proved to be about 1,000,000 bales larger than the Government's September prediction. That wide difference, however, was found to be due principally to the fact that the planted acreage had been underestimated by more than 15 per cent. It is quite unlikely that such a mistake has been made this year. The smallness of this season's prospective crop is giving much concern to cotton goods manufacturers and distributors who, quite generally, are now convinced that the price of the staple will continue abnormally high. Despite the sharp decline which followed last week's crop report, manufacturers of printcloths and gray goods continued decidedly firm at the higher levels recently established, and refused to accept orders at current prices

for deliveries much more than one month ahead, while many mills declined to sell anything but spot cloth. Some shrewd buyers made unusually large commitment for nearby deliveries before the Government report was published, evidently in anticipation of price advances in the near future. If raw materials, cotton, wool, and silk hold around present levels—there is nothing in the situation to encourage hopes of any substantial recessions—prices of finished textiles generally must of necessity be advanced, according to competent authorities. Manufacturers are no longer willing to sell at cost, or at a loss to keep plants running. Whether or not higher prices will check distribution, and to what extent, only the future can determine. One feature, however, which has an important bearing on the outlook for trade in cotton goods and other textiles is the fact that stocks, in many lines, have been greatly reduced, if not exhausted, as a result of widespread curtailment of production and steady absorption of surpluses in the past few months.

Labour troubles, which have been such a disturbing factor in this country for a number of months, and which have checked the revival in trade and industry in many directions, are practically over. Following closely upon the settlement of the prolonged controversy between bituminous coal operators and miners, and the resumption of activity in soft-coal mines, the anthracite coal strike has been settled and production is to begin within the next week. In New England the textile strike is now a small affair compared with what it was at the outset, as a result of the steady return of operatives to various plants which have held out for the 20 per cent. reduction in wages, and the recent action of several mills in re-opening under the same wage scale and working conditions that prevailed before the strike began. The railway shopmen's strike is still in progress, but the railroads, according to official statements, have made rapid progress in building up their shop forces since all peace talk and conferences came to an end, and they confidently predict that such forces will be fully up to normal, in point of numbers, within the next month, even if the strikers do not return to work. Despite present handicaps, the carriers are moving an increasing volume of traffic, as reliable statistics plainly show. Transportation service is steadily improving in all sections, and no serious difficulty was experienced in handling the big Labour Day crowds of passengers. It is becoming more and more apparent that the railway unions have lost their strike. In the New England textile controversy, some mills have virtually capitulated to the union strikers, but other manufacturers have not. In the coal strike, however, the operators failed in their efforts to reduce wages. In announcing the agreement which terminated the anthracite coal strike, the operators declared that while they were still of the opinion that wages should be reduced, and that even though the present emergency did not justify continuation of the old scale, nevertheless, in conformity with the insistent appeals of President Harding and of the public, they accepted the proposal which had been made with a view to ending the controversy. The main points in the agreement are as follows: The contracts that were in force March 31, 1922, are to be continued until August 31, 1923; the production of coal is to begin immediately; the organisations of operators and miners are to join in a recommendation to Congress that legislation be enacted forthwith creating a separate Anthracite Coal Commission, with authority to investigate and report promptly on every phase of the industry; the continuance of production after the extension date is to be upon such terms as the parties may agree to in the light of the commission's report. The date limiting the extension of the old wage scale, namely, August 31, 1923, was a compromise; the operators did not want an extension beyond March 31st of next year, while the miners wished to have the former wage agreement continued until March, 1924. It is noteworthy that the date fixed for the expiration of the agreement just entered into comes at an odd time of the year, which marks the end of the coal year in that industry, and contracts between producers and large consumers usually expire at that time. The new contract period is also said to be the shortest that has ever been proposed

in negotiations between the operators and the United Mine Workers of America. The definite settlement of the coal strikes is generally regarded as most welcome and timely. With production again under way, the serious shortage which has resulted from the prolonged strikes will gradually be relieved; but under the best possible conditions it will be a long time before available supplies of both soft and hard coal catch up with requirements. Fortunately, it will be about two months before really cold weather arrives, and a substantial amount of coal can be produced in that period, but it will be wholly inadequate to meet all needs, and many consumers will undoubtedly experience great difficulty in getting what they require during the coming winter.

FRANCE.—STATE FINANCE—THE COMING BUDGET—TOBACCO AND MATCHES—GERMAN TRADE AGREEMENTS—PRICES AND COST OF LIVING—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 12.

THE Chambers are now expected to be called together again on October 10th, by which time the Budget estimates will in all probability be ready. General opinion appears to be that, notwithstanding the fact that the Treasury will be badly in need of ready money between now and the end of the year, the situation is such that it would be very difficult to float successfully another national loan, while any renewed increase in the amount of paper money is not to be thought of. The total note issue, which on June 22nd last amounted to 35,852,000,000f., was returned last Friday as 36,959,000,000f. This increase may be explained as due, to a great extent, to purely temporary circumstances, and as part of the great system of robbing Peter to pay Paul that has become chronic not only in France, but in many other countries also. Nevertheless, although the aforementioned methods of raising money are at present regarded as impracticable, ready cash must be had, and the Finance Minister, in order to overcome the difficulty facing him, is understood to have found an ingenious way out of the dilemma.

It is reported that two large loans are to be authorised—one of six milliards, to be issued by the consortium that now controls the whole of the French railways, which will in this way mobilise the debt owed to it by the State, and in this way mobilise the debt owed to it by the State, and the other of four milliards, to be issued by the guarantee Foncier. As both loans will be backed by the guarantee of the State, their success is a foregone conclusion. As neither the railways nor the Crédit Foncier has any immediate need for these large sums, the Treasury will have a good deal of ready money at its disposal, which it will replace for the time being with Bons de la Défense, which, it is hoped, will in turn be liquidated later by the cash which it is still believed will be received either from Germany direct or out of the produce of the suggested great international reparations loan.

One of the most interesting features of the coming Budget debates is expected to centre round the proposal that has been put forward by one of the Parliamentary commissions to the effect that the Government match and tobacco monopolies should be transferred to concessionaires on a farming basis. Categorical reports have been circulated from time to time for several years past that important financial and industrial groups, generally American, were anxious to enter into negotiations with the Government with a view to "taking over" the tobacco and matches monopolies, and there is no doubt most of these reports have been well founded. The tobacco monopoly yielded some 900,000,000f in relief of the taxpayer during the first seven months of the current year, while matches produced about 60,000,000f. It is held in many quarters that these results might be largely improved upon if more efficient methods of manufacture, distribution and salesmanship were adopted.

A cry of alarm, as might be expected, has already arisen from tobacco-growers, the employees in the Government tobacco and match factories and the privileged holders of tobacco selling permits, who have just sent a deputation to the Minister of Finance to protest against

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits ... 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

any attempt to suppress the present monopolies. M. de Lasteyrie informed the deputation that the Government will in no event hand over these two monopolies to any foreign syndicate. He intimated, however, that far-reaching modifications are contemplated in the methods of working the tobacco monopoly, with a view to improving the process of manufacture and reducing the sale price. As to matches, the Minister regretted that, both in quality and price, the French Government allumettes compare very unsatisfactorily with foreign-made matches. In the circumstances, and in view of the resolutions passed by the commissions, an official inquiry is now in progress into the working of the match tax in other countries and the possibility of transforming the existing monopoly in this country.

Other agreements between French organisations in the devastated area and German trade associations are likely to follow the Lubersac-Stinnes entente. The Comité d'Action des Régions Dévastées has decided to accept an offer from one of the great German trade unions (Verband Sozialer Baubetriebe, of Berlin) for the supply of materials. An agreement is to be drawn up and submitted to the French Government. In this case there is no question of the payment of any commission of 6 per cent. or otherwise, as in the Lubersac-Stinnes arrangement, therefore the cost of the materials will be correspondingly lower.

The French index figure for wholesale prices for August, as compiled by the Statistique Générale (based on 100 as representing the general average of prices 1901-1910), after remaining stationary for June and July, shows a rise from 375.6 to 382.1. The following table shows the comparative figures for July and August:—

	July (Corrected).	August (Provisional).
General index figure (43 categories) ..	375.8	382.1
Foodstuffs (20 categories) ..	381.6	378.5
Vegetable foods (8 categories) ..	351.2	350.6
Animal foods (8 categories) ..	423.2	417.4
Sugar, coffee, cocoa (4 categories) ..	359.4	356.5
Raw materials (25 categories) ..	371.1	385.0
Minerals and metals (7 categories) ..	317.5	329.9
Textiles (6 categories) ..	459.0	493.1
Various (12 categories) ..	358.6	363.0

The general index figures for the four previous months (March-June) were 355.4, 362.6, 366.2, 357.7 respectively, those for foodstuffs alone being 366.9, 387.5, 387.3, and 394.8. The August figures, therefore, indicate that the appreciable fall in wholesale food prices that occurred during July only partially continued last month. The index figure of retail prices of 13 categories of foodstuffs in Paris, which was returned as 3159 in March (or an increase of 194 per cent. on that of 1914), after rising to 3413 (217 per cent.) in May, had dropped by the end of August to 3107 (or 189 per cent. increase on those of 1914).

The continued high cost of living—or "artificially high cost of food," as it is often termed in this country—is exciting a good deal of attention once more, particularly among employers of labour. It is now generally recognised that the recent serious strike at Havre, where the workers proceeded to extremities in their resistance to a proposed cut of 10 per cent. in the wages of men employed in the metallurgical industry, was at bottom a genuine protest by labour against onerous conditions of living. The question was seriously discussed by the local Chamber of Commerce, and from this discussion two facts emerged: (1) that certain of the Chéron decrees,

the export of certain foodstuffs and prohibiting importation of others, have proved absolutely beneficial to consumers in general, however beneficial they may have been to French agriculturists, and have contributed directly to increase the cost of living; (2) at part of "the excessive price of certain foodstuffs" is due to the excessive profits made by middlemen. The latter, for instance, are alleged to have been largely responsible for the high price of meat, which is purchased, as a rule, at very moderate prices from the cattle raisers, and sold to the butchers at rates that are universally recognised as excessive.

Experts in the Havre district complain that the farmers, who have profited largely since the war began, and now, in the majority of cases, own the land they formerly rented, systematically hold back their produce, and refuse to sell except at the top of the market, and even keep down production in order to keep up prices. Thus, potatoes were selling at the end of May as high as 100 francs per 100 kilos. On the arrival of the new crop at the end of June, old stocks fell suddenly to 10 francs per 100 kilos, and there is abundant evidence that many holders preferred to lose the sale of their stocks rather than sell at reasonable prices. Prices were held at such a figure during the earlier part of the year, indeed, that it was possible to import potatoes from Esthonia, in spite of the high freight rates, at a substantial profit. The same policy has been followed by the growers of beans and other vegetables, with the result that crops harvested in 1920 and 1921 are still being doled out for sale. It is urged that, in the general interest, free competition in foodstuffs should be restored at any cost, by the abrogation of the decree prohibiting imports, which would curb the speculative practices of the agricultural class. Another ground of complaint, particularly in the North of France, is that owing to the continued high price of meat a large area of what was formerly laid down in wheat has been transformed into grazing farms (which to some extent explains why France may have in the future to import larger quantities of bread-making materials).

The Bourse has well maintained its position, despite the fact that there were a number of sales in view of the approaching settlement. French rentes again showed a marked advance. Thus the Three per cents. improved from 60.25 to 61.75, the 1915-16 from 76.65 to 76.80, the redeemable Five per cents. from 88.80 to 89.10, and the Six per cents. from 90.75 to 91.20. Banks for the most part have remained unchanged, but Crédit Lyonnais moved up from 1,450 to 1,485, and Crédit Mobilier Français from 465 to 486. Railways have maintained their position, but there have been few dealings, and prices are virtually unchanged, with the exception of Metro, that improved from 425 to 460. Electrical undertakings have strengthened, Thomson rising from 813 to 825, and Electricité de Paris from 549 to 570, others acting similarly. Owing to optimistic statements as to the metal market, there has been a general improvement in metallurgical undertakings. Mines have been well in demand, Tintos advancing 50 points at 1,640.

GERMANY.—FINANCES—CURRENCY—BOURSE—PRICES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 12.

THE suspension of the Belgian negotiations concerning bond guarantees caused disappointment; but an understanding is hoped for. The Stinnes deal was taken fairly favourably. The official and private authorities on ruin have suggested numerous precipitate remedies; but the remedies, like the ruin, lost their public interest as soon as the dollar exchange lost its rise. The Government has forbidden the import of raw tobacco. The consumption of cigarettes has risen enormously; and as the people, according to the Chancellor, cannot afford bread, they nourish themselves (according to the counsels of Queen Marie Antoinette) on a costly narcotic. It will appear wrong to treat with levity the condition of a country where, in a certain class, there is real and terrible need; but the target aimed at is not the real misery of any

citizen, but the unheard-of exaggerations of the Federal Government, the Press, and foreigners. If the Government wants to alleviate the lot of the only ruined class, it ought to take measures against the wholesale transfer of real wealth from this class to others. As a result of laws and ordinances, a "Schieber" profiteer on the Kurfürstendamm pays a rent of 15s a year for a ten-room flat; and the gold price paid by me last week for a first-class sleeping compartment from Frankfurt-on-Main to Berlin (9½ hours, distance 539 kilometres) was 34d, and the first-class fare 1s 9d. The approximate £200 a year presented to the profiteer, and the approximate £5 presented to me, were taken out of the pockets of the particular class for which Dr Wirth, a week ago, expressed his compassion; and this happened not by accident, but by official design and by law. In order to replace the money so lost to the State, the Government, among other measures, has raised the gold supplement on customs duties from 28,900 to 33,900 per cent., which means that even the more fortunate producing citizens, whose earnings have risen 50-fold since 1914, must pay a 400-fold tax on their coffee and their cotton shirts. The Government now proposes a tax on excessive eating and drinking in public; and as this can only be based on the totals of restaurant bills, and as average totals of restaurant bills double in a week, the tax will, in two senses of the word, ensure a movable feast.

Lest it be feared that this official policy really spells ruin, it must be reported that the State finances show no sign at all of ruin. Whereas the estimated taxation revenue for all 1922 was 108 milliard marks, the revenue receipts for the first five months of the financial year, April-August, were 90,292,348,000 marks. The Floating Debt continues to increase; but the burden of the interest, being transferred to the unprivileged classes, is ever smaller on the State. The total for August 31st was 355,622,667,616 marks, whereof 316,945,535,300 marks were Three Months' Treasury bills. The Minister of Industry talks of issuing Treasury bills with an exchange character; and is being criticised for his vagueness; but a system of borrowing which would guarantee the lender against being repaid in worse money than he lent is honest in principle, and would probably revive the citizen's willingness to lend.

The first month-end Reichsbank report, after the mark touched bottom, shows, as was forecast, a new record in the credit pressure and in the inflation. This fact may be recommended to those foreigners who still believe that inflation causes a mark fall, and not vice-versa. Private bills discounted rose by 4,976,498,000 marks, to 21,704,341,000 marks; and now total more than 20 times the figure of a year ago; Treasury bills rose by 25,283,039,000 marks, to 249,765,773,000 marks; and the pressure on the Loan Bureau is shown by an increase of the Bank's holdings of Kassenscheine by 2,736,755,000 marks to 23,239,947,000 marks. Note circulation increased by 22,978,898,000 marks, which is about twice the former biggest weekly increase, to 238,147,160,000 marks, and Kassenscheine circulation by 888,700,000 marks, to 13,382,500,000 marks. As prices are still rising, the inflation must continue. The Reichsbank's note-printing capacity will be increased to 3 milliards daily by September 15th. Reichsbank clearings in August totalled 374.86 milliards, against 79.17 milliards in August, 1921. A party resolution declares for legislation forbidding use of foreign currencies in home business. This is a doubtful measure. When the French assignats and mandats were depreciated, as is the mark, to the extreme, the hoarded gold and silver coins came back into circulation; and for a time there was a dual currency, the paper currency's buying power being determined by its fluctuating metal exchange. This facilitated the return to a metal currency, at the expense of the mere paper-owners. Here the dollar plays the rôle of stable measurer of real values, and even as a second physical currency, with good results, as metal played in France; and this might prepare for the automatic expulsion of the paper mark. The French system was made possible by the withdrawal of draconic measures in favour of the assignats; whereas the German plan is to continue enforcing the assignat as the only currency.

Stocks have had a big fall. The *Frankfurter Zeitung's* index for dividend payers shows on September 8th 64,879, as against 82,599 on August 25th and 40,250 on November 10, 1921. Since January 1, 1920, the stock index figure has risen 8-fold, whereas the mark's gold exchange has fallen to about 1-30th. Capitalisation increases would explain only a fraction of this disparity. Since 1914 the stocks of certain companies which have not increased their capital at all, and are therefore pure goldmark values, have risen only 15-fold, or to less than 1-20th of their theoretical paper-mark value. Federal Threes, at 468 yesterday, have made a new record; Fours, for years under par, quoted 238; 3½ per cents., 144; Colonial Fours, 140; and Savings and Premium, 79. None of the Prussian or other State Loans are above par. The big rise in Federal Loans is not a sign of belief that the mark exchange will be raised and stabilised; if that were the belief, the purchase of low-priced State and municipal loans would be more tempting. The rise indicates a probably mistaken belief that the State's theoretical currency debt will be repudiated by means of automatic depreciation to nothing, while Federal Loans will be redeemable at a certain reduced gold price. The numerous British subjects who have bought Threes in this belief are likely to regret their credulity. Neither on practical grounds, nor on grounds of justice, is there any likelihood of public-funded debts faring better than currency.

The price-rise in August was about double that of July, which was the greatest so far experienced. It followed, as usual, the mark-exchange decline, instead of preceding it, as would have been the case if inflation (bringing home depreciation) was the cause, not the effect. The *Frankfurter Zeitung's* wholesale price index figure, which rose in July from 9,140 to 13,935, rose further to 28,919, or 290-fold that of 1914. As the dollar exchange index (basis also 100 in 1914) was 32,142, prices remained below world-market level. The food group rose from 13,961 to 29,175; textiles and leather, 21,910 to 36,398; minerals, 18,355 to 42,648; miscellaneous from 10,993 to 21,605; and standard finished articles, 8,549 to 19,352, or only 193½-fold 1914 level. The big rise of minerals is due to the great rise in native and imported coal and metals, and has been influenced by the fixing of iron prices according to the dollar in exchange. During the month the prices of most important commodities about doubled. Of Steel Syndicate products, ingots rose from (in marks per metric ton) 14,480 to 27,530, bars from 19,470 to 37,020, thick plates from 21,860 to 41,580, and other sorts proportionately; but there was a new rise on the 11th to 34,370, 46,930, and 52,750 respectively. Hematite pig-iron rose from 11,317 to 29,784, and is also due for a new rise. Coal rose from 1,530 to 4,105 marks.

Trade continues good. The Prussian Trade Ministry's monthly report shows that the selling boom during the present mark decline was not as active as in the great decline of last year. It is reported that only half of the food and raw materials credit of 140 million gulden granted by Holland in March, 1921 has been applied for by importers, and this agrees with the trade statistics to show that the officially alleged catastrophic inability to import, caused by the mark drop, is a fiction. To this matter I shall return next week. The *Kurven der Frankfurter Zeitung*, a statistical periodical, after noting the large increase (lost territory allowed for) in the number of producers, due firstly to the minimal unemployment, secondly, to the reduction of military establishments, and thirdly, to the enforced conversion of the ruined capitalist class into a producing class, gives figures to show that producers as a whole are increasingly efficient, and may be more efficient than before the war. The report of one large shipyard shows that efficiency fell to 100 in 1914, to 70 early in 1920, and is now 109. "This," says the authority, "is probably typical of a very considerable part of our industry. A leading cigarette factory reports: 1914, 100; 1922, 113; in another branch of this concern average productivity was 1914, 100; 1922, 196; and in a third branch, 100 and 750 (for this great increase there must be some special reason). Of sixteen different industries engaged in shipbuilding, six report production unchanged since 1914, five report an

CABLE ADDRESS: BANKTRUST, PARIS

average decline of 5 per cent., and five report an average increase of 14 per cent. The journal issuing this report describes the improvement as extraordinary, and expresses the view that pre-war efficiency is approaching. The percentage of unemployed is 0.6, against a pre-war average of 2.3, but for the reasons above given the absolute number of employed (on present area) is greater than in 1914. It is as hard as ever to see how a nation with an increased number of permanently employed producers of wealth, producing as, or nearly as, efficiently as in admittedly flourishing times, can really have experienced, or is about to experience, a collapse which will drag down the whole world.

CANADA.—CROP CONDITIONS—COLLAPSE OF THE WHEAT BOARD PROJECT—FARMERS' DIFFICULTIES—FRAUDS IN THE EXPORT GRAIN TRADE—PLANS OF THE FINANCE MINISTER—LOAN CONVERSION—THE RAILWAY PROBLEM—FEDERAL REVENUES—TRADE, INDUSTRY, AND MARKETS—THE AMERICAN TARIFF—CANADA AND REPARATIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 28.

IN Eastern Canada the grain harvest is well advanced, except in high-lying regions like the valleys of the Laurentian range, and in the western provinces wheat cutting has been general for the past fortnight. New wheat is already moving to the seaboard, and the actual results of the harvesting have in no way falsified the calculations of a satisfactory crop. It is true that drought has reduced the yield in extensive areas in Saskatchewan, Alberta, and British Columbia to very modest dimensions, but, on the other hand, in the territory surrounding Brandon in Manitoba, and other favoured localities, the crop will average about 30 bushels per acre and be as good as the historic yield of 1915. One grain trade journal claims that the whole Canadian wheat crop will this year exceed 350 million bushels, but more reliable agencies, like the Dominion Bureau of Statistics and the C.P.R. Natural Resources Department, will not claim more than 320 million bushels. Ten days' good sunshine is required to ripen a lot of the uncut wheat, but if it is vouchsafed the harvest will be finished early and all danger of loss from September frosts be obviated. Despite reports of a crop shortage in Europe, grain prices have been inclined to sag, and the farmers in the outlying regions of the West complain that they will not be able to meet their costs of production. In Ontario and Quebec, however, the farmers have every reason to be satisfied with their crop and transportation charges take no such toll from their returns. The fruit crop in Eastern Canada is particularly good this year, and root crops are also in excellent condition.

No competent grain expert was found willing to undertake the management of the Wheat Board with its curtailed powers, and the project had to be abandoned for the present year. The Western farmers are exceedingly indignant at the fiasco, and their representatives have

ing the Government to secure by exhortation of banks and other creditor institutions a sort of moratorium which will prevent the wholesale dumping of wheat on the market in the autumn months by sellers who are being pressed for payment of debts. The Government have promised the usual sympathetic consideration, but will not provide any public funds to enable farmers to hold their wheat. Mr Robb, the Minister of Trade and Commerce, has just returned from Europe, where he has been inspecting the Canadian trade agencies and attending to some departmental business. A very successful miller himself, he has a special knowledge of the grain trade, and he has been conducting a quiet investigation into the charges that Canadian wheat shipped via American ports was frequently subjected to adulteration and mixing with inferior American grades, with the result that the value of the Canadian grain certificate was destroyed. Evidence of these practices was obtained at the places where they were committed, and now Mr Robb has procured confirmatory proof in London from purchasers of the "mixed" wheat. It happens that owing to the ice blockade of the St. Lawrence in the winter months, more than 50 per cent. of the Western grain crop reaches tidewater at American ports, and this through traffic is encouraged by the American railways. Mr Robb intends to solicit the co-operation of the American Government in bringing the fraudulent practices to an end, and if it is not granted, steps will probably be taken to confine the export of Canadian grain to Canadian seaports.

The Finance Minister is at present *en route* for Europe, where he will settle some outstanding matters with the British Treasury and try to bring to a head negotiations which have been set on foot for a new commercial treaty with France. Before he sailed he announced that holders of the Victory Loan maturing on December 1st of this year could convert their holdings for a new issue of five- or ten-year bonds at the same rate of interest—namely, 5½ per cent. The new issue will be, unlike the old, subject to income-tax, but an inducement of one month's interest as a bonus for conversion is offered. There are about 180 million dollars of this issue outstanding, and the Finance Department expect that about 70 or 80 millions will be converted. At least another 100 million dollars must be obtained from some other source, and it is uncertain whether the Finance Minister will issue a domestic loan or once more have recourse to the New York market. The deficit on the operations of the national railways is growing worse instead of better, and the problem surrounding them is a continual source of worry to the Government. The serious illness of the Minister of Railways is now available as an excuse for further delay in appointing a new directorate for the national system. The old directors, both of the C.N.R. and the Grand Trunk, have handed in their resignations to the Government, and the country is becoming impatient at the dilatoriness of the Government in providing a new board for the unified system. There was a rumour that the chairmanship of the C.N.R. directorate might be offered to Sir Eric Geddes, but it is officially denied, and the latest report is that it will be offered to a well-known American railroad man of British birth.

However, the Government, amid their difficulties, can derive some consolation from gratifying increases in the Federal revenues. There has been a steady rise in the Customs revenue, and the decline in the sum realised by the income-taxes proves to be much smaller than was anticipated. The new stamp taxes are proving an extremely fruitful source of revenue, and are realising on an average half-a-million dollars per day, which is about double the sum produced by the old stamp imposts. If the railway deficit can only be kept down to reasonable dimensions and the rapacity of members for public works in their constituencies checked, Mr Fielding ought, next April, to be able to produce a very hopeful budget.

Industry and trade have been maintained at a moderately good level during the summer months, and both wholesalers and manufacturers report that country merchants, now that a good crop is assured, are replenishing their stocks and buying freely, especially in the grocery and drygoods lines. The industrial situation is not altogether satisfactory. There is a serious shortage of coal,

which has been further accentuated by a strike in the Nova Scotia coal mines. The Cape Breton area, where the British Empire Steel Corporation and its subsidiaries are the dominant influence, is the black spot in the Canadian industrial world, and so serious had matters become last week that troops had to be sent in order to keep order and preserve property. Impartial accounts of the situation won a good deal of public sympathy for the striking miners, and a settlement, which is now being voted upon, has been arranged, wherein the company has been forced to concede very material increases in the miserable wages lately paid. But even if the Nova Scotia mines reopen, they can do very little to fill the gap caused by the withdrawal of the usual American supplies through the coal and railway strikes in the U.S. The coal reserves in Canada are at a very low ebb, and industries are now realising the benefits of the Hydro-Electric Commission's enterprises. Extensive orders are being placed for Welsh coal for domestic fuel, but serious fears prevail of a fuel famine, which is a very unpleasant matter in a Canadian winter. Owing to the large demand for harvest labour, unemployment is at present virtually non-existent, but the problem will reappear as soon as winter brings out-of-door work to an end. Despite the fuel situation and industrial troubles, the stock markets have been remarkably buoyant, and the paper stocks, since the threat of any fresh barriers on pulp and paper imports in the new American tariff has been removed, have been indulging in a miniature boom. The pulp and paper industry is still one of the bedrocks of Canadian prosperity, and fresh mills, the latest being financed by American capital in the East Kootenay region at Elk, are continually being started. There is also great activity in the Northern Ontario mining field, and the returns of the Hollinger and other well-known mines are amazingly good.

The latest news from Washington is that the Fordney tariff may not be allowed passage before Christmas, because the Republicans are afraid of its effect upon the Congressional elections in November. The hope in Canada is that these elections may reveal a strong swing to the Democratic side, and in that event the new duties, which are so adverse to the Canadian farmer, might undergo drastic revision. The effect of the duties imposed by the Emergency Tariff upon Canada's southward exports has been very serious, but the recent trade returns are also demonstrating to intelligent Americans that if they will not buy from Canada they cannot expect to retain her as an increasingly valuable customer.

Canadian interest in the reparations problem, which is now occupying the minds of European statesmen, is very slight. No Canadian politician of any standing or any reputable paper has ever encouraged the public to hope for any substantial sum from Germany, and there have been no expectations to disappoint. The Canadian Government still holds over 30 million dollars' worth of enemy property in various forms, but two Government officials are now in Europe working out a settlement of private claims.

ARGENTINA.—FOREIGN LOAN—PROPOSED BANKING CONSORTIUM—NEW BANKING LEGISLATION—TRADE CONDITIONS.

(FROM OUR CORRESPONDENT.)

Buenos Aires, August 21.

THE failure of the Argentine Government to receive serious tenders for its proposed loan of \$200,000,000 gold was not a surprise to local financial interests. Indeed, the subsequent official statement to the effect that henceforward nothing under 6 per cent. at 95 would be considered, was but a repetition of what had been said unofficially before the tenders were opened. Five representatives of American banking groups did tender, but the nearest being one of eighty million gold at 6 per cent. interest, and an issue price of 92. It is, therefore, safe to assume that nothing further will be done in the direction of seeking a foreign loan until the presidential change due on October 12th has been effected, and Dr Alvear has selected his cabinet ministers. Now that this gentleman

is actually *en route* for Argentina, there is much speculation as to who will accept the various portfolios, more especially that of the Ministry of Finance. It implies the immediate discharge of an almost Augean task in the shape of bringing the floating debt within measurable limits of control, and, to be successful, the minister must be strong enough to over-ride all parochial restrictions, and even party considerations, at need. Among the names mentioned for this post, that of the Argentine Ambassador to Washington, Dr Tomas le Breton, is at least probable. It has also been suggested that he would be best fitted to the Ministry of Agriculture, apparently because the National Petroleum Department comes under this section of the cabinet. Yet though it is clear that many reforms are overdue in connection with the extraction and marketing of the national oil wealth, the problems there presented are not so many, or so far-reaching, as those which must confront a capable and conscientious controller of the *res publica* during the next few years of Argentine development.

A fortnight after the abortive loan before mentioned news was received of a small private transaction sanctioned by H.E. President Irigoyen and his Ministers on behalf of the State railways. The British engineering house of Sir William Arroll and Co., Limited, advance £2,000,000 for 20 years at 6 per cent., free of all charges. It, however, reserves the right of supplying 50 per cent. of the amount named in goods, provided that its terms and prices are found satisfactory when tenders are sought by the department named. Even so, the offer is decidedly the best that Argentina has received for many a day, and it is to be hoped that Congress will place no difficulty in the way of sanctioning the business. For at present it is perforce *ad referendum* to that body, as is the purchase of the Central Chubut Railway for \$1,950,000 gold. This is a highly satisfactory figure for the owners of what, as it stands, is not an over-flourishing line, 105 kilometres long. Its value to the Argentine Government lies in the link with the coast at Port Madryn that it will provide for the internal connections of the Patagonian system—northern section. Payment will be spread over a period of two years from the signature of the contract, with \$487,500 gold in cash, and the balance at 12, 18, and 24 months, with interest at 6 per cent. Reverting to the subject of loans, it is interesting to mention the proposed formation of a consortium of Argentine banks, ostensibly designed to free this Republic from dependence on external accommodation. As yet this ideal is somewhat too vast for Argentine banking to be able to attain, especially having in view the fact that if the banks were to find for the Government all the funds whereof it stands in need, the general commerce of the Republic would be so severely handicapped as to be in sore straits for ready-money facilities. It is much more probable that what is actually in preparation is a workable scheme for discounting Treasury bills on a fairly large scale, until such time as the new President and his Cabinet have been able to treat the Argentine's national finance as a whole. There is a plethora of deposit funds in the Argentine banks to-day, and these latter would be only too glad to have them, the ability to encash such paper at will, and without loss, should the general situation make such a course advisable. Hitherto the Argentine banks have taken up these Treasury bills fairly freely, relying upon the Banco de la Nacion to rediscount them at need, but there is reason to believe that this latter establishment is feeling that its direct and indirect credits to the Government are gradually becoming larger than is altogether compatible with a thoroughly liquid position. The crisis in the cattle trade, though not quite as acute as it was a couple of months ago, still means the locking up of large sums in loans to big breeders, loans which must perforce be renewed either wholly or in part, and that without much higgling as to terms, if a catastrophe is to be averted.

What one is inclined to regard as the most interesting thing about the talked-of consortium is the proof which it affords of the ever-increasing tendency to draw a wide division between Argentine and foreign banking operations in the Republic; and this view is strengthened by the recent introduction of a so-called "organic" banking law, designed to regulate the general conduct of bank-

ing business in Argentina. Brought forward by a Cordoba deputy, Dr Arturo M. Bas, the Bill which has just been laid before Congress consists of 53 articles, covering the authorisation, administration, inspection, and liquidation of banks established in the Republic, both as Argentine concerns and as branches of foreign institutions. Among other items, it provides for the creation of local boards, consisting of a president and four members as a minimum. Half the board is to be composed of Argentines, and special attention is paid to the question of reciprocal treatment by other countries whose nationals may seek to establish banking offices in this Republic. Broadly speaking, one may say that the proposals are more patently aimed against the American institutions now working in this market, but at the same time, should Congress discuss and pass the Bill, it would undoubtedly mean a change of method, and to some extent of direction, in the case of other foreign banks here established. A pointer in the same direction is the recent emphasis laid by the Government on the need for early despatch of the Bill which is to grant pensions and annuities to bank clerks and their dependents. The Executive Power, after making a fairly obvious allusion to the abortive bank clerks' strike of 1920, emphasises the fact that banking is a public function, and that those who perform its manifold duties should therefore be treated in this matter similarly to other public servants. Reduced to its simplest terms, the measure will mean that bank employees must pay 5 per cent. and the banks 8 per cent. on the salary bill, the funds so raised being administered by a committee which is partly built up by ex-officio members and partly through election. While it may come as a boon to the clerks in a few small institutions, to the great majority of bank workers it offers little more than is offered by the private pensions funds of the banks themselves; less, indeed, when one takes into account the fact that as a rule the latter do not call for a contribution from members of the staff. There is, however, one advantage from the employee's point of view, namely, his ability to change employment without thereby forfeiting pension rights accrued through years of service. Better terms or a more convenient position will no longer have to be weighed against past employment, since the fund applies to all banking service; but such cases are not likely to be numerous, changes being as a rule confined to men of salient qualities or particular gifts. Here, as elsewhere, the good man fetches a good price, hence any tendency to change can always be countered, if deemed advisable, by improved remuneration. Indeed, while the exceptional man may benefit, the rank and file are not likely to be much better off in the long run, since it is reasonable to suppose that the immediate addition of 8 per cent. all round to salaries in the shape of a pension contribution will be automatically set off by a corresponding diminution of the sums annually apportioned to increases of pay.

Notwithstanding a natural anxiety over the commercial outlook in Europe, Argentine business in general is showing steady improvement. The news that hides have been put on the United States free list offsets to some extent the duty imposed on wool, while cereals, despite unfavourable weather conditions, have been moving freely. Wheat is weaker at \$11.70 Arg. paper p. 100 kilos, shipments to date reaching 3,058,000 tons, as against 1,700,000 tons last year. Maize shipments are backward, owing to abnormally warm, moist weather, which has rendered artificial drying necessary to condition even the relatively small quantities that have been shipped, a million and a quarter tons, as against 2,817,000 tons last year. Exchange is seriously preoccupying those engaged in export to the Continent. For the moment Germany is out of the question, save on the basis of contracts in dollars or sterling, and both francs and lire are depreciating faster than is commensurate with sound business dealings. Italian shipments hither are naturally benefited, but the small advantage there gained is more than offset by the doubt concerning export payments, and the threat of diminished importation both by France and Italy. Sterling remains fairly constant at a premium of 6 per cent. reckoned in Argentine currency, while the U.S. dollar, at 121 to the \$100 Arg. gold, is at 18 per cent. above par. Freights homeward have again been seriously affected by damp weather, and while ships can

for o.c., September cancelling, at 22s, San U.K./Cont., the parcel rate is down once more 6d for U.K. and French ports, with 15s to 6d for U.K. and 11s 6d to German ports. It must, however, be borne in mind that a fortnight of fine dry weather would materially improve these last quotations, save in the case of Hamburg, which is reported heavily unfavourable conditions, have been moving freely.

SWEDEN. — RUSSIAN AGREEMENT — RAILWAY STRIKE — TRADE CONDITIONS AND FIGURES — GOTHENBURG HARBOUR.

(FROM OUR CORRESPONDENT).

STOCKHOLM, September 9.

RUMOURS have been current of late regarding the resumption of negotiations between Sweden and the Soviet for a new trade agreement. Nothing official has been published in this matter, and the reports are more or less hearsay. It is understood, however, that the Soviet is very anxious to come to terms with Sweden, and is prepared to make concessions on points which previously have been stubbornly contested. On the other hand, the same anxiety does not manifest itself on the Swedish side; at least, not amongst Swedish business men. If, however, the Soviet is agreeable to guarantee to prevent the spread of red propaganda, the main obstacle for a treaty should be removed, and generally Sweden should then have no objections to an agreement with Bolshevik Russia.

For some time there has been a strike on the private railways on the question of wages. The agreement between the private railway companies and their employees expired on January 1st last, and ever since the wages have been paid on a basis, decided upon by the companies, according to which the war-bonus should follow the official index. Now, however, the railwaymen find the drop in their pay too heavy, and demand another basis; but as this would have involved the private railways in about 10 million crowns higher expenditure per annum, they refused, and the men answered with a strike. Of course, at present, when both the industry and the general public are most urgently claiming reduced freights and fares, it is not very likely that higher pay will be granted. How long the strike may last is difficult to say, as it seems as if none of the parties concerned will give in. The railwaymen's union declares that they will be able to keep on almost any length of time, as the strikers very well might be supported financially by funds and payments by the men not on strike. The outlook for a strike among the farm workers seemed pending, and would have been very disastrous under present circumstances, with the very late crop this year, owing to unfavourable weather; but there has been an agreement. There has been considerable anxiety for the crop, which has been suffering from constant rain, but the last week with its sunny weather has brightened the situation very much indeed.

The general outlook in trade and industry is not particularly bright, although there is some improvement. The textile industry seems to be best off, working at full speed. In the iron industry the outlook is rather gloomy, and the output at the iron and steel works is only about one-third to one-half of the normal production. New orders have recently been booked from various Government departments by different works, which have been possible, thanks to a sum of 25 million crowns which was granted by Parliament for helping the industry. A part of the money was raised out of the unemployment funds. The monetary situation, however, might be called brighter, even if private capital is scarce; but the output for our standard articles (iron-ore, timber, paper, and wood pulp) has been very good, and timber sales are proceeding favourably, the sold quantity now being about 675,000 standards, which is considered very good under present circumstances. The prices obtained might not

have given any great margin for profit, but stocks have been converted into ready cash all the same. It is reported that prices for craft paper are to be raised by 10 per cent., and it is expected the other kinds will follow.

The export figures for the first half-year of 1922, compared with those for last year, are much better. For the first six months of 1922 there was an import surplus of 103 million crowns, while the figure for the same period last year was 157 million crowns. (For the same period of 1913 the import surplus was 34.6 million crowns.) For June, 1922, there is an export surplus of 11.1 million crowns, the total value of exports being 104.2 million crowns, and that of imports 93.1 million crowns. Exports during June, 1921, were 68.5 million crowns, and imports 93.2 million crowns, thus giving an import surplus of 24.7 million crowns. The same figures for 1913 were: Imports 62.1, exports 73.4, and export surplus 11.3 millions.

It was a remarkable event in the history of the harbour of Gothenburg last week, when the free harbour was solemnly opened by the Crown Prince. It is expected that this harbour will be a very prominent feature in the transit-traffic, not only for the various parts of Sweden, but also in the transit-traffic with the States all round the Baltic. Gothenburg, which is the biggest and most modern harbour in Sweden, has regular connection with almost every big port in Europe, and with many all over the world. This free harbour, which, in all, has cost 30 million crowns, is meant to be extended if circumstances demand it. The total length of the quays is now 3,700 feet, and the basin has an area of 25 acres, the depth of water being 30 feet. The railway lines at the free harbour have a length of 40,000 feet, of which 16,000 feet are alongside the quays and sheds. There are 23 electric cranes.

NORWAY — AGREEMENT WITH SPAIN — REDUCED BANK RATE — EMPLOYMENT — COST OF LIVING.

(FROM OUR CHRISTIANIA CORRESPONDENT.)

THE political crisis mentioned in my last letter, caused by the tariff differences with Spain, was arranged through a compromise, whereby the present Government, for the moment, at any rate, remain in power. The Storting decided by a great majority that the arrangement made by the Government with Spain, according to which a quantity of 500,000 litres of wine of a certain strength was to be annually imported from Spain, was to be ratified, but only as a provisional measure. The Government as soon as possible (which was understood to mean in time for the result to be put before the Storting at the autumn session this year) was to resume negotiations with Spain as to an ultimate agreement, based either on a fixed limited quantity of wine, or on an unrestricted quantity.

The Bergen Ships' Hypothek Bank, which was established 3-4 years ago, but which has postponed operations on account of the abnormal times, is now going to work in earnest. It has just placed with a couple of our largest banks a loan for 10 millions kroner at 6 per cent. at par. Out of this amount, five millions were offered for public subscription and over-subscribed three-fold. Since the official discount was reduced recently from 5½ to 5 per cent., the demand for presumably safe investments has increased. The position of the Bank of Norway, though not particularly easy, was considered good enough to warrant this reduction, which was hailed with pleasure by the trading community.

The number of unemployed workmen has been steadily decreasing in the course of the summer, and is not at present strikingly high. The future is, however, looked forward to with some apprehension, especially since the general state of the world trade is so unsatisfactory. The cost of living has increased again, but only to a small degree, and the increase most likely is seasonal, and may be expected to go somewhat down again in the autumn.

Letters to the Editor.

AMERICA'S CLAIM—OUR COUNTER-CLAIM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Doubtless, according to the strict letter of our engagements, the money borrowed from the U.S. to sustain a war in which both were, in fact, equally interested, must, as *The Times* seems rather in a hurry to get settled, be repaid in full. On the other hand, war conditions still prevail—at least on the home front—and the so-called moneyed-classes, which include numbers of small investors in house property, who are prevented by war legislation from meeting the diminished value of our currency by raising their rents, are already taxed to the extreme of endurance. It is largely on their shoulders that this American tribute will be laid, and if, owing to the abnormality of the times, their clear right to their property is for good and sufficient reasons suspended, may they not, in common fairness, claim similar indulgence from a rich and flourishing creditor?

Anything meaner than the American attitude in this matter would be difficult to imagine. The enterprise we were engaged in was a joint one, and in the final settlement the contributions of the associated Powers, whether in treasure or blood, should be fairly estimated and allowed for. Though not so direct, the menace to American honour and independence was as real as to our own. The Americans knew this, otherwise they would not have joined us; as, indeed, they have frequently admitted. In the result, reckoned solely in money, each of the great European Powers contributed more than America, while, on the other hand, American nationals made enormous profits at our expense. Reckoned in human life, the 50,000 Americans, who bravely laid down their lives to save civilisation, are but a small, though a highly honourable band compared with the 3,000,000—the flower of European manhood—contributed by France, Italy, and England—their debtors! American farms and homesteads were not ravaged; their factories were not stripped of machinery; their women and children went safely to church. Had we not stood up at once against this world-danger, Kentucky and Kansas, by this time, might have shared the fate of Belgium. From this we saved them, and in return they try to obtain a monetary international advantage that will endure for a century—from which England at least, with her industrials working at low pressure, can never recover.

Let us, however, look back a little. Fifteen years ago, when the U.S. were at war with Spain, the fact—well established—that our Navy was ready to support the weak American fleet, had Germany, as she was anxious to do, espoused the cause of her European sister, saved our American cousins from a humiliating defeat—a far more important matter, historically and imperially, than the repayment of this loan. On the other hand, this action on our part inflamed the Kaiser's anger against us, as it was bound to do, and unquestionably we should never have given that support except on a clear understanding that similar assistance to us would be forthcoming in case of need. It seems safe to aver that, had the case been reversed, English statesmen, who, on fit occasion, are not too proud to fight, and have the instincts of gentlemen, would have felt this and not left their preserver to flounder on in a bog of blood and mire until the psychological moment arrived when intervention might be most profitable.

After this, for him, humiliating experience, the Kaiser felt that we stood between him and that world-empire he might otherwise aspire to, and we may very safely assume that it was largely to escape from this tutelage that, when he thought us so disorganised by the Socialistic and Separatist tendencies of Mr Asquith's Administration as to be unable to act rapidly, he made the plunge which cost him his throne, but which was almost successful and would have been entirely so but for the preparedness and heroism of the French, whom it is now the ignorant servile fashion of time-serving journalists to abuse.

For the first time in our history, during the late war, the majority of our soldiers were withdrawn from com-

mercial and industrial pursuits. They were men in the prime of life, and the half-million who fell represent a capital loss to the nation far in excess of the American claim. No court of international equity could possibly rule out so pertinent a consideration when striking a balance. Would it not be possible to constitute such a court composed of the leading Jurists and Divines in Italy, England, France, and Belgium? From such a court a moral sanction at least might be expected to withhold payments to America, at any rate until the trade balance is in our favour and the dollar value of sterling at par.

In conclusion, perhaps it may not be entirely beside the mark to inquire what use the Americans propose to make of the tributary millions they expect to levy upon us. Apparently the money will be devoted to building up a commercial fleet to compete with ours all over the world, and deprive us of half our carrying trade.

It is, of course, to the interest of England to set a high example of commercial and financial integrity, but this does not connote a disregard of the circumstances under which a covenant was exacted and the effect of its enforcement. Even the terrible law-courts of the middle ages refused to sanction removal of the merchant's flesh when it was pointed out that his life-blood would follow. We are able to pay the interest on War Loan and kindred obligations, because it is, as it were, paying from one pocket to another. To pay even the seventh part of such a sum to a foreign community, with the trade balance against us, is a very different matter.—I am, yours faithfully,

PORTIA.

London, September 2nd.

Books and Publications.

THE STRUCTURE OF FRENCH FINANCE.*

THIS little book has the merits and the defects of an "official" publication. It is not official, but if the French Finance Ministry had prepared a statement of its own position, admirably fortified by an imposing array of irrefutable statistics, it might have come out very much like this; the more effective for U.S. consumption in that there is no propaganda in it. There is no propaganda; there is something more subtly effective in the invincibly optimistic view of France's financial position which is everywhere taken. Mr Fisk's criticisms are sparing: he does remark that the Budget, being prepared very early, is often little more than a sketch of what actually happens in the way of expenditure; that the "automatic" method of estimating based "as to receipts on the actual results of the second year preceding, and as to expenses upon the appropriations made for the year preceding that for which the Budget is being prepared," is most unsatisfactory; that there is great temptation to make a budget which reads well; and that hardly has a budget law been enacted than the process of "amendment" begins—by way of supplementary appropriations. "There is, in fact," said an English writer so long ago as 1877—and Mr Fisk quotes the remark as still applicable—"an uninterrupted program of expenditure in each successive budget." But, in general, he accepts official figures in the official spirit.

A discussion of French public finance in realist terms is, at the moment, very difficult; so long as Reparations payments, of unspecified amount, complicate it, indeed impossible. Mr Fisk has made immense efforts to get together figures that will, at all events, make the debt position clear, and no part of his useful little book is more useful than this. French Governments in the last fifty years have not succeeded in inspiring themselves with the salutary theory of Napoleon, who declared loans to be "immoral" and disastrous, since borrowing "insensibly undermines the edifice of State, and exposes one generation to the curses of the next." When war broke out the French National Debt stood at about 34,000 million francs, of which two-thirds had been

* "French Public Finance." By Harvey E. Fisk. (New York) Bankers' Trust Company.

incurred on war purposes of various kinds. France financed the war to the extent of only 18.50 per cent. from taxation and other revenue collections, to 65.17 per cent. from borrowing at home, and to 16.33 per cent. from borrowing abroad, and, according to official figures, at the end of 1921 the Debt stood (at exchange par) at 267,743 million francs (on currency basis well over 300,000 millions). This makes unreal all comparisons of budgetary revenues and expenditures—e.g., that for 1920, which shows a deficit of 39,735 million francs, excluding receipts and payments on debt account.

It should be mentioned that Mr Fisk's volume contains a mass of material nowhere else accessible in anything like so convenient a form. He describes the machinery of local as well as that of central finance, and gives an excellently clear account of the banking system. Moreover, it is possible to understand from his pages what the system of taxation is, how the income-tax is worked, and who pays it.

CANADA AND BRITISH GOODS.*

This book will undoubtedly be of great assistance to business men who contemplate extending their activities to Canada, and, indeed, there is much information in it which would warrant careful study by firms already transacting business with the Dominion. It is an exhaustive summary of Canadian conditions, and the facts contained in it must be the result of careful and intelligent study of the resources and potentialities of the Dominion. The statistics with which the book abounds are well and carefully compiled, and enable a sound view to be formed of the trend of trade throughout Canada.

The author writes in an optimistic vein, and he is doubtless on the whole fully justified in doing so. At the same time, it must not be forgotten that great as are the potentialities of Canada, that country is at present suffering from certain disadvantages. In the first place, the crying need of Canada is for a greater population. The last census showed that the present population is in the neighbourhood of nine million people, and that the increase in population is not proceeding at a satisfactory rate. A country like Canada, which is in a comparatively early state of development, must depend for its future prosperity upon attracting a large volume of immigration. The Canadians very rightly are not prepared to accept immigrants unless they come from races and classes which in Canadian opinion would contribute to the strength of the country, and there is no doubt that, even with the prevalent unemployment in Europe, there is a considerable difficulty in attracting the right class of immigrant in large numbers. In the second place, Canada is suffering from a mistaken railway policy in the past. A country with nine million inhabitants did not show great economic wisdom in constructing three trans-continental railways. The railways which have been taken over by the Canadian Government are at present operating at a heavy loss, and until the population of the country is increased, it is difficult to see how they can be placed upon a self-supporting basis. Largely owing to the results of Canadian railway policy, allied to the general conditions arising out of the war, Canada's national finances are in an unsatisfactory condition in spite of the heavy rate of taxation which prevails. At the same time, in spite of these disadvantages, there can be no doubt that eventually the Dominion must develop into a great country. Time is needed for this, but the eventual prosperity of Canada must be considered as assured, and great opportunities should await British trade in that country, in spite of the very strong competition which exists from the U.S. This competition is only natural in view of the similarity of conditions in the two countries and the intimate knowledge which it is so easy for the American to acquire of Canadian conditions. Although strong competition must always be expected from the States and from the rapidly growing industries of Canada herself, which may in certain products render it very difficult for Great Britain to compete, many of the staple products of this country will undoubtedly continue to find a ready market in Canada. In other lines

* "Canada as a Market for British Goods." (London) Selwyn and Blount. 7s 6d net.

it may be necessary either to abandon the market or fulfil its requirements by manufacturing in Canada itself, preferably in conjunction with Canadian interests. There are many possibilities in this direction, and it would appear thoroughly desirable that British interests should participate in Canadian industrial development rather than to leave the initiative in this matter to the United States, which at the present moment is actively engaged in establishing branch factories throughout the manufacturing districts of the Dominion.

Both as a market for British goods and as a territory in which British capital can be employed for development work, Canada has great possibilities, and in view of the necessity for developing inter-Imperial trade and for encouraging business in countries which are free from political, social, and exchange difficulties, the publication of this book should be welcomed. It is to be hoped that those who read it will be sufficiently interested to consider the question of Canadian trade very seriously, and if possible to translate their interest into visiting the country themselves. This is a point upon which too much importance cannot be laid, since Canada is overrun by business visitors from America, whereas the British business man is comparatively rarely seen in the Dominion.

FOR NEXT SUMMER.*

This is a most engaging little guide book, resembling those issued by railway companies and tourist agencies, but much more thorough, and the introduction is far more informative and readable than those of most guides of a more formal and elaborate type. The geology, the climate, the history from the Viking period, the constitution, the educational and social conditions, the great personages in Swedish science and literature, the national sports, the economic life, the industries, are all sketched effectively, and the illustrations are charming. It should induce those who do not know the country to visit it as soon as they can.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 20.	September 21.

BUSINESS in the Stock Exchange markets has been handicapped by the outbreak of war in the Near East. At first it was thought that war between Turkey and Greece would be a more or less local and short-lived affair, but as the aspect of affairs became more threatening, and other countries looked like being drawn into a struggle, the Stock Exchange markets had perforce to take notice of what was going on. The effect has been to bring about a mild depression over most parts of the Stock Exchange. Coupled with the expectation of a rise in the Bank rate and the approach of the end-September settlement, the Near-East problem unsettled the minds of men and markets, with the result that orders fell away and prices tended to decline.

On the news that the Bank rate was to be left at 3 per cent., the War Loan marked 100 several times, but later in the same day the price dwindled on a fresh outbreak of selling. Conversion 3½ per cents. are also coming to market in unexpected

* "A Book About Sweden." Published by the Swedish Traffic Association. Sold by A. B. Nordiska, Bokhandeln, Stockholm.

amounts, and this selling, which causes dullness in the Consol market, affects the House as a whole.

Greek bonds are lower as a matter of course, while Turkish Unified, the speculative stock of this group, has been moving in accordance with the news from day to day. Chinese bonds are heavy, partly in consequence of the further postponement of interest payments on the Chinese "Vickers" notes, partly on a somewhat disquieting speech made in the early part of the week on the financial position of China by Dr Wellington Koo. German bonds have varied within narrow limits, and French Government bonds moved erratically; French railway issues have weakened. Mexicans started to go back after their vivid rise of last week. Peruvian Corporation preference was hoisted on a variety of vague rumours, none of which seemed to be very reliable. A little improvement took place in Russians, both the Government and Government-guaranteed railway bonds, on the hopes of a renewal of trade between the countries, resulting from the agreement reached between the Russo-Asiatic Consolidated Company and the Soviet Government.

The only feature in the Home Railway market is the strength of Undergrounds. Metropolitans are being bought by people who talk of an alliance of the company with the Great Western. Districts are going up, in consequence of optimistic dividend anticipations. The Underground Electric Railways issues are a good, because of the expectation that, in the near future, a scheme will be published for rearrangement of the company's capital. Of the steam stocks, three of the principal Southern descriptions, Brighton, South-Eastern, and South-Western deferred stocks, advanced in consequence of the anticipation that the grouping plans will be made known within the course of the next week or so. The heavy stocks, however, are dull, and the general tendency of this market, apart from the exceptions just mentioned, is easier.

Mexican Rails remain tolerably cheerful, and in the Argentine railway market a sharp rise in Buenos Ayres and Pacific ordinary is linked to hopes that Lord St Davids will have a pleasant tale to tell of his recent sojourn in the Argentine Republic, and of the prospects for the line of which he is chairman. Cordoba Centrals went up with a rush, on statements that the Argentine Government may take over the line, but in the absence of confirmation prices reacted from the top. Leopoldinas spurred sharply when the news became known that the Brazilian Government had ratified the increased freight charges proposed by the railway. But the rise was followed by the usual reaction.

Rubber shares are better, thanks to the Rubber Growers' Association having requested the Colonial Office Commission to take steps for restriction of output in Malaya, irrespective of what the Dutch Government may do in Java and other Dutch colonies. Oil shares moved upwards as a whole, but the dullness which developed in the House later in the week was not without effect. Royal Dutch have been notably strong. Textiles are easier, on sales by people of whom some had apparently bought too many shares at the beginning of the account. Jutes are better on the week. The shipping market is inclined to be lower, P. and O. going back to 300. A few small rises occurred in the insurance market, but the banking list is placid as ever. Electric lighting shares again advanced, gas stocks being slightly lower. The catering group is firm. Marconis have enjoyed fair activity, which, however, left little change in prices on balance.

Paris has been selling Kaffir shares, and with no fresh support from the Cape prices gave way all along the line. De Beers, after being 13½, fell to 13 sellers before a slight recovery ensued. The market developed more backbone on Thursday afternoon. Rhodesians drooped, in company with Kaffirs. Broken Hill shares are not quite so good, Colonial buying orders having fallen off. Russo-Asiatics were a lively market, advancing sharply on the news of the arrangement concluded by the chairman with M. Krassin. This caused the various other Russians to harden, though cautious folk were inclined to ask whether the rise were not somewhat rapid. None of the tin shares show any changes worth mentioning. In the copper list, Rio Tintos, after a smart rise, went back on selling by French operators. Mexico Mines of El Oro went ahead on rumours of favourable developments on the property.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

1914.....172,585,827	

General Real Estates Investment and Trust, Limited.—Authorised capital £3,500,000, divided into 500,000 ordinary shares, all of £1 each. The preference and 3,000,000 ordinary shares, all of £1 each. The preference and paid-up capital is stated as £2,711,003. This is an issue of 500,000 5 per cent. cumulative preference and 250,000 ordinary shares at par. The company has been formed mainly to acquire a portion of the Howard de Walden London estates. The consideration is the discharge of a mortgage of £364,456 and the payment of £3,999,904, of which £1,289,904 is in cash. The net revenue of the company for the year ended September 30, 1921, is given as £74,141. Surplus assets are valued at £2,220,163. Freehold property "at cost" figures at £2,827,127, but no independent surveyor's report appears in the prospectus to the effect that this is a reasonable market value to place upon the property. If the shares offered are all subscribed, the issued capital will apparently be £3,461,003. Although the dividends and capital for the preference shares appear to be at present well covered, the surplus revenue available for ordinary shares is by no means ample. Nor do we find any provision in the prospectus for safeguarding preference shareholders against prior charges.

African Theatres, Limited.—Authorised capital £500,000, divided into 400,000 ordinary shares and 10,000 founders' shares of £1 each, all of which have been issued. The rights attached to the founders' shares are set out in an announcement made in the Press to comply with the regulations of the Committee of the London Stock Exchange in connection with an application for leave to deal in ordinary shares of the company, and investors, before purchasing this latter type of share, should examine carefully these rights. The company was formed in March, 1921, to acquire a theatrical and cinema business carried on in South Africa. A balance-sheet is published, and profits of the old undertaking are shown from 1913. It should be noticed, however, that these profits are shown before charging directors' fees and depreciation. A decidedly speculative concern.

British Cellulose.—We are informed that the Cellulose Holdings and Investment Company, Limited, will shortly issue £500,000 7 per cent. participating first mortgage debenture stock. It is stated that no public issue will be made, and that the debenture stock will be offered to the shareholders of the British Cellulose and Chemical Manufacturing Company, Limited. In addition to the fixed return of 7 per cent., the debenture stock will be entitled to one-third of the profits of the Holding and Investment Company.

ACTIVE SECURITIES.

CLAYTON WAGONS.—The directors greatly regret that, having regard to a loss of not less than £25,000, brought about by the engineering dispute, and also because of the necessity of writing down stock values, it is not possible to pay dividends for the year on the preference and ordinary share capital.

LAKE SUPERIOR CORPORATION.—Directors regret that results do not permit payment of interest on income bonds.

SELFRIDGE AND CO., LIMITED.—The half-yearly dividends will be paid on October 1, 1922, on the 6 per cent. (free of income-tax) cumulative preference shares, and 10 per cent. cumulative preferred ordinary shares.

SOUTH AUSTRALIAN COMPANY.—A distribution of assets of £35 per share will be made to those shareholders who were registered in the company's books on August 31, 1922, payable on September 26, 1922.

Orders for the publication in these columns of the reports of the Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

THE AUSTRALIAN BANK OF COMMERCE, LIMITED.

FURTHER EXPANSION IN BANK'S FIGURES.

GROWING POPULARITY OF THE BANK.

LEGISLATIVE INTERFERENCE WITH TRADE AND AGRICULTURE.

The annual general meeting of shareholders was held at the Banking House, George and King streets, Sydney, on Tuesday, July 25th, Mr F. N. Yarwood, the deputy-chairman of directors, presiding.

In moving the adoption of the report and balance-sheet for the year ended June 30, 1922, the Chairman said: Gentlemen,—The balance-sheet presented to you to-day shows the position as at June 30th last, with profit and loss account for the year's operations ended same date. The figures, the board are pleased to say, again show further expansion—the total, as you will see, now exceeds 13½ millions, an increase of some £456,000 over what it was twelve months ago.

On the liabilities side of the balance-sheet the figures call for little, if any, comment—beyond the fact that they show the growing popularity of the bank and its increasing usefulness to the public generally. On the assets side, the more liquid assets are on this occasion £4,631,671, an increase on the figures of the previous year of some £454,289.

This total figures out at 8s 11d in the £ of our current liabilities—a very strong and satisfactory position.

The bills discounted, loans, advances, &c., stand at some £8,172,000, a small advance on last year, but the tendency of lower values throughout trade, and the reduction and realisation of stocks that has been very wisely the general policy of the trading community, have naturally caused a decline in individual overdrafts all round.

EXPORTS AND IMPORTS.

Briefly stated, commerce in Australia, speaking broadly, continues in a satisfactory condition, due to the exercise of the good common-sense of our trading community. The financial pressure that we experienced for a brief period some two years ago, in consequence of imports being for a time largely in excess of our exports, has happily passed away without any very serious trouble arising. The figures are interesting and speak for themselves.

In 1920-21 Australian imports were 163 millions.

Exports .. 131

A balance against us of .. 32

while in 1921-22 the figures for the 12 months are:—

Exports .. 127 millions.

Imports .. 100

A balance in our favour of .. 27

Australia has need to export more than she imports, in order to pay the interest on her overseas debts and other necessary items. During this last year this has been done to a satisfactory extent.

BURDEN OF TAXATION.

Our profit and loss account on this occasion calls for little comment. Our total profits have been £235,906, as against £231,798 a year ago, reduced on this occasion by £45,061 paid in taxation to State and Federal Governments. During the last twelve months in taxation we have been called upon for £7,749 more than in 1921. It is sincerely to be hoped in the best interests of the community generally that the last of increase in taxation has been seen for many years ahead. Reduction is what is badly—very badly—wanted, and when the whole community realises that the present taxation is depleting any accumulations for development purposes—both wage-earner and investor will be able to join hands in insisting upon economies and reduction in Government expenditure, the gravity and importance of which is recognised by our present State Government.

Our shareholders will from these figures be able to see for themselves that the present position is, that the Governments, under whose control our operations happen to come, are taking in taxation from us an amount equal to 50 per cent. of the dividends which we consider it reasonable and prudent to distribute.

GRADUATED LAND TAX

The graduated land tax charged us is a mistake—it cripples our development and has led to the adoption of a policy by us with buildings which has been anything but a benefit to municipalities.

NET PROFITS AND ALLOCATIONS.

Our net profits for the year, after paying taxation and interest on inscribed deposits, amounted to £137,195. Six months ago we paid an interim dividend at the rate of 7 per cent. per annum, and propose for your consideration to-day to make a similar distribution, which will make the full dividend for the year 7 per cent., and this will take some .. £84,000

We suggest the transfer to reserve of .. 40,000

And to write off premises .. 10,000

Making a total of .. £134,000

And this will leave .. £3,195

To be added to the balance in profit and loss already .. 39,391

and thereby raise the carry forward to .. £33,586

This is the first occasion on which we have been able to distribute the full 7 per cent. for a year's working, and we trust this will be satisfactory to you.

BRANCHES AND RECEIVING OFFICES.

The following are the figures of branches and receiving offices we have been able to add for the purpose of extending this bank's activities during the past three years:—

1920 ..	8	Branches	8	Receiving Offices
1921 ..	3	"	2	"
1922 ..	2	"	1	"
	13		11	

These facilities are a convenience to the public, and also give us opportunities to offer openings to the younger deserving officers who show the necessary ability to manage and conduct the bank's business. Our development in this direction for the past two years unfortunately is less than usual—due to increased taxation demands and other causes over which the management has no control.

AMALGAMATION RUMOURS.

The tendency of the times undoubtedly is to bring about amalgamation of banking institutions, with a view to reducing expenses if possible—and as long as the public convenience does not suffer in consequence no one can complain—but shareholders will be wise in these days to beware of rumours that are sometimes

have to be renewed or otherwise dealt with by both this and the Queensland States within the very near future:—

	N.S.W.	Queensland.
1922-23	10,667,057	2,828,750
1924	6,901,009	13,140,634
1925	37,735,297	12,007,200
	£55,303,363	£27,976,584

To renew these loans, must as far as one can judge to-day, entail an increase in the present interest paid thereon.

PACIFIC TRADE.

The depression that has prevailed lately has given rise to a certain amount of public discussion here as to what can be done to improve matters and increase employment. That this subject should be fully ventilated is all for good—unfortunately too often the damage done first and the remedy looked for afterwards. As an illustration one has only to mention Australia's unfortunate attitude towards the Pacific trade.

We have always to remember that all trade is a matter of exchange—not exchange in the sense in which the word is used in banking (with bankers exchange is principally a matter of dealing with the difference in values of the goods delivered and those received)—and unless this principle of exchange of products is assisted by labour, and recognised and fostered by our Government authorities (instead of being harassed and penalised as it has been in the recent past)—in the very near future Australia bids fair to cut a very sorry and small figure in the world's affairs.

AUSTRALIA'S MINING AND RURAL INDUSTRIES.

As one sign of the change of opinion on the part of the authorities, New South Wales business men will welcome the proposal for the reduction of stamp duties in this State to the Victorian level, but beyond all this we can only hope that drastic economies of an all-round nature may be effected. The cattle industry in Australia will die out unless we can cut costs to such a point as will make it profitable to go on using the very large area of country we have that is only fit for beef production. At present the Queensland Government is still pursuing the unfortunate policy of carrying out to the letter the retrospective legislation against its lessees which it has been warned is very naturally regarded in all well-informed circles as not in the best interests of the country as a whole.

The following figures for the State of New South Wales will illustrate the need there is here, in the interests of everyone in the community, for every encouragement to be given to increased development of our production and trade:—

	Tons.
Tonnage shipping inwards and outwards in year ending June, 1913—Total.....	16,188,602
Tonnage shipping inwards and outwards in year ending June, 1922—Total.....	12,742,991
A decline of	3,445,611
The population employed in rural occupations	
In 1913 numbered.....	151,632
In 1921 numbered.....	136,283
A decline of	15,349
while the percentage of population in rural occupations—	
In 1913 was	8 per cent.
In 1921 it had declined to	6 per cent.
The number of miners employed—	
In 1913 was	38,880
In 1921 was	29,701
A decline of	9,179
or 23 per cent. in nine years.	

The rot in employment in mining has been very pronounced; it started in 1907 and has been almost continuous since.

These declines in numbers engaged in rural occupations and mining are all the more serious when one remembers that in the same time the public debt (the interest on which has to be provided out of the value of the production of the State) has increased as under:—

In 1913 it was 106 millions.
In 1921 it was 164 millions,
an increase of 55 per cent.

All these figures go to show the very grave need there is for less legislative interference, reduction and simplification of taxation, and last, but not least, increased population, while more care must be taken that our railways and civil services do not become an "old man of the sea" on the shoulders of the trade and production of the country.

POSITION OF EUROPE.

In conclusion, we should like to add a few words on the position in Europe. It is a matter of regret to us all that the recent Genoa and Hague Conferences did not end more satisfactorily for the world at large. Unfortunately, America does not yet seem to realise the need there is for her, great and wealthy as she now is, to take a more intimate interest in the settlement of affairs in Europe, without which trade must continue to stagnate in the United States as well as elsewhere. From reports, one gathers that many of the American people are at present of the opinion that they should not become embroiled in the politics of Europe—a short-sighted view, possibly, for a nation of the importance of the United States. It is pleasing, however, to note that lately the purchasing power of Europe is a matter of lively and intelligent interest to him—and that under existing conditions that purchasing power is greatly crippled, and will remain so until remedied. Trade at all times means swapping goods and services, and Europe can only buy from America to an extent commensurate with America's willingness to take goods from Europe. The same thing applies to Australia, and it cannot be too strongly impressed upon public opinion here that the secret of our relief from a "Slough of Despond" of unemployment is to encourage in any and every way possible the development of our country's natural productions and an increase of our population by making land settlement and occupation as profitable as possible to those engaged and investing therein. That so far penalisation of land owning by taxation has failed to attract any increase of investment or ownership is obvious to those who study the facts and statistics.

We can only hope that common sense (said by some cynics to be the rarest of all the senses) will prevail, and that as soon as possible.

A hearty vote of thanks to the chairman, directors, general manager and staff was carried unanimously.

The proceedings then terminated.

J. LYONS AND CO., LIMITED.

SCHEME FOR CONTROL OF STRAND HOTEL, LIMITED, APPROVED

An extraordinary general meeting of J. Lyons and Co., Limited, was held, on the 14th instant, at the Trocadero Restaurant, London, to consider resolutions to increase the capital of the company with a view to purchasing a controlling interest in the Strand Hotel, Limited.

Mr Montague Gluckstein (chairman of the company) presided.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills dated from Monday to Saturday, September 18-September 23, were opened on September 15, 1922, and the total amount applied for was £60,610,000. Tenders for Monday to Saturday bills at £99 8s 1d will receive about 73 per cent. and above in full. The average rate of discount for Treasury bills was £2 7s 1.56d. The amounts allotted were as follows:—In bonds, nil; in bills at 3 months, £45,000,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills, Average Rate.	4½% Treasury Bonds, 1932, Average Price.
June 30.....	(a) 50,000,000	(a) 84,230,000	2 2 11.55	98 4 4.8

Sept. 8.....	(a) 50,000,000	(a) 67,675,000	2 11 3.29	None allotted
Sept. 15.....	(a) 45,000,000	(a) 60,610,000	2 7 1.56	None allotted

(a) Including Treasury Bonds.

Tenders will be received on Friday, September 22, 1922, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £60,000,000. The amount of Treasury Bonds issued will not exceed £10,000,000, but subject to that limit the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

NOTE.—Budget Estimate as in H.C. No. 77 of 1922.

Mr Geo. W. Booth, the secretary, having read the notice calling the meeting,

The Chairman said: Ladies and Gentlemen,—At our last general meeting I indicated to you that suggestions had been made to the effect that the Lyons Company should acquire the large majority, 90 per cent., in fact, of the deferred shares in the Strand Hotel, Limited, as well as the option on the remaining 10 per cent. of those shares, the purchase price to be paid in 10s "B" proportional profit shares, having the same rights, share per share, as the existing proportional profit shares, except for repayment of capital, as to which they would rank as 10s shares. Since that time your board has given the scheme very careful consideration, and terms have been arranged which they think you will agree are highly satisfactory. We invited Sir William Plender—and you will agree, I am sure, that we could not have made a better choice—to act on behalf of the Lyons Company in making a valuation of the Strand Hotel deferred ordinary shares, having regard to the class of shares which it was decided should be issued in exchange. The agreement which is before you for ratification is based on his valuation.

TERMS OF THE AGREEMENT.

It provides for the payment to the vendors of £225,000, which is to be satisfied by the allotment to them of 450,000 fully-paid "B" proportional profit shares of 10s each in exchange for the 4,500 deferred shares in the Strand Hotel, Limited, and the right to purchase at a future date the remaining 500 shares, on terms defined in an existing agreement. It has been pointed out to you, in the circular letter which accompanied the notice of this meeting, that many of your directors are interested as vendors, but the board unanimously and unhesitatingly recommend the scheme to you as a sound business deal. Indeed, judging from the proxies which we have received from shareholders, our proposals appear to enjoy practically unanimous approbation.

ADVANTAGES OF THE SCHEME.

The shares we are acquiring command a virtual control of the Strand Hotel Company. That company is, I think, too well known to you all to need any discourse from me on the very satisfactory results of its past trading, and its position in the hotel world. I need only mention that its potentialities are very great. It has recently acquired, on very favourable terms, a magnificent site in Oxford street, facing Marble Arch, on which a new hotel will be erected, and there are other future developments under consideration which should mean a very profitable expansion of its business.

With regard to the option on the remaining 500 shares, I should like to point out that there is in this a considerable profit to the Lyons Company, as the terms on which those shares can be purchased are very favourable to the purchaser. Those terms are fully set out in the circular letter, and I do not think I need recapitulate them. The option is exercisable on the death of the present holder of the shares, or earlier if the present holder desires to sell the shares. The dividends which have been paid on the Strand Hotel shares during the past five years are also set out in the circular letter which you have all had before you. The effect of the transaction is to give the present holders of these shares approximately the same income as they are now obtaining. If anything, there will be a slight difference in favour of the Lyons Company in this respect.

"PERMANENT COMMUNITY OF INTERESTS."

I should also like to mention briefly a further advantage to this company of the transaction. At present the Lyons Company and the Strand Hotel Company work together, partly because of the similarity in the personnel of the boards, and partly because of the ownership of these deferred ordinary shares in the Strand Hotel Company. Circumstances, however, may change, and the advantages of co-operation might then be lost to this company. The proposed arrangement makes the community of interests permanent. It is, therefore, more than a matter of a profitable investment in the shares of another company. Before I conclude, though it is not quite to the point of this meeting, I think you will like to know that our business continues to be eminently satisfactory. I will now propose the first resolution appearing on the notice of meeting, that is, for the creation of 450,000 "B" proportional profit shares.

Mr J. Balfour, in seconding the resolution, said it would have been a very great danger if the deferred shares in the Hotel Company had ever fallen into alien hands. There were a good many people looking about in England with a view to bringing alien interests into the management of English companies, and he therefore considered that the acquisition of these shares by Lyons and Company was absolutely necessary in the interests of both companies.

The resolution was duly carried, and the agreement was approved.

A vote of thanks to the chairman terminated the proceedings.

Total value of imports of gold	704,520
	831,859

Messrs Samuel Montagu and Co. write on September 14th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £125,592,235, as compared with £125,587,650 last week. There was a delay in the arrival of the African gold this week, owing to the steamer carrying the consignment, "Kinfauns Castle," having stopped to render assistance to the sinking German liner "Hammonia." The moderate amount of gold on offer was taken for New York and India. Gold to the value of \$1,320,000 has arrived in New York from London. The Transvaal gold output for August, 1922, amounted to 752,490 fine ounces, as compared with 730,635 fine ounces for July, 1922, and 711,526 fine ounces for August, 1921. The following were the United Kingdom imports and exports of gold during the month of August, 1922:—

	Imports.	Exports.
	£	£
Netherlands	735	3,782
Belgium	136,750	—
West Africa	—	—
Java and other Dutch Possessions in the Indian Seas	—	—
United States of America	21,387	2,207,242
Mexico	1,867	—
South American Countries	250	—
Rhodesia	175,772	—
Transvaal	3,602,653	—
British India	—	633,051
Straits Settlements	—	12,600
Other Countries	40,368	9,885
	3,979,782	2,887,029

SILVER.

The market has been quiet, and movements in the prices have been narrow. India has again figured as a buyer with China as the source of supply. Business, however, has not been on a large scale, as buying orders have been limited as to price, and sellers seemed willing only to supply the market at a rise. After a return to level prices, cash silver has been again prompt shipment. Supplies from the Continent have been on a small scale, and the trend of the American exchange has not been conducive to offerings from that quarter. Advice has been received from Bombay, dated August 25th, to the effect that from London by bears, who sold much below parity. This bought freely, following which came a desire on the part of the September settlement advanced from Rs.90.3 to Rs.91.8. China banks are said to be heavily overbought in Bombay, and it is believed in that city that in the event of silver being bazaars would resume buying in the London market. It is announced that the Director of the United States Mint purchased 300,000 ounces of silver on September 1st, making the 128,780,106 ounces. The output of the Burma silver mines during the month of July, 1922, is reported as 361,514 ounces.

INDIAN CURRENCY RETURNS.

	Aug. 22, 1922.	Aug. 31, 1922.	Sept. 7, 1922.
Notes in circulation	18,198	18,226	18,142
Silver coin and bullion in India	8,709	8,832	8,795
Gold coin and bullion in India	2,432	2,432	2,432
Gold coin and bullion out of India	6,473	6,378	6,330
Securities (Indian Government)	584	584	585
Securities (British Government)	—	—	—

No silver coinage was reported during the week ending 7th instant. The stock in Shanghai on the 9th instant consisted of about 40,200,000 ounces in sycee, 33,500,000 dollars, and sycee, 33,000,000 dollars, and 4,100 silver bars on the 2nd instant. The Shanghai exchange is quoted at 3s 5 1/2d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

NOTICES.

Barclays Bank, Limited, announce that a branch will be opened on September 18th at 16 and 17 King street, Stroud, Glos., under the management of Mr F. Gittins.

The British, Foreign and Colonial Corporation, Limited, announce that Major Maitland Kersey has resigned from the board, and that Sir John J. Jarvis, Bart., has been appointed to fill the vacancy; also that the Right Hon. the Earl of Mar and Kellie, K.T., has joined the board as local director of the corporation for Scotland, with offices at 8 Charlotte square, Edinburgh.

Lloyds Bank, Limited, announce that a branch has been opened at 290 Holloway road, N. 7, under the management of Mr H. F. Edgar.

London Joint City and Midland Bank, Limited, have opened a new branch at 5 High street, Cheadle, Cheshire, under the management of Mr W. G. Hannah.

The new Anglo-Czechoslovakian Bank, which has opened at 24-28 Lombard street, although strongly backed by British capital, has its capital in Czech crowns (120,000,000). Its head office is in Prague, and the office in Lombard street is, therefore, a branch. The chairman of the bank is Mr Kunes Sonntag, formerly Minister of Finance, and the board includes other well-known Czech and Bohemian industrialists. The British representatives are Mr M. Spencer Smith, Mr Peter Bark, and Sir Henry Strakosch. The new bank takes over all the branches of the former Anglo-Austrian Bank which are in the territory of the new Czechoslovakian Republic, and is, therefore, a going concern, with branches throughout the country and a large and old-established clientèle.

On and after September 18th the business of the Tata Industrial Bank, Limited, will be conducted at 31 Great St Helens, E.C. 3.

THE CHATWOOD SAFE

Successfully withstands seventeen days' attack!

"THE CHATWOOD SAFE CO., LTD.

"BANKERS' ENGINEERS.

"BOLTON,

"ENGLAND.

"BUCHAREST.

"March 19, 1921.

"Gentlemen,

"Enclosed herewith I am forwarding you a photograph representing a band of 7 burglars and a gendarme in charge. These 7 men tried on January 2nd, 1921, to steal the contents of The Chatwood Safe (No. 32404) belonging to the Petroleum Refinery "Helios," Societe Anonyme, in Tirgoviste, Roumania.

"They broke through the wall of the house, took the Safe out and transported it per cart a distance of 9 miles, where they left it for some time buried in the sand and gravel of a river bed.

"They afterwards worked 17 (Seventeen) days on the Safe, exhausting all ordinary devices of safe opening known in this country trying to open it, but beyond succeeding in breaking off the hinges and the handle and severely battering the outside of the safe and the lock, they failed utterly in getting at the contents of the Safe, which, when it was opened, were found in perfect order.

"Yours faithfully,

"E. G. ROXSHALL."

THE NEW CHATWOOD SAFE BOOK recently issued, containing 58 pages and including full particulars of each model of The Chatwood Safe and Strong Room, will convey to you something of the aims as well as achievements of the firm. A Post-card brings a copy gratis.

BANK OF VICTORIA.—The net profit of the Bank of Victoria for
ended June 30, 1922, was £179,930 plus £35,845 brought in,
making £215,775. After placing to officers' provident fund £3,000
the directors recommend a dividend on the preference shares of 9 per
cent. for year, a dividend on ordinary shares of 9 per cent. for year,
and placing to reserve £50,000, carrying forward £29,754.

Mark Lane, Friday Evening.

Weather conditions have been unsettled and showery, but good progress was made with the belated harvest during the past week, and it is to be hoped that work on the land will suffer no further interruption until crops have been safely secured. Official returns estimate the average yield of wheat at 31 bushels to the acre, while the total outturn for England and Wales is given 7,600,000 qrs., compared with 8,700,000 qrs. at corresponding period last year. Barley and oats are expected to show a better yield than anticipated a month ago. Offerings of native wheat was on a larger scale both here and at provincial markets, while quality showed

Total	88,554,663	82,661,405	740,803,626	651,656,527

some improvement. Millers, however, showed little disposition to operate, and prices were again on a lower basis, though steady at the decline. Suitable milling samples ruled at 36s to 39s, with inferior samples at 34s per 504 lbs, free on rail. Imported descriptions moved off slowly, and while prices ruled steady for spot and near at hand lots, forward parcels were slightly dearer. No. 1 Northern Manitoba quoted 51s 6d, ex ship, 55s landed. No. 1 hard winter 48s 3d, Australian 52s 6d, Rosafe 64 lbs 49s, all ex ship, and the latter 50s landed per 496 lbs. The cargo section displayed quiet features, but holders were not pressing, and rates were tolerably steady. Australian, on passage, sold at 50s 3d, and Rosafe 63 lbs arrived at 45s 4½d. Shipments and floating supplies to the United Kingdom show a falling off, but liberal quantities were shipped to Continental ports, while the floating supply was further increased. Exports from India are expected in the near future, but prices so far are out of line with market values here. There is not much improvement in the flour trade, though prices of home milled were advanced by 1s per sack for all grades. London standard straight run now quoted at 41s, 38s per sack, delivered to London bakers. Imported unaltered and still difficult to vend. Manitoba patents range from 38s to 41s, Pacific 36s, and Australian 37s to 38s per 280 lbs, ex store. Millers' offers quiet, and prices moved in buyers' favour. Barley remains steady, but trade does not expand. Chilean quoted 54s to 57s, Australian Chevalier 47s to 55s per 448 lbs, ex store, American malting 48 lbs 30s, Persian 20s, No. 4 Canada Western 32s 6d, all ex ship, per 400 lbs. English new grinding moves off quietly at 37s to 42s per 448 lbs, free on rail. Maize ruled firmer, with fair inquiries. Yellow La Plata, ex ship, quoted 40s 6d, ditto landed 42s 6d, American mixed ex ship 33s 9d, landed 35s 6d. No. 6 with slow support, but rates steady, and a steamer of La Plata, September-October, sold at 34s 9d, and ditto afloat at 37s 9d. Oats steady for native varieties at 23s to 28s per 336 lbs, according to sample, free on rail; imported somewhat irregular. La Plata f.a.q. clipped American 38 lbs, 25s 9d; ditto 36 lbs, 25s, all landed per 320 lbs. Oatmeal in good demand, especially for flaked descriptions.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated September 14th, is as follows:—Pig-iron: There is a very satisfactory demand for and pig-iron of ordinary Cleveland quality and special basic iron, and prices are firmer. In addition to the demand for export, home consumers are very anxious to cover their requirements. No. 3 Cleveland G.M.B. is quoted 92s 6d to 95s per ton. Unfortunately the demand is not so good for East Coast hematite, and whilst the price of mixed numbers is nominally quoted at about 89s, this would be shaded for orders for prompt delivery as stocks in makers' yards are very heavy. Manufactured iron and steel: There is a slight improvement in the demand, but not sufficient to enable works to put in full operation, some being only partly employed, whilst other large works are idle entirely. Prices for home consumption are nominally as follows:—Steel ship plates, £9 10s 6d; steel ship angles, £8 15s; iron bars, £11; steel rails, £9 10s 6d; but these are varied, and no doubt less would be taken for home consumption and export orders. Iron ore: Business is very slow, and prices have a tendency to weaken. Some sellers are holding out for 24s 6d for best Bilbao Rubio c.i.f. Tees, whilst others are prepared to take less for this quality, and still lower for good Mediterranean hematite ores.

Our Sheffield correspondent writes :—More signs of revival in trade are reported, but these mature with disappointing slowness, and the actual increase in trading activity this month has been insufficient to cause any real improvement in the situation. There is still a general lack of orders in bulk. Users refuse to buy forward, notwithstanding the favourable prices of many iron and steel materials, and the higher classes of steel are neglected. Owing to American buying, stocks of pig-iron at the furnaces are being reduced, and this demand is particularly welcome to makers of hematite pig, who have been unable for some time to get rid of their output, although it was limited. Several additional hematite furnaces are to be put into operation forthwith. There is a good demand for basic iron and basic steel, whereas home sales of foundry and forge pig continues at a low level. Unemployment is still serious in Sheffield. Thousands of skilled and unskilled men who have worked for years on armaments are now subsisting on doles or parish relief. Many of them could not take up efficiently any other kind of engineering work, and even if they could there is no call for their services. The existence of such a mass of unemployed men constitutes a grave problem in which armament centres as Sheffield and Barrow, as a general improvement in the trade of the country would leave most of them unabsorbed. Conditions in Germany have checked the buying of tools and cutlery in that country, and as stocks of these in British hands become exhausted there should be a good opening for Sheffield's products. The continued demand for coal from America is maintaining the stronger position of the market here, but prices for British consumption have not been advanced to any considerable extent as the large buyers are under contract at the rates of two months ago. The demand for household coal has not brisiked up so much as had been expected, and prices are not higher as a rule. Sales of industrial fuels are well maintained at their former level, and the heavy export demand causes coke to be rather scarce. Quotations per ton at pits are :—Best branch, 36s; best Silkstone, 33s; Derbyshire house, 21s; South Yorkshire hards, 21s; rough slack, 2s to 10s.

Our Cardiff correspondent writes:—There has been very little change in the coal position at Cardiff during the present week. Prices are lower, but the pace of the reaction has been retarded.

There have been more inquiries for large coals than was the case last week. These inquiries have been neither numerous nor heavy, but they have been sufficiently plentiful to constitute a current of business slightly greater than that of last week, and it has prevented the stoppage of work at collieries which a week ago were practically without stems. The weakness of some of the small steam coals, however, has been accentuated. The tonnage employed in the heavy shipments on American account has provided an outlet for the best classes of bunker steam coals, and the prices of these have accordingly been fairly well maintained, but the inferior quantities have in some cases proved practically unsaleable, and they have been offered at figures ruling down to 13s and even less per ton. It is the execution of the orders placed by the United States and Canada that still gives the market its chief support. Last week no less than 36 per cent., or over 210,000 tons, of the coal exported from the South Wales ports was for trans-Atlantic destinations, and what the South Wales coal trade owes to this emergency demand from America may be gathered from the fact that under normal conditions there is not a ton of South Wales coal exported to the United States. In view of the probable discontinuance of the American shipments at an early date anxiety is felt concerning the immediate future prospects of the industry. It is probable that the audits for August and September will be among the best for the year. The revenue from the export trade in August was £500,000 greater than it was in July, and there is every reason to expect that the August proceeds will be equalled, if not exceeded, by those for September. Unless, however, there is a great expansion in the demand from normal markets the position after September will be a very serious one, and at a meeting of the joint board held this week Mr Evan Williams, the president of the owners' side, warned the workmen's representatives of the dangers of imposing any further burdens on the coalowners. The miners have demanded an increase of 1s per day under the subsistence wage clause of the national agreement. It is specifically provided for in that agreement that if the current rates of wages do not give a subsistence wage to low-paid day wage workers, such additions in the form of allowances per shift worked shall be made to the daily wage of those workers as, in the opinion of the district board, or the independent chairman, may be necessary for the purpose. The miners are, therefore, quite within their rights in submitting demands for what they consider to be a necessary subsistence wage, and in the event of a failure to agree the owners will be bound by the decision of the independent chairman. Such a decision, however, cannot compel the colliery owners to work pits that are unrenunerative, and Mr Williams informed the workers' representatives that the industry had not been able to pay even the present minimum wage without the sacrifice by the owners of nearly £3,000,000 since last November, and that any further increase in costs without a corresponding increase in prices would become intolerable, and would inevitably lead to the closing down of collieries. This matter will be further considered at a meeting of the joint board next week.

of the joint board next week.

Current market prices are as follows:—Best Admiralty large, 27s 6d to 28s 6d; seconds, 26s 6d to 27s 6d; best drys, 28s to 29s; best black venis, 26s to 26s 6d; Western Valleys, 26s to 26s 6d; Eastern Valleys, 26s to 26s 6d; best bunker smalls, 17s 6d to 18s; ordinary cargo smalls, 16s 6d to 17s 6d; coke for export, 37s 6d to 40s; inland blast furnace coke, 27s to 27s 6d at ovens; patent fuel, 29s to 31s; pitwood, ex shop, 23s 6d to 24s 6d.

The feature of the iron and steel trades this week has been the improvement in the market for galvanised sheets. The principal buyers are India and China. The tinplate market is steady, and orders have recently been placed for 600,000 boxes of oil plates. Prices are unchanged.

THE COTTON TRADE.

MANCHESTER, September 14,

An uncertain feeling has prevailed in the market throughout the week, and the conditions have not been at all favourable to a large turnover. Ups and downs have occurred in raw material rates, and merchants have been discouraged by the unsettled political situation. A persistent demand continues to be met with in piece goods for India, and although a large part of the inquiry has been quite unwelcome, fair lines have been booked for Calcutta and Madras at low prices. News from China is no better, and trade is undoubtedly being blocked at the moment by the financial situation abroad. Business for the Near East has been practically suspended, but some useful contracts have been booked for the outlets of Central and South America. There has not been much activity in home trade fabrics. Quotations in American and Egyptian yarns have been irregular when tested. Not more than a miscellaneous business has been done in home counts. Export numbers remain in rather improved request for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market for tops has been less active during the past week, mainly due to the cautious attitude adopted by both sellers and buyers. Wool values in London have been well maintained, but there is a general feeling that the position is one of some delicacy, and top-makers are not disposed to add to their already heavy commitments except at prices which will cover the cost of converting into tops wool bought at the Coleman Street auctions. That means that a really good 64's top would cost from 5s to 5s 2d per lb, but users are not prepared to do business on that basis. Most spinners want to buy at not more than 4s 9d to 4s 10d, and it is about on that level that orders have been put through this week for December delivery. Then, again, a new selling season opens in Australia next Tuesday, and most members of the trade here are waiting for the wool position to be thoroughly tested in the primary markets before launching out. In the circumstances business at the moment is more of less of a hand-to-mouth character. Fine crossbred tops are firm at late rates, but there is not a great deal doing in the lower qualities. Spinners complain that they cannot make prices for yarn commensurate with the increased cost of tops, and in this section, also, business is being conducted on restricted lines. More orders have come through from Germany,

however, and firms engaged in this trade are regaining some of the confidence which was so badly shaken when the recent financial crisis started. The piece goods trade is quietly steady, but new that values have again got to a level at which business is almost impossible.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have made very good progress, and finished most satisfactorily. The series have been shorter than usual, many buyers complaining that they might have been continued another week, but a sale will be held at Hull next Thursday, when the British Australian Wool Realisation Association will offer 32,000 bales. On Thursday week another similar offering will be brought forward at Liverpool, after which there is a sale at Antwerp, and the next series of London sales are expected to begin on October 10th. This shows that there is going to be a fairly decent quantity of Colonial wool available between now and the time when the next London sales commence, and that buyers cannot really complain that the market is being kept bare. A visit to the principal wool consuming centres in Yorkshire would give an opportunity to see hundreds of railway wagons on the sidings full of wool. This may be seen at most of the stations ten miles around Bradford, and the most striking feature of the Colonial wool trade to-day is the steady and persistent buying done by users in spite of the apparently adequate stocks they already hold.

The only danger associated with values for merinos is that prices are being pushed up too far. If the new Australian and other clips are lifted without a reaction taking place in the prices paid for merino wools, definite evidence will be given to show that trade is better than is generally supposed, and this may be said without in any way ignoring the fact that during recent months a steady improvement has taken place. The Board of Trade records during the first eight months of this year have been very well maintained. There was a slight decrease in the exports of able quantity, the increase in the amount sent to that destination during January-August, 1922, being approximately 3,000,000 lbs compared with the first eight months of last year. Giving due over 2,000,000 bales of 56's quality wool and upwards at current values. Putting the Australian and South African new merino clips together, we should say that there will be 1,800,000 bales of merinos, and including the whole of the Australian, New Zealand, and South African clips, the total must be approximately 2,900,000 bales. In addition to this, B.A.W.R.A. have around 1,200,000 bales of old wool to dispose of, and these figures force one to the conclusion that neither combs nor spindles are going to stand just yet for the want of raw material. Our conclusion, from a general survey of the position of wool supplies to-day, is that prices for fine wool in particular are quite high enough to be consistent with safety. There is no need for any section of the trade to adopt such forcing tactics as have been followed during past weeks, there being enough wool in sight to satisfy all trade requirements.

Good combing merino wool (64's-70's) is now anywhere from 90 to 100 per cent. more than in July, 1914, this advance exceeding Goldfinch forecasts a shortage of fine wool in twelve months. It is true that the trade have absorbed merino and even crossbred wool known before, but against this must be put the fact that stocks in consuming centres were allowed to fall almost to the vanishing point during the twelve months ended July, 1921, and that an up the reduction. It remains to be seen whether during the next year wool is absorbed as freely as during the past year. The ability to do so may be questioned, and for this reason it is not advisable to force the pace.

VEGETABLE OILS AND OILSEEDS.

Market conditions generally may still be described as easy. Small buying interest and lower Argentine options have had the effect of further depressing linseed, Plate for shipment having dropped

Deposits are received for fixed periods on terms which may be ascertained on application.

back to £16 7s 6d, with new crop quoting £15 15s, January-February loading. A fair trade in Calcutta to London has been done at £18 for seed on passage, and for shipment. Near-at-hand supplies, though not excessive, are apparently ample to meet present demand, crushers being well supplied, and not having need to increase commitments, in view of the slowness with which the oil product is going into consumption. Cottonseed has continued dull and neglected, Black Egyptian offering at Hull at £9 10s Bombay is about unchanged at £8 5s for spot. Rapeseed is mostly required for on Continental account, Antwerp paying £17 12s 6d for Toria first arrived. Soya beans neglected, old crop offering at £12 on passage, and new crop at £10 10s for shipment.

A fair demand for spot oil and a good enquiry for new delivery caused raw linseed oil to appreciate 20s per ton, but this has since been lost, and the market on Thursday closed steady round £35 for spot, £33 month, £32 September-December. The forward position, which showed some steadiness, has relaxed to £31, January-April, ex-Hull mill. Cotton oils are in poor demand, notwithstanding lower values, the Hull mill price of crude Egyptian being £29 10s, and soapmakers' grade, refined, £33. Soya bean oil and rape oil are both lower.

The imports of oilseeds and oil nuts into the U.K. in August were below the average at 89,088 tons, comparing with 109,995 tons in July, and 116,966 tons in August a year ago. Linseed arrivals at 21,802 tons were a little more than a third of those of a year ago, but most other seeds and nuts were at a good level. In the eight months January-August the aggregate imports of oilseeds and nuts and kernels were 910,219 tons, an increase of 79,882 tons over a year ago, the principal items being linseed 238,873 tons (41,295 tons less than a year ago), cottonseed 304,549 tons (an increase of 63,582 tons) and nuts and kernels 247,241 tons (a decline of 18,934 tons). Exports of unrefined vegetables in August fell to 5,662 tons, and refined to 344 tons. Exports of linseed oil to date are 50,693 tons, against 30,755 tons on August 31st a year ago.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides were decidedly firmer at Thursday's Bermondsey sales, and advances were secured on last prices. Best made from 7½d to 9½d, with seconds selling from 5½d to 8½d per lb. Best cows sold from 6½d to 7½d, and kips from 3½d to 6½d. Calf were fairly steady, and sold from 7½d for heavy to 12½d for lights. Lambs made from 3s 2d to 9s, and pelts from 4s 4d to 7s each. The demand for imported hides remains quiet owing to high prices at the River Plate, but there has of late been a better inquiry for a low class of Nigerian hide. The American market remains firm, cabled advices quoting best heavy packers at Chicago at 21 cents, with native skins now selling at 19 cents.

Reports from the northern tanneries all agree that trade is still improving, whilst Bermondsey factors also have received more inquiries and orders. There is, however, an absence of speculation, and orders are for small parcels. Tanners are firm in their prices, and as hides have again taken an upward turn the concessions will be a thing of the past. Manufacturers seem to realise this, as there is nothing like so much haggling over a deal as was the case a month ago. Fears, however, are still expressed that large consignments may be expected from America. This seems possible from the fact that the imports of undressed leather from the United States have been 14,324 cwt and 85,378 cwt for the first eight months of 1921-22.

The demand for upper stock is improving, and as quotations for American stock have advanced it is giving our dressers a better chance. Prices of kip leathers, however, are very low, and the competition is such that some of the semi-chrome sold at 4½d to 5d per foot shows a loss on every foot turned out.

Orders are coming in better from the shoe factors and retailers, but many are now waiting for the Shoe and Leather Fair, which opens in October at the Agricultural Hall, London, before placing big orders. All space is booked, and the attendance will probably beat all records.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 15.

SUGAR.—The market opened the week with a very quiet tone, but later business proceeded with more freedom at lower prices, British makes being 6d per cwt easier. Messrs Tate and Lyle's cubes, sold, 57s 6d to 58s 6d; crushed, 56s; nibs, 56s 6d; granulated, fine and coarse, 51s 3d, London; No. 1, also No. 2, 50s 9d; icing, 54s 9d; ditto, in drums, 54s; pulverised, 53s 3d; caster, 53s 9d to 54s 9d; granulated, October, 50s 6d; November-December, 50s. West India crystallised, 42s to 44s 6d, as to quality; muscovado, 33s to 37s. White Mauritius, spot, 47s to 47s 6d; ditto, Brazilian, 46s to 46s 6d; Costa Rica, 44s 6d to 45s. American granulated, spot, sold, 49s 6d to 49s 3d; afloat, 22s 9d to 23s and 22s 6d; white Java, spot, 47s to 47s 6d; afloat, 20s 1½d to 20s, c.f. and i., London. Belgian granulated, 47s 6d; afloat, 20s 1½d to 20s, c.f. and i., London. f.o.b., Antwerp, October-December, 19s 4½d; crystals, 19s 1½d, f.o.b., Hamburg, Czech granulated, November-December, 21s 9d, f.o.b., Hamburg. Dutch granulated, prompt, 24s 6d, f.o.b., Amsterdam. Cuban, basis 95 per cent., September, quoted, 17s; Peruvian, ditto, September,

sold, 16s 6d; and Brazilian, basis 80 per cent., October-December, quoted 9s; near sold, 8s 4½d, c.f. and i., terms, U.K. Terminal market ruled somewhat unsettled. White, December, sold, 20s 9d to 21s 3d, 20s 7½d, and 20s 9d to 20s 7½d; May, 21s 4½d to 21s 3d, 21s 6d, and 21s. Cuban stocks, 397,700 tons, against 1,214,700 same time last year.

COFFEE.—A steady tone prevailed, and there was a moderate inquiry from the home trade. Nairobi, bold sizes, sold, 10s to 10½s; Salvador, foxy pale, 77s. Future delivery steady, but trade moved slowly.

COCOA.—Market quiet and featureless, both with regard to spot and forward positions. Accra, F/F quality, October-December, sold, 36s 6d, f.o.b. terms.

TEA.—34,000 packages Indian were submitted to auction this week, and all the finer qualities sold readily at a steady range, but inferior proved rather quiet, with rates tending against sellers. 23,000 packages Ceylon received fair support, but common kinds ruled weak, otherwise a steady market resulted. Java and Sumatra realised full rates.

RICE in slow request, and quotations somewhat nominal. Two Stars, spot, 15s 3d; September-October, 14s 3d. Broken descriptions dull at late rates. Rangoon beans quiet, and spot parcels held for 7s 3d. Madagascar butter beans slow. Old crop, spot, 8s to 10s; new, 12s to 14s. Japanese peas steady. September-October sold, 26s 9d to 27s 6d; December-January, 26s to 26s 3d and 25s 6d.

SPICE.—Pepper market slow, but sellers adhered to steady asking rates. Fair black Singapore, spot, 3½d; October-December, 3½d; Aleppy, spot, 4d; Tellicherry, 4½d; Ceylon, 4½d; white Singapore, spot, 5½d; Muntok, ditto, 6½d; ditto, October-December, sold, 6d. Zanzibar cloves, spot, 1s 3½d; October-December, 7½d; pimento, spot, 2d; flake tapioca, spot, 2½d; ditto, September-October, sold, 23s 6d; October, 22s 6d. Fair Penang seed, spot, 19s; sago flour, September, sold, 14s to 14s 9d, and 14s 3d; October-December, 13s 6d. Desiccated coconut, spot, 32s 6d to 34s 6d paid; afloat, 31s 6d to 33s 6d; September-October, 33s to 34s 6d. Ginger in slow demand at previous quotations.

FRUIT.—A good inquiry continued, and market for currants ruled very firm. Quarter cases, 59s to 60s; Vostizza, 60s to 63s. Cape raisins, first grade, 58s; second, 50s; third, 40s to 42s. Australian sultanas, three crowns, 130s. Dates steady. New crop, Khredrowie, October, via Bombay, sold, 30s, landed terms, London.

JUTE.—Market hardened during the

there was a disposition to quote easier rates in some quarters, in view of an expected demand for bills maturing at the end of December, and the probability of easier monetary conditions after the turn of the month. As anticipated, the Treasury Bills went at a low rate, and when the result was known the market rate for three months' bills was quoted at $2\frac{3}{8}$ per cent. and under.

	Sept. 22, 1922.	Sept. 15, 1922.	Sept. 8, 1922.	Sept. 1, 1922.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	$3\frac{1}{2}$ (Jly. 13, '22)
Bank Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Discount/Call	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Houses/Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	..

The Bank Return showed an increase of £577,100 in the Reserve, as a result of a decline of almost that amount in the circulation, and a slight increase in the gold stock. Government securities were reduced by £2,205,000, but Other securities rose by £2,127,600, so that total deposits rose by half-a-million. Public being £5½ millions higher and Other £5 millions lower. There was a reduction of £1,828,900 to £289,756,000 in currency notes outstanding in the return dated September 21, 1922, which includes £1,560,193 for notes called in, but not yet cancelled. The fiduciary issue is £240,045,800, or £69,942,600 below the maximum.

THE STOCK MARKETS.

During the week the stock markets have been under the influence of the political news, and prices at times fluctuated sharply, but although transactions have been numerous, the public has not been represented to any great extent in operations. The most noticeable weakness in the gilt-edged market was the Conversion Loan, which fell at one time to 72½. French Government and French railway bonds were marked down, but values of German issues were well maintained. The Home Railway market gave some indication of increased activity; prices of foreign railway investments, however, have been irregular. Even with the advance in price of the raw material, the quietness of the rubber market stands out in striking contrast to the liveliness of operators in the oil market. Changes occurred in the banking and insurance lists, although the Smyrna disaster is said to have had little effect on our insurance companies. Iron and steel shares are better; with the exception of a demand for Lyons and other catering shares, the industrial market is inclined to be dull. Mining issues are quiet.

THE COMMODITY MARKETS.

Business in the cotton trade has been fitful, and transactions in piece goods are reported as on a smaller scale. Values remain unchanged in the wool trade, but users appear to be uneasy about the present high level of prices, and it is considered that quotations may be easier later this year. Makers of pig-iron are benefiting considerably by the American demand for foundry iron, and have been able to fill their order books up to the end of October; prices in consequence are firmer. Revival in the steel trade is slow, however. Our Glasgow correspondent writes hopefully, but our Sheffield correspondent reports that except in a few branches business is not appreciably better than it was three months ago. Best Admiralty steam coal is now down to 26s per ton, but a demand has been experienced in the Cardiff market for anthracite and dry steam coals. Wheat prices have been firm, although buyers are only satisfying immediate needs. Conditions in the vegetable oil and oilseed markets are unsettled, prices for early delivery tending to be higher.

FOREIGN EXCHANGES.

Under the influence of unexpected political developments, the nervousness and uncertainty in the exchange market has continued unabated. Operators are naturally reluctant to commit themselves to any extent. New York, after its recovery to 4.43, relapsed to 4.41½, but slowly regained the former figure. The market, however, seems bare of dollars, and in the absence of unforeseen events any substantial demands would undoubtedly have a further weakening effect in the rate. At the time of

writing, dollars are quoted 4.42½, and forward New York is about ½ cent per month over spot. The British policy in the Near East must have a disturbing influence on sterling, and if continued will probably accentuate the present weakness. The more reassuring news and rumours regarding Germany's position with regard to reparations has had an effect on the mark, which has steadily appreciated from 6,550 a week ago to 6,150 at the moment of writing. The principal Allied currencies, under the lead of Paris, have, as usual, responded sympathetically to political events. French francs, which opened the week round 58.50, improved on Wednesday under the influence of more reassuring developments in regard to the Turkish position. The improvement, however, has not been maintained, and the rate has again gone back to 58.15. Forward francs are now 3 points per month over spot rates. Brussels, after fluctuating with Paris, is now quoted 61.50, while Italy, which at one time recovered to 104.62, has again relapsed to 105. Holland is now quoted 11.42, as compared with 11.43 a week ago, while Switzerland has remained fairly steady all the week round 23.69, and is now 23.70. The Spanish exchange has moved against this country, the present rate—29.02—comparing with 29.25 last week. The outstanding feature in Scandinavians has been the rise in the Danish exchange owing to the banking troubles in Copenhagen. The timely action of the Government and the National Bank has, however, prevented anything in the nature of a panic, and the rate has now slightly recovered, being quoted 21.20. Norway and Sweden, at 26.30 and 16.70, have both moved fractionally against us. As anticipated last week, an improvement is shown in Finnish marks, the rate, dipping at one time under 200, is now quoted 202. Vienna remains practically round last week's figures, with a weak tendency; but Warsaw has again depreciated to over 34,000. Amongst South Americans, Valparaiso is fractionally better at 32.10, but both Buenos Aires and Rio have shown weakness at 43½d and 6½d respectively. The Eastern exchanges have moved somewhat irregularly, the rupee being a shade firmer at 1s 3½d, while Hong Kong has also shown a firmer tendency. Shanghai, however, after remaining steady during the greater part of the week, is now slightly weaker at 3s 5½d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 16, 1922:—

RECEIPTS.	Min. £	Max. £	EXPENDITURE.	Min. £	Max. £
From Revenue	11,524	11,524	Supply Services	5,830	5,830
			Interest on Debt	406	406
			Sundries	230	230
			Debt Reduction	4,685	4,685
			Added to Exchequer Balances ..	373	373
				11,524	11,524

The total revenue during the week ended September 16, 1922, amounted to £11,523,943, as compared with £20,233,351 in the corresponding week a year ago. Expenditure at £6,466,410 compares with £12,082,214. Property and Income-tax yielded £4,197,000, against £4,207,000 in the same week a year ago. Receipts from Excise amounted to £2,085,000, against £9,135,000, while Customs yielded £1,699,000, against £1,606,000. The week's operations reduced the National Debt by the sum of £4,685,000, and caused the following changes:—

Treasury Bills	Min. £	Max. £	Advance Bank of England ..	Min. £	Max. £
Savings Certificates	+ 1,863	+ 250	Do Public Depts.	3,750	3,750
			Sundries	234	234
				114	114
				6,798	6,798

The floating debt was decreased by £4,829,000 to £870,248,500 during the week.

FINANCIAL YEAR, 1922-23 (April 1 to September 16, 1922).

Total spent	325,388,896	Raised by revenue ..	373,032,284

DOWNING STREET AND THE DARDANELLES.

THE fruits of the vacillating policy adopted in the Near East have ripened suddenly and quickly. Having allowed matters to drift for six months or more, the Government has become hopelessly entangled in its Greek policy. But a display of power may now be necessary to revive the little respect for Allied authority, and to restore the prestige of international agreements and decisions, thoroughly bad though many of them may be, it is unfortunate in the extreme that Downing Street, even when in the right, should continue in its determination to do things in the wrong way. Last week's notes showed an incredible lack of tact, and the question now arises, Can an immediate military collision between British and Turkish troops at Chanak be avoided? The issue was favourably affected by Lord Curzon's conversations with M. Poincaré and Count Sforza on Wednesday, the 20th. Obviously both the suggestions thrown up at these meetings were of a sedative character. A withdrawal of the British units from Chanak would place the "channel of deep salt-water that separates Europe from Asia" between the rifle-barrels and bayonets of the British and the Turkish troops, and would at least veil the yawning chasm in the Entente which had been displayed by the withdrawal of the French and Italian contingents from the Asiatic shore while the British remained behind. An immediate and definitive conference of all the interested Powers (among whom Bulgaria and Russia both ought to be, and could probably insist upon being included) would then reduce to a minimum the inevitable period of military tension which will continue until the status of the Straits and of Thrace is settled by agreement. But the clouds still hang low, and threaten to break into storm at any moment. There are indications that, on the question of Chanak, Lord Curzon, even if convinced himself, may be unable to carry his colleagues with him. The Prime Minister may not face such a humiliating confession of personal defeat, and it may also be the view of naval experts that, with Chanak in potentially hostile hands, even the naval command of the Straits by the Allies would become insecure. The conference, too, when it is summoned, is as likely to accentuate differences of outlook as to reconcile them.

The crux of the problem is that not only the freedom of the Straits (which Angora has, in principle, conceded), but the restoration of Eastern Thrace to Turkey (on which Angora will make no concessions) is at stake; and so far none of the diplomats concerned have discovered a formula by which these two strands of policy can be disentangled. The Turks, while prepared for the demili-

tarisation and neutralisation of the shores of the Bosphorus and Dardanelles under the control of the League of Nations, are not prepared to resign their claim to civil dominion and sovereignty over any portion of these shores, or over any portion of the European hinterland up to Adrianople and the River Maritsa. So far, however, they have received no assurances from the British Government that, even if they meet our views in regard to the Straits, their territorial and administrative claims on the European side will be granted them. On the contrary, the British Government's reference to the Gallipoli Peninsula as "soil hallowed by immortal memories," for the "defence" of which the Dominions have been invited to send contingents, would most naturally be interpreted as a refusal to contemplate the restoration of Turkish civil administration there, even if the "deep-water line" were adequately safeguarded. If one tries to look at the situation from the Turks' point of view, one must acknowledge that, on the facts before them, their prospect of recovering civil authority in any part of Europe without armed conflict with the British Empire must appear more than doubtful. In their eyes the British Government's conduct might almost seem like a piece of diplomatic sharp-practice, designed to put Turkey in the wrong. By loudly proclaiming that the Turks are menacing the freedom of the Straits, when they have already conceded it, our Government are certainly obscuring the fact that the Turks are claiming sovereignty in Thrace, and that we are standing between them and this perfectly legitimate objective. Meanwhile, every day that a settlement is delayed, our own naval and military position at the Straits will be strengthened, our great momentary inferiority to the Nationalist forces will first be turned into equality and then into superiority of strength, and therewith we shall arrive at a position in which we can not only set up whatever régime we think good at the Straits (whether or not it commends itself to Turkey), but can also deny Thrace to Turkey, and leave that province under Greek sovereignty, if we elect to do so. Time is all against the Kemalists, and in military matters a few days may be decisive. Before even the speediest conference can be summoned, the military situation at the Dardanelles may have turned irrevocably to Mustapha Kemal Pasha's disadvantage, if he holds his hand. It is no use minimising the temptation under which he has been placed (by Mr Lloyd George's policy) to fall upon Chanak immediately, to get his military pledges in hand, and to risk all the consequences that might follow. In similar circumstances, such a course would probably be advocated by the general staff of any Western Power. This is the peril that will continue to hang over us for the next few days.

It appears, indeed, that Kemal Pasha has already informed the Allies that he will respect the neutral zone of the Straits on condition that the satisfaction of the Turkish claims in Thrace is guaranteed. This was an obvious, and not an unreasonable, line for Angora to take, and the French Government evidently foresaw that it would be taken; for last week, before the publication of the famous British manifesto, they informed our Government that they would join us in maintaining the freedom of the Straits so long as reasonable Turkish claims on other points were satisfied. This was an allusion to Thrace, and the publication of a joint Allied assurance in regard to the destiny of Thrace, if a Turkish assurance in regard to the freedom of the Straits could be obtained in exchange for it, would be a fair and prudent piece of diplomacy. The moment these two points were settled in principle, the dangerous element in the military situation would be removed, and we could concentrate our energies on the Peace Conference, without the fear that it might be forestalled and stultified by the firing of some fatal shot.

However, we are still far from having reached these comparatively smooth waters. No British assurance about Thrace, and consequently no unconditional Turkish assurance about the Straits, has yet been given. An encounter between patrols, or the news of massacre and ill-treatment of Moslems at Rodosto or Adrianople, may still at any moment explode the powder magazine. On the home front, Mr Lloyd George has to some extent consolidated his position by silencing—temporarily, at least—the righteous indignation of a strong Labour deputation,

which paid him a visit on Thursday to protest against the sabre-rattling tactics of last week-end. No public announcement of what passed at the meeting has been made, and we are left wondering what particular piece of information it may be which the Prime Minister could produce to cause the deputation to retire so quietly and consider their position before making known the result of their efforts.

AUSTRIA AND THE LEAGUE.

THE world is, perhaps, a little sceptical of any great results emerging from the League of Nations until it has by slow and painful growth developed into a more powerful organ of international co-operation. Nevertheless, it is hoped that at the present Assembly some solution may be found for the deplorable condition of the new Austria. This hope is not based on the fact that all interested parties are now anxious to prevent any further political and social demoralisation which has already reached an advanced stage, and that it is difficult to see where to look for a solution if the League fails, for it is improbable in the extreme that private initiative would come forward in the present *débâcle* of Austria's finances.

It is, however, important not to ignore the difficulties of the task, which are partly financial, partly economic, and partly political. It may be some days or even weeks before any plan covering all these aspects can be put forward, but in the meantime it will be useful to recall some of the more fundamental issues.

Apart from the fact that the recent depreciation of Austrian currency has played havoc with the Budget, the dislocation of values has produced an entirely unstable economic condition in the country. Wages have perforce had to be regulated in proportion to cost of living by a scheme of index numbers, and these variations, hitherto taking place every month, are in some cases being made weekly, and even this is hardly adequate to keep pace with the meteoric movement in the value of money. But all prices have not moved in this proportion, a notable example being that of the railways, in which fares have increased perhaps two thousand fold, while wages have increased twelve thousand fold. The effect of this has, of course, been not only disastrous to the accounts of the railways, but has really meant that during the past season, when Austria has been full of foreign tourists, the railways have been transporting these visitors about the country at a gold price which is far less than is required to feed the staff of railwaymen who have been performing this service. In other words, Austria, instead of taking toll of its visitors, has been subsidising them; for the means of feeding its railwaymen, as other workers in the country, has had to be found by the various foreign loans which she has managed to secure during the past months, and by continued taxation through the inflation of the currency. This example shows the complicated reactions of an index-number system unless it is applied all round.

On the other hand, Austria has, in fact, a larger population than she can support by her own industry and commerce, unless and until there is a great recovery in the economic situation of Europe. This means she must face a reduced standard of living until a new equilibrium is established between her working population and the trade and production which she is enabled to do under new conditions. This problem would arise even if she were united in a customs union either to Germany, Czecho-Slovakia, or Italy, and must be faced by any population whose production is insufficient for its requirements. It is futile to imagine that any system of credits can save the country from facing this regrettable necessity, and it is perhaps unfortunate that the talk of foreign assistance has encouraged the country to imagine that it can be saved by such means from facing the realities of the situation.

A corollary of this is that any scheme of control which might be imposed either by the League of Nations, or by a group of creditors, would have to be very stringent, and would have to impose hardships upon the people if it is to be used as a means for bringing Austria into a solvent condition, and making her worthy of credit. Hence, adequate control of Austria's finances will involve action

to which there may be grave political consequences, and in considering whether it can undertake this task, the League must frankly face this very serious difficulty. It can well be imagined, for example, that if a control were established, and the scheme was found to press heavily upon real wages, impose burdens on the more prosperous peasants and agriculturists of the countryside, and involve for the first time heavy direct taxation, the controller or controllers would become extremely unpopular, and after some months political agitation would arise. What would be the attitude of the League or any other organisation of control if disorder arose, and if this developed into anarchy, or the population turned in despair to Communism or Bolshevism? The case of Russia and the futile attempts of Western Europe at intervention are, of course, not in any sense analogous. But with the history of Russia before their eyes, is the League of Nations prepared to prevent the Austrians by force from establishing a form of government which might deny the right of property or repudiate its debts? Even if the League answered this question in the affirmative, by whom is this intervention to be carried out? Assuming disorder in Vienna, are the neighbouring States to be free to intervene to defend their nationals, and what becomes of the right of self-determination? The invention of a financial scheme to save Austria is by no means an easy task, but it is less difficult than the solution of this thorny political problem.

But in any case an elaborate financial scheme, even if enforced, will not remove the fundamental difficulties of Austria, unless the League or the Allies, combining in control, also deal with the fundamental difficulties of the economic situation; and for this purpose the essential point is to remove the barrier which shuts off a large population from the free trade and commerce by which alone they can support themselves in Central Europe. The proposal discussed at Porto Rosa, but which failed to secure the support of Czecho-Slovakia and other neighbouring States, must be put into force before any plan can hope to succeed. Czecho-Slovakia is nervous that she puts down her tariff barriers she will become the dumping ground of goods exported by her neighbours with low exchange, while Yugo-Slavia is afraid of losing the food supply of her northern provinces. The scheme of the League will begin at the wrong end if it starts with finance, and postpones this most vital of all the outstanding questions.

WAGES AND PROFITS IN THE COAL TRADE.

(BY OUR CARDIFF CORRESPONDENT.)

AFTER the end of the present month it will be open to either the coalowners or the workmen in the British coalfields to terminate the National Agreement of June, 1921, and either to renew or revise it, or revert to the pre-war practice of independent district agreements. The terms of the settlement of June, 1921, were fixed for a period of fifteen months ending September 30, 1922, and thereafter until ended by three months' notice on either side. Both the coalowners and the workmen's representatives have recently been considering what action they shall take in the exercise of the freedom which the agreement confers upon them. Neither is satisfied with its operation during the past fifteen months. The agreement was one of the boldest experiments ever made in this country for the distribution of the proceeds of a great industry. No less by the workmen's representatives than by the Government it was described as an epoch-making innovation. The only quarrel Mr Frank Hodges had with it was that the underlying principle was given a district instead of a national application. It gave labour the first claim on the proceeds from the sale of coal; it established a standard wage equivalent to the actual average wage of July, 1914; and it secured for the workman the definitely fixed proportion of no less than 83 per cent. of the surplus proceeds of the industry after the cost of the standard wage and the payment as standard profits of an amount equal to 17 per cent. of that standard wage had been deducted from such proceeds. Moreover, in addition to that standard wage, the workmen obtained a guarantee that the actual wage during the period of the

operation of the agreement should not be less than 20 per cent. above the standard wage. In no other industry has labour been given so big a share of the profits.

Yet, the working of the agreement has been a disappointment to employers and workmen, for it has been unable to prevent wages falling to the minimum, thus leaving the miners with a wage of a purchasing power considerably less than that earned before the war, or to protect the colliery companies against unprecedented losses. The statistics of the industry are periodically published by the Mines Department of the Board of Trade, and from those statistics, and others compiled to a later date by the Mining Association of Great Britain, it is possible to give a general statement of the finances of the industry for the twelve months ended last June.

Before we give the figures, however, one or two explanations are necessary. It was the original intention of both sides that the payment of the standard wage and of the standard profits should go together—that the claim of capital to a standard profit of 17 per cent. of the amount of the standard wage should possess as much force as the claim of the workmen to the standard wage whenever the proceeds of the industry were more than enough to meet the cost of the standard wage and "other costs." Indeed, there was a provision that if the proceeds of the industry were not sufficient to pay the standard profit, as well as the standard wage and other costs, the deficiency in the standard profit should be carried forward as a charge against future surpluses and recouped out of those surpluses before the wages were raised above the standard. This arrangement necessitated the preparation of the returns in such a form as to show the standard profit, the surplus profit, and the actual profit.

Another point that needs to be explained is the incidence of the 20 per cent. minimum on both the surplus and the actual profits retained by the colliery owners. The undertaking to pay this 20 per cent. minimum was given at the last moment, and without regard to its bearing on the other clauses of the agreement. In June, 1921, no one foresaw the severity of the reaction during the following twelve months. Stocks were depleted both at home and abroad, prices were high, and there was no country in Europe in so favourable a position to relieve the European scarcity in coal than the United Kingdom. In the circumstances, as they then stood, the employers as a whole were confident that from the financial point of view the agreement would operate advantageously to them. It is now only too well known how these hopes have been unfulfilled, and the failure of the employers in June, 1921, to realise the possible effects of the 20 per cent. minimum clause on the other provisions of the agreement has been disastrous not only to individual collieries, but to whole districts. When the application of this minimum wage clause first became effective the independent chairman (Sir William Plender) was called in to determine whether the profits surrendered in the payment of the minimum wage could be carried forward as a charge against future surpluses. The ruling of Sir William Plender was that they could not be so carried forward. He laid down the principle that only those deficits could be charged against future surpluses which arose from a shortage in the proceeds to meet the standard wages, other costs, and standard profits. If the proceeds were only just equal to these three charges there was technically no deficiency under the terms of the No. 4, Recoupment Clause that could be carried forward; that deficiency only arose when the actual proceeds were not sufficient to meet the standard profit as well as the standard wages and other costs. The payment of the 20 per cent. minimum on the standard wage was an obligation into which the employers had entered without prejudice to the original terms of the Recoupment Clause. The effect of this ruling has been that the owners have been saddled with labour costs which they had not anticipated. In the twelve months ending June the total amount which the coalowners of the country had to surrender in order to make up the 20 per cent. minimum reached nearly £3 millions, and of that practically £1,730,000 was contributed in the South Wales coalfield alone.

It appears that the amount paid out during the 12

months in standard wages over the country as a whole was equivalent under the terms of the agreement to a standard profit of £15,735,000, and that the surplus of the proceeds left after the deduction of the standard wages, other costs, and standard profits, permitted the nominal retention by the coalowners, under the scheme for the distribution of 83 per cent. of such surplus to labour, and 17 per cent. to capital, of a further profit of £8,355,000. The minimum wage clause, however, gave the workmen the first claim on these surpluses, and in consequence of the absorption of such surpluses by labour, and of the surrender also of standard profits the actual profits retained by the industry in the 12 months ending June last was only about £9 millions compared with the £28 millions guaranteed during the period of control. It is not irrelevant here to point out that during the stoppage the colliery owners incurred a loss of approximately £12 millions, so that in the 15 months ending last June the industry suffered a dead loss of over £3 millions.

The incidence of this loss has been very unequal. As a matter of fact, more than one-half of the total profits of £9 millions was confined to the Eastern Federated area, and over 75 per cent. to the Eastern Federated area and the Lancashire, Cheshire, and N. Staffordshire area. In six of the fourteen wage administrative areas established under the agreement of June, 1921, the 12 months' working showed a loss. In Scotland the year's profit was only about £304,000, in Northumberland about £485,000, in Durham about £710,000, and in South Wales about £920,000. When it is borne in mind that the Powell Duffryn Company alone, with an output of less than four million tons, made a net profit of £625,000 in 1920, a total profit for the South Wales coalfield as a whole, on an output approximately of about 45 million tons, of only £920,000 is clearly not only wholly inadequate, but inhibitive of enterprise.

This survey shows that neither the workmen nor the owners are satisfied with the working of the present agreement, and the position at the moment is much worse than it is represented by the figures for the 12 months ending last June. The employers will probably demand a revision of the agreement on at least two points, namely, the 20 per cent. minimum, and the Recoupment Clause, while the workmen, suffering from an average wage which is from 35 per cent. to 40 per cent. below the purchasing power of the average wage earned in July, 1914, will probably make an effort to secure a higher minimum, or the introduction of such methods of price regulation as will increase proceeds to such an extent that the industry will be able to pay a higher wage without disturbing the present minimum clause. The National Board is to meet early in October to deal with these important questions.

POTENTIALITIES OF CHINA'S TRADE.

(BY A SHANGHAI CORRESPONDENT.)

FIGURES showing the foreign trade of China per head of its population, recently published by the Chinese Maritime Customs, suggest a number of comments. The figures are as follows:—

Year.	Value of Trade in Customs. Taels.	Value of Trade Per Head.	Average Exchange Per Year. s d	Trade per Head in Sterling. s d
1901 ..	437,959,675	1.09	2 11 ³ / ₄	3 2 ¹ / ₄
1911 ..	848,842,109	2.12	2 8 ¹ / ₄	5 8 ¹ / ₄
1921 ..	1,507,377,976	3.77	3 11 ³ / ₄	14 10 ³ / ₄

The comment of the Statistical Department of the Customs on these figures reads:—"There is a remarkable improvement noticeable in the figures for the three years given above, which may well be taken to prove that, given favourable environments, the potentialities of China's trade are enormous."

The accepted figure of China's population is the round one of 400,000,000. It has been the accepted figure for at least a quarter of a century, and in all probability, as there is no machinery for arriving at an accurate one, it will go on being the accepted figure for another 25 years. With equal confidence one may predict the continued characterisation of the country's commercial potentialities as enormous. I have never heard them referred to in any other way, and there is hardly a book or an article written

about China which does not endorse the description. Is it justified?

The answer depends upon the correct valuation of a number of different facts. The facts always turned to first are the import figures, which are usually quoted in values rather than quantities, and are apt to be misleading on account of fluctuations in exchange. It seems preferable, therefore, where possible, to quote the figures showing quantities, for they are a surer indication of demand. The figures for cotton goods are as follows:—

	1910.	1920.
Pieces	16,484,794	22,324,693
Yards	26,886,815	120,595,195
Dozens.....	2,702,532	1,873,096

The goods of which the import is recorded in yards are fancy muslins, yarn-dyed cottons, velvets and velveteens, and cotton goods not enumerated in the tariff, the big increase in the 1920 total being due mainly to imports of Japanese cotton cloth. The figures for dozens include handkerchiefs and towels.

Let us turn next to the figures for metals the import of which is for the most part recorded in piculs. The 1910 total was 4,174,297; the 1920 total 8,063,724. There being 16.80 piculs to a ton, the import of metals into China has increased by a little over 231,513 tons in ten years. Electrical materials and fittings are recorded by value. The figure in 1910 was Hk Tls 1,387,267; in 1920 it was 6,294,633. (In 1910 the average Customs or Haikwan Tael rate of exchange was 25 8½d, in 1920 it was 6s 9½d.) Machinery imports are also recorded by value. In 1910 they were classified under two heads (a) machinery and fittings, the net total value of which was Hk Tls 6,694,945, and (b) machines, sewing and knitting and accessories, the net total value of which was Hk Tls 202,000. The returns for 1920 are much more elaborate, and are divided under agricultural, propelling, textile, brewing, other kinds, and embroidering, knitting and sewing. The value of all classes lumped together was Hk Tls 23,291,538, the most noticeable increase being in machinery for textile industries, the value of which totalled Hk Tls 6,903,610, and "machinery, other kinds," the value of which was Hk Tls 11,983,101.

Other noticeable figures are:—

	1910.	1920.
Aniline dyes.....value in hk. tls.	2,711,438	7,730,291
Gasoline, benzine, naphtha, petrol, gallons	224,931	2,604,634
Kerosine oil	161,389,585	189,588,540
Leather	59,926	123,826
Cigarettes	6,902,246	22,029,585

Let us turn now to the export figures. In 1910 the value of China's export trade with foreign countries was Hk Tls 380,833,328; in 1920 it was Hk Tls 541,631,300. Comparative figures for the most important items are as follows:—

	1910.	1920.
Beans	10,925,451	10,281,220
Cotton (raw)	1,247,304	376,230
Eggs, fresh and preserved	305,810,040	646,700,000
Groundnuts	752,559	1,268,145
Oil (bean, groundnut, tea, wood, &c.)	1,460,234	3,256,986
Seeds	3,547,885	3,748,268
Silk	335,082	268,020
Strawbraid	135,206	55,065
Tea	1,560,800	305,906
Skins and furs	19,838,656	21,812,968

It will be observed from these tables that the export figures are not by any means as satisfactory as the import, especially in view of the decadence of the tea trade, and the absence of any increase in the quantity of silk exported. The cumulative adverse balance of China's foreign trade is now Hk Tls 304,866,902, which amount must be increased to nearly 321 million taels if the recorded movement of bullion and coin are taken into account. Granted that an adverse balance is not necessarily a bad thing, it may be questioned whether the "invisible exports" which have to be set against it are in China's case of a nature altogether reassuring. For if it is still true that the chief of them is "her export of brawn and brains in the emigration of a portion of her redundant population"—to quote Mr H. B. Morse, formerly Statistical Secretary of the Chinese Maritime Customs—the growing antipathy to Asiatic immigrants on the one hand, and trade unionism on the other, appear likely to diminish the value of this asset.

Other factors which have to be taken into account are the extremely backward state of the country's means of communication; the hopelessly untrustworthy nature of her judicial machinery which, in the last resort, has to be relied upon for the enforcement of contracts; the absence both of the knowledge of foreign business methods and of the credit facilities necessary for direct trade between the British exporter or manufacturer and the Chinese importer; the very rudimentary state of co-operative enterprise on modern lines in the shape of limited companies with substantial capital; the deadly streak of unreliability which characterises nearly everything that the Chinese do, write, say, or make; their colossal indifference to efficiency; their imperturbable satisfaction with their own ways and methods; the very small purchasing power possessed per head of the population, and, last, but not least, the smallness of the proportion who can read and write their own language.

Doubtless these are all factors that, as years go on, will inhibit trade development less than they do now, but in view of their strength at the present time, the description of China's commercial potentialities as "enormous" is only justifiable when the word "potentiality" is used strictly in its anticipatory and provisional sense.

MARKET RIGHTS.—II.

A CONSIDERABLE share of the wealth of modern communities consists of abstract privileges as monopolies, for which no service is, and in some cases has never been, rendered. How far charters and grants made by monarchs centuries ago to their favourites which fetter successive generations, and add to the cost of living, should be perpetrated is an academic question. These have been recognised by law. Some day the force of public opinion may compel action to terminate rights of this class, which are wrongs to the general body public, and secure for the nation a freedom which it does not now possess. What has hitherto prevented this desirable consummation are the huge amounts of money awarded as compensation where such interests have been abrogated or transferred, as in the case of Spitalfields Market.

At the same time, it is recognised that monopolies are often necessary as a stimulus to effort and development, the rewards of which are uncertain, or may be delayed, or where a service to the community is rendered. Railways, the Post Office, and Municipal markets are cases in point. In each of these there is entire or partial public control, and the general well-being is thus promoted. Much of the capital cost involved is represented actually by land, buildings, or plant, and by a business on which large sums of money have been expended. Although monopolies of the nature indicated are to some extent restrictive, where they are applied for the public benefit, and in a practical manner, the gains more than compensate.

The whole question of London markets must be regarded in the light of those vast changes which have taken place since the rights and privileges on which they are based were granted. In the reign of Charles II. the population of England was one and a-half million smaller than now to be found within the metropolitan area. At that time London, inclusive of the surrounding residential districts, was comparatively small in population if not in extent. What was enough for the requirements of that time is totally inadequate now, although even then the grant made by Edward III. to the City of London of exclusive market rights within seven miles was an injustice, and must have been severely felt by those who lived on the outer ring of the circle. So far as the wholesale branches of the trade are concerned, this is less serious. To meet the requirements of the great populations which have congregated around London supplies have to be drawn not only from many parts of the country, but from other lands, coming in large bulk. It is, therefore, a great convenience that there should be centres where buyers know they can obtain what they require. This should not involve any increase of cost to the consumer; in fact, it should save both time and money.

The dead meat trade may be cited as an example; whether the meat is obtained from Aberdeen or the

Argentine, it would be impracticable for senders to forward to the consuming districts around London. Even were such method carried out, the cost would be much greater than selling in wholesale markets. Profits and charges involved in reaching the consumer must be paid. Retailers have, also, greater choice as a result of concentration.

The restrictions imposed are often totally unsuited to present-day conditions, especially so in respect to home produce. The natural sources of supply to the eastern side of the Metropolis are the Eastern counties, whence goods are brought direct by rail. For products that come from other parts of the country or overseas the City markets are requisite. Whatever is derived from Eastern England can be more expeditiously distributed, and at less cost, if delivered to a common centre in the midst of the great districts comprising Eastern London and its suburbs. That is why the Great Eastern Railway Company established the Stratford Market, which has rendered a service for which the company has to pay tolls to the lessee of Spitalfields Market, although he did not contribute one penny to the cost of establishment or maintenance.

But for the City's market rights the same company would have developed Bishopsgate Station as a market when Liverpool Street Station was opened. When the Midland Railway built St Pancras Station a market was designed to occupy the adjacent land, but the project could not be carried out for the same reason. These are manifest abuses of a power granted at a time when conditions were entirely different from those now existing. Full freedom should be granted, so that on each of the great trunk lines markets to serve the areas in London in which they are immediately concerned could be opened, if railways and local authorities are prepared to establish them.

It has been said that "the London Central Markets are the pride of the City of London." This is undoubtedly correct in so far as the buildings are concerned. They are, however, close markets. No opportunity is afforded for growers and breeders to come into direct contact with buyers. Both parties are tied to the dealers and salesmen who have shops or stands. A sender of meat in Norfolk or Aberdeen, or a poultry fatterer in Sussex, who is dissatisfied with sellers has no opportunity of defending his interests by taking this part into his own hands. He can change his salesman, which is no real remedy. Competition is thus restricted. Factors which make for avoidance of abuses are almost entirely absent. The entire system works in favour of foreign produce. Those who hold positions in the markets are masters of the position, and, within limits, can dictate their own terms and conditions. It is recognised that anyone of ordinary business capacity obtaining a stand in the markets is practically assured of a fortune in a few years.

What is urgently required in the interests of the community is that the wholesale markets shall be considerably extended, and that anyone on payment of stated tolls shall be able to offer his goods for sale, independent of intermediaries, just as the farmer in provincial markets can sell his corn, or hay, or cattle, or the smack-owner his fish. Londoners suffer heavily because of the absence of these open markets which form an important feature of Continental cities.

The absence of retail markets in residential areas has led to a vast increase in the number of shopkeeper-retailers, and to an enhancement in the cost of food supplies owing to the huge expense of distribution. The system of calling upon householders for orders, and of delivering the goods, is an undoubted convenience, but it involves a cost estimated at from 10 to 30 per cent., much of which could be saved in the lighter classes of produce, and there would be a greater choice afforded. So long as the monopoly of the City of London continues, local authorities within the seven-mile limit are powerless to take steps in defence of their citizens.

Considering the small area ruled over by the London City Corporation, the time has fully arrived for dealing with the entire question of Metropolitan markets, and of transferring the control to some body which is as much concerned with Kensington and East Ham, with Islington and Brixton, as with the square mile surrounding the Guildhall.

THE NEW AUSTRIAN BANK OF ISSUE.

(BY OUR VIENNA CORRESPONDENT.)

THE new Austrian issue bank, the Austrian National Bank ("Oesterrische Nationalbank"), which is destined to replace the Austro-Hungarian Bank, now in process of being wound up, is a child of distress. It has been founded owing to the pressure of the present political and economical calamity, and from the beginning it has been clear to the Government as well as to political parties and financiers that its creation was only patchwork in the economic reconstruction of the country. The decisive impulse of its foundation was given by the terrific rise of the cost of living, caused by the appreciation in foreign rates of exchange, and by the fear of social disturbances. As the Government did not want to make the question of the issue bank a bone of contention between the political parties, a dense veil of mystery was spread over the preliminary work of its foundation. The draft of the statutes and the allotment of the participations in the share capital to the several banks and bankers was carried through in the most secret way. Only a small committee of Parliament deliberated on the statutes, and sanctioned them; most members of the House did not even know them. When finally, after manifold difficulties, the Bill was passed, and an agreement as to the several participations was reached, it turned out that some provisions of the statutes did not meet with the approval of the head office of the Anglo-Austrian Bank in London, and the head office of the "Laenderbank" in Paris. The objections raised by these two foreign banks were due, as will be explained later on, to excessive influence of the Government over the bank, and to the question of security for note issue. Here again the negotiations with these groups were kept so secret that the Viennese banks and the representatives of the political parties have not the faintest notion at the present moment as to what concrete alterations of the statutes have to be made. The result of all these lengthy negotiations is that the issue bank, which intended to start operations originally on August 15th, then on September 1st, finally on September 15th, is not even yet founded.

The nominal share capital of the bank is to amount to 100 million Swiss francs, of which 60 million shall be subscribed and fully paid up at once. Of this amount 24 million will be subscribed by the Viennese banks and bankers, while the remaining 36 million will be offered for public subscription in Austria and abroad. The statutes of the new bank, as they have been sanctioned by Parliament, grant the Government a great influence in the management of the bank. At the head of the bank is a president, then a general board ("Generalrat"), consisting of 15 to 20 members; 8 to 14 of these are to be elected by the general meeting, the remaining 7 or 6 will be nominated by the Government from representatives of industry, commerce, trade, agriculture, and the trade unions. Thus, if the number of members does not exceed the minimum of 15, the majority will be appointed by the Government. Only six members of the general board are allowed to be foreigners. Owing to the objections raised by the Anglo-Austrian and the Laender Banks, the aforementioned right of appointment by the Government has been restricted, but to what extent is not yet known. It is, however, important to note that the president and the general manager, in the appointment of whom the Government has a preponderating voice, will have much more influence in the management of the new bank than they had in the old Austro-Hungarian Bank.

For the bank notes issued by the National Bank, a "third" security is to be provided by the condition that the total bank note circulation must not exceed the treble of the value of the gold and the foreign bills held by the bank. As, however, the value of these foreign bills in Austria is continuously subject to great fluctuations, it is provided that for the period immediately after the foundation of the bank their value should be calculated at the average rate of exchange of the last two preceding months; the Finance Minister is entitled to check this ratio every six months, and to change it according to the fluctuations of the rate of exchange. Thus the bank has the right to issue as many more bank notes as the price of foreign currencies may have risen. As this might lead

to a constant inflation of the note issue, the representatives of the Anglo-Austrian Bank and the Laenderbank objected to this provision. Further differences of opinion arose from the question of where the gold and the foreign bills should be deposited; the afore-mentioned foreign banks demand that they should be deposited outside Austria, which, of course, might be considered to show a certain want of confidence.

The National Bank takes over the whole bank note circulation, plus the liabilities of the Austrian Department of the Austro-Hungarian Bank, and the assets corresponding to these liabilities; among these assets are the deposits of coin and bullion and of foreign bills and the commercial bills discounted. The transfer of the deposits of foreign money belonging to the "Devisenzentrale" (State Clearing House for the money market) to the new bank will be arranged by a special agreement.

The lines on which the new bank has to conduct its business do not differ very much from those of the old Austro-Hungarian Bank; a new feature is the right to issue debentures in foreign money and to accept deposits in foreign currencies. An important provision is that the Government is not allowed to make use of the Issue Department for the purposes of its own financing unless the bank notes to be issued on its behalf are covered by a deposit of gold or foreign bills. The Government, too, is not allowed to issue any sort of State notes which might handicap the bank in its obligation to keep the rate of the krone at a certain level. The two foreign banks have also raised objections to the condition which obliges the bank to stabilise the rate of the krone, failing which it would lose its privileges, as in view of the disorganised state of the Austrian finances the new bank may find itself confronted by an impossible task.

The Austrian Government guarantees the capital, together with dividends at the rate of 6 per cent. on the paid-up capital, payable in Swiss francs, and pledges as security the Customs duties. Five per cent. of the profits have to be deposited for account of the pension funds. Any profits after the payment of dividends at the rate of 8 per cent. on the paid-up capital shall be divided as to two-thirds to the State and one-third to the shareholders, while profits after the payment of dividends at the rate of 10 cent. shall be divided as to three-quarters to the State and one-quarter to the shareholders.

Notes of the Week.

The Fate of Smyrna.—The Kemalist army has done its best to complete the ruin of the richest part of the Turkish Empire. Smyrna, the chief port of Asiatic Turkey, and the only one possessing a really good harbour with modern equipment, had a population 12 years ago of some 300,000, more than half Christian, and comprising many Greeks and Armenians, together with foreign residents of every European nation. It was the natural outlet of a very fertile country, whose great agricultural and mineral resources were only partially developed; in the ten years preceding 1913 the revenue of the province had doubled; the population was industrious, and the modified crops, including cereals, beans, figs, raisins, cotton, opium, and tobacco, had never been known to fail all at once. The region was one of the chief sources of the supply of valonia, there was a very large export of Eastern rugs and carpets, and, with Naxos, it supplied all the emery of the world. It was well served by two railways, and it possessed—for Turkey—good and fairly numerous roads. In the four years preceding the great war the city had suffered considerably through the suspension of trade with Italy, and afterwards with Greece, and through the wholesale expulsions of Italian and Greek residents during the Tripoli and Balkan wars; and the competition of the Anatolian Railway and the transfer and extension of the Smyrna-Cassaba line seemed likely to divert part of its trade to the Bosphorus and the Sea of Marmora. But the extensions of the Ottoman-Aidin line had opened up new sources of traffic, and that company, which in 1899 had felt compelled to readjust the interest on its debentures, was paying 6 per cent. in 1913 on its ordinary shares. Even in the period of compara-

tive stagnation since 1918 the annual value of the imports had been about £4,000,000, and of the exports about £4,500,000. Latterly, after the interruption of the Greek steamer services, about a third of the shipping in the port had been British, and nearly half Egyptian. Of the imports of cotton goods, about 70 per cent. came from Manchester, and last year the second largest share of the whole of the exports came to Great Britain, the largest to Italy. Now the city is burnt down, the Greek and Armenian population refugees or massacred, the foreign commercial communities (including about 800 British residents) expelled and ruined, the inland towns, which acted as centres of collection for its export traffic, burnt and plundered, and its trade, and the revenues which went to the Porte and the foreign bondholders, cannot recover for years. And the recovery may be retarded by the growth of French and Italian export facilities respectively at Mersina and Adalia, and by the diversion of part of the traffic along the Cassaba extension to Panderma and along the Anatolian Railway to Constantinople. But the natural advantages of the city, including its excellent harbour, will probably ensure its revival hereafter.

The Porte and the Foreign Bondholders.—In addition to the payment of 6s per coupon on account of the arrears on the Unified Debt for 1920-21 and 1921-22, it is now announced that a further payment will be made shortly on account of the arrears on six loans not included in the settlements of 1881 and 1903. These loans are the Four per Cent. of 1890, the Five per Cent. of 1896, the Four per Cent. of 1902, the Four per Cent. of 1901-5, the Four per Cent. of 1908, and the Five per Cent. of 1914. They were issued in Paris and Constantinople, except that of 1908, a Baghdad Railway loan, which was issued partly to the concessionaires and partly to the Deutsche Bank. They are secured on revenues controlled by the Debt Council, which, speaking generally, consist of receipts from certain tithes, from the sheep tax in some of the provinces, and from Customs duties, or from one or more of these sources; and payments on account were made on them last April, ranging from 35c to 4f 40c on the "unitary coupon," i.e., the coupons of bonds of a nominal value equivalent to £20. The announcement, which appeared in Tuesday's *Financial Times*, is surprising, in view of the interception of revenue by the Kemalist Government and the state of Turkish foreign trade. Probably the payment comes out of the balance left after the distribution of last April; the precise amounts will be known about the middle of next month. Turkish bondholders in general may well be thankful for these small mercies, in view of the results to them of the destruction of Smyrna.

Finance Accounts 1921-1922.—The finance accounts for the year ended March 31, 1922, have just made their appearance. Although by this time general interest may have waned in the detailed accounts of the past financial year, yet there are still many items which call for notice. The publication of these enable us to revise our National Debt table, which appears on another page, and the most noticeable change here will be found to be an increase of approximately £17 millions in "Other capital liabilities." This is accounted for mainly by the inclusion of £13,950,000 on account of "Unemployment Insurance Acts, 1921." The detailed statement of Miscellaneous Revenue is a welcome addition to our meagre knowledge of ordinary and special receipts, as briefly stated week by week in the income and expenditure return. Special receipts amounted to £170,805,948. Naturally the Treasury, with £48,463,516, were the principal contributor, this sum, of course, including the cash received from the Reparation Commission, amounting to £35,523,200. From the Board of Trade £25,417,833 came into the accounts; the chief item of £11,773,261 being for surplus receipts from the Food Department, while "Sale of coal imported during coal emergency" is given as £6,862,877. From the Disposals and Liquidation Commission £42,733,197 was received, and the Shipping Liquidation Commission contributed £31,408,668. Repayment of loans made to

Dominions and Allies provided £15,354,171, of which £6 millions came from Belgium for payment of the Post-Armistice Loan, and £4,289,089 from Australia. Greece also paid £2,379,064, in addition to the £12,000 instalment off the loan of 1832.

Cost of Living.—A further decline of 2 points is recorded by the *Ministry of Labour Gazette* cost of living index figure for August, reducing it to 79 per cent. above the pre-war level. This is the lowest point touched since the Armistice, as may be seen from the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914. (Food, Rent, Clothing, Fuel, and Light, &c.)					
	1918.	1919.	1920.	1921.	1922.
January 1st	85-90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90-95	110	132	133	82
May "	95-100	105	141	128	81
June "	100	105	150	119	80
July "	100-105	105-110	152	119	84
August "	110	115	155	122	81
September "	110	115	161	120	79
October "	115-120	120	164	110	..
November "	120-125	125	176	103	..
December "	120	125	169	99	..

The index number for food alone fell from 75 per cent. at the end of July to 72 per cent. at the end of August, the decline being mainly accounted for by a fall in the price of potatoes. There were also slight reductions in the average prices of meat, flour, and bread, but these were offset by advances in the prices of eggs and fish, and by other minor increases. The increase in the price of clothing as compared with July, 1914, is estimated at 135 per cent., as against 140 per cent. at the end of July last.

Employment and Wages in August.—There was a slackening during August in the rate of reduction of unemployment. The *Ministry of Labour Gazette* records that the percentage unemployed among members of trade unions from which returns are received was 14.4 per cent. at the end of August, as compared with 14.6 per cent. at the end of July. Recent movements in the percentage figure may be seen in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.							
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.

* Excluding coal miners.

There was a marked improvement in the coal mining industry, and employment was a little better in the pig-iron and iron and steel trades. On the other hand, there was a decline in the cotton spinning industry, and in the jute, pottery, and glass trades. The percentage unemployed among workers insured under the Unemployment Insurance Act was 12.0 per cent. at August 21st, as against 12.3 per cent. at July 24th. The total number of workpeople registered at the employment exchanges as unemployed at August 28th was approximately 1,378,000, as against 1,400,000 at the end of July. In the industries from which statistics are collected by the Ministry of Labour, the changes in rates of wages reported as having taken effect in August resulted in an aggregate reduction of about £450,000 in the weekly full time wages of over two million workpeople, and in an increase of £15,000 in the weekly wages of over 90,000 workpeople. The prin-

cipal bodies of workpeople affected were coal miners in Durham, Yorkshire and the East Midlands, workpeople employed in the engineering industry, and gas workers. In the case of coal miners, there were decreases equivalent to rather less than 1 per cent. on current rates in Durham and to over 14 per cent. in Yorkshire and the East Midlands. On the other hand, the lower paid day-wage workers in coal mines in Lancashire, Cheshire and North Staffordshire received increases up to 1s per shift in the form of subsistence allowances. Men in the engineering industry had their rates reduced by 5s 6d per week, and those in the gas industry by 1d per hour, or 4d per shift. Since the beginning of 1922 the changes in rates of wages reported to the Department have resulted in a net reduction of over £3,600,000 in the wages of 7,500,000 workpeople, and a net increase of nearly £3,500 in the wages of 18,000 workpeople.

Cotton Trade Short Time.—Our Manchester correspondent writes:—Owing to the severe trade depression, spinners of American yarns in the Lancashire cotton industry have decided to stop their mills on Saturdays and Mondays for a month. This decision was announced to-day by the Master Spinners Federation in Manchester, the ballot on the proposal having shown the necessary 80 per cent. in favour of the scheme. A circular has been sent out requesting the employers to make the necessary arrangements. The first stoppage will be on September 30th, and the curtailment of production will continue until October 23rd. This organised short-time will mean that during the four weeks the mills will run 140 hours instead of 192 hours, and the stoppages will result in a limitation of output equal to 27 per cent. Over five hundred firms, owning forty million spindles, are affected, and nearly one hundred thousand operatives will, of course, receive reduced wages. The crisis in the Near East is having a vital effect upon Manchester trade; less business has been done this week than for a long time back, and in weaving districts looms are running out of orders, and more machinery is being allowed to stand. Unemployment, therefore, in both spinning and manufacturing branches of the industry is increasing.

Occupational Diseases.—A Labour correspondent writes:—After the Whitehaven colliery disaster the Trades Union Congress, which was then in session at Southport, passed a resolution of condolence, and in support of this Mr Herbert Smith, president of the Miners' Federation, in a speech utterly devoid of rhetoric but forcible and poignant in its sincerity, dealt with the question of safety. The question of the protection of the workers from the peculiar risks incidental to their various callings is one which has always received a good deal of attention from the Labour movement. The general public even yet does not realise the prevalence of industrial diseases, some of them often fatal, to which workers in different industries are subject. Occupational diseases have in recent years become a special branch of medicine, and some steps have been taken to cope with the problem. The dangers of lead poisoning, and the horrors of "phossy jaw," are more or less familiar to the public, but of the wide range of diseases known to the Home Office the outside world is almost entirely ignorant. Yet if the deaths and non-fatal cases from occupational diseases each year were paralleled by the losses resulting from, say, British intervention in the Greco-Turkish war, public opinion would be stirred by the slaughter. This preamble is inspired by the fact that the Government is now contemplating against the view of the Home Office, it is believed, the closure of the anthrax disinfecting station at Liverpool, in order to cut a deficit of about £5,700. Anthrax poisoning is almost entirely confined to the woollen and worsted, horsehair, and hides and skins industries, and is most prevalent amongst persons handling wool. During the last four years (1918-21) 34 persons have died from anthrax, and in the previous 20 years there were 113 fatal cases reported; so that in a quarter of a century 150 people died as a consequence of a disease which is preventable. During that period the proportion of fatal cases

to total cases shows no decline. Towards the end of the war a Departmental Committee on the subject reported that "the existing regulations are unequal to the task of coping with the nature of the disease." Its view was that the principle of compulsory disinfection of materials likely to be infected should be substituted for regulations under the Factory Act. It expressed the opinion that these materials should be disinfected at the ports of embarkation, e.g., Karachi, Bombay, Basra, and Cairo. As an immediate policy it was proposed that a small experimental disinfecting station should be established in this country without delay in order "to settle the type of station to be used." In the following year the Anthrax Prevention Act was passed empowering a Secretary of State to provide "the necessary works for the disinfection of infected goods." Within 18 months a factory was established at Liverpool for the purpose of disinfecting certain classes of wool. Last year the deficit was about £5,700, due undoubtedly to the trade depression. The Geddes Committee cast its eye on this institution, and recommended that it should be closed, or made self-supporting. The Treasury is now anxious, it is understood, to close the factory. It is not surprising that the wool textile workers are perturbed at the thought that the Government should even be considering the possibility of closing the disinfecting station. A special meeting of the Joint Industrial Council has been called for next week, and protest meetings are being arranged. The need is not for the closing of the present station, but for the extension of the provision for disinfecting raw materials. The present factory is so small that it was possible to require compulsory disinfection only of the grades and types of wool particularly liable to infection, and there is no doubt that the Liverpool station has done good work. But more provision is necessary. Within the last month cases of outbreaks of anthrax among sheep and cattle have been reported as a result of these animals drinking from streams polluted with water which had been used for the washing of wool. It is clear that nothing but the compulsory disinfection of all suspected wool will effectually remove the risk of anthrax.

Land Drainage.—So encouraging were the results of the drainage schemes which the Government initiated last winter in order to alleviate unemployment, writes an agricultural correspondent, that, subject to the sanction of Parliament, funds will again be available during the coming winter. The quality of the work done was considerably better than was anticipated. Although it is impossible to state the exact acreage which has been relieved of flooding or waterlogging by the operations which were carried out last winter and spring, it is estimated that substantial benefit must have been derived in the case of not less than 340,000 acres. A far greater acreage, however, still suffers from permanent waterlogging or too frequent flooding. The bodies to which advances will be made are Drainage Authorities and County Agricultural Committees. The Ministry of Agriculture, in the case of each scheme submitted to it and approved, will be prepared to advance the whole of the money required, subject to certain conditions, among which are the following:—All the work done must, as far as possible, be carried out by hand labour. Seventy-five per cent. of the labour must be among ex-service men, if they are available. Of the remaining 25 per cent., the majority must be married men, if available. The ordinary farm labourer's wage of the district will be paid. All the work must be completed by the end of March next. On the conclusion of the work, a proportion of the net cost, up to 33½ per cent., will be refunded to the Ministry.

The Port of London Authority.—The report of the Port of London Authority for the year ended March 31st last shows a further increase in the trade of the port, the total net tonnage of vessels which arrived and departed with cargoes and in ballast from and to foreign countries in 1921 amounting to over 34 million tons, as against 32½ millions in 1920, 26½ millions in 1919, and 40 millions in 1913. The net register and deck-cargo tonnage of shipping which entered and left the Port of London and paid river dues during the twelve months ended March

31st last amounted to 25½ million tons, an increase of 5.8 per cent. as compared with 1920-21, an increase of 12.4 per cent. in the foreign trade being partly offset by a decrease of 12.3 per cent. in the coastwise trade. A summary of financial results in recent years is given below:—

	For Year Ending March 31.					
	1914.	1918.	1919.	1920.	1921.	1922.
Total revenue	£ 3,494,453	£ 4,407,846	£ 5,723,690	£ 8,305,801	£ 10,043,731	£ 7,929,874
Total expenditure	2,217,822	2,910,599	3,532,604	5,531,726	7,101,601	5,801,217
Balance of rev.	1,216,631	1,497,247	2,191,086	2,774,075	2,942,130	2,128,657
Fixed charges	932,786	1,226,917	1,264,567	1,600,323	1,944,166	1,575,266
Surplus revenue	283,845	270,330	926,519	1,173,752	997,970	552,788
Brought forward	89,637	340,465	341,953	349,384	383,347	896,044
Written off, &c.	373,482	610,795	1,268,472	1,523,136	1,381,317	1,448,772
Carried forward	281,578	268,842	919,088	1,139,789	485,273	...
	91,904	341,953	349,384	383,347	896,044	1,448,772

The amount of nearly £1½ millions carried forward is subject to liability, if any, for excess profits duty. The reserve fund has been raised to £1 million by the addition of £16,663, a part of the income from investments during the year. Capital expenditure for the year was £1,472,800, while £500,000 Port of London 5½ per cent. Inscribed Stock was redeemed in August, 1921. Of the authorised Port Stock of £32½ millions, £30 millions has been issued and half a million redeemed, leaving a balance unissued of £3 millions. From the table below, which gives the value of imports and exports of the principal ports (excluding coastwise goods), it will be seen that London has regained its place at the head of the list so far as values are concerned:—

	1919.	1920.	1921.	Dec. in 1921.
London (including Queenborough)	£ 819,875,330	£ 1,005,276,386	£ 606,856,886	% 39.6
Liverpool	827,986,112	1,091,657,022	528,012,834	51.7
Hull	148,023,115	172,951,919	91,922,735	46.8
Manchester (including Runcorn)	146,890,745	207,683,045	86,515,435	58.4
Southampton	41,046,404	88,509,359	66,813,302	24.5
Glasgow	110,248,762	158,126,941	94,701,689	40.1

During the year ended March, 1922, the Authority landed or received 2,231,232 tons of import goods for warehousing or for immediate delivery, a decrease of 641,671 tons, or 22.3 per cent., as compared with the tonnage dealt with during the previous twelve months.

Nobel Industries.—We cordially welcome the steps taken in the interest of greater publicity in company affairs in the speech of Sir Harry McGowan, at the annual meeting of Nobel Industries, yesterday afternoon, giving the position of the constituent companies comprising the merger. It is stated, and rightly so, that a mere aggregation of the existing balance-sheets as they stand would be practically of no value. But in bringing the balance-sheets of the large number of constituent companies to a common basis by employing a uniform method of valuing companies' assets and liabilities, a more reliable picture of results is revealed. This is certainly a step in the right direction, and although the figures only relate to the year 1920, the directors are to be congratulated upon the innovation. According to this statement, shareholders in Nobel Industries had at the end of December, 1920, assets to the value of £18,754,561 to set off against a total share capital issued by Nobel Industries of £15,738,427. Thus a surplus of £3,016,134 is shown. Patent processes and goodwill are valued at £4,049,335, and land and buildings at £2,157,300. But the items which shareholders will examine most critically are the various investments of the undertakings. These amount to approximately £10 millions, and are divided into three classes. The first, investments in allied and subsidiary companies, at £3,944,054, is taken at cost. The third, "Other Investments" at £1,071,353, is taken at market values at December, 1920, while the second is a huge item, "Investments in Large Industrial Undertakings," amounting to £4,784,548, and valued at cost. The last sum includes the company's holdings in Dunlops, General Motors, and other concerns, which are known not to have fared well. If these holdings could be re-valued in accordance with the market

values of the assets of the companies concerned, it would be interesting to know how much would have to be written off the £3,016,134 surplus before mentioned. When we have the figures for 1921 in front of us we shall examine them with considerable interest to see how much the investment holdings in the big industrial undertakings have been written down, and incidentally if it has been possible to find a more equitable method of valuation than taking "at cost."

The Johnnies Report.—The report of the Johannesburg Consolidated Investment Company, Limited, for the year ended January 30th last, shows profits realised on stocks and shares, dividends and sundry revenue, of £305,780, which compares with £422,298 in the previous year. The dividend of 7½ per cent., free of tax, absorbs £296,250, as against £395,000 for the 10 per cent. dividend paid a year ago, and the balance forward is reduced from £184,400 to £162,200. The value of the gold produced by the company's group of mines was £7,995,300, the average price obtained being £5 2s 8d per fine ounce, as against £5 11s for the previous year. A reduction of £1,931,600 in the value of gold recovered is ascribed partly to the strike and partly to the lower price of gold. The balance-sheet shows an increase of over £15,000 in the holding of stocks and shares, and of £5,000 in mining properties and advances to mining companies, while there is a new item of £342,900 for loans to South African companies. Sundry debtors and dividends accrued, however, have been reduced by £372,000, and cash is £94,000 lower. With regard to the company's holdings in South African Diamond Mines, the directors state that "there is a decided improvement in the demand for rough diamonds, though as yet it is for limited quantities." America has reappeared as a buyer.

Conditions in Japan.—Cable advices from Tokyo state that after the half-yearly settlement money came back so freely from the provinces that the rate of short loans dropped sharply, day-to-day money having been freely offered at about 3½ per cent. Two months' credits were, however, still quoted as high as 8½ per cent., and the discount rate remains unchanged at 9½ per cent. The stock market was very inactive, and prices were generally lower. The weather has continued fine without any break even on those days on which the typhoon occurred very often, and with the favourable outlook for big crops the price of rice has fallen heavily. In the cotton yarn market demand continues inactive both at home and abroad, and stocks are gradually increasing. There was a fairly good business done in the silk market. The Imperial Silk Company is expected to be dissolved after the clearing out of its outstanding stocks in the near future. The allotment of the company's profits is now under consideration. The following statement with reference to the embargo on gold has been issued by the Government:—"The embargo on gold is naturally an abnormal measure which was introduced during the war, and it goes without saying that it should be removed as soon as possible in order to restore the normal course of things. It requires, however, deliberate consideration to decide whether now is the proper time to carry out its removal. The economic condition of the world has not yet settled down to stability; many countries have not adopted any definite policy with regard to gold; the international movement of gold has not generally returned to the former free condition; moreover, the economic condition of this country being not yet sufficiently stable, it seems that the immediate removal of the embargo may have an adverse effect on the economic position of this country, which might not be trifling. Under these circumstances, the Imperial Government do not think it proper to remove the embargo on gold now, but nevertheless hope to do so as soon as the time comes when the general economic condition becomes more stable and when there is no fear of inflicting sudden changes on the monetary market. It must, however, be added that the Imperial Government will give special consideration to the unfavourable effect of the embargo upon the exchange quotations, and will proceed on the lines of giving more facilities for the sale of as much gold held abroad as possible."

The programme of the University Extension lectures for the coming session, issued by the University of London, South Kensington, covers a wide range, and courses of great interest in the departments of literature, science, art, history, architecture, and economics are included in the list. In the direction of teaching of a non-vocational character, important work is being done by the board. In particular the attention of students may be directed to the very excellent group of courses arranged for the diplomas of history, literature, economics, and social science, and the history of art, which extend over a period of four years, and pursue to a high level the study of each subject.

PROFESSOR H. S. FOXWELL, F.B.A., will deliver a special course of ten lectures on "The London Stock Exchange," on Thursdays, at 6.15 p.m., beginning on Thursday, October 12th, in the theatre of the School of Oriental Studies, Finsbury circus, by permission of the director. Further particulars can be obtained from the secretary of University College London, Gower street, W.C. 1.

Oversea Correspondence.

UNITED STATES.—THE TARIFF—ESTIMATED CROP YIELD—RAILROAD EARNINGS—COMMODITY PRICES—MONEY EASY.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 11.

MUCH sooner than had generally been expected, the Senate and House conferees have reached an agreement on the Tariff Bill, and present indications are that the measure will be passed by both branches of Congress, and signed by the President within the next fortnight. The compromise tariff, as decided upon by the conference committee, retains practically all of the extremely high rates of duty in the Senate Bill, especially those which were dictated by the so-called farm bloc. The strong opposition which it was thought would be encountered from the House conferees failed to materialise; they yielded all along the line, even on many of the most radical increases and changes made by the Senate in the measure that was first passed by the House of Representatives. Pressure upon the Republican leaders in Congress from protectionists and business men generally throughout the country, urging that tariff legislation, which has been dragging for more than a year, be expedited, is given as the main reason for the quick action of the conferees in reaching an agreement on matters that only a short time ago promised to be debated for weeks. It is suspected that a desire to stimulate contributions for the coming campaign—which thus far have been rather slow apparently—may also have been a factor. The tariff as agreed to by the conference committee has not yet been published, but some of its main features may be summarised as follows:—The foreign valuation system of levying duties has been accepted, instead of the American valuation plan, which was advocated by the House. The free tariff zone system has been eliminated. The compromise measure contains the elastic tariff provision, authorising the President, under certain conditions, and with certain limitations, to change the tariff rates after an investigation by the Tariff Commission; the President is also authorised to employ the American valuation plan in determining rates of duty, if such a course is deemed advisable. Among the principal rates decided upon are the following:—Scoured wool, 31 cents a pound, that rate being a compromise between the 33-cent rate in the Senate Bill and the rate of 25 cents a pound in the House measure. Sugar from Cuba is assessed 1.76 cents a pound, and that from all other countries 2.20 cents. The duty on wheat is 30 cents a bushel, while the rate on dye products is 50 and 60 per cent. *ad valorem*, in addition to a specific duty of 7 cents a pound. It is understood that the high Senate rates on all agricultural products were accepted by the conferees, but that the duty on vegetable oils was slightly lowered. The rate on potash has been fixed at 1½ cents a pound, equivalent to \$30 a ton.

Owing to the strikes of coal-miners and railway shopmen it was fully expected that railroad earnings for July would be somewhat less than those for June. Complete returns filed with the Interstate Commerce Commission, however, make a very favourable showing, all things considered, especially with respect to net operating income. Total gross earnings in July, for the first-class carriers, amounted to \$443,183,000, as against \$472,880,000, approximately in June, and representing a decrease of 4.3 per cent. from July, 1921. Operating expenses aggregated \$340,725,800, or 6.1 per cent. less than in July of last year; in June they amounted to \$363,335,000. Preliminary estimates had placed net operating income at between \$30,000,000 and \$40,000,000, but the final returns give that item as \$69,239,000, equivalent to an annual return at the rate of 4.04 per cent. on the tentative property valuation, as compared with 4.79 per cent. in June and 4.5 per cent. in July of 1921. The railroads in July fell \$33,618,500 short of earning a 6 per cent. annual return, and were \$29,332,800 below the amount necessary to show a 5½ per cent. return, which the Commerce Commission has decided is a reasonable figure. For the first seven months of the current year the railroads had a net operating income of \$418,271,000, as compared with \$214,713,400 in the corresponding period of last year. This is at the annual rate of return of 4.36 per cent. on their property valuation, as against only 2.24 per cent. for the first seven months of last year. Gross earnings for the period were \$3,054,531,000, showing a decrease of 2.6 per cent., while operating expenses totalled \$2,419,602,000, or a drop of 11.2 per cent., compared with the like period of 1921.

This year's leading crops in the United States, according to the latest estimates by the Department of Agriculture, calculated on September 1st farm prices, will approximate \$6,600,000,000, or about \$1,250,000,000 more than their value last year. Three crops alone, namely, corn, cotton, and hay, will exceed one million dollars in value; combined, their value will amount to more than one-half of the value of all the important crops. Some of the present estimates are: Wheat, \$720,600,000; corn, \$1,801,900,000; oats, \$404,100,000; potatoes, \$385,400,000; hay, \$1,160,200,000; and cotton (exclusive of seed), \$1,064,400,000. The Government's latest crop report forecasts a corn crop of 2,875,000,000 bushels, showing a reduction of 142,000,000 during the past month owing to excessive heat and lack of moisture in various sections of the corn belt. The indicated yields, with comparisons, are shown below:—

	Final, 1921.	Aug., 1922.	Sept., 1922.
Corn	3,186,000,000	3,017,000,000	2,875,000,000
Wheat.....	795,000,000	805,000,000	818,000,000
Barley.....	151,000,000	192,000,000	194,000,000
Buckwheat ..	14,100,000	13,800,000	13,500,000
White potatoes	347,000,000	440,000,000	438,000,000
Sweet potatoes	98,700,000	112,000,000	108,000,000
Tobacco.....	1,075,000,000	1,425,000,000	1,353,000,000
Flax	8,100,000	11,400,000	11,700,000
Rice.....	36,500,000	38,700,000	38,800,000
Hay, tame.....	81,600,000	93,100,000	92,900,000
Hay, wild.....	15,200,000	17,200,000	15,800,000
Sugar beets ..	7,780,000	5,080,000	5,260,000
Apples	98,100,000	202,000,000	207,000,000
Peaches	32,700,000	56,000,000	55,600,000

During August, commodity prices showed an even narrower movement than in July. Bradstreet's index number as of September 1st, namely, \$12.0793, was only eight-hundredths of 1 per cent. higher than that of August 1st. The September index number, as compared with that of August 1st, included six groups of commodities which advanced, while six declined, the changes being slight in both, and one group remained unchanged. Of the 106 commodities contributing to the general price exhibit—96 of them being contained in the index number—30 advanced, 33 declined, and 43 remained stationary. The change from July 1st to September 1st was only two-tenths of 1 per cent.; such a narrow movement is probably unparalleled even during a dull mid-summer season. The authority mentioned comments on this "hesitation" of prices, remarking that this "almost utter absence of movement needs to be borne in mind when predictions are made of a general rise impending in all costs, but especially in prices of commodities and

wages of labour." The September index number, although showing scarcely any perceptible change from that of August 1st is 8.9 per cent. higher than on August 1st a year ago, and 14.7 per cent. above the low point of recent years touched on June 1, 1921, but is 32 per cent. below the peak of February 1, 1920, and 38 per cent. above the level of August 1, 1914.

The increase of 173,944 tons in unfilled orders on the books of the United States Steel Corporation during August is further evidence of the growing demand for steel products, although it is possible that some of the gain in that month was due to a falling off in production rather than entirely to an increase in the volume of new business. The corporation's unfilled orders on August 31st aggregated 5,950,105 tons, as against 5,776,161 tons at the end of July. It is noteworthy that this gain in tonnage is the only one thus far reported for August; production of both pig-iron and steel ingots decreased considerably in that month. In the steel industry generally operations have fallen off from about 75 per cent. in June to 55 per cent. at the close of August; they are now believed to be close to 60 per cent., with indications that they will be increased to 70 per cent. or more before the end of the year. The total of unfinished business reported by the Steel Corporation as of August 31st is the largest volume shown since March 31, 1921.

After a slightly firmer tendency, money rates have eased, following the return to the banks of the September 1st interest and dividend disbursements. Although money may stiffen at times during the next month or two, owing to crop-moving demands and a possible further revival in trade and industry, there is nothing in the present situation and outlook suggesting the likelihood of stringency in any section. Banks throughout the country have thus far met all seasonal requirements without signs of any strain. That the money market is expected to continue easy is indicated by the action of the Treasury Department in offering for subscription an issue of about \$200,000,000 of new Treasury certificates, dated September 15th, and bearing interest at 3½ per cent., as compared with the previous offering at 4½ per cent.

GERMANY.—CURRENCY—FINANCES—TRADE PROSPECTS—MARK AND IMPORTS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 19.
The foreign exchanges fell sharply to-day on publication of the news that the Reichsbank had come to an agreement with the Bank of England, but later recovered, and the dollar official rate was 1,476. It is stated that the conditions of the agreement will not be published at present, as the transaction is private and between the two banks. The currency question last week continued to obscure all others. Cash is almost as short as ever. The Reichsbank announces that by October 15th it will be printing 7 milliards a day. Concerning the shortage, which, as already reported, is due to the great price-rise and the maintenance, or perhaps (according to precedent) increase, in the volume of business, the director of the Disconto-Gesellschaft, Dr Urbig, submitted how, despite the great increase in circulation, the buying power of the circulated money has rapidly fallen, and added that at the recent rate of inflation and price-rise the circulation at the end of this year will be 500 milliards, with a buying power of 500 millions, or only £25,000,000 gold. The table does not quite agree with my own calculations, but as it illustrates the principle I give it. All the columns represent milliards of marks; the third column (foreign buying power) is calculated on an exchange index compiled from the leading currencies. The gold (dollar) buying power of the circulated marks is, of course, considerably less:—

	Circulation.	Index.	Home Commod.	Exchange
January 31, 1920.....	70	5.4	5.15	
" 31, 1921.....	122	7.6	6.39	
" 31, 1922.....	158	4.5	3.3	
May 31	213	3.3	3.2	
June 30	238	3.3	2.6	
July 31	265	2.6	1.6	
August 31	337	1.9	0.82	

The controversy between friends and enemies of the mark currency continues. The first are led by the Reichsbank, which already in March last proclaimed against the threatened expulsion of the mark by stronger currencies. The Reichswirtschafts Ministry is considering a Bill legalising the (at present unallowed) discounting of bills drawn on foreign currencies. The Association of Footwear Wholesale Merchants has forbidden its members, under threat of fine, to use foreign currencies in home trade. The Wholesale Yarn-Dealers' Association has recommended the dollar as a basis for fixing home prices, but has fixed the dollar exchange rate temporarily at 1,000 marks, which is much below the current quotation. The effect of this arbitrary rate-fixing is to make the dollar's fluctuations the basis for calculating prices, but not to charge the full world-market price on a dollar-exchange basis. The question whether use of foreign currencies at home is legal is, it appears, doubtful. Debtors, reports the *Vossische Zeitung*, are refusing to pay undoubted debts, in order that by the time judgment is given against them they may pay more easily in worse money—as the taxpayer does when possible. An official authority states that, owing to the heavy loss which falls on sellers of real estate through the State's claim for Increment Tax two paper marks are worth 100 per cent. more than one old mark. The real price at which houses and land change and is fraudulently concealed in every single case of sale—illegally would be a better word than fraudulently. There have been several new *clausula rebus sic stantibus* decisions releasing merchants, on the ground of currency depreciation, from a contracted liability to deliver. These decisions may be regarded from a new viewpoint, which have hitherto ignored. They seem to be a repudiation of the paper-mark currency, and a refusal to recognise the law of August, 1914, enforcing the paper mark. The essence of a forced paper currency is that it shall be enforced regardless of its value, and heavy loss to certain interests is taken for granted. A paper currency that did not cause anyone heavy loss would not need to be enforced. It seems, therefore, that the Supreme Court decisions may prove, as did the abandonment of capital punishment as a means of enforcing the *assignat*, a death-blow to the mark. The Reichswirtschaftsrat has provisionally voted that the mark must be retained, and recommends that the prices of goods not containing foreign materials shall be reckoned only in marks, but adds that foreign material may be reckoned on a foreign exchange basis. A demand or prohibition of the use of foreign currency was defeated. In fact, nothing can prevent the use. An illustration of present conditions is that a new five-storied house in the prosperous Bavarian quarter, with six shops underneath and about 20 large and middle-sized flats, is advertised for sale, freehold and mortgage-free, for £800 (5,500,000 marks). The pre-war gold mark price would about equal £40,000. Of the £800, some £400 would go on Increment Tax. Foreigners buy houses up, and as houses, almost without exception, are mortgaged to three-fifths of their value, the foreigner can buy a house like that mentioned by paying down part of the price in the expectation that in a short time he will pay off the mortgage with a five-pound note. Whether such speculations are wise is a complicated question.

The revenue receipts in July show a large increase, the more remarkable because the new currency depreciation only began in that month, and had hardly time to express itself in taxation. Receipts from taxes only were 21,547,437,308 marks; receipts for the months April-July inclusive, 70,135,291,116 marks, or 47,325,209,830 marks more than in the same months of 1921. The 70 milliards in four months provide the greater part of the 108,724,000,000 marks revenue estimated for the whole financial year 1922-23. Railways and Posts brought 15,396,054,000 marks in July, and in the four months 48,338,835,000 marks (or 40,287,836,000 more than in the same months last year), or about half the estimated 100,883,618,000 marks for the whole financial year. In July income-tax yielded 6,320 millions more than in July, 1921, sales tax 3,938 millions more, coal tax 2,350 millions more, and Customs (including gold supplement) and taxes on consumption, 1,398 millions more. In the first four months income-tax yielded 23,344 millions, or 18,871 millions more than in the same months of 1921, and coal tax 8,158 millions, or 6,853 millions more. Postal rates

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

will be raised on October 1st, the home letter rate to be 6 marks, or 1-5d, foreign rate 20 marks, or 3d. Railway freight rates will be raised 100 per cent. (to include a 33½ per cent. rise earlier announced) on October 1st, and passenger fares will be raised on November 1st by 100 per cent. over October fares. All these increases will leave charges far below the currency depreciation, and heavy deficits are certain, although early this year the railways were yielding a profit for the first time since 1913. This is the Government's own fault. Experience has shown that railway charges could, without injuring traffic, always be put up in measure as the currency depreciates; but the Government neglected to do this in good time and gradually; and it now reasons that the big sudden increase which is necessary in order to adapt charges to other values is impracticable. The Reichsbank statement for September 7th shows new pressure for credit, and an increase in the note circulation by 14,226,578,000 marks to 252,373,738,000 marks. Of late, the statements for the first week of the month have not shown the usual relief.

Of increased difficulty in importing owing to the mark's lowness nothing is heard. The incessant question: How can a German merchant buy foreign currency for import when the dollar has risen from 4 marks to 1,500 marks? is best answered by the question: How can a German merchant buy pig-iron for export when a ton has risen from 79.50 (1914) to 29,722 marks? Both operations require expenditure of a vastly increased sum in marks; but nothing is ever heard of the second question. Both operations, when the rise is rapid, involve a greatly increased demand for credit; but here it is not the absolute sum in marks which counts most, but the commercial practicability of the proposed deal, which determines whether credit can be had. In fact, when the foreign exchanges have had a particularly long and bad drop, import orders are temporarily withheld; but the reason is that all such mark declines end (as the latest ended) in partial recoveries, and the influence causing the withholding of the order is the fear of loss through the mark

recovery. If the dollar reaches 1,500 marks, that means that people are paying 1,500 marks for it, and not that it is impossible to pay. As the proofs lately given that ability to import does not decline owing to mark depreciation have been questioned on the ground that coal imports make up the greater part of the actually recorded import increase, I give the following figures:—

	Metric Tons. Imports Without Coal.	Monthly Average Imports. 1.35 million.
1920	16,133,029	1.35 million.
1921 (eight months)	15,183,700	1.9 million.
1922 (seven months)	16,917,000	2.43 million

This shows that in seven months of 1922, with the dollar anywhere between 200 and 670, imports were greater than in twelve months of 1920, when the dollar varied between 35 and 104. Probably there is no reason for deducting coal imports (as these, too, must be paid for), but only for allowing for their low value. Imports of many unnecessary articles have increased, notably pottery, although home sales of home-produced pottery, reports the *Boersen Zeitung*, have of late trebled. The notion that a depreciating exchange checks imports under all conditions is as untrue as the notion that it encourages exports under all conditions. A falling German exchange, while reducing the gold production cost, does not encourage exporting (1) because export prices, with certain exceptions, have nothing to do with home production cost; (2) because a mark exchange drop always increases the home demand, and the Government then prohibits or rations export. One important reason why the falling mark does not check imports is that the passive total of the foreign payment balance is reduced by the reduction in the gold value of liabilities to foreign creditors other than the Ally Governments, and the foreign money—which the *Handel und Industrie Zeitung* rightly says is presented to Germany after every mark fall—is presented in the form of unpaid-for imports. Mr Keynes pointed this out long ago. In so far as that influence operates, a falling mark exchange favours importing.

POLAND.—MONETARY CRISIS IN UPPER SILESIA—SUGAR PRODUCTION—AERIAL COMMUNICATION—COMMERCIAL NEGOTIATIONS WITH JAPAN AND RUSSIA.

(FROM OUR CORRESPONDENT.)

WARSAW, September 14.

UPPER SILESIA is passing through a grave monetary crisis, which is the result of the financial régime in force in this new Polish province. According to the decision of Geneva, the German mark is the only legal currency in that area. In consequence, neither the Polish Government nor the Polish bank of issue has any influence on the quantity of notes circulating there. The whole economic life of this highly industrial province has been put at the mercy of the Reichsbank in Berlin. By simply cutting off the supply of German marks, this bank can stop completely the wheels of Silesian trade. This situation has already arisen only a few months after the partition of the province. The crisis, which in the long run could hardly be avoided, has been hastened by the collapse of the German mark. The German printing press was not able to keep pace with the rising prices, and in Hamburg and Berlin, for instance, some of the biggest institutions were short of cash and were unable to cash their customers' cheques for payment of weekly wages. Upper Silesia was confronted with the same troubles, only in a more acute form. The great mines and factories were unable to pay the wages to their workmen, because neither the branch of the Reichsbank nor the great private banks could supply them with the necessary cash. The angry crowd plundered shops in Katowice, in Bismarckshütte the employees tried to throw the manager of an undertaking into a blast furnace. The police were unable to cope with the situation, and it became necessary to resort to military aid. The soldiers, attacked by the crowd, which tried to disarm them, had to make use of their rifles. Twenty persons were killed and wounded. The Warsaw authorities sent a wagon with three milliard Polish marks to Katowice, and the employers and workmen have decided to pay and accept

wages in that currency at the rate of 4.60 Polish marks to one German mark. This rate is not stable, and it will be modified every day according to the quotations of the exchanges.

The present measures can, however, be considered also as a first step in the direction of the replacement of the German mark by Polish currency. According to the convention between Poland and Germany, signed on May 15th in Geneva, though during a period of 15 years the German mark remains the only "legal currency in Polish Upper Silesia," the Polish Government can replace the German currency at an earlier date. "This replacement can take place only on the first of every month, and it must be announced ten months in advance in the *Monitor Polski* (Polish Official Gazette), and it has to be notified immediately to the German Government." (Article 306.)

During the period of ten months which separates the date of the announcement and the final replacement of the German mark, the Polish Government may decide that debts contracted in German currency may be paid in Polish marks according to the rate of exchange established by the Chamber of Commerce of Upper Silesia. This rate is to be calculated daily on the basis of the average quotations of four exchanges (Berlin, Danzig, Katowice, and Warsaw). This provision, however, applies only to debts contracted after the announcement of the introduction of the Polish currency. All prior obligations are payable in German marks.

The area under sugar beet amounted in Poland before the war to 172,994 hectares, divided as follows:—

	Hectares.
Former Congress Poland.....	79,004
Former Prussian Poland.....	79,896
Former Austrian Poland.....	6,008
Eastern districts	8,086

In 1921-22 the respective figures were:—Congress Poland, 26,590 hectares; Prussian Poland, 52,617 hectares; Austrian Poland, 1,912 hectares; Eastern districts, 1,068 hectares. The total amounted to 47 per cent. of the area which was under sugar beet before the war. For 1922-23 the area has increased by 10 per cent. in Posnania and by 30 per cent. in the other parts of Poland. It may be expected that the quantity of sugar obtained during the present campaign will be greater than a year ago by one million metric centies. This will enable Poland to export a part of this year's production.

A new company, the "Aero-Lloyd," has opened the first Polish aerial communication between Livow (Lemberg) and Danzig. The journey from Livow to Warsaw takes 2½ hours, and from Warsaw to Danzig 2½ hours.

Negotiations for the signature of a commercial treaty between Poland and Japan will shortly be opened in Warsaw. New efforts are being equally undertaken for arriving at a commercial agreement with Russia. In a fortnight the Polish delegates are leaving Warsaw for Moscow, where the representatives of the two States will try again to arrive at an understanding.

CANADA.—CROP REPORTS—IMPROVING EXCHANGE—COMMERCIAL PROSPECTS—NEW IMMIGRATION POLICY—TRADE RETURNS—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 10.

THE western grain crop is apparently destined to exceed the earlier estimates, which placed the wheat yield at 320 million bushels. A combination of abnormally propitious conditions has been available during the past fortnight, and areas where the crop was regarded as virtually ruined returns. As a result the Manitoba Free Press, which specialises in crop surveys and has a reputation for reliability in them, now estimates the western wheat crop at 371,900,000 bushels; in regard to other grain crops it predicts 413,539,000 bushels of oats, 61,080,800 of barley, 53,311,000 of rye, and 3,088,000 of flax. Grain prices have been falling, but at the current level, which is expected to hold, the *Free Press* calculates that the farmers of the prairie provinces will secure about 566 million dollars for their grain. There will also be a greater margin of net profit in the 1922 crop than in its predecessor, for it was

sown at a much lower cost. Seed was cheaper, the farm wage scale has materially fallen, and with the reduction in freight charges achieved at the end of last session the cost of transportation which in the end falls on the producer will be lessened. The wheat crop exceeds in volume the record crop of 1915, but as the acreage planted has enormously increased it falls far short of it in average yield, the *Free Press* figures showing an average of 25.97 bushels for 1915 and only 17.31 for 1922. However, there will be an abundant surplus for sale abroad, and unless the marketing problem proves insuperable it should bring in a flow of money and goods which will set Canadian commerce and industry on its feet. There is no expectation that the western farmers will be able to clear off all their accumulated debts through this crop, but it will materially assist the liquidation of credits everywhere. By a fortunate coincidence it also happens that Eastern Canada is blessed this year with equally abundant crops, and they are being reaped under favourable conditions. The fruit crop, which is an important factor, is especially good, and people in the cities are getting the benefit of very cheap fruit. One pleasant result of the good crop reports, to which other circumstances, like the American strikes, contribute, is that last week for the first time for many years the Canadian dollar has reached par in New York. It has since receded a little, but for practical purposes the exchanges between the two countries have been equalised, and American tourists in Canada have been complaining that Canadian hotels have begun to charge a discount upon the American dollar. Apart from the obvious commercial advantages this swift recovery of their dollar is a great source of pride to the Canadian people, and has given a great fillip to national confidence in the future. Another result is an improved tone in the business situation. With a substantial purchasing power assured for the rural community country storekeepers are now beginning to place orders with greater freedom. Stocks in the hands both of retailers and wholesalers are low, and manufacturers will benefit by fresh orders. As there have been substantial increases in the wages of unskilled labour in recent weeks a revival of demand is likely to be followed by a rise in prices, of which signs are already apparent. The industrial clouds have not been cleared, but the settlement of the American coal strikes has brought some improvement in the situation, and assures Canada of her winter's supply of fuel. We are still, however, threatened by a strike of the railway shopmen, which might have very serious consequences if it caused a traffic blockade and prevented the movement of the western crop.

The Federal Government have now announced an immigration policy by which it hopes to people the vacant lands of the western provinces and check the movement to the cities, where the problem of winter unemployment is almost chronic. There will not yet be any encouragement of city workers, but redoubled efforts will be made to secure immigrants who will engage in agriculture and domestic service. As a preliminary step, the Immigration Department will make a careful survey of conditions existing in countries from which efficient settlers might be secured. Later on a conference will be called at Ottawa of representative officials of the provincial Governments and field officers of the Immigration Department, at which the further details of the programme will be worked out. There has been in existence for some time a body called the Canadian Colonisation Association, which, with the backing of private capital, has been trying to settle lands lying adjacent to the railways in the west, and is now planning to conduct operations in consonance with the British Government's Overseas Settlement scheme. The association endeavours to provide the new settler with a variety of practical help, and to assist him in his early struggles with expert advice and welfare work. The Government will now make a substantial grant to the association and work in conjunction with it. Efforts will also be made to lure back some of the thousands of the Canadians who have in recent years emigrated to the United States, and a campaign to bring from Great Britain carefully selected boys and girls in their teens will also be instituted. Owners of vacant land are being invited to list their holdings with the association on the understanding that they are available to be sold on a 32-year term payment basis. The relations between the Govern-

ment and the association are at present rather obscure, and the criticism is offered that the latter body is too much under the influence of real estate agents who are anxious to make sales and earn commissions. The scheme would have more chance of success if powers had been secured to appropriate at a fair valuation vacant land in the west now being held for speculative purposes, and in the end, probably, some such steps will have to be taken.

Detailed figures of the trade returns for July indicate a continuation of a trend away from the United States and towards Britain, and for this feature the new American duties are held to be mainly responsible. The total exports for July were valued at \$70,430,235, as compared with \$54,518,036 in July, 1921, while imports were \$60,757,019, as compared with \$62,405,890 in July, 1921. The effects of the American tariff are shown by the fact that exports to the U.S. for the 12 months ending July 31st fell from \$477,347,273 to \$304,054,941. In the same period, exports to the United Kingdom rose from \$297,106,257 to \$306,792,308. Canada is still getting the bulk of her imports from the U.S., but while their value in July fell from \$43,786,570 to \$40,484,197, the British quota rose from \$7,115,991 to \$10,146,771. The situation from the British point of view is, therefore, visibly improving. The stock markets continue to be lively, and the pulp and paper and traction stocks have made substantial gains. C.P.R., despite the reduction in freight rates, has reached its highest point since 1919. The milling and textile stocks are more or less quiescent. Money is reasonably easy, and considerable sums are coming in from the United State for speculative investment. Some discussion has arisen in the financial papers about the establishment of a broader call-loan market in Canada. At present the Canadian markets, Toronto and Montreal, are only fair-weather markets in the eyes of bankers, and they prefer to place their spare funds on call in New York. The question will probably have further ventilation when the Bank Act comes to be revised next year. As a preparation for this event, the provincial Government have appointed a local professor of political economy as a special commissioner to hold sittings in the province, and take evidence about the working of the existing credit system. To judge by the sittings already held, the Progressive members from Alberta will not lack ammunition to attack the Act when it comes before Parliament.

AUSTRALIA.—TRADE—CROP PROSPECTS—TARIFF AGREEMENT WITH NEW ZEALAND.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 12.

THE Australian trade returns for the financial year ended June 30th compare with those for the preceding year as follows:

	1920-21.	1921-22.	Inc. or Dec.
Imports—	£	£	£
Merchandise	163,320,278	101,028,179	— 62,292,099
Gold	10,862	36,482	+ 24,620
Total imports	163,331,140	101,064,661	— 62,267,479
Exports—	£	£	£
Merchandise	126,666,224	124,445,214	— 2,221,010
Gold (inc. premium) ..	5,258,867	3,504,241	— 1,754,626
Total exports	131,925,091	127,949,455	— 3,975,636

Imports for 1921-22 show a reaction nearly to the 1919-20 total of £98,974,292, as the effect of the restrictions on fresh ordering after the flood of imports in 1920-21. With the reduction in stocks, there has lately been a tendency to order with rather more freedom, and the imports for the month of June show an increase of £748,139, as compared with June, 1921. The large Government borrowings in London tend to encourage revival of Australian import trade, while the lower prices make the process a safer one for buyers, who have been able to make profits on recent business after the losses sustained a year ago. The reduction in exports is more apparent than real, as the exports for 1920-21 included a considerable quantity of wool and wheat paid for in earlier years by the British Government, while similar exports of wool included in the 1921-22 figures were smaller. As regards exports, representing fresh payments receivable by Australia, there was probably some increase in 1921-22.

The country has also received the benefit of Bawra distributions of 10 millions sterling (represented by priority certificates), as an instalment of the Australian half-share of profits on resales of wool bought in earlier years by the British Government. This 10 millions may be added to the excess of exports over imports for 1921-22, viz., £26,885,794, making together nearly 37 millions in favour of Australia for the past 12 months. After setting fresh Government borrowings against the annual interest and other amounts payable to British investors, the above figures explain the accumulation of Australian balances in London which has taken place during the first half of the current year.

Subject to the weather in the early future, prospects appear favourable for Australian exports for 1922-23. The realisation of the new wool clip will doubtless be spread over the greater part of the season up to June, 1923, but the quantity of wool remaining to be shipped on account of the British Government is now small. The great problem at the present moment is that of the next wheat harvest. So far the crops have made good progress, but the rainfall, though fair, has generally been below average, and the result will depend upon spring rains in September and October, which, if favourable, will mean a good yield, and enable steady shipments of wheat to be made after next Christmas. So far as the last wheat harvest is concerned, practically the whole of the surplus has now been shipped, the exports from the beginning of December, 1921, to early August, 1922, being over 80 million bushels, inclusive of flour. Butter exports during the first half of the new season promise well, the production already being somewhat larger than a year ago.

The following is a comparison of some of the principal exports from Australia for the last two financial years:—

	1920-21.		1921-22.
	£		£
Wool	33,774,032		47,975,498
Wheat and flour	39,422,224		34,164,092
Butter	11,067,076		7,987,558
Frozen meat	5,398,499		4,007,542
Ores, metals, concentrates	4,723,017		3,852,076

A tariff arrangement between Australia and New Zealand is now going through the two Parliaments. A similar arrangement was made, but not adopted, some years before the war. Recently it has been found that in the absence of arrangement, New Zealand was admitting British boots under the "British preferential" tariff at a much lower rate of duty than Australian boots under the general tariff. The proposed New Zealand duty against Australian boots is to be 35 per cent., instead of the general rate of 45 per cent., the "British preferential" rate being 25 per cent. As regards the Australian duties on New Zealand goods, butter and cheese are to be reduced from 3d to 2d per lb, and fish is to be made free, while the duty on grain remains at 1s 6d per 100 lbs. A number of other alterations are made in each case. There is a provision that goods imported into Australia, and thereafter transhipped to New Zealand, or *vice versa*, are to be charged at the British preferential rates, if otherwise eligible, in the same manner as if direct importation had taken place. This provision is calculated to assist Australian re-export trade with New Zealand in British goods.

Letters to the Editor.

THE RAILWAYS ACT, 1921.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with much interest both Mr Wedgwood's article in the *Manchester Guardian* on the "Future of British Railways" and your comments on it. May I venture to say that neither of them seems to me quite fair towards the Act of 1921. Surely it is not true that the Act, rigidly interpreted, would increase the burden of rates in times of prosperity, and lighten it in times of bad trade. No doubt the Act lays down the broad principle that rates are to be so fixed as to produce annually to the companies their standard net revenue.

But there are many qualifications. Section 58 provides that, when fixing charges, the Tribunal shall not only in-

sist on proof of efficient and economical management, but have regard to the means in their opinion best calculated to ensure the maximum development of traffic, and accordingly shall ascertain as far as practicable the effect which existing charges have had upon traffic, and "in particular whether the application of such charges has tended, or if continued would be likely to tend, towards causing the increase or diminution of the said traffic."

Further, Section 59 provides that the Tribunal shall not reduce rates when they are producing more than the standard revenue, if it is of opinion that, owing to change of circumstances, the excess is not likely to continue, and that a deficiency of standard revenue in previous years may be carried forward as a claim against excess in subsequent years. In other words, the Tribunal is required, not only to refuse to impose a scale of rates which would throttle trade, but to take a long view, and ignore trade fluctuations, while the companies are promised that, though they may have ups and downs, on balance their net revenue shall be maintained, always supposing that the general trade of the country keeps up and prospers.

I am sure it cannot have been to these eminently common-sense provisions of the Act that you refer when you suggest that it would be well for the Tribunal to "put the Act out of its mind." Nobody supposes that the rate-fixing provisions of the Act are either simple or perfect, nor that the scheme will be easy to work. But no one, as far as I know, has proposed a better scheme. And when we remember that both France and the United States have legislated on practically the same lines, we are entitled to believe that the best that could be done to meet the post-war *bouleversement* has been done.

But you have hit the nail on the head in saying that the crucial point is that the Tribunal shall succeed in maintaining its non-legal character. The tragic death of Sir Francis Gore-Browne is nothing short of a public calamity. No successor, however eminent, even if possessed of equal industry, patience, and genius for conciliation, can fill his place at the outset; for Sir Francis was not only an eminent lawyer, but had with his three years' experience become an expert in railway questions. Now it is up to the traders and the railway companies, by carrying on their methods of previous discussion and compromise, and bringing before the Tribunal only in the last resort the main outstanding issues, to make it clear to the new President that they are business men seeking to arrive at a fair business settlement; and that the last thing they desire is a second and less dignified edition of the Railway Commission.—I am, Sir, yours, &c.,

September 18th, 1922.

W. M. ACWORTH.

Books and Publications.

TWO BOOKS ON INDIA.*

"HAPPY INDIA," by an English engineer, owes most of its happiness to an unhealthy contempt for facts, while the "Indian Export Trade" depends so much on facts as to be dull. The author of "Happy India," having read a book with the sarcastic title of "Prosperous British India," found that all was not well with that great country, and decided to investigate for himself. This he did in some four months of the cool season.

He found India to be a land of great potentialities, inhabited by a people equal in ability to that of any other country. But, in spite of this, the country was poor, and many millions were normally underfed. Responsibility is laid chiefly at the door of the Government, which is accused of wasting money on useless things, such as guarding the North-West Frontier, spectacular receptions, and sporting expeditions. The poverty of India is only too true; so is the fact that millions are underfed, but whether the amount saved by abolishing receptions, &c., would go far to assist matters is doubtful. Certainly neglect of the North-West Frontier and Afghanistan would lead to disaster. History tells us what happens

* "Happy India." By Arnold Lupton. (London) George Allen and Unwin. 6s. "Indian Export Trade." By R. M. Joshi. (Bombay) Sydenham College of Commerce.

when the North-West is not properly guarded. One does not hold a brief for Delhi or Simla, but much of the present criticism is based upon an ignorance of facts.

Again, the author was shocked to learn that all the cowdung—the only available fertiliser in India—is used as fuel instead of manure. This is true. Any scheme whereby wood or coal could be substituted would be welcome, but the author's scheme sounds exceedingly costly unless very slowly developed.

Most of the contemplated happiness in this book depends upon the use of fertilisers, whether animal or mineral. The author is at pains to demonstrate that increased output must depend upon manuring the land. This is what all writers on Indian agriculture have already told us. How to do it is another matter. The writer's method is simple. Supply manure free. There will be a pleasant and friendly agreement, by which the cultivator will pay for the manure if he thinks the results warrant such payment. Supposing the plan works, why should the cultivator grow more produce only to enrich the village money lender? The solution depends upon more than manure.

And so with all other reforms. Waterworks are wanted to supply pure water to prevent cholera. They must be built irrespective of cost. Malaria must be abolished. What the Americans did for some thousands of disciplined workpeople must be done for the whole of India. Further, "every stream must have its banks made straight and smooth, so that there shall not be little corners where the mosquito may breed." A simple and inexpensive task for a country with an area of roughly 1,750,000 square miles! Similarly, by scientific methods, the excessive death rate will be reduced to a decent figure.

But the author nullifies much of his discussion of disease and its prevention by introducing (in Ch. XII.) the question of growth of population. He shows that Indians insist upon an excessive birth-rate. "It is the pace that kills." "In the last forty years the population of B. India has increased 48,000,000, and except for..... 'fevers,' would have increased 200,000,000, but that was impossible....." Imagine it in an already densely populated country! Even the author says it can't be done. They must die. So the death-rate is the result of the excessive birth-rate, and the nature of the death is secondary.

Chapter XII. should have been the first chapter in the book. It gives the key to most of India's troubles from an economic point of view. With such an uncontrolled birth-rate science will do little for India. Any surplus wealth due to better methods is immediately followed by a rapid growth of the population, and the standard of living is kept down to the bare sustenance level.

The Government might be improved—the recent reform and Indianisation of the services will remove one complaint in the book—better and more scientific methods should be welcomed, but the future happiness of India is bound up equally with changes in the social habits, as with the economic methods of the people.

Here the Government can do little except through education. And this must be slow. To educate almost 320 millions of people is a colossal task, which is not simplified by the babel of languages, by age-long prejudices, and great poverty. All the reforms proposed mean an enormous increase in expenditure. Where is the money to come from? "The curse of the poor is their poverty," and so it is with India. Improvement will be slow; there is no royal road. One need not be pessimistic, but a blind optimism and contempt for facts as shown by the author only hinders progress.

Mr Joshi's book, "Indian Export Trade," is dull, and will be of little use except to Indian students for examination purposes. Most of us will prefer to go direct to the Blue-books. The title is misleading, for the study only covers a period of 15 years—1899-1914. A very inadequate chapter brings us up to 1899, and nothing at all is said of the last eight years. Why this period should have been chosen is difficult to understand. The facts are made no use of beyond a few casual remarks. But perhaps this is inevitable in a treatment which isolates exports from imports, and which does not attempt to show the close connection between foreign and home trade. The charts are useful.

Agents and Secretaries of Tea, Rubber and other Produce Estates and Companies.

INTERNATIONAL COTTON STATISTICS.

THE first issue of the Bulletin of the International Federation of Master Cotton Spinners' and Manufacturers' Association has been published. The Bulletin will be issued quarterly, and will contain the usual half-yearly statistics relating to the consumption and stocks of raw cotton throughout the world. The secretary of the federation, Mr Arno S. Pearse, has produced a most valuable document.

Particulars are given of the amount of short time worked by master spinners throughout the world during the half-year ending July 31st last, with comparative figures for previous half-years. With regard to Great Britain, it is stated that the stoppage of machinery during the past six months was equal to 4,539 weeks of 48 hours, against 6,037 weeks in the half-year ending January 31st last. The comparative figures for France are 1,147 weeks against 2,876 weeks, Germany 1,745 weeks against 3,257 weeks, Japan 12,541 weeks against 16,521 weeks, Belgium 4,322 weeks against 7,712 weeks, and Switzerland 3,113 weeks against 2,538 weeks.

The officials of the federation have obtained returns from the owners of 132,085,210 spinning spindles, out of a total throughout the world of 154,555,267. The consumption of all kinds of raw cotton in the six months ended July 31st was 9,487,245 bales, against 9,322,213 bales in the previous half-year. With regard to American cotton the world consumption for the six months was 5,946,711 bales, as compared with 5,803,626 bales. It is of interest to mention that these figures, after allowance is made for the amount used by spinners who have not made any returns, confirm the consumption estimate of Mr H. G. Hester, of New Orleans, of 12,800,000 bales for the season 1921-22. The consumption of American cotton in Great Britain during the half-year was 1,034,791 bales, against 1,003,772 bales in the previous six months, whilst the consumption of all kinds of raw cotton in Great Britain is given as 1,319,099 bales, as compared with 1,247,464 bales in the previous half-year.

Some interesting statistics are given relating to mill stocks of raw cotton. The federation gives the supplies throughout the world of all kinds of cotton on July 31st last as 4,286,315 bales, as compared with 3,926,619 bales twelve months previously. Spinners in Great Britain held on July 31st 274,667 bales of cotton, against 296,997 bales at the end of July, 1921. Spinners' stocks of American cotton on July 31st last were 161,942 bales, as compared with 204,523 bales a year before.

It may be pointed out that out of the 132,085,210 spindles that have made returns 55,670,665 are mule spindles and 76,414,545 ring spindles. In Great Britain the owners of 50,135,638 spindles made returns. Mule spindles are given as 38,964,670 and ring spindles 11,170,968. The number of spindles in Great Britain using Egyptian cotton is given as 14,419,329.

Kaye's Rubber Latex Process, Limited.—Authorised capital £12,000, divided into 10,000 10 per cent. ordinary shares of £1 each and 40,000 deferred shares of 1s each. All the ordinary shares have been issued, and 10s per share has been called up. Of the deferred shares 18,000 have been allotted to the vendor, and 22,000 "have been paid up in full in cash." The division of profits between the two classes of shares is fully set out in an advertisement inserted in the Press to comply with the regulations of the London Stock Exchange. The object of the company is mainly to acquire a patent process of paper making which presumably utilises rubber latex. Some names well known in the rubber world are associated with the company, and the progress of the concern will be watched with interest. It is, however, a speculative proposition.

BURMA CORPORATION, LIMITED.—During the month of August 16,430 tons of ore were milled in the treatment plant, producing 9,002 tons of leady concentrate. 11,447 tons of lead-bearing material were smelted in the blast furnace, producing 3,982 tons hard lead for treatment in the refinery. Refinery products were:—
Lead, 3,401 tons; refined silver, 368,704 ozs.

CHAMPION REEF GOLD.—Cable:—Regret to have to report that rockburst occurred this morning, Sept. 21st, 40 level North Garland's Shaft; 39 to 42 levels damaged; 40, 41 levels choked. Stopping temporarily suspended this area. It will be some time before this return may not be able to maintain October.

CORNISH KAOLIN.—Production of china clay for August:—Washed, 1,102 tons; not washed, 1,500 tons; sold, 896 tons.

The BROKEN HILL PROPRIETARY COMPANY report for four weeks ending July 19, 1922.—Iron and Steel Works, Newcastle: The whole of the company's plant at Newcastle being shut down, with the exception of the steel foundry, which produced during the period under review 17 tons of castings, production has entirely ceased. Iron Knob: No limestone was transported to Newcastle from this source, suspended. Broken Hill: Underground—Operations suspended. Ore dressing mills, 304,107 tons of tailings were treated, producing 302 tons of lead concentrate and 4,431 tons of slime. Zinc separation plant—2,422 tons of zinc concentrate and 4,491 per cent. lead, and this plant, the assay value being 48.16 per cent. zinc, 47.86 per cent. lead, and 10.77 oz. silver. Slime flotation plant—Bastard process—1,535 tons of lead concentrate were produced from slime, assaying 45.89 per cent. zinc, 47.86 per cent. lead, 82.48 oz. silver, total value 3,516 tons of zinc concentrate, assaying 51.07 per cent. zinc, 47.86 per cent. lead, and 12.41 oz. silver. Sulphuric acid plant: 50,000 gallons of acid were produced; no sales were made to outsiders.

Mr Shailer Weston seconded the motion, which was carried unanimously, and the Chairman and general manager having replied, the proceedings terminated.

Before proceeding with the business before the meeting the Chairman, on behalf of the shareholders, congratulated Sir Robert Black, a director of the corporation, upon his well-deserved baronetcy, and having mentioned that the corporation owes much to his valuable advice and assistance, added that, as chairman of the Mercantile Bank of India, Sir Robert has done much by the broad views he has taken throughout the difficult times we have come through to stabilise and carry on Anglo-Indian trade and finance.

After a vote of thanks to the directors and the staff in London and the East had been passed, the proceedings terminated.

515

As you are aware, we are still interested as shareholders in the Dunlop Rubber Company. That concern has had a very trying time and they could not cope with the demand for tyres,

Chilian Explosives Company.—Another of our investments is in the Chilian Explosives Company, in which we have taken up 300,000 shares, or 50 per cent. of the capital, the other shareholders being the duPont Company, of America, and the Atlas Powder Company, of America. About 18 months ago, as a result of investigations by a committee appointed by the duPont Company and ourselves, we agreed that the time had come to consider the erection of a factory for the manufacture of explosives in Chile. Chile and Bolivia with their nitrate fields, their great copper and other metal deposits, are large consumers of explosives, and with certain of the raw materials used in the manufacture of explosives to be found on the spot and with an expressed desire on the part of the

Chilian Government that Chile should be self-contained in this direction, we decided after various investigations and mature deliberation to erect a factory at a spot convenient for the supply required by the above demands. During my recent visit to South America I found great interest in this enterprise on the part of the President of the Chilian Republic and other officials, and so far as one can humanly foresee this investment should be a profitable one, and I think will give us results which could not have been possible to us by exporting from this side in competition.

EUROPEAN INVESTMENTS.

Such financial interests as we possess on the Continent are strictly limited, and consist, apart from the Near Eastern interests to which I shall refer later, of investments in companies carrying on similar business to our own in Belgium, France, and Spain, totalling less than £100,000. In addition we have trading relations with important groups in those and other Continental countries which are working quite satisfactorily, and to your company's benefit. We have so far no direct interest, financial or otherwise, in Russia, Poland, Germany or Austria, except our small pre-merger connection in the last-named country.

Steps are being taken to conserve and extend our former interests in the production and sale of industrial explosives, &c., and cognate commodities in the Near Eastern States, notably Czecho-Slovakia, Hungary and Roumania, which will involve an ultimate financial interest of about £100,000. I have recently returned from a visit to those States after making a survey of the whole position, and we are satisfied that the measures taken will ensure that we shall share in the profitable development of trade in those countries which will follow every improvement in political conditions.

We are giving special attention to exploiting trade in our own Empire and South America and the Far East, as there is a wide field in these countries still awaiting development.

THE FINANCIAL POSITION OF THE MERGER AS A WHOLE.

It is frequently stated as a matter of complaint that the balance-sheet of a company like ours does not tell the full story about the position of the business, and that shareholders are quite in the dark as to what is really behind such an item as "Cost of Shares in Constituent Companies, £17,334,564." It is said that Parent or holding companies are able to screen the true position of affairs, and that such a document as this gives no indication as to whether the business of the operative companies is prosperous or the reverse. I need hardly point out to you that, although we may in fact own practically the whole of these businesses, so long as they remain separate legal entities as distinct companies, we are not entitled to put into our balance-sheet the land, buildings, &c., they own, but can, perforce, only indicate the shares we hold at what was given for them in our own share capital and cash. But, while this form of legal balance-sheet is thus narrowly prescribed for us, and we have no option in the matter, we have every desire that shareholders should have the fullest information as to the real position, and know what actually constitutes their assets.

Now that we can get an aggregate of all these balance-sheets— which, as they are upon a uniform basis may properly be done—they represent the real state of the merger companies taken as a whole, and by watching the progress thus disclosed from year to year, we are able to ensure not drawing upon the balance of assets over liabilities which existed (either as a carry forward or reserve) when we purchased, and also to see that all losses since merging are fully taken into account against profits before our dividend policy is determined. This annual aggregated document is invaluable to us, and is kept up on the lines following those on which the original valuation was determined, and is approved by, and under the criticism and examination of, our auditors. The preparation of it for each company naturally follows later than that of its own legal balance-sheet, and the aggregation of all the companies must obviously wait upon the last completed account. I am, therefore, not in a position yet to deal with the summarised position for December, 1921, but I propose to give you the salient features as at December, 1920, in a statement which I think is practically an innovation for large concerns so far as this country is concerned. In this statement we have replaced the item "Cost of Shares of Constituent Companies" by the actual detailed assets and liabilities of those companies, and included the other separate assets and liabilities of Nobel Industries, Limited, while all inter-debtedness of the constituent companies and ourselves is naturally cancelled out, making one consolidated balance-sheet as at December, 1920.

STATEMENT.

Assets:	
1. Land and buildings (as written down)	£ 2,157,300
2. Plant magazines, ships, cars, office fittings and fixtures (as written down), and including all war capital expenditure written down to 20 per cent. of cost	2,563,022
3. Patents, processes, and goodwill	4,049,335
4. Investments in allied and subsidiary companies	3,944,054

5. Investments in large industrial undertakings	4,784,548
6. Other investments	1,071,353
7. Stocks	5,042,435
8. Debtors	3,353,813
9. Cash at bankers and in hand	772,338

Total assets (not including cost of note issue) 28,338,198

Liabilities:	
10. Debentures in certain constituent companies	£ 1,148,504
11. Note issue and interest due	3,022,923
12. Bank loans	1,203,046
13. Sandry creditors (including provision for final dividends)	3,885,871
14. Portion of surplus applicable to shares of constituent companies not exchanged at December, 1920 (<i>i.e.</i> , not belonging to Nobel Industries)	323,293
	9,583,637

15. Surplus belonging to Nobel Industries	18,754,561
16. Against Nobel Industries' share capital issued	15,738,427

17. Surplus above share capital at December 31, 1920 ... 3,016,134
(After providing for all capital losses on realisation of physical assets through liquidation and concentration as known at that date.)
The Nobel Industries "carry forward" at December, 1920, of £757,000 is, of course, included in this surplus.

We know sufficient about the position which will be disclosed by this consolidated balance-sheet at December, 1921, to be able to state that it will prove no less satisfactory.

CASH POSITION AND GENERAL ADMINISTRATION.

With regard to our present cash resources, I will content myself by saying that after meeting the obligations arising through the various operations and investments I have referred to, and after taking up a substantial amount in our own 8 per cent. notes, we are in the happy position to-day that the parent company and our constituent companies have a sufficiency of working capital without any one of those companies or ourselves being indebted to banks in any part of the world.

The reduction of our book debts, due to lessened trade, has had an effect on our cash, but the principal reason for our comfortable position is a determined and successful effort during the past two years to bring our stocks of raw materials, semi-manufactured and finished products, to the lowest possible level consistent with safety. There is no more prolific waste in public companies than the holding of too large stocks, which means unnecessary tying up of capital and grave risks during times of falling prices.

I would add that the bearing of the present conditions of the money market upon our note issue finance is not being overlooked. After considerable delays through hindrances in the building trades, with which you will be familiar, our offices at Nobel House have been completed and our head office organisation is now concentrated there. We have thus been able to give up a large number of separate smaller offices in London, and the consolidation of the staff is already yielding results of great value.

THE FUTURE.

Now, what can one say as to the future? So far as we can judge at the moment, notwithstanding general conditions so far as this company is concerned, the present year should not be worse than its predecessor, and I am hopeful that it will be somewhat better. Let us hope we are nearing the end of industrial disputes, which are so disturbing to the trade of the country. The unsettled condition of the Continent prevents a rapid restoration of the world's commercial equilibrium.

One must not be over-optimistic with so much unsettlement so near at hand, not hepled by abortive political conferences. It looks as if the recovery from the effect of the war must be accomplished by natural laws, and the lesson has been, and will be, a stern one. Until the Continental nations show a disposition to economise and to balance their Budgets they cannot look for outside financial help by means of international loans. I look with much more confidence to the commercial people and bankers to help this recovery than to Government interference. What we must do is to reduce the cost of our products, correspond our selling prices thereto, and thus do our share towards the restoration of buying movements even in those countries impoverished by the effects of the war.

I have endeavoured to give as much detail as can properly be made public, and I hope that the information given showing the financial strength of your company will, in these anxious times for investors, reassure you all. Industry has come through trying times, but, thanks to the fundamental soundness of your business and an efficient organisation and a loyal and enthusiastic staff

your company has weathered the storm, and I finish my remarks by an expression of continued confidence in its future.

The report and accounts were unanimously adopted and the usual formal business transacted.

RAPHAEL TUCK AND SONS, LIMITED. COMPANY'S STANDING "NEVER HIGHER."

The twenty-first annual ordinary meeting of the shareholders in Raphael Tuck and Sons, Limited, was held, on the 19th inst., at Winchester House, Old Broad street, London, Sir Adolph Tuck, Bart., chairman of the company, presiding.

The Chairman, in moving the adoption of the report, said that it was well known that business in the course of the year had not been the easiest in the experience of the commercial world, nor in the history of the company. However, if the actual net results of the last year did not come up to the figures of some of their previous years, he could confidently say that the company had had its full share of the business that had been going in its particular branch of trade. Certain it was that the standing of this company had never been higher, nor the number of its regular customers greater. Given more normal conditions of trade, its net earning power was bound to be considerably augmented. Happily, the efforts put forth by the Picture Postcard Committee, specially appointed to combat the unjust increase of postage on picture postcards, and of which committee he had the honour to be chairman, had proved successful, and on May 31st last the postage on picture postcards was again reduced to 1d, and in the case of five words, to ½d. Unfortunately, however, the Postmaster-General had seen fit to limit the five-word message, which entitled the sender to the ½d rate of postage, to phrases of courtesy or of a conventional character only. He (the chairman) had already approached the Postmaster-General on behalf of the picture postcard industry, and, in the interests of the public, and no less so of the postal revenue itself, to remedy this state of affairs, but so far without result.

POSTAGE COMPETITION.

He was, however, not altogether without hope that the Postmaster-General might relent, and in order to bring this seemingly small but highly important question, with its full import, before the public, the directors had inaugurated an important postage prize competition, limited, of course, to Tuck's postcards, with prize awards amounting to £5,000, of which £3,500 would go to competitors, £1,000 to hospitals, and 500 guineas to the trade for the best window displays of Tuck's postcards. The practical nature of such a competition, which might well claim to be of national import, was well evidenced by the fact that Viscount Knutsford, chairman of the London Hospital, Sir Arthur Conan Doyle, and the Editor of *Truth*—all eminent men—had kindly consented to act as judges. The competition itself was of the simplest possible character, and consisted of but three questions, any one, or all three, of which might be replied to by competitors. The first question was: (a) Why do you like receiving or sending picture postcards? and the second was: (b) What message would you send to the Postmaster-General to urge him to allow any five words to be sent for a halfpenny on a picture postcard? The company hoped to be able to prove to the Postmaster-General, by the nature of the replies sent in by competitors, how strong was the feeling of the public in favour of the rescinding of this harassing, impractical limitation of the permitted five words to phrases of courtesy or convention only. He was glad to say that the competition was being enthusiastically taken up by the entire trade, which was naturally anxious to safeguard the future of the picture-postcard industry, and that it had already evoked a considerable number of responses on the part of the public, and would naturally gather volume during the six months of its progress. He trusted that every shareholder in the company would do his best, both by personal participation and by recommendation to friends, to assist the directors in their efforts to make Tuck's postcards postage competition a success for all concerned.

YEAR'S PROSPECTS.

The chairman then proceeded to deal in detail with the various other departments of the company's business, and remarked that, as they were in the fifth month of the new financial year, he was able to give a fair indication of their prospects. These, he was glad to say, were of a most favourable character, and the independent trade Press had also spoken very favourably of the company's productions. With reference to the company's claim against the German Government, he, the chairman, said that he had been to Berlin and had arranged a basis of settlement. They had received a payment of £6,800 from funds already in England, but from what they could gather it might take some years before full payment was made. The chairman then dealt in detail with the items in the account, and concluded by moving the adoption of the report and balance-sheet, and remarked that the directors recom-

mended the payment of a final dividend on the ordinary shares for the six months at the rate of 12 per cent. per annum, making, with the interim dividend of 8 per cent. already paid, a dividend of 20 per cent. per annum.

Sir Arthur Conan Doyle, in seconding the motion, said that he hoped the trade would play their part in making the success of the competition which had been initiated by Sir Adolph Tuck a great success. It was in their hands to do so, and he hoped they would see the force of his suggestion. As the chairman had said, the results during the first four months of the current year were better than in any previous year in the history of the company, and in his opinion they had a most successful future before them.

The report and accounts were unanimously adopted.

VEREENIGING ESTATES, LIMITED. "ASSETS MUCH UNDERVALUED."

At the annual meeting of the Vereeniging Estates, Limited, held at Lewis and Marks' building, Johannesburg, on August 10th, Mr Julius Weil, who presided, pointed out that the chairman of the company, Mr Isaac Lewis, was in London in connection with business that might result in important developments at Vereeniging. Their profits for 1921 were £31,165, compared with £55,640 for the preceding year, the reduction being due almost entirely to the abnormal slump in the price of all farming produce. A dividend was declared on May 15th at the reduced rate of 2½ per cent. They regretted the reduction, but they felt the only sound policy was to write down the farming assets to such a figure as would ensure for future years an assured profit.

Their company's position was exceptionally sound, as a glance at the balance-sheet would show. There was not a concern to which temporary upheavals or times of depression could do permanent harm. The intrinsic value of their assets was incomparably greater than the figures at which they stood in the balance-sheet. Their farms consisted of 127,277 acres, over which huge area the company owned the mineral as well as the surface rights of 126,121 acres, three-quarters of this ground being computed by Dr. Hatch to be coal-bearing. The actual river frontage of their farms was over 50 miles. The Rand Water Board hoped to close its barrage within a few months, when there would be 40 miles of perpetual navigable water, 18 miles below and 22 miles above Vereeniging. The potentialities of the district had been enormously increased; it was impossible to measure the extent of the benefit of this water to the town of Vereeniging, and to the company's farms. As to the forest, the 4½ million trees stood in the balance-sheet at about 3½d each!

The Cornelia Colliery equipment stood in the books at about half its actual value to-day. The company, he reminded them, had an agreement with the Victoria Falls and Transvaal Power Company in perpetuity to supply their Vereeniging power station with all its coal requirements at a price giving their company an agreed profit per ton. Last year the Victoria Falls Company purchased 452,215 tons of coal. Such an agreement, providing for an assured output, obviously largely increased the value of their collieries.

He was sure they would agree with him on such evidence as this that the company's position was far stronger than a casual glance at the balance-sheet disclosed, and that it gave promise of a very much larger return to the shareholders in the near future.

The Chairman pointed out that the loss on the farming operations was due to conditions prevailing all over the world. Steady improvement, however, was now noticeable, and he was hopeful of their being back before long to normal conditions.

With a view to stabilising profits and ensuring payment of a

regular and increasing dividend, the directors had decided gradually to discontinue farming operations in the Transvaal and to lease the land to desirable tenants.

The Cornelia Colliery had again produced a record output for the year, the sales having risen steadily from 296,706 tons in 1912 to 581,296 tons in 1918, and 646,994 tons in 1921. When the European workmen returned to duty after the strike the opportunity was taken to reorganise the working conditions, and the colliery was now producing the pre-strike tonnage with a reduced complement of workmen.

The report and accounts were carried unanimously, without discussion.

(a) Including Treasury Bonds.

Tenders will be received on Friday, September 29, 1922, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of £55,000,000. The amount of Treasury Bonds issued will not exceed £5,000,000, but subject to that limit the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

Messrs Samuel Montagu and Co. write on September 21st as follows:—

GOLD.

A substantial amount of gold came on offer, and was mostly taken for New York, Indian inquiries not being on a large scale. It is reported that gold to the value of \$500,000 has been received in New York from London, and that a similar amount has been exported from New York to Canada.

SILVER.

The market has again been steady, and movements in prices have been narrow. Buying orders continued to come forward from the bazaars, but many remained unexecuted, as, owing to the poorness of supplies, prices rose over the limits at which the orders were effective. Bear covering and buying on China account carried quotations to 35 1/2 for spot and 35 1/2 for forward delivery on the 10th inst., but on the whole the market has been subdued, and business has not been on a large scale. It is announced that the total amount of silver purchased under the Pittman Act up to the 7th inst. is 128,828,506 ozs, including a purchase of 48,000 ozs on that date. It will be remembered that in our letter of the 7th inst. it was pointed out that an eminent New York authority estimated the time required for completing the purchases under the Pittman Act (now about 80,000,000 ozs) as about 15 months from July 25th last. Should this estimate prove correct, price of silver will improve over 43 per cent. before the end of October, 1923, based on yesterday's New York quotation of 60 1/2 cents per oz. Exports of silver from New York for the month of August were as follows:—To England, 66,090 ozs; to India, 1,139,216 ozs.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Aug. 31, 1922.	Sept. 7, 1922.	Sept. 15, 1922.
Notes in circulation.....	18,226	18,142	18,121

Gold coin and bullion in India.....	6,378	6,330	6,235
Securities (Indian Government).....	584	585	584

No silver coinage was reported during the week ending 15th inst. The stock in Shanghai on the 16th inst. consisted of about 40,100,000 ozs in sycee, 35,000,000 dollars, and 4,260 silver bars, as compared with about 40,200,000 ozs in sycee, 33,500,000 dollars, and 4,660 silver bars on the 9th inst. The Shanghai exchange is quoted at 3s 5 1/2 the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1922.	Gold.	Silver.	1921.	Silver.

NOTICES.

Barclays Bank Limited announce that the Executor and Trustee Department has been removed from 3 Bank buildings, Lothbury, E.C. 2, to larger premises at the Head Office, 54 Lombard street, E.C. 3 (entrance 58 Lombard street). They also announce that they will open on Tuesday next, September 26th, a new sub-branch at High street, Highworth, Wilts, under the control of Mr E. Roberts, manager of Swindon branch.

The London Joint City and Midland Bank, Limited, announce the opening of a branch in High street, Sittingbourne, Kent, under the management of Mr L. Clarke, and an office at Leg of Mutton Corner, Yelverton, South Devon, under the supervision of Mr Cyril G. Chard, manager of the Tavistock branch.

Lloyds Bank, Limited, announce that a branch of the bank is now open at Potter street, Willington, Quay, under the management of Mr C. M. Johnson, of the Wallsend branch.

The Banco Nacional Ultramarino announce that they will remove their principal London office at 27B Throgmorton street, as well as their offices at 6 Austin Friars and 13 Copt-hall court, established later to meet increasing business, to larger premises at No. 9 Bishopsgate.

Tenders for Rs. 50,00,000 six months' Indian Treasury bills were opened on September 14th. The total amount applied for was Rs. 3,66,00,000. Tenders at Rs. 97 1/4 were accepted at rate was Rs. 97 1/4 9p per cent., equivalent to accepted rate of discount of 4.2445 per cent. per annum. Inter-a rate of discount will be offered for sale in India during the week mediate bills will be offered for sale on Friday, at Rs. 98 1/4 per cent., and tenders will be received on Friday, September 22nd, for Rs. 100,00,000 six months' Treasury bills. The amount of Treasury bills outstanding on September 16th was Rs. 78,71,65,000, of which Rs. 23,82,65,000 were in the hands of the public and Rs. 54,89,00,000 were held in the paper currency reserve.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 26 Broadway, Leigh-on-Sea.

We are informed that the formal consolidation of two of the oldest banking institutions in the United States took place on Thursday, when the Bank of New York, place on Thursday, when the Bank of New York Life founded by Mr. Alexander Hamilton, and the New York Life Insurance and Trust Company were merged under the name of the Bank of New York and Trust Company. The consolidated concern begins business with a capital of \$4,000,000; the surplus and undivided profits exceed \$11,500,000, and the aggregate deposits exceed \$75,000,000. Mr Edwin G. Merrill, president of the New York Life Insurance and Trust Company, is president of the consolidated institution, and Mr Herbert L. Griggs, president of the Bank of New York, is chairman of the board of trustees.

The Banque Belge pour l'Etranger announce the opening of an office at Braila, Rumania, as a sub-office of the branch established at Bucarest. The principal object of the new office is to facilitate all transactions connected with the export of Rumanian grain.

§ Approximate receipts

Reports and Notices.

Mr W. L. Griffith, the permanent secretary of the Canadian Government office in London, has joined the committee of Roumanian Government bill holders to represent the Canadian interests.

BANKS.

BANK OF NEW ZEALAND.—The balance-sheet and profit and loss statement for the year ended March 31, 1922, shows that the profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, for special grant to increase pension benefits, also for bonus to staff, are £703,242. From this has to be deducted:—Interest on guaranteed stock, £21,199; leaving £682,043. Of this sum the directors have allocated in reduction of bank premises and furniture, £50,000; leaving balance of profit for the year, £632,043; to which has to be added balance brought forward from last year, £361,276; making £993,319; from which there has been paid:—Dividend on preference "A" shares, £50,000; interim dividend on preference "B" shares, £21,875; interim dividend on ordinary shares, £131,250; leaving available for distribution, £790,194. This the directors propose should be disposed of as follows:—Dividend on preference "B" shares, making £62,500 for the year, equal to 25 per share, £40,625; dividend on ordinary shares, making £300,000 for the year, equal to 25 8d per share, £168,750; transfer to reserve fund (making reserve fund £1,675,000), £150,000; leaving balance to be carried forward, £430,819. During the year branches have been opened at Hamilton North and North End (Wellington), an agency has been re-opened at Avondale, and the agency at Normanby has been closed.

MINES.

RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERS.
RAND, LIMITED.—The directors have authorised their London agents to receive tenders of sale for £91,900 of the first mortgage debentures, such tenders to include all accrued interest. Tenders to be sent to the London agents of the company (The Johannesburg Consolidated Investment Company, Limited, 10-11 Austinfriars, London, E.C.2), so as to be received not later than October 2, 1922. Payment will be made on October 9, 1922, in respect of all accepted tenders.

MISCELLANEOUS.

BRITISH GAS LIGHT.—The net revenue of the British Gas Light Company for the year ended June 30, 1922, after providing for interest on debentures and debenture stock, was £67,339, making available, with the balance brought forward, £124,097. The directors have transferred £15,000 to general reserve (London), and recommend a final dividend on the ordinary shares of 5 per cent., making 10 per cent. for year, also a bonus of 2s 6d per share, both less tax, and carrying £58,983 forward. The report for the

THE ANGLO-SIAM CORPORATION, LIMITED.—The report for the year ended March 31, 1922, states that:—Including the amount brought forward from the previous year, and after providing for all necessary depreciation and all known bad and doubtful debts, the balance at the credit of profit and loss account is £124,848, out of which interim dividends absorbing £13,864 have been paid, leaving a balance of £110,984 at disposal. The directors have placed £15,000 to the general reserve funds, £5,000 to the reserve for British Government taxes, and £3,000 to provident fund, whilst they have written down the cost of acquiring the Indian business by £13,666, and out of the balance of £74,316 they recommend the payment of a final dividend of 3½ per cent. on the preference shares and a final dividend of 12½ per cent., with a bonus of 10 per cent., on the ordinary shares—all less income-tax—and that the balance of £33,772 be carried forward to the current year, subject to any taxation that may be payable. The report states that the timber business yielded only moderate profits; but as the 1921-2 floating season was one of the worst on record, and prices of teak continued to fall, whilst the cost of extraction continues to rise, this was to be expected, and as the Siamese Government are proposing a very substantial increase in royalty, the outlook is not encouraging. The results of the general business have been satisfactory on the whole; but it has been necessary again this year to provide for further losses, and as, apart from the poor demand for Eastern produce in Europe and other countries, some old stocks in the East have yet to be liquidated, it is too soon to expect a material revival in trade.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.—
The profits for the year ending June 30, 1922, after making all necessary provisions, amount to £40,918, and the balance brought forward from last year is £80,750, making a total available balance of £121,668.

An interim dividend of 3 per cent. on the first preference and $3\frac{1}{2}$ per cent. on the second preference shares, less tax, has been paid. The directors now recommend that a final dividend be paid of 3 per cent. on the first preference shares, $3\frac{1}{2}$ per cent. on the second preference shares, and of 5 per cent. on the ordinary shares, all less income-tax, making a total distribution of £61,755 for the year, leaving a balance of £59,913 to be carried forward. Mr Frank W. Cooper retires from the board in compliance with the articles of association, and is eligible for re-election. The auditors, Messrs Blease and Sons, also retire and are eligible for re-election.

RAPHAEL TUCK AND SONS.—The report for year ended April 30, 1922, shows that the trading for the year after providing for bad and doubtful debts, depreciation, income-tax, and all expenses, has resulted in a profit of £48,163; from this has to be deducted for directors' and management remuneration £6,027, leaving £42,136, add to this the amount brought from last report, £5,136, making £47,273 for disposal. From this amount there has been paid one year's preference dividend to January 1, 1922, £13,750. Ordinary dividend of 10 per cent. for year absorbed £25,000, leaving £8,523. The directors further recommend that this balance be appropriated as follows:—Transfer to special dividend reserve fund as provided by the articles of association, £2,795; leaving to be carried forward £5,728. The reserve accounts will then stand as follows:—Capital reserve, £8,845; special dividend reserve, £54,322; general reserve, £35,042. The report states that the various departments of the company's business maintain their sound and healthy condition. The investments, consisting of War Loan Stock, English corporation, colonial and other high-class securities, as also similar investments of the special dividend reserve fund, have been taken at the official quotation for these securities at April 30, 1922, the close of the financial year of the company.

SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED—The report for the year ended June 30, 1922, shows that the net profit amounts to £70,632; add balance brought forward from last year, £42,310; making £121,943; less interim dividend ($\frac{2}{3}$ per cent.) paid on February 1, 1922, £33,403; balance for disposal, £88,480. It is recommended that this sum be appropriated as follows:—Final dividend of $\frac{3}{4}$ per cent, making 6 per cent. for the year, less income-tax, payable on October 2, 1922—£121,275 preference shares fully paid, at 8d. each, £3,029; 137,725 preference shares 8s paid, at 3 30d each, £1,929; 1,171,157 ordinary shares fully paid, at 8d. each, £40,990—£46,948; balance to be carried forward, £41,631. The report states that in consequence of the stoppage of the collieries during April, May, and June, 1921, there was a strong demand for coal at the beginning of the last financial year, and prices were for a time well maintained. Owing, however, to the general stagnation of trade, blast furnaces, steel works, and other large consumers of coal were not able to resume operations on a sufficiently large scale to enable collieries to work full time; and notwithstanding an improvement in the export trade, prices fell rapidly. Under the terms of settlement arranged in July, 1921, wages are regulated according to the profits in each of the prescribed areas, and, as a consequence of the fall in prices, wages have been reduced in the eastern federated area (in which the company's collieries are situated) to the lowest level permitted by the agreement. This level was reached in the wages for August, 1922, which were based on the results for the month of June. The iron-works have suffered severely from the unprecedented depression of trade during the year, and have been only partially employed. There is an indication of improvement in some departments. The prices of all iron products are at a low level, having regard to the working costs, and the wages of the men have been reduced to a considerable extent.

THE STAVELEY COAL AND IRON COMPANY, LIMITED—The report states that the trading results for the year ended June 30, 1922, have been the worst experienced during the whole period of the company's existence, but substantial sums have been received as a refund of excess profits duty and for coal award, which mainly account for the profit of £176,124. To this is added £47,278 brought forward from preceding year. Whilst trivial strikes have affected the company's operations internally to a minor degree, the national strikes and lock-outs have had a most disastrous effect on the company's operations. It is pleasing to record the amicable relationship that exists with our employees at the present time, and further to announce the fact that 700 of the company's workmen's names appear on our list of shareholders. An interim dividend was paid on March 30, 1922, of 6d per share on the fully paid shares, 4½d per share on the 15s paid shares, and ½d per share on the 5s paid shares, and your directors now recommend the payment of a final dividend of 1s per share on the fully paid shares; 9d per share on the 15s paid shares, and 3d per share on the 5s paid shares, making 7½ per cent., free of income-tax, for the year, carrying forward a balance of £42,760. The whole of the company's plant and machinery has been maintained in good working order at the various works and collieries.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Sydney reports for four weeks ending September 8th:—Shale mined, 1,675 tons; shale retorted, 1,653 tons; crude oil and naphtha produced, 168,864 gallons (equal to 102.1 gallons per ton of shale).

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, September 13, 1922, amounted to 1,047 tons.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 21st, is as follows:—Pig-iron: As far as pig-iron is concerned, our makers are benefitting considerably by the American demand for foundry iron. They have been able to fill their order books up to the end of October. Prices are firmer at 95s for No. 3 Cleveland G.M.B., whereas mixed numbers East Coast hematite are 89s per ton. Manufactured iron and steel: The steel trade revival is very slow in arriving. We are at a considerable disadvantage as against Continental works. The principal quotations for home are as follows:—Steel ship plates, £9; steel ship angles, £8 15s; iron bars, £11; steel rails, £9 10s net. Iron ore: There is rather more pressure to sell imported ores, and prices are barely maintained. Best Bilbao Rubio is about 24s per ton, c.i.f., East Coast.

Our Sheffield correspondent writes:—A survey of the industrial situation in Sheffield shows that except in a few branches things are not appreciably better than they were three months ago. An increasing tonnage of the cheapest classes of steel are being exported, the business being secured by quoting prices which do little more than cover the costs of production, but this material is not typical of Sheffield's steel trade. As regards the best qualities of alloy steel business is rather worse than better, and the expectations of an improvement following the close of the holiday season has failed to materialise. The optimist prophecy now defers the revival to the beginning of the new year. America has been buying moderate quantities of alloy steels to anticipate its new and higher duties. The Tariff Act of that country is now law, and will come into force next month. It provides heavily increased duties on high-grade steels and cutlery. These are aimed at Germany, but they are calculated to reduce further the limited business in those commodities which Sheffield has maintained with the United States until the present time. Inquiries for railway steel are on a more liberal scale than of late, but the quantities only represent a small percentage of the output of the plants. For foreign railways Sheffield has been underquoted by Continental countries, and lost some valuable work. Local prices have been brought down substantially, and our makers could have plenty of work for export if they could quote approximately the same figures as Germany and Belgium are doing. Business in numerous classes of hand and engineers' small tools has quietened down considerably, and makers report very little doing either for home or export. The file and saw branches are also extremely slack. The coal trade is now fairly active, and exports are reaching the pre-war level. The position of best South Yorkshire steams has improved considerably, and are being appreciated to an increasing extent. They command 21s or more at the pits. Best Tyne steams are quoted at 23s or 24s. The improvement in the textile trades is responsible for a larger call for small fuels. Gas and railway companies are taking increased tonnages. The coke trade continues brisk.

Our Glasgow correspondent (writing on Wednesday) says:—A better time is in evidence this week. Several decent contracts for engineering material have been secured by leading firms in the Clyde Valley, and one or two tenders have been invited for new constructional work. The orders booked include one, to the Fairfield Company, for a large liner, which was projected a couple of years ago. The Albion Motor Car Company, Scotstoun, has received a contract from the India Office for 50 30-cwt motor lorries, said to be the forerunner of many heavier lines contemplated. Sir William Arrol, Limited, have added another to the numerous orders booked by them since the beginning of July—the latest constituting the erection of a series of bulk stores of large capacity, and involving a large expenditure, at new synthetic ammonia works at Stockton-on-Tees. It is reported that motor engine builders keep very busy, and are booking more orders than has been the experience for years, including departures in construction that promise to work out nothing short of a revolution in this department of engineering. Proceedings in the steel trade still lean to the quiet side, but there are individual instances of producers realising more activity than of late, especially in the rolling of light plates and of rails, fish-plates, &c. Rumours are current of further cuts in heavy plates being in contemplation, but producers are indisposed strongly to do anything in that direction if it can be at all avoided. They are still commanding £12 10s for boiler plates, £9 for ship plates, and £8 15s for sections—all delivered at Glasgow stations. Export quotations are called 5s to 10s a ton lower. The Scotch pig-iron position is practically unaltered on the week. On home order a small trade only is being put through, yet a more hopeful estimate as to the future obtains here and there amongst founders, who are meeting with a better export outlet in bars. Pig-iron makers are arranging for the re-lighting of some 10 furnaces, a movement which will issue in a much-needed expansion in supplies. There is said to be more doing in black sheets (heavy and light), and there is a greater turnover advised in iron

and steel hoops, bolts, nuts, &c., in blooms, billets, &c., and in all sizes of hoops. Pig lead is off 5s a ton at £24 15s. Scotch hematites slow of sale round £5 7s 6d f.o.b. at the steel works. Coals keep fairly steady, though home demand is to the quiet side. Foreign (Continental) inquiry is well sustained, especially from Germany, Denmark, and other Northern ports.

Our Workington correspondent writes:—The outlook has brightened considerably during the past few days, business on American, Continental, and home account now being on such a substantial scale that an increase of work is inevitable, and if the demand is maintained the early relighting of three to five additional furnaces is more than likely. Practically all the stocks in workyards have been exhausted. The only fly in the ointment, as far as the continuance of a substantially increased production is concerned, is the weakness of the heavy steel trade, which in times of severe pressure in the hematite pig-iron trade is such a large user of metal. The wants of this industry are comparatively small at the present time, and while the steelworks in Cumberland and the Furness district are idle there cannot be a restoration of the activity witnessed before the coal strike came. The situation is developing, however, rather more satisfactorily than was anticipated; two months ago there was little expectation of stocks being cleared before the end of the year. How long American buying will go on cannot, of course, be said, but orders have been placed freely, and the shipments for a few weeks to come will be not inconsiderable. Germany, France, and Belgium are all taking parcels up to 500 tons. There is a brisker market for special qualities of iron, the Midlands for the first time for some period having started to take supplies. Scotch requirements of ordinary iron are larger. Prices have stiffened, and Bessemer mixed numbers are on their way back to the old figure of £5 5s per ton, delivered at Glasgow and Sheffield. In August they dropped almost to £5 per ton. America is a keen buyer of ferro-manganese at £15 per ton f.o.t., but spiegel is not in much request at £7 per ton f.o.t. There is little doing at the moment in the steel trade, and the rolling mills at Workington, which on Saturday completed orders for railway material for South Africa and India, are idle this week. The shortage, it is believed, will be only a temporary one, but at the moment there are not many new orders on the books. The iron ore industry is better employed, and some of the mines began on Monday to raise full outputs. Ordinary sorts command up to 15s per ton, superior grades up to 22s 6d per ton, while special qualities, of which there is a market in Sheffield, are quoted at 25s per ton to 27s 6d per ton. The coal trade is very busy, the demand from the North of Ireland being extremely strong, and all the collieries are working full time. There is no change in prices. Local coke is in sharper request, and it is hoped that the necessity to work the plants at top pressure will shortly arise.

Our Cardiff correspondent writes:—Anthracite and dry steam coals have been the only strong features of the Cardiff coal market this week. For these qualities there is a good demand, and Canada is continuing to place orders. The supply of anthracite is very scarce. The outputs of the collieries in the Western area are relatively small, and are fairly fully absorbed by the normal demand. The drier qualities of steam coals are a little more plentiful, and these are the coals that are benefiting most from the demand from Canada. Big vein large anthracite is ruling up to 60s per ton, and French nuts up to even 73s per ton, while best dry steam coals are quoted up to 28s 6d, f.o.b. For ordinary steam coals the demand is comparatively inactive, and both production and prices are suffering in consequence. The latest returns show a slight fall in the output of coal in the South Wales coalfield, although the figure is still over one million tons per week, and prices are, in some cases, already back to the low level out of which they were raised in the latter half of July under the pressure of the demand from the United States. Best Admiralty large steam coals are now down to 26s, and the best classes of Monmouthshire semi-bituminous down to 25s, while cargo smalls have receded to 13s and less. Moreover, there is trouble brewing in the coalfield. The joint board has been unable to agree on the question of a subsistence wage to the lower-paid day wage workers, and Lord Buxton, as independent chairman, has been called in to determine the issue. It is anticipated that Lord Buxton will grant the miners some increase in wage, for he is bound by the terms of the national agreement to provide the worst-paid workmen what he may consider to be a subsistence allowance, but what effect his decision will have upon the financial position of the collieries will depend upon the conditions of trade. At the moment these are very unfavourable, and there is a real peril of the closing down of pits if costs of production are increased. The executive council of the South Wales Miners' Federation last week contemplated the service of a fortnight's notice on October 2nd on the non-unionist question, but this extreme course was condemned by some of the districts, and the matter is to be reconsidered at another coalfield delegate conference. The following are the current market prices of representative coals:—Best Admiralty large, 26s to 27s; seconds, 25s 6d to 26s; best dries, 28s to 28s 6d; best black veins, 25s to 25s 6d; Western Valleys, 25s to 25s 6d; Eastern Valleys, 24s to 25s; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 14s to 16s; big vein anthracite large, 57s 6d to 60s; machine-made cobbles, 65s to 70s; French and stove nuts, 70s to 73s; rubble culm, 13s 6d to 14s; coke for export, 35s to 37s 6d; inland blast-furnace coke at ovens, 25s to 26s; patent fuel, 27s to 29s 6d; pit wood, ex ship, 28s to 29s 6d. In the iron and steel trade the position is easier, and prices of tinplates a shade lower. A restriction in output by the closing down of some of the mills is contemplated unless the position improves.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market is distinctly quiet, but values are nominally unchanged. It is manifest that some users are uneasy about the present level of prices, and although the raw material market shows no sign of weakness, there is a strong impression in some quarters that more favourable conditions for buying will be found later in the year. As most firms have covered the bulk of their requirements for the next three months, there is no need for them to rush in at the present time, and the majority appear to be quite willing to stand aside in the meantime and let things simmer. Wool bought at the opening sale in Australia on Tuesday last will bring in warp 64's tops at about 4s 10d to 5s per lb, and there is a feeling that that basis is dangerously high for the opening of a new season, especially as there are some very big weights of wool to be offered here and in the primary markets during the next few weeks. Apparently everybody is determined to go slow for the time being, the more so in view of the fact that spinners and manufacturers frankly assert that they find it impossible to sell their products on anything approaching current quotations based on the cost of wool and tops. In the circumstances trade in tops is being conducted on hand-to-mouth lines, and a broader outlet is required in order to place business on a sound foundation. Some spinners appear to be taking rather more interest in fine crossbreds, but medium and low qualities are slow. Business in yarns does not show much bulk, but there are more offers from Germany, though some firms are a bit dubious about the position, and are not inclined to carry much liability. The piece goods trade is steady, with some manufacturers better employed than others.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

After the activity seen in Coleman Street Wool Exchange during the past two weeks, interest has largely been shifted to consuming centres and overseas markets, chiefly the latter. Last Tuesday saw the opening of a new selling season in Australia, where at Brisbane the first day's catalogue consisted of 13,000 bales of new clip wools. The show would certainly be one of the best, for the early sheds in Central and North-West Queensland always clip good wool, and as the season has been moderately favourable, we expect some good wool during the next 12 months from the Northern State. If some of the sellers in Brisbane with branches in London would cable the clean scoured cost of good combing, either ex warehouse or c.i.f. London, it would greatly help matters to see what buyers are actually paying, and so help some reliable information to get abroad regarding the actual state of the market. It seems to the writer that Brisbane has opened sensibly, and we say this notwithstanding that 10 to 15 per cent. advance is advised. This about lifts prices on to a parity with the figures ruling in London, but, as already said, it would have been still better if Dalgety's or Kreglinger and Fernau's would state what is the clean scoured cost for good 70's and 64's combing fleece. Several Bradford firms cabled out buying orders on a basis of 4s 6d to 4s 8d for 64's in the top, delivered Bradford, but apparently prices are higher because all reports agree that the home trade did practically nothing. We are not surprised at this, for there has not been the least response in consuming centres to the last advance, and unless an important change comes over the situation we shall see rather lower, and not higher, prices for merinos. During the past two years no advance has been received with so much indifference as the last one, and all buyers of yarns and pieces will have to radically alter their attitude if they agree to pay prices in harmony with the present cost of wool and tops. There is in consuming centres

a very unanimous opinion that wool must come back to a basis of about 4s 6d in the top before buying recommences, while it would be better still for the entire trade of the world if good combing wool reverted to a basis of 4s 3d for good 64's tops. We say this in all seriousness, recognising that merinos are outrageously dear compared with other qualities, and still much too dear to induce the outside world to buy piece goods, and so ensure the prosperity of the industry. We see no necessity whatever for anyone to fear a shortage of raw material supplies, and reaffirm that the interests of the entire trade would be best served if fine wools went back to a basis of 4s 3d in the top.

A sale took place in Hull last Thursday, when something like 32,000 bales were offered on B.A.W.R.A. account. The selection was anything but choice, and while there was some useful top-making wools among the merinos, the bulk were more suitable for the Continent than home trade account. There was a particularly good show of scoureds from Australia and New Zealand, and the greasy crossbred fleece was likewise of a useful character for Bradford. The attendance of buyers was fairly good, and when valuing was proceeding the opinion was expressed that there would be no change compared with the close in London, certainly no higher prices, while a slight setback need surprise no one on account of the character of the offerings. New business in manufacturing centres continued to be markedly absent.

MANCHESTER, September 21.

A limited business has been done in all quarters of the market during the past week. The political situation abroad has been very disturbing, and most merchants have adopted a waiting policy. Scattered sales have occurred in piece goods for India, most of the demand having run on light fabrics. No improvement can be recorded in the turnover for China. Firms with connections in Turkey and the Levant are wondering what is happening to their goods. Trade advices from South America continue rather better. Goods suitable for home consumption have been purchased in limited quantities. There is a tendency for manufacturers to lose ground. A dull tone has prevailed in the yarn section. Restricted operations have occurred in both home counts and export numbers. The position of spinners is getting worse.

VEGETABLE OILS AND OILSEEDS.

Trade conditions continue dull and unsettled, and another week has passed with only a small business done. Plate linseed is scarce in near positions, and spot and afloat are about 10s per ton dearer on the week. Seed for shipment, however, has been in but poor demand, and has fluctuated, with Argentina shippers' quotations now being round £17 for September-October, while new crop is offered at £15 15s for January-February loading. Some business has been done in Calcutta to London at £18 2s 6d, October-November. Favourable reports as to the new Plate crop indicate good supplies, but further trade is retarded, English crushers being content to hold their hand, and business with the Continent continues to be handicapped by the difficult financial conditions. The American crop, estimated to yield 295,000 tons, is likely to satisfy crushers in the United States until the Plate crop is well under way. Cottonseed, following a depressed oil market, is lower, and down to £8 15s has been accepted for old Sakellaridis, with further sellers at that figure. New crop Egyptian is arriving at Alexandria, and the quality is described as good. Black offers at £10 for shipment to Hull. Bombay cottonseed has been done at £7 15s, September-October. Rapeseed continues quiet, and but little trade done on U.K. account. Manchurian soya beans, new crop, November-December loading, are quoted by shippers at £10 7s 6d, but crushers here are not responsive.

Scarcity of raw linseed oil on spot and for early delivery has led to an appreciation to £36 for spot and £34 15s month at Hull, but forward the position is somewhat easier, current value for October-December delivery being round £32 10s and for January-April £31 per ton naked, ex Hull mill. America is reported to have again been in the market, but it is not known to what extent. The high import tariff to be levied on linseed oil by the United States new Bill, which is before the President for signature, is, however, a serious hindrance to the development of American demand on anything approaching the scale of recent months, and much support for the market from this quarter is not anticipated. Egyptian cotton oil has rallied somewhat, trade having been stimulated by the low level of value, crude Egyptian now being quoted £31 and soap-makers' grade of refined £33, ex Hull mill. Other vegetable oils quiet, and in cases inclined easier.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The advance in hides still continues, and at the Bermondsey sales held on Thursday many classes showed further advances. Best heavy ox sold at 9½d, and lights from 7½d to 8½d. Best cows at 7d to 7½d were firmer, kips selling from 3½d to 6½d. Calf in the heavy weights sold at 8d, lights making as high as 12½d per lb. Business in imported hides is better, and several large transactions are reported. Frigorifics have advanced at source of origin, whilst the Liebig Co. have sold 20,000 hides, partly for Liverpool, at 9½d to 10d per lb. Drys are also firmer, whilst the latest cable from New York describes the Chicago position as firm, with best heavy packers selling at 21 cents.

The demand for leather still continues moderate, although Bermondsey merchants do not seem very contented, as some report a falling off. Bends are, however, selling in fair quantities, but speculation is absent, and users inclined to wait for the Shoe and Leather Fair before placing winter requirements. American sole is coming in small quantities, whilst a new departure is an import of sole leather from Sweden.

Upper leathers are still a dull sale, although inquiries are frequent for sampling winter grades of chrome sides, calf, and glacé. Prices are firm, as America has advanced her quotations very considerably.

Reports from the shoe centres are cast in rather a pessimistic mould; few factories are working full time, and unless the export trade looks up I fear many operatives will be more or less idle during the winter.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, September 22.

SUGAR.—The market opened the week easier for most descriptions of refined, and general tone ruled quiet, but later a fairly liberal volume of business was carried through. Of British, Messrs Tate and Lyle's cubes sold 55s 6d to 56s 6d; crushed, 53s 6d; nibs, 55s; granulated, fine and coarse, 50s 3d, London; also No. 1 and 2, 49s 9d; caster, finest, 54s 3d; A, 52s 6d; B, 52s; yellow crystals, 44s 3d; pieces, 34s 6d to 39s; fine white, 44s 6d; granulated, October, 49s 9d; and ditto November-December, 49s. Crystallised West Indian sold quietly at 42s to 44s 6d, as to sample. American granulated, spot, changed hands at 49s; afloat parcels, 23s 3d; September, 23s 3d; white Java, spot, 47s to 47s 3d; ditto afloat, 19s 6d, c.f. and 1. terms, London. White Mauritius, spot, 47s; ditto Brazilian, 46s 3d to 46s 6d. Czecho granulated, October-December, 21s, f.o.b., Hamburg. Belgian crystals, October-December, 19s; and granulated, 19s 3d, f.o.b., Antwerp. Cuban basis 96 per cent., September, nominally, 16s; Brazilian ditto, 15s 9d; ditto 80 per cent., November-December, 8s 9d. Java No. 17, Dutch standard, 16s 9d, c.f. and 1. terms, United Kingdom. Terminal market showed fair animation, but selling pressure led to lower rates. December delivery, sold, 20s 4½d to 19s 10½d and 20s; May, 20s 9d to 20s 3d. Cuban stocks stand at 364,800 tons, against 1,205,320 at same time last year.

COFFEE.—Spot market steady, though actual trade pursued a quiet course. Bold colour Vera Paz, sold, 102s 6d to 103s 6d; washed Dumont bold, 89s. A steady but very slow market resulted for future delivery.

COCOA.—Market quiet, and small sales include Grenada, on spot, at 52s; Accra, October-December, 35s, f.o.b. terms. In auction line Trinidad, sold, 71s; ditto Grenada, 53s to 53s 6d. Butter quiet at 1s 9d per lb.

TEA.—44,650 packages Indian were offered this week, and with active and well distributed competition a very firm market resulted on balance. Fannings, however, were barely steady. 18,440 packages Ceylon also engaged brisk competition at full rates, some of the finer qualities being a shade dearer.

RICE.—Market slow and featureless. Rangoon two stars, spot, 15s 3d; September-October, 14s 3d. No. 1 garden Siam, afloat, 16s 6d; September-October shipment, 16s double bags. Broken kinds in but retail support. Rangoon beans, spot, 7s 3d. Japanese peas, September-October, sold, 25s; December-January, 23s 6d.

SPICE.—Pepper market again quiet, and prices in several instances easier. Fair black Singapore, spot, 3½d; October-December, 3½d, sellers. Aleppy, spot, 4d; Tellicherry, 4½d; white Singapore, spot, 5½d; Muntok, 6½d; ditto October-December, 5½d; Ceylon, black, on spot, 4½d. Zanzibar cloves, spot, 1s 3½d; October-December, 7½d. Pimento, spot, 2d; flake tapioca, spot, 2½d; September steamer, London, 23s 3d; fair Panang seed, spot, 19s 3d; sago flour, September, 13s 10½d; October-December, 13s 4½d; desiccated coconut, spot, 35s; afloat, 34s; September-October, 34s 6d. Ginger quiet, unaltered.

FRUIT.—The market for currants steadily hardened under sustained buying, and quarter-cases quoted 61s to 68s; Vostizza, 66s to 70s. Choice Smyrna sultanas, 165s to 170s; medium to good, 150s to 160s. Cape first grade, 105s. Raisins firm, with moderate inquiries. Valencia, September shipment, sold, 68s. Cape, first grade, spot, quoted 62s to 65s. Dates steady, quiet. Siar, spot, 27s. First tide, Hallowee, 32s; Khredrowie, 27s; Siar, 22s.

JUTE.—The market opened the week with a firmer tone, a good many orders on covering account being in circulation, and after further hardening prices developed some irregularity and weakness. First grade, October-November, usual continental ports, sold, £32 10s to £34 and £33 10s; November-December, £33 to £34 5s and to £34 and £33 10s; £30 10s to £31 5s and £31. 10-oz Hessians, £33 15s; lightning grade, £30 10s to £31 5s and £31. 10-oz Hessians, spot, sold, 36s; 8-oz, spot, quoted 25s 6d to 26s. A twills, spot, 79s 6d; B, 67s 6d; salts, 62s; sugars, 78s 6d.

HEMP.—A firmer market resulted for Manila qualities. F grade, October-December, quoted £40; G, £34 10s; H, £33 10s; J, sold, £32 to £32 5s; K, £31; L, £30, and M, £29. New Zealand slow, but held steadily. African sisal, No. 1, G.E.A., October-December, held for £35 10s, and B.E.A., £35.

SHELLAC.—Market quiet, and prices rather unsettled in forward positions. T.N., spot, 300s; October, sold, 270s; and December, 265s to 260s.

COPRA was again quietly dealt in, and the market for the chief part of the week ruled featureless. F.M.S. Straits, October-December, Rotterdam, sold, £23 5s; Ceylon, ditto, £24 10s, sellers, and earlier positions, sold, £24 7s 6d; Cebu to Hamburg quoted £22 10s; Java, £23 12s 6d; Dutch East Indies, September-October, sold, £23 7s 6d; mixed, excluding Padang, quoted £22 7s 6d. Palm kernels quiet, and October-December, Liverpool, sold, £16 7s 6d to £16 5s.

MENTHOL.—Spot, 28s 6d; forward, 24s 3d. Japanese peppermint oil, spot, 6s 6½d; forward, 6s 1½d. Aniseed, spot, 2s 2½d; forward, 2s 3d. Slab camphor, spot, 3s 7d; forward, 3s 5d; crude, spot,

3s 4d; forward, 3s per lb. Japanese wax, spot, 80s; forward, 74s per cwt.

EGG PRODUCTS.—Market dull and prime hen liquid yolk, on spot, sellers, 95s; forward, 90s per cwt. Albumen, spot, sellers, 3s 1d and forward, 3s per lb.

OILS.—Lined seed irregular, closing firm. Spot, net, naked, 35s 6d; September, 35s 9d; October-December, 32s 9d; January-April, 31s 4d. Rape dull. Crude, spot, nominally 40s; refined, 43s. Cotton weak. Crude Egyptian, spot, 32s; common edible, 43s; deodorised (in barrels), 46s. China-wood quiet. Hankow, spot (barrels), 62s; shipment, 62s. Coconut quiet. Ceylon, spot, 38s; September-October, 36s 9d; Ceylon, ditto, quoted 42s. Soya quiet. Oriental, barrels, August-September, 33s. Japan fish quiet. July-August, cases, 22s. Cod steady. English, spot, 31s. Ground nuts quiet. English crushed, naked, spot, 45s; deodorised, barrels, 54s. Turpentine irregular. American, spot, 100s 6d; October-December, 99s 6d; January-April, 99s 6d. Rosin firm for common and medium grades. American, grade B, 14s 9d; G, 15s 3d; H, 15s 3d; N, 16s; WG, 18s; WW, 20s 6d. French, F/G, 15s 6d; WW, 18s 3d per cwt. Petroleum steady. American standard white, spot, 1s 4d; and water-white, 1s 5d per gallon.

OILSEEDS.—Lined seed, but tone steady. Bold Bombay, afloat, 117s 6d. Small Bombay, ditto, 118 7s 6d. Calcutta, afloat, 118 7s 6d; August-September, 118 7s 6d; September-October, sold, 118 5s. Plate afloat, 117; August-September, 116 17s 6d; January-February, new crop, 117 5s 6d. Rapeseed easier. Toria, September-October, quoted 117 5s; real bold Ferozepore, September-October, quoted 116 15s. Cotton-seed inactive. Egyptian black, September, quoted 119 15s, and white, 118 12s 6d. Bombay, September-October, sold, 117 15s. Gungelly quiet. Chinese, new, October-December, Continent, 122 5s; large Bombay, August-September, 122. Castor, Bombay, August-September, sellers, 116 15s, to Hull. Ground nuts dull. Coromandel, machine-dried, September-October, 119 10s; ordinary, 119; East African, 118 10s; Nigerian, 121; bold Bombay, 119 10s. Chinese, November-December, 120 5s. Soya beans, Manchurian, August-September, 112; new crop, November-December, 110 7s 6d per ton.

METALS.—Tin: The market opened with a quiet tone, but sellers were in no way anxious to press sales, though rates showed slight weakness. Only small sales resulted in cash at 159 5s to 159 2s 6d; October, 159 10s to 159 12s 6d and 159 7s 6d; December and three months, 160 5s. Advices from the East report sales at 161 10s to 161 12s 6d, c.f. and i. Subsequent movements were attended by a slight irregularity due to selling pressure. Distant positions ruled about steady, but cash easier. Dealings included cash at 158 12s 6d to 158 15s; October, 159 7s 6d to 158 17s 6d, while finally registered at 159 5s; and three months, 160 to 159 10s to 159 17s 6d. Some improvement occurred by the middle of the week, and the market showed an upward tendency owing to a good inquiry

for forward dates. Standard cash sold at 159; October up to 159 15s; and three months, 160 5s. The improvement was upheld at Thursday's session with a good demand. Cash sold at 160 to 160 7s 6d; and three months, at 161 10s to 161 15s. Copper commenced the week with a dull and easier tone, buyers being reserved, and only small sales were effected in standard, cash, at 63 2s 6d to 63; October, 63 5s, and three months, 63 11s 3d to 63 10s. The downward movement continued until Wednesday, though steady at the decline, including standard, cash, at 62 15s; October, 63, and November, 63 3s 9d to 63 1s 3d. No material alteration in values occurred at Thursday's session, and a good business transpired in cash at 62 12s 6d to 62 15s, and three months, at 63 5s. Lead easier, at 23 17s 6d to 23 6s 3d, as to position. Spelter irregular, at 31 10s to 30 18s 9d, according to position. Antimony, ordinary, 27 to 29 10s. Aluminium: Home, 100; export, 105.

TALLOW.—Messrs Colchesters and Woolner write on September 20th as follows:—The tallow market was steady during the week, and prices are partly 6d dearer to-day. The decline in values attracted tallow from Australasia during August amounted to 7,400 tons. At auction to-day 1,557 casks tallow were offered, and 785 were sold. Quotations are:—Australian mutton: Fine, 41s; good to fair, 40s 9d to 39s; dull to dark, 35s to 32s 6d; hard, 40s 9d. Australian to 32s 6d; sweet, 41s. Present shipment from Australasia: 37s. The market letter is unchanged. Town tallow, 34s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 24s 6d per cwt. Quotations are:—Town, 33s net cash, naked, 24s 6d per cwt. Frail casks, 32s 6d; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 34s to 33s. Bone fat: White, none; pale, none; benzine, 30s; melted stuff, 29s, f.o.b.

JOHANNESBURG CONSOLIDATED INVESTMENT CO., LIMITED.

(Incorporated in the Transvaal.)

REPORT OF DIRECTORS to be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 21st day of November, 1922, at 11 o'clock in the forenoon.

1. The Company's Balance Sheet and Profit and Loss Accounts for the financial year ended 30th June, 1922, are submitted herewith.

2. After making provision for depreciation, English and Colonial Income Tax, and other charges, the profit for the year, including £184,411 13s. 8d. brought forward, amounts to £458,402 5s. 7d.

3. On the 21st June the Directors declared a Dividend of 7½%, free of Income Tax, payable to Shareholders registered in the books of the Company on the 30th June, 1922. Excluding the provision made for Income Tax this distribution absorbs £296,250, leaving a balance of £162,152 5s. 7d. to be carried forward to next account.

4. As the Company's principal sources of income are its mining interests in South Africa it will be readily understood that the recent prolonged miners' strike on the Rand involved the Company in a heavy loss of revenue.

5. The financial position of the Company continues to be satisfactory. During the year under review the opportunity was taken to participate in the purchase of ex-enemy shares from the Custodian of Enemy Property for the Union Government of South Africa. The number of shares in the various Companies thus acquired were relatively too small for pro rata distribution.

6. The position of the various Gold Mines under the Company's control is made clear from the Annual Reports and from the Chairman's Speeches at the Annual Meetings recently held. It may, however, be of interest to refer to the following points:—Government Gold Mining Areas (Moffatfontein) Consolidated, Limited.

Operations on this property continue to be most successful, and the results obtained are highly satisfactory. During 1921 the ore crushed was 1,625,500 tons, an increase of 110,500 tons as compared with the previous year. The profit gained, in spite of the lower price of gold, amounted to £1,762,490, being an increase of £54,326 over that obtained in 1920. The Ore Reserves are maintained at over 10,000,000 tons, which are of an average value of 8.5 dwts. over a stopping width of 77 inches.

7. The value of the gold produced by the Company's Group of Mines during the year under review amounted to £7,995,283, the average price obtained being, approximately, £5 2s. 8d. per fine ounce, as compared with £5 11s. 6d. per fine ounce for the previous year. The reduction of £1,931,654 in the value of gold recovered was mainly due to the stoppage of crushing operations during the recent strike, and in part to the lower price of gold.

8. The position of the South African Coal Industry during the year under review has been difficult owing to keener competition with England. The Coal Industry throughout the world is at present somewhat depressed.

9. The Collieries in which the Company is interested are now well equipped, and as no further expenditure of a substantial nature is anticipated, it is hoped that the recent profits will accrue to the benefit of the Company's activities.

10. Your Company's holdings in the leading Diamond Mines remain unchanged. There is a decided improvement in the demand for Rough Diamonds, though as yet it is for limited quantities. It is a satisfactory feature that America, which the past has been the most important customer for Rough Diamonds, has again appeared as a purchaser.

11. Progress continues to be made in the sale of Building sites on the Company's residential estates.

12. Your Directors have to report with deep regret the loss the Company has sustained during the year by the deaths of their colleagues, Mr. Charles Marx and Mr. H. A. Rogers. Both these gentlemen have been Members of the Board for many years, and have rendered valuable and faithful services to the Company.

13. Messrs. W. Ferguson and S. Thomson, the Auditors of the Company in Johannesburg, and Messrs. Kemp, Chatteris, Nicholls, Sendell & Co. the Auditors in London, retire from Office and offer themselves for re-election.

By Order of the Board, THOMAS HONEY, Secretary.

Dr. BALANCE SHEET, 30th June, 1922.

Capital and Liabilities.

Authorised Capital—(Under Resolution of 23rd November, 1905) £ 4,500,000 0 0

Of which £4,545,000 is Registered Capital.

By Balance of Profit and Loss Account at 30th June, 1922. £458,402 5 7

THOMAS HONEY, Secretary.

We report to the Shareholders that we have audited the accounts of the Johannesburg Consolidated Investment Company, Limited, dated the 30th June, 19

quiet. The Treasury bills tendered for yesterday run into January, and went at a considerably higher rate. When the result was known the market rate was adjusted to 2½-5.

	Sept. 23, 1922.	Sept. 22, 1922.	Sept. 15, 1922.	Sept. 8, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount/Call	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½-5	2½-5	2½	2½	..

The Bank return showed increases of £4,800 in the gold stock and of £976,500 in the circulation, making the Reserve £971,800 lower. Government securities rose by £485,000, and "Other" securities by £2,207,700, so that Deposits were £3,660,000 lower, £4,703,400 coming off "Other," while over a million went on to Public. There was a reduction of £629,000 to £289,127,000 in currency notes outstanding in the return dated September 28, 1922, which includes £1,556,459 for notes called in but not yet cancelled. The fiduciary issue is £239,420,600, or £70,567,800 below the maximum.

THE STOCK MARKETS.

In spite of the uncertainty aroused by the disturbed political situation prices have remained, on the whole, fairly steady, the smallness of movements in quotations being evidence both of the restraint of sellers and of the absence of buyers. French and German bonds gave way on the weakness of the exchanges, and Home Rails, apart from the southern lines, which were active in anticipation of amalgamation details, were lower. Argentine Rails show some improvement, but Brazilian Rails were heavy. Rubber shares have hardened a little on a rise in the price of the raw material, but oils have not benefited from the cut in the price of petrol. The industrial list has shown irregular movements, and Kaffirs have been flat on selling from Paris.

THE COMMODITY MARKETS.

The political situation continues to dominate markets, and merchants in the Manchester cotton trade appear to be determined to adopt a waiting policy; in consequence in all sections of the cotton industry a dull feeling has prevailed. The wool trade in this country has been following with much interest the steady trend of values of the Australian clip. In the pig-iron market, Cleveland No. 3, G.M.B., is now 92s 6d per ton, makers having little to offer on account of the scarcity of coke, and though there is stated to be a little more inquiry for steel, orders are still very difficult to obtain. There has been a slightly improved demand for coal from abroad, but our Cardiff correspondent reports no striking change in quotation. Wheat prices are slightly higher, on account of the unsettled political atmosphere.

FOREIGN EXCHANGES.

The exchanges have naturally been affected by the Near Eastern crisis, and a great amount of nervousness still exists on the part of operators, who are waiting for the war clouds to clear. At the time of writing the outlook appears somewhat grave, and Wednesday's development in Greece has rendered the situation temporarily more chaotic. The New York exchange has been the centre of interest during the past few days, and the probable weakness which we have predicted for some time past has shown itself; the rate is now 4.39 after being 4.43½ on the 25th. Heavy offerings of sterling and other grain and cotton bills are reported from New York. The German mark improved considerably to 6,150 at the beginning of the week on the report of the satisfactory solution of the guarantee question which was outstanding between Germany and

Belgium, but a decided depreciation has occurred since, the rate rising at one time to 7,350, though recovering later to 7,100. The French franc has been affected by the position in the Near East, and after being 58.05 on the 23rd, is now 57.98; last week the highest quotation reached was 58.54 on the 18th. The franc has been seriously affected by the weakness of the New York exchange. The Belgian franc is now 61.50, after having been back at 61.20. The lira has not fluctuated very much, and is now 104, as against 104.75 at the time of our last report. Holland is now 11.34, after having been 11.40 at the beginning of the week, whilst Switzerland is 23.55, as compared with 23.62. The peseta has risen to 29.05 compared with 28.84 a week ago. Last week's rise in the Danish exchange has still been maintained to a certain extent, the rate now being 21.25, but it is contemplated that owing to the settlement of the Danish banking difficulties, an appreciation may be seen shortly unless something unforeseen occurs. Christiania is down at 25.80, after having been seen at 26.15, but Stockholm has fluctuated very little, being round about 16.66. The Finnish rate has again improved, and is now 198, but the market shows very little activity. Vienna is round about 320,000, showing a slight improvement on the former rate. The Polish rate is about 38,000, showing a fall of about 3,000, no doubt caused by the Polish Finance Minister's speech, which foreshadowed a continuance of inflation. Prague is 140, and Belgrade 286, the former rate showing a slight depreciation, and the latter an improvement. Drachmæ are a purely nominal market, and can be purchased at 200, and the Turkish exchange is about 750. Amongst South Americans, Valparaiso has again improved, and is 31.50, but very little alteration is shown in Buenos Aires and Rio at 43½d and 6 17-32d. Amongst the Eastern exchanges rupees have remained fairly steady at 1s 3½d, and Hong Kong has also remained at round about 2s 6½d. In India the restrictions on exports of wheat, and other food grants have been removed. Shanghai is slightly firmer at 3s 5d. The silver market has been very quiet, India continuing to be the chief supporter of the market, while China appears to take very little interest in it.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 23, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,025	Supply Services	6,750
		Interest on Debt	324
		Sundries	433
		Debt Reduction	10,069
		Added to Exchequer Balances ..	999
	18,025		18,025

The total revenue during the week ended September 23, 1922, amounted to £18,025,000, as compared with £14,968,079 in the corresponding week a year ago. Expenditure at £6,966,822 compares with £9,610,750. Property and Income-tax yielded £3,912,000, against £3,083,000 in the same week a year ago. Receipts from Excise amounted to £9,022,000, against £4,219,000, while Customs yielded £2,941,000, against £3,583,000. The week's operations reduced the National Debt by the sum of £10,059,456, and caused the following changes:—

Savings Certificates Sales....	Min. £	Advances by Public Depts. ..	Min. £
	+ 250	Treasury Bills	2,400
		Savings Certs. Housing	2,286
		Funding Loan, &c.	5,000
		Unemployment Insurance ..	193
	+ 250		430
			10,309

The floating debt was decreased by £4,705,000 to £865,543,500 during the week.

FINANCIAL YEAR, 1922-23 (April 1 to September 23, 1922).

THE THIRD ASSEMBLY OF THE LEAGUE OF NATIONS.

It is the general impression that the third Assembly of the League gives evidence of definite growth in the power and prestige of the League of Nations. The meetings of the Assembly do not and never will possess the spectacular features of the Supreme Council, for whereas the latter are short and charged with crises from beginning to end, the meetings of the international Parliament at Geneva share much of the dullness and routine of ordinary national Parliaments. Indeed, the fact that everything has to be translated tends to make the proceedings even more prolonged than in ordinary legislative assemblies, but, on the other hand, there is to be set the fact that the standard of speaking is much higher, since all the delegates are picked representatives, and there is the interest and colour due to the presence of many varied nationalities. It is sometimes thought that the fact that the League has to discuss and to perform many tasks of secondary importance, or perhaps one should say of a less exciting character than political crises—such as co-ordination of health activities, labour legislation, transit questions, opium traffic, the international white slave traffic, intellectual co-operation, and a dozen other such topics—tends to clog the wheels of the League machinery, divert attention from more urgent questions, and give the impression that the League is a debating society for philanthropists. The fact is, however, that quite apart from their intrinsic importance, these activities are greatly assisting the League to deal with the major questions. The experience which the Secretariat has gained in organising conferences on these matters has enabled it to perfect the mechanical part of its organisation, a matter of no small importance, as those who were present at Genoa and other international gatherings will fully realise. It has helped to gather together a staff of very high efficiency, which is truly international in character and trained to take an international view of all questions, and even in the Assembly itself the fact that there is this miscellaneous work going on enables its corporate life to run on in spite of any clashes that may occur on the big questions. When representatives of two Powers fail to agree, leave the matter in suspense and continue for two or three days to discuss points on which there is no vital difference, opportunities are created for quite informal mediation and for reflexion in an atmosphere which tends to promote agreement.

But the present Assembly has grown in importance in respect also to the major questions. The failures of the Supreme Council have left the League as the one hope of international co-operation, and as the big outstanding

questions between the nations are perforce referred to the League the world's Press has begun to take its discussions more seriously, while the Assembly itself has responded to this sense of greater importance by more boldly facing the discussion of really vexed questions. There has, moreover, been less tendency to veto debate on vital issues, since the Governments of the great Powers themselves are increasingly anxious not to leave so many problems to drift unsolved. Hence the Assembly has discussed freely the question of disarmament, reparations and inter-Allied debts, the condition of Austria, and the situation in the Near East. It is too soon to say what part, if any, the League will play in this last question, but the significant fact of the debate is that the Western Allies appreciate that the voice of Europe must be heard on such a question. A significant incident occurred when the international measures undertaken by Dr Nansen and his international organisation for the relief of the refugees in Smyrna was facilitated by the intervention of the Persian delegate with the Turks.

The discussion on armaments has had an auspicious beginning. The problem of land forces does not lend itself to the prompt and dramatic solutions of the Washington Conference, but the Disarmament Commission is endeavouring to feel its way towards a solution, or at all events to throw up into sharp definition the obstacles in the way of agreement. The progress made on the actual question of armaments themselves has been chiefly in regard to the extension of the Washington Conference resolutions to other naval Powers. The League is taking steps to call a special Conference of nations interested for this purpose. In regard to land armaments, it has not done anything more at the moment than urge the restriction of armaments to the war power of 1913. This is not a heroic measure, but it is only intended as a stop-gap. It is also actively endeavouring to secure the suppression of the traffic in arms, a matter which was left unsolved by the failure by several nations, including the United States, to ratify the Arms Convention of 1919. This point is itself an example of the value of a permanent institution to deal with matters of this character, for it is almost certain that it would be allowed to drop if further discussion were left to the initiative of any individual State. But the armaments discussion has brought out once more the fact that agreement can only be found if the conditions of real peace are present, and the League is discussing and slowly forming opinion in diplomatic circles on the vital question of future international relations, namely, the form of guarantee to be entered into by various States to protect one another against aggression. The importance of this issue cannot be over-estimated, for it really goes to the root of the problem of the sanctions for the preservation of international law and order.

The disarmament discussion has, however, also been made the ground for raising the question of an international financial settlement, on which, after a good deal of discussion and constant reference by the respective delegates to the French and British Governments, a formula has been agreed upon which is of considerable significance. After asserting that the machinery of exchange of products by means of which European nations have always lived cannot be reinstated until the problem

has been settled, and that though it may be possible that a full solution cannot be hoped for without the assistance of the United States, there is no reason for doing nothing until that assistance is forthcoming, the Assembly declared:—

"That such confidence cannot be attained so long as the world continues to suffer from disorganisation of the exchanges, economic chaos, and unemployment, and that the only method of remedying these evils is to put an end to the uncertainty which prevails regarding the means for the restoration of the devastated regions and the settlement of the inter-Allied debts."

It expresses the hope that, "in so far as these questions can be regulated by the unaided efforts of the European nations, the Governments signatories of the international treaties and agreements which deal with these questions, and within the framework of which they must be envisaged, will achieve as soon as possible a general settlement of the problem of reparations and inter-Allied debts."

And it further recommends:

"That the Council shall devote constant attention to every effort made in this direction by the Governments concerned, it being understood that it can only usefully assist in the solution of these problems if requested to do so by the Governments in question."

This resolution may not at first sight seem to say very much, but it has a certain significance, for the British Government is committed to the view that negotiations must continue without American participation, and that Europe must endeavour alone to find a general settlement—a view which indicates some relaxation of the more rigid tone of the Balfour Note—while France has formally agreed to a resolution which opens the door to a reference of the Reparations question to the League—a reference which she has hitherto always refused to admit.

On the problem of Austria, the concurrence of Great Britain in the guarantee which is required greatly increases the probability that a complete scheme will shortly be made public, and submitted for Austrian acceptance. For various reasons it would, however, be unfortunate if public opinion made the success of the Austrian problem the touchstone in considering the work of the third Assembly. The terms offered to Austria will be far from pleasant, and even if she accepts them the League will be entering on one of the most difficult experiments in external control of a nation's internal affairs which has ever been attempted.

Not many new reputations have been made at the present Assembly, and the discussion has to a considerable extent been led by men who had already made their mark in previous Assemblies. It is indeed of great value that the work of the League of Nations is producing a group of diplomats and public servants in various countries who are becoming fully acquainted with this method of international co-operation, and this is one of the reasons why the proceedings are becoming more effective and business-like. On the other hand, it is important that this *personnel* should increase. There are already in many countries an increasing number of persons who have practical experience of the machinery of the League at Geneva. This is in itself a great factor in developing national opinion and confidence in the League's decisions. Of the newcomers, M. de Jouvenel stands in a class by himself. He has been the spokesman of France in most of those discussions in which his Government has displayed an increasingly sympathetic attitude towards international action. He has been careful to show that he has always been in touch with his Government, but his speeches have created an impression of statesmanship and a more Liberal standpoint. M. de Jouvenel has added his name to the list of Frenchmen with an international reputation, and his political career will in future be followed by a very wide circle.

A picturesque and possibly a significant incident of the past week has been the meeting, while the Assembly was in session, of a small committee of medical experts to discuss the problem of standardisation in connection with serums used in fighting epidemics. The meeting has been attended by an official of the Bolshevik Government, and by representatives of Germany and America, as well as by the representatives of the Health organisation of the League.

STABILISATION.

It is natural enough that, in an earthquake, stability should seem to be the *summum bonum*. It is less reasonable, but still excusable, that a stormy crossing should reduce Channel passengers to such a state of desperation that they would welcome the end of all motion, even though they have set out to reach the further shore. So long as one economic upheaval follows another, we may expect the same reactions in a different sphere. Storm-tossed humanity will dream of bringing prices, wages, exchanges, competition—everything, in fact, but trade and profits—to a standstill; and professors of dynamics (or economics) will become professors of statics (or stabilisation).

That is the fate which has overtaken Professor Cassel, whose latest contribution to the current problems of money and foreign exchange has just been published.* Everything, he tells us, is in a state of flux, as someone said three thousand years ago; but a more modern faith in the powers of man over Nature now adds the rider that everything must therefore be stabilised. "The only quality demanded of a monetary system, which is of any importance for promoting the trade and general welfare of the world, is stability" (p. 254). Professor Cassel relies on the agonies of our time to make this fundamental premiss seem axiomatic. He never doubts or defends it, but proceeds at once to an analysis of the methods by which stability must be secured. His conclusions are somewhat as follows.

Everything in the economic world depends on everything else, except the bank rate, which depends on the humour or caprice of the Bank Court. The whole machine is governed by the single lever of rediscount rates, which is operated in a central control station, inhabited since 1914 by incompetent people—"the cause of the Central Banks' weak discount policy naturally lies first and foremost in the extremely vague notions as to the true import of the monetary phenomena entertained by bank managements" (p. 111). First inflation, then deflation, have sent prices, wages, and exchanges rocketing and tumbling the world over, and the whole process has been due, not to any irresistible economic forces sweeping from one country to another, but to simultaneous attacks of mania which afflicted the various control stations, by a curious accident, at the same time and in the same manner—"if there exists any connection between the processes of deflation in different countries, it is a psychological and not a material connection," p. 232). The way to put things right is to organise an international service of statistics which, at frequent intervals, will supply Professor Cassel promptly and accurately with index numbers of the volume of purchasing power and the volume of purchasable goods in every country in the world. He will then do a series of sums in simple division, and so arrange matters that the answer will be in every case the same. So we shall have achieved stability, and everyone will enjoy continuous employment, except the people whose business it is to write books on economics, who will have none.

This crude parody of Professor Cassel's views must not be taken to imply any lack of appreciation of his book, which disposes, neatly and effectively, of more economic fallacies to the square inch than any book published for a long time. The parody is intended to make prominent, by deliberate exaggeration, the weaknesses on the constructive side, of this and every other plea for the rational control of economic forces on an immense international scale. No one will deny that everything is in flux, nor quarrel with the contention that a frantic state of flux is insufferable. But when Professor Cassel goes on to demand complete equilibrium, assent will not be universal; when he offers his own explanation of the causes that produce instability, he stirs up a whole hornet's nest of contention; and when he prescribes his remedies, he must not be surprised if he provokes nothing but a rather wistful smile.

There is, in fact, a very good reason why it will always be possible to find fault in theory with the monetary con-

trol exercised by the central authorities, and to sigh for a more "rational" system—(the use, by the way, which Professor Cassel makes of the words "rational" and "normal" is not altogether innocent of *petitio principii*). The reason is this: that in order to be effective, as it admittedly might be, monetary control of wages, exchanges and commodity prices would, in the first place, have to be unhampered by any considerations not purely economic; and, in the second place, it would have to be based upon correct *anticipation* of the future. The first condition is one which will never be complied with so long as human interests are more than purely material; the second condition is one which would make it impossible in practice for any central financial authority to exercise an entirely confident and consistent control, even in a purely materialist society. For it means that the fate of the community must be entrusted, before the event, to the unfettered judgment of financial specialists, who are required first to arrive at an agreed policy among themselves, and then to impose it upon their fellows. At the very moments when control by anticipation is alone effective and is most required, agreement is least likely to be reached; and if the doctors did agree on their diagnosis, the patient would never willingly acquiesce in the treatment they prescribed. Only the manifest evidence of accomplished facts can afford a firm basis for monetary policy, and for this reason alone it is inevitable that instead of governing events by anticipation we should follow them, or adapt ourselves to them *ex post facto*. "The most serious faults in banking policy in all countries during the past year seem to have been due to the necessary steps having been taken too late" (p. 273). Of course. Until we have a financial dictatorship, it will not be possible to apply the "new rule for a true bank policy" (p. 103), which is that "the supply of credit must be so regulated that no rise in prices and, naturally, no fall in prices either, takes place."

No one has a clearer vision than Professor Cassel of the causes and consequences of instability. It may be doubted, perhaps, whether they are all so measurable, so easily reduced to mathematical equations, as he would have us believe. But it seems highly improbable that a practical or practicable policy is ever likely to be based upon a formula, however convincing the proof of it may be. It is not enough to show that all our present discomforts could be cured by intelligent and deliberate monetary control, for until humanity is prepared to surrender itself to the experts, the shocks of unfettered economic and natural forces will be preferred to the gentle, salutary guidance of a few men of genius manipulating the world's machine.

The long and short of it is that "equilibrium" was a better word to describe the proper goal of monetary policy than "stabilisation." Let us by no means despair of moderating the violence of financial and monetary disturbances. Let us, with the invaluable help of Professor Cassel, attempt (if that is our business) to understand the

why and wherefore of the forces whose interplay we have to deal with. But let us abandon dreams of an incredibly efficient all-inclusive world control that sets our lives in order for us, for such cannot be fully realised, and if they were, would only have the doubtful advantage of giving us stagnation instead of chaos.

INTERNATIONAL MARITIME PROBLEMS.

Two topics of practical interest have been put down for discussion at the conference in London of the Comité Maritime International commencing on October 9th. They are (1) the immunity of State-owned ships from the obligations to which privately-owned ships are subject, and (2) negligence clauses in bills of lading, or, in other words, those clauses freeing shipowners from responsibility, in substitution for which standardised conditions—known as the Hague Rules, 1921—holding shipowners responsible for safe carriage and delivery, have been brought into use. Both matters have been the subject of a good deal of recent discussion, and a summary statement of the developments leading up to the holding of this conference may be interesting.

First of all, it should, perhaps, be explained that the Comité Maritime International is a voluntary association, of which the members are shipowners, underwriters, merchants, and other business men interested in shipping, and also commercial lawyers. These are grouped in national committees, delegates from which attend the conferences held from time to time. The Comité was founded in 1896 by M. Louis Franck, of Antwerp, and has, as the result of numerous international conferences, at which differences between the laws of the various maritime States have been compared and adjusted, succeeded in bringing about, through diplomatic conferences for which it has prepared the way, the international unification of maritime law in several important respects.

As was explained in an article in the *Economist* on May 6th, the Comité took up the immunity question as the main subject for its conference now to be held at the suggestion of the Chamber of Shipping of the United Kingdom. Shipowners have found themselves unfairly handicapped in competition with State-owned trading ships. Before the war the problem, which has now become important, seldom arose, but since Governments have entered the shipowning business the immunity of their merchant ships from ordinary legal obligations stands in the way of obtaining settlement of just claims. A striking instance was that of a Portuguese steamer which went ashore in the Mersey and was saved by local tugs. The Portuguese Government entered the plea to a claim for salvage, that, though engaged in trade, this was a public vessel of the State. The judges of the Admiralty Court and Court of Appeal expressed themselves strongly but were clear that they could give no redress by way of awarding payment for salvage. The case showed that many interests may be concerned: cargo owners, the owners, dock authorities, underwriters, bankers, an

others, as well as shipowners, may find themselves with unrealisable claims.

The reports on various national laws which have been drawn up for comparison in preparation for the conference show considerable diversity of rule. In some Continental countries the English law that subjects cannot sue their own State does not prevail, but, in most instances, courts will not assume jurisdiction over a foreign State-owned ship because of the generally accepted rule that States respect each other's independence. In some countries, notably Belgium and Italy, the courts are inclined to ignore the immunity where even a foreign vessel engaged in trade, and not in a public service, is in question, but, amidst the confusion, one point is quite clear. This is that those engaged in shipping business, which is in its nature international, may at any moment find their right to enforce a claim barred so long as the immunity of States in respect of their maritime property exists in some countries. Thus in Norway the State does not claim any immunity—anyone may sue the Government for damages caused by its trading vessels or by its warships—but the Norwegian shipowners point out that they "have had large claims, the promotion of which has been blocked and interfered with on account of the present unfortunate rules of procedure, according to which the State as such could not be sued except with the permission of the proper authorities." They therefore emphatically endorse the opinion that the immunity of the State, in those countries where this still exists, should be altered.

For remedy there must be an international convention. States must therein lay down a principle into conformity with which they will bring their national rules. That principle must be the entire abolition of the present immunity—at least, this appears to be the view endorsed by the Chamber of Shipping. The courts must have unfettered jurisdiction. As to the further question of the liability of maritime property to arrest, it may be necessary to provide a means whereby warships shall be free if general security is given beforehand, as bail is now commonly given in individual cases in respect of ordinary merchant ships to secure freedom from arrest. That would be the only qualification. Continental jurists are apparently inclined to propose the maintenance of the immunity, and the inclusion within its protection not only of warships, but of State-owned ships engaged in a public service, but to introduce classification in this way would mean that conundrums—border-line cases—would arise to be the subject of tedious and costly litigation.

The other problem for the conference of the Comité—that of the Hague Rules—also raises the question of an international convention. Business men, after formulating, in agreement with shipowners, this code of standard conditions for inclusion by reference in bills of lading in the same way as the York-Antwerp Rules are incorporated, seem to be doubting their own wisdom, and pining for State control of the form of the contract of carriage by sea. The steps whereby a revised version of the Hague Rules was evolved in order that it might be scheduled to a Bill to be introduced by the Board of Trade were described in the *Economist* on June 3rd. The understanding was that the Bill should be brought in before Parliament adjourned in August, but it failed to materialise, much to the distress of representatives both of cargo interests and of shipowners, who combined in a letter of protest to the Board of Trade, in which they referred to the hampering effect on trade of uncertainty.

Meanwhile the French view apparently is that while the adoption of the Hague Rules by voluntary agreement should be approved, their sanction by an international convention would be desirable. In Belgium an international convention is favoured, but in Holland the opinion that the Hague Rules should be tested in practice before being officially crystallised finds favour. Incidentally, that is being done pending the taking of legislative steps. Both in this country and America legislation has been discussed, but it is clear that the matter is one for general international agreement, and, if there is to be legislation, it should be based on an international convention. Whether British shipowners will agree to their hands being first of all tied by national legislation, and to other countries being afterwards asked to imitate our statute, remains to be seen.

BREWERY SHARES AND RESULTS.

It would appear from a perusal of the reports and accounts of a number of brewery companies that the directors of these undertakings have not concerned themselves with achieving uniformity in methods of issuing accounts as has been the case in other industries not so well organised. The financial years of companies end, and accounts are published on, such varied dates that it is difficult to find a group of undertakings of any size showing accounts for similar periods, and while Whitbread and Co. can publish their accounts for the year ended July 6, 1922, on the 25th of the same month, the accounts of the Cannon Brewery Company for the year ended December 31, 1921, are dated March 16, 1922. On account of these vagaries we are compelled to omit from our group several of the most important concerns. These, however, are dealt with separately in the *Economist* as the figures are issued.

However, we have selected the companies comprising the following group, showing net profits and the amounts placed annually to reserve in the last three years. Figures for 1914-15 are appended for comparative purposes:—

Company.	1914-15.		1919-20.		1920-21.		1921-22.	
	Net Profit.	To R's'v, &c.	Net Profit.	To R's'v, &c.	Net Profit.	To R's'v, &c.	Net Profit.	To R's'v, &c.
A. Guinness	£1,511,678	£585,000	£3,363,092	£735,000	£3,729,803	£519,407	£2,925,755	£235,000
Bacley, Perkins	81,073	40,000	339,043	250,000	150,582	50,000	175,564	25,000
Bass, Ratcliff	256,789	50,000	454,220	160,000	403,515	100,000	386,063	100,000
Bent's	43,443	15,000	78,071	20,000	39,058	2,000	38,868	2,000
Boddington's	45,381	2,500	75,958	6,747	71,107	5,000	70,731	5,000
Cannon	159,341	22,000	125,931	10,000	157,439	10,000	157,240	10,000
Chester's	53,373	25,000	95,517	35,000	84,622	22,500	104,219	32,500
Huggins and Co.	20,466	5,000	46,463	10,000	58,324	10,000	32,464	10,000
Mitchells & Butlers	208,533	50,000	505,617	175,000	430,089	100,000	430,049	100,000
Newcastle	56,067	15,468	177,043	101,000	113,990	46,566	61,999	31,000
Watney, Combe	233,211	73,606	278,000	281,524	73,111	45,000	61,464	100,000
W. B. Reid	38,159	20,000	90,656	40,000	73,111	45,000	31,007	20,000
Whitbread	75,680	193,834	161,339	177,788	177,788	45,137	10,000	
William Hancock	37,836	3,000	71,143	15,000	56,116	10,000	45,137	10,000
Total	2,820,970	840,968	6,352,864	1,835,747	5,821,319	920,473	5,251,898	680,500

In considering the totals shown in the group, allowance should be made for the differences in the financial years, but over a period of years these totals give an approximate guide to the trend of the industry. A perusal of the directors' reports reveals a common reticence as to the reasons for the handsome profits made in a period of severe industrial depression.

Auditors' certificates and reports are mostly on conventional lines, although it is pointed out in the case of Newcastle Breweries that the auditors have no means of arriving at the value of 5,000 £10 ordinary shares in another brewery concern. Also the auditors' report of Mitchells and Butlers carries us a little further in the activities of accountants. It states that "The conveyances of the properties have been produced to us in conjunction with the solicitors," and proceeds to observe that "We have verified all other securities."

Our next table shows dividend distribution from 1913. This will probably convey a better picture of the progress of the brewing industry in this country than the previous table:—

Company.	Dividends.											
	1912-3	1913-4	1914-5	1915-6	1916-7	1917-8	1918-9	1919-20	1920-1	1921-2	1922-3	1923-4

+ Bonus paid tax free. : Free of tax. (a) Also 20% in War Loan. (b) On increased capital. (c) Paid on an ordinary capital of £2,040,000, against an ordinary capital of £1,360,000 in 1918. (d) Paid on an ordinary capital of £2,691,180, against £1,345,599 in previous year. (e) Ordinary capital increased from £200,000 to £400,000. (f) Final dividend of 12½% paid on the £400,000. * Also distribution of fully paid shares through capitalisation of reserves. (i) 5% of this is paid free of income-tax.

Mr W. Waters Butler, the chairman of Mitchells and Butlers, at the general meeting of the company, in the course of a lengthy speech in which he reviewed the position of the industry, stated that the demand for beer "fluctuates with the state of industry generally, although the decline in the output of beer falls more rapidly than the reduction in the earning power of the consumer, for the reason that whether the consumer is earning much or little, the first claim upon those earnings is the cost of the home, and this is further accentuated if his requirements during the time of short earnings are being sold at the same unit of price which prevailed when his earnings were much higher." The chairman also referred to the position of consumers who may consider that they are not benefiting by the reduction of working costs, and pointed out that his company was mainly concerned at present in improving the quality of beers, and that during the year £150,000 had been spent in this direction "without any increase in the prices to retailer or consumer." On this same question of cheaper products Mr Cosmo Bonsor, the chairman of Watney, Combe, Reid, and Co., made some interesting remarks at the annual meeting of the undertaking. He said that at the moment it was impossible to assist in reducing the price of beer to the consumer. "Taxation was too high. In 1914 the taxation was 7s 9d per standard barrel; now it was £5. The company's sales amounted, in round figures, to 900,000 barrels a year, or 250,000,000 pints. The demand was that there should be a reduction of 1d a pint, which would mean something over £1,000,000 a year. Their income was £770,000, out of which they had to pay debenture interest, preference interest, and dividend on their ordinary stock."

In the next table we show the quotations of the most important public issues of these concerns at intervals over a period of years, together with the present yield based on recent dividends:—

Company.	Share.	Price July 27, 1914.	Price Sept. 30, 1920.	Price Sept. 30, 1921.	Price Aug. 31, 1922.	Present Yield.

† £10 shares.

As shown in our list, a substantial improvement in brewery investments has taken place during the past year. Guinness stock, in spite of Irish troubles, has reached the high-water mark of 470, as against 380 in July, 1914, and other remarkable price increases will be found. The wide yields in many cases, however, denote that public confidence in the brewing industry is yet tempered with some doubts as to the future.

In the absence of the figures formerly issued by the Liquor Traffic Control Board it is possible to obtain an approximate statistical view of the industry from figures published by the United Kingdom Alliance. These figures are estimated, and though the society's object is the suppression of the liquor industry, the following table showing a decrease in the consumption of alcoholic drink generally in Great Britain is probably not unfairly coloured by partisan views. This table shows the estimated consumption of alcohol in Great Britain and

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000

Paid Up Capital ... 1,050,000

Reserve Fund and Undivided Profits ... 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Ireland over a comparative period of six months in four successive years. An estimate of cost to the consumer is added, but this we should imagine is a very approximate figure:—

	HALF-YEAR ending JUNE 30TH, estimated CONSUMPTION and EXPENDITURE (000's omitted).			
	1919.	1920.	1921.	1922.
Beer (standard barrels)	8,710 ..	13,089 ..	12,103 ..	10,402 ..
.. (bulk barrels)	14,443 ..	17,242 ..	15,526 ..	13,191 ..
Spirits (proof gall.)	8,669 ..	10,880 ..	8,473 ..	7,824 ..
Wine (gall.)	9,713 ..	9,035 ..	5,354 ..	5,712 ..
Cider and perry (gall.)	2,271 ..	2,795 ..	2,698 ..	3,447 ..
Cost to consumer	£169,000 ..	£215,000 ..	£196,000 ..	£171,000 ..

It is stated that the approximate cost in 1920 is given, the figures being affected by the change in taxation owing to the Budget. The secretary of the United Kingdom Alliance has explained that the decreased consumption recorded by these figures was due, in his opinion, to the continuance of high prices, coupled with unemployment and scarcity of money. He had no theories regarding the cause of the rise in the figures of the consumption of wine and of cider and perry. Nevertheless, these latter figures indicate an interesting development. Taking the above figures as our guide, and comparing alcohol consumed with the table of companies' profits, it is reasonable to assume that while accounts for 1922-23 may not be as good as the two previous years, they should at least show results as good as those recorded for 1919-20. Indeed, it is possible that these results may even be better. For, as already mentioned, the selling price of the product has been maintained, although it is evident that in many cases wages and salaries have been reduced.

TRADE UNION MEMBERSHIP.

(BY OUR LABOUR CORRESPONDENT.)

It is now possible to state with some definiteness the extent of the decline of trade union membership which, it is common knowledge, has recently taken place. The *Morning Post* appears to regard the numerical weakening of the trade union movement as an evidence of its final extinction—the result, we are given to understand, of its intervention in politics. But students of trade unionism are well aware that in times of industrial depression trade union membership falls off, for reasons which are obvious. The present decline followed on the heels of the collapse of trade. The peak of trade union membership was reached in 1920. In that year the total number of organised workers, according to the official figures of the Ministry of Labour, was nearly eight and a-half millions. The provisional returns of the Ministry, which may be subject to some slight revision, show that the total figure had fallen to 6,793,000 at the end of last year, a decline of 20 per cent. In 1921 the combined membership of the unions affiliated to the Trades Union Congress reached the record figure of 6,417,910. At the recent Trades Union Congress the delegates represented 5,127,308 members, a fall of 20 per cent. during twelve months.

Apart from the teachers, amongst whom union membership increased slightly last year, there was during 1921 a general decline in trade union membership. The fall was by no means uniform. The following table shows

the trades in which the decrease in membership was about the average :—

Group of Unions.	Percentage decrease at end of 1921 compared with end of 1920.
Shop assistants, clerks, warehouse workers, &c.	44.3
Builders' labourers.....	43.1
General labourers	36.3
Leather (other than boot and shoe)	33.7
Tailoring and other clothing	32.2
Agriculture	29.1
Shipping	26.3
Woollen and worsted.....	24.5

In some trades and callings the drop in the membership of employees' organisations was much less than average, as is seen below :—

Group of Unions.	Percentage decrease at end of 1921 compared with end of 1920.
Bricklayers and masons	1.5
Food, drink, and tobacco	1.8
Mining and quarrying (not coal)	4.5
Banking and insurance	4.9
Cotton	5.1
Carpenters and joiners	6.7
Ironfoundry, engineering, and shipbuilding.....	9.2

In every group there was a bigger relative decline in women's membership than in men's membership of unions. In the case of men, there was during 1921 a fall of 19.2 per cent., but the number of women members of unions dropped by 24.2 per cent.

These figures throw some light on the slump in trade unionism. Between the end of 1920 and the end of 1921 there was, according to the records of the Ministry of Labour, a drop of 1,700,000 in trade union membership. Of this number nearly 340,000, or a fifth, were women. In 1920 the general labour unions had a combined membership of 1,353,530; at the end of last year they had 862,645 members. Here is a fall of close on half a million. This is not surprising, as the general labour unions include the worst paid workers, casual workers, and workers among whom unemployment has been exceptionally heavy. Nearly a third of the total leakage of union membership is due to the loss of members by these unions. Builders' labourers, an allied group—many of them are, in fact, members of general labour unions and included in the figures just given—showed in 1921 a decrease of nearly 76,000 members. The group of shop assistants, clerks, warehouse workers, &c., lost nearly half their women members last year, and suffered a total loss of 166,000 members. Trade unionism has never been a very powerful influence amongst these workers. It is of relatively recent growth, and it has not stood the strain of the present time of difficulty. This is true again of agricultural workers, who lost 61,000 members last year. Other trades where the proportionate drop is below the average have nevertheless lost a considerable number of members. The coal miners' membership is down by 200,000, a fact which should occasion no surprise. The groups to which reference has been made above, and where existing circumstances might be expected to affect trade union membership adversely, account for two-thirds of the lost membership; in other words, the unions of general workers, shop assistants, agricultural workers, and miners, &c., have lost a million members, leaving a loss of half a million to be distributed amongst the remainder of the trade union movement.

It will be seen, therefore, that over the greater part of industry, commerce, and the public services the trade depression has not inflicted a shattering blow on the workers' organisations. The greatest inroads have been made where trade unionism is not firmly established, or where, as amongst the miners, there were special circumstances—a serious defeat, drastic wages reductions, and unemployment—to account for the slump.

But this is not all. The backwash must not be considered apart from the great wave of trade unionism which preceded it. The trade union movement was at the end of 1921 numerically stronger than it was at the end of the war, and 50 per cent. above its strength in the year before the war. The total figures are as follows :—

End of year—	End of year—
1913	4,189,000
1918	6,664,000
1919	8,081,000
1920	8,493,000
1921	6,793,000

Even if the decline has not yet fully run its course, it is clear that trade unionism will emerge from the crisis much stronger than it was immediately before the war. It is not anticipated, however, that there will be a further substantial decrease in trade union membership, and consequently the Trades Union Congress will remain a much more powerful body than ever it was before the war. The affiliated membership of the Congress at intervals during the past 20 years is shown below :—

Year.	Members.	Year.	Members.
1902	1,400,000	1919	5,284,000
1907	1,700,000	1920	6,505,000
1912	2,002,000	1921	6,418,000
1917	3,082,000	1922	5,127,000
1918	4,532,000		

Even if organised labour were somewhat further weakened numerically, the proportionate gain in membership during the last decade will be at least as great as that in the previous decade.

Moreover, the effect of the trade depression has been to weed out the "weaker brethren," and the real strength of the trade union movement has not been seriously impaired. Further, as the Ministry of Labour's statistics show, there was during 1921 a decrease in the number of trade unions from 1,425 to 1,296, due mainly, it is pointed out, to amalgamations. This consolidation of forces offsets to some extent the temporary decline in trade union membership. It is, of course, true, on the other hand, that the trade depression and such important national stoppages as those in the mining and engineering industries, have seriously depleted the financial resources of the unions, and that it will be some time before the unions recover the financial position they held before the collapse of trade. Nevertheless, a comprehensive survey of the position of trade unionism to-day shows that it is not so desperate as some of its friends and most of its critics imagine. It has lost in numbers and money, but not beyond possibility of recovery. It is expected that as employment increases trade union membership will revive, whilst existing circumstances are giving an impetus to the more effective consolidation and organisation of trade unionism. Consequently we may expect the movement to emerge from the present crisis stronger in organisation, if temporarily weakened in numbers.

THE QUARTER'S NEW ISSUES.

The past quarter has lived up to its reputation of being the slackest period of the year in the new issue market, our statistics of new capital applications for the three months ending September 30th showing a total of only £62 millions as compared with £162½ millions in the second quarter and £286½ millions in the first quarter. In the corresponding period of 1921 the total was slightly less at £57¼ millions. Of the past quarter's total over £42½ millions represented borrowing by the British Government, leaving some £19 millions for other purposes. New issues quarter by quarter in recent years are set out in the table below :—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	567,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	162,567,100	61,920,200	..	..

These figures include British Government borrowing, with the exception of money raised by Treasury bills and Ways and Means Advances. During the past quarter £39½ millions was raised by 4½ per cent. Treasury Bonds, the last of which were sold in the week ended August 11th, and £2¼ millions from the sale of National Savings Certi-

ificates. Out of a total of £510½ millions in the nine months the British Government has been responsible for borrowings of £346½ millions, a large proportion of which represents conversion of floating debt into short dated bonds. The following analysis shows the purposes for which the remaining new issues were made in the quarter and in the nine months :—

Description.	Total, First Half-year, 1922.	Third Quarter, 1922.	Total Nine Months to September 30.
	£	£	£
British Government Loans	304,258,900	42,493,300	346,752,200
Colonial Government Loans	41,582,300	nil	41,582,300
Foreign Government Loans	13,066,600	nil	13,066,600
British Municipal and County Loans	5,555,300	nil	5,555,300
Colonial corporations	2,883,100	2,950,000	5,833,100
Foreign corporations	6,107,500	nil	6,107,500
British railways	2,872,000	nil	2,872,000
Foreign railways	14,687,500	nil	14,687,500
Australian mines	16,500	nil	16,500
South African mines	409,200	nil	409,200
Other mines	1,131,000	132,500	1,263,500
Exploration, financial, & investment trust	3,902,300	1,483,000	5,385,300
Breweries	784,000	nil	784,000
Merchants, importers, &c.	100,000	nil	100,000
Manufacturing	5,690,000	562,500	6,252,500
Stores and trading	170,500	nil	170,500
Estate and land	125,000	487,500	612,500
Rubber	120,700	5,000	125,700
Oil	16,490,000	275,000	16,765,000
Iron, coal, steel, and engineering	5,385,000	3,903,800	9,288,800
Electric lighting and power	1,715,500	1,651,500	3,367,000
Framways, omnibus, &c.	490,000	87,000	577,000
Motor traction and manufacturing	nil	nil	905,000
Gas and water	1,247,600	439,700	1,687,300
Hotels, theatres, and entertainments	1,103,900	525,000	1,628,900
Patents and proprietary articles	nil	116,200	116,200
Docks, harbours, and shipping	12,109,700	2,000,000	14,109,700
Banks and insurance	2,870,700	50,000	2,920,700
Miscellaneous	3,893,600	2,839,900	6,733,500
	448,774,200	61,920,200	510,694,400

Under Colonial Corporations there were three loans: Port of Bombay, £1,600,000 in 6 per cents. at par, Johannesburg, £1,000,000 in 5½ per cents. at par, and Auckland Electric Power, £350,000 in 5½ per cent. stock at par. In the industrial section the largest group is iron, coal, steel, and engineering, in which two companies are responsible for nearly £6 millions—Tata Iron and Steel, with an issue of £1,960,000 in 7 per cent. debenture stock at 98, and Platt Bros. and Co. with £3,444,300 in ordinary shares and £534,000 in 7 per cent. preference shares. Both these issues were made in the early part of July. Three companies in the electricity section made new issues, the larger part of which was accounted for by the County of London Electric Supply Company, with an offer of £562,500 ordinary and £500,000 6 per cent. preference shares. There were five small issues in the gas and water group, but the Royal Mail Steam Packet Company was responsible for the total in the shipping section, with an issue of 6½ per cent. preference stock. In the miscellaneous list the principal issues were £1,238,300 by Crosses and Heaton's Associated Mills in 6 per cent. debenture stock at 98, £400,000 by Thos. de la Rue and Co. in 8 per cent. debenture stock at par, and £617,500 in 6½ per cent. debenture stock at 95 by the Empire Paper Mills.

From the final table, in which the destination of the new capital issued is given, it will be seen that a very much larger amount has gone abroad during the past nine months than in the corresponding periods of the previous two years :—

Destination of New Capital.	First Nine Months				
	1912.	1913.	1920.	1921.	1922.
	£	£	£	£	£
United Kingdom.....	36,533,400	25,595,200	264,582,900	118,101,400	405,012,000
British Possessions.....	35,501,800	26,948,700	95,002,600	46,478,900	55,110,800
Foreign countries	78,995,500	67,778,200	4,716,500	21,884,900	50,571,600
Total	151,030,700	150,322,100	364,291,000	186,465,100	510,694,400

If British Government borrowings be excluded it will be found that nearly two-thirds of the money raised here in the past nine months was for use outside the United Kingdom, a very much higher proportion than in the corresponding period of 1921. The manner in which the amount going to foreign countries in the last three years has grown is noteworthy. The latest total, however, is much below the pre-war figure, without making any allowance for the alteration in purchasing power. In the case of British Possessions, the figure for 1922 is considerably in excess of the pre-war average.

Notes of the Week.

Maritime Trade and the Near Eastern Crisis.—The revolution in Greece comes too late to re-establish her as one of the guardians of that freedom of the Straits which is the avowed object of the Powers—unless, indeed, the situation should be transformed by the obstinacy of the Kemalists or their treatment of the refugees at Smyrna. At present they seem bent on completing the ruin of that port and its hinterland begun by the Greek army during its retreat. At the Ottoman Railway meeting, on Tuesday, Lord St Davids stated that, though the terminal equipment of the line at Smyrna had not suffered, the retiring Greek forces had completed the destruction of the towns of Aidin and Nazli, burnt a number of stations, looted and destroyed the Turkish villages, deported Turkish notables to Athens, and devastated the rich district on which the trade of the port depends; and that there was reason to apprehend grave damage to the line beyond a point some 70 miles from Smyrna. He insisted also on the harm done by the division of Asia Minor into spheres of influence—a division for which France and Italy are to be blamed rather than our own Government. It remains to be seen what securities are to be found for the freedom of the Straits. A Greek Thrace seems unlikely to be one of them. Should Eastern Thrace be returned to the Porte, Bulgaria will at least have an outlet through Constantinople less obstructed than that which she should rightly have through Salonika. But she needs the unrestricted access to the Aegean, promised, but not yet accorded, by the Powers. Professor Toynbee suggests in Wednesday's *Times* that it may be secured to her by the partition of Thrace into an Eastern and a Western section with the Maritza as the dividing line, the Eastern portion being returned to Turkey, and the Western made autonomous, like Dantzig, under a High Commissioner appointed by the League of Nations. This would secure the protection of the racial minorities in the Western section better than Greek rule could; and Dedeağatch would then be included in the Western portion, and would serve as the promised outlet for the overseas trade of Bulgaria. Dedeağatch, however, is still a long way by rail from Bulgarian territory, and its harbour is an open roadstead, where ships cannot lie during a southerly gale. The proposed partition would revive the project of 1914 for a sheltered harbour at Porto Lagos at the mouth of the Burukol lagoon, with a direct railway connecting it through Gumuldjina with Karadjik, some 40 miles east of Philippopolis, on the Orient Railway to Constantinople, and a short line from Karadjik, giving direct access to the Bulgarian railway system through Stara Zagora. The engineering difficulties might be considerable and the scheme costly, but it is necessary for the development of Bulgaria, and it is not likely to be carried out while Western Thrace remains part of the Greek kingdom.

Conditions in Ireland.—As we go to press our Dublin correspondent telegraphs that the postal strike has been ended by the acceptance of the Government's last pre-strike offer. Writing on Thursday he said:—It is satisfactory to record definite progress on the road towards settled government, and a certain ripening of public thought. Dail Eireann, which combines the functions of a Parliament of the Provisional Government and of a Constituent Assembly, has settled down to work. Standing orders for the regulation of its own procedure have been framed; a very modest scale of salaries for Ministers and for payment of members fixed; progress made in the debate on the draft Constitution, which has been conducted with moderation and a temperate discussion of differences of opinion; measures authorised for adjusting the incidence of the financial burden of the recent destruction as between the local authorities and the National Government; special powers conferred upon the military authorities to enable them to use some of the most effective weapons of martial law against the rebel irregulars. The Labour Party, prudently mindful of the clear wish of the mass of the people, is settling down into an orthodox Opposition, and, under the same impulsion, the free-lances who started by showing a disposition to harass a Government misguided

enough to have omitted them from its official ranks, are showing themselves less troublesome. Mr Cosgrave, as President of Dail Eireann and Minister of Finance, has been firm, able, and urgent for the despatch of business. Mr O'Higgins, as Minister for Home Affairs, has already earned a reputation for his clearness of exposition, his command of his subject, and effectiveness in debate. Mr Mulcahy, as Minister of War, is firmly established in general esteem as a high-minded personality of much practical ability. The good work done and the improved situation are both attributable to the firmness of the public temper. It has definitely determined that it must have the Treaty, and that it must have order and settled government, and that it will allow no side issues to deflect its purpose. Apparently passive as to expression, it is unshakeable now in its conviction. The attempt to bully it has failed, and the rebel irregulars, should they persist in it, will find to their cost how bitterly it has been resented. The damage that has been done is enormous. Mr Cosgrave provisionally mentioned £40,000,000—and the bulk of this huge sum will become a national charge in relief of the local authorities, which are primarily liable. But the local authorities are to remain partly liable. Mr Cosgrave aims at linking together the local authorities' rates with the Government taxes, in order to furnish the maximum of security for the necessary public loans. It was made clear also that this local liability should lead to increased zeal in local resistance to sabotage, and to a closer local scrutiny, before endorsement, of local claims for compensation out of public funds. On the other hand, the local authorities are to receive, on Local Taxation Account, the grants and arrears thereof which had been withheld by the British Government for their contumacy towards the L.G.B., but as these were portions of the guarantee fund for the payment of land purchase annuities, certain deductions must be made. Thus each locality will realise the convenience of getting the purchase farmers to pay their debts. These measures are just and practical, and will tend to stimulate the sense of civic obligation amongst country ratepayers and voters. Dublin during the three weeks since Dail Eireann met has had a postal strike on the grand scale, but has made shift, almost cheerfully, with most defective—almost non-existent—postal, telegraph, and telephone services; it has had a building trade strike, and a shut-down of its two shipyards, and it is threatened with a printers' strike. The Government, with the full approval of the public, is adamant. Its position is that civil servants have no right to strike, and that after the cut has been made, wages will be higher here than for the corresponding grades in England and N.E. Ulster. The latest Exchequer returns show a balance on September 23rd of £2,822,610, as against £2,380,907 for the previous week, and a sum of £250,000 Ways and Means Advances has been paid off. Receipts suddenly accelerated, coming up to the half-year period—£1,394,277 being collected. Apparently President Cosgrave's public reproaches affected some income-tax payers, for, after being motionless for three weeks, the item "Property and Income-tax" moved from £1,017,000 to £1,091,000. All but £90,000 of the week's receipts were Customs and Excise. Readers of the *Economist* will recollect that these figures represent Revenue as "collected," and not "true" Revenue. No new fiscal arrangements will come into operation until after the ratification of the Constitution in December next.

The Iron and Steel Outlook.—The autumn outlook for the iron and steel industries is very different from that of a year ago. Then the industry was just starting up after the disastrous coal stoppage, and at the end of September only 68 furnaces were in blast, while pig-iron, instead of being exported, was being imported at the rate of about 100,000 tons a month. Progress during the past year has been painfully slow, and there are even now only about 130 furnaces blowing out of a total of about 480, and the production of pig-iron is only 60 per cent., and of steel 70 per cent., of the average monthly production in 1920. At the same time, although the most sanguine observer does not expect to see the number of furnaces blowing reach the 300 that were operating in September, 1920, there are indications of an improvement in the trade this

autumn. Prices, which had been falling continuously for a year, until many works were operating at a loss, now show a tendency to harden. There has been a distinct improvement in the home demand in certain directions, while in some of the chief export markets for iron and steel, notably India, Australia, and South America, signs of increased purchasing power are apparent. While it is true that shipbuilding, on which the iron and steel industry normally depends for about a third of its outlet, shows little signs of improvement, negotiations are in progress to curtail still further the labour cost of production, which may enable shipbuilding once more to become an economic proposition. It is clearly recognised by iron and steel interests that a complete return to normal is impossible while the situation on the Continent and the Near East remains so involved, and while railway rates remain at their present high level, but in spite of these handicaps some fairly substantial improvement is looked for this autumn.

The Ebbw Vale Stoppage.—The depression in the coal trade has hit few colliery undertakings more severely than that of the Ebbw Vale Steel, Iron, and Coal Company, Limited. In the financial year ending 1920 the gross profits amounted to £1,448,632, and in 1921 to £633,247. In 1920 the dividend paid was 15 per cent., and in the following year 5 per cent. Last year, however, the gross profit was only £49,500, and after deducting general and legal expenses, as well as interest on debentures and loans, there was a net loss of £320,870. Under these conditions the company found it imperative to carry out drastic economies in costs of production, and one of the forms which these economies took was that of the withdrawal of allowances which from time to time had been made to supplement the day rates and the piece rates earnings of the miners. The withdrawal of these allowances, however, was strongly resented by the workmen, but they were persuaded by the South Wales Miners' Federation to refer the dispute to arbitration, and Professor Galloway, an arbitrator of their own choice, was appointed. He recently gave his award, and it had been contemplated to put that award into operation as from November 1st next. The Federation officials were agreeable to that course and to give the award a three months' test. Mr Evan Davies, M.P., however, the advisory agent of the district, but not the agent who had been in control of the local negotiations, condemned the award root and branch, and expressed his determination to refuse to allow it to take effect. In this course he was opposed by the miners' agent, and the dispute, therefore, embittered not only the relationships between the company and its employees, but also those between the leaders and the workmen themselves. Last week an exchange of letters between Mr Evan Davies, the advisory agent, and the management apparently left on the agent the impression that his authority to act on behalf of the workmen was disputed, and as a reprisal Mr Davies, on Wednesday, September 20th, called out not only the miners, but also the workmen employed at the by-product works upon which the company's iron and steel establishments are dependent for their coke supplies. A mass meeting of the miners on the following day confirmed the authority of Mr Davies, and that day intimidation was given to the company that the employees were prepared to resume their duties immediately. The management replied that as the workmen had again broken their contracts of service, and closed down the pits, it was not intended to reopen them for the present. The records of disputes in the coalfield show that stoppages, irregular and regular, have been more numerous at Ebbw Vale than in any other district, and in a statement which he made on September 23rd Sir Frederick Mills, the chairman of the company, complained that that was the fifteenth occasion when the Ebbw Vale by-product plant had been stopped as the result of unauthorised strike action. The stoppages at the collieries have been even more frequent, and the action taken by Mr Evan Davies last week had been threatened on other occasions this year. In these circumstances, the company have decided to keep their works closed until they are given greater security against these stoppages than they have possessed in the past.

Approximately 12,000 men have been thrown out of employment, and distress in the district, after a long period of depression and low wages, is very acute. The South Wales Miners' Federation has taken control of the dispute out of the hands of the local miners' agents, and has offered to give the Galloway award a three months' trial. The demand of the company is that that award be applied unconditionally, and as the steel furnaces have been raked out, and the pit ponies and workmen's tools removed from the mines, it is feared that the stoppage will be prolonged until an improvement in the coal and iron and steel trades affords a reasonable prospect of remunerative production.

Stock Exchange Values.—The *Bankers' Magazine* statistics of stock exchange values show a decrease of nearly £44 millions from August 18th to September 18th, 387 representative securities falling in value from approximately £6,192½ millions to just over £6,148½ millions. It is stated that "the depreciation is wholly accounted for by the setback in gilt-edged or fixed interest-bearing securities," the fall being particularly pronounced in British Funds. In variable dividend securities, in spite of the fact that British railway ordinary stocks fell about £9 millions, a net gain of £25 millions is recorded. American railways have risen nearly £24 millions, while Colonial railways are higher, but South American rails, it is stated, "have been somewhat depressed." The selected 13 British bank shares have fallen slightly, but 18 Colonial and foreign have made a small upward move. Insurance shares also record an improvement.

Co-operative Trading Results.—The decrease in the sale of the Co-operative Wholesale Society, Limited, continues, but the loss which startled the movement a year ago has become a matter of history. The report to be presented at the October meetings shows sales of £32,175,883 for the half-year, a decline of 24 per cent. following the decrease of 17 per cent. reported in 1921, as compared with 1920. The productive enterprises have had a turnover of £10,000,000, against £14,000,000 in the first half of 1921. The deposits and withdrawals in the C.W.S. Bank indicate the lessened business, being £43,689,024 less than in the former period, that totalled only £252,833,323. This is due to the altered conditions of trade union finance, as well as to the straitened resources of many co-operative societies, for the C.W.S. now deals with the current accounts of 7,748 trade unions and friendly societies, as well as of 2,698 workmen's clubs. Amalgamations of co-operative societies have lessened the number of co-operative accounts, which now number 1,026. After providing for all expenses and paying £619,666 interest on share and loan capital and £374,968 for depreciation on land and building, the result is a net profit or "surplus"—as the co-operators now term their gains—of £23,521. This is being added to the reserve fund of £614,988. Among the trade details which make up the C.W.S. returns are the sale, during the six months, of 23,146,802 lbs of tea valued at £2,553,136. The supplies for the society's eleven flour and provender mills were £4,591,947, as compared with £7,086,863 in the first half of 1921. But although the values declined 35 per cent., the output of flour was only 5 per cent. and of offals 9 per cent. less than in the earlier period. Of flour, 1,574,760 sacks were produced, and 1,185,452 sacks of offal, the result being a profit of £104,746. The total capital of the C.W.S. is now £33,025,898, having increased by three millions in the six months. There are 1,199 shareholding societies in the federation, with a membership of 3,480,168, an increase of 1 per cent. Evidently the co-operative movement is in the throes of a great struggle, but it is better off than was the case a year ago. The committees of retail societies are being urged by the directors of the C.W.S. to give them all the trade they can, in order to lessen the ratio of standing charges which cannot be reduced, and to make possible a return to the old days, when a dividend can be declared on trade. It should not be forgotten that throughout the whole period since the war the Co-operative Wholesale Society has maintained its interest on capital—so that it has really done better

for the shareholding societies than many private concerns have done for their investors. The fact that much of their own capital is invested with the C.W.S. has been a source of financial strength to the retail distributive societies throughout the country.

Conditions in South Africa.—According to information received by the Standard Bank of South Africa, business in the Union of South Africa is proceeding on very quiet lines, although prospects generally are favourable. The demand for agricultural implements is increasing, and the outlook is brighter owing to the favourable climatic conditions. But the mining material and iron and steel markets are dull, although an early improvement is foreshadowed. Prices are slightly firmer. The quotations at Johannesburg are:—Imported iron and steel flats 25s 6d to 35s per 100 lbs, and steel plates 20s to 25s. In the electrical trades, business is quiet and prices are unchanged. It is recorded, however, that the building trade maintains steady progress, heavy shipments of timber having recently arrived, although stocks in most lines are ample. The tinplate market is dull, and while the soft goods and clothing business shows a slight improvement, in the hardware and cutlery market little business is passing. In boots and shoes the volume of business shows little change. The first instalments of the new wool clip are now arriving, and are eagerly competed for. There is keen demand for long super clips. The mohair market is quiet, with some business passing in summer fairs. Business in the sheepskins market is brisk, and there is keen demand for all descriptions. Prices for hides are firm, but it is reported that the wattle bark market is weak, small sales of chopped bark having been effected at 117s 6d to 120s per ton, Durban. The ostrich feather market shows no improvement, and the Cape wheat market is weak. Large supplies of Canadian and Australian wheat are expected shortly. The maize market is rising, and supplies are difficult to obtain at the current quotations at Capetown, which are, for Grade 2, 12s 3d, and for Grade 6, 11s 3d. The trade figures for British South Africa during the six months ended June, compared with the corresponding period of 1921, are as follows:—

	January-June, 1921.	January-June, 1922.
Imports	£ 33,810,877	£ 24,731,768
Exports, including re-exports ..	30,337,550	26,707,706

Figures for the Transvaal gold output during August have already appeared in a recent issue of the *Economist*.

Labour Trouble in Australia.—From time to time of late considerable purchases of the shares of Australian base metal producing companies have been made on behalf of capitalists residing in the Commonwealth. It has been understood that the buying has been induced by the belief that economic conditions were improving, more especially on the score of labour. Certainly, a few small concessions had been granted by the Arbitration Courts, but it would seem that the optimistic conclusions were premature, cables to hand this week reporting fresh strikes, with the threat of a general strike, in connection with the proposed restoration of the 48-hour week, the abolition of compulsory arbitration, and other matters. It might have been thought that the prolonged stoppage of work at Broken Hill, the dismissals in Western Australia, and

other like currencies, would have induced labour to take up a more conciliatory attitude. In some quarters, the view is put forward that a "fight to a finish" will provide the only satisfactory settlement.

Petrol and the Oil Market.—The announcement of a cut in the prices of petrol has caused fresh searchings of heart amongst holders of shares in oil companies, writes a Stock Exchange correspondent, and it had the effect of accentuating the dulness in oil shares, though there was nothing in the shape of a pronounced fall in prices. No doubt shareholders are wondering how it will affect the profits of their undertakings, and if there had been any pronounced weakness in the market probably prices would have given way more noticeably throughout the list. The mere fact of the market remaining tolerably steady, however, served to reassure holders, and the dulness which developed was not sufficient to arouse more than uneasiness in the minds of holders. The reason advanced in the market for this comparative steadiness, in the face of the petrol cut, is that the price of crude oil has been coming down for a long time past, and that the new scale to consumers of petrol, while it will rejoice the heart of the motorist and others interested as retail purchasers, can hardly be expected to make much material difference to the profits of the oil-producing concerns, although it is likely to cause a temporary diminution in most cases. For some months past the oil market has been in a subdued condition. It may be assumed that the majority of shareholders in oil companies acquired their interests at prices higher, and in many instances substantially higher, than those which rule to-day. The proprietors see no particular reason for cutting losses, but, at the same time, the outlook for the oil business is not sufficiently bright to encourage fresh purchases of shares to average others bought more expensively. The consequence is that the market has arrived at a stage in which interest is largely academic on the part of the public, and mainly professional on that of speculators. The Shell Company, it may be recalled, made an issue of 7 per cent. preferences early in the year at 20s, and the price is now 23s 3d. The issue was well over-subscribed, and on the strength of this there was a rush for the Mexican Eagle 7 per cent. preference shares, offered soon afterwards at 20s 6d. The lists closed promptly, but stags found themselves left with considerably more shares than they required. Hence Mexican Eagle preference stand at a discount of 9d per share, in spite of the fact that there is a dividend due at the end of next month. The present cut in petrol is held in the market to be unpleasant for the producing concerns, though, for the reason above stated, it is thought that profits may not be permanently affected. So far as the Shell Company is concerned, its interests are so many and so widely spread that oil production pure and simple is by no means the only source of revenue; the distributing part of the company's business is sufficiently profitable to enable shareholders to regard the fall in the price of the spirit without apprehension. With regard to the Burmah Oil Company, the shares have eased off in sympathy with others in the group, for it is assumed that, although a cut in petrol in England need not affect the price of the spirit in India, a reduction is probable to Indian consumers, who will point to the example set by the trade in this country. Mexican Eagles have given way, owing to the fact that the company is a producer almost entirely, and therefore dependent for its principal profits upon the price of crude oil. The Trinidad companies have been getting on none too happily for some time past, as recent reports have shown. Shortage of pipe-line facilities in the island and disappointments in connection with output have contributed to bring about dulness in the shares of most of the Trinidad companies, and this is accentuated by the dulness of the oil market as a whole. Royal Dutch shares have come down a little with the rest, but the price is tolerably well maintained, and shareholders no doubt congratulate themselves upon their company having received £4 11s 6d from a pool for its large holding of Shell shares. The smaller fry of the oil market are affected more by gambling considerations than by output, but, speaking broadly,

the effect of the cut in the spirit has been to give the market a dull appearance and to divert speculative attention into other sections.

Indian Fiscal Commission.—Our Manchester correspondent writes:—Lancashire traders have this week displayed considerable interest in the report of the Indian Fiscal Commission and the recommendations have been closely studied. It cannot be said that the report of the Commission has caused any surprise, in view of its composition. Lancashire has realised for some time that the Indian Government is determined to adopt a policy of protection for her industries. The Commission condemns the excise duty on cotton goods, and it may be taken for granted that this tax will be removed at an early date, whatever may be done with regard to the import duty. It is feared that the protection which is now being established will injure to a considerable extent Lancashire's trade, but most merchants are not down-hearted. It must be expected that more and more mills will be built in India during the coming years, and imports of textile machinery are on a large scale. The factories, however, are being put up at a big cost and the capital outlay is much larger than Lancashire mills. Labour difficulties in our Dependency are increasing, and the mill owners will have to be prepared to pay higher wages and provide better conditions for the operatives. It is suggested that a fair rise in the value of the rupee would destroy the benefit which now accrues to Indian manufacturers as a result of the duty on imported goods. If a long view of the situation is taken, the opinion prevails that as the years go by the standard of living of the natives in India will be raised and they will not be content to be clothed with coarse materials such as those made in the local mills.

Van den Berghs.—It may be recalled that in the accounts for 1920 of Van den Berghs, Limited, the auditors drew attention to the stocks of raw material held by the company, "which were considerably in excess of the market values ruling at the date of the balance-sheet." In the accounts for 1921, now issued, it is significant to find that the directors refer "to the unprecedented fall in the price of raw materials, which began to take place towards the end of 1920, and which continued till well into 1922." The reduction, however, in stocks, as revealed in the balance-sheet, from £3,022,615 to £755,787, is certainly a matter which will compel shareholders' attention. Claims in respect of enemy pre-war debts still figure under assets at £407,233. The previous accounts covered a period of 18 months, and, including the balance brought forward, profits amounted to £1,624,873. Of this sum £468,750 was appropriated for a bonus share issue, bonuses were handed to the managing directors and a dividend of 25 per cent. paid on ordinary shares. For 1921 a loss of £176,867 is recorded, without taking into consideration £37,169 paid to directors. Goodwill account remains unchanged at £656,463, but the 6 per cent. notes, amounting to £343,954, and loans from bankers of £646,363, have now disappeared from the balance-sheet. Fortunately the company had a balance in hand of £635,930, and after the demands for dividend of preferential shareholders have been met, £166,566 is left to be carried forward to the next accounts. The balance-sheet will be found analysed in our usual column.

A Kafir Quartette.—Our mining correspondent writes The great majority of the annual statements of the Transvaal gold mining companies are made up to December 31st, but a few strike their balances at June 30th. Of these, four—all belonging to the Rand Mines Central Mining group—have made their appearance this week. Naturally, each reflects in a greater or lesser degree the decline in the gold premium and the strike of January-March last. Of the quartette, the most important is the New Modderfontein, which has already distributed dividends totalling nearly 8½ millions, besides devoting a large proportion of its profits to outlay upon plant, &c. The net earnings of 1921-22 fell appreciably short of the

record total of 1½ millions declared in respect of the preceding year, when the dividend was raised from 32½ per cent. to a round 100 per cent.; hence the rate was reduced to 70 per cent. But with the current price of gold at approximately last year's average, and costs coming down month by month, there is reason to anticipate a restoration of the distribution to the "cent per cent." level. The cost, however, will be spread over a series of years. The partial stoppage of work naturally exerted a slightly adverse effect upon the ore reserve position. Still, the tonnage even now exceeds 8½ millions—or, say, eight years' supply for the mill; while the value has been more than maintained. On the basis of 100 per cent. dividend the yield on the shares at the current price of 4½ would be about 12 per cent. Appended is a tabulation of the salient features of the reports for the past three years of the Modder and of the other three companies:—

	Year Ended June 30th.

* About two months. † Loss.

The report of the Modder East shows that in 1920-21, when the gold premium was at its height, the revenue averaged 44s 6d per ton, and costs 30s 5d. Operations in the first half of 1921-22 showed a profit of £64,100; in the second a working loss of £26,400, due to the labour trouble, which accounted for nearly 3s of the increase in the cost ratio. The company is on the horns of this dilemma. All the while the ore is transported to and crushed at a hired battery, the output must be relatively small and the expense average high. To alter this state of affairs the removal and re-erection of the Simmer-Jupiter plant is necessary, entailing heavy expenditure—and the finances are weak. The consulting engineer gives a frankly unfavourable account of the mining position, and states that working costs under present conditions can only be met by encroaching on the high-grade reserves. The Consolidated Main Reef owns a large area in the Central Rand, but as both the eastern and western sections of the mine offer little prospect of the discovery of any considerable quantities of payable ore, the middle section has naturally to bear the whole burden of finding material for the mill. This involves a considerable and disproportionate expense in shaft-sinking. The extent to which the company is dependent upon a reduction in working expenses is vividly brought out by the statistics, showing that at the normal price of gold last year's operations would have resulted in an operating loss of £63,200, or 2s 8d per ton. The ore reserves tend to decrease both in quantity and value; the present tonnage represents only about two years' supply for the mill. Last year's dividend of 5 per cent. compares with 12½ per cent. in

respect of each of the two preceding periods. There appears to have been some foundation for the reports as to the developments in the Nourse Mines, the manager stating that, in the eastern section of the mine, blocks of South Reef and Main Reef Leader were exposed "of a slightly higher value than the ore reserves." Nevertheless, the value of the latter, as a whole, remains unchanged. The company will shortly have the benefit of an additional shaft for the exploitation of its deep level area.

Restitution under Article 238.—Notice is given by the Board of Trade that no claims against Germany for restitution under the provisions of Article 238 of the Treaty of Versailles of cash, securities, or other property seized or sequestered in occupied territory will be entertained, except in cases which have been notified to the Reparation Claims Department, Cornwall House, Stamford street, London, S.E.1, and full particulars of which have been furnished before October 28, 1922. All claims for restitution which have been notified to the Reparation Claims Department, but in respect of which all the particulars and information which have been asked for by the Reparation Claims Department have not been furnished before October 28, 1922, will be presumed to have been abandoned.

Oversea Correspondence.

UNITED STATES.—NEW TARIFF—CAPITAL ISSUES—JULY FOREIGN COMMERCE.—TRADE RECOVERY.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 18.

WHILE many business and financial interests seriously doubt the wisdom of enacting such an extraordinarily high tariff as that now pending in Congress, the prospect of an early passage of the measure, after nearly two years of agitation and uncertainty, has had a decidedly beneficial effect upon most lines of trade and industry concerned. Whatever the results may be, the rates of duties and the provisions of the new tariff are practically settled, and final action, which appears imminent, will give merchants, manufacturers and bankers at least something definite in that respect upon which to base operations for the future. It had been expected that the House would promptly adopt the compromise Tariff Bill agreed to in conference, but the action of the conferees in inserting the dye embargo provisions after the latter had been rejected previously by both branches of Congress, together with the imposition of the duty on potash for three years, caused a revolt among the Republican members. The Bill was recommitted to the conferees, who revised their report by putting fertiliser potash on the free list, eliminating the dye embargo provisions, and lowering the *ad valorem* rates after two years to 40 per cent. on intermediate dyes and to 45 per cent. on those in the finished state. With those changes made, the House passed the measure as submitted by the conference committee.

In order, apparently, to meet the autumn investment demand, new bond issues were offered on an exceptionally heavy scale last week. The total of such offerings, amounting to \$172,529,100, exceeded that of any other week in the history of new financing in Wall Street, with the single exception of the week of April 28, when new bonds aggregating \$232,228,995 were offered, and barring, of course, the Government's war issues. During the past month or so the weekly offerings have reached only about \$10,000,000. By far the largest portion of the new issues (\$93,000,000) consisted of industrial bonds; public utility concerns put out \$29,500,000 worth, while State and municipal offerings accounted for \$21,242,000 of the week's total, the balance being made up of railroad, foreign and miscellaneous bonds. The State and municipal bonds, carrying interest rates of 4 to 5½ per cent., were offered at prices to yield returns ranging from about 3½ to 5½ per cent., although most of the yields were below 5 per cent. Public utility issues, with interest

rates of 5 to 6 per cent., were priced to return 5.47 to 6.60 per cent. on the investment, while railroad bonds bearing 5 and 6 per cent. interest were offered at figures to return from 4½ to 5½ per cent. Interest rates on the new industrial bonds vary from 5 to 7 per cent., and the yields from 5.40 to 7½ per cent. A comparatively small issue of Province of Saskatchewan 5 per cent. gold bonds was offered at 99½ to yield 5.05 per cent., and another of Greater Winnipeg Water District 5 per cent. bonds was priced to investors at 98½, yielding 5.10 per cent.

According to Washington advices, the Government of Haiti has invited American bankers to submit bids for an issue of \$16,000,000 bonds—the first portion of the \$40,000,000 loan provided for in the protocol between the United States and Haiti concluded in October, 1919. The bonds are to bear interest at 6 per cent. and mature in 1952, and are to be secured by a first lien on the internal revenues of the republic and by a second lien on the Customs revenues. The principal purpose of the \$40,000,000 loan, it is said, is to take advantage of the present situation in the foreign exchange market in order to refund the French exterior loans of 1896 and 1910, aggregating 87,000,000 francs approximately. The balance remaining, together with a contemplated issue of \$5,000,000 internal bonds, will be used for the settlement of the interior debt, amounting to about \$3,275,000, and for the economic development of the country, public roads and schoolhouses. Haiti's total public debt is stated to be \$17,871,471. The average annual income of the republic for the past six years is given as \$4,776,447, while revenues for the first eight months of the 1921-1922 fiscal year are reported as amounting to \$3,922,558.

An offering of 600,000,000 German marks, divided into 60,000 common shares, par value 10,000 marks each, of the "United European Investors, Limited," has been extensively advertised here recently. According to the announcements, the company, incorporated under charter of the Dominion of Canada, is headed by Franklin D. Roosevelt, formerly Assistant Secretary of the Navy, and now a vice-president of the Fidelity and Deposit Company of Maryland. William Schall and Co., New York, the Deutsche Bank and the Norddeutsche Bank, Hamburg, are given as the company's bankers and depositors, and the Bank of America, New York, as its transfer agents. The purpose of this company, it is stated, is "to exchange its shares for German marks held by American investors, and to invest these marks in actual values in Germany. Carefully selected investments will be made," it is added, "in real estate, mortgages, securities and participation in industrial and commercial enterprises." Attention is called in the advertisements to the fact that the company "does not, in any case, advocate the further purchase with American dollars of German marks; its purpose is solely the placing of actual values behind marks already owned in America." What the response will be to this offering cannot be predicted. Obviously those who subscribe will do so in the hope of getting back eventually at least some portion of the funds they have invested in depreciated German currency.

The Department of Commerce statement of our July foreign trade by countries of origin or destination presents several interesting features, especially the statistics showing the value of the merchandise and commodity movement to and from European countries and South America. Exports to Europe in that month aggregated \$159,600,000, representing a decrease of more than \$27,000,000 from June, and of \$20,700,000 approximately from July, 1921; imports, amounting in value to \$75,000,000, were slightly less than in June, but some \$8,200,000 greater than in July of last year. Our exports to Great Britain, \$62,000,000, were \$9,000,000 less than in July of 1921, but imports, valued at \$28,000,000, were nearly double those of the corresponding month a year ago. For the seven months ended with July, exports to Europe aggregated \$1,155,000,000, as against \$1,476,000,000 in the like period of 1921, while imports were \$517,000,000, as compared with \$433,000,000.

Practically all lines of trade and industry are now rapidly recovering from the serious depression caused last month by the coal shortage and railway strike. How extensive was the setback may be judged from the fact that pig iron production dropped 25 per cent. from that

of July, ingot steel output fell off about 11 per cent., steel mill operations generally declined to less than 50 per cent. of capacity, as against 75 to 80 per cent. prior to July 1, automobile manufacturing operations were threatened, the output of various building materials decreased, bank clearings slumped, and shipments of merchandise and commodities were interfered with. In all those fields of activity there has been marked improvement within the past few weeks. It is noteworthy, also, that while some industries last month were showing increasing depression, others were making new high records. For instance, August building expenditures topped those of July; cement production exceeded the best previous record; cotton consumption in August was the largest in more than two years, and car loadings, with the exception of fuel, increased, a notable gain being reported in merchandise and miscellaneous loadings which in normal times constitute more than one-half of the total freight movement. As Bradstreet's aptly remarks, these showings contain two lessons that might be borne in mind in the event of threats of future strikes—namely, that "the most serious strike situation in American history did not halt the improvement which was under way when the strikes began, and that, owing to the resourcefulness of American business and industry, the improvement, though confessedly slowed down, was not brought to a complete stop as was predicted and hoped for by the men responsible for imperilling the 1921-22 rally in trade."

FRANCE.—THE BANK OF ENGLAND AND THE GERMAN BONDS—THE LUBERSAC-STINNES CONTRACT—DEVASTATED AREAS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 27.

THE eleventh-hour decision of the German Government to comply with the request of the Reparations Commission and agree to hand over to Belgium six months' Treasury bonds, covered by the guarantee of the Reichsbank, for the 270,000,000 gold marks due on account of reparations in cash down to the end of the current year, was put into execution this afternoon so far as the payments for August and September are concerned. Ten bonds, representing a total of 96,000,000 gold marks, payable in American dollars, at the fixed rate of 4,197,865 marks to the dollar, to the order of the Belgian Minister of Finance, at the Bank of England in London, half on February 15th, and the rest on March 15th, were handed over to M. Delacroix, the Belgian delegate, by the President of the Reparations Commission. The bills—or, rather, as they are officially described, promissory notes—are drawn by the German Government, and endorsed by the Reichsbank. Similar Treasury bonds, it is understood, will be handed over as the payments become due on October 15th (50,000,000 gold marks), November 15th (60,000,000), and December 15th (60,000,000). Extraordinary secrecy seems to have been preserved both in Brussels and London as to the conditions under which, as the result of Herr Havenstein's mission to London, the Bank of England has agreed to guarantee these bonds on behalf of Germany. According to unofficial reports received here, however, Herr Havenstein has informed the leaders of the German political parties that the Bank of England has undertaken to discount two-thirds of the whole series of bills for 270,000,000 gold marks forthwith, and the other third in six months. The Bank of England, according to Herr Havenstein, again, is guaranteed by the gold and silver reserves in the vaults of the Reichsbank, supplemented by a fund in cash which the German Government has undertaken to constitute by drawing on the 25 per cent. which it has secured the right to levy on export invoices. The Reich will have 18 months in which to reimburse the Bank of England, the exact date of the expiration of this period being June 15, 1924. It is understood that the Belgian Finance Minister proposes to discount immediately the bonds for 96,000,000 gold marks which have been handed over to him in respect of the payments due on August 15th and September 15th respectively. Some nervousness is expressed here as to whether these arrangements, as set

forth by Herr Havenstein, do not suggest that Germany does not propose to pay anything more than this 270,000,000 gold marks in cash until after June 15, 1924.

The statement has been published that, with the payment of the 270,000,000 gold marks covered by these bills, Belgian priority rights will be exhausted. This is apparently inaccurate. It is difficult, in view of the payments that have been made in kind, to ascertain exactly how these priority rights now stand. There is good reason to believe, however, that there will still be something in the neighbourhood of 400,000,000 gold marks due to Belgium after she has discounted the bills for the payments due to the end of 1921.

The signing of the Lubersac-Stinnes contract for the supply of German materials to the devastated regions, under the Wiesbaden and supplementary agreements, is only one of several operations of a similar character that have been carried through recently by the combined efforts of French and German capitalists. The Sichel group, of Mayence, has entered into an agreement, for instance, with a concern known as the Société Co-operative Française de Travaux. Another contract that has been entered into is between the powerful Lehrer-von Siemens group, of Berlin and Dusseldorf, and a French group headed by M. Brice, the chairman of the Chambre Syndicale Française de Béton Armé (reinforced concrete). The object of the Lehrer-Brice combination is not only to furnish materials under the system of payments of indemnities in kind, but also, later on, to provide labour under the same system. For the purpose of carrying out the Lehrer-Brice agreements two important companies have been formed, the Société Internationale de Reconstruction, with a capital of 1,000,000f, and the Société Internationale d'Importation, the capital of which is 500,000f. Sixty per cent. of the capital of each company is French and the balance foreign, the registered offices of each being in France.

The promoters of these companies are working on the principle that direct agreements between French *sinistrés* and German industrial firms are difficult, if not impossible, to carry out, unless some machinery is provided to furnish the purchaser with expert and financial assistance. Further, it is argued that it is inadvisable that the *sinistré* should himself have to order the materials required, which can be done much more satisfactorily by the contractor who will have to utilise them. The contractor, on the other hand, requires financing, while the German manufacturer, unless he can cover himself against exchange fluctuations, would find it difficult to book orders for forward delivery. The function of the Lehrer-Brice Franco-German combination will be to furnish this intermediary machinery. The group proposes to bring into its operations as large a number of German firms, both large and otherwise, as possible, in order to stimulate competition. The principle, therefore, is quite different from that of the Lubersac-Stinnes agreement, under which the whole of the merchandise supplied will be furnished through firms under Herr Stinnes' own control. Nor will there be any question in these cases of the addition to the amounts to be credited to Germany of commission at the rate of 6 per cent. (which is the amount the Stinnes group has stipulated to receive in respect of all purchases effected through its medium). The Bemelmans agreements, which extended to Great Britain and the rest of the Allies, and the benefits of the Wiesbaden agreements regarding reparation payments in kind, came into operation, it is now announced, on September 15th.

The Lubersac-Stinnes contracts, if accepted by the two Governments and fully carried out, will enable France, according to M. Le Trocquer, to accomplish reconstitution work in the devastated regions to a total value of between 20,000,000,000f and 25,000,000,000f. The question is, however, whether the German undertakers will be willing, even if they are in a position to do so, to operate on a scale of this magnitude. M. de Lubersac has recognised, with characteristic frankness, that the contract he has signed with Herr Stinnes involves no guarantee on the part of the latter that he will furnish a single franc's worth of materials, but merely places him in a position to do so. "Nothing in the contract," M. de Lubersac has stated, "gives us the right to insist on the Germans delivering us any materials at all." This view

appears to be in direct contradiction with the Treaty of Versailles, which gives the Allies a general mortgage over the whole of Germany's resources, but may be regarded as exact so far as these private Franco-German arrangements are concerned. Opinion here is now much less optimistic as to the practical value these contracts may have in the completion of the work of reconstitution. "The Lubersac-Stinnes contract," says the *Journée Industrielle*, "even if it is followed by numerous similar contracts between other groups, will not amount, for some time, to more than the proverbial drop of water in the hole represented by the word 'reparations'; consequently they bring little or no improvement in the immediate difficulties characterising French public finances." The problem of labour shortage in this country is again attracting close attention, by reason of the fact that the delivery of materials by Germany to the value of, say, 1,500,000,000f will involve the recruitment of labour to the value of at least 750,000,000f. Where is this labour to come from? Obviously only from Germany, as no further calls can be made on that required by French agriculture and industry, while all the imported labour—Belgian, Polish, Spanish, Italian, &c.—that France can obtain is required in other directions. Logically, therefore, the solution is only to be found in the direct employment of German labour. This principle it will be remembered, was foreseen even before the signature of the peace treaty, but was objected to by President Wilson, on the ground that it would be equivalent to reducing the German people to a state of slavery. M. Le Trocquer, however, has since taken up the same principle again in connection with his proposals for the carrying out of great French public works at the expense of Germany, and even the French trade unions have expressed themselves in favour of this solution, under certain conditions.

Reports from the devastated regions show that the reconstruction of roads, railways, and canals, &c., may now be regarded as completed, while the reconstruction of factories and industrial plants is well on the road. The clearing of the unexploded shells and other obstacle (barbed wire, &c.) from the soil is also practically finished. Only a small area now remains to be dealt with, and the surface devoted to wheat and beetroot either has been or is now in a condition to be again put under these crops which are the principal ones in these regions. Practically the whole of the French sugar crop prior to the war came from the devastated departments, the Aisne being the largest producer of sugar beet. As might have been expected, in view of the scarcity and high prices of materials and the still very high cost of building, far less has been able to be accomplished in the direction of rebuilding the destroyed dwelling-houses than in any other section of the work of reconstitution. The situation in this respect at the end of the war was as follows:

Houses completely destroyed	222,132
" seriously damaged	128,197
" partially destroyed	214,011

The latest figures available at the Ministry for the Liberated Regions, when I called there a few days ago, showed that out of this total of over 564,000 totally

partially destroyed houses, 3,348 had been "completely rebuilt," 180,417 "repaired provisionally," and 214,422 "definitely repaired." The fact that so far, three years after the end of the war, it has been found possible to rebuild only 3,348 (or about 1½ per cent.) of the 222,132 houses completely destroyed during the hostilities, furnishes an eloquent explanation of the reasons why the recently concluded arrangements for the utilisation of German materials in the restoration of the devastated regions have been so warmly approved of here.

There has been a marked downward tendency on the Bourse this week, partly owing to the events in Asia Minor and partly because it is common knowledge that there will shortly be a large number of fresh issues of capital. French rentes have fallen back, the 1914 3½ per cents. declining from 79.30 to 78.85, the 1918 4 per cents. from 65.70 to 64.45, and the rest behaving similarly. Banks, after various fluctuations, ended on a drop, the Banque d'Algérie losing 40 points, the Banque Nationale de Crédit 7 points, the Union Parisienne 9 points, the Crédit Lyonnais 20, the Banque de Paris 35, and the Crédit Mobilier 20. Railways, after a long period of sustained prices, are notably weaker. Est has fallen from 800 to 794, Nord from 1,235 to 1,211, Orleans from 960 to 950, and P.L.M. from 950 to 940. Shipping has behaved similarly. In electrical undertakings, Thomson at 784 is weaker by 27 points, and Electricité de Paris at 550 by 5 points. The metallurgical group has followed the general tendency of the market.

GERMANY.—POLITICS—REICHSBANK—CREDIT AND CASH—COMPANY TRANSACTIONS—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 26.

THE Majority-Socialist and Independent-Socialist parties decided on September 24th for union. This is not the first time there has been only one German Socialist Party, and more than once there have been two. The united party will be much the strongest in the Reichstag. The party proclamation announces an effective struggle against the shameless exploitation of the people, but does not mention the fact, which is easily demonstrable, that the manual working-class has increased its earnings more or less in accord with the currency depreciation, while the intellectual workers earn not only relatively, but sometimes absolutely less than the manual workers, and the pure capitalist has been almost wholly expropriated. So far the manual worker has escaped entirely or almost entirely the burden of the war and of the peace, which must necessarily be borne by some German class or classes. The Government proposes raising customs duties on luxuries, which were lately doubled, by another 50 per cent. This would mean a three-folding of the pre-war rates, and, with the present gold supplement of 360-fold, would mean that 1,080 paper marks duty would be paid for every former one gold mark. The Jugo-Slav Government has accepted a proposal that Germans should deliver machines, instead of cattle, for Reparations. Of the catastrophe less is heard every day, and business is settling down on the new values basis. A competent writer, Herr Erich Dombrowski, at last ventures to say (in the *Berliner Tageblatt* of September 24th) what was long ago plain—that the mark currency depreciation is no index either of State-financial or of private-economical conditions. "If one regards things as a whole," writes Herr Dombrowski, "the extraordinarily low exchange of the mark is incomprehensible when taken as a reflection of Germany's state finances and of her private economy. Private industry is at work as hard as it can work; the process of regeneration of agriculture, which decayed during the war, is making good progress; and the Budget can be balanced, so that if Reparations payments cease the further increase of the Floating Debt will not be necessary. If Germany gets an international loan, the moment for stabilisation of the currency will come; and if that is achieved, the at present inconceivable total of the Floating Debt, 340 milliards, will shrink to a few milliard gold marks." The foreign payment balance, equilibrium in which would be necessary for stabilisation, is by no means so passive, Herr Dombrowski shows, as

is generally believed. This picture may be optimistic, but it is nearer the truth than the wild nonsense about catastrophes which Germans and foreigners indulge in every time the mark has a bad drop.

The Reichsbank's increase of its discount rate to 8 per cent. is explained by the continuing credit demand. Between August 15th and the date of the new rate increase, discounted Treasury Bills increased from 218.44 to 274.70 milliards, and private bills from 12.27 to 27.47 milliards. The Bank's statement for September 15th shows, for the third time in succession, an abnormal swelling of the credit and circulation totals. Private bills discounted rose by 8,180,170,000 marks to 35,441,997,000 marks (which is 35-fold the total of one year ago), Treasury Bills by 22,933,229,000 marks to 274,698,283,000 marks, and circulation by 19,224,019,000 marks to 271,597,757,000 marks. The three weekly statements issued since the mark exchange touched bottom show a total circulation increase of over 56 milliards, which is more than the whole circulation of two years ago. As such inflation causes mistaken impressions abroad, it should be stated that the increased circulation is not only inevitable, but also desirable and even indispensable if business is not to stop. As long as the mark-exchange leads and determines the price-level, the currency in circulation must adapt itself to the price-level. The only threat, a slight one, of a real crisis occurring during or immediately after the last heavy mark fall lay in the doubt whether credit and cash could be manufactured fast enough. The Loan-Bureaux (*Darlehenskassen*) have now more than regained their war-time position as important credit institutions. Loans outstanding, which at the beginning of 1921 totalled 30 milliards, and sank to 10½ milliards last October, have risen to 41.7 milliards. Most of these loans are upon security of interest-bearing papers, about one milliard are upon stocks, and three to four milliards upon wares.

Money early this week suddenly became relatively plentiful. The reason is not known; probably large deposits came to the banks from sales of crops by farmers; and some citizens in their fear before the coming month-end settlements appear to have got more money than they needed. The Reichsbank has advised citizens to postpone or temporarily to reduce their month-end payments. High money rates continue to prevail. The private banks propose to double their various fees and charges, but here the aim is to cover the increased administration expenditure caused by the price-rise. The Finance Ministry proposes to authorise the issue of local emergency currency, which was forbidden by a law of July 17th. Several industrial organisations have expressed willingness to support the Reichswirtschaftsrat's resolution against the general use of foreign currencies in home business.

The Bourse, under influence of easier money, has taken a firmer tone. Stocks last week and on the first two days of this week were strong. The *Frankfurter Zeitung's* index for dividend-payers for September 22nd shows 65,576 against 64,200 a week earlier, but home loans dropped from 1,429 to 1,342. Announcements of big company transactions encouraged the bull movement. The aniline concern, consisting of Badische Aniline, Hoechst Dyeworks, Friedrich Bayer, and four other dyes and chemicals concern, will double its capital. The last all-round increase, in December, 1921, left the ordinary stock at 1,764 milliards, preferred at 110 milliards; the new rise leaves the former at 3,529 milliards, and the latter at 220 milliards. The gold value of the capital is, of course, smaller than ever, and this applies to all capitalisation increases, so that even the most watered companies' capitals are small when measured in terms of the properties owned and the business done. A still more important transaction is the creation, under Herr Otto Wolff, of Cologne, of a new metal, electrical, and shipping concern resembling in character and in dimensions Herr Stinnes' Electro-Metal Trust. Herr Wolff, who is primarily an iron merchant, and who controls 80 per cent. of Germany's tinplate production, is with Herr Haniel, the chief man in the big Phoenix Corporation. Into the combine the Phoenix Company brings nine companies, including the Reiherstieg shipyard, in which it is interested. The Rhenish Steel Company, which together with the Phoenix constitutes the metal wing of the combine, brings

in five companies. The electric wing consists of the Dessauer Gas Company, which has an interest in 14 electrical and gas companies, and in the Rheydt electro-technical company, and this group is joined by exchange of shares with the Sachsen Light and Power Company, the biggest concern of its kind in Saxony. At the same time Herr Wolff has acquired representation on the boards of the Roland Line and of the North German Lloyd, which controls the Roland Line, and it is expected that the important overseas trade of the fused companies will become a N.G. Lloyd monopoly. With exception of the Stinnes combine, the new Wolff combine is the most important recorded. Bond prices to-day were: War Loan 77.50, Federal Fours 130, 3½ per cent. 90, Threes 412 (460 on the 25th, maximum of last week 508), Colonial Fours 130.50, Savings and Premium 79.30.

Industry continues active. The first Northern Fair, held last week at Kiel in connection with the proposed free harbour and with the now nearly completed conversion of naval workshops to productive aims, was a very great success. In particular, crude oil motors, yachts, and motor-boats were sold, largely to English buyers, and producers of electrical and telephone material, boots, leather goods, and textiles sold all they could turn out for long ahead. One textile mill reports having received orders of 120 millions in value. A couple of years ago Kiel, which has a population of 200,000, all formerly almost entirely dependent upon the large navy, was stated to be threatened with ruin and desolation. To-day there is no unemployment in the city, and the entirely new industries are working smoothly. This successful transformation gives a better picture of German conditions than the eccentricities of the Reichsmark, and emphasises the often forgotten but always vindicated fact that the impulse to live, and therefore to create and to trade, is far stronger than the petty obstacle raised by currency instability. The report for 1921 of the Industrial Inspectorates confirms this, showing that since 1920 the number of producing concerns (employing more than 10 persons) increased from 300,434 to 324,169, and that the number of workmen in such concerns increased from 6,967,000 to 7,461,407.

SOUTH AFRICA.—OFFICIAL MINING STATISTICS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, August 30.

AN annexe to the Union of S.A. Mines Department's statistics for July presents the detailed figures of capital involved in the various mining industries as at December 31, 1921. The net issued capital of Rand gold mines is returned at £59 millions, of which only £27½ millions is in receipt of dividend, which amounted to £7,164,000 last year. Nearly £19 millions was embarked in non-dividend producing mines, nearly £3½ millions in developing mines, while upwards of £9 millions were locked up in non-working mines. The specification of issued capital was:—

	Property, Equipment, &c.	Cash.
Dividend paying	18,261,000	9,233,000
Non-dividend	13,578,000	5,290,000
Developing	473,500	3,215,000
Not working	5,477,500	3,430,000
Totals	37,790,000	21,168,000

Debentures total £12½ millions, but the net amount redeemable has been reduced to £5,335,000, the amount in respect of producing dividend-paying mines having been reduced to £432,000, or less than a sixth of the amount originally issued. Prosperous mines do not usually require to issue debentures. In the case of mines producing but not dividend-paying, the position is very different. These concerns have issued nearly £9½ millions, of which nearly half remains outstanding. No debentures at all have been issued by developing mines, but the non-working mines have a net debenture liability of rather over half-a-million.

The producing dividend-paying mines received £11¼ millions in premiums on shares, the non-dividend payers over £5 millions, and the non-working nearly £1½ million. But in each instance there have been considerable writings off, and the net amount outstanding for all classes is now under £8 millions. Temporary advances to all Rand companies totalled £2¼ millions, sundry creditors £5½ millions, while the outstanding credit balances, including gold reserve appropriation accounts, and so forth, figured at £30½ millions. The total debts of the Rand gold mining industry amount to rather over £110 millions.

The net present book value of mining property is slightly under £32 millions, and of shafts and mine development £23 millions, the dividend-paying mines being responsible for about half in each case. Of equipment, the net value is £31¼ millions, the figure against dividend concerns being £18½ millions. There is deficiency of cash assets in the non-dividend-paying and non-working mines totalling over four millions.

Of gold mines in the outside districts, the issued capital is £5½ millions (roughly about one-tenth of that for the Rand itself). Of this only about a million is in receipt of dividend, while the capital of developing and non-working mines taken together is nearly £3¼ millions. Upwards of a quarter of a million was received as premiums on shares. Mining property is valued at £3½ millions, shafts and development at £600,000 (net), and equipment at £1,310,000.

The net issued capital of all gold mines in the Transvaal is given at £64,673,000, while the dividends paid thereon last year figured at £7,259,600. As regards the Rand, the admitted total of working capital for amortisation purposes as determined by the Inland Revenue Department is £69,000,000. The amount to be deducted is £3,960,000 a year, leaving a net amount of £3,203,000 as the return on £59 millions of issued capital for all classes of Rand gold mines, and some ten millions more as actually expended.

Coal mines come next in importance. For the Transvaal collieries the issued capital amounts to just upon £5 millions—about £3½ millions for the properties, and the balance for cash. There are also £317,000 debentures outstanding. Dividends paid amounted to £383,300. For Transvaal diamond mines the issued capital is given at £212,000. There is only one concern of importance, the Premier Mine, and the total dividend paid was £100,000, representing that company's two preference dividends of 125 per cent. While the nominal capital of the Transvaal base metal industry is as much as £5½ millions, there is a considerable amount of it uncalled, so the issued capital is but £3 millions, of which the considerable proportion of but £1½ millions was represented by cash. No dividends at all were paid by these mines last year, a natural result of the depressed state of the base metal markets. The entire mining industry of the Transvaal has a capital of £72½ millions, the dividends paid last year aggregating £7½ millions.

Mining concerns in the Cape Province have a net issued capital of just over eight millions, those in the Orange Free State three and a-half. In both cases the bulk is represented by diamond companies, De Beers Consolidated in the one case, Jagersfontein and Roberts Victor in the other. Coal mines in the Free State return an aggregate capital of £1,343,000, which includes a considerable amount representing State property of the Vereeniging company. Natal's mining activities are centred on coal, some £3½ millions being invested in collieries, on which £275,000 was paid in dividends last year.

In a year in which the gold mines made nearly the whole of their profits from the currency premium on the metal, when sales of diamonds at 530,106 carats was only about a fifth of the normal, and when both copper and tin were being sold below the cost of production, it is perhaps not unsatisfactory that the dividends paid in respect of the entire mining industry of the Union should have reached £8½ millions, only a shade under 10 per cent. on the combined capital of £88½ millions. This yield is by no means adequate for a wasting asset like mining, and would, of course, represent a much smaller percentage on the market valuation of the share capitals.

DENMARK.—TRADE CONDITIONS—PRICES.

(FROM OUR COPENHAGEN CORRESPONDENT.)

BUSINESS conditions in Denmark have not undergone any material change since my last report. Some anxiety is being felt in agricultural circles, where prospects of lower wheat prices are being spoken of. The harvest has, on the other hand, been completed without severe difficulties, and the comparatively fine weather of late has no doubt proved of favourable assistance. The quality of the crops is considered to be somewhat below the average. As an indication of the improvement of agricultural conditions, it may be mentioned that the latest statistics concerning the number of swine slaughtered at the recognised export slaughter-houses has now reached 83 per cent. of the pre-war figure.

At a time when Denmark is taking part in the "Nations' Food Exhibition" in London, a few remarks regarding this year's agricultural exports may perhaps be of interest. During the first seven months of the present year Denmark has exported 62 million kilograms of bacon, of which 61.9 million went to Great Britain. At the same period last year the figures were respectively 44.6 and 77 million kilograms. The export of Danish butter in casks and cases has amounted to about 55 million kilograms, which is 2.4 million kilograms more than during the period from January to July last year; 36.2 million kilograms were exported to Great Britain, against 34.9 million last year. The export of fresh eggs was 19.8 million score, against 18.7 million score during the period mentioned in 1921, and Great Britain imported respectively 17 and 16.2 million score of this quantity. As regards agricultural products, the situation clearly continues to adapt itself to the changed conditions, and the solidity which exists in the main department of Danish commerce is mainly responsible for the present stability of trade conditions as a whole.

The manner in which the import of coal is progressing also shows that trade conditions have entered into a more favourable period. During the first seven months of this year 1,352,000 tons of coal were imported, against 793,000 tons during the same period last year. The import from Great Britain has shown a distinct increase, while the United States have now gone out of the market as far as Denmark is concerned.

The statistical department's index figure for the cost of living has now fallen to 199, and is only 99 per cent. higher than before the war (July, 1914). Six months ago the index figure was 212. Finansstidende's wholesale index figure has fallen 2 points during the course of August to 178, which is exactly the same figure as at the beginning of the year. It would appear, therefore, that the purchasing value of money has reached a certain degree of stability. Prices are now 56 per cent. lower than in the autumn of 1920, when the boom in prices culminated in Denmark, and are now 78 per cent. higher than before the war. The fall in the month of August was due without exception to feeding stuffs, in which group, however, such goods as butter and eggs are not included.

CZECHO-SLOVAKIA.—THE EXCHANGE AND UNEMPLOYMENT—TRADE.

(FROM OUR CORRESPONDENT.)

PRAGUE, September 19.

IN his report on the industrial and economical situation in Czecho-Slovakia, Mr Bruce Lockhart, Commercial Secretary to H.M. Legation in Prague, states that the export trade of the Republic constitutes "the very vitals of her existence." Foreseeing the crisis which was looming in the near distance at the time of writing, he states that two alternatives were before the Government—artificial inflation by resort to the printing press, or making sweeping reductions in the cost of living and generally in prices. At the time of the publication of the Report in May the crown had remained at the same value for several months, and most people were of opinion that it had been more or less stabilised at 200 to 230 crowns to the pound sterling, or about ten centimes on the Swiss exchange. It was in July that the crown entered upon a new career of

ascend, and before long gained as much as 50 per cent. on its then figure. This new rise came as a surprise as much to the general public as to probably the Government itself, and has resulted in a very rapid development of the crisis which has now set in with all its consequences. The number of unemployed has risen to 700,000, or about 5 per cent. of the whole population. Many of the larger concerns dealing with glass and textiles have altogether closed their works, miners are being dismissed daily, and at the same time workers are everywhere threatened with reduced wages.

While the price of living does not go down, the proposed reduction will certainly not be agreed to without a struggle, and if the clouds are to lift while the crown maintains its high value, the lowering of prices is an absolute necessity. This lowering of prices of foodstuffs will be, and is being, bitterly opposed by the Agrarian Party in Parliament, who are even now calling out for some protection for the produce of their soil and less protection for manufactured articles. This party is the most solid and richest in the country, and the Government will need to have a very stiff front to conquer in the encounter which it will surely have to undergo.

The Socialist Party have taken up the cause of the consumers, and are very insistent upon the necessity of opening up the frontiers. Here, it may be said that a general abolition of import dues is not considered practicable, and, therefore, out of the question. Certain articles may be admitted. The coal tax will probably be reduced by one-third.

Meantime the Government can justify their attitude by pointing to the trade figures for the first six months of 1922, which show that, while imports have decreased by four million quintals, exports are actually two million quintals higher than during the same period in 1921. The figures have been discredited and attacked by an ex-Minister of Commerce, but the Ministry of Commerce, in reply, maintain their correctness, and there the matter remains. That such figures are not always correct is to be gathered from Mr Lockhart's report, where he states that the figures given in his report for 1920, though emanating from the same source, were proved to be incorrect. The figures, however, are very instructive and worth examining. The imports for the month of June amounted to 2,373,000 quintals and 70,860 pieces, out of an import for the six months from January to June of 17,590,000 quintals and 382,232 pieces. The total imports for the same period in 1921 were 21,359,000 quintals and 133,460 pieces, a remarkable difference considering the increased purchasing power of the crown.

The total exports amounted to 47,266,000 quintals and 2,200,000 pieces, against 45,790,000 quintals and 1,780,000 pieces last year. The export of glass ware has increased by over 50,000 quintals in the six months. Iron and iron goods amount to one million quintals, against one million last year, while machinery shows a decline. The proportion taken by Germany, Austria, Poland, and Hungary remain the same as before, these four Powers absorbing over 40 millions out of 47 millions. The bulk of the exports is wood, coal, and fuel, which amounts to over 36 million quintals, the four countries named taking well over 30 million quintals. It is worth noting that France, Holland, Belgium, Switzerland, and even Great Britain have all increased their importation of these items. While France has doubled her exports to the Republic, Holland increased hers by 50 per cent. The reflection on reading the figures is that the price must have been very low to be able to compete with Sweden and Archangel in the matter of wood. It is clear also that Germany must be using her credits bought some time ago to be able to pay for her share. Austria probably followed the same plan, but has other ways of payment, as we know. Poland and Hungary have no doubt resorted to barter.

Apart from the direct effect the slump in the export trade is exercising upon the industrial position of the country, the fact must also be taken into consideration that there is very great danger of Czecho-Slovakia losing her old markets. While, owing to high prices, she is unable to export manufactured goods to the neighbouring countries with a low rate of exchange, Germany and Italy are busy selling their articles in Austria, Yugoslavia, and

the Balkans. Unless matters in Czecho-Slovakia are speedily adjusted, she will have her work cut out in trying to regain a footing in the Succession States, which, after all, form the natural outlet for her surplus production. In this connection high hopes are placed on Austria, for it seems probable that this country will be brought into closer economic contact with Czecho-Slovakia, Italy, and Switzerland, which should prove of advantage to all parties concerned.

Letters to the Editor.

THE MONETARY POLICY OF SOUTH AFRICA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your leading article on "South Africa, Australia, and the Gold Standard," published in the *Economist* of July 29th, which has just come to hand, you write:—

"Even Mr Samuel Evans, whom Professor Cannan singled out for special commendation as the one mine-owner who had 'risen to the height' of advocating a sound gold policy, has now recanted, and declares that 'what was within the bounds of practical politics two years or 18 months ago is out of the question now,' and is content to satisfy his 'nothing like gold' proclivities in the promoter field of European problems by deploring the projects for 'managed' and gold-economising currencies, emanating from Professor Cassel and Mr J. M. Keynes."

I venture respectfully to submit that that is not a correct or a fair description of my position as disclosed in my memorandum on "The Monetary Policy of South Africa." If you will take the trouble to glance again at the memorandum you will observe that I recommended:—

- (1) The immediate removal of the embargo on the export of gold, and the establishment in South Africa of an absolutely free market in gold; and
- (2) The restoration at as early a date as possible of the old-fashioned gold standard with gold coins in circulation.

I, however, questioned the advisability of attempting to force, regardless of the consequences, the complete restoration of the gold standard by June 30th of next year, and I explained that a policy which was within the bounds of practical politics at the beginning of 1920 was out of the question at the end of 1921, chiefly because in the course of 1920-21 there had been an enormous increase in wages and expenses generally in the Government services and in all industries in South Africa. I wrote in paragraph 38:—

"The total annual disbursements (excluding war expenditure) of the Union Government, the Provincial Governments, municipalities, and the railways of the Union have increased from £41,000,000 in 1915-16 to over £82,679,000 in 1920-21, and of the increase £19,000,000 took place in 1920-21. Obviously, the deflation of the currency to the pre-war level will involve very drastic reductions in public expenditure. Can the necessary economies be effected in the time allowed for in the proposed plan?"

I added in paragraph 39: "It seems to me that we are justified in concluding that it would be inadvisable at present to lay down a definite policy for the deflation of the currency within such a short period as that contemplated" (by June 30, 1923). "It is, however, important that a period should be fixed. It is, also, most important that the South African Reserve Bank and the Treasury should pursue steadily and unflinchingly a policy directed towards the complete restoration at as early a date as possible of a self-regulating gold standard, without embargoes and without Government interference.—Yours, &c., SAMUEL EVANS."

153 Nugget-street, Johannesburg, August 28th, 1922.

THE MARK AND INFLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Two gentlemen, both, no doubt, careful observers of the facts as they see them, have recently given us two diametrically opposite explanations of the depreciation of the mark. Your Berlin correspondent

(*Economist*, of September 2nd, p. 395) states that, "A mark exchange fall causes (is not caused by) internal currency depreciation and prices rise"; while the City Editor of the *Times* (September 8th) attributes the fall in exchange, together with "all that is happening in Germany to-day—economically, politically, and socially"—to the policy of inflation. That is to say, the external depreciation is caused by the internal depreciation.

Such fundamental disagreement between doctors proves that all is not well with the study of this branch of economics. Indeed, it is two centuries behind other sciences in the methods which its adepts use. Chemists, physiologists, biologists, naturalists are content to spend laborious days and years in patiently trying to extract from Nature her secrets. They build up their theories on a foundation of investigation of minute details. Writers on money, on the other hand, fill their pages with arm-chair theories and positive assertions without any of the long preparation necessary for their task.

We talk of prices "rising" and "falling" as if these were automatic actions, instead of being, as they are, the result of deliberate decisions.

To arrive at the point of origin of changes of price, it would be necessary to follow the life history of batches of a considerable number of commodities, noting not only the changes of price, but the direct causes and influences which led producers and dealers to change the price, and again following these causes and influences to their source.

A detailed inquiry of this kind would require much time and patience, but it is probable that there exists in Government archives, both in Germany and in this country, a mass of information which might be utilised.

If one of our learned societies could undertake the investigation, it would be invaluable to future students.—Yours, &c., A. MITCHELL INNES.

Bedford, September, 1922.

Books and Publications.

THE FOUNDATIONS OF SOCIAL REFORM.*

THIS massive work, by a veteran and eminent Italian economist, demands the careful attention of all students of economics and of all promoters of social reform. They will find it difficult reading, and full of hard sayings. The subject is approached from an unusual standpoint, necessitating a novel mechanism of concepts and terminology which recalls Comte's condemnation of the scholastic and metaphysical attitude of the economists of his time. The book should be read as a sequel to the author's other works; its mathematical method of exposition involves the detailed statement of inferences which ordinary readers would leave unanalysed, and in which support of his conclusions Signor Loria ranges over all history, citing, for example, the laws of Hammurabi, Moses, and Solon, the decrees of Roman Emperors, the legislation of mediæval Italian Republics, the judicial interpretations of the Inter-State Commerce Act, and the effects of price control during the late war. He surveys in parentheses the whole field of economics—except international trade and the foreign exchanges—by the light of pure theory, and we note with satisfaction that much of his information on contemporary history comes from our own columns. Unfortunately, a reviewer cannot well verify references, or find space to summarise the elaborate analysis of production and productivity with which the book begins. Only the main positions can be briefly given here.

Wealth is purely material; the producing agent is "complex labour," compounded of labour, capital, and land, and their several shares in production are undistinguishable. The practical aim of economics is the provision of the maximum wealth per inhabitant—a conclusion anticipated by Adam Smith in the second paragraph of the "Wealth of Nations." But actual wealth is far less than it might be. Putting aside the effects of physical

* "I Fondamenti Scientifiche della Riforma Economica." Studio sulle Legge della Produzione. Da Achille Loria. (Torino) Fratelli Bocca. 1922. Pp. viii-576. Lire 60.

and mechanical hindrances, the deficiency or "under-product" is either "hypernormal" or "normal." The latter will be dealt with later; the former is set up by the increase, on the part of one or other of the groups which share the product, of its own share at the expense of the others, whether in the course of production, circulation, distribution, or redistribution. In all these it takes many and various forms: the commonest is the limitation of output so as to raise price; but it also occurs when the producer sacrifices future production to present profit, e.g., by neglecting repairs, or paying low wages, or reckless deforestation, or when financiers concerned with production hamper the management for their own profit, or wages or rent are so forced up as to discourage enterprise, or the State discourages it by misplaced taxation, and in multitudinous other ways, some of which, when stated, provoke the reader to exclaim with Mill that production is not the sole aim of human existence. Under-production, Professor Loria remarks, has occasionally been noted by economists, and sets up many evils—low wages, a submerged class, reckless multiplication and also artificial limitation of population, are among them; and efforts to remedy them are made empirically, e.g., by fixing wages, by public works for the unemployed, workmen's insurance, and so forth, but their root—"the underproduct"—is ignored. They are only possible where the product is relatively large; they often tend to lessen it, and even before the world-war it was beginning to decline. Hence the tendency to Protectionism and to "Imperialist" adventure. We may note in passing that the Taylor system of increasing output by "scientific management" is rejected as tending ultimately to decrease it, being itself both coercive and exhausting. But "the underproduct" diverts a certain amount of capital and labour into unproductive employments. Professor Loria proposes to force it back again by taxing its yield, and so to strike at social evils through the "underproduct" which is their root.

But even were this "hypernormal underproduct" eliminated, and production carried on in the spirit (the expression is the author's) of the prudent father of a family rather than of the profiteer, there would still be a "normal underproduct of the first degree," set up by the conditions of the persistence of the actual economic system. Commodities, for instance, would not be produced if their abundance brought down the profit to zero; but a more conspicuous example is found in the non-cultivation of land because it is overvalued; were it accessible, the labourer would work it, and escape from bondage to the capitalist. Here, again, the injurious political and social effects of "the underproduct" (given in great detail) are usually attacked empirically and unsuccessfully by so altering the social system as to recognise the right to employment, or to a share in capital or in land. But all these remedies, in fact, tend to intensify under-production, the last-named by substituting isolated for associated cultivation. Collectivism, while increasing the number of producers, would, in Professor Loria's opinion, reduce the product, because the labour would be compulsory; the guild-system would be worked by trade unions, which are in essence not constructive, but defensive. As before, his remedy is to tax the yield of the capital forced into unproductive employment, so as to bring it back to production. This, indeed, would tend to destroy the existing social system; it would get the labourers on to the land, but it would substitute their isolated labour for conjoint and more productive labour; so it would bring back underproduct and hasten revolution, of which underproduct is a necessary condition. The revolution, however, would eliminate "the underproduct of the second degree," i.e., the difference between the product of this system of society and the next, and would tend to initiate what Professor Loria regards as the future constitution of society—a system of co-operative productive associations, in which the State would take a large share, and which would exchange their respective products on the basis of cost of production. But there would still be a normal underproduct of the second degree, viz., the difference between the maximum product obtainable respectively in that stage of society and in the next; and a third, a fourth,

and so on to the *n*th degree, as new phases of social organisation successively arise.

We trust this is a fair summary of the essence of a very difficult and very stimulating book. We should like to deal with many of its details, and in particular with its insistence on the State as the sole possible agent of reform, with the distinction of "quantitative" and "qualitative" reform, each of them either "empirical" or "rational," and the interesting parallel between the effect of "rational qualitative reform" on society, and that of human selection in producing new varieties, but not new species, of living beings. One cannot but feel rather hazy about two underproducts which, though "perfectly measurable," consist of totally heterogeneous commodities, reducible ideally to terms of "complex labour," and themselves existent only in idea. However, Professor Loria's two most substantial and unquestionable conclusions are, first, that society needs more production, and, secondly, that economics needs a theory of production instead of the few scattered and fragmentary remarks of economists. His pathetic preface seems to suggest that this book is his final legacy to the world. We trust he may yet develop the theory of production, and so begin to fill up one of the lacunae of economic science.

BOOKS RECEIVED.

Industrial Relations and the Churches. (Philadelphia) American Academy of Political and Social Science.

Secretarial Work and Practice. By Alfred Nixon and George H. Richardson. (Longmans, Green, and Co.) 6s.

The Future of Exchange and Indian Currency. By H. Stanley Jevons. (London) Humphry Milford 18s 6d.

The European Commercial. An Organ of World-Wide Commerce. (Vienna) 1 Hohenstaufengasse 7.

This is the first issue of the "European Commercial," a trade paper in English, published in Vienna, and contains 100 columns of commercial information gathered from all the leading European countries. Special correspondents in France, Sweden, Belgium, Czechoslovakia, Hungary, Jugoslavia, Turkey, Sweden, Roumania, Poland, Italy, and Russia, to name only a few, set out from a commercial point of view the exact position for the week in each of these territories. Sir Ernest Benn is responsible for this publication, which should appeal to the business community of the world.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
October 4.

ACCOUNT.
October 5.

ONCE more the calm course of Stock Exchange markets has been badly disturbed by currents of apprehensions, rumours, and possibilities of war in the Near East. This incessant turmoil of politics has the effect of putting a heavy brake upon business. People would rather keep money on deposit than venture it even in such securities as the War Loan and other gilt-edged investments. In the circumstances, it must be said that prices hold their ground with tolerable strength, and the slightness of the changes shown in the Consol market is evidence as much of the restraint of the sellers as it is of the absence of buyers. Several new Colonial loans are rumoured as being on the stocks, but having regard to the unsettled state

of politics at home and abroad, the borrowers are likely to defer their operations as long as they conveniently can.

German bonds are flat, as the natural sequel to the fresh outbreak of weakness in the mark. French issues, after a display of strength, gave way to an extent which hardly wiped out the previous improvements. In Brazilians the heaviness is attributed, of course, to the melancholy fall in the milreis. Argentines are dull on the talk of a possible new loan. The Far Eastern group is steady, Chinese 8 per cent. Notes holding their dramatic rise of the previous week. The little improvement in Russian Railway guaranteed bonds is barely maintained. Peruvian Preference continue to be the sport of professional speculation, which is stimulated by a liberal supply of rumours as to what is likely to happen in regard to the accrued dividends on the stock. Paris was a liberal seller on Thursday.

The Home Railway market found a little business, in consequence of the optimism engendered by hopes of what may be the terms of grouping arrangements in connection with the southern railways. The Isle of Wight Central stocks rose substantially when the terms were published of the proposals under which the company will be taken into the southern group. Other stocks in the Home Railway market, however, are lower. Undergrounds, Scottish, and heavy issues going back in sympathy with the prevailing sentiment engendered by the fears of war with Turkey.

Argentine Rails have been better again, despite the conservative dividend declarations. Expectations arose of a material improvement in earnings, consequent upon higher freight rates. Brazilian Rails go heavily. Mexicans and Grand Trunks are practically unchanged, nor is there any vitality at the moment in Mexican Government bonds.

Rubber shares have hardened up, owing to a rise in the price of the product, but oil shares gave way upon the announcement of the cut in the price of petrol. Electric lighting shares are a trifle easier, apparently on the idea that the companies may have to reduce their prices, but gas stocks, in which a decline has already taken place, are somewhat firmer. A few of the lower-priced shipping shares show a better tone, and the banking list is steady, except for a fresh fall in Hongkong shares. The insurance group is characterised by an advance in General Accidents, on the doubling of the interim dividend, 10 per cent. being declared, as against 5 per cent. a year ago. A mild amount of speculation centres around Courtaulds, where the price gave way; the textile market as a whole is easier, holders appreciating that at present prices the returns to be obtained on the basis of the current dividends are very moderate.

Catering shares are better, with Lyons a good spot. Last week's dramatic jump in Aerated Breads brought in sellers ready to take advantage of the unexplained rise. Van den Berghs are little the worse for the poor report just out. Iron and steel shares are weighed down by reason of the labour trouble at Ebbw Vale. The wireless market, together with that for cable stocks and shares, is placid, but holders of Marconi are on the *qui vive* for developments in connection with the broadcasting extension. Profit-taking caused falls in tobacco shares. Dunlops and some of the motor issues are inclined to be a little harder, owing to the near approach of the Motor Show and the indirect benefit which the industry is likely to receive from the fall in petrol.

Kaffirs are flat, on a heavy outbreak of selling, which started in Paris, to be taken up on this side by speculative holders apprehensive of the political outlook. A break in Rand Mines led a general decline throughout the list. Diamonds and Rhodesians dropped with the rest. Copper shares have been included in others pressed for sale from France. Russo-Asiatics yielded on fears that there may arise difficulties in the way of carrying out the agreement recently concluded by the company with the Soviet Government. Mexicans, Broken Hills, and other miscellaneous mining shares failed to escape the effect of the weakness apparent elsewhere.

We are officially informed that Mr Edgar Augustus Harper has ceased to be a member of the Stock Exchange.

1915 658,988,006	1914 512,522,633
1914 173,023,446	

The United States and General Trust Corporation, Limited.—Authorised share capital £700,200, of which £500,000 has been subscribed, and is fully paid. This is an issue of £250,000 4½% per cent. debenture stock at 87½%, being the remaining part of a total issue of £500,000. The stock is redeemable at par in 1962, or at any time after January 1, 1937, at the option of the company, at 102½% per cent. The whole £500,000 of debentures is secured by trust deeds, rendering the issue a first floating charge upon assets which are mainly investments. When the proceeds of the present issue have been invested, the security for this £500,000 debenture stock should, on the basis of a recent valuation, exceed £1,200,000. The prospectus points out that this valuation of investments was made at a recent date, when upwards of 85 per cent. had a published quotation, and that the valuation showed a substantial appreciation over the book cost of the investments. A useful table of dividends paid on deferred stock is also given, but a similar table of net revenue would have also been appreciated by intending investors. These debentures are fairly attractive at the price.

The Tyre Investment Trust, Limited.—Authorised capital, £1,650,000, all of which has been issued and is fully paid. This is an issue of £200,000 7 per cent. first mortgage debenture stock, being part of an authorised issue of £240,000, at 97½% per cent. The stock is to be secured by a trust deed, constituting a first specific charge upon "the debentures, mortgages, royalties, and shares owned by the company." The stock is repayable in 1934 at 102½%, but the company has the option of redemption at any time after July 1, 1925, on giving three months' notice. The company was formed in 1917, mainly to acquire the Dunlop Rubber Company (Far East) and an interest in the Dunlop Tire and Rubber Goods Company (Canada). At the date of the last balance-sheet the trust had expended upon these interests £1,601,677, and this sum represents the cost to the company of the specific security pledged. The company's holding in the Canadian company consists of \$3,150,000 fully-paid common stock, out of a total issue of \$4,962,500. It is the sole owner of the Far Eastern company, including the debentures, and the royalties payable by that concern, the annual payment on which amounts approximately to £90,000. The service of the present debenture issue will require approximately £34,000 per annum, and though the revenue of the trust fell from £328,658 for 1920 to £83,862 for 1921, there is still a comfortable margin. The security for capital, however, is not particularly attractive.

Harwich Gas and Coke Company, Limited.—Authorised capital, £60,000, of which there has been issued, including premiums, £34,583. The authorised loan capital is £30,000, of which only £8,045 has been issued. Established in 1854, the company supplies gas in Harwich, Parkeston, and Dovercourt. This is an issue by tender of 3,000 £5 6 per cent. irredeemable preference shares, the minimum price of issue being par. The net revenue for the year ended December 31, 1921, was £1,966, but it is stated that the coal dispute involved the company in an additional expenditure of £1,750. As, however, the interest on the borrowed capital takes but £483, and ever, the interest on the borrowed capital takes but £483, and the above-mentioned preference shares rank immediately after the loan capital, the necessary £900 for preference dividends can easily be found. Subject to the narrow market for so small an issue, the preference shares, if obtainable at par, are a good investment.

ACTIVE SECURITIES.

Total	111,90,65,000	78,84,35,000

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended September 27, 1922, the stock of coin and bullion shows an increase of £4,784 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Sept. 27, 1922.	Countries to which Exported.	Week Ended Sept. 27, 1922.
Latvia	£ 836	Denmark	£ 300
British West Africa	34,019	Netherlands	2,800
British South Africa	624,698	U.S.A.	395,300
Other Countries	1,153	British India	185,000
Total value of imports of gold	660,976	Total declared value of exports registered in the week	583,400

Messrs Samuel Montagu and Co. write on September 28th as follows:—

GOLD.

A fair amount of gold came on offer, and was divided between India and the United States of America. Gold to the value of \$2,720,000 has arrived in New York—\$1,720,000 from London, and \$1,000,000 from France. The Indian balance of trade in August was 296 lacs in favour of India, as compared with 32 lacs in July. The net import of treasure included in the August balance was 196 lacs. In August, 1921, the balance of treasure was quite the other way, for there was a net export of 281 lacs.

SILVER.

The market has been very quiet during the week. China has furnished most of the supplies. The Indian bazaars have figured both as buyers and sellers, but the offerings of the Continent have been small, and America has been neutral. The outlook is uncertain. It is remarkable that, with the exception of one day (September 5th), the cash price has been quoted within 1d either side of 35½ ever since August 24th last. Yesterday for the first time since October 30, 1919 (64½ for two months' delivery), the price of silver was fixed with a fraction of a sixteenth. The Bombay Mint will offer for tender on October 2nd

10 lacs of tolas silver on behalf of the East African Currency Board. This, be it observed, is a new quarter, where demonetisation has arisen. As two tenders of silver, derived from the same source, have been made before, it is possible that there is some connection between those tenders and the deflation to which the preceding paragraph refers.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Sept. 7, 1922.	Sept. 15, 1922.	Sept. 22, 1922.

NOTICES.

The Imperial Ottoman Bank announces that it has reopened at Smyrna in temporary premises.

Barclays Bank, Limited, announce that they will open on Monday next, October 2nd, a new branch at Cornhill, High-bridge, under the management of Mr H. W. Heymer (also manager of Bridgewater branch). On the same date they will open a new sub-branch at 35 Splott road, Splott, Cardiff, under the management of Mr J. P. Morgan (also manager of Queen street and 92 Newport road branches).

Tenders for Rs. 100,00,000 six months' Indian Treasury bills were opened on September 22nd. The total amount applied for was Rs. 3,82,25,000. Tenders at Rs. 97 1/4 were allotted about 15 per cent. and above in full. The average accepted rate was Rs. 97 1/4 1p per cent., equivalent to a rate of discount of 4.2010 per cent. per annum. Intermediate bills will be offered for sale in India during the week at Rs. 98 1/4 per cent., and tenders were received on September 28th, for Rs. 100,00,000 six months' Treasury bills for issue during the first week in October.

The London office of the Union Bank of Canada announces that a branch of the bank has been opened at King street East and Spadina avenue, Hamilton.

Chislet Colliery	4,536	Week ended Sept. 23rd.				

BRITISH BROKEN HILL.—Mill returns for fortnight ended Sept. 23rd:—7,515 tons crude ore produced 1,290 tons lead concentrates, containing 793 tons lead and 33,624 ozs silver; also 110 tons zinc concentrates, assaying 9 per cent. lead, 10.5 ozs silver per ton, and 44.5 per cent. zinc. 205 tons carbonates raised. One day's stoppage.

MOUNT MORGAN.—Four weeks ended Sept. 19th:—Treated 6,294 tons Mount Morgan ore, 4,964 tons concentrate, and 9 tons of purchased ore and secondary products; produced 445 tons blister copper, containing 141 tons copper and 5,329 ozs gold; also 5 tons of copper from purchased ore and secondary products. Concentrator treated 15,838 tons ore for a production of 5,481 tons of concentrates, containing 281 tons copper and 3,581 ozs gold. In addition to above production have milled on hand containing 46 tons copper and 460 ozs gold.

TEHRUM MINERALS.—Production of china clay for August:—Washed, 800 tons; dried, 1,170 tons; sold, 1,082 tons.

Reports and Notices.

Messrs Donald McMillan and Mott, solicitors, have removed their offices from 11 and 12 Clements lane to Stafford House, 14 King William street, E.C. 4. New telephone No. Central 6258.

The address of Wm. Cory and Son, Limited, and its associated companies is now Cory buildings, Fenchurch street, London, E.C. 3, instead of 52 Mark lane as hitherto. The telephone numbers will be changed to Avenue 9240 (14 lines).

Branches of the Meadow Dairy Company, Limited, have been opened at 217 Seven Sisters road, London, N., 60 Lower Richmond road, Putney, and 226 The Broadway, West Hendon.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the fourth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1922.

VICTORIAN GOVERNMENT 4 PER CENT. INSCRIBED STOCK.—Holders of stock and debentures maturing October 1, 1922, are reminded that the offer of conversion into Victorian Government 5 per cent. inscribed stock will be closed to-day.

RAILWAYS.

ALGOMA EASTERN RAILWAY COMPANY BONDHOLDERS COMMITTEE.—We have received the following:—"On the 1st instant the committee received information that negotiations were taking place in reference to the sale of the company's lands, and on the 13th place in reference to the sale of the company's lands, and on the 13th instant a cable was received saying that the agreement for sale had been signed, subject to examination of title. The committee immediately endeavoured to secure confirmation of this, and on the 23rd inst. a cable was received stating that the Bank of Montreal had been instructed to pay the coupon due on March 1st last, on October 2nd next. A further cable has been received stating that this coupon is being paid out of the cash deposit on the sale of lands. Holders of 5 per cent. first mortgage 50-year gold bonds who have deposited their bonds with the Bank of Montreal should present their deposit receipt to that bank, when the same will be endorsed with as they prefer. The committee would point out that, owing to the state of exchange, holders will benefit if the coupons are presented in Canada or New York. The committee will in due course report to the bondholders when full information is received from Canada as to the sale of the lands."

MISCELLANEOUS.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.—The report for the year ended March 31, 1922, shows that the gross earnings for the year compared with those for the same period of 1920-21,

show an increase of Rs. 1,28,159. The expenditure shows a decrease of Rs. 21,008. The train miles run were 255,690, as against 250,836 in 1920-21, while the number of passengers carried was 645,374, a decrease of 22,289. The general revenue account shows a profit for the 12 months of £86,192. The expenditure in the colliery account has continued to increase, and is chiefly responsible for this poor result. In order to pay the preference dividends, the board have brought into the accounts a sum of £22,131, representing sundry credit balances from previous years, which were held in abeyance and are no longer required. After payment of debenture interest, and a lowering for all the preference dividends paid or accrued to date of the balance-sheet, there remained a balance at credit of net revenue account of £2,521 10s 5d, which the directors recommend should be carried forward. They regret that the accounts do not permit the payment of a dividend on the "B" stock.

BRITISH GLUES AND CHEMICALS, LIMITED.—The report for the year ended May 31, 1922, shows that the balance on profit and loss account subject to taxation carried forward from the last year's accounts amounted to £149,872; deduct preference dividend paid October 1, 1921, £20,999, leaving £128,873; deduct net loss for the year, after due allowance has been made for depreciation (£31,274) and bad and doubtful debts, and after making provision for the reduction of stocks to market values, £64,177; leaving a balance, subject to taxation, of £64,696. The directors regret that no settlement has yet been reached with the Inland Revenue Authorities with regard to the company's liability for excess profits duty, corporation profits tax, and income tax, though these matters have been the subject of negotiations throughout the past year. Their efforts to arrive at a fair basis of settlement have been unsuccessful, and the matter has been placed in the hands of their legal advisers. The difference in the taxation liability as between the basis upon which the company claims to be assessed and the basis upon which the Inland Revenue Authorities claim to make assessments amounts to a very large sum, and in view of this and the manifest unfairness of the Revenue claims the directors have decided that the question must of necessity be carried further. In view of the trading loss sustained during the year and the outstanding liability for taxation the directors do not recommend the payment of dividends on the preference and ordinary shares, and they have waived their fees from August 31, 1921. The improvement in trade which was hoped for at the time of the last annual meeting unfortunately did not materialise, and the year was one of difficult trade conditions and constantly falling values. These conditions necessitated the writing down of the company's stocks to little more than pre-war values, which, together with the coal strike during the first two months of the year, are the main causes of the company's loss. Considerable improvements have been made in the company's factories, and the cost of production has been materially reduced.

DEBENHAMS, LIMITED.—In the report for the year ended January 31, 1922, the directors state that they regret that it has been impossible to hold the ordinary general meeting of the company earlier, but the final settlement of excess profits duty was effected with the Inland Revenue only in August last. The amount available for dividend, as shown by the balance sheet, amounts to £442,150, which is divisible in the manner prescribed in clause 111 of the articles of association as follows:—Dividend on cumulative first preference shares, £110,500; dividend on cumulative second preference shares, £66,600; reserve fund, 20 per cent. of balance (subject to income-tax), £53,010; dividend on cumulative preferred ordinary shares, £100,000; participation dividend, 30 per cent., after deduction of preference and preferred ordinary dividends, £49,515; dividend on "A" 10 per cent. ordinary shares, £50,000; dividend on "B" ordinary shares, £12,525—shares, £50,000; dividend on £53,010 (less income-tax) is transferred to reserve fund the company's reserve funds (including debenture to reserve fund) will stand at £420,628. The directors further state that (sinking fund) will stand at £420,628. The general trade conditions existing during the season half of 1920, in values remained more constant during the latter part of the year, in consequence of which the results for this period were more favourable than in the corresponding period of the previous year. Full provision has been made for all losses incurred in overseas trading, and in accordance with previous practice the whole of the company's stocks have been taken at cost or market value whichever is the lower. The present balance-sheet shows an approximate diminution of £1,000,000 in liquid assets and in liquid liabilities, which may, therefore, be said to have regained their normal proportions.

MANCHESTER LINERS, LIMITED.—The report and accounts for the year ended June 30, 1922, states that, notwithstanding that trading conditions during the year have been difficult, necessitating a certain amount of laying up of steamers, the company's services have been well maintained. The steamers of the company, as hitherto, have been kept in a state of complete efficiency out of revenue. During the year the balance of the "A" debentures have been redeemed, leaving the company's assets entirely free of charges of any kind. Since last report, in response to the representations of shareholders and to bring the capital denomination of the company's shares more into keeping with present-day practice, each of the £10 5 per cent. preference and £10 ordinary shares of the company have been divided into ten shares of £1 each. Since the year ended a new oil-burning fast turbine steamer has been added to the fleet. The vessel has been named *Manchester Regiment*, and should prove a valuable acquisition. After providing for all charges (including debenture interest, preference share dividend, and taxation), and including the balance brought forward from last year, the amount of profit available is £131,250. Out of this your directors propose to pay a dividend of 15 per cent., free of income-tax, on the ordinary share capital of the company, absorbing £66,780, leaving a balance of £64,470, which your directors deem advisable to carry forward to the next account.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 28th, is as follows:—Pig-iron: Makers are well sold in Cleveland foundry pig-iron for next month, and have practically no iron to offer. At the same time the output could not be increased owing to the scarcity of coke. No. 3 Cleveland G.M.B. is now 92s 6d. Stocks of East Coast hematite are still considerable, and the price of mixed numbers is 90s per ton. Manufactured iron and steel: There is little more inquiry for steel, but orders are still very difficult to obtain. Quotations to home consumers are as follows:—Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £11; steel rails, £9 10s. Iron ore: A few cargoes of Mediterranean ore have been sold for early delivery, and there has been some business in Swedish ore. Prices, however, are barely maintained. Best Bilbao rubio is nominally 24s per ton, c.i.f. East Coast ports.

Our Sheffield correspondent writes:—In several important branches of local industry conditions, instead of improving, appear to be going from bad to worse, and the position as a whole shows no improvement upon three or six months ago. Everything points to a winter of widespread unemployment and hardship. The large sums which are being paid out of local resources every week to maintain the army of out-of-works is piling up a heavy burden to be borne by those engaged in trade. Local rates have already reached 22s in the pound, and are certain to go higher. Such a tax adds to the difficulty of producing goods at prices to compete with rival countries, and constitutes a grave menace to the future of industry. Such revival as is to be found is limited for the most part to the cheaper steels, which find a market in foreign countries. Business is almost dead in Sheffield's special alloy steels. A considerable quantity of this material was shipped to the United States to escape the new and higher tariff, but some of the consignments arrived too late. The same remark applies to cutlery.

The new charges make the cost of Sheffield steel and cutlery almost prohibitive in the United States unless the British exchange depreciates—a not unlikely event. A spell of depression has overtaken the building trade in most parts of the country owing to the completion of a number of housing schemes. Apart from these, there is no speculative building, although there are on hand the erection of a number of villas for individual owners. Prices generally in the heavy and finished steel branches are at an unremunerative level, and the chairman of one of the big companies asserted this week that not a single blast furnace in the country was working at a profit. A brisk inquiry is maintained for steel strip, whether hot or cold rolled, common spring steel, and basic steel billets. Engineering and iron-foundry continue quiet, with little change for the better, while the shipbuilding industry is furnishing only a meagre amount of support to the steel trade. The railway steel departments are still quiet, but collieries are buying tools, stores, and equipment on a more liberal scale. Coke is scarce, and in substantial demand abroad at enhanced prices, namely, 30s f.o.b. American buying of steam coal is easing off, but there is an increased demand from the Continent. Householders show no haste in getting in their winter supplies of coal. Home consumption of industrial fuel keeps on a restricted basis, although expanding slightly. Best hand picked branch is quoted 36s at pits, and best Barnsley Silkstone 33s. Best South Yorkshire steam is about 21s, and best Tynes 24s.

Our Glasgow correspondent (writing on Thursday) says:—This has been a rather quiet week in steel trade connections, only a moderate quantity of material having been contracted for. Bar-iron makers are the turn better off than they have been of late, but they fail to see any distance ahead. Several black sheet makers keep well employed on export account, and inquiries, while not plentiful, keep well up with satisfactory prospects. Demand emanates largely from the Far East. There is said to be some promise of development in bridge building. Scrap iron and steel in fair request at firm rates. Pig-iron very quiet at regards home demand, but at the moment the feature remains, as it has been for weeks, the extent of the business offerings from the United States. Consumers there continue to buy Scotch foundry sorts freely, and rumour has it that the engagements entered into (on to the end of the year) cover 10,000 tons. Supplies are better than of late, but there are 23 blast furnaces blowing on Scotch ordinary, as compared with a couple two months ago. There are also a couple of furnaces running hematite. Prices are unaltered on the week at 105s for Scotch No. 1 and 100s for Scotch No. 3—f.o.t. at makers' works. Scotch hematite unchanged at 107s 6d. Crown bars are called £10 10s; boiler plates, £12 10s; ship angles, £9; sections £8 15s; sheets, £10 5s. Good Continental export trade passing in coals, but on home order the business is on narrower lines than could be desired.

Our Cardiff correspondent writes:—The most disturbing event in the South Wales coalfield this week has been the stoppage of work at the mines and iron and steel works of the Ebbw Vale Company, which has had its effect on the market. It has coincided with a slightly improved demand from abroad, and if this improvement is maintained, the loss of 300,000 tons of Monmouthshire coals may quite possibly have a very appreciable influence on prices. There has been very little change in quotations, but the large steam coal collieries are well stemmed, and towards the end of the week 28s was asked for coals which were selling a week ago at 26s 6d. Second-class large steams are relatively easier, and ordinary smalls are a glut on the market. The outstanding feature is the strength of washed smalls, particularly those anthracitic in quality. The demand for these coals is due chiefly to the scarcity of pure anthracite, and for washed nuts, beans, and peas 28s 6d to 29s 6d is obtainable. The demand of the workmen for subsi-

tence wages was considered this week by Lord Buxton, who made his first visit to South Wales as the Independent Chairman of the Joint Conciliation Board. The colliery owners protested against the application on the ground that the industry was even at present the unremunerative, and argued that, in the event of the wages of the lower-paid day wage workmen being increased, the higher wage should be paid only to married men and single men supporting families. The latest returns of outputs and exports show slight decreases. The production of the South Wales coalfield in the week ending September 16th amounted to 1,033,600 tons, compared with 1,054,800 tons in the preceding week, and with 1,082,500 tons in the week ending September 2nd; while the exports in the week ending September 22nd amounted to 578,126 tons, compared with 596,710 tons in the preceding week, and with 606,422 in the week ending September 1st. The demand from the United States is being slowly exhausted, and in the week ending September 22nd the proportion of the total represented by the exports to the United States and Canada had declined to 21 per cent. from the proportion of 36 per cent. reached in the week ending September 8th.

The following are the current approximate quotations for representative coals:—Best Admiralties, 26s to 27s; seconds, 25s 3d to 25s 9d; best drys, 28s to 28s 6d; best Black Veins, 25s to 25s 6d; Western Valleys, 25s to 25s 6d; Eastern Valleys, 24s to 25s; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 14s to 16s; Big Vein large, 55s to 57s 6d; machine made cobbles, 65s to 70s; French and stove nuts, 70s to 72s 6d; Rubby Culm, 12s 6d to 13s; coke, for export, 35s to 37s 6d; inland blast furnace coke, at ovens, 25s to 26s; patent fuel, 26s 6d to 28s 6d; pitwood, ex ship, 27s to 28s.

In the iron and steel industry, the easiness I referred to last week has become more marked. Prices are falling, with tin plates selling at 18s 6d to 18s 9d, I.C., f.o.b., and it is feared that some of the works will be closed down in the course of the next few weeks unless the position improves.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Users of wool in this country are following with more than ordinary interest the course of values in the Australian markets. It was generally expected that the new clip would come on to the market at a high level, but it is doubtful if the majority of importers and users thought that the new season would open with 64's wool selling on a basis of nearly 5s in the top. Some big weights have been bought in Australia at prices which will enable topmakers to produce a really good top at less than 5s per lb, but the fact remains that many are refusing to sell at a lower price, although the majority find the greatest difficulty in making the quoted price, except perhaps in the case of spot lots. Spinners are simply holding off as long as possible in the hope that more advantageous terms may be got later on, but a certain amount of covering for urgent requirements is in progress, and the market generally presents a more active appearance than at any time since the close of the last London auctions. The great trouble at present is that both spinners and manufacturers assert they cannot sell their products at prices commensurate with the cost of fine wool and tops, and so the matter resolves itself into a question of whether and how they can afford to stand aside and wait for more reasonable values. Those engaged in the wool end of the industry appear to have the utmost confidence in the position of the raw material, but whether current prices can be maintained in face of a restricted demand for cloth and the big weights of wool to come on to the market during the next few months. Meanwhile, the yarn trade is well employed on old orders, and rather more inquiry is reported for various classes of yarn. Some activity is also noticeable in the mohair section, orders having been received from Germany and America for some fair weights of mohair yarn. The piece goods trade presents no new feature.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The numerous cables from Australia published in the daily Press during the past week show that the new selling season in Australia has opened splendidly. Sales have been held at practically all the centres, and competition has been keen, the prices registered showing an average advance of 10 to 15 per cent. compared with those ruling early in July. Apparently both sellers and growers are satisfied with the results, and the former are acting wisely in meeting the market. Sir Arthur Goldfinch stated recently that those who sold last would sell best, but experience has proved over and over again the wisdom of selling when prices were good, and not waiting in the hope of a still further advance being made. Wool values are always subject to fluctuation, and there is a strong element of uncertainty about the prices now ruling. We cannot see much sign of any extensive decline in merino values, but it would be all to the advantage of the trade if they were to come down gradually 20 per cent. In saying this, we are not thinking simply about the consuming end of the trade, but have in mind the good of the entire industry. The only real advantage that is likely to accrue from merinos remaining on the present high level is that the public may be compelled to show greater interest in lower qualities, and if that could be brought about it would be a real good thing for everybody.

One of the most amazing features of the trade is the existence of a desire for the maintenance of high prices for merinos. Fine wool is now practically 100 per cent. dearer than it was in 1914, and yet commodity prices generally are only about 60 per cent. higher.

There are those, however, who are not hesitating to forecast a further advance in merinos, it being anticipated by some that 6s will be realised for 64's tops before Christmas. We cannot see how this can be brought about, and even if it is possible do not think it desirable, for the trade cannot stand such a figure. We are as much in favour as anyone of growers being paid prices for their wool which will leave them a good profit, but no one acquainted with the facts will deny that the production of fine wool is a lucrative business, even without prices advancing still further. It may be open to question whether greater profits are being made than before the war. The probability is that a question to growers on this point would be answered in the negative, and no doubt the only things that are no dearer to-day for Australasian pastoralists than before the war are rain and sunshine. We repeat that in our opinion the buying basis on which the new season has started is too high to be really safe, but time will prove whether to-day's prices can be maintained, or whether they will advance. Granting that there is sufficient buying power to lift the new clips of Australia, New Zealand, and South Africa, the latter is admittedly within the range of possibility.

We are treading upon somewhat slippery ground in saying that Colonial prices are not on the same high clean scoured costs as at the last London sales. We are frankly of opinion, however, that this is the case, and whereas warp 64's tops were often costing 5s 2d in London, wool has been bought in Brisbane to bring in a super 64's top at 5s, whilst a good 64's can be made out of Adelaide wool at 4s 9d, and out of Sydney and Melbourne wool at 4s 11d. It is still possible to buy in Bradford for January delivery at 4s 10d to 5s, and the firm opening of the sales at all the selling centres in Australia has stiffened the attitude of topmakers in Bradford, who are not now as willing to sell forward at 4s 10d as they were a fortnight ago.

THE COTTON TRADE.

MANCHESTER, September 28.

There has not been any increased activity in the market this week. In all sections a dull feeling has prevailed. There continues much uneasiness with regard to political events abroad, and merchants seem determined to adopt a waiting policy until the outlook is clearer. Occasional transactions have been put through in piece goods for India, chiefly for Madras. Operations for China have been very restricted. Printed and dyed goods have attracted some attention for South American outlets. Some Near Eastern firms are having to face severe losses. The requirements of the home trade have been easily satisfied. Ground is being lost by manufacturers, and more looms are running out of work. The decision to run short time in the American spinning section has

VEGETABLE OILS AND OILSEEDS.

There has been some little demand for linseed, and, in sympathy with Argentine options and the advance in oil, old crop Plate is firm, and about 15s per ton dearer on the week. As much as £18 10s is demanded for seed on spot at Hull, and £17 10s to £17 15s has been paid for shipment. Linseed (Plate and Indian) on passage to the United Kingdom has dropped to 27,000 tons, while that to the Continent is returned at 68,000 tons, together 95,000 tons, against 118,000 tons a week ago. Crushers in this country are buying very moderately indeed, and little fresh trade has been done in new crop Plate, which is now quoted £16 5s for January-February shipment. Calcutta linseed to London has been done at £19 2s 6d to £19 5s, September-October. Rather more interest has been evinced in Egyptian cottonseed, £10 5s having been conceded for new black, first half of October loading, to Hull, and £10 7s 6d to London. Bombay cottonseed quiet at £8. Soya beans quiet, sellers offering new crop at £10 15s without finding takers. London has bought Toria rapeseed at £16 15s for shipment. Palm kernels quiet and easier. Nothing doing in ground nuts.

A shortage of September linseed oil has caused values for prompt delivery to advance to £38 spot, ex Hull mill. The October-December position has also advanced somewhat, £35 10s, but however, is small, and next to nothing is doing on export account. The recent extensive business with North America in this commodity has little chance of reviving with a tariff equal to £17 and over per ton against it. The political situation in Europe generally is also having a depressing effect. Cotton oils have been in better request, and, on scarcity, crude Egyptian has advanced 60s per ton to £34, while soap-makers' grade of refined is 40s dearer at values about unchanged. Some improvement in the demand for linseed cakes is reported. Cotton cakes and meals are steady and more inquired for.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market was again slightly firmer on Thursday last, as several classes advanced in spite of the fact that many hides sold from 7½d to 9½d, and the demand for secondary hides was shown by the fact that second ox and heifer advanced ½d to 1d in many cases. Kips also advanced in similar ratio, but cows were steady at last prices. Calf were fairly steady at last high prices, slight advances being noted in one or two classes. Lambs and pelts were practically unaltered. Imported hides reflect the domestic strength of the market, and advanced prices have been paid by unwilling tanners. Prices in the River Plate are round about 1½d to 1½d, and sales are reported at this figure to America and Canada, but are above our tanners' ideas of value. Dry hides of all classes have also been sold at advanced prices.

The demand for sole leather has fallen off this week, but whether this is due to poor trade or a "wait and see" policy in view of the next week's Shoe and Leather Fair is uncertain. Dry hide bends of 8/10 lbs are the best selling lines, with 10/12 for repairs' use. Tanners are firm in prices, but any talk of advance is at once turned down by likely buyers. Rough dressing leather is slow, as the French exchange is still unsettled. Split hides are firm. Upper leather is quiet, but both producers and importers have advanced prices, and are content to wait for results at the Fair, when the real tug-of-war will be felt.

The shoe section is none too well employed, and short time is still prevalent in some centres. Stocks in factors' hands are said to be low, and orders may be placed in bulk at the Agricultural Hall next week.

OVERSEAS PRODUCE MARKETS.

SUGAR.—There was a moderate amount of business effected in spot lots of refined, and after opening the week at 9d to 1s per cwt decline prices ruled steady. Messrs Tate and Lyle's cubes sold 54s 6d to 55s 6d; granulated, 48s 9d to 49s 3d; cas er, 51s to 53s 3d; pulverised, 51s 3d; pieces, 33s 6d to 39s, for yellows and fine white, 44s; yellow crystals, 43s 3d. Granulated, October, 48s 9d; and November-December, 48s 6d. Crystallised West India ranges from 41s to 44s, as to quality. American granulated, spot, sold from 48s 3d to 47s 9d; September, steamer, 21s, c.f. and i., London. White Java, spot, 46s to 46s 3d; afloat, 19s, c.f. and i., London. White Mauritius, spot, 46s; Brazilian, 45s 6d. Cuban basis 96 per cent., 15s 3d; and ditto basis 80 per cent., October-November, 8s 3d, all White, December, sold 19s 10½d to 17s 9d, 20s 3d; March, 20s 3d to 20s 6d; May, 20s 7½d to 20s 3d, 20s 7½d. Cuban stocks stand at 356,000 tons, against 1,195,600 same time last year.

COFFEE.—Business was on a moderate scale, and prices on balance show little or no alteration. Good bold Costa Rica sold, 116s 6d; Nairobi, 100s. Future delivery market slow, and small transactions include March at 59s 6d.

COCOA.—Spot market steady, quiet, and sales include some fine Grenada at 53s. Accra, F/F quality, November-January, sold, 35s to 35s 6d, f.o.b. terms.

GIRARD TRUST COMPANY PHILADELPHIA, PENNSYLVANIA.

Chartered 1836.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

TEA.—Offerings of Indian at public sale this week embraced some 49,300 packages. With active competition for all descriptions, the market showed general stability, with rates frequently ½d to ¾d per lb dearer. 15,300 packages Ceylon were also briskly competed for at full to dearer rates. Fine broken orange pekoe sold, 2s 10d per lb in bond. Java and Sumatra realised much higher prices.

RICE.—Market quiet, and prices barely steady. Two stars, spot, 15s 3d; October, 14s. No. 1 garden Siam, October, double bags, 16s c.f. and i. Broken descriptions quiet, but held steadily. Rangoon hand-picked beans, on spot, quoted 7s. Japanese peas, September-October, sold, 25s; December-January, 23s.

SPICE.—Pepper market steadier on the week with increased buying orders. Fair black Singapore, spot, 3½d; October-December, steamer, sold, 3½d; Aleppo, spot, quoted 4d; Tellicherry, 4½d; white Singapore, spot, 5½d; October-December, 5½d; Muntok, spot, 6½d; October-December, done 5½d. Zanzibar cloves, on the spot, 2½d December, 7½d. Pimento, spot, 2d; flake tapioca, on the spot, 2½d per lb; ditto, September steamer, London, 23s; October, 22s; December, 21s. Desiccated coconut, spot, 34s 6d; September-October, 33s. Sago flour, September, quoted, 13s 3d; December, 13s.

FRUIT.—Currants were firmly held, with sustained inquiries, and new Panaxiti, spot, sold, 8s; Vostizza, 90s to 93s. Sultanias met with quieter support. Smyrna, good average, quoted, 145s to 148s; choice, up to 170s. Raisins received fair patronage, and market ruled steady. Valencia, halves, 90s to 92s; quarters, 105s to 125s. Dates steady. Siar, spot, 23s; first tide Hallowee, 30s; Khredrowie, 27s; and Siar, 22s. Hallowee second tide, sold, 28s.

JUTE.—The market hardened during the week under improved buying orders and firm cables to hand from Calcutta. First grade, November-December, continental ports, sold, £33 to £34 5s; lightning grade, November-December, £31 to £31 10s. Hessians steady, quiet. 10 oz, spot, 36s; 8 oz, 25s 6d; A twills, spot, 80s 6d; B, 67s; sugars, 77s 6d; flour, 77s.

HEMP.—Manila in quiet request, but prices fairly steady. G grade, October-December, quoted £34; J sold, £31 10s; K quoted, £30 10s; L, £29 10s; M, £28 10s. New Zealand nominally unaltered. H.P.F., October-December, £33 10s; fair, £31 5s. African sisal, No. 1 G.E.A., October-December, £35 10s.

SHELLAC.—Market unsettled, and prices lower on balance, while rather unsettled forward. T.N., spot, 285s; October, sold, 250s to 260s; December, 240s to 252s 6d.

COPRA.—Market quiet, and prices ruled easier for most descriptions. F.M.S. Straits, September-November, Rotterdam, sold, £22 16s 3d to £22 13s 9d; October-December, £23 5s to £22 15s; Ceylon, October-December, £24 2s 6d; Java, September-October, £23; Dutch East Indies, £22 16s 3d; South Sea Islands quoted £22 5s; mixed, excluding Padang, £22 5s. Palm kernels, October-December, Liverpool, done, £16 7s 6d to £16 6s 3d.

RUBBER.after being in good support and prices dearer, disclosed a quieter tone. Standard plantation crepe and sheet, spot, sold, 8d to 8½d and 8½d; October, 8½d to 8½d, 8½d; October-December, 8½d to 8½d, 8½d; January-March, 8½d to 8½d; April-June, 9d to 9½d and 8½d.

EGG PRODUCTS.—Market quiet but steady. Prime liquid yolk, spot, 97s 6d; forward, 95s per cwt. Albumen, spot, 3s 1d; forward, 2s 1½d per lb.

MENTHOL. spot, 32s; forward, sold, 25s 3d. Japanese peppermint oil, spot, 7s 6d; forward, 6s 5d; aniseed, spot, 2s 3d; forward, 2s 0½d; slab camphor, spot, 3s 7d; forward, 3s 4d; crude, spot, 3s 4d; forward, 3s per lb. Japanese wax, spot, 80s; forward, 74s per cwt.

OILS.—Linseed market firmer. Spot, net, naked, 39s; September, 38s; October-December, 35s 9d; January-April, 32s 6d. Rape dull. Crude, spot, nominally 41s; refined, 43s. Cotton steadier. Crude Egyptian, spot, 33s; common edible, 41s; deodorised (in barrels), 46s. China-wood quiet. Hankow, spot (barrels), 62s; shipbarrels, 62s 6d. Coconut quiet. Ceylon, spot, 38s; September, October, 36s 9d; Cochin, ditto, quoted 41s. Soya steady. Oriental, barrels, October-November, 34s. Japan fish easier. July-August, cases, 20s. Cod inactive. English, spot, 29s to 30s. Ground nuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 53s. Turpentine dearer. American, spot, 103s 3d; October-December, 103s 6d; January-April, 104s 3d. Rosin firmer for American. American, grade B, 15s; G, 15s 6d; H, 15s 6d; N, 16s 9d; W, 19s 6d; WW, 21s. French, F/G, 15s 6d; WW, 18s 3d per cwt. Petroleum easier. American standard white, spot, 1s 2d; and water-white, 1s 3d per gallon.

OILSEEDS.—Linseed quiet, but tone firmer. Bold Bombay, afloat, £20 10s. Small Bombay, ditto, £19 10s. Calcutta, afloat, sold, £19 10s; August-September, £19 7s 6d; September-October, £19 2s 6d to £19 5s. Plate afloat, £18; August-September, £17 17s 6d; January-February, new crop, sold, £15 17s 6d. Rapeseed, easier. Toria, September-October, quoted £17; real bold Ferozepore, September-October, quoted £16 12s 6d. Cotton-seed firmer. Egyptian black, October, sold, £10 5s, and white, £9 5s. Bombay, September-October, quoted £8. Ginglyly quiet. Chinese, new, October-December, Continent, £22 5s; large Bombay, August-September, £22. Castor, Bombay, August-September, sold, £16 15s, to Hull. Groundnuts steady. Coromandel, machine-dried, September-October, £19 15s; ordinary, £19 5s; East African, £18 10s; Nigerian, £21; bold Bombay, £19 10s. Chinese, November-December, £20 5s. Soya beans, Manchurian, August-September, £12; new crop, November-December, £10 7s 6d per ton.

METALS.—Tin opened the week with a firmer tendency in sympathy with stimulating advices from the East and good buying orders, sellers being reserved in their offers. Standard, October, was dealt in at £161 15s to £162, December up to £162 12s 6d, and three months, at £161 15s to £162, December up to £162 12s 6d, and three months, at £161 15s. In the East sales occurred on the basis of £164 5s, c.f. Slight weakness was apparent later, though liberal offerings were readily absorbed. Standard, cash, sold at £161 5s; October, £162 2s 6d; December, £162 5s; and three months down to £162 10s. The downward movement continued during the middle of the week, but a fair business transpired at the decline. Standard, cash, sold at £160 17s 6d, and three months £162 2s 6d. At Thursday's session values ruled

dearer. Standard, cash, sold at £161 15s, and three months at £162 10s to £162 17s 6d, while finally registered at £162 15s. On Friday tin was accorded active support, and market ruled dearer. Cash, sold, at £162 17s 6d to £163 2s 6d, and three months £163 10s to £164 12s 6d. English ingots, £163 to £163 10s. Copper commenced firmly on higher American cables, and a moderate demand prevailed, chiefly for distant positions. Standard, cash, sold at £63 5s; December, £63 15s; and three months, £63 15s. The upward tendency was maintained, with sellers showing more reserve, and a fair amount of trading ensued. Standard, cash, on Wednesday touched £63 7s 6d; November, £63 12s 6d; and three months, £63 18s 9d. At Thursday's session rates were firmer to the extent of 5s on balance for cash and forward. Standard, cash, sold, at £63 12s 6

CONSOLIDATED MAIN REEF MINES AND ESTATE, LTD.

(Incorporated in the Transvaal.)
Extracted from the Annual Report for the year ended
30th June, 1922.

Capital, £1,247,602 in 1,247,602 Shares of £1 each (all issued).
NOTE.—Of the above Issued Capital of 1,247,602 Shares, the Company
has purchased to date and holds 22,065 ex-Energy Shares.

THE MONEY MARKET.

LOMBARD STREET has lately dealt largely in surprises, but
surprise became almost amazement on Monday, when it
found itself in the Bank of England borrowing a consider-
able amount. In view of the payment of the Conversion
Loan interest and the maturing of National War Bonds,
considerable creation of fresh credit had been expected, or
which the market had hoped to see itself in ease and
plenty. But a number of special withdrawals, and the
slowness with which official disbursements find their way

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

into the usual monetary channels, combined to produce the result recorded. From the figures of the Bank return it appeared that the amount borrowed by the Government, as indicated by the increase in the Government securities, had either been considerably reduced by Wednesday night, or had been much less than the market had looked for. Monday's spasm, however, was quickly followed by ease, and the tendency of the discount market quickly responded, though the demand for bills was not over-keen, except in the case of November Treasury bills, which were wanted at $1\frac{1}{8}$ per cent.

	Oct. 6, 1922.	Sept. 29, 1922.	Sept. 22, 1922.	Sept. 15, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3 $\frac{1}{4}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 $\frac{1}{4}$ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 $\frac{1}{4}$ (Jly. 13, '22)
Houses (Notice)	1 $\frac{1}{4}$	1 $\frac{1}{4}$	1 $\frac{1}{4}$	1 $\frac{1}{4}$	1 $\frac{1}{4}$ (Jly. 13, '22)
Market rate (3 months' bills)	2 $\frac{1}{8}$	2 $\frac{1}{8}$	2 $\frac{1}{8}$	2 $\frac{1}{8}$	2 $\frac{1}{8}$

The Bank return showed a decline of £9,300 in the stock of gold, and an increase of £732,600 in the circulation, with a consequent decrease of £742,000 in the Reserve. Borrowing by the Government and the market was reflected in increases of 16 millions in the Government securities and 2 millions in the Other. There was thus a net increase of 18 millions in the deposits, the whole of which had gone to Other. There was an increase of £2,015,700 to £291,142,700 in currency notes outstanding, which includes £1,554,300 for notes called in, but not yet cancelled. The fiduciary issue is £241,438,400, or £68,550,000 below the maximum.

THE STOCK MARKETS.

International complications have not greatly affected stock market prices this week. War Loan, in fact, has gone over par, and other stocks in the gilt-edged market have been quiet. In the foreign section, German bonds have been flat, and French bonds have been erratic. Home Rails have been better. Rubber shares continue to show a slight improvement, but oils are irregular. Iron, coal, and steel issues have hardened a little, and there have been a few advances in other sections of the industrial market. Mines have attracted a little more attention than recently.

THE COMMODITY MARKETS.

Although favourable reports have been received relating to the trade outlook in India, Manchester cotton merchants are not apparently taking an optimistic view of the immediate future. The wool market retains all the recent strong features, and a fair amount of business has taken place; manufacturers, however, are hoping for lower values. Cleveland foundry pig-iron continues to be in demand for America, and although the strikes in that country have been settled, it is stated that it will be some time before conditions return to normal. There is a slightly improved demand for Welsh steam coal, and our Sheffield correspondent reports that steam coal is going freely to the Continent. The tone in the wheat markets is steady, and prices of vegetable oil and oilseeds are firm. Leather values are maintained. Fuller particulars of markets will be found in later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The foreign exchanges have again been dominated by the Near Eastern crisis; consequently transactions have been comparatively few. The American exchange has again been the centre of interest, and after the rate had fallen to 4.36 $\frac{1}{4}$ on the 29th ult. on the bad Near Eastern news, a gradual recovery occurred in sympathy with the more favourable political outlook, the rate now being 4.42 $\frac{1}{2}$. We have predicted a fall for some time past, and we do not anticipate any great improvement in the near future in view of the large seasonal offering of cotton and grain bills which will appear on the New York market during the next two months. The German mark has fallen from 7,100 to 9,600, and it is somewhat

difficult to give any definite reason for this collapse. Hitherto a sensational depreciation like this has been attributable to some outstanding cause. No doubt the increased note circulation has a great deal to do with it, and the fact that Germany has been purchasing raw materials. The French franc has fluctuated between 57.80 and 58.18, and any improvement in the rate would not appear to be warranted in view of the political and economic conditions prevailing in France at the moment. The Belgian franc has moved in sympathy with the French franc; it has varied between 61.63 and 62.10. The lira has moved very slightly, being now 103, as compared with 102.88 a week ago. However, the rate rose to 103.40 on the 4th inst. Holland is now 11.38 $\frac{1}{2}$, after being as low as 11.28 on the 29th ult., the rate having moved to a certain extent in sympathy with the dollar. Switzerland is 23.62, showing a slight rise, and it is considered improbable that the discounting by a Swiss banking consortium of the German Treasury Bills handed by that country to Belgium on account of the Reparation payment due on August 15th and September 15th will disturb the exchange to any appreciable extent, as Switzerland is a holder of large amounts of American dollars. The total of the bills in question amounts to 96 million gold marks, and according to the arrangements these marks will be converted into gold dollars at 4.197865 gold marks to the dollar, and the dollars into Swiss francs at 5.20 per dollar, the total amount involved will therefore be 118,917,518 Swiss francs. The peseta is round about 29.05, compared with 28.92 last Friday. Copenhagen rose to 21.53 on the 2nd inst., and, after various fluctuations, is now 21.49. Christiania is 25.10, after being about 27.00 a month ago; this appreciation is attributed to the more favourable political outlook and to the trade possibilities which may accrue owing to the settlement of the commercial agreement between Spain and Scandinavia. Stockholm has fluctuated slightly, and is now 16.60. The Finnish rate is 195, showing a still further appreciation on the favourable trade news received from that country. The Austrian exchange has been sympathetically affected by the announcement of the League of Nations Credit Scheme, and the rate is approximately 300,000. The Polish mark quotation is now approximately 40,000, after considerable fluctuation during the past week. In this connection it may be mentioned that a report from Warsaw dealing with the Polish Minister's proposal for the restoration of more stable currency conditions, states that it is proposed to use Poland's gold reserve, amounting to 100 million gold francs, as a basis for a new currency. A scheme has been drawn up for the issue of a loan, half of which is to be issued in Polish marks and half in "Zlotys" (a monetary unit equal in value to the Swiss value), the coupons being payable in gold currency. The reform in the exchange will, it is anticipated, extend over a period of three to five years, during which time the equilibrium of the Budget should be re-established. Prague is 125, showing a further appreciation. Belgrade is 270, on the reports of a slight improvement in the general economic situation, and the financial position of the country is believed to have been strengthened by the good crop reports. The drachma is 155, and the Turkish pound 740, both markets still being nominal. The Roumanian lei is 713, showing a steady depreciation since September 23rd, when the rate was 650. Business conditions in the country still remain unsettled, and the crop prospects are reported not to be quite so satisfactory as at first anticipated. Bulgaria is 725, the financial position being practically unchanged, but the favourable reports as to a good crop yield continue, and as the country is primarily agricultural, a bumper harvest should tend to lessen the uneasiness caused by the present general economic situation. Among South Americans, Valparaiso is back at 32.20, after having been 32.40, and very slight alteration has been seen in the Buenos Aires rate. Rio is 6 13-32. It is generally anticipated that there may be a rise in the quotation on account of the large supplies of coffee which the country is holding, and the possible demand caused by the world shortage in this commodity. This, coupled with a better political outlook, may have a favourable effect. The Eastern exchanges have varied very little during the past week.

THE NATIONAL ACCOUNTS.

The return of revenue and expenditure for the first six months of the current financial year is quite as satisfactory as could have been hoped for in the circumstances. Revenue amounted to £403,893,412, as compared with £456,163,160 in the corresponding period of 1921. This is a net decrease of £52,269,748 for the half-year, and compares with the Budget estimate of a decline of £214 millions in the full year. Estates duties at £32,071,000 show an increase of £9,681,000, and corporation profits tax improved from £5,590,000 to £8,277,000. The telephone service is responsible for £6,900,000, as against £3,000,000, a contribution which will be viewed with mixed feelings by many subscribers. The principal decreases were Excise £16,209,000, Excess Profits Duties £26,110,000, and Special Receipts £26,419,550. The half-year's expenditure is down by £150 $\frac{1}{2}$ millions—namely, from £497,993,849 to £347,423,844, and though it is as yet too early to draw satisfactory conclusions, it may be recalled that the Chancellor budgeted for a decline in expenditure of only £169 millions in twelve months. For the first half of the financial year there is a surplus of £56 millions, which compares with a deficit of £41 millions at the same time last year.

FINANCIAL YEAR, 1922-23 (April 1 to September 30, 1922).

Total spent	£ 347,423,844	Raised by revenue ..	£ 403,893,412
Dec. in balances	3,342,316	Net repayments	59,811,884
Total	344,081,528	Total	344,081,528

ESTIMATES for YEAR 1922-23.

Ordinary Expenditure ..	£ 823,846,000	Ordinary Receipts ..	£ 820,775,000
Special Expenditure ..	61,223,000	Special Receipts ..	90,000,000
Contingencies	25,000,000		
Total	910,069,000	Total	910,775,000
		Surplus	706,000

MR McKENNA ON INTER-GOVERNMENTAL DEBTS.

At the American Bankers' Association Convention held this week in New York, an address was delivered by the Chairman of the London Joint City and Midland Bank on the subject of Reparations and International Debts. Mr McKenna began by explaining the reasons for his choice of this subject in preference to some professional topic of special interest to bankers. He did so by laying stress on the great difference between the law and practice of banking in America and England, which made it difficult for an Englishman to discuss banking matters without being constantly involved in obscurities caused by this

difference. "This very meeting," he said, "will illustrate the point. I understand that there are over 30,000 separate banks in the United States, a large number of which are represented here. In the whole of Great Britain we have only 39, but with us the branch system is so highly developed that these few banks have no less than 9,650 branches, of which 6,800 belong to five banks alone." Many other essential differences, touched on by Mr McKenna, convinced him that it was impossible to discuss a technical banking subject, and it was all to the good that he came to this conclusion, since the problem he proceeded to handle is one that is at present of world-wide importance, the elucidation of which, both in America and on this side of the Atlantic, is eminently desirable. He quoted the report of the Bankers' Committee, which sat early this summer in Paris, as laying stress upon the need to resume normal trade conditions between countries and to stabilise exchanges, and its conclusion that neither of these aims could be accomplished without a definite settlement of the reparation and other international debts. These conclusions are obviously sound, and they mean that without this settlement real trade recovery cannot be achieved.

Mr McKenna was careful to observe that he spoke as a banker expressing his personal views, anxious to determine the limit of the debtor's capacity to pay and the effect of payment upon the world's trade. He also referred to the difficulty with which he, as a member of a nation that is one of the debtors of the United States, spoke to an American audience upon international indebtedness. But he dealt with this difficulty with complete success, and in a manner which will be heartily endorsed on this side of the water. He did so by stating that in the course of his argument he would show that England has the ability to pay, and that he could unhesitatingly assert her determination to honour her bond in full. "I believe," he said, "I am justified in asking you to treat England's debt to the United States as certain to be provided for, and, if this be conceded, we shall be free to consider the question of the remaining international debts as one in which America and England are equally concerned, and in which both have the same interest as creditors."

Broadly, Mr McKenna's conclusions are in accordance with those of most people who have given serious thought to the problems that he handled, but we cannot doubt that his clear exposition of them and of the arguments that have led him to them, was a most useful incident of the American Bankers' Conference. In his view Germany can pay nothing now, except the foreign balances owned by her citizens, if they can be secured by her Government, which, as he admitted, cannot be done without the consent of the holders. This consent, however, could, in his opinion, easily be got, if their foreign assets could be sold for an assured profit. "It must be remembered," he said, "that to a considerable extent they are the proceeds of sales of marks which have been flung by Germans on the foreign market under the well-founded apprehension that the pressure of reparation payments would rapidly depreciate their value. Remove this pressure, and the mark would immediately improve. It has still a far greater value in Germany than it has outside, and the German holders of foreign assets would have a clear advantage in selling them for marks to their Government." As to the extent of those assets, Mr McKenna believes it would be safe to put them at not less than a billion dollars. It may be noted that this estimate, though far below some of the wild imaginings that have been current concerning the mass of wealth that Germans have piled up abroad, is also considerably above the sum arrived at by Mr Keynes, after elaborate calculations set forth in Section Eight of the *Manchester Guardian Commercial's* "Reconstruction in Europe." In the article referred to Mr Keynes concludes that the net assets—after allowing for short-term credits owed—held abroad by Germany are of a value below £100 millions sterling and quotes on his side an answer given by Sir Rober Horne in the House. But whatever be the amount of these foreign assets Mr McKenna thinks that Germany could pay it, "provided the fall in the mark was arrested"—a rather substantial proviso. More than that he does not think that Germany could find at least for some years, and he expressed the belief that, "looking mere"

at the amount to be received, the creditors would gain by abandoning the attempt to obtain other money payments for at least three years." The need for this rather protracted breathing time seems to have impressed itself on Mr McKenna for reasons which are not quite convincing. Firstly, because though Germany has only paid \$375,000,000 in cash, the mark has been divided in value by 70; secondly, because in spite of Germany's efforts during the past three years to develop her export trade, her exports, "long after the immediate deficiency in essential foreign commodities due to the war was made good, are still barely equal to the imports." From these premises he concludes that Germany has at present no capacity to obtain a surplus from the export of goods. But surely both of them have been to some extent caused by the condition of political and economic uncertainty and disorganisation that has been forced on Germany by the handling of this reparation problem by her late enemies. By delaying to name a fixed and possible sum, the Entente has invited and obliged Germany to leave her finances in a state of chaos, and her currency in a condition of growing depreciation. The consequence of this chaos was that her citizens, anxious above all things to have anything but marks in their possession, have spent their money as fast as they could. If the mark were once stabilised—an assumption that Mr McKenna was ready to make in considering the German Government's power to acquire its citizens' foreign assets—it is at least possible that the reckless consumption that one hears of as rampant might be checked, and that before three years are out an export surplus might be established. Mr McKenna doubts if a Government can increase an export surplus by taxation. But of this there can surely be little doubt. For if means were found of securing more of the German taxpayer's income and transferring it to foreigners, German imports and home consumption would fall, and German export industries be stimulated. The weakest link in Mr McKenna's argument was the assumption that an export surplus cannot be artificially created, for he adds that at the end of three years of grace future demands must be "limited to the annual amount of Germany's exportable surplus at that time." But, in fact, such a surplus appeared in France in 1871, and it is really begging the question to suggest that the amount of reparation can be indicated by a realised export surplus.
