TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £2 18s. 6d.
Colonies and Abroad, £3 15s 6d per Annum.

Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the *Economist* may always be obtained in the City at Messrs Davies and Co., 95, Bishopsgate; Leathwait and Simmons, 5, Birchin lane; Barker and Howard, 6, Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15, Cullum street; Willing and Co., Limited, 50, Cophthall avenue, and 53, Finsbury pavement.

Paris: Galignani Library, 224, Rue de Rivoli; Messrs Brentano's, 37, Avenue de l'Opera. New York: *Economist* Office, 20, Broad street (Room 1,709).

THE MONEY MARKET.

As was expected, the market's large holding of end-June Treasury bills enabled it to make the Treasury do much of the borrowing from the Bank of England necessitated by the requirements of the end of the half-year. The other securities in the Bank return—which, of course, only recorded operations up to June 28th—actually showed a decrease of over a million, although, both on Monday and on Wednesday, small amounts were said to have been

borrowed by the market; but the Government securities had expanded by more than four millions. There was thus very little pressure in the early part of the week, and discount rates were weak, September Treasury bills being placed occasionally at 2 per cent., while three months' commercial bills were in fair demand at 2½ per cent.

	June 30, 1922.	June 23, 1922.	June 16, 1922.	June 9, 1922.	Previous Rate and Date Changed.
Bank Rate	3½	3½	3½	4	(June 15, '22)
Banks Deposit Rate	1½	1½	1½	2	(June 15, '22)
Discount (Call)	1½	1½	1½	2	(June 15, '22)
Houses (Notice)	1½	1½	1½	2½	(June 15, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	..

The Bank return showed increases of £64,000 in the stock of gold and £1,675,000 in the note circulation, causing a net decrease of £1,611,000 in the reserve. Government securities rose by £4,192,000, while Other declined by £1,076,000. Public deposits were drawn on to the extent of £454,000, and the private deposits were thus nearly two millions higher. The currency notes outstanding on June 29, 1922, at £295,374,100, including £1,600,200 for notes called in but not yet cancelled, compare with £295,611,500 in the preceding week. The fiduciary issue is £245,623,900, or £64,364,500 below the maximum.

THE STOCK MARKETS.

Business in the Stock Exchange remains quiet, but the tendency of gilt-edged securities is firm, and War Loan is once more above 100. Home Railway debentures and preferences are showing an upward tendency, and a "shake out" in the ordinary stocks was followed by a recovery. The announcement of the South-Eastern and Chatham's amalgamation proposals produced a sharp drop in Chatham ordinary and South-Eastern deferred. There was considerable activity in Argentine Rails on the signing of the decree allowing higher freight charges. The decision of the International Conference in Holland to ask the Dutch Government to assist the scheme for restricting the output of rubber was taken as a strong bull point in the rubber share market, and most quotations are better on the week. There have been no important changes in the miscellaneous group, but Kaffirs have been fairly lively, and the payment of a 10 per cent. dividend on Ropp Tin, after a long gap, came as a pleasant surprise to holders of tin shares.

COMMODITY MARKETS.

Although signs of trade recovery are not very noticeable, there is little which would suggest any backward movement, except, perhaps, the state of the coal trade. Conditions in the cotton industry have been irregular during the week, spasmodic movements in raw cotton rates having had a disturbing influence upon business in yarn and cloth. Our Manchester correspondent, however, describes "the undercurrent of demand" as "healthy." Results of recent London wool sales appear to have had a stabilising effect upon wool prices, and the general tone of the market is satisfactory. The Home demand for pig iron continues to be much restricted, but the export business is rather better. A better tone is noticeable in the steel trade, owing to the many inquiries made, but orders are comparatively few. Our Sheffield trade correspondent states that while people are hopeful of a substantial revival, it will not come before the last quarter of the year, or the beginning of next year. In the Welsh coal trade, quotations appear to be nominal, and the position is slightly worse. Although business in wheat markets is inclined to be quiet, prices remain steady. The demand for raw linseed oil continues to be well maintained. The hide market is still firm, with prices showing a tendency to advance. Our correspondent reports that the boot trade is "fairly brisk, with prices falling."

FOREIGN EXCHANGES.

Political events on the Continent and particularly in Germany have further added to the highly unsettled condition of the foreign exchange market, which once more finds itself in a state of disorganisation greater than has been experienced for a considerable time. As was natural, Germany was most affected during the last week, and the rate which seemed to have remained comparatively steady in view of the failure of the Bankers' Conference, broke on Monday to 1,530, from which figure it further advanced, closing on Thursday at the new high level of 1,625. At the time of writing, the quotation is round 1,615, with forward marks one over spot per month. "Allied" currencies have been similarly affected. The tendency of Paris and Brussels has been consistently weak, and though temporary reactions have, of course, been witnessed, the rates have risen to 52.85 and 55.65 respectively, the forward quotation for French francs being now 2 centimes per month above spot. Italian currency has also depreciated, the rate having risen to well over 94 at one time, and being now quoted round that figure. Other Europeans, although not so directly affected, have been irregular, and have shown greater fluctuations than for some time, although changes on the week are not so greatly marked. Dutch florins, after being 11.50½, are now 11.48. Switzerland is quoted 23.27, while Spain has receded to 28.34. Sweden and Denmark have both moved against this country at 17.17 and 20.60 respectively, but the Norwegian rate has further risen to 27.10. There was further demand for Finnish currency, and the rate has now fallen to 192. Austria has not maintained the recent gain, the rate having again fallen to 84,000, and Polish marks, at 20,500, are weak. Movements in the dollar have been uncertain, and at times inclined to be nervous and erratic. New York, which closed last week about 4.40½, fell at one time on Monday to 4.38½, but again recovered on that day, and the quotation, after varying from 4.39 to 4.41½, is now 4.40½. The forward quotation remains unchanged at 1½ per month over spot. Movements in South Americans have been slight; Buenos Aires is now 44½, and Rio 7½, but Valparaiso has not maintained the recent appreciation, and is now quoted at 35. The tone of the silver market has been quiet, and Eastern exchanges show little change on the week. Shanghai and Hong Kong are round previous quotations, and rupees are quotably better at 15 3 21-32d.

THE NATIONAL ACCOUNTS.

The statement of Revenue and Expenditure for the first quarter of the financial year 1922-23 shows that revenue during that period amounted to £195,154,200, which represents a decline of £9,014,200 in comparison with the corresponding three months of last year. The principal declines are shown in Excise (-£8,158,000), Income and Super Tax (-£6,467,000), and Excess Profits Duties (-£16,160,000), while Customs have produced £2,964,000 more. Expenditure during the quarter amounted to £199,218,900, a reduction of £72,201,400 on the corresponding period of last year. The reduction in the debt charge for the period was £15 millions, while supply services took £58 millions less. The Floating Debt has declined during the quarter by £64 millions, the total of Treasury Bills outstanding having dropped from £882½ millions to £760½ millions.

CREDITORS AND DEBTORS.

In spite of the failure of the bankers to find an immediate solution of the Reparation problem, the international horizon seems a little less overcast than in the stormy days at Genoa. There is, indeed, little tangible basis for the improvement; but the more friendly personal relations between the British and French Premiers following the latter's visit to London, coupled with the general recognition implied in the bankers' report that Allied debts and Reparation are different aspects of one and the same problem, have produced a mollifying effect in Paris. The urgent need of a foreign loan for Germany is still the theme of discussion; but the conditions for its realisation are now more clearly seen. This change of atmosphere is reflected in the speech of M. Poincaré in the Senate on Thursday, when he expounded the fundamental difficulties in a way which shows that a common interpretation and point of view is gradually emerging.

We have considered a certain number of measures of coercion, military and economic, such as the extension of occupation, levies on the holdings of banks, or on the products of taxation, and expropriation of factories and forests—but these sanctions would not solve the question. They might influence the attitude of Germany, but they would not bring to the coffers of the Allies sums equivalent to those in the schedule of payments. We should procure only lent to those in limited quantities—only a few hundred million gold marks. But we need money immediately. If Germany delays too long we shall succumb under the burden, and be reduced to the worst extremities.

When the Prime Minister quoted Germany's exports as evidence of capacity to pay, without allowing for essential imports, he was still giving his audience too favourable a picture. But in the main he showed a sense of realities which we warmly welcome. As an early default by Germany is not anticipated, there will now be an interval which must be profitably employed in endeavouring to see what progress can be made on the subject, which, after the internal situation in Germany, is the main obstacle to a settlement. We refer to the question of the Allied debts.

On this question the solution which we believe commands the greatest support in Great Britain to-day is one that is consonant with both equity and economic possibility. Briefly, it is that Germany's payment should be reduced to a figure which should at least cover the cost of reconstruction; that the creditors of France, Belgium, and Italy should cancel their claims, which those countries would regard as written off against their own contingent claims for reparation; and that America should be content to receive only the debt due to her

from Great Britain. There is nothing very novel in this suggestion, for, except as regards the first clause, it is in fact what is happening to-day. We do not know whether France is yet prepared to agree with the rest of the world as to Germany's capacity to pay, but much water has flowed under the bridges since the treaty was signed, and we believe that in spite of the vagaries of the mark it should be possible in 1922 to do what was impossible in 1919, and fix the final reparation payments on a reasonably firm basis of statistical information.

We will not attempt to say what the final figure should be; but we agree with the bankers' committee that the German payments may be very substantial. A nation's ability to pay depends mainly on three sets of considerations:—(1) The surplus of production over the nation's consumption, including in the latter the cost of services performed by its Government. An increase in this margin may be caused by new inducements to save or by heavy taxation, causing a reduced standard of living. (2) The condition of foreign markets and international competition, on the one hand, and the possibility of expanding export industries, &c., on the other. (3) The internal political situation on which depends the possibility of the Government raising the required amount by taxation. In respect of the first two points, pre-war conditions are the only safe basis from which the discussion can proceed. Before the war Germany's export of capital was much less than that of Great Britain, her total foreign holdings being estimated by Helfferich at about £1,000 millions, while her annual foreign investments were probably not much more than £50 millions a year—or less than one-third of Britain's annual investments overseas. But the reason for this small figure was that Germany was employing her savings on internal development on a much greater scale than Great Britain. Her actual surplus of production over consumption was very large. According to the authority already quoted, out of a national income of £2,000 millions (40 milliard marks), over £400 millions (8 to 8½ milliard marks) were being added to the national wealth annually, apart from appreciation in the valuation of property. Under post-war conditions, provided the currency is stabilised, a similar surplus, which would normally take the form of new houses, railways, plant, &c., will emerge, and there is no reason why a substantial portion of it should not be diverted to the reconstruction of France on the one side, and of Russia on the other. The 10 per cent. loss of national income due to alienated territory is a permanent deduction from Germany's pre-war income; but if we may assume that gold prices remain at not less than 50 per cent. above pre-war figures, it is by no means out of the way to assume that after a few years Germany could build up a production surplus larger than before the war, and that out of this an added export surplus of £100 millions (gold)—or £66 millions at pre-war prices—is possible. Whether this additional export would create undue depression in competing countries depends on the form it took. It is only a reasonable solution if methods of export can be found which do not involve a cut-throat competition by means of depreciated exchange. The internal budget problem has been temporarily complicated by handing over to the central Government the task of collecting the revenue hitherto collected by the separate States, and the financial administration is making heavy weather over it. But these administrative difficulties need only be temporary.

On the other hand, the position of France even before the war was very different. Though exporting a larger amount of capital than Germany, she was adding to her wealth at a much slower rate. Between 1892 and 1908 the average increase in wealth was only at the rate of £100 millions a year. In the war her man power was proportionately reduced more than any other belligerent, and though this is to some extent compensated in Alsace and Lorraine, France cannot anticipate the same growth of surplus wealth as is likely to result from the activities of the much larger industrial population and material resources of Germany. France, like Germany, has lost a great part of her overseas investments, and will be quite unable to replace them if her whole savings are to be spent on reconstruction. We do not believe that in

practice it will be possible for Germany to do more than restore to France and Belgium the devastation she has wrought, and it is unthinkable that France's wealthier Allies would call upon her for payment of a penny piece until this is made good.

There remains the debt of Great Britain to the United States of America, which we think can and should be paid. Two conditions would greatly facilitate payment, viz., that prices should remain at about their present level above pre-war—since our Budget problem, with its enormous items for debts and pensions, would become difficult in the extreme if we were to return to pre-war prices; and, secondly, that American prices should also settle at a similar figure—for this would enable the dollar exchange to reach and be held at par, and if this is not done we shall have to collect more pounds sterling to pay our dollar debt. Granted these conditions, and if we may also assume that the period of payment will be prolonged, we could discharge our liability of £860 millions (at par) in 20 years by a payment of £68 millions a year, or in 30 years by £56 millions a year. If events prove that Britain's industrial standing in the world has not been permanently injured, this is not impossible for a country which was investing abroad before the war at the rate of £170 millions a year—which would equal £300 millions at to-day's prices—provided always that the countries of the world do not cramp our activities by restrictions on our shipping, on our trade and on our commercial enterprises.

But is it fair that Great Britain should forgive both her Allied and ex-enemy debtors without asking that her debts be forgiven? On this question we must start from the standpoint of those American publicists who say that the war was not America's business in the same sense that it was Europe's concern. The number of Americans who have a cosmopolitan outlook by reason of political, economical, or personal interests is very small, and no amount of theorising can reduce the distance between San Francisco and Berlin. In a hundred years' time, when space has been further obliterated and the world has found the true balance between nationalism and internationalism, it may be that a world-wide policing operation, such as the Great War, will be paid for by the nations on the basis of their respective wealth, which means that America would be the greatest contributor. But if we regard the war, as we must, as primarily Europe's affair, America may reasonably ask for some repayment of advances, which covered not merely munition supplies and war stores, but food for our civil population. For the taxpayer this policy, so quixotic on the surface, would really be the best possible course, for nothing will repay him so well as a settlement of the prevailing uncertainty in Europe followed by trade recovery at home.

When we examine the prospects of America falling in with these views about the debts of the Continental countries, we have to confess that those who have a right to speak on the state of American opinion are far from hopeful, and though there is a greater appreciation of Europe's difficulties, we are warned that it will take a long time before Congress is ready to accept the modifications which American financiers recognise to be necessary. Much will perhaps depend upon the progress of American trade. If the internal revival which is going on continues without a hitch, it is hardly to be expected that European affairs will figure much in the public mind; but if the recovery fails to come up to present expectation owing to the lack of elasticity in foreign trade, and if the producer of raw produce and other exports is forced to ask himself the reasons for continued world depression, it is possible that opinion may change at a very rapid rate. The American politician to-day is uncertain what line to take on this question, and his attitude will be determined by the reaction of economics on public opinion. There are, perhaps, times when nations, like individuals, may follow the biblical injunction to lend without hoping for any return, but in the present case the policy we have suggested fortunately does not depend wholly or even mainly upon moral considerations. Its ultimate adoption, in our opinion, is assured in both countries merely as a matter of business.

THE MONETARY HALF-YEAR.

DURING the half-year that ended yesterday, the value of money, in the Money market sense of the phrase, has made steady progress downwards, its course being marked by three reductions in Bank rate. The official rate began the half-year at 5 per cent., was lowered to 4½ per cent. on February 16th, to 4 per cent. on April 13th, and to 3½ per cent. on June 15th. The movement to 4 per cent. on April 13th, the Thursday before Easter, was doubly interesting, because it took the market by surprise, and also because it broke away from the principle which was believed to have been cherished by the Bank of England Court that Bank rate in London must not be below the New York Federal Reserve Board's re-discount rate. The reason for this policy was said to be that since London is now, as compared with America, a debtor country, it was not in accordance with the fitness of things that money should be cheaper here than on the other side of the Atlantic. This principle had, however, for some time been set at naught by the movement of market discount rates, which had gone considerably below those current in America, and our readers need hardly be reminded that market rates of discount are much more effective than Bank rate in influencing movements of exchange. The declines in Bank rate were followed *pari passu* by the deposit rates published by the banks, which have kept step throughout the half-year 2 per cent. below the official level. When Bank rate was at 5 per cent., this wide difference was perhaps easily defensible. With Bank rate at 3½ per cent., depositors are naturally inclined to remind themselves that before the war the deposit rates of the banks were normally only 1½ per cent. below Bank rate. The discount houses' deposit rates also kept pace evenly with Bank rate. The downward movement in the official and unofficial value of short loans has been general all over the world in places where such things as Bank rates are known. During the half-year the Indian Bank rate was advanced by 1 per cent. on February 16th to 8 per cent., but it was subsequently reduced on April 27th to 7 per cent., and on June 1st to 6 per cent. Otherwise movements have all been downward, and the following table shows how general they have been, and that London now shares with Switzerland the distinction of being officially the cheapest Money market.

CHANGES IN FOREIGN BANK RATES DURING the FIRST HALF-YEAR 1922.

It need hardly be said that this downward movement in the price of short money has been almost entirely due to acute trade depression, accompanied, and to a certain extent caused, by continued political uncertainty and the failure of the ruling powers to arrive at any business-like settlement with regard to German reparations and inter-allied indebtedness. Slack trade and lower prices of commodities meant the release of a considerable amount of money which had been used for financing trade commitments, and so affected both the price of short loan and consequently the market discount in Lombard Street and also prices of securities, especially of the gilt-edged class, dealt in on the Stock Exchange. Since, by the reform carried out in the first half-year of 1921, the Treasury had put the responsibility of fixing the price of

Treasury bills in the hands of the market by putting them up for tender, the influence of cheap money told rapidly on the rates at which Treasuries were placed, and so, as was inevitable, affected market rates of discount, which have fluctuated throughout the period within about ½ per cent. of the rates current for Treasury bills. During the past half-year an interesting new departure was made by Treasury bonds being also put up for tender at the same time as Treasury bills, though their sale was stopped for a time so as not to interfere with a conversion operation which the Government had in hand during the last week of April and the first three weeks of May. The following table shows the average rate at which Treasury bills were allotted during the half-year and the price secured by the Government for its offerings of Treasury bonds, bearing a rate first of 5 per cent. and afterwards of 4½ per cent.

(*) Including 4½ % Treasury Bonds.

(†) Including 5 % Treasury Bonds.

By means of these sales of Treasury bonds, the Government has been able to effect a considerable reduction in the amount of the floating debt. There is, on theoretical grounds, something to be said for this change in the condition of the debt, but it is a somewhat costly process, since 5 per cent. and 4½ per cent. has been paid for Treasury bonds, the proceeds of which have been used to eliminate Treasury bills which have been current at much lower rates. One of the features of the half-year was the skill with which the Treasury and the Bank of England handled the financing of the big interest payment on War Loan due on June 1st. The Market had anticipated that most of the sum necessary would have to be produced by the creation of Ways and Means advances from the Bank of England, but, in fact, the greater part of it was raised by sales of Treasury bills, so that the Government was able to borrow the interest, not from the Bank of England, but from other lenders, and consequently avoided the inflation and disturbance caused by large additions to the Government securities held by the Bank of England. The following table shows the position of the floating debt at the end of the half-year:—

	December 31, 1921.	March 31, 1922.	June 30, 1922.
Bank of England Advances..	£ 20,000,000	None	£ 40,000,000
Public Department Advances	180,034,000	147,301,500	164,837,500
Treasury Bills	1,059,806,000	882,219,000	760,525,000
	1,259,840,000	1,029,520,500	965,362,500

In the discount market, the half-year has been uninteresting and not over profitable. In fact, it has contained several periods in which bill brokers have complained that the force of circumstances was compelling them to discount bills at rates which were below the average cost of the money which they had to borrow to finance them. At the same time the market has been largely free from acute disturbance and stringency such as often marks

the turn of the March quarter, the Easter demand for holiday currency, and the turn of the half-year at the end of June. The following table shows the daily averages for discount rates and money rates during the first half of this year and the previous four years.

DAILY AVERAGE for FIRST HALF-YEAR.

Margin	0 3 8	0 4 7	0 7 5	0 11 2	0 10 11

During the period under review, the outstanding volume of currency notes has declined from £325,584,000 on December 28, 1921, to £295,374,000 on June 29, 1922, and the Bank of England's note circulation from £126,520,000 to £123,048,000. This deflation in the matter of legal tender currency has been due, of course, to trade depression which has continued throughout the half-year, although there are hopeful signs of improvement in some quarters. As a matter of interest, it may be noted that the Treasury has resumed the practice of placing Bank of England notes in the currency note reserve, additions of £100,000 having been made in the weeks ended June 14th and June 21st. No change has been made in the gold backing, but an increase of a million in the silver held in the currency reserve was shown in the return for the week ended June 8th. The meaning of this latter movement is merely that silver has been, like currency notes, returning from circulation, and the currency reserve is a convenient place for its lodgment until trade revival causes the circulation of subsidiary coinage to expand again.

The following table gives the principal movements in exchange:—

Centre.	Method of Quoting.	Par Level.	Rate, Dec. 31, 1920.	Rate, Dec. 31, 1921.	Rate, June 30, 1922.
Paris.....	Francs to £1	25.22½	59.72.77	51.70.75	52.77.82
Berlin.....	Marks to £1	20.45	257.259	765.770	1654.1658

Amsterdam.....	Florins to £1	12.107	11.26.28	11.381.393	11.47.48
Copenhagen.....	Kroner to £1	23.15.20	20.95.21.00	20.95.21.00	20.57.60
Rome.....	Lire to £1	25.22½	1014.102	964.964	94.944
Switzerland.....	Francs to £1	25.22½	23.15.20	21.60.62	23.96
Madrid.....	Pesetas to £1	25.22½	26.44.49	28.12.16	28.31.34
Lisbon.....	Escudos to £1	25.22½	63.7	42.4	32.4
New York.....	Dollars to £1	4.864	3.54.54½	4.21.21½	4.41½
Buenos Aires.....	Pence to dollars	47.58	51.51.51½	44½	44½
Rio de Janeiro.....	Pence to dollars	18	94½	73	73
Montevideo.....	Pence to dollars	51	49½.50½	41½	43½
Valparaiso.....	Dollars to £1	13.33	10 to 10 gold	40.10	35.00
Calcutta.....	Ster. to rupee	15.84	1/4	1/4	1/3½.14
Hong Kong.....	Ster. to dollar	2/2.2½	2/7½	2/7½	2/7½
Shanghai.....	Ster. to tael	4/1.24	3/64	3/7.7½	3/7.7½
Yokohama.....	Ster. to yen	2/8.8½	2/3½	2/3½	2/2½.8

It will be seen from the above table that the value of sterling has shown a fairly general improvement, the most important advance being that in the rate quoted for it in New York. This quotation passed the \$4.50 line early in June, and the significance of this movement was discussed in the *Economist* of June 10th. Since then there has been some relapse, firstly, owing to the decision of the Bankers' Committee, discussed in the *Economist* of June 17th, to the effect that it was not possible to consider the question of an international loan to Germany as long as the French representative on the Reparations Commission refused to agree to the discussion of any variations of the reparations terms as stated in the Allied ultimatum of May, 1921, and afterwards, owing to the news of the murder of Dr Rathenau on June 24th. These influences also caused very severe depression in the value of the German mark, and it will also be noted that the Austrian crown has fallen headlong in the course of the half-year from 11,000 to 73,500 to the £, having at one time touched 105,000. On balance there has been little alteration in the value of the franc as measured in sterling, while Italian currency shows some improvement. The price of gold fluctuated as usual with the variations in the New York exchange, and has declined from 98s 4d per ounce on January 5th to 93s 7d on June 30th.

RAILWAY COMMODITY STATISTICS.

(FROM A CORRESPONDENT.)

THE Ministry of Transport has just published a folio of 360 pages of closely printed statistics, giving a mass of detail as to 50 or 60 selected commodities conveyed on the railways of Great Britain during given monthly periods, their volume, the average distances they were carried, and the average rate which was charged. The price of the book is 30s. Probably, therefore, outside the railway companies' offices, the purchasers will be but few. And yet there are few business men who might not spend the price with advantage, for it throws a flood of new light, not only directly on railways, but indirectly on general business in various directions.

We are often told, for instance, that railway rates, and especially the rates now current, are unreasonably high. Now for the first time we can get a good idea of the ratio of the railway charge for carriage to the value of the article carried. Let us take a few instances:—

Iron and steel plates, now quoted at about £10 a ton, were hauled an average distance rather less than 65½ miles at an average rate of 2.40d, say 13s per ton.

Wheat, worth, say, £12 a ton, was hauled an average distance of 55 miles at an average charge of 14s per ton.

In other words, on these typical low-class commodities the railway rate seems to be something like 6 per cent. of their value. When we come to more valuable commodities, not only is the rate per mile higher, but the average haul is longer; and yet the percentage of rate to value is far lower. Groceries in the No. II. list, for instance, which include articles like bacon, coffee, cocoa, can hardly have a less average value than 11d per pound, say £100 per ton. The average rate is 5d per ton mile, which, for the average haul of 113 miles, is, say, 47s per ton. Or, again, take meat. The public pays, let us say, £100 per ton, which would correspond to an average price of about 11d per lb. The railways carry it an average distance of 153 miles at an average rate of 5d per ton mile, say, £3 3s 9d per ton.

These rate statistics have, however, when examined in detail, a much more than general interest. They will be constantly referred to in future before the Railway Rates Tribunal, both by the applicants who desire to show by comparison that their own rates are unreasonably high, and by the Tribunal itself, which in fixing its new standard rates will undoubtedly endeavour to redress as far as possible the startling inequalities that can be found on every page. One would have supposed, for instance, that the rate per mile on any commodity would decrease more or less regularly as the distances increase. And this proves fairly true when we look at the rates for Great Britain as a whole. But on individual companies the variations are remarkable. Take, for example, the case of sand. For distances in groups of 10 miles from 50 to 100 the average rates per ton mile are, for Great Britain as a whole, as follows:—1.87d, 1.72d, 1.54d, 1.45d, 1.22d. On the South-Western the rate for 50 to 60 mile distances is 1.93d; between 60 and 70 miles it rises to 2.13d, and between 80 and 90 miles it rises again to 2.93d. Similarly, on the South-Eastern, for distances from 50 to 80 miles it gradually drops from 2.03d to 1.56d; but between 90 and 100 miles it jumps up sharply to 2.64d. Similar instances could be picked out by the dozen on any page. There is probably no general explanation. The lower rates for the higher distances may in some cases be due to exceptional rates. But this explanation cannot cover cases where the quantities carried at the disproportionately low rates are, as they often are, quite trifling. In other cases the higher rate may be due to the fact that the traffic passed over the line of more than one company, which normally involves a higher rate per mile, for it should be noted that the traffic entered under the head of a particular railway is traffic originating on that railway and not traffic confined to it.

It does not seem easy to obtain from these figures any general impression as to whether the rates of one company are substantially lower or higher than that of any other. The rates on a given commodity vary very greatly from one company to another; but while one company

may be at the top of a list in one case, it may be at the bottom in another. But a casual perusal does show very remarkable discrepancies. Take, for example, building stone carried an average distance of 140 to 150 miles. Over the country as a whole the rate is 1.30d per ton mile; but while on the South-Western it falls as low as 1.17d, on the North-Eastern and the Great Northern it rises as high as 2.49d. Between 150 and 200 miles the average rate for all England jumps to 1.84d; the individual companies' charges range from 1.57d on the Lancashire and Yorkshire to 4.29d on the North Staffordshire, and 9.39d on the London and Brighton. The scales of this last company are so remarkable that one wonders whether the figures are correct. To charge 1.71d per ton mile for a distance of 42 miles, 2.44d for 43 miles, 2.85d for 47 miles, and 2.50d for 48 miles seems, to say the least of it, peculiar. In the highly organised and localised trades, on the other hand, the rates are evidently accurately adjusted to distance. For cotton yarn, for instance, the bulk of which is carried on the Lancashire and Yorkshire, the rates move steadily and symmetrically downwards as the mileage increases. But in these days when one hears so much of the railways losing their traffic to the roads, one would like to know why one consignor sends six tons of yarn on the railway for one mile at a charge of 16s 8d per mile, while other consignors send 24 tons two miles at a charge of 8s 9d per mile, and other consignors 24 more tons three miles at a cost of 5s 6d per mile.

But it is not profitable to take further thimblefuls out of this vast reservoir. We welcome the publication as a valuable instance of the efforts that the Ministry of Transport is making to enlighten not only the public but the railwaymen themselves as to how the companies earn their money, what services they render to the public in return, and what they spend in the course of rendering it. We cannot believe that any railwayman will peruse the volume with complacency. These sporadic rates may be valuable as evidence of the zeal with which the worshippers of the great goddess, Rule of Thumb, make offerings at her shrine. But from no other point of view can they be regarded as admirable. The task of the Rates Tribunal in endeavouring to introduce some rudiments of order into this welter of confusion is not one for which they are to be envied. It is evident that they must construct their new standard rates on some logical principle, and yet it is equally evident that levelling cannot be all downwards; that the traders whose rates are lowered in consequence of the revision will lie low and say nothing, while every trader whose rate is raised will be loud in his protestations.

"SHELL" TRANSPORT AND TRADING COMPANY.

ORIGINALLY formed in 1897 to carry on the business of transporters of illuminating oils in India and the Far East, the Shell Transport and Trading Company has now become a holding company, controlling by its shareholdings an enormous number of subsidiary oil undertakings. In 1907 the company entered into an arrangement with the Royal Dutch Petroleum Company, two new companies being formed—the Anglo-Saxon Petroleum Company, registered in England with a capital of £25 millions, and the Bataafsche Petroleum Maatschappij, registered in Holland with a capital of 300 million florins. The Royal Dutch Company holds 60 per cent. of the capital of both companies, and the Shell Company 40 per cent. At the same time the Royal Dutch Company acquired 500,000 ordinary shares at 30s each from shareholders in the Shell Company. By majority holdings or by a management agreement the Royal Dutch and Shell companies control, jointly or severally, a large number of oil undertakings, the principal being the Mexican Eagle Oil Company. The list given in the Oil and Petroleum Manual includes seven companies in Russia, six in the United States, five in Mexico, four in Venezuela, and two in Roumania. Numerous other interests are held, including an extensive fleet operated by the Anglo-Saxon Petroleum Company and two Dutch companies.

The very rapid growth of the Shell Company may perhaps be shown most clearly by the following table, which summarises the last twelve balance-sheets:—

	Ordinary Capital.	Pre-ference Capital.	Reserves and Un-divided Profits.	Shares in Sundry Com-panies.	Invest-ments.	Cash.	Total Assets.
1910.....	£ 2,500,000	£ 1,000,000	£ 1,857,322	4,017,822	76,616	400,809	5,380,076
1911.....	2,750,000	1,500,000	1,846,236	4,267,822	404,685	215,389	6,115,032
1912.....	3,500,000	1,500,000	4,158,944	6,867,973	933,227	1,163,317	9,894,209
1913.....	4,047,610	2,000,000	5,465,847	7,156,206	820,003	1,183,467	11,553,515

1915.....	4,082,902	2,000,000	5,874,318	10,453,017	1,645,505	738,788	13,903,147
1916.....	4,082,902	2,000,000	5,904,400	10,666,026	1,892,112	481,068	14,038,249
1917.....	4,997,561	2,000,000	7,013,443	9,510,859	3,037,526	105,493	15,090,750
1918.....	8,039,791	2,000,000	4,975,804	11,019,820	2,764,923	137,441	15,535,863
1919.....	12,857,641	2,000,000	10,775,247	12,036,905	8,112,506	760,923	25,958,435
1920.....	19,321,296	2,000,000	13,795,042	16,588,461	13,812,051	122,713	35,311,702
1921.....	19,365,144	2,000,000	12,420,010	20,256,603	6,820,359	2,338,771	34,338,771

Shares in sundry companies are taken at cost or under, and the steady growth in this item has approximately kept pace with the increase in the paid-up ordinary capital. In 1912 ordinary shares were issued to holders at the rate of two shares for every 11 held at 65s a share, the lowest market quotation for that year being 79s 6d. In 1913 two shares for every 19 were issued to shareholders at 66s, the lowest market price being 95s. In 1917 one share for every four held was issued at £1, the lowest market price of the year being 96s. In 1918 a free bonus share issue was made at the rate of three shares for every five held, while in each of the years 1919 and 1920 shares were issued to ordinary shareholders at £1 each at the rate of one share for every two held, the lowest price touched in the market during the period being 5s 4d. The bonus issue in 1918 was made by capitalising £3,042,230 of the reserve fund, which was thereby reduced to £1,000,000; but in the following year it was again raised to £4,000,000 by the addition of a part premium on an issue in the United States of ordinary shares. The sharp reduction in investments in 1921 results from the sale of National War Bonds, Exchequer Bonds, and Treasury Bills to the extent of nearly £7 millions. In spite of the enormous expansion in the paid-up ordinary capital, the ordinary dividend was maintained at the high level of 35 per cent., free of income-tax, from 1913 to 1920, inclusive, profits having risen from £706,000 for 1910 to £7,668,600 for 1920, with only a slight set-back in 1916. The report for the year 1921 shows the first definite relapse in profits for many years, dividends from the subsidiary companies being over £2 millions lower at £5,143,600. A summary of profits and appropriations for a number of years past is given below:—

	1913.	1916.	1917.	1918.	1919.	1920.	1921.
Balance forward	£ 265,194	£ 420,302	£ 459,384	£ 1,239,032	£ 1,136,877	£ 1,242,622	£ 2,007,588

The lower dividend of 27½ per cent., which is paid free of income-tax, absorbs £1,400,000 less, and the balance forward is increased by £62,000, but no addition is made to the reserve fund. The latter, however, stands at £5 millions, and the directors state that they "are satisfied that ample provision for depreciation has been made over the numerous companies in which they are interested, and the reports received from them enable the directors to assure the shareholders of the continued prosperity of the business. They consider that the reduction of the dividend is the soundest course in the interests of that prosperity. The company's financial position is as strong as ever, and the present dividend is paid without in any way trenching on the company's reserves, and represents the result of the working of the year under review." But apart from these comforting and optimistic remarks, the directors vouchsafe no information as to the activities and prospects of the subsidiary undertakings.

The recently issued report of the Royal Dutch Company goes further into the matter. Its dividend income dropped from 133 million florins to 92 millions, a drop for which the world-wide trade depression was

responsible, falling prices and freights being unaccompanied by a commensurate reduction in working costs. It states that the majority of the subsidiary companies showed an increase in production, and that so far as the current year is concerned, valuable concessions have been acquired in South America, while results of new borings in California have given very much better results than had been anticipated.

In February last the Shell Company made an issue of £5,000,000 7 per cent. second preference shares at par, the money being "required for the future development of the company's business, the company's present ash resources being amply sufficient to meet all its outstanding obligations." At next week's meeting the chairman will no doubt enlighten shareholders as to the direction in which new developments have been made.

THE SHIPPING OUTLOOK.

OF all the agencies which before 1914 were welding the world into a unity whose essential character the war shattered but could not destroy, steam transport was, and remains, the mightiest. Shipping is the lifeline of British industry, also of internationalism. The slump of the last two years in shipping and in shipbuilding is, in the main, a symptom of the paralysis of Europe—of its incapacity to buy.

If shipping and shipbuilding—two of our greatest pre-war industries—are only now beginning to share in the revival which is slowly reanimating in other trades, the reasons are, mainly, the European trade paralysis, and the actual excess of shipping tonnage in existence in the world. In general, shipping is peculiarly affected by those wide cyclical fluctuations of trade to which our monetary and credit system expose us, and whose evil effects have been aggravated by after-war policy. Great, perhaps excessive, stress is laid on this aspect by Mr D. H. Robertson in his excellent survey of the world's shipping position in the second *Manchester Guardian* Reconstruction Number. There is, he urges, "altogether irrespective of lapses in seaborne trade, a deep-seated tendency to fluctuations in the level of freights and discontinuity in the process of ship construction"—a tendency exemplified six times in the course of the last half-century, exaggerated in the great post-Armistice boom.

But the principal cause is the excess of tonnage, as the result partly of unprecedented efforts in the direction of replacement of tonnage lost in the war, partly of the extreme economic nationalism that followed it. As Dr Isserlis, statistician to the Chamber of Shipping of the United Kingdom, points out in an article later in the number, at the end of 1921 the total world shipping tonnage was 12½ million tons above the 1914 figure, and in March of the present year 13 million tons above.

NUMBER AND GROSS TONNAGE OF SEAGOING MERCHANT VESSELS, STEAM, MOTOR, AND SAIL (OF 100 GROSS AND UPWARDS), BELONGING TO THE UNITED KINGDOM, THE UNITED STATES, AND THE WORLD, AS RECORDED IN LLOYD'S REGISTER BOOK FOR JUNE 30, 1914, AND 1921.

* Excluding Great Lakes tonnage. † Converted to gross tons from net figures given in Lloyd's Register Book.

The outstanding features in this table are, of course, first, the huge increase in world tonnage; second, the fact that the United Kingdom's total is practically what it was in 1914; third, the stupendous increase in the tonnage of the United States.

The main cause of the shipping slump is, plainly, this actual plethora in tonnage. Mr Robertson points out

that while in 1913 the world's shipbuilding capacity was 7.1 per cent. of the tonnage in existence, in 1919 it was 14 per cent., and on this comments: "It is obvious that a shipbuilding capacity which is adequate for replacing exceptional losses must become grossly excessive as a permanent source of progressive addition to the world's supply of ships, and that there can never have been any ground for supposing that the rate of shipbuilding activity which prevailed in 1919 could be maintained."

The major factors in the huge increase in the world's shipping tonnage, to a figure more than adequate to handle world trade on a pre-war scale, and grossly excessive for its present shrunken proportions, were mainly three. First was the enormous shipbuilding programme of the United States; on the whole of this the reader should be referred to the brilliant survey, in this same number, by Mr H. Parker Willis. Second, the national replacement programmes such as that of the French Government. "The tonnage under the French flag has, in the last four years, recovered its pre-war standard, and quickly exceeded it, having at the present time reached 3,200,000 tons on round figures." In the reconstruction of the French fleet British yards have played an important part. Under the Clémentel-MacLay Agreement, 90 vessels, with a gross aggregate tonnage of 377,000, on February 20, 1922, 16 units of these, representing 91,800 tons, still remained to be delivered. Moreover, French shipowners ordered in Great Britain 12 vessels of about 81,400 tons displacement, of which only two, representing 13,000 tons, have been delivered up to the present. This brings the total number of vessels ordered from British shipyards since the war up to 102 vessels, representing 458,500 tons. Third, must be reckoned such measures as the embargo on the sale of the ships, compulsorily transferred by the German Government to the Allies under the Peace Treaty, to German or other foreign owners. This embargo continued up to June last. Most of the million and a-half tons of this shipping was transferred to the British register; none was permitted to be resold to German or other foreign owners until the middle of last year. The effect of this restriction and of the general one on the sale of British tonnage abroad up to August last has been to stimulate foreign shipbuilding, and so to increase the world output irrespective of world need. The taking over of the German fleet, in any event, is compelling Germany, despite shrunken resources, to start a rebuilding programme. According to Dr Cuno, Germany's gross tonnage, before the war, of 5,459,000, has now, under war losses and the Treaty, dwindled to 400,000—"a miserable remainder which consists entirely of small and very small coastal vessels, and does not contain one ship built expressly for overseas traffic."

On the other hand, although even if wooden and sailing shipping be excluded, there is in sea-going steel and iron steam and motor tonnage an increase between 1914 and 1921 of 27.5 per cent., and although most of the ships completed in the last few years are designed for the carriage of cargoes; there is to be set against this the fact that 4.5 million tons, or 8.2 per cent. of the world's effective fleet, was in 1921 specialised for the transport of oil in bulk, and is thus removed from the general market. Again, during the war and the Armistice, an abnormally large proportion of old ships was retained in service; in the case of the United States the proportion that will have to be scrapped under this and other heads is so large that it is estimated that America will not actually have more than 5 or 6 million tons equipped for competition on the world market, as against a nominal 12 millions.

Now, at last, there are signs of recovery—at all events so far as British shipping is concerned—due, in the first instance, to the gradual improvement in coal exports, which in the closing months of last year took a leap upward and have not since seriously relapsed. Reductions in manufacturing costs at home, and the rise of German prices (e.g., for repairs) to the world level are also helping. Mr Robertson thinks that "signs of a genuine improvement in demand for sea transport can be described." As it is, the paralysis of certain European centres of production has, temporarily at any rate, been advantageous to the British shipper, who has carried wheat from Australia to Europe that might have been supplied

via the Black Sea; sugar from Cuba that might have come from Germany, and so on. In the same way for various reasons British coal and steel is now being exported to Germany. Any such special and temporary advantages as may accrue to British shipping from the general distress are, however, overridden by the broad fact that large imports of raw materials are the condition precedent to a British export and manufacturing boom. "One of the first signs of trade revival should be such a recovery in the demand for sea transport as seems to be now in progress, if only so far on a moderate scale."

THE HALF-YEAR'S NEW CAPITAL.

THE June quarter, although not quite so prolific as the first quarter of the year, has produced a formidable total of new capital issues in the London market. For the half-year, the total of £448½ millions defeats all records, if the years 1917 and 1918, with their great war loan operations, be excepted. It must, however, be remembered that this year also a predominant part has been played by British Government borrowings—a fact that is made plain in a subsequent table. Totals raised in each quarter since the beginning of 1910 are shown in our first table:—

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	165,567,100	..	..	..

Our calculations do not include Treasury bills or Ways and Means advances. This is an important fact to remember; for while, as the next table shows, the British Government has borrowed £304 millions in the past half-year, the amount of Treasury bills outstanding has, in the same period, been reduced by £250 millions, from £1,060 millions to £810 millions. The Treasury has taken full advantage of the strong investment demand which developed last autumn and continued through most of the past half-year to replace a large slice of the floating debt by securities of larger currency, while conversion offers to holders of Government securities have been so successful that the urgency of a large funding operation has passed for the time being. It may be explained, in passing, that conversion operations and loans issued to replace maturing obligations find no place in our totals, which include only new money. British Government borrowings for the two quarters were made up as follows:—

March Quarter.	£	June Quarter.	£
National Savings Certificates (net sales)	27,120,000	23,498,000	
Local Loans	17,100,000	5 % Treasury Bonds	57,478,500
5 % Treasury Bonds	115,106,865	4½ % Treasury Bonds	11,213,800
5 % Treasury Bonds	52,566,223	5½ % Treasury Bonds	175,475
	211,893,098		92,365,775

Towards the end of the March quarter sales of savings certificates were stimulated by the announcement of a raising of the price from 15s 6d to 16s, as from April 1st; and as the proceeds of sales take a fortnight or three weeks to appear in the official returns, the rush to make use of the last opportunity for obtaining the more favourable terms affects the figures for the June quarter also. In fact, the returns for the first week in April showed net sales of no less than £18½ millions; under the higher terms sales have fallen off sharply.

If British Government borrowings are deducted from the totals of new issues, it will be found that other borrowers absorbed about £74 millions in the March

quarter, and about £70 millions in the June quarter. These borrowers and the extent of their activities are classified below:—

Description.	Total, First Half-year, 1921.	First Quarter, 1922.	Second Quarter, 1922.	Total, First Half-year, 1922.
	£	£	£	£
British Government loans	20,067,000	211,893,100	92,365,800	304,258,900

Banks and insurance	2,052,000	920,700	1,950,000	2,870,700
Miscellaneous	1,171,100	1,569,500	2,324,100	3,893,600
	128,574,500	286,207,100	162,567,100	448,774,200

Colonial Governments have again been very active, taking £25 millions in the past quarter and £41½ millions in the half-year. Of the June quarter's total, the Government of India accounted for nearly one-half, with a 5½ per cent. loan of £12,500,000 at 9½, other Colonial borrowers being Western Australia, New Zealand, Straits Settlements, British Guiana, and New South Wales. Foreign Governments were represented in the market during the June quarter by Czechoslovakia, with an issue of £2,800,000 at 8 per cent. sterling bonds at 96½, and Brazil, with £7,000,000 7½ per cent. stock at 97. No British municipalities appeared in the market in the past quarter, but Foreign Municipalities were represented by the Associated Municipalities of Denmark and the City of Greater Prague, the former issuing £2,000,000 5 per cent. bonds at 93½, and the latter £1,500,000 7½ per cent. stock at 92½. Of Colonial Municipalities, the City of Wellington and the Port of Calcutta floated loans. British railway issues of the past quarter include one by the Metropolitan, and the two underground issues this week with Government guarantee under the Trade Facilities Act.

Among industrial companies, there have been few very large issues in the past quarter. In March, however, Lever Brothers issued £4,000,000 5 per cent. debenture stock at 92½, while the Consett Iron Company in the same month put out £1,500,000 6 per cent. debentures at 99. The shipping group has been notable for two French flotations by the Chargeurs Réunis and the Compagnie Générale Transatlantique, the former offering £1,000,000 and the latter £1,500,000 6½ per cent. sterling bonds at 92½. The only banks entering the market during the past quarter were the National Bank of New Zealand, the Bank of New South Wales, and the British Trade Corporation.

A comparison of the geographical distribution of the capital raised in the past half-year with the records of the last two years and the last three pre-war years is given below:—

DESTINATION OF NEW CAPITAL.

	First Half of Years.					
	1911.	1912.	1913.	1920.	1921.	1922.
	£	£	£	£	£	£
United Kingdom.....	16,677,000	24,159,400	20,324,400	207,742,400	70,241,000	348,703,300
British Possessions	35,576,800	27,932,200	43,002,600	21,541,100	37,568,600	49,499,300
Foreign countries	65,230,000	58,262,000	57,032,600	3,822,700	20,764,900	50,571,600
Total	117,483,800	110,353,600	120,359,600	233,106,200	128,574,500	448,774,200

If British Government borrowings are deducted from the total, it will be seen that foreign countries and British Possessions each took round about £50 millions, as compared with about £44 millions for the Home destination. Indeed, the half-year has seen a marked increase in the activity of Dominion, Colonial, and foreign borrowers in the London market.

Two other features of the half-year in the new capital market call for special notice. One was the acute development of the process of "stagging," which caused the lists of many of the more attractive issues to be closed within a few hours. For a considerable portion of the period public absorption of new scrip was on a large enough scale to make the process generally profitable. But as the half-year drew towards a close the experience of "stags" became less fortunate. The other feature was the decline in the rates of interest offered. Bank rate, it will be remembered, opened the year at 5 per cent., and by three stages fell to 3½ per cent. The New South Wales Government, who in January had borrowed on terms of 6 per cent. at 97, floated their new loan in May on the basis of 4½ per cent. at 95. Soon afterwards the Straits Settlements Government offered the same terms, but both borrowers seem to have followed the trend of money rates rather faster than the market cared about, for in each case a very high percentage of the loan was left on the underwriters' hands. The early part of June saw a comparative lull in new borrowing, but in the closing days of the half-year a resumption of activity took place, and a considerable rush is anticipated of borrowers eager to find accommodation before the holiday season sets in.

THE POSITION IN PERSIA.

In 1920 the Persian Government and the Mejliss failed to ratify the Agreement made with Great Britain in 1919 under which Persia was to receive the assistance of British expert financial and military advisers, and a loan of £2,000,000. In 1921 they definitely completed the rejection by entering into an agreement with Soviet Russia. This reversal of Persian policy was primarily due to the same sort of exaggerated nationalism as that which caused the rising of 1920 in Mesopotamia. The people feared, without reason, that the country would become a British Protectorate; but the action of the Government was stimulated by Russian bribery of high political personages and by lavish expenditure on the part of the Russian Mission. Possibly this rejection is the chief reason why the Report of the British Commercial Attaché in Teheran, just issued by the Overseas Trade Department, deals only with trade and transport, and omits politics and public finance.

The Report nevertheless indicates the financial straits of the Persian Government, and brings out very clearly the dependence of the country on British transport and British trade. Persia, like other non-European countries, is suffering severely from the high prices of necessary imports and the fall in the prices of its own products, and its sufferings are intensified by its dependence on foreign countries for almost all necessities, and even for part of its food. The import and export statistics are admittedly incomplete, because the frontiers are so extensive that much of the merchandise passing them must escape registration; but as far as they go they exhibit a permanently and increasingly adverse balance of foreign trade. In 1920-21 imports fell in value nearly 25 per cent., as compared with the figures of 1913-14, and in quantity even more, while exports, apart from petroleum and its products—which are worth more than all the rest together—went down 70 per cent. in value; and the exports in 1920-21 were only 22 per cent. of the value of the whole

foreign trade. Attempts made to redress the adverse balance by exporting silver currency and bullion have been stopped by legislation and by the Customs officials, and by the end of January, 1922, the import trade was almost at a standstill. The Mejliss has sought to mend matters by prohibiting the importation of luxuries, but these form only a small proportion of the imports, and the chief result of the prohibition has been the creation of small native industries in leather, boots and shoes, and buttons, of the cottage rather than the factory type. Exports to Russia are checked by obvious causes, and the cost of land transit southwards prevents their reaching other markets. Over 55 per cent. of the total trade, or, if that with Egypt and Mesopotamia is included, 83 per cent., is carried on with the British Empire and its dependencies. Of the existing trade routes, which the Report describes minutely, the five most important (Basra-Baghdad, Kermanshah, Bushire-Shiraz-Ispahan, the Karun River, Quetta-Sistan-Meshed, and Bandar Abbas-Kerman) have been developed by British enterprise. Of the Persian Gulf shipping, six regular lines are British, the seventh Swedish; and of the 902 steamers entering the Gulf ports in 1920-21, 863 were British. We may add that a British syndicate has in hand a scheme for railway construction, and that during the war British forces suppressed brigandage, improved the trade routes, and spent largely on supplies and transport—benefits appreciated by the people, if not by their rulers.

As to finance, the revenue in 1913-14 was approximately £1,488,000, and the deficit is known to be chronic, huge, and increasing. The taxpayer is bled, but much of the revenue fails to reach the Treasury; official salaries are irregular, and there are no pensions. Persian Ministries at present are very unstable; and the Bolshevik Mission may pervert Persian opinion, but it can give no adequate aid, and is not likely to promote native Bolshevism. We may therefore hope that Persian sympathies, aided, perhaps, by the pro-British reaction which seems to have begun in Mesopotamia, will eventually again turn towards Great Britain as the only possible source of financial assistance and of help in the reorganisation of the administrative machine.

Notes of the Week.

Mr Collins Sees It Through.—The fighting in Dublin and in other parts of Southern Ireland this week is deplorable from the point of view of loss of life, destruction of property, and the bitterness which it must leave behind it. But the public would, we believe, be better advised to bend their thoughts even more intently on the more distant implications of these events than upon the hourly news of battle progress. For many months Mr Collins has been accused of ineffective action, and his apparent inertia in the face of treachery and outrage produced an atmosphere of suspicion which thickened to grave distrust when the strange pact with De Valera was announced. The real meaning of the present disturbance is, we hope and believe, threefold. In the first place, Mr Collins has now had time to organise physical forces behind him; secondly, he sees himself fortified by the moral support of the electorate; thirdly, his recent actions display his determination to use these twin elements of strength to crush the minority of lawless rebels, to restore law and order in South Ireland, and to prove his strength to govern the country in accordance with the clear decision of the people. His difficulties, it is true, appear on the surface to be partly of his own making. Had he shown the courage of his oft-expressed opinion that the great majority of the people of Southern Ireland were behind him and the Treaty, and abjured Mr De Valera and all his works, his position might have been stronger to-day. For a colleague who regards Rory O'Connor, the rebel leader, as the salt of the earth is surely a formidable embarrassment. But it is, on the other hand, probable that the position as regards physical force made it impossible for Mr Collins to take a strong line until now. In any case, we read in this week's Dublin turmoil a proof that Mr Collins and Mr Griffiths are manfully

striving to redeem the pledge conveyed by their signature to the Treaty. The recent elections have shown that the majority of the citizens of the Free State are behind them. This being so, we believe that they will eventually triumph over the tremendous difficulties that confront them, and they are entitled to receive throughout the present crisis the patient confidence of Great Britain at this crucial moment of their struggle to bring the Free State through the maelstrom of civil strife into the calm waters of peaceful self-government.

The Finance Bill and Super-Tax Evasion.—Although the debate on the beer duty and the Chancellor's refusal of remission may have attracted more attention from the man in the street, the real importance of this week's Finance Bill discussions lay in the long and detailed consideration of the Chancellor's proposals for preventing evasion of super-tax. Clause 14 in the Finance Bill, as originally drafted—framed to stop up the loopholes by bringing private companies under the super-tax—was regarded by many members as carrying a serious threat of injustice to thousands of *bona-fide* trading companies, and Sir Robert Horne agreed to substitute a new clause designed to meet this criticism. This new clause occupied the attention of the House of Commons in Committee for many hours on Tuesday night. Both the Chancellor and Sir Harwood Banner, who was a member of the Income-tax Commission, were emphatic on the point that super-tax dodging had been largely practised by the method of forming small private companies and placing large sums to reserve, particularly since super-tax rates became heavy. The object of the new clause was to stop this practice while safeguarding the *bona-fide* business. It passed the Committee stage on three understandings:—(1) That companies thus brought under the super-tax should be exempted from Corporation Profits Tax—a concession readily made by the Treasury; (2) that the clause should operate in respect of accounts made up to April 5, 1922, or subsequently, instead of to those made up to April 5, 1921, and subsequently. This concession, it was stated, would cost the Exchequer about £400,000; (3) that in the report stage words should be inserted making it clear that the sole intention of the clause was to reach those who were attempting to evade super-tax. The question is one that bristles with technical difficulties and calls for a very astute draughtsmanship, and we sympathise with the uneasiness of members who dislike leaving it to the Special Commissioners to decide what is a "reasonable proportion" of income for a private company to distribute under any given circumstances. The wording of the Government's addition to be added at the Report stage will call for very careful scrutiny. But the Treasury are certainly bound to make an attempt to checkmate widely practised methods of tax evasion, and the task of achieving this object, while fully safeguarding the *bona-fide* company, should not prove beyond the powers of the draughtsman.

The Traffic in Honours.—The debate in the House of Lords on the alleged sale of peerages and other honours has a flavour which will commend it to a scandal-loving public. Whether the "Prices current," mentioned by the Duke of Northumberland, for a place in Burdett are correct or not we do not pretend to know—this being one of the few markets which has never been quoted in the *Economist*. Indeed, we doubt whether it ever happens, except in the rarest of cases, that transactions of this kind are ever reduced to such simple terms as the debate suggested. It is, however, certain that generous subscribers to the funds of a Government in power will find a very ready appreciation of any other little claims they may possess to recognition of their services to their country. There is only one satisfactory, but very simple, way of preventing these recurrent debates on a theme which is steadily bringing into world-wide discredit the sound British principle of rewarding national service by the awarding of social distinctions—and that is legislation, as proposed by Lord Buckmaster, compelling the publication of party funds. This reform is urgent, not for this reason alone, but also as a means of weakening the hold of the party caucus in the constituencies. A change in this direction has been begun with the great

extension of the franchise. The next step is that the natural influence of wealth should come out of its hiding places and exercise what power it may in the open.

U.S. Trade Balance and Foreign Loans.—The latest monthly circular of the National City Bank of New York contains an interesting table comparing the aggregate new foreign loans, omitting refunding operations, placed on the New York market from January 1, 1921, to March 31, 1922, with the net foreign trade balances, including gold and silver for the same period, which we reproduce below:—

	Foreign Securities Purchased in U.S.	Credit Balance Merchandise Including Gold and Silver.
1921.		
January.....	50,500,000	416,422,000
February.....	40,525,000	230,809,000
March.....	24,310,000	47,195,000
April.....	1,500,000	4,627,000
May.....	76,200,000	63,085,000
June.....	13,250,000	106,203,000
July.....	43,309,000	87,108,000
August.....	49,000,000	83,780,000
September.....	97,500,000	82,392,000
October.....	47,438,000	113,066,000
November.....	67,079,000	31,345,000
December.....	58,850,000	30,840,000
Total for year 1921..	578,460,000	1,296,872,000
1922.		
January.....	92,346,000	34,771,000
February.....	57,768,000	9,351,000
March.....	155,513,000	39,851,000
Total for 3 months..	305,627,000	83,973,000
Total 15 months....	884,087,000	1,390,845,000

In the last twelve months currencies generally have shown a marked improvement in relation to the United States dollar, which has in the main been due to the falling off in America's favourable trade balances, and the large volume of foreign loans made in the New York market. It will be seen from the table that since and including March, 1921, the aggregate of loans has more than covered the trade balance, plus the net movement of gold and silver, while for the first three months of 1922 the excess was still more pronounced. The circular points out that the most notable change has been in the case of the pound sterling, which has gained in relation to nearly all currencies, notwithstanding the slack state of British foreign trade, and proceeds: "With a revival of trade it should be easily practicable to raise the pound to par and resume gold payments. Interest payments upon the debt to the United States, however, if begun this year, will be a serious drawback, as the sum accruing is about \$200,000,000 per year." Canadian exchange has become much more favourable to Canada, to some extent because of the improvement in sterling, as Canada settles in part by that means, and perhaps even more through the influence of her borrowings in the New York market. The trade returns for April show a larger export balance, but foreign issues have continued to be abundant.

Disposal and Liquidation Commission.—In a report on the work of the Disposal and Liquidation Commission for the year 1921-22 (Cmd. 1640), Sir Howard Frank, the chairman, mentions that approximately 87 per cent. of the total quantities of stores reported as available for disposal to March 31st last have been sold. The sales of the Disposal Board since the Armistice have been as follows:—

From Armistice to March 31, 1921	£ 292,660,442
From April 1, 1921, to March 31, 1922	31,998,091
Total	324,658,533
SALES OF RAW MATERIAL ON TRADING ACCOUNTS:—	
From Armistice to March 31, 1921	278,460,303
From April 1, 1921, to March 31, 1922	671,403
SALES OF WOOL THROUGH B.A.W.R.A.:—	
From January 1, 1921, to March 31, 1922	20,890,067
	300,021,773
Grand total	624,680,306

Since April 1, 1919, the revenue statement has divided miscellaneous revenue into ordinary and special receipts,

and from that date to March 31st last the special receipts have totalled nearly £724 millions. The bulk of this total presumably consists of receipts from the Disposal Board, but it also includes a large number of small items, and also large amounts from the Ministry of Shipping, and such items as £8½ millions repaid from the Mines Department, and £20 millions from the Treasury on account of Exchange Account. There were also small amounts for contributions towards the expenses of the war, including the balance of India's £100 millions. The main function of the Disposal Board continues to be the disposal of property and stores after they have been declared by public departments as surplus to their requirements, and it is hoped that the declarations of war surpluses will be completed during the current financial year. As a result of the report of the Geddes Committee, it is anticipated that considerable additional surpluses, which are not war surpluses, will be declared during 1922-23. The Board has continued its policy of "block sales," and during the year 1921-22 applied this method to the sale of all surplus textiles, ferrous material and brass scrap, and of all the balance of surplus stores in Egypt. It is stated that the Disposal Board has taken advantage of "every opportunity to sell property and stores when reasonable offers, approximating to the market price of the day, could be obtained, thus avoiding the holding up of sales indefinitely to the detriment of trade generally for the chance of an improvement in the markets, and at the same time refusing to sacrifice public property." This is the only sound policy, but so long as large stocks of any particular commodity exist recovery and activity in the industry concerned are impossible. The accumulation of a large surplus of material after a great war may be inevitable, but it would be interesting to know what ratio the £624 millions so far received bears to the actual cost to the British taxpayer of the goods sold. The estimate for 1921-22 provided for a net expenditure of £7,600,000, but it is anticipated that when the books are closed there will be a saving of about £1,020,000 for surrender to Exchequer. The staff, which on April 1, 1920, numbered 49,956, was reduced to 7,625 on April 1, 1921, and further to 5,917 on April 1st last. Of the latter figure 4,237 are industrial staff. Wages and salaries last year took approximately £1,400,000, as against £2,634,710 for 1920-21.

Argentine Railway Rates.—At long last the President of the Argentine Republic has signed the decree authorising an increase in the rates on the Argentine Railways, important exceptions being wood, potatoes, flour, hay, livestock, building material, and urban season tickets. In his letter published last week, our Buenos Aires correspondent referred to the joint memorial addressed to the Minister of Public Works by the North-East Argentine and Entre Rios companies advising him that they would be obliged to reduce both services and personnel unless additional tariff charges were granted, and this seems to have brought matters to a head. Among the trading interests serious objection to the raising of the rates comes only from the cattle raisers, who are pressing for the maintenance of the old tariff. The announcement of the signing of the decree had a beneficial effect on stock market prices, but any benefits that will accrue will, of course, not make themselves felt in the accounts for the year 1921-22, which closed yesterday. Moreover, reports from Argentine speak of a marked falling off in the volume of cereal traffic, which will offset at least temporarily any advantages the companies may gain from the increased charges. Increases in rates have been twice sanctioned since the beginning of the war, namely, in December, 1917 and in September, 1919.

Hopes for Rubber.—Lively hopes, writes a Stock Exchange correspondent, are raised in the rubber market by the voting at the Conference of the International Association for Rubber Cultivation in the Netherlands East Indies, which was recorded last Tuesday. The Conference, which is composed of representatives from British, French, Belgian, Dutch, and other rubber-producing interests, sat to consider restriction of output with a view to restoring the industry to an economic level. A resolution to seek

the Dutch Government's assistance was carried by 383 votes to 125 votes, and a committee was promptly appointed to open negotiations with the Dutch Government in order to study the best means for applying such help as might be granted. This is read in London as implying that the question of restriction of production upon the Dutch-owned estates, in addition to those controlled by British and other interests, will be carefully and sympathetically examined by the Dutch Government. The result of the voting came, by singular coincidence, less than a fortnight after it had been pointed out here (*Economist*, June 17th, page 1241) that the Stock Exchange was discussing a scheme for restriction said to have been placed in front of the Dutch Government. "The existing state of affairs is one, therefore," our correspondent continued, "of remarkable interest to all concerned with rubber. If the Dutch Government consents to come into line with the proposals outlined by the British, there might, and probably would, be a complete change in the outlook for the rubber industry. For an agreed restriction of output, by whatever means secured, should change the whole aspect." This is what has actually occurred. From being plunged into a slough of despond and stagnation, the rubber market of the Stock Exchange has suddenly awakened to comparative activity and liveliness. Prices during the past few days have risen with a rush. A good deal of the marking-up process was purely automatic. Buyers who came in expecting to pick up the shares at the levels of the previous night were, perhaps, more disappointed than astonished to find themselves unable to deal at anything like such figures. The mere casting of a gleam of light upon the rubber situation served to bring about numbers of cancellations of selling orders, and, with speculative buyers anxious to get hold of shares, prices rose with a run. It is necessary to point out that, although the outlook is certainly much brighter, it will not do to count the chickens before they are hatched. In other words, everything depends at the moment upon the manner in which the Dutch Government will receive the resolution of the Association, to which reference has just been made. The votes in favour, to the number of 383, may have been cast mainly by British, French, and Belgians interested in Dutch properties belonging to companies connected with their own people. It is not yet announced, at the time of writing, what proportion of Dutchmen was to be found on the side of the resolution in favour of restriction. Until this is made clear, the cautious will hesitate to attach too much importance to what may turn out to be, after all, little more than a pious expression of opinion, and one which has been breathed many times before by British and other interests outside those of the Dutch. In any case, however, it is a great point gained for the Dutch Government to have before it so substantial a majority body of opinion in favour of the policy advocated by British producers whose past efforts in the direction of curtailing production have been handicapped, if not actually thwarted, by the fact that Dutch owners of rubber estates declined to afford any support worth mentioning to the proposal for imposing a restriction upon output. The price of rubber promptly responded to the possibilities of a change in the situation, and, if the Dutch Government lends its countenance to a definite policy of restriction, there should be a further rise. The Stock Exchange market is treating the matter cautiously, though with every hope that tangible advantage will result from the present state of affairs. For, if the Dutch Government is aroused, equally with the British Government, to the necessity for taking drastic steps in order to save the rubber industry, it will be only a matter of time before the various interests are brought into something like harmonious line on the question of what may be the best steps to take for the protection and fostering of an industry which, under the policy of drift, has simply gone from bad to worse.

South-Eastern and Chatham and Dover Railways.—As a necessary preliminary to the opening of negotiations with the boards of the London, Brighton, and South Coast and London and South-Western Railway Companies regarding terms and conditions of amalgamation under the

grouping scheme laid down in the Railways Act, 1921, the respective boards of the London, Chatham, and Dover and South-Eastern Railways and the Managing Committee have entered into a provisional agreement for amalgamation, as from January 1st next. Under the terms of this agreement existing stocks will be exchanged for stocks in the new company, but, in all cases, the actual income will be unchanged. The whole of the debenture capital of the South-Eastern will be converted into one 4 per cent. debenture stock, certain of the preference stocks will be converted into one 4 per cent. consolidated preference issue, and the ordinary, preferred ordinary, and deferred ordinary will be exchanged for a similar amount in the new company, a principle which also applies in the case of the existing annuity and the remaining stocks. As regards the Chatham company, the abnormal proportion of debenture capital has made it necessary to reduce the debenture capital issued in exchange for the various debenture stocks by substituting varying proportions of 4 per cent. debenture, $4\frac{1}{2}$ per cent. guaranteed preference, and 4 per cent. consolidated preference stocks in the new company. For the Arbitration preference £27 of 5 per cent. preference, 1914, and £72 $4\frac{1}{2}$ per cent. preference, 1922, will be given, while for each £100 of the Arbitration ordinary stock £52 10s contingent ordinary stock in the new company. The following table shows the loan and share capital of the proposed new company and the proportion to be allocated the London, Chatham, and South-Eastern Railway Companies respectively:—

Description of Stocks.	Total Stocks of New Company.	South-Eastern Company's Proportion.	London Chatham & Dover Company's Proportion
	Amount of Stocks.	Amount of Stocks.	Amount of Stock.
Terminable debentures.....	£ 571,032	£ ..	£ 571,032
Annuities.....	800,000	800,000	..
Debenture stock—4 per cent.	14,662,613	9,133,113	5,529,500
Total.....	16,033,645	9,933,113	6,100,532
Preference Stocks:—			
(a) $4\frac{1}{2}$ per cent. vested	719,175	719,175	..
$4\frac{1}{2}$ per cent. cons. guaranteed ..	1,967,322	984,300	983,022
4 per cent. cons. preference....	15,396,623	10,728,048	4,668,575
(b) 4 per cent. convert. pref. (1903) ..	997,190	997,190	..
5 per cent. preference (1914) ..	2,316,388	500,000	1,816,388
5 per cent. redeem. preference ..	175,302	175,302	..
Total.....	21,572,000	14,104,015	7,467,985
(a) Cumulative.			
(b) Non-cumulative.			
NOTE.—Under the Railways Act, 1921, all the above stocks would be trustee stocks in Great Britain.			
Preference stock (1922)—			
A new stock to rank for dividend <i>pari passu</i> with ordinary stock up to a maximum of $4\frac{1}{2}$ per cent. for the year	5,715,170	..	5,715,170
Ordinary stocks—			
Undivided ordinary, preferred ordinary, and deferred ordinary (amount of each description as existing on December 31, 1922) ..	10,049,220	10,049,220	..
Contingent ordinary—			
A new stock to rank for dividend <i>pari passu</i> with ordinary stock after $4\frac{1}{2}$ per cent. per annum has been paid on the ordinary stock	5,911,123	..	5,911,123
Total.....	21,675,513	10,049,220	11,626,293
Total stocks.....	59,281,158	34,086,348	25,194,810

As the scheme will not come into operation for six months, the stocks of the existing companies will remain unaltered until the beginning of next year.

The English Wool Clip.—The English wool fairs opened on June 14th, and since then sales have been held in several of the most important districts. It is, perhaps, too early to say with certainty that a sound buying basis has been established, writes our Bradford correspondent, but one feature is very pronounced, namely, that the best and finest Down wools are making prices which users

consider to be exceptionally high. The Down wools, of course, are in a category by themselves. Just as the finest merino combing wool is in keen demand at prices nearly double those ruling before the war, so the various Downs are wanted for special purposes, and are making prices which must tend to cause disappointment to farmers who have only the lower qualities of wool to sell. It is the old story of the great disparity between fine and coarse wool. The Southdown sheep produce the finest wool grown in this country, the raw material being equal to 56-58's Bradford quality. This wool, and that grown on the other Down breeds, is of the greatest value in the hosiery trade, where soft full-handling yarns are essential. Indeed, the high prices which are being paid in the country are entirely due to the spirited competition of hosiery spinners, the majority of whom can easily outbid the ordinary merchant. Up to 21d per lb has been paid for the best Southdowns, and as the supply is limited, it seems probable that values will be well maintained. On the other hand, it is just possible that the present level of prices may induce users to give more attention to wool imported from Punta Arenas and the Falkland Islands. This raw material is becoming more and more popular in the hosiery trade, and there is no doubt that it is a serious competitor of the English Down wool. The imported South American wool ranges from 46's to 56's quality; it is usually sound in staple, gives a good clean yield, and is of a lofty character so much desired in the production of hosiery yarns. It is to be feared that growers of the strong deep classes of wool—such as Lincoln and Leicester—will experience considerable difficulty in moving their clips at what they will regard as satisfactory prices. The bulk of the wool grown in the United Kingdom ranges in quality from 40's to 48's, ignoring for the moment blackface wool, to which reference will be made later. It is in these qualities that stocks of Colonial crossbreds are so heavy. For example, at the end of last month the British Australian Wool Realisation Association held 118,038 bales of New Zealand crossbreds of 46's-50's, and 154,862 bales of 44's and below. These low crossbreds are still selling at prices well below the pre-war level, and with these huge surplus stocks in addition to those held privately, and the product of the forthcoming clip, it is obvious that demand will have to improve very considerably before values can be brought up to what may be termed an economic level. The opening up of trade with Europe is essential in order that an adequate outlet may be found for this class of raw material, and although consumption has certainly increased during the past few months, there is still a tremendous amount of leeway to make up before the position can be regarded as even approaching normal. An encouraging feature of the trade in home-grown wool is the good export demand for certain qualities. Considered merely in bulk weight, the export figures for this year are very encouraging. For the five months ended May, no less than 25,444,300 lb of British wool was shipped abroad, against 11,813,000 lb in the corresponding period of 1913. It is necessary to point out, however, that the heavy exports this year are entirely due to the keen American demand for blackface. Before the war it was generally estimated that the United States took about 75 per cent. of the blackface clip produced in this country, the raw material being used in the carpet trade. This wool is admitted free of duty under the Emergency Tariff, and in the Permanent Tariff now under consideration provision is made for what practically amounts to the free importation of carpet wools. Already this year America has taken 12,004,800 lb of British wool, against 4,190,100 lb in the first five months of 1913. The last season's blackface clip has been practically cleared, and the new clip is likely to make good prices.

Mexican Eagle Oil.—The accounts now submitted for the half-year ended December 31, 1921, by the directors of the Mexican Eagle Oil Company, Limited, show the results of the company's trading for a period of six months only, instead of one year as formerly, owing to the fact that the financial year of the company now ends at December 31st instead of June 30th as heretofore. This has been done mainly to coincide with the Mexican

Government's fiscal year. Profits on trading, as in the case of other oil companies, are considerably reduced when compared with the previous year's results. The following table shows results during the past 3½ years:—

	1919.	1920.	1921.	Half-Year Ended Dec. 31, 1921.
	\$	\$	\$	\$
Trading profit, after providing for administration expenses, interest, and interest on debentures	37,194,427	59,453,574	85,320,429	26,818,322
Forward from previous year	2,219,054	3,543,282	3,814,190	1,373,181
Transfer to field redemption and reserves accounts.....	39,413,481	2,996,856	89,134,619	28,191,501
	10,051,707	7,452,518	49,615,671	6,610,231
Provident fund	29,351,774	55,544,538	39,518,948	21,581,272
	1,000,000	1,500,000	1,500,000	500,000
Distributed in dividends	28,351,774	54,044,538	38,018,948	21,081,272
	24,808,482	50,230,349	36,645,767	19,399,142
Carried forward	3,543,282	3,814,189	1,373,181	1,682,130

The old preference share capital receives a 15 per cent. distribution, and the ordinary share capital a similar dividend for the half-year. Total reserves now stand at just over \$158½ millions. The reasons given for the falling off in profits are (a) depressed trade conditions, (b) increased working costs, and (c) decreased profits from Eagle Oil Transport Tank Steamers. The report, however, adds that "working costs in Mexico should show a considerable reduction in the current fiscal year, and with an improvement in world trade conditions, the demand for and the prices of oil products should show a steady improvement." It will be recalled that the company recently issued 7,000,000 7 per cent. first preference redeemable shares of 10 pesos each, and, of course, the annual amount required for the service of the issue will have to be taken into consideration in connection with next year's accounts.

St John del Rey.—The favourable view of the outlook taken in these columns last year on the report for 1920-21 has been fully justified by results. In 1921-22 this wonderful old gold mine—the present report is the 91st annual—not only treated an increased quantity of ore for an improved average yield, but also benefited substantially from the exceptionally favourable tendency of the exchange, the company's drafts averaging 7.87d per milreis, as against 13.7d in 1920. The gold premium, of course, continued to be a factor, although bringing in less than before. The net profit of £257,200 shows an expansion of £89,400 upon the 1920-21 result; hence the final dividend of 6½ per cent. on the ordinary (making the usual total of 10 per cent.) has been supplemented by a bonus of 1s per share. At £70,000, the sum transferred to capital works account is less than before, but reserve now gets an allocation of £30,000, raising that entry to £130,000. The directors frankly point out that the results of the current year will be adversely affected by the decline in the gold premium, and that a rise in the exchange may be anticipated; although there is the prospect of a continuance of favourable returns from the mine. Notwithstanding some delay in development, the manager is able to report the ore reserves at the enhanced total of 1,023,600 tons, equivalent to five years' supply. Twelve months ago the lode at horizon 22 had just been struck. It has proved to be 936 feet in length, and in all respects compares well with the deposit on the horizon above. The new power plant, in conjunction with the water-cooling installation, will permit the operation of the mine down to the 26th horizon, or 1,200 feet below the present deepest level. One horizon provides eighteen months' supply of ore. At current price of about 20s, cum 2s 3d dividend, the shares yield over 11 per cent. on the basis of the usual 10 per cent. dividend, and constitute a reasonable speculative holding.

Spiers and Pond.—The report of Spiers and Pond, Limited, for the year ended March 31st last, the fourth since the company was reconstructed, shows that profits have been well maintained in spite of the trade depression, and this enables the directors to repeat the dividend of

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned period of the Year ending March 31, 1923, as compared with the corresponding period of the preceding Year.

	Quarter from April 1 to June 30, 1922, compared with the corresponding Quarter of the preceding Year.			
	Quarter ending June 30, 1922.	Quarter ending June 30, 1921.	Increase.	Decrease.
Customs	£ 31,309,000	£ 28,345,000	2,964,000	
Excise	36,738,000	44,896,000		8,158,000
Motor Vehicle Duties	1,703,000	1,421,000	282,000	
Estate, &c., Duties	16,591,000	10,924,000	5,667,000	
Stamps	3,442,000	2,697,000	745,000	
Land Tax, House Duty, and Mineral Rights Duty	470,000	390,000	80,000	
Property and Income Tax (including Super-Tax)	57,433,000	63,900,000		6,467,000
Excess Profits Duties, &c.	954,000	17,114,000		16,160,000
Corporation Profits Tax	3,817,000	2,020,000	1,797,000	
Postal Service	7,650,000	7,350,000	300,000	
Telegraph Service	1,250,000	1,250,000		
Telephone Service	3,400,000	900,000	2,500,000	
Crown Lands	292,000	130,000	162,000	
Interest on Sundry Loans	1,933,461	1,954,837		21,376
Miscellaneous—				
Ordinary Receipts	13,545,736	6,868,664	6,677,072	
Special Receipts	14,637,956	14,007,884	630,072	
	195,154,153	204,168,385	21,792,144	30,806,376
			Net Decrease, £9,014,232.	

II.—An ACCOUNT showing the RECEIPTS into and ISSUES out of the EXCHEQUER in the Quarter ending June 30, 1922, as compared with the corresponding period of the preceding Year.

RECEIPTS.	Quarter ending June 30, 1922.		ISSUES.	Quarter ending June 30, 1922.

	(10 %)	(12½ %)	(12½ %)	(12½ %)
Carried forward	15,355	15,652	22,531	13,114

The paid-up ordinary capital has not been changed since the previous year, and it is to be gathered that the increase in the amount charged to the appropriation account for the ordinary dividend is a matter of adjustment of income-tax. Profits for 1921-22 include £16,822 for net rent of premises in government occupation during the war, no credit having been included in previous accounts for this item. The company has acquired a hotel at Lynton, and also the freehold of the Southampton Hotel, Surbiton, of which only the leasehold interest was previously held; since the close of the financial year a mortgage of £40,000 on the Hotel Metropole, Blackpool, has been discharged.

On Wednesday, July 5th, at 5 p.m., there will be held in the Hall of Gresham College, Basinghall street, the annual meeting of the National Movement towards a Christian Order of Industry and Commerce, a movement inaugurated a year ago "to rally men and women engaged in the administration of industry and commerce for the application of Christian principles to industrial life." The chair will be taken by Sir James Martin (chairman of Council, London Chamber of Commerce, &c.). After addresses by Mr John Murray, M.P., on "Obstacles to Industrial Peace," and by Mr Angus Watson (chairman of Angus Watson and Co., Limited, Newcastle) on "Ideals in Business," Mr Sydney Pascall, chairman of the movement, will lay before the meeting a programme, revised in the light of experience, for the furtherance of its objects.

Oversea Correspondence.

UNITED STATES.—MEXICAN DEBT AGREEMENT—JUGO-SLAVIAN LOAN—MORE RAILWAY WAGES REDUCED—MONEY EASIER.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 19.

THE conferences between the International Committee of Bankers on Mexico and Finance Minister de la Huerta ended last Friday, when a comprehensive agreement covering the matter of the Mexican Government's external debt was formally signed. The agreement will be submitted to President Obregon and to the bondholders for approval, and deposits of the various classes of securities involved will be invited in due course by the banking houses and institutions heretofore identified with Mexican Government financing. In a statement explaining the terms of settlement, Thomas W. Lamont says that the preliminary articles of the agreement recite the determination of the Mexican Government to fulfil its obligations to the full extent of its capacity, and state that the International Committee, recognising the difficulties of the situation caused by the revolution, and desiring to co-operate with the Government in promoting the full economic restoration of Mexico as rapidly as possible, "will recommend that the bondholders make substantial adjustments of their rights."

The plan of adjustment embraces the entire external Mexican Government debt, direct or guaranteed, the National Railways debt, and certain so-called internal Government debt, which is largely held outside of Mexico. The total face value of the securities involved exceeds

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000

Surplus \$25,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE.
Gresham House, Old Broad Street.
London, E.C. 2

\$500,000,000 gold, on which the interest in arrears approximates \$200,000,000.

Under the terms of the agreement relating to current interest, cash payments in varying proportions among the different bond issues are to be begun after January 2, 1923, out of a special fund as provided for in the agreement. The schedule of disbursements in general will be based on the relative values and priorities of the different issues of bonds. Scrip is to be issued and redeemed in due course for such part of the current interest that may not be paid in cash, certain funds being made available for such redemption. The special fund for current interest will be increased annually until January 1, 1928, when full service of the debt is to be resumed; the oil export taxes and a surcharge on railway gross receipts will be paid into that special fund. With respect to back interest, it is stated that all cash payments are to be waived. The matter will be arranged by the deposit, with a trustee, of "overdue coupons," against which receipts will be issued, to be amortized without interest over a certain period. That arrangement, it is pointed out, is virtually equivalent to cancellation of a part of the back interest.

The agreement provides that the railways are to be operated by private management as before the revolution, the Government to assume, by endorsement, all of the railway debt not previously guaranteed; the rights of foreclosure hitherto held by the bonds are to be suspended while the plan is being carried out, in order to protect the stock ownership of the Mexican Government and other shareholders, as well as the ultimate rights of the bondholders. To give time for full resumption of all cash obligations, all classes of bondholders are to agree to a temporary suspension of sinking fund rights during a five-year period, after which all contract clauses will again become effective.

The announcement has been received here with general satisfaction. Just what "substantial adjustments" bondholders will be asked to make the chairman's statement does not indicate; but it is believed that the agree-

ment will prove advantageous to all concerned. Mexican bonds dealt in here have lately advanced sharply. In financial circles the outcome is considered the most important step yet taken by the Republic toward setting its financial house in order, a development which, no doubt, has been deemed essential by the United States, Great Britain, France, Belgium, and Switzerland before extending recognition to the Obregon administration. The opinion is expressed that if the terms of the agreement are faithfully carried out, it will not be long before recognition is extended by those countries. Among the foreign bankers who attended the conferences were Sir William Wiseman, E. R. Peacock, of the Bank of England, and J. Chevalier, of the Banque de Paris et des Pays-Bas.

New bond issues floated in this market last week totalled about \$81,300,000, consisting of approximately \$22,000,000 industrial, \$12,000,000 railroad, and a like amount of public utility bonds, the remainder including State, municipal, and foreign issues. The largest single offering, and the one that received most attention, was the issue of \$25,000,000 40-year 8 per cent. secured external gold bonds of the Kingdom of Serbs, Croats, and Slovenes (Jugo-Slavia), representing the first external loan by the new kingdom. The bonds were offered at 95½ and interest to yield about 8.40 per cent. to investors. The bonds are non-callable for 15 years, but callable thereafter at 110 and interest, with the premium decreasing ½ per cent. annually to 101 in 1955. An annual sinking fund, beginning May 1, 1922, is provided, sufficient to retire the entire issue by maturity. The proceeds, it is understood, will be used principally to rehabilitate the country's railroad system, including the construction of a new line from Belgrade to the Adriatic. Additional foreign financing here is understood to be pending, including a loan to Cuba, the amount mentioned being \$50,000,000. The flotation of such a loan has been under consideration for several months, but has been delayed by the unsatisfactory financial and political situation in the island. The Cuban budget for the coming year has been reduced to \$54,000,000, as against \$127,000,000 last year, and the loan negotiations may be successfully concluded within the next few weeks.

Complete returns of railroad operations during April reflect to a considerable extent the effects of the coal strike. Gross earnings of all the first-class carriers amounted to \$416,868,620, compared with the March total of \$474,669,629, and were \$16,529,453, or 3.8 per cent., less than in April of 1921. Increased coal shipments in March, in anticipation of the strike, were largely responsible for the big gain in gross revenues in that month. Operating expenses in April were \$336,178,422, as against \$375,696,712 in the corresponding month of last year, representing a decrease of \$39,518,290, or about 10½ per cent., with the result that, despite the rather sharp falling off in gross earnings, net operating income totalled \$50,271,865, as against only \$29,856,640 in April, 1921. The net operating income in April was equivalent to an annual return of about 4 per cent. on the tentative property valuation of the carriers.

Another decision just rendered by the Railroad Labour Board reduces the wages of some 325,000 additional railway employees. The latest ruling, it is estimated, will mean a further cut in the annual pay-roll of the carriers of about \$27,000,000, making a total wage reduction under the three decisions lately handed down by the board, to become effective July 1, \$135,000,000 approximately. The reductions affect more than 1,000,000 employees. According to leaders of the railway unions, reports on the strike balloting thus far show an overwhelming majority in favour of a walk-out. The chief executives of the railroad brotherhoods, now taking a strike ballot, have officially notified the Railroad Labour Board that a nation-wide strike is certain if the workers vote to reject the wage cuts that are to become effective July 1st. Present indications, therefore, are that after July 1st more than 1,500,000 men (exclusive of New England textile employees) will be on strike. Nevertheless, the prospect of such a development seems to be causing remarkably little concern in railroad or business circles.

Money rates have become decidedly easier at this centre. Fixed date funds are now available at 4 per cent. for practically all periods, while 30-day loans are negotiated at 3½ per cent., as compared with 4½ to 4¾ per cent. which prevailed until recently. Call money rates on the Stock Exchange have fallen to 2¾ per cent., the lowest level reached since April, 1918, and rates for bankers' acceptances have declined to the lowest points witnessed in four years; thirty, sixty, and ninety-day bills for eligible member banks are now quoted at 3½ per cent. bid and 3 per cent. asked, as against 3¼ bid and 3½ asked a few days ago. A lowering of discount rates by at least some of the Federal Reserve Banks is confidently expected shortly, especially in view of the recent reduction in the Bank of England rate.

FRANCE.—PAYMENT IN KIND—PUBLIC WORKS AND GERMAN LABOUR—SUGGESTED BUDGET CHANGES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, June 27.

The coming into operation of the agreements arrived at between the French and German Governments for the payment of part of the reparation debt in kind—in the form of materials required for use in the devastated area—has been advanced another stage by the notification to-night that the Reparations Commission has now formally approved of the Gillet agreements. These agreements (so named after the permanent official who negotiated them on behalf of the French Government) are really an extension of and supplement to the Wiesbaden agreements negotiated between M. Loucheur and the late Dr Rathenau. The defect of the latter, for the sufferers from war losses for whose benefit they were intended, was that claimants who desired to receive payment in the form of materials were required to pass their orders through the machinery of the two Governments. By the provisions of the Gillet agreements, claimants to reparation payments in the form of materials will be able to place their orders direct with whatever German firm they prefer, and to receive delivery direct, as in an ordinary commercial transaction. The only practical difference will be that, instead of paying for the goods in cash, they will pay in reparation claim certificates, which will be handed by the German supply firm to his own Government for payment, and then credited by the French Government against an equivalent amount of reparation debt due from Germany. The question has been raised that the privilege of handling transactions of this kind shall be limited to firms carrying on business in the occupied territory, but on this point nothing has yet been settled. Apart from this, apparently, all that remains to be done to permit these agreements to come into operation is for them to be ratified by the French Parliament. This ratification is expected to be given in the near future.

It is now becoming slowly realised here that, whatever may be the outcome of the effort that is being made by the Allied Committee of Guarantees, which is now sitting in Berlin, to bring something like order out of the chaos into which German national finances have been allowed to fall, it is hopeless to expect that France will be able to obtain any appreciable sum in cash from her defeated enemy in the near future. France has already raised some 80,000,000,000 by loans of various kinds towards the cost of restoration work in the devastated area, every penny of which should have been paid by Germany, and it is estimated that this country will have to raise several additional millions annually during the next seven or eight years before her ravished departments are definitely reconstituted and again brought back to producing level. The Budget estimates for 1923 involve a deficit of something like 3,900,000,000, which must necessarily be still further swollen to the extent of the annual interest charges if further loans for reconstitution purposes have to be issued. The limit of taxation is estimated as having already been reached. It would seem, therefore, that if Germany continues to fail to make reparation payments that will leave a substantial cash surplus for France, and if the latter is unable to raise further money from her own resources, the work of recon-

stitution must be brought to a standstill for an indefinite period.

M. le Trocquer, the French Minister of Public Works, announces that the Government proposes to avail itself of its rights under Paragraph 19 of Appendix 2 to Part VIII. of the Versailles Treaty, which provides for the possibility of German labour and materials being utilised, not merely for the devastated area of France, but for all such works as are designed to enable any of the Allied or Associated Powers to develop its industrial or economic life. To this end plans have been under consideration since M. Poincaré's advent to office last January, with a view to utilising German labour and materials for the carrying out in various parts of France of a huge programme of great public works for the benefit of the country as a whole.

In determining the nature of the public works to be carried out under this scheme, the Government laid down as a basic principle that the undertakings must be of a kind that would be more or less immediately productive of revenue. The undertakings most closely corresponding to this condition were obviously the important schemes that have been under consideration for some time past with a view to the development of water power and the distribution of electricity for power and illuminating purposes. Parliamentary powers (as I stated some months ago) have already been obtained for the carrying out by the State and the various local authorities and others of an enormous scheme for the development of the Rhône, the plans involving the transformation of the river into a great inland waterway, the construction of a large number of stations for the development of electric power, and an important irrigation undertaking. With this is involved the construction of a series of great electrical transport lines, the electrification of certain portions of the French railways, and other important propositions. M. le Trocquer's programme also includes the utilisation of German labour and materials for the construction of several new lines of railways, estimated to cost 800,000,000; the Channel Tunnel (provided the British Government can be persuaded to give its assent), which it is estimated would cost 840,000,000; harbour works, involving improvements in nearly all the French ports, 3,200,000,000; internal waterways about 5,650,000,000 (of which about 40 per cent. would be labour cost, 650,000,000 cost of land, and 1,000,000,000 cost of materials, &c.). The estimated cost of the whole programme is 18,419,000,000, of which it is estimated at least 13,000,000,000 might be furnished by Germany (labour about 6,000,000,000, and materials, &c., about 7,000,000,000), on account of her reparations debt to France. M. le Trocquer states, as evidence of the seriousness of the proposal, that it has already been formally placed by M. Poincaré in the hands of the French delegation on the Reparations Commission, and that it has so far advanced that it is being considered by an interministerial commission composed of representatives of the Ministries of Finance, Commerce, Labour, Liberated Regions, and Colonies.

Although, as already stated, we have had it on official financial authority that it is estimated that the limit of taxation has been reached, no less a personage than M. Bokanowski, the rapporteur générale of the Budget, has this week come forward before the Finance Commission of the Chamber with proposals to wipe out the estimated deficit on the 1923 Budget by increasing certain of the existing taxes to the extent of two milliards, and to get rid of the balance by further reducing expenditure to the extent of 1,900,000,000. M. Bokanowski's proposals in the circumstances, have come upon public opinion almost as a surprise, and it is generally regarded as extremely doubtful whether they will be found practicable. The rapporteur générale proposes first to suppress the paying-off of 500,000,000 of the public debt that was to have been provided for out of that portion of the excess profits tax that will be paid by the surrender of an equivalent amount of Rentes. He suggests that the military and naval estimates shall be reduced by a further 525,000,000 (including 175,000,000 in respect of the credits for Syria, 125,000,000 for Morocco, and 25,000,000 in connection with the forces occupying Constantinople). Another 120,000,000, he urges, might be saved by further cutting down by the various other Government depart-

THE BRITISH LINEN BANK.

ments, and 200,000,000 by the suppression of another 25,000 of the State employés. A further reduction of the interest payable on Bons de la Défense Nationale would save another 375,000,000 during 1923, 80,000,000 could be got by reducing the repayments to the Bank of France, and 100,000,000 would be saved from the fact that, in the circumstances, it would be unnecessary to provide for interest charges to that amount of loans that would no longer be required. The total of these economies in expenditure would amount to 1,900,000,000. On the revenue side M. Bokanowski proposes the re-imposition of "circulation" duties on non-alcoholic beverages, which he estimates would produce 200,000,000, an increase in the income-tax due from agriculturists, 200,000,000, an increased yield from income-tax, by better methods of surveillance, 450,000,000, increase of succession duties, &c., 600,000,000, manipulation of the "special" accounts, 300,000,000, and—what is perhaps the most interesting of all—the demonopolisation of the trade in tobacco and matches, which he estimates would enable the State to secure an additional 250,000,000 from these two sources.

The Bourse has again this week been depressed and hesitating, but despite this general tendency there has been no demoralisation. Among the factors of weakness, the more prominent are the opening of the holiday season and the selling occasioned in view of the approaching issue by the Crédit National. The improved financial position in the United States, on the other hand, has had a hardening result. French Three per Cents. moved back from 58.45 to 57.45, and the redeemable Five per Cents. from 91.55 to 90.30, but the 1917 Four per Cents. were, like most of the other French Rentes, more in demand, improving from 61.75 to 62.15. Banks declined, the Banque de l'Algérie moving from 3,915 to 3,855, the Banque de France from 5,750 to 5,700, the Banque Nationale de Crédit from 627 to 620, and the Banque de l'Union Parisienne from 608 to 602. Railways, for the most part, were stronger, Est advancing from 722 to 725, Midi from 765 to 768, Nord from 1,146 to 1,170, Orléans from 627 to 635, and P.L.M. from 852 to 869. Orléans, however, declined from 876 to 870. Shipping was weaker, Messageries Maritimes losing 12 points at 163, and Chargeurs Réunis 8 points at 325.

GERMANY.—POLITICS—FINANCES—EXCHANGE AND BOURSE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, June 27.

THE assassination of Dr Rathenau, who was much the ablest member of the Wirth Cabinet, is not likely to bring any direct change in Germany's international or home affairs. Ever since the Armistice small groups of men, mostly young and belonging to classes which have not adapted themselves to the new political conditions, have been conspiring for the murder of radical politicians; and as the Government has shown very little energy in counter measures, it is not surprising that they have had success. At present the extent, resources, and desperation of these organisations is being exaggerated by alarmists, and it is desirable that this fact should be understood abroad. The policy of the Government and its supporters is to proclaim that the Republic is in danger, and to give colour to wild stories of extensive political conspiracies,

impending counter-revolutions, and so on. On the days following Dr Rathenau's death, Ministers and great part of the Press and public lost their heads. There is no reason to believe that the Republic is in any danger. The Kapp revolt of March, 1920, indicated the way that a counter-revolution must take; but there is no sign of a repetition of that; and were an organised Monarchist force available, it could effect nothing, as Kapp's experience showed, against the great majority, which is certainly devoted to the Republican State form, if not always pleased with present Republican methods. The cry that the Republic is in danger produced a temporary panic on the Berlin exchange bourse. The Rathenau murder, like that of Herr Erzberger, must ultimately be traced to Germany's unfortunate foreign relations. Each new humiliation imposed and accepted from abroad gives native extremists, who believe that they are the only good patriots, an excuse to impugn Ministers for treasonable weakness, and this form of criticism easily blends with extreme sentiments, and ends with explosions.

The provisional figures for the fulfilment of the Budget of 1921-22 have been published. Summarised, these are:—Ordinary Budget: Revenue, 62,226,381,000 marks; expenditure, 167,847,458,000 marks, whereof 12,914,120,000 marks is non-recurring—deficit, 105,621,077,000 marks. The Extraordinary Budget balances at 182,552,427,000 marks. Both Budgets together show revenue, 244,778,808,000 marks; expenditure, 350,399,885,000 marks. State undertakings show: Posts and Telegraphs, receipts, 8,690,601,000 marks; expenditure, 13,973,833,000 marks—deficit, 5,283,232,000 marks; Railways, ordinary, receipts, 37,504,000,000 marks; expenditure, 48,339,014,000 marks—deficit, 10,835,014,000 marks; Railways extraordinary: Receipts, 4,000,000 marks; expenditure, 24,800,000,000 marks—deficit, 24,796,000,000 marks; Federal Printing Office: Receipts, 398,660,000 marks; expenditure, 395,321,000 marks—surplus, 3,339,000 marks. Total revenue, 291,376,069,000 marks; expenditure, 437,908,053,000 marks. From the last sum should be deducted 105,621,077,000 marks transferred from the Extraordinary Budget to cover the deficit in the Ordinary Budget, so that the net total expenditure is 332,286,977,000 marks, and the total deficit 41 milliards. The balance in the Extraordinary Budget is, however, achieved only by booking the yield of Treasury bill discounts; but though the amount of Treasury bills discounted during the year can be had, the actual sum yielded is not stated.

The Floating Debt between June 11th and June 20th increased by 3,133,960,000 marks, and reached a total of 290,708,725,000 marks. Of the increase, 2,095,648,000 marks was spent on buying high-currency bills for Peace Treaty liabilities. As a result of the last exchange fall, the gold supplement on Customs duties has been raised to 6,400 per cent., or 65 times the nominal. The supplement was raised from 900 to 1,900 per cent. in October last, to 3,900 per cent. in November, to 4,400 per cent. in March, and to 5,900 per cent. in April. The Cabinet has been obliged to grant an all-round 40 per cent. increase in official salaries and wages. This is the first time officials of all classes have had the same proportional salary increase. The Forced Loan Bill is not yet through. In Reichstag Committee a proposal was accepted to limit the amount to 60 milliards of paper marks. This is a weakening of the Bill, which was originally for a gold loan of one milliard, to be subscribed in paper marks at current exchange. The Reichstag Committee has also raised the initial interest rate (November, 1925—October, 1930) from 2½ to 4 per cent., and the definitive rate (after October, 1930) from 4 to 5 per cent. The increase in interest rate is not important, as the important question for the enforced subscribers is in what kind of mark they will get their interest and capital. Berlin Municipality reports a deficit of 845 millions, of which 707 millions are a result of the increase of salaries and wages since May. The deficit will be covered mainly by increasing the industry-and-trade tax and the real estate tax. The Federal Commissary for Import and Export has decided that Memel shall be treated as a "low-exchange foreign country." Hitherto, for export, Memel has been treated as German in that

German exporters were allowed to sell to it at native prices. As a low-exchange foreign country, Memel will in future pay for German goods somewhat more than Germans pay, but less than high exchange countries pay. This is part of the system under which the Foreign Trade Boards grant export licenses only on condition that fixed minimum prices are charged to the foreign buyer.

The Reichsbank has increased its gold purchase rate to 1,400 paper marks for the 20 mark gold piece. This is the highest price so far paid, and is nearly double the rate (720 marks) of last January. For silver coins is being paid 30 times the nominal value. The policy of the Cabinet and Reichsbank towards a new possible mark exchange fall has been much in debate. According to a Berlin news agency, the President of the Reichsbank, Dr Havenstein, told the Chancellor that Reichsbank intervention sales from its stock of high-currency bills would have no effect in checking any strong rise in the foreign exchanges, and that the most the bank could do would be to moderate minor fluctuations. The bank never holds sufficient foreign currency to support the mark by intervening when the other mark interests all over the world are selling. The mark has for the moment recovered from the shock administered by Dr Rathenau's death. On news of the occurrence, the dollar rose from 331 to 356, but was yesterday back at 349. The Bourse last week moved independently of the exchanges, the general tendency for dividend payers being slightly downward, while the exchanges tended upwards. Exceptional inactivity prevailed, and towards the close of the week dealings were so small that initial quotations were made with difficulty. The brief Saturday panic among business men had ceased before the Bourse reopened yesterday, and again business was dull. Bond prices yesterday were:—War Loan, 77.50; Federal Four per Cents., 107.50; Three and a-half per Cents., 80.25; Three per Cents., 146; Colonial Four per Cents., 120; Savings and Premium, 85.30; Prussian Four per Cent. Consols, 82.10; Three per Cent. Consols, 72.25; Bavarian Four per Cents., 85; Hamburg Staats-Rente, 79.

Business conditions continue good. The finishing industries, in particular the machinery, building, wood and textile branches, have plenty to do. The number of publicly supported unemployed in 367 towns of over 10,000 inhabitants on June 10th was only 19,232. Between January 7th and June 10th the unemployed in Berlin fell from 58,471 to 6,742; in Breslau from 4,047 to 2,229; in Hamburg from 6,074 to 1,990; in Leipzig from 4,396 to 396; in Munich from 2,353 to 561; while in Essen are only 40 unemployed. In general, employment is better than in the best pre-war years. Prices continue upwards. The Steel Syndicate has raised quotations as follows:—

	June 20, 1922.	April 1, 1922.	July, 1914.
	Marks.	Marks.	Marks.
Ingot.....	7.960 ..	7.170 ..	82.50
Blooms	8.670 ..	7.775 ..	87.50
Billets	8.965 ..	8.010 ..	95.00
Slabs	9.190 ..	8.200 ..	97.50
Construction forms.....	10.460 ..	9.325 ..	110.00
Bars	10.640 ..	9.500 ..	97.99
Wire rods	11.470 ..	10.265 ..	117.50
Thick plates	11.930 ..	10.650 ..	105.00
Medium.....	13.570 ..	12.140 ..	110.00
Thin (1-3 mill.)	14.450 ..	12.770 ..	125.00

These rates are good until the end of July, but supplements will be added in case of a further increase in coal prices. The price of Portland cement has been raised to 15,061 marks per 10 metric tons, the pre-war price being 350 marks. Prices of breadstuffs have of late tended to rise more rapidly than the dollar exchange. On the 22nd, home-grown wheat sold at 78 times the price of December, 1913, the dollar having appreciated 77 times, and barley sold at 84 times the peace price. This does not mean that world-market gold prices have been fully reached, but merely pre-war gold prices. Cotton, which was moving slightly downward towards the end of May, has again moved up with the dollar, and was yesterday (American fully middling, Bremen) 188.90 marks, against around 140 marks at the beginning of the month. Hides and leather have of late moved sharply upward, in part owing to great activity in the boot industry. Retail prices of food and necessities are mostly double those of

January, and sometimes more. Specimen quotations at Frankfurt-on-Main are:—

	Jan. 7th.	June 24th.
Butter.....	42	78-82
Lard	26	52
Santos la coffee.....	44	110
Sugar	5.60	14
Bread, 1,500 gr.....	6.25	13
Rice	6.00	12
Oatmeal.....	4.50	11.50
Potatoes.....	1.25	2.60
Petroleum (litre).....	9.50	13.50

POLAND.—CABINET CRISIS—MONETARY STRINGENCY—MARKET RATE 60 PER CENT.—POLISH NATIONAL BANK—FINANCIAL SITUATION.

(FROM OUR CORRESPONDENT.)

WARSAW, June 14.

POLAND is again passing through a very severe Cabinet crisis. This is the sixth change of Government since the formation of the new Polish Republic. The present Cabinet has been forced to tender its resignation, not by an unfavourable vote of the Diet, but by the attitude of Marshal Pilsudski, who has informed Mr Ponikowski that the present Government does not enjoy his confidence.

The alleged reason for the Marshal's action is the weakness of the present Government, which is not backed by a great majority of the Diet. Mr Ponikowski's Cabinet was formed at a moment when it was impossible to find such a majority. In consequence the position of the Government was a very difficult one, and very important Bills were often passed by a majority of three, four, and even one vote. Marshal Pilsudski is of the opinion that at the present moment, when preparations for new elections must be made, a strong Government must take the affairs of the country into its hands. This is the explanation given by the Marshal himself. It is certain, however, that the real reasons must be sought elsewhere. Though the weakness of Mr Ponikowski's Cabinet is deplorable, it is certain that a strong Parliamentary Government is at this juncture impossible. In the Diet the Left and the Right nearly balance each other, and for three years all attempts to form a stable majority failed. Under very difficult conditions Mr Ponikowski succeeded in strengthening the position of his Cabinet considerably. In the first instance, the financial policy of Mr Michalski and the foreign policy of Mr Skirmunt had the decided support of the Diet.

It is generally known that the breach between the Marshal and Mr Ponikowski is due to a difference of opinion as far as the foreign policy of the country is concerned. Marshal Pilsudski considers the present position as a very dangerous one. He thinks that the concentration of Bolshevik troops along the Dnieper is directed against Poland, and that an invasion of Polish territory in the summer is not impossible. To prevent it he has asked for an important increase of military credits. This has been refused by the Finance Minister and by Mr Skirmunt, who view the international situation in a more optimistic spirit. Hitherto no progress in the direction of a solution of the crisis has been made. Mr Ponikowski has been asked by the "Convent of Seniors" of the Diet to retain his office, but he did not accept the offer. The discussions which are actually pursued between the Marshal and the representatives of the political parties have a purely academic character. They are devoted to the question to whom the initiative of nominating the Cabinet belongs, to the President of the Republic or to the Diet. According to the Constitution of February 20, 1919 (called "Small Constitution" as distinguished from the Great Constitution of March 17, 1921), the Cabinet is nominated by the President after consultation with the Diet. This clause is interpreted in a different sense by the political parties, and this renders the solution of the crisis very difficult. The political deadlock, which is the result of such a situation, has a very detrimental influence on the state of the country. The majority of the Diet and of public opinion is severely criticising the Marshal for having provoked, without any justifiable reason, such a serious political crisis.

ALL CLASSES OF INSURANCE EFFECTED

The stringency on the money market is becoming every day more severe. The rate of interest has reached a mediaval level. Even undertakings which are financially solid are obliged to pay 50 to 60 per cent. for bank credits, and in Lodz private discount houses are charging a rate of 3 to 5 per mille per diem. Mr Michalski, the Finance Minister, has met the representatives of the banks at a conference, and has declared that a rate of more than 20 per cent. is unjustified. Where they do not observe this limit the banks will be refused any credit by the Polish National Bank.

This stringency on the money market is due to two reasons: (1) Scarcity of capital, (2) the policy of the Polish National Bank. The country, exhausted by the long war, does not possess sufficient capital for reconstruction. The stringency has been accentuated by the anti-inflationist policy of the Polish National Bank, which is putting great difficulties in the way of discounting commercial bills. The credit accorded to the 12 most important banks of the former Congress Poland for the rediscount of their bills has been fixed at 3.7 milliards, an amount which is out of proportion with the needs of these institutions. As the banks cannot count in the case of emergency on the assistance of the Polish National Bank, they must have always at their disposal a comparatively high reserve. The relation of cash to deposits of the principal banks of Congress Poland was, during the first three months of this year, as follows:—

	Cash. Milliard Marks.	Deposits. Milliard Marks.	Per Cent. of Cash to Deposits.
December 31, 1921.....	7.8	26.8	29.2
February 28, 1922.....	9.0	36.4	24.7
March 31, 1922.....	7.4	41.0	18.2

From the end of 1921 to March 31st of this year the cash of the banks had decreased by 400 millions, while the deposits had increased by 14.2 milliards. This has entailed a reduction of the percentage of cash to deposits from 29.2 to 18.2 per cent. This proportion is, under present conditions, not sufficient, and the banks have been forced to charge exorbitant rates of interest so as to re-establish the equilibrium.

The stringency has induced the Polish National Bank to modify its policy. A Bill has been introduced in the Diet authorising the Bank to issue paper marks for the purpose of discounting and rediscounting commercial bills payable after a lapse of time not exceeding six months. It is not expected that an increase of paper circulation for productive purposes will have the disastrous consequences which were due to the working of the printing press to meet public expenditure.

The last accounts of the Polish National Bank reveal a marked improvement, as shown by the figures below:—

	Increase of Paper Circulation. Milliard Marks.	Increase (+) and Decrease (—) of Advances to the Government. Milliard Marks.
October, 1921.....	+ 24.9	+ 25.0
November, 1921.....	+ 11.1	+ 15.5
December, 1921.....	+ 15.9	+ 6.0
January, 1922.....	+ 6.2	+ 6.4
February, 1922.....	+ 51.0	+ 3.2
March, 1922.....	+ 3.5	+ 1.5
April, 1922.....	+ 9.9	— 12.1
May, 1922.....	+ 15.4	— 3.0

While in October the advances to the Government increased by 25 milliards, we observe in April and May a reduction of 12.1 and of 3 milliards. This is due to the collection of the capital levy, which has enabled the financial administration to cover its expenditure. Issues of new paper marks have been exclusively for the purpose of commercial credits.

It seems that the amount obtained from the capital levy is already exhausted. The increase of salaries of the civil servants makes the imposition of new taxes necessary. Mr Michalski has prepared a Bill dealing with this problem, but the Cabinet crisis has prevented him from presenting it to the Diet. If the present political deadlock is of long duration, it will inevitably force the Government to resort again to the printing press as a means of covering its budgetary deficits.

SPAIN.—KING'S SPEECH—PUBLIC FINANCE—NEW CAPITAL—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

MADRID, June 20.

IN the past month there has been little to record in the political world apart from the King's speech in Barcelona, which caused somewhat of a sensation in the Congress. The purport of Don Alfonso's words, indicating the necessity of dissolving the "Juntas de Defensa," or Army Officers' Defence League, was generally approved, but some of the members of Parliament declared the speech to be unconstitutional. These "Juntas de Defensa" have caused considerable trouble in the past, and are likely to give rise to serious complications unless they are either suppressed with a firm hand or so modified as to eliminate the possibility of their becoming a national danger.

The Inland Revenue figures for the month of March show that receipts from all sources amounted to 276,205,823 pesetas, whilst disbursements reached 285,152,069 pesetas. The following is a comparison of these two items in the last five years:—

	Receipts. Pesetas.	Disbursements. Pesetas.
April to March.		
1917-18	2,452,379,143	2,309,406,830
1918-19	2,016,120,224	2,209,164,797
1919-20	3,017,554,823	3,071,629,275
1920-21	2,798,888,101	2,676,088,887
1921-22	4,362,164,961	3,633,334,924

At first sight it would appear that there was a large excess in 1921-22 of receipts over disbursements, but the official figures do not include certain items which account for a reduction of 2,128,180,000 pesetas in the receipts and 419,160,000 pesetas in the disbursements. After making these adjustments the latter exceed the former by 980,190,000 pesetas.

The total figure of public issues made in Spain during 1921 indicates that there has been a reduction in the amount of capital invested in industrial concerns, while investments in State and Corporation securities have increased considerably. The last two quarters of 1921 show the most important increase over previous years, as demonstrated by the following table:—

Quarters.	1919. Pesetas.	1920. Pesetas.	1921. Pesetas.
First	405,264,100	125,479,000	386,456,000
Second	675,609,500	153,417,000	343,400,500
Third	108,745,000	417,642,500	683,460,000
Fourth	123,570,000	100,855,000	1,386,777,000
	1,313,188,600	797,393,500	2,800,093,500

Of the total for 1921 some 92 per cent. is absorbed by Government and other official issues, and this result compares with previous years as below:—

Year.	Total Public Issues.	Government and Official Issues.	Industries.
	Pesetas.	Pesetas.	%
1917	634,643,213	352,746,963	55.5
1918	637,443,500	373,381,500	58.5
1919	1,313,188,600	872,883,000	66.4
1920	797,393,500	388,935,000	49.0
1921	2,800,093,500	2,589,297,500	91.9

Only in one year did the amount of capital invested in industrial concerns exceed that of the official issues, and in 1921 the small amount of the former is striking evidence of the critical situation of Spanish industries after war prosperity had subsided.

Analysing the capital invested in industries we find that in 1917 the largest individual sum was absorbed by railways, in 1918 by mining concerns, in 1919 by electrical industries, in 1920 by mining concerns again, and in 1921

by electrical enterprises once more, as will be seen by the following table:—

Year.	Industrial Issues.	Railways.	Electrical Industries.	Mining.	Other Industries.
1917	281,899,250	49,952,000	39,399,000	3,100,000	189,448,250
1918	264,062,000	37,951,500	52,750,000	54,500,000	118,861,500
1919	440,205,600	69,688,500	71,450,000	48,500,000	250,567,100
1920	408,458,500	47,834,500	69,110,000	105,250,000	186,264,500
1921	210,196,000	55,840,000	65,050,000	30,400,000	58,906,000

In the five years mentioned electrical concerns have issued capital to the extent of 297,759,000 pesetas, railways 261,266,500 pesetas, and mining industries 241,750,000 pesetas.

This month has been a little more animated, both in the stock and exchange markets, with occasional relapses to dead quiet. In the exchange ring the protests against false closing quotations are taking a more energetic form, and it is not unlikely that within a short time these abuses may be, if not entirely suppressed, at least reduced within reasonable limits.

AUSTRALIA.—BANK RETURNS—TAXATION METHODS—WHEAT EXPORTS.

(FROM OUR CORRESPONDENT.)

MELBOURNE, May 22.

THE quarterly average returns to March 31st of bank liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show that deposits have increased by £9,452,477 since the previous quarter, the movement being usual at the time of the year when the country receives proceeds of wool and wheat sales, and that advances (inclusive of Government securities) have diminished by £348,861. The following is a comparison of the principal totals with those for the previous quarter and a year ago:—

	March Quarter, 1921.	December Quarter, 1921.	March Quarter, 1922.
Deposits—	£	£	£
Australia	219,036,309	209,753,941	217,672,828
New Zealand	53,455,135	43,333,249	44,866,839
Total deposits	272,491,444	253,087,190	262,539,667
Advances—			
Australia	200,031,752	182,932,700	183,675,755
New Zealand	60,021,408	53,507,275	52,415,359
Total advances	260,053,160	236,439,975	236,091,114
Cash Items—			
Coin and bullion (Australia and New Zealand)	27,523,277	27,521,008	27,557,996
Australian notes	30,897,400	25,978,540	29,604,826
Legal tender, notes of other banks (New Zealand only)	749,384	912,619	1,312,967
Total cash	59,170,661	54,412,167	58,475,789

Deposits show a reduction of £9,951,777, as compared with a year ago, of which £1,363,481 is in Australia and £8,588,296 is in New Zealand. Advances show an apparent decrease of £23,962,046 on the year, the actual decrease being somewhat less after allowing for some British Government securities included in the earlier figures by one of the banks. This decrease is mainly the effect of repayments by traders whose overdrafts early last year were swollen in consequence of the large stocks imported, which have since been reduced. Owing to the exchange difficulty early in 1921 deposits were increased for a time by moneys awaiting the opportunity of remittance, which has since been effected.

The effect of the various movements, accompanied by smaller imports and larger payments receivable from abroad for exports, and by substantial London borrowings by various Governments, has been to replenish Australian balances in London and to make the exchange position an easy one. The public are inclined to look for easier rates for money, but against this are the facts, firstly, that Commonwealth Government securities, even after the improvement in the market, can still be bought to yield rather high rates of interest; secondly, that some of the State Governments are competing for fresh money by

selling securities over the Treasury counters; and in the third place that there is an active demand for accommodation, especially for factories and housing purposes, in town. On the other hand, many of the farmers are well off for money, and are able to lend.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	March Quarter, 1921.	December Quarter, 1921.	March Quarter, 1922.
	£	£	£
Deposits	24,939,722	25,251,886	22,628,567
Saving Bank deposits	33,982,966	35,983,860	36,144,999
Discounts, loans, &c.	15,998,321	14,652,186	15,141,497
Government & Municipal securities	33,676,380	34,537,456	34,693,510
Coin and bullion	1,779,141	1,955,451	2,207,552
Australian notes	3,069,168	5,836,209	2,299,336

The decrease in Commonwealth Bank deposits is partly due to smaller Commonwealth Government balances.

Stocks of coin and bullion in Australia and New Zealand, including the ordinary banks, £27,557,996, Commonwealth Bank, £2,207,552, and reserve against Australian note issue, £23,400,000 (approximate average), amount to £53,165,548, against £53,002,418 for the March quarter, 1921, and £45,826,337 for the June quarter, 1914.

The Commonwealth Commission on Taxation has presented a second report, the principal recommendation of which is that the States should discontinue their income-taxes, and that the Commonwealth should discontinue land tax, succession duties, and entertainments taxes. The three latter forms of taxation would then belong to the States only, and income-tax would be charged by the Commonwealth only. It is also recommended that the allocation to the States, at the rate of 25s per head of population, out of the Customs and Excise revenue collected by the Commonwealth Government, should be discontinued. The recommendations would simplify the taxation system, and taxpayers would be relieved from the trouble of rendering income-tax returns both to State and Commonwealth Governments under divergent laws, while the Commonwealth Government would be relieved of the task of taxing land on its capital "unimproved value" on a basis that would be equitable all over Australia. But the effect would also be to leave the States with less revenue than under the present system, and they would have to depend upon a fresh allocation of the proceeds of taxes collected by the Commonwealth Government, which would thus be in a position to exercise control over the States' financial arrangements, control which might assume a political character in case of an extreme party being in power in the Commonwealth. From the point of view of the States the recommendations are critically regarded, and it is not expected that they will be adopted early, or without much further consideration than has so far been possible.

After a little anxiety occasioned by a dry period in autumn, the season has taken a favourable turn, with more rainfall early in May, and it is now expected that the area to be sown with wheat in Australia will be fully as large as last season's total of nearly 10,000,000 acres. Exports on account of the surplus from the last harvest have been proceeding somewhat rapidly, and shipments will fall off after the end of May.

Letters to the Editor.

FORESTALLING UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is, I am afraid, sufficiently clear that even with some improvement in trade we shall still next autumn and winter have a very large volume of unemployment, and the trouble of necessitous areas, emphasised by the deputations to the Prime Minister which I attended last week, will become more pronounced than ever.

In view of these two facts, I wish most strongly to urge that this will be the time to take in hand on a large

HARRISONS & CROSFIELD,
LIMITED

1-4, GREAT TOWER STREET, E.C.3.

The Company invites communications from British Manufacturers desirous of developing business in the East.

scale the whole question of scientific and up-to-date road reconstruction to carry the enormous amount of modern traffic where this may be necessary. Last week I questioned the Parliamentary Secretary to the Ministry of Transport as to the policy of his Department in this respect, and urged that he should evolve a policy, recommend schemes to the various Councils, and offer general advice as to desirable action. Mr Arthur Neald replied sympathetically that it is the policy of his Department, which exercises the functions of the late Road Board, to encourage Local Authorities by substantial grants from the Road Fund to adopt the most scientific methods of road engineering. The Ministry is in the closest touch with the officers of the Local Authorities, and places at their disposal all the advice and assistance in its power. Since then I gather that the Ministry of Transport and the Unemployment Grants Committee have both recently issued circulars to the Local Authorities, asking them to place road and other work for next winter, which, if possible, should be done by contract, a recommendation which cancels last year's advice that it should be done by direct labour.

It is a wise decision, because now we shall get ahead. Direct labour, whatever its advantages, is at all events slow. There are plenty of contractors ready and able to carry out large scale operations, and no others are really much good for jobs of this nature.

If we adopt tinkering methods we shall only perpetuate the present hopeless condition of many of the chief roads of the country, and assuredly we shall never have more favourable economic conditions or operations which will be more timely in their beneficial effect. Let us hope, therefore, that there will be some driving force behind the scheme of work.—Yours very faithfully,

WALTER DE FRECE.

House of Commons, June 27th, 1922.

A NEW TRADE BAROMETER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As everybody knows, iron for a great number of years has been considered as the main indicator of the state of general trade. And very naturally so, seeing that iron is connected with the every-day life of every human being who comes within the pale of civilisation. It is a question, however, whether there has not, within the last generation or so come into existence another and still more sensitive, and therefore more reliable and serviceable, trade barometer than iron. I mean paper.

Having for a long time been connected with that line of trade, I have almost been forced to see how the state of the paper trade has moved up and down with the state of trade generally. I am, of course, aware that most branches of trade flourish and languish simultaneously; but I think that no single branch so faithfully, so minutely, and so quickly records the actual state of trade. A moment's consideration will convince everybody that it is natural that this should be so. Take, for instance, every branch of literature—from the daily papers, magazines, periodicals, &c., to the daintiest publications: in times of depression the circulation is reduced; in good times it is increased. So with all kinds of manufactures that need wrappers—cutlery, textiles, &c., &c., in innumerable cases. Also shop papers. When trade is brisk much paper is needed for parcels—and *vice versa*. All these changes, which are so many unerring signs of how trade in general is moving, are very quickly felt by the manufacturers no less than by wholesale paper merchants and retail stationers. This condition of things is bound to increase in proportion to the ever-increasing spread of the use of paper to practically every individual on the globe.

I think this fact worthy of notice, but as far as I have

observed it has been overlooked. Except in the special trade papers you seldom see the state of the paper trade mentioned in the same way as iron, cotton, corn, &c., and in no case have I seen it used as an indicator of the general state of the trade. I would, therefore, suggest that statisticians and political economists take up this question, and see whether paper might not serve them excellently as an auxiliary in their work of enlightenment and guidance of traders.—I am, Sir, yours truly,

ABR. GRIMSTVEDT.

Books and Publications.

FISCAL POLICIES IN THE EMPIRE.*

IN this volume Mr Porritt maintains the standard which we are learning to expect in the publications of the Carnegie Trustees. It is a monument of industry and patient research; indeed, the chief fault which we find is that it is somewhat overloaded with names, details, and documents. Although it deals chiefly with the vexed question of fiscal policies, it is remarkably free from bias of any kind.

For something like a hundred years after the loss of the American colonies, it was taken for granted that the other colonies would break away peacefully in due time; little importance was attached to the political tie as a means of holding or extending trade with them. This was largely the result of the highly satisfactory trade relations between Great Britain and the U.S.A. in the sixty years that followed the American Revolution. Mr Porritt draws a distinction between the later eighteenth-century concessions to Ireland and the West Indies, which were forced upon England with the inroads on the old commercial system which were made in the first half of the nineteenth century, "because it was to the interest of the United Kingdom, and of the Empire at large, that there should be a larger freedom of trade." Although the colonies were forced to buy English manufactures, they were allowed certain preferences in return, although Mr Porritt doubts if these were of much advantage. The North American provinces had a preference on lumber, which was of little real benefit to them; certainly the seamen engaged in the trade gained nothing; the preamble of an Act of 1839, prohibiting deck-loads, admitted "great loss of life and severe sufferings amongst the crews" of the timber-ships. There was also fraud; timber from the U.S.A. was shipped from the St. Lawrence ports as Canadian, and even shiploads from the Baltic crossed the Atlantic to return to England as Canadian, and so secure the preference. Our landed interest, moreover, was still too strong for the preferences on wheat and flour to be of much use to Canada.

From 1836 to 1840 we find Upper Canada protesting against tariffs enacted for the North American provinces at Westminster. When Russell and Grey passed the Enabling Act of 1846, which gave fiscal freedom to the North American colonies, they did not intend to grant tariff powers against England; consequently there was "shock and dismay among manufacturers in the United Kingdom" when, in 1858-59, protectionist tariffs were enacted by the legislature of the United Provinces. The extension of responsible government to Canada coincided with the triumph of Cobdenism in England, and Free-trade was expected to be the policy of the Empire. Mr. Porritt explains the early adoption of a protective policy in Canada by the influence of the U.S.A.

The Australian Act of 1850 contained a section which prevented any of the Australian legislatures from enacting differential duties; two years later a similar Act for New Zealand had no such restriction, having been passed by the Derby Government, which still hankered after protection; but, until the amending Australian Act of 1873, New Zealand could not enter into reciprocal arrangements with its only neighbour.

* "The Fiscal and Diplomatic Freedom of the British Oversea Dominions." By Edward Porritt. Edited by David Kinley, president of the University of Illinois. (Oxford: Clarendon Press. 12s 6d net.)

Mr Porritt gives full recognition to the tireless and self-sacrificing work (he lost all his advertisements in one day) of David Syme and his Melbourne paper, *The Age*, in promoting protection in Australia. Like Horace Greely in the *New York Tribune*, he laid much stress on the low wages, long hours, and child-labour in textile and other factories in England. It is a curious fact that the champions of protection against Britain, both in Canada and Australasia, were all born in the old country—Cayley, Galt, Rose, Buchanan, Weir, Syme, Fox, and Vogel.

For a long time it did not occur to the colonies that if they put a tax on goods from the Mother Country, they might, at least, put a heavier tax on wholly foreign goods. It was not until 1897 that the Laurier Government introduced this into the Canadian tariff, but Sir Wilfrid and his party then abandoned the Free-trade doctrine which they had so strenuously preached whilst in opposition. Conservative governments had argued that no preferences could be given to the United Kingdom without similar concessions to the twenty countries with which we had favoured-nation treaties; this was true, but the Salisbury Government promptly denounced the treaties.

Fiscal freedom was secured in principle by the self-governing colonies when Lord Palmerston refused to veto the Galt tariff in 1859, for this was a crucial decision from which no future British Cabinet could recede. In 1873 Gladstone and Kimberley were reluctant to grant the same powers to Australia, but they felt that "the principle of self-government was more important than the principle of Free-trade."

There is much in this book of the indifference to Colonial questions shown by both Houses of Parliament in the period—roughly—from 1783 to 1887. At times, indeed, there were complaints of Colonial duties on British manufactures, but Colonial Secretaries invariably protested that they were helpless to interfere. What the Dominions, and the Crown Colonies also, did for us in the dark years 1914-1918, is still too fresh in our memory to need recording.

THE PROGRESS OF DENMARK.*

IN this modest volume Professor Westergaard gives a concise and masterly sketch of Danish economic history and recent social reforms. The peasantry, he tells us, suffered less than in other European countries through the transition from mediæval to modern conditions, and their recovery began earlier than in Germany or France. Compulsory education was instituted in 1739; continuation schools and the agricultural instruction which have so aided the prosperity of the nation preceded by a few years the free constitution of 1849, which was the precursor of a series of political and social reforms. The loss of Schleswig-Holstein in 1864 set up a great industrial development, but the industrial revolution was slighter than in other countries, and free of most of its usual evils, though it intensified the drain to the towns. Out of it grew a Labour movement, and a Labour Party which is now the largest section of the Lower House; and social reform was greatly aided by a Government Report on the condition of the working classes in 1875. Workmen's insurance, started by the German measures of the 'eighties, has been conducted mainly through the Friendly Societies; old-age pensions, with municipal participation, followed in 1891; unemployment insurance (through neutral societies), labour exchanges, and (only last year) invalidity insurance, have made the provision complete; while labour conditions have been adequately regulated by law. (The great political struggle from 1877 to 1894, which Prof. Westergaard does not notice, seems to have had no adverse effect on social reform.) But English readers will be specially interested in the successful substitution by the Danish agriculturists of the production of butter, bacon, and eggs for that of wheat when it became unprofitable, and in the great developments of the co-operative principle which facilitated the change; and also in the more familiar application of co-operation to retail trade, in the rural

* "Economic Development in Denmark Before and During the World War." By Harald Westergaard. (Carnegie Endowment.) (London) Humphrey Milford. 1922.

districts rather than the towns, and the organisation of all its developments under a central committee of control. Danish economic development, Prof. Westergaard points out, has been conducted mainly by private enterprise, even where the initiative has come from the State. The war intensified Government intervention, but the trades worked with the Government. Revenue, especially from direct taxation, has increased immensely; so have wealth, the national debt, and State aid to trade. But a reaction may be expected against State Socialism. Though the Danish Social Democrats are a Reformist party, there is, no doubt, an extremist section; but few countries, in Professor Westergaard's opinion, are better protected against catastrophe, and Denmark's solution of social problems may well set examples for imitation.

STOCK EXCHANGE NEWS.

TICKET.	SETTLING DAYS.	ACCOUNT.
July 12.		July 13.

The difficulty this week in presenting the usual record of Stock Exchange news is to know upon which particular feature to start, so many items of interest having occurred that it is not easy to determine which is the most important. Business is still quiet, and, in spite of the pleasurable anticipation aroused amongst investment markets by the prospects of cheap money influences, there is still noticeable a little disinclination on the part of investors to take any bold hand. It may be that with the turn of the half-year the window-dressers will release money for employment in Stock Exchange channels. The retention of the Bank Rate at $3\frac{1}{2}$ per cent. is considered a natural course for this week of the year.

Meanwhile, however, demand is sufficiently pressing to sweep the Consol market of any cheap-looking issues that may be on offer. Rises in the 4 per cent. Funding Loan, $3\frac{1}{2}$ per cent. Conversion stock, and a number of other similar securities stand out prominently. The India $5\frac{1}{2}$ per cent. scrip, which at this time last week stood about 15s discount, is now quoted at 13½ premium. Home Railway debentures and preferences are beginning to move upwards again. The War Loan is once more above 100, enabling the execution of the numberless limits to sell the stock at the round three figures. With the rise in Conversions, National War Bonds have sympathised. Bank of England stock to-day stands a full 50 points higher than the price which ruled at the beginning of this year, and the War Loan over the same period shows a gain of 7½ points. The Irish chaos has had no effect upon Stock Exchange prices. Dealings in the new Government guaranteed stocks of the electric railways are taking place on the basis of the issue-price, 94 in each case.

French and German bonds suffered further disturbances from the movements in the exchanges, though the fluctuations in prices were not material. Brazilians have been recovering, and there is noticeable strength in the corporation stocks of the Danish and Scandinavian countries. The only change of consequence in Chinese bonds is a further fall in the 8 per cent. Treasuries. Argentines and Chileans are better on balance.

Home Railway stocks suffered a fairly sharp shake-out, partly as a result of the evidence produced at the carry-over of a continued bull account, partly owing to the shifting of interest from this market into other parts of the Stock Exchange that seem, for the moment, to offer greater scope for speculation. Publication of the South-Eastern and Chatham's amalgamation proposals was followed by a sharp drop in Chatham

ordinary and South-Eastern deferred. North-Westerns receded under 100, before a general rally occurred on Thursday afternoon. Undergrounds went back with the rest. State bulls have been disappointedly getting out of stock, for they think immediate public demand is over. Grand Trunk Pacifics are a little better, on the prospect of steps being taken to form a committee for safeguarding the holders' interests. Mexican Rails are dormant. Something like a boomlet occurred in Argentine Rails, and spread to Brazilians. Substantial rises are to be seen in all the Argentines, in consequence of the hope that with new freight charges the companies will be able to resume more profitable conditions of working. Leopoldinas improved for somewhat similar reasons. United of Havana and Antofagasta deferred both gained several points, on attention being turned to foreign railways as a whole.

The rubber market, after many months of weary stagnation, rallied smartly, and most of its prices are better on the week. The improvement occurred on the strength of the hope that the Dutch Government may enforce some measure of restriction of output, in response to the resolution just passed by a large majority at the Hague Conference that is considering the outlook for the rubber industry. In the oil market the maintenance of the Mexican Eagle's 15 per cent. half-yearly dividend, and of the Burmah Company's 4s per share net dividend, fairly exercised little effect, both declarations having been fairly generally expected. The Shell group is quiet, but next Tuesday's meeting of the Shell Company is awaited with lively interest. Most of the London banking shares are better, by reason of the cheaper money outlook. The feature amongst insurance shares is a substantial drop in General Accidents, upon the secretary's denial of there being any negotiations afoot. The shipping market is steady, with Furness Withys better on the week. Active movements in Courtaulds left the price higher; other textiles are inclined to be dull. Flatness overtook the wireless market by reason of continual liquidation in a market disinclined to take shares in the absence of any public demand. The cable group is unchanged. Lyons' meeting failed to produce any alteration in the prices of the company's shares, other catering descriptions being equally steady. The iron, steel, armament, and engineering group marks time owing to the disclosure of the fact that many contracts were lost during the recent lock-out of the engineers, with its necessary sequel that work can only be resumed partially in many cases. Vickers, however, are better, and so are Dunlops. There is no particular anxiety shown by the public to buy the new scrip recently issued by industrial concerns, though the premiums on the earlier stocks are well maintained. While no changes worth mentioning have occurred in the list for trust companies stocks, the demand in that particular section is so keen that it may be said that there is scarcely any floating supply of the good stocks available. Brewery debentures are also wanted, and are scarce. Easy money conditions are the natural reason for the strength shown by sound stocks and shares all round the markets.

South Africans are quite a lively market, with many good rises to their credit. The idea is that the gold-producers can make useful profits now that working costs are so materially lower. Other mining departments have gone quietly. A 10 per cent. dividend on Ropp Tin came as a pleasant surprise to those who feared that no tin company could pay dividends in the present state of the market for the metal. A remarkable revival of interest in option-dealing is evidence of the public's willingness to indulge in mild speculation.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Future Liability.
ISSUES OF THE WEEK—	£	£	£	£
Amount previously recorded	..	442,942,194	..	..
4½ % Treasury Bonds (by Tender June 23, 1922), £2,000,000, at 298 3s 1d	..	..	1,963,083	..

1915	70,001,376	1914	612,522,633	..

London Electric Railway Company (Issue of £1,000,000) and **City and South London Railway Company** (Issue of £1,500,000).—This is a total issue of £2,500,000 4½ per cent. second debenture stock by the Underground Electric Railways group. The loan, £1,000,000 of which is on behalf of the London Electric Railway and £1,500,000 for the City and South London Railway, is issued at £94, and is guaranteed as to principal and interest by the Government under the provisions of the Trade Facilities Act. The stock is repayable at par in 1927, with the option of redemption after July 1, 1922. The proceeds of the issue will be applied towards the development of the Edgware and Hampstead Railway, to link up the City and South London Railway and the London Electric Railway, and to improve the City and South London Railway. Interest on this second debenture stock is a revenue liability secured by the balance of earnings remaining after payment of interest upon first debenture stock, and the "common fund" established under the London Electric Railway Companies Facilities Act of 1915. The present issue forms part of a total of £6,000,000 stock carrying the Government guarantee. Net traffic receipts of the Underground group are given, also the amount of "common fund" each year from 1915. But the Government guarantee is sufficient incentive to attract any investor to this trustee security.

Bovril, Limited.—Share capital £2,500,000, divided into 750,000 6 per cent. cumulative preference shares of £1 each, 1,000,000 7½ per cent. cumulative ordinary shares of £1 each, and 750,000 deferred shares of £1 each, and £500,000 4½ per cent. debenture stock, and £300,000 6 per cent. five-year notes (redeemable May 1, 1924). This is an offer for sale at 22s. per share of 190,000 7½ per cent. cumulative ordinary shares. The shares are entitled to a fixed cumulative preferential dividend at the rate of 7½ per cent. per annum and rank immediately after the 6 per cent. preference shares and in priority to the deferred shares. Instalments are spread over a period with a final payment on December 1st, but the shares now offered will rank for dividend as if they were fully paid, at the rate of 7½ per cent. per annum as from July 1st. Net profits were £249,106 for 1921, as against £219,728 for the previous year. Regular dividends have been paid on all shares. There appears to be a reasonable margin available for security after the demands of the loan capital and pre-preferential issues have been met. From the information given in this document it is difficult to gauge the value of the shares offered. It is perhaps considered that the prestige of a well-known concern like Bovril is sufficient inducement alone to attract investors, but it is a pity that a company of this high standing does not issue shares by means of a prospectus, and thus set a better example to less reputable people, who so often use the offer for sale to hold back necessary information.

James Barton and Sons, Limited.—Authorized capital £600,000, divided into shares of £1 each, upon which 10s per share has been paid. This is an issue of £250,000 7 per cent. first mortgage debenture stock at 96 per cent. It forms part of an authorised issue of debenture stock to the nominal amount of £300,000, and will be secured by trust deed, constituting a specific first mortgage on the property and plant, and a general floating charge on other assets. The company is precluded from creating other charges upon the assets included in the floating charge ranking in priority to or *pari passu* "except to secure overdrafts or advances from its bankers in the ordinary course of business." The advertised prospectus also states that the company may create further debenture stock "for a nominal amount not exceeding in the aggregate a sum equivalent to one-half of the value of any further fixed assets acquired by the company and vested in the trustees by way of further security." The stock will be repayable by means of a sinking fund beginning in 1925, sufficient to provide for the repayment of the whole issue by 1955, by annual drawings at 102, or by purchase at or under that price. According to the published statement of assets and liabilities there are surplus assets to the value of £680,818 as security

for debentures. This, however, includes the estimated proceeds of the debenture issue £225,000, and £300,000 uncalled capital on issued shares, the latter a somewhat unusual estimated security for first mortgage debenture holders. Looked at from another aspect the proposition is—Assets, £580,037, less liabilities £424,219, leaving a surplus of £155,818 as against a paid-up share capital of £300,000. Moreover, "the proceeds of the present issue will be utilised...solely to repay bank advances," which reminds one that the borrowing powers when used for obtaining overdrafts on this scale practically reduce the position of first mortgage holders to second mortgage holders.

Thomas, Gater, Bradfield, and Co., Limited.—Authorized capital £500,000, divided into 250,000 7 per cent. cumulative preference and 250,000 ordinary shares of £1 each. This is an offer for public subscription of 75,000 7 per cent. cumulative preference and 75,000 ordinary shares at par. The company was formed in June, 1920, to erect and equip a flour mill at Southampton, and to acquire several businesses of a similar or allied nature. Under a valuation, dated, it should be noted, June 30, 1920, assets are valued at £225,064, and the immediate purchase consideration is £185,344, payable in shares. There is also a contingent consideration in connection with goodwill, which is a novel feature in a prospectus. A further amount of £20,000, payable in shares, is due to vendors at the end of a period of years if the undertaking is running on a profitable basis. Past profits are given from 1918, and a balance-sheet and profit and loss account for the year ended June 30, 1921, is submitted. Although the prospectus is a clear statement of affairs in recent years, subscribers would like to know what were the pre-war profits of the individual companies.

New Guinea Copper Mines, Limited.—Authorized capital £500,000, of which £275,875 has been issued. The following information is taken from an announcement made in the Press in connection with an application made to the London Stock Exchange for permission to deal in the ordinary shares of the company. The company was incorporated in Victoria, Australia, in March, 1920, under the Companies Act of Victoria, 1915, mainly to acquire mining leases in New Guinea. Assets acquired at the formation of the company in 1920 comprised the Laloki mine, an option on the Dubuna mine, plant, equipment, &c., on properties in New Guinea and sundry debts. The price paid was £162,295 7s 3d, of which £22,295 7s 3d was satisfied by the New Guinea Copper Mines, Limited, taking over the bank overdraft and sundry creditors of the vendors; the sum of £400 was paid in cash, £24,400 in series A and £15,200 in series B non-interest bearing income bonds repayable only out of profits; and the balance of £100,000 by the issue of 100,000 fully paid shares to the shareholders of the Laloki (Papua) Copper Mines (no liability). The total shares issued comprise 125,000 10 per cent. cumulative participating preference shares, upon which 5s per share has been paid and balance called up, and 244,625 fully paid ordinary shares. The borrowing powers of the directors have been exercised to an extent of £41,358. The progress of the company is not clearly indicated in these details, and therefore the shares will mainly be of interest to those who have more information as to the company's trading history placed at their disposal.

Moss Empires, Limited.—Authorized share capital £1,060,000, of which £1,038,785 has been issued, and is fully paid. The company has recently created £300,000 6 per cent. mortgage debentures, which have been sold to the Law Debenture Corporation at £92½ per cent. This is a Press announcement made to comply with Stock Exchange regulations to secure a quotation. The published statement shows that these debentures will be specifically secured by a trust deed upon properties recently valued at £499,819, also by a mortgage subject to £400,000 first debenture stock upon property to the value of £1,445,035. Profits are given from 1907, and debenture charges can apparently easily be met. A well-secured debenture.

London and Midland Oil Company, Limited.—Authorized capital £250,000, divided into shares of £1 each, of which 82,007 have been issued. The company was incorporated in April, 1920, to consolidate interests in certain oil properties in Roumania. The advertised statement of the company made to comply with Stock Exchange regulations informs us that "20,007 shares of £1 each were issued privately in June, 1920, at par for cash; 8,000 shares were issued privately in October, 1920, at par for cash; these 28,007 shares are fully paid; and the issue of 7,500 shares privately at par for cash has been arranged, and is about to be made." 54,000 shares were issued, credited as fully paid, in October, 1920, 20,000 shares are under option until May 13, 1925, at par in respect

of the underwriting and subscription of 20,000 of the 20,007 shares specified above." A speculative undertaking, with fair prospects in front of it.

Consolidated Coffee Estates, Limited.—Authorized capital £600,000, divided into shares of £1 each. The issued capital consists of 40,000 shares fully paid and 20,000 2s 6d paid. The company was formed in March, 1922, and its business is denoted by its title. It has purchased certain estates for £35,000. Details given in a public announcement are brief, and are too vague to enable one to form an opinion of the value of the shares, but nevertheless it is made, it is stated, in accordance with the requirements of the Committee of the Stock Exchange.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED. IMPROVED OUTLOOK—INCREASES IN RATES.

The 114th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 28th ult., at River Plate House, Finsbury circus, London, Mr Vincent W. Yorke (the chairman) presiding.

The secretary (Mr C. Tennant) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said: The provisional agreement between the International Committee for the Protection of Foreign Investors in Mexico and Señor de la Huerta on behalf of the Mexican Government, signed in New York ten days ago, is a matter of the very highest importance for all interested in Mexico, and will, I hope, prove to be the first step in the rehabilitation of that country, and lead up to the definite renewal of commercial and diplomatic relations with the rest of the world. As a member of the British section of the International Committee, I have been able to follow closely all the negotiations, which have been protracted, difficult and anxious. On the one hand, there were the representatives of investors, naturally impatient of receiving no interest on their debts from a country whose revenue was larger than at any time in her history, whose resources were immense, and whose exchange was at a parity with the American dollar; on the other hand, there were the representatives of a Government who had in an incredibly short time produced order out of chaos, satisfied the varying aspirations of 15 millions of people, and were naturally smarting under a sense of injustice that the success of their efforts had not met with the reward they expected, namely, recognition by the Governments of the United States, Great Britain, and France. Our most sincere congratulations are due to those who have brought matters to the first stage of a definite settlement, and I trust that recognition by the Governments of the United States, Great Britain, and France may speedily follow.

RECEIPTS AND EXPENSES.

I think that, on the whole, we may look back on the half-year under review with feelings of great satisfaction. The outstanding feature is the high level reached by our gross receipts, which have exceeded 8½ million pesos for the period—a record in the history of the company. If you bear in mind that the increase in rates which was granted to us only came into effect on September 1st, and therefore only operated for four months out of the six, the result is very remarkable. The chief reason for the large takings is that during the half-year we were able, after receipt of the new locomotives which we purchased, to clear up the large arrears of traffic which had accumulated at Vera Cruz. We also carried 103,000 tons of fuel oil.

Unfortunately, when we turn to the expenses we are faced with an increase nearly commensurate with the increase in receipts. While receipts have increased by 22 per cent. as compared with the corresponding half-year of 1920, expenses have increased by 19 per cent., and thus a large proportion of the gross gain has been eaten up. For this increase two causes are mainly responsible. In the first place, the labour situation has, and is still, most difficult. While in most countries labour has recently abated its demands, it is not so in Mexico. During the half-year the demands of the labour unions, which are powerful and well organised, were most insistent, and it was impossible to put up an effective resistance to them. In the second place, when the railway was taken over in June, 1920, from the Government administration, stores of all sorts had fallen very low, and a large stock of all the ordinary requisites of a railway had to be ordered at the very high prices then prevailing. Much of this material has been charged out in the expenses of the half-year, and has thus added inordinately to the cost of running the railway. I hope, however, that it may be possible to make a sensible reduction in expenses in the near future. Nevertheless, the total net earnings of 1,956,000 pesos is by far the best showing made by the three half-years since the property was handed back to us, and with the assistance of profit on exchange and interest on investments we have been able to reduce the large debit balance to net revenue account by £113,000.

CURRENT HALF-YEAR.

As regards the working of the railway for the current half-year, the gross receipts show a considerable falling off, owing to the reservoir of freight at Vera Cruz having been exhausted, and expenses have been about 78 per cent., as compared with 77 per cent. On the other hand, the expenses for the month of April

were far more satisfactory, being as low as 73 per cent., and if this rate can be maintained for the remaining two months, May and June, the result of the half-year, though worse than that of its predecessor, will not be unsatisfactory. In addition to this we have collected from the public and credited to the Government during the half-year £42,000, being one-half of the increase in rates granted to us, and which came into effect on September 1st of last half-year only.

The total amount received on account of indemnity is £141,000 to the end of December last. Of course, this is vastly below the figure which the Government should have paid us by now under the agreement which they signed when the property was handed back to us, but still it is satisfactory to think that payments on account are being steadily collected. The total amount of indemnity payable has not yet been agreed, but we estimate that it will considerably exceed £2,000,000 sterling.

INCREASE IN RATES.

Since the issue of the report we have been notified of a further increase in our rates, which is being put into force by the Mexican Government in order to make them correspond more nearly to the rates in force on the national railways. This increase will amount to an all-round increase of all freight rates to 40 per cent., as compared with the present increase of 25 per cent. on all articles not of prime necessity. The rates on passenger traffic have not been further increased, and remain at 25 per cent. above ordinary rates. Half the new increase is to be treated as an addition to revenue, and half as payment by the Government on account of indemnity. So far as we can estimate, this addition to our ordinary income, based on the continuance of the present volume of traffic, ought to bring us in an all-round increase of 15 per cent. on the total takings, as compared with a 7½ per cent. increase since September 1st last, or, say, in round figures, 1,000,000 pesos per half-year, instead of 500,000, and should increase the daily payment on account of indemnity from 3,000 to 6,000 pesos.

There is a further burden which I understand is to be added to the rates in order to provide a fund for the service of the Public Debt under the provisional agreement recently signed in New York. This is a 10 per cent. tax on all earnings of the railways, which is to be collected by the railways and handed over to the Treasury. This, when added to the increase in rates now in view, will undoubtedly constitute a heavy load for our customers to bear.

PROSPECTS.

Turning now to the future, the prospects of local business are quite good, as the area under crops in the vicinity of our line is increasing under more settled conditions, and the crops promise well, and it is quite possible that foreign business, in view of the more favourable international outlook, may go ahead again. The increase in rates which will come into force now almost immediately must increase our profit on all traffic offering, and I am very hopeful that expenses, in view of the much improved state of the property, falling prices of materials and better organisation, will from now onwards show a decreasing tendency. So that, except for labour troubles, with regard to which it is most difficult to prophesy, the outlook is not otherwise than promising.

The scheme of arrangement with our debenture holders is now in force. We have found ourselves able to redeem a further 10 per cent. of the "A" debenture stock by July 1st next, making 30 per cent. in all, and if net earnings do not fall off there ought to be no difficulty in redeeming the whole of the two issues within the times called for by the scheme.

At the last meeting I spoke to you of a project that we were considering for the electrification of the mountain section of the railway, and we have now received a full report from the experts who have been studying the matter. They recommend very strongly that the section from Orizaba to Esperanza (some 30 miles) should be operated electrically, and in view of the many advantages which they claim for such operation there is no doubt in the minds of your board that their recommendation should be adopted, and the sooner the better. The capital expenditure involved would be in the neighbourhood of £500,000 sterling, but the savings held out to us should make the investment of the money a highly remunerative one.

I must now tell you something about the concession for a line from Pachuca to Tampico. We have long been seeking some outlet looked into the matter of this concession with unusual interest on my last visit to Mexico. Since then we had the projected line investigated by competent engineers, who report that it can be built at a reasonable cost, and will run through a country much of which has excellent agricultural possibilities. The joining up open up great possibilities for traffic. The price we are paying for the railway and concession I believe to be a moderate one, and we have obtained terms of payment in equal instalments over six years.

NECESSITY FOR RECOGNISING MEXICAN GOVERNMENT.

In the opinion of your board, both the electrification of a portion of the system and the construction of the short line to Tampico ought to be put in hand at once, and would rapidly fructify. But to carry out the work the company will need from £2,000,000 to £2,500,000 sterling of new money. The question before us is whether it is possible, in the first place, and justifiable, in the second place, to raise this large sum before full recognition has been accorded by our Government to the Mexican Government. In the present irregular state of diplomatic relations I doubt very much whether we should succeed in raising the money, and even if we did so, I doubt even more whether we should be justified in taking it.

The report and accounts were unanimously adopted.

HUDSON'S BAY COMPANY.

SATISFACTORY RESULTS—INCREASED PROFIT.

A general court of the Hudson's Bay Company was held, on 30th ult., at the Cannon street Hotel, London, Sir R. M. Kindersley G.B.E. (the governor), presiding.

The Governor, in moving the adoption of the report and accounts, said that the fur trade profit for the period under review amounted to £237,082, as compared with a loss of £84,086 in the previous year. Sale shops and other trading showed a profit of £77,871, against £204,960, while the profit on the Winnipeg head office was £61,471, against £44,450. The item of interest on instalments and rents, less taxes and expenses of collection, amounts to £119,570, against £128,399. Interest on loans and investments showed a considerable decline, being £12,120, against £60,341. On the land account municipal and other taxes, less taxes chargeable to profit and loss account, had fallen from £250,000 to £209,566. The total of all taxes on land had fallen from £328,389 to £278,292, but it had to be borne in mind that the previous year's figures included £32,097 of special or previous taxation, so that the net reduction this year was about £18,000. This was the first time for many years that the directors had been able to report a decrease in the amount paid for taxation. The general expenses of administration of the land had fallen from £63,838 to £31,500, due to the smaller sales. Capital reserve fund had been increased during the year by £28,392, and now stood at £339,284. The cash received from and loss account, had fallen from £250,000 to £209,566. The total result was that there was a surplus on land account for the year of £69,986, and by reducing the carry forward from £33,459 to £3,445 the directors were able to distribute £100,000, or 10 per cent., free of tax, on account of land sales, against 15 per cent. for the previous year.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, owing largely to the gradual liquidation of the company's business with foreign Governments, creditors and credit balances showed a decrease of some £821,244. The profit as per profit and loss account was £450,000, as against £300,000 in the previous year, while £100,000 was transferred from land account, as against £150,000. They had £607,053 cash at bank in London, against £152,756; investments were down from £391,915 to £254,905; debtors and debit balances were £924,000, against £725,428; while the amount invested in the fur trade had risen from £1,508,947 to £1,769,949. The amount invested in the sale shops and other trading was reduced from £4,184,855 to £3,259,465. The net result was that the directors were enabled to recommend a dividend of 35 per cent. out of trading and of 10 per cent., free of income-tax, from land—a result which he hoped the shareholders would consider satisfactory.

With regard to the fur trade, it was gratifying to report such a satisfactory profit as £237,082 from this department. The prices of fresh furs had been very well maintained during the year, compared with many commodities, and as the company's goods were invariably fresh goods they had been able to benefit to the full from the demand. A new development of this department during the last year or two was that of selling goods on consignment. Over two years ago the company was approached by Mr Stefansson, the well-known explorer, with a view to introducing reindeer into Baffin Land. It must be recognised that this project, which had the active support of the Government of Canada, was entirely in the nature of an experiment, the success of which was largely dependent upon climatic conditions.

With reference to the land department, no doubt the shareholders were disappointed with the results, but it was useless to try and sales of farm lands for the year had amounted to only 33,595 acres for \$545,611. This was the smallest acreage sold by the company in any one year since 1910, with the exception of 1915. Unfortunately, the conditions of harvesting turned out to be simply deplorable, and it was not surprising that the farmer should feel disinclined to extend his operations by the purchase of further

lands, nor that he should be behindhand with his interest and instalments. The promise of the present crop was decidedly encouraging.

TOWNSITE SALES.

As to townsites, there had been a distinct increase in sales. During the year townsite land had been sold to the value of \$163,483, which represented the largest sales since 1913. If only a reasonable and steady demand set in—and signs were not wanting that it was coming—they might see this deficit disappear in a year or so. The amount due to the company on lands sold, for principal and interest in arrear, was \$22,051,667. The number of acres remaining unsold was 2,810,591, in addition to the townsites.

With regard to the stores and general trading, he wished to make it quite clear that, had they been depending on the results of their stores alone for the period under review, they would have disclosed a loss on trading. Happily, the trading carried on from this side resulted in a very satisfactory profit, which, added to sums received in connection with adjustments of taxation, enabled them on balance to show a profit of £77,871.

The report and accounts were unanimously adopted.

BANK OF ADELAIDE.

The fifty-sixth annual meeting of shareholders in the Bank of Adelaide was held at the head office, Adelaide, on May 3, 1922. The chairman of directors, Mr Arthur Waterhouse, presided.

The Chairman, in moving the adoption of the report and balance-sheet, said: After making adequate provision for bad and doubtful debts, and allowing for the interim dividend paid in November, the net profit for this year is £92,633 as compared with £88,107 last year. Bills in circulation show a decrease of £489,316, mainly accounted for by our customers having reverted to the practice of remitting to London by cable, instead of by currency bills, as was done to a considerable extent during the exchange difficulty of last year. Deposits show an increase of £560,000. On the assets side our liquid resources are greater in Imperial Treasury bills by £755,000, in Australian notes by £280,000, and in Government securities, money at short call, &c., by £74,000, making together £1,100,000. But there is a shortage of bank bills purchased, remittances *in transitu*, and balance due to other banks, total £326,000, giving a net increase of £783,000. The liquid assets, which amount to £4,087,129, represent 11s 10½d in the pound, or 59.2 per cent. of the bank's total liabilities to the public; a very strong position, which, in these times of uncertainty, it has been deemed wise to maintain.

During the eight months of the financial year 1920-21 the imports to Australia were £117,000,000, while the exports were £86,000,000, so that there was a considerable sum (£31,000,000 roughly) unprovided for by exports. During the same period of 1921-22 the imports were reduced to £62,000,000, while the exports were about £81,000,000. Between the two seasons there was a reduction of imports of £54,500,000, whereas the reduction of exports was £4,800,000, or a difference of about £50,000,000. That is the reason why things have come right again.

The good general rains which have fallen during the last week have much improved the agricultural and pastoral outlook. Seeding operations can now be proceeded with, winter feed will be given a good start, water supplies will be replenished, and generally a good opening of the season secured. I have pleasure in moving the adoption of the report and balance-sheet.

The motion was unanimously agreed to.

WESTERN AUSTRALIAN BANK.

The one hundred and sixty-first half-yearly meeting of the shareholders of the Western Australian Bank was held on Wednesday, May 3rd, at the Banking House, St George's terrace, Sir E. H. Wittenoom (chairman of directors) presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said that it must be as gratifying to the shareholders as it was to the directors that they were able to maintain and pay the usual dividend in spite of the troublesome financial times. In addition to paying the dividend, the directors had decided to increase the reserve fund by £25,000, bringing it to no less a sum than £750,000. Besides this, it was satisfactory to be able to carry forward £15,822 for the next half-year. The deposits were higher than they had been for the last two half-years, being no less than £3,326,672. These figures were £17,800 better than March, 1921, and £217,000 better than September last. No better evidence was required of the popularity of the institution and the confidence the public had in it. Advances had not varied much, being only about £22,000 less than in September last. The directors received numerous applications for the employment of the bank's funds. The item "Specie, bullion, &c.," had improved in position, being no less than £817,650. This was £75,000 better than March, 1921,

GUEST, KEEN, AND NETTLEFOLDS, LIMITED. EXCELLENT RESULTS OF A DIFFICULT YEAR.

The ordinary general meeting of Guest, Keen and Nettlefolds, Limited, was held, on the 29th ultimo, at the Queen's Hotel, Birmingham, Mr Edward Steer, the chairman and managing director of the company, presiding.

The Chairman, in the course of his speech, said: I would like, first of all, to congratulate you upon the result of the trading for the nine months. This result has been achieved in spite of the very depressed condition of trade which has prevailed, and still exists. The fact that we are able to show this profit for such a period is largely attributable to the variety of businesses we carry on, and to the very substantial help which each one of our undertakings is able to render to and also receive from the others. In all our subsidiary and allied companies number sixteen. The largest and most important of these companies is that of John Lysaght, Limited. Incidentally, I might remark that this company has been of invaluable assistance in furnishing work for our Dowlais mills when that department has been short of orders, and the amalgamation has proved a wise step in every direction.

I propose to occupy your attention for a short time with a review of the conditions under which we have been carrying on our business since we last met in September. At that time several of our largest departments were idle owing to the disastrous condition brought about by the coal strike, which extended from April 1st to July 4th of last year. The question of unemployment had then become so acute that, immediately after our September meeting, a special meeting of your directors was held to consider what we could do to diminish the great distress prevailing amongst the company's workpeople at Dowlais. After anxious consideration it was decided that steps should be taken for a partial resumption of work there at the earliest possible moment. We realised that this course was not warranted by the state of the iron and steel trade, and would result in loss to the company, but the board felt that under the very exceptional conditions then prevailing they, as large employers of labour, were justified in making an attempt to tide their workpeople over the crisis. Arrangements were accordingly made to restart work at Dowlais, and I am quite sure that the action of the board was very highly appreciated by the workpeople and inhabitants of Dowlais generally. I am equally sure of the approval of our shareholders.

I now turn to the report. You will see that we have during the nine months under review obtained a controlling interest in the Gwaun-cae-Gurwen Colliery Company. This is an undertaking in the Amman Valley, near Swansea, with an output of nearly 300,000 tons per annum of the best anthracite coal, the mineral area being about 5,000 acres.

So far as the steam coal trade of South Wales is concerned, we have pits capable of an output of something like 2,000,000 tons per annum, but the exploitation of anthracite coal, for which there is an ever-increasing demand, will, I think, be an important part of the coal trade of the future. The only true anthracite coalfield in Europe lies in the western portion of the South Wales coalfield, its total output being about 4,000,000 tons a year. When it is remembered that America produces and consumes over 80,000,000 tons a year of this description of coal, the dearth of anthracite in Europe is very apparent. Feeling that this branch of the trade was a natural adjunct of our steam coal business, your directors decided, after much careful consideration, to make an offer to the Gwaun-cae-Gurwen shareholders of one £1 5 per cent. second preference share (free of tax) for every £1 7 per cent. preference share (subject to tax) and one ordinary share for every £1 ordinary share in the Gwaun-cae-Gurwen Company. The number of Gwaun-cae-Gurwen shares so exchanged amounted to 209,863 ordinary shares and 13,942 second preference shares, and the issued capital of Guest, Keen and Nettlefolds, Limited, is increased accordingly.

Since March 31st a further number of Gwaun-cae-Gurwen shares have been exchanged. In the opinion of our colliery experts the property has great possibilities, and I am quite sure that you will approve the steps we have taken to acquire an interest in the anthracite business, a policy which, I am glad to say, has already justified itself.

The balance of profit and loss for the nine months, after charging debenture interest, is £567,219, to which has to be added the amount brought in from last year, £264,098, making a total of £831,317. Deducting from this the interim dividends paid on preference and ordinary shares, £414,958, there is left a disposable balance of £416,359. The report shows how we recommend this should be appropriated.

I have already referred to the condition of trade during the period covered by our accounts, and to the fact that our works have been more or less on short time, but every effort has been made to secure trade alike in the interests of the company and our workpeople.

At our last annual meeting I ventured the opinion that trade was reviving, although we had still a long way to go before

arriving at normal conditions. This anticipation has been realised to some extent. I believe that the signs of a possible revival are more evident than they were then, but they require to be nursed and encouraged in every way.

The motion was unanimously agreed to.

JOHN BROWN AND CO., LIMITED. LABOUR CO-OPERATION NEEDED TO MEET COMPETITION.

The annual general meeting of John Brown and Co., Limited, was held at Sheffield, on the 27th ultimo, Lord Aberconway, P.C. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said he was afraid he had not any very pleasant remarks to offer on the general situation. His words would be rather of a negative character, because there was little of a positive character to go upon, except the fact that they had just closed the worst year in the history of the company that he could remember, although he was not sure that the year they were now in would not be equally as bad. The general situation had been affected by various adverse conditions. Last year there was the miners' strike of three months, which practically paralysed trade for a quarter of the year; this year there had been the engineers' strike, which, he was glad to say, had come to an end, but which, of course, had had the usual adverse effect upon national trade. The expected revival of trade last year was not realised; the consumer refused to buy at high prices, and the biggest strike they had ever had had to be faced—the strike of the consumer, the man who had not the money to pay for the goods which remained at those high prices, but said, "I will make my old things do for the present, because I can't afford to buy new ones." We used old ships instead of new, old rails, old machinery, and even old clothes.

EFFECTS OF HIGH INCOME-TAX.

That had the effect of forcing prices down, and at the same time no relief came to Sheffield. There were practically no fresh orders, and with the high rate of income-tax people were not able to put money into fresh business developments. Not only had they not got the money, but they felt that if they had half to three-quarters of their income it would be taken by the Government in the shape of income-tax and super-tax. The high rate of income-tax had a great deal to do with a lot of the inactivity we had to face. There had been a considerable decrease in prices compared with materials of Continental manufacture. Last year English basic pig-iron was £9 per ton, compared with Belgian at £8 15s, but we had brought prices down this year to £8 10s. There was no profit, but we had got to quote these prices to retain what trade there was. Last year steam coal was 35s; this year it had fallen to 20s. People might say: What is the advantage of quoting prices that do not show a profit? There was an indirect advantage if they looked at the exports and imports of pig-iron during the last five months and compared them with last year. They would see a very great change. Our imports from Belgium and Germany were 66,000 tons less than last year, while the exports were 23,000 more; that made a difference of 96,000 on balance. With France imports were 40,000 tons less, while exports to France were 23,000 tons more. If you take the general trade of the world in which we are interested, you will find that imports are 117,000 tons less and exports 153,000 more, making 270,000 in our favour. These figures show that as soon as we get prices down to an economic level an improvement set in. By next January we might see something better, but before then he did not expect any better financial results.

COAL SITUATION.

Matters would have improved generally but for the engineers' strike. In all branches of industry the repercussion of that must have been felt. Coal was at the bottom of all industry, and blast-furnaces came next. Blast-furnaces could only work on cheap coke, which had fallen from 61s per ton to 17s. That helped a lot, but at 17s per ton coke was not profitable. In Yorkshire miners' wages were 64 per cent. above the basis, and coalowners had to compete with other districts where the wages were only 20 per cent. above the basis, and when they recollected that the reduction in the selling price of coal was more than double, the reduction in wages they would see what a very tight corner the coal trade was in.

Labour costs could be reduced by the assistance and cordial co-operation of the men, if they did not restrict output. More economical conditions of work, new machinery, and new processes would do a great deal to prevent the individual suffering in the process of reducing labour costs. We are having to struggle for existence in the engineering and shipbuilding trades, continued it is in the interests of our men to fall into line. There is one safe and sound policy, and that is one of give and take. We had to face the most fierce foreign competition, and the employer must have a free hand in dealing with his workshops, his men, and the

conditions of the industry. There was no intention in the recent negotiations to make the conditions of labour any worse.

Lord Aberconway, in dealing with the coal situation, said he did not think owners should force prices down; they should have an understanding as to what prices to offer coal to railways and for foreign shipment. He deplored that high railway charges precluded Yorkshire owners from taking full advantage of the foreign demand for coal. At Clydebank a great deal of work had been suspended; high prices made it difficult to get orders. They had completed and delivered two very fine vessels, one the "Windsor Castle," which the Prince of Wales launched. Lord Aberconway concluded with a very high tribute to the work of the staff. The financial position of the company was thoroughly sound, and when trade recovered they would be able to satisfy their customers as well as any firm in the United Kingdom.

Sir Charles Ellis seconded the report, which was unanimously adopted.

CROWN MINES, LIMITED. (INCORPORATED IN THE TRANSVAAL.) WORKING COSTS AND ORE RESERVES. HIGH WAGES IN SOUTH AFRICA.

CURRENCY QUESTION AND THE GOLD EMBARGO.

The twenty-sixth annual meeting of Crown Mines, Limited, was held in Johannesburg on June 1st.

The Chairman (Mr Samuel Evans) said:—

You will note from the report and accounts that the operations of the company in 1921 resulted in a net balance of revenue over disbursements of £662,800, which, with the amount of £457,352, the balance unappropriated at the end of 1920, £157 discount on debentures purchased, and £335 forfeited dividends, brings the total credit in the appropriation account to £1,120,644. Capital, annuity in respect of undermining rights and redemption of debentures, require £213,816, Government and provincial taxes £98,734, and dividends £305,534, leaving £502,560, which is made up of: Stores and materials, sundry debtors, &c., £299,609; net cash, £202,951. The net cash on hand at the beginning of 1921 was £138,748.

The Central Mining and Investment Corporation, Limited, recently acquired from the Custodian of Enemy Property all the enemy shares of the companies of the group held by him. They included 28,000 Crown Mines shares, which were acquired for 31s per share. The Corporation has offered these shares to the company at cost price, plus a commission of 5 per cent., and your board has accepted this offer.

The outstanding features of the year under review were the high working costs and the low efficiency of our labour force, as will be gathered from the following comparison of the results with those of 1914:—Average Europeans, 1,753 (1914, 1,576); natives, 13,109 (11,826); footage, 44,856 (32,698); tons milled, 2,177,000 (2,287,000); per white employee, 1,242.6 (1,451.1); per native employee, 166.1 (193.4); gold recovered (ounce), 643,005 (707,957); working revenue, £3,388,748 (£2,975,688); working costs, £2,716,718 (£1,784,959); working profit, £672,030 (£1,191,629); dividends paid, 395,534 (£799,999).

There have been very wide variations in the currency price of gold on the London market during the year. The additional revenue obtained by the company on account of the premium has been £691,002 in 1921, against £926,062 in 1920 and £286,309 in 1919; per ton milled, 6s 4.2d, against 8s 5.0d and 2s 11.3d; per fine ounce produced, 21s 5.9d, against 27s 6.9d and 8s 11.5d. Had our gold output last year been disposed of at the standard value of 85s per fine ounce, the result would have been a loss on the working of the mine of 2.1d per ton milled, or £19,000 altogether, and this is exclusive of the redemption of and interest on debentures, capital expenditure, and Government taxes.

This year, owing to the strike, we had up to the end of March incurred a working loss of £89,663. During April we made a profit of £35,661, and last month it is estimated that the profit will amount to close on £45,000. We are still suffering from the effects of the strike, as the average number of natives in the service of the company on May 30th was 11,982, as compared with 15,495 at the beginning of January. Our working costs for April were 22s 0.6d, as compared with an average of 25s per ton milled last year, but it must be remembered that the quantity of ore milled in April this year was only 146,400 tons compared with 192,000 tons in April, 1921. From now onwards there should be a steady improvement in the profits, as the working costs should show a further appreciable reduction in the course of the next few months, provided, of course, that our native force continues to increase, as we have every reason to expect that it will.

Reverting to last year's results, it will be observed that, although we treated 110,000 tons less, the costs were £932,659 higher than in 1914. It is true that we developed last year 12,000 feet more than in 1914, but the additional cost of that work would amount to only about £60,000. Taking gold at its normal price, the

revenue per ton last year was 1s 2.6d less than in 1914, while the costs per ton were 9s 4.3d higher. Had the costs in 1921 been the same as in 1914, and had there been no premium on gold, the working profit would have exceeded £1,000,000.

SATISFACTORY VALUES.

These facts clearly indicate that our main difficulties are not connected with the value of the ore reserves. In fact, taken as a whole, our ore reserve position is satisfactory, and justifies us in taking a hopeful view of the future prospects of the company. When the Crown Mines was formed Mr Webber never anticipated a higher average grade than five and a-half to six dwts from most of the areas from which we are now drawing ore. Of the ore developed last year 79.1 per cent. was payable, and totalled 2,250,000 tons, of an estimated average value of 6.3 dwts. We have now exposed on the 19th level a stretch of good main reef leader 2,500 feet long. Owing to the strike the amount of development done this year has been small, but I may mention that the values exposed in the lowest levels of the mine continue satisfactory. As you will see from the report of the consulting engineer, our available ore reserves totalled on December 31st last 8,511,200 tons, estimated to carry 6.1 dwts over a stoping width of 61 inches, as compared with 8,131,700 tons, averaging 6.4 dwts over a stoping width of 62 inches at the end of 1920.

There are also fully developed in the mine close on 6,000,000 tons of ore of an average value of rather more than 3 dwts, which is to-day classed as unpayable. Were it possible to bring costs down to something approaching the level which prevailed when the Crown Mines came into existence, the bulk of this ore could be worked, thereby adding to our profits, increasing the life of the mine, and affording greater scope for employment.

The Crown Mines and the Langlaagte Estate and Gold Mining Company have recently purchased from the estate of the late Henri Jacques Lebaudy the Langlaagte Proprietary claims, bewaarsplaatsen, water-rights, machine stands, and freehold ground for a total sum of £55,100. The mining ground has been divided between the two companies on a basis agreed upon by their technical advisers. This transaction gives us approximately 35 reef-bearing claims, which can be opened up and mined from our existing drives without much delay and with comparatively little additional expenditure on capital account.

From our present reserves we can expect an average yield of close on 25s per ton, which, with costs reduced to something approaching the pre-war level, a fair supply of native labour, and after providing the amounts required to cover debenture interest and redemption, the undermining rights annuities, and the estimated capital expenditure necessary for the development and equipment of our southern ground, should enable us to distribute to shareholders a yearly dividend considerably better than on the average has been the case since the outbreak of the war. It should be clearly understood, however, that satisfactory results cannot be achieved by the Crown Mines or any other company on the Rand except on condition that the management is not harassed by hasty changes of the miners' phthisis and other laws, Government regulations, labour union restrictions and interference, that the native labour supply is adequate, and that we are not burdened with increased taxation either by the Union or Provincial Governments.

WORKING COSTS.

It is obvious from the comparison of results of last year with those of 1914 that working costs constitute the crux of the situation as far as our mine is concerned. As compared with the 1913 figures, working costs last year show an increase of £930,696, or 8s 6.6d per ton milled. A careful analysis of our expenses shows that the main reason for the difference between the 1913 figures and those of last year is the enormously enhanced cost of European labour employed by the company or employed in the manufacture, transportation, and handling of the stores which we have to purchase. The total average cost per man per shift of underground day's pay men and contractors went up from 20s 5d in 1913 to 39s 6d last year, an increase of 93.4 per cent. In the case of reduction workers there was an increase of 85.4 per cent. in the cost per man per shift worked of day's pay men. The cost of white labour per native employed rose from £43 18s in 1913 to £76 4s in 1921, an increase of 73.6 per cent. I am including in the costs not only the wages, but other disbursements, such as holiday and sick leave pay, &c., to which I have already referred. The changes that have taken place in recent years in the miners' phthisis laws have involved a very heavy additional burden on the mining industry. The reckless prodigality of the Union Legislature in this matter is unprecedented in the history of compensation for industrial disease. The present cost per shift worked of the miners' phthisis contribution is equal to over 20 per cent. of the average cost per shift of European underground day's pay men and contractors in 1913.

As regards stores, the prices of primary products, such as mealies and meat for feeding native labourers, have fallen, but stores the prices of which depend on white wages are still high.

averaging at the end of March about 60 per cent. above the 1913 quotations. The substantial increase made in railway rates in recent years has added largely to the cost to the mining industry of stores and power. For instance, in the case of mining poles grown in the country the railways now get more than the grower.

WAGES AND AGRICULTURAL DEVELOPMENT.

After reviewing the strike troubles, the Chairman continued: I have on previous occasions urged that the slow development of the rural parts of South Africa is attributable in no small measure to the unduly high rates of pay and generous working conditions which prevail on the Witwatersrand. A standard is set which necessitates excessive railway rates and fares and an extravagant scale of expenses generally for the farmers and the other inhabitants of the Union. The Economic Commission, which reported at the beginning of 1914, showed that wages on the Witwatersrand were 40 per cent. higher than in America (where money wages were materially greater than in any other country examined), 49 per cent. higher than in Canada, 69 per cent. higher than in Australia, and nearly 225 per cent. higher than in any European country. Although Labour is more powerful in Australia than in any other part of the British Empire, the increases in wages made on the mines in Western Australia during the war and afterwards were considerably less than on the Rand.

The high cost of living is usually the excuse given for the exceptionally high wages paid in Johannesburg, but it is seldom realised that under existing circumstances the high cost of living is itself due to high wages. It is important that this should be clearly understood. If you compile a list of the necessities of life that are really dear to-day, you will find on investigation that their dearness is caused in practically every instance by the high cost of production, transportation, and handling occasioned by high wages.

CURRENCY QUESTION.

At our meeting last year I pointed out that the unsound currency policy pursued by Governments in recent years was the root cause of our present troubles. The events of the past 12 months confirm the correctness of the conclusions I submitted to you a year ago—namely, that there can be no prosperity and contentment in this or any other country until we have restored the normal relations between primary products on the one hand and manufactured goods, transportation, and selling charges on the other hand. The farmer and other primary producers must be enabled to exchange their products with the products of other industries on a fair basis, a basis which will provide a reasonably equal reward for capital and labour in each industry. That means that the wages of industrial workers everywhere must be reduced; they must be adjusted to the economic situation in which the farmer and other primary producers find themselves. Without such an adjustment full employment and permanent prosperity is out of the question. Organised workers gain nothing by the attitude of their leaders. It is true some workers are getting too much, but others are getting nothing, and when due allowance is made for the loss of wages by the unemployed it is probable that the aggregate earnings of organised workers are considerably less than they were in pre-war days. Organised labour in the manufacturing, building, transportation, and shipping industries here, in England, America, and certain other countries are still clinging desperately to the high money wages, short hours, and the inefficient conditions of the period of inflation which followed the war, whilst Governments (including our own), by means of embargoes on the movement of the precious metals, dumping provisions, and high Customs tariffs, render it impossible for us and for the farmers to derive any material advantage from the low prices measured in gold and agricultural products of machinery, implements, and stores in countries with highly depreciated currencies. It seems to be forgotten that international trade is an exchange of goods for goods, and for the time being the policy of cutting your nose off to spite your face is in the ascendant with many Governments, who have apparently allowed themselves to be mystified and hoodwinked by the fallacies of the Mercantilist school dressed in the jargon of the exchange market.

There are, however, signs of a break in the clouds. Politicians and bankers are being gradually forced to abandon currency views and policies based on the balance of trade and other fallacies, and to admit—very reluctantly, it is true—the soundness of the conclusions of Ricardo, Lord Overstone, and the other economists and statesmen-financiers who were responsible for the principles which Sir Robert Peel embodied in the Bank Charter Act of 1844.

STABILISATION OF EXCHANGES.

Perhaps the most insidious and gravest danger confronting the gold-mining industry at the moment is the aspiration of our Government and of other Governments for co-operation amongst the leading nations of the world through central banks or otherwise for the establishment of some uniform plan for the stabilisation of currencies and exchanges. With this object in view international monetary conferences have been held, and others are

contemplated. Let us clearly understand that we have everything to lose and nothing to gain by these international currency conferences. No good can come out of them as far as we are concerned. Their whole history shows that the real object is to economise gold or to do without gold. Indeed, it is most fortunate for us that the United States has hitherto held aloof; and that the ter Meulen proposal, the British Government credit scheme, and other plans to continue and extend the substitution of paper for gold, have so far failed. I have no doubt whatever that had there been no attempt at joint international action in this matter in the last three years, already several Governments, besides those of the United States, Japan, and Switzerland, would have restored the gold standard in some form, that the embargo on the free movement of the precious metals would have disappeared in a great many countries in addition to those mentioned and India, and that as a consequence the trade of the world would have been in a far healthier and more prosperous condition than it is in now. I can see no possible valid objection to the removal of the gold embargo by all countries. No country stands to lose by it. If generally adopted, it will enable producers in various countries to exchange their products on a reasonably stable basis immediately, and, what is of cardinal importance, it will tend to free international business transactions from the paralysing interference of Governments. The report was carried unanimously.

CITY DEEP, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

YEAR'S RESULTS "EXCEEDINGLY SATISFACTORY."

The twenty-first ordinary general meeting of shareholders was held in Johannesburg on May 26th.

The Chairman (Mr F. R. Phillips) said: I think we can only regard the results achieved as exceedingly satisfactory. The profit earned constitutes a record in the history of the company, the balance of working expenditure and revenue account amounting to £718,584 18s 7d, as against £644,184 5s 5d for the preceding year. This result is all the more gratifying when it is realised that the additional revenue obtained owing to the increased price of gold over its standard value decreased by £34,238 as compared with 1920. Nevertheless, it is significant that the higher price obtained for gold accounted for 62 per cent. of the profit earned, the working profit with gold at 84s per fine ounce being £270,140, and the additional revenue represented by the difference between 84s per ounce and the actual price realised amounting to £441,376.

The factor chiefly responsible for the increased profit was the amount of tonnage crushed, which was greatly in excess of anything previously accomplished. The tonnage milled was 995,100 tons, as against 862,500 tons in 1920, and 617,800 tons in 1919. This increase was due to the additional native labour supply, acquired from the City and Suburban mine and to better machine efficiency.

It is especially noteworthy that the sum charged directly to working expenses in respect of development costs exceeded that for the previous year by more than £40,000, and was almost double that for the years 1915-1916, when approximately the same amount of development footage was accomplished.

WORKING COSTS.

The working costs for the year compared with 1914 show an increase of 7s 6d per ton. The reasons for this increase, which has been general, have been given on many occasions. They include the high cost of stores, the increased remuneration to white and native employees, and heavy charges for the plithisis compensation fund. Every endeavour is being made to reduce costs, and with the increased efficiency which freedom from trades' union restrictions should bring, together with lower costs of material, a considerable improvement may be expected. The development position of this mine, however, is such that a vigorous policy must be pursued, and in consequence heavy expenditure in this direction must be expected.

The net profit for the year, namely, £718,584 18s 7d, together with the unappropriated balance of £313,201 0s 1d brought forward from 1920, and a small amount in respect of forfeited dividends, gave a total credit of £1,022,558 16s 11d in the appropriation account, and was allocated as follows:—Amount expended on £96,202 18s 4d; Government and provincial taxes, £114,438 14s 3d; dividends Nos. 18 and 19 of 20 per cent. and 17½ per cent. respectively, £485,625—£696,266 12s 7d. This leaves a balance unappropriated of £326,292 4s 4d. Of this balance £144,574 17s 6d was represented by net cash after allowing for liabilities.

Turning now to the operations for the past year, the outstanding features were the large increases in the development footage accomplished and in the ore mined. But notwithstanding the great amount of development footage accomplished, the ore mined from the reserves was considerably in excess of that replaced with the

result that upon a recalculation the reserve estimated at December 31st showed a decrease of 670,900 tons at a slightly lower grade.

DEVELOPMENT PROGRAMME.

The fact that an increased development programme is necessary is fully realised, and every endeavour is being made to improve the position. This is indicated by the increase in the monthly development footage, which averaged 2,596 feet for the last six months, as compared with an average of 1,959 feet for the first half of the year. It must be understood, however, that it will not be possible to effect any appreciable improvement by the end of the current year. During the year the south shaft was sunk a further 1,554 feet. The first stage in the sinking of this shaft was completed in December at a depth of 4,470 feet below the collar, and the connection between it and No. 2 incline shaft, *vid* the 17th level cross-cut, was made on April 21st in the current year. The permanent equipment of this portion of the shaft will be dealt with without delay. In this respect I should remind shareholders that a large amount of capital expenditure will be required.

It has been the practice in the past for your chairman to give some indication of the most recent values exposed by development prior to the annual meeting. This year, unfortunately, the position remains much the same as at the end of the year, owing to the events to which I shall refer later. I would mention, however, that highly payable ore is indicated in the ground extending from the western boundary for a distance of about 1,000 feet. Intervening between this area and No. 2 shaft poor values have been encountered, whilst the district between Nos. 2 and 1 shafts still shows uniformly payable ground over a distance of 4,000 feet. The broken area, referred to at previous meetings, east of No. 1 shaft has been passed through, and good values have been obtained east of the break.

It is hardly necessary for me to dwell at great length upon the devastating strike which took place on the gold mines, and which lasted from January 10th until March 17th. As regards mining operations for the first quarter of the current year, unfortunately it is necessary to record a heavy loss, amounting to £36,352. For the month of April, however, it is gratifying to be able to report a considerable improvement. The tonnage milled amounted to 69,200 tons, and the estimated profit earned will go far to wipe out the deficit of the preceding three months.

It must not be forgotten, however, that, apart from actual losses incurred as a result of the strike, there is a loss of the profits which would have been made, and which must now be deferred approximately to the end of the life of the mine.

EX-ENEMY SHARES.

I must make a brief reference to the shares of enemy shareholders vested in the Custodian of Enemy Property of the Union of South Africa. The Central Mining and Investment Corporation, Limited, has recently concluded a deal with the Custodian, whereby the corporation purchased the whole of the shares of all the companies under its administration. Included in this purchase were approximately 70,000 shares of your company. These were acquired at the price of 32s 6d per share. The Central Mining and Investment Corporation, Limited, offered these shares to the company at the same price, plus 5 per cent. commission, and such share of legal and other expenses incurred in their acquisition. At a meeting of the board it was decided to acquire the shares from the Central Mining, and that the interests of shareholders would best be served by cancelling them, and thereby reducing the capital of the company by a corresponding amount. A general meeting of the company will be held in due course to effect this arrangement. While we consider that the price at which the shares were obtained was fair and reasonable to both purchaser and seller, it must be remembered that it was only possible to complete this business so satisfactorily because it formed but a small part of a very much larger transaction.

The report was unanimously adopted.

GEDULD PROPRIETARY MINES, LIMITED.

(REGISTERED UNDER THE LIMITED LIABILITY LAWS OF THE TRANSVAAL.)
SATISFACTORY RESULTS OF OPERATIONS.
LOWER "PREMIUM" ON GOLD.

The twenty-first ordinary general meeting of shareholders of the Geduld Proprietary Mines, Limited, was held in Johannesburg on Friday, May 26th.

Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks stated:—

The actual operations at the mine have been quite satisfactory, the tonnage treated in the mill being some 11,000 tons in excess of the previous highest, the yield per ton practically the same as in the previous year, and the working costs at 23s 7d, about 6½d per ton lower. The effect of this increased output and lower costs has, however, been insufficient to offset the reduction in revenue due to the lower selling price of gold, with the net result that the working profit of £369,566 is less by about £19,000 than that for 1920.

ALLOCATIONS.

Sundry receipts from interest, rents, sales of water, owners' share of licences, &c., added £16,562 to the working profit, bringing the total for the year to £386,128. Of this amount, £32,552 was expended on excess development; taxation accounted for £47,285; charitable donations absorbed £2,715; additional remuneration to the directors under the provisions of the articles of association amounted to £1,800; £6,939 was written off as depreciation, chiefly to reduce to present-day values some of the stores and materials purchased during the war which are still on hand; and £220,916 was distributed in dividends. The remaining £73,921 was added to the unappropriated balance brought forward from the previous year, increasing this item to £129,467 18s 8d.

On capital account a total of £181,000 was expended during the year, of which £152,468 was in connection with the new No. 7 shaft, the sinking of which was completed during the year. At this shaft connection has been made with the reef on the 6th and 7th levels, while at the 8th level, where the main ore bin will be located, the crosscut to the reef is well on the way. Work in connection with the underground lay-out at this shaft will not be completed until well into next year, but will be sufficiently advanced in three or four months' time to permit of this section of your mine supplying its due quota of ore to the mill *vid* the new surface transport system. In the meantime, only 4 per cent. of the ore stoped is coming from this section, which contains 20 per cent. of the ore reserves.

You will have gathered from the reports of the consulting engineer and general manager that the increased development footage accomplished during last year continued to disclose very satisfactory values, particularly in the southern area of the mine. The result is that the ore reserves at the end of the year amounted to 3,545,000 tons, valued at 8.1 dwts over a stoping width of 62 inches, which figures disclose increases over those of a year ago of 325,000 tons, 0.1 dwt in value and 1 inch in width.

REDUCTION IN WORKING COSTS.

I do not propose to review the operations for the first four months of this year, as the conditions have been quite abnormal, owing to the strike and the attempted revolution on the Rand. What is of vital importance to shareholders is that the mill was idle from January 10th to February 20th, and from March 12th to 15th. An encouraging feature, to which I would draw your attention, is the reduction in working costs under the altered industrial conditions since the resumption of operations. The cost of production for last month was 20s 9d, including the usual charge of 2s 9d per ton for development redemption.

The development done this year in the southern area, though small in extent, is maintaining the high promise of previous work. On the 6th level, 420 feet of driving has been done, of which 63 per cent. is payable, having an assay value of 19.6 dwts over a reef channel width of 41 inches. On the 7th level, 100 feet of driving has been done, all of which is payable, having an assay value of 20 dwts over a reef width of 42 inches. In order to bring your information up to date with regard to development in this section of the mine, the position is that out of 7,325 feet of driving, wining, and raising in reef to date, 63 per cent. disclosed payable assay values, averaging 15.4 dwts over an estimated stoping width of 66 inches.

ORE RESERVE POSITION.

The present ore reserve position, which is better than it was four years ago by 1,345,000 tons at an improved value of 0.6 dwt, together with the favourable prospect of developing further high

grade ore, has induced the consulting engineer to recommend, and your board to sanction, an immediate increase in the capacity of the reduction plant to 65,000 tons per month. If further justification were needed for increasing the capacity of the plant, it will be found in the existence of a large quantity of low grade ore developed during recent years in the northern portion of the mine. This ore could not be included in the ore reserves when working costs were in the neighbourhood of 2s, but can be treated at a profit when the anticipated reduction in working costs resulting from the improved industrial position, and the further reduction due to operating on an enlarged scale become an accomplished fact. Your consulting engineer estimates that the saving in working costs due to these factors should be between 5s and 6s per ton compared with the average costs for 1921, and estimates the quantity of this low grade ore at 2½ million tons. If this ore be added to the previously published reserve of high grade ore, it would bring the total payable ore now available to 6,000,000 tons, having an assay value of 6.6 dwts over 61 inches stope width. It is not intended that ore of this average stope value should be sent to the enlarged plant, but rather to rely on being able to maintain a supply of the higher grade ore. It is, however, comforting to know that in this low grade ore the company has a valuable asset. The enlarged plant is expected to be in commission in the early part of next year.

FUNDS SUFFICIENT FOR CAPITAL EXPENDITURE.

The funds available at the beginning of this year, as disclosed in the balance-sheet, are sufficient to cover the capital expenditure programme sanctioned by the board in connection with completing the equipment and underground lay-out at No. 7 shaft, the surface transport arrangements, the extension of the reduction plant, compound accommodation, &c.

It is probable that the board will find it necessary to sanction further capital expenditure from time to time, but you may rest assured that any future appropriations out of profits to meet such calls will be of a very minor nature, and that the bulk of the profits earned, after making due allowance for the tax collector, will go into the pockets of shareholders.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED.

(REGISTERED UNDER THE LIMITED LIABILITY LAWS OF THE TRANSVAAL.)

YEAR'S RESULTS—RECORD YIELD AND PROFITS.

The twenty-first ordinary general meeting of shareholders of the Modderfontein Deep Levels, Limited, was held in Johannesburg on Friday, May 26th.

Mr P. M. Anderson (chairman of the company) presided, and in the course of his remarks stated that the features of the past year's operations have been the records established in the tonnages mined and milled, in the yield per ton and in the profit earned.

The very gratifying increase in the yield to over 11 dwts enabled the previous highest production to be passed by nearly 12,500 ounces, which, with gold at its standard value, would have given an additional revenue of about £53,000. As, however, the average premium of about 25 per cent. obtained for the year was 3½ per cent. lower than that for the previous year, the net increase in the revenue from gold was only £11,000. The profit of £916,824 derived from the year's production of 280,355 ounces was £25,516 ahead of the previous record, this being, of course, partly due to the higher yield I have just mentioned, but mainly to a reduction in working expenditure of £14,500, equal to nearly 7½d per ton.

On reference to the table of results since the commencement of milling operations, contained in the report, it will be seen that there remains a considerable margin for further reduction in working costs, as last year's figure of 22s per ton is, approximately, 35 per cent. higher than the figures for the years 1916 and 1917. Though a return to the levels of these years cannot be expected in the immediate future, it is hoped that a level materially nearer to normal may be reached in the current year. In this connection you will, no doubt, have noted with satisfaction that the figure for last month was nearly 2s per ton below the average of last year.

It would serve no useful purpose to review in other respects the current year's operations to date, as these have, of course, been quite abnormal owing to the strike and attempted revolution. It is very gratifying, however, to be able to record that a working profit of £52,874 was earned in respect of the first quarter, although the mill was idle for nearly two months and heavy strike expenditure had to be met. The profit for April was £53,959.

THE ACCOUNTS.

Turning now to the accounts, the profit on working was increased by interest, rents, and other sundry revenue to a total of £932,394, which, with the unappropriated balance of £163,464 brought forward from the previous year's accounts, gave a total of £1,095,858 to be

dealt with. Of this, £161,299 went in taxation, £3,012 in charitable donations, &c., £1,000 to the directors in accordance with the articles of association; £1,091 was written off as depreciation, and £750,000, or 150 per cent. on the capital of the company, was distributed to the shareholders by way of dividends, leaving a carry forward of £179,456, or some £16,000 more than at the close of the previous year. As your company has no further expenditure to incur on capital account, its financial position may, I think, be regarded as distinctly sound.

The technical reports in your hands have given you details of the development work done during the year, and I am sure you will have been gratified to read that the footage accomplished was 278 feet in excess of the preceding year and continued to disclose very satisfactory values, almost identical with those of the preceding year. As the result of this work, the ore reserves when re-measured at the end of last year showed a further increase of 275,000 tons, the assay value being, approximately, the same at 9.3 dwts and the width unchanged at 77 inches. This increase brought the reserves to a total of 4,375,000 tons, or over eight years' supply for the present mill.

With regard to future development, there remains several years' work to be done in undeveloped areas which are confidently expected to contain ore of as good value as that exposed in the past. It is proposed, however, to make certain ventilation connections and to do some prospecting in areas which are expected to contain low-grade ore. It is, therefore, possible that the development results to be published with future quarterly reports may, at times, be below the average value of the mine. I mention the point in order that you may be prepared, should this occur, and need not have any misgivings as to the value of your mine.

The Chairman put the motion for the adoption of the directors' report and statements of accounts to the meeting, and declared it to be carried unanimously.

NOTICES.

The Union Bank of Australia, Limited, notify that a branch has been opened at South Grafton (New South Wales).

Branches of the Commercial Banking Company of Sydney, Limited, have been opened at Quandialla and Tabulam, New South Wales.

The City office of Messrs Cox and Co., bankers, give notice that on Monday, July 3rd, their business will be transferred from 38 Lombard street, E.C. 3, to 80 Gracechurch street, E.C. 3.

Barclays Bank, Limited, announce that on and after Saturday, July 1st, their office at Rochford, Essex, will be converted into a full branch under the management of Mr Charles Foster (also manager of 24 High street, Southend, branch). They also announce that they will open on Monday next, July 3rd, a new branch at 345 Archway road (opposite G.N. Railway station), Highgate, N.6, under the management of Mr C. Aitken.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 1 and 3, Allerton road, Woolton, near Liverpool, and 5 Brockley terrace, Brockley road, Brockenhurst, Hants.

Reports and Notices.

Sir Arthur Worley, O.B.E., F.C.I.I., general manager of the North British and Mercantile Insurance Company, Limited, has been re-elected president of the Insurance Institute of London. Mr R. Y. Sketch, F.C.I.I., general manager of the Phoenix Assurance Company, Limited, and general manager of the Norwich Union Fire Insurance Society, was elected deputy president; Mr Henry Mann, F.C.I.I., of the Commercial Union Assurance Company, Limited, being re-elected hon. treasurer, and Mr J. A. Pollard, F.C.I.I., of the Alliance Assurance Company, Limited, being re-elected hon. secretary.

The Johannesburg Consolidated Investment Company, Limited, announce that Sir William Van Hulsteyn has been appointed a director of the company.

Mr W. G. Duncan, of Adelaide, has been appointed a director of the Broken Hill Proprietary Company, Limited, in place of the late Hon. D. E. McBryde.

The Metropolitan Electric Supply Company, Limited, have appointed Mr H. Richardson, manager of the Electricity Undertaking of the Dundee Corporation, as general manager of the company in succession to Mr W. R. Rendell, who has resigned on account of ill-health. Mr Richardson will take up his duties on October 1st next.

The directors of G. Beer, Limited, announce that they have appointed Messrs W. Elles-Hill and Co., chartered accountants, to be secretaries and accountants to the company as from July 1, 1922, on and after which date the registered offices of the company will be at 17 Throgmorton avenue, London, E.C. 2.

GOVERNMENT STOCKS, &c.

4 PER CENT. EXTERNAL DEBT OF GUATEMALA.—The Council of Foreign Bondholders have received telegraphic advices from the agents of the bondholders in Guatemala that the Government of Guatemala has paid them the sum of £35,000. This, together with the balances standing to the credit of the Government in London, is sufficient to provide for the service of the debt for the year ending June 30, 1923.

GUAYAQUIL AND QUITO RAILWAY PRIOR LIEN BONDS.—The Council of Foreign Bondholders have received the following telegram from the president of the Guayaquil and Quito Railway Company:—“Prior lien service arranged.”

3 PER CENT. CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—Tenders of bonds of the above debt for amortisation were opened on June 29th at the offices of the Council of Foreign Bondholders. Tenders ranged from £53 to £59 per cent. Those under £54 12s 6d were accepted in full, and those at that price to the extent of about 7 per cent.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—Tenders of bonds of the above debt for amortisation were opened to-day at the offices of the Council of Foreign Bondholders. Tenders ranged from £59 to £75 per cent., and those at and under £63 10s per cent. were accepted.

RAILWAYS.

SOUTH INDIAN RAILWAY.—The directors are prepared to renew the £250,000 6½ per cent. debenture bonds which fall due on July 3rd, for a further period of two years from that date, at the rate of 4½ per cent. interest at the price of £99 per £100 bond, with commission of 5 per cent. Holders of these bonds are requested to advise the company in writing by three o'clock on Friday, June 30th, whether they desire to avail themselves of this offer or not.

ASSURANCE.

SUN LIFE ASSURANCE OF CANADA.—The annual report and balance-sheet for 1921 shows that new assurances were issued and paid for to the amount of £18,499,322, bringing the total assurances now in force well above the hundred million mark. The total income from premiums, interest, and other sources was £6,526,347, an enormous sum of money for a purely life company to collect in twelve months, and far exceeding the income of any previous year. £2,458,987 was paid to policyholders, which brings the sum similarly paid since the company's foundation up to £23,456,508. The assets now amount to £26,766,455, an increase of over £3,000,000.

MISCELLANEOUS.

HOVIS, LIMITED.—At the annual meeting of the company, held on July 6, 1921, the cause of the delay in the presentation of the accounts was explained. The directors are now able to submit the balance-sheet and profit and loss account of the company in respect to the year ended March 31, 1920. The balance of the profit and loss account available after the payment of interest on debentures and dividends on 6 per cent. accumulative preference shares and interim dividend on the ordinary shares amounts to £33,918 13s 2d, out of which the sum of £7,500 was allocated to pay the final dividend on the sum of £26,418 13s 2d, which the directors propose to appropriate as follows:—To place to reserve £10,000; to carry forward £16,418. The directors confidently hoped that the accounts for the years ended March 31, 1921, and March 31, 1922, would have been placed before the shareholders by this time, but settlements with the Government have not yet been completed. The directors, therefore, propose, subject to the approval of the shareholders, to pay a dividend at the rate of 8 per cent. per annum in respect to the half-year ended March 31, 1922, and to convene a general meeting of the company later on for formally adopting the accounts as at March 31, 1921.

BANKS.

NATIONAL BANK OF SOUTH AFRICA, LIMITED.—The report for the year ended March 31, 1922, just issued, shows a balance of £193,424 at credit of profit and loss account. This figure is arrived at after taking into account (a) the balance of £34,881 brought forward from the previous financial year, (b) a transfer of £300,000 from reserve fund, (c) the application of £25,000 in reduction of bank premises investments stand at or below the present market prices. The bank's assets with their policy as foreshadowed in the statement of May 16th, year ended March 31st last, and also recommend that the profit and half-year ended September 30, 1921, at the rate of 8 per cent. per annum, which absorbed £118,600; to pension fund, £50,000; to following branches have been closed during the year, those indicated by italics having been replaced by agencies:—Transvaal: Bandolierkop, Leeuwpoort, Tzaneen, Val, Warmbaths. Cape of Good Hope: Orange Free State: Bushmanskop, Cornelia, Edenville, Orange-Territory: Lindi, Mwanza, Tabora. During the year the Hon. H. Keynolds, who held the position of general manager and managing director, resigned their seats on the board. Stockholders will be asked to confirm the appointments by the board of Mr Walter S. Webber, M.L.A., and Mr Charles Maggs as directors of the bank.

P. AND O. BANKING CORPORATION.—The report for the year ended March 31, 1922, shows that, after setting aside £79,770 for taxation, market rates, for bad and doubtful debts, and valuing investments at brought forward, the net profits amount to £159,300, which, with £6,846 have placed £52,228 to reserve, together with £37,500 recovered in respect of stamp duties and £272 being the balance at credit of share premium account, making total reserve £90,000. The dividend is 5½ per cent., less income-tax, absorbing £99,875, while £14,043 is carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Growing crops and pastures have derived considerable benefit by further rainfalls during the week, which has brought relief to the parched ground in most parts of the country. Spring cereals were suffering from lack of moisture, and the general position was becoming rather critical. Winter wheat, however, continues to make favourable progress, being less affected than other crops. Trading was on a more liberal scale than for some weeks past, and general trend of values firm. Native wheat continues to be sparingly offered both here and at the principal distributing centres, and values were slightly dearer at 54s to 55s for suitable milling samples, with inferior ranging to 51s per 504 lbs, free on rail. Imported

varieties met with better support, and prices responded to higher forward offers. No. 1 Northern Manitoba quoted 61s 6d landed per 406 lbs, No. 3 ditto 55s 6d, Australian 56s 6d, Rosafe 64 lbs 56s 6d, all ex-ship, to arrive per 480 lbs. In the cargo section more activity was noticeable, the demand from Continental countries showing improvement, and prices ruled firmer in sympathy with stimulating advices from North America. The following cargoes changed hands:—Hard Pacific and Red Pacific loading at 50s 6d and 49s 6d respectively, Rosafe 63½ lbs afloat 51s 9d to 52s 6d, loading 52s, July 51s 9d, and Australian afloat 52s 9d. Parcels in fair request and prices firm, though somewhat irregular at times. Crop reports generally continue favourable from the chief exporting countries. Flour steady at the recent decline, with a fair demand for home milled. London standard straight run quoted 45s 6d, patents 47s 6d to 48s 6d, town households 43s 6d, all English straight run 43s 6d per sack delivered London area. All English country straight run 39s to 40s free on rail at London stations. Imported quiet. Manitoba export patents quoted 44s, straights 40s, Pacific 40s, Australian 41s, all per 280 lbs ex-store. On c.i.f. terms the demand proved quiet, but rates steady, Canadian Patents July 15th 42s, straights ditto 39s, Kansas patents July 42s, Australian ditto 36s per 280 lbs. Millers' offers dull and values weak. Bread bran quoted £7 to £7 5s, ordinary ditto £6 5s to £6 10s, middlings £8 10s, bags included, ex-mill, Fancy Plate middlings £9 10s, Plate pollard £7 10s per ton landed. Maize firmer and in better demand. Yellow Plate old crop quoted 37s, ditto new 40s, yellow round African 35s 9d, landed, American mixed 33s 3d, ex-ship, to arrive. Cargoes engaged better support at firmer rates. Plate steamers afloat sold 36s to 36s 6d as to position, loading 36s 3d, June-July 35s 9d, while a good trade occurred in parcels at full to firmer rates. Barley, firm for feeding qualities, but the demand generally quiet. English malting nominal, grinding sorts quoted 44s to 48s per 448 lbs, free on rail. Of imported, Californian ruled at 39s to 46s, Australian chevalier 49s to 52s, Chilean ditto 49s to 55, landed per 448 lbs, No. 4 Canadian Western landed 34s 6d per 400 lbs. On c.i.f. terms cargoes of Persian July shipment sold 28s, and Dan/bess/Kustendji August-September at 31s per 400 lbs. Oats, firm to dearer, while sparingly offered. English in small supply, and ranges from 35s to 38s per 336 lbs as to quality, free on rail. Imported, Plate f.a.q. advanced to 27s, clipped 28s 3d, No. 2 Canadian Western 31s 3d, No. 2 white clipped American 38 lbs 26s 9d, and New Zealand 37s 6d to 40s, all landed, per 320 lbs. Oatmeal remains steady, but quiet. London made, coarse pinhead £18 10s, medium £17, whole groats £17 10s, rolled oats £18, flaked £20 10s, ordinary Scottish oatmeal £20 10s to £22, American all-cuts £18 to £18 10s per ton. Beans steady. English springs quoted 56s to 72s, and winters 50s to 54s per 532 lbs, free on rail. Imported, Rangoon hand-picked spot sold 6s 10½d to 7s, Madagascar haricots old crop quoted 10s to 12s, and new 16s to 17s per cwt. Chinese horse beans £10 15s to £11 15s per ton, ex-store. Peas quiet. English maples 85s to 95s, Duns 62s to 66s per 504 lbs, free on rail. Imported dull. Japanese spot quoted 52s, Dutch hand-picked 29s to 29s 6d, screened 25s to 26s, Tasmanian 23s to 24s, New Zealand blue 22s to 24s per cwt. English rye quoted 49s to 45s per 504 lbs, free on rail. Lentils steady. No. 1 split quoted 29s to 30s, No. 2 ditto, also Egyptian, 21s to 23s per 100 lbs. Homeward grain chartering was on a moderate scale, business being chiefly from North-American ports to the Continent and Mediterranean at generally steady rates. Montreal closed several steamers on the basis of 15 cents Rotterdam, and 15½ cents Antwerp/Hamburg, July, with similar cargoes

IRON, STEEL, AND COAL.

from American Northern Range to Continent at 14 cents, with to option of barley at 16 cents, and oats 18 cents per 100 lbs. To Mediterranean 20 cents is quoted, and Greece 24 cents, while Gulf of Mexico to Continent, August, would come at 18 cents per 100 lbs. North Pacific ruled quiet at 37s 6d per ton for wheat to U.K./lbs. Cont. September-October shipment. The River Plate ruled dull and easier, down to 23s being accepted for handy size vessels from upper ports July-August to U.K./Cont., while 5½ dollars was paid for full cargoes of linseed to New York. Eastern markets remain for all cargoes of linseed to 16s 6d to 17s to U.K./Cont. Australian wheat is reported to be chartered at 37s 6d home. South African maize indicates 22s 6d, while similar cargoes from the Danube were placed at advancing rates, and up to 19s was established for August-September shipment to U.K./Continent.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19

Our Cardiff correspondent writes:—There has been no improvement in the Cardiff coal market this week. If anything, the position is worse, and in several parts of the coalfield pits, where the loss on working was heaviest, have either been closed down or placed under a 14 days' notice. The depression is felt most severely in those districts producing the inferior grades of steam coals. In April there was a pithead loss on all the steam coals produced in the Swansea district of between 3s 6d and 4s per ton, and in the Port Talbot district of about 1s 6d per ton. The losses this month in these particular districts have been much heavier, and in the absence of a scheme for the joint control of output and the subsidising of the poorer collieries by levies, the owners have had no alternative but to stop working. June has been the least satisfactory of all the months since February. The output has declined by approximately 100,000 to 150,000 tons per week, and the latest export returns show a decrease of 130,000 tons from the Welsh ports compared with the best week's shipment in May. The dearth of business at the end of this week is very pronounced. It is difficult to explain this slump, for there has been no unfavourable development in the principal foreign markets for South Wales coals, and the theory that foreign buyers were holding off in an effort to reduce prices seems to be discredited by the fact that there is no business even at the present low values. The threat of a strike in the coalfield next month on the non-unionist question has certainly led to the temporary withdrawal of one or two orders which were on the point of completion, but in the coalfield it is not for a moment thought that the miners will carry out their threat, and if there were any real danger of a stoppage, the probabilities are that prices would be harder for prompt shipment than weaker. The question of the control of the sale of coal has this week again been considered by the Employers' Association, but only with the result of the indefinite postponement of any action involving artificial regulation of prices or production. The differences of opinion between the colliery companies are too great to be bridged. The only market showing any real strength is that for anthracite coal, which for the best large qualities are now ruling up to 50s. for machine-

The fourth series of London auctions finished last Wednesday, two days earlier than expected, due to B.A.W.R.A. withdrawing 20,000 bales. This was done on account of prices for crossbreds not being satisfactory, and in view of the distinctly lower level of values no surprise need be felt with the action of the association. Some seem to think that B.A.W.R.A. stocks should be allowed to go regardless of prices, but those responsible for marketing these wools need be in no hurry to force them on to an unwilling market. It can easily take two to three years before the last is seen off. B.A.W.R.A.'s old stocks of crossbreds, and in the meantime there is certain to be considerable fluctuation in the price of this class of raw material. Without doubt, the political situation in Europe has affected the sale of crossbreds, not only the raw material in London.

and this is bound to continue. Merinos finished mostly 5 per cent. below the close of last series, and the slight ease need alarm no one. It is just a reaction from the high level seen in May, and will have done more good than harm. One observes in consuming centres a very keen desire to get 64's tops back to a 4s basis for the opening of the next Australian season, and that level could be reached without any great upheaval. As a matter of fact, good standard 64's tops have been sold for September delivery by more importers than one at 4s 4d, and to-day there is at least 3d per lb variation among topmakers' quotations for merino tops of the same quality. We have contended all along that the piece trade of the world cannot get on to a permanently satisfactory basis with 64's tops at 4s 8d, and merinos must decline or crossbreds advance. The shearers' strike in Australia is certainly giving rise to some concern, and if continued long enough will upset the market. It is apparently a question of who are to be masters, pastoralists or shearers. However, it is too early for anyone to take fright, and in the meantime it is to be hoped that wise counsels will prevail. Manufacturing conditions continue to be healthy, and we think that, given a continuance of reasonable prices, a further improvement in the consumption of the raw material and partly and fully made goods will take place. Emphasis is still being laid upon the high cost of combing and other processes, and undoubtedly this is a serious consideration. Nevertheless, consumption is improving, and wool at a reasonable price, particularly merinos, would intensify the present measure of confidence.

Trading in the market during the past week has been rather irregular. The ups and downs in raw cotton rates have had a disturbing influence upon business in yarn and cloth. The undercurrent of demand, however, may be described as healthy. In view of the feature of interest has been the activity in piece goods for India the and a substantial turnover has taken place for Calcutta. Sales have also been arranged in shirt-

Rather more inquiry is reported from Hull for linseed cakes but cottons are in poor demand, while oil meals are unchanged in value and in normal request for the time of year.

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keeiung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

Deposits are received for fixed periods on terms which may be ascertained on application.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

In spite of tanners' protests that tanning does not pay at present prices of hides, the market is still firm to an advance, as at the Berrymondsey sales held on Thursday last best heavy ox sold at 93d and lights from 7d to 93d, showing an advance of 3d to 4d on last prices. Best cows at 63d to 71d remained steady. Calf were also a shade dearer, and lights at 113d to 12d were 3d up. Lambs remained steady from 2s to 4s 2d each, and pelts made from 1s 10d to 2s 3d each. The opinion is held in many quarters that hides are comparatively scarce all over the world, and that prices may go still higher. There has been a fair amount of business done in imported hides, and as America is still buying actively in the River Plate, values are very firm for all grades. The Chicago packer market is cabled as strong, with best heavies now selling at 17½ cents, Chicago calfskins making 18 cents.

The demand for sole leather seems erratic, but, on the whole, the trade has fallen off since the Whitsun rush. Tanners are very firm on prices, and as stocks of bends are low, users are perforce obliged to pay asking rates. The tendency is for a better class of sole leather, as the wear—or lack of it—of some of the rubbish made from dry hides has been deplorable. The instability of the Continental exchange has again affected business in split hides, and French business has fallen to nothing again.

Upper leathers are fairly brisk, but suede seems falling off, and manufacturers are now sampling glacé kid and calf leathers for the winter trade. Complaints are made of "dumping" of foreign upper stock, but official statistics do not seem to support the suggestion. A meeting of chrome leather tanners and consumers is, however, to be held to discuss the position, when probably some attempt will be made to protect this section under the Safeguarding of Industries Act.

The boot trade is still fairly brisk, with prices falling; but leather goods makers are all complaining of lack of orders.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 30.

There was a moderate amount of business doing in most commodities, and with one or two exceptions prices ruled steady.

SUGAR.—A fair off-take resulted in spot parcels of refined this week, and general steadiness ensued. Messrs Tate and Lyle's cubes, sold, 55s 6d to 56s 6d; crushed, 54s; granulated, 50s 3d to 50s 9d; A caster, 54s; B, 53s 3d; yellow crystals, 44s 9d; pieces, 35s to 37s; fine white, 45s 6d; granulated, August delivery, 50s 3d; September, 50s. West Indian crystallised, sold, 42s to 45s 6d, as to quality. American granulated on spot changed hands at 49s to 49s 3d; June, steamer, 22s 1½d to 22s 3d; July, 22s 4½d to 22s 6d; August, 22s 4½d to 22s 7½d, c.f. and i., London. White Java, July, sold, 20s 3d to 20s 4½d; August, 20s 1½d to 20s 3d, c.f. and i. terms, London. White Mauritius, spot, 47s to 48s; white Brazilian, afloat, 21s, c.f. and i., London, for dry. Cuban basis 95 per cent., June-July, quoted, 16s 9d; and Brazilian basis 80 per cent., ditto, 9s 3d, c.f. and i., U.K. Terminal market presented generally quiet features. White, August, sold, 22s 6d to 21s 9d and 22s 4½d; December, 21s 6d to 21s 1½d and 21s 6d. Cuban stocks total 937,200 tons, against 1,424,700 same time last year. Liquid glucose, spot, 27s 6d.

COFFEE.—This market disclosed a quiet tone, and general trend of values proved favourable to the buyer. The assortment at public sales was by no means attractive, and only a very moderate proportion found buyers. Futures steady, but trading was carried on quietly. December, sold, 62s.

COCOA.—Market quiet, unaltered. Butter slow, at 1s 7d per lb.

TEA.—Indian auctions this week amounted to 39,145 packages. There was a good demand for all descriptions, and previous level of values was maintained without difficulty. Ceylon sales embraced 32,900 packages, and where quality showed some improvement, active support was accorded at full to dearer prices. Common kinds generally steady, and sold with fair freedom.

RICE.—Inquiries on Continental account were rather more frequent, though, speaking generally, business moved quietly without particular change in prices. Two stars Rangoon, spot, new crop, quoted 14s 9d; afloat, 14s 4½d, c.f. and i. Demand for both beans and peas remained slow. Rangoon hand-picked beans, on spot, sold, 6s 9d to 7s.

FRUIT.—Market keeps quiet for currants, and where sales resulted buyers were favoured respecting any alteration in values. Pyrgos quoted 52s; Amalia, 53s to 54s; Vostizza, 58s to 65s. Only small transactions were effected in both sultanas and Valencia raisins. Dates quietly steady.

SPICE.—Pepper market again quiet, but steady in absence of any undue pressure to sell. Fair black Singapore, spot, sold, 44d; June-August steamer, 34½d; Aleppy, spot, quoted 44d; Tellicherry, 44d; white Singapore, 7d; ditto, June-August, 6½d; white Singapore, spot, 7½d; ditto, June-August, sold, 7½d to 7½d. Zanzibar cloves, spot, 1s 2d; September-November, steamer, 9d. Pimento, spot, 2½d. Flake tapioca, fair quality on the spot, sold, 2½d per lb; ditto, June-August, London, quoted 22s; fair Penang seed tapioca on spot, 21s 6d; ditto, June-August, London, 21s; sago flour, May-July, sold, 15s; July-September, 14s 9d. Desiccated coconut, spot parcels done 38s 6d to 38s; June-August, 37s 6d to 37s 3d; August-September, 38s to 37s 6d.

JUTE.—With no improvement in demand from spinners the market remained dull, but closed better. First grade, May-June, Continent, sold, £34 to £35; ditto, June-July, £34 10s to £35 10s; July-August, £34 15s to £35 15s; lightning grade, June-July, £31 10s to £32 10s; July-August, £31 15s to £32 15s. Hessians slow. 10 oz, spot, 39s; 8 oz, 28s. A twills, spot, 80s; B, 70s.

HEMP.—With a decided falling off in demand for Manila sorts, prices eased slightly, though there was no undue pressure to sell. F grade, July-September, quoted £37 10s; G, £34; J, £30; K, £29;

L, £28; M, £27; streaky threes, £34. New Zealand largely nominal. H.P.F., spot, sellers, £31; and fair £30. African sisal quiet. No 1 G.E.A., July-September, sellers, £35 10s.

SHELLAC.—Market showed quiet features. T.N., spot, 375s; August, sold, 367s 6d to 360s; October, 362s 6d to 352s 6d.

COPRA.—This market opened the week firmly, but assumed a quieter tone later, then re-acted. F.M.S. Straits, July-September, Rotterdam, sold, £25 7s 6d to £25 12s 6d; August-October, £25 10s to £25 8s 9d to £25 15s and £25 13s 9d; Java, July-September, £25 8s 9d to £25 15s; South Sea Islands, £24 15s; Zanzibar, June-July, £25; Ceylon, July-September, quoted £26 15s. Palm kernels steady, quiet. July-September, Liverpool, sold, £17 17s 6d to £18.

RUBBER.—Market very unsettled, but higher on the week, and on Wednesday last some excitement ensued owing to Dutch interests recommending the falling into line with British growers upon the point of restricting output. Standard crepe and sheet, spot, July delivery, sold up to 9½d, then 8½d; July-September, 9½d to 8½d and 8½d; October-December, 10d to 8½d and 8½d. Fine hard Para, spot, 10½d; soft fine, 10d; ball, 7½d.

MENTHOL.—Spot, 24s; Japanese peppermint oil, spot, 5s 1½d; aniseed, spot, 2s 6d; slab camphor, 3s 6d per lb. Japanese wax, spot, 90s per cwt.

EGG PRODUCTS.—Market steady. Prime liquid yolk, spot, 130s per cwt. Albumen, spot, 3s 5d per lb.

OILS.—Linsed market irregular but firmer. Spot, net, naked, 43s 6d; June, 42s; July-August, 41s 9d; September-December, 38s. Rape quiet. Crude, spot, 44s; refined, 48s. Cotton quiet. Crude Egyptian, 42s; Bombay nominal; common edible, 48s. China-wood: Hankow, spot (barrels), 67s; shipment, 65s to 64s, as to position. Coconut steady. Ceylon, spot, 40s; June-July, 39s; Cochiti, ditto, 43s. Soya quiet. Oriental, barrels, ditto, 40s. Japan fish steady. May-June, cases, 22s. Cod steady. English, spot, 31s. Ground nuts quiet. English crushed, naked, spot, nominal, forward, 48s; deodorised, barrels, 56s. Turpentine very irregular. American, spot, 112s 6d; July-December, 96s 6d; September-December, 94s. Rosin firm for common and medium grades. American, grade B, 13s 9d; F, 14s 9d; G, 14s 9d; WW, 20s 6d. French, F/G, 14s 6d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linsed market firmer, with a good inquiry for near positions, with a better demand. Bold Bombay, afloat, £22 15s. Small Bombay, ditto, sold, £21 10s. Calcutta, afloat, £21 15s; May-June, sold, £21 10s; June-July, £21 5s. Plate, afloat, sold, £19 15s to £20; June, sold, £19 15s to £20; June-July, £19 15s to £19 17s 6d. Rapeseed firmer. Toria, June-July, sold, £18 17s 6d; real bold Ferozepore, July-August, quoted £18 10s. Cotton seed irregular. Egyptian black, June, £12; and white, £11 2s 6d, paid and buyers. Bombay, July-August, sellers, £9 3s 9d. Ginglyly dull. Chinese, June-July, Continent, nominally £27 5s; large Bombay, ditto, £26. Castor, Bombay, May-June, quoted £18 17s 6d, to Hull. Ground nuts weak. Coromandel, machine-dried, May-June, Hull, £22 10s;

When you
Rent a Typewriter
have the best possible—
"The ROYAL"

Makes work easy because the touch is so light that the keys would almost appear to anticipate your thought; it makes the work look so well because the sharp, clean-cut letters please the eye and, in fact, the machine seems to do anything you wish, so adaptable is it. The duplicating is particularly good.

Machines can be hired at reasonable rates, by the week, month or any period.

Skilled operators provided at any time for special or temporary work.

Portable Typewriters Supplied.

ROYAL

Continent, £22 10s; Chinese decorticated, f.a.q., May-June, Continent, nominally £23 per ton.

METALS.—Tin opened the week with a quiet tone, and rates occasionally the turn in buyers' favour. Small dealings occurred, including cash at £152 10s, three months' £153 10s to £153 15s. Further slight concessions were made by holders on Tuesday, but without stimulating demand. Cash moved down to £152 7s 6d, and three months' £153 10s. Values remained steady at the decline by the middle of the week, with rather more inquiry. Cash, sold, at £152 7s 6d, and three months' £153 10s to £153 15s. On Thursday rates ruled easier, with a good inquiry. Cash, sold, £152, three months' £153 10s to £153. At Friday's session the market ruled firmer with good dealings in cash at £152 15s; July dates, £152 5s to £152 10s; and three months', £153 2s 6d to £153 15s. English ingots, £152 5s. Copper: In good demand on Monday, and rates ruled fully steady, cash selling at £61 12s 6d to £61 13s 9d, and three months' £62 2s 6d. On the following day values gave way slightly on some selling pressure, but others were fairly well met, and sales resulted in cash at £61 10s, three months' £62 2s 6d to £62. A quieter tone prevailed during the mid-weekly session, and prices barely steady, cash ruling at £61 10s, three months' £62 to £61 17s 6d. On Thursday a steadier tendency ensued, and a fair business transpired. Cash, sold, £61 10s to £61 15s, three months' £62 to £62 5s. At Friday's session market active and again dearer. Cash, sold, £61 16s 3d to £62; August dates, £62 to £62 5s; and three months', £62 5s; electros, £69 10s to £71; best selected, £66 to £68; strong sheets, £94; wire bars, £71 per ton. Lead steadier, £25 to £23 15s, as to position. Spelter dearer, £28 to £27 15s, according to positions. Aluminium, home trade, £100; export, £105. Antimony, English regulus, £27 to £29 10s.

Commercial Times.—Weekly Price Current.

Easy money kept discount rates weak, but buyers and sellers were both rather shy, and when no change in Bank rate was announced there was a slight hardening in the tone of the market. Yesterday the market was inclined to talk higher rates, owing to the movement of gold referred to below, which is believed to be going to America, and to be possibly the beginning of a considerable movement. But the low rate at which the Treasury Bills were placed put an end to the hardening of rates, and commercial bills were quoted at $2\frac{1}{16}$ per cent.

	July 7, 1922.	June 30, 1922.	June 25, 1922.	June 16, 1922.	Previous Rate and Date Changed.
Bank Rate	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (June 15, '22)
Banks Deposit Rate	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2 (June 15, '22)
Discount Call	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2 (June 15, '22)
Houses Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2 (June 15, '22)
Market rate (3 mths' bills)	$2\frac{1}{16}$	$2\frac{1}{16}$	$2\frac{1}{16}$	$2\frac{1}{16}$	..

The Bank return showed a decrease of £488,000 in the stock of gold, in spite of a reduction of £500,000 in the gold held in the currency reserve, which is balanced by an addition of £500,000 to the Bank of England notes there shown. It would thus appear that a million in gold has gone abroad. The note circulation has expanded by £1,475,000, and the total decrease in the Reserve is thus £1,963,000. Government securities were swollen by 18½ millions, and this sum was roughly put to the credit of the Other depositors, the decrease in the Reserve being balanced by a decline in Public deposits. In the currency notes return, dated July 6, 1922, the gold in the currency note redemption account has been reduced from £28,500,000, at which it had stood since May 12, 1915, to £28,000,000. The sum of £500,000 has been added to Bank of England notes in the redemption account, making them £20,150,000. Currency notes outstanding increased by £2,530,000 to £297,904,100, which includes £1,594,900 for notes called in, but not yet cancelled. The fiduciary issue is £248,150,500, or £61,828,900 below the maximum.

THE STOCK MARKETS.

The demoralisation of the Continental exchanges and events in Ireland, coupled with the realisation that a further reduction in Bank rate was unlikely this week, checked activity in the gilt-edged market, although the tendency remained firm. Foreign bonds were affected by the weakness in the exchanges, and Home Rails have suffered from lack of support. Argentine Rails have supplied the brightest spot, but prices gave way from the best towards the end of the week. Rubber shares have relapsed again into stagnation, and the oil market is quiet. Kalirs fell on realisations, and other mining descriptions have attracted little attention.

COMMODITY MARKETS.

Reports from leading trade centres this week do not suggest any general improvement, and with regard to cotton, iron and steel, and coal the position appears to be developing in an unfavourable direction. Business in cotton piece goods was restricted owing to a rise in values. The raw material jumped ½d on the American cotton crop report, but the rise was not fully maintained. Yarn quotations have been firmer and business slow. In pig-iron business is very quiet, and our Sheffield and Glasgow correspondents report increasing quietude in all branches of the iron and steel trades. Continued gloom is reported from the South Wales coal trade. In the Bradford wool markets there is little change to be noticed. At the Liverpool wool sale on Thursday crossbreds sold at firm rates under demand from French, Swiss, and Belgian buyers. In the wheat market balancing influences have been heavy offers by Argentine shippers and a growing fear of a late harvest at home. The market for hides is again firmer; in sole leather the week's turnover showed some improvement, but shoe manufacturers report a slight falling off in new orders.

FOREIGN EXCHANGES.

The unsettled conditions in the foreign exchange market continue to increase. During the week under review violent movements have occurred in the principal exchanges, and the present position is one bordering on

demoralisation. The outstanding feature has once more been the rapid depreciation of the mark, which at the time of writing (Friday) has reached the new high record of 2,270-2,300, a rise in the rate of almost 250 since the closing price on Thursday night, and 500 marks on the week. Any indication that this movement has reached its limits is still lacking, but the increasing recognition of the danger, especially from political quarters, may tend to bring about conditions which will eventually be to the benefit of Germany. Allied currencies have naturally been sympathetically affected, and Paris quotations, at present 56.85, show a depreciation on the week of well over 4½ to the pound. Brussels at 60.80 shows practically the same depreciation. The forward quotations of Paris francs are now quoted about five points per month over spot. Dollars, which opened the week at 4.42½, have been subject to irregular and somewhat violent movements, having at one time touched 4.41, and gradually recovering during the week to 4.46½, which figure was touched on Thursday, are now round 4.44½. Italy has once more gone over 100, and is now round 103; arrangements being made in connection with Italian Treasury bills in London may be partly accountable for this movement. Most of the neutrals have moved in favour of this country during the week. Holland, which reached over 11.50 on Thursday, has now gone back to 11.49, while Swiss francs, after gradually showing a rising tendency, are now quoted at 23.29. Scandinavians have moved irregularly, Christiania and Stockholm rates showing a slight increase at 26.62 and 17.16 respectively, while Copenhagen kronen have fractionally appreciated at 20.56. The Vienna exchange rose rapidly early in the week, but recovered to 90,000 on Thursday, only to fall back to 96,000 at the time of writing. Polish marks continue a weak market at 23-24,000 to the pound. In the South American market, Valparaiso at 34.30, has regained part of the recent depreciation, but Buenos Ayres at 44 and Rio at 77½ are fractionally lower on the week. Rupees at 15 3¼d and Hongkong at 28 7¼d remain practically unchanged. Shanghai, however, is weaker at 38 6¼d on the lower price of silver.

INTERNATIONAL FINANCE AND DISARMAMENT.

A SHORT time ago we observed that Germany's reply to the Reparations Commission afforded a breathing space, which might enable statesmen to achieve progress with the problems of international finance before any new disaster developed. Much was then hoped from the Bankers' Committee. But since this hope was dispelled symptoms have quickly developed which show only too clearly that the sands are running out, and that though Germany's default may be postponed for a few weeks, there is little time to lose in making fresh attempts to solve the problems of international indebtedness and to achieve international co-operation. The most serious of these symptoms is another spectacular depreciation in the mark. The latest slump, it is true, has not been quite so catastrophic as some of its predecessors. In four weeks the mark has lost about 40 per cent. of its value measured in sterling, whereas in the four weeks which followed October 10th it lost 50 per cent. of its value. Nevertheless, the fall has been serious enough. Its gravest aspects, perhaps, are that it indefinitely postpones the date when Germany can be expected to produce a Budget equilibrium; that it lays up an additional store of trouble, both social and economic, for the German Government against such time as it may make a real attempt at financial reform—with its inevitable consequence of falling prices and depressed trade—and that by doing so it makes it less likely that a Government determined to face the problem can derive sufficient strength from popular opinion to enable it to live and carry out its task. The new mark crisis, therefore, carries us definitely nearer to the possibilities of internal developments in Germany, which would have grave repercussions throughout the world.

The fall in the mark has also been fast enough to produce a disturbing effect on the trade of competing countries. Since Great Britain is one of the most important of the latter, it is of special interest to consider what effect this new movement will have on British trade, which has recently been showing definite, but very modest, signs of trade revival. On the previous occasions in the last year and a half when the mark has shown a violent movement, it has meant for the time being that German goods have drastically undercut British goods in international markets, owing to the facts that internal prices and wages in Germany have been slow to respond to the downward movement of the exchanges, and that German manufacturers have found themselves stocked with imported raw materials bought when the exchanges were more favourable. Each slump has, therefore, been a blow at the restoration of trade generally; it has transferred a certain limited number of orders to Germany, and has caused buyers everywhere to suspend the placing of orders because it has shaken faith in the current level of prices. The world is threatened with another setback by the present fall in the mark. There is, however, reason to think that the effect will be less serious on this occasion than it has previously been. It is true that the margin between internal and external prices, which has steadily been closing up for the last six months, will now be widened again, and such trade as the sale of British coke and coal in Germany and Europe may for the moment be stopped once more. But for three reasons it is improbable that the disturbance of last October will, in fact, be reproduced. In the first place, the phenomenon of a depreciating currency is better understood both inside and outside Germany, and with each successive movement of the exchange the response of internal prices becomes more automatic. At hotels, for example, which are frequented in the main by Germans, there are public notices that in the event of the exchange moving the prices for accommodation will also be changed on the following day. The greater disparity between internal and external prices will, probably, be short lived. Secondly, it appears that Germany has no substantial stocks bought at low prices, and she will, therefore, not get much help in this respect on the present occasion. In the third place, the instability in the standard of value is gradually killing long-period credit in Germany.

British buyers know from bitter experience that though it was easy last winter to get quotations for goods, it was extremely difficult to get delivery, and on this occasion it is certain that both foreign buyers and German sellers will be less ready than they were eight months ago to deal on the assumption that the disparity in prices will continue. The commercial world also now understands that Germany in any case cannot possibly supply all its needs, and that the world level of prices of manufactured goods is not fundamentally affected by a momentary break in the gold value of German goods. Business men are not seriously perturbed at the prospect of a "deluge" of German exports with which the Prime Minister endeavoured to scare the delegation of Lancashire Free-traders on Wednesday. Further, it is realised that whereas the first few breaks in exchange enabled many to get rich quickly, an industrial nation which inevitably depends on its credit machinery cannot rear a stable structure of prosperity on the quicksands of a variable standard of value. We are becoming familiar with the fever which accompanies these exchange crises, and our knowledge of how to deal with the symptoms means that each attack in its actual effects upon competing countries is less serious and is over more quickly than the last. Such external effects are, in fact, far less serious than the dangers which the fever threatens inside Germany.

When viewed from this aspect the position is one that should spur on statesmen to expedite a sane solution of the urgent problems of international finance. For the moment we may recognise in the visit of two French representatives to Washington to discuss debt problems a means of continuing the discussion. But we are not under any illusion as to any prompt action being possible in the United States. Mr Lloyd George declares that he is "alarmed at the prospects in Germany." His course is clear. There is only one way by which the present drift can be stayed and opinion turned once more in the direction of hope, and that is for Great Britain to declare that she is prepared to discuss at once, and without reference to any action the United States may take, the terms on which it is prepared to cancel the debts owed to her by the European Allies.

It is, however, necessary to remember that before the international debt question can be finally disposed of there are certain preliminary conditions that must be fulfilled. Of these the most important is an agreement on the subject of land armies and armaments. We are not quite certain whether our friends on the Continent yet realise that in Great Britain, and still more in the United States, financial opinion will not welcome an arrangement with any nation which is overtaxing its strength to maintain large military forces. For at the moment military commitments are more important in producing unbalanced Budgets than debt interest which is not being paid. For this reason great importance attaches to the meeting in Paris this week of the League of Nations Commission for the Reduction of Armaments. It has not the spectacular features of the Naval Disarmament Conference at Washington last winter, and, obviously, it will be unable to achieve comparable results. But it is a matter of urgency that the Paris Commission should make as much progress as possible in getting over the preliminary discussion which all such questions involve. Following the method of the Washington Conference, Lord Esher, the British

representative, has put forward in nine resolutions concrete proposals, which lay down for the first time a working hypothesis of the ideal relative strength of armies in Europe. The plan adopts man power as the criterion and not expenditure, since the rate of pay in various armies differs so enormously. Moreover, the plan only applies to home troops and not to armies overseas. It makes no suggestion as to the military system of any country, and only fixes a ratio for the men actually under the colours, leaving reserves, territorial armies, &c., out of account. With these limitations he proposes a ratio scale of six for France, Poland, and Italy, four for England, Greece, Roumania, Yugoslavia, Spain, and Czechoslovakia, three for Belgium, two for Switzerland, and so on. His proposition is that the number of men in the Austrian army, viz., 30,000, should be taken as a unit. These figures obviously only form a basis of discussion, but any disarmament plan for Europe must, of course, proceed upon some such lines. There will be more criticism in principle of his proposal that an international staff should be established with the object of keeping its eye on the danger points of Europe, and for this purpose should have military attachés with real power of inquiry. This suggestion will, no doubt, raise widespread objection, but it will serve to show what real force of opinion there is in Europe which is determined to get rid of the burden of military preparation. Lord Robert Cecil, who is also a member of the Commission, has contributed a further suggestion for a more definite military agreement between the European nations than is contained in Art. 10 of the Covenant of the League. Under his scheme the signatories of this special pact would commit themselves to military assistance in the event of aggression against one of their number. If sufficient of the nations of Europe are ready to accept this "defensive alliance" it would, we think, smooth the way to reduction of armaments, and give France the much-needed military security which she cannot hope to obtain by a pact with Great Britain alone in the present state of English opinion.

THE PALESTINE MANDATE.

DURING the last few days the problem of the Palestine Mandate has taken a prominent place in public affairs. A letter on the subject addressed by Cardinal Gasparri, Secretary of State to the Holy See, to the Secretary-General of the League of Nations, has been published in the Press (e.g., in the *Manchester Guardian* of June 30th). A communication, regarding this letter, from the British Government to the Secretary-General of the League has been issued as a White Paper (Cmd. 1708, 1922). In another White Paper (Cmd. 1700), the Government have printed various notes that have passed between the Palestine Arab Delegation, the Zionist organisation, and themselves. And finally, the "Rutenberg Concession" was on Tuesday last the subject of a debate in the House of Commons. In this debate, which the Government treated as a question of confidence, the Opposition were defeated by a very large majority, but the Palestinian problem was not thereby brought any nearer to a solution. The debate, and the preceding publications, have raised issues rather than settled them. Their chief value for the British public (on whom now rests the ultimate responsibility for the welfare of Palestine in the post-war period), is that they may enable us to take the measure of the task with which we are confronted.

Palestine is a small and not a particularly rich country, but it is of vital importance to four main groups of interests:—(i.) its non-Jewish Arabic-speaking population (about 85 per cent. of the whole), and the Arabic-speaking population of neighbouring countries with whom they may have a common national consciousness; (ii.) its Jewish population (possibly amounting to 15 per cent.), and Jews elsewhere who may take an interest in the Palestinian Jewish community; (iii.) three international religions (Christianity, Islam, and Judaism), with adherents all over the world; (iv.) the British Empire, as a Power with a special interest in Egypt, and a still more special interest in the Suez Canal. Egypt herself must be included, side by side, with the British Empire, in this

fourth group, in such measure as she may establish her independence.

Of these groups of interests, the third and fourth are obviously not irreconcilable either with one another, or with the first and second. To take, as a concrete illustration, the apprehensions of the Holy See in regard to the proposed British Mandate, we may fairly confidently anticipate that the British Empire, with its immense experience in India, will successfully carry out in Palestine the delicate task of adjusting the relations of the various religious denominations as regards access to and guardianship over the holy places. And if our stewardship in this respect is a success, no one will grudge us the strategic safeguards for our sea-communications which the Mandate will automatically carry with it. This position, however, involves us in the much more difficult task of mediating between the Arab and the Jewish elements in the local population (with their respective kinsmen and supporters in other countries).

We do not approach this task with free hands. Our Government have already given pledges to both parties. The Arabs maintain that these pledges are incompatible, and after examining their arguments we are forced to accept the very serious conclusion that the Arabs are in the right. The British Government's pledge to the Zionists (the "Balfour Declaration") is impugned by the Arabs on two grounds: (a) that it conflicts with a previous pledge given to King Hussein in 1915, in regard to the Arabs at that time subject to the Ottoman Empire; (b) that in the Covenant of the League (Art. 22), the people of Palestine (among whom the Arab element is in an immense majority) were recognised as an independent nation, subject to the rendering of assistance by a mandatory until such time as they might be able to stand alone; and further, that, in the same instrument (Art. 20), the signatories undertook to obtain release from previous obligations inconsistent with its terms (a category in which the Arabs argue that the "Balfour Declaration" must be included).

On this point (b), the case has gone to the Arabs by default, for the Colonial Office, in their reply of April 11th, passed over Article 20 of the Covenant in silence, though the validity of the "Balfour Declaration," as against the Covenant, had been the principal argument of their previous letter of March 1st. It is hard to see how, in the face of Article 20 of the Covenant, the Balfour Declaration can still stand. But the commitment in Article 20 was, after all, entered into retrospectively, and it is more serious if the "Balfour Declaration" is also incompatible with a pledge to King Hussein which preceded it in date. Here, too, however, it must be confessed that the Government's position is wholly unsatisfactory.

The point is somewhat technical. In the first draft of a memorandum communicated on May 30th by the Colonial Office to the Arab Delegation and the Zionist Organisation the Colonial Office put it on record that the promise given to King Hussein "to recognise and support the independence of the Arabs was given subject to a reservation made in the same letter, which excluded from its scope the country lying to the west of the vilayet of Damascus." Now, "vilayet" is a technical term of Ottoman government, signifying a certain class of administrative area, and there was a "Vilayet of Shams," of which Damascus was the capital, and which also included all those trans-Jordanian districts to the west of which Palestine lies. Therefore, if this "Vilayet of Shams" was the area specifically referred to in the original letter to King Hussein, then Palestine was undoubtedly part of the territory that was simultaneously excluded from the scope of the pledge. The Arab Delegation objected, however, that, in the text of that original letter, the word "district," not "vilayet," had really been used, and that the "districts" of Homs, Hama, and Aleppo were mentioned in it in addition to the "district" of Damascus. Since Homs and Hama both belonged, like Damascus, to the Ottoman "Vilayet of Shams," the Arab Delegation maintained that the words "district of Damascus" could not possibly mean "Vilayet of Shams" in this connection, but must refer to a smaller territory immediately surrounding the town, and not extending either to the districts of Homs and Hama (separately mentioned) in the one direction or to the district of Transjordan in the other.

New York City

This may seem a quibble to readers unacquainted with the history of the famous "Secret Agreements," but to the initiated it will be obvious that the Arab Delegation's argument is both sound and important, and the officials of the Colonial Office (being numbered among the initiated) have taken a step which gives their own case away. In their letter of June 23rd, the Colonial Office wrote that the Secretary of State had "decided, after consulting the authorities concerned with the early correspondence between Sir Henry McMahon and the King of the Hejaz, to make a modification in the draft [i.e., the draft of the "Memorandum on British Policy in Palestine," in which the original letter to King Hussein was quoted] on a point of fact." What was this modification? When we compare the draft as first submitted to the Arab Delegation and quoted by them (Cmd. 1700, p. 25, l. 46), with the text subsequently submitted by the Colonial Office to the Zionist Organisation, and now published (Cmd. 1700, p. 20, l. 26), we find that the words "Vilayet of Damascus" in the first draft have been altered to "District of Damascus" in the second. By thus admitting that "district," and not "vilayet," was the word used in their original letter to King Hussein, the Government have admitted by implication that Palestine was, after all, one of the territories in which we pledged ourselves, in virtue of that letter, to recognise and uphold the independence of the Arabs. The "Balfour Declaration" thus turns out to be irreconcilable, not only with the retrospective obligation involved in Article 20 of the Covenant of the League of Nations when read together with Article 22, but with a pledge previously given to King Hussein, the acknowledged representative of the Arabs themselves.

Mr Churchill has got his majority in the House of Commons, but the fact remains that the British nation, through technical blunders in diplomatic negotiation, has been involved in obligations that are incompatible, and an exceedingly unfortunate dilemma has therefore arisen. A way out has got to be found, and found quickly. The first essential point, in our view, is that it is now out of the question for the British Government to go back upon the Balfour Declaration; the second is that in carrying that declaration into practice the Arabs must be assured of the privileges and safeguards which a reasonable interpretation of British pledges might lead them to expect. In spite of the verbal contradictions produced by diplomatic blundering, we do not believe that the task of combining these two achievements is actually impossible. Whether the British Government is, in fact, framing its policy so as to combine them cannot be said until the full text of the terms of the Mandate is published. We suggest that before the Mandate comes up for sanction at the adjourned meeting of the League of Nations Council this month the full text should be laid on the table of the House of Commons, together with the original correspondence with King Hussein. In a matter where the good faith of Great Britain is in question Parliament should not be presented with a *fait accompli*, but should be given an opportunity of prior discussion.

INDIAN EXCHANGE AND TRADE.—I. EXCHANGE.

It is not often that economic affairs furnish a story so dramatic and so ironical as that afforded by the course of the rupee exchange in the last few years. Before the war the currency and exchange system of India had acquired a peculiar fame. It had become the standard illustration of the possibility of maintaining an effective gold standard, not by the ordinary mechanism of a gold standard, but by means of what it is customary to call the "artificial" methods of Government control. Without a gold mint, with a currency consisting in overwhelming proportion of silver coins, without the express convertibility of these silver coins into gold, the Indian Government had for many years maintained the rupee at a parity with the sovereign of 1s 4d. They had done this by means of a series of well-considered devices, of which the central feature was the readiness to sell Council and Reverse Council drafts at specified rates in unlimited quantities. At its inception this policy had been received by the wise-aces among practical bankers with general headshakings and prophecies of disaster. Its striking success was thus not merely a tribute to the intellectual and practical abilities of the Indian Civil Servant; it was a triumph for reason over mysticism in the domain of currency. Even in that domain, where dangerous nonsense is so plausible that the practical man has learnt to hold fast to tradition and ancient saws, it was demonstrated that theoretical principles, when intelligently applied, could actually be made to work.

The upheaval of the war proved too strong for the gold exchange standard system of India; as, indeed, it proved too strong for the orthodox gold standard of Great Britain. The large favourable balance of trade which soon accrued to India and the rise in the price of silver made it impossible to maintain the unlimited sale of Council drafts or the old rate of exchange. When silver rose above the critical point of 43d per ounce, the rupee reverted, in effect, from a gold to a silver basis, and followed the price of silver upwards. During the war the appreciation was not serious; the price of silver was kept steady at a dollar per ounce by means of an effective system of inter-Allied control; and at the Armistice the official rate for the rupee was 1s 6d. It was in May, 1919, that the fun began; the price of silver was freed from control, at once took a sharp leap upwards, and continued to soar, until in February, 1920, it touched the phenomenal figure of 80½d. After it, willy-nilly, went the rupee; every other month saw an additional 2d added to the official rate, until 2s 4d had been reached. It was this moment that the ironic fates prompted the Indian Government to choose for action.

So far the appreciation of the rupee had followed a course somewhat similar to the depreciation of sterling. During the war, a slight departure from parity, held in check by measures of control; in the spring of 1919, a violent movement following the withdrawal of control. There was a further parallel. The Indian Government had appointed a Committee on Exchange and Currency, which reported

about the same time (December, 1919) as the Cunliffe Committee reported here. The Report bore all the marks of a sensible and well-considered document. Stability of exchange was the great desideratum; the particular parity adopted a comparatively minor matter. Stability might now be re-established on the basis of a new parity, approximating to the present rate of exchange; for, as the Committee rightly argued, the price of silver was unlikely to rise much higher. On the other hand, to aim at restoring the old parity would involve an indefinite postponement of stability, with the disadvantage, if the goal were ultimately attained, of a further rise in Indian prices, already a source of grave discontent. The Committee recommended, accordingly, the immediate re-establishment of the gold exchange standard system on the basis of one rupee equals 2s gold, equivalent at the time, or shortly afterwards, to well over 2s 6d sterling.

It is at this point that the parallel with British conditions breaks down. A recommendation involving, as did this, legislative enactment and a formal alteration of the currency basis would not have been adopted in our democratic Britain without long, acrimonious, and doubtless muddle-headed controversy. But the bureaucrats of India could steer the course advised by the currency experts, unembarrassed by the exigencies of politics or the irrationalities of public sentiment. The Committee's Report was adopted with the utmost promptitude. The Coinage Act and the Paper Currency Act were duly amended; and 10 rupees were solemnly declared to be henceforth equivalent to one gold sovereign.

The sequel was no less prompt. The balance of payments, which for many years had been strongly in India's favour, swung violently round the other way. The Indian Government exhausted its sterling reserves in London, incurring a loss of £30 millions, in a gallant attempt to meet the formidable demand for bills of England. It was in vain. Before the year was out the rupee had sunk well below the old parity of 1s 4d; and, apart from occasional short-lived recoveries, it has remained below it ever since. As for the price of silver, it had fallen by 50 per cent. within five months, and had ceased once more to have any connection with the rupee. It is not surprising that it should have become the vogue to express the hope that the Government will in future leave the exchange alone. The laugh is with the old-fashioned sceptic now.

But the significance of the unhappy story must not be misconceived. The moral of it is not the unsoundness of "artificial" arrangements like the Indian gold exchange standard, based on Governmental selling of exchange, as contrasted with the solid virtues of an orthodox gold standard. The policy of the 2s rupee would have failed no less speedily and certainly if India had had its own gold mint for years, and had kept the whole of its currency reserve in the form of gold sovereigns in Calcutta. The only difference would have been that the exhaustion of these gold reserves would have been substituted for that of the sterling resources in London. No conceivable system, indeed, could have maintained a stable rupee exchange in the years following the Armistice in face of the unprecedented fluctuations in the balance of foreign trade. Before the war India had built up a trade equilibrium on the basis of a large excess of exports of merchandise over imports, which varied from year to year within narrow limits. Both the volume of imports and the volume of exports fluctuated considerably, but they moved at any time in the same direction. In the last five pre-war years the annual export surplus, which averaged about 72 crores, never fell below 58 crores or rose above 84 crores. In 1919-20 the export surplus was 111 crores; in 1920-21 it gave way to the unprecedented phenomenon of an import surplus, which amounted to 81 crores. The most imposing gold reserves could hardly have stood the strain of so sudden and so violent a displacement.

The true moral of the story is the unwisdom of attempting to stabilise exchange by any methods until some degree of stability has been secured in trade conditions. The stability of our pre-war gold standards was dependent on an established equilibrium in the balance of trade. It is true that the working of a gold standard gives rise to tendencies which serve to check departures from this equilibrium when once it has been attained. The outflow of gold which follows upon an undue increase in imports

or decline in exports leads, in its turn, to a contraction of bank reserves, a curtailment of credit, a reduction of prices; and thus tends to check imports and stimulate exports, and to restore equilibrium. But these corrective forces, which are given equally full scope under the arrangements of the Indian system, are somewhat weak and very slow. They are strong enough to deal with the small displacements from trade equilibrium which occurred before the war, but for bringing order into chaotic conditions they are as futile as are the "sanctions" of an ordinary police force for the maintenance of peace in Ireland. Genoa has focussed attention upon attractive schemes for a general return to gold standards by the road of devaluation. In the light of Indian experience, the prudence of such projects may be questioned so long as such problems as Russia, Reparations, and inter-Allied debts remain unsettled. How unfortunate may be the consequences if stabilisation is attempted and breaks down, the case of India again exemplifies, as will be shown in a succeeding article.

OUR INDEX NUMBER.

The month of June saw a further slight increase in wholesale prices of commodities, our Index Number having risen by 17 points to 4389. This is 130 points above the lowest point this year, which was at the end of February, and at present it looks as if the first half of 1922 has witnessed the end of the long and severe price fall which began about two years ago. It is too soon yet to say that any degree of stabilisation has been reached, but it is certainly true that the movements of the last six months have been very much less violent than those of the three previous years, and the half-year closes with a slight increase on balance, as compared with the end of the year 1921. The appended table shows how the five groups and the total have fluctuated since the beginning of the year:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Lead, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	500	500	400	500	2200	100.0
End July, 1914....	579	352	616	464	553	2568	116.6
" Dec., 1915....	897	446	731	711	848	3634	165.1
" Dec., 1917....	1286	686	1684	839	1348	5845	263.2
" Nov., 1918....	1289	782	1848	903	1389	6212	282.6
" Dec., 1919....	1303	782	1805	866	1337	6094	277.0
" Dec., 1919....	1441	881	2442	1145	1453	7364	334.7
" Mar., 1920....	1508	914	2974	1246	1709	8352	379.6
" Dec., 1920....	1344	805	1284	1216	1275	5924	269.3
" Dec., 1921....	921	636	1106	762	931	4357	198.0
" Jan., 1922....	907	654	1066	730	925	4284	194.7
" Feb., 1922....	948	640	1037	696	936	4259	193.6
" Mar., 1922....	980	687	1038	700	892	4297	195.3
" April, 1922....	1008	667	1010	709	890	4285	194.8
" May, 1922....	1040	657	1079	710	885	4372	198.7
" June, 1922....	1000	676	1135	690	887	4389	199.5

So far as June is concerned, movements in the individual groups have been wider than the change in the total would convey. In primary foodstuffs nearly all changes were downwards, the exceptions being a sharp recovery in pork, and a slight rise in barley. Wheat and flour were lower, and there was a considerable seasonal decline in potatoes. Among subsidiary foodstuffs a decline in tea and coffee was offset by a rise in sugar, and there was a large increase in butter. Apart from Australian wool and hemp, which were unchanged, all commodities in the textile group moved upwards. American cotton rose throughout the greater part of the month on poor accounts of prospects for the new crop, but dropped back on more favourable weather reports. Both American and Egyptian cotton, however, closed considerably higher on balance. Yarn and cloth have also risen. In their monthly report, Messrs Robt. Barbour and Brother, Limited, write:—

So far as cloth transactions are concerned, progress has been very difficult, the rise in prices being too rapid to follow and considerably curtailing the month's turnover. It seems probable from the amount of inquiry on hand that had values retained their May level a large business might have been put through, but the sum total of actual bookings, much of it only arranged by virtue of anticipatory purchases of cotton or yarn on the part of spinner

or manufacturer, cannot have reached a very big figure..... Monsoon news is fairly satisfactory, and the financial position is improved to the extent that further progress has been made in regard to settlements with overseas debtors, but the concessions granted have been iniquitous, and capital resources have been severely crippled in consequence. The month closes with no lack of prospective business, but with cotton still such an uncertain quantity that a period of stability, void of alarms and excursions, firm enough to keep alive a healthy tone, but not too strong by reason of prohibitive rates to deter would-be customers from replenishing supplies, can hardly as yet be looked upon as assured.

English wool, silk, flax, and jute show moderate increases.

In the minerals section, iron and steel are unchanged, but coal shows an appreciable decline. The minor metals are practically unchanged. Movements in the miscellaneous group were of no importance, the principal change being a small increase in tallow. In the table below we show the movement of each commodity's index as compared with the end of May, the figure 50 representing the average price during the base period, 1901-5, in each case:—

Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.
Wheat—For... 102	—	5 Cotton A... 120	+ 10	Copper... 51	— 3
English... 94	—	6 Cotton B... 124	+ 7	Minerals... 690	— 204
Flour... 89	—	7 Yarn... 135	+ 4		
Barley... 92	—	8 Cloth... 135	+ 4		
Oats... 93	—	9 Wool, Eng... 100	+ 5	Baldie timber... 101	—
Potatoes... 100	—	10 Aus. Wool... 97	—	Amer. timber... 89	—
Rice... 104	—	11 Silk... 135	+ 7	Leather... 137	+ 1
Beef... 106	—	12 Flax... 120	—	Petroleum... 77	— 2
Mutton... 107	—	13 Hemp... 48	—	Oils... 84	—
Pork... 113	—	14 Jute... 118	+ 5	Oilseed... 127	+ 3
				Tallow... 614	—
Cereals & Meat 1,000	— 40	Textiles... 135	+ 56	Indigo... 127	—
				Crystals... 103	—
Tea... 88	—	2 Pig-iron... 97	—	Rubber... 103	—
Coffee... 94	—	3 Steel rails... 79	—		
Sugar cane... 157	—	4 Iron bars... 92	—	Miscellaneous... 887	+ 2
Sugar beet... 105	—	5 Coal, steam... 103	— 11		
Butter... 105	—	6 House coal... 97	— 10	Total... 4,389	+ 17
Tobacco... 116	—	7 Lead... 105	—		
		8 Tin... 59	—		
Other foods... 676	+ 19				

As a result of these changes, the increase in the total, as compared with the figure recorded at the outbreak of war, is now 71 per cent., as against 70 per cent. a month ago. Taking the indices of each of the groups and the total as 100, we get the following changes:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1918....	226	222	293	186	241	236
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
June, 1921....	203	188	158	210	185	188
Dec., 1921....	159	180	180	164	168	170
Jan., 1922....	157	186	173	158	167	167
Feb., 1922....	164	182	168	150	169	166
March, 1922....	169	195	168	151	161	167
April, 1922....	174	189	164	152	160	167
May, 1922....	180	186	175	153	159	170
June, 1922....	174	192	184	149	160	171

As compared with this time last year, the most pronounced change has occurred in the minerals group, which, at that time, showed the largest percentage increase over the pre-war figure, and is now the nearest to the normal. Textiles, on the other hand, which a year ago were the lowest, are now the highest but one. Primary foodstuffs and miscellaneous commodities have dropped heavily, but other foods are a little higher.

In many foreign countries prices show further signs of an approach towards stability. In the table below we show the percentage changes on the pre-war level for a number of important countries:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918....	205	358	438	...	325	367	292	214
Highest, 1920....	227	591	673	6,809	325	366	403	322
(Jan.) (April)					(Jan.) (June)		(Oct.) (Mar.)	
End 1921....	123	326	594	3,585	176	172	178	209
End Jan., 1922....	131	314	577	3,955	171	170	177	206
" Feb., 1922....	133	307	562	4,888	170	166	182	205
" Mar., 1922....	132	308	554	5,899	163	164	178	200
" Apr., 1922....	134	315	527	6,572	161	165	177	197
" May, 1922....	137	318	...	6,809	160	164	179	194

• May, 1922.

Bradstreets' Index Number for the United States for the end of May is at the highest point recorded since March, 1921, and is 12 per cent. higher than it was at the end of May, 1921, but it is still 43 per cent. below the high record reached at the end of January, 1920. Foodstuffs again declined in May, and textiles were almost entirely responsible for the rise in the total. In France foodstuffs were practically unchanged, but textiles and minerals rose considerably. In the case of Germany, the rise in prices shows signs of slackening. Taking the level at the beginning of January, 1920, as 100, the figure for the end of May is 606, as against 584 at the end of April, and 317 at the end of 1921.

VICKERS, LIMITED.

THE statement that the armament business of Vickers, Limited, in the year 1921, except for an order for armour-plate received from the Japanese Government, was virtually stagnant will be read by the world at large without regret, whatever may be the feelings of shareholders. From the latter's point of view, however, it is unfortunate that so far as concerns the other manufactures in which the company is interested, the trade depression hindered any expansion. As the directors put it: "There was no improvement in the purchasing power of foreign countries, while in the United Kingdom the heavy weight of taxation and the condition of the money market maintained the general inability of purchasers to incur expenditure on extensions, new enterprises, or requirements which in ordinary times would be counted necessities." The three months' coal stoppage, of course, impeded production, and the writing down of stock to market value must have required a large amount in view of the heavy decline in prices; but the accounts, nevertheless, show an increase in profits in comparison with 1920. The latter period, however, included the prolonged moulders' strike, which threw all engineering and shipbuilding production out of balance. But the directors do not think fit to publish a profit-and-loss account, and while the report mentions that considerable reductions have been effected during the year in the settlement of accounts with Government departments, on which negotiations have now been in progress for several years, it is impossible to tell how much profits have been affected by these settlements, either in 1920 or 1921. The profit figure, in fact, is of little value to the outside investigator, for it is given "after allowing for adjustments of reserves for taxation." This may mean little or much, but it certainly hides very effectively the results of the year's operations. For 1920 the accounts were presented in the same way, and the two figures of profits may, or may not, be closely comparable. For 1921 the amount disclosed is £708,103, and for 1920 £541,261. This is after payment of debenture interest. At last year's annual meeting the chairman threw no light on the question, and shareholders will be fully justified in inquiring at the meeting on Wednesday week the extent to which profits have been affected by the liquidation of accounts with the Government. No reports were issued for the three years 1916, 1917, and 1918, and at the end of 1920 combined accounts for the four years ended December, 1919, were published showing "net profits for four years," without any qualifying remark, amounting to £4,493,726. The dividends paid during the period were 12½ per cent., tax free, for 1916, 1917, and 1918, and 11½ per cent., tax free, for 1919. No distribution was made on the ordinary shares in respect of 1920, but for 1921 it is proposed to make a payment of 5 per cent. less income tax, absorbing £431,042, and leaving £872,993 to be carried forward, as against £991,639 brought in, preference dividends for the year having required £395,706.

In the table below we give a summary of the principal items of the balance-sheets published since 1912. The most striking feature, it will be seen, is the growth that

has taken place in interests in subsidiary and connected companies since the war :—

	Ordinary Capital.	Prof. Capital.	Reserves.	Property, Plant, &c.	Subsid'y Cos.	Stock in Trade.	Cash and Bills.
1912.....	£ 3,700,000	£ 1,500,000	Nil	£ 3,757,020	£ 4,095,602	£ 1,120,739	£ 261,396
1913.....	4,440,000	1,500,000	1,070,000	4,096,481	4,025,473	1,656,701	269,689
1914.....	5,549,262	1,500,000	1,764,000	4,243,326	4,736,097	914,899	792,828
1915.....	5,549,784	1,500,000	2,064,261	5,721,487	5,448,734	785,003	875,426
1916.....	12,315,548	8,361,640	6,663,159	7,514,095	17,236,517	3,911,685	3,361,958
1917.....	12,315,483	8,362,241	6,495,871	7,576,660	18,076,591	3,481,572	700,388
1921.....	12,315,483	8,363,807	6,495,871	7,650,474	18,144,967	2,669,529	1,620,345

The acquisition of controlling interests in kindred concerns is by no means a post-war innovation with the company, for it will be seen that at the end of 1912 holdings of this kind were valued at a higher figure than the company's own property. The company was formed in 1867 as Vickers, Sons and Co., to take over the business of steel manufacturers of Naylor, Vickers and Co. In 1897 certain armament firms were absorbed, including the Maxim-Nordenfolt Guns and Ammunition Company, and the company's name changed to Vickers, Sons, and Maxim. In 1902 half the capital of Wm. Beardmore and Co. was acquired. Since the war the principal deal has been the acquisition of practically the whole of the share capital of the Metropolitan Carriage, Wagon and Finance Company, Limited, in connection with which the share capital was largely increased, six million ordinary and seven million preference shares having been created. The chairman of the company claimed that there had been "a combination of various allied interlocking manufacturing businesses using each other's products and forming a complete organisation capable of producing all the elements necessary for the largest electrical generating and transportation problems." The company's present holdings include all the ordinary share capital of Wolseley Motors, Limited, and of the Electric and Ordnance Accessories Company, Limited, and controlling interests in W. T. Glover and Co., Limited, and in Vickers-Petters, Limited. It is also interested in the Swiss firm of Brown, Boveri and Co., Metropolitan-Vickers Electrical Company, M. L. Experimental, Limited, and Metropolitan-Vickers Electrical Export Company. The company owns works or interests in Canada, Italy, Japan, Spain, and Russia.

The debenture capital has been steadily reduced during the past ten years, namely, from £2,752,000 at the end of 1911 to £1,250,000 at the end of last year, but in the middle of 1920 an issue of £1,500,000 7 per cent. seven-year notes at 95 was made. The balance-sheet shows also a contingent liability of £898,200 for a guarantee of 6 per cent. debentures, issued by Canadian-Vickers, Limited, and of £824,200 for guarantee of bankers' loan, overdrafts, &c., for subsidiary companies. A detailed comparison of the latest balance-sheet with that for 1920 will be found in another column. From this it will be seen that creditors have been reduced by £1,301,300 to £6,084,400, this movement being balanced by reductions of £1,898,800 in debtors and of £812,200 in stocks, and by increases of £664,400 in marketable securities, and of £920,000 in cash and bills. The ordinary shares are quoted now at just under 14s. The highest point reached since the war was 2½ in 1918, and the lowest 7s. 6d. in the early part of this year. At the present time the yield works out at about 7½ per cent. At the conclusion of the forthcoming annual meeting an extraordinary meeting is to be held to define more closely the wide and undefined powers taken by the company before the end of the war to carry on any business or industry calculated to turn to account the various premises, plant, and works of the company.

RAND MIDSUMMER DIVIDENDS AND COSTS.

(BY OUR MINING CORRESPONDENT.)

THE ominous clouds which appeared upon the horizon of the Transvaal mining industry about the time of the dividend declarations in December last proved to be the precursor of a storm of unprecedented violence. The strike which followed the endeavour of the leaders of the industry to get costs down to something approaching an economic basis developed into a revolution, whose tardy suppression entailed resort to military measures.

Work was in abeyance for more than one-third of the first quarter of 1922, and while production ceased, expenses continued, save under the heading of white mining labour. To make matters worse, the gold premium declined sharply. As a result, the great majority of the companies reported losses of greater or lesser extent for the quarter ended March 31st.

In these circumstances it was a foregone conclusion that the dividend declarations in respect of the first half of the current year would, as a whole, be lower than for some considerable time past. The only matter for surprise consists in the relatively substantial extent of some of the declarations. The Meyer and Charlton—which on recent preceding occasions had followed a conservative policy in the distribution of profits—maintains its interim dividend at the same rate as for 1921. All the other announcements, however, are at greatly reduced rates, while about one-third of the companies do not figure in the list on the present occasion. In some cases the purchase of ex-enemy shares with a view to cancellation is a factor. The variations will be seen from a glance at the appended table, which covers the past two years and a half :—

* Tax free.

This table does not include declarations made at dates other than June and December.

As regards the finance undertakings, the Anglo-American has been adversely affected by the disorganisation of the diamond industry. This factor also exerted considerable influence upon the fortunes of the Johannesburg Consolidated Investment Company, whose distribution, nevertheless, shows only a moderate decline. The Rand Selection Corporation is in the same boat with the Consolidated Mines Selection Company, which has been under the necessity of passing its dividend for 1921 owing to the conditions already commented upon in our columns.

That the disappointing results for the first half of 1922 should be accompanied and followed by a considerable degree of activity in the share market appears, at first sight, something of an anomaly. But optimistic views are current as to the beneficial effect which the new labour conditions, in conjunction with reduced charges for stores and materials, will have upon the working expense ratio. Certainly, appreciable progress is being made by some companies. If only the cost ratio could be brought down to a general average of say 20s, millions of tons of ore which have been excluded from estimates as unpayable under existing conditions could be made to yield wages to the worker and dividends to the shareholder.

BOTTOMLEY AND HIS METHODS.

THE failure of Horatio Bottomley's appeal leaves us with dry eyes. That his conviction on the ground of fraudulent misappropriation was just is beyond a peradventure, and the severity of his sentence is appropriate. Our tears are rather for his hundreds of thousands of victims, not only on the score of the losses which most of them could ill afford, but also for their unlimited gullibility. The perpetual gullibility of large sections of the public is in every generation exploited by financial sharks. The present generation has produced many prominent examples of the type, some of them happily now under lock and key. For a time they flourish like a green bay tree; but success is always their undoing, for it leads to a rashness which eventually oversteps the mark up to which financial roguery can be practised with impunity. Of this type Horatio Bottomley is in some respects the most interesting example that has yet appeared. He loomed larger in the public eye than any other of his kind, past or present. He had his ups-and-downs, but the war brought him his supreme opportunity. Upon public gullibility he could trade with fluctuating success; but upon gullibility coupled with patriotic emotion he could flourish exceedingly. And we frankly acknowledge our belief that he might have continued to flourish at the expense of a victimised public until the end of his days had it not been for the conspicuous ability and undaunted persistence with which our contemporary *Truth* and its financial editor carried through the conspicuous public service of exposing his rogueries.

The methods by which financial crooks batten upon the savings of their fellow-citizens are usually an interesting, if revolting, study. Hooley will be remembered as the prince of shady company promoters and manipulators of financial figures. Bottomley, had the war not occurred, might never have risen above rivalling Hooley's position. His fame would have rested merely on the records of the affairs of the Hansard Union, the Joint Stock Institute, and of a score or two mining and other speculative companies to which the public subscribed their money freely and never saw it back. But Bottomley possessed talents which would have lifted an honest citizen to high position and honour; and the arrival of the war gave these talents their grim opportunity. The power of eloquence, which in old days had often turned away the wrath of meetings of disillusioned shareholders, was employed upon the platform and in the Press to fan every popular prejudice and to voice every excess of unbridled patriotic fervour. Here was a man who by tongue and pen could sway the multitude. Under the stress of war needs, Governments and statesmen were glad to use him; and the public grew accustomed to seeing his name coupled with those of the leaders of the country's life in every sphere. At the same time, his vigorous verbal espousal of the cause of the soldier and sailor during the war and of the ex-service man thereafter, his prodigious philanthropy with other people's money, his vote-catching political stunts, his pose as a great British "sportsman," assisted in building up a popularity with the masses which gave Bottomley an unprecedented opportunity of making money out of public trustfulness.

In his later exploits, then—and it is only the adventures that brought him to his fall that are of abiding interest—Bottomley's most formidable weapon was popularity and the glamour cast by eloquent patriotic professions and association with the great. That is the keynote of his methods. But his actual financial dealings in the Bond Club affairs reveal very clearly a second method, purely financial, which, for the sake of brevity, we may call the "snowball" method. He starts one concern. When that begins to go wrong, he merges it with another. Shares in the first, together with a fresh cash payment, may be exchanged for shares in the second, and so on. And all the time the new money coming in suffices to pay off such of the sub-

scribers to the earlier concern or concerns who demand repayment with inconvenient insistence. From the wealth of evidence which *Truth* has unearthed, this method may be briefly illustrated. In 1918 Bottomley started the War Stock Combination. The avowed idea was to raise a fund of £77,500 in 15s 6d subscriptions, and purchase £100,000 in War Savings Certificates. He got the money and more, and it is a marvellous tribute to the prestige that he had achieved that the public forgot that the largest holding of Savings Certificates that any one holder could purchase was £500. The original proposal was to pledge the certificates for £10,000 with a banker, and draw for that amount in prizes, instead of waiting five years for repayment. Owing to the restriction mentioned, National War Bonds were purchased, and an announcement (readily swallowed) was made that a proper prize drawing had taken place. The flotation of the Victory Loan gave Bottomley a wonderful opportunity. He appealed on patriotic grounds for subscriptions to a Victory Bond Club. (Incidentally, subscribers to the War Stock Combination were offered exchange into the Club on payment of a cash consideration.) Shares were of £1 each, and unlimited in number; the proceeds were to be invested in Victory Bonds; interest was to be pooled as a fund for prize drawings. In spite of glaring errors in the prospectus, the public subscribed nearly £500,000. Shortly afterwards Bottomley, operating from Paris, formed the Thrift Prize Bond Club—a scheme similar to the Victory Bond Club, except that subscriptions were to be invested in French Credit National 5 per cent. bonds. In 1920 Bottomley announced that the Victory Bond Club had been "merged" into the Thrift Prize Bond Club, in spite of the fact, which should have been obvious, that the French lottery laws made the latter club illegal. Faced with this illegality, Bottomley found yet another opportunity for raising money. In exchange for their shares in the Thrift Club he offered subscribers Credit National Bonds at £15. In spite of the fact that these bonds could be bought for £9, much money came in this way. There is no need to go into further detail. In spite of the growing discontent over the earlier schemes, in spite of glaring mistakes in his "prospectuses," the impetus of Bottomley's war-born prestige carried on his "snowball" plans, so that some people could always be induced to throw good money after bad. Even up to the eve of the recent trial fresh money was, we believe, being extracted on some pretext from subscribers to one Bottomley concern or another. So long as prestige lasted there was no end to it, and the affairs of all these concerns were in such a hopeless tangle that Bottomley must have always hoped to hoodwink a jury in case of need with his unrivalled forensic persuasiveness.

Bottomley will not prey on the public again for some years, at any rate. But, unfortunately, others will, if in smaller and less notorious ways. We would therefore implore investors to learn the moral of the Bottomley affair. Those who wish to take the most ordinary safeguards to preserve their savings must essentially observe a few simple rules:—(1) Never trust merely to the glamour of a popular name. This is of no value as a substitute for proper financial organisation and safeguards. (2) Always approach an appeal for subscription in a critical spirit. The more apparently attractive the offer, the greater should be the suspicion. (3) If possible, never deal except through a recognised member of a Stock Exchange or a bank, and, if financially uninitiated, always seek advice in such quarters. (4) For those whose means are very small, and who have no ready access to bank or Stock Exchange advice, it is a good rule to stick to the securities of the State, which in these days are offered in the smallest denominations. (5) Remember that attempts to get rich quickly usually mean a quick increase in poverty. If rules like these were commonly observed, then hosts of financial sharks would be driven either to Carey street or into more reputable lines of business. Fortunately for the public, a financial crook of Bottomley's cleverness and ability does not appear in every generation, and when he does appear he is seldom faced with the amazing opportunities that the circumstances of the war presented to Horatio Bottomley.

Notes of the Week.

Fabric Glove Decision.—Though economic arguments may fail, electoral considerations still have power to sway the Prime Minister. It is the pressure of public opinion of Lancashire, voiced by the deputation of employers and employed, under the leadership of the Earl of Derby, which has caused the suspension of the order taxing the import of German fabric gloves. In form the decision of the Prime Minister to postpone the action until he has received the Lancashire case in writing is only a suspension of sentence; but, in fact, since opinion will undoubtedly harden behind the Lancashire Free-traders, the judgment against Lancashire will probably be postponed indefinitely, whatever may be the fate of the other proposed orders. The incident has been one of the most perfect examples that could have been designed to illustrate the unexpected repercussions of Protection, and it is just possible that the reflection which it may stimulate will induce the Government to suspend action on Part II. of the Safeguarding of Industries Act altogether. To put it into effect to-day is most untimely. The Supreme Council having lectured the Succession States of Central Europe on the folly of imagining that trade can recover if they shut out one another's goods, the Brussels and Genoa Conferences took up the tale, and did their best to check the growing spirit of restrictive nationalism in fiscal affairs. Great Britain alone was in a position to preach this doctrine effectively, and was a country to which everyone in Europe who was fighting for a more liberal tariff policy in his own country looked for support. It is at this critical moment of European affairs that the Government chooses to surrender its strong position, in return for an Act which gives a doubtful protection to one or two insignificant industries, barely pays the costs of its administration, and is too feeble to be an effective weapon for beating down other countries' tariffs. It is unscientific, and we venture to think that it could not possibly pass the House to-day in its present form, for since it was put upon the Statute Book German exchanges have given the world an object-lesson in the true meaning of exchange fluctuations. Six or eight months ago the internal value of the mark was three or four times as great as the external value, and the imposition of a 33½ per cent. duty was absurdly inadequate to influence the importation of German goods, which entirely depended upon whether the German producers could give delivery or not to British merchants. Two months ago, as we showed in a recent article, the internal and external values were rapidly overhauling one another, and in certain important enterprises British manufacturers were undercutting German goods, both in Germany and elsewhere in Europe. Yet the Government's attempt at scientific protection ignores these variations by maintaining a steady 33½ per cent. duty until the Act expires. Finally, the Act is opposed to the whole of our financial policy, for according to the letter of the statute there is hardly any import to which, at certain conditions of the exchange, the Act could not be applied, and if this were done it would quite clearly obstruct the recovery of the commerce of Germany or any other European country. If the Safeguarding of Industries Act were administered in such a way as to have any effect at all on the European situation, it would be in the direction of preventing a stabilisation of the exchanges, and there is no serious politician who would argue to-day that any small stimulus which the Act might have on employment in a particular industry could weigh in the balance against the encouraging effect on the whole economic situation which would be caused by greater exchange stability.

Palm Kernels and Protection.—The affair of the Rutenberg contract seems so greatly to have intrigued both the House of Commons and the public that the most important feature of the debate last Tuesday on the Colonial Office

vote has received comparatively slight attention. This was the announcement by the Under-Secretary of the abolition of the duty on palm kernels, exported from the West African Colonies to destinations outside the British Empire. The imposition of this duty in 1916 under Mr Bonar Law's régime at the Colonial Office was the first breach made during the war in the Free-trade policy of the British Empire. It was, moreover, an especially serious departure, inasmuch as it meant using our political sovereignty to promote the interests of British industrialists at the expense of the native producers. The duty is now to disappear, unwept, unhonoured, and unsung. Mr Wood, indeed, had the hardihood to say that "it had produced extremely valuable results both during the war and since," coupled with the discretion to avoid giving reasons for this opinion. But he added that, "in order that it should be really effective two things were necessary—namely, that the country in which the duty was imposed should have a practical monopoly, and that the article on which the tax was imposed should be non-substitutable. These two conditions did not exist, and the Colonial Secretary, on a review of all the circumstances, had decided to abolish the duty." The plain English of this appears to be that the duty succeeded in injuring the native producer without benefiting the British seed-crusher. But the main thing is that the duty is now to go. If so short an experience has sufficed for this first essay in the new Protectionism, the term of the Safeguarding of Industries Act should be shorter still.

Teachers' Pensions.—On May 16th the second reading of the School Teachers (Superannuation) Bill was interrupted by a Government defeat on a motion for the adjournment. The debate was resumed last Monday, and the second reading carried by 210 votes to 54. It will be remembered that the Government defeat on May 16th was due to the uneasiness of M.P.s as to whether the Government, in making teachers' pensions contributory, was breaking faith with this important body of public servants. A Select Committee was appointed to look into the question, and by a narrow majority reported in the Government's favour. Hence the easy passage of the second reading on Monday. In deference, however, to the dissatisfaction that remained, particularly on the Labour Benches, Mr Fisher agreed to limit the application of the Bill to two years, and also intimated the willingness of the Government to make concessions in the case of teachers not in receipt of the full Burnham scale. With such concessions the passage of the Bill is apparently assured; so that the narrow majority of the Select Committee will probably prove to have had the triple result of helping the Government out of an awkward impasse, of soothing the consciences of members of the House of Commons, and of saving the taxpayer £2,000,000 or so per annum.

American Cotton Crop.—At the beginning of this week the Agricultural Bureau of the Department of Commerce of the United States Government published important statistics relating to the cotton crop for 1922-23. The condition of the growth on June 25th was stated to be 71.2 per cent., against 69.6 per cent. on May 25th, 69.2 per cent. at the end of June last year, and 70.7 per cent. in 1920, and a 10-year average of 76.9 per cent. The Bureau estimates the acreage at 34,852,000 acres, against the revised figures of this season of 31,763,000 acres, an increase of about 10 per cent. On the basis of the statistics issued a crop of 11,065,000 bales is indicated, as compared with an expected yield of about 8,500,000 bales for this season. "The condition report," writes our Manchester correspondent, "was much worse than anticipated, and a smart advance on prices of 3d a lb occurred, but since then the rise has not been maintained. Many Lancashire traders discredit the statistics issued by the American Government. There is a probability, however, of consumption in 1922-23 being 13,000,000 bales, and if the crop turns out to be less than that amount, lower prices can scarcely be expected."

The Scuttled Steamers.—Within the past few weeks it has been found by three separate judges that three foreign-owned steamers which went to the bottom last year were deliberately scuttled by the masters, with the connivance of the owners, for the value of the insurance money. Of the three steamers one (the "Leonita") was Spanish-owned, and the other two, the "Gregorios" and the "Johanna," were Greek. The "Leonita," which was purchased from the American Government, to whom heavy instalments had still to fall due, was sunk in the Atlantic in a very convenient position, and all the members of the crew were brought safely to land. The owners' case was that the sinking followed a bad mechanical breakdown of the engines, which broke an induction pipe, and allowed the water to flow into the steamer in such quantities that it was hopeless to attempt to save her, and she sank within a few hours. This story, to be credible, postulated so many remarkable coincidences that Mr Justice Rowlatt regretfully came to the conclusion that the boat was intentionally sunk with the privy of the owner, which (given the scuttling) was beyond a doubt, and found for the defendant underwriters. In this case once the facts were established the law presented no difficulty, for the person on whose behalf the insurance was effected was the guilty party, who by his guilt had robbed himself of any claim on his underwriters. The two Greek steamers presented a different set of circumstances, and involved the most difficult questions of law. The assured here were not the guilty owners, but innocent mortgagees who had advanced money on the steamer, and to protect the loans had themselves taken out policies of insurance. The actions were brought by them against (1) the underwriters covering war risks, and (2) the underwriters covering marine risks. The attack was first directed against the war underwriters, because the captain and crew said the vessels had been sunk by mines, but as the cases developed in court it became apparent that the damage had not been done by mines, and in spite of a desperate attempt by counsel and witnesses to prove that floating wreckage was responsible, both Mr Justice Greer and Mr Justice Bailhache decided that the vessels were sunk by the captains with the privy of the owners. This put the owners out of court, but the difficult question remained as to whether the mortgagees, who were admittedly innocent, could still recover from underwriters, despite the guilt of the owners and the captains. In a nutshell, the question is "Was the proximate cause of the loss the criminal action of the captain and the owner, who opened the seacocks, or was it the inrush of sea water which followed the opening of the seacocks?" Should the judge attribute the loss to the crime which led to the sinking, or to the sea water, which actually filled the vessels, and so caused them to go to the bottom? If the loss is in law attributable to the crime, the mortgagees have no claim; if it is attributable to sea water, they have. The judges, following a 25-year-old judgment of the Court of Appeal, decided that the proximate cause was sea water, and gave judgment for the mortgagees, though Mr Justice Bailhache obviously did so with reluctance and much doubt. To the layman the question seems ridiculously silly, and that hundreds of thousands of pounds should depend on the answer to it, ludicrous. But law is law, and where commonsense and law come to blows, it is commonsense that takes the count.

The Distillers' Company.—The industrial depression has left the Distillers' Company almost unscathed. Profits for the year 1920-21 dropped, it is true, by £70,000 from the high record of the previous year, but in the year ended May 15th last they rose again by £45,000 to £642,300, which, with the exception of the boom year referred to, is the highest figure touched in the history of the company. Results for the past four years, and for 1913-14, are compared below:—

COX & CO.

The reserve fund is credited with £150,000, as against £100,000 a year ago, and £10,000 now goes to superannuation and staff fund. The ordinary dividend, which is paid free of income-tax, is maintained at 10 per cent., but the carry forward is reduced by £10,000. The ordinary capital has been increased by £200,000, 20,000 £10 shares being allotted in part payment of purchase of distilleries from James Calder and Co., Limited. These shares, however, have not yet ranked for dividend. Property and plant together show an increase of £184,000, but debtors have been reduced by £314,900. Loans to subsidiary companies have been increased by £263,900 to £685,000, and loans from subsidiary companies reduced by £152,000 to £297,900. Stocks of spirits, grain, &c., which "are put down as usual at safe prices," stand at £2,186,700, or £17,100 more than a year ago. An analysis of the balance-sheet will be found in another column.

Burmah Oil.—The report for 1921 of the Burmah Oil Company shows a sharp drop in profits, which brings them down to the level earned in 1917. This decline is attributed by the directors to the fall in the value of the rupee, together with the reduction in the market value for all petroleum products, the latter mainly affecting the company in its production of paraffin wax, and petrol "sold outwith India." The drop in profits amounted to £1,650,000, as may be seen from the following comparison of results:—

	1914.	1918.	1919.	1920.	1921.
	£	£	£	£	£

† Tax free. ‡ Including donation of £50,000 to Cambridge University.

The increase in income-tax is more apparent than real, for a year ago there were various deductions for amounts recovered. The amount carried forward from the 1920 accounts was subject to taxation estimated at £1,935,000. The latter proves to have been £1,794,100, as the amount brought into the 1921 accounts is £348,082. The reserve appropriations include £200,000 to general reserve, £20,000 to insurance reserve, and £108,800 to employees' provident fund. The amounts written off for depreciation and field expenditure before profits were struck totalled £1,247,700, as compared with £1,153,700 in the previous year. After payment of the 30 per cent. dividend, free of tax, the same as in the previous year, there remains £359,600, or £11,100 more than was brought in, to be carried forward, subject to corporation profits tax. During the year an issue of £3,000,000 8 per cent. preference shares was made, and these ranked for six months' dividend, which absorbed £84,000. A detailed analysis of the balance-sheet will be found in the usual column. The directors mention that there has been within recent weeks a rather stronger tendency in petroleum values, and they anticipate that if this is maintained the current year's results will be as good as those of the previous year.

The Anglo-Dutch Report.—The net profits of the Anglo-Dutch Plantations of Java for 1921 make a more favourable showing than might have been expected, being £116,556, against £147,186 in the previous year. A year ago 10 per cent. was paid on the 1,286,780 old shares and 2½ per cent. on the 643,390 new bonus shares. This year 6 per cent. is to be distributed on the full 1,930,170 £1 shares, leaving a small sum to be added to the amount brought into the accounts to be carried forward to the current year. Recent years' results compare as follows:—

	1917.	1918.	1919.	1920.	1921.
Share capital.....	£1,163,216	£1,286,780	£1,286,780	£1,930,170	£1,930,170
Net profit	81,615	89,317	215,350	147,186	116,556
Brought forward	48,483	71,937	58,311	48,475	50,898
Available for distribution	130,098	161,254	273,661	195,661	167,454
Paid in dividends.....	58,167	102,943	225,187	144,763	115,810
Rate per cent.	5	8	17½	10 on old shares 2½ on new shs.	6
Carried forward	71,937	58,311	48,475	50,898	51,644

The results would have been better but for tea crop disappointments. The 1921 tea crop was 1,620,778 lbs, against 2,083,831 lbs in 1920, and the net selling price was only 5.91d per lb, against 7.44d. The rubber crop was 2,369,602 lbs, against 2,559,004 lbs, the net selling price falling from 1s 6½d to 1s 3d, but costs were also brought down from over a shilling to 10½d per lb. As regards the current year, the directors have decided to reduce rubber tapping still further, and, of course, a selling price of 1s 3d can hardly be looked for. But two references in the report to expenditure are hopeful. The first statement is: "The representative has effected important reductions in the general expenditure of the company, which it is expected will have a marked effect on the cost prices of products and general working during the year." The second passage is as follows:—"The year opened with a continuation of the adverse labour conditions of the previous year..... More normal conditions have supervened, and the year closed with labour, as regards volume and rates, again on normal levels....." The outlook for important cost reductions in the current year is therefore favourable. Happy in these critical days is the plantation company with large liquid resources, and this happiness the Anglo-Dutch enjoys. The balance-sheet shows gilt-edged investments which, at the middle-market price of December 31st last, were worth £1,139,500. Even if the acute rubber crisis lasts for some years, the company, thanks to its interests outside rubber and its strong liquid resources, should have no difficulty in weathering the storm.

Agricultural and General Engineers.—The report for the year ended March 31st last of Agricultural and General Engineers, Limited, founded in 1919 to obtain controlling interests in a number of agricultural and other engineering concerns, shows that the combined results of all these companies is a loss of £217,000, after writing down stocks and work in progress to market value and providing for taxation. The parent company is able to show a profit of £51,200, of which no less than £31,300 is interest on loans to associated companies. Results for the past two years compare as follows:—

	1920-21.	1921-22.
Profit.....	£68,730	£51,235
Brought forward.....	21,470	456
Written off	90,201	51,691
Preference dividend	89,745	37,663
Carried forward	456	14,028

Out of the amount available £31,400, the balance of preliminary expenses, is written off, and provision for two years' income-tax and corporation profits tax requires £6,300. No preference dividend is paid, the arrears at the date of the balance-sheet being £43,200, and the report adds that interest to the net amount of £17,600 is, under contract, payable on the balance of the purchase price of shares in associated companies, pending an issue of 6 per cent. preference shares to the amount of £168,300. For this purpose it is proposed to convert 168,300 of the unissued ordinary shares into preference shares ranking *pari passu* with the existing preference shares. The unissued ordinary capital at the date of the balance-sheet was £4,414,400, but the company is under agreement to issue further ordinary shares in respect of foreign debts recovered by associated companies. Shares in associated companies stand in the balance-sheet at cost—namely, £2,081,200—and debentures at £458,000, while the balance of the combined net assets of these companies is given as £3,331,300. There is no reserve fund, and the directors, "whilst drawing attention to the loss on balance made by the associated companies, do not propose making any reserve in this year's accounts, as the basis on which the concerns were acquired.....provides ample margin." There are contingent liabilities in respect of partly-paid acquired shares amounting to £13,800, and in respect of guarantees of overdrafts of associated companies amounting to £260,200. Apart from investments in and loans to associated companies, the only asset of any size in the balance-sheet is leasehold property in Aldwych, £187,000, cash standing at £8,300.

Anglo-Polish Bank.—Highly successful results are disclosed in the report for 1921 of the Anglo-Polish Bank, formed in the spring of 1920 under the auspices of the British Overseas Bank. Credit is given in the report to the latter for the support of their "powerful organisation." Moreover, "it was mainly owing to this valuable assistance and connection that it was found possible to effect transactions which far surpassed the resources of the Anglo-Polish Bank, Limited, itself." The development of the bank, indeed, is said to have been "so rapid" that the directors had to make "special effort" to keep level with the work required for the internal organisation of the bank. Profits for the year amounted to 166½ million Polish marks, of which 9,375,000 was devoted to a dividend of 30 per cent., 35½ millions was placed to reserve, and 50 millions capitalised, raising the paid-up capital to 100 millions. At the end of the year the capital was raised from 25 to 50 millions, the bulk of the new issue being taken up by a Polish bank. The balance-sheet shows current accounts at 318½ million marks, while cash stands at 40 millions, balance at the State bank at 148 millions, bills discounted at 154½ millions, and public securities at 118 millions.

Financial Conditions in Japan.—Cable advices from Japan state that since last month general economic conditions have somewhat improved. Thanks to a plentiful supply of credit the large demand on the banks for money for purchasing new cocoons by raw silk manufacturers has been easily satisfied, and the market passed through

the end of the half-year under easier conditions than had been anticipated in March or April. While the rate of day-to-day money was quoted at 11 per cent. at the end of the month, that of money running over the next month was only 8½ per cent., showing the general tendency of the market, which fully expects cheaper money for some time to come. The raw silk market in Yokohama is steady owing to small stocks, while new raw silk is gradually arriving; the stock held by the Imperial Silk Company has now been reduced to 450,000 kin. The rice market, which was very strong in consequence of little rain in the wet season, has become slightly weaker now that fair quantities of rain in various districts are reported.

Shamva Mines.—The past year, writes our mining correspondent, may be regarded as marking the beginning of a new phase in the history of this Rhodesian enterprise—unique in the possession of a mountain of low-grade ore. In his 1920 report the consulting engineer laid considerable stress upon the importance of the removal and treatment of the large tonnage of overburden which overlies the better ground. For the year in question the quantity of low-grade or "excess" material extracted was slightly in excess of that taken from the estimated reserves. For the purpose of enabling the company to operate on a larger scale eight Nissen stamps with one tube mill were installed, and came into operation at the beginning of 1921. A natural corollary to the foregoing is the inclusion in the reserve estimates of a large tonnage of material, low-grade but payable, hitherto not taken into account. Hence the jump in quantity and decline in average shown by the 1921 figures in contrast with those for preceding periods. The salient features of the past three annual reports are set out below:—

	1919.	1920.	1921.
Ore crushed	599,500 ..	609,500 ..	595,500
Gold yield	95,520 ..	96,720 ..	87,120
Cost per ton	114.60 ..	125.18 ..	122.50
Net profit	£178,500 ..	£223,500 ..	£155,100
Dividends.....	135,000 ..	180,000 ..	180,000
Taxes, &c.	..	25,800 ..	10,200
Brought forward	49,700 ..	93,150 ..	110,870
Carried forward	93,150 ..	110,870 ..	75,790
Ore reserves.....	1,982,000 ..	1,981,250 ..	2,801,000
Value.....	4.3 ..	4.1 ..	3.5

That, despite the increase in the treatment capacity, the tonnage crushed last year should fall somewhat below the 1920 total is due partly to the need for reconditioning the old plant, and partly to a stoppage of 32 days through labour trouble. With lower-grade ore sent to the mill, the yield of gold inevitably declined, and the revenue was further cut down by the fall in the gold premium. These two factors in combination reduced last year's income by £72,400 to £463,300. The cost ratio remaining practically unaltered, maintenance of the dividend at 30 per cent. entailed drawing upon the carry forward to the tune of £35,000. Two interim distributions of 7½ per cent. each have been announced in respect of the current year. Upon this basis the yield on the shares at 30s cum. dividend is over 20 per cent.—a rate which makes a fair allowance for contingencies. Future distributions will depend partly upon the extent to which reduced wages and lower charges for stores will offset the decline in the gold premium. The May average was 9s, as against somewhat over 10s for the whole of 1921.

The Russian Situation.—The fourth of the *Manchester Guardian* Commercial Reconstruction Numbers, which is mainly devoted to Russia, is probably unique in international journalism, for in it the editor, Mr J. M. Keynes, has persuaded the heads of the Soviet Government to state their own case to the world. The illness of Lenin has prevented his sending his promised contribution, but foreign affairs, industry, agriculture, Labour, and finance are dealt with by the various experts. External views of the Russian situation are supplied by Lord Robert Cecil, M. Painlevé, and Signor Orlando, and by a number of American contributors, some of whom supply some of the most uncompromising criticism of the Bolshevik régime. No one who wishes to understand the Russian situation should

fail to study this remarkable production, whose only shortcoming is the absence of any statement from the British trader's standpoint.

Claims Against Bulgaria.—The Administrator of Bulgarian property has, under the powers conferred upon him by Section 1 (iv.) of the Treaty of Peace (Bulgaria) Orders, 1920-1922, and with the approval of the President of the Board of Trade, prescribed September 30, 1922, as the final date by which proofs of debts by British nationals against Bulgarian nationals, and other claims by British nationals against the Bulgarian Government, must be made in order to rank for payment of the first dividend to be declared by him out of the Bulgarian assets within his Majesty's Dominions or Protectorates which are subject to the charge created by Section 1 (i.) of those Orders. British nationals who have claims against Bulgarian nationals or the Bulgarian Government under Part IX. (Economic Clauses) of the Treaty of Neuilly-sur-Seine, with the payment of which the Bulgarian assets above referred to are charged, and who have not yet lodged their claims upon the prescribed forms with the Department for the Administration of Bulgarian Property, Cornwall House, Stamford street, London, S.E. 1, should do so immediately, as any such claims lodged after September 30, 1922, will only be permitted to rank against any surplus of the above-mentioned Bulgarian assets which may remain over after payment of the said first dividend.

The third annual Norwegian Industries Fair will this year be held from September 3rd till 10th at Christiania.

THE IRISH FREE STATE. — SUPPRESSION OF REBELLION—STRENGTH OF THE PROVISIONAL GOVERNMENT—LABOUR'S ATTITUDE.

(FROM OUR CORRESPONDENT.)

DUBLIN, July 6.

THE definite ascertainment of the national will of Ireland a fortnight ago has proved a veritable quickening of the longed-for offspring with whom she has been pregnant so long. Scarcely were the election returns completed when the Provisional Government struck its first blow at the armed forces of disorder. To-day the backbone of open resistance is broken, though undoubtedly the vanquished will continue to practise, at the expense of the community which they profess to love, those insurrectionary tactics which are so carefully worked out in the propagandist handbooks of militant anarchy. Their atrocious anti-patriotic and anti-social activities, however, have one salutary effect: they have stimulated, and will continue to stimulate, the concentration of the national will and its determination to realise itself in a firmly maintained system of peace and order. Amidst the storm of shot and shell, with the attendant flames and bloodshed following close in their train, the good ship Ireland has found herself, has braced herself to take the strain, and has triumphantly forged ahead in her appointed course. The people are proud of their Army, of its gallantry, its efficiency, and that zealous unity of spirit which serves it well so far in lieu of the mechanical discipline of the older-established armies. They have confidence in the chiefs of the Provisional Government, whose general policy, which was open to misconstruction, has been vindicated by its later development, and whose temper and sense of perspective have been really admirable. They will respond generously to the national call to arms, issued to-day, by the aid of which the Provisional Government proposes systematically to stamp out the embers of the revolt as they flicker into activity sporadically throughout the community. Thus, if they remain true to themselves, after a brief space will they enter into their promised land, which, in truth, will prove for them, economically speaking, a land flowing with milk and honey. In the meantime, the salutary process of purging the body politic of noxious disorders must have cost the country some three or four

millions sterling. But if the forces of hysterics, high-falutin', and pseudo-intellectualism have been suppressed, no sane Irishman will grudge the cost. Too long have they been allowed to mislead honest men by disingenuous appeals to patriotic ideals.

One minor development of the situation is significant. Labour is showing a disposition to fish in troubled waters. It has protested against the postponement from July 1st to the 15th of the first meeting of the newly elected Dail. Its leader, Mr Thomas Johnston, admitted, by the courtesy of the Provisional Government, to Mountjoy Gaol to interview the imprisoned rebels for a specific purpose, used the opportunity for giving publicity and currency to the prisoners' views in a matter of controversial propaganda. Some of its extremists have obviously been in unofficial alliance with the rebels, and it is already pretty clear that it will, at least, not facilitate the Provisional Government. Apparently, it dislikes any form of government which provides an Executive prompt and strong to suppress every form of sectional disorder. Short-sighted as this is, the fact remains. Labour, in Ireland as elsewhere, has not yet realised that by constitutional action in a democratic country it can achieve all that it really wants. It still bankers after illegitimate power—after the strike which the State is not strong enough to control. Large numbers of farmers and commercialists who voted Labour at the recent election in protest against militarism are beginning to realise that they would be better off with a policy and a party of their own.

Now that Ireland has started to curb her extremists, the question is whether North-East Ulster will follow her lead. Sir James Craig has told us that the disorder in Southern Ireland is the cause of the troubles in Belfast. Mr Collins has replied that the converse is the case, and the chronology of the last two years would appear to confirm his view. But, be that as it may, he has started most drastically to put his house in order. Will Sir James Craig fellow suit? What has happened in Belfast would go far to ruin the moral credit of any city, and the developments bid fair to bring economic disaster close on their heels. The Ulster Association has issued from its London office a statement upon the position as to the trade and financial position, with the object, apparently, of restoring confidence in British business circles, to the loss of which it expressly refers; and it deprecates economic isolation from the rest of Ireland, while viewing the prospect of it "with a good deal of equanimity." It may yet achieve both its objects if the North-East Ulster Government will grapple with its own extremists as the Provisional Government of Ireland has done.

UNITED STATES.—REDUCTION IN FEDERAL RESERVE RATES—OIL PRODUCERS' MEXICAN NEGOTIATIONS—BANK MERGER—NEW BOND OFFERINGS—TELEPHONE STOCK OFFERED TO CUSTOMERS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 29.

LAST week's reduction by the New York Federal Reserve Bank of its rate on rediscounts and advances of all kinds from $4\frac{1}{2}$ per cent., which had prevailed since November 3, 1921, to 4 per cent. had long been predicted, and was considered inevitable when the Bank of England recently reduced its rate. For several weeks, as a matter of fact, the New York institution had been in a position to lower its rate, but the $4\frac{1}{2}$ per cent. level was maintained, largely, it is said, because its officials feared that a reduction might possibly lead to another period of inflation and speculation. There was some ground for such apprehension. Tangible evidence was not lacking that the Treasury Department's reduction a while ago in the interest rate on new certificates of indebtedness had been chiefly responsible for tendencies in that direction. Evidently it is considered, however, that all danger of such a development has now passed. The latest reduction in the New York rediscount rate is the sixth made during the process of liquidation and readjustment under way since February of 1921, when the rate was raised to 7 per cent., the highest ever named by the local bank. The Federal Reserve institution at Boston immediately followed New York's lead by cutting its rate from $4\frac{1}{2}$ to 4 per cent., and it is expected that banks

in the 10 other central reserve cities throughout the country will lower their rediscount rates, although such action probably will not be taken at once by all of them; they will be governed by conditions in their respective districts. The Bank rate reduction was followed by freer offerings of time money at 4 per cent. for the 60 and 90-day periods, and at $3\frac{1}{4}$ per cent. for 30-day loans, while the business paper market has shown a downward trend to a 4 per cent. basis, as against $4\frac{1}{4}$ to $4\frac{1}{2}$ per cent. discount rates heretofore prevailing.

Following the successful conclusion of negotiations for the settlement of Mexico's foreign debt, Finance Minister de la Huerta is conferring here with representatives of leading American oil companies which operate in Mexico. The latter, it is understood, are seeking to obtain the Mexican Government's approval of a plan which will afford proper security to the companies, and also will assure the Government of its share of the benefits accruing from development. The companies, it seems, propose to act concertedly in exploration work, if guarantees are obtained, although it is said that they are not endeavouring to secure any special favours or concessions. They wish to learn what burdens, if any, they may have to bear in the shape of regulatory laws, taxation, and so on, before they start expenditures in search for new oilfields in Mexico. The plan now under consideration is to pool all undeveloped Mexican acreage of American companies for development by a corporation to be owned and controlled jointly by them. Many oil men believe that such joint operation in exploration work would save much useless expenditure of time and money. American oil interests attending the conferences are those who visited Mexico City last April to negotiate with Mexican Government officials on export taxes and other matters.

A bank merger of more than ordinary interest is the proposed consolidation of the Bank of New York and the New York Life Insurance and Trust Company. The trustees of the latter and the directors of the bank have already approved of the union under the name of the Bank of New York and Trust Company, and arrangements are being made for special meetings of the stockholders to ratify the plan. Edwin G. Merrill, president of the New York Life Insurance and Trust Company, will be president of the consolidated company, while Herbert L. Griggs, president of the Bank of New York, will become chairman of the board of trustees. The new institution will have a capital stock of \$4,000,000, surplus and undivided profits of about \$12,000,000, and net deposits exceeding \$50,000,000. For the immediate future, both institutions will continue to maintain their present headquarters in Wall Street. The Bank of New York is the oldest bank in New York City, having been organised in 1784. It was founded as a State bank, but after the close of the Civil War, in 1865, it was converted into a national bank. The New York Life Insurance and Trust Company was the first financial institution in the United States to begin business with "trust company" as a part of its title. It was organised under a special charter granted by the New York State Legislature in 1830, and has always made a specialty of personal trusts.

Ordinarily, a reduction in the Federal Reserve rediscount rate and relaxation in money would stimulate activity at rising prices in the bond market. The latter, however, has ruled extremely dull for several days, and price fluctuations in most instances have been so narrow as to excite comment. One of the few features was the advance in Liberty Loan 4½'s to new high records, but their gain over previous levels was only slight, and movements in other issues were very irregular, with foreign Government bonds generally displaying a reactionary tendency, which was attributed more to present, and perhaps temporary, market conditions than to any new developments affecting them. Even British securities, which have been the mainstay of the market here for foreign bonds, eased off, the heaviest decline occurring in the 5½'s of 1929: they dropped more than a point to 107½. Mexican Governments lost practically all of their recent rise, while some weakness developed in South Americans and various Europeans, such as Denmark 6's and 8's, Bordeaux, Lyons, and Marseilles issues. The week's offerings of new securities, exceeding \$93,000,000, consisted largely of railway equipment trust certificates, the total of which reached about

\$42,000,000, including \$27,645,000 New York Central 5's. State and Municipal bonds accounted for \$25,000,000. Several foreign bond offerings are still under negotiation, but subscription books were opened to investors last week for 12,500,000 kroner deposit certificates issued by the Guaranty Trust Company of New York for the Kingdom of Norway 6 per cent. internal loan of 1921-1931, the price being \$198 flat per 1,000 kroner. The bonds, which are payable, principal and interest, in Norwegian kroner, are redeemable by October 1, 1931, in 16 semi-annual instalments, beginning April 1, 1924, by drawings at par or purchases in the open market if below par.

It is not uncommon for American corporations, especially industrial concerns, to extend to their employees the privilege of becoming shareholders through the purchase of stock, either in cash or in monthly instalments. The United States Steel Corporation is a notable example. The New York Telephone Company, however, has gone a step farther. Believing that "satisfactory telephone service depends largely upon the co-operation" of its customers, employees, and management, and that such co-operation "will be increased through the direct personal interest in the company" which its customers will have as shareholders, it is now offering to customers (telephone subscribers) 6½ per cent. cumulative preferred stock, par value \$100, at \$100 per share, plus interest accrued at the dividend rate, payable in cash, or in monthly instalments, or by partial payments as small as \$5 a month per share. Six per cent. interest will be allowed on the monthly payments until the stock is fully paid for. Not more than \$25,000,000 will be issued at this time, and the number of shares to any one person is limited to a maximum of 20. Heretofore, the company's only stock has been common stock, held by the American Telephone and Telegraph Company; the new stock is preferred over the common stock, both as to assets and dividends.

FRANCE.—FRANCE AND THE DEBTS PROBLEM—GERMAN LABOUR AND PUBLIC WORKS—BOURSE (FROM OUR CORRESPONDENT.)

PARIS, July 5.

UNDER pressure of the American determination to secure payment of the debts owing to it by the Allies, French opinion is slowly awakening to the fact that, even if Germany eventually escapes bankruptcy and carries out her undertaking to pay her reparation debt, there will be little likelihood of any of the money being available for the reconstitution of the devastated regions. The cold facts of the situation are now becoming painfully clear. The United States Congress, whether for election purposes or otherwise, has voted a Bill, under the provisions of which France is to be called on to pay off her debt to America within 25 years, with interest at the minimum rate of 4.5 per cent. The British Government, as everybody knows, is also a heavy debtor to America, and is in the same predicament as France under the provisions of the same Act of Congress. It has accordingly warned the French Government that it reserves the right, as from October next, also to call on this country to pay off its debt to Great Britain. The British Government, with characteristic sense of realism, has more than once put forward tentative suggestions, as is well known, for some plan to be arrived at whereby a mutual cancellation of debts might be brought about, and has shown itself prepared to write off at least part of the debt owing to it by France if the latter, on the one hand, would agree to forego an equivalent amount of the debt owing to her by Germany, and the United States, on the other hand, would consent to waive part of its claims against Great Britain. The French, in view of their vital need of payment from Germany, have shown themselves by no means eager to accept this suggestion, while the Americans have flatly refused to consider it. The Washington Government has also refused to consider another British proposal, to the effect that the question of the inter-Allied debts as a whole and the reparations problem should be taken into consideration at one and the same time, with a view to general liquidation, and has insisted that it will deal only with each debtor country separately.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

For the time being, therefore, it is evident that matters are at a deadlock, and it is difficult to see what possible solution can be arrived at, unless the United States Government is prepared to write off, for once and for ever, a substantial proportion of the debt owing to it by the Allies. So far as France is concerned, the present situation, as set forth by the American demand for payment, is an absolutely impossible one.

M. Henry de Jouvenel, one of the leading members of the Senate, sets out the situation in a striking manner. Using the gold mark as the basis of calculation, and assuming that the same method of repayment would be demanded by both Great Britain and the United States, he sets out the French annual balance-sheet as follows, in respect of the amounts this country ought to receive from Germany and would have to pay to her Allies:—

French debt to United States:—	Gold Marks.
13,000,000,000 gold marks, repayable in 25 years, at 4.5 % by annuities of	876,000,000
French debt to Great Britain:—	
11,600,000,000 gold marks, repayable in 25 years, at 4.5 % by annuities of	781,000,000

Total annual payments to America and Great Britain... 1,657,000,000
Reparation payments owing by Germany to France, namely, 52 % on 3,000,000,000 gold marks per annum (assuming that no new moratorium be accorded to Germany and that she pays the whole amount in cash) 1,560,000,000

leaving an annual deficit to be met by France of 97,000,000 gold marks, or about 300,000,000 at the present value of the franc. "In other words," said M. de Jouvenel, a day or two ago, "after all the priorities have been exhausted (cost of armies of occupation, Belgium priority, and priority for private debts, &c.), the Allies of France will first, if Germany fulfils her engagements scrupulously, take for themselves 48 per cent. of the money paid (under the agreements of December, 1919); then place their hands on the remaining 52 per cent. (in virtue of the debts owing to them by France), and finally will demand a further 300,000,000 a year, leaving us to find the money to pay for the reconstitution of the devastated area, pensions, and the whole cost of carrying on war (other than the amount we borrowed from our own Allies) from our own pockets."

The foregoing represents, in general, the situation of France as it will be laid before the Washington Government by M. Parmentier, who has just left for America on a special mission from the French Government to the United States, with a view to sounding the American Treasury Department as to what, if any, arrangements may be possible in the interest of this country. I understand M. Parmentier's instructions are not to busy himself in any way with questions of a definite settlement, but merely to investigate and inquire. Indirect efforts have already repeatedly been made, as is known, to induce the French Government to take the initiative in raising the question of a general liquidation of war debts. In view of the fact that this must inevitably involve the question of a possible further reduction of the French claim against Germany, the Poincaré Government has so far remained adamant to these overtures. It is now regarded here as probable that the American Government, once the pending elections are out of the way, will be compelled, in spite of its previous refusals, to raise the matter on its own account, possibly in the form of a new Washington Conference of the Powers, the work of which would be limited to financial and economic questions.

In the circumstances it is not surprising that the plans referred to in this column last week for the utilisation of

German labour and materials (in default of reparation payments in cash) in the carrying out of public works in this country, are being energetically pushed forward. At this morning's meeting of the Ministerial Council a report was presented from the Inter-Ministerial Commission appointed to consider these plans, in which it was recommended that the programme of the first section of the public works which it is proposed shall be carried out by Germany in application of Article 19b of Appendix 2 to Part VIII. of the Treaty of Versailles, should be immediately laid before the Reparations Commission, with a view to its execution. I understand that this "first section" includes the following proposed works:—

Development of the River Rhone: total estimated cost, 3,250,000,000f; German part, 2,658,000,000f; French part, 592,000,000f; the labour required will occupy 12,000 workmen permanently for 10 years.

Development of the River Truyère: estimated total cost, 210,000,000f; German part, 129,000,000f; French part, 81,000,000f; labour required will be 1,800 men, all Germans, for four years.

Development of the middle section of the Dordogne River: estimated total cost, 290,000,000f; German part, 185,000,000f; French part, 105,000,000f; 2,500 German workers for four years.

Tunnel from St Maurice to Wesserling (through the Vosges Mountains, Mulhouse-Epinal line) 8,264 metres long (with 10-millimetre gradient): estimated cost, 64,000,000f (of which 63,500,000f comprises German part); 600 German workmen for five years.

Canals to link up the Saar, Moselle and Meuse, and the Meuse and Escaut (or Scheldt): estimated cost, 1,010 million francs, of which the German part would be 862,000,000f and the French 147,000,000f; labour time required, 19,800,000 days.

These works, which total 4,824,000,000f, it is proposed shall be carried out like ordinary public works, under the orders of French engineers. The German contractors would use their own plant. The German labour would be paid by the Berlin Government, and would be lodged and boarded in labour camps, receiving only small sums in francs as pocket money. As a general principle, one-third of the materials used would be furnished by French manufacturers.

Various factors making for an improved position on the Bourse came into effect this week, and markets have been firmer. The fall in value of the franc has naturally given strength to international securities and to a certain extent to French industrials, while the firmness of both London and New York, despite the Irish situation on the one hand and the threatened strikes on the other, have contributed to the maintenance of the strength of the French market. French 3 per cents. have advanced from 57.45 to 57.90, but other Government stocks have fallen back, the 1918 4 per cents., for instance, declining from 62.70 to 62.20 and the 1917 4 per cents. from 62.15 to 61.95. Banks generally are higher. The Banque de Paris et Pays Bas has moved from 1,096 to 1,118, the Banque de l'Union Parisienne from 602 to 609, and the Banque des Pays du Nord from 415 to 445. Foreign banks have been irregular, but with slight fluctuations. In railways Est has lost five points at 720, Metropolitan is unchanged at 370, Nord has gained ten points at 1,180, Orleans two points at 872, while P.L.M. is four points weaker at 865.

GERMANY.—INTERNAL POLITICS—REICHSBANK—EXCHANGE AND BOURSE—IRON PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 1.

THE internal situation during the past week has not materially changed. Police investigations show that there is a considerable extremist organisation, the more desperate members of which, mostly very young men whom the Revolution displaced from their normal vocations, hold that killing Ministers is no murder. No conspiracy against the Republic by any persons who pretend to control armed forces has been discovered. The popular excitement, however, continues to be intense, and takes not very edifying forms. A Government and a nation in a panic seldom show political

wisdom, and in the present case there are indications that the Republic is more endangered by lack of political sense in its supporters than by the occasional murder plots of its much less numerous foes. The Left newspapers and prominent Left politicians proclaim, nevertheless, without ceasing that Republican institutions are in mortal peril, and to support this impression the wildest charges are, without any proof, launched against named individuals who are or are even alleged to be in some way connected with German-National politics. The Cabinet apparently holds that the cry "the Republic is in danger!" will rally citizens not only to support the Republic, but also to support of itself. This panic policy is at once irresponsible and unintelligent, and it is plainly the cause of the new heavy drop in mark exchange, a serious matter, as Ministers have often rightly declared, both for home conditions and international relations. That the result has not been worse must be credited to the cooler heads of international finance.

The measures adopted by the Cabinet are open to criticism. They have been condemned by the Cabinet of Bavaria, but apparently will be supported by most of the other States. Under the 48th Article of the Constitution, the Federal Government has power to suspend the Constitutional guarantees—right of assembly, freedom of the Press, and so on—and it has a right to take further not defined "necessary measures" for restoration of order. Were the Republic really in any danger, these exceptional powers would properly be used against individuals or organisations plotting a counter-revolution, and equipped with sufficient resources at least to make success conceivable. As there is no such danger, the Cabinet has not so used its powers. Instead, there have been published in great haste decrees which almost exclusively give personal protection to certain privileged citizens. Extravagantly long terms of imprisonment are proclaimed for persons who slander or libel Federal Ministers in office, and the same unusual protection is extended to all Ministers now in office, or who have ever been in office since the Revolution in any of the States. Without waiting for the Reichstag's sanction the Cabinet has proclaimed the death penalty as punishment for membership of, or financial support of, any organisation which has among its aims the removal by force of any person who has ever held office since the Revolution. It is doubtful whether the German, any more than any other modern Constitution, intended to empower officials to extend the sphere of capital punishment by decree, when the Legislature, if it wishes, can pass the necessary law in a few hours. The Cabinet's policy is doubly open to criticism in the light of the particular conditions of German criminal law. For Germans who do not and have never held office there is practically no defence against slander or libel; civil damages are not given; and the Courts usually inflict only petty fines. Against the assassination, with the worst motives, of citizens who have never been Ministers, there is also little protection, owing to the leniency of the Courts and the liberal application of new theories of moral and mental irresponsibility. The Cabinet's extreme Left supporters are quite as vehement in their attacks and incitements as are its Right enemies. All members of all present or of all past Federal and State Cabinets have not honestly earned immunity from attack; the late Herr Erzberger, before his assassination, was declared by a Court's verdict to have been thoroughly corrupt, and his corruption was exposed by the very parties who are now threatened with five years' imprisonment; in Dr Wirth's present Cabinet a prominent Minister is at present under official enquiry on corruption charges brought first by Republicans, and pressed home with extraordinary violence solely because this Minister was suspected of reaction in his Finance policy; and a considerable number of the former State Ministers gave only too good ground for attack. The Wirth Cabinet has committed a serious blunder in giving a privileged position to all these miscellaneous politicians, and there is good reason to believe that its members are repeating a mistake of the displaced autocrats by identifying their personal safety and immunity, and not the safety and protection of all citizens equally, with the cause of good government.

The foreign exchanges were yesterday 100 per cent. over

the figure of the beginning of the year, the dollar quoting at 374, against 187 on January 2nd. Extreme shortness of money prevails. The price of day money this week was between 4½ and 6 per cent. The Reichsbank has decided not to raise its discount rate for the present. Whether a discount rate increase would check the demand for credit is doubtful—currency depreciation makes borrowing even upon unfavourable terms profitable. An increase in the rate would cost the State considerable sums, as the Reichsbank's discounts almost wholly consist of Treasury bills. There is a great demand for money by farmers. The Reichsbank statement for June 23rd shows a decline of Treasury bill discounts by 4,278,000,000 marks to 167,624,671,000 marks and an increase of note circulation by 2,589,951,000 marks to 157,935,228,000 marks. The decline in discounts means merely the normal reaction against the large demand for credit shown by the statement for June 15th. More characteristic of money conditions is the increase of 1,987,527,000 marks to 11,150,680,000 marks in Kassenscheine booked among the bank's assets. Before the money shortness began the "Kassenscheine," which represent loans on bonds, stocks, &c., on easier terms than those granted by the Reichsbank proper, threatened to disappear altogether, owing to the rapid repayment of the loans on which they are secured. The total loans outstanding sank from 33 milliards at the end of 1920 to 20 milliards at the end of 1921. It has since, owing to the money shortage, risen to 21 milliards. The impending collection of the forced loan is expected to bring further demands both on the loan bureaux and on the Reichsbank for rediscounts.

In spite of rising exchanges, the Bourse continued dull and undecided, with occasional rises in average quotations towards the end of the week, which were followed by reactions. Owing to various unfavourable factors, stocks have not of late risen in accord with the exchanges, as they invariably did in 1920 and 1921. Whereas the foreign exchanges stand twice as high as at beginning of the year, the stock index (*Frankfurter Zeitung's*) for 25 dividend-payers has only risen since January from 33,442 to 35,068. Potash stocks were yesterday active and rising, but attempts by speculators to galvanise the general market failed. Home Loans have not been affected by the Rathenau crisis; in fact, the foreign favourite Federal Threes stand one point higher than on the last Bourse day of last week. Prices yesterday were:—War Loan, 77.50; Federal Fours, 105.20; Three and a-Half, 79.25; Threes, 150; Colonial Fours, 120; Prussian Consols, 4 per cent. 83, 3 per cent. 72.60; Hamburg Staats-Rente, 77.80; Berlin 4 per cent. 1904, series 2, 94.75.

Railway freight rates were increased 25 per cent. to-day. Before this increase they were officially estimated as on the average 72½-fold above those of 1914. The first in the average 7 per cent., took place in August, 1917; and as late as April, 1919, rates were only 97 per cent. up; in April, 1921, 1,023 per cent. up; in December, 1921, 2,089 per cent.; and now 7,147 per cent. Governments made the mistake of raising rates too slowly at first, and they were later compelled to raise them rapidly, with the result that business is hampered, while the losses suffered in earlier years have not been recovered. The increases in rates for different classes of goods vary very much, and in no comparison can be made with pre-war rates, as the no classification has been changed. Since 1914 passenger rates have been increased as follows:—First class, 1,801 per cent.; second, 1,543 per cent.; third and fourth, 1,379 per cent. Prices of pig-iron have again been increased by per cent. The new and former prices in the Iron Industry Union. The new and former prices per metric ton were:—Hematite, 7,670, 6,724; foundry pig-iron No. 1, 7,261, 6,206; ditto No. 3, 7,191, 6,136; Siegerland steel iron, 7,250, 6,300; Spiegeleisen, 8,239, 7,137; ferro-manganese 80 per cent., 16,570, 15,415; ditto 50 per cent., 15,270, 14,400; ferro-silicium, 9,050, 8,100. The Reichsrat has sanctioned a Government decree restoring State control of scrap iron, on the ground that the rapid rise from 600 marks a ton in May, 1921, to 5,600 marks to-day is considered greater than can be justified by the currency depreciation. The authorities are given power to requisition and ration scrap at fair prices. The crop reports for mid-June are unfavourable. Thirty-seven per cent. of reports on winter wheat are classed as "bad," as against 3 per cent. at the same time last year.

CANADA.—THE FEDERAL BUDGET—THE FISCAL QUESTION — WHEAT BOARD LEGISLATION — CROP PROSPECTS—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 19.

THE King Government, after announcing very considerable modifications in the original proposals, managed to secure the passage of their Budget on June 14th by a majority of 18, the vote being 119 to 101. The Opposition groups opposed the Budget from divergent angles: the Conservatives attacked the tariff reductions, and especially the repeal of the Marking Act's compulsory provisions, and of the regulations about the Customs valuation of goods coming from countries with depreciated currencies. They contended that the repeal of the latter would expose Canadian manufacturers to the ruinous competition of a flood of cheap German goods, and as opinion in the industrial centres strongly backed this plea, Mr Fielding agreed that henceforth the value of articles imported from countries with depreciated currencies shall be fixed (if a parallel is available) by the standard of British value. If a British parallel is not available, then the value of similar articles made in Holland or some other adjacent country shall be the standard. The Conservatives moved an amendment asking for a condemnation of the Ministry, on the ground that its tariff proposals were a violation, tending to lower public standards, of the pledges of the 1919 Liberal platform. All the Progressive party save four assisted the Government to defeat this amendment, but the main body could not support the Budget, regarding it as essentially a Protectionist measure. However, the Government made no secret that a defeat on the Budget would entail their resignation and another General Election, and this threat played a large part in inducing nine Progressives and two Independents to vote for them and provide a reasonable majority. But without this reinforcement the Ministry would have been in a minority of four, and its position is extremely shaky.

The other changes were chiefly made in deference to strong protests from affected interests. A limit of 2c has been set to the stamp tax on cheques, and a receipt tax of 2c has been introduced. The tax on confectionery has been reduced from 10 per cent. to 5 per cent., but will be applied to the soda fountain trade. The extra levy on ale, beer, porter, and stout will be reduced from 15 to 12½ cents per gallon, and the Excise on cigarettes from \$9 to \$7.50 per 1,000. The tax on stock transfers is brought down from 5 cents to 3, but will be applicable to bond transfers. Motors valued at over \$1,200 were originally to pay 10 per cent. on their full value, but will now pay 10 per cent. on their value in excess of \$1,200. There are also adjustments in the Excise imposts on beet sugar and raw leaf tobacco, the latter being designed for the encouragement of the use of home-grown tobacco in Canadian factories. Other minor changes have also been sanctioned. The Committee stage of the Budget is now proceeding, and the Progressive party are pressing strongly for further reductions in the cotton and woollen duties. Though the King Government survived the test of the division, the debate has revealed a

cleavage in the Liberal party on fiscal matters, which is more likely to grow than be healed.

The Government have now introduced legislation based on the report of the Agricultural Committee of the House of Commons, which attempts to meet, at least in part, the demand of the Progressive party for the revival of the Canadian Wheat Board and its system of control and pooling. It proposes to establish a national wheat marketing agency for the crop of 1922; it will be endowed with all the powers of the 1919 Board which the Federal Government can confer within its constitutional limits, and it will come into operation by proclamation as soon as two or more provinces have passed legislation conferring upon the Board all the remaining powers enjoyed by the 1919 Board which come within provincial jurisdiction. Mr Crerar, the Progressive leader, accepted this measure, and declared that the proposed agency would be able to regulate the flow of wheat, prevent the usual autumn glut of the market, and help to stabilise prices. Mr Meighen criticised the legislation as quite ineffective, and advocated the establishment of a marketing agency on the voluntary pool system, which would function all over the Dominion. The measure will pass the House of Commons, but may be rejected by the Senate. There are good grounds for doubting its efficacy. Owing to the fact that the Manitoba Legislature has been dissolved, only two provinces, Alberta and Saskatchewan, are likely to be able to hold the special sessions necessary to pass the required concurrent legislation in time for the handling of the 1922 crop. The other provinces, being only interested in wheat on a limited scale, will stand aloof. The Board is not to be allowed control of flour prices, and if it can only operate in two provinces its success is highly problematical. The Federal Government disclaims all responsibility for financing the scheme, and the task may strain the resources of the provincial treasuries involved. The Winnipeg Grain Exchange, however, dislikes the legislation exceedingly, and contends that if the scheme is successful its doors may as well be closed.

The latest crop reports show a continuance of favourable conditions in all parts of the West. There have been heavy rains in almost every quarter of Canada, which have benefited the young crops, and they have been specially abundant where they were most needed. The hot spell of the early days of June has been succeeded by a period of cool weather, which checks too rapid growth and allows the crop to be better "stooled." In some districts of Alberta there has been a threat of the recrudescence of the grasshopper plague, which caused so much damage in 1920 and 1921, but the farmers have organised very thoroughly to combat it, and are using poison bait and straw fires with some success. On June 6th there was a frost in the Saskatchewan Valley between Battleford and Edmonton, which nipped the grain severely. Seeding operations in the West have now been wound up for the year, the last flax and barley being planted about June 13th. To compensate for the decline in wheat acreage the rye crop of Saskatchewan will be 16 per cent. greater than last year. In Eastern Canada there has been an abundance of moisture during the past week, and the weather has been cool and helpful to plant growth. Pastures are excellent, and the hay crop is especially promising. The prospects of a first-rate fruit crop are also good, and in general the agricultural community, despite the poorness of prices, has no reason to be gloomy. The satisfactory crop reports have contributed to an improvement in business conditions, and accounts from most of the important points state that the improvement is likely to continue. Wholesalers assert that both city and country merchants, though still buying conservatively, are ordering more freely in the principal staples, and showing greater confidence in their plans for the coming autumn and winter. In all seasonable commodities the retail trade is active, and the Labour Department reports that the unemployment figures are steadily receding. A resumption of operations on a large scale in the mining areas, a close approach to normal conditions in the pulp and paper mills, and a sort of building boom in many towns and cities have helped the absorption of the workless and stimulated trade. The stock markets, after a period of briskness, have now become listless, and most stocks have dropped several points during the past week.

The Minister of Railways, who is responsible for the operations of the Canadian Mercantile Marine, has announced that 27 of the smaller ships will be laid up indefinitely, and there is a rumour, which the Government on being questioned would not actually deny, that it is in treaty with British interests for the sale of a portion of the national Fleet. The first prosecution of the general manager of the defunct Merchants' Bank was quashed by the police magistrate who heard it, but the trial of the president, Sir Montagu Allen, is now proceeding. The Finance Department have also taken steps to arraign Mr Macarow, the general manager, by another process before a higher court.

SWITZERLAND.—BANKING PROBLEMS—INDUSTRIAL REPORTS—EXTERNAL LOANS—IMPORT CONTROL.

(FROM OUR CORRESPONDENT.)

GENEVA, June 21.

In several centres of Switzerland disputes are in progress between the directors and staffs of the leading big banks, the employees' associations being strongly opposed to reductions of wages. The managers have a very strong argument, and that is that the expenses of the leading banks during the past few years have increased more rapidly than the gross income. Business expenses, which amounted before the war to only 32½ per cent. of gross income, rose to 57.2 per cent. in 1921. The bulk of the increased expense is to be attributed to higher wages and also to luxurious new buildings. The strong resistance of the leaders of the big banks is explained by the very considerable reduction of the amount of business in discount and foreign exchanges. The extraordinary income out of dealings with foreign exchanges during the past few years gave an entirely false idea of the business possibilities of Swiss banking. Many of the freshly-created branches, in particular, paid only because of exchange transactions. Switzerland, with a smaller population than that of Greater London, has not only 24 flourishing State banks, which give a fair interest on deposits, and which are further guaranteed by the Cantonal governments for all liabilities, but she has in addition about 180 local commercial banks also accepting deposits, and about 230 local savings banks. Besides this network of official and local banks, there are eight so-called leading banks which have increased the number of their branches since 1913 from a little over 40 to nearly 100. Consequently the branches of the leading banks are, unlike the minor branches of the leading banks in some other countries, no mere places for accepting deposits, but each branch must be organised for all banking transactions. Each branch of a leading bank has to compete with a local State bank and several local joint stock banks. For the purpose of this competition a considerable staff is indispensable. The centre of the unrest among banking staffs in Zurich, where an abnormally high percentage of the population consists of bank employees. The problem practically only exists for the leading banks. Officials of the Cantonal banks are State officials. Whether it is possible to cut down business expenses without abolishing all unnecessary branches is very doubtful.

The loan of the Federal Railways, which was the first public loan since 1916 offered at an interest of 4½ per cent., received subscriptions to the amount of 290 millions Swiss francs; that is to say, three times the sum originally required. The lists were closed a few hours after opening, which is really exceptional in Switzerland. Some smaller Cantonal government loans, which fall due in the month of July, 1922, have been renewed without public subscriptions, also at the rate of 4½ per cent. The assembly of the leaders of Swiss Cantonal banks, held at Herisau, resulted in the rate of interest for savings booklets all over the country being reduced to 4 per cent.; and all outstanding mortgage bonds of more than 4½ per cent. interest will be called in at the earliest opportunity. Whether this reduction will be sufficient to make banking business pay, so far as Cantonal banks are concerned, depends on the revival of the building trade. The commercial banks, which, during the year of credit crisis, issued bonds yield-

ing 5, 5½, 6, and even more per cent. interest, are endeavouring to pay them back as quickly as possible, for such expensive money really means, under present conditions, a substantial loss.

Industrial reports covering 1921 continue to give a very pessimistic impression; but, nevertheless, the quotations for Swiss industrial securities of standing are rapidly rising. The shares of the Bally concern, the leading Swiss shoe factory, rose in value, although there is not only no dividend, but the year ends with a substantial loss. The shares of the Nestlé company find speculative buyers. As to the three factories of the Basle Aniline Dye-stuff group, all show considerable reduction of net profit, and dividends are considerably cut down. All the quotations are rather high.

After the success of the 6 per cent. loan of the municipality of Amsterdam, the French railway company Paris-Orient is starting negotiations with Swiss banks for the purpose of a 50 million loan at 6 per cent. In spite of the disagreeable circumstance that the Roumanian Government did not supply the wheat for last year's 40 million loan, there is still a question of a 60 million loan to the Yugo-Slavian Government; but there is strong opposition against this combination of loans granted by the Swiss Government to Eastern Governments against import licences for Swiss goods combined with supplies of foreign goods for the Swiss governmental import offices. The feeling is entertained that in this way Government import monopoly will be maintained in spite of serious protests from all Swiss commercial circles that the dealing with import licences from foreign governments by the commercial department of the Swiss Government creates a dangerous favouritism.

NORWAY.—RAILWAYS—MONEY MARKET—BANK CLEARINGS—WEATHER AND CROPS—EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, June 26.

The construction of railways in this country, sparsely peopled, and intersected with deep valleys, fringed with high mountains, is both expensive and difficult. Still, progress has been very satisfactory. The first Norwegian railway, from Christiania to Eidsvoll, was built by the famous Sir Morton Peto, and constructed by Robert (brother of George) Stephenson. This trunk line was opened for traffic on September 1, 1854. To-day the total mileage of railways in Norway is about 3,400 kilometres, having cost about 450 million kroner. Apart from the above-mentioned trunk line, which is yielding regular and satisfactory profits, the railways of Norway do not earn sufficient profits to pay to the State an adequate interest on the capital employed, but, of course, they are not built, in the first place, to yield direct profits, but for the immense indirect benefit they give to trade, industry, agriculture, and on the whole to the population of all classes. A few days ago the Government placed before the National Assembly a plan for the construction of further 500 kilometres of railway, the completion of which will span a period of 20 years, and involve a capital outlay of 500 million kroner. This gigantic plan is based, of course, to some extent on more or less rough estimates both as to the time and the money required, but when complete will have connected all the main parts of the country with the general railway system.

The money market is well supplied, and a reduction of the discount rate, which since May 18th is 5½ per cent., is recommended in some quarters. Last week the circulation of bank-notes was reduced by one million kroner, and had come down to 364 millions, causing a corresponding rise in the reserve to 58,200,000 kroner. The Government has issued a loan of 100 millions, which was entirely subscribed by some of the leading banks; the terms, so far, have not been disclosed.

The *Aftenposten* publishes interesting statistics of the

clearings of the banks in Christiania for a number of years:—

	Kr.		Kr.
1913	488,644,600	1918	8,460,900,000
1914	529,189,600	1919	6,849,670,000
1915	863,086,400	1920	7,828,205,000
1916	2,579,679,900	1921	6,442,352,000
1917	5,892,560,000		

The enormous leap from 1915 to 1916 probably may be ascribed to three causes: (1) The large increase in the turnover; (2) the higher prices of commodities; (3) the increased use of cheques. A marked decrease is noticed for 1920 and 1921; the decrease is likely to continue during 1922, because the same influences—a decreased turnover, and lower prices—are still at work. It is very likely that the decrease would have been still more marked if the use of cheques had not become constantly more extensive.

After a long season of chilly and dry weather, jeopardising all kinds of vegetation, very refreshing rains have fallen over Southern Norway during the last couple of days. Though all crops are extremely late, with warm weather things may still brighten up, as only here and there any real damage has yet been done by the drought. The *hausse* on the exchange bourse is still going on. All kinds of foreign values, save the Reichsmark, are appreciating—it must almost be said by leaps and bounds. From 23 kroner for a pound sterling on April 28th, the rate in less than two months has jumped to 27.30 kroner to-day; and the other exchanges have more or less followed suit.

Letters to the Editor.

INTER-ALLIED DEBT CANCELLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You say that you think the debt of Great Britain to the United States of America can and should be paid. As a matter of practical politics, you are probably right. But surely the reason that you give is incorrect. You say, "America may reasonably ask for some repayment of advances which cover not merely munitions, supplies, and war stores, but food for our civil population." Am I not right in believing that we have already paid America in full for all supplies and food furnished to us, and that our outstanding debt to America is wholly due to the fact that we backed the bills of France, Italy, and the other Allies for munitions and food supplied not to us, but to them?

Practically the two things may be the same. If in private life one backs a bill to help a poor friend, one has to face the consequences. But from the ethical, the "good form," point of view, if the endorser is also a poor man, if his endorsement was given to enable the debtor to perform a service largely for the benefit of the creditor, and if the creditor is rich, one is entitled to shrug one's shoulders as one faces the music.—I am, Sir, yours, &c.,
London, July 1st, 1922. W. M. A.

[It is certainly not the case that we have already paid America in full for supplies and food furnished to us. It is true that in the last years of the war we lent to France and other Allies as much as America lent to us; but our loan to France was in respect, almost entirely, of British goods, such as cloth, steel, and benzol—representative commodities in three main trade groups—which we should have had to supply to France whether America had been in the war or not. On the other hand, our American debt during those years was incurred for food, copper, and munition materials supplied to us, which we could not have replaced from any other source. It is true that we lent approximately as much to France, Italy, &c., in these two years as America lent to us, but it is certainly not true to assume that if we had not done this for France we should not have incurred a debt to America. In the first two or three months of America's participation the British Treasury actually borrowed dollars for buying wheat, &c., in America, which was shipped to France, and thus backed France's bill in the sense implied by our correspondent. But these transactions were soon stopped, and represent only a tiny fraction of the money which Great Britain borrowed from America after April, 1917.—Ed. *Economist*.]

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

ONLY a few authors have, as yet, realised or achieved a sufficient control over their publishers to make their realisation effective, the advantage, from the reviewing point of view, that will accrue to any book of moderate distinction appearing in late June, July, or August. Then it may easily appear, at all events to the reviewer, "Fair as a star, when only one, Is shining in the sky." But trade practice seems to be too strong; and even economic books dwindle and fall away in the summer. In June, indeed, periodicals actually claim first mention.

There is the *Economic Journal*, the monthly organ of the Royal Economic Society, with articles by Sir Wm. Acworth (on the independence of communication costs, urging the Government "so to shape its policy as to encourage that means of communication which is, on the whole, the most economical to the community at large"); by J. H. Pearson, on the relations between internal and external values, as exemplified in a study of the fantastic movements of the Polish mark; a survey of American views on Europe, by Professor D. H. Magregor; and an account of the Italian Bank Crisis, by Signor Sraffa. All of these are substantial contributions, and worth reading. In the French monthly, which, with illuminating differences, corresponds more nearly than any other to the *Economic Journal*, the *Journal des Economistes*, for June, the editor, M. Yves Guyot, contributes a characteristic article on the Bankers' Loan project. The *Bankers' Magazine* (published in this country by Effingham Wilson) has an entertaining account of "Women Savers." A much more advanced technical standard is represented by the *Scottish Bankers' Magazine* (Blackwood). *Economica*, issued by the London School of Economics, keeps up its high standard.

When one turns from periodicals to books, one has to note again that the category (b), *Advanced and Technical*, is practically bare. On the other hand, under (a) *Elementary*, there is a little book that, though slight in bulk and modest in pretensions, can be confidently recommended. This is Mr F. W. Pethick Lawrence's "Unemployment," in the excellent series of small manuals, published, at 2s 6d each, by Mr Humphrey Milford, under the general rubric of "The World To-day." Mr Lawrence's book, especially if read concurrently with Mr Lavington's "Trade Cycle" (referred to last month), puts the student in a position to understand how what is called "over-production" can exist in a world ridden by poverty, and something of the lines on which the problem of cyclical movements may be grappled with. His writing is admirable in its candour and clearness. To Professor Charles Gide's "First Principles of Political Economy" (translated by E. E. Row, Harrap, 2s), the same unqualified praise cannot be given. It is charmingly written, but its apparent simplicity is secured by some rather hazardous skating over thin ice.

(c) Descriptive and Works of Reference.

There are, this month, two or three works of a character mainly descriptive, of very great interest. First among them is "Economic Development in Denmark Before and During the World War," by Professor Harold Westergaard (Clarendon Press, Oxford, 4s 6d). From this standpoint of social and economic development, Denmark is one of the most interesting countries in Europe; perhaps the only one that can make the much-tried believer in democracy feel really sanguine. Dr Westergaard's is a sober and scholarly survey. M. Jean Decoudou's "La Bourse de Londres (Sagot et Cie., Paris, 10 francs) is, of course, intended for French readers; for the English operation its lines are too broad and general; at all events, for those for whom the new editions of such standard works of reference as Sir Francis Gore-Browne's "Handbook on the Formation, Management, and Winding-Up of Joint Stock Companies (Jordan and Sons, London, 15s), or Mr H. C. Emery's "Company Management (Effingham Wilson,

12s), are intended. A book of more general readability is the third volume in the useful series of "Staple Trades and Industries," which Messrs Constable are publishing (10s 6d net each). This, by Mr A. S. Moore, is devoted to linen. Interest of a rather different kind will be roused by Mr Clarence Bonnell's "Employers' Associations in the United States (Macmillan and Co., 18s net). This, in the main, an account of such employers' combinations as exist in the States. Especially instructive are the sidelights cast on the "Secret Service System," without which Mr Briggs, the President of the National Founders' Association, said he "would hardly know how to direct the work of this association. It seems to be an indispensable requisite to good results, and on the use of "special contract operatives" (e.g., by the National Metal Trades' Association), who "will report on the loyalty of the workmen, and even of foremen."

(d) Political and Propagandist.

Under this head there are no entries worth making.

THE WOOL POSITION.*

WE turned eagerly to the Review of Wool Statistics compiled by Mr W. H. Dean, of Messrs Dawson and Co., in the hope of finding that the elusive problem of measuring the world's wool production had been solved. But the author has avoided the many pitfalls awaiting anyone who makes such an attempt by treating separately individual statistics of the principal countries which exert influence in the wool and woollen textile trades, and international comparisons have not been attempted owing to the wide differences of definitions, classifications, and so on. The statistics themselves will principally interest those closely connected with the trades concerned, but some of the conclusions drawn are of considerable general interest. The wool textile industry is the fourth most important in the country, and exports from 30 to 50 per cent. of its production, and is consequently particularly susceptible to any falling off in exports. After the boom in 1919-20, heavy cancellation of contracts overwhelmed the trade in acute financial stringency, and quickly caused a collapse of the covering movements. Every section suffered from extreme over-production at high prices, and huge stocks of goods increased the general financial and industrial depression. The year 1921 was one of painful readjustments, and while credit and confidence are not yet fully restored, the situation is more hopeful now that prices are more stable. The raw material position is gradually readjusting itself, the surplus is diminishing, and sheep figures indicate that production also is tending towards equilibrium of supply and demand. Moreover, Yorkshire, in spite of Continental competitive advantages is securing an increasing share of business, more particularly in semi-manufactured goods. The chief markets for finished goods are in a better position to buy, and are now taking slightly larger quantities. The European outlets are very little more depressed than the Colonies, the raw material-producing countries generally are recovering from their own financial difficulties, and are consequently trying to take their proper place in the circle of production and consumption. In fact, the worst phase of depression has been left behind. For those with time to study them, a number of interesting charts are provided.

* "Statistical Review of the Wool and Wool Textile Trades, 1912-1921." (London) H. Dawson and Co. 10s 6d.

A NEW REVIEW.*

"THE SLAVONIC REVIEW," "a survey of the Slavonic peoples, their history, economics, philology, and literature," makes its bow to the public this month. It will appear thrice yearly, and has three editors in Mr Bernard Pares, Mr R. W. Seton-Watson, and Mr Harold Williams. A glance at the first number shows that this new addition to the ranks of serious periodicals will be of interest not merely to scholars and research students, but also to all who are concerned with European politics and economics. Mr Thomas G. Masaryk, President of Czechoslovak Republic, contributes the first article, "The

* "The Slavonic Review." Published by the School of Slavonic Studies in the University of London, King's College. (London) Eyre and Spottiswoode, Limited. 5s net.

Position of the Slavs in the New Europe," in the course of which he incidentally draws attention to the need for a review such as this by reminding us that the Slavs form more than one-third of the population of Europe. "If united," he points out, "they would be the largest nation and State." Interspersed with articles on literature, history, and scholarship are surveys by competent authorities of such questions as "The Russian Co-operative Movement," "The Agrarian Problem in Hungary," and "Land Reform in Czechoslovakia." If the standard of the first number is kept up—as we may assuredly expect in view of its distinguished auspices—students of economics and politics will have to add "The Slavonic Review" to their regular reading list.

STOCK EXCHANGE NEWS.

TICKET.	SETTLING DAYS.	ACCOUNT.
July 12.		July 13.

THE exuberance shown by Stock Exchange markets during the last week of the first half of the year has subsided to a great extent, in consequence of the fresh demoralisation in the Continental exchanges, and, to a minor degree, by reason of the happenings in Ireland. Early in the week the Stock Exchange abandoned most of its hopes that there would be a fall in the Bank rate on Thursday, and there would be a noticeable shrinkage in the demand for this led to noticeable shrinkage in the demand for gilt-edged securities. The drop in the value of the franc affected foreign bonds, oil shares, Kafirs, and it also influenced, indirectly, a good many other markets round the Stock Exchange. Clients are inclined to hold back from entering upon fresh engagements, and professionals, quick to notice the tendency, started to take what profits remained to them in the departments where speculation had raised a timid head. Bombay new Sixes were rapidly subscribed on Thursday, the subscription lists closing before the announcement that the Bank rate would remain at 3½ per cent.

The War Loan holds its price steadily at a trifle over par,

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

and although Funding Loan, Victory Bonds, and others of this class did not maintain their best prices, the disposition of the market is firm, without there being much business to back it. India Government loans are distinctly better. The Government-guaranteed stocks of the London Electric and the City and South London Railways came into favour, the prices rising to 1 premium. Home railway debenture and preference stocks are again better, but in Colonials and other such securities there is little change to record.

The feature in the foreign market is, as already mentioned, the heaviness of French stocks, this extending to the French railway issues, and bringing about a certain weakness in a few other foreign issues. Exceptional strength has been shown by Italian Maremmiana bonds, the price jumping 8 points on the official prohibition of what amounts to the export of bonds from Italy for sale in this market. German Threes, after touching 2 when the mark fell to 2,000, recovered with a temporary rally in the exchange. Peruvians have been heavy, in sympathy with the French malaise. Brazilians gave way after a mild display of strength.

Acute weakness seized the Home Railway list for a brief period, but evidently the market was ringed with buyers on the look-out for bargain stock, for prompt recovery ensued from the worst. There is not, however, a great deal of resiliency in the market, and prices tend to ease off in the absence of general public support. Metropolitan and Districts proved superior to the conditions of the market as a whole, but the Scottish groups moved with the rest. Argentine Rails stand out as the principal feature of strength this week, prices going ahead substantially on expectations of increased dividends in October, added to the pleasant outlook unfolded by permission to rearrange freight rates. Towards the end of the week prices gave way from the top, and the same conditions have applied to several of the other foreign railway stocks, Brazilian, Cuban, &c.

Rubber shares have fallen into a state of stagnation again, and there is not much doing in the oil market. Tuesday's meeting of the Shell Company produced no fresh illumination, although the chairman's speech was certainly interesting. It had no effect upon the price of the shares, and with business quiet, the oil list has been inclined to droop. Textiles are firm, banking shares generally better, the insurance market uninteresting, save for the continued heaviness of General Accidents. The unexpected dividend of 1s on Vickers' shares made the price better, and had a strengthening effect upon some of the other iron and steel descriptions. Trust companies' stocks are extremely difficult to obtain. Gas stocks are scarcely so firm as they were, and the shipping market shows no change of consequence. Marconis fell back on further apprehensions respecting the dividend. Cable stocks continued quiescent. Watney deferred gained 7½ points, and other brewery stocks are hard. The tobacco favourites are lower.

The boomlet in Kaffir shares gave place early in the week to a fairly general shake-out, in the course of which the leading prices came down sharply from the best. As usually happens this had the effect of checking fresh purchases, and quietude prevails throughout the market, Rhodesians and Diamonds also being very passive. A good cable from the Santa Gertrudi helped to revive a little interest in Mexicans. Indian mining shares are easier, tin shares are scarcely mentioned at all, an other mining descriptions attract so little notice that broker scarcely bother to look at the prices at the end of each uneventful day. A Stock Exchange Nomination changed hands this week at £25, and House shares, £25 paid, stand about 96.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital, £	Cash Subscription, £	First Payment, £	Further Liability, £
ISSUES OF THE WEEK—				
Amount previously recorded		448,774,277

1915	657,001,376	1914	612,522,633	

Government of India Rupee Loan, 1922.—We are officially informed that subscriptions in India on the opening day, July 3rd, amounted to about Rs. 11 crores. The loan is issued in the form of 6 per cent. five and ten-year bonds at par, free of Indian income-tax, and the subscription lists in India and at the London office of the Imperial Bank of India (5 Whitlington Avenue, E.C.3) are open up to August 14th for cash subscriptions, and up to September 26th for conversion of Indian War Bonds, 1922.

Port of Bombay Six per Cent. Sterling Loan of 1922.—This is an issue by the trustees of the Port of Bombay of £1,600,000 in 6 per cent. sterling debentures at par. The loan will be repayable at par in 30 years by a sinking fund, to be accumulated by yearly contributions from the trustees' revenues and investment in public securities. The capital debt of the Board is £12,226,200, against which there are assets, in the shape of land, buildings, docks, &c., standing in the accounts at £13,045,200, which is the cost price, and does not allow for the "immense increase in the value of land in Bombay" since 1879. The sinking funds accumulated at present amount to £1,494,400, and special reserve funds against contingencies to £400,000 over and above a revenue reserve fund of £363,700, and £774,100 spent by the Board on capital account out of revenue. The financial operations of the Board are subject to Government sanction, and the accounts are audited half-yearly by Government auditors. The yield of 6 per cent. on a relatively long-dated security should appeal to investors who like to include a high-class Indian security in their list. The issue was quickly over-subscribed.

Platt Brothers and Co.—Capital £3,710,160, in 1,236,720 4½ per cent. cumulative preference, 618,360 7 per cent. cumulative preference, and 1,855,080 ordinary shares, all of £1 each. All the 4½ per cent. preference and ordinary shares have been issued, and there is £1,030,600 in 3½ per cent. debentures outstanding. The present is an offer for sale by B.S.T., Limited, of 534,000 7 per cent. preference shares at par, and 1,602,000 ordinary shares at 43s. The chairman in a letter states that a very large proportion of the ordinary shares have hitherto been held by trustees, and the principal objects of the purchase and resale by B.S.T., Limited, are (1) to enable trustees to realise their holdings, and (2) to secure the widest possible distribution of the shares. The company is said to be the largest maker of textile machinery in the world, the business having been founded in 1821, and it is stated that of 18½ million spindles in Oldham

and district, mills which contain exclusively Platt's machinery number 11½ million spindles, while mills filled wholly by other makers number only 2½ million. Approximately, 80 per cent. of the cotton spinning machinery in Japan has been made at the company's works. Net assets are stated at £5,051,800, the property standing at £2,558,900, and goodwill at £1,560,000. An independent valuation on June 12th last places the property, exclusive of goodwill, at £4,097,300, an excess over the book value, which more than covers goodwill. Profits since 1909 are clearly set out. In 1920-22 a dividend of 22½ per cent. was paid on the ordinary shares, after setting aside £550,000 to reserve. In June last £618,360 of the reserve fund, leaving £762,000, was capitalised, and a bonus of one 7 per cent. preference share given for every three ordinary shares. The B.S.T., Limited, is paying 45s per share for the ordinary shares now offered, and receives the 534,000 preference shares as bonus. It will, therefore, pay £3,604,500, and from the sale will receive a gross amount of £3,444,300 for the ordinary and £534,000 for the preference shares, or £3,978,300, a profit of £373,800, out of which it will pay underwriting commission of 3 per cent. and overriding commission of ½ per cent., and all other expenses of the issue. In view of the excellent record of the company, both classes of shares may be classed as attractive industrial issues.

Tata Iron and Steel Company, Limited.—Authorised share capital, Rs. 105,212,500 (equivalent at Rs. 15 to £1 to £7,014,166), all of which is issued and called up. Messrs Linton Clarke and Co. offer for sale, through Lloyds Bank, £2,000,000 7 per cent. sterling first mortgage debenture stock at 98. The company is described as "the only company manufacturing steel in India." Existing debentures will be converted into this issue or paid off at par. The proceeds of the issue are required to carry out extensions. The stock is part of an authorised issue of £4,000,000, and will be secured by a trust deed, creating a first specific mortgage, "according to the laws of India, upon the present and future lands, buildings, and fixed plant and machinery of the company," and a first floating charge on other assets. The stock is repayable at 102½ in 1957, if not previously redeemed by purchase or drawing. A sinking fund is to be established. Surplus assets at February 28th last are given as £11,042,372, but it should be noticed that the property and plant item of over £10½ millions is entered "at cost, without providing for depreciation." Interest on the £4,000,000 debenture stock, when all issued, will absorb £280,000 per annum. Profits in 1920-21 were £840,146, and in the previous year £838,099, but in 1914-15 were as low as £186,900. In each case profits are given "before providing for debenture interest, depreciation, and taxation." A subsequent table, however, sets out these items, and shows that depreciation allowances have been on a large scale. The attractive yield and the high reputation of the company will evoke response from those who are not too pessimistic about the Indian outlook.

Charles Baker and Co., Limited.—Authorised share capital, £220,000, of which the whole has been issued, and £215,500 has been paid up. There is also outstanding £86,530 of 4 per cent. first mortgage debenture stock, redeemable at £110 per £100 on November 1, 1922. The present issue is of £125,000 6½ per cent. mortgage debenture stock at 95. This will form part of an authorised issue of £150,000, and will be secured by a trust deed, constituting a first mortgage (after the redemption of the £86,530 existing 4 per cent. debenture stock) on freehold and leasehold properties, and a floating charge on other assets. The new stock is redeemable at par on November 1, 1947, but the company reserves the right to redeem whole or part at 102 on any interest date after May 1, 1933, on giving six months' notice. The company was formed in 1889, and carries on business as wholesale and retail outfitters, clothiers, hosiers, &c. The assets subject to the specific mortgage are independently valued at £118,300, while the additional net assets subject to a floating charge figure in the latest balance-sheet at £241,073. The security, therefore, is adequate, and the list of profits in recent years (though we should have preferred to see pre-war profits also given) suggests that the interest on the debentures is very well covered. The yield at the issue price is £6 16s 10d per cent., without allowing for profits on redemption, and the offer is attractive in its class. Holders of the existing 4 per cent. debentures are offered the right of exchange into the new stock at the rate of £100 of the old stock for £110 of the new, and a payment of £5 10s in cash. This offer should prove generous enough to induce holders to convert, except where the repayment of their capital in November is desired for special reasons.

Sena Sugar Estates, Limited.—Share capital, authorised and issued, £1,200,000. Loan capital consists of £500,000 7 per cent. first mortgage debentures (the present offer), £70,400 6½ per cent. first mortgage debentures (to be repaid out of the proceeds of the present offer), and £151,370 7 per cent. second mortgage debentures, redeemable 1920-1950. The Law Debenture Corporation offer for sale £500,000 7 per cent. first mortgage debentures at 97½. The stock will be secured by a trust

BRITISH EMPIRE STEEL CORPORATION, LTD.

Report and Statement 16th April to 31st December, 1921.

To THE SHAREHOLDERS,

The Balance Sheet now presented is the first to be issued to shareholders since the Corporation assumed definite form, and will form a basis for comparison with the Balance Sheets to be issued from time to time in the future.

With respect to Cost of Properties it may be explained that previous to the 16th April, 1921, when your Company's stocks were issued, the amount which formerly was carried in the current account of the Nova Scotia Steel & Coal Company, Limited, in respect of payments on account of the purchase of the stock of the Acadia Coal Company, was transferred to Cost of Properties. Some other smaller items were treated in the same way with the effect of reducing current investments and increasing capital assets.

No new expenditures of any kind were undertaken, and those made were confined to the completion and adjustment of items which originated in a previous period. These relate chiefly to the new battery of 60 Coke Ovens for Dominion Iron & Steel Company, Limited, and to such general extensions as are inseparable from the operation of properties of the extent and importance of those in which your Company is interested.

Your Directors after careful consideration decided that it would be advisable to adjust the cost of some important items of property and equipment installed by Constituent Companies during the war period, when cost of construction was abnormal. To effect this the sum of \$3,339,841.65 has been deducted from Cost of Properties, and a corresponding reduction has been made in the amount of the Consolidated Surplus.

Your Directors are glad to report that Bank Loans have been reduced \$2,542,197.00 and other Current Liabilities \$5,119,948, a total reduction of \$7,662,145.

The excess of Current and Working Assets over Current Liabilities at 31st December, 1921, was \$14,364,860.18.

During the year 1921 the Funded and Mortgage Debts of the Companies were reduced \$404,965.34 through the operation of the various Sinking Funds.

The 6 per cent. Mortgage Debentures of the Nova Scotia Steel & Coal Company, Limited, were increased by the issue of \$478,000 in connection with the acquisition of the property and stock of the Acadia Coal Company, which, as already noted, was concluded previous to the date of the consolidation.

The amount at credit of accounts for Renewals, Taxes and Contingencies is \$5,274,208.73. Included in this is \$2,500,000.00, part of amount received by Dominion Iron & Steel Company, Limited, as part payment of its claim for damage due to the cancellation of the contract for the supply of Ship Plates to the Government of Canada.

Business conditions during the period covered by the statements submitted herewith have been for the most part unfavourable. During the months of May to October a considerable tonnage of coal was disposed of in the St. Lawrence market, which for some years had been practically closed to coal from Nova Scotia. During the same months the steel works at Sydney and New Glasgow were moderately employed.

In the last quarter of the year there was a marked decline in the operations of all the Companies.

For the Board of Directors, R. M. WOLVIN, President.

Montreal, P. Q., 3rd May, 1922.

Consolidated Balance Sheet as at December 31, 1921.

ASSETS.		LIABILITIES.	
Cost of Properties:		Capital Stock of the British Empire Steel Corporation Limited:	
Representing the Ore and Coal Properties, Plant, Buildings, Machinery and Equipment, etc., of the Constituent Companies, the aggregate value of which is supported by independent Appraisals less Reserves for Depreciation and Exhaustion of Minerals and after deduction of the Special Appropriation of \$3,339,841.65 from Surplus Account as at December 31, 1921)		8 per cent. Cumulative First Preference Stock Series "A"	
Investment in Capital Stocks of, and advances to, other Companies		7 per cent. Cumulative First Preference Stock Series "B"	
Cash in hands of Trustees for Bondholders		7 per cent. Cumulative Second Preference Stock	
Bonds purchased for Sinking Funds		7 per cent. Non-Cumulative Preference Stock	
Current Assets:		Common Stock	
Inventories of Finished Products, Goods in Process and Materials and Supplies, less Reserves		Deduct—Held by Constituent Companies:	
Trade Accounts and Bills Receivable, less Reserves		7 per cent. Cumulative Second Preference Stock	
Other Accounts Receivable		Common Stock	
Investment in War Bonds, etc.		Note: Out of the total authorized issue of 7 per cent. Cumulative First Preference Stock Series "B," \$13,116,080.00 is reserved for exchange of the outstanding Preference Stocks of Constituent Companies.	
Cash on hand and in Bank, and Call Loans		Preference Stocks of Constituent Companies outstanding:	
Deferred Charges to Operation:		Dominion Steel Corporation Limited	
Development Expenditures, etc.		Dominion Iron & Steel Company Limited	
Insurance and Other Expenses paid in advance		Dominion Coal Company Limited	
		Nova Scotia Steel & Coal Company Limited	
		Eastern Car Company Limited	
		Capital Stock of the Acadia Coal Company Limited Outstanding:	
		Ordinary Stock	
		Capital Stock Reserve:	
		Par Value of the 7 per cent. Cumulative First Preference Stock Series "B" reserved for exchange of the outstanding Preference Stocks of Constituent Companies	
		Less—Par Value of the Preference Stocks of these Companies outstanding	
		Funded and Mortgage Debt, represented by Bonds and Debenture Stock of Constituent Companies	
		Deferred payments on Properties

Balance at December 31, 1921	977,664.47
	\$755,926.53

They were, he continued, making no splash, they were going along quietly, conducting their business to the best of their ability on a prudent and conservative basis. It would continue to be their endeavour to avoid any conflict with old-established institutions, to take no undue risks, to build up slowly on sound lines, to accumulate out of profits a good reserve, and to distribute a fair dividend. Three months of the current year had expired with satisfactory results, and if, as he hoped, the trade of the Empire improved and labour difficulties were surmounted, he was confident the corporation would, with care, continue along the road of prosperity. He believed the P. and O. Banking Corporation had filled a gap which would have been filled by someone else if it had not come in, and, although he did not ask them to

expect an added half per cent. in next year's dividend, nothing would be wanting on their part to enable them to pay it, provided always they could add to their reserve, which, they would agree, was sound policy for the board to adopt.

The report and accounts were adopted. A dividend was declared at the rate of 5½ per cent. per annum, less tax, and the retiring directors, Sir Frederick Eley, Bt., Sir Montagu C. Turner, Mr W. O. Grazebrook, and the Hon. Alexander Shaw, M.P., were re-elected. The meeting closed with a unanimous vote of thanks to the chairman, proposed by Sir Michael O'Dwyer, seconded by Sir M. M. Blownaggee.

The Chairman briefly responded.

BRITISH EMPIRE TRUST COMPANY, LIMITED. "VERY STRONG AND SATISFACTORY POSITION."

The annual general meeting of the British Empire Trust Company, Limited, was held on the 3rd instant at the Great Eastern Hotel, London. Mr J. Davidson (deputy chairman and managing director) presided.

He expressed regret that the chairman, Mr R. M. Horne-Payne, owing to ill-health, was not able to preside at the meeting, but he would read to the shareholders the address of their chairman. Proceeding, he said the directors were glad to meet the shareholders with a statement of affairs which showed a very strong and satisfactory position. From the point of view of income, the company's position was better to-day than at any previous time in its history because their two main sources of income—viz., trusteeships, registrarships, and secretaryships, and interest and dividends on investments, had now reached higher figures than ever before. Their income from trusteeships, &c., amounted to £15,782, as compared with £14,481 last year, and interest and dividends on investments amounted to £68,889, compared with £65,693 last year. Their income account this year was further increased by £16,071, arising from the appreciation on balance of the company's investments, due not to any specific cause, but to the improvement which had taken place in security values generally. This brought the company's revenue up to the satisfactory total of £100,743. After providing for income-tax, corporation profits tax, general expenses and expenses of administration, including the exceptional expense of £3,416 incurred in removing to, and fitting up, new offices, and after bringing in the balance of undivided profits from last year, there remains a balance of profits of £90,096 3s 7d. The payment of the dividend on the 5 per cent. cumulative preference shares requires £12,500, leaving available for further distribution £77,596 3s 7d. After deducting from this figure the dividends now recommended by the directors—namely, 8 per cent. on the employees profit participating shares, 5 per cent. on the preferred ordinary shares, and 7 per cent. on the deferred ordinary shares—there remained a balance of undivided profits of £50,453 1s 2d, which the directors recommend should be carried forward to the current year.

BOARD'S SOUND POLICY.

The directors felt that it was of great importance to have a very substantial surplus, not only for the protection against all possible emergencies of the company's capital—the conserving of which was essential to the company's credit, and, therefore, vital from the point of view of obtaining and carrying through future business—but also from the point of view of rendering secure to the shareholders the continuity of what he might perhaps call the normal dividends of 5 per cent. on the preferred ordinary shares, and 7 per cent. on the deferred ordinary shares. The directors had also in mind the difficulty at present being experienced of employing the company's liquid resources safely and remuneratively, and that financial and commercial conditions generally throughout the world being in an unstable condition, circumstances might easily arise to cause a general set-back in security values.

BRITISH COLUMBIA ELECTRIC.

At last year's annual meeting he stated that the British Columbia Electric Railway had practically completed negotiations with the City of Vancouver for a revised franchise on terms which would have enabled the company to rely with reasonable confidence on such income as would enable it to maintain future dividends at rates which shareholders of such enterprises had the right to expect, and thus lead to the re-establishment of the company's credit. This agreement, however, unfortunately proved unacceptable to the people of Vancouver, mainly, he was convinced, because it was not understood. As the authority to charge a 6-cent fare in the City of Vancouver continued only until July 1, 1922, the company decided to proceed with its application to the Dominion Government for the company's undertakings to be placed under the control of the Dominion Railway Commission, who would then have had power to regulate the company's fares and rates. The application was heard by the Dominion House of Commons in May last, and was supported by a petition signed by many of our great bankers, financial houses, and brokers interested in Canadian

investments. The application, which was opposed by the Government of the Province of British Columbia and the local municipalities on the ground that its effect would be to remove the company's undertakings, which lay practically entirely within the Province of British Columbia, from the control of the Provincial Government, was refused; but an agreement had been come to with the Municipality of Vancouver under which the company's right to charge a 6-cent fare had been extended to December 15, 1922. Agreements had also been come to with the surrounding municipalities giving the company the right to continue existing charges until that date. In the meantime further negotiations with these municipalities were taking place with a view to such revision of the franchises as would give the company authority to make adequate charges. In the event of the failure of the municipalities and the company to come to an agreement, the Government of the Province of British Columbia proposed to establish some local tribunal or authority to institute an inquiry as to what fares the company should be allowed to charge in order to earn a reasonable return upon the invested capital. It would, therefore, appear that at last the company might look forward to a definite settlement either by mutual agreement with the authorities concerned or by an appeal to an independent authority.

MONTEREY RAILWAY, LIGHT AND POWER COMPANY.

The scheme of reorganisation of the Monterey Railway, Light and Power Company submitted to the debenture holders in July, 1921, was duly approved, and has been carried through. The then existing 5 per cent. first mortgage debenture stock and arrears of interest on same are now represented by three new debenture stocks called 5 per cent. "A" first mortgage stock, 5 per cent. "B" cumulative income charge debenture stock, and "C" sinking fund debenture stock.

The carrying through of the reorganisation has enabled the company to recommence interest payments; interest on the 5 per cent. "A" first mortgage debenture stock was paid on August 1, 1921, and February 1, 1922. The interest on the 5 per cent. "B" debenture stock is payable only as and to the extent to which the company's revenues permit of such payments, and the revenue has not yet been sufficient to provide any interest on this debenture. The "C" sinking fund stock does not bear interest.

It is hopeful to note that the Republic of Mexico has signed a provisional agreement with the International Bankers' Committee covering her external debt. It is to be hoped that the State of Nuevo Leon will follow suit and come to some arrangement with the company for the payment of the money due under the guarantee.

Having mentioned that his prediction of last year in regard to the Canadian Western Lumber Company had been confirmed, he alluded to the Canadian Western Natural Gas Light, Heat and Power Company, mentioning that last year he referred to the treatment which it had received at the hands of the City of Calgary. He detailed the present position, mentioning that the City of Calgary was endeavouring by legal process to have it declared that the company had no right to sell gas in Calgary, excepting at the entirely unremunerative price of 35 cents per 1,000 feet. Whether successful or not, such action as that of the City of Calgary was absolutely destructive of all credit, and would be received with the strongest condemnation and most active resentment, and if holders, would severely reflect on the credit in London of every enterprise in Canada.

The report and accounts were unanimously adopted.

ANGLO-AMERICAN CORPORATION OF SOUTH AFRICA. CHAIRMAN'S REVIEW OF CORPORATION'S INVESTMENTS. POSITION OF DIAMOND INDUSTRY—LABOUR CONDITIONS.

The fifth ordinary general meeting of shareholders of the Anglo-American Corporation of South Africa was held at Johannesburg, on June 3rd, Mr F. R. Lynch, the deputy Chairman of the Corporation, presiding.

The deputy Chairman said: Your chairman, Sir Ernest Oppenheimer, left for Europe a few weeks ago on an urgent business visit, and requested me to express to you his keen regret that he would be unable to preside at this meeting to-day. Our Corporation's utmost importance to our affairs, especially in these critical times, that our chairman should keep in intimate touch with London and New York.

Before he left, Sir Ernest Oppenheimer prepared a review of the corporation's activities for the past year, and, with your permission, I will now present it to you.

"The annual general meetings of all the companies in which we are financially interested have been held during the past week or ten days, and, as in past years, a copy of the chairman's speech

in each case will be forwarded on request to shareholders in this corporation, in order that they may have the opportunity of keeping themselves fully posted as to the position of the various concerns. I propose, therefore, to refer briefly only to the more important affairs of each company, starting with the Consolidated Diamond Mines of South-West Africa, Limited.

"The Anglo-American Corporation remains by far the largest shareholder in the Consolidated Diamond Mines of South-West Africa. Our holding consists mainly of 8 per cent. debentures, which are convertible into shares at par at any time before they reach maturity in October, 1929. I do not think the excellence of this investment is fully appreciated, and I would therefore like to draw your attention to some of its prominent features. The debentures bear interest at 8 per cent. per annum, free of all Union taxation, and are redeemable at par in October, 1929, unless, of course, they have been converted into ordinary fully-paid shares before that date. Under the debenture trust deed the Diamond Company is required to set aside a portion of the profits each year so that a sufficient sum will be accumulated to redeem all the debentures when they fall due in 1929. If the debentures are converted into shares just before maturity, the trust fund will be released, and the company will have at its disposal from this source a sum in cash equivalent to 8s per share on its then total share capital.

DIAMOND COMPANY'S FINANCIAL POSITION.

"The depression in the diamond trade became accentuated as the year 1921 advanced. The policy of caution in the face of the crisis which the board of the Diamond Company evinced in passing the dividend at the end of 1920—although the company had sufficient funds in hand—was very wisely continued in 1921, first by curtailing production and finally by suspending mining operations altogether, in order to conserve the company's cash resources to the greatest possible extent.

"Thus the Diamond Company's expenditure, in addition to its debenture interest, was reduced to a small figure for running expenses, and its cash funds are sufficient to meet its commitments for a considerable period. But the directors, wishing to make the position of their company doubly secure by providing against the remote contingency that the acute depression in the diamond market would continue without improvement for so long as to exhaust all their funds, approached our corporation for temporary loan facilities if the necessity should arise. As sponsors of the Diamond Company and the holders of the majority of its debentures, and having in view the Diamond Company's substantial cash resources, which would be augmented if any diamonds were sold, we agreed to advance a sufficient sum, should the company's funds become exhausted, for the payment of its debenture interest to June 30, 1923, and its running expenses to the end of that year.

"I am pleased to say that sales of diamonds have already been effected, and I regard it as unlikely that the Diamond Company will require any assistance from us at all.

"The financial position and the arrangement of the affairs of the Diamond Company are such that it can face the present depression in the trade with patience and confidence—in other words, it can subscribe to and carry out, without misgiving, the policy of 'not forcing diamonds on an unwilling market.' This policy has helped the diamond trade over every crisis in the past, and it will be found just as efficacious now.

RAND SELECTION CORPORATION.

"The Rand Selection Corporation is principally interested in gold mining properties, although it also possesses valuable assets in townships, freehold property and plantations. The result of its operations for the past year was satisfactory, and dividends of 15 per cent. and 12½ per cent. were declared, amounting to £165,000.

BRAKPAN MINES, LIMITED.

"Our interest in this company is through the large shareholding of the Rand Selection Corporation, and owing to our ownership of the Schapenrust claims.

"The result of the year's operations was satisfactory. The tonnage crushed at 659,800 tons was 63,000 tons in excess of the 1920 figure, and costs were lower by 2s 5d per ton.

"The balance of revenue over expenditure for the year amounted to £494,545. This is £52,000 less than the previous year, but, as the gold premium received was £265,339, against £336,164, it is apparent that on the standard value of gold the profit for 1921 was higher than during 1920.

"In addition to the above amount the appropriation account was credited with the sum of £100,619, representing the proceeds of gold placed to reserve. This reserve was created in order to assist the company to meet heavy capital commitments in connection with the equipment of the lease area, and was therefore transferred to appropriation account. Over and above this amount represented by the gold reserve the directors decided to utilise a portion of the profit for capital expenditure.

"Dividends declared during the year totalled 30 per cent., absorbing £255,000.

"The amount received by our corporation from Brakpan Mines under the sale agreement of the Schapenrust claims was £5,395.

SPRINGS MINES.

"Although this mine is producing on a considerable scale, the output is still not commensurate with the area of the property. For this reason a vigorous and extended programme of development is being carried on, with a view to building up an ore reserve which will permit expansion of the company's milling operations to an extent more in accordance with the magnitude of its claim area. The nominal milling capacity was about 40,000 tons per month during the past year, while the extension of the reduction plant, which is now approaching completion, will increase its capacity to a nominal 50,000 tons per month. It has recently been decided to further increase the capacity of the plant to 60,000 tons per month.

"The profit earned was £397,803—some £40,000 less than in 1920—owing to the fact that the amount received by way of gold premium showed a reduction of £56,000.

"Two dividends were declared, each of 7½ per cent., the amount distributed being £197,585.

WEST SPRINGS.

"The work of opening up the West Springs property has proceeded satisfactorily, and the excellent progress made in shaft sinking has been maintained in the primary development headings. In March of last year the No. 1 shaft cut the reef at a depth of 3,890 feet. After the necessary work as regards station arrangements had been completed, the east haulage was extended to a connection with the haulage driven from Spring Mines, the connection being effected early in this year.

"The working agreement entered into with Springs Mines Limited, in September, 1918, has greatly facilitated the development of the West Springs property.

"Fortunately little damage was done to the property during the strike, and on the resumption of operations the mine was speedily de-watered, and development work is now in full swing.

"At the end of the year the company had about £100,000 still to be called on its partly-paid share capital, and, in addition, had cash and cash assets amounting to £120,000, making a total of £310,000.

TRANSVAAL COAL CORPORATION.

"At the last annual general meeting shareholders were informed of the coal interest acquired by the Corporation. Our holdings are situated in the Witbank-Middelburg area, which district is pre-eminent as a source of supply in the Transvaal owing to its favourable mining conditions and the great width and high calorific value of the coal to be won from selected areas.

CORPORATION'S FINANCIAL POSITION.

"The year 1921 witnessed very severe financial and commercial depression the world over, and consequently it was a period of great uncertainty. Your board, therefore, thought it prudent to pursue a cautious policy, and no new business was entered into. That accounts for the absence in the 1921 accounts of revenue under headings which figured in previous accounts.

"If you will refer to the profit and loss account attached to the annual report, you will observe that our revenue for the year amounted to £258,600, which simply represents dividends received on various shareholdings, interest on debentures, and interest earned on cash balances. This revenue must be considered very satisfactory when it is remembered that we have considerable sums invested in companies which have not yet reached the producing stage; that Brakpan and Springs are opening up new lease areas, and have not yet reached their full capacity; and further, that in consequence of the depression in the diamond market our large shareholding in the Diamond Company, apart from debentures, was not dividend-earning during the period under review. We have every reason, therefore, to look for considerable increase of revenue in the future.

"The expenditure was kept at the lowest possible limit in Johannesburg, London, and New York, and, including directors' fees, amounted only to £1,381, after deducting the amounts received in fees. I must point out that remuneration to the permanent directors, which is only payable when dividends are declared, amounted to £5,989, and is provided for in the appropriation account.

"The payment of the dividend absorbed £159,701. The only other item in the appropriation account calling for comment is the £65,000 written off investments. This was done in pursuance of the policy of writing down investments to the market prices as at December 31st in the case of quoted securities and to conservative figures in the case of unquoted securities. Our unappropriated balance is £177,953.

"A few remarks on the balance-sheet will conclude my financial review. Our cash assets were 'sundry debtors and debit balances,'

£570,655, earning interest, plus a small amount of £511 earning 6 interest at the bank, which makes a total of £571,166. Our cash liabilities on the other side of the balance-sheet were 'sundry bareholders,' £232, and 'sundry creditors and credit balances,' £44,380, which makes a total of £444,612, showing a surplus of £126,554.

"Of our cash assets, nearly £500,000 was money either then accrued as dividends or debenture interest, or was at immediate call, while of the £444,380 due by us under the heading 'sundry creditors and credit balances,' the sum of £250,000 represented loans on fixed deposit, and the balance was held at call. Our investments amounted to £3,245,000, and if we add to this the £126,000 by which our cash assets exceed our cash liabilities, we arrive at a grand total of assets amounting to £3,371,000, while our share capital remains unchanged at £3,194,028.

SOUTH AFRICAN LABOUR SITUATION.

I think the recent industrial upheaval through which the industry has passed calls for some comment from me.

"The labour movement started from 1914 with the reasonable objects of improving the conditions of labour, raising the standard of living of white workmen, and securing increased wages to meet the rising cost of living and the currency depreciation which resulted from the war. The trade union movement did not stop with the realisation of its primary objects. It advanced further and developed into a determined effort to capture, for its advantage, the management and control of private enterprises. This movement, aggravated by economic circumstances—such as the diminution of the gold premium, which meant in all cases very much reduced profits and in many cases actual losses—made it quite evident that sooner or later the employers would be forced to assert their undoubted right to manage their own businesses and thus restore efficiency and economy. A struggle which would settle once and for all whether trade unionism should manage the mines or whether that function should be restored to its rightful repository had to be both prolonged and bitter.

"Early in the war organised labour had entrusted their cause to a body called the 'Industrial Federation,' which, after several refusals, obtained recognition from the Chamber of Mines. As long as the Federation pursued the legitimate aims of labour they met with great success. But in the hour of trial the Federation was found wanting. They could not prevent their organisation from falling into the hands of unauthorised and unscrupulous men of extreme views, who used their usurped power to the danger and detriment of the community, and even of the State itself.

"It is not surprising that the Chamber found it impossible any longer to recognise the Federation, which had proved impotent. The mining industry made it perfectly clear at the same time that his decision was not aimed at trade unionism proper, but that it was willing, and that it was its intention, to treat in future with such unions as represented the men employed in the industry itself. The non-recognition and decline of the Federation must also make a distinct difference to the powers vested in the Chamber of Mines by its individual members. The managers have had restored to them the powers which they held before the Federation became prominent, and I feel confident that only good can come of the alteration. I look forward now to efficient and economical exploitation of the mining industry, or, in other words, a new era in gold mining in South Africa."

The report and accounts were unanimously adopted.

BARCELONA TRACTION, LIGHT AND POWER COMPANY, LIMITED.

IMPROVING CONDITIONS IN SPAIN.

BURDEN OF INCREASING TAXATION IN SPAIN.

The annual general meeting of the shareholders of the Barcelona Traction, Light and Power Company, Limited, was held at the offices of the company in Toronto, Canada, on Tuesday, July 4, 1922.

The President of the company, Mr E. R. Peacock, took the chair, and in moving the adoption of the accounts of the year 1921, supplemented the annual report by a concise survey of the present financial position of the company, and the business of the operating companies in Spain. He pointed out that in Spain, as elsewhere, social and financial conditions had been unsettled for some time past, cost of living had been high, and business more or less stagnant. In the past few months, however, there had been a notable revival in the textile trade throughout the area in which the companies were operating, and this improvement was reflected in the earnings of the controlled companies in Spain, which for the first five months of the current year were as follows:—

	Pesetas.
Gross earnings	18,897,597
Operating expenses	7,298,660
Net earnings	11,598,938

NEW CONSTRUCTION WORK.

With reference to the new construction work, he pointed out that the work on hand was small as compared with that of previous years, and was mainly in connection with the extension of the distribution system, the chief item being the construction of a large sub-station in the busy factory district, and he added that the funds required for this work had already been provided.

Referring to the Electric Railway (F. C. de Cataluna), he mentioned that it was working satisfactorily, and that the extension to Sabadell was opened for traffic on June 1st last. The operation of this division was already increasing the earnings substantially.

AN EXCEPTIONALLY EFFICIENT STAFF.

The Chairman congratulated the shareholders on the fact that the operating companies in Spain had an exceptionally efficient staff, and that the constant co-operation of the Spanish directors was a source of great strength to the board.

In conclusion, the Chairman observed that while the general outlook was encouraging, the board viewed with considerable anxiety the burden of the constantly increasing taxes in Spain.

PLATT BROTHERS AND COMPANY, LIMITED.

PRESENT VALUE OF ASSETS.

STRONG FINANCIAL POSITION.

THE B.S.T. PURCHASE.

Presiding at the annual general meeting of Platt Brothers and Co., Limited, on the 6th instant, at Oldham, Mr H. Platt Hall, in the course of his speech moving the adoption of the report and accounts, said: Notwithstanding the present increased values of properties, our buildings, boilers, steam engines, machine tools, &c., remain (in our balance-sheet) at pre-war values, less the full annual depreciations.

Our valuers estimate these properties, together with the convertible stock, to be worth at to-day's prices £4,697,329, which is nearly double the amount at which they stand in our stock books.

When you see from the figures I have quoted from the balance-sheet that the total of the investments, sundry debtors, cash and bills equals £2,374,523, as against £1,483,822 last year, an increase of no less than £890,701, you will agree that the company is in a very strong financial position.

The most important event has been the offer from B.S.T., Limited, for the purchase of the ordinary shares of the company. For some time past it has been obvious that an increase in the number of shareholders of the company was desirable.

The company is 100 years old. It has been a public company for a considerable time, but the majority of the ordinary shares were held in comparatively few hands, and as the original shareholders died their shares have passed to the hands of trustees.

SHAREHOLDERS REINVEST.

No matter how wide a testator makes the investment clauses in his will, counsel's opinion states that on no account may industrial investments be held indefinitely. The present opportunity is one in which trustees would have incurred a most serious responsibility had they refused to accept.

We have come to the third generation. As was natural, there has been for some time past an increasing number of these trustees who desired to make some change in their investments.

After much thought, consideration, and only after prolonged negotiation, was the business arranged. While the trustees are, of course, debarred in the majority of cases from continuing any portion of their interest in the company, individual shareholders have in a surprising number of cases made a firm application for both ordinary and preference shares of the new issue in respect of a considerable proportion of their original holding.

The fact that so many of our old shareholders are going back into the shares on the new basis is, you will agree, sound evidence of their confidence and belief in the company's future. When the market in the shares finally settles down, I feel sure it will be found that the shares have been spread over a large number of investors, creating a much wider interest in the company, creating a better market in the shares, with benefit to all concerned.

MANAGEMENT UNCHANGED.

No change in the management and business methods is contemplated. Messrs B.S.T., Limited, under the terms of the purchase, have the right to nominate a director. I am happy to be able to

inform you that the Right Hon. Lord Emmott, a native of this town, has been nominated to the board. His wide experience in financial and Government affairs will be of great value to the directors.

In marked contrast to the general engineering trade of the country, textile machinery has been a really bright spot in industry. We have had a very full share of the orders in the trade for the past twelve months, which have resulted in a satisfactory profit.

PROSPEROUS OUTLOOK.

The firm is generally well supplied with orders for at least two years ahead. These orders are principally on behalf of our customers in other countries, therefore, with the revival in the spinning and weaving trades in this country, which revival cannot be delayed indefinitely, we have good grounds for looking forward with confidence to the future, with expectations of improved home trade demand.

The report was unanimously adopted. The resolution sanctioning the payment of a dividend of 20 per cent., making with the interim dividend already paid 22½ per cent. for the year, having been agreed, the proceedings closed with a vote of thanks to the chairman.

HOWARD AND BULLOUGH, LIMITED.

SUCCESSFUL YEAR DESPITE DIFFICULTIES.

The twenty-eighth annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on the 6th instant. The chairman of the company, Sir George Bullough, Bart., presiding.

In moving the adoption of the reports and accounts, the Chairman said: We are dealing with a year which has suffered interruption from the stoppage that affected the engineering trade throughout the country. Fortunately our works extensions were well forward and got into working order. We were thus able to considerably increase our weekly output before the stoppage occurred, more nearly approaching that of pre-war times. Our new No. 4 foundry and the four-storeyed building in Richmond street being completed, we shall now proceed with the erection of the remaining middle building, intercepting the one along Richmond street as originally planned. When this is finished in the course of next year, we shall be in a position to fully carry out the programme we had set before us for the reorganisation and redistribution of our various departments. Our aims are: Greater efficiency, more economical working, a larger output, and also the elimination of night-work and overtime. We are convinced that these are factors of greatest importance if we are to keep well to the fore and to successfully confront the new competition we shall meet.

Towards defraying the costs of the extension and new plant we were able to realise some of our investments to advantage. You will notice, on the other hand, that our balance-sheet shows a substantial bank balance.

The report shows that we propose the payment of a bonus of 1s 6d per ordinary share, in addition to the usual 10 per cent. dividend, to place £50,000 to dividend reserve, £100,000 to general reserve, and to carry forward £94,014 to next account. I hope these recommendations will have your approval.

Your directors have appointed to the Board two tried and trusted members of the staff, Mr James Redman and Mr William Denham Smith, and your confirmation of these appointments will be asked for.

Mr William Hay, of Cheadle Hulme, moved that a dividend be paid for the half-year ending May 31, 1922, at the rate of 6 per cent. per annum, less income-tax, on the preference shares; and a fourth quarterly dividend of 2½ per cent., less income-tax, on the ordinary shares, making with the interim dividends already paid, 10 per cent. for the year on the ordinary shares.

Mr Thomas W. Hutchinson, of Whitworth, seconded, and the resolution was agreed to.

Alderman D. C. Dewhurst, O.B.E., J.P., of Accrington, in moving that a bonus for the year ending May 31, 1922, at the rate of 1s 6d per share, less income tax, be paid on the ordinary shares, complimented the directors and staff on the successful year's work.

Mr D. W. Moffitt, of Accrington, seconded, and the resolution was unanimously carried.

Mr Joseph Watson, of Cheadle Hulme, said he had very great pleasure in moving the re-election of Mr C. A. Peltzer as a director of the company.

Mr R. M. Simpson, of Fallowfield, seconded, and the resolution was agreed to.

Mr Peltzer expressed thanks for his re-election.

Mr C. Moorhouse, of Accrington, moved that the appointment of Mr James Redman and Mr William Denham Smith, as directors, be approved and confirmed.

Mr W. A. Walsh, of Accrington, seconded, and the resolution was duly confirmed.

Mr James Redman, on behalf of Mr W. D. Smith and himself, suitably thanked the shareholders for the confirmation of their appointment as directors.

Mr John R. Annis, of Accrington, proposed the re-election of Messrs John Adamson, Son, and Co., of Manchester, as auditors of the company, on the same terms as before.

Mr James Drake, of Altham, seconded, and it was approved.

Mr Percy Needham, on behalf of his firm, Messrs John Adamson, Son, and Co., expressed thanks for their re-election as auditors.

Mr Joseph Watson proposed a vote of thanks to the chairman and co-directors, and to the staff and workers for their services.

Col. Harold Wilson, of Mirfield, seconded.

Sir George Bullough suitably responded, and the meeting terminated.

CHANNEL TUNNEL COMPANY, LIMITED.

SUPPORT FROM MANY MEMBERS OF PARLIAMENT.

The ordinary general meeting of the Channel Tunnel Company, Limited, was held, on the 3rd instant, at Cannon street Hotel, London.

The secretary (Mr R. D. Heckels) read the notice convening the meeting.

Baron Emile B. d'Erlanger, chairman of the company, presided, and moved the adoption of the report and accounts. He said that last year he informed the shareholders that the board had decided to spend some money on trying a new boring machine, and that they had hopes that it would prove satisfactory and greatly shorten the time of the construction work. Although their hopes had not in any way been affected by the tests that had been made, the machine was ready for trial only a few weeks ago, and Mr Tempest, the company's engineer, was not yet in a position to report fully as to his confidence that it could do all that was expected from it. He felt certain that at the next general meeting, unless they had begun the actual boring of the Tunnel, they would be able to report the trials had been eminently satisfactory.

The hopes of his colleagues and himself with regard to the

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

future of the Channel Tunnel project had been buoyed up by the important banquet which recently took place at the House of Commons. At that banquet, which was attended by a number of prominent and influential Frenchmen, including M. Cambon, the construction of the Tunnel was advocated by a very representative gathering of members of the House of Commons. Moreover, only a few days ago the Channel Tunnel Committee of the House decided to take immediate action, and a petition had been set on foot, which had already obtained a great many signatures, in order to press the Government to appoint a day for a debate on the principle of this important question. Out of the seven hundred members of the House of Commons no fewer than between four and five hundred had expressed their adhesion to the scheme, and therefore it would be really remarkable if the Government refused to appoint a day for the debate. He was confident there would be a very large majority in its favour. He hoped, for many reasons, not only reasons of equity but also of expediency and economy, the promotion of the Bill for the construction of the Tunnel would be entrusted to this pioneer company, which had never wavered in its efforts and in its faith, and that the day would come when the patience of the shareholders would be duly rewarded.

Mr Charles Sheath, J.P., seconded the resolution, which, after some remarks by Sir Robert Perks in favour of the project, was unanimously adopted.

ESTATES CONTROL, LIMITED.

BOVRIL SHARE ISSUE.

PUBLIC APPRECIATION AND CONFIDENCE.

Presiding at the eighteenth annual general meeting of Estates Control, Limited, held on the 3rd instant, Sir George Lawson Johnston (chairman) referred to the marked success of the recent issue by the company of Bovril ordinary shares, and said that last week they offered to the public 100,000 $\frac{7}{8}$ per cent. ordinary shares of £1 each in Bovril, Limited, at 2s premium. This was the full market price for the shares at the time they offered them, but they were inclined to believe that Bovril stood so high in public estimation, owing to the unique reputation and standing of its product and national appreciation of its anti-profiteering record, that the public would be likely to think even more highly of the shares than the market did. They had a single-column advertisement in a number of papers, and it had been a feature of the applications that nearly two-thirds of them came in on newspaper forms. They had to close the lists promptly, owing to over-subscription, and were now preparing the lists for acceptance and regret. Their intention was to reduce large applications by at least 90 per cent. on any excess over 1,000 shares, and to eliminate all applications under 25 shares. This would enable them to be more liberal with the applicants between 25 and 1,000 shares. They would probably appreciate that the reason for not accepting the smaller applications was that the postage and cheque stamps cost 7d a year on two dividends.

Bovril circles might, he thought, be excused for feeling some gratification at the result, and at the fact that the lists of this issue of $\frac{7}{8}$ per cent. ordinary shares at a premium were closed a day earlier than an issue made at the same time with a British Government guarantee attached to it.

Sir George commented on the danger to industrial development of the enormous increase in local rates, which to-day in England and Wales reached an average annual charge of £4 11s 8d per head of the population. He hoped when the quinquennial valuations were made, local authorities would not be so short-sighted as to press for an unfair assessment of energetic, and, therefore, prosperous firms, which brought fresh employment into working-class areas.

CALCUTTA TRAMWAYS COMPANY, LIMITED.

EFFECTS OF LABOUR UNREST.

The annual meeting of the Calcutta Tramways Company, Limited, was held, on the 4th instant, at 1, Queen Victoria street, London, Mr John G. B. Stone, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the expenditure on capital account had been increased by £3,626s, mainly represented by the cost of motor buses and the car shed extension. In order to repay bank advances, and provide for additional rolling stock and plant, an issue was made last month of £250,000 in 7 per cent. second debentures, which were largely oversubscribed. The revenue of

the company during the year was adversely affected by strikes, the actual stoppages representing 57 days during the year. They hoped that matters were satisfactorily settled, and that there would be no recurrence of the trouble.

The earnings showed a reduction of £81,767, or 17 per cent.; and the working expenses showed an increase of £39,285. The net earnings (after providing for loss on exchange of £44,700) amounted to £64,429, as compared with £240,389 in the previous year. To meet increased expenses, it has been necessary to introduce a new scheme of fares, which came into operation on February 1st last, resulting in a satisfactory increase in the company's earnings. Political agitation and labour unrest were dying down, and the directors were confident that more prosperous conditions would prevail before long.

In order to meet a growing demand, it was essential to add to their rolling stock, and orders were being placed accordingly. The motor buses purchased last year were put into service in August last, but with, so far, disappointing results. The directors were of opinion, however, that a use for these vehicles could best be found for special traffic purposes pending the further development of the city now proceeding under the capable management of the Calcutta Improvement Trust. During the last few years, owing to the expansion of the company's operations, the directors had been faced with the necessity of increasing the generating plant, and at the same time had realised that much economy could be obtained by the adoption of more modern machinery. As an alternative to the expenditure of capital involved in such developments, the directors considered the advisability of purchasing current in bulk from the Supply Corporation, with the result that an agreement had been entered into on what they considered satisfactory terms. Notwithstanding the temporary set-back, the shareholders could regard themselves as the proprietors of a sound and profitable enterprise which supplies a great progressive demand in Calcutta.

SPIERS AND POND, LIMITED.

YEAR'S RESULTS "IN EVERY RESPECT SATISFACTORY."

The thirty-eighth ordinary general meeting of shareholders was held, on the 5th instant, at the Hotel Cecil, Strand, London, Sir J. S. Harwood Banner, M.P., the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts and payment of the dividends, said: This is the thirty-eighth ordinary general meeting of this company, and it is the fourth I have had the pleasure of presiding over since the re-organisation scheme was carried through in 1918. I think you will agree that the position disclosed is so sound that there is very little comment I need make upon it.

We recommend to-day a final dividend of $\frac{7}{8}$ per cent., which, with the interim distribution, makes $1\frac{1}{2}$ per cent. for the year. For the first year after the reorganisation we were able to pay a dividend of 10 per cent. We have followed that for the next three years with dividends of $1\frac{1}{2}$ per cent., and in addition we have given you a bonus in shares of 20 per cent., so that in the four years we have been in office we have been enabled to make a return to our shareholders of a total of $6\frac{1}{2}$ per cent. In addition, we have accumulated (with the allocation we propose to you this year) a general reserve of £100,000, and I think you will agree that the financial position of the company has been so strengthened and improved that we may reasonably look forward with confidence to the future.

After a survey of the accounts, the Chairman continued: I venture to submit that whether from the point of view of financial stability or from the point of view of earning capacity, the accounts we have presented to you are in every respect satisfactory. You must remember that many expenses which are quite beyond our control have during the year still shown an upward tendency, though I am hopeful we have now reached the top and may look forward to some amelioration. I refer more particularly to the question of rates and taxes, which for the year under review show an increase over the corresponding period of last year of approximately £5,000, and if you go back a few years more, this item alone shows an increase over 1920 of £13,500, and over 1919 of £15,700. Licences and compensation levy during the year also show an increase of nearly £2,000, and gas and electric light of nearly £2,500.

Our properties have been adequately and fully maintained, and to-day I think we may say they are in first-class condition. I referred earlier in my remarks to the acquisition we have made during the year of the Valley of Rocks Hotel at Lynton. We have had this property thoroughly redecorated, and as it was closed for these alterations for a period of three months, you will understand we have had no advantage from this acquisition in the accounts now before you.

The Chairman's resolution was carried.

HOVIS, LIMITED.

CAPITALISATION OF RESERVE FUND.

The ordinary general meeting of Hovis, Limited, was held, on the 6th instant, at Caxton Hall, Westminster, London.

Mr J. Browne-Martin, who presided, in moving the adoption of the report and accounts, said that a chairman's task was always a pleasurable one when associated with such a company as Hovis, Limited, which showed the merit of consistency in its progress. With that feeling there was also a feeling of regret that he could not deal with the accounts brought up to date as the directors would have liked, but the shareholders knew the difficulties all businesses had to meet with when taken over by a Government office. It was only during the last few weeks that they had received a settlement for 1920, but they did not anticipate now that the figures for 1921 would be long delayed. The accounts now before them were for the year ended March 31, 1920, and it would be seen that the reserve account was now £100,000, and they proposed to place a further £10,000 to that account. With regard to the profit and loss account, during the period of control the company was indemnified against loss, and had, as remuneration, the pre-war standard of profits, plus certain allowances, and that, in the year under review, amounted to £50,084, as against £43,416 for the previous year.

They had made provision out of their profits and allowances to spend money on advertising, and since decontrol they had expended a considerable amount. In inducing the public to take the company's products they were promoting the welfare of the community. Medical testimony proved that those of the public who were wise enough to listen to the message that was given to them would benefit both in mind and body. Their investment in the shares of Marriage, Neave, and Co., Limited, had turned out extremely satisfactory. The acquisition of the Chelsea Mill had not only considerably increased the area of the company's activities and its milling capacity, but had enabled the management to effect useful economies and increased efficiency in output and delivery. The directors were entirely satisfied with the results of their investment. In furtherance of promises made at a previous meeting, and in consideration of the satisfactory conditions of the company's position, the directors felt justified in recommending a distribution out of the company's reserves.

The report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting a resolution was passed authorising the capitalisation of the reserve fund.

BRITISH BROKEN HILL.—Mill returns for the fortnight ended July 1st:—6,650 tons crude ore; produced 1,150 tons lead concentrates, containing 685 tons lead and 29,832 ozs silver; also 1,060 tons zinc concentrates, assaying 94 per cent. lead, 10 ozs silver per ton, and 44.5 per cent. zinc; 210 tons carbonates raised. Two days' stoppage.

BROKEN HILL SOUTH.—For the four weeks ended July 1st 16,250 tons of crude ore and 11,287 tons of dump slime were treated and produced 4,725 tons of concentrates, assaying 59 per cent. lead and 28 ozs silver per ton.

ELECTROLYTIC ZINC COMPANY OF AUSTRALASIA, LIMITED.—Production for four weeks to June 28th:—1,981 tons zinc; silver lead product for shipment to Port Pirie for realisation containing 245 tons lead, 46,875 ozs silver.

MINING CORPORATION OF CANADA.—May:—Total number of standard ozs produced, 118,853; operating cost at mine, £13,552; special capital expenditure, £27; total development footage, nil; total tonnage, 8,189.

MOUNT LYELL.—During the four-weekly period ended June 28th there were smelted:—Mount Lyell ore, 592 tons; North Lyell ore (direct to smelters), 397 tons; concentrates, 1,977 tons. The converters produced 493 tons of blister copper, containing—copper, 489 tons; silver, 9,434 ozs; gold, 112 ozs. The mill treated 6,699 tons of ore, and produced 2,206 tons of concentrates. Cable, dated July 6th, adds:—"Burrage shut down to day for approximately a week owing to a shortage of material; similar temporary shut downs will be necessary until additional capacity provided. The third Dwight Lloyd sintering unit expected to reach reduction works end of the month."

MOUNT MORGAN.—For the six weeks ended June 25th treated 9,683 tons Mount Morgan ore, 74 tons Many Peaks ore, 6,651 tons concentrates, and 40 tons of purchased ore and secondary products. Produced 715 tons blister copper, containing 708 tons copper and 6,365 ozs gold, including 1 ton copper and 1 oz gold from Many Peaks; also 18 tons of copper and 7 ozs of gold from purchased ore and secondary products. Concentrator treated 21,575 tons ore for a production of 7,067 tons of concentrates, containing 423 tons copper and 4,511 ozs gold. In addition to above production, have matte on hand containing 18 tons copper and 225 ozs gold.

Reports and Notices.

Vice-Admiral Sir George Goodwin, K.C.B., has accepted appointment to seat on board of directors of Richardson's, Westgarth, and Co., of Hartlepool, Middlesbrough, and Sunderland. The seat has been rendered vacant by resignation, for reasons of health, of Captain Walter Brown, R.N.

The Standard Bank of South Africa announce numbers of certain bonds of the Salisbury (Rhodesia) Municipal Loan (£100,000 4½ per Cent. Bonds) purchased for cancellation.

We regret to announce that the chairman of the Refuge Assurance Company, Limited, Mr R. Wm. Green, passed away on July 1st.

At a meeting of the board of directors of the Fine Cotton Spinners' and Doublers' Association, Limited, Mr Herbert William Lee was unanimously elected to be the working chairman of the association, in succession to Mr John W. McConnell, the late chairman. At the same meeting Mr William Howarth, a member of the executive board, was appointed chairman of the executive directors in succession to Mr H. W. Lee.

RAILWAYS.

NORTH LONDON RAILWAY.—It is announced that the directors, subject to the approval of the proprietors and debenture stockholders, have, in accordance with the Railways Act, 1921, entered into a provisional agreement with the directors of the London and North-Western Railway Company, under which the North London Railway Company will be amalgamated with the London and North-Western Railway Company, the arrangement to have effect as from January 1st last. The terms on which the several stocks of the company will be exchanged for stocks of the London and North-Western Railway Company are as follows:—

NORTH LONDON STOCK		LONDON AND NORTH-WESTERN STOCK TO BE ISSUED ON EXCHANGE	
4% debenture	100 0 0	3% debenture	£ s d
4½% debenture	100 0 0	3½% debenture	133 6 8
4½% to 5% preference, 1866	100 0 0	4% preference	150 0 0
4½% second preference, 1875	100 0 0	4½% preference	125 0 0
Ordinary	100 0 0	(This secures to the holders the maximum dividend to which the stock is entitled.)	
		4% preference, 1902	112 10 0
		Ordinary	80 0 0

A meeting of the proprietors and debenture stockholders will be summoned at a later date, when the proposed scheme will be submitted for their approval.

with Australian makes. All English straights 40s to 42s, free on rail at London stations. Imported remains dull, while in liberal supply. Manitoba export patents quoted 45s, straights 41s, Pacific 40s, Australian 40s to 40s 6d, all landed per 280 lbs, ex store. On c.i.f. terms, parcels of Canadian patents, July seaboard, quoted 42s, Canadian straights, ditto, 40s, Kansas patents 42s, and Australian 36s per sack. Millers' offals quiet, and rates easy. Broad bran quoted £6 10s to £6 15s, ordinary ditto £6 5s to £6 10s, middlings £8 10s, bags included, ex mill, feed oat meal £11 5s, ground oats £14 5s per ton, free on rails. Of imported, fancy plate middlings quoted £9 10s, plate pollards £7 10s per ton, both landed. Maize firmer, with a better demand. Yellow La Plata new quoted 40s 3d, No. 5 white round African 36s 6d, both landed. American mixed No. 2 34s, ex ship to arrive, all per 480 lbs. White African maize meal quoted £8 10s per ton landed. Cargo market ruled firm, but generally quiet. Plate cargoes, August-September shipment, sold 34s 6d, Dan/Gal/Foxanian afloat 36s 14d. Parcels in good demand at full to firmer rates. Barley quiet, and tendency easy for imported sorts. English grinding descriptions rule at 45s to 47s 6d per 448 lbs, free on rail. Of imported, Californian 38s to 40s, Australian Chevalier 40s to 53s; Chilean ditto 40s to 56s per 448 lbs. No. 4 Canadian Western 34s 6d, Tunisian 34s per 400 lbs, all landed. The cargo market showed more activity, with offers of new crop European in evidence, and steamers of Danubian on sample afloat sold 33s 6d, with August-September held for 32s 9d per 400 lbs. Parcels trade remain slow. Oats generally firm, with rather more inquiry, and native varieties in small supply. English whites rule at 36s to 38s, grey winters 35s to 36s, black ditto 34s 6d to 36s, as to sample per 36 lbs, free on rail. Of imported, Plate, f.a.q. quoted 26s 9d, clipped 28s 6d, No. 2 Canadian Western 31s 6d, No. 2 Canadian feed 28s, No. 2 white clipped American 38 lbs 27s, ditto 36 lbs 26s 6d, Chilean Tawny 28s to 29s 6d, New Zealand 37s 6d to 40s, British Columbian 37s 9d, all landed per 320 lbs. Forward market fully steady, and while La Plata kinds were sparingly offered, a fair business resulted in North American kinds at full to dearer rates. Oatmeal steady, with a moderate demand. London made, coarse pinhead £18 10s, medium £17, whole groats £17 10s, rolled oats £18, flaked £20 10s, ordinary Scottish oatmeal £20 10s to £22, American all cuts £18 to £18 10s per ton. Beans, English, are steadily held at 57s 6d to 65s, and ticks 85s to 95s per 532 lbs, free on rail. Of imported, Madagascar Haricots, old crop, 10s to 12s, New 17s to 17s 6d, Rangoon hand picked, spot, 6s 10d per cwt. Peas, English, quiet, and prices barely steady. Maples range from 90s to 100s, and Duns 65s to 70s per 504 lbs, free on rail. Of imported, Tasmanian blues 22s to 23s, New Zealand 20s to 22s, Dutch hand picked 29s to 29s 6d, screened 25s to 26s, Japanese 49s per cwt, ex store. English rye quoted 42s 6d to 45s per 504 lbs, free on rail. Lentils steady. No. 1 splits quoted 29s to 30s, No. 2 ditto, 21s to 23s, Egyptian 22s to 24s per 100 lbs. Homeward grain chartering continues on a moderate scale, but rates generally steady, chief business being from North America to Continental and Mediterranean ports. Montreal to Continent paid 15 cents per 100 lbs, ditto to West Italy spot done 4s 3d, and Greece July at 5s per quarter. Northern range to Continent quoted 14 cents per 100 lbs, and to Greece 4s 9d per quarter paid July loading, Gulf of Mexico to Genoa chartered at 4s 6d per quarter. North Pacific continues to absorb tonnage at 37s 6d basis heavy grain to U.K./Continent, August-September option, San Francisco 38s per ton. Eastern markets steady, with 18s paid Bombay/Karachi to U.K./Continent, one port loading one port discharge August. A fair inquiry prevails from the Danube, and charters were completed at 17s 6d to 18s, according to cancelling date for heavy grain cargoes to U.K./Continent.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated July 6th, is as follows:—Pig-iron: Business in pig-iron is very quiet, but there is rather more business doing in Cleveland foundry iron than in hematite. Cleveland iron prices are unchanged at 95s per ton for

No. 1 and Siliceous, and 90s per ton for No. 3 G.M.B. The price of East Coast mixed numbers hematite is weaker, and whilst business is reported at 93s, it is understood that even a lower price would not be declined. Manufactured iron and steel: There is a slight improvement in some directions, but whilst some of the works are working part of their plant, others are still idle. Steel prices are unchanged:—Steel ship plates, home, £10; steel ship angles £9 10s; iron bars, £12; steel rails, £9 10s net. Iron ore: Consumers are not inclined to buy for forward delivery, and what small business has been done is only in odd cargoes for fairly prompt shipment. Whilst best Bilbao rubio is now quoted 26s, it is reported that at least one cargo has been sold at a lower figure.

Our Sheffield correspondent writes:—Business in most kinds of iron and steel has been particularly slow this week, and although stocktaking is responsible to some extent for the unsatisfactory state of things people are disappointed at the slow materialisation of the signs of recovery. Some are inclined to lose heart. There is, however, no lack of confidence in the eventual recovery of trade, as the majority of the manufacturers are either losing money or earning nothing anxiety as to their ability to keep going in a financial sense is very prevalent. Business in hematite iron has been very flat for a month, and practically none is being bought for this district. Prices have been officially fixed at 105s for mixed numbers delivered here. Basic billets are in request, and prices, although low, are firm. The production of mild steel is increasing. The marine and railway steel departments are still without any work to speak of, and very few crucible steel furnaces are in operation except occasionally. The exceptions are fairly substantial. American orders have just been placed with two large makers. Things are a little more brisk in hand tools, but this experience is by no means universal in the city. Business received from shopkeepers for domestic hardware has dwindled rapidly of late, and is now smaller than at any time for many years past. Industry is suffering to an increasing extent from the reduced and still falling buying power of the public. Further expansion of the electric industry is reported, and there are huge schemes ahead in connection therewith. The only important branch of engineering which is anything like busy is the manufacture of textile machinery, for which there has been for a long time, and still is, a world-wide demand. The coal market has sagged very much this week. Best South Yorkshire steam coal can now be bought under contract at 20s at the pits, and Derbyshire at 19s. Steel-making coke for crucible heating has been reduced to 25s per ton for "patent," and 35s for "behive" qualities. Blast-furnace coke, foundry coke, and house and gas coal are quiet markets.

Our Glasgow correspondent (writing on Thursday) says:—Business this week in iron and steel, indeed in all metals and materials, has been quieter than for some time past, and there is no prospect

of an improvement for at least two or three weeks to come. For this the advent of the summer trades holidays is largely, if not wholly, responsible. Already operations in several Clyde ship-building yards have been suspended for the season; others will follow suit on Monday, and by Thursday there will be few establishments not at a standstill in all productive departments at least, and steam will not be raised again, unless in exceptional instances before the end of the month. These conditions do not make for new business, and it is therefore not surprising to hear that few engagements of any consequence have been booked by any firms in the past eight days, either for prompt or forward execution and delivery. Consumers have on every hand been cleaning up old and surplus stocks, and this has reacted on the position of producers, especially of hematite and ordinary irons, who have indeed been obliged to add to their stocks. This has not proved entirely disadvantageous—it has rather helped makers to meet export inquiry, which has been on the expanding side, notably from the United States. Those concerned and informed are not attaching much importance to the suggested American trade, but admittedly it may turn out to have more influence on the market position than many experts are prepared to recognise. Scottish hematite is called £5 8s 9d f.o.t. with No. 1 foundry at £5, and No. 3 at £4 15s, both delivered Glasgow. Bar iron and steel rollers find things very dull, and have not made any headway from the reduction last week of 10s per ton (from £11 to £10 10s) in Crown bars. Steel prices are unchanged, with, however, a declining tendency in a few connections. Boiler plates keep round about £13 10s; ship plates, £10; sections, £9 10s; sheets ½ to ¼ in., £11 5s; 24 gauged galvanised (f.o.b., Glasgow), £16. Export rates are generally 17s 6d to 20s lower. It is stated that inquiry from several colonial markets is giving signs of improvement, as a result, no doubt, of the reductions in quotations lately made. Various export and home markets are looking for yet easier conditions, following on the anticipated break in engineers' wages. Official statistics show that for last month 16 vessels of 34,996 tons were launched on the Clyde, bringing the aggregates for the six months up to 62 and 167,493 respectively. In the existing circumstances of the industry, the figures are not unsatisfactory; and they indicate that a greatly increased number of shipwrights must have been employed of late. The various steelworks are barely earning half-time, but some authorities in the trade are hopeful as to back-end results, though it is added that shipowners declare that current values for new tonnage have no temptation for them. Black sheet makers have secured several substantial contracts from Far Eastern markets; a (local) Hamilton firm has got an order for 250 railway waggons, and inquiries are spoken of for steel wrought tubes, pipes, girders (and other sections), &c., required in bridge and structural work, of which there are several good lines—home and foreign—about. At which there are several good lines—home and foreign—about. At the ordinary weekly meeting yesterday of the pig-iron "ring," there were sellers of No. 3 G.M.B. Scotch at 99s, f.a.s., Glasgow; of No. 3, Cleveland, at 90s, f.o.b. Middlesbro'; mixed numbers, East Coast hematite, at 95s, f.o.b., Middlesbro', but there were no buyers.

Our Cardiff correspondent, writing on Thursday, says:—Nothing has happened this week to relieve the gloom in the coal export trade of South Wales. The collieries are almost entirely dependent on their contracts. Day-to-day business has been attenuated to a shadow of what it was in April and the early weeks of May, and the consequent drain on the financial reserves of many of the undertakings has been too heavy to allow them to continue to work all their pits. The decrease in the volume of trade in June was about 360,000 tons, or 5 per cent.; but in the average market prices of coal there has been a fall of over 10 per cent., and the combined effect of the reduced prices, the diminished outputs, and the increased costs has been a heavy deficit on the working of the coalfield as a whole. The audit for May was the best since the decontrol of the industry. The owners were called upon to surrender only about £26,000 of their standard profits. Of these profits, therefore, they retained approximately £375,000, or £150,000 more than they had retained in the previous best month. This position will be completely reversed under the June audit, for enough is already known of the statistics of the industry last month to predict that the audit for June will be one of the worst, and that it will leave the district with little, if any, at all of its standard profits. Some of the wealthier of the combines are now breaking under the strain of these adverse trade conditions. All the efforts to resuscitate a schedule of minimum prices having failed, the weakest are going to the wall. The most expensive pits to work are being closed down, and work at those pits which are being kept in operation is becoming more and more confined to the seams where the cost is least. These conditions are also having their effect on the policy of the Miners' Federation. A fortnight ago a delegate conference of that body decided to hand in notices on June 10th to terminate contracts a fortnight hence on the question of non-unionism. It has now been decided to postpone the service of such notices for a week. Meanwhile, at the request of the miners' representatives the coalowners, while strongly repudiating allegations of victimisation, have agreed to appoint a sub-committee to investigate eight cases where the employers are stated to have refused re-employment in contravention of Clause 13 of the national coal strike settlement providing for the reinstatement of all men who came out on strike in 1921 as and when the pits were reopened. It is thought that this step will help to ease matters, and lead eventually to the non-service of the notices. The wage question, however, remains one of crucial importance, but action has been referred to the National Executive, and the policy of the Federation in regard to this matter will probably not be definitely decided upon until the Blackpool annual conference of the Miners' Federation of Great Britain. It is stated that at that conference a proposal will be made that the owners and the Government shall be given notice to increase wages substantially within a month, either by a system of minimum prices or by a subsidy, and that unless the demand is met in that period another national stoppage be declared. The financial position of the industry was bad in March, 1921, when the Government decontrolled the industry; intrinsically, it is worse to-day, for the reserves of colliery companies have been depleted, and on current production the loss is disastrous.

The following are the current prices on the Cardiff market:—Best Admiralty large, 25s to 25s 3d; seconds, 24s 6d to 25s; best dries, 25s to 25s 6d; Black Veins, 24s to 24s 6d; Western Valleys, 24s to 24s 6d; Eastern Valleys, 22s 6d to 24s; best bunker smalls, 17s 6d to 18s 6d; ordinary cargo smalls, 15s to 17s; coke for export, 35s to 37s 6d; inland blast furnace coke at ovens, 25s to 26s; patent fuel, 25s to 27s. pitwood, 31s 6d to 32s.

The improvement in the iron and steel trade is maintained, and more mills are being brought into operation. Tinplates are now quoted on a 20s basis per box (112 lbs) f.o.b., and there has been brought into force a pooling arrangement to assist manufacturers to secure contracts against foreign competition. Sheet and tin bars are unchanged at the official minimum for South Wales of £7 7s 6d per ton.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The sale at Liverpool to-day was awaited with a good deal of interest, and judging from the telegraphed reports, the action of B.A.W.K.A. in withdrawing all their New Zealand wools (over 9,000 bales) has had the desired effect, for crossbreds have apparently sold well at firm rates. Much of the wool offered was more suitable for the Continent than for the home trade, and although German competition was lacking, there was keen bidding from French, Swiss, and Belgian buyers. The best merinos appear to be down about 5 per cent. as compared with the closing rates in London. The raw material market will again be tested next Thursday, when about 30,000 bales of Australasian wool will be offered at Hull. So far as the Bradford market is concerned, there is not much change in actual conditions. Topmakers' quotations are a little irregular, but this is easily accounted for by the fact that some firms are very well sold forward, and are not prepared to add to their commitments. In other cases definite offers of business will frequently bring a concession in the matter of price, and 4s 3d may be regarded as a general quotation for good standard 64's tops for delivery September-November. For a good warp 64's there

ment of Ways and Means advances from the Bank to the Treasury, and also because of the movement of gold to America, now stated by the Chancellor of the Exchequer to have been arranged for meeting the service of our debt to the United States, and the uncertain outlook on the Continent. These considerations were regarded as likely to check a reduction in Bank rate, but the Bank court thought otherwise. After the announcement of its decision, the market three months' rate eased off to 1½ per cent. Yesterday, after the announcement of the Treasury Bill result, the market quotation was about 1½-¾ per cent.

	July 14, 1922.	July 7, 1922.	June 30, 1922.	June 23, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3½%	3½%	3½%	3½% (Jly. 13, '22)
Banks Deposit Rate	1	1½	1½	1½	1½ (Jly. 13, '22)
Discount (Call)	1	1½	1½	1½	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 mths' bills) ..	1½	2½	2½	2½	2½

The Bank return showed a decrease of £274,000 in the note circulation, in spite of a further transfer of £500,000 in notes to the currency note reserve, against a corresponding draft on its gold. The Bank's gold stock declined by £558,000, so that another million in gold seems to be on its way to America; the Bank's Reserve was thus £284,000 lower. Government securities declined by £20½ millions, and Other by 2 millions, these movements causing a corresponding decrease in deposits, Public and Other showing reductions of 2 and 21 millions respectively. Currency notes outstanding in the return dated July 13, 1922, show an increase of £730,700, to £298,634,800, which includes £1,591,400 for notes called in but not yet cancelled. The fiduciary issue is £248,893,400, or £61,095,000 below the maximum. Gold coin and bullion in the Redemption account was further reduced by £500,000 to £27,500,000, while Bank of England notes were increased by £500,000 to £20,650,000.

THE STOCK MARKETS.

The reduction in Bank rate to 3 per cent. was not altogether expected, but although it led to a general hardening of prices, especially in the gilt-edged and home railway markets, there was no appreciable increase in the volume of business. The slump in the mark led to a good deal of uneasiness in the market for both British and foreign Government securities in the early days of the week, but this was mostly allayed by the subsequent rally. Home Rails were weak at first, but greatly improved later on. Industrials have moved irregularly, and there have been no outstanding features. Stagnation in the rubber market has continued, with a further drop in the price of the raw material, but Oil shares are a little better. A sharp jump in Chartered was the main feature of the Mining section.

COMMODITY MARKETS.

Reports from industrial centres reveal little change this week on the whole, but the position in the South Wales coal trade, reviewed in some detail by a trade correspondent on a later page, has gone from bad to worse. In the wool trade there is much hesitation, owing to uncertainty as regards German developments, but prices at the sales of the raw material are well maintained. From the cotton markets a quieter tone is reported. In the iron and steel trade generally slack conditions prevail, but the resumption of German competition is not greatly feared. The only noteworthy event in the pig-iron trade is the termination of price control of Cleveland pig-iron. The hide market remains firm, but the boot and shoe trade finds orders slower than had been hoped. A fairly steady tone is preserved in the market for vegetable oils. Timber for building construction shows a firmer tone.

FOREIGN EXCHANGE.

During the past week the foreign exchange market has been bordering on the chaotic, and it is hardly too much to say that conditions have been as uncertain as at any time since the Armistice. The root factor of the situation is, of course, the position of Germany and the attitude of the Allies towards reparation payments. The only ray of hope is that the present position may prove an object lesson in what may be expected if some reasonable agreement is not arrived at without further delay. Signs are not lacking that this is now being realised in quarters which have, up to now, been opposed to any modification in the reparation payments. The Berlin rate, which opened the week at the record figure of 2,450, shows certain signs of improvement, and although fluctuations remained violent, the value of the mark on balance improved, closing on Wednesday at 1,900. This, however, has not been maintained, the quotation on Thursday being 2,000 and at the time of writing 2,100. Paris and Brussels have again moved in sympathy with Berlin, Paris ranging from 56.00 on Saturday to 54.00 on Wednesday, from which figure it has reacted to 54.25, while Brussels in the same period ranged from 58.60 to 57.00, and is now quoted at 57.20. The forward quotation on Paris is six points over spot per month, while forward Brussels is four points under spot for the same period. New York has remained comparatively steady on balance, the present quotation of 4.44½ comparing with Monday's figure of 4.44½. The market still appears to be affected by the possibility of a policy of gold shipments, but the fact should not be lost sight of that a part at least of the American crop is now coming forward, and may at an early date provide a depreciating effect on the rate. The forward quotation in New York remains unchanged at ½¢ of a point per month over spot. Italian lire, although naturally affected by the German position, have remained comparatively steady, with an improving tendency, and the present quotation of 98.25 shows a fractional fall for the week. Dutch florins have shown a quotable appreciation, the rate having fallen at one time on Wednesday to 11.42 on the news of a new Dutch Government loan. This quotation has not been maintained, and the present rate is 11.44. Spain and Switzerland have again remained steady, the present rates of 28.55 and 23.16 showing only trifling alterations since Monday. Steadiness has also characterised the Scandinavian exchanges, Sweden at 17.15 and Denmark at 20.62 being practically unchanged. Norway, which at one time rose to round 27.10, has now reacted to 26.92, showing a slight fractional rise for the week. Finnish marks, on the other hand, have not maintained their recent strength, and the present quotation of 220 shows a rise of some 15 points in the week. Vienna and Warsaw at 117,000 and 24,500, continue their upward course. Little movement is shown in the South American market, and quotations remain round last week's figures. Any tendency discernible, however, was a slight weakness. A weaker tendency was also shown on the Eastern exchanges, the rupee at 1s 3½d being fractionally lower, while the quotations for Hong Kong and Shanghai of 2s 7½d and 2s 4d respectively also show slight declines.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the eight days ended July 8, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,893	Supply Services	10,829
		Interest on Debt	3,946
		Sundries	0,708
		Reduction of Debt	3,918
		Added to Exchequer balances ..	1,307
	18,893		18,893

The total revenue, at £18,892,614, during the eight days ended July 8, 1922, compares with £31,588,972 during the nine days ended July 9, 1921. Expenditure during the same period, at £14,845,074, compares with £23,069,681. The decline in revenue during the past eight days compared with the corresponding nine days a year ago is primarily due to Special Receipts, at £1,079,000, or £8,729,642 lower. Customs, at £2,920,000, are lower by £1,503,000. Receipts from property and income-tax, at £8,388,000, show little variation.

The week's operations reduced the National Debt by the sum of £3,917,615, and caused the following changes:—

	Min. £		Min. £
Unemployment Insurance....	+ 530	Bank of England Advances ..	- 35,250
4½% Treasury Bonds	+ 2,947	War Loan Surrenders.....	- 010
Treasury Bills	+ 16,476	National Savings Certificates ..	- 350
Public Department Advances ..	+ 11,635		
Sundries	+ 105		
	+ 31,693		- 35,610

The floating debt was reduced by £7,120,000 to £958,242,500 during the eight days ended July 8, 1922.

FINANCIAL YEAR, 1922-23 (April 1 to July 8, 1922).

EXPORT TRADES AND IMPORT DUTIES.

WHEN Lord Derby, accompanying a deputation from Lancashire, asked that the Order imposing a duty of one-third upon fabric gloves from Germany might be subjected to further inquiry, he was asking for bread. The obdurate Mr Baldwin, laughing in his sleeve, has conceded the inquiry, but taken care that the produce of it shall be a stone. A composite Cabinet, squeezed on the one hand by Protectionists and on the other by Free-traders, has wriggled in just the fashion which might have been expected. The Departmental Committee, set up by the Board of Trade to inquire into the effect, if any, which an import duty of one-third upon German fabric gloves and glove fabric may exert upon employment in the fine spinning industry of Lancashire, is the same in *personnel* as the Statutory Committee which has already reported in favour of an Order imposing a duty. We are afraid that the Lancashire spinners have been out-manoeuvred, and that the report of the Committee might be written in advance of the special inquiry which began yesterday. So far, at least as this Committee is concerned, the case is *ane chose jugée*.

It is an able and highly respectable Committee, with

Sir Henry Rew as chairman. Were it possible for this Committee to approach the whole subject with minds swept clear of pre-conceptions, it would probably be a trustworthy court of first instance. But this is not now possible. Lancashire's case has been gravely prejudiced by the manner in which the earlier statutory inquiry was held under the Safeguarding of Industries Act. Lancashire's interests had no legal status, though her representatives were, as an act of grace, permitted to present their views. But no cross-examination by Lancashire's counsel was permitted, and the documentary evidence laid by the fabric glove interests before the Committee was not allowed to be subjected to Lancashire's criticism.

The inquiry was restricted and partial, as are all these inquiries under the Safeguarding of Industries Act, not through any fault in the Committees, but because the Act itself does not permit an adequate investigation. After listening to what Lancashire had to say, and bearing in mind the statutory limitations with which the Committee functioned, the following *obiter dictum* was pronounced:—

"Certain evidence was submitted with the view of convincing us that the exportation from the Bolton district of cotton yarn to Germany for the manufacture of glove fabric would be affected prejudicially if a duty were imposed on imported gloves. We were anxious not to exclude any evidence which could in any way be regarded as relevant to our inquiry, but, on consideration, we think we should not be justified under the terms of our reference in having regard to this point, even if the evidence had carried conviction."

There is here an unmistakable hint that Lancashire's case, the consideration of which was outside the terms of reference submitted to the Committee, did not carry conviction. How can it be expected to carry conviction now when every member of the Committee must realise that the purpose of their reassembling is to provide a shelter for the Government against Lancashire's bombs? It would need to be a pronouncement delivered by an Archangel to carry conviction under such prejudicial circumstances.

It is not at all easy for those who are unacquainted with the conditions in which Lancashire's vast export trade in cotton yarns and cloth has been built up to appreciate the strength of their case. Lancashire's trade is vulnerable because its basis is wholly man-made. Lancashire exports cotton yarn and cloth to all the world because from long and hereditary experience it has learned to spin and weave better and more cheaply than any other cotton centre. But although the county has some inherent advantages in its damp climate, it has no advantages which make the tenure of its trade certain. Other countries may learn—in the fine as already in the coarser counts—to spin and weave as cheaply and efficiently as Lancashire does. This is the peril always hanging over the head of the great cotton county; its trade is no monopoly, and cannot be retained in its present volume if customers in other countries are driven to set up new "Lancashires" of their own. Taken by itself in present-day volume, this fabric-glove threat to Bolton's export trade in fine yarns is not very alarming. But if Saxony cannot send fabric gloves to us to pay for the yarn which it desires to purchase from Bolton, then Saxony must look elsewhere for fine yarns of equal quality. They may not be available elsewhere at the moment, but both France and Germany could learn to spin them if the necessity became urgent. It is very much easier to lose an export trade than to build one up, and Lancashire is justly apprehensive of any tendency—especially when due to the folly of a British Government—which may compel its customers to learn how they may supply themselves. Industrial specialisation is the basis of our export prosperity, under Free-trade, and the intrinsic objections to the fabric glove duty itself, though serious enough, are comparatively slight compared with the danger of once beginning to tamper with the conditions under which vital export trades have been laboriously built up.

INDIAN EXCHANGE AND TRADE.—II. TRADE.

THE causes of the present world depression of trade fall into two broad groups. There are, first, the forces which have always made for ups and downs of trade; the tendency for a boom to destroy itself by the rise in prices, the inflation of credit, and the maladjustment between different branches of industry which it engenders. Second, there is the destruction by the war of the old network of trade relationships, and the obstacles which widespread political disorganisation and impoverishment oppose to the re-establishment of the old relationships or the creation of new ones. It is not easy to disentangle these causes from one another. For the unsettled conditions of the post-war period serve greatly to accentuate the sweep of the ordinary forces of trade fluctuation. How far do they work through this medium, or how far do they exert an independent depressing influence? Upon the answer to this question depend the prospects of British trade in the next few years. In so far as the former explanation holds, we may expect to see, not indeed stable trade conditions, but changing conditions, under which good times will at least alternate with bad, while the next good time should not be very distant. But, in so far as we must wait for a trade recovery upon the restoration of the well-being and comity of Europe, we must wait, it must be feared, for very long indeed. We shall attempt here to examine this question in regard to the particular case of our trade with India, which exhibits in an unusually clear light all the features of the general problem.

The poor demand for British goods which India has offered in the past year represents in a large measure the inevitable reaction from the excessive purchasing which followed the Armistice. During the war the produce of India was in large demand, while she could not secure her customary volume of imports. The Armistice thus found her denuded of stocks, but well equipped with purchasing power; and she naturally proceeded to place heavy orders for imported goods of every kind. This process, as was hardly less inevitable, was carried far beyond the point which the conditions really justified. There is always a considerable time-interval—in 1919-20 it proved an exceptionally long one—between the placing of orders in Lancashire and the arrival of the goods in India. Until the goods arrived India continued to present all the outward signs of an unsatisfied demand; the volume of orders already placed could only be vaguely estimated, and throughout 1919 the rasher type of Indian merchant continued to make purchases on an extravagant scale. He was encouraged in this course by the rising value of the rupee, which weakened the deterrent of the rapidly increasing and sometimes fantastic sterling prices which he had to pay. When the goods began to arrive in India in large quantities the bubble burst. It then became necessary to pay for them; and the attempt to do so was the cause of the immense demand for Reverse Council bills, which precipitated the collapse of the rupee. Later on, as supplies became abundant, prices in India commenced to fall. The Indian merchant was thus doubly prejudiced, and was faced with the prospect of heavy losses on the contracts into which he had lightly entered. The placing of fresh orders was virtually suspended; but meanwhile, month after month, throughout 1920, and hardly abating until the latter part of 1921, continued the flow of imports ordered in the full tide of the boom.

The premature attempt to stabilise the rupee accentuated the difficulties of the situation. The Government's policy contributed nothing, of course, to the exchange débâcle; but it provided the Indian merchant, in his natural anxiety to evade his obligations, with a convenient and colourable excuse. The rupee had been declared by law to be equivalent to 2s gold; upon the basis of 2s gold he was quite prepared to meet his obligations, but was it reasonable that he should be ruined by an exchange loss, against which he had just received a solemn legal guarantee? Cancellation became the order of the day; and stocks began to pile up on the quays of Bombay, of which the consignees refused to accept delivery. The last two years have seen a gradual liquidation; British exporters have for the most part made the best of a bad situation, and obtained acceptance of the goods. But the process is still far from complete,

and the congestion of uncleared stocks will probably impede the recovery of active trade for some months to come.

Meanwhile the export trade was affected by considerations of a similar type, coupled with a succession of poor monsoons. Before the war, grain was one of India's principal exports, ranking after jute and cotton. Good harvests prevailed during the war, but consumption under war conditions was also on a large scale, and left considerable stocks with which to eke out the scanty harvests which followed. The incidence of the shortage was thrown upon the export margin by Government restrictions, designed to secure adequate supplies for domestic consumption. The exports of wheat fell to virtually nothing in 1919-20, while the exports of rice fell in the same year to under 40 per cent. of their pre-war level. It was remarkable, in these circumstances, that the total exports for 1919-20 should have reached (in values) a record figure. But this was due to causes as essentially transient as those which promoted the importing boom—the replenishment of exhausted stocks overseas, affecting notably hides, leather, and tea, and the speculative outburst in Japan, which led her to import enormous quantities of Indian cotton. In 1920-21 there was a different tale to tell. The exports of grain, though they recovered somewhat, remained abnormally low, while there was a serious decline in jute, cotton, tea, hides, leather, and seeds. The total exports fell below those of 1913-14, this decline preceding that of imports by fully a year, and contributing to the collapse of the rupee. The causes of trouble, so far considered, belong to the first of the two groups mentioned at the outset of this article—to those which make for violent oscillations rather than for a sustained depression of trade. But contributory factors of the other type must now be examined. It has become common to single out India as the leading instance of a country whose export trade is likely to be seriously prejudiced so long as the problem of European reconstruction remains unsolved. Germany and Austria, it is pointed out, were formerly important markets for the cotton and jute of India. Russia was a notable consumer of Indian tea. With the elimination of Russia from the world's markets, and the tremendous depreciation of the Central European currencies, it is suggested that India's export trade is likely to suffer a prolonged depression, and that she, in her turn, will thus be unable to purchase British goods on the pre-war scale. This has become Mr Lloyd George's favourite illustration of the theme of the essential unity of the world's trade. When, however, the facts are closely examined, it does not appear that we have here any solid grounds for serious concern. Before the war, Germany and Austria between them accounted for only about one-fifth of India's exports of raw cotton, and for little more than one-quarter of her exports of jute, while in the case of Germany, at least, the depreciation of the mark, though it prejudices, is far from proving an insurmountable barrier to post-war trade. In 1920-21 Germany took over half her pre-war quantities of cotton, and nearly half her pre-war quantities of jute. The principal overseas markets for Indian cotton and jute were Japan and Great Britain respectively; while so far as general world impoverishment is likely to impede trade, it should affect these commodities in a lesser degree than most others. Russia took before the war only 12 per cent. of India's exports of tea, and tea accounted for only about 6 per cent. of the value of her total exports. Trade was not before the war confined so rigidly, and in such unvarying proportions, to particular channels that there need be here a really serious and enduring obstacle to a flourishing Indian export trade.

The threat to our trade with India, arising from the competition of native manufacturers, is more difficult to assess. The rapid expansion during the war in the production of the Indian cotton mills was no flash in the pan, as is shown by the comparatively slight relapse which it has undergone under the conditions of the last few years. The native yarns and piece-goods are of coarser counts and qualities than those in which Lancashire does the bulk of her trade. But, though the direct competition can thus be exaggerated, there is none the less an indirect competition which may prove more and more

formidable, and which we must expect to be stimulated by a growingly powerful nationalist sentiment and protective tariff policy. It is, however, only our cotton industry which can be said to be seriously threatened in this way, and the cotton industry has lived all its life exposed to such dangers, and has shown an unrivalled power of adapting itself to them and surmounting them. For the rest, the gradual industrialisation of India would seem more likely to increase on balance than to decrease the demand for British goods. An enlarged demand for electrical and textile machinery, for example, should counterbalance whatever diminution there may be in the importation of the steel plates and rails, which India is beginning to make herself. In any event, the danger is one affecting the general trend of British trade over the next half century rather than the early future.

Thus, on a general review, there seems no reason for expecting the present depression of our trade with India to be much more prolonged than usual. And this conclusion is supported by all the indications of the moment. Exports from India have recovered lately; for jute, in particular, there is now a strong demand, and the monsoon this year promises well. Meanwhile, the stocks of cotton goods in India are steadily declining, and fresh orders have for some time back been placed in Lancashire on a fairly substantial scale. On the other hand, it is probable that we have still a considerable time to wait for a real revival. The balance of trade swung round some months ago in India's favour, so far as merchandise is concerned, but there have been heavy imports of treasure, while the Secretary of State, in the interests of the rupee exchange, has hitherto postponed, so far as possible, the selling of Council Bills, and must soon find himself compelled to draw large quantities. There seems, therefore, small prospect of an early rise in the rupee, and here enters again into the problem the incalculable factor of exchange policy. The Indian Government have not formally abandoned the policy of the 2s rupee; so long as this remains, much uncertainty necessarily attaches to the future course of exchange, and there will always be those who expect, not perhaps a full realisation of the official policy, but a considerable movement in that direction. Anticipations of an eventual rise in the rupee serve to check the placing of overseas orders by India, since postponement may lead to their being placed later on more favourable terms. Exchange uncertainty may thus hold up the revival of our export trade to India for some months after it would otherwise have taken place. Such difficulties, however, cannot involve more than a comparatively short delay.

INDUSTRIAL PROFITS.

As we have often pointed out before, it is not possible to present an up-to-date statistical picture of the earnings of industry by reason of the varying length of time which is allowed to elapse before company accounts are published. The figures that are available, however, although a few months behindhand, are of considerable interest in that they serve to show how the fluctuations in trade and business have affected the earning capacity of the principal industrial undertakings of the country, and incidentally how the much-abused capitalist, in shape of the holder of industrial stocks and shares, has prospered or suffered. During the past 12 months we have analysed in a weekly table the profit and loss accounts of 1,386 industrial companies. The period covered by these accounts is a wide one, for while the bulk of those analysed in July of last year may have referred to the financial year ended March 31, 1921, those analysed recently will in the majority of cases have referred to the year ended December 31st or March 31st last. During the past three months 401 companies have been dealt with. These showed aggregate net profits, after payment of debenture interest, &c., of £25,195,690, as compared with £38,044,790, earned by the same companies in their previous financial year, a decrease of 33.7 per cent. The following table shows the results of our last four quarterly analyses:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

		Number of Companies.	Reports Published in		Decrease.	
			1920-21.	1921-22.		
1921.			£	£	£	%
Third quarter	232	24,157,772	13,912,771	10,245,001	42.4	
Fourth quarter	311	30,272,382	14,268,278	16,004,104	52.9	
1922.			£	£	£	%
First quarter	442	47,368,926	26,785,952	20,582,974	43.4	
Second quarter	401	38,044,790	25,195,690	12,849,100	33.7	
		1,386	139,843,870	80,162,691	59,681,179	42.6

There has been a progressive decline in the percentage decreases in each of the past two quarters, but this is due not so much to an improvement in profits as to the fact that the profits with which they are compared had already passed the top point. This is brought out clearly in the next table, which shows the increases or decreases recorded in each of our quarterly analyses since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.
First quarter	— 1.0 ..	+ 10.4 ..	+ 26.9 ..	+ 3.5 ..	— 43.4
Second quarter ..	— 5.8 ..	— 5.1 ..	+ 37.8 ..	— 8.4 ..	— 33.7
Third quarter	+ 12.3 ..	— 3.4 ..	+ 41.9 ..	— 42.4 ..	..
Fourth quarter ..	+ 4.7 ..	+ 10.5 ..	+ 27.1 ..	— 52.9 ..	..

The largest percentage increase was shown in the quarter ended September 30, 1920, and this would refer in the main to profits earned in the year ended March or June, 1920. The first actual decrease was shown a year ago. Since then the decreases have been on the substantial scale shown in the first table. The next table classifies the 1,386 companies whose reports have been analysed during the past year into 20 groups, showing the increases or decreases in net profits:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1921.	1922.				
		£	%	£	%	£	%

Waterworks	318	40,880,611	19,720,760	..	..	21,159,851	51.9
Miscellaneous	1,386	139,843,870	80,162,691	..	..	59,681,179	42.6

In our article a year ago there was an aggregate increase of 9.2 per cent., only seven of the groups showing a decline. The tea group, one of the three in the above table to record an increase, showed a decline of 87 per cent., a fact which largely explains the phenomenal increase now recorded. The effect of the advance in charges is presumably responsible for the increases under gas and electric lighting and power companies. Among the decreases, rubber and textile companies are the most prominent, but nitrate and canal companies and shops and stores are also conspicuous. It should be mentioned that the figures of the miscellaneous group both in the above and in subsequent tables are affected by the figures of the Dunlop Rubber Company, which made a net loss of £8,320,000, as against a profit of £2,163,900 in the previous year. The next table shows how profits were distributed in each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
	£	£	%	£	%	£	%
Third quarter 1921.	13,912,771	10,646,266	76.6	2,834,956	20.3	431,549	3.1
Fourth quarter 1921.	14,268,278	11,464,889	80.4	3,386,148	23.6	Dr 582,750	4.0
First quarter 1922.	26,785,952	22,171,510	82.9	9,689,030	36.2	Dr 5,074,588	19.1
Second quarter 1922.	25,195,690	20,066,774	79.7	6,156,048	24.4	Dr 1,027,132	4.1
	80,162,691	64,349,439	80.3	22,056,179	27.5	Dr 6,522,992	7.8

It will be seen that in the 12 months the amounts distributed to shareholders have exceeded profits by 7.8 per cent., funds in hand having been drawn upon to this extent. The last column includes the amounts by which the balances carried forward exceed or fall short of the balances brought into the accounts, as well as specific allocations to reserve. It has always been difficult, thanks to the divergence of method adopted by company directors in the presentation of accounts, to maintain an absolutely uniform method of compilation for the figures of reserves, and it is becoming increasingly so with the growing tendency nowadays to reduce the amount of information given. We have made every effort, however, to make the comparisons accurate, and to preserve continuity. In the next table we show how the various groups have dealt with their profits:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.	%
	£	£	£	£	%
Breweries	7,234,812	4,552,489	630	1,250,321	17.2
Canals, docks, &c.	272,394	121,925	44.4	157,139	58.0
Electric lighting, &c.	2,066,369	626,149	30.2	505,623	24.5
Gas	1,840,373	1,771,338	96.3	293,018	15.9
Hotels, restaurants, &c.	1,252,661	814,040	65.1	443,318	35.3
Iron, coal, and steel	11,831,517	7,753,643	65.6	2,215,291	18.7
Land, mortgage, &c.	3,681,572	3,079,234	83.6	953,350	25.9
Motor and cycle	406,696	406,696	100.0	273,608	67.3
Nitrate	740,662	740,448	100.0	2,066,094	21.1
Oil	9,733,826	7,017,485	72.2	2,716,111	27.5
Rubber, &c.	437,250	857,466	196.1	27,925	6.4
Shipping	6,561,340	3,799,341	57.9	1,186,490	18.1
Shops and stores	3,276,279	2,092,396	63.8	1,360,244	41.6
Tea	389,203	935,762	94.6	306,718	31.0
Telegraph, &c.	3,706,126	2,276,769	61.5	265,189	7.1
Textiles	3,196,161	6,083,659	190.6	1,430,460	44.8
Tramways	1,620,242	666,146	41.2	586,727	36.2
Trust companies	3,309,229	2,323,131	59.4	1,231,583	31.5
Waterworks	453,697	350,919	77.5	95,320	21.0
Miscellaneous	19,720,760	18,079,801	91.8	8,833,604	44.6
	80,162,691	64,349,439	80.3	22,066,179	27.5

Ten of the twenty groups have reduced reserves and balances in hand in order to meet dividend payments, the most curious case being the 27 motor and cycle companies, which have drawn from past profits a sum considerably larger than the net loss for the year for dividend distributions. It must be borne in mind, of course, that these are aggregate figures, and that they are apt to be affected surprisingly by the poor results of a few large concerns. Textiles also make a bad showing. In the matter of reserve appropriations the shipping group has a good record, and it may be mentioned that shipping companies, who incidentally are amongst the worst offenders in the matter of withholding information in their accounts, make a practice of setting aside large sums for fleet depreciation before disclosing profits. Electric lighting companies reserve the largest proportion of profits, while telegraph, tramway, and oil companies also set aside a fairly substantial percentage.

We show next the ratio of net profits and of amounts reserved or withdrawn from reserve to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.	%
	£	£	£	%
1921.	166,443,500	13,912,771	431,549	0.3
Third quarter	218,246,700	14,268,278	582,756	0.3
Fourth quarter				
1922.	442,936,400	26,785,952	5,074,588	1.1
First quarter	350,840,200	25,195,690	1,027,132	0.3
Second quarter				
	1,178,466,800	80,162,691	6,252,927	0.5

A year ago the ratio of profits to total share capital was 13.2 per cent., and in July, 1920, 14.6 per cent. The average rates paid on debenture, preference, and ordinary capital in each of the past eight quarters are set out below:—

	Debenture Capital.	Debenture Interest.	Average Rate.	Average Rate a Year Ago.
	£	£	%	%
1921.	35,707,800	1,589,573	4.45	4.12
Third quarter	54,253,900	2,456,478	4.52	4.43
Fourth quarter				
1922.	90,820,900	4,256,527	4.70	4.43
First quarter	87,804,700	4,387,109	5.00	4.61
Second quarter				
	268,587,300	12,689,687	4.72	4.48

	Preference Capital.	Preference Dividend.	Average Rate.	Average Rate a Year Ago.
	£	£	%	%
1921.	56,733,200	2,834,956	5.0	4.9
Third quarter	66,483,200	3,386,145	5.1	5.3
Fourth quarter				
1922.	183,183,300	9,689,030	5.3	5.0
First quarter	121,797,900	6,156,048	5.0	5.6
Second quarter				
	428,197,600	22,066,179	5.1	5.2

	Ordinary Capital.	Ordinary Dividend.	Average Rate.	Average Rate a Year Ago.
	£	£	%	%
1921.	109,710,300	10,646,266	9.7	14.2
Third quarter	151,763,400	11,464,889	7.6	11.6
Fourth quarter				
1922.	259,753,000	22,171,510	8.5	10.3
First quarter	229,042,500	20,066,774	8.8	12.6
Second quarter				
	750,269,200	64,349,439	8.6	11.8

High money rates have had more effect upon debenture than upon preference capital, the latter showing but little variation. The average rate paid on ordinary capital shows some signs of recovering from the low level recorded in the last quarter of 1921, but the average for 12 months shows a marked drop from the 11.8 per cent. for 1920-21. The final table gives the average rates for the various groups:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate a Year Ago.
	£	%	£	%	£	%	%
Breweries	33,461,847	4.85	23,255,166	5.4	35,533,452	12.8	11.8
Canals, docks, &c.	1,480,633	3.5	5,504,810	3.0	6,478,500	1.9	3.8
Electric lighting, &c.	11,766,012	5.0	10,072,071	5.0	10,858,510	5.7	6.6
Gas	9,292,663	3.6	7,909,835	3.7	37,728,399	4.7	3.6
Hotels, restaurants, &c.	7,101,660	4.4	8,149,843	5.4	9,208,732	8.8	10.1
Iron, coal, and steel	27,356,074	5.4	43,647,510	5.1	109,819,606	7.1	10.5
Land, mortgage, &c.	22,771,528	4.3	21,580,481	4.4	37,300,042	8.2	9.2
Motor and cycle	3,306,602	6.7	6,463,761	4.2	14,734,596	2.8	8.6
Nitrate	1,036,450	4.9			6,276,269	12.5	15.8
Oil	5,446,240	5.1	11,712,791	5.5	29,314,644	24.0	28.9
Rubber, &c.	1,039,269	6.8	819,961	3.4	41,247,328	2.1	7.8
Shipping	20,558,360	5.4	21,458,075	5.5	41,690,669	9.1	9.9
Shops and stores	8,176,010	4.9	23,040,335	5.9	25,136,466	8.3	15.0
Tea	1,355,106	5.3	5,335,029	5.7	10,024,362	9.3	5.5
Telegraphs, &c.	4,590,369	4.1	6,032,218	4.4	27,043,061	8.4	9.5
Textiles	9,447,094	4.2	30,999,899	4.6	59,914,173	10.2	13.6
Tramways	24,960,638	4.6	12,911,399	4.5	18,057,248	3.7	3.6
Trust companies	31,405,198	4.1	31,016,599	4.0	37,874,361	6.1	7.4
Waterworks	2,712,315	4.2	2,783,617	3.4	6,103,247	5.7	5.7
Miscellaneous	41,363,218	5.3	155,686,203	5.7	185,925,617	9.8	13.6
	268,587,282	4.7	428,197,603	5.1	750,269,194	8.6	11.8

Four groups only show a slight increase in the average ordinary dividend—namely, breweries and gas, tea and tramway companies. The average rate paid on ordinary shares in the oil group is still exceptionally high owing to the high rates paid by the Shell, Anglo-Persian, and Lobitos Companies. The rubber group shows an exceptionally heavy reduction.

LABOUR AND THE SOCIAL CREDIT SCHEME.

(FROM A LABOUR CORRESPONDENT.)

To those who believe that it is possible to secure better relations between workpeople and their employers it is of the utmost importance to understand the various currents of Labour opinion. It is for this reason, rather than because of its intrinsic value, that it is worth while to study the Douglas-New Age Credit scheme which has had so remarkable a vogue in the last three years in certain quarters. Strenuous efforts have been made since the war to commit the Labour movement to this. Active propaganda has been carried on in local Labour parties, I.L.P. branches, and trade union branches, and through the *New Age*, a weekly paper distinguished in the past for its advocacy of Guild Socialism, *Public Welfare*, the organ of the "Social Credit" movement, and the columns of trade union journals. Under skillfully chosen titles articles have appeared in the general Press, and even in parish magazines. In certain quarters the theory and schemes of Major Douglas and the *New Age* have been received with the enthusiasm of a new religion, but the Labour movement has remained cold. It was hoped to win support for the new school by the practical application of the scheme to the mining industry, but the miners

continued to insist on nationalisation. Some time ago the Labour Party Executive appointed a committee to inquire into the Douglas-New Age scheme. The members were Sidney Webb, R. H. Tawney, and Sir Leo Chiozza Money, the three non-mining Labour members of the Coal Industry Commission, Frank Hodges and F. B. Varley, of the Miners' Federation of Great Britain, G. D. H. Cole, Dr. Hugh Dalton, J. A. Hobson, and Arthur Greenwood (secretary). The committee has reported on the scheme, and its report has been accepted by the Labour Party Executive. With the issue of this report any hope of the Labour movement becoming committed to the teachings of the Douglasites has completely vanished.

The scheme falls under two heads. In the first place it analyses the working of the existing machinery by which credit or the use of capital is obtained, and secondly, it puts forward a proposal for the introduction of a new banking organisation and a new and compulsory system of fixing selling prices. The point which emerges from the Douglasite analysis (which the Labour Committee subjects to detailed criticism) is that the purchasing power in their hands is not and cannot be adequate to purchase the goods available for them. The committee, in its report, easily disposes of this contention. The report, indeed, destroys the theoretical basis of the scheme.

On the constructive side, the scheme proposes that consumable goods should at the outset be sold below their cost of production. How much below cost this price is to be fixed would depend upon how far total national production exceeds total national consumption. This is to be determined statistically from time to time, and prices fixed in accordance with the formula

$$\text{price} = \frac{\text{total national consumption}}{\text{total national production}} \times \text{cost}$$

Manufacturers are to be recompensed for the difference between the prices which they receive from consumers and their total costs by an issue of Treasury notes from the Government. The Labour Committee argues that the scheme is impracticable, on the ground that total production can only be measured in terms of money, and "the money valuation is itself dependent on the price to be set upon each of the different commodities." The scheme is criticised as unsound, on the ground that the wholesale payments to manufacturers of Treasury notes (which never appear to be cancelled) would raise prices, or if all prices could be rigidly controlled by law, the money demand would far outrun available supplies. Under the scheme we should, the committee suggest, "be back in the worst experiences of the war, in soaring prices, inadequate supplies, queues, and the rest of it—only very much more so."

The Douglas-New Age school lays great emphasis on the proposal that in each industry a "producers' bank" should be established, preferably by the trade unions concerned. A scheme for a miners' bank has been worked out in detail. All the workers in the mining industry would be shareholders in the bank, and all wages and salaries would be paid into the bank in bulk by the employers. The bank would be given by law the right to furnish whatever additional capital the colliery companies required from time to time, to the extent, at least, of the proportion that the total of wages and salaries bears to the total distributed in dividends. By this means, it is said, the employees in the industry would gradually become owners of an increasing number of colliery shares without having put up any money for them. The proposal ignores the need of the bank for capital before it can purchase shares, and the amount left out of wages and salaries after the needs of the workers had been met would be negligible. The resources of the bank would in actual fact be entirely swallowed up in expenditure on rent, rates, taxes, salaries, printing, stationery, &c.—expenditure which the authors of the scheme entirely ignore. It is assumed that there is something magical in membership of a clearing house, and it is laid down in the scheme that the producers' bank "shall be affiliated to the clearing house"; but it is not shown that this "affiliation" will in any way assist to secure the solvency of the producers' bank.

The Social Credit scheme, as the Labour Committee

point out, rests on the assumption that "whilst employer may struggle to retain their 'managerial functions' unimpaired, those who control finance will accept proposal which the promoters of the scheme believe will deprive them of their financial power." "We do not think," say the Committee, "that capitalists will relinquish financial control any more readily than the Engineering Employers Federation will surrender industrial and workshop control," and consequently "the view that the scheme holds out hopes of an early and effective revolution in industry is.....untenable, and the main value of the Douglas-New Age credit proposals disappears."

The Committee's final conclusions are emphatic. The scheme is denounced as "theoretically unsound and unworkable in practice." It is, moreover, "out of harmony with the trend of Labour thought, and is, indeed, fundamentally opposed to the principles for which the Labour Party stands." The Committee do not see in the social credit scheme a sovereign remedy for all ills. On the contrary, they assert that "to be effective, a policy in regard to banking and credit must be accompanied by an industrial and a fiscal policy." With the latter questions the Committee do not deal, but they introduce the question of a banking policy, which they propose to treat more fully in a further report. As might be expected, the Committee's alternative proposals are:—(1) The nationalisation of the joint stock banking system, and the substitution in the business of cheque banking and credit issue of a unified banking system, publicly owned and controlled; and (2) the energetic development throughout the country of municipal banks, established under Act of Parliament, conferring general powers upon municipalities to set up such institutions.

Whatever may be said of Labour's own proposals, it must at least be given credit for its investigation in the social credit scheme. Individuals have, here and there, written articles in criticism of it, but no association, organisation, or movement appears to have faced the heretics.

THE HALF-YEAR'S OVERSEAS TRADE.

In pre-war days it was often noticed that June saw some slackening in overseas trade, and in studying the Board of Trade returns for last month it must also be remembered both that the Whitsuntide holidays fell early in the month, and also that price-cuts in British manufactures have taken place in recent months. Nevertheless, the June returns, after all these allowances have been made, remain disappointing. Imports, at £84.3 millions, were £4.5 millions lower than in May, and while re-exports at £8.7 millions were only slightly worse than stationary, British exports were £5.9 millions lower than in May at £52.1 millions. The June export value figure was the lowest recorded since August, 1921. The summary figures for June and the first half of this year and last compare as follows:—

MONTH OF JUNE.				
	1921.	1922.	Increase or Decrease in June, 1922.	%
Imports	£ 88,171,892	£ 84,298,169	— 3,873,723	— 4.4
British exports	38,152,238	52,145,951	+ 13,993,713	+ 36.7
Re-exports	7,082,764	8,720,209	+ 1,637,445	+ 22.1
Total exports	45,235,002	60,866,160	+ 15,631,158	+ 34.6
Excess of imports over total exports	42,936,890	23,432,009	— 19,504,881	— 45.5
SIX MONTHS Ended JUNE 30.				
	1921.	1922.	Increase or Decrease in 1922.	%
Imports	£ 571,864,872	£ 487,262,611	— 84,602,261	— 14.8
British exports	368,895,027	551,761,805	+ 182,866,778	+ 49.6
Re-exports	49,685,689	55,671,520	+ 5,985,831	+ 12.0
Total exports	418,580,716	607,433,325	+ 188,852,609	+ 45.1
Excess of imports over total exports	153,284,156	79,829,286	— 73,454,870	— 48.1

In each case comparisons with a year ago are vitiated by the long coal stoppage of last year. For instance,

apart from the general dislocation of trade caused by that event, the accounts for June, 1921, included an entirely exceptional item of £5 millions for coal imports, while coal exports had dwindled to a negligible figure. From the financial point of view, the figures provide some satisfaction, the import excess having been reduced by £7.3 millions in the past half-year; and although invisible exports have been hard hit by the trade depression, there should be no doubt that the real trade balance is substantially in the favour of this country.

Value figures being affected so largely by price movements, and all comparisons with a year ago by the coal stoppage, possibly the most useful method of judging the trade of the past half-year is to set out quantities of some of the principal imports and exports for the first half-year of 1922, 1921, and 1920:—

IMPORTS, QUANTITIES.

	First Half-year.		
	1920.	1921.	1922.
Raw cotton(centals)	12,758,131	5,133,176	6,638,407
Sheep and lambs wool..	4,578,456	3,693,251	6,776,340
Flax, hemp, & jute (tons)	271,803	96,290	120,628
Wet hides(cwt.)	249,754	144,258	212,282
Dry & salted hides (cwt.)	568,956	112,039	208,616
Pulp of wood(tons)	505,225	178,592	302,250
Rubber(centals)	1,155,940	1,157,347	733,294
Iron ore(tons)	3,459,508	1,284,166	1,578,427
Grain and flour ..(cwt.)	82,207,111	75,593,976	85,598,245
Butter(cwt.)	1,057,785	2,145,705	2,397,340
Sugar(cwt.)	16,056,844	13,991,318	20,781,015
Tea(lbs)	217,539,336	219,607,479	186,787,987

Among raw materials, wool alone in this list shows larger imports than in 1920, although in most cases imports of this class were higher in the past six months than in the disturbed period of January to June last year. A similar comparison for leading exports reads as follows:—

BRITISH EXPORTS—QUANTITIES.

	First Half-year.		
	1920.	1921.	1922.
Coaltons	14,431,833	6,025,448	27,183,960

Boots and shoesdoz. prs.	396,791	175,049	207,396
Leathercwt.	168,748	80,485	105,700
Paper and cardboard ..cwt.	968,680	752,607	894,957
Locomotivestons	18,123	21,682	18,029
Motor cars and chassis ..No.	2,533	2,340	1,347

Coal is the outstanding feature, and we have so far recovered our export trade that shipments this year have been nearly double those of the first half of 1920. Coal exports of 27.8 million tons compare with 34.0 million tons in the first half of 1914, and in view of the world-wide trade depression, the comparison is by no means so bad as it might be. One of the most satisfactory points about the table is that the quantity of iron and steel exports is almost up to the 1920 level, while machinery, though well behind last year, exceeds the figures of two years ago. The cotton yarn figure is also rather remarkably satisfactory. On the whole, the export figures bear out the contention that trade as a whole has been engaged in slowly, but definitely rising above the depth of last year's depression.

The bullion and specie figures are as follows for the six months:—

	IMPORTS.		EXPORTS.	
	Jan. to June.	1922.	Jan. to June.	1922.
Gold	23,874,490	13,875,567	29,538,587	14,479,696
Silver	4,896,014	5,050,698	5,281,007	7,312,144

Exports of gold to the United States in the past six months were only £5,287,791, compared with £28,087,714 in the corresponding period of 1921. The figures of shipping engaged in the foreign trade give

evidence of greater activity. They may be summarised as follows:—

	Entered with Cargoes.	Cleared with Cargoes.
	Tons.	Tons.
Jan. to June.		
1920.....	16,849,194	18,263,337
1921.....	17,306,545	13,700,663
1922.....	19,957,402	2,688,451

Among commercial information on a later page of this issue will be found tables setting out in more detail the value figures of imports and exports in June and the first six months of this year and last.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

URUGUAY.—While the economic conditions of Uruguay have not improved during the term of office occupied by Dr Baltasar Brum, the President has nevertheless worked hard in the commercial interests of the country. The external debt of the country has increased during the past six years from a little over \$32,000,000 (£6,400,000) to \$74,000,000 (£14,800,000), while general trade has suffered a severe set-back, culminating within recent date in a banking crisis, during the progress of which several monetary institutions of standing have been obliged to reduce their credit operations in order to preserve their own financial integrity.

If the suggestion put forward by Dr Brum should be followed, he will be the last occupant of the Presidential Chair, since he has publicly advocated the abolition of his office and the adoption of a Commission, or Junta form of government, for he believes that "most of the troubles of Latin-American countries have arisen from the schemes of ambitious men to secure political power." Certainly no such charge could be urged against him personally, since it is generally conceded that he has performed his task of government in a thoroughly conscientious manner through an exceptionally difficult period. Notwithstanding the heavy deficit which the accounts of the Banda Oriental display, and the far from plethoric condition of the national treasury, every effort has been made to meet exterior obligations. As recently as June 1st a remittance amounting to 45 per cent. of the Customs duties collected during the last fortnight in May, was received in London to be applied to the service of the Uruguayan 3½ per Cent. Loan, while, at the commencement of the year, resumption of sinking fund operations was notified. During the war, Uruguay carried on a profitable trade, and the finances of the country appeared to be in a thoroughly sound condition, the national bonds being freely utilised as a means of remittance. The actual dimensions of the transactions carried out in these securities, subsequently divulged, created no small surprise.

Of late, Uruguay has been a considerable borrower on the American market, although in 1920 the proportion of the Uruguayan foreign debt in that country did not exceed 5 per cent. of the total amount. A loan of \$7,500,000 (£1,500,000), carrying an interest of 8 per cent. per annum, and issued at 98½, was raised in August last, while soon afterwards negotiations were opened for a further loan in the same direction for \$6,000,000 (£1,200,000), carrying a like rate of interest, the life of the loan being 30 years in comparison with 25, the length of the previous one. Until lately, Uruguay had not been in the habit of borrowing at such a high rate of interest as 8 per cent., with 4 per cent. amortisation; but the condition of the world's money markets at the time that the New York loan for \$7,500,000 was raised sufficed to give a considerable profit upon transfer of the proceeds to the borrowers. Following the example of the National Government, the Municipality of Monte Video has recently raised—with facility—a loan for \$6,000,000 from the United States, which gives a flat investment yield of 7½ per cent.

According to the latest available figures from Uruguay, the current financial year (ending June 30th) is expected

to show a deficit of about \$8,000,000, following upon a deficiency of \$3,500,000 for the previous financial year. Expenditure is estimated at \$43,243,500 (£8,650,700), towards which Customs receipts, which last year contributed \$17,000,000 (£4,400,000), are expected to produce little more than \$15,500,000 (£3,100,000). Whereas the Executive is in favour of extra taxation to meet the deficiency, the Chamber of Deputies prefers the application of the economic "axe," and proposes the exercise of more drastic economy in all spending departments.

BOLIVIA.—The appointment of Señor Don Alberto Gonzales (formerly Minister for Foreign Affairs) as Bolivian Minister in London will be welcomed as an indication of improved economic relations between the two countries. These, of late, have been far from satisfactory. Owing to the comparatively small population of Bolivia (under three millions) and the difficulties experienced in conducting internal commerce owing to the general lack of transportation, British trade has hitherto not been of first importance; but recent discoveries of extensive oilfields believed likely to rank eventually among the richest in the world, and in which British interests are concerned, afford promise of considerable commercial expansion. It would appear, however, that foreign interests will not be allowed to secure anything in the form of a monopoly, and competition, especially from the United States and Germany, is likely to become very lively. It is the desire of the Bolivian Government, profiting by the experience of Mexico, to preserve a dominating holding in its mineral wealth. The new oilfields, comprising an estimated area of 5,320,000 acres, should prove sufficiently important to employ the capital and enterprise of several different foreign companies. The principal field is located in the Santa Cruz district, which already had been selected for the introduction of a system of new railways to be electrically operated, and in connection with which an expenditure of \$10,000,000 (£2,000,000) is contemplated. Apart from this enterprise, a contract has been signed between the Bolivian and the Argentine Governments for the construction of a railway destined to tap the rich mineral and agricultural resources of Eastern Bolivia. With a view to exploiting hitherto untouched natural resources, the Government recently decided to issue a short-term internal loan of 2,000,000 pesos and to raise a foreign loan of \$24,000,000 gold (£4,800,000), at 8 per cent., secured by a first mortgage upon lines of existing railroads as well as upon others under construction. This issue would be in place of the loan of \$15,000,000 gold (£3,000,000) authorised by the Bolivian Senate in February last. The total foreign debt of the Republic, inclusive of the most recent loans, is not large, being under £6,000,000, the previously existing debt to France having now been expunged.

VENEZUELA.—Considering the economic difficulties experienced by the great majority of the Latin-American States during the past year, the financial position of Venezuela may be considered as fairly satisfactory. The Public Debt of that country at the end of 1921 amounted to 124,859,319 bolivars (1 bolivar equals 0.193 cents gold). Taking the population of the country at 2,411,952, it would appear that the *per capita* debt amounts to 51.76 bolivars. The 3 per cent. Diplomatic Debt of 1905, which originally amounted to 130 million bolivars, has been reduced 46 per cent. by amortisation and expiration, the outstanding amount to date being 70 million bolivars. The last date for tenders of these bonds for redemption was June 29th. The issues of 1903, 1904, and 1905, aggregating 5,633,490 bolivars, have not as yet been assigned sums for amortisation.

CHILE.—At the end of the last financial year, the Public Debt of Chile was stated to amount to 501,151,426 pesos (gold) and 145,149,600 pesos paper, exclusive of the sums of £1,500,000 and 80 million pesos paper, which sums of £1,500,000 and 80 million pesos paper, which the President has been authorised by Congress to raise, in the form of a loan, in order to cover the deficit of the fiscal year 1921, such loan being guaranteed either by bank credits, renewable treasury notes, or tax-exempt State bonds, bearing an interest not in excess of 8 per cent. For the current year, the total expenditure of the Republic has been estimated at 288,244,350 pesos paper and 65,958,045 pesos gold.

MONEY, AND HOW TO LOSE IT.

CONCRETE examples may, perhaps, be required to supplement the warnings advanced here last month as to the danger of dealing with a certain class of outside brokers. The financial fashion of this present hour is set rather strongly in the direction of giving money for the call of shares. This is called option-dealing, as, indeed, it is, though in its real sense option-dealing is the most scientific, and the most intricate method of Stock Exchange business which exists. By dint of flamboyant advertisement and adroit appeal to an instinct of sporting greed, certain outside brokers, bucket shops of the most marked type, have succeeded in establishing a wide *clientèle*. Many of their clients make money. The small fry are sometimes paid. Large profit-makers are less lucky. If the man who has "made" money which he cannot get should threaten to take the money out, it is politely hinted to him that the best such a thing as the Gaming Act. He is asked to accept something on account. He is urged to take another option. The bucket-shop, safely entrenched behind the client's fear of publicity, and the protection afforded to its own non-payment by the effect of the Gaming Act, can go on its way rejoicing. One day there was an exasperated victim of sufficient courage to push him to legal extremes. In this case the firm would not pay the money as being cheaper than winning an action, under cover of the Gaming Act, that would give the letting-in of daylight upon its methods. A firm named "Ediff" has been sending out a type-printed circular headed "100 per cent. profit within three months on a Government security," the last three words being underlined. To make such a statement, admits the firm, "appears at first sight to be carrying optimism past the limit of common sense." Any sensible person will heartily agree. Pleasurable anticipation is liable to suffer a chill, however, when further examination shows that the 100 per cent. profit may be obtained through the purchase of a three-months' option on Conversion stock, Corbols, Funding or the War Loan, the first-named being more particularly indicated. The option-rate on conversion for three months is given as 1½ per cent., plus ½ commission and another ½ if the option is exercised, plus a interest charge incurred in holding the stock for the period. Taking conversion at 77, there is 1½ call-rate and commission to be added, and at least another 1 per cent. for interest, making 79½. If the price rises to about 80½, the speculator makes "100 per cent." profit on his Government security. In other words, he will have a profit of £5 note, or thereabout, on £500 stock opened now. It seems a very modest 100 per cent. Another firm at pushing the sale of shares in the New Galician Standard Oil Company, Limited, shares which carry not less than 12 per cent. guaranteed dividend, with participating rights. Nor is this all. The buyer of shares at £1 each receives a discount of 2s. per share and a 5 per cent. income certificate of £1 for every five shares subscribed. "Knowing the immense fortunes that are being made in Galician Wells, we want you," the firm writes "to take up as many of these participating preference shares as you can afford." One pound 12 per cent. participating preference shares, offered at 18s, cum income certificate shares, in a Galician oil company, are sufficiently remarkable to raise the obvious question as to the nature of the guarantee. Maybe the readers of the *Economist* will be better satisfied on this point than we are.

A third case is that of a concern in Newington Causeway, who offer what they candidly call a thousand to one chance, although they may not put the same construction upon the phrase as the mere outsider will be tempted to do. Theirs is a proposition for getting the speculator to buy, for £3 per acre, the lease of oil land in Texas. One example is given of a lease-owner who with "eleven small farmer associates," sold his property for £750,000. "From a very poor man, he became very wealthy overnight," adds the grammatical account. We could go on multiplying illustrations from circulars and appeals, of the same type, that lie in front of us, but these are sufficient to show the traps laid for the unwary and the credulous. How there can be anybody so foolish

as to venture upon such wild-cat gambles, the prosaic, if practical, person may well ask, in frank surprise. But the papers would hardly be circulated unless their authors knew that some folks were likely to put up money. It is in the hope that the better-informed may drop a word of friendly warning to the probable recipients of such literature that this anthology is here presented for the amusement of our readers.

Notes of the Week.

Great Britain's Next Move.—The expected note from Germany asking for a release from further cash payments of Reparation for a considerable period has created renewed activity in reparation circles, and the Commission will shortly have to inform the German Government what payment it must make in August. An unconditional demand for cash even on the reduced scale agreed upon this year would almost certainly cause another downward plunge of the mark. France, as well as Great Britain, is now alive to the fact that the farther Germany is pushed down the slippery slope over which, first Russia, and subsequently Austria, have been rushing so precipitately, the more difficult it will be to call the halt. The last thing France wants is to bring financial ruin to the German Government, for this would only have the effect of making a completely bad debt of her reparation claim, while leaving intact the roots of German economic life, which will sooner or later grow into a great tree. The reiteration in the French Press of regret at the failure of the Bankers' Conference, and the recognition that a general discussion covering the question not only of inter-Allied debt, but also the scaling down of the total due from Germany, must come and come quickly, creates an occasion more favourable for a reasonable settlement than any we have experienced hitherto. The reported demand of the British Government that the Supreme Council should meet again and consider this situation seems to us most unfortunate in view of the circumstances under which M. Poincaré came into power, and the feelings of suspicion which, rightly or wrongly, Frenchmen generally entertain for that particular organ of international diplomacy. Although the general reduction of railway rates just announced will do something to help the recovery of trade in this country, the evidence of the foreign trade returns is not quite so favourable as it was two or three months ago, and the British Government, with the prospect of having to deal with a colossal unemployment problem again this winter, cannot afford to allow any point of punctilio to interfere with its efforts to deal with the one problem which can make a vital difference to our general trade outlook. In present circumstances it would not help matters very much for Great Britain to announce an unconditional cancellation of the debts due to her by the Allies; such an act of charity would certainly be misunderstood both in Europe and America. But it would be of the greatest possible assistance if our Government could state either through the mouth of the Prime Minister in Parliament, or through the usual diplomatic channels, to France, Italy, and Belgium that we are prepared to write them off upon terms to be mutually agreed upon, without regard to any action which the United States may take. This is, indeed, the only step on which it is the proper reply to the less uncompromising attitude of France.

House of Lords Reform.—In the House of Lords on Tuesday the Earl of Crawford read the resolutions upon which the Government propose to base their long-awaited Bill for the reform of the Upper Chamber. In many respects the resolutions are so vague, and leave so much undecided, that they convey the impression that the Cabinet is still unable to agree upon a definite plan. According to the resolutions the House, when reconstituted, is to consist of 350 members. Apart from "Peers of the Blood Royal, Lords Spiritual, and Law Lords," it is to be composed of (a) members elected, either directly or indirectly, from the outside; (b) here-

ditary peers elected by their order; (c) members nominated by the Crown, the members in each case to be determined by statute. These shadowy proposals carry us no further towards solution of the vexed problems of the proportion of elected to nominated members, nor of the mode of election to be adopted. The new House, it is suggested, is not to amend or reject Money Bills—no Government could nowadays propose that—but the decision as to what is a Money Bill is no longer to be left to the sole arbitration of the Speaker of the House of Commons. It is to be decided by a Joint Committee of the two Houses, with the Speaker as chairman. One is left wondering whether at times of political heat such a Committee would approach their decision in so technical and unbiased a manner as the Speaker. The only other point about the resolutions is the proposal that the Parliament Act shall not refer to Bills which alter or amend the constitution of the Second Chamber itself. Obviously, they make only the very beginning of long discussions, and it is impossible to foresee the shape in which legislative proposals will eventually be moulded. For as yet none of the t's are crossed nor the i's dotted, and it is upon the dotting and crossing that everything depends. As they stand at present the various clauses will cause about an equal amount of suspicion in both of the main political camps.

The Reduction of Railway Rates.—The announcement this week of an agreement between the railway companies and the Federation of British Industries renders unnecessary the hearing of the appeal for a general reduction of rates before the Rates Tribunal, and the question of the interpretation of last year's Railways Act is thus postponed for a future occasion. The companies have perhaps been wise to make friends with their enemy while they were in the way with him, for the companies' action lends at all events *prima facie* support to the view expressed in these columns that with the Government grant to assist them in the matter of dividends, the maintenance of the present freight rates could hardly be justified to-day, even if a reduction involved some immediate loss of net receipts. Under the terms now announced, the coal rate of 75 per cent. over the pre-war figure is reduced to 60 per cent., and the additional "flat-rate increase" falls to 2d. Iron ore, &c., which had already fallen to 50 per cent. over 1914, only receives the small concession of the further reduction of the flat rate to 2d. In the case of general merchandise, the increase of 100 per cent. is reduced to 75 per cent. above the rates in operation on January 14, 1920, while the various additional flat rates on the various classes are reduced from 1s to 6d, from 9d to 4d, and from 6d to 4d, the 3d flat rates being unaffected. The rate for smalls is to be reduced from 150 per cent. to 100 per cent. above the rates in force on January 14, 1920. The settlement is not to affect the question of merchandise carried by passenger train, nor any present or future negotiations relating thereto. The reductions are to come into force on the first of August next, and it is understood that neither the Federation nor the railway companies will apply or be parties to any application for a general alteration to come into operation before July 31, 1923, of the rates and charges now agreed. The general reduction in the index of rates from 200 to 175 is half the amount demanded by the traders, and the latter can hardly have accepted this compromise unless the companies had put before them some evidence as to their net receipts. If, as is no doubt the case, the companies are in possession of such information, it ought to be published, for it is only by a knowledge of the facts that a reasonable judgment can be arrived at by the public as to the true situation in so vital a national service.

The Amendment of the Trade Boards Acts.—The Minister of Labour has issued a paper stating that the preparation of a Bill to give effect to the recommendations of the Cave Committee's report will take considerable time and labour, and presumably will not be introduced in Parliament this session. The Minister has therefore set out in his statement a list of the changes proposed by the Committee which it will be possible to make by administrative action. The chief recommendation of the Committee

on the subject of wage rates, which it is proposed should be divided into (a) genuinely minimum rates fixed, if need be, by the vote of the State nominees, and enforced as at present under the criminal law, and (b) any other rates agreed between the parties enforceable, if approved by the Minister, under the civil law, is an alteration which cannot be made except by statute. The speeding up of the process of rate fixing or rate charging also involves amendment of the Acts, since the periods of notice, &c., are set out in the statute; but the Minister states that, so far as his own action is concerned, steps will be taken which will enable him in ordinary cases to reduce the period for deciding to accord or withhold confirmation to a fortnight. Similarly, as regards District Committees, the Minister has no power to appoint local bodies, this right being at present vested solely in the Boards concerned. The Minister proposes, however, to deal with the question of overlapping, and to endeavour to adjust the jurisdiction between the various Boards; he further undertakes that before instituting new Boards he will adopt the Committee's definition of the conditions in which they may be set up, and also their recommendation that no Boards should be instituted without a public inquiry. These and other minor administrative changes will do something to smooth the working of the system. But it is clear that no substantial progress can be made without a consolidating Act of Parliament. Meanwhile, the Trade Union Congress have also showed their hand in a report which in temperate language declares on the chief issues against the unanimous recommendations of the Committee. The view put forward is to leave the 1918 Act entirely unchanged. But in making their proposals it is evident that the Cave Committee had in mind the possibility that in the not far distant future the powers and procedure of the Trade Boards may be extended to cover not only the new employments that may be made subject to Trade Boards, but also the industries now served by Joint Industrial Councils. It will be a long time before public opinion will accept a system of State regulation of wages enforceable under penalty of imprisonment covering from a third to a half of the wage-earners of the country, however carefully the official "conciliators" with a casting vote may be selected from among the best lawyers and economists of the country. The Committee's scheme is designed to provide a framework within which the system may apply to a larger field, and at the same time avoid the graver objections against too rigid a system of wage determination.

The Quarter's Shipbuilding.—"Lloyd's Register Shipbuilding Returns" for the quarter ended June 30th last show that the merchant tonnage returned as under construction in the United Kingdom at the end of June, 1922, amounts to 1,919,504 tons. This represents a reduction of about 316,000 tons, as compared with the total at the end of the previous quarter; but under the present conditions even these reduced figures cannot be regarded as a true index of the activity of the shipbuilding industry in the near future. The total includes a considerable amount of tonnage (481,000 tons) on which work has been suspended for some time. Deducting this amount in order to enable a comparison to be made with figures for normal times, the tonnage actually under construction in the United Kingdom now amounts to 1,439,000 tons. The average tonnage under construction during the twelve months immediately preceding the war was 1,890,000 tons—i.e., 451,000 tons more than the present figures. As compared with the figures for the quarter ended March 31, 1922, there has been a considerable reduction in the tonnage launched and in the tonnage commenced in the United Kingdom during the past quarter, the tonnage of vessels launched being 185,000 tons and of those commenced 12,000 tons less. The total merchant tonnage building abroad is 1,315,926 tons, but this includes about 290,000 tons upon which work has been suspended, leaving about 1,026,000 tons actually under construction. The tonnage building abroad is about 128,000 tons lower than the total building at the end of March, 1922. The decrease affects most countries, but especially France, Holland, and Italy. The figures for the leading countries abroad are:—Italy, 285,671 tons; France,

243,290 tons; Holland, 226,318 tons; United States, 150,623 tons; and Japan, 115,512 tons. The above figures do not take into account the tonnage building in Germany and at Danzig, for which no returns are available, but it is estimated that the tonnage under construction in Germany at the present time is about 500,000 tons, and at Danzig 45,000 tons, as compared with a total of 547,000 tons in June, 1914. The tonnage of vessels launched in the world during the quarter amounts to 389,760 tons, of which 148,886 tons were launched in the United Kingdom and 240,874 tons abroad. In addition to the above, about 150,000 tons were launched in Germany, but, as previously stated, these figures are only approximate. The tonnage commenced during the same period amounted to 150,822 tons, of which only 38,877 tons were commenced in the United Kingdom.

Trade Facilities.—A statement of the guarantees which the Treasury have stated their willingness to give under the Trade Facilities Act, 1921, up to June 30th last, shows a total of £17,042,145, of which £14,958,145 were detailed in the statement to March 31st. Recent guarantees thus involve a total of £2,084,000, the principal item being £1,000,000 for various improvements to the City and South London Railway, principal and interest being guaranteed for 50 years. The Workington Harbour and Dock Board has obtained a guarantee of £500,000 for 30 years for constructing and deepening a dock and various other improvements, while £300,000 is guaranteed for 25 years for the Guildford and Waldershare Colliery Company for the sinking and equipment of a colliery.

The Bank Dividends.—The half-yearly dividend announcements of the principal banks recently made are at the same rates as at this time last year, as may be seen from the table below, in which the midsummer dividends for a number of years are shown:—

	Per Cent. per Annum.									
	1915	1916	1917	1918	1919	1920	1921	1922		
Bank of Liverpool and Martin's	*16	*16	*16	*16	16	16	16	16		
Barclays Bank "B" shares....	+17½	+17½	+17½	+20	+20	14	14	14		
Lancashire and Yorkshire	16	16	16	16	16	16	19	19(t)		
Lloyds	*18½	18½	18½	18½	18½	16½	16½	16½		
London Joint City and Midland	18	18	18	18	18	18	18	18		
Lon. Onty. Westminster & Parr's	18	18	18	20	20	20	20	20		
Manchester and County	13½	13½	13½	15	15	15	15	15

Williams, Deacon's	14	14	14	14	12½	12½	12½	12½		
Alexanders Discount.....	10	10	10	12	13	14	15	15		
National Discount.....	10	10	10	11	12	12	12	12		
Union Discount.....	13	13	13	13	14	14	14	15		

* Final dividend. † On old capital. (t) Lancashire and Yorkshire Bank.—Also a special cash bonus of 10s. per share, free of tax.

In addition to the usual dividend, the Lancashire and Yorkshire Bank makes a distribution of 10s per share, free of tax, equivalent to 5 per cent. actual, in commemoration of the bank's jubilee. The Union Discount Company increases its interim dividend by 1 per cent. It had been generally anticipated that bank dividends for the half-year would be unchanged, for while conditions have not been favourable for the earning of high profits, the necessity for holding back a large proportion of profits for investment depreciation has been obviated by the substantial increase in the market value of gilt-edged securities.

The Situation in Brazil.—The military outbreak at Rio Janeiro has failed to start a revolution, and its prompt suppression has apparently been without material effect either on the business position or the market in Brazilian stocks and bonds. But the disturbance should clear the political atmosphere for the inauguration of Señor Arturo Bernardes as President. His election was confirmed by Congress a month ago; but its legality is disputed, and during the contest he had become unpopular among the officers of the army through the expressions applied to them in a private letter bearing his signature, and published in the Press. He repudiated it, but the Military

Club, after investigation, pronounced it genuine. Their resentment at the confirmation of his election by Congress had been increased by the interference of Federal troops in the State election at Pernambuco, to the disadvantage of the Opposition candidate; and Marshal Hermes da Fonseca, in the name of the Military Club, had sent a telegram to the Federal commander, which was interpreted as an incitement to disobedience. The arrest of the Marshal, an ex-President of the Republic, was followed by a rising in Rio Janeiro under the command of his son. A small body of troops and a number of cadets, after some fighting in the suburbs, seized the fort of Copacabana, some five miles south of the capital, and cut the long-distance wires at Niteroy, on the opposite shore. The fort was bombarded, not too severely, and the insurgents, after further fighting, surrendered. Senhor Nilo Peçanha, the defeated Presidential candidate, has endorsed their action; but the disaffected element is small, even in the Army, and the disturbance may open the way to needed and drastic retrenchment. Since her alliance with Uruguay and Argentina and the disappearance of the danger in the south from Germany, Brazil cannot be threatened by any foreign antagonist. The present strength of the army is 54,000; its chief function is to keep order in the State elections, which would be better done by the non-political gendarmerie. Its higher ranks are powerful socially, but the participation of the cadets has cut off the supply of young officers, and the mutinous members of the Military Club have merited dismissal from the service. President Bernardes, therefore, may be able to recommend reduction to a figure more in conformity with the national need.

Coal and Iron and Steel Output.—The production of coal at the mines of Great Britain for the week ended July 1st was 4,530,000 tons, as against 4,353,900 tons in the previous week, and a weekly average of 4,606,000 tons for the first half of the year. The statistics published by the National Federation of Iron and Steel Manufacturers show that pig-iron output in June was 369,200 tons, as against 407,900 tons in May, a monthly average of 217,600 tons in 1921, and of 855,000 tons in 1913. The steel production in June was 400,200 tons, as against 462,300 tons in May, a monthly average of 302,200 tons in 1921, and of 638,600 tons in 1913.

General Electric Company.—The year ended March 31st last has been "one of difficulties and disappointments" for the General Electric Company, and the recently extended works were not fully employed. The overseas branches have also suffered, and the company has encountered the universal problem of a fall in the value of stocks. A satisfactory feature of the year's trading is that there has been no reduction in the number of transactions, but they have been of smaller amounts. The results, which are said to be better than at one time anticipated, are compared below with those of the previous year:—

	1920-21.		1921-22.
	£		£
Net profit	796,149		566,582
Brought forward	175,668		348,094
	971,817		914,676
Debt interest	8,000		182,431
Depreciation	157,915		161,745
Pension fund	17,266		15,283
Preference dividend	229,344		232,594
Ordinary dividend	211,198		105,599
	(10 %)		(5 %)
Carried forward	348,094		217,024

In June, 1921, an issue of £3,500,000 of 7 per cent. mortgage debenture stock was made, and this accounts for the heavy increase in debenture interests. The depreciation allowance comprises £45,500 for land and buildings, £79,500 for plant and machinery, £29,300 for loose plant, tools, &c., and £7,400 for fixtures and installations, the last two items being written down to £1 each, which is the figure at which goodwill and patents stand. The ordinary dividend, which is provided from the amount brought forward, is reduced from 10 per cent., free of tax, to 5 per cent. The reserve fund stands at £707,000, stock in trade and work in progress has declined by £581,100 to

£2,195,800, largely as a result of "a considered policy of stock reduction, which has been carried out throughout the year." Last year's debenture issue enabled loans for £2,575,000 to be wiped off, and the 4 per cent. debenture stock for £200,000 no longer appears, all the holders presumably having accepted the offer to convert into 7 per cent. stock.

Transvaal Output in June.—A welcome improvement is noticeable in the June statistics of gold output and labour in the Transvaal issued by the Chamber of Mines. The June output at 675,697 ounces of fine gold compares with 629,786 ounces produced in May. In June last year the output was 678,490 ounces. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.

The figures of number of natives employed at the gold mines show a steady improvement.

An address will be delivered to members of the London Chamber of Commerce and others by Mr. Edward Birin (Consul-General for Latvia in London) on "The Prospects of British Trade with Latvia, with special reference to transit trade through Latvia," at the offices of the Chamber, on Tuesday, July 18, 1922, at 3 p.m.

Oversea Correspondence.

UNITED STATES.—TRADE CONDITIONS—CROP PROSPECTS—EXPORTS IN MAY—RAILROAD EARNINGS—GOVERNMENT FINANCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 3.

FURTHER improvement in trade and industry generally took place last month, according to the Federal Reserve Board and other authoritative sources of information. The outstanding features of the economic development were the continued increases in the physical volume of production, a further advance in prices, and a decrease in unemployment. There was a noteworthy gain in production, not only in basic industries, but in highly finished lines of manufacture, the increase having been especially marked in iron and steel and in those industries which are large consumers of iron and steel products, such as automobile plants, foundries, and machine shops. Building activity continued practically unabated, the value of contracts having been about 50 per cent. greater than for the corresponding period of last year. Employment conditions generally showed a decided turn for the better. Most of the larger cities reported an increase. In certain lines an actual scarcity of labour now exists, as, for example, in the iron and steel and building trades. While there is still considerable unemployment, particularly in the coal and textile industries, where labour troubles prevail, figures furnished by the United States Employment Service and by various State Departments of labour at the end of June showed marked reductions in numbers out of

work. As in recent weeks, the best reports regarding current trade distribution are being received from the grain-growing regions of the West, where the generally favourable crop outlook has served to increase the disposition to buy more freely. Among the leading industries, record sales and output feature the automobile and cement trades, the latter industry having been greatly stimulated by the big road construction programme that is planned, estimated at some 40,000,000 square yards; other building materials continue active, although in primary lumber markets buying has slackened somewhat, with a slight easing of prices for woods used in house construction. In the steel trade, higher labour and fuel costs are given as reasons for recent advances in prices of finished products, such as wire rods, steel bars and tank plates. Railroads are still in the market for cars, and are buying rails and track material freely. In the market for copper metal heavy sales continue to be noted. With the exception of a material increase in demand for silk piece goods for delivery during the next few months—in strong contrast with the small hand-to-mouth buying for some time past—primary textile markets are quiet, but prices generally are very firmly held, with an advancing tendency in many directions owing to the high costs of raw cotton, wool, and silk. Labour troubles in this country have been augmented by the strike, which began July 1st, of some 400,000 railroad shopmen in protest against the wage reductions recently prescribed by the Railroad Labour Board, effective on that date, and applying to shopcrafts and other classes of railway employees. Whether or not maintenance of way men and other union workers will join the walk-out is at present uncertain; but thus far train service throughout the country has not been interrupted to any extent worth mentioning, and railway managers are emphatic in their declarations that they are fully prepared to cope with the situation, and they express confidence that the movement of traffic will not be seriously interfered with. One thing is certain: public sentiment is not in sympathy with the strikers, who are refusing to abide by the decisions of the Railroad Labour Board—a tribunal created by Congress to fix rules and wages for railway employees.

Latest returns from the Department of Commerce show in what directions, chiefly, our export trade decreased in May, and also reveal some interesting cross movements in the outflow of different products. Exports of merchandise for May aggregated only \$308,000,000, as compared with \$318,100,447 in April and \$329,709,579 in May of last year. Assuming that June exports equalled those of May, the exports for the fiscal year just ended promise to approximate \$3,745,000,000, as against \$6,516,510,033 in the preceding fiscal year. On the same basis of computation imports for the fiscal year will total about \$2,600,000,000, compared with \$3,654,459,346 in the previous year. There is thus indicated an excess of exports to the extent of \$1,145,000,000, which is less than half that of the preceding year, and only about one-quarter of that of the freak year 1918-19; it is somewhat larger, however, than that of 1914-15, and far heavier than the excess of exports reported for any fiscal period preceding the first year of the war.

Reports filed with the Interstate Commerce Commission show that 136 of the 201 first-class railroads of the United States had gross earnings for the month of May of \$332,770,500, representing a gain of six-tenths of 1 per cent. over last year, while their operating expenses of \$262,843,000 were 6½ per cent. less than in the same month of 1921. Their net operating income of \$46,967,700 compares with \$29,393,000 for the same number of carriers in May of last year. In order to earn a return at the rate of 6 per cent. annually on their tentative property valuation, complete reports from all railroads should show a net operating income of \$85,211,600; recent estimates place the total at \$65,000,000 approximately.

The Government succeeded in balancing its Budget for the fiscal year just ended, and will probably be able to show a small surplus. Final reports of Federal financial operations are not yet available, but, according to Under-Secretary of the Treasury Gilbert, expenditures for the past year will fall below \$3,900,000,000, or some \$500,000,000 less than was estimated at the beginning of the year. That result was accomplished through the un-

Graham House, Old Broad Street,
London, E.C. 2

remitting efforts of all Government Departments to keep expenditures down to the lowest possible limit consistent with proper administration. The gross public debt of the United States at the end of the fiscal year, as shown by the latest returns, amounted to \$22,950,000,000, approximately, representing a total reduction of more than \$3,600,000,000 from its peak on August 31, 1919. The reduction, Mr Gilbert explains, was brought about by the application of \$1,000,000,000 in the general fund, made possible by lessened expenditures and outstanding maturities; the application of some \$200,000,000 of repayments by foreign Governments; the receipt of funds from salvage and other assets remaining over from the war totalling about \$1,400,000,000; and by the application to debt retirement of about \$1,000,000,000 of surplus tax receipts during the fiscal years 1920, 1921 and 1922. As to the future, liquidation of the public debt, it is pointed out will have to be accomplished principally from surplus revenue receipts, and particularly through sinking fund and other accounts, since the Treasury balance has been reduced to the lowest possible figure consistent with the proper conduct of Government business. The success of the Treasury's plans for refunding the \$7,500,000,000 short-dated debt, consisting of Victory notes maturing next May, Treasury certificates of indebtedness and war savings certificates, seems assured. Since that refunding programme was started in April, 1921, considerable progress has been made. Victory notes now outstanding amount to about \$2,000,000,000, as against \$4,000,000,000 at that time; Treasury certificates aggregate \$1,830,000,000, against \$2,750,000,000; and the amount of war savings certificates has been reduced from \$750,000,000 to \$650,000,000. There are now outstanding approximately \$2,200,000,000 new obligations in the form of Treasury notes issued in connection with the refunding plan, but they will mature at various dates in 1924, 1925, and 1926. There is still outstanding, however, about \$4,500,000,000 of obligations, which will mature in less than a year; of that amount \$2,000,000,000

is in the form of Victory notes, and their refunding will present to the Treasury Department an important problem. For the fiscal year ending next June, present indications point to a Budget deficit estimated in some quarters as high as \$485,000,000; it is too early to make calculations for the ensuing year, however, especially since appropriations have not yet been passed by Congress.

FRANCE.—END OF SESSION — REPARATIONS — GERMAN — A MORATORIUM — PRICES — TAXATION RETURNS — BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 12.

THE Chamber and the Senate, by dint of sittings last Saturday that extended well into Sunday morning, both brought to a close at 12.50 a.m. sessions that began at the commencement of January, and adjourned until the middle of October. With the exception of the Army Bill, it cannot be claimed that any measures of first-class importance have been passed into law. A very large part of the time of both Houses, however, as might have been expected, has been devoted to matters connected with reparations and other features of French foreign policy, which still remain, as is inevitable, the principal subjects of public attention here. The outstanding effect of this has been that the Budget proposals for 1923, although laid before the Chamber some months ago, have not yet come up for discussion, and cannot now be dealt with before the autumn. Recent developments in connection with the Reparations problem and with the financial situation of Germany have rendered the prospects of a speedy disposal of the Budget in the autumn still more doubtful, and there is now the fear that, notwithstanding the commendable promptitude of the Finance Minister, M. de Lasteyrie, in drafting his Budget proposals, recourse will once more be necessary by the end of the year to the objectionable system of *douzièmes provisoires*, or monthly votes on account.

The formal demand of the German Government, which has been received by the Reparations Commission to-day, for a complete postponement of all payments that will become due under the provisions of the Peace Treaty during the next two years, cannot be said to have come as a surprise, so far as French opinion is concerned. There is—and has been, indeed, since even before the Treaty of Versailles was signed—a fixed belief in this country that Germany, although defeated in the field, will make every endeavour to achieve victory in peace, by avoiding the carrying out of her obligations to make reparation to the people whose economic and financial ruin she so nearly accomplished during the war. Whether she will succeed in this attempt now obviously depends very largely on the attitude that is adopted by Great Britain.

The French attitude in regard to Germany may now be described as an irritated but nevertheless patient marking of time. Germany, it is felt, in her effort to cheat her creditors, has set in motion forces that have now got beyond the control of both herself and the Allied Powers, and all that can be done is to await the inevitable catastrophe. Just what action will have to be taken to prevent France being also driven to disaster nobody now ventures to predict. It is significant that for some time past little has been said in the public Press as to the numerous methods that were formerly advocated for bringing effective pressure to bear upon Germany for the purpose of exacting payment. The spectre of the inter-Allied debts and the enigmatic attitude of Europe's Transatlantic creditor appears to have extinguished most of the hopes that were formerly entertained in this country of relief in the form of money, and increasing faith is now placed in the possibility of obtaining payment in German labour and materials.

There appears to be a strong probability, at the time of writing, that Germany's application for a moratorium will be granted, if only through force of circumstances, but it is obvious the matter will not end with this. The Reparations Commission, with whom the immediate response to Germany rests, will in all probability postpone any definite reply until it is in possession of the

report it is awaiting from the Allied Committee of Guarantees, which has been sitting in Berlin for some weeks past, for the purpose of investigating the exact financial situation and potential resources of the German Government. This committee, it is expected, will return from Berlin on Saturday, and its report, it is believed, will throw much light on the real facts of the German situation, and particularly as to the extent to which the Government of the Reich has deliberately contributed towards rendering it impossible for Germany to fulfil her engagements. Light will also be thrown on the capacity of Germany to bear the heavier taxation which the Reparations Commission has insisted shall be imposed, and on the legitimacy of the reckless expenditure on public works either already carried out or projected for the near future. With this information in hand, the Commission will be in a position to give a definite reply to the German request, and, if necessary, to carry matters further. It seems impossible, however, that the eventual outcome can be anything other than a new inter-Allied conference, in the near future, at which decisions must be taken to deal with the reparations question, the inter-Allied debts, and the proposed international loan as integral parts of one and the same whole.

The general index figure of wholesale prices in this country, as published by the *Statistique Générale de la France* for the month of June, indicates that during the four weeks the cost of living again showed a substantial increase. The corrected general index figures for 45 commodities, for the months of March, April, and May (taking the figure of 100 as a base for the period 1901-1910), were respectively 355.4, 362.6, and 366.2, whereas the provisional general index figure for June is returned as 375.7. The detailed comparative figures for the past two months are as follows:—

	May. (Corrected.)	June. (Provisional.)
General index figure (45 categories).....	366.2	375.7
Foodstuffs (20 categories).....	387.3	394.8
Vegetable foods (8 categories).....	371.8	381.1
Animal foods (8 categories).....	427.4	428.6
Sugar, coffee, cocoa, &c. (4 categories).....	338.3	354.4
Industrial materials 25 categories).....	349.3	360.5
Minerals and metals (7 categories).....	298.7	306.2
Textiles (6 categories).....	395.4	435.8
Sundries (12 categories).....	355.7	354.5

The index figure for retail prices of foodstuffs in Paris (13 categories), which was returned as 3,159 (or 194 per cent. increase on 1914) for March, 3,272 (or 204 per cent.) for April, and 3,413 (or 217 per cent.) for May, is given as 3,297 for June, or an increase of 207 per cent. on the prices that prevailed in 1914. Taking France as a whole, however, and by regions, the index figures for the 13 categories of foodstuffs show a general reduction, as will be seen from the following comparative table of regional index numbers for the first and second quarters of 1922:—

	First Quarter.	Second Quarter.
Whole of France.....	3,239	3,163
North of France.....	3,431	3,378
East of France.....	3,127	2,996
South-East of France.....	3,202	3,130
South of France.....	3,120	3,059
West of France.....	3,098	3,015
Alsace-Lorraine.....	3,272	3,134

The taxation returns for the month of June are now in, and show a net yield to the Treasury of 1,224,572,000f. This figure, as compared with that for June last year, shows an advance of 194,612,000f, or an increase of 19 per cent. It is, however, unsatisfactory in so far as that it falls below the Budget estimate by 85,356,070f, or 6 per cent., the reason being chiefly the falling off in Customs revenue (40,631,000f), and in the tax on business turnover (64,464,000f). The improvement last month has been well maintained. The returns for May showed a deficit as compared with the Budget estimates of 6 per cent., but in January the figure was 7, in February 19, in March 14, and in April 11. When the actual yield for the two months of May and June is compared, there is an increase for June of 46,969,000f.

Apart from a certain collapse in Russian nationals that had secured a certain speculative value, the Bourse, this week, has been well maintained, largely owing to the

strength of British sterling and American dollars, but the chief feature of interest has been the remarkable rise in the value of the pound and the dollar, that has been due largely to speculators who have shown uneasiness at the prospect of Germany refusing to fulfil her obligations. French Funds have been a trifle weaker, the Three per Cents. having dropped from 57.90 to 57.70, the 1917 Four per Cents. from 61.95 to 61.20, and the redeemable Five per Cents. from 90.10 to 89.65.

GERMANY.—POLITICAL CRISIS — FINANCES — EXCHANGE AND BOURSE — PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 11.

REPORTS from abroad and comparative quotations show that Germans, not foreigners, bore the mark. The home public, having for a week been frightened out of its wits by frightened Ministers and frightened agitators, rushed to turn its marks into something solid, and as solid wares were too abundantly bought up last October and November, the solid commodities sought were the dollar, pound, and other high currencies. The Reichsbank is reported to have sold 100,000,000 gold marks of foreign bills in a vain attempt to stay the rout. In business circles it caused surprise that the Cabinet, which knows well the disastrous effect of each mark depreciation, made no attempt to reassure the public, and that the Majority parties did not take the initiative. The Reichstag was busy on a Bill which provides penal servitude in certain conditions for the ugly but in no way dangerous offence of insulting the memory of dead persons, considering a Socialist proposal that the death penalty should be extended to offenders who innocently join assassination societies if the offenders, through their own negligence, do not know that assassination is the society's aim, and in general considering official plans for executions, penal servitude and unlimited fines. On the wisdom of these dreadful measures there is a fair agreement between the various Republican parties; but no agreement has been come to on the more reasonable plan to strengthen the Government; the Moderate Socialists refuse to work with the People's Party, and the Communists to-day proved their devotion to the Democratic Republic by publishing an appeal from Moscow for overthrow of Dr Wirth and substitution of a Communist minority dictatorship. Of this there is no more prospect than of a Monarchist revolt.

While it is unquestioned that the unnecessary official and public panic has dealt a new severe blow to the finances, there is a tendency also to exaggerate the severity of the blow. The Cabinet is treating the latest mark exchange decline as a new fact which at last really makes Reparations impossible; there is new talk here, as abroad, of State bankruptcy, sudden collapses, and so on; and, as Germans see, there is a new demand in certain foreign quarters for a radical reconsideration of Reparations, if not of the whole Versailles Treaty. The public memory is here, however, rather short. As regards home finances, the depreciation of the mark to any particular figure cannot produce a crisis, or bring any conditions which may be considered more immediately critical than are produced by any other other mark level; and as regards Reparations also it cannot be said that any particular mark exchange makes them impossible, if they were possible at the preceding bad exchange. Exactly the same crisis was gone through between June and November, 1921. In the latter month the mark at 300 to the dollar was taken as the worst conceivable depreciation from home or Reparations standpoint; the Cabinet, then hoping for a loan or a complete moratorium, proclaimed that it would no longer finance Reparations by mark-selling, and foreign experts generally agreed that something must be done. But after nothing was done that could really help, it was still found possible to balance the 1922 Budget, without Reparations; and when inflation, prices, wages, and other values had more or less adapted themselves to the 300-

French American Banking Corporation

mark dollar, Reparations were still being financed by mark-selling. For the last reason, a new mark fall must have come before the end of the summer if it had not been precipitated by the unexpected political crisis. To-day the foreign public is again in the mood of last November, convinced that things can go no further, and determined that remedies shall be found; but if last winter's history is repeated by no remedy being found, it will probably be found that a mark at 500 to the dollar also has no absolute significance. Certainly the Republic will not go bankrupt, except in the sense in which it has long been bankrupt, and it is by no means certain that Reparations will not be financed by further mark-selling. As long as Germany is a great producer, her marks, however depreciated, have buying-power for foreigners—it is a matter of indifference to foreigners whether they buy a dollar's worth of German goods with 300, 500, or 1,000 marks. If the Wirth Cabinet this time really means to default on Reparations should no relief be given, it is a pity that it did not execute its promise to default last winter. Had that been done, the crisis might have been over by now. The official view before Dr Rathenau's murder was, however, that the worst conceivable results of the mark-selling system were preferable to the threatened further occupation of the Republic's territory.

On home finances the mark fall will have a bad result. The Cabinet lately limited the yield of the supposed one milliard gold mark Compulsory loan to 60 milliards paper. At the latest exchange, the loan will yield only about half a milliard gold; and owing to the rise in values the loan will be a much smaller burden than was intended. Some taxes will increase immediately and automatically, and on these the State will not lose, but some will increase automatically and slowly, and of these the new mark depreciation will alleviate the burden. This also applies to income-tax already assessed but unpaid. On future income-tax the present progressive rates would impose an unbearable burden; and, having reduced the rates last winter, the Reichstag is reducing them again. The minimum 10 per cent. rate now imposed on the first taxable 50,000 marks will in future be imposed on the first taxable 100,000 marks, and the maximum rate, now imposed on income exceeding 2,000,000 marks, will be first reached on income exceeding 3,000,000 marks. Certain other minor changes are made. The actual tax, according to the new and former schedules, works out at:—

Taxable Income.	Tax Payable.	
	New.	Old.
50,000	5,000	5,000
100,000	10,000	15,500
500,000	119,750	160,500
1,000,000	324,750	385,500
10,000,000	5,574,750	5,710,580

As was pointed out from here when the income-tax was last reduced, the repeated changes in rates cause great confusion. For direct taxes generally the new Austrian system of "taxation-units," based on the currency's changing buying power, is more satisfactory.

The Reichsbank reports clearings of 191,413 millions in June, against 68,764 millions in June, 1921, and 943,612 millions, against 435,183 millions, in the first halves of 1922 and 1921. The bank's report for June 30th shows the greatest recorded increases in Treasury bill discounts and in circulation, the figures being 18,501 millions and 11,276 millions respectively, also a large increase among assets in holding of Kassenscheine, representing an additional demand for credit, which rose to 14,605 millions.

The following is the movement of discounts and note circulation:—

(In millions of marks.)		
	Discounts.	Notes.
June 30, 1914	1,213 ..	2,407
December 31, 1918	27,416 ..	22,188
December 31, 1920	60,634 ..	68,805
December 31, 1921	133,393 ..	113,639
March 31, 1922	148,683 ..	130,671
June 30, 1922	190,877 ..	169,212

The main cause of the inflation continues to be Reparations. Of 23.13 milliards yield from floating debt operations in April-June inclusive, 21.51 milliards went on execution of the Peace Treaty.

The *Frankfurter Zeitung's* monthly wholesale index, altered by inclusion of 16 finished industrial products, and now calculated on the basis of 100 for 1914, shows a continued price-rise in June:—

	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Industrial Products.	All.
Mid. 1914	100	100	100	100	100	100
Jan., 1, 1920 ..	1,972	3,407	2,749	1,101	1,343	1,987
Jan., 1, 1921 ..	2,019	3,840	2,780	1,776	1,594	2,127
Jan., 1, 1922 ..	3,840	7,168	5,178	3,149	3,159	4,238
June 1, 1922 ..	6,967	11,891	10,141	6,413	5,859	7,841
July 1, 1922 ..	8,323	13,938	12,168	6,881	6,750	9,140

Stocks, again fully under control of the exchanges, last week rose rapidly; but to-day, with weakening exchanges, there was a sharp all-round decline. The *Frankfurter Zeitung's* index for 15 dividend-payers shows 42,228 for July 7th, against 35,477 for June 30th, and 40,250 at the height of the November boom. All groups of industrial stocks, and practically all individual stocks, took part in the rise; and there was considerable foreign buying. The index for home loans rose during the week from 959 to 1,008, the highest point ever reached. Foreigners apparently did not all share in the panic; and there was active buying, reported largely English, of Federal Threes, which yesterday rose to 249, which is more than four times the price at the end of 1920.

ITALY.—RISE IN SAVING DEPOSITS—PUBLIC REVENUE—SECURITY INDEX NUMBER.

(FROM OUR CORRESPONDENT.)

TURIN, June 30.

THE collapse of the Banca Italiana di Sconto has led to a new increase in the deposits of the State postal savings banks. The following are the most significant figures (in millions of lire):—

June, 1914	2,138.4	September, 1921	7,960.6
" 1918	2,927.9	October, "	7,940.2
" 1919	4,232.9	November, "	7,948.2
" 1920	5,896.2	December, "	8,146.2
" 1921	7,869.4	January, 1922	8,230.9
July, 1921	7,932.0	February, "	8,290.9
August, "	7,946.5	March, "	8,349.1

The increase in the December, 1921, figure was wholly due to a sum of 206.3 million lire of yearly interest falling due. Apart from this exceptional variation, the stagnation of deposits in the second half of 1921 compares strikingly with the increase in the first three months of 1922. The public, uneasy about the private banks, are again bringing their savings to the public postal savings banks.

The latest accounts of the principal revenue items are not so satisfactory as the previous ones:—

(In Millions of Lire.)		
	1920-21.	1921-22. (Inc. or Dec.)
Taxes on incomes	3,146.9 ..	3,984.9 .. + 837.9
Stamp	1,071.4 ..	1,260.9 .. + 189.6
Registration and succession duties ..	716.5 ..	863.9 .. + 147.4
Customs and Excise	1,561.5 ..	1,846.6 .. + 285.1
Monopolies	2,527.0 ..	2,729.7 .. + 202.7
Sale monopolies	466.7 ..	382.1 .. — 84.6
Lottery	133.3 ..	168.9 .. + 35.6
	9,623.3 ..	11,237.2 .. + 1,613.9

These results are not so satisfactory as they appear on the face of it:—(1) It is uncertain how much the month of June will yield; but it seems unlikely that the sum total of principal revenue items for the fiscal year 1921-22, which ends to-day, will exceed 13 billion lire. "Minor" items of revenue may perhaps bring it up to 17-18 billion lire; but even that leaves us far below the expenditure total. The latest hints from the Treasury point to a deficit of 6.7 billion lire for the fiscal year just ending. (2) A beginning of slackening is noticeable in various items. For instance, in the taxes on incomes group the war profit tax in the 11 months has yielded 1,565 million lire, against 1,623 millions in the preceding year; and this item is bound to go rapidly to zero. How this source of revenue is to be replaced is uncertain. The new tax on income will be slow to give abundant fruits. In the meantime, the extraordinary capital levy will tell the position, especially if taxpayers can be induced to pay the whole of tax in a lump sum instead of spreading it over 10 or 20 years.

Another doubtful item is the increase of 189.6 million lire in the yield of the stamp tax. The good result is for the greater part due to 134.5 million lire of increase in the yield of the stamp tax on luxury sales. This tax is 12 per cent. on the sale of luxury goods to customers and of 6.30 per cent. on the sales between merchants and merchants. Like the sale tax in France, this tax has given somewhat disappointing results. The estimated yield was 350 million lire for the whole fiscal year; and the actual yield for the first 11 months was only 188.3 millions. Other items in this group are rather disconcerting. Apart from an increase of 52.2 million lire in the tax for the benefit of wounded and mutilated men and their families, which is simply an additional tax on all stamps, we see decreases in the yield of the stamps on contracts (— 22.6 million lire), on motor-cars (— 18.6), on precious stones (— 9.3), &c. The greatest increase in the old stamp taxes is ominous: the yield of the tax on the paper circulation of issue banks has gone up from 228.9 to 273.1 million lire. As it is desirable that the paper issues should be checked, this item should be bound to decrease.

Professor Bachì has published the usual index number of share prices for May, the basis of 100 representing the price for December, 1918 (see *Economist*, May 13th, page 906):—

	December, 1921.	March, 1922.	May, 1922.
Banks	94.19 ..	90.47 ..	92.14
Railways	50.84 ..	50.09 ..	53.80
Land transport	58.45 ..	61.46 ..	66.13
Navigation	53.97 ..	47.56 ..	52.07
Cotton	125.08 ..	115.75 ..	128.83
Jute	102.15 ..	108.27 ..	104.04
Wool	118.41 ..	118.35 ..	123.41
Hemp and flax	155.41 ..	124.64 ..	144.06
Silk	153.85 ..	128.62 ..	161.60
Mines	53.23 ..	50.14 ..	48.61
Iron and steel	17.77 ..	13.95 ..	15.90
Engineering	32.81 ..	18.12 ..	17.73
Motor cars	56.29 ..	47.55 ..	56.71
Electricity	67.95 ..	68.36 ..	69.13
Chemicals	58.98 ..	54.66 ..	61.40
Sugar	101.54 ..	96.92 ..	103.57
Food	107.33 ..	98.80 ..	105.02
Water supply	90.35 ..	87.06 ..	86.21
Building and land	100.64 ..	93.23 ..	90.48
Miscellaneous	112.26 ..	103.62 ..	110.68
General index	63.84 ..	56.70 ..	59.45

In March the quotations reached low-water mark. The subsequent rise is as yet not general, nor very sure of permanency. The group of textiles shows up most prominently, and it can be said that there the crisis is past. Almost all mills are working at full time. Iron and steel engineering are still at their worst. Not only are the prices of shares seriously depressed, but a national strike has been in progress for about a week in this industry. We have no trace in Italy of the phenomenon known in Germany as the catastrophe-boom. After December, 1918, the number of lire necessary to buy a pound sterling has gone up from 30 to 80-100, but the average index number of share prices has gone down from 100 to 59.45. It is true that in December, 1918, foreign exchanges were pegged, but, at the utmost, this fact signifies that lira has not depreciated in the meantime. This should have kept up values at their former level. The decrease is a sign of the after-war liquidation process which is going on.

DENMARK.—BUSINESS CONDITIONS—BANK FIGURES—PRICES—EXHIBITIONS—GREAT NORTHERN TELEGRAPH COMPANY.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 3.

DANISH business conditions seem to be a shade better. Production is progressing satisfactorily in certain branches of industry, though the development is still unreliable. The improvement is perhaps partly seasonal, for as a general rule there is more life and enterprise in the early part of the summer. There has been a decrease of unemployment. The last figure given was about 40,000, and the question now is whether the decrease implies an actual improvement of conditions.

At the end of April the total balance of the banks' accounts was Kr. 5,288,000,000. At the end of May this figure had decreased to Kr. 5,217,000,000—i.e., by Kr. 71,000,000, of which, however, Kr. 42,000,000 represents the decrease as far as Nationalbanken is concerned. It is pointed out by the Statistical Department, however, that the increase of the item "current account" on the asset side, amounting to Kr. 14,000,000, is presumably due to increased business activity after the settlement of the lock-out. Further, a decrease has taken place in the holdings of home bills, especially as far as Nationalbanken is concerned, their holding of home bills having decreased during the month by Kr. 20,000,000—i.e., from Kr. 204,000,000 to Kr. 184,000,000. Unfortunately, it does not appear from the monthly balance-sheet how large a proportion is bank bills and how large a part represents private bills. Information on this point would have been a very valuable guide by which to judge the change which has taken place. For although an increase of the bank's holdings of bills may undoubtedly indicate increased business activity, it may also be due to uncertainty about the future and an increased demand by sellers of goods for bills in cover, as well as disinclination of the banks to give loans in another form. In consideration of the said movements, especially of the current account item on the asset side, the decrease in home bills may presumably be considered an indication of increased business activity; this should also be the reason for the decrease in the deposit items on the liability side, which as far as Nationalbanken is concerned is very considerable, and is presumably due to the withdrawal of deposits from the bank for productive and commercial purposes.

It is, however, clearly shown by reports from these organisations and from other sources how serious have been the effects of the trade depression. At the recent annual meeting of the Textile Manufacturers' Association, which comprises 133 factories, or practically the entire textile industry of the country, it was stated that the sum total of wages paid by the members of the association last year figured out at well over 17 million kroner, compared with roughly 31 million kroner in 1920. This collapse is with roughly 31 million kroner in 1920. This collapse is mainly due to the disastrous depression experienced, especially by the textile industry. The depression was so severe that the average amount of employment barely reached 60 per cent. of last year's total. The full strength employed by the members of the association totals some 12,000 hands, in addition to some 1,300 home workers, but on resuming work at the conclusion of the lock-out this number had dwindled to 8,000. Even if there has been a slight improvement in sales of late, and consequently a corresponding rise in employment, in the face of the abnormal rates of exchange and resultant serious competition from abroad, nothing definite can yet be said as to the probability of any lasting improvement in textiles.

The price index number of the "Finanstidende" is 2 points higher for May—viz., 179. The rise, which is principally in the foodstuff group, is mostly due to increased prices of meat, pork, potatoes, wool, and certain metals, while the price of butter and a few other articles have been subject to a decline, which, however, is not very heavy. The changes since the beginning of 1922, when the figure was 178, have been rather insignificant, and the paper states that, generally speaking, the decline in the wholesale prices may now be considered to be definitely at an end for the present as far as this country is concerned.

Concerning the retail prices some official information

is available. By means of reports received from the Municipal Councils of Copenhagen and Frederiksberg, as well as from all the local provincial Town Councils, and from about one hundred Parish Councils, sufficient information has now been collected to be able to form some idea of the average retail price level. In a similar investigation undertaken in January the prices for the majority of goods showed a slight decrease on those of October, 1921. This decrease continued during April, but was insignificant as far as the separate items are concerned. In fact, some goods even showed an increase on the January price-level.

During the past month the Danish Town Association contracted an English loan of £2,000,000 through Den Danske Landmandsbank and Hambros Bank, Limited, London. This loan bears interest at the rate of 5 per cent., and was contracted at such a price that the actual interest is 6 per cent., which conditions are regarded as favourable.

A new company domiciled in Copenhagen has recently been established under the style of British Danish Samples, and in co-operation with the Federation of British Industries, and its subsidiary company, British Samples, the new company will superintend the great British Samples Exhibition in this city. The board of directors of the new company will be principally Danish. It is expected that the Samples Exhibition, which will also include Danish exhibitors, will open in the coming autumn, and negotiations for suitable premises are now progressing. Just now the Danish goods for the World Exhibition in Rio de Janeiro are being dispatched. The day before yesterday a large Dutch Exhibition was opened in Copenhagen. This exhibition is of cultural and trade interest, and comprises, for instance, Colonial produce from the Dutch Indies, Dutch industrial produce, and Dutch art. It is pointed out that Dutch exporters desire an extension of the direct export from the Colonies to Denmark, and the remainder to Scandinavia, instead of employing the foreign intermediate ports of London and Hamburg, as in the past.

The well-known Danish company, the Great Northern Telegraph Company, has published its report for 1921. In this report it is stated that in spite of recent "bad times," the general result has been good. Even if the net profits, Kr.7,900,000, are roughly 32 per cent. less than those of last year, and even if the telegraphic intercourse of the world shows little sign of improvement—rather the reverse—the directorate consider themselves fully justified in declaring a dividend of 22 per cent. for the shareholders. This is only 2 per cent. less than that of the preceding year. As the result of a series of protracted negotiations the Great Northern Telegraph Company have been enabled to resume to a large extent their Russo-Asiatic service, which is an important link in the peace organisation of the company. Negotiations have been commenced with England and Sweden for a prolongation of the concessions granted by these countries, but no conclusion has been arrived at. In co-operation with the Eastern Extension Australia and China Telegraph Company, the company have also commenced discussion with the Chinese Government concerning the prolongation of the concessions granted to the two companies, but these negotiations have been delayed by the fact that the Washington Conference had included in their programme the settlement of the Chinese telegraph service question.

CHINA.—THE SHANGHAI PIECE GOODS MARKET—TRADE METHODS—CHINA AS A MARKET FOR BRITISH CAPITAL—TARIFF REVISION.

(FROM OUR CORRESPONDENT.)

SHANGHAI, June 3.

THE increased interest with which London newspapers appear to be following developments in China is well-comed in Shanghai. British merchants here, however, are quick to detect inaccuracies, and a good deal that is inaccurate has lately been published, more particularly in the correspondence columns of one or two papers, where the most surprising statements have been made,

of my visit to our properties in India and Burma—dealt so very fully with the extent and value of our assets and the nature and scope of our activities generally, that it is unnecessary that I should to-day make more than a general reference to them.

Our drilling and producing operations in Burma have secured the full requirements of our refineries, and in several directions in our older fields the drill has proved considerable extensions of our reserves. But every day in these older fields the necessity for deeper and consequently more expensive drilling is forced upon us, and while generally in our Burma properties we are not faced with the great and costly depths to which drilling in the competitive area of the Twingone and Beme Reserves has to be resorted, we are enormously the prepondering producer in these reserves, and must and intend seeing that we continue to get our full share of the oil there.

NECESSITY FOR TESTING OUTSIDE AREAS.

From our outside fields in Burma I regret that there is still no reward for the heavy sums of money and great expenditure of time and care made on them. But we test only after the most careful geological examination and recommendation, and we cannot possibly risk the consequences of neglecting to put our geologists' reasonable and reasoned views to the test of the drill. If we stand aside, and whether or not, ladies and gentlemen, the lure of oil is so great nowadays that others are ready to at once take our place, and it is merely common prudence in such a business as ours, and a form of insurance of the capital we have put into it, that we should continue, so far as our resources reasonably permit and circumstances require, to take up and test every area considered by our geological advisers as offering favourable conditions for the collection and concentration of oil on a commercial basis. If we sat down to develop merely what we have, and have proved, it might be that for a time we could distribute larger dividends to you, but such a policy would exhaust your assets without any effort at their replacement, and beyond this might even endanger those assets through the discovery by others in India of still unknown productive areas, thereby undermining the predominant position occupied by your company as a marketer as well as a producer in India. Even as it is, we cannot hope to avoid misses or to miss hits. These, however, are excusable deficiencies in every human organisation; there would be no sort of excuse for those responsible for the management of your business if their policy ever became a passive one confined to working proved ground instead of—as it has always been—a policy which, while fully developing what it has, takes every reasonable step and risk to add to your oil reserves—the very life blood of your business. We can only hope that our pioneer and continuous efforts, and our great expenditure in pursuance of this policy, will yet bring the success they at least deserve although they cannot command.

LOWER ASSAM AND THE PUNJAB.

Our operations in Lower Assam have not materially added to the potentialities in oil of the small field we have at Badarpur, and the oil continues to be of little more than fuel-oil value. While we have never anticipated anything big here, we are still hopeful of a moderate field capable of at least paying its way. Water is a great trouble and expense in its development and operation, however, and until we can get down to and test the possibilities of deeper horizons, we cannot speak with any marked confidence either as to life or value.

Elsewhere in Lower Assam, and also in the Punjab, we have continued and added to the test wells being drilled by us. At one point we have reached without result the depth beyond which geological advice held out no hope, and the test and this particular area have been abandoned. The other test wells are still drilling—with varying difficulties constantly being met and overcome—and further tests are on the point of being started up. I need scarcely tell you, ladies and gentlemen, that operations of these kinds are being carried on in remote, difficult, uncongenial, and even unhealthy places, where there are neither reasonable comforts nor even in some cases the most modest amenities of life. Communication is difficult, and slow and expensive, and drilling is frequently unavoidably interrupted. Even the best informed of us on occasions sometimes forget these factors in our impatience for results, but we must never forget the great loyalty, endurance, and perseverance of our staff working day in and day out in such uncomfortable and discouraging conditions. Britons, Americans, Burmese, and Indians all deserve our appreciation and thanks.

Our investment in the Assam Oil Company, Limited, has brought us the commercial and technical management of that company, and the old staff, fortified by our wider experience in every branch of their business, and assisted by our fields and refining technicians, are already improving the general position of the company's properties and business in Assam. As chairman of the company I hope to preside at the annual meeting, which will be held early next month, and I shall not to-day anticipate in any

way what I shall then say as to the present position and future possibilities of the company.

BURMA OIL FIELDS ELECTRIFICATION SCHEME.

Our Burma Oil Fields Electrification Scheme commenced to turn turbines on June 29th. Power should thus be available within another month, and application to the drilling and pumping wells of ourselves and the co-operating companies will thereafter be rapidly made and in due course become general. When the scheme is completed and in full operation we should be able to entirely cut out the consumption of crude oil as fuel in the Yenangyoung field and thereby effect a very important saving in that direction alone, and at the same time find a remunerative outlet for our natural gas production—after compression—as fuel for the power station. In this act of compressing the natural gas we shall produce natural gas gasoline, which will be mixed with our crude oil and conveyed by the pipe-line to Rangoon, where in due course in the process of distillation it will be recovered in the form of petrol.

During the year our main pipe-line—of increased capacity consequent on the additional two pumping stations to which I referred last year—performed steadily and satisfactory service. £95,095 6s 1d, the cost of relaying during the year a considerable portion of the line in the districts where the alkaline nature of the soil makes corrosion specially severe, has been, you will see, charged to depreciation account. In this connection I may mention that the whole main pipe-line is now in course of being coated with a special bitumastic solution which will protect it much more adequately against corrosion, and thereby greatly lengthen the life of the line.

THE REFINERIES.

Operations at our refineries continued throughout the year uninterruptedly and with satisfactory results in yields and qualities of products on lower fuel consumption, and the Allan Atmospheric—a fractionating system developed by our works manager, after whom it is called—have given excellent results in increasing the yield of the lighter and more valuable products of our crude, at the expense of the volume of the less remunerative.

At the refineries, as in the fields, our officials and staff generally have done excellent service, carrying on their day-to-day duties simultaneously with the preparation and development of new capital works. In this connection the works manager and his staff are now progressing with our scheme of refinery concentration and reconstruction. As during the whole of these operations it is our intention to steadily maintain our present throughput, although reconstructing the refinery on the site of the present works at Syriam, and utilising a very large quantity of the present plant, it will be evident to you that these operations will be spread over a considerable period. One undoubted advantage of this, however, will be that as each new unit comes into operation valuable information is certain to be gained from the actual working of the new plant which will undoubtedly prove of great advantage in the designing and erection of the further units.

Our tanker fleet has run steadily and without serious accident throughout the year. Unfortunately, almost on the point of completion, delivery of our new 10,000 tanker, the s.s. "Badarpur"—which was launched in the autumn—was delayed fully three months by the trouble in the engineering trade, and she is only running her trial trip to-morrow, after which she will go at once into commission. She will undoubtedly be a most valuable addition to our fleet.

BULK PETROL IN BOMBAY AREA.

I have in previous years touched on our efforts and the difficulties met by us in attempting to provide facilities for the importation of petrol in bulk into the Bombay area, and it is a relief to us that these have now been overcome, and that the first bulk petrol cargo was discharged safely and satisfactorily at Bombay in May last. As a result of this we have been able to make a considerable reduction on the price of our petrol in the Bombay sphere.

The Tinplate Company of India, Limited, in which we are very largely interested, has made good progress with its works, and the manufacture of tinplates in India is expected to commence on a preliminary scale towards the latter part of the year. It is hoped that this new enterprise, created by the Tatas and ourselves, will prove in time to be a valuable factor in the industrial development of India, which no company more than ourselves should do everything reasonably possible to foster and encourage.

During the year, despite greatly increased political unrest throughout India—happily now much less active—accompanied by labour troubles in many parts and industries of the country, the relations between us and our Indian and Burmese labour were on the whole quite satisfactory, and we continue to do everything possible and reasonable for the comfort, health, and happiness of our large body of employees. As I have already indicated, we

have again been well served in every branch of our business by a capable, loyal, and enthusiastic body of administrators and technicians, and I would ask you to be permitted to convey to all of them your and my appreciation of work so well done.

KEROSENE PRICES AND NEW TAXES.

The necessity for further revenue has caused the Indian Government to resort to increased taxation in their current Revenue Act—mainly in the direction of greatly increased import duties on manufactured and semi-manufactured articles, many of which are essential to the conduct of our business. These must add at least relatively to our producing costs, and I would be failing in my duty did I not make it quite clear to all concerned that there must be a point at which these increased burdens on the one side may make it economically and commercially difficult—if not impossible—on the other, to maintain our maximum price policy for Kerosene in India, which still remains in force. Another feature of new taxation has—as I have already mentioned—been the imposition of an Excise duty on indigenous Kerosene. It is true that this has been accompanied by an equivalent increase in the import duty on foreign Kerosene, and to-day both duties have been passed on to the consumer. One must not forget, however, that circumstances may at any time arise with regard to supplies of and markets for foreign Kerosenes which may lead to the Indian dumping ground for surplus foreign production irrespective of import duties, and I can say with confidence that however we ourselves might be able to stand up against such competition while saddled with this Excise duty on Kerosene, there are other small indigenous producers in India to whom it would sound the death knell, and Government and the indigenous industry generally will require to watch this position closely.

INTERESTS IN TRINIDAD.

Our interests in Trinidad, through the United British Oilfields of Trinidad, Limited, have unfortunately not even yet developed into a condition in which production on a satisfactory scale and of reasonable stability has been forthcoming, but geological opinion continues not unfavourable to eventual success in both these directions, and certainly, if expert and thoroughly qualified technical control can secure these results, we have every right yet to expect them.

Our friends, the Anglo-Persian Oil Company, Limited, continue their wonderful expansion, both in production and in refining and marketing, but I say no more than this, since this is a field which my friend, their worthy chairman, Sir Charles Greenway, has made peculiarly his own, and which he deals with exhaustively every year at the company's annual meeting. In this connection it has been our custom for a number of years to post to every one of our shareholders a copy of Sir Charles's speech, but in view of the wide publicity now given to that speech in the Press, and of the very heavy expense involved in posting a copy of it to our over 25,000 shareholders, we have decided to discontinue the practice—a decision in which you will, I am sure, under the circumstances, quite concur.

Towards the end of last year Mr John Gillespie, head of our engineering and stores department on this side, took a trip to India and Burma, in the course of which he visited all our principal installations in India, including Chittagong; the tinplate works in course of erection at Jamshedpur; the Assam Oil Company's properties; the Badarpur Field; and spent three weeks at our fields in Burma and a month at our refineries at Syriam, and there is no doubt the company should derive most beneficial results in many directions from Mr. Gillespie's extended tour.

CURRENT YEAR'S PROSPECTS.

As regards prospects for the current year, I am glad to be able to tell you that in the meantime these are, taken all over, favourable. While there has been a further weakening in prices of wax and candles—the market conditions for which are still somewhat obscure—and a drop in the price of lubricating oils and jute batching oil in India, we have, as from April last, contracted to sell on a greatly improved basis our production of petrol in excess of what our own organisation can dispose of. We have also some of what our own organisation can dispose of, and the benefits we what augmented our throughput of crude oil, and the benefits we what receive in these two directions will be a considerable set off against any lower prices ruling for the products mentioned. Exchange is, of course, still a very uncertain factor, but unless there is a severe drop in it or some unfavourable developments at present unforeseen arise in some other directions, the results for the current year should, I anticipate, be very similar to those to which I have just had the pleasure of referring.

The Chairman, concluding, said: "I now beg to propose that the report of the directors and audited statement of accounts, including the balance-sheet and profit and loss account to December 31, 1921, presented to the meeting, be received, approved, and adopted," and I shall call upon Sir Campbell K. Finlay to second the motion. After the motion has been seconded an opportunity

will be given to the shareholders to ask any questions they may care to.

Sir Campbell K. Finlay: I beg to second the motion.

The Chairman: Are there any questions, ladies and gentlemen?

The Chairman (after a pause): There being no questions, I now beg formally to put to the meeting the resolution which I have just proposed.

The resolution was carried unanimously.

The Chairman: I have now pleasure in moving: "That the dividend on the ordinary shares recommended by the directors of 4 per cent. per share, free of tax, making, with the interim dividend paid in November last, 30 per cent. for the year, be adopted, and that the same be hereby authorised to be paid on July 21st, and that the balance of £359,583 14s 7d, subject to corporation profits tax, estimated at £130,000, be carried forward," and I would ask Mr Jas. A. Macarthur to second the motion.

Mr Jas. A. Macarthur: I beg to second the motion.

The Chairman: Well, I am sure, ladies and gentlemen, you are all unanimous in this.

The Chairman: The next business is the re-election of directors, and I have very great pleasure in moving that Sir Campbell K. Finlay be re-elected a director of the company.

Mr Thos. S. Findlay: I beg to second the re-election of Sir Campbell Finlay.

The Chairman: I now beg to move that Mr D. W. T. Cargill be re-elected a director of the company.

Mr Thos. Gibson: I beg to second the re-election of Mr. Cargill.

The Chairman: I beg to move that Mr Leonard Gow be re-elected a director of the company.

Mr Robt. Clark: I have much pleasure in seconding the re-election of Mr L. Gow.

The motions were adopted unanimously.

Colonel R. D. McEwan: I beg to propose the reappointment of Mr Jas Herbert Wilson, C.A., as auditor for the current year at a remuneration of 500 guineas.

Mr W. J. Hill: I beg to second the appointment of Mr J. H. Wilson, C.A., as auditor.

The motion was adopted unanimously.

The Chairman: That, ladies and gentlemen, is all the business, and I thank you for your attendance here to-day.

VOTE OF THANKS TO CHAIRMAN.

Mr T. F. Donald: Ladies and Gentlemen,—I think that before we leave this hall it is only right and proper that we should award a vote of thanks to our chairman. The Burmah Oil Company is one of the most successful undertakings that has ever been formed or carried on business in Glasgow, and I think I am not guilty of any exaggeration when I say that a very great measure of that success is due to the fact that we have had, and, I am happy to say, that we still have, as chairman Sir John Cargill. We have to-day had the privilege of listening to one of those lucid and informing statements upon the position and prospects of the company which he is good enough to deliver every year, and I think we must agree that what he has said, though not, perhaps, without a word of warning here and there, is, on the whole, eminently satisfactory. Sir John, like every eminent man, is no doubt exposed at times to criticism, but I am not aware that he has ever been accused of being unduly optimistic, and I think, coupling that fact with what he has said, we may look forward with confidence to continued prosperity. Of course, in such undertakings there must be fluctuations, and I will not undertake to forecast the future; but one thing is certain. So long as the conduct of affairs is in the hands of our present chairman and board, we may be sure that the affairs of the company will be administered with the same sound finance, judicious foresight, and such business abilities that have always characterised the management of the Burmah Oil Company. I will ask you again to give a special vote of thanks to Sir John for his conduct in the chair, and also a very hearty vote of thanks to himself and his colleagues for the admirable way in which they continue to manage the affairs of the company.

CHAIRMAN'S REPLY.

The Chairman: Mr Donald, Ladies, and Gentlemen,—I feel that it will be rather difficult for me suitably to acknowledge what Mr Donald has so very kindly said, and also the very hearty way in which you have seconded, without seeming to exaggerate; and exaggeration, I think, always tends to make one feel that one is not just quite sincere. I do assure you, though, that I appreciate most highly the very kind and very flattering remarks that Mr Donald has been good enough to make. There are few chairmen of any company that have had the good fortune that I have had during the last 18 years to preside every year over meetings where I was able to tell my shareholders of the continued wonderful prosperity and progress of the company. There is one thing I am absolutely confident of, and that is that there is no other chairman of any company who has received such whole-hearted, such consistent, and such loyal support from every one in the

company, from the highest to the lowest, and to that I attribute far more than anything I may have done myself the great and continued success of the Burmah Oil Company. The Burmah Oil Company is founded on sand, and carried on on sand—I mean oil-sand—but, at the same time, below that sand there is the foundation of rock, on which my predecessors in the early days built up the company in the shrewd, the careful, and the honest manner in which they did. My endeavour has been to carry out the precepts that I was taught by my predecessors, and in the edifice which you see to-day—which I say is founded on rock, but lives upon sand—I feel that you have an edifice which will stand against any reasonable competition, or anything that I can foresee, short of a collapse in the whole industry. I thank you most heartily for the very kind way you have received me to-day, and for the very hearty vote of thanks you have given me.

The proceedings then terminated.

BANK OF BRITISH WEST AFRICA, LIMITED.

PROSPECTS OF TRADE REVIVAL.

The twenty-eighth annual general meeting of the Bank of British West Africa, Limited, was held, on the 13th instant, at the Cannon street Hotel, London, the Rt. Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), presiding.

The Chairman said that the paragraph in the report which dealt with the conditions under which the bank had had to work all through 1921 told the whole story. The world had been passing through what was probably the most severe commercial and industrial crisis which had ever oppressed it. That the British Empire had escaped with no greater financial crisis than it had experienced was at least very largely due to the soundness of our banking system. The banks had tried to keep things going, and they had succeeded. This bank had played its part in that effort, but it had not done so without losses, and, of course, when trade was so acutely depressed no bank could make the same profit as in normal times. It had always been the practice of the directors of this bank to make scrupulous provision for all bad and doubtful debts, and this year they had done the same, and had taken £225,000 out of the published reserves, which, after that had been done, would stand at £400,000. In addition, they proposed to

transfer £50,000 from profits to a contingency fund, and they were satisfied, after careful examination, that all realised and anticipated bad debts had been amply provided for. He hoped that that policy would commend itself to the shareholders, and that they would also approve of the declaration, under the conditions of the time, of the reduced dividend for the year of 6 per cent. He could not tell them that the depression of trade had passed away. The utmost which could be said was that things were moving very slowly, but that such movement as there was was in the right direction.

THE CHAIRMAN'S VISIT TO WEST AFRICA.

Having dealt with the accounts, the Chairman proceeded to say that since he last had the honour of addressing the shareholders he had visited every branch of the bank in Nigeria and every branch but one on the Gold Coast. He was absent from home for four months, and did not confine himself to visits to those places only where the bank had branches. He was anxious to make the personal acquaintance of the members of the staff of the bank. But he was also anxious to see something for himself of that great country which was called Nigeria and of the ancient colony of the Gold Coast. In Nigeria and along its coast he travelled over 4,000 miles, and on the Gold Coast he got as far north as Coomassie. He was proud to report that the bank was served by an efficient and loyal staff, and that the large amount of money spent in recent years on bank buildings and quarters for the staff had been well spent. There were still some new buildings to be erected and some improvements to be made in existing buildings, but nothing more than could be properly undertaken from year to year when the conditions of business began to improve. He would not like to close his remarks without mentioning the definite impression left in his mind of the great future prospects of business on the West Coast of Africa owing to the natural resources of the country, and in certain places to the comparative density and trading characteristics of the population. At the present moment both Government and individuals were passing through a period of stress calling for rigid economy in all respects. He was convinced that no greater service could be done to trade than at the earliest possible moment some reduction of the duties which at present were hampering alike exports and imports.

The report and accounts were unanimously adopted.

BANK OF NEW SOUTH WALES.

SATISFACTORY RESULTS OF THE HALF-YEAR.

INDUSTRIAL POSITION IN NEW SOUTH WALES.

The half-yearly general meeting of the Bank of New South Wales was held at the Chief Banking House, Sydney, on Tuesday, May 30, 1922.

The Chairman, Mr Thomas Buckland, president of the bank, in moving the adoption of the report, said: Gentlemen,—I desire first of all to refer to the retirement of the Hon. Sir Charles K. Mackellar, K.C.M.G., M.L.C., from the position of president. Sir Charles has presided at the meetings of the bank for some 20 years, and it was with feelings of the greatest regret we accepted his resignation, but I am pleased to say he will continue to give us the benefit of his experience and knowledge by remaining a member of the board.

BALANCE-SHEET FIGURES.

Before moving the adoption of the report and balance-sheet I will briefly review the figures of the latter so that you may as far as possible understand their incidence.

Note circulation in New Zealand is £130,000 less than at this time last year, which we attribute largely to the reduction there brought about by the curtailment of importations into the Dominion, which for some time after the termination of the war were excessive.

Deposits are £930,000 lower than last year. We pointed out then that the increase was of a temporary nature only and the special items concerned have since disappeared, and our figures are now normal.

Bills payable and other liabilities have decreased £2,760,000. As you may remember, it was necessary last year to use every means to conserve our London funds (which were depleted by excessive importations throughout Australasia), without unduly embarrassing our customers in their necessary requirements for London money. Hence telegraphic remittances gave place to long usance drafts, and acceptances under credits were substituted for negotiations by London. Normal conditions now obtain, and these drafts and acceptances have run off.

THE HALF-YEAR'S PROFIT.

Profit for the half-year is £45,000 less than the exceptional profit in March last year, but £10,000 more than last half-year.

Capital and reserve fund are £185,000 more than last year, and now total £8,500,000. The capital itself stands at £5,000,000, and we are inviting you at a special meeting, to be held immediately after this meeting terminates, to pass resolutions for a further increase of the capital to £6,000,000 by the creation of 50,000 new shares at par, which after due consideration your board considers desirable and in the best interests of the business of this institution.

ASSETS.

On the assets side the first line amounts to £30,798,000, which is £1,255,000 less than at this time last year. This harmonises with the reduction in deposits and the London payments of bills payable to our and acceptances. The proportion of our first line of assets to our liabilities to the public is slightly more than 10s in the £, which is about the average we have maintained for some years past.

Wheat advances have increased £1,670,000. In conjunction with the other Australian banks we have once again financed the various wheat pools in the States under Government supervision, although we would much prefer that wheat, like wool and other produce, be dealt with more on the lines obtaining in pre-war days.

War Loan advances have decreased £846,000 by payments by customers of amounts borrowed to enable them to subscribe to the "peace loans" issued by the Commonwealth.

Bills discounted and advances to customers have decreased £3,240,000. Nearly £1,000,000 of this is accounted for by reduced purchases of goods from abroad, and the balance by proceeds of wool and wheat. We consider that stocks of merchandise held are now normal, and that a healthier tone prevails among the mercantile community than this time last year.

SATISFACTORY PROGRESS.

You will notice in these comparisons that several of the items show a slight shrinkage from this time last year, which I regard as the transition from the abnormal war influences and their immediate aftermath to the more normal conditions which obtained before the war, and not in any way to reflect on the general progress of our business, which continues to expand in the most satisfactory manner. In parts of Queensland some of our connection is more or less stagnant, through the glut in the beef market in London and the consequent inability of graziers to realise on cattle at payable prices. Although we cannot at the moment forecast any immediate improvement, it would be opposed to all precedent if a change were not forthcoming before long, and we can afford to wait as our business and prospects in all other parts of Australasia are very good.

POLITICAL SITUATION—GOVERNMENT BORROWINGS.

I shall touch upon politics only in the briefest manner, but the great change which has occurred in the Government of New South Wales since our last half-yearly meeting can hardly be altogether overlooked. This institution, which I have the honour to represent, has been so closely interwoven with and, if I may say so, so materially instrumental in the development of this great continent, extending over a period of upwards of 100 years, that I and those associated with me in its management naturally view with the greatest interest and concern the general trend of events. During the war period and for some time afterwards the policies of the different Governments in borrowing money and distributing it in a very generous, if not reckless, manner created a fictitious, a very false and erroneous prosperity, which was most harmful in many ways, particularly in the formation of ideas in the public mind, which very largely came to regard this false prosperity as normal, as the natural order of things, and it is now most difficult for people to regulate their lives in conformity with the change from the abnormal to the normal. But, gentlemen, such change must take place. However unpleasant, it is inevitable, unless, like a badly navigated ship, we continue on the wrong tack so long that rocks and destruction cannot be escaped.

REASON FOR LANGUISHING INDUSTRIES.

That our industries are languishing and unemployment abounds are two facts too evident to ignore, and the reason is just as obvious as the facts are. Quite a short time ago the Broken Hill Proprietary Company started what promised to be one of the greatest enterprises ever attempted in Australia, viz., the production of steel in large quantities. The sums of money sent out of Australia for the purchase of rails for railway construction, and other steel necessities too numerous to mention, have been stupendous, and yet this magnificent enterprise, capable of sustaining well many thousands of people, is fading away, for the chief reason that coal is costing more to produce here than in other countries, which is altogether wrong seeing that there are no natural disabilities in the production of our coal, and living expenses are much less with us than with most other white peoples of the world. What applies to the steel works applies equally to other industries, and makes it manifest that our past Governments have encouraged impossible ideals, and the sooner we get back to material facts and not fancies the better for every man, woman, and child in the State.

The present Government, which has just come into power, are evidently endeavouring to meet the seriousness of the position. They appear to realise that it is necessary for a country to be governed for the good of the whole of the community and not for any one particular section of it, and unless such takes place no sustained prosperity can be looked for to the country or the people resident therein. They, the Government, have a titanic and in some instances a thankless task before them. And I feel that it is due to all of us with the best wishes of our country at heart not to hamper them with criticism, but to give them a fair and patient trial.

AUSTRALIAN ESTATES AND MORTGAGE COMPANY, LIMITED.

REPUDIATION ACT—QUEENSLAND GOVERNMENT'S ARBITRARY CONDUCT.

The annual meeting of the Australian Estates and Mortgage Company, Limited, was held, on the 14th instant, at the Cannon street Hotel, London.

Mr Andrew Williamson, chairman of the company, presided, and, in moving the adoption of the report and accounts, said:

The gross profits at £254,141 show a gratifying increase of £36,210 over last year. It would have been greater by £23,000 had the Queensland Government kept faith with their pastoral lessees, as our revenue account has suffered to that extent by increases in rents, in violation of the express covenants in our leases, to which I will refer later.

The directors recommend the payment of a dividend of 5 per cent., a result which, when we bear in mind the unfavourable as well as the favourable aspects of the past year, cannot but be regarded as satisfactory.

We have been favoured with very good seasonal conditions, the rainfall having been abundant (indeed on some of our properties excessive) and well distributed over the year, resulting in a good, well-grown clip amounting to 15,304 bales, as against 13,834 bales in the previous year. The sound and well-nourished condition of this year's staple is one of its most attractive features in meeting the requirements of American and Yorkshire manufacturers. The demand for wool, especially merino, has greatly strengthened, and there has been a marked improvement in value since this time last year, and our 1921-22 clip has so far realised satisfactory prices. Another essential factor, however, besides a good market for wool, to securing that a bountiful season is adequately reflected in our revenue account, is that of sales of live stock, and I regret to say that during the past year these were extremely disappointing.

HIGH COST OF WORKING PROPERTIES.

Even in the case of wool the high costs of working the properties, which, owing to the demands of the labour unions, still continue, neutralises the advantages from the increase in the selling price of the product. The principal element in the high costs is, of course, that of wages, and the refusal of various unions to submit to a reduction in wages to a true economic level is the most formidable obstacle to Australia's happy return to a full tide of prosperity.

I would now say a word or two about the outlook for the current year. Our latest cable advices indicate that there is a slight improvement in the season on our New South Wales properties, but that the Queensland outlook is not favourable though the lambing has not been seriously affected so far. Beef prices are still wholly unprofitable, and the market for sheep is dull. The volume and quality of our sugar crops have been affected by the adverse season. This does not give a very encouraging prospect for the current year, but the rain telegrams recently show that there is rain about even though the falls so far have been slight, and it is premature to take a despondent view of the outlook as regards the season.

WOOL MARKET—STATISTICAL POSITION.

The wool market has had a wonderful recovery, as we can better appreciate when we look back to the beginning of 1921 and compare the position then with the state of things to-day. The statistical position now is very different from what it was 18 months ago. There then was in sight of the market over 5,000,000 bales of Australian wool; to-day, including the unsold balance of the carried over wool from the war of, say, 1,300,000 bales, the unsold wool of the last clip and the oncoming 1922-23 clip, there can be nothing like that quantity, being nearer 3,800,000 bales. On the other hand, 18 months ago Bradford was bare, or almost bare, of stocks, and to-day Bradford cannot be far behind pre-war stocks; but the congestion of manufactured goods, which was a block 18 months ago, is greatly relieved, and the labour question, which was more or less acute then, has been settled for some time on a most satisfactory basis, with the exception of the top makers' union, who absolutely refuse to work overtime, and are therefore a serious hindrance to full recovery, as they form a bottle-neck to the rest of the trade. There is to-day, both in Yorkshire and in Coleman street, a feeling of confidence in the immediate future, which 18 months ago was conspicuous by its absence.

QUEENSLAND AND THE REPUDIATION ACT.

I have already mentioned how seriously we are injured by the operation of the Queensland Land Act Amendment Act, 1920, known throughout Australia as the Repudiation Act.

The Government of Queensland by this Act forcibly altered a provision of a contract to which their State was a party, not only without the consent, but against the protests, of the other party to the contract and without a vestige of compensation for the wrong done. A vital provision in the Queensland pastoral leases affected by this Act is that the rent, while subject to review and alteration by the Land Court every 10 years during the currency of the lease, cannot be raised more than 50 per cent. above the rate ruling during the preceding 10 years. In reliance on this protective provision, the leases were taken up and millions of money spent in improving and developing the land. This Repudiation Act removes not only the 50 per cent. limitation, but any limitation whatever, and under its operation rents have been raised enormously, in some cases as much as 300 per cent.

This Act was made to apply, not only to the unexpired balance of the leases, but it was also made retrospective to the beginning of the current decennial period, going back to as far as 1914.

An appeal was lodged against the retrospective application of the Act, and was carried to the Federal High Court, but the decision of a majority of the Court was given in favour of the validity of the Act, and confirmed its retrospective operation.

Thus, in a word, the Government of the State of Queensland has, by the arbitrary use of the sovereign power of the State, done that which no private lessor could or would dare to do, namely, has altered to its own advantage, and to the serious disadvantage of the other party to the contract, a vital condition in the Pastoral Leases, which, under the authority of the Crown, it had granted to the pastoral lessees in the State.

Now the practical effect of this breach of contract by the Queensland Government upon your interests has been this:—

Up to the present (and all our properties have not yet been dealt with) the company has been compelled to pay no less a sum than £25,000 in excess of the maximum that could be claimed under our leases.

On this subject it only remains to say that this magnificent State—among whose early pioneers were the immediate predecessors of this company—with all its splendid resources, is still very largely in the process of early development. Its full development is quite impossible without the capital necessary to pay for labour,

machinery and equipment generally, and this capital can only be obtained in this country if there is confidence, and confidence is only possible where contracts are sacredly observed and not deliberately broken.

With the internal politics of Queensland, or of any other Australian State, we have nothing to do—and no desire to interfere—but when a Government of one of the States of the Commonwealth breaks its contract with us and other pastoral lessees, then we have not only the right to emphatically protest, but it is our manifest duty to do so.

It is greatly to be hoped that at no distant date wiser counsels may prevail, and that steps will be taken to repair a wrong which ought never to have been committed.

The report was unanimously adopted and the usual formal business transacted.

DE TREY AND COMPANY, LIMITED.

NEED FOR DENTAL EDUCATION OF PUBLIC.

The 10th ordinary general meeting of De Trey and Co., Limited, was held at 6 Swallow street, London, on the 14th instant, Mr C. De Trey, chairman of the company, presiding.

The joint secretary (Mr George Dawson) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:

It is the first time since the inception of the company that I have to present to the shareholders a balance-sheet which does not show a profit. The reasons for this have already been superficially discussed last year, and find their source in the world's economic crisis, which has lasted much longer than was anticipated.

Last year I told you that the dental trade, in Europe in particular, had received the first serious setback, but that, as is usual when a setback is experienced in our trade, the depression is generally less acute than in others. This stands as true to-day as it did last year, for, while your board of directors are laying before you a balance-sheet which is, indeed, not as we should like it to be, the figures shown are in many respects infinitely better than those exhibited by many old-established and famous industrial and commercial organisations.

PUBLIC NEGLECT OF DENTITION.

You may ask, Why should a trade so essential to the welfare of any nation have suffered such a setback at all? The cause is as real as it is to a certain extent sad, and is a result of the inadequate education of the public in fundamental questions of health. The public at home and abroad has suffered such acute losses that many have been obliged to forego efficient dental treatment.

The public of all classes should realise what it means to anyone to neglect dentition even for a period of twelve months, and the extent to which national health is undermined as the result, and that it always costs infinitely less to attend to dental trouble in its infancy than to cure it when it is no longer local and necessitates the help of both dentist and doctor. When they do so national health will improve, as is the case in America, where the child is taught to use a toothbrush almost before he knows how to pronounce the word.

We are to-day just as optimistic as ever as to the ultimate development of the dental trade. Indeed, trading has shown, all things considered, fair progress for the first six months of this year—a statement which, under present conditions, one is almost afraid to make for fear that further European political or economic developments may arise to offset or delay further the continuation of this improvement.

NEED FOR CENTRAL EUROPEAN MARKETS.

Before the war we had all the heavily populated countries of Central Europe as an available market, but we have been again last year almost completely cut off from all territories east of the Rhine, in which there are no less than 40,000 dentists practising—a greater number than are available to us in the rest of the sphere of our activities. Just think what it means to dental manufacturers and traders in this country! The German Government has imposed total prohibition on the import of all dental goods into Germany—a territory in which there are no less than 20,000 dental practitioners; the German manufacturers, on the other hand (enjoying the full support and protection of their authorities) find it easy, with the help of the depreciation of the mark, to unload their dental products—mostly of greatly inferior quality—in the whole of our allied and neutral territories. This state of affairs is serious for all dental houses in this country.

The prohibition of import of British and American dental goods into Germany, while the British Government allows the free export from Germany of dental goods into this country, appears unreasonable, but, as you know, many industries are suffering in a similar manner, and it is not my purpose to invade the dangerous

territory of policies. I may add, however, that nowhere more than in Germany is the high quality of our goods appreciated by the profession and the retail dealers. This is brought home to us by the fact that a little over a year ago we had an appeal made by over 3,000 dentists, and by more than 90 per cent. of the retail dealers in Germany, for the removal of the barrier of prohibition of imports and the general embargo on our goods in Germany. The above facts caused the German manufacturers who feared the competition of our goods to appeal to their Government for support, and they obtained it.

Mr X. Castelli seconded the motion, which, after questions had been asked by shareholders, and answered by the chairman, was carried unanimously.

The retiring directors were re-elected, and auditors re-appointed. A vote of thanks to the chairman and directors terminated the proceedings.

MOLASSINE COMPANY, LIMITED.

REASONS FOR ADVERSE RESULTS.

The annual general meeting of the Molassine Company, Limited, was held, on the 11th instant, at the company's offices, Tunnel avenue, East Greenwich, London, Mr John Prosser (chairman and managing director) presiding.

Mr E. C. Puplett, F.C.I.S. (one of the joint secretaries), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I very deeply regret that we have not a better balance-sheet to put before you, but we are dependent to a very large extent on the sale of our principal products to farmers, who during the last year have gone through a most disastrous period. The weather was against them, and foot-and-mouth disease also caused great anxiety and loss to stock owners. The cause simply and solely has been conditions over which we could have no control.

On account of the very poor demand for feeding stuffs, stocks that should have been cleared were left on hand at the end of the financial year. These, however, have been written down to current market prices, and as the company is not burdened with adverse contracts for raw material, they are able to take advantage of the market, and so, given normal trading conditions and a normal demand for feeding stuffs, the directors see no reason to doubt, but have every confidence in the future.

As to the figures in the balance-sheet, the capital reserve, which stood at £25,000, now stands at £7,000, £18,000 having been taken therefrom to adjust the loss on the year's trading. The sundry creditors are down about £6,000.

With regard to the credit side of the balance-sheet, we thought it as well to write £500 off "trade marks, patents, copyrights, &c." The item of plant, machinery, motors and equipment is not very different from last year. Cash at bankers is £10,318 18s 3d, against £8,318 17s last year, and sundry debtors are reduced by £7,495 9s 3d. Stocks are down about £20,000, being £50,811 this year, against £71,234 last year.

Freehold poultry farm and equipment has gone up from £16,430 10s 1d to £18,204 13s 2d, caused partly by expenditure on additional necessary equipment and on further payments on account of moors previously purchased.

I am pleased to be able to tell you that the Molassine dog and poultry food business continues to be satisfactory.

The resolution was carried unanimously.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

RECORD PROFITS.

The annual general meeting of the International Tea Company's Stores, Limited, was held, on the 13th instant, at Winchester House, Old Broad street, London, Mr G. A. Tonge (governing director and chairman) presiding.

The Chairman, in the course of his speech, said: I am sure you will agree that it is a very satisfactory balance-sheet and report that we are able to present to you to-day. The profit of £320,612 16s 7d is the largest that has ever been earned in the 27 years that the company has been in existence, and this, with the £52,631 7s brought forward from last year, makes in all £382,244 3s 7d to deal with. This enables us to pay the dividends on both classes of preference shares, to depreciate our fixtures and fittings by £25,000, to place £40,000 to reserve, and, after paying the directors' and auditors' fees, to pay 16 per cent. on the ordinary shares, and to carry forward £103,151, which latter amount is subject to corporation profits tax.

Turning to the balance-sheet, freeholds now stand at £587,080. These largely comprise various branches, which, in years gone by, were enabled to purchase very cheaply indeed, and with the great appreciation that has been going on in properties such as these I am confident that were we to have them re-valued we should find that their present worth would be something approaching a million sterling. Stock-in-trade is £706,723, and has been valued upon a strictly conservative basis, and the course of the markets since the date of our balance-sheet and the immediate outlook are such that I feel sure we need not view a fall with any apprehension whatever. The amount owing to us, £250,018, has also been subject to ample reserve—they are only ordinary trade debts, and no doubt have by now been discharged. With regard to the goodwill, various suggestions have at times been made to me that this amount should be depreciated, but to my mind such a policy would be stupid and unsound if you want your balance-sheets to show your true position. Our profits are continually increasing, and the goodwill to-day stands at between one and three-quarters' and two years' purchase of profits. If we depreciate the goodwill and continue to increase our profits, and that is what must ultimately happen with the same continuous and sane management that the business now gets, we should bring the goodwill down to one or even half a year's profits. Surely the goodwill of a business such as ours, which has gone ahead for so many years with profits practically always increasing, must be worth something very substantial.

The report and accounts were unanimously adopted.

SIDNEY TURNER, Accountant-General

India Office, July 12, 1922.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended July 12, 1922.	Countries to which Exported.	Week Ended July 12, 1922.
British South Africa	£ 563,877	United States	£ 1,232,000
Belgium	856	Egypt	9,200
Belgian Congo	20,917	British India	160,794
United States	3,494	Other countries	956
British West Africa	26,101		
Total value of imports of gold	615,248	Total declared value of exports registered in the week	1,402,950

Messrs Samuel Montagu and Co. write as follows on July 13th:—

GOLD.

A fair amount of gold came into the market, and was taken for India, New York, and the trade; India took the largest proportion. Gold valued \$7,753,000 is reported to have been received in New York, \$7,628,000 from London, and \$125,000 from France. We append the latest figures compiled by Mr Joseph Kitchen:—

GOLD PRODUCTION.

(In Millions of Pounds, at 84s 11½d per fine oz.)

Year.	Transvaal.	The Rest of the Empire.	British Empire.	Foreign Countries.	World.
1921	34.5	12.9	47.4	20.6	68.0
1922	27.0	14.5	41.5	21.5	63.0
1923	27.0	14.5	41.5	21.5	63.0

Drop mainly due to strike of January-March. 1923 should show a recovery to a figure approaching the 1921 total.

The following were the United Kingdom imports and exports of gold during the month of June, 1922:—Total imports, £2,558,078; total exports, £2,058,191.

SILVER.

A considerable amount of selling from China, and a greater willingness on the part of the United States to supply the market, have brought about an easier tendency. Indian bazaar orders have been but slight, and the market has had to rely mostly upon bear covering to absorb supplies. In so lifeless a market, as it has been on some days, the tendency for bears to respond to falling rates has not been quick, hence rather sharp falls have ensued. Owing to falling Continental exchanges, parcels have been forthcoming from that quarter. The following appeared in the Federal Reserve Bulletin of June last:—"The amount of silver in the Reichsbank is not published, but a year ago it was estimated at about 30,000,000 ounces. During 1921 and the first four months of 1922 about \$6,000,000 worth of silver was imported into the United States from Germany. This amount represents about 9,000,000 ounces of silver, which presumably was taken from the Reichsbank's stock and exchanged for goods or credit in the United States." Although it has been reported that some, at least, of this metal was refined, no definite news has been received of its sale.

INDIAN CURRENCY RETURNS.

	June 22, 1922.	June 30, 1922.	July 7, 1922.
Notes in circulation	17,417	17,601	17,648
Silver coin and bullion in India	7,888	8,073	8,120
Silver coin and bullion out of India	2,431	2,432	2,432
Gold coin and bullion in India	6,514	6,512	6,512
Gold coin and bullion out of India	584	584	584

No silver coinage was reported during the week ending 7th inst. The stock in Shanghai, on the 8th inst., consisted of about 34,300,000 ounces in sycee, 33,000,000 dollars, and 2,000 silver bars, as compared with 32,700,000 ounces in sycee, 33,000,000 dollars, and 2,200 silver bars on the 30th ulto.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

NOTICES.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch in High street, Westham, Pevensy, Sussex, under the management of Mr A. E. Parsloe.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 155 Fortress road, Tufnell park, N.W. 5, the resident officer being Mr F. R. Church.

The Union Discount Company of London, Limited, announces that Mr F. Nevill Jackson, formerly assistant manager has been appointed sub-manager, and Mr A. F. E. Foucar, O.B.E., and Mr E. K. Brown assistant managers.

Mr Thomas Frederick Tattersall, of Messrs C. Tattersall and Co., cotton merchants, Manchester, has been appointed a director of Williams, Deacon's Bank, to fill the vacancy caused by the death of Mr John W. McConnel.

The London office of the Union Bank of Canada announce that a branch of the bank has been opened at Waterways, Alberta.

The Göteborgs Bank of Gothenburg, Sweden, has taken over, as from July 1st last, the business of Kopparbergs Enskilda Bank, established in 1835.

Reports and Notices.

The head office of the British Oak Insurance Company, Limited, has been removed to 63-64 Gracechurch street, London, E.C. 3. The marine department will remain at 2-3 Royal Exchange, E.C. 3.

RAILWAYS.

MISSOURI, KANSAS, AND TEXAS RAILWAY COMPANY. — The Equitable Trust Company of New York remind holders of common and preferred stock in the above company that payment of the third instalment under the reorganisation scheme, and amounting to \$5 per share on common stock and \$4 per share on preferred stock, is required on or before July 18, 1922. As the amount has to be cable to New York the payment should be the equivalent in sterling at the current rate of exchange for cable transfers on New York, and failure to make such payment on or before July 18, 1922, will forfeit all rights in respect of prior instalments paid and otherwise under the temporary receipt or the participation warrant.

BANKS.

BANK OF LIVERPOOL AND MARTINS, LIMITED. — The Bank of Liverpool and Martins, Limited

CV. of deed of settlement, £125,000; leaving a balance of £385,133, which the directors recommend to be dealt with as follows:—To payment of a quarter's dividend to March 31, 1922, at the rate of 10 per cent. per annum, out of the half-year's profits, £125,000; to augmentation of the reserve fund, £100,000; to balance carried forward, £160,133. The directors record with much regret the retirement from the presidency of the Hon. Sir Charles K. Mackellar, K.C.M.G., M.L.C., who has presided at the board meetings for some 20 years. Sir Charles has been succeeded by Mr Thomas Buckland, who has long been associated with the bank, and is the second of the name to enjoy the distinction of being president, his uncle, the late Mr Thomas Buckland, having acted in that capacity for years. During the half-year branches of the bank have been opened at Clarence Town and Finlay (N.S.W.). Branches and agencies now number 360.

IMPERIAL BANK OF INDIA.—Cablegram received (July 12th) from the central office states:—"Net profits for half-year ended June 30th, Rs.63,52,300; brought forward from December 31, 1921, Rs.12,74,500—total, Rs.76,26,800. The governors have declared dividend of 15 per cent. per annum, free of income-tax, absorbing Rs.44,98,300; transferred to reserve, Rs.10,00,000; transferred to pension fund, Rs.5,00,000; carried forward, Rs.16,28,500."

MISCELLANEOUS.

BRAZILIAN TRACTION, LIGHT, AND POWER.—The ninth report and accounts for the year ended December 31, 1921, shows that revenue received under contracts with subsidiary companies was \$4,410,057; interest on investments and miscellaneous income, \$127,657, making \$4,537,714; general and legal expenses and administration charges, \$169,464; interest and charges on secured gold notes and other loans, \$833,568; provision for general amortisation, \$300,000—\$1,300,033, making net revenue \$3,237,681; dividends on preference shares at 6 per cent. per annum, \$600,000; making surplus for the year, \$2,637,681. The following comparative statement shows the total gross and net earnings of the subsidiary companies in Brazil, the fixed charges and expenses of the subsidiary companies and of this company and the resulting net revenue of this company for the past four years:—

	Year Ended December 31.		
	1919.	1920.	1921.
Gross earnings from operation in Brazil	Milreis. 113,073,982	Milreis. 134,905,832	Milreis. 170,867,353
Net earnings from operation in Brazil	58,423,485	69,990,657	95,105,553
Average value of milreis for exchange on New York based on remittances	Cents. 26.80	Cents. 20.41	Cents. 12.51
	\$ 15,655,477	\$ 14,286,039	\$ 11,898,523
Above net earnings in dollars	86,160	458,576	270,150
Miscellaneous revenue	15,741,637	14,744,615	12,168,673

As will be seen from the above statement the total gross earnings of the subsidiary companies in Brazil were 170,867,353 milreis, being an increase as compared with the corresponding earnings of the previous year of 35,951,521 milreis, or 26.65 per cent. The net earnings from operation were 95,105,553 milreis, being an increase of 25,114,896 milreis, or 35.88 per cent.

BRITISH EMPIRE STEEL CORPORATION, LIMITED.—The earnings for the period April 16th to December 31, 1921, were \$4,416,450, after deducting all expenses incident to operations, current repairs, taxes, administrative and selling expenses, and after reserving sufficient amounts to provide for shrinkage of inventories and other contingencies. The sum of \$1,501,176 was set aside for depreciation of plant and properties and to provide for sinking funds, and \$1,181,681 was deducted for interest on bonds and debenture stock, leaving \$1,733,591 net profit for the period. After payment of dividends declared on the first preference shares of the corporation and the preference shares and preferred stocks of the constituent companies, amounting to \$718,277, and making provision for those which had accrued upon December 31st, amounting to \$259,387, there remained to be carried over the sum of \$755,926. No dividends were paid upon the second preference or common stocks.

ENGLISH SEWING COTTON COMPANY, LIMITED.—The directors report that the accounts for the year ended March 31, 1922, result as follows:—After providing for depreciation, debenture interest, directors' fees, law charges and auditors' fees, the net profit for the year is the sum of £348,160, to which has to be added the balance from last year, £198,354, making £546,514. This amount the directors propose should be dealt with as follows:—Payment of preference dividend (5 per cent.) for the year ended March 31, 1922 (of which 2½ dividend (5 per cent.) for the year ended March 31, 1922, on March 31, per cent. was paid on September 30, 1921, and 2½ per cent. on the 1922), £50,000. Payment of a final dividend of 1½ per cent. on the issued ordinary shares (making with the interim dividend of 2½ per cent. already paid, 15 per cent. for the year), £300,000. Balance carried forward £196,514.

MANILA ELECTRIC CORPORATION.—The report of the above company (formerly known as The Manila Electric Railroad and Lighting Corporation) for the year to December 31st last has now been issued. An issue of \$2,500,000 First Refunding Mortgage 7 per Cent. Gold Bonds, due 1942, was made in April, 1922, to provide funds for the redemption of the Three Year 7 per Cent. Notes due September of this year, and for extensive additions to the electric generating capacity now nearly completed, and other corporate purposes. The dividend has recently been increased from 6 per cent. to 8 per cent., payable quarterly (and an extra ½ per cent. bonus was declared last quarter). After paying all dividends for the year, there was a balance left of \$646,231, which was transferred to surplus, making the total accumulated undistributed surplus at December 31, 1921, \$3,673,054.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cereal crops have derived considerable benefit from recent moisture, but a spell of warmth and sunshine is needed to hasten maturity. English wheat continues in small supply, while firmly held at 55s to 58s per 504 lbs free on rail for suitable milling grades. Imported descriptions remain firm in sympathy with improved forward offers, though trading marked no appreciable expansion. No. 1 Northern Manitoba landed quoted 61s 6d per 490 lbs, No. 3 ditto 50s 6d, Australian 50s 6d, Rosale 64 lbs 57s, all ex ship to arrive per 480 lbs. The cargo section displayed firm features, the tendency being affected by stimulating foreign advices, but the demand was restricted on Continental account owing to fluctuating exchange rates. A steamer of No. 2 hard winter August-September sold 48s 6d and Victorian shortly due 52s 6d, both to France. Parcels were dealt in quietly, chiefly North American grain prices being somewhat irregular, though fully steady on balance. Flour in generally quiet request, and home milled varieties were reduced 1s per sack, at which there was rather more inquiry. London standard straight run quoted 45s 6d, town households 43s 6d, patents 47s 6d to 48s 6d, all English straights 43s 6d per sack delivered London area. All English country straights 40s 6d to 42s 6d free on rail at London stations. Imported steady, but quiet. Manitoba export patents quoted 45s, straights 41s, Pacific 40s, Australian 40s per 280 lbs ex store. On c.i.f. terms only a small business resulted, chiefly in strong Canadian makes, Manitoba patents July seaboard quoted in 44s, ditto straights 42s, Kansas patents 39s, and Australian 36s per 280 lbs. Millers' affairs quiet, but occasionally the turn easier. Broad bran quoted £6 15s to £7, extra £7 10s, ordinary bran £6 to £6 5s, middlings £8 5s to £8 10s per ton ex mill, bags included. Of imported, fancy Plate middlings quoted £9 10s and Plate pollard 7 10s per ton both landed terms. Barley remains dull. English grinding sorts rule at 46s to 47s 6d per 48 lbs free on rail. Of imported, Californian 38s to 40s, Australian chevalier 49s to 53s, Chilean ditto 49s to 50s per 48 lbs, Tunisian 34s, No. 4 Canadian Western 34s 3d per 400 lbs, all landed terms. Cargo market quiet and easier. A steamer Danubian-Bessarabian-Kustendji afloat sold at 32s per 400 lbs. Maize ruled firmer, owing to higher c.i.f. offers, and La Plata qualities sparingly offered. Plate yellow quoted 42s, No. 5 white African 37s, both landed, American mixed ex-ship to arrive 34s 6d per 480 lbs. The cargo section ruled firm for near, but forward positions quiet. A steamer Dan-Gal-Foxanian afloat was resold at 30s, and yellow Plate afloat 37s 3d, with August-September at 34s per 480 lbs. Parcels in good request at generally firmer rates. Oats, English, in small supply, and steadily held at 35s to 38s, according to sample, per 336 lbs, free on rail. Imported occasionally in buyers' favour. Plate f.a.q. 26s 9d, ditto clipped 28s 6d, Chilean tawny 28s, No. 2 white clipped American 38 lbs 27s, ditto 36 lbs 26s 3d, No. 2 Canadian Western 31s 6d, No. 3 ditto 29s 3d, New Zealand 37s 6d to 40s, all landed per 320 lbs. On c.i.f. terms small dealings occurred, chiefly North American grades, at generally easier rates, Plate descriptions being largely nominal in absence of offers. Oatmeal firm, but quiet. London made coarse pinhead £19, medium £17 10s, special groats £18 10s, rolled oats £18 10s, flaked £21, ordinary Scottish oatmeal £21 10s to £22, American, all cuts, £18 to £18 10s per ton. English beans steady. Springs quoted 58s to 65s, winters 51s to 53s per 532 lbs, free on rail. Of imported, Rangoon spot 6s 10½d, Madagascar haricots old crop 9s to 10s, and new 17s to 17s 6d, per cwt; Chinese horse beans £10 15s to £11 15s per ton ex store. Peas quiet. English maples 80s to 90s. Denes 65s to 70s per 504 lbs, free on rail. Of imported, Japanese spot 48s to 49s, Dutch hand-picked 20s, screened 25s, Tasmanian "A" grade 23s to 24s, New Zealand blue 22s to 24s per cwt. Lentils steady. No. 1 split 20s to 30s, No. 2 ditto 21s to 23s, Egyptian 21s to 25s per 100 lbs. English rye 40s to 45s per 504 lbs, free on rail. Home-ward grain chartering was on a moderate scale, chiefly from North American ports to Continent and Mediterranean. The River Plate section was very depressed, especially for prompt loading, and steamers up river to U.K./Continent July worth 17s 6d, while forward positions are nominally 20s to 20s 6d heavy grain, with options. Montreal to Continent August done at 15 cents, ditto Northern Range loading 13½ cents per 100 lbs. Range to West Italy November and December 4s 6d per qr, Montreal to four ports Denmark 21 cents per 100 lbs, Gulf to Continent August 18 cents per 100 lbs, and Mediterranean not east of West Italy August and first half September at 4s 9d per qr. North Pacific steady, but no business reported, and values stand at 37s 6d per ton to U.K., Continent September October. Eastern markets quiet but steady, with 18s paid from Bombay to U.K./Continent on deadweight. South African maize new crop rules at 22s 6d, while similar cargoes from the Danube would come at 17s 6d to 18s 6d according to size and position.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated July 13th, is as follows:—Pig-iron: The only event of importance this week is the termination of the price control of Cleveland pig-iron. In the absence of demand, it is not expected that any material change will be made in the selling prices. Nominal quotations are to-day:—90s for No. 3 Cleveland, G.M.B., and 94s for mixed numbers, East Coast hematite. Foreign exchange has stopped export trade for the moment. Manufactured iron and steel: Business in steel is very slack, and orders scarce. Steel prices are unchanged: Home—Steel ship plates, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s net. Iron Ore: Buyers seem to have withdrawn from the market, and hope for lower prices. Best Bilbao Rubio is nominally 25s.

Our Sheffield correspondent writes:—The slowness of the recovery of local industry from the effects of the recent lock-out is illustrated by the statistics of unemployment. There was a total of 50,000 persons receiving out of work benefit when the dispute ended, and this has since been reduced by only 6,000. Some increase of activity in the cheaper kinds of mild steel is noticeable as buyers abroad are obtaining supplies from this country instead of the Continent. British billets at £7 5s, delivered to works here, is below Continental quotations, British pig can also be bought as cheaply as foreign, although Continental makers are beginning to cut their prices again, in order to recover their footing in overseas markets. The steel output of the country was at the last return 60 per cent. of the average of 1913, and has since increased, but the output capacity is now much larger than in that year. The im-

proved statistics are the result of a really great revival in South Wales, which is producing a much greater tonnage than before the war. South Wales tin plate has regained fully the Canadian market, which went to the United States during the war. In other parts of the country the steel trade shows a small gain week by week. In railway steel, heavy steel castings, forgings, and tool steel, Sheffield trade is still seriously depressed, with little sign of substantial improvement, but things are decidedly better in cold-rolled steel, engineers' small tools, and various craft tools. A substantial Russian order for files, saws, edge and engineers' tools has just been placed in Sheffield with satisfactory arrangements for payment. There is a general complaint that trading at the current low rates is quite unremunerative, and makers state that prices must go up as wages cannot be cut any further. The only economy in costs now remaining lies in a reduction of railway carriage charges, and a valuable concession in this direction has just been announced. The coal trade is unchanged, except a further decline in sales of household sorts, and reduced prices. Railway companies have placed contracts for South Yorkshire steams at 20s per ton, this being the lowest figure for three years. Rather less is being asked for export. Coke is being asked for on a steadily increasing sale. Weakness in the demand for gas coke is reported. Small fuels are in request, and inclined to become scarce, with prices tending upwards for the best sorts.

Our Glasgow correspondent (writing on Thursday) says: Business in iron and steel (raw and manufactured) has this week been practically at a standstill. That is to say, works have been almost solely concerned in clearing off booked orders, in view of the almost day-to-day of the usual summer industrial holidays, but nothing to speak of has been transacted in relation to new contracts on home and export accounts. The future in these connections is still shrouded in uncertainty, and neither buyers nor sellers, producers or consumers, are inclined for the time being to expand their engagements. Of course, inaction is influenced by the fact that the off-interregnum will last more or less generally from now till the first week in August, before which much may unexpectedly transpire, a condition which traders naturally prefer to prising that prices for most kinds of material have leaned to the easier side, but particularly so as regards pig-iron, which here and there has yielded 2s 6d to 5s a ton. These reductions, however, can hardly be said to be fixed, though they cannot fail becoming pronounced should the competition from Germany (that has again revived, make further progress. That will depend largely on the course of exchange. Scotch hematite continues quiet in the tone, round £5 8s 9d. Scotch No. 1 foundry, 100s, f.o.b. maker's works and ditto No. 3, £4 15s. At the usual meeting of the ring yesterday there were sellers of No. 3 Scotch at 98s, f.a.s., Glasgow; No. 3 Cleveland G.M.B., 89s; f.o.b. Middlesbro'; but no buyers. West Coast hematite, 94s, f.o.b. Middlesbro'; and mixed numbers To-day some holders of Cleveland are asking 90s, while consumers are offering 87s 6d f.o.b. at producers' works, and this, it is believed, would be accepted for a good prompt line. No feature has transpired over the week in shipbuilding or engineering relations—nothing notably, at least, in the giving out of structural contracts. In informed quarters, however, the opinion holds that when operations are resumed, two to three weeks hence, ship-builders and engineers will be in better positions than they are to-day, especially as regards engine building, but, of course, departures in oil engines construction is promised, and these what is desired are realities in that and other lines, and these are slow in coming along. The coal trade position is most unsatisfactory: demand is concentrated on smalls, supplies of which are fully 50 per cent. behind requirements.

Our Cardiff correspondent writes:—The position on the Cardiff coal market during the past week has grown from bad to worse. There has never been within the memory of the oldest member of the Exchange a week when there was so acute a dearth of current business. The collieries have been dependent for cargo shipments almost entirely on their contracts, and in a very considerable number of cases these contracts have not been sufficient to keep the pits working for more than three or four days. The number of collieries closed down indefinitely is greater than ever, and employment is, therefore, on the increase. The depression has been aggravated by the heavy falls during the week in the French, Italian, and German exchanges. The violent fluctuations in the values of the franc and the lira have accentuated the distrust of exporters in the securities offered them, and little business has been done except for sterling cash in London against documents. Colliery companies in these circumstances are finding it more and more difficult to finance the working of their pits. There is no sign of any improvement in prices. The tendency continues downwards. Best Admiralty are from 6d to 1s per ton lower than they were a week ago, and other large qualities have sagged in sympathy. At these prices the loss per ton must be considerable. Even in May, when large coal prices were ruling for current supplies at between 27s and 27s 6d, the average pit-head proceeds per ton raised in the coalfield was only 18s 10d. That price left a profit of about 1s 2d per ton, which, however, accrued less from the slight increase in the average realised price than from the fall of over 1s per ton in the cost of production in consequence of the much improved output in that month. At the present moment the outputs are considerably less than the outputs in May, and in addition to the heavy fall in price the colliery owners have to contend with a much higher cost of production. The inland demand for household purposes has slightly improved, but the supply for industrial consumption is, as usual at this time of the year, at its lowest, while the quantity of coal exported in the foreign trade from the South Wales ports in the week ending July 8th was only 430,301 tons, compared with 501,215 tons in the previous week.

The following are the current market prices for representative coals:—Best Admiralty large, 24s to 24s 6d; seconds, 23s 9d to 24s; best drys, 24s to 24s 6d; black veins, 24s to 24s 6d; Western Valleys, 23s 6d to 24s; Eastern Valleys, 22s to 24s; best bunk smalls, 17s 6d to 18s 6d; ordinary cargo smalls, 15s to 17s; col for export, 35s to 37s 6d; inland blast furnace coke at ovens, 2s to 20s; patent fuel, 25s to 27s; pitwood, 31s 6d to 32s.

In the iron and steel trade business has not been quite as active but a large contract has been placed by the Burma Oil Company, and tinplate prices are steady at 10s 6d to 10s 9d per box, f.o.b. Galvanised sheets are quiet at £15 12s 6d to £15 17s 6d, f.o.b. for 24-gauge corrugated in bundles, while sheet bars are unchanged at £7 7s 6d.

THE COTTON TRADE.

MANCHESTER, July 13.

A much quieter tone has prevailed in the market during the past week. A disturbing factor has been the fluctuations in raw cotton rates, and generally speaking buyers have operated very cautiously, as there is still a great dread of any depreciation in values. With regard to cloth, business has been done in an irregular way. If the demand does not improve within a week or so, then some manufacturers will be desperate for orders. Some encouraging light piece goods transactions have taken place for India, but most of the offers for shirtings have proved entirely unworkable. No developments have taken place with regard to China, and shippers to that outlet are very slow in raising rates. A recent advice reads in a discouraging manner. Day-to-day buying in a small way has been recorded for the outlets of the Near East. Rather less demand has been met with for the Continent and South America. Home trade buying has been patchy. American and Egyptian yarn quotations have been irregular, and on the week are slightly easier. Weak sellers are still to be found. The offtake for home use has been unimportant. Most of the bids in export numbers have had to be turned down.

Our Bradford correspondent, writing on Thursday, says :—The decision of the directors of the British Australian Wool Realisation Association to withdraw all their medium and low crossbreds from the July-September sales has apparently had its effect on the trade. Reports from Hull this afternoon indicate that the offerings of crossbreds have been well taken up at, in most cases, firm prices, and if the demand continues at the London auctions, the B.A.W.R.A. may have succeeded in their declared intention of stopping the rot. In this centre there is a somewhat better tone to-day, though business is still being conducted on restricted lines. The great trouble at the moment is the uncertainty in regard to Germany, for it is recognised that a financial collapse in that country would completely upset trade. As it is, most firms are adopting a waiting attitude, and are content to work off old orders. In the circumstances there is some irregularity in the quotations for tops. In most cases they are nominally unchanged, but definite business would doubtless find sellers willing to make concessions. Good warp 64's have been sold at 4s 5d, and various prices have been taken for average sorts for delivery in October and later months, anything from 4s 2d to 4s 4d being mentioned, according to the position of the seller in regard to commitments. Crossbreds are more or less neglected, and although there is not much change in quotations, the position favours the buyers. Botany mixture spinners are busy, but in other departments demand is rather quieter, though practically all spinners have enough work in hand to keep their machinery employed for from two to three months. There is not much change in the piece goods trade, but prices are fairly firm. Home-grown wools are selling well, the feature still being the high prices paid in the country for Downs.

(FROM A CORRESPONDENT.)

The season can now be regarded as over in Australia, and cables to hand this week from Melbourne, Sydney, and Brisbane indicate that sellers and growers are satisfied with the past twelve months' work. It would have been interesting to have known the actual carry-over, but the number of bales remaining unsold can not be very large, and the way the trade has absorbed such big weights of wool in London, Liverpool, Australasia, South Africa, and South America is remarkable. Practically all the Colonial clips have been sold, while letters to hand this week from South Africa indicate a bare market, with hardly anything available excepting Basutos and six months' clothing wools. The Cape clip never disappeared so readily, and the Australian season will open probably the third week in September with chiefly new clip wools. The trade would appreciate more information regarding the shearers' strike, and whether shearing is taking place anywhere. If this strike continues any length of time, it will play sad havoc with markets, and can to a large extent upset the equilibrium of the trade. If it goes on for three months, every pastoralist will want his wool off the sheep's backs at once, and the forthcoming clip may easily be of extra length and the succeeding clip a short stapled one.

The sale at Liverpool last week-end passed off better than the majority expected, and although the opening was somewhat slow, with prices mostly in buyers' favour, towards the middle of the sale competition broadened, and the bulk of the merinos sold on a parity with the close of the London sales. The few Australian crossbreds catalogued sold at very firm prices. A sale is taking place to-day at Hull, where there is a very good show of wool, particularly Tasmanian merinos and crossbreds, and steady prices are generally expected. Next week another series of London sales will commence, and if the wool to be offered is actually sold, the

takings of the trade during June and July will be well on towards 500,000 bales. Surely after taking such a quantity buyers will deserve a month's holiday.

Last Monday B.A.W.R.A. issued a statement which the trade generally has regarded as of a "bullish" character. Undoubtedly the object is to inspire confidence in the present and future position of crossbreds, and the statement deserves consideration. It is satisfactory to know that the Association have got rid of such a big weight of crossbreds this year. It may be suggested that the Association need not set forth in pounds weight the quantity of wool absorbed by the trade. The weight of a Colonial and South American bale is well known, and the trade are accustomed to think of raw wool in terms of bales. No mention is made of the position of merinos, everything in regard to these wools evidently being considered satisfactory. I do not think anybody will object to the statement that it is not intended to sell crossbreds below a parity with June, neither need the taking off the market of N.Z. wools from the June and September series of sales disturb anyone. New Zealand pastoralists are undoubtedly experiencing a ruinous time, and should have an opportunity to market their free wools.

(FROM OUR CORRESPONDENT.)

So far as linseed oil is concerned, the market has preserved a fairly steady tone, and spot and "near" values show some appreciation on the week, $\$44$ now being the value for prompt delivery, and $\$43.58$ late July. Supplies are not heavy, and a strong factor has been the purchases on American account, substantial quantities having again been booked for early shipment. Evidently buyers on the other side have still plenty of faith in the capacity of the United States to absorb the oil between now and the incoming of the new domestic crop of linseed into the mills. America has been buying Argentine seed rather more freely of late, but notwithstanding the increased tariff on the imported oil product, English oil continues to find its way into the States. It is recognised, however, that the time is coming when domestic oil will be in competition with foreign, and that the extent to which the latter will be required will depend upon an increased capacity of America to absorb it. Forward positions of English oil are moderately steady, at a substantial discount off spot and near positions, August and $\$38.00$ or $\$38$ below July.

Cotton oils are more money in sympathy with Egyptian being £40 10s per ton, or £30, or less inactive, and offer at somewhat less easier seed, current value of crude Egyptian, naked, ex-Hull mill. Soya bejan, rape, &c. without notable change.

In the oilseed section, Plate linseed maintains a level of over £20 for shipment, and is slightly firmer, but crushers, in view of the uncertainty of the future, are indisposed to do more than to meet current oil commitments. Cottonseed is rather lower on the week, and a little more trade doing.

The imports of oilseeds and oil nuts in June were 130,703 tons, or above the average, thanks to large arrivals of linseed. For the six months the aggregate imports are 710,336 tons, against 630,759 tons same period last year, or 79,577 tons more, the principal increases being under the heads of cottonseed, rapeseed and soyabbeans. Linseed arrivals at 102,746 tons are 17,500 tons below a year ago, and nuts and kernels, at 102,684 tons, nearly 17,000 tons behind. Exports of unrefined oils for January-June are returned at 59,921 tons, against 31,738 tons, linseed oil accounting for 43,788 tons, against 10,650 tons, the heavy increase being due wholly to the large exports to America.

(BY OUR OWN CORRESPONDENT.)

Hides from home slaughtered cattle were firm at the auctions held in Bermondsey this week, best ox and heifers making on the average about $\frac{1}{4}$ d per lb advance. The three top weights in seconds recorded a similar advance, with the lighter weights remaining at last week's figures. First cows were a shade easier in the 50 lbs and under, seconds were unsold, while bulls realised

last prices. Calf skins were slightly easier in some classes as compared with last week, while lambs made from 2s to 4s 4d and pelts from 2s 2d to 3s 2d per skin. In the foreign hide market a fair amount of trading has been done during the week, and it is reported that Frigorifics at origin are very firm. Campana ox have changed hands at round about 44 dollars, while Bovril ox have made 8½¢, c.i.f. shipping weights. Dry and dry salted descriptions have experienced a moderate demand, but buyers are acting with extreme caution in regard to buying ahead.

Sole leather is patchy, with the demand about that of the preceding week. Hinds in the lighter averages are the main features of the trade passing, and repairers are taking these goods in 8 to 10 lbs average at round about 2s. Shoe manufacturers are inquiring for something lighter, and better selections round about 4 to 6 lbs have found buyers during the week, while there has been the usual weekly inquiry for something very common at a low price. Bellies are a fair market, although the better grades have not been so much sought after, while the call for shoulders seems to have slackened off.

Upper leathers are also a slow sale, the larger portion of what inquiry there is going around being for the commoner selections in glacé kid. Box and willow calf leathers are in limited request, and the call for suede leathers seems to have fallen off altogether. There is a small trade doing in waxed kips butts, but nothing much to speak of.

Shoe manufacturers are not finding orders coming to hand so freely as has been the case of late, and some are of the opinion that there is likely to be another dull period. However, there is still a moderate amount of business to be executed, and it is hoped that by the time this is completed the position will have improved.

(FROM OUR CORRESPONDENT.)

The position as regards the market for building construction woods during the past month has been in favour of sellers, f.o.b. prices having shown a firm and steady tone. This is principally due to the fact that the Finnish shippers in the early months of the year

cleared a considerable portion of their f.o.w. stocks, some on cash terms and at very attractive prices, and were thus in a position to hold for, and obtain, more advanced rates for their later shipments. This action forced buyers to the Swedish market, which had been neglected because of what was considered to be the too high ideas of Swedish sellers—i.e., £26 for deals and £18 for 7-inch unsorted red, f.o.b.—and business has been negotiated both by Continental and United Kingdom buyers at these basis figures, and, to a greater extent, lower quality wood below these bases.

On the spot, however, the situation is not so satisfactory from importers' and merchants' points of view as now pertains to the f.o.b. market, for competition is still keen, and goods are turned over at prices that, under shippers' present ideas, cannot be replaced. With the fairly large import during June the country is well supplied with wood (though the stock is considerably less than last year's very heavy holdings) at the present rates of consumption. The latter is the key to the whole position of price—the demand is the thing, and it will have to improve considerably if spot values are to go much higher. One of the difficulties of a firmer spot market is that the early and cheaply purchased Finnish timber is piling up against the wood bought later at higher figures.

The Swedish *Svensk Travarar Tidning* reports that "the sales figures for the half-year will probably slightly exceed than fall short of 475,000 standards.....this means that all but 50 per cent. of the total supplies of the year have been sold, a result that is extremely satisfactory in view of the fact that the British market really opened only six or seven weeks ago." "Extremely satisfactory" is hardly the term to use, for importers were forced to enter the market on shippers' terms for immediate and early future requirements, and the competition in the United Kingdom for a share of the balance of the 50 per cent. stocks may not be so keen as for their share of the first 50 per cent. It rests with the demand on the Continent, which certainly has shown improvement of late months, and the United Kingdom. The Finnish balances unsold are not nearly of such importance.

It is worth mentioning that Russia during the first five months of this year sent us 34,900 loads sawn softwoods, against 2,840 loads for the first five months of last year, and Norway 63,300 loads, against 21,280 in 1921.

Canadian spruce is being imported moderately, about the same:

as last year, and stocks are light. Prices have shown more steadiness lately, and will depend on the demand here, and also in the home market and in the United States. For American pitchpine the home demand has lived up, resulting in a rise of prices there and also here for forward shipments, but owing to the bad state of the shipbuilding and engineering trades shippers' higher prices are hard to pass on to consumers.

In the furniture wood market the situation shows improvement, but more in price than in demand, although the latter is a little better than it has been for months past. For mahogany, particularly for British Honduras logs, goods prices have been made at auction; stocks in first hands are reduced, and new supplies are coming in very sparingly. For American furniture woods it is difficult to educate buyers to the higher ideas of States shippers, and the demand consequently lacks activity.

The teak market continues disappointing to importers and merchants in that branch of the trade. The demand from the shipbuilding trade is very slow, whilst the present changes in railway organisation and depressed conditions generally are having the effect of curtailing the call from constructors of rolling-stock. Values continue weak.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 14.

The markets for the chief part disclosed quiet features, buyers continuing purchases to wants of immediate necessity, while export requirements do not extend in face of the difficulties attaching to the question of the rates of exchange.

SUGAR.—General stability was again apparent under sustained buying orders and firmness existing in American centres. Recent prices were not only fully maintained, but in several cases substantially exceeded. Messrs Tate and Lyle's cubes, sold, 57s to 58s; crushed, 55s 6d; nibs, 56s; granulated, 50s 9d to 51s 3d; caster, 53s 3d to 54s 3d; yellow crystals, 45s 3d; pieces, 35s to 36s; granulated, August, 50s 9d; ditto, September, 50s 6d; October-December, 50s 6d. Crystallised West India, sold, from 42s 6d to 45s as to quality. American granulated received fair support, and spot parcels sold, 49s 7½d to 49s 9d; July, steamer, 22s 9d to 22s 10½d, 22s 9d; August, 22s 10½d to 23s; September, 23s 1½d; white Java, July, sold, 21s to 20s 10½d; August, 20s 10½d to 20s 9d, all c.f. and i. terms, London. Dutch and Czechoslovakian sugars quite nominal for shipment. White Mauritius, spot, ranges from 47s 6d to 48s 6d, as in quality; white Trinidad, 48s 3d; white Brazilian, 47s. Cuban, basis 96 per cent., July, quoted, 17s 6d; Java, No. 17, Dutch standard, July, 18s 6d; Brazilian, basis 80 per cent., July-August, 9s 3d; ditto, 96 per cent., September-October, sold, 17s, all c.f. and i., U.K. Belgian crystals, October-December, 20s, f.o.b., Antwerp. Terminal market firm in the early part of the week, but quieter later. White, August, sold, 22s 9d to 22s 4½d; September, 22s 6d to 22s 3d; October, 21s 10½d to 21s 9d; October-December, 21s 7½d to 21s 3d and 21s 6d. Cuban stocks stand at 789,980 tons, against 1,431,700 same time last year. American glucose, spot, 27s 6d.

COFFEE.—A quiet tone pervaded this market, and prices for common descriptions tended in buyers' favour. General run of quality at the moment is not attractive to home-trade buyers. Futures dull. December, sold, 61s; March, 60s 1½d.

COCOA.—Market very quiet, but prices about unaltered. Transactions effected by private treaty include fine Grenada, at 57s; Bahia, 58s; West Coast African, 48s. Butter selling quietly at 1s 7d per lb.

TEA.—37,500 packages Indian were catalogued in auction this week and met with a generally slow demand. All the finer qualities denoted some irregularity, though about unaltered on balance. Inferior types were ½d to ¾d per lb lower. Ceylon auctions embraced some 28,600 packages, and for which the market ruled distinctly unsettled. Common and medium broken kinds ¾d to 1d per lb lower. Finest broken and leaf teas met a good demand, and market disclosed steady features.

RICE.—Shippers again offered sparingly, and market ruled firm, though buyers were not much in evidence. Two Stars, spot, new crop, 15s 3d; July-August, 14s 9d, c.f. and i. terms. No 3 cleaned Rangoon, afloat, quoted 14s 9d, c.f. and i., Levant, double bags. Broken descriptions steady, unaltered. Rangoon beans quiet of sale. Hand-picked, spot, sold, 6s 10½d; Madagascar butter beans, spot, old crop, 9d; new held for 17s to 18s. Japanese peas, spot, 49s; new crop ditto, September-October, sold, 33s 6d to 34s; and October-November, 33s. Dutch peas quiet. Screened, on spot, 24s to 25s.

SPICE.—Pepper market quietly steady. Fair black Singapore, spot, sold, 4½d; ditto, August-October, steamer, 3½d; Aleppy, spot, quoted 4½d; Ceylon, 4½d; Tellicherry, 4½d to 4½d, as to sample; white Singapore, spot, 7d; ditto, July-September, 6½d; white Singapore, spot, 7½d; ditto, August-October, sold, 6½d. Zanzibar cloves, spot, 1s 1d; ditto, July-September, 9d, and October-December, 7½d per lb. Pimento, spot, 2½d. Flake tapioca, spot, fair, sold, 2½d per lb; ditto, July-September, London, quoted, 22s 9d; fair Penang seed pearl, spot, 21s 6d; July-September, 21s. Sago flour quiet; July-September, quoted 15s. Desiccated coconut dull; spot, 38s to 37s; ditto, July-August and August-September, sold, 36s 9d to 35s 9d. Ginger quiet, but prices steady.

FRUIT.—Currants steadily held, but demand was only moderate. Pyrgos quoted 52s; Amalia, 53s to 54s; Vostizza, 57s to 65s. Sultanais quiet. Smyrna, medium to good, 115s to 120s; fine to choice, 126s to 135s. Raisins quiet, and without new features. Dates quietly steady.

JUTE.—The market disclosed some irregularity and weakness, as buyers were not so frequent with actual dealings confined to a very moderate limit. First grade, July-August, continent, sold 136; new crop, August-September, 138; September-October, 137 10s. Lightning grade, July-August, 132 10s; August-September, 134; and September-October, 134. Hessians, 10-oz, spot, 38s 6d; 8-oz, 28s. A twills, 77s 6d; B, 70s. The Director of Agriculture of Bengal confirms acreage under jute at 1,456,000, and adds that crop will be

very late, owing to drought in earlier months. Present crop prospects fair, and stocks of old jute up country limited.

HEMP.—Manila slow of sale, and prices barely steady. F grade, July-September, quoted 139; G ditto, 133 10s; J, 130; K, 129; L, 128; M, 127. New Zealand steady, and H.P.F., spot, quoted 131 10s per ton.

SHELLAC.—Market slow, but steady. T.N., spot, 360s; August, 352s 6d; October, 345s.

COPRA.—Market slightly unsettled, but a fair amount of business resulted. F.M.S. Straits, July-September and August-October, Rotterdam, sold, 125 5s to 125 8s 9d; F.M. ditto to Marseilles, 124 7s 6d; Ceylon to Hamburg quoted 126 10s; Java ditto, sold, 125 8s 9d to 125 10s; South Sea quoted 124 10s; Cebu, 124 15s. Palm kernels steady. August-October, Liverpool, sold, 17 7s 6d.

RUBBER. remained in a quiet and rather featureless condition. Standard crepe and sheet, spot and July, sold, 7½d to 7½d and 7½d; August-September, 7½d; October-December, 8d; January-March, 8½d. Fine hard Para, spot, 19½d; soft fine, rod; ball, 7½d.

MENTHOL.—Spot, sold, 24s; forward, quoted, 22s 6d. Japanese peppermint oil, spot, sold, 5s 3d; aniseed, spot, 2s 4d; August-October, 2s 5d. Ceylon citronella oil, spot, sold, 2s 4½d; June-July, 1s 11d; Java, spot, quoted, 2s 11d; forward, 2s 9d per lb. Japanese wax, spot, 87s 6d; forward, 74s.

OLDS.—Linseed market generally firmer, with improved inquiries. Spot, net, naked, 44s; July, 42s 7½d; July-August, 42s 6d; September-December, 38s 7½d. Rape quiet. Crude, spot, 44s; refined, 48s. Cotton quiet. Crude Egyptian, 42s; Bombay nominal; common edible, 48s. China-wood: Hankow, spot (barrels), 64s; shipment, 65s. Coconut steady. Ceylon, spot, 42s; July-August, 38s 9d; Ceylon, ditto, 43s. Soya steady. Oriental, barrels, ditto, 41s. Japan fish steady. July-August, cases, 22s. Cod steady. English, spot, 31s. Ground nuts quiet. English crushed, naked, spot, nominal, forward, 48s; deodorised, barrels, 56s. Turpentine easier. American, spot, 102s 9d; July-December, 91s; September-December, 88s 6d; January-April, 88s 6d. Rosin firm for common grades. American, grade B, 14s; F, 14s 9d; G, 14s 9d; WW, 20s 6d. French, FJG, 14s 6d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OLSEEDS.—Linseed market opened firm, but quieter since. Bold Bombay, afloat, 122 15s. Small Bombay, ditto, 121 15s. Calcutta, afloat, 121 15s; June-July, 121 15s. Plate, afloat, sold, 120 2s 6d; June-July, 119 15s; July-August, 119 12s 6d; August-September, 119 12s 6d. Rapeseed irregular. Toria, July-August, quoted 118 12s 6d; real bold Ferozepore, July-August, quoted 118 2s 6d. Cotton seed firm. Egyptian black, July, sold, 12 2s 6d; and white, 11 2s 6d. Bombay, July-August, sellers, 19 5s. Gingly dull. Chinese, June-July, Continent, nominally 12 7s; large Bombay, ditto, 12 6s. Castor, Bombay, May-June, quoted 19 5s, to Hull. Ground nuts dull. Coromandel, machine-dried, July-August, Hull, 12 3s.

METALS.—Tin: With a fair number of buying orders in evidence,

INVEST IN A ROYAL TYPEWRITER It Pays for Itself.

Typing, copying, and duplicating work can invariably be found by those who are anxious to earn money in their spare time.

The "Royal" Typewriter has a well-deserved reputation for producing the finest work. The clean-cut lettering, the ease of operation, and the adaptability for every class of work make it an ideal machine for home or office work—and it pays its own instalment.

If you think of hiring a typewriter or obtaining one on easy purchase terms, ask us to call, or call on us. Our terms are most reasonable. Please write for them.

Skilled operators provided at any time for special or temporary work.

Portable Typewriters Supplied.

Phone: City 7891.

ROYAL

general firmness characterised movements at the opening market. Cash registered 154 15s to 154 10s, and three months 155 to 155 10s, and finally at 155 5s. The tone, however, was not maintained on the following day, sellers being less reserved, while obliged to make concessions in order to effect business. Cash sold, 154 down to 153 12s 6d, and three months 154 15s to 154 5s and 154 7s 6d. The tendency continued in a downward direction at the middle of the week, though offers were fairly well absorbed. Cash was established at 153 5s, and three months 154 10s to 153 15s and 154 5s. At Thursday's meeting the tendency was again easier, with a fair amount of business in force. Cash sold, 153 5s; three months, 154 5s to 154 15s; and three months, 154 to 153 15s to 154, while finally registered at 153 17s 6d. English ingots, 154. Copper has been a very steady market, but trading on a moderate scale, sellers showing no disposition to press sales. Standard cash commenced at 162 17s 6d, and three months 163 10s to 163 2s 6d and 163 7s 6d. Values improved by the middle of the week, and business was more extensive, cash being dealt in at 163 5s, and three months 163 10s to 163 13s 9d. Market showed firm features on Thursday, and moderate transactions resulted, including cash at 163 5s, three months 163 15s to 163 12s 6d, and again at 163 15s. At Friday's session values ruled easier. Standard cash sold at 163 1s 3d to 163 2s 6d; early September, 163 7s 6d; three months, 163 10s to 163 13s 3d to 163 10s. Electros, 170 5s to 171 15s; best selected, 166 to 168; strong sheets, 194; wire bars, 171 15s per ton. Lead dearer, 124 12s 1d to 123 12s 6d as to position. Spelter firmer at 128 15s to 128 12s 6d, according to position. Antimony, English Regulus, 127 to 129 10s. Aluminium, home delivery, 1100; export, 1105.

TALLOW.—Messrs Colchesters and Woolner write on July 12th as follows:—The tallow market was less active during the week, and prices are fully maintained. Little business is possible for shipment, because prices at the sources of supply are above the parity of those current here. At auction to-day 1,522 casks tallow were offered, and 1,017 were sold. Quotations are:—Australian mutton: Fine, 40s 6d; good to fair, 40s to 38s 3d; dull to dark, 36s 6d to 33s 6d; hard, 39s. Australian beef: Fine, 40s 9d; good to fair, 38s 6d to 37s 6d; dull to dark, 36s 3d to 33s 3d; sweet, 41s 3d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., —, and mixed, 43½ c.i.f. London, 38s. The market letter is unchanged. Town tallow, 34s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 24s per cwt. Quotations are:—Town: 33s 6d net cash, naked, ex works. Country: Frail casks, 33s; home melted, shipping casks, net f.o.b., good coloured, 3½s; fair to dull, 35s to 34s. Bone fat: White, none; pale, none; benzine, 30s; melted stuff, 29s 6d, f.o.b.

THE MONEY MARKET.

As usual in these times, when the Treasury is not borrowing from the Bank the market has a very narrow margin, if any; and on Monday some large withdrawals by the clearing banks, for balance-sheet and other purposes, combined with the absence of maturing Treasury bills, forced borrowers to go to the Bank of England for considerable sums. Since then the supply of credit has been uneven, but barely adequate; 2 per cent. was readily paid for loans over the night, and on Thursday one of the

[July 22, 1922.]

banks proposed to arrange advances until Monday at this rate, thereby arousing some comment among the bill brokers, on the ground that for some time they paid the banks more than they could earn on bills, and that it was thus hardly fair to seize the present occasion to squeeze them, when the Government, as shown by the Bank return, was sitting on an unusually large balance.

	July 21, 1922.	July 14, 1922.	July 7, 1922.	June 30, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)

Houses (Notice)	1	1	1	1	1 (Jly. 13, '22)
Market rate (3 months' bills) ..	1	1	2	2	..

The Bank return showed another withdrawal of half a million in gold, with a corresponding cancellation of notes in the Issue department, and the transfer of another half million of notes from the Banking department, which reappeared in the Currency Note Reserve. The "circulation" was practically unchanged, and the Reserve was thus half-a-million lower. Other securities rose by 2½ millions, and there was a small decline in the Government securities. Public deposits showed an increase of no less than 9½ millions, and the Other deposits were thus nearly 8 millions lower. The circulation of currency notes was reduced on the return dated July 20th by £1,023,900 to £297,610,900, which includes £1,588,600 for notes called in but not yet cancelled. The fiduciary issue is £247,872,300, or £62,116,100 below the maximum. The sum of £1,000,000 was added to silver coin in the Redemption Account, making it £7,000,000, while gold was reduced by £500,000, making it £27,000,000, and £500,000 was added to notes, making them £21,150,000.

The monthly statement of average weekly balances of the London clearing banks is printed in detail on another page. The aggregate figures of the nine English banks for June are compared with those of previous months in the table below:—

	June, 1921.	Dec., 1921.	March, 1922.	April, 1922.	May, 1922.	June, 1922.
Capital and reserves	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	57.7	65.3	57.1	56.7	57.0	55.2
Deposits (incl. undiv. profits, &c.) ..	1,768.4	1,818.6	1,746.9	1,737.1	1,745.3	1,755.2
Total Liabilities	1,942.0	1,999.8	1,919.9	1,909.7	1,918.2	1,926.3
Coin, notes, balance at bank, and cheques in course of collection ..	265.1	273.5	245.8	253.3	250.5	251.3
Money at call	98.0	105.7	102.5	107.3	103.0	113.0
Investments	335.9	343.3	392.7	402.3	415.7	412.0
Discounts	346.2	424.3	350.5	319.8	325.1	346.2
Loans and advances	815.4	762.3	706.2	745.2	735.7	723.3
Cover for accept., premises, &c.	8.4	90.7	82.2	81.8	82.2	80.5
Total Assets	1,942.0	1,999.8	1,919.9	1,909.7	1,918.2	1,926.3

Deposits show an increase for the second time in succession, but the decline in advances continues. Discounts have risen again, and are nearly up to the March figure, but investments have fallen off a little. The half-yearly figures of the "big five" banks are referred to in a "Note of the Week."

THE STOCK MARKETS.

The reduction in Bank rate last week to 3 per cent. has made itself felt in all the investment sections of the Stock Exchange, and gilt-edged stocks have shown a steady upward movement. French securities have been a little firmer, and there has been a slight improvement in Russians, but German bonds have gone back. Home Railways are better, North-Easterns being conspicuous on expectation of the terms of amalgamation of the North-Eastern group. Rubber shares continue flat, and oils are dull. Tobacco shares were strong on the increased dividend of the Imperial Tobacco Company, and Brewery stocks were good. There was a fair demand for gold mining shares, and considerable activity in Chartered in anticipation of the terms on which the Union Government

may propose to take part of the property, a subject to which we refer elsewhere.

COMMODITY MARKETS.

The reports from principal commercial centres this week are somewhat after the nature of the curate's egg. The best point is the news from Bradford woollen trade, where the position is thus summed up by our special correspondent:—"While it cannot be said that there is any great activity, there is certainly more doing in most sections of the industry." In the coal industry, although recent unsatisfactory conditions continue, there is the good news that the Miners' Federation has decided to stand by the wage agreement, while the presidential speech of Mr. Herbert Smith, commented on in a later column, has created a good impression. The holiday season is beginning to cast its shadow, and this week has affected production in the cotton weaving districts of Lancashire. Trading in the Manchester cotton market is reported as being on a limited scale, but hopes of greater activity are entertained, especially since the monsoon news from India is favourable. From iron and steel centres come reports of rather discouragingly slow expansion of business. Quotations in the hides and skins market are easier; the demand for leather is only moderate, and boot and shoe manufacturers note a slackening of orders. In the for vegetable oils and oilseeds the feature is the steadiness of linseed oil.

FOREIGN EXCHANGE.

The foreign exchange market is still in an extremely unsettled condition awaiting political developments. The erratic and violent movements witnessed during the last few days are more the result of nervous speculative operations than of real business. German marks, although they have not again attained the record figures of a fortnight ago, have been subject to uncertain and violent movement, and Berlin remains the storm centre. Marks opened for the week under 2,000, but immediately lost this recovery, rising on Tuesday to 2,125, and after rapid and varying fluctuations closed on Thursday at about 2,220. At the time of writing the quotation is 2,150, with forward quotation 10 points over spot per month. Paris and Brussels once more followed the mark movements, the franc appreciating on Tuesday to 51.65 only to relapse on Wednesday to 53.00, and is now quoted 52.75. The forward quotation for French francs is round 5 points per month over spot. Brussels at 55.80 shows a recovery of almost one franc on the week. Italian lire have, of course, also been under the influence of the German position, and the violent fluctuations have been further assisted by political events in Italy. The recovery in lire to 92.50 on Tuesday has not been maintained, and the present price of 96.00 shows a fall in the rate of only slightly more than 1 lira since last Saturday. Dollars have been surprisingly steady throughout, with a firm tendency inspired from New York, where the position appears to be viewed much more optimistically than in Europe itself, and at one time during the week New York came in as a buyer of practically all European currencies. The present rate of 4.45½ shows an appreciation of 1½ points since last Saturday. Forward quotations remain unchanged. Holland, which opened the week round 11.47, fell on Tuesday to 11.45, round which figure it is now quoted. The Swiss exchange has remained comparatively steady with a slightly rising tendency, and is now 23.20, whilst Spain, after spurring on Monday to 28.70, has gradually receded to round last week's closing quotation. On balance Scandinavians have fractionally moved against this country, Denmark being now quoted 20.62, whilst Norway and Sweden are 26.67 and 17.12 respectively. In spite of rumours that a loan to Poland had been arranged, the rate for the Polish mark has gradually receded to round 25,000, but Vienna, after reaching the new record of 160,000, recovered sharply at one time on Thursday to 100,000 on the news that the Government were again taking steps to control the exchange. This again was not maintained, however, and the rate is now about 135,000. South Americans have remained fairly steady round last week's quotations, with the exception of Buenos Ayres, the quota-

July 22, 1922.]

tion for which has now fallen to round 44½. In the Eastern exchanges the rupee remains quatably unchanged at 1s 3½, but the silver exchanges have shown a slightly easier tendency, Shanghai being now 3s 6d and Hong Kong 2s 7½d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 15, 1922:—

From Revenue	Min. £ 18,790	EXPENDITURE	Min. £ 18,790
Supply Services	7,950	Interest on Debt	559
Interest on Debt	559	Sundries	361
Sundries	361	Reduction of Debt	9,788
Added to Exchequer balances ..	152		
	18,790		18,790

The total revenue during the week ended July 15, 1922, amounted to £18,790,172, as compared with £17,778,124 during the week ended July 16, 1921. Expenditure was reduced from £11,004,216 a year ago to £8,869,625. The expenditure under the head of interest, &c., on the War Debt amounted to £551,263, against £1,537,253 a year ago. The receipts from Property and Income-tax were about £500,000 higher than a year ago at £8,386,000. Special receipts under Miscellaneous amounted to £3,000,000, or just double the amount received a year ago. Customs at £2,324,000 are £570,000 higher. Excise at £1,794,000 compares with £3,868,000. Estate, &c., Duties yielded £355,000 more at £1,070,000. The week's operations reduced the National Debt by the sum of £9,768,421, and caused the following changes:—

	Min. £ + 5,245		Min. £ - 15,013
Unemployment Insurance	+ 130	Bank of England Advances ..	- 4,750
4½% Treasury Bonds	+ 4,915	Public Department Advances ..	- 8,995
National Savings Certificates ..	+ 200	War Loan Surrenders	- 925
		Treasury Bills	- 495
		Funding Loan &c., Sinking Fnd ..	- 750
			- 15,013

The floating debt was reduced by £14,260,000 to £943,982,500 during the week ended July 15, 1922.

A GREAT OPPORTUNITY.

For the first time for two years the Council of the League of Nations met in London this week to consider a number of important questions, of which the principal were the "A" and "B" mandates, particularly the British mandate for Palestine. The "B" mandates have been approved, but at the moment of writing the discussion of the meeting, which is likely to last well into next week, is important and in some aspects critical, yet the British public have been singularly ill-informed as to its import and relevance. We cannot resist the impression that the fault does not lie with the Press, but that the Council should take more active steps to ensure that its discussions obtain full publicity. We do not wish to see a League meeting heralded by the sort of publicity which customarily surrounds meetings of the Supreme Council. But it is surely peculiarly deplorable at the present time that the light of the League should be hidden under a bushel. Thirteen international conferences have achieved little, and the fourteenth, at the Hague, is drifting to failure; Europe shudders at the idea of reviving the Supreme Council, and the man in the street, looking in bewilderment for some machinery of salvation, is beginning to ask, "Did not the Peace Treaty set up a League of Nations? What is the League doing? Why does it not solve Europe's problems?" Such questions arise out of an ignorance of the League and its functions, which is widespread and colossal, and which cannot be dispelled by the devoted efforts of a small band of disinterested enthusiasts. We would ask the Council of the League itself to consider this question, and to see whether the public cannot be provided with a ready flow, not of propaganda, but of clear official information on the past achievements, the current proceedings, the functions, limitations, difficulties, and possibilities of the League.

Its most ardent supporters realised from the first that the League was a tender plant, whose growth must be carefully fostered. To saddle it with problems not yet ripe for solution would have been an obvious mistake, but, in our opinion, statesmen have grievously overdone the care of this healthy infant. We trust that the reference to the League by the Genoa Conference of several questions of minor importance are a promise that the nations which compose it will in future make greater use of this great international instrument that they have created. Two facts more than any others stand in the way of its development. They are the absence of the United States and the exclusion of Germany from its councils. To the former we must reconcile ourselves until such time, at any rate, as America in her wisdom sees fit to readjust her policy towards the Old World. But the latter defect is remediable. Obviously at the present time no international body on which Germany is unrepresented is as fully

equipped as it should be to discuss the problems that are keeping Europe in unsettlement and irritation. This truism received at least partial recognition at Genoa. Germany, we believe, would apply for membership of the League to-morrow if reasonably sure that she would be treated as a great European Power and not merely as a humble member of no more importance than a Central American republic. France, we also believe, has so far abandoned the policy of exclusion as to be willing to accept Germany as a humble member. Not until pride and prejudice have given way before the pressure of economic fact and Germany obtains full membership of the League with representation on the Council can the League hope fully to perform those services to the world for the carrying out of which it was created. The Prime Minister has said that if Germany applies for membership Great Britain would vote in favour of admission, but he will be losing a great opportunity if he allows all the diplomats now assembled in London to depart without attempting to bring them round to his view of this all-important question. For several reasons the present moment is peculiarly favourable to an attempt to secure French agreement to Germany's full admission to the League. The proceedings at the Hague have helped to produce an atmosphere more conducive to agreement; for France has now seen that, when once the representatives of Great Britain and France got down to strict business over the Russian problem, the views of the two countries were far less violently in conflict than they appeared to be at Genoa.

But, clearly, Mr Lloyd George cannot hope to achieve this object so long as no progress is being made with the main issues between France and Germany, and his desire to see Germany brought within the comity of nations would be more likely to be achieved if he would seize this moment to make the gesture for which France is waiting, and which, we believe, would set France on the high road that leads safely out of the forest of difficulties which now surround her. We refer, of course, to the remission, on certain terms, of French debt to Great Britain. A persistent rumour, so far undenied, is current in the United States to the effect that Mr Lloyd George has promised France to remit this debt on condition that Germany's reparation bill is scaled down. Whether this rumour represents truth, exaggeration, or fiction we are not in a position to say. Ingenious minds may be inclined to read into a Parliamentary answer of Mr Lloyd George this week supporting evidence of a change of front on the subject of the French debt. A short time ago he was denying the possibility of cancellation. But on Monday, when questioned by Colonel Wedgwood on the proposal that Great Britain, while paying her debt to America, should accept German C. Bonds in lieu of her debts from her allies, Mr Lloyd George contented himself with merely pointing out the disadvantages of such an arrangement. The apparent change of tone may mean little—or much. But, be that as it may, the outburst of approval with which the report has been received across the Atlantic possesses a significance which can hardly be lost upon Mr Lloyd George and his advisers. It should serve to remove one main reason for hesitancy. For it will reveal to the Government a vital fact, which some politicians have been slow to recognise, namely, the existence in the United States of an atmosphere in which a great and disinterested move by Great Britain might produce astounding reactions upon the orientation of American opinion and attitude toward Europe's problems. America is waiting, as France is waiting, for this big initiative on the part of this country. The stage is set for it. The audience look for it. If it is delayed beyond the psychological moment, half its effect will be lost. The psychological moment is now, when the alternative of political and economic disintegration in Central Europe is more threatening than ever. If it is used as Mr Lloyd George could use it, then at last we may find ourselves on the way to the solution of great international problems which are holding back Europe and the world from economic recovery.

THE STORY OF THE CATTLE EMBARGO.

THE history of the so-called Canadian cattle embargo is spread over the last quarter of a century. It may be briefly stated. By the Diseases of Animals Act, 1894, and earlier Acts, the power was conferred on the Minister for Agriculture to exclude live "foreign" cattle from entry into the United Kingdom. This power was exercised as seemed necessary to preserve the health of home herds, but its enforcement was an invidious task, and gave rise, quite naturally, to remonstrance. In 1892 a supposed case of pleuro-pneumonia occurred in a consignment of cattle from Canada, and in consequence the Board was not unwillingly deprived of its discretion (which at the time was exercised in favour of Canada alone), and the Diseases of Animals Act, 1896, was passed. By this measure the prohibition of live-cattle importation was made absolute, and the present issue was raised. On close investigation it became more than doubtful whether the case which had brought the matter to a head was in fact well founded, and naturally enough an agitation arose for the restitution to Canada of the status quo. Successive Governors-General sent home protests from the Privy Council, the Senate, and the Parliament of the Dominion. On this side the Free Importation of Canadian Cattle Association was formed, and soon gained powerful adherents in the councils of the large cities, the co-operative societies, and representatives of the meat trade and consumers.

To this agitation all governments, Liberal and Conservative, turned a deaf ear. Their reply was always the same. We are blessed with a "moat," and mean, so far as we can, to use it to give our herds the priceless advantage of protection from disease.

The controversy reached a further stage in 1917, when at the Imperial Conference the Canadian representatives renewed the old demands. The situation had changed a good deal. For one thing, there was the possibility of the depletion of British herds as a result of the war. Accordingly, Lord Ernle, who was President of the Board of Agriculture, gave the famous "pledge," and Mr Long endorsed it. The words of it are familiar:—

"Mr Prothero said:—'.....As far as I personally am concerned, and so far as the English Board of Agriculture is concerned, after the war is over, of course, because it is not an economical mode of bringing meat to this country during the war to bring over live animals, we should, I consider, be wise to remove the embargo.....and I can assure you that so far as the English Board of Agriculture is concerned, we are in favour of the removal of the Embargo. We do not believe that there is now, or has been for a good many years past, the slightest ground to exclude Canadian cattle on the score of disease.....'

"Mr Walter Long said:—'.....As far as I am concerned, my name has been brought into it; I can only say that I entirely agree with Mr Prothero's policy. I think the time that has elapsed has shown that Canada has had a complete and clean bill of health during that time.....Now the position is that the restriction is to be removed, and the Board of Agriculture will take such steps as are necessary for this purpose.....'

"Mr Rogers:—'Do you not think we should have a Resolution about it?'

"Mr Walter Long:—'You do not want a Resolution, do you?—or if you like, you can simply move that the Embargo on Canadian cattle be removed as speedily as possible.'

"Mr Rogers:—'I beg to move that.'

"Mr Walter Long:—'Mr Prothero accepts that, and there is an end of it.'"

It is sometimes said that this pledge was only a personal one, but the Prime Minister did not take this view. On the contrary, he called it a pledge given "on behalf of the Cabinet." The matter rested there. Difficulties of shipping made any immediate change impracticable.

After the peace, however, the Dominion representatives, supported by their British allies, began to demand the fulfilment of the promise. A crisis arose when Sir Arthur Griffith-Boscawen, newly appointed President of the Board of Agriculture, went to fight his by-election at Dudley. The embargo was made a test question, and by its means the Minister was defeated. Before Sir Arthur

proceeded to Taunton, where he secured re-election, Mr Lloyd George in the House of Commons promised to appoint a Royal Commission, which met in May, 1921, and reported in August. This completes the story of the controversy to the present day.

Lord Findlay's report, though indecisive in some ways, cleared the air. It disposed in a final and authoritative way of the argument from disease, but it expressed no great hope of the possibility of cheapening home-killed meat by the removal of the embargo, and it expressly stated that the questions of Protection and food supply in war-time had not been considered. Except for one point, which will be mentioned in a moment, this laying of the disease-spectre refined the issue to one of Free-trade against Protection.

The exception refers to cruelty. There is little doubt that the transport of live animals, whether by sea or land, involves a great deal of suffering. Evidence abounds. The embargo does not prevent it. Fat cattle come here for slaughter at the ports. They suffer. Store cattle suffer in coming from Ireland. If sent to the United States, Canadian cattle would suffer also. The plea on their behalf makes a strong appeal, and it is to be hoped will produce necessary remedial legislation, but it is beside the point. It is said lean cattle would be worse treated than the more valuable fat cattle, but the argument is weak.

The Free-trade case, therefore, emerges. It happens to be fortified by the theory of preferential Imperial trade, but to this reason a Free-trader can give no weight. It is not our business to suit our fiscal system to the wishes of Canada. The Canadians have frequently recognised this. If other countries at any time can show a bill of health as clean, their stores have an equal claim. Our duty is to procure the best for Great Britain on the most favourable terms.

The embargo party oscillate between the argument that few stores would arrive and therefore prices would not fall, and that so many stores would be sent that the home breeder would be driven out of business and feeding stuffs would run short. They cannot ride both horses. The truth is that stores would come accordingly as the condition justified. That the fatterer would get more raw material, and in the end the public cheaper meat. That is the conclusion of the Commission.

"We think in the long run the tendency would be to bring prices to a level somewhat, but not greatly, lower."

Cheap and plentiful imports are often the basis of a successful export trade. Could this become the case here? The argument is ridiculed. Says Sir Arthur Boscawen:

"On the question of the Canadian embargo, he was bound to say that of all the extraordinary remedies for agricultural depression, the suggestion to remove the embargo was the most extraordinary."

But his view is disputed by Mr Moreton Frewen.

"If I am right, we in England ought to be exporters of beef instead of importers. I persuaded the late Sir John Lawes that this was our true economic position by reason of the infinite advantage our mild climate affords us, and this is much more true to-day, linked up as we are by an unbroken water connection, via the new St Lawrence water route, with the greatest maize area in the world. Three thousand million bushels of maize are available by that route, and the cattle resources of Chicago are over ten thousand a day."....."All of this we can get from imported live bullocks and imported maize, and ten times more still from the great hydro-electric plants on the new St Lawrence waterway promised by President Harding. All this a proper Commission will point out in order to guide public opinion."

And the Duke of Devonshire, who of all men has seen the case from both sides, says:—

"If any encouragement is given them, we in this country—we are the only country that can provide them with what they want—will see a big demand in the course of the next few years for the highest class of our stock to act as the foundation stock, and they will return to this country for stock for renewal purposes. If the old country can do something to help them in developing their trade, there is no reason why steps should not be taken

which would be equally beneficial to the breeders of stock in this country and to the breeders of stock in Canada, especially in the Prairie Provinces."—(House of Lords, July 12, 1922.)

In short, the case presents the usual features. The division in the Cabinet shows it. Mr Chamberlain, Sir Arthur Griffith-Boscawen, and Mr Baldwin on the one side, against Mr Churchill and Mr McCurdy on the other. Free-traders can hardly remain in doubt. They are encouraged by such naïve assertions as the following. Supporting the embargo, the National Farmers' Union say:—" (i) It provides for the maintenance of our home meat supplies, without the cost of a single penny to the taxpayer or the consumer, that national insurance which the Corn Production Acts were intended to provide in respect of our cereal supplies. The principle underlying these Acts has never been abjured by the Government, but has been reiterated in the Key Industries Act and in the course of the debate on the Corn Production Acts (Repeal) Act." If, indeed, the Canadian Cattle Embargo is of a piece with the policy of the Safeguarding of Industries Act, the sooner it goes the better.

INSURANCE AND PUBLIC POLICY.

(FROM A CORRESPONDENT.)

It is commonly assumed that invention and progress go hand in hand, and, indeed, that invention is progress. One of the most startling commercial developments of recent years has been the inventiveness which has been displayed by an ever-enterprising community, namely, those engaged in the business of insurance. Half a century ago the amount of insurance which was not comprised within the terms Marine, Life, and Fire was small; but since then (and particularly during the present century) new forms of insurance have been forced upon the attention of the public with bewildering rapidity and un-failing attractiveness. Bad weather, hail damage to crops, motoring accidents, including liability to third parties, and almost every ill to which poor human flesh is heir, can now be mitigated by the purchase for a premium of a solatium or an indemnity; while the fertility recently produced by the alliance of the journalist and the insurance manager continues to provide a new breakfast thrill week by week. However, we are not concerned to speculate upon the limits to which newspaper insurance may go, and the extent to which the newspaper proprietor may out the broker by becoming the normal medium between the public and the insurance company in making provision against the contingencies of private or business life. Quite apart from this, certain forms of insurance have recently been offered to the public which give one cause to "think furiously," to inquire what the real economic function of insurance is, and to wonder whether in giving free rein to insurance enterprise and freedom of contract we are not losing sight of larger considerations of public policy.

All trading operations are attended with risks. Some of these risks may be regarded as more or less inherent in the business itself—loss of market, change of fashion, fluctuation in exchange, bad debts; such risks the trader will usually run himself. Others are more adventitious, and less within the purview and calculating capacity of the ordinary business man; for instance, fire, war, the perils of marine transport, pilferage, riots and civil commotion; such risks will usually be transferred to a specialist, a man who, as has been said, "by balancing the good against the bad, and by adjusting the premiums as the circumstances seem to require, may not only escape loss, but may even secure for himself considerable profit from the result." Similarly, the private citizen may obtain a measure of peace of mind by insuring his life, and may devote himself to the business of making a living and keeping alive with greater equanimity and a larger bank balance than if he were under the constant necessity of accumulating savings to protect his family against the catastrophe of his premature demise. It is perhaps contrary to human nature to expect that a man will exercise in all respects the same degree of care to avoid a risk against which he has insured himself as if he knows that

he had to bear the blow himself; but, in the main, insurance of the types illustrated above cannot be said sensibly to impair responsibility, and to operate in the case of most men to increase their economic efficiency by affording to them legitimate relief from certain external anxieties and enabling them to concentrate upon the fulfilment of those economic functions to which they are best adapted. Accepting this as a fair though necessarily brief indication of the economic value of insurance, can it be said that certain recent forms of insurance will satisfy this test?

Can it be doubted that the knowledge of the possession of an adequate insurance policy does not seriously diminish in certain types of driver the degree of care exercised in driving a car? Fortunately, most road accidents are likely to injure the offender as well as his victim, but there are many accidents, notably collision with pedestrians and the humbler type of cyclist, where the odds are in favour of the car and its occupants. Last year the courts had to deal with a claim on a motoring third-party indemnity policy, where the plaintiff, by grossly negligent driving, injured two pedestrians and killed a third. The two survivors and the widow of the third were suing him for compensation, and he claimed from the insurance company a declaration that he was entitled under his policy to be indemnified against these claims. The company raised the defence that the insurance was contrary to public policy, in so far as it was an indemnity against the criminal acts of the plaintiff (who had pleaded guilty to a charge of manslaughter), but the judge, who remarked that he believed the defence to have been raised for the first time, held that in insurance against the consequences of one's own negligence, whether slight or great, and provided it does not amount to a wilful and intentional act, was not contrary to public policy, and gave judgment for the plaintiff.

Similarly, policies insuring newspaper proprietors against libel actions in respect of matter appearing in their publications are enforced by the courts—at any rate, where the newspaper proprietor has been successful in the libel action brought against him, and is merely claiming from his underwriters the costs he was unable to recover from his defeated opponent.

Another form of insurance, which is not novel, though perhaps now being more energetically "pushed" than in the past, is the insurance to navigating officers of the merchant marine of a lump sum in the event of the cancellation of their certificates as the result of a Board of Trade inquiry for causes other than "any breach of discipline, gross misconduct, or conviction for any offence against the law of the realm." The attention of the Board of Trade was directed in the House of Commons to this form of policy, but the Department took the view that the scheme did not militate against the public interest, and that no action on its part was necessary. Many of us, however, would sleep sounder with the knowledge that the man on the bridge was staking his whole livelihood on his efficiency.

But the most disturbing of modern insurance developments is the Directors' Indemnity Policy, which is now attracting attention. One form of this policy protects a director against liability to third parties "arising out of negligence of the assured in his office of director of the said company and/or in the performance of the duties of the said office," provided that the third party's claim is based solely on negligence and not, in addition or in the alternative, on the "fraud, deceit, misconduct, or misfeasance of the assured." Is such insurance in the interest of the investing public? Is the present position of the director so onerous and hazardous that there is any difficulty in finding men of standing and substance to become directors of a company with a sound basis and a reasonable prospect of success? Surely such insurance runs counter to the whole policy of the State in its regulation of companies. Recognising that complete freedom of contract between the investing public and the promoters of joint stock enterprise would be disastrous by reason of the ignorance and gullibility of the former, the Legislature has by a series of statutes particularised the duties, as to disclosure and otherwise, of the promoter and the director. And when the famous case of *Derry v. Peek* in 1889, arising

out of a tramway company's prospectus, revealed the fact that at common law directors were not liable to subscribers in respect of false statements negligently (and not fraudulently) permitted or inserted by them in a prospectus, Parliament hastened to reverse this decision by the Directors' Liability Act, 1890, which now forms part of the companies code. The director's relations with his company are not merely contractual; they are also fiduciary. That is a basic principle of our company law, and any infringement upon the strict accountability of directors for the exercise of fair and reasonable diligence places upon those proposing it a heavy burden of proof of its necessity.

The experience that complete immunity from the consequences of negligence, whether by insurance or by express bargain with the party exposed to those consequences, is unsatisfactory, has already found expression in several ways. Underwriters realise that by accepting only seventy-five per cent. of pilferage risks the efforts of the assured to prevent pilferage are stimulated. More recently, the Hague Rules, 1921, show that in the opinion of practically the whole of the mercantile community in any way concerned with overseas transport, merchants, underwriters, bankers, warehousemen, and shipowners, the British policy of permitting the shipowner to obtain by means of a clause in his bill of lading complete immunity from the consequences of his own and his servants' negligence must be abandoned; accordingly, the principle of the American Harter Act and similar legislation in several of our Dominions has now, with modifications, been adopted by general consent in the Hague Rules, 1921, which are on the point of receiving a statutory sanction.

The company director who wished to bargain with his shareholders that he need not exercise care in the management of their interests would probably soon be out of business; but the new Directors' Indemnity Policy would seem to enable him to achieve this result for a money payment, without the embarrassment of telling his shareholders that he has done so. Such a degree of undisclosed immunity can hardly be essential to legitimate joint stock enterprise, and is likely to encourage the other kind. A compulsory statement in every prospectus that the directors propose to insure themselves against negligence, where that is so, might afford a certain safeguard, and it seems worthy of the consideration of the Stock Exchange Committee whether they should permit official dealings and settlements in the shares of a company whose directors have so little confidence in their business capacity as to require indemnities of this nature.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past quarter cotton spinners and manufacturers in Lancashire have continued to improve their position. Although progress towards better times has not been rapid, production has been gradually increased, and from the point of view of employment for the operatives the position is more satisfactory than for over 18 months back. The conditions, however, are far from healthy, and producers are still experiencing much difficulty in securing prices which cover the cost of production. Speaking generally, manufacturers of cloth are more favourably situated than spinners of yarn. Values have tended to harden, and there has been a very fair rise in raw cotton prices. On several occasions, however, it has been apparent that our customers abroad are not in a position to pay more than a certain price for manufactured articles, and support is withdrawn when sellers hold out for stiff advances.

As is usual at this time of the year, considerable interest has been taken in the reports relating to the prospects for cotton supplies during the coming season. The American crop made a poor start, but during the last few weeks there has been an improvement in the conditions, and the plants are now making steady progress. In some quarters great stress is laid upon the damage from the boll weevil, but it is extremely difficult to estimate the effect upon the ultimate yield. At the beginning of July the condition of the growth was estimated by the Agricultural Bureau at 71.2, against 69.6 a month earlier, and

69.2 at the same time last year. The statement was worse than expected, and there was a rise in prices of about 3d a lb. The advance, however, was not maintained. The acreage has been officially estimated at 34,852,000 acres, as compared with 31,763,000 acres for the current season. The increase of about 10 per cent. was about equal to anticipations. As things stand at present, there seems to be every probability of an output of quite 12,000,000 bales. It is generally believed, however, that the consumption will not be less than 13,000,000 bales. The situation, therefore, causes some anxiety. There is no likelihood of a famine, but if scarcity exists in due course prices are bound to advance. If values for manufactured goods reach a much higher level than at present, it seems pretty certain that the consumption in Eastern and Far Eastern markets will be restricted. There is more fear of Lancashire machinery standing idle for want of orders than owing to a scarcity of raw cotton. On March 31st the quotation for Fully Middling American, on the spot in Liverpool, was 10.84d. By April 21st the price had fallen to 10.26d, but an upward movement then took place, and 11.75d was posted on May 9th, with 12.22d on May 16th. Fluctuations occurred from day to day, but 12.91d was the figure on June 12th. There was a stiff rise on July 4th to 13.94d, but part of the advance has since been lost, the quotation on Wednesday last being 13.65d. Advances relating to the Egyptian crop are fairly satisfactory. The area under cultivation has been officially estimated at 1,465,135 feddans, against 1,286,180 feddans for the current season. It is too early for anything to be said as to the probable production. On March 31st the quotation in Liverpool for Fully Good Fair Sakellaridis was 17.75d. There was very little change during the following month, but at the end of May 19.25d was registered, whilst in the middle of June 20d was posted. The quotation last Wednesday was 19.75d.

Compared with three months ago, manufacturers of piece goods, as a body, have more work to go on with, and, speaking generally, better prices are being secured. Producers of fancies and specialities are more favourably situated than certain makers of plain materials. Production at the moment is very irregular, owing to the annual holidays in weaving districts, but it is estimated that about 90 per cent. of the looms are fully working. Quite an encouraging business has been done for India. Light cloths have moved off fairly freely, and many manufacturers now want October-November delivery. Although during the last week or two grey shirtings have been quieter, the trade done has been fairly substantial. Printing cloths have also attracted more attention. Favourable reports are being received relating to the monsoon. There is every probability of a continuance of the improved demand for our Dependency if prices are on a reasonable level. Operations for China have been irregular, and the anticipated decided improvement in trade has not been realised. Political and financial matters on the other side are not all that could be desired, and merchants are rather nervous. In fancy goods, however, the buying has been encouraging. The Near Eastern outlets are now giving less support, but during the last two or three months the turnover for Egypt and Turkey has improved. Business has also been better for the markets of Central and South America. An active trade has been done, especially in printing and finishing styles, for European countries, and exports to Switzerland are on a distinctly larger scale than last year.

The following is a comparative table of cloth shipments, the figures being given for the six months ended June 30th in each year:—

	Yards.	£
1913	3,582,788,800	48,756,738
1920	2,396,798,000	153,347,097
1921	1,211,021,700	75,104,452
1922	1,850,860,000	67,391,014

So far this year we are exporting more freely than last to China, Switzerland, Australia, Egypt, Germany, and the United States, but there are small decreases in the shipments to Bengal, Roumania, and Mexico.

Spinners of yarn have continued to meet with an increased demand. A most favourable development has been the reduction in stocks held at the mills. Producers

as a body have obtained relief, and more determined efforts have been made to secure remunerative prices, but this section of the industry is not yet on a profitable basis. Speaking generally it may be said that all mills are now working full hours, but in certain factories machinery can be found that is standing idle. Yarns suitable for home consumption have been bought on a freer scale to cover the larger cloth contracts secured by manufacturers. In export descriptions there has been an increased turnover for India, but latterly the demand for China has fallen off. Quite an encouraging trade has been done for European countries, especially Holland and Germany.

The following is a comparative table of yarn shipments, the figures being given for the six months ended June in each year:—

	Lbs.	£
1913	106,409,000	7,512,062
1920	78,614,700	23,912,824
1921	50,638,100	10,301,588
1922	106,309,100	14,242,341

The big increase in the exports so far this year compared with last is rather striking, and the improvement is chiefly accounted for by larger shipments to the Netherlands, Germany, and India.

The stocktaking results of spinning companies continue far from satisfactory. According to an analysis of the returns published by 103 mills at the beginning of this month the directors of 58 concerns were not able to recommend any dividend. Sixty-seven companies that balance their books for the three months ended June paid an average dividend of 4.65 per cent. per annum, against 4.74 per cent. in March last, and 5.35 per cent. in December, 1921. In the case of 36 companies that balance their books for the half-year ended June the average dividend declared was 4.39 per cent. per annum, against 4.53 per cent. per annum for the half-year ended December last.

The prospects in the Manchester market at the moment are rather uncertain. Since the beginning of this month there has been a distinct pause in business. It may be said that spinners and manufacturers are losing a little ground again, and this week prices for yarn and cloth when tested have been easier. It is not usual to find great activity in the height of the summer, and there is a disposition in most quarters to await further developments relating to the cotton crop in America and the monsoon in India. The position of the industry as a whole is much sounder than at the beginning of the year, and spinners and manufacturers are not likely to lose the improvement secured without a struggle. In distributing centres abroad supplies of manufactured goods are not heavy, and there is every reason to expect another buying movement in the early autumn. It is realised, however, that when a broad view of the conditions prevailing throughout the world is taken, anything approaching a trade boom in the immediate future is very improbable.

NITRATE POSITION AND RESULTS.

As regards its severity, and the extent to which it is due to the failure of international trade to revive, the slump through which the nitrate industry of Chile has been passing is comparable to that out of which the rubber plantation industry is still seeking some means of escape. In other ways the two are not comparable. For while a chief difficulty in the case of rubber is to obtain the harmonious co-operation of the industry in emergency measures, the Chilean nitrate industry, being centralised, is more amenable to control. The growth of stocks has been checked by output limitation; stocks in Chile are held by a Producers' Association, while stocks in Europe are in the hands of a pool. Marketing policies, therefore, are not haphazard as in the case of rubber. Fortunately the recent months have shown distinct signs of improvement in the nitrate industry, and with European stocks passing fairly well into use, the American market proving better than was expected, and Chilean output being restricted in the past half-year to about one-third of normal, it is hoped that the industry has set its feet on the toilsome upward path that leads to normal prosperity.

But the top of that path will not be reached until international trade revives and consuming countries on the Continent are better placed to buy the fertiliser in more adequate quantities. The following table showing shipments, production, and stocks for various periods is compiled from statistics presented in the annual report of Messrs Aikman (London), Limited :—

(In Thousand Tons.)

	1913	1914	1920	1921	1922.
	2nd	1st	1st	1st	1st
	Half.	Half.	Half.	Half.	Half.
Shipments to Europe and Egypt.....	1,194	831	555	517	198
" " U.S.A.....	237	310	798	228	74
" " Other countries.....	46	41	153	28	52
Production in Chile.....	1,367	1,455	1,183	838	456
Visible supply in Europe and Egypt at end of period.....	..	416	317	836	..
" " U.S.A.....	..	84	216	249	..
" " Other countries.....	..	11	19	3	..
Stocks in Chile.....	..	754	1,248	1,317	..

* Estimating production in June at 65,000 tons, and shipments at 5,000 tons to Europe, 23,000 tons to the United States, and 3,000 tons to Japan and other countries. † Excluding about 175,000 tons reserve stock held by the American Government.

Stocks in Chile have again increased, but European stocks are being dispersed satisfactorily, and it is rumoured that the "pool" may be dissolved before long. It will be seen from the above figures to what a low Chilean production has had to be restricted.

As regards the outlook for consumption, Messrs Henry Bath and Sons write in their half-yearly report on nitrate:—"A forecast of consumption for the 12 months commencing July, 1922, can only be made with the usual reservations; but the likelihood of sulphate of ammonia remaining in short supply, combined with lower prices for nitrate of soda and the probability of a general expansion of demand, seems to point to 1,800,000 or 1,900,000 tons for the world, excluding the contingency of a material revival of consumption in Germany and Austria, which at present it is not possible definitely to gauge. Allowing for supplies already in sight, there may therefore be room for new shipments from Chile in the 12 months of about 1,750,000 tons, and if 750,000 tons be assumed to come out of the existing Coast stock, there will consequently be about 1,000,000 tons to be supplied by new production. On these lines, say 85,000 tons production per month, it is obvious that a considerable time must still elapse before manufacture can be resumed on anything like a normal scale; but it can at least be said that the worst times appear now to have been weathered, and that the industry is at last in process of convalescence."

Below we summarise the 1921 results of a number of Chilean producers, whose reports have been issued. The first table, setting out net profits and appropriations, clearly reflects the adverse influences of the year :—

	Net Profits.		Ordinary Dividend.		Reserve, Deb. Redemption, &c.		Carried Forward.	
	1920.	1921.	1920.	1921.	1920.	1921.	1920.	1921.

Santa Rita.....	37,891	17,621	17,500	15,000	..	20,391	23,012	..

* Period ended September 30th.

Lautaro provides the most startling figure. The profit and loss account of this company for 1921 records a "trading loss in 1921 on the manufacture and sale of nitrate and iodine" of no less than £473,667; while on the other side of the account is entered "over-provision in previous years for depreciation of property in Chile written back," £282,082. This step, which is at first sight surprising in view of the present position of the industry, is not commented on in the report, but at the recent annual meeting the chairman explained that even after this writing up the properties still stand at less than their real value. This company draws £210,202 from reserves in order to maintain the carry-forward. Salar del Carmen shows up remark-

ably well with an increase from £45,936 to £55,761 in net profits, the only other company to show any increase being the New Paccha and Jazpampa. Salar del Carmen alone maintains the previous year's dividend rate. The principal items in the latest balance-sheets are analysed below :—

	LIABILITIES.

If should be noticed that the New Paccha Company has completed its repayment of outstanding debentures. Lautaro's writing up of the property item has been referred to above, and among this company's liabilities appears a loan of £417,088, as compared with £156,000 a year ago. As regards liquid position, the Anglo-Chilean shows up well. A final table shows prices, dividends, and yields of the companies listed above :—

(c) £5 shares.

Prices show no very striking change from a year ago, and the position of the market reveals the feeling that the worst of the depression in the industry is past. But shareholders will have to exercise patience before a return to prosperity can be expected: for this depends, as in the case of other industries, on a general revival of international trade, and of the achievement of some degree of exchange stability.

THE PANAMA CANAL.

It is nearly eight years since the Panama Canal was opened to commerce (August 15, 1914), compared with 53 years since the Suez Canal was opened (November 17, 1869); the former has a total length from sea to sea of 50 miles (43.84 nautical miles) and the latter 96 miles (84.17 nautical miles). In the course of construction of the two canals there was a remarkable point of resemblance; both pass through lakes for a distance of 22 miles. In the case of the Panama Canal a huge artificial lake 163 square miles in extent was formed by the construction of an enormous dam across the bed of a river; by using this artificial lake the excavation of a channel was saved for the length of 22 miles, and in addition the cutting of 85 feet where the Canal passes through a range of hills, a notable engineering feat. The Suez Canal is laid for the same distance through the beds of two lakes, from which for at least 2,000 years the Red Sea had receded, and they had become part of the desert; they were

refilled by the Canal from both sides, five months being required for the process.

The essential difference between the two canals is that the older one has no locks, whilst the Panama Canal has three at each end. Both canals have their entrances protected by long breakwaters. The Panama Canal has a bottom width of 300 feet through the deepest cutting, and of 500 feet in the sea-level sections at each end; through the great lake there is a clear bottom width of 1,000 feet, whilst the depth ranges from 45 to 85 feet. The Suez Canal has a bottom width ranging from 146 to 195 feet, and a maximum depth of 39 feet.

As regards earnings, the older canal has developed a traffic, which pays both working expenses and a handsome return on the capital expenditure, whilst the Panama Canal, which may be described as still being in its infant stage, pays working expenses, but has not yet reached the stage of paying a return on the capital outlay of £76,780,000 and a reserve for covering the cost of replacement of machinery which will become necessary from time to time. At present these two items are a charge on the national exchequer, which will no doubt be reduced year by year as the canal trade grows. The Manchester Ship Canal has had to pass through a similar period of slow development, at the expense of the original shareholders. Both canals have a railway alongside, and a modern town at each end, with public buildings, hotels, water supply, electric lighting, and every convenience for travellers.

The number of vessels which have used the Panama and Suez Canals, as well as the net tonnage, are given below since the opening of the American canal :

Year.	Panama Canal.		Suez Canal.	
	Ships.	Net Tonnage.	Ships.	Net Tonnage.
1915.....	1,072	3,772,100	3,708	15,266,100
1916.....	760	2,385,200	3,110	12,325,300
1917.....	1,806	5,817,600	2,353	8,368,900
1918.....	2,068	6,584,000	2,522	9,251,600
1919.....	2,028	6,145,000	3,986	16,013,800
1920.....	2,478	8,546,000	4,009	17,574,600
1921.....	2,892	11,415,800	3,975	..

The small number of ships using the Panama Canal during 1916 was due to a land slide, which closed the canal for seven months; apart from that the traffic figures given above show a steady increase. In a few years the Panama Canal may be competing with Suez for the lead. A considerable number of Government vessels pass through the Canal, but as they do not pay toll they are not included in the figures given above; last year they numbered 426. Vessels flying the flags of 23 nations used the Panama Canal during 1921; those of the United States were the most numerous, and those of Great Britain followed. Japanese and Norwegian vessels held third and fourth places respectively. In cargo tons, American vessels carried approximately 45 per cent. of the total, British vessels 32 per cent., Japanese vessels 7 per cent., and Norwegian vessels slightly under 6 per cent. The vessels of these four countries carried between them 80 per cent. of all the cargo which passed through the Canal. Of the nationalities which shared the remaining 11 per cent., the most important were Denmark, Holland, Spain and Sweden. Details for last year are given below. Germany, in spite of the fact that the Allies have seized the whole of her mercantile fleet, has sent no fewer than 19 steamers through the canal, and it is confidently asserted that within very few years she will be third on the list.

	Number of Ships.	Tons of Cargo.
The United States.....	1,210	5,163,000
Great Britain.....	972	3,738,200
Japan.....	136	758,600
Norway.....	140	637,800
Denmark.....	60	322,000
Holland.....	50	216,400
Spain.....	44	143,000
Sweden.....	25	128,900

The total tolls received amounted to £2,349,350; the gross returns from all sources during 1921 reached £5,625,000; the excess of revenues over operating expenses amounted to £573,000. The railroad alongside the canal, with its associated Panama Railroad Steamship Line, contribute largely to the successful working of the canal, thus the railway has a gross revenue of £4,583,000 and operating expenses of the same amount,

and the steamship line had gross revenues of £1,074,000 and operating expenses somewhat in excess of that amount. The money turnover of the combined canal, railway, and steamship line during 1921 was approximately £11,250,000, and the operating expenses £10,830,000.

The canal authorities keep large stocks of coal and oil in hand for vessels in transit, 468,800 tons of the former were sold, and 4,565,700 barrels of oil were pumped into passing steamers. There are also facilities for repair and dry-docking; during the year 671 steamers required repair, and 104 were dry-docked. The Canal authorities expedite the passage of ships through the Canal under the plan that if a vessel arrives at either entrance at an hour which will permit her dispatch through the last lock before dark, there is no obstacle to a continuous passage; should she need fuel, supplies, or repairs, these are furnished with the least possible loss of time.

The traffic through the Canal may be divided into two sets:—(A) That for which the Canal is an undoubted convenience by shortening distance and saving time to such an extent that shipping could hardly afford to use any other route, assuming that reasonable efficiency and fair charges prevail at the canal, and (B) the trades in which routing through the Canal may or may not be an advantage, such as those in which the saving of distance as between the Canal and an alternative route is not great.

This may be described as competitive traffic; the Canal authorities are thoroughly alive to the necessity of retaining, and, if possible, increasing it by good management. Almost one-third of the total tonnage handled in 1921 was so strongly competitive that prompt and complete service may have been the determining factor in the choice of the Panama route. The two great trades in which the Panama Canal is in distinct competition with other water routes are those between Europe, Australia, and New Zealand and between the Atlantic coast of North America and the Far East, principally the area lying between Singapore and Japan. A ship from Great Britain with cargo for both Australia and New Zealand might go through Suez, or around the Cape of Good Hope, or through the Panama Canal, without gaining any very great advantage in distance and time through the choice, and for the homeward journey would have, in addition, a choice of the course through the Straits of Magellan and up the Atlantic coast of South America. If the vessel went through one canal and returned through the other, it would serve the area with the least possible travel, but it would save only about 1,400 miles over a course via the Cape of Good Hope, and a return through the Straits of Magellan. By not using either canal, it would avoid paying approximately 5s 2½d per ton net in tolls on each leg of the voyage (the tolls for cargo vessels at Suez and Panama are substantially the same). The greater distance of 1,400 miles by the Cape and the Strait would mean about five additional days at sea for a 12-knot vessel. Such a saving of itself alone would not compensate for the canal tolls, the deciding factors would be fueling costs and possibilities of additional traffic to be handled along the way. Before we declared war it was customary to figure roughly that the cost of operating a steamer over the average route was equivalent to 5d per net ton per day, including capitalisation, insurance, &c.; on that basis it would probably be equally accurate to use 10d per net ton as the average daily operating cost at present. With this assumption the canal tolls of 5s 2½d per net ton would equal the cost of six and one-fourth days at sea. In other words, with other factors equal, a ship would have to save about six days and six hours on a voyage to offset the canal tolls. It follows that prompt and cheap handling of ships at the canal is an attraction to traffic from alternative routes.

The more important cargoes passing through the Canal are the following:—(1) From the east coast of North America to the west coast of South America, 1,908,800 tons, equal to 16.46 per cent. of all the cargo passing through the Canal, about an equal quantity each way. (2) The tonnage of cargo between the east coast of North America and the Far East was nearly as great, in the aggregate: 1,641,900 tons, equal to 14.15 per cent. of the total. In this trade 187 vessels went to the East,

but only 74 returned via the Panama Canal. Apparently vessels go out to the Far East through the Panama Canal and return by the Suez Canal. The American coastwise trade passing through the Canal was 1,641,900 tons of cargo last year, representing 11.83 per cent. of the total traffic.

Another important trade route through the Canal is from the west coast of North America to Europe, amounting to 1,165,100 tons, equal to 11.21 per cent. of the total, but the number of vessels and the tonnage of cargo going to Europe was double that to America. On the trade route from Europe to the west coast of South America 136 vessels passed through the canal and 178 returned, owing to many vessels using the Straits of Magellan.

The principal commodities shipped through the Panama Canal during 1921 were:—Nitrate, 1,530,500 tons; crude oil, 1,182,900 tons; coal and coke, 767,800 tons; wheat, 697,000 tons; steel and iron, 510,200 tons; refined oil, 454,800 tons; food in cold storage, 408,300 tons; and timber, 356,000 tons.

Notes of the Week.

The Price of Honours.—For a long time past there has been a growing conviction abroad that the connection between the Honours list and the subscription lists of political party funds is often close enough to amount to a public scandal. Suspicion in this case has, no doubt, been supplemented by fiction and exaggeration, but that things are very far from what they should be has become a matter of general acceptance. We welcome, therefore, the appointment of a Royal Commission, although admittedly it is a rather serious comment on our public life that such a Commission should be needed. Probably the revelations that will be unearthed will prove unsatisfying to the whetted appetites of expectant scandalmongers, but the air will be cleared, and future Prime Ministers will perhaps walk more warily in the matter of their recommendations to His Majesty. Certain unsavoury facts may be exposed and some future scandals prevented. But probably the whole affair is not quite worth all the fury and heat that rage round it. This heat was particularly in evidence in the debate in the House of Commons, where the process of washing dirty linen apparently revealed one or two pieces of linen that had got into the basket by mistake. For our own part we should weep no tears if honours lists were abolished altogether. If they are to remain, we agree that greater care should be taken lest honour be rooted in dishonour. Honours should be earned by public service and not bought. But it has to be remembered, firstly, that selection by pure merit is almost utopian in any human community, especially one of the size of Great Britain; and, secondly, that those who are keen enough politicians to subscribe to party funds are not necessarily unworthy of honour on other grounds; and, thirdly, that abuses are almost bound to creep in under any honours system. Fortunately this rather unpleasant business has its humorous side. The Duke of Northumberland quoted what purported to be a regular tariff for honours—so many thousands of pounds for a knighthood, so many for a baronetcy, and so many for a peerage. We commend the idea to the Chancellor of the Exchequer. If honours are to be bought and sold, let them be quoted publicly, and let the Exchequer, not party funds, reap a harvest from the vanity of certain types of rich people. We would gladly print the weekly quotations, which presumably would fluctuate with the demand, in our price current of commodity markets. A capital levy graded to the vanity of millionaires would be a popular plank in an election platform. But in all seriousness the Royal Commission is to be welcomed, and we trust its personnel will be beyond cavil or suspicion. Even more welcome would be the introduction of a Bill compelling the publication of party subscription lists. If such a Bill were to be passed the public would be able to decide for themselves whether connections between honours lists and subscription lists were fortuitous and proper or studied and improper; while the fear of publication would act as a

deterrent against abuses. For the dark diseases of public life there is no cure so effective as fresh air and the sunshine of publicity.

Conditions in Ireland.—The task of restoring conditions of settled government is proceeding surely, if somewhat slowly, writes a Dublin correspondent. Large numbers have to be enrolled, and elaborate methods of organisation devised for the purpose of pushing further and further to the West and go to the South the armed cordon which encloses the ever-growing area of re-established peace and order. Both entail inevitable delays. The end, however, is quite certain. The country is positively aching to get back to normal conditions, and notwithstanding the rather mischievous interventions, or attempted interventions, of the Labour Party, there is no countenance or unconstrained support for the rebel bands from any quarter. The Labour extremists are already with them, and official Labour is seeking an aggrandisement of its own prestige and power by affecting to treat the Irish Government and the revolting Republicans as rival factions between whom it is timely and appropriate for it to mediate. It protested against the postponement of the meeting of the newly elected Dail, in total disregard of the fact that the Parliamentary minority, dissatisfied with the decision of the electorate, were actually at the moment in arms against that decision and against the Dail and Government which must needs give effect to it. Its next step was an attempt to convene an unofficial meeting of the Dail on the 20th instant by the issue of an invitation from the Labour members to their colleagues to meet them in conference at the Mansion House to debate upon the situation and to discuss proposals for peace. The attitude of the Irish Government was thereupon made clear in an official statement:—"The whole economic life of the country is threatened. The safety and future welfare of the nation depend upon the power of the Irregulars being broken. It is the duty of all to stand solidly together to establish that the will of the people shall prevail." The result proved that Labour had made a false move: only one member accepted the invitation, and the proposed conference proved abortive. There is no move yet in North-East Ulster analogous to that made by the Provisional Government of Ireland. Belfast is a great commercial community, whose principal industries are shipbuilding and linen manufacture. Its prosperity, similar in kind to that of Liverpool and Glasgow, has depended in large measure upon its proximity to both, and on its large distributive trade and banking business with the rich agricultural hinterland of Ireland. But if things continue unchanged, the distributing trade of Belfast will die, rather from a popular boycott than from a Customs barrier—though it might have to face both. Ireland's exports of poultry and eggs (£18,319,795 in 1919 and £16,397,965 in 1920) exceed those from the shipbuilding yards (£10,600,000 in 1919 and £12,720,000 in 1920) by some 30 per cent., and whereas the gross value of the former is the produce of the soil, in the latter case Belfast merely obtains a net profit derived from the application of capital and labour to imported raw materials. Again, Ireland's meat exports dead and alive (£37,577,573 in 1919, £52,845,761 in 1920) exceed Belfast's linen exports (£36,519,011 in 1919 and £44,645,759 in 1920), and the linen trade is also something of an exotic growth, which is to-day faced with its own difficulties in the restriction of foreign markets both as to the purchase of its raw materials and the disposal of its finished products. If Belfast cuts itself off from the great, real and potential wealth of Ireland, what, from the standpoint of purely economic theory, are its chances of future prosperity? Responsible men in Belfast are apprehensive of the worst when to an unpromising economic prospect are added the factors of chronic internal tumult on sectarian lines, a most expensive administration, and the loss of business confidence and moral esteem in circles of an ever-lengthening radius. In these apprehensions will be found the ovum of a new school of political thought in North-East Ulster more in touch with the actualities of the position and more in harmony with accepted principles for the framing and maintaining of the structure of human society.

The Miners' Conference.—Owing to the continuance of trade depression the coal industry is passing through a period of difficulty calculated to provide a severe test for the new régime under which the industry has been conducted since decontrol and the great stoppage of a year ago. Particularly welcome, therefore, is the restrained and optimistic tone of the review of the industry and its outlook which Mr. Herbert Smith delivered on Tuesday as President of the Miners' Federation. Mr. Smith frankly admitted that the coal owners, as well as the miners, had experienced hardships, and emphasised the point that without the wage agreement between the owners and the miners the latter would have been worse off than is actually the case. In his view the principles underlying this agreement are sound, and he mentioned that to maintain the minimum wage at 20 per cent. above the level of 1914 had cost the owners approximately £3,000,000; which is, of course, another way of saying that the agreement has saved the miners from £3,000,000 worth of hardship. Two or three other points in Mr. Herbert Smith's speech call for special notice. He announced that, while retaining the seven hours' day, they could "with proper internal organisation and the more extensive use of scientific methods, not only maintain the output per man employed of pre-war days, which they were doing, but they could increase the output beyond the aggregate output produced in 1913, provided they had the same number of men employed and worked the same number of shifts per week." Turning to the question of the publication of statistics of the industry, Mr. Smith expressed great pleasure that the owners themselves had acceded to the miners' request for information, and recognised that the supply of information as to costs of production "had been of the greatest possible advantage to the workmen in assisting them to understand more fully the finances of the industry." Developing the theme, he stated his conviction that "if the owners took the workmen still more into their confidence, a much better spirit would prevail throughout the district." We do not know what further information Mr. Smith had particularly in mind, but in view of recent experience the remark is one which owners should not overlook. On the general outlook Mr. Smith refused to be pessimistic. World trade might, he thought, recover "in spite of the Government," and the industry would emerge from its present position in the course of the next twelve months. We venture to share his restrained optimism. The coal industry has got down to an economic basis; and provided that the better relations between owners and men, which Mr. Smith's speech indicates, continue, there should be nothing to prevent the coal industry from benefiting to the full from trade revival as and when it comes.

Our Debt to the United States.—In the course of the third reading debate on the Finance Bill last Friday both the Chancellor of the Exchequer and Mr. Asquith were at special pains to repeat, what has often been said and is unquestionably true, that every section of responsible opinion regards the British debt to the United States as an obligation that must be fulfilled to the uttermost. The Budget for the current fiscal year includes £25 millions for payment of interest on this debt, and in recent weeks gold has begun to be shipped in preparation for such payment; but it has been a matter of some comment that no attempt had as yet been made to arrange a regular funding scheme. This omission is now to be repaired, for in reply to an answer to a Parliamentary question on this point on Monday the Prime Minister made this announcement:—"In response to their request the United States Government has been officially informed that a special delegation will arrive in Washington early in September to make funding arrangements with the Special Commission set up by the United States Government under Act of Congress for dealing with the debts owed to the United States Government in respect of war advances." We welcome the news that this obligation is at last to be put upon a definite basis, and hope that it may help to pave the way to closer co-operation with America on vital questions of international finance.

Employment in June.—June saw further slight improvement in employment conditions. The coal industry was an unfortunate exception, but the textile and clothing trades and some sections of the woodworking trades record a better demand for labour, while the settlement of the engineering dispute was responsible for better employment in the iron and steel trades. According to the *Ministry of Labour Gazette* the percentage unemployed among members of trade unions from which returns are received moved down from 16.4 per cent. to 15.7 per cent. during June. The following table shows how this figure has moved month by month over a number of years:—

	TRADE UNION UNEMPLOYMENT PERCENTAGES.											
	1913.	1917.	1918.	1919.	1920.	1921.	1922.					
End of—	%	%	%	%	%	%	%					
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8					
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3					
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3					
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0					
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4					
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7					
July	1.9	0.4	0.6	2.0	1.4	16.7	..					
August	2.0	0.5	0.5	2.2	1.6	16.3	..					
September ..	2.3	1.3	0.5	1.6	2.2	14.8	..					
October	2.2	1.1	0.4	2.6	5.3*	15.6	..					
November ..	2.0	1.1	0.5	2.9	3.7	15.9	..					
December ..	2.6	1.4	1.2	3.2	6.0	16.5	..					

* Excluding coal miners.

A closely corresponding decline during June is also shown by the unemployed percentage figure for all workers insured under the Unemployment Insurance Act, which fell from 13.5 at May 22nd to 12.7 at June 26th. The total number of workers registered as unemployed at the employment exchanges was 1,455,000 at June 26th, as compared with 1,522,000 at the end of May. "A small part" of this decrease is stated to be due to the temporary exhaustion of insurance benefit.

Cost of Living.—A sharp upward movement in the Labour Ministry's Index Number of the cost of living took place in June, which is the first break in the decline that has proceeded month by month since July, 1921. At July 1st the cost of living was estimated to be 84 per cent. above the pre-war level, as compared with 80 per cent. above at June 1st. The following table shows monthly movements of this index figure over four and a half years:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

March "	90	115	130	141	86
April "	90-95	110	132	133	82
May "	95-100	105	141	128	81
June "	100	105	150	119	80
July "	100-105	105-110	152	119	84
August "	110	115	155	122	..
September "	110	115	161	120	..
October "	115-120	120	164	110	..
November "	120-125	125	176	103	..
December "	120	125	169	99	..

Those who are disposed to hail this movement as a definite check to the long-continued price fall should not overlook the fact that the upward turn in June was due mainly to increases in the prices of potatoes, butter, and eggs. Such increases are seasonal, and were mainly responsible

for the temporary rise in the index figure eleven months ago. According to the Labour Ministry's calculation retail food prices, which at June 1st were 70 per cent. above the pre-war level, rose to 80 per cent. above that level by July 1st.

The Banking Half-Year.—The half-yearly balance-sheets of the banks as at June 30th, the last of which has appeared this week, show changes in comparison with the figures for December 31st last, the tendency of which has already been indicated by the monthly statements of average weekly balances. In the table below we compare the aggregate figures of the "big five" banks with those of six and twelve months ago:—

	June 30, 1922.	Compared with Dec. 31, 1921.	Compared with June 30, 1921.
	£	£	£
Paid-up capital	59.2	..	..
Reserves	47.1	..	+ 0.2
Acceptances and endorsements	45.5	— 8.3	— 1.9
Deposits (including undivided profits)	1,600.2	— 49.1	— 19.9
Total	1,752.0	— 57.4	— 21.6
Cash, notes, balances at bank, and cheques in course of collection	242.5	— 28.5	— 11.1
Ratio to deposits	15.0 %	— 1.4 %	— 0.6 %
Money at call and at short notice	100.3	+ 20.6	+ 20.4
Investments	377.0	+ 67.3	+ 73.8
Discounts	308.1	— 86.8	— 23.8
Loans and advances	655.9	— 22.4	— 79.8
Premises and sundries (including cover for acceptances)	68.2	— 7.6	— 1.1

There is a very definite downward movement in deposits, and the decline in acceptances is only to be expected at a time of world-wide trade depression. Changes on the assets side are of more interest. The decline in bills discounted, which include Treasury Bills, has been a feature of the monthly statements, and is to be ascribed to the transfer from Treasury Bills to Treasury Bonds, which accounts for the increase of over £67 millions in investments. Two years ago discounts stood at £158 millions and investments at £330 millions. Advances which two years ago stood at £843 millions dropped by £107 millions in 1920-21, and the decline has been continuous during the past twelve months. In comparison with the end of 1921, the advances of the London Joint City and Midland are practically unchanged, but those of each of the other four banks show a decline. The decline in the cash item has been to some extent offset by the expansion in money at call and short notice.

British Coal for Germany.—The most remarkable feature of the coal export returns for the United Kingdom in June was the phenomenal expansion in the volume of trade with Germany and the Netherlands. In 1913 these two countries took nearly 11 million tons of coal from the British coalfields. Of that total about 9 million tons were direct shipments to Germany and 2 million tons to the Netherlands. During the war exports to Germany were stopped, and in 1918 the Netherlands received only 88,000 tons. Last year the exports to the Netherlands were 1,787,678 tons, and to Germany 817,877 tons. Last month, however, the exports to Germany amounted to no less than 889,644 tons, and those to the Netherlands 568,081 tons. It is doubtful whether the records of the coal export trade contain any month where the volume of our trade with Germany and Holland was so great. Last month's shipments to Germany were 143,000 tons more than the average monthly shipments in 1913, while those to the Netherlands were nearly three and a half times the average monthly shipments in the pre-war year. The Northern exporting districts gained most from this remarkable improvement. The North Eastern ports absorbed 56 per cent. of the coal exports to Germany and 49.3 per cent. of those to the Netherlands; the Scottish ports 23.4 per cent. and 16 per cent. respectively; the Humber ports 15.1 per cent. and 17.5 per cent.; and the South Wales ports 3.7 per cent. and 14.5 per cent. This proportionate distribution differs from the normal share

of German and Dutch coal import trade enjoyed by the different British coalfields in pre-war years. The chief change is that the exports from the North Eastern ports have been increased at the expense of those of the Humber and Scottish ports, and that in the case of the Netherlands the South Wales' share has been increased from 5 per cent. to 14 per cent. The immediate cause of this sudden and phenomenal demand from the Continent has been the shortage in the supply of coal in Germany. In 1913 Germany produced more coal than she required for her own consumption, and her exports to Allied countries exceeded her imports from them by nearly 8½ million tons per annum. As the result of the war, Germany has lost the Alsace-Lorraine, Saar, and Palatinate coalfields, and her output in April last was only about 11¼ million metric tons. Moreover, Germany is under an obligation to supply France, Belgium, and Italy with approximately 20 million tons per annum as reparation coal. It will thus be seen that Germany has much less coal of her own production available for inland consumption, and that of this reduced production she is compelled to send roughly 15 per cent. to France, Belgium and Italy as a form of reparation payment. Germany's need has been Britain's opportunity, and it is rather remarkable that so big a volume of trade should have been undertaken in June under the unstable foreign exchange conditions prevailing in that month. There is every indication that the exports in July will be even greater than those in June.

Chartered and the Provisional Agreement.—The provisional agreement between the British South Africa Company and the Union of South Africa, which is to be considered at a special meeting of shareholders on Friday, was issued yesterday in an interim report of the directors. The excitement in the market for Chartered shares which heralded the approach of this special meeting receives justification in the favourable terms of the provisional agreement. In summary the upshot of the terms is that the Union Government is prepared to pay the company £6,215,000, plus 5 per cent. interest, in return for the cession to the Union of railway interests, and of rights, interests, public works, and assets in Southern Rhodesia, of preferential rights in Bechuanaland, and certain other assets. The agreement is subject to acceptance by the company's shareholders, which is recommended by the directors, and should be a foregone conclusion, and presumably also to concurrence of the Union Parliament. It is also conditional "upon Southern Rhodesia actually forming a part of the Union of South Africa not later than March 31, 1924." In other words, it becomes inoperative if the result of the forthcoming referendum in Southern Rhodesia is unfavourable to incorporation with the Union. Such a result to the referendum would also invalidate the offer made by the British Government to waive claims against the company on account of advances, amounting to not far short of £2 millions, for war expenditure. Any exuberance which the terms of the provisional agreement may arouse must therefore at this juncture be tempered by the recognition that everything depends upon the voting of the people of Southern Rhodesia. But it is not unreasonable that shareholders should entertain substantial hopes of a considerable strengthening of the company's balance-sheet, which General Smuts's offer would effect if carried into practice. For supplementary information, elucidation of certain financial points, and for an estimate of the chances of the fulfilment of the conditions, investors will eagerly await the statement to be made at the meeting in London next Friday.

The Niger Company's Loss.—"The directors now present the audited balance-sheet at December 31, 1921, which they regret shows a loss of £836,701, after taking credit for the general reserve and the amount carried forward from 1919. This heavy loss is caused by the unprecedented fall which took place in the value of West African produce and trading goods, and in the price of tin. The directors have made a re-valuation of the assets of the company, and are satisfied that the figures in the balance-sheet now represent the true value of the assets." In these three sentences the directors of the Niger Co. con-

dense their report on the financial results of the company's operations for the two years ended December 31st last, no report having been issued since the belated publication of the accounts for the year 1919 in January, 1921. We have rarely seen a more glaring instance, in the case of a reputable company, of so entire a disregard of the rights of shareholders to be informed as to the results of the company's trading. Here is a company which has issued no accounts for two years, and then gives one figure, the composition of which it is entirely impossible to ascertain without reference to the preceding balance-sheet, for no profit and loss account is given. The general reserve, which is "taken credit for," stood in the last balance-sheet at £1,300,000, while the balance carried forward at the end of 1919 was £460,520. The loss on the two years' working was, therefore, £2,597,221, or rather £60,000 less than this amount, for from a note in the balance-sheet under the preference capital it is to be gathered that a half-year's dividend was paid on the 8 per cent. cumulative preference shares for the first six months of 1920, no dividend having been paid since. At the beginning of 1920, it may be recalled, an offer was made by Lever Brothers to purchase the ordinary capital of the Niger Company for £6 10s. per share, the current market value being about 4½. This offer was accepted by some 75 per cent. of the shareholders. Lord Leverhulme is now the Governor of the company, and the Hon. W. H. Lever the chairman. At the end of 1920 £2,500,000 8 per cent. seven-year notes were issued. The balance-sheet, which is analysed in comparison with that of two years ago elsewhere in this issue, shows some marked changes. Land and property has risen by £1,589,500, and shares in associated companies by £2,984,600, while stock-in-trade and debtors have declined by £1,225,900 and £1,415,000 respectively. Creditors are £1,411,100 higher. The auditors, a different firm appointed on the proposal of Lever Brothers, say that they are unable to express an opinion as to the value at which shares in associated companies, &c., standing at £3,824,600, are valued, "but we are informed by the directors that they consider them to be of that value," a curiously non-committal remark. While the speech of the chairman at the statutory meeting held in February last prepared the way for the disastrous results now published, which are, of course, largely due to the slump in prices, shareholders in Lever Brothers cannot be expected to feel much satisfaction at the purchase of Niger shares at the top of the boom at an inflated price. Niger company shareholders may be able to comfort themselves with the reflection that they would have been worse off but for the existence of a fairly substantial reserve fund. But this has now been wiped out, and, however quickly trade may recover, it will be some time before the company can build up a strong balance-sheet.

Bawra Accounts.—The accounts of the British Australian Wool Realisation Association for the year 1921 show that sales during the year amounted to £6,424,006, while interest, discounts, and sundry receipts brought in £526,539. The surplus for the twelve months was £13,823, after meeting carriage and shipping charges, £1,042,130, and administration, insurance and other expenses, allowing £17,811 for depreciation of plant, pensions, and office furniture, and for expenditure on new offices, and providing £200,000 for deterioration of wool, &c. Stocks of wool on hand valued as at date of acquisition (cost less 40 per cent.) were reduced during the year from £14,000,914 to £8,542,280, of which £5,853,490 was in the United Kingdom and Antwerp, and £2,688,790 in Australia or afloat. The value of the assets acquired by the Association as at December 31, 1920, amounted to £22 millions, the consideration for which was the distribution to nominees of the Commonwealth of Australia Central Wool Committee of 11,848,036 fully paid shares of £1 each, and priority certificates £9,902,267, and the retirement of small interests and fractional payments £249,697. On July 30, 1921, 47.5 per cent. of the priority certificates were repaid, leaving £5,198,686 outstanding at the date of the balance-sheet. The authorised share capital is £25 millions, of which the amount mentioned above has been issued. At the meeting held in Melbourne on Thursday,

a resolution was submitted to the effect that the capital be reduced from £25 millions to £19 millions, and that such reduction be effected by the directors as and when they consider it advisable by paying off paid-up share capital (approximately £12 millions) to the extent of £6 millions, and by reducing the nominal amount of each paid-up share accordingly. The balance-sheet shows what seems an almost unnecessarily liquid position, bank balances amounting to no less than £3,089,224, of which £994,289 is on current account, and the balance on deposit and at short call. Investments total £5,412,266, and include £4½ millions in Treasury Bills and £920,440 in National War Bonds. Buildings, plant, machinery, &c., stand at £223,400.

English Sewing Cotton.—An almost surprising recovery is shown in the profits of the English Sewing Cotton Company, Limited, for the year ended March 31st last. A year ago profits fell very heavily, and in order to maintain the ordinary dividend, £200,000 was withdrawn from stock contingencies reserve. Net profits have now risen from £189,700 to £348,200, but the latter is substantially below the high record touched in 1919-20, as may be seen from the following comparative table:—

	1913-14.	1916-17.	1917-18.	1918-19.	19 20.	1920-21.	1921-22.
Trading profits	£ 376,365	£ 468,733	£ 503,854	£ 588,105	£ 794,136	£ 254,242	£ 414,915
Dep. and deb. int.	65,843	64,804	65,396	64,363	64,012	64,497	66,754
Net profit	310,522	403,929	438,458	533,742	730,124	189,745	348,161
Brought forward	100,079	174,029	177,958	191,416	193,563	358,608	198,353
Amount available	410,601	577,958	616,416	725,158	923,687	548,353	546,514
Preference dividend	50,000	50,000	50,000	50,000	50,000	50,000	50,000
Ordinary dividend	130,000	200,000	200,000	250,000	300,000	300,000	300,000
Reserves, &c.	125,000	150,000	175,000	231,595	415,307	198,353	196,514
Carried forward	105,601	177,958	191,416	193,563	193,563	198,353	196,514

* Includes £200,000 transferred from stock contingencies reserve. The capital was doubled three years ago by the capitalisation of £1,000,000 of the reserve fund. No additions have been made to reserves for the past two years, and they now total £650,000; a reserve of £108,400 for depreciation of investments has disappeared in the latest balance-sheet, and investments are given at or under market value. The balance-sheet is a fairly strong one. Stock is taken at cost or market value, whichever is the lower, having been reduced by £444,800 to £879,800 since the previous balance-sheet. Debtors are £174,800 lower, and creditors £189,500 lower at £515,100 and £385,000 respectively. The property item has been increased by £564,700 to £3,251,000, a call of \$1½ on 1,197,500 shares of the common stock of the American Thread Company of \$10 each (making \$9 per share paid) having added £485,100. An analysis of the balance-sheet will be found in the usual column.

Queensland "Repudiation" Act.—The Queensland Land Act Amendment Act, 1920, known in Australia as the Repudiation Act, was referred to at some length by the chairman of the Australian Estates and Mortgage Company at the meeting in London last week. By this Act, he maintained, the Government of Queensland "forcibly altered a provision of a contract to which their State was a party, not only without the consent, but against the protests, of the other party to the contract, and without a vestige of compensation for the wrong done. A vital provision in the Queensland pastoral leases affected by this Act is that the rent, while subject to review and alteration by the Land Court every ten years during the currency of the lease, cannot be raised more than 50 per cent. above the rate ruling during the preceding ten years. In reliance on this protective provision, the leases were taken up, and millions of money spent in improving and developing the land. This Repudiation Act removes not only the 50 per cent. limitation, but any limitation whatever, and under its operation rents have been raised enormously, in some cases as much as 300 per cent. This Act was made to apply, not only to the unexpired balance of the leases, but it was also made retrospective to the beginning of the current decennial period, going back to as far as 1914. An appeal was lodged against the retrospective application of the Act, and was carried to the Federal High Court, but the decision of a majority of the Court was

given in favour of the validity of the Act, and confirmed its retrospective operation." The Act has so far cost this particular company £25,000 in excess of the maximum that could be claimed under the leases. Queensland, just as much as any other young country, will need capital for development for many years to come, but arbitrary action of this kind does not improve the standing of the State in the eyes of the investor. The reports of some of the other Australian land companies affected by the Act will be awaited with interest.

Gordon Hotels.—In spite of an increased turnover the accounts of the Gordon Hotels Company show a net loss for the year ended May 31st last of £14,500, which compares with a profit of £48,000 a year ago, and of £124,200 two years ago. Below is a summary of results for a number of years past:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.

8% notes, interest, and sinking fund.	8,650	12,417	9,252	8,641	8,553	8,844	39,343
Red. funds, fees, &c.	71,325	71,325	71,325	71,325	71,325	71,325	61,672
Debt interest	4,927	17,227	26,533	94,576	124,243	48,018	Dr 11,518
Net profit	81,690	Dr 8,017*	9,210	35,743	24,170	30,838	25,781
Brought forward	86,617	9,210	35,743	130,319	148,413	78,856	11,235
Preference div.	53,075	..	..	106,150	106,150	53,075	..
Ordinary div.	28,950	..	..	..	..	..	..
Carried forward	4,592	9,210	35,743	24,169	42,263	25,781	11,235

* Dr 23,525 less £15,500 compensation for Hotel Metropole.

Gross receipts for the past year were £1,375,100, as against £1,183,200 in the previous twelve months. Accrued interest on the 8 per cent. seven-year notes required £19,200, against £8,800, and a further £20,000 was required for the sinking fund. Income-tax and corporation profits tax, which did not figure in last year's accounts, totalled £29,400, while £17,600 went to the L.B. and S.C. Railway for its share in the profit of the Grosvenor Hotel. Preference dividends are now in arrears since May, 1919, and nothing has been paid on the ordinary shares for eight years, while the deferred shares of £10 each have had no distribution since 1903. Claims against the Government in respect of the occupation of the Northumberland avenue hotels have been settled, but those in respect of hotels in Folkestone, Dover, and Broadstairs have not yet been finally agreed, though a payment has been received on account. The company has a claim against the Government for loss of goodwill, which it is hoped will be heard at an early date. It is proposed to alter the date of the financial year to December 31st, and the next accounts published will be those for the seven months ended December 31st, 1922.

Marconi International Marine.—In spite of the depression in the shipping trade, and of the fact that the directors have met shipowners to the extent of £100,000 on the matter of rebates of rentals and payment of operators whilst unemployed during the time that ships were laid up, there was no decline in the profits of the Marconi International Marine Communication Company for the year 1921. As may be seen from the comparison below, both revenue and expenses were substantially higher than in the previous year, but net profits for the past two years are considerably below the average of the three previous years:—

	1913.	1917.	1918.	1919.	1920.	1921.
Total revenue	£ 146,326	£ 470,855	£ 563,445	£ 772,462	£ 933,723	£ 1,084,591
Expenses, &c.	102,700	272,892	371,119	569,596	811,751	962,747
Interest	6,597	5,907	5,989	4,725	4,402	3,801
Balance	37,029	192,056	186,342	198,141	117,570	118,043
Rep. of debts	3,500	2,080	..	..	..	..
Reserve	..	50,000	..	..	..	..
Dividend	30,604	89,997	150,000	178,909	178,909	119,273
(10%)	(10%)	(15%)	(15%)	(15%)	(15%)	(10%)
Carried fwd.	6,068	105,418	141,760	161,890	46,552	25,322

The report points out that many shipping companies have gone into liquidation, and £12,000 has been written off in respect of bad and doubtful debts. Although profits were

practically unchanged, the dividend is reduced from 15 to 10 per cent., and £21,000 less is carried forward, the explanation being the very large sum brought into the 1920 accounts. As regards the outlook for the current year, the report mentions that some improvement has taken place, the number of ships laid up having been reduced by approximately one-half.

Kafir Costs.—Our mining correspondent writes:—In our recent article on the Rand dividends, a general reference was made to the fact that a number of the companies had succeeded in reducing their expense ratio. The whole of the returns for June being now available, it will be interesting to compare last month's figures with those of May, and the two, again, with the ratio for the last preceding normal period—December. Costs being only half the story, the statistics under this heading are supplemented by the declared profits for June and December. The appended table embraces the more important undertakings:—

Company.	Costs per Ton.			Working Profit.	
	Dec.	May.	June.	Dec.	June.
Brakpan	s d 28 5	s d 25 7	s d 24 7	£ 30,200	£ 45,880
City Deep	28 6	25 6	26 6	42,720	51,850

Witwatersrand Deep ..	25 4	23 3	23 4	3,900	10,160
Witwatersrand (Knights)	21 7	21 8	20 3	5,490	11,580

* Loss.

It will be seen that in the 27 instances cited, comparing June with December, reductions of greater or lesser extent in the cost ratio are recorded in all save a couple of examples. Here and there the differences are only trifling, but with a fair proportion of the companies the savings are of substantial extent—to wit, 3s 10d per ton on the part of the Brakpan, 5s 2d Modder B, 3s 2d New Kleinfontein, 2s 10d New Modder, 5s 3d Randfontein, 4s 6d Robinson Deep, 2s 11d Springs, 3s 11d Van Ryn Estate, 3s 1d Van Ryn Deep, and 7s 4d Village Deep—whose December average was exceptionally high. The less favourable showing made by some companies for June than for May is attributable to the increase in the Miners' Phthisis assessment for the quarter. This factor, however, should in the future be fully offset by the withdrawal of the last instalment of the war bonus paid to the white miners, which takes effect as from the beginning of the current month. As regards profits, some three-fourths of the companies earned more last month than in December, and in many cases the gains are of very appreciable extent. Changes in the opposite direction are comparatively unimportant.

West African Gold Industry.—Shareholders in Gold Coast mining enterprises are having a very lean time just now. Even the doyen of all—the Ashanti Goldfields—has paid no dividend so far this year, difficulties being encountered one after another. The 1921 report of the Abbotiakoon, whose meeting was held last Monday, shows a loss of £22,800, whereas in the two preceding years small profits were made, out of which one dividend of 5 per cent. was disbursed. Last year's disappointing results are due to a sharp rise in working costs, largely arising

from shortage and inefficiency of the labour supply, as well as to the decline in the gold premium. Developments on the West Reef in the bottom levels are highly encouraging, but underground work failed anything like to replace the ore extracted; hence the reserves are 51,700 tons down at 447,500 tons, albeit the value is somewhat better at nearly ½ oz per ton. The Prestea, upon which an enormous amount has been expended without a penny of return, is in process of reorganisation. Members are to be given one 4s share for each £1 share held, and are offered £50,000 6 per cent. debentures at 95, the stock being redeemable by five annual instalments at a premium of 20 per cent. Subscribers will be entitled to take up at par 50,000 "B" shares of 1s each, part of a total of 75,000, entitling to one-third the profits of the company. The underwriters of the debenture issue get a cash commission of 12½ per cent., and subscribe for the remainder of the "B" shares. The terms appear onerous, but the arrangement is doubtless, as claimed, the only alternative to liquidation. The company has secured the support of the Minerals Separation, whose process is expected to effect a great reduction in costs. Last year the latter averaged 61s 7d, as against a recovery value of 43s 7d. Naturally, in these circumstances, a heavy loss resulted. The ore reserves represent little more than one year's supply at the normal rate of crushing, so it is to be hoped that there will be a continuance of the good developments at depth recently reported. The two other important producing companies—the Abosso and the Taquah—have fared rather badly of late, one factor being the inadequacy of the native labour supply.

Japanese Trade and Finance.—Cabled advices from Tokyo report that since the close of the half-year the money market has been abundantly supplied with funds, and the rate for day-to-day loans descended to 3½ per cent. In the expectations that the abundance will continue, bankers are eager to take securities of longer terms, with the result that the market for National loans has become active, and new issues of municipalities and private concerns are meeting with good demand. Profit-taking has, however, caused stock market fluctuations. In the market for raw silk the good demand noticeable in the early part of the month has given way to quiet conditions. The index number of wholesale prices in Tokyo rose 3 points in June, the latest figure being 261.02. June imports were 157,000,000 yen, and exports 146,000,000 yen. On July 15th the note issue of the Bank of Japan was 1,146,000,000 yen, compared with 1,053,000,000 yen a year ago, while discounts and advances were 157,000,000 yen, as compared with 66,000,000 yen.

UNITED STATES.—COTTON REPORT—CONDITION OF CROPS — MAY RAILROAD EARNINGS — STRIKE SITUATION — UNEMPLOYMENT DECREASING — TREASURY FINANCES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 10.

SUCH a spirited advance in cotton prices as that which followed the publication last week of the Government report, showing an improvement in the crop's condition during the preceding month, is indeed a rare occurrence. Ordinarily, prospects for a larger yield than had previously been indicated would serve to depress the market for the staple, but nothing like that happened. On the contrary, from the moment the condition figures became known there was a wild scramble to buy, which carried prices up 10 to 20 points, not only to new high levels for this season, but to the highest reached since the extensive deflation two years ago forced the staple down from around 40 cents to 10 cents. Last Monday, when the Government report was issued, spot cotton closed at 23.75 cents, the October Option well above 23 cents, and other months above 22 cents. The net rise for the day was about 1½ cents a pound, or more than \$8 a bale. Reasons

for the sensational advance are not hard to find. The June crop report was a big surprise. Instead of an improvement of three or four points, as had generally been expected, the gain in condition was only 1.6 per cent. over the preceding month. The condition of the crop on June 25th was given as 71.2 per cent. of normal, as against 69.6 per cent. on May 25th, 69.2 per cent. on June 25, 1921, and a ten-year June 25th average of 76.9 per cent. The report pointed to a yield of approximately 151.9 pounds per acre, as compared with 124.5 pounds last year. The report indicated a crop of 11,065,000 bales, which would compare with last year's actual production of 7,953,641 bales, with 13,439,603 bales in 1920, 11,420,763 in 1919, and 12,040,532 bales in 1918. The yield now forecast falls short by a very wide margin of the yield which is considered necessary to meet world requirements, which are estimated at about 13,000,000 under present conditions. Obviously, the situation is greatly complicated by last year's short crop, because reserves have been depleted to a marked degree. A realisation of such facts was mainly responsible for the intense excitement and spectacular advances witnessed last Monday. Since then prices have eased off somewhat from the top figures, but in many quarters it is predicted that much higher prices will be witnessed later in the season. The Department of Agriculture says:—"Boll weevils are reported more numerous this year than ever before in the history of the American cotton industry. In the south-east the damage is already reported as considerable; on account of the lateness of the crop it is difficult to estimate the exact damage." The next two months will be critical ones for the cotton crop, and manifestly any extensive damage from weevils or other unfavourable developments will reduce the yield now indicated. Occasionally the crop has improved during that period, but, as a rule, the June condition proves to be much higher than that shown in the final condition report as of September 25th. That consideration was also an important factor, no doubt, in the recent vigorous rise.

Conditions with respect to other crops are irregular. Harvesting of winter wheat is about completed, and threshing is proceeding rapidly. Winter wheat yields are variously estimated at 555,000,000 to 574,000,000 bushels; the previous estimate was 607,000,000 as against 587,000,000 bushels actually harvested last year. Private estimates of the spring wheat yield indicate a crop of about 260,000,000 bushels, as against the June Government forecast of 247,000,000, and last year's harvest of 209,000,000 bushels. Corn is making good progress, although the stand is very irregular. Condition estimates range from 86 to 87, compared with 91.1 a year ago, and the indicated yield varies from 2,807,000,000 to 2,835,000,000 bushels, compared with last year's production of 3,081,000,000 bushels. As regards oats, present forecasts of the yield range from 1,205,000,000 to 1,235,000,000 bushels, as against last year's harvest of 1,061,000,000 bushels. Rye and barley crops promise to be larger than in 1921, and harvesting of rye is progressing.

Complete reports filed with the Interstate Commerce Commission by the 201 first-class railroads show total operating revenues for May of \$448,947,900, and operating expenses of \$355,588,800. Net operating income amounted to \$61,980,600, which, on an annual basis, represented a return of 4.36 per cent. on their tentative property valuation. For the first five months of the current year the net operating income of all lines amounted to \$273,259,000, as against \$94,417,907 during the like period of 1921, representing an annual rate of return of 4.36 per cent., compared with 1.51 per cent. for the first five months of last year.

The railroad strike which began July 1st has not resulted in such an extensive walk-out of employees as was threatened a while ago. Probably not more than 400,000 employees all told are on strike, the great majority being members of the shop-crafts unions. An equal number of workers, comprising the maintenance of way brotherhood, eventually refused to join the strike. The brotherhood of signalmen has adopted a similar course, and it now seems likely that the same policy will be pursued by other classes of employees, whose pay was reduced as from July 1st. No serious or widespread

interruption to freight or passenger service has yet taken place, and developments in the past few days would seem to indicate that the shop-crafts strike will not be of long duration.

In view of the unsettled conditions caused by the coal, textile, and railroad controversies, it is considered remarkable that employment throughout the country actually increased last month. The Government's industrial survey for June, published to-day, and embracing 355 principal industrial centres, shows that, of 65 leading cities, 52 reported an increase in employment last month over May. The survey covered employment conditions in every line of trade and industry in the United States, including 1,428 concerns each usually employing 500 or more. The report states particularly that building activities have developed to such an extent that a shortage of skilled building craftsmen is becoming apparent in many sections of the country, and there is at least a temporary shortage of help in the harvest fields of the Middle West. Similar conditions prevail in the iron and steel industries. Commenting on general conditions, the report says:—"The country is steadily but surely forging its way toward a period of industrial prosperity, in which it is possible that the labour supply will not equal the demand. As contrasted with opinion six months ago, a note of optimism pervades practically every industry in every section of the country."

A complete record is now available of the Government's receipts and expenditures during the fiscal year ended June 30th. Receipts aggregated \$4,109,104,150, while expenditures chargeable against them amounted to only \$3,795,302,499. Receipts were some \$140,600,000 larger than had been expected, while expenditures were about \$197,600,000 less, and a surplus of \$313,801,651 was shown by the Treasury at the close of the fiscal year. The increases in receipts came from several sources, notably from Customs collections, which totalled \$356,443,378—the largest on record, and over \$81,000,000 above estimate. Miscellaneous receipts, including Panama Canal tolls, reached \$539,407,506, or about \$50,400,000 above the estimate, the gain being due chiefly to increased realisations on property and to the sale of approximately \$44,000,000 Federal Farm Land Bank bonds owned by the Government. Internal revenue receipts, including income-taxes, aggregated \$3,213,253,256, or only about \$1,200,000 less than was estimated. The decrease in expenditures resulted largely from smaller outlays on account of the railroads.

FRANCE.—REPARATIONS AND DEBTS—RAILWAYS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 18.

THE expected German Note to the Reparations Commission, asking for a further moratorium, arrived last Thursday, and took the form—as was anticipated—would be the case—of a request for a complete suspension of all reparation payments in cash for the next two and a half years. The German demand is based on the fact that the mark has now fallen so low that it will in future be impossible for the Berlin Government to find sufficient money to purchase the dollars, sterling, francs, and other foreign currency in which the payments would have to be made. The Note insists that the recent heavy fall in the mark "began with the adjournment of the negotiations of the Loan Committee," and makes use of the present situation as a skilful additional argument in favour of a great international loan on behalf of Germany. As usual (as French opinion views the matter), the German Government made the mistake of overstating its necessities, and was so ill-advised as to ask also to be relieved from the necessity of making the payment due on July 15th, the foreign currency to meet which was admittedly already in the possession of the Reichsbank. The Reparations Commission, as was to be expected, saw no reason why the Allies should make a present of this money to Germany, and insisted, in its reply, that it should be handed over, in the usual course, after deductions amounting to 17,892,602.50 gold marks, representing certain interest charges and payments made in kind in the form of coal (for Luxemburg)

and dyestuffs. The balance of the total sum of 50 million marks, amounting roughly to £1,600,000, has accordingly been paid in cash. This £1,600,000, so far as can be seen at present, bids fair to be the last cash payment Germany will make to her creditors for a long time to come.

Exactly what the fate of the German request for a complete moratorium for two and a half years will be it is at present difficult to offer even a suggestion. At the time of writing, the Reparations Commission is still awaiting the report of the Allied Committee of Guarantees as to the real facts of the German financial situation. This Committee, as is known, has been sitting in Berlin for some weeks past, carrying out a thorough investigation of Germany's financial position, and the Reparations Commission's reply to the German request will depend largely on what this Committee's inquiry has disclosed. One thing is certain, and that is that under present conditions it is absolutely impossible for Germany to continue to make the payments in cash that were required from her. This fact alone, however, is insufficient to determine the future action of the Allies. If the report of the Committee of Guarantees proves—as it is universally believed here will be the case—that Germany has deliberately and intentionally brought about her present inability to continue her payments in order to be able to cheat her creditors, the principal result of her dishonesty will be to place the Allies legitimately in a position to deal much more drastically with her than would have been the case had her situation been due merely to unavoidable misfortune. Both plain commonsense and poetic justice, as this country sees it, demand that Germany should be subjected to the same treatment that would be meted out to any other fraudulent bankrupt, and that her estate should be handled for the benefit of her creditors as would be that of any other bankrupt. The great underlying fear that is felt in France, however, is that Germany's greatest asset, in spite of her financial bankruptcy, is to be found in the divergence of views between England and France. M. Poincaré's Government is anxious that the Allies should declare Germany bankrupt, and thus clear the ground and render possible the taking over of the derelict estate for the benefit of the creditors. The Government of Mr Lloyd George, on the other hand, is considered here to be in favour of continuing to be kind to the German aggressor, and to render still more impossible the position of Germany's greatest victim. To the average Frenchman the attitude of the British Government—and this in spite of the failure of all its previous efforts to extract satisfaction from Germany in the past—is an absolute mystery.

Almost equally mystifying, from the French point of view, is the attitude of America, which at the moment when all hope seems to be vanishing of obtaining from Germany the money required to reconstitute the devastated area, persists in demanding payment of the inter-Ally debts. The French situation *vis-à-vis* her own and Germany's reparation payments, is thus eloquently summed up by one of the Paris newspapers for the consideration of that portion of American public opinion which is calling for repayment by France of the debt she owes to the United States:—"Germany, which has not had a factory window broken by the war, has paid on account of reparations during three years only \$1,250,000,000. France, which has had seven of her departments ruined by the war, has paid on account of the same reparations, in the same period, \$7,500,000,000."

It is impossible, the same writer points out, to state that the German mark has fallen to zero because the country has had to pay a milliard and a quarter in reparations, if the French franc has fallen only 40 centimes, in spite of France having had to pay 7½ milliards in the same time. If Mr Lloyd George is so anxious to accord a moratorium to Germany, it is asked in the same article, what moratorium do Great Britain and America propose to grant to France?

Figures that are now available setting forth the situation of the French railways, show that, in spite of the enormous burden imposed upon her by Germany's failure to pay her reparation debt, France is working with commendable energy to bring about her economic restoration. The increased railway rates imposed some two years ago,

coupled with the steady increase in traffics, are having an extremely satisfactory effect on the enormous deficits that characterised the whole of the French lines as the result of the war, and there appears to be little doubt that before long the railways will be at least able to balance expenditure with revenue. The situation at the end of 1921, as compared with that of the previous year, is shown in the following table:—

	(In Millions of Francs.)		Comparative	
	1920.	1921.	Gross.	Per Cent.
Railway.	578	233	345	60
Nord	578	233	345	60
Est	303	160	143	47
Orléans	494	385	109	22
P. L. M.	633	426	207	33
State	718	696	22	1.5
Midi	255	184	71	28
Totals	2,981	2,084	897	Average 31

The results of the first 23 weeks' working of the present year were a total increase of 194,000,000 francs in receipts, as compared with the corresponding period of 1921, the average increased yield per kilometre for each of the six companies being 7.9 per cent. It is estimated that by the end of the present year the total deficit on the year's working will have been reduced to between 1,000 and 1,100 million francs. The P.L.M. system expects to reduce its 1921 deficit of 426,000,000 francs to 40,000,000 francs during 1922, while the Est expects to get down to 150,000,000 francs, the Midi to 180,000,000 francs, the Etat to 240,000,000 francs, the Nord to 230,000,000 francs, and the Orléans to 250,000,000 francs. Much of this possibility is due to the fact that the lines are now being worked on a unified national basis, instead of independently.

The sudden appreciation of sterling that on Monday attained 57f 40c, and then declined almost as rapidly as it had risen, has been the governing feature of the Bourse, and has resulted in violent fluctuations in those securities that are largely governed by the foreign exchanges. To take one illustration, that of Tintos. There was a brisk advance from 1,465 to 1,492 that was later followed by a decline to 1,447. The French 3 per cents. were in demand, gaining 25 centimes at 57.95, but other rentes were weaker, the 1915 5 per cents. falling from 75.40 to 74.55, the 1917 4 per cents. from 61.40 to 60.65, and the 1920 6 per cents. from 87.95 to 87.55. French banks have been depressed, Banque de l'Union Parisienne declining from 620 to 594, Banque Nationale de Crédit from 619 to 600, and Banque de Paris et Pays Bas from 1,130 to 1,110. Banque de France, however, moved from 5,740 to 5,850. Railways, influenced by M. Le Trocquer's favourable report, were notably stronger.

GERMANY.—REPARATIONS—LEGISLATION—CREDIT—EXCHANGE AND BOURSE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, July 15.

THE Reparation Commission's provisional reply to the new moratorium request caused some disappointment; with the result that the foreign exchanges, and with them commodity prices, yesterday again rose moderately, after the big drop which came when first the question of a moratorium was reopened. The disappointment in part arose from the Commission's insistence on the 32 million gold mark payment due to-day; but mainly from the Commission's expression of belief that Reparations are not the main cause of the mark's depreciation on exchange. At present exchange 32 million gold marks are about 4 milliard paper marks; and though the Government has the necessary foreign currency, an extra four milliard marks paper will have to be sold for import payments, or an even larger sum if, as may be expected, the first selling further depreciates the mark. The Commission's views about the cause of the mark's depreciation would, if taken seriously, exclude all hope of a Reparations alleviation; and it is hard for Germans to understand why, if this is an

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

expert considered view, such a fuss is being made about Reparations in London, and why, if it is not an expert considered view, it is expressed. The immediate prospects of the mark exchange are very hard to judge. The last week's movements closely resemble movements in similar earlier circumstances. The opening of negotiations for a new Reparations basis first leads to a sharp mark recovery, after which follows a relatively stable period until the final decision is given. The prospect of an increase of the present 1,450 million deliveries in kind is not relished here. At present exchange, compensation to the native producers of the 1,450 million goods would cost about 170 milliard marks. This would be covered by Floating Debt operations, which means in the main by inflation; and the unpaid-for exports would increase seriously the existing passive payment balance on ordinary trade.

The Bill reducing income-tax rates has been accepted, with certain further alleviations for pensioners and petty rentiers, and on income from savings bank interest. The paper mark maximum of the Forced Loan has been raised to 70 milliards paper. The Reichstag has passed on third reading a Bill empowering the Government, in case of pressing necessity, to increase or reduce import duties, or to impose new duties, after taking the views of the Reichsrat, Reichswirtschaftsrat and a Reichstag Committee. This is one more of several surrenders by the Legislature to the Cabinet of control of taxes. The gold supplement on Customs duties was raised on July 12th to 7,900 per cent., and from 19th to 26th will be 9,400 per cent. The consumer, who is probably on an average earning thirty-fold his pre-war income, will pay 95-fold the pre-war duty on imported goods; in some cases, where the nominal duty was lately doubled, 190-fold. The 40 per cent. coal tax is felt as an equally serious burden. This tax is one of the best revenue-yielders; and it was bearable when 20 per cent., and when the difference between German and world-market coal prices was much greater than now. The threatened result is the almost complete cessation of domestic heating next winter. Under the dwellings law of July 1st, the Housing Conciliation Boards can at the request of an apartment tenant order the partial or complete cessation of central heating. Being unable to pay, tenants are preparing to demand this wholesale, arranging instead for stove-heating of only one room. Railway fares will be raised 50 per cent. next October. In this matter the Government has been unreasonably lenient. Measured in gold, or, as is fairer, in paper earning power, fares which have been raised only from 14 to 19-fold according to class are unreasonably low. The loss on railways must always be met by inflation, which expropriates certain classes. The official explanation is that raising fares on the eve of the holiday season would be a hard measure. This reasoning is characteristic of the Government's general weakness when faced by clamour from the classes which make most trouble. Millions of citizens from whom the debased mark has taken not only holidays but also bread are being further impoverished in order to provide cheap holidays for the very small rich class which takes any holidays at all.

The credit strain continues. The Reichsbank's statement for July 7th is significant of this. Nearly every first

week in the month, and in particular the first week in the quarter, has so far shown a heavy drop in credits given, owing to reaction from the credit strain of terminal settlements. Although the bank's holdings of Treasury Bills in the last June week increased by the unprecedented sum of 18 milliards, the decline in the week ending June 7th was only 1,123 millions. The note circulation increased by 3½ milliards. Dr Salomohnson, chief of the Disconto Bank, declares that the money scarcity has brought the era of increasing company capitalisations to an end; and adds that at present mark exchange the difficulty will be met in financing imports. To meet the credit demand, the Darlehenskassen have decided to lend up to 50 per cent. on Bourse stocks quoted at under 600, above that quotation up to 2/5ths; the interest rate on loans secured on such stocks or on wares is raised from 5½ to 6 per cent. Hitherto the maximum loan has been 40 per cent. of the quotation value or at most 100 per cent. of the nominal value for single-quotation securities, and 60 per cent. of quotation value or at most 150 per cent. of nominal value for securities with continuous quotation.

Stocks last week closely followed the exchange market, falling considerably on the first reaction in the foreign rates, and ending with a moderate recovery. The improvement in the Darlehenskassen's loan conditions helped the market. On the 10th, mainly it is believed owing to English buying, Federal Threes rose to 249.50, which is four times the quotation of the end of 1920; but declined yesterday to 188. The movements of this bond are more erratic than those of any of the leading speculative stocks. Other loan prices yesterday were: War 77.50, 4 per cent. 117.50, 3½ per cent 93, Colonial 4 per cent. 126.75, Savings and Premium 79.70, Prussian 4 per cent. Consols 79.50, Three per cent. 79.25, Hamburg 3½ per cent. Staats-Rente 76, Berlin 4 per cents., 1904, ser. 2, 95, Cologne 4 per cent., 1900-1912, 98.

Foreign trade in May, as compared with April, shows an increase of imports in weight; but otherwise no very great change. The import surplus in values was 5,291 millions, against 5,300 millions in April. Imports in the first five months of 1922 were 13,127,400 tons, value 108,464 millions; exports 10,196,000 tons, value 100,492 millions, the import surplus being a little under 8 milliards. Monthly details are:

	Quantity. (In 1,000 Doub. Centners).		Values. (In Million Marks).	
	Imports.	Exports.	Imports.	Exports.
January	23,100	20,300	12,641	14,394

Berlin Municipal Budget for 1922-23 balances at 13,179,856,720m.; but a supplementary Budget is already made necessary by the price rise. Municipal workmen have demanded wage increases totalling 2 milliards a year. The lowest municipal wage at present is 32.95m. per hour, the highest 34.60m. Unskilled workmen, as in the private industries, have almost caught up on skilled. Berlin has decreed that foreigners not resident in Germany shall pay a fivefold hotel-room tax. As the tax is assessed on room-prices, and as already foreigners pay four to five times as much for their rooms as Germans, the actual tax on foreigners for the same class of rooms is 20 to 25-fold that falling on Germans. As already the prices of rooms and tax thereon charged to Germans have in great measure caught up with the currency depreciation, the special tax on foreigners is unreasonable.

CANADA.—CROP PROSPECTS—TRADE CONDITIONS — NATIONAL RAILWAYS — FREIGHT RATE REDUCTIONS—PROTECTIONIST LEGISLATION— PENDING DOMESTIC LOAN—GRADING SCHEMES FOR DAIRY PRODUCTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 6.

Crop prospects are the topics of paramount interest in Canada to-day, and the last survey of the Dominion Bureau of Statistics, which records conditions at the end of June, is distinctly encouraging. In the West, which is the most important crop area, there has been severe loss through drought in certain parts, and local hailstorms have done damage, but now that June, the most critical month, has ended, the outlook for a really good crop is regarded as extremely promising. Manitoba crops were reported as needing rain, but on July 5th they received a good drenching. They are well advanced in growth, and autumn rye is almost ready for cutting. Hay and pastures are excellent. It is in this province that hail damage has been most serious, 30,000 acres of crop being completely ruined by a storm on June 23rd. In Saskatchewan the seeding was accomplished under good conditions, and the store of moisture was sufficient till the weather broke on June 17th. Since that date regular rains have occurred and the crops are making excellent progress, some of the wheat being in the shot blade. Recent alarmist reports about the conditions of the crops in Southern Alberta have been contradicted by local experts, and recent rains have in any case materially improved the situation. The grasshopper menace has been successfully combated, and the general prospects are for an average crop of wheat and oats. Owing to the lightness of the hay crop, 50 per cent. of the rye sown is being cut for winter feed. In British Columbia grain and pastures have suffered from a lack of moisture, but the fruit crop is in good condition.

In Ontario and Quebec prospects are generally encouraging. Eastern Ontario has had rather too much rain for its crops, but its pastures have profited. Elsewhere autumn wheat is well headed out, and barley, oats, and spring wheat promise well, but all grains are decidedly short in the straw. Potatoes, roots, and maize have got a good start. Early apples are abundant, and most orchard fruits are good. All the smaller fruits except raspberries are plentiful. The maritime provinces report that a judicious regularity of rainfall and good growing weather have brought the crops into excellent condition. Cereals, turnips, and potatoes are very promising, and the hay crop is good though damaged by floods in some areas. Pastures are excellent, and stock is in first-class condition. In Nova Scotia, however, the set of the fruit has only been fair, and the apple crop may not be more than two-thirds as large as last year's.

Reports from various commercial centres agree that trade is still on the mend, but it is difficult to point out any feature which stands out prominently. Wholesale houses state that orders are coming in with reasonable freedom; firms dealing in drygoods and groceries find business quite brisk, and there has been marked activity in the sugar market, due to European orders and the advent of the preserving season. Now that freight rates to the West have been cut, a large flow of orders from western merchants who were awaiting the verdict is anticipated. Industry is holding its own quite well, with unemployment continuing to decrease. Better strength is shown in the steel markets with iron and steel bars selling at \$2.90 and \$3.00, but very few of the plants are working even at an approximation to full capacity. The motor factories have lots of orders, and the building boom is being maintained in many cities. The coal strike in the United States is causing some inconvenience to Ontario manufacturers, but as an offset it is helping the Nova

Scotia mines, which are sending considerable quantities of coal into the United States. Now that the holiday season has arrived retail business in the towns and cities is likely to experience a period of dullness, but good autumn trade is anticipated. The banks are still keeping a close rein upon loans, and merchants declare that if they would loosen their purse strings trade would be greatly stimulated. The stock markets after a period of liveliness are now experiencing a reaction, and most local stocks are in a listless condition.

The President of the Canadian National Railways reports a welcome improvement in their prospects. There was a small operating deficit for May amounting to \$38,638, but it is a welcome change from the deficit of 2½ million dollars shown in May, 1921. There has been a satisfactory reduction in operating costs, whose ratio to earnings was 100.28 : 100, as compared with 129.87 : 100 in May, 1921.

The controversy in Parliament over the western freight rates has resulted in a real triumph for the Progressive party, who are fighting the claims of the C.P.R. Most of the latter were conceded by the first report of the Transportation Costs Committee, but it was only carried by the casting vote of the chairman, and the Government found that at least a score of their own followers were determined to support the Progressives in their obstructionist tactics against the legislation necessary to implement the report. Accordingly, the Committee were invited to reconsider their report, and the later version which they produced conceded the main point of the western claims by restoring the rates on grain and flour embodied in the Crows' Nest Pass agreement. The rest of the agreement has been suspended for another year, and the Railway Commissioners were asked to examine the rates on the other basic commodities and, if possible, reduce them. They have already ordered some reductions amounting on an average of 7½ per cent. The changes in freight rates will involve heavy decreases in the revenues available for the railways, and it is calculated that the C.P.R. and the National system will have to share in almost equal amounts a loss of about 15 million dollars, the exact amount being dependent upon the size of the crop.

In the final stages of the Budget further evidence was afforded of the dominance of protectionist influences in the councils of the Ministry. There was put through an amendment to the Customs Act which Mr Meighen described as the most protectionist measure ever passed at Ottawa; it virtually gave the Cabinet arbitrary power to fix a scale of valuation and impose duties at their own caprice on imported natural products which they judged were competing under unfair conditions with home-grown products. The Progressives, when the Budget was being discussed in committee, fought hard for more drastic cuts in the duties on blankets, clothing, and other commodities, but the Government resisted all changes, and were able to secure Tory support to defeat the amendments moved.

Before the close of the present financial year the Government must raise \$350,000,000 to meet various obligations, and the Finance Minister has announced that if financial conditions are reasonably good, a domestic loan will be raised in the early autumn. During the debate on the Budget a plea, probably instigated by bond houses, was made that no domestic loan should be floated by the Government; it should seek its money abroad and leave local capital available for private enterprises which had less chance of securing funds elsewhere. Mr Fielding, the Minister of Finance, and Mr Ernest Lapointe, the Minister of Marine and Fisheries, will be two of the Canadian delegates to the next Assembly of the League of Nations, due to take place at the end of August. Mr Fielding will also take up with the British Treasury a number of matters which require adjustment, and he will discuss with the French Government the question of a commercial treaty between France and Canada.

Apparently considerable apprehension has developed in British trading circles about the new system of Government grading of Canadian dairy produce. It should be realised that in no sense does it imply Governmental control of marketing; the new regulations are merely designed to stimulate an improvement in the quality of the product, and by promoting a uniformity of standards secure an improvement in prices.

CABLE ADDRESS: BANKTRUST, PARIS

AUSTRIA.—THREAT OF FINANCIAL RUIN—NOTE CIRCULATION — AN INTERNAL LOAN — 1921 TRADE—THE BUDGET DEFICIT.

(FROM OUR CORRESPONDENT.)

VIENNA, July 1.

THE last month has seen a considerable change for the worse in the financial situation in Austria. Consternation reigns in Government and Parliamentary circles and among all classes of the population. The latest impulse in the downward direction is caused by the fact that, contrary to the optimistic announcements of the Government, the arrival of certain delegates of the Morgan group, expected a week ago, has not taken place. The Social Democratic Party, being in opposition to the present Government, which is composed of Christian Socialists and Pan-Germans, would like to upset the "bourgeois" Government, and, despite constant statements to the contrary, to form a Socialist Government, which would bring in a Socialist financial programme. One of their leaders, Dr Bauer, has brought forward a proposal to urge the German Government and German financial circles to participate with German capital in the foundation of an Issue Bank, and to prepare the way for the introduction of the mark currency, but without suggesting that a political union should follow yet. Disturbed by the threats of the Socialist party and the appalling state of the exchange market, as well as by the general panic which has seized the whole population, the Government has in most emphatic terms demanded from the banks that they should found, by means of their own available resources and with the help of any affiliated foreign groups, an Issue Bank, which would be required to buy in the present kronen notes in circulation and to replace them by a new issue based upon a pool of foreign negotiable securities. The banks, as well as the foreign diplomatic representatives have been informed by the Government and the leaders of the political parties that something must be done if disturbances are to be avoided. The banks have declared themselves ready in principle to finance the new Issue Bank with their foreign holdings without, however, giving a hope that the storm which threatens to break over Austria will hold off for any appreciable time; but, at all events, it would mean that for the time being the situation would be calmer.

The preliminary legislative work for the foundation of the new Issue Bank has made fairly good progress. The Government has steadily insisted on the banks and influential bankers subscribing the share capital of the proposed bank, which is to be 100 million Swiss francs. The Government has made it quite clear to them that only by a voluntary subscription in foreign currencies of an adequate portion of this share capital can they avoid the confiscation of their foreign currencies, as had been demanded by the Socialist party. The first instalment,

to be raised on the share capital must amount to 24 million Swiss francs. The allotment of this first instalment, however, is not very simple, as each bank is inclined to give precedence in the subscription to the others. As in the Bill for the foundation of the new bank brought before the Parliament, the new bank is only pledged to prevent a further fall of the krone, and not given the task of gradually improving the rate of exchange, it is again proved that the Government itself has lost all hope in the recovery of the krone.

The Finance Administration has made considerable demands upon the Austro-Hungarian Bank during the last two weeks. The increase in the note circulation has amounted to 42,000 million kronen—i.e., 3,000 million kronen daily. Of this sum, the Ministry of Finance required 20,800 million; the remainder is due to the demands of the banks, industries, and commerce. A proof of the lack of confidence which the Austro-Hungarian Bank has in the recovery of the krone is the fact that, in agreement with the Ministry of Finance, it has always fixed the gold parity for payment of Customs dues, which is officially determined every week, at a higher level than justified by the price of Swiss currency, which previously was the basis for all such calculations.

Simultaneously with the foundation of the new Issue Bank, it is proposed to invite subscriptions to an internal loan. One of the securities for this loan will be a compulsory general mortgage on the entire real estate of Austria. The farmers and peasants seem to oppose this part of the scheme and are endeavouring to obtain at least the concession of redeeming this mortgage immediately by payment in cash. With regard to capital and personal property, it is proposed to compel all companies to subscribe 15 per cent. of their share capital in gold kronen; private individuals will have to contribute their share in proportion to their income-tax (20-33 times this year's tax). There is, of course, this danger: the enormous demand for money which will be caused by this loan will increase the prevailing money stringency, and either cause many insolvencies or, what is more probable, augment the demands on the Austro-Hungarian Bank, and so result in a further increase of the banknote circulation. The concession made by the Government to the State employees—i.e., that their salaries will be automatically increased in proportion to the official index figures, will compel commerce and industry to grant the same increase to their employees. This will again enlarge the demands upon the Austro-Hungarian Bank for both public and private needs.

The Government has just published the figures concerning Austrian imports and exports during the year 1921:—Imports, 1,698 million gold kronen; exports, 926 million gold kronen; excess of imports, 772 million gold kronen. This excess of imports, 772 million gold kronen, equals in paper kronen 43,000 million. Of these imports, 136 million gold kronen represent fuel, 729 million foodstuffs, and 201 million industrial raw materials. Of the total of 926 million gold kronen exports, 790 million gold kronen represent various industrial products. This year the excess of imports will probably be greater, as the import of fuel and foodstuffs has no doubt been much larger.

A few examples are given below which show clearly how the cost of living has increased during the last 14 days:—

	Beginning of June.	Middle of June.
	Kronen.	Kronen.
Tram tickets	80	150
Coal	70	116
Loaf of bread	940	1,230
Beef	4,500	7,000
Fat	4,000	6,800
Shoes	25,000	40,000
Gas (per cub. meter)	130	220
Unemployment dole	1,600	2,400

The official statistics show that the cost of living has increased 71 per cent. since May 16th.

The demand for foreign currencies and securities has become so great that certain stocks show from one day to another a rise of half-million kronen; a rise of 200,000-300,000 arouses no comment. The banks and brokers' offices are quite unable to cope with the demands of

the population for the purchase of securities. Below are a few examples of the rise in the prices of securities:—

	Beginning of June.	Middle of June.
	Kronen.	Kronen.
Nordbalm (Northern Railway)....	760,000	1,500,000
Staatseisenbahngesellschaft	179,000	350,000
Cosmanos (textile firm)	194,500	385,000
Schoeller Zucker (sugar)	271,000	530,000
Pilsner Brewery	640,000	1,010,000
Veitscher Magnesit.....	390,000	1,100,000

The Government recently demanded a credit for 220,000 million kronen, which, it explained, would only cover the requirements of the Treasury for three months. But as in the meantime the value of the krone has depreciated, the monthly Budget deficit is bound to increase even above the present figure of 78,000 million kronen. It remains to be seen if the new financial programme which the Government will introduce in the next few days will bring about a change in this lamentable state of affairs.

G R E E C E. — BANKERS' CONSORTIUM — TARIFF REVISION AND INCREASES—FOREIGN TRADE—COST OF LIVING—SERVICE OF THE DEBT.

(FROM OUR CORRESPONDENT.)

ATHENS, July 1.

As a result of negotiations between the Government and the banks regarding the fate of the Bankers' Consortium established a year ago to handle foreign exchanges, it was finally decided, at the suggestion of the Government, to renew the capital of the Consortium, which will continue its operations, with some modifications in its internal organisation and methods.

In a statement to the Press, the Minister of Finance declared that the Government, as well as the banks, have formed the conviction that the foreign exchange rates will soon fall. During the ten months past, he said, the Consortium bought £24 millions. The daily receipts average £70,000. This sum would be, in fact, considerably larger but for the illicit dealings which take place in the so-called free market, chiefly for account of Smyrna. The latter is not subject to the restrictions imposed by the law concerning the Consortium, and as it is always ready to pay higher rates for obtaining exchange, a considerable portion of exchange finds its way there through the free market.

The capital of the Consortium amounts now to £1,353,000, the Government participating for £1,000,000 and the balance having been taken up by the principal banks. New members may be admitted with a participation in the capital of at least £5,000. The Consortium resumed its functions on June 26th, and fixed the rate of the pound sterling at 140 dr for cash transactions and 125 dr for forward contracts. The difference between these two rates is attributed to the confidence of the Consortium in a fall of the rates during approaching months, when foreign exchange is usually imported in the country owing to the exports of currants and other products.

The Minister of Finance has introduced and passed through the National Assembly a Bill providing for the inclusion in the tariff of some articles hitherto not specifically mentioned in it. On the other hand, some of the articles already contained in the tariff are classified more methodically, while the duties on some others are increased. But the importance of the Bill lies in the increase, by means of co-efficients ranging from 2 to 15, of the import duties on various articles which either were hitherto lightly taxed (in consideration of their present value), or are considered as luxuries. It should be added that, independently of these increases, the raising of the official rates of foreign exchanges has already brought about an automatic general rise of the import duties of more than 30 per cent., since duties are levied in gold and paid for in bank-notes, the rate of one gold drachma varying according to the official fluctuations of the rate of exchange on London. Besides increasing duties, the Bill contains a provision prohibiting for six months the import of various articles which are defined in the Minister's introductory report as being luxuries and not of primary necessity. The aim of these measures is, on the one hand

an increase of revenue, and, on the other hand, the protection of the drachma by every possible restriction of imports of merchandise from abroad.

The foreign trade for the first four months of this year and the corresponding period of last year shows the following improvement:—

	(In Million Drachmæ.)		Excess of Imports.
	Imports.	Exports.	
January to April, 1921..	539	185	354
January to April, 1922..	675	453	222
	+ 136	+ 268	— 132

In the appended table will be found index numbers of retail food prices in Greece, calculated by the Statistics Department of the Ministry of National Economy, for the years 1914 and 1921:—

(Average Price in 1914 = 100.)			
Bread	400	Eggs	458
Dry legumes	356	Milk	347
Vegetables	424	Wine and beer	424
Meat	469	Cheese	463
Poultry	512	Coffee	249
Fish	348	Sugar	412
Butter	402	Rice	376

Index numbers for 55 various articles (principally foodstuffs) show the following gradual rise of the cost of living since 1914:—

	1915.	1916.	1917.	1918.	1919.	1920.	1921.
	121	167	289	382	341	359	421

The actual increase of prices is, however, now larger than would appear from the above figures.

According to information supplied by the International Financial Commission, the receipts from the revenues assigned for the service of the Greek public debt during the first four months of this year show the following increases over those for the corresponding period of last year:—

	(In Thousands of Drachmæ.)		Increase.
	1921.	1922.	
Receipts from monopolies, tobacco and stamped paper	29,165	48,935	19,770
Receipts for Custom houses	32,901	67,457	34,556
Total	62,066	116,392	54,326

Books and Publications.

THE BEGINNINGS OF ECONOMIC THEORY.

This is a readable little book, written, as a result of studies pursued before the war in the British Museum, and after the war in Warsaw, by an author who now occupies the position of Professor of Political Economy in the University of Lublin, Poland. The purpose is "to find among the doctrines advanced more than one hundred years ago such theories as still to-day can help us to understand economic phenomena." In a chapter on the Beginnings of Political Economy he shows how some economic laws go back to the 16th and 17th centuries, or earlier. We find, for example, the astronomer Copernicus in 1526 inquiring into the debasement of the currency in Prussia, and forestalling the "quantity theory" of money. Seventy years later Gresham enunciated his famous law:—"When two sorts of money are current in the same nation of like value by denomination, but not intrinsically, that which has the least value will be current, and the other as much as possible hoarded." Locke developed the law of supply and demand, and writers of the 17th century applied it to interest as well as to prices. In the three following chapters he explains clearly the place of the Physiocrats, Adam Smith and Ricardo, in the development of economic doctrine. He shows a sympathetic insight in summing up their views, while at the same time pointing out limitations and mistakes. In these chapters the author is at his best. He is not so happy in dealing with the "Post-Ricardian Period," to which he devotes a final chapter; and we think that these few pages might with advantage have been omitted. It would be hard to

By Jan St Lewinski, D.Ec.Sc. (London) P. S. King. 6s 6d.

justify his sweeping assertion that "all the authors of the post-Ricardian period who have investigated the problem of interest, wages, and rent, are lacking in the large perspective which is characteristic of Ricardo's work." His judgment also that the theoretical advances of political economy since Ricardo's "Principles" are comparatively irrelevant, while "the last decades especially have been very barren," does far less than justice to such men as Jevons and Marshall—to mention only these two.

IRON AND STEEL IN FRANCE.*

WITH Lorraine restored and Morocco her Protectorate, France possesses some seven milliard tons of iron ore, or 57 per cent. of the European total. But it is widely scattered, associated with different geological formations in different districts, and relatively poor in iron; that of the Briey region, now again French, has only been made valuable through the Gilchrist-Thomas process, that powerful factor in the German industrial advance. This book covers the whole history of the French industry. Beginning in Gaul in the Bronze Age with furnaces dug in the earth, worked by half-a-dozen men at most, and abandoned as soon as material or fuel became scarce, it passed, about 1300, into a stage, copied from Central Europe, of permanent foundries aided by a water-driven bellows and hammer. From about 1800 these have had to meet the competition of smelting by coke, introduced from England by Wilkinson; but charcoal has only been gradually superseded since 1870, and "the iron age" in France only began about 60 years ago. Dr Levainville shows how the competition of the different areas, stimulated by rail and water transport, specialised the local manufactures, how "combines" of foundries with coal mines arose, and how the reluctance of the French labourer to settle far from his home necessitated the importation of Belgians, Spaniards, Italians, Croats, Poles, and even Moors. From 1860 to 1913 the French output of iron multiplied tenfold, and Dr Levainville expects an annual export, in the near future, of 17 million tons of ore. For French iron and steel the outlook is less hopeful, owing to the present and future competition not only of other European countries but of America and the East. The book is packed with information admirably set forth, and full of interest for all students of economic history or of French social life.

WHITE MEN AND MEN OF COLOUR.*

This fifth volume of lectures delivered at the annual summer school at Woodbrooke, near Birmingham, is of the highest interest to all students of European history and international politics; and the closing essays have an economic and practical application, dealing, as they do, with the great problem of native labour. Mr J. H. Harris and Sir Sydney Olivier show that the negro, whether in Africa or the West Indies, does not easily submit to modern "industrialisation," even in the rudimentary form of the organisation of his labour for the collection and production of the various raw materials which are indispensable to civilised life. He is much more effective as a producer if he tills his own land than he is as a wage-earner on an elaborately organised plantation, with all the latest appliances for production. The two systems were tried side by side before the war, the former on the Gold Coast, the latter in the Cameroons, then German. The Gold Coast in 1906 produced thrice as much cocoa as the Cameroons; in 1913 the German output had tripled, that of the Gold Coast had increased nearly sevenfold. Further proof has been supplied by the small holdings created on a sugar estate in Trinidad. The negro works well intermittently and on piece work; but he will not work continuously if he has land. Hence the white man's effort to force him to labour by expropriation or otherwise—an effort happily frustrated in Kenya, though a flagrant example of it is supplied by Southern Rhodesia. But con-

The upward movement of the War Loan steadily continues. This sets the pace for other gilt-edged issues. The effect of the reduction to 3 per cent. in the Bank rate has made itself felt throughout the past week in all the investment parts of the Stock Exchange. Business has been, if not active, at any rate good, though members are inclined to think it would have been still better had there been a sufficiency of stock to supply the demand. National War Bonds are higher. Rises have occurred in all the India Government securities, in Irish Land, Consols, Local Loans, and the older War stocks. Home Railway prior-charge varieties are a point or so up in some two score instances. The Colonial market is strong, and Corporations are almost impossible to get.

Greater firmness characterised the list of French securities, including those of the railways. This came about by reason of the slight recovery in the value of the franc; but German bonds, on the other hand, have gone back. There is a good deal of speculation in them, and people who buy the bonds turn them out at very short profits. The Brazilian group is harder. Far Eastern stocks have moved but little. Peruvian

Corporations spurred strongly, and, in spite of profit-taking, the preference stock, in particular, is substantially higher on the week. Rio Tintos moved up in response to a little demand from Paris. Russians have advanced to some extent. Czechoslovak bonds have further weakened.

Home Rails are better in most cases. Another advance in the popular "Berwicks," North Eastern Consols, had the effect of stiffening the prices of Midlands, Great Westerns, and North Westerns. Once more it is stated that the terms of the North-Eastern grouping will be out during the week-end, and, in consequence, Great Northerns, Great Centrals, and Great Eastern are all better. Led by a good rise in Brighton deferred, the Southern passenger stocks have hardened, while the Scottish issues found ready supporters who came from the south, as well as north of the border. There is nothing much doing in Undergrounds.

Grand Trunk Pacific debentures are a trifle better as a result of the meeting in the middle of the week, called to enable proprietors to protest against the manner in which their security is being treated by the Dominion Government. Argentine Railways held a fair amount of firmness, but the main features of strength in the Foreign Railway market are Antofagasta and United of Havana stocks, both of which spurted sharply. A few of the Nitrate producers' shares are better.

There is nothing doing in rubber shares, and the oil market is dull. Selling, for account of holders rendered apprehensive by falls in the price of crude-oil in America, found no support ready to take the shares, and prices have accordingly given way. The main feature of excitement amongst industrials came about through the declaration of an increased dividend by the Imperial Tobacco Company. This sent the shares, and the tobacco market, soaring upwards; there has been a huge turnover of British-Americans, as well as Imperials, this week. Animation amongst the textiles was confined to mild speculative dealings in Courtaulds. Trade reports from Manchester do not encourage enthusiasm in regard to the immediate outlook for textile companies. Dealings in the Royal Mail new $6\frac{1}{2}$ preference stock, issued at par, started at 1 premium, but this was rapidly doubled. The ordinary stock gave way on holders trying to sell this in order to invest in the new preference. The banking market is very quiet, and so is that for insurance shares. Electric Lighting issues are firm; the new County of London ordinary and preference were readily underwritten. The Aerated Bread Co. quickly secured its money for the new $6\frac{1}{2}$ per cent. preference issue, offered at a guinea: the lists of the Bengal Telephone bonds closed within an hour after they were opened. Some of the land companies' shares went better. Brewery stocks remain good, with two or three somewhat dramatic rises in stocks, for which there is a persistent demand, but no supply. Marconi Marines fell away on the reduction in the dividend, taking the parent company's shares with them, though a little recovery ensued in both cases. The cable group is hard. Two or three very substantial rises in Trust companies' stocks indicate how firmly these are held by proprietors who decline to be tempted, even by rising prices, out of their stocks.

The Kaffir market is generally good, with Rand Mines better, and a fair demand for a number of the gold-producing shares. It is expected that this month's production returns will show a substantial increase upon those of June. Something like the old-time activity in Chartered came about as the result of the knowledge that a statement was imminent in regard to the terms upon which the Union of South Africa may propose to take part of the Chartered company's property into its own control. Diamonds are quiet. Broken Hills have advanced on the declaration of a dividend, the first for three years, on Broken Hill South shares. This was followed by buying of all the Barrier shares from the Colony. Russo-Asiatics advanced in consequence of the proceedings at The Hague. The tin market has been a shade better, thanks to a rise in the price of the metal, and Burma Corporation improved upon a little inquiry, said to have originated from India.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Liverpool Corporation Bills.—Tenders are invited for £1,000,000 Liverpool Corporation Bills, dated July 31st, and repayable on July 31st, 1923. Tenders will be received at the Bank of England on Tuesday, July 25th, and payment in full of the amounts of the accepted tenders must be made at the Bank of England in London not later than 2 o'clock on July 31st.

Aerated Bread Company.—Authorized capital £1,750,000, in 1,250,000 ordinary shares, and £500,000 $6\frac{1}{2}$ per cent. cumulative preference shares, both of £1 each, of which £977,500 ordinary shares have been issued and paid up. The present is an offer of £500,000 preference shares at 21s. per share. No issue of debenture stock can be made ranking in priority to this issue without the consent of the preference shareholders. The company was incorporated in 1862, and owns and operates 140 tea shop depôts in London and the suburbs. The proceeds of the issue are required for expansion and development, for the erection, at an early date, of an up-to-date establishment on the Wilton road site, and a further extension of bakeries and stores at Camden Town. Profits for the past four years only are given. These show that the preference dividend is covered four times over, while net assets in the balance-sheet, dated October 31st last, were £1,118,500. The preference shares only confer the right to vote at the general meeting when the dividend is three months in arrear, or if the meeting is called for reducing capital, winding-up, etc. The issue was quickly over-subscribed.

Bengal Telephone Corporation.— Authorised capital 2,00,000 shares of 10 rupees each, of which 600,000 have been issued and paid up. Equivalent at 15 rupees to the £ to £400,000. The present is an offer for sale by the P. and O. Banking Corporation of £350,000 7 per cent. First Mortgage bonds to bearer at 97. The bonds are repayable at par on December 31st, 1943, or at 102 in the event of the Bengal Telephone Co. going into voluntary liquidation before that date. The company also has the right to redeem at 102 on and after June 30, 1932, on giving three months' notice. The bonds are secured by a Trust Deed constituting them a first specific mortgage upon the immoveable property of the company and a floating charge upon the undertaking and assets, present and future. Further bonds, to a maximum of £800,000, inclusive of those now offered, may be issued, but such issues must not exceed the paid-up capital. The Government of India had the option of purchasing the undertaking on certain terms on April 1, 1923, but under a new agreement

the Government agrees not to exercise this option before 1943. The purpose of the present issue is to provide funds for extensions and improvements. Financial results since 1910 are set out, the ordinary dividend having steadily risen from 5 to 10 per cent. Interest on the bonds, which were all readily bought, would appear to be well covered.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

VICKERS, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The fifty-fifth annual general meeting of Vickers, Limited, was held at River Don Works, Sheffield, on the 19th instant, Mr Douglas Vickers, M.P., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, expressed regret at the death of one of their valued members, Sir Francis Barker. He also had to record the death of Mr J. T. Coffin, who had been secretary since 1912 and had been with the company for more than thirty-five years. Mr A. Cartwright, who had been chief of the accountants' department, had been appointed in his place.

WAR ACCOUNTS.

Proceeding, the Chairman said: The settlement of the war accounts is not yet terminated. It has been a long and wearying task on both sides; with one department of the Government alone over 600 contracts had to be analysed and reviewed, some because the company were instructed to take them at prices based on ascertained (or actual) cost plus a percentage, but most because the Armistice brought about suspension of the work before the orders were completed. This naturally involved many difficult questions and the most careful investigation of books. In addition to these dealings with the buying departments of the Government, there have been long negotiations with the Inland Revenue. Some points have still to be settled with several departments, but, as indicated in the report, these have been so reduced in number that it has been possible to put before you a balance-sheet into which estimates come only as a comparatively small proportion. These estimates have been framed on conservative lines. Shareholders will no doubt have gathered from notices issued by other companies that we have not been the only sufferers from these delays. In fact, certain other companies do not appear to have advanced as far as we have, although there was only one company whose activities could be compared to ours.

BALANCE-SHEET ITEMS.

Making a running comment on the leading items in the balance-sheet, he continued: Stocks and work in progress and book debts owing to the company show decreases of £812,000 and £1,898,000, due in the first case to decreasing trade and writing down stocks to meet the fall in values, and in the second partly to the state of trade and partly to gradual settlements with the Government. Cash and bills at £1,620,000 show an increase of £919,000. This figure should be taken into consideration with the increase mentioned in marketable securities. It indicates the financial strength of the company, but is not altogether a good sign in other respects, for the increase is largely due to bad trade and the consequent reduction of stocks and work in progress and book debts owing to the company. When trade improves, these items will show increases which will diminish the cash and securities.

I now turn back to the other side of the balance-sheet, to the items most interesting to shareholders—the figure of the net profit for the year. It stands at £708,102. This figure comprises profits made in Sheffield, Barrow and Weybridge (our aeroplane factory), a dividend of 7½ per cent. from the Metropolitan Carriage and Wagon Company, other dividends from subsidiary companies, among which there were good returns from Glovers, Booths, Arrols, and the Japan Steel Works. Against those had to be set losses at the three factories in the London district—Erith, Crayford, and Dartford. The last two have been practically closed down now except for some self-supporting departments mainly connected with wood-working, which show some promise. Wolseley Motors, Limited, had a bad year, due to depreciation of work in progress and strikes which disorganised the output. Their results did not justify the payment of dividends, but, when compared with those of other motor-car companies making cars of similar class, were quite encouraging after allowance had been made for taxation.

In our own figures reserves were made for taxation based on the figures of the year and for any weak points in the company's holdings and interests.

No depreciation has been written off for the year. The directors are of opinion that consideration of this should be deferred till a final settlement has been reached with the Inland Revenue.

The final result is the figure just mentioned, which, with the carry-forward from the previous year, and after payment of preference dividends for the year, amounts to £1,304,035. Out of this sum the directors recommend the payment of a dividend of 1s. a

share, less income-tax, which will leave a carry-forward of £872,993, or £118,646 less than the previous year.

CURRENT YEAR'S PROSPECTS.

So ends 1921, a year of troubles, disappointments, falling prices, and diminishing trade for practically all the engineering concerns in the country. The only exceptions known to me were the textile machine trade, in which we are not interested, and the electrical trades. At the present time, with seven months of 1922 gone, there is no change for the better. If we did not know that trade must recover in the end, and that every month brings us nearer to that revival, we should say that recovery is as far off as ever. The electrical trade still shows best, though orders do not come in as fast as work goes out; there are very few inquiries for ships or steel products or railway material, carriages and wagons; motor-cars, on the other hand, are selling quite well. We are still waiting for armament orders, though our reduced designing staffs are very busy with new designs which we have been asked to get out, and which we must undertake if we are to retain that trade in the future. We are getting our share of such aeroplane orders as are being placed, and our types of machines are very successful, but orders come for such small quantities that the cost of designing and experiments bears much too high a proportion to the works' cost of a machine. The position of an aeroplane manufacturer here contrasts very unfavourably with that of the French manufacturer, who gets orders for large series of machines, and works, therefore, with much reduced charges and all the advantages of repetition work.

The report was adopted.

The payment of the preference dividend for 1921 was confirmed, and the dividend on the ordinary shares of 5 per cent. per annum, less income-tax, as recommended, approved.

An extraordinary general meeting was afterwards held, when a resolution was carried modifying the objects clause of the memorandum of association of the company in the light of present experience, including provision for the carrying out of research work and various aspects of welfare work.

E. ROBINS AND SON, LIMITED.

FAVOURABLE RESULTS—NEW PROPERTIES ACQUIRED.

The twenty-ninth ordinary general meeting of Messrs E. Robins and Son, Limited, was held, on the 13th instant, at the Anchor Brewery, Waterloo street, Hove. Mr A. B. Taylor (the chairman) presided, supported by Messrs H. Ferguson, H. Rashleigh Gray, C. Conyers Haycraft, and E. M. Taylor (directors), and Mr C. Phillips (secretary).

The Chairman at the outset expressed great personal regret that Mr H. Geere had resigned his seat on the board, a position he had held since the formation of the company, while he had been connected with that particular business nearly fifty years. Throughout that time there had been no more notable figure in the liquor trade of the Brighton district, and a better fellow never walked. The meeting passed a resolution of regret at Mr Geere's resignation.

The Chairman moved the adoption of the directors' report and statement of accounts. The report showed a satisfactory increase in the company's sales, and announced that during the year the company had acquired the following properties: 30, College place, Brighton, freehold; 37 Church road, Tunbridge Wells, freehold; 50 and 60 St James's street, Brighton, leasehold; 91, 93 and 95 London road, Southborough, freehold; Leonfield Arms, Brighton, freehold (previously leasehold); 80 St George's road, Brighton, leasehold. Ample provision had been made for all outstanding taxes and excess profits duty, and it was proposed to pay a dividend of 7½ per cent. on the ordinary shares. An interim dividend of 1½ per cent. had already been paid. The balance was now recommended. The sum of £2,000 was placed to reserve and £500 added to the leasehold reserve account, leaving a balance of £5,614 4s 7d to carry forward. Despite a falling market the sales were up by a few thousand pounds, and they had to thank the managing directors and the staff generally. Moreover, during the first two months of the present year's trading over £3,000 more business had been done than in the corresponding period of last year. The acquisition of additional properties during the year had consolidated the company's position.

Proceeding, Mr Taylor expressed the view that the Government made a mistake in the last Budget in not reducing the beer duty and that the effect had been to add to the unrest and unemployment the country through. They tried to foster the best relation between employer and employed, and to this end had, where possible, distributed bonus in the way of extra wages. The provider fund he started a few years ago for the employees had now £2,84 invested in it. The directors guaranteed 6 per cent., and if money was so well invested by the employees' committee that it had only had to find £33 during the year. There had been

some calls on the Disabled Soldiers' Fund, which at present stood at £2,100.

Mr E. M. Taylor, in seconding, said that, compared with 1913, the reserve was now £23,000 instead of only £2,000, and they had also a reserve of £5,000 for repairs, and of £1,000 for dilapidations on leaseholds, while the loan of £19,000 from the bank had been wiped out.

The motion was carried unanimously.

GENERAL ELECTRIC COMPANY, LIMITED.

YEAR'S RESULTS SATISFACTORY.

The annual general meeting of the General Electric Company, Limited, was held at Magnet House, Kingsway, London, on the 18th instant, Mr Hugo Hurst, chairman and managing director, presiding.

The secretary, Mr Leslie C. Gamage, having read the notice convening the meeting, together with the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: I imagine many of you will be somewhat disappointed at this first setback in the results of the company after its marvellous record during the last 14 years. For the benefit of those who come with that feeling, I propose to read one of the opening sentences of my last year's address, when nearly four months of the present financial year had elapsed. I said:

"To-day it is my privilege to put before you the balance-sheet of the year just completed, of which we have every reason to be proud, yet the four months of the new year that have just elapsed are casting a shadow over these results. Unrest in the labour world, the stoppage of the coal mines, the shutting down of most of the steel works of the country, the standstill of the shipbuilding industry and automobile industry, the condition of the textile industry, and many more that I could mention, have all at once reduced our home market beyond recognition. The general fall in the values of securities has impaired the purchasing power of the public. Simultaneously the state of exchange in many of our foreign markets has interfered with export, and has added to the present state of depression, bordering on paralysis."

ADVERSE CONDITIONS.

I added the hope that things might improve, but clearly indicated that unless they did we were temporarily in for a bad time. Ladies and gentlemen, you must be aware that things did not improve. To the long list of ailments reiterated above can be added a number of additional strikes, the engineering dispute—to which latter I shall refer later—the state of civil war in Ireland, the state of sedition and civil commotion in India and South Africa, and last, but not least, through various causes, a further deterioration of the economic conditions in all European countries which were already suffering from weak or collapsed exchanges.

Bearing in mind these conditions, I do not hesitate to say that we have done remarkably well—better than we dared to hope—and the results speak well for the soundness and strength of our company, and for the ability of your staff and employees. It is true the results of some electrical concerns published during the last few months might have justified the hope that things were better, but let me here say an upheaval such as we have witnessed during the last 15 months does not affect every company in the same manner.

We manufacture very largely for stock to fill the shelves of the world with our material, and we suffered naturally from the fact that we produced that stock when wages and raw materials were still high, whilst throughout the year we were selling in a falling market. It is not likely that there will be a further serious drop,

but stocks have both been replaced at cheaper rates and are reduced. Thus it happened that our sales organisations, which year after year have been the main contributors to our profits, have failed us this year. A carefully built-up organisation cannot adapt itself quickly to such extreme changes: its expenses remain substantially the same, but the drop in turnover and falling prices have reduced satisfactory profits in these departments to a minimum. One cannot immediately lower wages and reduce staff, and a firm like ours which has so many valuable, well-trained and loyal old servants must think twice before parting with any—not only on account of sentiment but also with an eye to the turning point when things get better once more.

LABOUR AND WAGES.

Labour and salaries being in our industry the most important item, an adjustment of wages and salaries is the first essential for competitive production. I am afraid wages and salaries will have to be further lowered. It is no pleasure to the employer to reduce wages; it is a great pleasure to every employer to be able to give rises. Yet a country that has to live on industry in order to be able to live at all, but which will not take steps to protect that industry efficiently, cannot keep in employment millions of workers if it produces at a cost which the world cannot afford to pay, or if its prices are above those at which other countries can produce.

We have not built the works to see them empty; and, instead of 12,000 workers, we could employ at least 24,000 in due course if we could produce at the right price, and if, at the same time, we could rely on the Empire primarily as our market.

A publication by the so-called Labour Research Bureau has recently been placed in my hands, in which we are taunted with playing into the hands of the capitalist by paying a high price for capital. I do not know the importance of this Research Bureau, but it impressed me with somewhat of an official stamp. If this Research Bureau were to study the problem more thoroughly with a less biased mind they would find that the dearthness of capital has been largely the result of the unfortunate attitude of misguided Labour during the last few years.

There are other conditions prevailing which do harm to industry at the present moment, but which industry alone cannot settle unless it has the support of the Government. We can only get that support if employer and employed co-operate: we should insist jointly that public money should only be spent for British labour. We should also insist on better protection against countries with collapsed exchanges.

The resolution was carried.

ANGLO-CYLON AND GENERAL ESTATES COMPANY, LIMITED.

RESULTS OF AN ABNORMAL YEAR.

The thirty-sixth annual ordinary general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held, on the 20th instant, at 6 Laurence Pountney hill, Cannon street, London, Sir Edward Rosling (chairman of the company) presiding.

The secretary (Mr H. J. Hitchcock) having read the notice convening the meeting and the report of the auditors,

The Chairman, referring to the recent death of their late chairman, Mr Crichton, said: Our present satisfactory position is largely due to Mr Crichton's care and foresight, and during the whole 36 years of the company's existence his one desire was for its success. The board deplore his loss, not only as a valued colleague, but as a personal friend, and I am sure the shareholders join with us in tendering their sincere sympathy to Mrs Crichton and the members of her family.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

CROP RESULTS IN CEYLON AND MAURITIUS.

Continuing, he said: The year under review has been an abnormal one in almost every respect. In Ceylon—partly as the result of an unusually dry season and partly owing to finer plucking necessitated by the market demand for the finest quality—our tea crop ran very short, amounting to only 2,714,768 lbs, a decrease on the previous year of 142,679 lbs. One result of a short crop is to send up the cost per lb, and this has been increased still further by a more or less general rise in the cost of labour. The selling price has been satisfactory, the net average realised being 1s 1d. The cocoa crop has been fully up to the average, amounting to 5,200 cwt, as compared with 4,754 cwt in the previous season, and the price has been fairly well maintained. The rubber harvested was 220,000 lbs. Up to December last the crop was restricted by 25 per cent. in agreement with the Rubber Growers' Association, and costs have been very materially reduced.

In Mauritius the crop was very disappointing, resulting in only 125,720 tons of canes passing through our factories, giving a total of 12,988 tons of sugar. This is the smallest crop for many years, and is partly the result of a hurricane, which, although not in itself severe, came too late in the season to allow time for recovery—partly generally adverse climatic conditions, and, to a certain extent, shortage of labour. The previous season's high prices, accompanied by inflated rates of pay, had a very demoralising effect on much of the labour, which resulted in irregular and indifferent and expensive work. In spite of the difficulties encountered, the reports from the Ceylon and Mauritius Estates in regard to the condition and the state of the cultivation generally are satisfactory.

EXCESSIVE TAXATION.

Taxation continues to press heavily. In the last two years we have paid away £59,170 in excess profits duty, £17,843 in corporation profits tax, or over 15 per cent. of our capital, and this in addition to £25,000 we have had to set aside for income-tax payments in excess of the amount deducted from the dividends, and so recovered direct from the shareholders.

Dealing with the accounts, the Chairman continued: The proposed allocation of the profit does not call for much comment. With the balance brought forward from last year there is a sum of £131,644 to be dealt with. Out of this a 5 per cent. dividend amounting to £25,000 has been paid. It is now proposed to pay a final dividend of 10 per cent., which will absorb £50,000, to place £5,000 to the general reserve, and carry forward £51,644 to the new year, subject to corporation tax and the adjustment of the excess profits duty.

THE FUTURE.

In regard to the prospects for the current season, tea prices are materially lower than they were a year ago, in spite of the fact that stocks are some 50,000,000 lbs lower. The indications point to another short crop from Ceylon, and if the Indian crop is not excessive there is every reason to anticipate a better market in the autumn. The outlook for cocoa does not call for any special comment. Ceylon cocoa is really in a class by itself, and the price is chiefly dependent on a satisfactory export demand. As regards rubber, there is little one can say. All attempts to form a combination voluntarily to restrict output have failed, and this is not to be wondered at when the number of different interests are considered. It now remains to be seen whether the Dutch Government will join with the British in regulating exports over a series of years, in which case we should see a greatly improved position. Failing this, it is difficult to see where relief is to come from, anyhow in the near future. That the industry will once more become a profitable and thriving industry I have not the shadow of a doubt, but without some assistance in the matter of regulation it will probably be several years before we are free from anxiety. The prospects for sugar are decidedly more encouraging than they were. The excessive Cuban stocks appear to have been disposed of, and Germany has for the time being become an importer instead of the big exporter she was before the war. Prices are over £5 per ton up from the bottom, and our crops promise to be better than last season, so that, taking all our products in review, and averaging the good with the bad, I think we can anticipate reasonably satisfactory results for the current season.

Mr Henry K. Rutherford seconded the motion, which was carried unanimously, and the usual formal business terminated the proceedings.

OHLSOON'S CAPE BREWERIES, LIMITED. TRADE OUTLOOK IN SOUTH AFRICA.

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 19th instant, at the Great Eastern Hotel, Liverpool street, London, Mr Gerald Buxton (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said it was a matter of great regret to him and to his colleagues that they had to report that the past year had been a

most unprofitable one, and that they were not in a position to pay a dividend. Not only all over the world, but especially in South Africa, general business had been bad, and it certainly had been made worse there by the prolonged strike in Johannesburg, during which the Government thought fit to close all public-houses for three months, and naturally the output of all breweries ceased. This had the effect of turning the considerable profit usually made in Johannesburg into an actual loss. The consequences of the strike would be felt for some time, but it was hoped that good might come out of evil, and that they would be free from labour troubles for some time at any rate. Last year the Colonial barley crop was a good one, and there was sufficient grown to enable the company to make the great bulk of its malt. Local-grown barley meant a great saving to the company, as if they imported malt they had to pay a very big duty. He hoped the company would reap some benefit from that source during the coming year.

The price of hops had kept up because in this country they were under Government control, which did not tend either to economy or cheapness. He was glad to be able to say that the efforts of the brewers in South Africa to induce the people there to drink draught beer instead of bottled beer were gradually meeting with success. To supply beer in bottles was, of course, much more expensive to the brewer. They had had a letter from a very important customer, complimenting them on the quality of their lager beer, and comparing it favourably with the German lagers imported into South Africa. Mr W. D. Buxton had paid a visit to South Africa recently, accompanied by Mr C. G. Ferrier and Mr Montague Clayton. These gentlemen had looked thoroughly into matters on the spot, and as a result of their visit and the energy of Mr Swan, the new manager, it was expected that many useful economies would be effected. In the course of some further remarks the Chairman said that some of their best houses were in the vicinity of Cape Town, and had suffered especially owing to the stagnation in trade and shipping there. This could not be helped, and there was nothing to look for until trade revived. He believed that South Africa was beginning to get over the shock of the strike and interruption to all business, and he would point out that in countries like South Africa trade revived much more quickly than it did at home.

Mr Herbert J. W. Jervis seconded the motion, which was carried unanimously.

THE DISTILLERS COMPANY, LIMITED. BIG DISTILLERY AMALGAMATION.

The 46th annual general meeting of the Distillers Company, Limited, was held, at Edinburgh, on the 14th instant, when Mr W. D. Graham Menzies, chairman of the company, presided.

RECOVERY IN PROFITS.

Before moving the adoption of the report, the Chairman said:—A year ago I had occasion to record a diminution in our profits of £86,000 below those of the previous exceptional year. To-day I am glad to be able to chronicle a recovery of that deficiency to the extent of almost exactly one-half. This recovery has been all the more remarkable, as it is coincident with a curtailment in our production by no less than 2,600,000 gallons of whisky during the 12 months, which has more than neutralised any benefit we have received by reductions in the price of coal or in the rate of wages paid. We have had the benefit, however, of lower costs of grain, which has enabled us to pass on a large part of that benefit to our customers in the shape of a reduction in price of the manufactured article.

Previous to last Budget speech the whisky trade of the United Kingdom petitioned the Chancellor of the Exchequer against the continuance of the present exorbitant rate of duty on spirits, and submitted figures to show that a reduction of the duty from 72s 6d to 50s per gallon would enable the bottle of whisky to be retailed at 10s in place of 12s 6d, which would so stimulate the consumption amongst the moderate consumers of whisky that it would more than make up for the revenue lost by reduction in the rate of duty. In his wisdom the Chancellor of the Exchequer did not see his way to adopt the trade's suggestion, and apparently prefers to face the continued shrinkage in the revenue from this source.

I now move that the directors' report and statement of accounts be adopted.

HIGH SPIRIT DUTY EFFECTS.

In seconding the adoption of the report, Mr. W. H. Ross, the managing director, said: Sufficient, I think, has been said regarding the effect which the present high rate of duty is having upon the consumption of whisky in this country. It is more difficult, however, to estimate what is to be the ultimate effect of this high duty on our own industry. There can be no

doubt whatever, that the greater the number of people who can be weaned from the habit of partaking of spirituous liquors as a beverage in moderation through the effects of the high price which the continuance of this excessive duty entails, the more venerable will be our position when the next local veto election takes place.

MOTOR SPIRIT DEVELOPMENTS.

Now, just as a prudent man insures his property against the possibility that some day it may be burned to the ground, although not necessarily that it will be, so your directors are ever alive to the importance of looking out for new outlets for their products to provide for the possibility of the present channels of business being closed against them. I have referred in past years to the work which your directors have undertaken to produce a satisfactory motor fuel to supplement the supplies of petrol should these fall short. I am glad to acknowledge the valuable assistance which we have received from the Fuel Research Board through their officer, Sir Frederic Nathan, K.B.E., also from H.M. Board of Customs and Excise in getting the necessary alterations made to the regulations permitting of the easier handling of this product. This has enabled us to erect a mixing plant at our Hammer-smith Distillery, London, from whence we are regularly supplying quantities of our "Discol" motor spirit to a limited number of users. So much are we convinced of the future of this product that we are just completing the installation of a second mixing plant in Liverpool, and are now preparing plans for a third installation in Glasgow. In other directions we see possibilities for the use of alcohol which may solve the difficulties of over-production.

SHARE MARKET RUMOURS.

I think you may expect me to say something regarding the recent rise in the price of the company's shares. We have got the credit in turn of having been bought up by an American syndicate for £12,000,000; of having bought up one or other or all of the important blending businesses of this country, of the intention to pay a higher dividend than 10 per cent., or at the very least to distribute another bonus in the form of shares. In regard to the whole of these rumours, they have been very wide of the mark. The directors have not suggested paying a higher dividend, nor do they propose to distribute a further bonus in the form of shares. Neither of these courses would, they consider, be in the future interest of the company. There has been no offer by, nor yet any negotiations with, the large Scotch blending firms to acquire their interests, nor has there been any offer of £12,000,000, or any other sum, by an American syndicate to buy up this company. It is true that such a suggestion was thrown out—not for any given sum, but in the nature of a proposal. It is but fair to say that the American proposals had as their origin a desire to put an end to the rival yeast productions of the world, and if, therefore, some scheme can be formulated dealing with this portion of the industry only and safeguarding our interests as distillers we shall be quite prepared to consider such when presented.

ABSORPTION OF IRISH COMPANY.

Growing out of these proposals, and with the desire to consolidate still further the production of spirit in this country, your directors have had under consideration during the past month proposals to acquire the remaining shares in the United Distilleries, Limited, Belfast, of which we already own practically the one-half. The other half of these shares, which carry with them the control of that company, are held by the Distillers' Finance Corporation, Limited, which also owns or controls various other important blending and distributing businesses in the North of Ireland, Glasgow, and London. Within the past week we have concluded a provisional arrangement with the directors of the Finance Corporation whereby we agree to buy, and they agree to recommend their shareholders to sell, the whole of the ordinary shares of the Finance Corporation at a price which works out at rather under £3,000,000. This, you will no doubt feel, is a very large sum to pay for a concern whose businesses are to a great extent situated in Ireland. It will therefore be a relief for you to know that of the surplus assets over liabilities shown in said businesses there is represented in actual cash in bank about £1,200,000, while as part consideration of the price your directors are proposing to issue to the shareholders of the Finance Corporation about 53,000 of new shares of this company at a premium of £10 per share, thereby reducing the purchase at a premium of £10 per share, thereby reducing the purchase figure by roughly £530,000. This will then leave only about £740,000 to finance temporarily until some of the other assets can be realised. Thereafter the permanent burden left upon this company will be the £530,000 of additional capital. I shall not attempt to estimate the value of this amalgamation to you as shareholders, and also to the whole industry. But assuming that the offer is accepted, it will give your

directors power to regulate the production of spirits in accordance with the demand, and thus avoid that bogey of over-production from which most industries periodically suffer.

The Chairman, having invited questions, and none being forthcoming, declared the motion for the adoption of the report to be carried unanimously.

ELECTION OF EARL HAIG.

The election of Sir James C. Calder as a director having been confirmed, Mr William H. Ross moved the election of Field-Marshal Earl Haig as a director of the company. He said: I regard it as a very great honour to be allowed to put forward the proposal that Field-Marshal Earl Haig be elected a director of this company. It is now over 40 years since I was first brought into contact with Earl Haig. Mr Douglas Haig was a frequent visitor to the company's office in those days, and although our spheres of labour afterwards drifted apart, I never ceased to take a genuine interest and pride in watching the brilliant career which gradually unfolded itself in the person of the great soldier. I naturally consider it no mean honour to become a director of this company, but it is given to very few to shed the same lustre upon the company as the election of Earl Haig to a seat on our board will undoubtedly do.

Mr W. H. Fraser, W.S., in seconding, said: It must be a matter for satisfaction on our part and on the part of many others to find that a man like Lord Haig, who, apart from his public position, is well entitled to speak with authority by reason of his knowledge of his fellow-countrymen and his sympathy with their aims and aspirations, is prepared to throw in his lot with those who hold the conviction that the welfare of the community is to be attained not by destruction, but by reconstruction; not by curtailment of liberty, but by enlightenment towards the proper enjoyment of liberty; not by the imposition of unknown and new conditions, but by the reform, where necessary, of known and existing conditions. Ladies and gentlemen, I have much pleasure in seconding this resolution.

The Chairman: I declare the motion carried unanimously.

ILLINGWORTH, MORRIS, AND CO., LIMITED. COMPANY'S POSITION "IN EVERY WAY SATISFACTORY."

The second ordinary general meeting of Illingworth, Morris and Co., Limited, was held, on the 18th instant, at the Cannon street Hotel, London, Mr T. H. Morris, D.L., J.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: I had unfortunately last year a not very satisfactory statement to make of the prospects of trade at that time. We had not then recovered from the effects of the long coal strike; raw material values were still falling; accumulated stocks of goods were difficult to dispose of; still filled the merchants' shelves and were difficult to dispose of; foreign exchanges and the poverty of Continental markets stood in the way of an export trade, and there appeared to be a lack of confidence in every branch. But in the early autumn there appeared signs of some slight improvement and a strong feeling that we had seen the worst. Our mills, which so far had been only partially employed, began to work more time; there was more inquiry, and orders were more numerous, though small. By September all the mills were again running full time, and they have continued so ever since, and are now busy with ample orders and at rates which ought to give a fair margin of profit. This is a pleasant position at the present time, when so many other industries are still suffering, and when, owing to the difficulties of foreign exchanges, there are practically no markets open to us on the Continent. The mills are well equipped, considerable sums have been spent during the year on repairs and improvements, economies have been effected in working, an increased output has been secured, the profit-earning capacity has distinctly improved, and the position of the company is now in every way satisfactory.

At present taxation is our chief difficulty. A sum of approximately £100,000 has been retained to cover all possible contingencies. The directors much regret that the question of distribution of dividends out of this year's profits has therefore to be postponed until this matter is finally settled. You will, I am sure, understand it has been an anxious year, but the fact that the production of the first six months of 1922 shows an increase of over 100 per cent. on the first six months of 1921 and an increase of over 40 per cent. on the second half of that year is a gratifying result, and that the fact that substantial profits have been earned throughout the whole period of the greatest trade *debacle* in history proves the soundness of the company's properties and of the branch of the worsted trade in which they are engaged.

Sir Arthur H. Marshall, K.B.E., seconded the motion, which was carried unanimously.

Since July 21, 1920, notes and certificates outstanding include notes called in, but not yet cancelled. Maximum fiduciary issue for 1920 fixed at £320,600,000, for 1921 at £317,555,200, and for 1922 at £309,988,400.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills dated from Monday to Saturday, July 24-July 29, were opened on July 21, 1922, and the total amount applied for was £77,055,000. Tenders for Treasury Bonds at £100 3s will receive about 3.4 per cent., above in full. Tenders for Monday to Friday bills at £99 10s 6d will receive about 26 per cent. and above in full. Saturday bills at £99 10s 8d and above in full. The average rate of discount for Treasury bills was £1 16s 10.8d. The amounts allotted were as follows:—In bonds, £10,000,000; in bills at 3 months, £35,000,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills. Average Rate.	4½% Treasury Bonds, 1932. Average Price.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended July 19, 1922, the stock of coin and bullion shows a decrease of £498,540 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.	Week Ended July 19, 1922.	Gold Exported from the United Kingdom.	Week Ended July 19, 1922.
Countries from which Consigned.		Countries to which Exported.	
British South Africa	£ 836,932	Belgium	£ 17,000
Belgium	130	Netherlands	186
Hungary	2,147	British India	464,970
Other countries	1,290	Total declared value of exports registered in the week ..	482,156
Total value of imports of gold	840,469		

Messrs Samuel Montagu and Co. write on July 20th as follows:—

GOLD.

A considerable amount of gold came into the market. The bulk was taken for the United States of America; Indian requirements were small. Gold valued at \$2,500,000 has arrived in New York from London. A further million pounds arrived in New York from London. The White Star liner "Laurentic," which was mined off the coast of Donegal in 1917. This recovered treasure will doubtless follow the successive substantial Government consignments that have been sent to the United States of America. There is a possibility that the balance of the submerged gold will be recovered within the next few months. It is interesting to hear of gold being coined, now that its hand-to-hand employment as currency has so much diminished. The Washington Mint coined gold pieces worth \$53,000,016 during the fiscal year 1921/2, and others worth \$8,420,000 during the month of June last. The same Mint coined 16,030 gold pieces for Costa Rica.

SILVER.

Continued weakness has been shown by the China exchanges, and sales have been made from that quarter, as well as on account of America. Support has not been at all eager, being mostly composed of bear covering. Although news as to the monsoon is, as a whole, encouraging, it is too soon for whole-hearted buying from that quarter. Hence prices have been inclined to be retrograde. The following movements of silver were made in the month of June:—From New York to England, 1,105,787 ounces; from New York to India, 619,699 ounces; from San Francisco to China, 6,168,176 ounces. The last total seems to indicate that supplies in the Americas are plentiful. As 92,708,659 silver pieces, worth nominally \$92,548,566, were coined during the last fiscal year at the Washington Mint, a much larger number of dollars would appear to have been coined out of silver bought under the Pittman Act than could have been made from silver thus acquired during that period. The holding of silver rupees in the Indian Treasury continues to increase. The total exceeded 70 crores for the first time on June 30, 1921; exactly a year later it passed the 80 crore mark (almost reached on October 31st last with 7,996 lacs). The return for the 15th inst. is a new record with 8,222 lacs. This is the more remarkable, as the note circulation—17,750 lacs—was not so high as the record of 17,971 lacs established on October 31st last. The percentage of bullion (gold and silver) was then 58 per cent., as compared with 60 per cent. on the 15th inst.

20 ..	92 7	35 1/2	23, 1920	54 1/

shares held, in satisfaction of the bonus, any fraction of £1 being paid by the company in cash. It will, of course, be open to any shareholder preferring cash for the whole bonus accruing to claim payment in that form. To carry this arrangement into effect, an extraordinary general meeting will be held on August 1st."

APOLLINARIS AND JOHANNIS.—The accounts for the year ended March 31, 1922, show a net profit for the year amounting to £15,158 after paying in cash £10,710 for interest on debenture interest certificates for the past year. All advertising expenditure, both home and foreign, together with the usual amounts for depreciation, have also been written off. The report states that "the sales during the year under review show an increase on last year's total and are of an encouraging character, but the profits have been kept down by reason of the high cost of indispensable raw materials, which the company was compelled to buy at a time when commodities were scarce and dear. The adverse effects of these high costs on future profits will tend to disappear as the company's remaining stocks of raw materials—in which coal for the bottle works and timber for the packing cases play an important part—are gradually replaced by materials purchased at the lower prices now ruling. The export business of the company, a vital factor in its prosperity, has suffered, and is continuing to suffer, very severely from the restricted trade that has been experienced by all branches of overseas commerce, in addition to which prohibitory import duties have to be faced in many non-European countries. It must also be placed on record that it has been found almost impossible, so far as the greater part of the Continent of Europe is concerned, to do business of a remunerative character owing to the utter disorganisation of exchanges. Still, the fact remains that there is an increasing demand for Apollinaris, with the result that the sales have gone up. The capital suspense account in connection with the shares held by the Apollinaris Company, Limited, in the Owens European Bottle Machine Company, of the last year's figure of £108,349 7s 8d."

GOVERNMENT STOCKS, &c.

GOVERNMENT OF NEW SOUTH WALES 5½ PER CENT. LOAN, 1920-1922, DUE AUGUST 15, 1922.—Holders of stock and debentures outstanding are reminded that the above loan matures for payment on August 13, 1922. Applications for repayment of the principal should be made to the London County Westminster and Parrs' Bank, Limited—head office, 41 Lothbury, E.C. 2—from whom the prescribed forms of request are now obtainable.

STANDARD BANK OF SOUTH AFRICA, LIMITED.—The report for the year ended March 31, 1922, shows a net profit of £502,313. The amount brought into the accounts from March 31, 1921, was £206,725, making £709,038 available. The dividend of 14 per cent. absorbed £131,083, and the bonus of 2½ per cent. absorbed £55,729. The sum of £50,000 is placed to bank premises account and £100,000 is added to officers' pension fund and £191,226 is carried forward to next account. The principal items in the balance sheet under liabilities are capital £2,229,165, reserve fund £2,893,335, notes in circulation £4,207,800, deposits, current and other accounts £52,018,941, drafts and acceptances £1,034,029, and customers' bills £7,763,111. The principal assets are cash £13,010,949, investments £5,110,110 (standing at or under cost taken below market values as at March 31, 1922), bills of exchange £5,551,085, bills discounted £36,442,485, customers' bills £7,763,111, and bank property £976,434. The accounts published a year ago covered a period of 15 months, the date of the report having been changed from December to March. In that period profits amounted to £759,377.

BRITISH BURMA PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of January 1900 amounted to 70,500 barrels.

CALTEX OIL.—The Caltex Oil Company advise us of receipt of oil from Mexico giving the production of the company's oil for the month of June, 1922, amounted to 70,590 barrels.

COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Sydney reports for four weeks ending July 14, 1922:—Shale mined, 1,935 tons; shale retorted, 1,944 tons; crude oil and naphtha produced, 195,603 gallons (equal to 100.6 gallons per ton of shale).

KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during June amounted to \$6,376 barrels, or approximately 12,330 tons, including 8,768 barrels from the properties of the St Helens Petroleum Company.

ROUMANIAN CONSOLIDATED OILFIELDS, LIMITED.—Production for June, 1,814 tons. Metres drilled, 395 (1,600 feet). Combined

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, July 12, 1922, amounted to 705 tons.

MOND NICKEL COMPANY, LIMITED.—The balance-sheet, dated April 30, 1922, certified by the auditors, shows a balance to the credit of profit and loss account of £610,383. After deduction of the amount of £220,000 dividends declared and paid in respect of the year ended April 30, 1921, there remains a balance of £390,383, which the directors propose to deal with as follows:—Interim dividend on the preference capital at 7 per cent. per annum, paid on March 3, 1922, subject to deduction of income-tax, £87,500; dividend now to be paid on the preference capital at 7 per cent. per annum, subject to deduction of income-tax, £87,500; interim dividend on the ordinary capital of 6d per share, paid on March 3, 1922, free of income-tax, £22,500; dividend now to be paid on the ordinary capital of 1s per share, free of income-tax, £45,000; income-tax, £10,000; balance to be carried forward, £37,883. The report states that "trade conditions in the metal industry during the period under review have continued to be unfavourable, with the result that the operations of the company, both in Canada and in this country, had to be conducted on a reduced scale. Amongst the investments in associated and other companies is included the amount paid for the shares of Messrs Hy. Wiggin and Co., Limited, Birmingham, which were acquired in 1920. No dividends have yet been received from that investment, but the directors are satisfied that no alteration is necessary in the value at which the shares stand in the books, being of opinion that the setback in that business is due to the present depression in the metal industry. The world stocks of metallic nickel which had accumulated owing to the war have been mostly absorbed. The company have, however, on hand considerable stocks of intermediate products which were manufactured in Canada at high cost for war purposes. These have been written down substantially in the accounts now presented."

RIO DE JANEIRO FLOUR MILLS AND GRANARIES.—The directors, owing to the continued expansion of the company's business, have decided to recommend to their shareholders the capitalisation of part of the surplus profits and reserves which up to the present have been employed in the business, and that a distribution should be made to the shareholders of 5s per share, free of income tax, in the form of one fully-paid new share of £1 for every four shares held, in satisfaction of this bonus. The proposed new shares to rank for dividend as from the payment of the interim dividend in July, 1922, and in all other respects to rank *pari passu* with the existing issued shares of the company.

THE RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.
—A circular issued by the company states that "in view of the continued expansion of the company's business and of the fact that accumulated profits have necessarily been used as working capital, it has become advisable to capitalise part of the surplus profits and accumulated reserves. This capitalisation will form part of a proposed increase of the nominal capital of the company to £1,500,000, and for this purpose the directors propose the declaration of a special bonus of 5s per share, free of income-tax, which the shareholders may apply to the taking up of one fully-paid new share of £1 for every four

BROKEN HILL PROPRIETARY COMPANY.—Report for four weeks ending June 21, 1922: The whole of the iron and steel works closed down except steel foundry, Broken Hill: Underground operations unchanged. Ore Dressing Mills: Produced 312 tons lead concentrates and 4,594 tons slimes. Zinc Separation Plant: Produced 2,653 tons zinc concentrates. Slimes Flotation Plant: Produced 1,596 tons lead concentrates and 5,648 tons zinc concentrates.

BURMA CORPORATION, LIMITED (Incorporated in India).—Cable advices received July 19th report: During the month of June 15,055 tons of ore were milled in the bearing material we e smelted in the blast furnaces, producing 3,491 tons hard and 379,683 ozs refined silver. Refinery products were, 3,281 tons refined lead.

ELECTROLYTIC ZINC.—Production during four-weekly period ended June 28th, taining 245 tons lead, 46,875 ozs silver.

FALCON MINES, LIMITED.—Particulars of June output received from Bulawayo (2,000 lbs) of blister copper, containing 3,120 ozs of gold, 6,361 ozs of silver; estimated value, £32,451 (taking copper at £50 per short ton, gold at 90s per oz, and silver at 3s per oz).

NORTH BROKEN HILL.—Production for June: 2,075 tons lead concentrates, averaging 64 per cent. lead, 33 ozs silver per ton, and 8 per cent. zinc; also 1,840 silver per ton.

SAN FRANCISCO.—June: "Ore treated, 8,100 tons; residues treated, 590 tons; mated net smelter returns, 998,270 United States currency; operating expenses, \$47,015; estimated operating profit, \$51,225."

SULPHIDE CORPORATION, LIMITED.—Advice has been received from the tons of ore and 3,638 tons of slimes were milled at the central mine, producing which assayed 43 ozs silver, 67 per cent. lead, together with 5,985 tons zinc concentrates, assaying 12 ozs silver, 8 per cent. lead, 47 per cent. zinc per ton. The refinery products for the same period were 168 tons soft lead, 84,546 ozs silver, 639 ozs gold, and 249 tons antimonial lead.

RUBBER OUTPUTS AND DIVIDENDS

In the table below we give the June and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

of wool, tops, yarns, and piece goods are all in favour of the home trade, the aggregate turnover being considerable. During the first six months of this year we exported 20,886,000 lbs of tops, compared with 22,605,700 lbs in the corresponding period of 1913. The total volume of yarn exports was 20,521,000 lbs, compared with 25,091,100 lbs during the first six months of 1913. These figures go to show that British export trade in partly manufactured textile goods is approaching a pre-war level, and if one reckons the increased consumption by machinery on home account, the volume of business passing is now quite equal to pre-war days, this notwithstanding the comparative quietness of the woollen section. There is every probability of this important section of Great Britain's overseas trade continuing to expand, particularly if wool values remain reasonable.

THE COTTON TRADE.

MANCHESTER, July 20.

Trading in the market during the past week has been of a limited character. Buyers have not been in the mood to place orders of any weight with spinners and manufacturers. The fact of the matter is there is less fear of higher values in the near future. A fair miscellaneous inquiry has been dealt with in cloth for India, and moderate transactions have been put through in light fabrics, but grey shirtings have not attracted much attention. The monsoon reports continue very favourable. Trade for China has been dull, and advices from the other side are not encouraging. Operations for the minor outlets East and West have only been of a sorting-up nature, and the demand for the home trade has been on a restricted scale. In weaving districts production at the moment is very irregular as a result of the annual holidays. It has been a poor week for spinners of yarn, and prices have been rather easier when tested. The turnover has been small in both home counts and export numbers.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Largely owing to scarcity on spot and in near positions, raw linseed oil has maintained a steady level of value round £44 naked ex Hull mill for spot, and £43 10s July delivery. A fair home trade has been done, and renewed inquiries for supplies for shipment to America have assisted to a degree of firmness, though an easier feeling appears to be making its appearance. For August £42 12s 6d is quoted, and there is rather more doing for September-December at slightly improved values, Thursday's closing quotation for this position being £38 12s 6d. Cotton oils have been featureless, and prices of both crude and refined are a shade lower on the week. Soya bean oil is steady, and English make in fair request, the Hull ex-mill figure being £40. Rape oil is now in good supply, and offers freely at £42. Ground nut oil has appreciated to £47 ex Hull mill. Palm kernel and castor oils are about unchanged.

In the oilseed section, Plate linseed on lower Argentine options eased off somewhat, and crushers were moderate buyers at £19 12s 6d for shipment. A speculative interest also developed, and, in sympathy with Argentine reports, the market developed firmness, £20 5s being paid for seed on passage to Hull, and up to £20 wanted for shipment.

Calcutta to London has been done at £21 7s 6d June-July, and £21 2s 6d and £21 5s July-August, with sellers asking above these figures. Egyptian cottonseed is easier, £11 2s 6d being accepted for July Sakellariadis to Hull, while Bombay has been done at £9 3s 9d July-August. Soya beans for shipment are held above the market. Cawnpore castor seed has been done to Hull at £17 7s 6d July-August.

A little more demand is experienced for linseed cakes, but requirements are not above normal for the time of year, and selling values are without change.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

An easier tendency for hides and skins was to be noted at the auctions held in Bermondsey this week, all first-class ox and heifers recording reductions of from 1d to 3d per lb. Second ox and heifers were also weaker on the average, while cows, bulls, and kips made last sale prices. Only the 17/24 lb best calf skins made any alteration in price, this class appreciating 1d per lb in value. Other classes and weights were unchanged.

Generally speaking, the market for foreign hides is on the quiet side, although here and there spot parcels have been cleared. Prices at origin, however, are too high to interest the home trade, and the majority of the business that has transpired of late has been on account of the United States. Refrigerics are now on offer at something like 44 dollars, and although, as previously mentioned, little has been done for this market, America has taken something like 45,000 of these hides. Liebig hides have also been dealt in at round about 9 5/11 landed weights, with Frey Bentos cows fetching 8d. A small amount of business has been put

EMPLOYER'S LIABILITY INSURANCE.

dates, £157 to £157 5s; three months, £157 to £157 10s; English ingots, £157 to £157 10s. Copper: Market opened fairly steady, with dealings on the basis of cash, £63 2s 6d to £63 8s 9d and £63 2s 6d; July, £63 2s 6d; and three months, £63 10s to £63 8s 9d. Values since were generally maintained, though demand showed a slight falling off. At Wednesday's session cash stood at £63 to £63 2s 6d, with dealings in August at £63 7s 6d; September, £63 7s 6d; and three months at £63 10s to £63 8s 9d. The tone was steady at Thursday's market, and a good inquiry prevailed. Cash sold at £63 2s 6d; three months, £63 10s to £63 7s 6d, and finally at £63 10s. At Friday's session the tendency was rather steadier, with a good trade in force. Early August, sold, £63 5s; mid-September, £63 7s 6d; three months, £63 10s to £63 13s 9d, while finally, £63 12s 6d. Electros £70 10s to £72; best selected, £66 to £68; wire bars, £72; strong sheets, £94 per ton. Lead firmer at £25 12s 6d to £24 2s 6d as to position. Spelter dearer at £29 12s 6d to £29 5s as to position. Antimony, ordinary, £27 to £29 10s. Aluminium, home delivery, £100; export, £105.

TALLOW—Messrs Colchesters and Woolner write on July 19th as follows:—The tallow market was steady during the week, and prices are 1s 6d dearer to-day. Shipments of tallow from Australasia during June amounted to 4,400 tons. At auction to-day 932 casks tallow were offered, and 881 were sold. Quotations are:—Australian mutton: Fine, 42s; good to fair, 41s to 40s; dull to dark, 39s 9d to 39s 6d; hard, 42s. Australian beef: Fine, 40s 6d; good to fair, 40s to 39s 6d; dull to dark, 36s 6d to 34s 6d; sweet, 42s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., —; and mixed, 43½, c.i.f., London, 38s 3d. The market letter is dearer. Tallow, 1s; stuff, 1s. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 25s per cwt. Quotations are:—Town 35s net cash, naked, ex works. Country: Frail casks, 34s 6d; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 31s 6d; melted stuff, 31s, f.o.b.

When you
Rent a Typewriter
have the best possible—
"The ROYAL"

Makes work easy because the touch is so light that the keys would almost appear to anticipate your thought; it makes the work look so well because the sharp, clean-cut letters please the eye, and, in fact, the machine seems to do anything you wish, so adaptable is it. The duplicating is particularly good. Machines can be hired at reasonable rates, by the week, month or any period. Skilled operators provided at any time for special or temporary work.

Portable Typewriters Supplied.

Market rate (3 mths' bills) ..	1½	1½	1½	2½	..

The Bank return showed an increase of £501,000 in the note circulation, presumably owing to the holiday demand for currency, and a small addition to the stock of gold, leaving the Reserve half-a-million lower. Other securities were reduced by 4 millions, and Public deposits by 7½ millions, and the Other deposits were thus 3 millions higher. The circulation of currency notes shows a further reduction this week of £1,163,700 to £299,447,200, which includes £1,585,700 for notes called in, but not yet cancelled. The fiduciary issue is £246,711,500, or £63,276,900 below the maximum.

THE STOCK MARKETS.

The approach of the holiday season has begun to make its influence felt on Stock Exchange business, and after fairly busy conditions in some markets during the first three days the volume of transactions fell away towards the close of the week. War Loan is dull, and large lines of conversion stock have come on the market. Indian stocks have held their recent advances. French bonds have fluctuated sharply with the see-saw of exchange. Home railway prior charge stocks enjoyed some improvement, and the ordinary stocks, on the whole, were firm on the dividend announcements. Rubber and oil markets have been weak and dull. Among industrial descriptions colliery shares are prominent owing to coal shipments to America, and tobacco shares are in strong demand. There has been an improved demand in the Kallir market on the strength of reductions in mining costs. Chartered fell back after the meeting. Junior Grand Trunk stocks became unsaleable yesterday on the Privy Council judgment.

COMMODITY MARKETS.

The commodity markets appear to be under the influence of the prevailing holiday spirit. Our Manchester correspondent reports that in the cotton trade buyers are inclined to hold back orders in anticipation of lower values, although at the London wool sales, while prices display no upward tendency, business is regarded as satisfactory. Prices of pig-iron are weak and transactions are few, while our Middlesbrough correspondent states that the steel rolling-mills can barely keep going with their limited orders. The American demand for coal, however, has brought about a complete change in the Cardiff coal market. Best Admiralty, which a week ago was priced at 24s 6d, is now quoted at 32s 6d, with a rising tendency, and other descriptions of coal have advanced in sympathy. A slight improvement is noticeable in forward quotations for linseed oil, but prices in the hide market were slightly weaker for most descriptions of skins.

FOREIGN EXCHANGE.

Quieter conditions have prevailed on the exchange market during the last few days, and although rates have been far from steady, the excitement of the previous week seems for the moment quietened. Impending political events once more overshadow the market, and operators are inclined to await the outcome of the French Premier's London visit. Meantime, Berlin has again relapsed to 2,390, and the fortunes of the mark continue sympathetically to affect Allied currencies. Paris, which rallied on Monday to 52.55, did not retain this gain, and gradually fell away to 53.80 on Wednesday. The present quotation of 53.60 shows a depreciation of about 50 centimes since the close last Saturday. Paris forward dealings are now about 7½ centimes per month over spot. The spread between French and Belgian francs has remained round three francs during the week, and Brussels is now quoted at 56.60. Italy, which rose from 95.40 on Monday to 97.40 on Wednesday, has since recovered a part of this loss at 96.80. The New York rate, which was inclined to fall away earlier in the week, rallied fractionally on Thursday, and further recovered yesterday to 4.45½, showing

a net drop of about 50 cents since last Saturday. Forward dollars are now quoted 1½ per month over spot. Switzerland and Holland have moved in favour of this country, the present rates of 11.47 and 23.42 both showing rises for the week. Spain, however, has remained steady, and the quotation 28.62 is practically unchanged. Of the Scandinavians, Norway and Sweden have both moved against us at 26.33 and 17.07 respectively, but Denmark, on the other hand, is fractionally higher at 20.69. Vienna has not retained last week's gain, and kronen have again slipped back to 150,000. The Polish rate is also weaker, at about 26,500. Helsingfors is fractionally higher at 213, and Bucharest is a shade better round 700. Eastern exchanges have been quiet, and rupees remain unchanged at 1s 3½d, while the silver exchanges following the price of the metal have had a weaker tendency, Shanghai being now 3s 5½d to 3s 6d. Little change is evident in South Americans, except in the case of Valparaiso, which has further improved to 34.10.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended July 22, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	19,685	Supply Services	6,600
		Interest on Debt	361
		Sundries	450
		Reduction of Debt	12,138
		Added to Exchequer balances ..	136
			19,685

The total revenue during the week ended July 22, 1922, amounted to £19,685,360, as compared with £29,095,869 during the week ended July 23, 1921. Expenditure was reduced from £19,286,894 a year ago to £7,411,604. The expenditure under the head of interest, &c., on the War Debt amounted to £361,732, against £2,294,174 a year ago. The receipts from Property and Income-tax reached £6,673,000, against £7,056,000 a year ago. Customs at £2,107,000 are £1,694,000 lower than a year ago. Excise at £7,511,000 compares with £8,615,000. The week's operations reduced the National Debt by the sum of £12,137,625, and caused the following changes:—

	Min. £		Min. £
Unemployment Insurance	+ 430	Public Department Advances ..	5,839
4½% Treasury Bonds	+ 431	War Loan Surrenders	734
National Savings Certificates ..	+ 30	Treasury Bills	11,096
		Sundries	200
	+ 5,731		17,869

The floating debt was reduced by £16,934,000 to £927,048,500 during the week ended on Saturday last.

A PLEA FOR GREATER PUBLICITY.

THE system of private enterprise on which the recent material progress of the Western world has been built up has been subjected to sustained and often bitter criticism. Undoubted flaws have indeed from time to time emerged, and many of those who think that its underlying principles are likely to govern society, at all events for a very long time to come, have felt it to be of the utmost importance that no effort should be spared to bring it more closely into harmony with the public interest. The sense of national unity and co-operation engendered by the war stimulated a desire for a better and more harmonious order in industry and trade. The "National Movement Towards a Christian Order of Industry and Commerce" is an instance of this in one direction. Developments with perhaps a less consciously idealistic motive are the discussions not only in Labour circles, but among employers and business men, of means for promoting a greater spirit of co-operation. In all such discussions the one conclusion common to them all is the need for greater frankness and publicity.

The arguments for steadily increasing publicity as to economic affairs in the interest of investors, wage-earners, and consumers, and, indeed, of the public generally, are many-sided and cogent. Indeed, it is no exaggeration to say that the whole case for competitive enterprise depends upon it. It is commonly maintained that competition is the best means of ensuring that the maximum productivity of the national resources will be attained, and that capital, under the stimulus of profits, and labour, through the attraction of high wages, will move most freely into those channels where it can be employed with the greatest advantage to the community. But the argument falls to the ground if and in so far as profits are successfully concealed. The economic function of the investor can only be very inadequately carried out if he is working in the dark, and the same is true of those who might embark upon new ventures or enlarge the scope of existing ones. We fully appreciate the natural instinct of directors who are not anxious to encourage competition by disclosing profits, but we must face the fact that in this respect there may be a genuine conflict between personal interests and those of the public which may require the encouragement of such competition. We have more sympathy with the argument of those who are genuinely afraid that if figures are revealed they will be misunderstood or lead to harmful results when times are good by exciting the cupidity of shareholders or of wage-earners when the true interests of a concern demand that its resources should be conserved. But it is not impossible to educate the public and the wage-earner as to the necessity of adequate reserves and the nature of depreciation, and in any case any disadvantages in this respect cannot weigh against the evil results of the alternative policy of secrecy, for when it is realised that the whole truth is not told, suspicion is inevitably aroused.

This brings us to a consideration of a different kind. It is our considered opinion that a very great deal of the industrial unrest of recent years would have been avoided if workpeople had known the true facts as to wages and profits. From time to time estimates have been made of the nation's wages bill, which has been shown to be, say, half of the total national income; and from this it has been assumed that there is a large fund of profits, out of which the level of wages and the status of the manual labourer could have been considerably raised simply by redistribution. This is not the place to discuss the flaw in this argument, which has been faithfully dealt with by Prof. Bowley and others; but the dissatisfaction to which it has given rise would not have arisen if it had been met in detail by a simple authentic disclosure of the facts relating to particular industries. In this connection a remarkable example is to hand in the case of coal industry. No one who has

followed the recent history of that trade can doubt that the exceedingly difficult circumstances through which it has been passing would have aroused far greater bitterness of feeling against the employers, had it not been that the actual results of the working of the mines have been made known month by month to the miners, who have thus been able to see for themselves what are the true causes which control their situation to-day. Mr Herbert Smith in his presidential address to the Miners' Federation last week dwelt upon this fact in a highly significant manner. "The decision to supply information to the workmen," he is reported as saying, "as to cost of production had been of the greatest possible advantage to the workmen in assisting them to understand more fully the finances of the industry. The Federation desired to have still greater information than was now given, but it was a source of pleasure to think that the owners themselves had acceded to their request for further information without their having to go before the independent chairmen, who had already given a decision against the workmen. He was convinced that if the owners took the workmen still more into their confidence a much better spirit would prevail throughout the districts."

What is true of labour in industry applies also to the public generally in relation to monopolies and the often ill-founded charge of profiteering. Where trade or industrial combinations flourish all experience shows that public disclosure of the facts is the first essential step in safeguarding the public against the abuses of monopoly. If exploitation is shown to exist, the way is opened for competition or, failing that, to whatever regulation may be deemed expedient. If, on the other hand, no undue profiteering is revealed, the uneasiness of public opinion is set at rest.

Another equally important aspect of this question is the need of much fuller knowledge if we are to learn in the future to minimise the grave evils which result from recurring periods of over-trading followed by depression and unemployment. These fluctuations are largely to be attributed to faulty adjustment of supply to the world's requirements, to excessive production in particular directions, and to the accumulation of stocks to meet a demand which is inaccurately gauged. Clearly, fuller and more widely disseminated information will tend to lessen these errors; even the influence of harvest variations, which are beyond our control, can be more accurately discounted and their harm minimised by fuller knowledge. Those who are responsible for our banking policy are often criticised and held responsible for not checking these movements before they get out of hand, and in future it is to be hoped that more may be done in this direction. But it is a difficult matter to know at what moment to perform the invidious task of checking the optimism of the business world when it is in full cry, and it is not to be expected that it will be adequately performed without much fuller economic data than exist at present.

We have not space to elaborate these various aspects of the problem or to deal further with their importance. But we have recalled them because we have recently observed with regret a not unnatural tendency to greater reticence in financial and other statements. Within the last few months we have had occasion to call attention to several such instances. A prominent case is the failure of the railway companies to publish figures of their net revenue without which the public is unable to judge the merits of the rates question. In joint stock company accounts there are many flagrant instances, two of which—Vickers, Limited, and the Niger Company—have recently come up for notice. In the case of great amalgamations or of holding companies there is a special danger, even where a fairly detailed statement of accounts is presented, that the true state of affairs may be concealed by combining the figures of differing types of enterprise, and this can only be met by presenting statements in respect of, at all events, the main component concerns. Messrs Vickers, Limited, however, whose interests cover a substantial fraction of the engineering industry of Great Britain, have actually converted one of their main constituent companies from a public into a private company. Examples could be multiplied at length, but we will only mention that amongst the worst offenders in recent years

have been the great shipping companies, which have reduced reticence to so fine an art that the assets side of their balance-sheet has become one solitary item—in the case of the P. and O. Company of a value of over £23 millions.

These instances are recalled not because they are deserving of special censure, but in order that we may remind our readers that, though the Government collects a certain amount of economic statistics, the overwhelming mass of information which is available as to production as well as on financial conditions is produced voluntarily and as a matter of custom and tradition. It is, for example, often overlooked that even public joint stock companies are not legally compelled to publish a balance-sheet, although they normally undertake to do so in their articles of association. It may be that the time has come for reconsidering the obligations as to publicity which should be laid upon joint stock companies, in view of the vastly important interests which are involved. But the matter is one, in the first instance, for the serious consideration of the business community. If the financial and industrial leaders of Great Britain accept the view we have put forward they can by their example do much to develop commercial practice in this direction without recourse to the hampering restrictions of statutory regulations. But whether adequate knowledge of the facts of business comes voluntarily or under compulsion, we are convinced that it is the only condition on which in the long run the continuance of the system of private enterprise will be tolerated.

FABRIC GLOVES.

As was fully anticipated, the Departmental Committee of the Board of Trade—late the Statutory Committee on Fabric Gloves and Glove Fabrics—has reported unanimously against the fine cotton spinning industry of Lancashire. The Committee were asked to inquire whether the imposition of a duty of 33½ per cent. on fabric gloves imported from Germany would adversely affect employment in Lancashire, and they have replied that no convincing case for Lancashire has been made out. The whole question turned upon whether there were sources of supplies of fine yarns other than those of Lancashire to which the glove fabric weavers of Saxony could turn if they resented the application of a British duty on their goods, or if their sales of gloves in this country materially fell off as the result of a duty. In the opinion of the Committee there was no reason to suppose that Saxony either could or would turn to other sources of supply. France and Switzerland, which might supply the fine yarn required—at a price—already imposed import duties on German gloves, and when it came to price, Lancashire could always undersell France and Switzerland in fine yarns. One gathers from the report of the Committee that, in their opinion, Lancashire has been crying out before she was hurt, and is, in any case, not likely to be hurt. She is, in fact, too strong to be hurt. The Germans, they suggest, would rather pay the British duty themselves than see their sales of fabric gloves in this country seriously diminished, and they hint that there is plenty of margin available in the depreciated mark which would permit the Germans to pay the duty. The impression left by the Report is that the Committee regarded the whole question of a temporary duty on German fabric gloves—the clauses of the Safeguarding of Industries Act under which the duty would be imposed expire in August of 1924—as not worth making a fuss about. They evidently think that the German exporters will pay the duty, and that fabric glove makers in this country will not be a penny the better for the duty nor Lancashire fine spinners a penny the worse.

The case has been a very instructive one to those who recognise the far-reaching importance to Great Britain and to the world of our fiscal policy, and in particular has brought out the absurdity of making the question of an import duty depend upon an investigation of the effect upon employment in a particular, and in this case a minor, industry. If we allow our action to be based on

this consideration, and carry the principle to its logical conclusion, we shall utterly destroy the foundations of Great Britain's economic life. For if we attempt to deny the principle of international division of labour, there is no length to which we may not go. Why, for example, should we not grow the raw cotton itself? If we only spend sufficient labour and capital upon it we can grow tropical products in this country, or why should we not insist upon the yarn for the fabric glove industry being spun on the spinning wheel? It is surely not difficult to prove that, if we set our minds to it, we could occupy the population of a whole town in catering for the needs of this favoured trade. The argument behind the demand of the glove industry for protection in the interests of the people employed in it is the same argument that has been used in favour of retaining every uneconomic process and every uneconomic industry throughout the whole of our history, and it is always an unassailable one so long as consideration is confined to the numbers that might be employed in a particular occupation. If, as our Protectionists desire, this argument is applied all round, the result will be national poverty.

In Monday's debate the Coalition-Liberals will no doubt shelter themselves behind the argument implied in the Committee's Report that, after all, the principle of a fixed rate of duty embodied in the Act is faulty, and that the duty will not, in fact, keep German gloves out or spoil Lancashire's market. But this process of reasoning surely represents a rather weak type of compromise with conscience and principle. That its machinery is ineffective is scarcely a sound reason for bolstering up a bad Act. The fact remains that the Safeguarding of Industries Act, faulty or not, ineffective or not, sets out to reverse the fiscal policy under which this country has maintained its world-wide commerce. It must be small consolation for those Free-traders who are about to reverse our traditional policy, and thereby weaken Great Britain's position as the upholder of international specialisation, to reflect that the actual step now in contemplation is for the moment a completely ineffective one.

THE PALESTINE MANDATE.

TOWARDS the end of last week there was a lively fear that the question of the Palestine Mandate would again be suspended owing to difficulties arising out of the political crisis in Italy. Fortunately, the Council of the League was able to proceed with its business, and on Monday stamped its formal approval upon the British Mandate for the Holy Land. This event is doubly welcome; for not only was a quick decision by the Council most desirable in view of the position in Palestine, but also any further postponement of the Mandates question would have been a blow at the prestige of the League. We have been fortunate enough to obtain a copy of the final draft of the Palestine Mandate as approved by the Council. This historical document, which we hope will soon be made available to the general public, at present appears to be in short supply. It contains 28 articles, but the principal points lend themselves to brief summary. Article 2 strikes the keynote by laying down that the Mandatory "shall be responsible for placing the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish national home, and the development of self-governing institutions and also for safeguarding the civil and religious rights of all the inhabitants of Palestine irrespective of race and religion." Article 3 stipulates the encouragement of "the widest measure of self-government for localities consistent with the prevailing conditions." Article 4 provides for the consultation of the Government with a representative body of Zionists, and Article 5 prohibits the cession or lease of Palestine territory to any foreign Power. Article 6 refers to "the close settlement by Jews on the land, including State lands and waste lands not required for public purposes," and Article 7 to the acquisition in Palestine of citizenship by Jewish immigrants. Article 9 deals with the establishment of a Judiciary designed to safeguard the rights of foreigners and "law and (to the extent deemed expedient) the juris-

diction now existing in Palestine with regard to questions arising out of religious beliefs of certain communities....." Article 11 enjoins on the Mandatory to take proper measures for the development of the country, and Article 12 entrusts to the Mandatory the control of the foreign relations of Palestine.

With the next two articles we come to the vexed question of the Holy Places. "All responsibility.....including that of preserving existing rights, of securing free access to the Holy Places and religious buildings and sites, and the free exercise of worship, while ensuring the requirements of public order and decorum, is assumed by the Mandatory, who will be responsible solely to the League of Nations in all matters connected therewith." Thus Article 13, which ends by stipulating that the Mandate confers no authority "to interfere with the fabric or the management of purely Moslem sacred shrines, the immunities of which are guaranteed." Article 14 is calculated further to allay susceptibilities and apprehensions as regards these Holy Places. It provides for the appointment by the Mandatory (subject to the approval of the Council of the League) of a Commission to frame a report defining rights of ownership, use and access in respect of the Holy Places. This report is to be laid before the Council of the League, and when confirmed is to be binding on the Mandatory. Any sect, if not satisfied by the provisions of the Commission's report are that the provisions of the League, who may being carried out, may appeal to the League, who may thereupon call for a further report from the Commission. Article 15 provides for complete freedom of conscience and religious toleration, and concedes the right of each and religious community to maintain its own schools for the education of its own members in its own language. The administration may organise on a voluntary basis the forces necessary for the preservation of peace and order and for the defence of the country (Article 17). Article 18 prohibits discrimination in the matter of taxation, commerce, navigation, &c., between the nationals of various countries, or discrimination against goods originating in any of these States, and lays down that there shall be "freedom of transit under equitable conditions across the mandated area." But the administration may, of course, impose such taxes and Customs duties as it deems necessary. The main point in other articles is that the Mandatory is to conform to international conventions approved by the League.

The question of the Holy Places has claimed a large measure of the attention which has been devoted to the Mandate. We cannot, as Lord Balfour has said, pretend to hope that there will not be further discussions, or that historical controversies will suddenly die. But the provisions described above should assure the various religious bodies that the only wish of Great Britain is to secure absolute justice and safeguard cherished rights. "The last thing," said Lord Balfour, at the concluding and public session of the Council this week, "we wish is to deprive any man, any community, any nation, of the rights to which they have a claim, and our solitary wish is that all these ancient rights shall be carried on

with decency and order in the future, and in a manner which will prevent any religious interest feeling that it has been unjustly treated by those who possess authority." But of high importance as the question is, it is secondary to the question whether the terms of the Mandate hold out the prospect of a peaceful and prosperous Palestine. The Mandate terms are, of course, only a sketch of the foundations on which the structure of constitution and government is to be reared. But so far as the terms go, they sketch out the lines of government which should enable the desired end to be achieved. For the ideas that run through the Mandate are the provision of a national home for the Jews in accordance with the 1917 pledge, but of equal citizenship and equality of justice for all sections of the community, of religious and educational freedom, and of equality of commercial opportunity and of fiscal burden for all nationalities. It is to be feared that the Arabs remain dissatisfied and disappointed. Indeed, a protest against the approval of the Mandate has already been made. But there is surely ground for hope that before the new régime has lived very long they will find that (although what they regard as a broken pledge may never be forgotten), they have, in fact, obtained a just status under a Government that accords them every right and opportunity in all spheres of life. In our view the terms of the Mandate promise the best possible way out of the difficult situation with which the British Government was faced; and we hope that actual experience of their translation into practice under British supervision will steadily kill the grievances of the past. Lord Balfour made an eloquent appeal to dissatisfied parties to refrain from agitation, and to give the new régime a chance. Incredible though they may be, the pains taken to provide every safeguard in the Mandate terms should be sufficient to persuade the Arab community to wait until the test of experience has been applied to Lord Balfour's expression of hope that a new era of good government and prosperity is dawning in the Holy Land.

SOUTH AFRICA, AUSTRALIA, AND THE GOLD STANDARD.—I.

THE new interest which the British public has learnt to take in monetary matters has not yet extended to the currencies of South Africa and Australia. At first sight, indeed, these seem to form an unexciting topic. The unit of account of both countries is the pound sterling; there is no exchange market of the ordinary type in which their money is freely bought and sold for ours; and, accordingly, there are no exchange quotations to intrigue us with their fluctuations appearing daily in the newspapers. Corresponding to them there are, it is true, the statements issued by the colonial banks, indicating the premium or discount charged or allowed on the remittance of money between London and these Dominions. But the premium or discount is usually trifling, and, in appearance at least, has remained so, even under post-war

conditions. The fortunes of the South African pound and the Australian pound thus appear so closely associated with those of the British pound, that it might seem unlikely that they could raise in themselves any problem of especial interest.

But this association with British money is really a most remarkable fact. In pre-war days, under gold standard conditions, it was natural enough. But, for the time being, the currencies of Great Britain, Australia, and South Africa have alike lost their connection with gold, and in losing it they have lost any necessary connection and in losing it they have lost any necessary connection with one another. To-day they are all, either in form or in effect, inconvertible paper currencies, issued quite independently of one another, and controlled by the very different regulations which commend themselves to the respective Governments and Legislatures of the three countries. In these circumstances the apparent maintenance of exchange stability at the pre-war parity is a paradox, which should puzzle us and stimulate us to explore its causes at least as much as the wildest fluctuations of the krone or the mark.

The same phenomenon has another striking aspect. The great gold-producing and gold-exporting countries have inconvertible paper currencies depreciated in terms of gold. The interests of gold producers plainly lie in the earliest possible restoration of gold standards throughout the world, and the largest possible use of gold in currency reserves and in actual circulation. It was the general abandonment of gold standards during the war which was mainly responsible for the heavy fall (at one time reaching 60 per cent.) in the commodity value of gold, and its present partially recovered value is dependent on the very conservative banking policy of the United States, the permanence of which is perhaps somewhat doubtful. The commodity value of gold is an important matter for Australia, who produced before the war about £9 millions of gold per annum; it is a matter of extreme importance to South Africa, where gold still accounts for well over half her total exports. In the circumstances, there might be expected to prevail in these countries not merely a sentiment in favour of gold standards in the abstract and elsewhere (which, indeed, there does), but an agitation sufficiently determined to secure a prompt return to a gold standard in actual fact at home. As Professor Cannan has well put it, "It is not well for the village bootmaker to declare boots expensive and unhealthy, and to parade himself and his family barefoot. To the leather merchant there is nothing like leather, and to the Transvaal there should be nothing like gold." But the fact remains that the idea of an independent return to the gold standard is not so much as mentioned in Australia, even by the gold producers themselves, while in South Africa, where it was formally considered two years ago, it found small support, was deliberately rejected, and opinion seems to have hardened against it since.

The course of discussion in South Africa is instructive. Until 1920 South Africa maintained, as we still do in Great Britain, the nominal convertibility of the paper pound, and relied on the prohibition of the melting and export of coin to render this convertibility illusory. But with a large native population the leakage of coin over the frontier proved so serious, that it became necessary to face the issue of convertibility squarely and without equivocation. Accordingly, after inquiry by a Select Committee of the Legislative Assembly the Currency and Banking Act, 1920, was passed, which provided for the formal suspension of convertibility, though only until June 30, 1923. The prospect of an early reopening of the issue has stimulated a renewed output of monetary pamphlets in South Africa. But, so far as there is controversy, it is of a peculiar type. On the one side the protagonist is Sir Henry Strakosch, whose evidence dominated the Select Committee of two years ago. Sir Henry Strakosch maintains, now as formerly, that "it is not practicable to fix any definite time limit for the resumption of specie payments,"* and argues his case vigorously against—against exactly whom? Chiefly, it would seem, against our own Professor Edwin Cannan, and an article from his pen which appeared in the *Economic Journal* for December, 1920. For the precise arguments of this

article, almost in their original phraseology, are reproduced by Sir Henry Strakosch as representing the opposition which he sets out to refute. This is a remarkable testimony to the cosmopolitan character of monetary discussion in these days. It testifies no less to the absence in South Africa of any effective support for Professor Cannan's views. Even Mr Samuel Evans, whom Professor Cannan singled out for special commendation as the one mineowner who had "risen to the height" of advocating a sound gold policy, has now recanted and declares that "what was within the bounds of practical politics two years or 18 months ago is out of the question now,"† and is content to satisfy his "nothing like gold" proclivities in the remoter field of European problems by deploring the projects for "managed" and gold-economising currencies, emanating from Professor Cassel and Mr J. M. Keynes. Meanwhile, the Currency Conference, appointed by the Government to reconsider the problem, has reported in favour of the extension of inconvertibility until June, 1925. The Government has not yet committed itself; but few things are less probable than a resumption of specie payments in South Africa in 1923, or in advance of Great Britain at any time.

What are the reasons for this prevailing attitude? First there are the ordinary objections to the "deflation," which a return to the old standard would necessitate. These objections are twofold:—(a) The aggravation of trade depression and unemployment which the process of deflation would entail; (b) the added difficulties of Government finance which its accomplishment would leave behind. It is the first of these objections that carries most weight in South Africa, as here. It is felt by the mineowners no less, and perhaps more vividly, than by other classes of the community. For, though the commodity value of gold has fallen since pre-war days, it fetches a premium in terms of money, and the first and most obvious effect of a return to the old gold standard would be the disappearance of this premium. It is all very well to speak easily of the consequential readjustment of wages and other costs; but the process is extremely painful everywhere; and nowhere is it apt to prove more painful than on the Rand, as the recent troubles indicate. But real though this difficulty is, it is only transitional after all, and, if it stood alone, South Africa might perhaps be expected to "rise to the height" of it for the sake of her ultimate interests.

But the other difficulty is not merely transitional. With huge Government debts, fixed in terms of money, and relatively as heavy as our own, few people with a concern for the public finances of South Africa or Australia could contemplate with equanimity a further permanent reduction in the price-level. The point receives an extended application when it is added that part of these debts—a particularly large part in the case of Australia—is owed to Englishmen, and is fixed not in terms of their money, but of ours. Thus, while it is to the interest of South Africa and Australia that the purchasing-power of gold should appreciate, it is equally to their interest that the purchasing power of sterling generally, should not appreciate. Devaluation provides the only means by which these divergent interests can be reconciled. The really surprising thing is, thus, the very cold reception which the gold-producing Dominions have accorded to devaluation schemes. Doubtless this is mainly due to a confusion between the essentials of such schemes and the abominated gold-economising devices which their authors usually append to them as accessories.

There remain two further considerations which have played a considerable part in the South African discussions. Suppose the pains of deflation to have been endured, and specie payments to have been resumed, would it be easy to maintain the gold standard amid all the vicissitudes of post-war trade, and the incalculable possibilities of heavy inter-Governmental payments? The exchange effects of large international payments are not confined to the countries immediately concerned, and the country which first returns to a gold standard in effect places its gold reserves at the disposal of any country which has large obligations to discharge in the United States. We in Britain have seen many times in the last few years how the difficulties of France in meeting Ameri-

* "The Monetary Policy of South Africa." By Mr Samuel Evans.

can claims may serve to depreciate the sterling-dollar exchange. As the franc falls in terms of dollars, it becomes temporarily more profitable for Frenchmen to effect their payments through the medium of sterling, and this sends the pound up in terms of francs, but down in terms of dollars. This movement would take the form of an outflow of gold if gold were allowed to go. The truth appears to be that in order to maintain a gold standard successfully under present conditions, no matter upon what parity, a country requires that its balance of payments should be not merely not absolutely adverse, but relatively as favourable as that of the United States. Perhaps there is no country of which this can be predicted confidently, so long as the future of inter-Allied debts remains obscure. This is the main explanation of the reluctance of countries like Switzerland and Sweden, whose exchanges are near dollar parity, to resume unrestricted specie payments. The same consideration may well give pause to South Africa; later on, we may have to reckon with it seriously here.

Finally, there is the consideration that in returning before Great Britain to a gold standard, South Africa would lose the advantages of exchange stability with sterling. From the ordinary business standpoint, this would be a definite loss, since it is with Great Britain that South Africa does the great bulk of her foreign trade. Here we revert to what is perhaps the most curious feature of the whole situation. How is this apparent exchange stability maintained between inconvertible paper currencies which are unconnected with one another? Is it a reality, or an illusion? If a reality, is it purely accidental, and, therefore, transitory; or is it due to forces whose continued efficacy can be relied upon? We shall reserve the examination of these questions for a succeeding article.

THE POSITION IN CENTRAL EUROPE.—I. GERMAN AUSTRIA.

(BY OUR SPECIAL CORRESPONDENT.)

THE present position of the German-Austrian Republic, this miserable remnant of a once mighty Empire, is certainly one of great gravity. One fact must at the outset be patent to all observers: the country needs, above everything, a strong Government. Under present conditions this is indeed a counsel of perfection, for in no country, perhaps, have party strife and the conflicting interests of rival politicians done so much to undermine respect for all government. Having regard to this total absence of moral prestige, in a country where even the sanction of physical force is lacking, we cannot but conclude that it is relatively unimportant who may be at the head of the Government and what schemes may be proposed.

Economy in the administration is obviously the first condition of financial reconstruction, yet officials—whose names are legion—are now paid according to the index number figures, and these, in face of the downward rush of the krone, are always rising. But more serious, because more fundamental than this consideration, is the fact that the little Federal Republic has received as a heritage from the old Empire a veritable surfeit of officials. The railways, for example, cost the Government fabulous sums annually, and the introduction of an eight-hour day, combined with the fact that large numbers of railwaymen who formerly worked in what are to-day the other Succession States, have now, either from choice or from compulsion, attached themselves to the German-Austrian system, has led to an economic impasse. Yet all proposals, whether for handing over the railways to a private syndicate or for reducing the number of officials—which would certainly be a necessary consequence of the former scheme—are almost inevitably doomed to failure in face of the opposition of the trade union of railway workers, which has only recently shown itself once again to be the strongest force in the country. It must, of course, at once be conceded that schemes which would place transport on an economic basis would leave the fundamental question of what the dismissed men are to do quite unsolved.

It is alleged that the banks, of which there are an immense number, have done nothing to help and every-

thing to hinder financial reconstruction. Of course, what in England would be called sound banking is in Vienna an impossibility in view of the continual depreciation of the krone. It is not surprising, in consequence, that bucket shops abound, and that all incentive to saving has disappeared. Why, indeed, consume less than one produces, when the difference, in terms of the national currency, will each month represent less in terms of goods and services? In consequence, business men are always buyers of foreign currency, and the very official who buys a pair of boots is, in a sense, a speculator.

The constant depreciation of the krone is due, in the main, to three causes. (1) The lack of a sound financial policy on the part of the Government. The Budget never will come anywhere near balancing until a great financial effort is made, and this, in view of the political situation, is practically impossible. But this is not the only cause of depreciation, and hence a financial scheme which to-day would be truly heroic might, in a month's time, be wholly inadequate in view of a further fall in the value of the currency. (2) The trade deficit to which the country is condemned if even the present standard of living is to be maintained. Austria needs, amongst other things, both coal and food supplies from abroad. (3) The connection between the krone and the German mark. Much of the coal comes from Germany, and hence Germans are normally in possession of kronen. With each fall in the mark, and, what may often be the same thing, with each recurring reparations payment, the Germans buy foreign currency in Vienna, and help the downward movement of the krone.

But together with, and, in large part, in consequence of these factors, there is a growing lack of confidence in the currency and a feeling of despair as to the future of the country. Inquiry reveals that most shops in Vienna have very depleted stocks, this, in part, thanks to the purchases of foreigners who flock to a country where living is, for them, ridiculously cheap, but also in consequence of the fact that the Austrians themselves prefer goods to paper. In a word, the very foundations of modern economic life are here being undermined.

At present a Bill is being discussed for an internal loan of 400 milliards of kronen, and this is described everywhere as the supreme effort which will save the State. In view of the fact that this year's deficit, as estimated in June last, will be 1,500 milliards of kronen, and as the recent collapse of the currency, combined with the fact already mentioned that officials are now paid according to index number figures, will lead to this estimated deficit being very considerably exceeded, such legislation as that now proposed is almost worthless.

A distinguished Austrian described the Austrian peasant to me as being a greater enemy of the country than all the Jews and profiteers put together. Nevertheless, one cannot be surprised at the peasant's lack of confidence in the legal tender, and, in view of the Government's notorious lack of authority over the Provinces, the attitude of *saave qui peut* is quite understandable. To the countryman, Vienna appears as the home of Bolsheviks and profiteers. This judgment is certainly unfair as far as the mass of the Viennese, both workers and middle class, is concerned. But with the total instability of prices, and the constant rise in the cost of living, the desire of the workman working for private undertakings to share, along with the State official, the privilege of being paid according to the index number, is quite natural, though economically quite unsound.

In the event of a further collapse of the exchange—and there seems to be absolutely no reason for optimism in this respect—the resultant further dislocation in economic conditions must almost inevitably open the door to counsels of despair. The events of last December provide an ominous precedent. It would be futile to deny that the position is exceedingly grave. It seems equally futile to hope for any salvation from within. The people have proved that they are unable to govern themselves, and there is a widespread desire amongst the educated classes for some form of foreign intervention. Recent events have demonstrated that foreign credits, in the absence of strong government, can provide no final solution. Nearly a half of the recent British credit, for example, was used to peg the exchange for about six weeks earlier in the year, and for the million pounds thus spent there is now nothing to show. If the long-pro-

* "The South African Currency and Exchange Problem Re-examined." By Sir Henry Strakosch.

phesied "krach" is to be avoided, some formula must be sought which, while providing for foreign credits, will at the same time provide for such measure of foreign control as will be acceptable to Austria, her neighbours, and the Great Powers. Having regard to the present frame of mind of the Austrian people, this task, though difficult, should not prove impossible. In any case, it is essential that something drastic should be done, and that right early.

FOREIGN TAXATION OF SHIPPING PROFITS.

ONE of the heavy burdens which now hamper British shipping is the toll which it pays in taxation to foreign countries, and, unless the problem is faced and solved at once, there is every prospect of the toll being heavily increased in the near future. It is necessary to state how this burden arises, and, as it is in the main the reflex result of British fiscal policy and practice, to understand what the British policy and practice are. We levy income-tax upon non-resident persons and corporations who derive income "from any trade, profession, employment, or vocation exercised within the United Kingdom." In administering this provision our Revenue officials have displayed a zeal which, though perhaps commendable in its immediate effect of enhancing the receipts of our Exchequer, from wider considerations is questionable in view of the retaliation which it evokes and perpetuates; for they have interpreted it to legalise the taxation of foreign shipowners having vessels trading to this country and offices or agents or subsidiary companies in this country for the purpose of booking freights in this country on their behalf, income-tax being levied upon the profits accruing from those freights. Similarly the United States Government has since 1916 levied income-tax upon the profits made by British shipowners on the freights booked in the United States for their ships trading to the United States. The British shipowner is not allowed to deduct the amount of tax paid abroad from the tax which he pays to his own Government, but may treat it as a working expense and deduct it from his gross profits; he is thus to that extent subject to double taxation. The magnitude of the burden of foreign taxation may be gathered from the amount paid by one British company. Sir Thomas Royden, Bart., at the annual general meeting of the Cunard Steamship Company, on April 26th last, said, speaking of foreign taxation: "In this connection I would mention that for this year we have had to charge to revenue account over £100,000 for payment made, or to be made, to foreign Governments." It is known that the Governments of the Scandinavian countries are watching the situation with interest, and the Norwegian Government has already obtained authority from its legislature to tax the profits of foreign ships trading to its ports.

Last year the American legislature, with an enlightenment which is curiously at variance with the ultra-national tendencies embodied in President Harding's Shipping Subsidy Bill now under discussion, took a step which opens a way out of the international tax war thus well launched on its career. By section 213, sub-section 8, of the American Revenue Act, 1921, it is provided that:—"The term 'gross income' does not include the following items, which shall be exempt from taxation under this title: (8) the income of a non-resident alien or foreign corporation which consists exclusively of earnings derived from the operation of a ship or ships documented under the laws of a foreign country which grants an equivalent exemption to citizens of the United States and to corporations organized in the United States." This offer of reciprocity cannot be ignored; which does not mean that it must be blindly accepted. But the following considerations seem to point towards acceptance. (1) Although the present British policy yields a certain revenue from foreign ships, this yield can be obtained at too high a cost. Broadly speaking, freights on goods (and passengers) are booked in the exporting country. We are an importing country, and the freights on goods imported into this country are mainly booked in the country which exports them. This means that, in so far as these goods are imported from America in British bottoms, (a) our shipowners pay tax to the United States Government (as well as to their own) upon the

profits arising from those freights, and (b) the freights and, in consequence, the delivered cost of the goods are increased. On the other hand, the flow of goods in the reverse direction—United Kingdom to the United States—is very much less; and it would seem that in a fiscal contest of this kind an exporting country is bound to come off best.

(2) Another factor is that a large part of American tonnage is at present in effect Government-owned, and, it is believed, accordingly exempt from British taxation. But in so far as the United States Shipping Board continues its policy of disposing of its tonnage, this inequality against British tonnage will tend to disappear.

(3) The result of the present position is that, while the other leading maritime countries of the world abstain from taxing the profits of one another's shipping, the British ship is faced with the prospect of a demand for tax wherever she enters an American port to earn a freight booked in that country. Her Scandinavian and other competitors, on the other hand, are immune from this burden so long as their Governments refrain from taxing American ships. Thus in exchange for the revenue which the British Exchequer receives from American ships, the British ship is saddled with a severe handicap in competing for the shipping trade of the world. If a return were forthcoming from Somerset House as to the amount of tax thus flowing into the Exchequer, it might be possible to arrive at the purely financial equation. But even if that showed a credit balance in favour of the yield of revenue over the aggregate sum paid in taxation abroad by British shipping (which is extremely doubtful), there would still remain many wider considerations of economic and international importance. Amongst these considerations is the belief that in the long run the country owning the most tonnage will suffer the most from the policy of taxing and counter-taxing foreign shipping.

(4) It is a commonplace to remark upon the value to the United Kingdom of the carrying services rendered to the world by British shipping in maintaining the sound economic position of a country like ours, which must import so much of its food and raw materials, and must pay for those imports somehow. Hitherto those carrying services have played an important part in preserving the balance of trade, and a decline in them can only be viewed with alarm. We were driven to take to the sea in order to get what could only be found overseas, and we have developed a natural aptitude for seafaring which has enabled us to satisfy not only our own overseas transport requirements, but those of a large part of the world. This seafaring aptitude is one of our principal assets, and we must be allowed to develop it to the full. No artificial handicap should be allowed to hold it in check. He is a bold man who suggests at the present moment that the British Exchequer should close any pipe-line which may replenish its tanks. But is this taxation of foreign shipping really a substantial source of supply? It seems to be to foreign shipowners beyond doubt, irksome enough to evoke retaliation. Is it "good business"? One can well understand the embarrassment caused to a shipowner of knowing that if he sends his ship to a foreign port to earn a freight booked there his master will be faced with a demand for an income-tax return (upon which he will probably need expert advice) and for a payment of tax (which his owner was probably unable to calculate beforehand when fixing his freights). If that much misused term "freedom of the seas" has any meaning in British ears, it must mean liberty to ply one's trade at sea without any let or hindrance other than Nature has contrived. In that sense freedom of the seas is essential to British prosperity, and it is because this incipient tax war, with the vista of intensification which it has opened up, trenches upon that freedom of the seas that the question of its continuance or discontinuance merits our serious consideration.

(5) There are also wider questions of international comity and policy which need only be mentioned. No one can deny to a country the right to tax profits earned by a foreigner within its frontiers or territorial waters. But the taxation of profits earned by a foreigner on the high seas or in his own territorial waters is a different proposition. Again, the wisdom of perpetuating a tax war and all its occasions of friction and misunderstanding, with

the object-lesson of Europe in its present condition before us, seems to require more justification than is at present apparent for it.

The whole question was raised last week in the House of Commons upon an amendment to the Finance Bill by the Hon. Alexander Shaw in the following form, closely resembling the American clause:—"There shall be exempted from income-tax the income of a non-resident alien or foreign corporation which consists exclusively in earnings derived from the operation of a ship or ships documented upon the laws of a foreign country which grants an equivalent exemption in respect of shipping registered in the United Kingdom." The amendment was negatived after some discussion, but enough was said to show that more will be heard of the matter before next year's Finance Bill is introduced. We commend to the Government and to the public during that period the fullest exploration of the question. They must be satisfied that the monetary *quid pro quo* being received in return for this burden upon British shipping is adequate compensation for its many and obvious repercussive advantages. A Departmental Committee representative of all interests, including the Foreign Office, the Board of Trade, and the Treasury, would throw a flood of light on the problem.

BRANCH SHOP COMPANIES.

IN May last we published an article reviewing the profits of several companies engaged in retail shop trade in London, and in the following article propose to supplement this with a brief examination into the accounts of several more retail shop companies whose business is run on somewhat different lines, namely, on the principle of a number of branches in various parts of the metropolis and in the provinces, with centralised management. Our list is a miscellaneous one, but the companies are all well known, and will require no introduction. The majority of the reports refer to the year 1921, but some come up to a later date. The fall in prices of commodities was not so severe during 1921 as in the second half of 1920, and the amounts which had to be written off stocks, therefore, were probably not so heavy in 1921 as in the previous year. From the dividend record below it will be seen that three companies raised their dividend distributions for the past year:—

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921
Bobby and Co.	%	%	%	%	%	%	%	%	%	%	%	%
Charles Baker and Co.	nil	5	10	10	6	6	8	8	10	10	10	12
Home and Colonial ("A")	nil	20	20	20	25	30	30	30	30	30	30	30
Hope Brothers	5	8	8	9	10	10	10	10	12	12	12	16
International Tea Stores	6	6	6	6	6	6	7	7	12	12	12	12
Lipton	10	10	10	10	10	10	10	10	10	10	10	10
Maynard's	nil	nil	nil	4	6	4	7	7	10	10	10	10
Parke's Drug Stores	7	7	7	7	7	7	7	7	10	10	10	10
Pim Bros.	5	5	5	5	5	5	5	5	5	5	5	5
Plummer, Roddis	5	5	5	5	5	5	5	5	5	5	5	5

* Free of income-tax.

A year ago the Home and Colonial dividend, which was reduced from 30 to 15 per cent., was paid on a capital which had been raised from £100,000 to £400,000, and the past year's increase in the dividend to 25 per cent. must be regarded as very satisfactory. The International Tea Company's Stores also has a good dividend record. Four companies reduce their distributions, the explanation of which may be seen in the following table of net profits:—

	1913.	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Bobby and Co.	£19,456	£23,461	£30,058	£29,595	£32,249	£51,136	£44,400	£52,900
Chas. Baker & Co.	17,634	17,488	16,367	14,990	21,207	97,314	16,954	3,047
Home & Colonial	179,486	251,537	256,877	226,156	235,650	249,290	267,023	309,875
Hope Brothers	41,553	27,261	51,780	58,171	64,353	116,043	67,552	37,173
Internat'l. Tea	132,733	109,619	140,889	206,741	156,831	240,974	251,581	305,020
Lipton	140,286	104,340	238,530	354,044	380,270	378,229	162,155	205,710
Maynard's	10,716	13,733	26,512	43,332	80,468	148,427	86,508	59,250
Parke's Dg. Sts.	4,326	4,712	5,159	6,675	12,234	15,979	7,383	6,613
Pim Bros.	18,366	24,718	27,726	29,472	23,945	34,725	27,449	Dr 6,377
Plummer, Roddis	20,787	16,997	22,635	20,351	22,111	36,887	16,852	21,878

* Eighteen months.

There is an increase of over £40,000 in aggregate net profits, the two grocery concerns mentioned above being

prominent with substantial increases. Liptons also show a good increase, but the report states that while the home business was good, there were losses of £100,000 incurred abroad, towards meeting which £50,000 was transferred from reserve. Sir Thos. Lipton added at the meeting that the benefit of the reductions in prices, which had been handed on to the consumer, amounted to approximately £160,000, and proportionately reduced the profits on trading. Carriage and freight had cost upwards of £116,000, more than in the previous year, owing to increased railway rates, and £76,000 more had been paid in wages at the retail branches alone. Pim Bros., whose loss on the year's trading was over £6,000, brought £15,000 into the profit and loss account, being part of a claim of £20,000 for refund of excess profits duty, there being "no reason to doubt that the major portion, if not the entire, of this will be recovered." Hope Bros., whose profits show a further substantial decline, suffered in the manufacturing departments, but the retail department, according to the chairman, had been entirely satisfactory.

In the next table we show the principal items of the balance-sheets:—

	Total Liabilities	Re-serves	Leases, Property, &c.	Stock in Trade	Goodwill	Cash & Investments
Bobby and Co.	£1,125,289	£45,000	£572,452	£237,202	£25,155	£82,962
Chas. Baker and Co.	511,994	75,770	143,599	275,959	40,000	22,502
Home and Colonial	3,143,488	532,689	366,715	1,116,668	671,246	895,715
Hope Brothers	980,971	100,000	193,646	411,120	250,000	49,779
International Tea	2,579,882	184,906	654,400	706,724	626,675	150,351
Lipton	5,581,998	500,000	2,008,396	1,501,067	?	544,433
Maynard's	491,870	76,754	116,890	94,371	nil	202,727
Parke's Drug Stores	136,819	25,252	39,037	63,299	12,151	6,744
Pim Bros.	464,051	65,000	*160,000	119,500	?	6,293
Plummer, Roddis	504,355	61,000	207,872	120,031	50,000	3,196

* Includes goodwill.

With the exception of two companies, goodwill, which is, of course, an important item with concerns of this kind, is shown separately. The Home and Colonial and the International Tea Stores both value it at a high figure, but the attitude of the directors of the respective companies towards its reduction shows a curious divergence. At the meeting of the International Tea Company's Stores the chairman, after pointing out that, while freeholds stood at £587,080, their present worth was "something approaching a million sterling," referred to suggestions that goodwill should be depreciated, and characterised them as unsound and stupid. "Our profits are continually increasing, and the goodwill to-day stands at between one and three-quarters' and two years' purchase of profits. If we depreciate the goodwill and continue to increase our profits, and that is what must ultimately happen with the same continuous and sane management that the business now gets, we should bring the goodwill down to one or even half a year's profits. Surely the goodwill of a business such as ours, which has gone ahead for so many years with profits practically always increasing, must be worth something very substantial." The chairman of the Home and Colonial, on the other hand, said that it was not proposed to utilise the excess of the property item at its present-day value over book value, either as capitalisation or in payment of dividends on the share capital, as the weight of legal opinion was against either method, "but by writing down the item of goodwill." In most cases stock-in-trade shows some reduction, but the decline is not so large as might reasonably have been expected. In the final table we show share prices and the yields at the latest quotations:—

Description.	Share.	Present Amount.	Price July 30, 1922.	Price July 31, 1921.	Price July 31, 1920.	Price July 31, 1919.	Price July 31, 1918.	Price July 31, 1917.	Price July 31, 1916.	Price July 31, 1915.	Price July 31, 1914.	Price July 31, 1913.	Present Yield.
Chas. Baker, 8% cum. pref.	1	70,000	5 1/2	5	4 1/2	4 1/2	4 1/2	4 1/2	4 1/2	4 1/2	4 1/2	4 1/2	8 3/4
Home and Col., 6% cum. pref.	1	900,000	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	5 1/2	6 3/4

Lipton, Limited, Ord.	5	150,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	5 0
Pim Brothers	1	175,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	8 1/2
Plummer, Roddis	1	175,000	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	1 1/2	8 1/2

In the majority of cases present prices are higher than at this time last year, but the advance is small in comparison with that in many other sections of the Stock Exchange. The yield, however, cannot be called high for the shares of companies of this kind.

[July 29, 1922.]

Notes of the Week.

The Cattle Embargo.—The House of Commons, as frequently happens when members are freed from the control of the Party Whips, registered a common-sense decision on Monday, when a vote in favour of the removal of the cattle embargo was carried by a majority of 78 votes. We do not propose to re-tread the ground covered in our last week's article to explain why we sincerely welcome this decision. But there are several points in connection with the decision that deserve attention. In the first place, we are surprised at Mr Chamberlain's statement that "he did not think there was a chance of passing a Bill on the subject within the Parliamentary session of this year." Mr Chamberlain spoke without consulting the Cabinet, and we trust the Cabinet will take a different view. Now that the Commons have given a definite vote, it is absurd that legislation embodying their decision should be postponed for six or seven months. Since there is to be an autumn session, we can see no possible excuse for such delay. The other important point arising out of the debate is one of Ministerial responsibility. The Cabinet, unable to agree upon the embargo, decided to abandon Cabinet responsibility, and abide by the free decision of the House of Commons. Sir A. Griffith-Boscawen, the Minister of Agriculture, did not adopt the Cabinet attitude. He might have told the House simply that he, as the responsible Minister, was prepared to carry out whatever policy the House thought fit. But he chose a different course. He made a strong speech in favour of the embargo, and declared that its removal "would be a serious blow at the agricultural industry." He is therefore in the position of a Minister who has clearly explained to the House the policy of his department on an important matter, and has seen that policy definitely rejected. In our view immediate resignation is the only course, consonant with the doctrine of Ministerial responsibility, which is properly open to Sir A. Griffith-Boscawen. In recent years we have seen the doctrine of corporate Cabinet responsibility sadly undermined. If individual Ministerial responsibility on departmental questions of the first importance is also to be disregarded, another serious blow will have been struck at the system of democratic government.

Russia at the Hague.—From Thursday's debate in the Commons and the Papers relating to the Hague Conference (Cmd. 1,724, 6d), it appears that the Conference brought the minds of the Russian Delegation nearer to the realities of the situation and to the level of practical common sense. Three non-Russian Sub-Commissions discussed with it separately the restitution of foreign properties, the foreign debts owed or guaranteed by the Russian State and local and public authorities, and the credits demanded by it for the restoration of Russian economic life. But it proposed to make its concessions on the two first questions dependent on a satisfactory solution of the third. The first Sub-Commission, however, ascertained that restitution and compensation would only be granted in exceptional cases, and that several important industries—notably engineering and textiles—would be retained entirely "in the inexperienced and unsuccessful hands of the Soviet Government." Further, there was no security that former owners would get back their businesses, which they themselves had created, or that promises of compensation would be carried out. But, as the Sub-Commission contended, and Mr Lloyd George insisted in the debate on Thursday, Russia can only restore her industries by bringing back the foreign skill and capital which created them; and these a continuance of Government management would inevitably keep out. The second Sub-Commission found that the Budget figures were unreliable, but that continual deficits were certain, and that the persistent refusal to recognise the obligations of the Tsarist Government set a precedent for future repudiation. Moreover, the proposal of the Delegation that negotiations regarding the foreign debts should be conducted directly between the Governments of the creditors' countries and the Soviet Government, instead of directly between that Government and its creditors, would necessitate compelling the latter to accept the

settlement effected, and this was held to be impossible. Ultimately the Delegation suggested a composition by the payment of a lump sum, to be distributed by the foreign Governments; but obviously Russia, which cannot even meet the interest on her obligations, could not find the necessary amount. The third Sub-Commission pointed out that adequate arrangements for granting credits existed already, but that the sum demanded (£322,400,000) must come out of private capital, which would not be offered—especially as the Soviet Government demanded that all credits should be granted directly to itself. This point was admirably emphasised by Comptroller Hilton Young, whose speech elicited a fresh proposal—viz., that the Soviet Government should be invited to acknowledge the debts of the Tsarist Government on terms to be settled within two years between it and the sufferers. This offer the Commission rejected, there being neither machinery nor security for its performance; but it was regarded as opening the way to further negotiation. So the Soviet Government has at last learnt something, and there are signs that it is learning more. This week it is reported to have recognised, to some extent, the rights of property and of inheritance, and to have decided to restore the State monopoly of spirits—which may perhaps be offered before long as the security for a foreign loan.

West Indian Problems.—The report (Cmd. 1679) resulting from the recent tour of the Under-Secretary for the Colonies deals fully with many subjects, of which only the economic group can be noticed here. The sections devoted to them are somewhat depressing. All the staple products are suffering through the world-wide fall in prices, and several from special drawbacks besides. Coconuts and copra, produced chiefly in Jamaica and Grenada and Trinidad will hold its own; it is grown also in Dominica, Jamaica, and St Lucia, but it is only in extension. Jamaica in a good year produces one-third of the world's supply of bananas, and they could be grown in most of the other islands; but the hindrances are hurricanes and "Panama disease." The industry is dominated by the United Fruit Company, which has done much for the tourist traffic. Of its 1,500 employees in the island, all but three are British, and the benefits it confers are substantial, though it is an American "trust." Cotton, the staple product of Montserrat and St. Vincent, and important in St Kitts and Nevis, is of high quality, but suffers from boll-worm and exhausts the soil. For nutmeg, pimento, and arrowroot—grown respectively in Grenada, Jamaica, and St Vincent—the market is always limited, and the last-named is suffering from Japanese competition. The timber trade has great possibilities in Jamaica. Trinidad, of course, flourishes largely on its (struggling) industry, had prospered greatly during the war, and in a less degree for some years earlier; but the war profits went largely to pay off mortgages and modernise the machinery. Rum, its by-product, suffers through American prohibition, and the present price of sugar in Great Britain—even with the whole of the below which the production is unprofitable; and the possible dumping of the Cuban surplus in the British market, and the competition of Continental beet sugar favoured by a depreciated exchange, have set up a demand amongst the growers for a doubled preference for a term of years, during which, should the duties be reduced, it shall be maintained at £3 15s a ton. The report favours this concession, though, as it must be extended to the rest of the Empire, it will entail a loss of revenue; for, should the cultivation be stopped, the lost, there will be grave unemployment, and the elimination of the European staffs will be a serious matter politically and socially. The Dominican lime industry suffers from the competition of Sicilian lemon juice, from decreased demand (chiefly for cocktails) for the fruit in "dry" America, and for citric acid among English calico printers; but the acid is being made (ex-

July 29, 1922.]

perimentally) in the island, and may be brought under the Safeguarding of Industries Act. In spite of all this, there is little or no unemployment, and the bounty of Nature prevents actual hardship. Transatlantic and inter-insular communications have deteriorated, and the islands cannot hope for Imperial pecuniary aid. The report is worth study, both for its explanation of the difficulties which keep back the development of the islands and for the light it throws on the complications incidental to the working of Imperial preference.

Strife in Paraguay.—A South American correspondent, writing in the last week of June, says:—Notwithstanding the frequency with which contradictory reports come to hand from the north regarding the revolution now paralysing all business in Paraguay, it is abundantly plain that the present outbreak is serious. To trace in detail the causes which have led up to the armed revolt of Colonel Chirife in support of Señor Schaerer would not be profitable or interesting. The position at the moment of writing is as follows: Dr Eusebio Ayala, who is actually president, and who professes to act on behalf of Dr Manuel Gondra, the ex-president, whose voluntary resignation was the result of a *coup d'état* accomplished last October, holds Asuncion. Against this capital the troops under Chirife have launched an attack which failed. Some damage was done by shells, and there were several casualties. The railway line has also been destroyed, and certain bridges outside Paraguari have been broken down, that is, assuming reports to be correct. South at Encarnacion, the revolutionaries hold the city, which is being bombed by a Paraguayan gunboat, the *Adolfo Riquelme*, which for the first time is engaged on the official side. Damage has been done to the railway station and to some house property, and many of the inhabitants have fled to Argentine territory at Posadas, which is on the opposite side of the river, and the Argentine terminus of the international railway service, which at that point crosses to Encarnacion by train ferry, and continues on the track of the Paraguayan Central system. A request for aid in arms and munitions, addressed to President Irigoyen by Dr Gondra, has been peremptorily rejected, and attempts of the insurgents to buy material in the Argentine will be summarily dealt with. Meanwhile the business is at a standstill, and to make matters worse, the moratorium granted to the Mercantile Bank of Paraguay ends on June 25th. Before the revolution began it was proposed to extend the period of the moratorium over a further three years, but to do this legally the assent of Congress is required, and with most of the members of this body absent on military duties, a quorum cannot be obtained. Export trade is dead, ports are closed, the season's tained. Orange crop may be considered lost, and even if an early cessation of hostilities can be arranged, so much damage is done that the country will suffer for some years to come. It may be as well to explain that it is not so much the material damage of shot and shell that counts, as the complete dislocation of affairs caused by both sides busily pressing recruits, so-called volunteers, into their service. Nominally, Paraguayan exchange continues to be quoted at \$1,800 Paraguayan to the \$100 Argentine paper, but whether this rate can be maintained when peace reigns once more is highly doubtful. Both sides have taken such public monies as were available for the purpose of furthering their ends, and it is safe to assume that there will be little available for remission to Europe in settlement of the nation's external obligations, whoever may be the victor in the present fracas.

President De Alvear's Visit.—Last week the President-Elect of Argentina was entertained by the King, the Government, and the Lord Mayor of London, and stress was very properly laid at the banquets at Lancaster House and in the City on the historic and economic ties of Argentina with Great Britain, and on its importance, mainly through British capital and enterprise, as a source of supply of British food, especially during the war. Early in the last century, and fortunately for both parties, the country barely escaped forcible incorporation in the British

Empire; later, British money and British sailors aided it to gain independence, and, after a long period of despotic government, civil warfare, and financial disturbance, it settled down in the last decade of the last century as a stable and progressive Federal Republic. British enterprise has developed its cattle ranches, and especially its sheep farms, built its leading railway lines, provided it with the greater part of its trans-oceanic communications, and, more recently, taken over the ownership of much of its river and coastal traffic. British capital has taken up nearly all its foreign loans, and its temporary misfortunes nearly brought about a grave financial crisis in London a generation ago. It emerged, however, from disaster, paid its debts, and entered on a career of prosperity only occasionally broken by the extravagant claims and the turbulence of its Labour unions. Their power, however, has waned of late, and there is no reason to suppose that it will revive under the new President. His experience of European life as Ambassador in Paris has placed him in touch with European opinion, and he represents a very large majority of the Argentine electorate, which, as a whole, sided cordially with the Allied Powers in the war. His visit to London is an auspicious prelude to a period of closer relations between the two Governments and peoples, and Englishmen will cordially wish him a prosperous and successful Presidential term.

Rebuilding the Bank.—The volume of business transacted by the Bank of England has grown so enormously since pre-war days that the staff engaged in various sections of the Bank's duties are scattered over various City offices. Obviously, it is desirable that as far as possible the Bank's activities should be concentrated under one roof, and we are glad to know that the Court of Directors have under consideration plans for reconstructing the famous building in Threadneedle street. We have before us the plans and a sketch of the proposed reconstructed building, which, though not finally accepted as yet, are engaging the careful attention of the Court. A study of the sketch and the plans will please those who approach the problem from the various points of view of sentiment, dignity, and efficiency. In the eyes of the public the supreme merit of the projected plan is that the external ground floor features so familiar to generations of City men are to remain intact. The blank outer wall, the top-lighted halls, and the arrangements for quietude devised by Sir John Soames are to form the basis of reconstruction policy. Judging from the data before us, the central superstructure to be reared above the present shell will complete an imposing and worthy home for the central institution of British finance.

Home Railway Dividends.—A number of home railway dividends have been announced this week. The list below compares the midsummer declarations for the past five years:—

Name.	Mid-summer, 1918.	Mid-summer, 1919.	Mid-summer, 1920.	Mid-summer, 1921.	Mid-summer, 1922.
	Rates per		Cent. per Annum.		
Great Central, 1881....	4	4	4	4	4
Do 1889.....	4	4	4	4	4
Do 1891.....	..	..	..	4	4
Great Eastern.....	1	1	1	4	1
Great Northern, pf. ord.	4	4	4	nil	4
Do Cons. 6% "B" ..	6	4	6	5	6
London and N. Western	5½	5½	6	4	4
London & South-Western	4	4	4	2	2½
London, Brighton.....	2½	2½	2½	4½	4½
London, Chatham, Arb. pf.	4	4½	4½	1½	2½
Metropolitan.....	1	1	1	3	4
Midland, def.....	3½	3½	4	6	6½
North-Eastern Cons....	6	6½	6½	4½	5
North London.....	4½	4½	5	1½	2
South-Eastern, ord.	1½	2	2		

So far, there have been no reductions and some increases. But it must not necessarily be assumed that, where an increase is made in the interim dividend rate, the rate for the full year will be higher than that declared in respect of 1921.

South African Banking and Development.—Mr Clifton Brown's speech made in his capacity as chairman of the Standard Bank of South Africa contained some interesting remarks on recent banking amalgamation. He pointed out that "In the past there has been too much rivalry of the unhealthy kind among banks, with the result that many people have been able to secure more accommodation than their position entitled them to, a state of affairs which is obviously dangerous to the credit of any community." And that "We have reached the point of realising that, whilst healthy rivalry is necessary and beneficial, reckless competition is dangerous to the best financial interests of the country." It was also instructive to learn that, after a tour of South Africa lasting 9½ weeks and covering over 8,000 miles, this responsible City banker was deeply impressed by the "rich possibilities" of the country. Mr Clifton Brown is convinced of the prosperous future before the Union of South Africa, especially in view of the programme of new railway development about to be undertaken by the Union Government. In conclusion, the chairman of the Standard Bank of South Africa expressed his confidence in the bank's future, and its intention to carry out its traditional policy of "steady though cautious progression."

Dutch Rubber Restrictions.—When the representatives of various nations interested in rubber-production voted last month, at The Hague, upon the question of restriction of rubber output in the Netherlands East Indies, a majority of two to one supported the resolution in its favour. This was duly reported to the Dutch Government, and it had a pronounced effect in stirring for a few days the dry bones of the rubber market in the Stock Exchange. Caution suggested at the time that, before making too much of the incident, details of the voting should be awaited in order that the necessary analysis might be applied to show how far the Dutch interests approved a policy which hitherto had been politely rejected by them. The prospective buyer of rubber shares took the hint, and, after a very brief spasm of animation, the share market relapsed into a waiting attitude. This week, writes a Stock Exchange correspondent, has brought a *résumé* of the voting by the representatives assembled at The Hague, and the figures are much as might have been expected. The Dutch vote, taken on the acreage of rubber under cultivation, is rather less than two to one against the restriction resolution. Considering the way in which Dutch growers have opposed the policy heretofore, it says a good deal for the change of mind amongst the Dutch that the proportion should not have been materially greater against the scheme. Holders of rubber shares in this country will probably derive encouragement from the figures, particularly when these are supplemented by the knowledge that the matter is receiving careful attention from the Dutch Colonial Minister in Holland and the Agent-General of the Netherlands East Indies. These two gentlemen are in earnest consultation over a subject which has a very direct bearing upon the revenues of the Dutch Colonies, and, indirectly, upon those of Holland. Rubber has again dwindled to the insignificant price of 7½d. per lb., disappointing the hopes of those who anticipated an early return to 1s per lb on the expectation of the Dutch Government agreeing to some plan whereby restriction could be put into force. The British vote at the conference went almost solidly in favour of restriction, but the American interests opposed it by more than 20 to 1, as is natural enough. Americans are the principal consumers, and therefore want rubber as cheaply as possible, although the somewhat ingenuous argument has been advanced that even the consumers would be benefitted by such a rise in rubber as would lead to stabilisation of the price. The chief point gained as a result of The Hague rubber conference was to crystallise the question of restriction into a shape which enabled it to be brought officially before the Dutch Government, already disposed to be sympathetic to suggestions that might serve to revive the diminished rubber revenues of the Netherlands East Indies. The figures which we have quoted do not by any means imply that Holland will decline to take steps appropriate to remedying the present desperate situation. Nevertheless, the

spark of hope kindled in holders of shares in rubber-producing companies that are likely to find themselves plunged before very long into financial difficulties, is again dimmed. The prospect of assistance—in the shape of a rise in rubber—arriving too late to save them from reconstruction or liquidation is, unhappily, getting uncomfortably near in some cases. There are many others, however, where resources have been so skilfully conserved as to enable the companies to hold out for a considerable time in the hope of brighter days coming.

Base Metal Producing Companies.—The rise in metal prices, the issue of several reports, and the declaration of dividends have combined to direct attention to the position of companies winning lead, zinc, tin, and copper. The accounts of the Amalgamated Zinc Company for the half-year ended December 31st show only small receipts; the dividend of 1s per share was paid out of profits earned before the end of 1912 and transferred to equalisation reserve; the further distribution of like amount since declared was provided by the realisation of a portion of one of the company's assets—i.e., dumps of tailings. The net cash assets at the end of 1921 totalled £121,500. As only to be expected, in view of the circumstance that work was in progress for no more than about six weeks of the period, the accounts of the British Broken Hill Proprietary Company for 1921 reveal a substantial loss. The net liquid assets on December 31st amounted to £209,200. Legal proceedings have been initiated with a view to the abrogation of an onerous contract. Hopes are entertained of an amendment of the labour award which presses so heavily upon the Barrier Range companies; but unless any concession granted be of greater extent than that secured in Western Australia, it will afford little relief. The somewhat unexpected declaration of a dividend of 2s by the Broken Hill South Company—the first since the 1s 6d paid in March, 1919—has aroused anticipations with regard to the neighbouring North Company. The cabled summary of the report of the Mount Morgan Company for the year ended May 31st shows a deficit, which would have been greater but for substantial adjustments in respect of preceding periods. Operations were in abeyance from April, 1921 until recently, when they were resumed under the arrangement of a modest reduction in wages combined with a rebate for six months on freights on the Government railway. Even now, however, losses are resulting. Efforts are being made to meet the position by increasing the output. As usual, the cash position is strong, the liquid assets standing at £481,000. The deficit incurred by the Briseis Tin Company mainly arose through the concentration of efforts upon the final re-diversion of the Ringarooma River, now practically completed; tin-winning is expected to be resumed on a normal scale very shortly. This is just as well, as the company's resources have become slender. The last dividend paid was 6d in July, 1919. All the companies above referred to are operating in different parts of Australasia. The Rhodesia Broken Hill Development—whose *locale* is indicated by its title—pays 6d per share, equal to 10 per cent., for 1921, or the same as in respect of the preceding year. The output of 18,100 tons of lead fell short of the 1920 total, and the profit of £33,000 compares with £90,000 previously. As the distribution of 10 per cent. calls for £35,000, it is apparent that a very conservative policy was followed 12 months ago, whereas on the present occasion the carry-forward is drawn upon to a slight extent. The results of the Minerals Separation Company fully justify the cautionary attitude adopted in last year's "Note." Important developments have occurred in connection with showing a substantial profit, the accounts reveal a loss of £24,000. Fortunately, the financial position is particularly strong.

Irish Linen and the U.S. Tariff.—A Belfast correspondent writes:—Contrary to sanguine anticipations, the long-expected revival in the Irish linen industry has still failed to develop to any extent. Undoubtedly there is a very considerable increase in buying as compared with a year ago. In fact, the export of 4,958,660 sq. yards

of piece fabric valued at £472,740 during May compares very favourably with the 2,685,600 square yards, valued at £399,315, exported for May a year ago. America is our best linen customer, purchasing in normal times a round 50 per cent. of total linen goods exported, and consequently Belfast manufacturers are exceedingly apprehensive of the results of the threatened American Tariff additions. They plead that since this class of textiles are not manufactured in the United States, there is no necessity for any high rates with no industry to protect. It is indisputable that with towels, which now sell at 6.00 dollars per dozen, being increased to 7.5 dollars, and the duty on such universal articles as handkerchiefs raised from 4.00 to 4.71 dollars, buying would be much limited. Paradoxically, too, in face of this possible rise, there is no great purchasing now in advance. Indeed, for many months past the placing of orders has been in small, almost in retail, quantities. So with disproportionate overhead costs incurred in producing these limited bulks, some manufacturers aver that the margin of profit, if any, is more nominal than real. Somewhat over one-half of the total looms in the trade are working, and there are fears that several factories may soon close down for a spell until prospects are brighter. Meanwhile, with flax-growing at its minimum in Ireland this season, spinners tend to advance yarn prices.

Pre-War House Building.—The development of housing in Great Britain during the last half century is shown in some recent statistics of the quinquennial increase in the total number of existing dwelling houses prior to 1914:—

Quinquennial Periods.	England and Wales.	Great Britain.
Increase During	Figures Not Available.	
1875-1879		492,079
1880-1884		421,420
1885-1889		356,771
1890-1894		324,409
1895-1899	504,788	575,672
1900-1904	581,848	654,611
1905-1909	513,529	541,131
1910-1914	303,238	328,320

A steady decline is visible from 1875 to 1894, followed by sharp rises in the two succeeding periods. But it will be seen that another decline set in in the period 1905-1909, and was strongly accentuated in the five years following 1909 and its famous Budget. Another set of statistics given by the Minister of Health concern the number of dwelling-houses of annual value of under £20 and of annual value of £20 and upwards in Great Britain in the fifteen years before the war. From these we extract the following:—

Year.	Under £20.	£20 and Over.
1900-01	5,613,228	1,187,758
1905-06	6,047,579	1,414,383
1909-10	6,368,441	1,507,056
1910-11	6,379,092	1,532,562
1911-12	6,459,257	1,544,932
1912-13	6,505,507	1,558,711
1913-14	6,548,648	1,574,250
1914-15	(Figures not available)	1,592,117

The last column excludes shops, &c., used as dwelling-houses.

Deep Sea Fisheries.—The landings of wet fish by British vessels at the ports of England and Wales in the first half of the year were larger than in January-June last year, viz., 4,979,397 cwt, against 4,155,056 cwt. Those of Scotland, now included in the official return, were 2,381,782 cwt, against 2,251,914 cwt. The notable feature is a considerable decline in value. The total for England and Wales was £6,919,814 (including shell fish, £214,056), against £8,557,051 (including shell fish, £288,740), and for Scotland £1,874,391, against £2,597,473. The nature of the decline is, perhaps, better shown by the fact that the average value per cwt of the fish landed in England and Wales was only 26s 10d, as compared with 39s 10d a year ago; and of that landed at Scottish ports 15s 9d, against 23s 1d. The discrepancy in the average value of fish landed

in Scotland is possibly accounted for by the fact that it includes less North Sea fish and indifferent markets. The quantity of wet fish landed by foreign-owned vessels from the deep sea fisheries in the whole of Great Britain in the first quarter is returned at 184,498 cwt, against 90,610 cwt in the same period last year, the values being £170,175 and £147,399 respectively. This is equivalent to between 5 and 6 per cent. of the British landings. The fact, however, that the quantity has doubled is giving some anxiety to British trawler owners, who see in it a portent giving point to an alleged threat on the part of German fishing vessel owners to extend the practice which is not confined to German boats, but is followed by Danish and Dutch boats principally. The decision of the Treasury that fish caught by German boats in extra territorial waters does not come within the scope of the Reparations Act is resented by the British Trawler Owners' Federation, whose contention is that fish so caught is the product of German machinery and labour, and should therefore be included. An agitation is also afoot, through a committee of members of the House of Commons, to bring pressure on the Government to this end, and also to bring about the prohibition of the entry of fish caught by vessels of nations who take measures to protect their fisheries against the British owner. The latter proposition, if carried into effect, might possibly prove a two-edged weapon, inasmuch as Great Britain exports roughly twice as much as it imports. Last year, for example, we imported from abroad 2,031,545 cwt, chiefly wet fish (herrings, &c.), from foreign sources, and including 496,048 cwt landed by foreign-owned boats from the deep sea grounds, the total value being £3,037,475. On the other hand, our exports of fish aggregated 5,768,240 cwt, having a value of £6,071,543, principally cured or salted herrings, of which Germany took 2½ million cwt, valued at £1,793,345. In pre-war times Russia shared with Germany the distinction of being the most considerable markets for English-cured or salted herrings, taking 85 per cent. of the total exports between them.

Oversea Correspondence.

UNITED STATES.—COMMODITY PRICES—NEW BUILDING RECORD—TARIFF OUTLOOK—CROP PROSPECTS—BONDS ACTIVE.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 17.

COMMODITY prices registered another advance in June, the eleventh rise since June 1, 1921, when prices were at their lowest level following the 1920 and 1921 deflation. *Bradstreet's* July 1st index number, \$12,1069, represents a gain of 1.7 per cent. over that of June 1, 1922, and of 14 per cent. over June 1, 1921. Although the latest number is still 41.9 per cent. below the peak of February 1, 1920, it is 39 per cent. higher than on August 1, 1914. Last month nine out of thirteen groups of commodities advanced, while three declined and one remained unchanged. A large part of the net gain was due to the increased strength in textiles, especially cotton goods; other groups showing advances were provisions, hides and leather, metals, oils, coal and coke, building materials, naval stores, and miscellaneous products. Breadstuffs, live stock, and chemicals declined, while fruits were stationary. Last month also witnessed a further increase in building activity. According to the same authority, returns from 141 of the principal cities of the United States for June give a total value of construction, for which permits were issued, of \$218,674,449, a new high monthly record; it compares with the corrected total of \$206,804,015 at the identical cities in May, and with only \$127,671,278 for the same cities in June of last year. The figures represent an increase of 5½ per cent. over May and about 71 per cent. over the June, 1921, total. Marked gains are shown by all groups of cities over June a year ago. In fact, the total for the second quarter of this year exceeds that of the combined first and second quarters of 1921. With 23 cities yet to report for June, the total for the half-year amounts to

security, the Bavarian communication declares that the law threatens order and security in Bavaria, and therefore bases its decree annulling the provisions of the law on Article 48 of the Constitution, which authorises States to take special measures against disorder. While Bavaria's act is an open and technically unconstitutional defiance of the Republic, the actions of the Republic show a painful lack of political sense.

The elaborate terms of the agreement with the Guarantee Committee are criticised mainly on the ground that the Committee's mere right to obtain full information must bring also the right to interfere and dictate; but the majority parties are satisfied with the official declaration that the agreement will come into force only if a further moratorium is granted. The Right parties criticise the Cabinet for abandoning its declaration of last spring that no such terms would be tolerated. The measures agreed upon to prevent indirect export of capital will create new obstacles for foreign trade. The most serious aspect of Reparations is, however, not here; but in the indications that, instead of a bold treatment, or even a bold refusal to treat, the question is to be dragged out, confused and complicated by deals, like the Guarantee Committee agreement, which are at best masterpieces of bureaucratic ingenuity, and have no material relation to the real question. The Vice-President of the Reichsbank, Dr Glase-napp, has issued a reply to a London bank's statement that Germany is intentionally debasing her currency, the proof given by the London bank being that in a certain term the total of new note circulation largely exceeded the current Reparations liability. On this subject a great deal has been of late written, and the writers do not always understand that the movement of German note circulation is automatic, corresponding to money market conditions. The factor governing circulation in any given term is the amount of discounted and rediscounted bills (mostly Treasury bills) held by the Reichsbank. The exchange value of the currency, the matter which most attracts foreign interest, has no calculable relation at all to the note circulation, and has sometimes risen during and immediately after abnormally heavy inflation. In general, owing to the demand for credit caused by higher prices, heavy inflation has followed heavy exchange depreciation. This applies both to the private and the State demand for credit.

In general, the State demand for credit has not increased. The recent absolute monthly increases of the Floating Debt are, it is true, bigger, though not very much bigger, than those of last year and of 1920. That is inevitable owing to the general rise in nominal values. But the proportion of Floating Debt (i.e., current deficits) to revenue falls rapidly and almost continuously, so that the "real" deficits to-day, even with reparations being paid, are a mere fraction of the deficits of two years ago. The *Berliner Tageblatt* of July 23rd publishes a useful table illustrating this. The best month of 1920 (October) showed 2,318.9 million marks increase in floating debt and 5,120.7 million marks revenue received, the ratio being 45.3 per cent.; the worst month (June) showed respectively 11,553.1 millions, 3,226.9 millions, and 358 per cent. In only three months of 1920 was new floating debt less than revenue received; in four months it was over 200 per cent. on revenue. In 1921 the new floating debt in only three months exceeded revenue by more than 100 per cent.; in 1922 (January-May months) the highest percentage in any month was 59.9 per cent., and the lowest 27.2. This can be understood when it is stated that in early 1920 the monthly receipts were under 2 milliards; while in 1921 the lowest monthly receipts were 8 milliards and the highest 13 milliards, and in 1922 the lowest were 14½ milliards and the highest 30 milliards. The revenue in May, 1922, was almost exactly 30-fold the revenue in January, 1920, while the new floating debt (current deficit) was a little over fourfold. The absolute increase in floating debt is, of course, a register of the degradation of the currency; but it should not be taken as a register of the "real" deficit, or of the real State indebtedness. In general, in the last two years, the finances have greatly improved.

The Forced Loan Bill has been finally passed. The levy rises for physical persons from 1 per cent. of property on the second 100,000 marks wealth (first 100,000 marks being exempted) to a maximum 10 per cent. on wealth exceeding 1,000,000 marks. For juristic persons these rates are halved. The subscription price rises from 94 per cent. in July, 1922, to 106 per cent. in March, 1923. Amortisation begins on November 1, 1925, at at least ½ per cent. of the original total. After October 31st, 1925, interest will be paid at 4 per cent., after October 31st, 1930, 5 per cent. The loan stock will be accepted as security for advances on by the "Darlehnskassen," but, as long as it bears no interest, not by the Reichsbank. Official salaries have been raised, for July by 24 per cent., for August by 34 per cent. on last rates. The gold supplement on Customs duties for the week following July 26th is 10,400 per cent., or 105-fold. The supplement is now being fixed from week to week. The Finance Ministry is preparing to issue new aluminium and copper coins, to replace small denomination notes, to value of 1,850 million marks. The Reichswirtschaftsrat has received a private Bill authorising, and after 1926 requiring, all such persons as are legally obliged to keep books to draw their accounts in gold marks, values to be determined on a price-index basis. This is an imitation of the Soviet-Russian expedient, tried and abandoned last year. The measure is useless if the currency is stabilised, and unworkable if it is not.

The Reichsbank presented another bad report for July 15th. The increase in Treasury bill discounts is 10,126,373,000 marks, of note circulation 2,700,732,000 marks, and of Kassenschein 570,300,000 marks. The Darmstadter Bank has withdrawn from the Northern Bank for Commerce and Trade, which it and a Berlin Russian group founded in 1918 for conducting Russian business. The Bourse last week was moderately firm, the *Frankfurter Zeitung's* index figure for dividend-bearers rising from 38,491 to 39,356, and home loans also rose. The main stimulus was a great rise in Harpener Bergbau, supposedly due to buying by rival groups, one of which at least has foreign capital. This stock, which closed on July 14th at 2,160, to-day sold for 3,125. Other metal and mining papers rose in sympathy, favourites being companies whose business year ended on June 30th. There has been heavy buying of Austrian securities as a result of interest shown by the other Succession States. In general the Bourse is watching the exchanges, which have been very nearly stable during the past few days. Loans to-day are quoted:—War Loan 77.50, Federal 4 per Cents 117.25, 3½ per Cents 91.3 per Cents 200, Colonial 4 per Cents 150, Savings and Premium 79.40. There is still some foreign speculative buying of loans. The *Essen Bergwerks-Zeitung* estimates that foreign investors have lost about £700,000,000 from their purchases of mark loans and other mark securities. It holds that nominal values of 60 milliard marks come under the category of losing purchases; for these, at an average depreciation of 75 per cent., was paid 15 milliard marks gold, and as the present value is not more than 750,000,000 marks gold, the loss is about 14,250,000,000 gold marks. The average purchase price given by this journal seems high, but very heavy foreign purchases were made in 1919, when the mark's relatively slight depreciation was taken to foreshadow speedy restoration to gold value. Regarding the theory referred to last week, that the paper mark may any day cease to be saleable abroad, it may be noted that more than once after heavy falls, foreigners, so far from being frightened, have rushed to buy mark securities. The great rise in Federal Threes in connection with the new mark fall is the latest instance.

Prices are rapidly rising. Potash prices have been raised by 25 per cent., and new increases in coal and steel prices are under consideration. The accounts of the State railway for 1921 show receipts of 45.1 milliards, and expenditure of 52 milliards, deficit being 6.9 milliards, or 3.9 milliards less than estimated, and 8.7 milliards less than in 1920. The favourable result has been attained by raising freight rates. In 1921 56,000 new patents were registered, the largest number on record. Patent fees were raised on July 1st. The fee for reporting a patent is now 300 marks, and the annual fees rise progressively from 300 marks in the first year, and total 66,000 marks in the whole 15 years for which a patent runs.

ARGENTINA.—THE QUESTION OF GOLD EXPORTS— CATTLE INDUSTRY—AN AGREEMENT WITH GERMANY—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 23.

FOR some time past the question of rescinding emergency legislation passed in August and September of 1914 for the purpose of retaining Argentina's stock of gold has been under discussion. The chief supporters of the proposal are the Socialist members of Congress, who hold that there is no longer any real argument against restoring to the Conversion Office its full functions. Before the war this institution gave notes against gold in the ratio of \$227.27 paper for the equivalent of \$100 Argentine gold, and also delivered gold against notes in the same proportion. This latter function of the Conversion Office was suspended by Government decree at the outbreak of the war in Europe, nor has it been resumed, despite the wording of the Act, which expressly states that the obligation to deliver gold against notes at call is in abeyance during such time as a state of war exists. This measure was further strengthened by the prohibition of gold exports in general, over and above a small sum for personal use, \$500. Between 1914 and 1919 the latter ordinance was strictly enforced, but during 1920-21 a certain amount of clandestine exportation went on, the quantity of gold leaving Argentina during the latter year being put at nine million dollars, chiefly sent through private channels to Uruguay, where export, under certain conditions, was possible. A recent legal decision has, however, declared that the Law 9,483, which prohibits export, is null and void, the judge of the appeal court basing his verdict on the fact that the state of war which gave validity to the prohibitive measure officially ended in 1920. The case turned on a seizure of some \$10,000 gold by the Buenos Aires Customs, the specie having been acquired here by the captain of an American steamer, whose attempt to take it out of the country was discovered, and the gold itself held subject to forfeiture. As the alleged offence took place in 1921, Dr Jantus, the judge in question, held that no case against the respondent, since the Act and its prohibitions automatically lapsed when the state of war ended. He therefore ordered the Customs to release the gold, and acquitted the captain, who, it would seem, has now a good case for damage and loss, should he care to initiate proceedings against the Argentine Government. That is, however, by the way. What is of much greater interest is the fact that this reading applies equally to the gold movement of the Conversion Office. It has, indeed, been suggested that a test case should be created by officially demanding gold against notes, and proceeding against the institution before the Federal Courts in the event of its refusal to deliver. That it would so refuse is certain, its refusal to deliver is in no way disposed to take hasty action calculated to reduce the store which the Conversion Office now holds; a store which has not altered in amount since 1920, and which now stands at \$466,476,974 gold. Hence the judge's finding may be said to have rather a theoretical than a practical importance in so far as the Conversion Office is concerned. The argument of those who would see it resume its accustomed operations is based on the assumption that by bringing the exchange down until it was at or near par it would cheapen the appreciation of the Argentine dollar which would help the importer—and which he might or might not pass on in the shape of reduced prices to the retailer or consumer—the most react unfavourably on the price gained by the producer of Argentine exports, which is already sufficiently depressed. Moreover, it is plain that the international arbitrageur would at once be busy, and inasmuch as it is difficult to say how Argentina's trade balances now stand, a free movement of gold might have consequences of a serious and far-reaching nature, which would only force themselves on public attention when the harm done was beyond remedy. It would, it is true, tend at the outset to relieve the apparent plethora of money now in circulation, since as gold leaves the Conversion Office the paper circulation automatically shrinks. Banking deposits would fall, thereby affording temporary relief to banking in-

terests, who are at present unable to make profitable use of the moneys in their charge. It must, however, be remembered that Argentina is just now suffering severely from the sharp drop in the European demand for her cattle and meat, the "mother industry" of the Republic, and that many of the Argentine banks, including the Bank of the Nation, are carrying the weaker members of this trade on their shoulders to an unprecedented extent. This is only possible thanks to the collective confidence shown by depositors in the banks. Sudden diminution of the figures shown in the monthly published returns, which give the loans, deposits, cash in hand, and capital of each individual bank, would almost certainly weaken this confidence, while the steady outward movement of gold, heralded, as it would be, in the Press, might very easily precipitate matters and convert a position which only needs careful nursing to be brought round once more into acute disaster. Hence it will be gathered that resumption of gold shipments by Argentina is not as near as might be supposed on reading the comments relative to the recent finding, interesting rather from a legal standpoint than from any prospect of its immediate practical application to the monetary position of Argentina.

In connection with the cattle industry, a rather novel agreement is at present being discussed, under which Argentina will ship 80,000 head of cattle and 60,000 tons of meat per annum to Germany, taking payment in merchandise, and granting that country four months' credit from the date of shipment. Briefly, the ten clauses boil down to this: Argentina will fix a price for the meat she ships, and also fix the exchange equivalent of her invoice in paper marks according to the official quotation of the Bank of the Nation on the day such shipment is made. At the same time she will intimate what class and quantity of merchandise she requires, and the price for these goods will also be taken at the same rate—i.e., paper marks will be converted into Argentine dollars. A German syndicate will handle the business in Europe, and it will be asked to put up guarantees, signed by either the Deutsche or the Dresdner banking groups, for the amount at risk under the term of the credit. Somewhat nebulous as to details, the scheme has none the less been warmly received by the Argentine official world, and as the interests of the German import syndicate at this end are being looked after by the representative of Herr Stinnes, it is probable that every effort will be made to carry it to completion. On the face of it, Germany benefits most, since she can, in reason, practically fix her own price for the goods she ships hither, and once having fixed it and covered the exchange—which she has four months' credit to meet—her liability virtually ends. Her market is assured, and although the intention is to make Government requirements, such as railway material, ships, oil-boring plant, and public works plant generally, the first call on the proceeds of the cattle, provisos are made for the importation of other goods such as may be required by the general import trade. Indeed, a German-Argentine syndicate is said to be in readiness to take this part of the business off the Government's hands should the scheme be definitely approved, and altogether there seems to be a real danger of Argentina, for the sake of one important industry, sacrificing to a very large extent her economic independence in so far as her purchasing powers are concerned.

Nothing further has been heard of the proposed National Government loan to be sought abroad, but in the Province of Buenos Aires the Government has formally asked the Senate to sanction a call for £5,500,000—or the equivalent of that sum in other currencies. The terms offered are 6½ per cent. per annum and 1 per cent. per annum accumulative amortization, this latter not being obligatory until January, 1927. Special guarantees would be afforded by the taxes on property transfers,

stamps, and legal dues, also the profits derivable from the public works authorised by the Law which is to give the loan official sanction. Proceeds are to be devoted as follows:—\$34,000,000 paper to consolidation of part of the floating debt of the province; \$5,000,000 for a cattle market and freezing works in Avellaneda; \$2,500,000 for a general market in Avellaneda; and sundry other objects which may or may not be urgently needed, but are certainly of no direct value as revenue producers. The floating debt of the province is \$59,000,000 paper, while its total indebtedness, as quoted in the official preamble introducing the proposed loan, is set down at \$390,026,000 paper.

General business in Argentina during June has been abnormally quiet, a condition which naturally reflects on the local money market, and above all, on the banks, who are competing keenly for first-class business at 5 per cent. per annum, but unwilling to extend facilities to anything not classifiable under that category save at much higher rates, say 7 to 8 per cent. per annum. The movement on the local stock exchange continues good in respect to National bonds and Cédulas of the National Mortgage Bank, though the application for leave to issue the 13th Series has caused a slight set-back in price, the two previous series being now \$91.40 for cash, which is 0.50 cents down on the month. Exports are moving more leisurely than they did in May, but nevertheless over 3,000,000 tons of wheat have left the country; the wool stocks are down to what may be considered the unsaleable residue, some two million kilos, and the demand for finest dry hides has been firm. Wheat prices fell considerably during the first fortnight of June, touching \$11.60 Argentine paper per 100 kilos, but they have since improved, and may now be quoted at \$12.20 spot Buenos Aires. Maize and linseed are \$8.40 and \$20.15 respectively, with markets firmer. Homeward freight is weaker, a 5,800-ton boat, prompt, San Lorenzo/U.K.-Cont. being fixed at 26s 3d, while as low as 19s has been accepted for parcel cargoes, Buenos Aires/Rotterdam.

POLAND.—THE DEPRECIATION OF THE POLISH MARK—CAPITAL LEVY—GROWTH OF THE BUDGET DEFICIT—RAILWAY FINANCE—FORMATION OF A NEW CABINET.

(FROM OUR CORRESPONDENT.)

WARSAW, July 12.

FROM October to May the financial situation of Poland was steadily improving. As shown in my last letter (*Economist*, July 1st), the speed of the printing press became slower month by month, and in April and May one could observe for the first time since the foundation of the new Polish Republic a reduction of the advances made to the Government by the Polish National Bank. This check to the printing press had a very beneficial influence on the foreign exchange market. The movements were less spasmodic, and a certain stabilisation could be observed. Unfortunately, since the beginning of June the Polish mark has resumed a downward trend. English pounds, which at the end of May were quoted 18,000, have reached a level of 29,000. American dollars rose during the same period from 4,000 to 6,000, French francs from 390 to 486. To a certain extent this recent collapse of the Polish mark is the result of the Cabinet crisis, which has lasted more than six weeks. During this time the country has been without a Government, and obviously such a situation must have a detrimental influence on the finances of the country. But the real reasons for the resumed decline lie much deeper, and the political crisis has only aggravated the movement. The financial improvement of recent months was achieved by the collection of the capital levy, which yielded 50 milliards. Though this amount is 30 milliards below estimate, it enabled the Government to cover its expenditure for several months without resorting to the printing press.

The percentage of the collected levy as compared with the assessed amount shows very great divergences in the different parts of Poland, as shown below:—

	Per Cent. of Amount Assessed.
Former Congress Poland.....	35.5
Eastern districts	23.7
Former Austrian Poland.....	43.1
Former Prussian Poland.....	73.9

In the former Prussian Poland, when under German rule, the population was accustomed to a regular payment of taxes. The percentage is more than double of that in the former Congress Poland, and three times greater than in the eastern districts. In those two parts which were subject to Prussian administration the collection of all taxes encounters much greater difficulties. It seems that the yield of the capital levy is already exhausted. The last return of the Polish National Bank for June reveals the beginning of a new period of inflation. During that month the paper circulation increased from 276.0 to 300.0 milliards. This is the greatest increase since October, 1921. Advances to the Government increased in June by 18 milliards (from 217 to 235 milliards), as compared with 15.5 milliards in November, 6.0 milliards in December, 6.4 milliards in January, 3.2 milliards in February, 1.5 milliards in March, and a decrease in April and May.

The financial outlook is rendered still darker by the increase of the Budget deficit for the current year. According to the Budget of Mr Nichalski, which was presented to the Diet at the beginning of this year, the expenditure was estimated at 591.6 milliards and the revenues at 458.6 milliards, leaving a deficit of 133.0 milliards. It has now been officially announced that the real deficit will be not less than 400 milliards. Mr Nichalski's estimates have been completely upset by the rise of prices, which has forced the Government to increase the salaries of officials by 180 milliards. The rise in expenditure is also partly explained by the growing deficit of the railways. In Mr Nichalski's Budget the deficit of the Ministry of Railways was estimated at 62.5 milliards. Though the railway rates have been increased several times since January, the deficit for the current year will exceed 120 milliards.

The State railways are one of the weakest points in the whole financial system. Mr Nichalski lays special emphasis on this fact in a memorandum which he presented to the Cabinet shortly before leaving office. He is of the opinion that the railways are not economically administered. According to the report of a special Commission the staff of the railways should be reduced by 40,000. Mr Nichalski thinks that under present conditions, as long as the railway authorities are certain that all deficits must be covered by the Ministry of Finance, no marked improvement may be expected. The railways must be administered as business undertakings, covering all expenditure from their own revenues. Should the Minister of Railways not succeed in achieving this aim the lease of the transport system to a foreign concern would become necessary. This is the opinion of the former Minister of Finance, who in this respect is backed by a resolution passed in March by the Union of Polish railway engineers. In an interview with a representative of the *Czas*, Mr Nichalski dwelt in the first instance on the intimate connection which exists between the railway problem and the future of the Polish finances. "Without an improvement of the whole railway administration," he concluded, "a normal Budget and the introduction of a new sound currency is impossible." Mr Nichalski is in general in favour of leasing State undertakings to foreign concerns. In a letter written to Mr Sliwinski, who tried to form a new Cabinet, he declared that he could retain the portfolio of the Ministry of Finance only under the condition that the Diet will vote a Bill authorising the Government to form a special joint-stock company for the exploiting of the tobacco monopoly. The capital of this company subscribed in a foreign currency was to be divided in equal parts between the Government and a foreign concern. Mr Nichalski is strongly attacked by the Socialist Press for his plans "of selling the country's resources to foreign capitalists." This attitude is not shared by the majority of competent writers, who express the opinion that Poland in exchange for obtaining a

foreign loan must make some sacrifice and give real guarantees.

The collapse of the mark has convinced the parties of the Diet that the Cabinet crisis cannot be protracted indefinitely, and that some solution must be found. Hitherto the equilibrium of forces existing between the parties of the Right and of the Left has rendered the formation of a Parliamentary Cabinet impossible. The new Cabinet will have no pronounced political character. Its principal task will consist in a solution of the financial problems with which the country is confronted. In its character the new Cabinet will be quite similar to that of Mr Ponikowski, who accepted the office of the Prime Minister in October of last year when the depreciation of the Polish currency forced the parties of the Diet to put an end to their political quarrels and to seek a compromise.

SWEDEN.—THE EIGHT HOURS DAY—A NEW RAILWAY—WEATHER AND CROPS—A BOND ISSUE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 20.

THE eight-hour working day, established by law two or three years ago, does not seem to have been a success. The Employers' Union, which has made investigations in the matter, has come to the conclusion that the eight-hours' day is a great misfortune for the whole country, and the sooner the law is abolished the better. Investigations made in the pulp industry give the result that for this industry the general increase in costs caused by the eight-hours' day amounts to 15 per cent. The very much increased working intensity, which was promised by those who were in favour of the law, does not seem to have become a fact. It is believed in some quarters that if this law had not been passed we would have been better able to meet present competition and unemployment would have been less.

A great deal of interest is at present centred on the plebiscite on August 27th, when the votes will be given all over Sweden for or against prohibition. It seems as if those who are for prohibition are mostly to be found in the country, while the town inhabitants, as a rule, seem to be more against it. The smuggling of spirits and unlawful trade in liquors are already very lively here. On a single day there were 76 different alcohol cases at the police-court of Stockholm. From a financial point of view prohibition would be serious, as the income from alcohol taxes is substantial, and would be difficult to replace.

An important line of communication is now ready, and will be opened for traffic shortly. With the aid of this railway one will now be able to go by a direct line from the middle of Sweden up to the heart of Lapland via Wilhelmina. This railway has been badly needed by the inhabitants of the provinces through which it passes, especially Hørjedalen, where many people have been living not less than 70 to 80 kilometres from the nearest railroad, and some have even had to pass via Roraas and Trondhjem in Norway if they wanted to go to Stockholm.

The weather here during the early part of the summer was very dry indeed, and the crop suffered accordingly. When the rain came it was almost too late in some parts and for some crops, and it has been so heavy that it is not feared it might spoil the crops, which generally are not expected to give above average yield. There is some fear of labour troubles among the farm-workers, otherwise the labour market is comparatively peaceful.

The Ropparberg-Hofors concern has just issued a 10 million crown loan against 5 per cent. bonds. The bonds, which were sold at par, had a very good sale, which is quite remarkable, as the rate of interest is only 5 per cent., which is 1 per cent. less than the rate on bonds issued early in spring. The sea insurance company, Ocean, in Gothenburg, has had a good year during 1921, with a net profit of 1,588,110 crowns, compared with 1,872,000 crowns for 1920. A dividend of 27 per cent. is declared.

SWITZERLAND.—DYESTUFF INDUSTRY—LIFE ASSURANCE WITH GERMAN COMPANIES.

(FROM OUR CORRESPONDENT.)

GENEVA, July 24.

THE shares of the Basle aniline dyestuff industry were a week or so ago the object of anxiety to the holders. Rumours of agreement between the German concerns and the leading English, French, and American manufacturers were the immediate cause. But the shares sold by frightened people were willingly taken up at slightly reduced rates, and the uneasiness was quickly allayed. Even in the event of the French, English, and American manufacturers being in a position to use all German methods and patents, there remain sufficient Swiss specialities, which were before the war even exported to Germany herself. It is not generally known that before the war Germany imported up to 20 millions of marks worth of aniline dyestuffs from Switzerland. At any rate, the financial position of the Swiss aniline dyestuffs industry, especially as regards liquid reserves, is now so strong that we may be sure they will in time become actively interested in those of the English, French, and American firms which have really good lasting prospects. There is no doubt that the production of specialities will in future remain with the Basle industry and with the individual firms.

The 30,000 unfortunate Swiss people who have life insurance contracts with German companies to the value of 470 millions of Swiss francs have no very pleasant prospect before them. The German companies are now more or less officially declared insolvent. The sum they owe to their Swiss insured amounts to ten milliards of German marks. The German Government proposed to impose an extraordinary stamp duty on all new policies issued by German companies in order to redeem this enormous liability, but those German life insurance companies having no liabilities in Switzerland offered strong opposition, and there is no possibility of passing such a law through the German Parliament. It will be necessary for the Swiss State to intervene by way of a loan to the German companies, and, unfortunately, there is no possibility that this loan will ever be redeemed. As to the policies, there is still a discussion whether they should be remitted to Swiss life insurance companies or whether the 30,000 insured shall be combined under Government assistance into a mutual assurance company.

Letters to the Editor.

INTER-ALLIED DEBT CANCELLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter to the *Economist* which you published on July 8th I asked, "Am I not right in believing..... that our outstanding debt to America is wholly due to the fact that we backed the bills of France, Italy, and the other Allies for food and munitions supplied not to us, but to them?" You appended a note in which you stated: "It is certainly not the case that we have already paid America for supplies of food furnished to us," and then went on to justify your statement.

In to-day's *Times* there are reported two speeches of the Chancellor of the Exchequer. To the bankers at the Mansion House he said: "It is true that all we owe to-day, outside our own country, we contracted not for ourselves but for others. The debt which we now owe to the United States was contracted on behalf of our Allies." In the House of Commons the same afternoon he spoke of "the amount which we owe to the United States borrowed in the course of the war in order to help our Allies. I think I am right in saying that not a single pound in any way was for the British service."

When two doctors as authoritative as the Chancellor of the Exchequer and the Editor of the *Economist* flatly disagree, whom is the mere man in the street to believe?—I am, sir, yours, &c.,

W. M. A.

July 22nd, 1922.

["W. M. A." must judge for himself. But we venture to repeat the facts. After April, 1917, the United States Government advanced to the French Government nearly 3 milliard dollars. This represents the balance of the account between the two Governments in respect of the American goods supplied to France, on the one hand, and services, &c., supplied by France to the American army on the other. At the same time, the United States Government advanced over 4 milliard dollars to Great Britain in respect of (a) goods supplied to the British Government and (b) credits in New York for the purpose of supporting the sterling exchange. Out of the funds which Great Britain raised in America before 1917 from private sources, a small amount was spent on goods supplied to France and a substantial amount on orders for Russia. But practically none of the 4 milliards of American Government money was spent on goods for the Allies and our borrowings were only of direct assistance to our Allies in so far as our support of the exchange was needed to balance Allied purchases in other neutral markets of the world. The only important qualification of this statement is in certain cases like that of steel, where it was found convenient, for various technical and military reasons, to continue making French shell steel, &c., in British steel works, and to make good the consequent deficiency in our own munition programme by buying American steel. In 1917 such purchases, though directly in substitution for goods supplied by us to France, were paid for out of the British credit in Washington; but before the end of the war the American representatives on the Inter-Allied Finance Council admitted the doctrine of "replacement," and our last purchases of American iron and steel were paid for out of the French and Italian credits in Washington. But, apart from this special case, the industrial resources we used for assisting France could certainly not have made the goods which we bought in America. Nor could they, in practice, have been used for exporting goods to America to pay for our imports. The statement that we should not have run into debt if we had not had to lend to our Allies is only true on the assumption that the United States Government would have lent to Italy and France sufficient dollars to meet all their external requirements, including those from Great Britain, and not merely their purchases in America. In this case our sales to Allies would have given us command of the vital American dollars needed for our own requirements. This assumption is implicit in the Chancellor's statement, and should have been clearly expressed if confusion is to be avoided. In any case, it is not true that "the supplies and food furnished to us" by America have been paid for, and the Chancellor would be the first to admit that his statement was not intended to convey this impression.—ED., *Economist*.]

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am sorry to find you saying that "every section of responsible opinion regards the British debt to the United States as an obligation that must be fulfilled to the uttermost," and I am much afraid that the Treasury delegates who are going to Washington in September will tie us down to some unreasonable agreement. Above all, we must not consent to any variation of our contract which substitutes private investors for the American Government as our creditors.

Whatever may be said about the details, it is certain that our £900 million debt would not have been incurred but for the exigencies of our Continental Allies; yet it is proposed that we should repay the U.S.A. without obtaining payment from France and Italy. Do you really think that we can go on for 25 years paying about £70 millions per annum, when we cannot even now pay £25 millions without suspending the Sinking Fund, and when the Washington Government is doing all it can to shut out the British goods and shipping services by which alone payment can be made?

So far, all these inter-Allied debts and German indemnities have done nothing but hamper trade, create acute distress in special British industries—such as shipbuilding and mining, and stir up ill-will between the Allies. During the war our middle-classes were paying a 5s income-tax while French millionaires were paying

nothing, and even now I doubt if well-to-do people in France are paying much more than half the taxation that is paid by people with similar incomes in this country. If we can pay our debt to the United States, *a fortiori*, France can pay her debt to us; though I would rather see these debts and the Allied claims on Germany scaled down drastically. It is evident from the Chancellor's statement yesterday that the German payments will not be made. You and I never thought they would.—Yours, &c., J. E. ALLEN.

1 Mitre Court buildings, E.C. 4.

THE CATTLE "EMBARGO."

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your article contains, if you will allow me to say, some inaccuracies and processes of reasoning of doubtful value. In the first place, the Dudley election was fought not on the "Embargo" question, but that of "Cheap meat"; the promise made to the electors being that beef would be 6d a lb cheaper if the "Embargo" were removed. You state that "if other countries at any time can show a bill of health as clean (as in your opinion the Canadians have shown), their stores have an equal claim." This is practically what I wrote in the letter which you published in your issue of June 17th last, but how will the new principle be carried into effect? Are you going to revert to the permit system, which was found to be unworkable? It is officially recorded that one dispute with a foreign Government was only settled after 17 years' correspondence! The sanitary law of total exclusion is at least logical and practical. The permit system can, it is true, claim to be equally logical, but it was found not to be practical because it involved the acceptance or rejection by our Ministers of the official assurances as to a clean bill of health of cattle in other countries. The matter in dispute refers to under 3 per cent. of our meat supplies!

I would, moreover, join issue with you as to Free-trade arising on this question. In the interests of "clear thinking" cannot a measure or a policy have a primary object and a consequential or secondary result? And is it not an exaggeration to emphasise the consequential result and ignore the primary object?

With regard to the "Pledge," in the first place, I would point out that you quote it without the context. Whether, as the Premier states, that it was given "on behalf of the Cabinet" or whether his statement, expressed only last year, that the pledge was unequivocal was merely an expression of opinion, surely we arrive at a startling and novel constitutional doctrine. In effect, it is as follows:—Dominion Ministers attend an Imperial Conference armed not only with powers of Plenipotentiaries in the accepted diplomatic sense, but, in addition, they respectively represent, therefore our Ministers have equal powers.

Those who have argued not only that there was no "pledge," but there could have been no "pledge," have on these lines set forth in the House of Commons J. H. Thomas, and accepted by a majority of 76. In view of your acceptance of this new constitutional doctrine, the trade principles appears to be somewhat in the nature of straining at a gnat and swallowing a camel.—Yours faithfully, R. T. HINCKES, Capt.

Mauset Court, Hereford.

[Local exaggerations at the Dudley election are surely immaterial to the main argument. We can see no inconsistency in regarding the exclusion of store cattle (or any other ground than that of real sanitary danger) as an infringement of the Free-trade principle. As regard regulation of imports when the embargo is removed surely the only regulation necessary is that adequate quarantine arrangements should be made where required.—ED. *Econ.*]

Books and Publications.

A COAL TRADE STUDY.*

THE Professor of Commerce in the University of London has written a very business-like little manual on a subject of great practical importance, and his work is none the less valuable because it suggests problems rather than solutions. The author's purpose is to provide matter for thought on the question of coal in international trade. Unfortunately, the number of people who think is quite small, though perhaps they are worth addressing. Professor Sargent, however, really stimulates reflection about the important questions on which he touches, and his way of broadly generalising figures without insisting on minute details is a help towards appreciating the true significance of the facts which he brings into association. As to coal, the chief comparison is between America and Europe (including this country), and important considerations are the extent and commercial availability of the reserves of the mineral which exist. Another important matter is the relative cost of production and transport of coal, including the question of the effect of variations in the price of bunker coal on the cost of transport and prices of commodities in general. The coal factor in general manufacturing costs involves more intricate points, while the vagaries of circumstances during and since the war raise some specially difficult questions. Finally, there is the relation to coal of water power and oil, now and in the future. Professor Sargent covers a wide field, and his outline view of the problems he examines is most interesting.

* "Coal in International Trade." By A. J. Sargent, M.A. London) P. S. King and Son, Limited. 2s 6d net.

UNEMPLOYMENT.*

MR PETHICK LAWRENCE'S "Unemployment" is one of a series of booklets, designed to educate the general reader upon the important economic problems of the day; and it is a model of what such a work should be. Mr Lawrence commences with a comprehensive and orthodox account of the ordinary causes of unemployment, seasonal, cyclical, &c., proceeds to show how these causes "are accentuated by the results of the war, and supplemented by other causes which are purely of war origin," then turns to the question of remedies, and examines the various possibilities both of prevention and relief in a spirit at once scientific and sympathetic, and with much penetration and good sense. This is an amazing range of topics of which to treat within the compass of 63 pages; but the result is not, like so many short books, either a superficial treatment which ignores essential aspects of the subject, or a prodigy of high compression intelligible only to those who know the subject already. On the contrary, not merely is Mr Lawrence's grasp of economic principles sound and sure, but his exposition of them is accurate and thorough, never indulging the reader in easy superficialities when the real point is hard to state. At the same time, he avoids technical phraseology and intricate argument, is always interesting, and should prove entirely lucid to any reader, approaching the subject for the first time, who is capable of a quite moderate degree of mental concentration. This booklet is, indeed, an object-lesson in what may be achieved in the way of popular exposition of complex economic problems by a man who understands his subject thoroughly, realises that what his readers want is subject thoroughly, realises that what his readers want is not lollypops but lucidity, knows what to put in and what to leave out, and can write plain English as well.

THE BANKRUPTCY OF BUREAUCRACY.*

IN France, as in England, war-time "Controls" seem to have produced a lively reaction against anything in the nature of what we, lacking the admirable French word "Etatisme," have to call State Socialism, Collectivism, or, more familiarly, "Webbism"—though this last

* "Le Bilan de l'Etatisme." Par Adolphe Delemer. Preface de M. Jacques Bardoux. (Paris) Payot. 10 francs.

appellation is no longer strictly applicable, Mr and Mrs Webb having felt the general revulsion and adopted a modified Guild Socialism in their latest works. Certainly the very careful and thorough survey of the actual exploits of the various State monopolies controlled or regulated industries in France, which makes up the greater part of M. Delemer's most interesting and valuable book, makes one feel that were the French taxpayer satisfied he would be less than human. M. Delemer's balance-sheet is terribly damaging; what he brings is an indictment of bankruptcy, hardly less.

After a preliminary chapter, which is very well done indeed, on the movement of opinion in relation to the idea of bureaucratic State control, he turns to examine one after another the various departments of war-time industrial administration, passing in review, with the aid of official statistics and reports, munitions, transport, the posts and telegraphs, food, coal and oil, &c. His judgment is severe, but it is impossible to say that it is not just. Again and again he has to quote sentences like this from the Report, in 1920, of the General Controller on the Food Administration:—"A private company which conducted its affairs in this manner would find itself bankrupt." Or, again, "The agents of the Food Department signed contracts that they would assuredly not have made for themselves, and accepted risks they would have never run on their own behalf.....To estimate the responsibility of the Food Department is impossible, but this is certain, that instead of combating a rise in the cost of living, it contributed to its increase." M. Delemer's survey of the Post Office accounts makes any criticisms passed on our own P.M.G. Department look absurd. In 1919 the expenditure was 1,573,699,292f, whereas the receipts were 585,710,200f; in 1920 there was a net deficit of over 1,795,000,000f, and so on. Government control, Government monopoly, far from proving a source of revenue, has proved a source of increasing embarrassment. And always there yawns the five milliard deficit on the Budget, debt charges taking 51 per cent. of the whole expenditure (against 25 per cent. in 1914) and the debt itself standing at over 66 milliards. It is small wonder if the average elector has no very clear ideas as to what changes in the régime of Governmentalised industry should take place, is, in general, very little interested in politics, concerns himself only with trying to get off his back the burden of war debt and war prices. Yet, as M. Delemer remarks in his closing pages, the old mot, "*Faites moi la bonne politique et je vous ferai de bonnes finances*," is as true as ever. In so far as he is not hopeless of this "*bonne politique*," he is, apparently, more sanguine than Professor Bardoux, who writes an introduction to his monograph, and says that, whereas it is obvious that what is needed is a logical separation of executive and administrative functions, a reduction in the number of Ministers, a new system of selecting officials, a modernisation of industrial operations, and a restoration of administrative efficiency, "after three years, nothing of that has been begun. France has neither a Government nor an administration. There are some competent Ministers and some talented officials who still strive to serve—in what material and moral conditions!—a senile, anæmic, impotent wastepaper basket of a State."

COMPANY MEETINGS, &c.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

DIVIDEND AND BONUS MAINTAINED.

CONFIDENCE IN SOUTH AFRICA'S FUTURE.

CHAIRMAN'S VISIT TO SOUTH AFRICA.

The 109th ordinary meeting of Shareholders of the Standard Bank of South Africa, Limited, was held at the Cannon street Hotel, London, E.C., on July 26, 1922.

Mr E. Clifton Brown presiding.

The Secretary (Mr Herbert G. Hoey) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—

This is the second time that we have held our annual meeting in July, but the accounts which I bring before you this year represent a trading period of 12 months, and not 15 months, as they did last year, when the date of our annual meeting was first altered.

The accounts which are before you to-day represent the working for the 12 months which ended on March 31st last, and before going into the figures in detail I would like, with your permission, to call your attention to some of the main factors which affected business during these particular 12 months. Although in this country—and, indeed, I may say throughout Europe—the disastrous results of the war as it affected business were felt particularly in 1920, traders in South Africa, being further away from the centre of trouble, were still making money in 1920, and the tremendous slump in prices which caused such disastrous losses all over the world did not really reach South Africa until 1921. Indeed, at the commencement of 1921 trade was still active, and prices very inflated. One is reminded of a stone thrown into a pool of water, where the rings, although they may be violent when they reach the edge of the pool, only reach there long after the stone has been thrown into the centre. Such, indeed, appears to have been the result of the aftermath of this great war on our Empire, and one of the features of this disastrous fall in commodity prices seems to have been that although everybody seemed sure that it must come, hardly anyone appears to have gauged the time of its arrival correctly.

Trade in South Africa during the period that these accounts cover received a staggering blow, and I think you will agree that it is a matter of great satisfaction and congratulation to those responsible for the working of this bank that the accounts we are able to present to you are so satisfactory, and that, instead of having to reduce the payment to our shareholders, we are still able to pay them a good dividend, plus a bonus.

Last year you will remember that the chairman was able to announce to you the absorption by your bank of the African Banking Corporation, and expressed the expectation that this amalgamation would result in an increase of strength and prosperity. I think, ladies and gentlemen, that this increased strength has enabled the amalgamated institution to offer greater facilities to trade during the recent financial stress than could otherwise have been the case. It proves, I think, that this amalgamation was fully justified, and truly in the interests of our shareholders. And I will go even further, and say that in my opinion this amalgamation has also been in the interests of the South African community at large.

I fully realise that there have been remarks in the Press about the danger of reducing competition amongst banks, and that the existing banks in South Africa are not able to give the accommodation the country requires. I cannot, however, agree that these statements are in any way justified at the present time. In the past there has been too much rivalry of the unhealthy kind amongst banks, with the result that many people have been able to secure more accommodation than their position entitled them to, a state of affairs which is obviously dangerous to the credit of any community, and we have reached the point of realising that whilst healthy rivalry is necessary and beneficial, reckless competition is dangerous to the best financial interests of the country.

Unhealthy Rivalry Amongst Banks.

With larger figures, resulting from the amalgamation of the Standard Bank of South Africa and the African Banking Corporation, we are better able to meet the demands in the vast territory which we cover, and I can assure you that both your board and the management gladly recognise the responsibility which banking in a developing country involves, and are entirely ready to take their proper and their fair share in the development of those vast territories of South and East Africa where they are doing business. It is essential, however, for the credit of the country as a whole that banks, having regard to the great responsibility which rests on them, should not take on business rashly or run any risk of damaging the credit of the country. Rates in South Africa are naturally higher than they are at home, but this is warranted in view of the fact that the business done cannot be as cut and dried as it generally is here, and I venture to say that this bank, in common with the other banks in South Africa, has never refused to give farmers, or their other clients reasonable assistance against satisfactory security or at any time unduly pressed those clients to whom advances have been made.

The chairman last year also alluded to the South African Reserve Bank which had just been established, and I only refer to this matter again because on July 1st of this year one of the chief functions of this Reserve Bank (which is to be the note issuing bank of South Africa in the future) came into operation. We are extremely sorry to lose our note issue, both from a sentimental point of view and also because it was a source of considerable profit, but I think you will agree with me that it is a matter of great congratulation that the retirement of such a very large amount of bank paper and its replacement by the new Government notes has been effected by us so very smoothly and without any trouble, and without having recourse to facilities from the Reserve Bank, or restricting facilities to customers in any degree. When you think that this bank's note issue was over £4,000,000, and that we have already taken over nearly £3,000,000 in Reserve Bank notes to exchange for our own issue, you will realise how large an operation this has been, and how easily a little mismanagement might have caused considerable friction in the financial world.

I cannot think of any further particular feature that I ought to call your attention to, unless it is the question of the date for resumption of specie payments, which has naturally exercised the minds of all South African bankers, and about which considerable controversy has raged. You will all remember that in the Currency and Banking Act of the Union of 1920 there is a clause which provides that gold certificates shall not remain in operation after June 30, 1923. With the state of the world's exchanges as they are, it would appear doubtful whether the 1923 is not too soon for South Africa to resume specie payments, and the Commission who were appointed to study this question have reported to the Government their opinion that this clause must be amended by an extension of time or else by the deletion of the cent improvement in the American exchange, the Government of South Africa have, we learn, removed the embargo on the export of gold coin and bullion, and we can only trust that this action will prove beneficial to trade.

I would now like to take you through our own particular figures in detail, and, with your permission, will start with the debit side of the accounts. Capital and reserve fund remain unaltered, but the other figures show an all-round contraction of, roughly, 10 per cent. This will hardly surprise you, as at our last meeting the chairman predicted that, as a result of falling prices, we should probably see some of our figures at a lower level.

Assistance to Africa's Development.

South African Reserve Bank.

Resumption of Specie Payments.

The Accounts.

Capital and Reserve Fund.

A certain amount of deflation has been going on during the year, and the effect of this is now being reflected in the deposit figures of most of the large banks. Our notes in circulation stood at March 31st at £4,207,800—a decrease of about £400,000 for the year.

I have already referred to the fact that our issue of notes ceased at the end of last month, and the South African Reserve Bank from now onwards will be the only bank issuing notes in South Africa.

Our deposits have fallen during the year by about five millions, but still stand at over 52 millions.

I have also referred to the general fall in bank deposits due to deflation, and in view of this, and also the slackness of trade, the reduction in these figures is not surprising.

Drafts outstanding, acceptances under credits, and customers' bills for collection are items which fluctuate considerably, and beyond noting the fact that they stand at a much lower figure, I do not think I need make further reference to them.

If you will turn now to the assets side of the balance-sheet you will see at a glance that our position is a very liquid one.

Our cash assets, including remittances in transit and native gold on hand stood at March 31st at the satisfactory figure of 14½ millions, as against 12½ millions in March, 1921.

These cash items represent just over 26 per cent. of our liabilities for notes and deposits.

Our investments still figure in the balance-sheet at a little over 5 millions, being approximately £150,000 less than last year, due to certain changes in our investments consequent on the maturity of short-dated Government securities, and this in spite of the fact that we show for the first time the item of £115,000, representing our holding of South African Reserve Bank Stock.

Bills of exchange have fallen from just under 8 millions in March, 1921, to a little over 5½ millions, owing chiefly to the falling off in the imports into South Africa.

Bills discounted and advances to customers stand at £36,442,485—about 5½ millions lower than last year.

At the beginning of the year heavy stocks were held by many of the large importing houses in South Africa, and the reduction of their liabilities to the bank, due to the realisation of these stocks, is reflected in the figures of advances.

Full provision has, of course, been made for all bad and doubtful debts, and securities have been written down to, or below, market values.

Bank property and premises stand at £976,433—being an increase of approximately £80,000 for the year, due to expenditure on alterations and additions, and the purchase of premises at various places.

While talking of premises, as I had the opportunity this year of visiting South Africa and seeing most of our more important premises with my own eyes, I can assure you that this figure—large though it may seem to you—is worthily represented by the offices I saw.

Our chief office in Cape Town, which is being enlarged and is still swarming with builders and scaffolding, struck me as being one of the finest banking halls I have ever been in. It is hoped that when these premises are completed we shall be able more economically to centralise our business, and some departments, which are now working away from the central office, will be able to be housed there, which will mean considerable economy for the bank. I can assure you that this building is well worthy of the important bank in which you are shareholders.

Another very fine building is our new bank in Eloff street, Johannesburg, which, by the business it is doing, has thoroughly justified the money which has been spent on it, and is certainly a very handsome and imposing building.

Other premises of the bank which I visited, both in Rhodesia and the Union, do credit to the bank and are worthy of our great institution; but I have only time to mention these two, which are perhaps two of the most important and have caused us all a good deal of thought before embarking on the expenditure thereon. I am sure you will agree that it is an important thing that our bank should have handsome offices, and that the working conditions of our staff should be as comfortable as we can make them. Improvements and additions to the bank's premises continually have the close attention of the management.

Turning now to the profit and loss account, you will see that our net profits for the year, after making full provision for bad and doubtful debts and contingencies, amount to £502,313, which, added to the £206,724 brought forward from last year, gives us a total of £709,037 to dispose of. Of this sum we have already paid £156,041 as an interim dividend, and have appropriated £50,000 to the further writing down of bank premises.

This leaves a balance of £502,996, which we recommend be disposed of by allocating £100,000 to the Officers' Pension Fund, and by the payment of dividend and bonus at the same rate as last year, leaving £191,225 to be carried forward to the next account.

I feel sure that, having regard to the difficulties of the past year, you will be well satisfied with these results, and it is hardly necessary to remind you that they have been attained during a period marked by a considerable falling off in the trade of South Africa.

You will, I am sure, be interested in the particulars of the trade returns for the period under review, and some details in connection with the most important of the South African industries.

Total imports into South Africa for the year 1921 fell from £107,502,039 to £61,473,849, and exports from £86,058,997 to £65,068,955.

The marked decline in imports in 1921 followed as a natural sequence the excessive and abnormal importation of the previous year, when indents, some of which had been outstanding for a considerable time, were executed with unexpected celerity owing to the falling off in demand in other countries. This resulted in the accumulation in the hands of importers of large stocks of high priced merchandise which were difficult to realise at a time of rapidly falling prices and restricted demand. The uncertainties of price movements and the violent fluctuations in foreign exchange also tended to make importers cautious, and fresh indents were limited as far as possible to immediate requirements. Thus, whilst the fall in values affected the totals to some extent the reduction in quantity was a more important factor, and the tonnage of overseas cargo landed in Union ports was about 36 per cent. less than in 1920.

The value of the gold output of South Africa (Union and Rhodesia) for the year 1921, on the basis of £4.24773 per fine ounce, was £37,015,772, which compares with £37,135,045 for the previous year. The gold premium, estimated by the Transvaal Chamber of Mines at an average for the year of just over £1 per ounce, increased the value of the output for 1921 to £45,982,421, as against £47,687,313 in 1920, when the average premium was £1.23143 per ounce.

The annual production of gold throughout the world has steadily declined since 1915, but the fall has been proportionately greater in other countries than in South Africa, and the percentage of the whole represented by that country's output has accordingly increased, and in 1921 was about 56 per cent. of the world's total production for that year.

The downward trend in output figures was less marked in the last twelve months than in the preceding periods, but the present year will show a further material decline owing to the cessation of work on the mines during the recent strikes. The output from the Transvaal for the first quarter of this year was only 639,733 ounces, as against 1,883,976 ounces in the corresponding period of 1921.

The price of gold averaged 107s 0½d per fine ounce in 1921, compared with 112s 11½d per fine ounce in 1920. The highest quotation recorded was 127s 4d in February, 1920. The maximum and minimum quotations in 1921 were 115s 11d in January and 97s 7d in December, and the price has since declined further to 92s 5d.

The substantial fall in the price of gold in the latter months of last year revived in an acute form the question of the payability of the low grade mines, and a conference was arranged between the Chamber of Mines and the representatives of the workers with a view to readjustment of wages and working conditions.

Unfortunately the conference proved abortive, and further efforts by the Government to find a solution satisfactory to both parties were unsuccessful. The failure to come to an agreement resulted in a strike being declared by the miners in January last, and the industry was brought practically to a standstill. The strike continued for more than two months and developed into a revolutionary outbreak, necessitating the declaration of martial law and the employment of the armed forces of the Government to restore law and order. This was only accomplished after a good deal of bloodshed and regrettable loss of life.

Profit and Loss Account.

Pension Fund and Dividend.

Trade Returns.

Gold Mining Industry.

Output Figures.

Gold Prices.

The Strike.

[July 29, 1922.]

With restoration of order the strike collapsed and work was resumed on the terms offered by the Chamber of Mines, though with the promise of a Government Commission to inquire into the whole position. This Commission is now pursuing its investigations.

The gold output for Rhodesia for 1921 was 585,525 ounces valued at £2,487,152, as compared with 552,498 ounces valued at £2,376,052 for the previous year.

Gold discoveries are reported from South West Africa, East Africa, and Portuguese territory, but sufficient development work has not yet been undertaken to prove their value.

The Union Mint building at Pretoria has been completed, and will be in a position to commence operations towards the end of the year.

The *Refinery at Germiston* commenced working in December last, but had to close down temporarily during the strike. Work has now been resumed, and the bulk of the gold produced on the Witwatersrand will be lodged there for refining.

Whilst the effects of the recent industrial upheaval are likely to be felt for some time, and will be reflected in reduced output and dividends this year, it is generally hoped that the gold mining industry will benefit from more stable working conditions. Reduced costs of production will bring within the margin of payability large quantities of ore which could not profitably be worked under the old conditions, and the lives of some mines should be prolonged.

The output of diamonds fell from 2,545,017 carats in 1920, valued at £14,762,899, to 806,643 carats valued at £3,103,448 in 1921. Of the latter total 659,005 carats valued at £2,208,758 were produced at the mines, and 147,638 carats valued at £894,690 by alluvial workers.

These figures reflect the extent to which this important industry has suffered from the abnormal conditions generally prevailing. Demand has been restricted owing to the financial situation, but an adverse factor has been the forced realisations at low prices of large quantities of cut stones from Bolshevik and other Continental sources.

Hitherto America has been the most important buyer of South African stones, but the requirements of that country during the past year have been supplied chiefly from the other sources mentioned.

Exports of diamonds from *South West Africa* in 1921 were 171,188 carats, compared with 606,423 carats in 1920.

The production of coal within the *Union* for the year 1921 amounted to 11,389,015 tons valued at £4,989,028, which compares with 11,473,464 tons valued at £4,519,665 for the previous year.

The output tonnage in 1921 showed a slight decrease compared with the record figures of the previous year, but better average prices were obtained at South African ports owing to the high cost of production in other countries and the strike of mine workers in Great Britain in the earlier part of the year. With renewed activity in coal mining in Britain, however, the South African export trade has suffered from the keen competition in Eastern and other markets, and output in recent months has declined. The position was further adversely affected by industrial troubles in the Transvaal in the early months of this year.

To assist the export trade considerable reductions have been made in railage charges from the mines to the ports, and this pithead prices at the collieries have also been reduced.

The labour position showed no material change during last year, but early in January this year a strike of white miners was declared following proposals to reduce wages. The strike failed after lasting for more than two months, and many of the strikers have not been re-engaged owing to the present position of the industry.

Both output and shipments during the past year show record figures for the industry in Natal.

In Rhodesia the whole of the output comes from the Wankie collieries, whose total sales for the year ending August 31, 1921, were 314,125 tons, which compares with 320,477 tons in the previous year.

Owing to the fall in the price of copper which did not permit the profitable production of the metal, the output has been greatly reduced, although a considerable amount of copper ore still continues to be exported from South West Africa. Development work and the erection of additional plant is being proceeded with in anticipation of renewed activity when the demand in overseas markets improves.

The average price of this metal in London in 1921 was £165 5s 7d per ton, as against £295 16s 3d in 1920, and this fall in value is

responsible for the curtailment of the output from 2,463 tons to 1,439 tons.

Asbestos occurs over wide areas in the Cape Province, Transvaal and Rhodesia, and numerous fresh discoveries have been reported during the year. Output has been temporarily curtailed on account of market conditions, but as these improve further developments may be anticipated.

This industry continues to make good progress and production last year exceeded previous records. The iron and steel industry in South Africa has advantages in the way of ore reserves and ample fuel supplies at very moderate cost, but progress during the year has been hampered by existing trade conditions and industrial unrest. As conditions improve expansion of the industry may be looked for, and given efficient management it should be able to hold its own against overseas competition.

There is but little doubt that South Africa is rich in deposits of other useful metals and minerals, but difficulties of transport and lack of water have in many cases militated against successful enterprise.

It is expected, however, that with the development of the country and the construction of a number of new branch railway lines we can look forward to a material expansion in the base metal industry in South Africa in the near future.

Climatic conditions during the year were fairly favourable on the whole, though the distribution of rainfall in the several provinces of the Union was irregular. Good rains, however, have recently fallen in most districts and the outlook is at present satisfactory.

The farming community suffered severely from depressed markets in the early part of last year, brought about by the rapid fall in values of both stock and produce. The buoyant conditions of the years immediately following the Armistice encouraged farmers to extend their operations, and many of them purchased land and stock at high prices during the boom period, on which no adequate return could be obtained when the reaction set in. Markets improved in the later months of the year and values are showing more stability.

The wheat crop of the Union for the 1921/22 season is estimated by the Department of Agriculture at 5 per cent. below the previous year.

The total imports of wheat and flour for the year 1921 were valued at £751,052, as against £4,708,253 in 1920, but the latter figures were abnormal owing to drought and failure of crops in South Africa the previous season.

The area in the Union under maize, which is the most important of the cereal crops, was estimated at 5 per cent. more than the previous year, but the latest forecast of the Department of Agriculture anticipates a short fall of 5 per cent. in the yield owing to adverse conditions.

There is still scope for greatly increased maize production, and efforts are being made, by improved methods of cultivation and more careful seed selection, to improve the yield, which at present gives a much smaller average return per acre than in most of the principal maize growing countries.

Livestock in the Union is reported to be in good condition generally, and there were no serious outbreaks of disease during the year.

Livestock markets have been very depressed, and farmers have found difficulty in disposing of surplus stock at remunerative prices, though there is still a demand for good breeding animals at a moderate figure. There has been marked improvement in grade of livestock in South Africa of late years, particularly as regards dairy cattle. A recent shipment to England of 100 South African bred Friesland cattle attracted considerable attention, and extraordinarily good prices were realised for them.

In Rhodesia the condition of livestock is satisfactory, but there, as elsewhere, farmers are feeling the effects of the heavy fall in values.

In South West Africa stock raising is the mainstay of the farming community, and the number of head of cattle in the country is given as 470,000. Markets, however, are distant, and at present prices of stock, the cost of transport, and the deterioration *en route* make the returns inadequate. A Commission was appointed during the year by the Administrator to report on the position and prospects of the industry, and as an outcome it is proposed to erect cold storage works at Walvis Bay with a view to establishing a meat export trade.

Dairy farming continues to make satisfactory progress, and the regular returns received for dairy produce at a time when other markets were very uncertain encouraged farmers to devote more attention to this branch of farming. During last year exports of butter exceeded

July 29, 1922.]

million pounds in weight, valued at £252,331, which compares with 727,000 lbs valued at £88,413 the previous year.

The scheme for *grain elevators* in the Union is now being proceeded with and construction work has been commenced at Durban and Cape Town, here port elevators are to be erected with capacities of 42,000 tons and 30,000 tons respectively. Provision is also made for 34 elevators in the country districts with capacities varying from 1,800 tons to 5,800 tons. The work is expected to be completed in time for the 1924-25 harvest, and will be of material assistance in developing the grain trade of South Africa.

Wool exported during 1921 was nearly twice the quantity, though little more than half in total value of the previous year's export, the average price per lb having fallen from 2s 8d in 1920, to slightly under 1s in 1921. The actual exports for the two years were as follows:

1920—119,504,747 lbs valued at £15,988,103.
1921—230,421,915 lbs valued at £8,236,835.

Values continued to fall steadily until May, and, with the exception of the highest grades, wool was practically unsaleable owing to excessive stocks and paucity of demand. In the second part of the year, however, prices gradually improved and, apart from one or two temporary setbacks due to Continental exchange difficulties, the improvement has been maintained.

Stocks in the Union are now about normal and markets are steady on the lower basis of values.

Exports of mohair in 1921 were 17,128,915 lbs valued at £583,643, which compares with 6,289,888 lbs valued at £518,973 in the previous year, and the average price last year was 8½d per lb as against 8d in 1920.

In the years immediately prior to the war more than 75 per cent. of the production went to Germany and other Continental countries, and in the absence of these markets large stocks of mohair accumulated in South Africa, which were for the time unsaleable. With the revival of manufacturing activity in Germany, and a greatly reduced export of mohair from Turkey, demand for the South African article has latterly improved, and local stocks, particularly of superior grades, are finding markets. It is stated that South African mohair has deteriorated in quality in recent years, but attention is now being directed to improvement of flocks and production of a finer quality hair.

Ostrich feathers exported during 1921 amounted to 296,711 lbs valued at £461,533, an average of £1 11s 11d per lb, which compares with 285,144 lbs valued at £547,366 or £1 18s 4d per lb for the previous year.

The depression in this branch of the farming industry shows no signs of lifting, and as feathers may be classed as luxury articles and the demand also depends on the vagaries of fashion, it is not possible to say when revival may be expected.

Hides and skins exported during 1921 were valued at £1,211,835 compared with £4,235,311 in 1920, a decrease of about 70 per cent. In bulk, however, there was very little change and the lower values recorded for 1921 reflect the heavy fall in prices.

Conditions in the markets for hides and skins were very similar to those obtaining for other classes of produce, and local quotations followed the fall in values in other countries.

From East Africa, where large herds of cattle are held by the native population, considerable quantities of hides were exported to European markets, but for the past two years this trade is reported to have been very much restricted and large stocks are held by the coast merchants.

The position of the wine farmers is still unsatisfactory and the industry has not yet recovered from the setback resulting from the excessive speculation in 1920. The value of the wine and brandy exported during 1921 was £116,362, compared with £221,360 the previous year.

The value of fruit exported from the Union during the last two years was as follows:—

Fruit.	1920	1921
Fruit, fresh	£173,561	£421,591
Fruit, dried and preserved	£186,045	£245,597

The satisfactory increase shown is the result of larger production, better organisation, and improved transport facilities. Cold storage accommodation on the steamers of the Union Castle Company has recently been considerably enlarged, and we understand will be further increased to cope with the anticipated material expansion in the export trade. Efforts are also being made to open up Continental markets.

The yield of the sugar crop in Natal for the past three seasons and the quantities exported were as follows:—

Season.	Total Crop. Tons.	Exports. Tons.
1919-20	188,710	16,500
1920-21	143,750	30,000
1921-22	151,500	32,000

Exports of *raw cotton* from the Union in 1921 amounted to 914,268 lbs, valued at £36,527, which compares with 997,238 lbs, valued at £69,830, in 1920. The steady, if slow, progress made in recent years has been checked by the fall in values, but greater care is being given to seed selection and grading, and there should be further expansion if prices improve.

Exports from *Nyasaland* during 1921 amounted to 1,475,232 lbs, valued at £66,560, as against 913,718 lbs, valued at £86,483, in the previous year. Crops for the present season are promising, but the small margin of profit to the grower at present values has discouraged planting, and the yield is likely to be lower.

In *Uganda* cotton is entirely a native crop, but it is the most important product and chief source of revenue in the territory.

The total value of ginned cotton and cotton seed exported from *Uganda* in 1921 was £1,303,470, as against £3,930,326 in 1920.

In *Tanganyika Territory* the cotton crops also suffered from drought, and the output in most districts will be considerably below the estimates.

The area under tobacco in the *Union* is estimated at about 25,000 acres, giving a crop return of approximately 11,000,000 lbs. The major part of this is dealt with by the local factories, of which at the time of the last census there were 66, with a total output valued at £1,951,236. Exports of tobacco from the Union in 1921 amounted to 641,825 lbs, valued at £87,890. The Department of Agriculture estimates that the crop this season will fall considerably short of the quantity reaped last year.

In Rhodesia last season's crops were a record for the territory. The area planted was 9,531 acres, giving a return of 3,746,982 lbs, of which 3,192,662 lbs was Virginian and 554,320 lbs Turkish. Official estimates for the present season anticipate a smaller return owing to unfavourable weather conditions, the crop having suffered both in yield and quality from lack of moisture during the growing period.

Exports of tobacco from *Nyasaland* in 1921 amounted to 4,945,169 lbs, valued at £297,091, as against 4,963,130 lbs, valued at £481,519, in the previous year. Market conditions have improved since last year, but it is stated that large stocks are still held in London.

Exports of wattle bark and bark extract from the *Union* for the past three years were as follows:—

Year.	Lbs.	Value.
1919	140,406,846	602,182
1920	176,819,312	986,484
1921	170,823,744	570,127

The extent of the wattle plantations is estimated at approximately 250,000 acres, nearly all in Natal. In common with all other commodities, values have shown a material decline during the past two years, and stripping of trees was temporarily curtailed or suspended on many estates owing to the restricted demand and accumulation of stocks. Local quotations for chopped bark gradually receded from £12/13 per ton in 1920 to £5 10s per ton in 1921, but have since recovered to about £7 per ton. Wattle extract also declined from about £44 to £24 per ton.

The total quantity of timber used in the *Union* annually is estimated at 17 million cubic feet, of which 1½ million cubic feet are supplied from local forests and the balance is imported. The total value of imports during 1921 was £1,454,948, compared with £3,442,334 for the previous year.

The area under forests and plantations is estimated at approximately 800,000 acres, and though afforestation is proceeding steadily it will be some years before local output can be materially increased.

The area of the tea estates in Natal, according to the latest statistics available, is 3,497 acres, yielding 3,702,634 lbs of green leaf, or 913,751 lbs of manufactured tea. Imports during 1921 were 8,136,316 lbs, valued at £439,169, which compares with 6,672,975 lbs, valued at £597,268, in the previous year.

[July 29, 1922.]

South African production has steadily declined during the last few years owing to labour difficulties resulting from restrictions on Indian immigration, and to the displacement of tea by sugarcane on some estates on account of the more profitable returns obtained from the latter.

Exports of tea from *Nyasaland* during 1921 were 208,255 lbs, valued for Customs purposes at £3,414, as against 496,836 lbs, valued at £22,505, in the previous year. The decrease is due to the cultivation of tea having given place to tobacco.

Coffee from East Africa is now well known on the London market, and offerings find a ready sale at good prices. Exports from *Uganda* in 1921 totalled 48,856 cwts, valued at £94,038, which compares with 43,112 cwts, valued at £141,271, in 1920. The condition of this season's crops is satisfactory, and as freight and other charges have been reduced, the outlook is more promising.

Export statistics for the other East Coast territories for last year are not yet available. In *Kenya* trees are reported to be healthy, and given normal weather conditions, there is promise of a record crop, but in *Tanganyika* the output is likely to be adversely affected by drought.

Sisal is cultivated extensively in all the territories on the East Coast, where climatic conditions appear to be particularly suitable to its growth. For the current season production is estimated as follows:—

	Tons.
Tanganyika Territory	8,000
Kenya Colony	10,000
Portuguese East Africa	7,000

Flax is cultivated extensively in the higher altitudes of Kenya Colony, and considering that the first flax factory was only started in 1914, the progress made is regarded as very satisfactory. The area sown in 1921 is estimated at 20,000 acres, and the yield approximately 2,500 tons of flax and 2,500 tons of tow. The quality of the fibre is improving, and further expansion of the industry is anticipated.

Zanzibar and Pemba supply about 80 per cent. of the world's production of cloves, and it is estimated that there are about 52,000 acres under cultivation, the total number of trees in bearing being about 4,700,000. Output varies considerably, but averages approximately 14,000,000 lbs per annum, for the current season the crop is estimated at 8,000 tons.

As regards other manufacturing industries, the figures of the latest census show an increase in the total output of £52,478,962, or approximately 130 per cent., compared with five years ago. The number of factories increased from 3,998 to 6,890 during the same period.

At the time the last census was taken trade conditions were still buoyant and the effects of falling prices, depression in trade and renewed overseas competition will only be reflected in the later returns now in course of preparation. The recent industrial troubles in South Africa will also affect the position during the current year.

I think you will agree that the balance-sheet figures I have given you are satisfactory, and I see no reason to believe that your Bank will not be able to continue its prosperous course in the future, but South Africa has not yet recovered from the effects of the war, and is indeed a long way from being normal in trade. Banks, as you know, are an indication of the trade of the country, and in times like these we must exercise great caution.

One point I ought perhaps to call the attention of the shareholders to. I have already referred to the loss of the bank's note issue, and this is one source of profit which is cut off. But we must also bear in mind that, with low rates for money ruling in London, it becomes increasingly difficult for the Bank to maintain its profits.

Our fixed charges chiefly under the head of salaries during the last few years have risen very considerably, and this has made it necessary to close a number of small branches and agencies which could no longer be continued on a paying basis.

For this reason we have closed five branches and about thirty agencies during the year, and, in addition, we have in the process of absorbing the African Banking Corporation consolidated our branch system by closing thirteen branches in various places where both banks were formerly represented.

The only new branches opened during the year were at Kigoma in Tanganyika territory and at Vrededorp—a suburb of Johannesburg which is growing in importance as an industrial centre.

Chairman's Visit to South Africa.

I have already referred to my recent visit to South Africa and, with your permission, I cannot close without giving you one or two further details with regard to this.

I had originally meant to visit East Africa, unfortunately this was not possible on the present occasion, which was particularly disappointing since in these territories both planters and traders have been adversely affected by conditions by currency difficulties. The position is, however, I believe, now improving, and I understand that a much more optimistic feeling with regard to the future prevails.

I was accompanied on my visit by Mr Hoccy, our Secretary, and also by Mr Jeffrey, one of the General Managers in Cape Town, and I owe a great deal to these gentlemen, who, with their fuller knowledge of local conditions and details of actual business, were able to post me up and explain local conditions to me, which would otherwise have taken me much longer to ascertain.

We travelled over 8,000 miles during the 9½ weeks I was in Africa, and I was able to see something of Portuguese East Africa (the Mocim-bique Co.'s territories), as well as something of Southern Rhodesia and of the Union Provinces.

In Portuguese East Africa your Bank is at present carrying on business under great difficulties, and until the currency problem in these districts is straightened out it would appear that any British or African bank doing business there must do so at considerable risk of making losses.

In Rhodesia, where I visited Salisbury, Bulawayo and Livingstone, your Bank holds a very strong position, and although the country was suffering from a severe drought and there was much talk of serious loss both to farmers and ranchers this year, I was on the whole greatly impressed with the future possibilities of this wonderful country. But it must always be borne in mind that distances are enormous in this part of the world and transport development is necessary before it can attain the prosperity it deserves. It is remarkable, however, how quickly Rhodesia is going ahead.

I am very thankful that I was able to visit Johannesburg and Pretoria, as at one time it looked as though the revolution would prevent my getting there. This trouble was, however, so satisfactorily dealt with, that within a week of what might have been a disaster of the greatest magnitude to South Africa everything was quiet, and I was able to realise in a quite exceptional way, when I went to Johannesburg within a week of the fighting, how serious had been the danger and what a wonderful escape South Africa had.

I was immensely struck with the size and importance of Johannesburg as a city, and am confident that it will maintain its position as one of the most important distributing and business centres in South Africa.

Another city with which I was much impressed was Durban, and it is remarkable to see the development of the Congella district, with its large warehouses and factories where a few years ago there was nothing but marshy waste land.

I have not time to refer to all the interesting towns and places I visited, but I trust that the results of this visit may be beneficial to your Bank. This I can at least assure you—that the cordiality with which, as a Director of the Bank, I was received everywhere shows in what high esteem the representatives of the Standard Bank are held; and my visit gave me the opportunity of Africa, and of discussing various matters with them in the friendliest of ways, which was not only a very great pleasure to me, but I truly believe of advantage to your great institution.

The general feeling I have, after travelling over so much of South Africa, is one of great confidence in its future, and although it must take time for industry and trade to develop, the country as a whole is so full of rich possibilities that, assuming these can be developed along the right lines, it must, I feel convinced, have a prosperous future before it. My confidence is all the greater since reading in recent mail advices of the important programme of new railway development undertaken by the Union Government.

Although we fully realise our responsibility in the development of the country and have no wish whatever to minimise this responsibility, we feel, as I have said before, that it devolves on us to see that we do not at any time encourage bad banking or bad financial enterprise, but do our utmost to maintain and increase the high credit of this bank and of South Africa.

Prosperous Future Prophesied.

July 29, 1922.]

I cannot, of course, forecast the future, but I think South Africa is learning, perhaps quicker than any other portion of the world, that true prosperity can only be secured by increased production, thrift and real industry, and I have the greatest confidence that, in spite of possible reduced earnings your Bank will be able to maintain its position, and that in continuing to carry out our traditional policy of "steady though cautious progression," we may be enabled to meet all the problems that we are, in the course of natural events, bound to be faced with in the future. (Applause.)

I will now conclude by moving the first resolution, viz:— That the report and balance-sheet to March 31, 1922, now presented, be adopted, and I will ask my colleague, Sir David Barbour, to second it.

Sir David Miller Barbour, K.C.S.I., K.C.M.G.: I have much pleasure in seconding the resolution proposed by the chairman, Lord Middleton, K.P., P.C.: After the admirable and comprehensive statement which we have heard from the chair, I do not imagine that it would be ungracious if no shareholder rose to express our sense of the admirable result that the board has been able to show for the last year's working. Those of us who were shareholders in the African Banking Corporation were sanguine that this amalgamation would not be a great advantage to both banks, but would be, as the chairman has told us to-day, of advantage to South Africa, and it is certainly encouraging to know that, even after so short a time, this result may be regarded as already achieved, and I would venture to congratulate the board especially on the courage with which they have already set to work to evade one of the greatest dangers of amalgamation, the multiplication of staffs and branches which are no longer profitable. We have heard from him of what we may almost describe as the drastic steps which have been taken in that direction, and I think the board have every reason to feel encouraged by the results. I only rise to express what I know is felt—the appreciation of shareholders of the results which in a very disturbed condition of trade, and a not too quiet condition of South Africa, have been achieved in the last 12 months.

The Chairman: I am much obliged to Lord Middleton for his remarks. If no other shareholder has any remark to make I will put the resolution to the meeting.

The resolution was carried unanimously.

The Chairman: I now have to make a formal declaration of dividend by reading the following to the meeting:—"As empowered by the articles of association, on behalf of the board, I now declare a dividend for the six months ending March 31st last of 7s per share on 445,833 shares, as a final dividend for the 12 months ending on that date, with a bonus of 2s 6d per share (making, with the interim dividend, a total distribution at the rate of 16½ per cent. per annum), (subject to income-tax), to be paid to those shareholders whose names appeared on the register on June 28, and to become payable on the 27th inst."

The Chairman: I now have another resolution to propose, and that is, "That Mr William Smart be re-elected a Director of the company." I will ask the Right Hon Lord Sydenham, G.C.M.G., to second this.

The Right Hon Lord Sydenham, G.C.S.I., G.C.M.G., G.C.I.E., G.B.E., F.R.S.: I have very great pleasure in seconding this resolution.

The resolution was carried unanimously.

The Right Hon the Earl of Selborne, K.G., G.C.M.G.: I have great pleasure in moving "That Mr E. Clifton Brown be re-elected a Director of the company."

Mr Horace Peel: I have pleasure in seconding it.

The resolution was carried unanimously.

The Chairman: I have another resolution, and that is to propose: "That Mr James Fairbairn Finlay, C.S.I., be re-elected a Director of the company."

Mr. William Smart: I have great pleasure in seconding that.

The resolution was carried unanimously.

The Chairman: The fifth resolution I will ask Mr. Skeel to propose.

Mr. W. H. Skeel: The resolution that I have to propose is "That Sir William B. Peat, F.C.A., and Sir A. T. Turquand-Young, Esq., F.C.A., and Sir Gilbert Garnsey, F.C.A., be re-elected auditors for the ensuing year at a remuneration of 400 guineas each."

Captain Chas. Slack, F.R.G.S.: I beg to second the resolution.

The resolution was carried unanimously.

The Chairman: Ladies and Gentlemen, it is now my very pleasing duty to move the next resolution, and I am sure it will have the unanimous support of this meeting. It is:—"That the thanks of the meeting be given to the General Managers and other officers of the Bank for their valuable services."

I should like to preface my remarks by a word or two of very sincere regret for the loss which your Bank has suffered in the retirement, owing to ill-health, of one of our Joint General Managers in South Africa, viz., Mr Noel Jennings. His health has been worrying him for some little time, but we did not anticipate that we should be deprived of his services so soon. He came to the Bank in 1897, and during my recent visit to South Africa I was continually having inquiries made with respect to this gentleman, and it is quite evident that he is held in very great esteem by our customers in all parts of South Africa. The loss of Mr Jennings' services to the Bank is, we feel, very great, but we trust the release from his heavy duties will give him renewed health, and that he may have many years of health and happiness in store for him; we know at least that he will always be an ardent supporter of this Bank.

It is impossible for me to over-estimate the value of the services rendered by our General Managers and other responsible officers of the Bank, but the only name that I intend to mention on this occasion is that of our Senior General Manager, Mr. J. P. Gibson, who I much hoped might have been with us to-day, since he is by way of enjoying a holiday at home at the present time. He had, however, an opportunity of visiting Germany and seeing conditions out there, which your Bank thought would be of such value that we asked him to undertake this trip—which he naturally gladly did. His responsibilities in South Africa are very great, and it is with the greatest pleasure that I give this reassurance of the board's absolute confidence in his great ability and judgment.

One of the reasons that I do not on the present occasion mention any other names is that I am nervous, after visiting South Africa so recently, that if I once begin I shall not know where to stop, as many of the officers of the Bank are really worthy of special mention. It must be clearly understood that this vote of thanks includes the members of our staff in all parts of the world where we have a branch or agency, and includes those who work for us at the Head Office in London, who are sometimes apt to be forgotten.

I feel I must refer again for a moment to my recent visit to South Africa, since one of the great objects about which I wished to inform myself was the conditions under which those who work for us—and who are giving the greater part of their lives to the Bank's services—were working and living. I am sure you will agree that the last thing any of us wish is that those who are working for us should be exposed to unnecessary or avoidable inconveniences either during the time they are working in the office or the time they have to spend in their homes. We are a business enterprise, and cannot be a philanthropic institution, but we do wish to see that, as far as possible, healthy conditions exist both in the bank offices and in the homes of those who work for us; and this brings me to one of the difficulties of our foreign service, which I know you will all appreciate. Our branches are situated not only in large towns, but in many cases in outlying country districts and in smaller towns, where, while there is probably plenty of opportunity for the man who is in business and meeting business friends, to pass his time profitably, the same conditions hardly attach to the wives who, although experiencing considerable difficulties in very out-of-the-way places, are able to keep their husbands free from home worries and so enable them to give their best thoughts to the bank's interests.

During my trip, owing to the fact that my wife accompanied me (although in case any shareholder might feel critical, I would like to say that her visit was not at the expense of the bank!), we had several excellent opportunities of meeting the wives of many of our officers. My wife and I attended, and enjoyed greatly being able to attend, a garden party given in Cape Town, also one given at the Country Club in Johannesburg, and another very delightful river party in East London, to which the wives of members of the staff were invited with their husbands.

Although I should be quite out of order in including the wives in this vote of thanks, I do seize this opportunity of mentioning them and thanking them for the assistance they are indirectly giving us. (Applause.)

I am sure, ladies and gentlemen, you will be glad to hear that the conclusion I came to as a result of my visit was that the members of your Bank were well looked after, and, what is I think still more important, there was the greatest sympathy with any legitimate and proper complaint or grievance which was brought to the notice of the General Managers. Whether it is partly the result of

this or not, I am also glad to assure the shareholders that, in my opinion, the set of men who have risen to the rank of managers and other senior posts in your Bank do credit to this institution, and we ought to be extremely grateful to them one and all for the way in which they are carrying out their duties in these distant countries.

With the greatest cordiality I ask you to give this vote of thanks, and I will ask Mr Dodds Fairbairn to second it.

Mr A. Dodds Fairbairn: The chairman has referred to the valuable services which the manager and staff in London have given to the bank, and I am sure all on this side of the table associate ourselves with the remarks that the Chairman has made in that regard. I have especial pleasure in seconding the Chairman's motion, as it gives me an opportunity of acknowledging my indebtedness to the officers of the bank in Africa during my visit there last year. I had the benefit of interviews with the Senior General Manager, Mr Gibson, as well as his assistants, and from these gentlemen I received valuable help in the business matter in which I was specially engaged in Africa. I had also occasion to call at the bank offices in Johannesburg, Buluwayo, Durban, East London, and one or two other places, and in all cases I received equal sympathy and help from the officers, and I can quite confirm what the Chairman has said of his experience in South Africa, that we have an excellent staff out there. At the time of my visit wool and grain markets were somewhat disturbed, as the chairman has hinted at, and naturally there was a good deal of discussion in the hotels and clubs where we were, and these matters came under our notice. On more than one occasion, you may be interested to know, Mr Gibson's name came up, and reference was made to the very able and tactful way in which he was handling what then was a very difficult situation. With these few remarks I beg to second the Chairman's motion for a vote of thanks.

The resolution was carried unanimously.

Mr Francis Shipton (London manager): On behalf of the staff at home and abroad, in South Africa, in New York, in Holland, and in London, I beg to thank you, sir, and Mr Fairbairn for the

way you have proposed and seconded the resolution, and the shareholders for the way in which they have received it. It is a great encouragement to the members of the staff, especially those situated at big distances from the railway line, to know that their services are valuable.

The Chairman: That concludes the business of the meeting.

Lord Fairfax: Mr Chairman and gentlemen, before the business of the meeting is concluded, I should like to have the privilege of proposing a vote of thanks to our Chairman and the Directors of the Standard Bank of South Africa for the very splendid manner in which they have looked after our interests during this difficult and critical time for banking, particularly for banking of an overseas nature. The balance-sheet submitted to us is a striking example of the great capacity and ability which our directors have shown in times of stress—in fact, the most strenuous times the banks have ever had to pass through, when every credit and all new business called for the most careful consideration—and I feel that we are to be congratulated in having the affairs of our institution in such excellent hands. I feel that the managers, and the staff too, have helped a great deal, because without their whole-hearted co-operation such results could not have been achieved. I hope—in fact, I feel confident—that all the shareholders present here to-day will join with me in giving their unqualified support to this resolution, for we are all grateful to the directors for the work they have done on our behalf.

Mr Retallick: Mr Chairman and gentlemen, I have great pleasure in seconding the vote of thanks to the chairman for his statement on South Africa, and I am sure it is a great pleasure to us to have listened to him, and to have had such a clear account of the bank's doings in South Africa. I have therefore great pleasure in seconding the resolution of cordial thanks of the meeting to the directors for their attention to the affairs of the bank and to the chairman for his conduct in the chair.

The vote was unanimously accorded.

The Chairman: I thank you very much indeed on behalf of myself and my colleagues for your kind expression of confidence. The proceedings then terminated.

THE IMPERIAL OTTOMAN BANK.

SATISFACTORY RESULTS DESPITE DIFFICULTIES.
TRADE AND ECONOMIC CONDITIONS IN THE NEAR EAST.
ADVERSE CONDITIONS OF THE PAST YEAR.

EXPORTS AND IMPORTS IN 1920 AND 1921.

The annual general meeting of the shareholders of the Imperial Ottoman Bank was held, on the 26th instant, at Winchester House, Old Broad street, London, Viscount Goschen, C.B.E., presiding. The secretary (Mr Charles E. L. Corbhorn) having read the notice convening the meeting,

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted. I am sure that you will share our satisfaction that this year we have been able to hold our general meeting at a date approaching that which was usual with us before the war. I presume that it will be your pleasure that the reports and accounts, as printed and circulated among you, shall be taken as read.

Before going into the details of our affairs during the year 1921, you will permit me, perhaps, in order that the results obtained may be presented to you in their setting, to make a general and rapid survey of the conditions under which we have had to work.

These conditions are of two kinds: those which are the product of events that have affected similar establishments in varying degrees in all parts of the world, and those which are peculiar to the territory with which we have to deal. With the former you are well enough acquainted to allow me to confine myself to a brief reminder that they have been universally depressing; with the latter I would ask you to let me deal in rather more detail.

UNFAVOURABLE FACTORS IN NEAR EAST.

In the Near East we have a political situation which has grown gradually worse. The unfavourable factors which dominated preceding years prevailed even more emphatically during 1921, and ceding years prevailed even more emphatically during 1921, and the state of instability and uncertainty created by the war was more pronounced. During the year various efforts at mediation were attempted by the Allied Governments. Among these, the most notable was the Conference of London in March, 1921. All alike failed to produce any solution of the Turco-Greek problem or to restore peace. During the second half of the year hostilities broke out afresh in Asia Minor, and in the month of August a Greek offensive took place which, for a moment, threatened Angora itself.

These military operations obliged us to close or to transfer several of our branches as a temporary measure. In the economic sphere—perturbed by the general world crisis to which I have referred—the persistence of a state of war, with its attendant troubles, produced grave results.

TRADE FROM CONSTANTINOPLE.

Constantinople, as you know, owes its importance to its geographical position. It has always been the distributing centre for the countries bordering on the Black Sea, from which trade routes penetrate far to the North, East, and South. During the war, with the closing of the Straits, stocks in the countries dependent on Constantinople, and stocks in Constantinople itself, were exhausted, and it was assumed that on the signing of the Treaty of Sèvres there would be an immense demand for goods of every description. This, indeed, followed, and a period of intense activity marked the year 1920. Important stocks were accumulated at Constantinople to be re-exported to Russia, the Caucasus, Roumania, Bulgaria, and Asia Minor. Then in a few months the movement collapsed. Countries in the Hinterland were cut off or their currencies depreciated, and one by one the doors closed. The shipments to Rumania and Bulgaria became fewer and fewer as these peoples turned towards the commercial centres of the West. The ports of Southern Russia were held by Bolshevik armies and every transaction became precarious.

MARMORA AND GREEK OCCUPATION.

Finally, relations with the neighbourhood of the Marmora itself were rendered extremely difficult by the Greek military occupation. Already new falls in the price of the chief commodities had been produced by the general trade depreciation, and importers were reduced to a liquidation of their stocks at forced sale values. The importation of foodstuffs and articles of first necessity to Constantinople, dependent for these on foreign countries, was strictly limited by the difficulty of re-export, and, in addition, the closing of its export trade, although, on the whole, harvests were fairly good and tobacco, mohair, opium, and silk were in constant demand.

The history of this crisis is reflected in the figures for exports and imports during 1920 and 1921. The total of imports at Constantinople in 1921 was 121,329,000 Turkish pounds, against 169,396,000 Turkish pounds in the previous year. The total exports were 39,380,000 Turkish pounds in 1921, against 47,625,000 Turkish pounds in 1920. The deficit in the commercial balance was, indeed, reduced from 121,771,000 Turkish pounds in 1920 to 90,949,000 Turkish pounds in 1921, but the decrease is evidence not so much of an improved situation as of a pronounced decline in business. It should be regarded as the result of a limitation of imports caused by the depreciation of the currency and by monetary stringency. To this commercial decline the general downward tendency of the Turkish exchange—and even more its instability—was a great contributing factor. In this connection we may remark that Constantinople, owing to the isolation of Anatolia, has had to import from abroad the flour, cereals, and cattle necessary for its own subsistence.

During the year the rates of exchange were subject to violent fluctuations. For the first six months the pound sterling wavered between 570 and 580 piastres. In the month of May it fell to 500. Then it rose steadily till it reached its limit of 875 piastres in October. At the end of the year it stood at 700.

OTTOMAN FINANCE.

All these elements of uncertainty, political and economic, have had their effect on the public finances.

The Ottoman Treasury, deprived of its revenues from Anatolia, found difficulty in meeting even the most urgent of its charges. In order to supplement the resources collected through the Provisional Financial Commission it was obliged to rely on advances from various institutions. Our own establishment lent assistance to the Treasury, and placed at the disposal of the Government the sum of 1,200,000 Turkish pounds as an advance on account of its share in the profits of the Ottoman Tobacco Régie. In the course of this year the advance has been repaid. The receipts of the Administration of the Ottoman Public Debt have similarly been affected by the continuance of a state of war in Anatolia, and by the severance of the capital from its provinces in Asia Minor. The net receipts for 1920-21 amounted to 8,187,000 Turkish pounds, while for 1921-22 they are estimated at only 7,732,000 Turkish pounds.

Such was the situation, and such the conditions, during the past year—political unrest, economic uncertainty, and commercial stagnation. The effect on our establishment has been less severe than might be expected.

In Turkey the chief centres have had a satisfactory movement in current operations and in exchange. As a result of the general situation business in Mesopotamia, Palestine, Cyprus, Egypt and Greece has suffered a certain inevitable decline. In Paris and London, on the other hand, our agencies have been able to increase their activities. Together with our agencies in Manchester, Marseilles, and Tunis, they have steadily pursued their task of building up relations between East and West.

NEW BRANCHES AND OFFICES.

During the year we opened a branch at Hamadan (Persia), and offices at Troodos (Cyprus) and at Bethlehem and Ramallah (Palestine). We are now studying the possibilities of further extension in regions bordering on those where we already have a system of branches.

In conformity with the decision of our last general meeting, our Syrian branches were transferred to the Banque de Syrie as from January 1, 1921. During the year the banking business of our subsidiary developed in a healthy fashion, and it is satisfactory to observe that the profits realised have enabled it to distribute a dividend of 6 per cent. on its capital.

BALANCE-SHEET ITEMS.

In the establishment of our balance-sheet, as will be seen from the report, assets and liabilities in foreign currencies have been converted into pounds sterling at the rate ruling on December 31, 1921. Francs have been converted at the rate of 52 to the pound sterling.

That part of our assets which, in the ordinary course of events, we are obliged to keep in francs for the normal purposes of our establishment must necessarily be subject to fluctuations in the

exchange of the franc in its relation to the pound sterling, since our balance-sheet is established in the latter currency.

Principally as a result of the appreciation in the balance-sheet of the sterling value of the funds employed in francs, the balance of the difference on conversion, which figured in the last balance-sheet at £702,569, has been reduced to a figure considerably lower, which is covered by the £511,461 devoted to this purpose at our last general meeting. Thus, at the rate of 52, the deficiency of £191,108, referred to in the report last year, disappears. Consequently, on December 31st last, the balance of the profit and loss account of £268,000 remains available. We have, therefore, the satisfaction of being able to propose to you the distribution of a dividend at the rate of 10s per share.

Recalling our brief survey of the conditions which prevailed generally, and those which were peculiar to the Near East, you will appreciate, as we do, the results which, in spite of adverse circumstances, have been obtained. These results justify hopes expressed at former meetings.

TRIBUTE TO COMTE DE GERMINY.

Before closing, I wish to pay a tribute to the memory of our old colleague the Comte de Germiny, who was a member of the committee in Paris for so many years, and who passed away in March last.

I am sure that I interpret your wishes in expressing our thanks to our Direction-General in Constantinople, to the managements of our London and Paris agencies, and to those of our various branches, as well as to the staff of all ranks. In particular, I should like to address a special message of recognition to the staffs of our branches in Asia Minor, who have given, in a situation of great delicacy, new proofs of their devotion.

I beg to move: "That the report and accounts now read be received and adopted; that the dividend for the year ended December 31, 1921, be fixed at the rate of 10s per share, and that this dividend be payable in Constantinople, London, and Paris on August 1, 1922."

M. le Baron de Neufelize, C.V.O., seconded the resolution, which was carried unanimously.

The Chairman next moved: "That Messieurs le Baron de Neufelize and Arsene Henry, G.C.V.O., be and they are hereby re-elected members of the general committee."

General the Hon. Sir Herbert A. Lawrence, K.C.B., seconded the motion, which was unanimously agreed to.

VOTE OF THANKS TO CHAIRMAN, COMMITTEE, OFFICERS AND STAFF.

Mr A. Hood proposed a vote of thanks to the chairman, general committee, officers, and staff of the bank, both at home and abroad, and, after remarking that the chairman had already referred to the devotion of the staff, said he would like to take that opportunity of thanking his lordship for the very clear statement he had made of the affairs of the bank, and of congratulating the management and the staff on having steered and handled the ship during a period which, he hoped the chairman would be able to say in the not distant future, had been the most difficult, dangerous, and unstable period known in the history of banking.

Mr J. Roselli seconded the motion, which was passed unanimously.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

BANK OF ROUMANIA, LIMITED.

SATISFACTORY PROFIT DESPITE UNFAVOURABLE EXCHANGE.

The annual general meeting of the Bank of Roumania, Limited, was held, on the 26th instant, at Winchester House, Old Broad street, London, Viscount Goschen, C.B.E., presiding.

The secretary (Mr H. Locke) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: As you will see from the report, the profit for the year, after making provision for bad and doubtful debts, income-tax, corporation tax, &c., and placing £2,000 to the pension fund, amounts to £25,384 15s 2d. This amount has been transferred to the contingency account.

Until now we have continued to follow our established custom of converting the accounts from Roumania in the balance-sheet at the parity rate of 25 lei to the £ sterling. The difference between this rate of 25 lei to the £ and the current market rates was covered by the reserve accounts (including the contingency account).

In view of the further heavy and continuous depreciation in exchange which has occurred since the last report was issued, the accounts from Bucharest are now converted into sterling in the balance-sheet before you at the rate current on December 31st last (550 to the £).

In order to increase the contingency account to an amount suffi-

cient to cover the difference on conversion at this rate of 550 lei per £ in the bank's funds employed in Roumania, the directors have transferred to that account from the old reserve a sum of £124,059 6s 7d. This leaves a balance of the reserve accounts at £76,300 9s, which amount is more than ample to cover any further exchange depreciation in the funds actually employed in Roumania.

The reduction in the sterling totals of the balance-sheet is due to the conversion into sterling now being effected at 550 lei per £, as against 25 lei per £ in previous years, although the figures from Bucharest show a large expansion.

In view of the general conditions obtaining during the year under review, your Board have continued to follow a conservative policy of liquidity, and are sure that you will view with satisfaction the strong position which our balance-sheet shows. As you will observe, the year's working has yielded a satisfactory profit, notwithstanding the fact that the unfavourable rate of exchange, of course, operates against us when converting currency profits into sterling.

ECONOMIC AND FINANCIAL CONSOLIDATION.

To turn from consideration of our own affairs to those of Roumania generally, I may say that the country, in the year 1921, has continued its work of economic and financial consolidation. The considerable increase in taxation and the efforts which the Government is making to stabilise the financial situation, by a careful examination of the expenses of the State, should have the effect of bringing about gradually the balancing of the Budget.

The harvest last year was larger than that of the previous year, and the export of cereals amounted to 1,472,760 tons, as against 917,730 tons in 1920. Hopes are entertained that the figures for this year will be even better, although it is still too early to speak definitely on the subject.

The total production of unrefined petrol also increased in 1921 to 1,160,885 tons, as against 1,030,086 tons in 1920, an increase of 129,799 tons; while the oil exported amounted to 362,340 tons, compared with 246,912 tons in 1920. The production has not yet reached the level attained before the war owing to the insufficient means of transport, the lack of labour, and the difficulty of importing drilling materials. During the year, however, new oil companies have been formed, and the position of existing ones has been improved, so that there is every ground for believing that the production will increase greatly in the future. I may add that there are large areas owned by the State and also by private individuals which only await more favourable conditions for exploitation.

Roumania is relatively one of the richest countries in Europe in forests. In the Old Kingdom, as well as in her new territories, the production of timber, &c., is not only sufficient for her own needs, but should constitute one of her principal exports. It is estimated that New Roumania alone could export annually about 100,000 portionate to the resources, owing principally to the lack of adequate transport to the ports on the Danube.

Last September Roumania organised an important exhibition at Bucharest, which was very successful in demonstrating the possibilities of her industrial activity.

In conclusion, I should like, on behalf of the board, to thank the managers and staffs, both at home and abroad, for the valuable assistance they have rendered to us in the conduct of the bank's business.

General the Hon. Sir Herbert A. Lawrence, K.C.B., seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

UNION BANK OF AUSTRALIA, LIMITED. IMPROVED TRADE CONDITIONS IN AUSTRALIA AND NEW ZEALAND.

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 24th instant, at 71 Cornhill, London.

Mr Henry P. Sturgis, who presided, said that, in accordance with the powers conferred upon them by the proprietors in July following October. The issue having been fully subscribed, the capital of the bank, namely, £3,000,000. The premium received on the new shares, £400,000, had been added to the reserve fund. The net profit for the past year, including the amount brought forward, was £619,317. They had placed £20,000 in reduction of the reserve fund, which, with the £400,000 already referred to, now stood at £3,250,000, and after payment of a dividend at the rate of 15 per cent. per annum, free of tax, £86,817 was being carried forward.

The balance-sheet figures now submitted, compared with those for the previous year, showed a growth of £613,000, the principal

increases on the liabilities side being:—Capital, £500,000; reserve fund and balance of profits, £541,000; and bills payable, £33,000; while deposits and circulation showed a decrease of £343,000 and £118,000 respectively. The decrease in deposits was principally in New Zealand, where conditions had been unfavourable, owing chiefly to the poor market for coarse wools and cash meats. On the assets side there were increases in specie and cash balances, £300,000; money at call and short notice in London, £70,000; investments, £157,000; and bills receivable, &c., £1,876,000; while advances were lower by £1,795,000. Advances in February, 1921, were abnormal, owing to the heavy imports in 1920. These had to a great extent been realised, and stocks were now more normal, thus reducing advances, which reduction was reflected in bills receivable owing to large shipments of primary products.

The liquid assets amounted to 8s 6d in the £ of the bank's total liabilities to the public. Taking both Australia and New Zealand, the balance of trade, which in 1920 was £29,000,000 against those countries, changed in 1921 to a balance in their favour of some £5,000,000, which they could not but regard as a satisfactory feature, especially in view of the disturbed trade conditions throughout, out the world since the termination of the war. The past season, both in Australia and New Zealand, was a splendid one. Trade during the last six months of the year under review had shown generally a marked change for the better. Abnormally heavy stocks had been reduced to ordinary requirements, but not without heavy loss to traders. Consumption had been satisfactory, the realisation of produce making money more plentiful. The Commonwealth Government and the State Governments had raised very large loans in 1921 to a balance in 18 months; and in this on the London market during the last 18 months; and in this connection he could not refrain from repeating what he ventured to say at the meeting a year ago—how very necessary it was for States, as well as for individuals, to exercise the greatest caution and economy, in view of the financial position throughout the world.

The report was unanimously adopted.

COMPAGNIE ARAMAYO DE MINES EN BOLIVIE. LOWER PRICES FOR COMPANY'S PRODUCTS. COST OF PRODUCTION REDUCED.

The second ordinary general meeting of the Compagnie Aramayo de Mines en Bolivia was held at the registered offices of the company in Geneva, 16 Quai de la Poste, on July 21, 1922, Mr F. A. Aramayo, chairman of the company, presiding.

The Chairman spoke as follows:—
Gentlemen,—I beg to submit for your consideration the results of the operations of our company for the year 1921. The balance-sheet and profit and loss account, together with directors' and auditors' reports corresponding to that period are already in your hands.

YEAR'S PROFIT.

As you will see by these accounts, the result of the year's working, as remitted by the local administration in Bolivia, gives a profit of 1,984,407.03f for the year 1921, after making allowance for the very considerable loss in exchange due to the fall of 27 per cent. in the value of the Bolivian dollar compared with that of the Swiss franc. This figure has been to a certain extent modified, by as you will see by referring to the profit and loss account, by taking credit for interest on deposits and on securities, and by deduction of directors' fees, law expenses, and other outlays in Europe, leaving the sum of 1,847,844.84f as the net profit for the year. This profit, considerably less than that of the preceding year, which amounted to 5,279,967.08f, is due to the general depression of trade, and low prices that our principal products have fetched in consequence.

In reality our tin ores have produced a loss, with the exception of those of Chocaya, which have just paid for their cost of production.

Bismuth has left a small profit upon the moderate sales made, while the working of these mines has been almost totally stopped. It is only the production of silver which has allowed us to face the needs of our enterprise, and to maintain the payment of dividends.

The sales of black tin, copper, and silver during the period under review, were as follows:—

The sales of tin concentrates amounted to 3,097 tons, at an average rate of £71 1s 6d per 1,000 kilos, the sale of silver sulphides was 91,838 marcos, or 679,233.85 ozs troy, at an average of 40.65d per oz; the sale of silver ore was 64,226.85 marcos, or 475,021.78 ozs troy, at an average of 40.42d per oz. The sale of copper in cement form was 272.44 tons, and that of bismuth was considerably less than in the previous year, and at a much inferior price.

FIRE. LIFE. ACCIDENT. ANNUITIES.

Marine, Leasehold Redemption, Burglary, Fidelity Guarantee, Motor Car, Plate Glass, Personal Accident, Workmen's Compensation, Sickness, Live Stock, Loss of Profits, &c.

OFFICES IN ALL THE CHIEF COMMERCIAL CENTRES

The total production of barilla, or tin concentrates of 60 per cent., in the various mines rose to 2,361 tons, against 2,011 tons in the preceding year.

The production of bismuth in bars and flue dust was limited to 20,328 kilos, produced from mineral which was already extracted and in Quechisla, and 9,103 kilos in rich ore from Tasna.

The production of silver sulphides and exportable silver mineral reached 1,178,215 ozs troy, against 973,038 ozs the year before. The production of copper was 93 tons, against 78.6 tons of the previous year.

Works of development amounted to 3,206 metres run, against 3,885 metres of the preceding year.

SOCAYON SAN BARTOLOME DEVELOPMENT.

The new development work on the level of the Socayon San Bartolomé, of which I made mention in my speech last year, has not given quite the results wished, but it is evident that veins Nos. 2 and 4 correspond to the Quellucuya vein which has been rich at 400 metres higher up, and it is quite probable that the rich mineral which has been found in the level of the Socayon will continue in depth.

Happily we are favoured in this part of the mine by natural ventilation produced by cavities in the rock, and there is little water to interfere with the work of exploration.

In Tasna, as has been mentioned before, the work in bismuth has been almost totally stopped, and the extraction of tin reduced to a very moderate scale, solely with the object of giving work to the workmen.

Before recommending the production of bismuth, we have decided to install the Cottrell condensation process, in order to perfect the extraction from the ore; the material for this plant has already been contracted for in the United States.

Development in Chocaya in silver and tin continues to be entirely satisfactory, down to the gallery on the 175-metre level, and in the shafts which are already down to .190 metres.

RESERVES.

The development of the past year has increased our reserves upon the veins Colorado and Santa Rosa to 130,672 tons, containing 21.19 d.m., i.e., 0.2119 per cent. of silver and 7.04 per cent. of tin over an extent of 388 metres and 58 metres respectively, without taking into account the Llampera, Judios, and Animas veins which contain some silver ore at sight.

The new establishment at Telamayu, with a capacity for treating 75 to 100 tons of ore per day, is on the point of being finished, but we met with great difficulties in obtaining a branch line from the Antofagasta Railway Company, and we have decided to construct an aerial ropeway over the 8,000 metres from the mine to this establishment, the material for which will be shortly shipped from England, and the cost will be about £13,000 f.o.b.

The solution of this difficulty by this ropeway is very satisfactory, and the transport of mineral will be more economical than by rail.

CURRENT YEAR.

Now, referring to the results of the first four months of the present year, i.e., January-April, I am pleased to be able to record that the production has not diminished. On the contrary, that of tin concentrates has increased by 286 tons over that of the same period of last year, copper has increased by 1½ tons, and silver by 11,746.24 marcos, or 86,920.00 ozs, and it is only bismuth which has decreased by 29 tons, the production of this metal having been entirely suspended.

It is, on the other hand, of great interest to report that on account of considerable economies having been introduced, the cost of production has been reduced since the commencement of 1921, and the extraction of tin from the ore improved.

All the above makes us recognise that our general manager, Mr. Malcolm Roberts, and all the company's staff in Bolivia, have energetically carried out the recommendations of the board with a view to alleviating the effects of the present world's crisis, and, consequently, they have deserved well of your company.

In April last, typhoid fever reappeared at Chocaya somewhat severely, but it has been overcome with success by drastic measures of hygiene.

SEQUESTRATION OF DIVIDENDS.

Referring to the report, presented to the general meeting of the English company, which took place in London on September 16, 1920, upon the sequestration of dividends corresponding to German shares since the commencement of the war, I have to inform the shareholders that notwithstanding a vigorous and costly defence on our rights, the House of Lords has decided that the British authorities had the right to act in the manner in which they did, in view of the war legislation.

It therefore now remains for us to study other means to recover these dividends, which, according to the final judgment, the shareholders should not have paid themselves.

Returning to the final results of the year's operations, as shown by the accounts which have been presented to you, the board asks you to confirm the interim dividend of 5 per cent. paid in November last, to vote a bonus of 5 per cent. for the year 1921, and to carry forward the balance of 13,126,869.76f.

CARRY FORWARD.

I would like to state, as regards this large amount carried forward, that the situation is much about the same as that explained last year, and besides that, we must also take into consideration the debit balance of the exchange account, which is the result of the depreciation of Bolivian currency in relation to Swiss currency on that portion of the capital of the company represented by the stocks, merchandise, and local debtors in Bolivia. Although it is hoped that this situation will be modified in the future by an improvement of the exchange, it is prudent to keep a reserve to face this amount.

If any shareholder present wishes for information, I shall be glad to answer questions. No questions being asked, the following resolutions were passed:—

1. That the statement of accounts presented by the board for the year 1921 be approved, and entire discharge given to the directors, especially to the managing director, with thanks for the services rendered by him.

This resolution was carried unanimously.

2. (a) That the dividend of 5 per cent. paid in November, 1921, be confirmed. (b) That the declaration of a bonus of 5 per cent., making a total of 10 per cent. for the year 1921, be approved.

This resolution was also carried unanimously.

The Chairman informed the shareholders that the board had decided to pay a further interim dividend of 5 per cent. on account of the present year, and that this dividend (No. 5), and the bonus (No. 4) of 5 per cent. on account of the year 1921, would be paid on August 1st next to shareholders on the register of the company on July 20, 1922.

The meeting then proceeded to the election of the auditors, and Messrs. Tribe, Clarke, Painter, Darton and Co. were duly re-elected for the year 1922.

A shareholder proposed a vote of thanks to Mr. F. A. Aramayo, the managing director, and to Mr. Malcolm Roberts, the general manager in Bolivia, and his staff, which was carried with acclamation.

The proceedings then terminated.

MINERALS SEPARATION, LIMITED. SUCCESS OF BRIQUETTING TESTS.

The 17th ordinary general meeting of the shareholders of Minerals Separation, Limited, was held, on the 28th instant, at Winchester House, Old Broad Street, London, Mr. Francis L. Gibbs, chairman of the company, presiding.

The secretary (Mr. H. G. Hankins) having read the notice convening the meeting and the report of the auditors,

The Chairman, speaking of the developments of the new briquetting system of the company's invention, said he referred last December to trials commenced to prove the process in conjunction with the Powell Duffryn Steam Coal Company. Wonderful success had attended their efforts. To those acquainted with the existing dry methods of briquette making it was wonderful to see ground-up coal mixed with 50 per cent. of water going into a press, all the water except 4 or 5 per cent. ejected as a clear jet,

and the resultant briquette coming out in compact shape, with a more or less hard surface, and becoming in a few hours so hard that it could be thrown about without breaking. The amount of binder was only about one-third of that usually employed, and briquettes from Powell Duffryn coal could be made to contain only about 3 per cent. ash and 3 per cent. moisture. All they had hoped to establish by their new system had been more than justified, and a new field undoubtedly opened out for a largely increased use of this kind of fuel. The first step, now that the process was proved sound, was to erect plants to produce in quantity, and this work they were immediately setting themselves to accomplish. The Powell Duffryn Company and they had acquired a site in Wales where a plant would be erected to produce daily at least 2,000 tons of "Minseps," the registered brand of the highest class of patent fuel which would be manufactured by their methods in this country. All over the world there were collieries where owners would be handsomely rewarded by cleaning their fine coal by the company's processes, and then briquetting it, mixed with some coarser class of coal; or by cleaning certain classes of coal, so as to make part of it available for cooking and the balance for briquetting. There were many new avenues of business opened by the success of this briquetting system, and all that was required was time to enable the work before them to be carried through. A leading French expert in briquette manufacture had declared that it was not merely an improvement; it marked a revolution in the briquetting industry. So it was. The combination of interests of the two companies was a factor of the highest importance in the coal industry, and the manufacture of patent fuel would experience a revolution from the discoveries they had made.

The erection of a plant treating 600 tons per day at the Skinningrove Iron Company's works had made considerable progress, and they were gratified by the success so far obtained in the problem of getting rid of the moisture content in the coal after passing through the flotation system. At the Oughterside Collieries in Cumberland they had erected a plant with a capacity of 600 tons per day, which had commenced operations and enabled the owners to produce from the coals an excellent metallurgical coke far superior to that previously produced. At the Low Laithes Colliery in Yorkshire a 250-ton plant was being erected, and one of similar capacity was under construction for the Team By-Products Coke Company. The Powell Duffryn, after innumerable tests, had decided to instal two large plants for the production of metallurgical coke. Three outstanding sides of their coal business thus existed: (1) a perfect system of cleaning fine coal; (2) a system under which the problem of reducing the moisture in fine coal was capable of solution; and (3) a new system of manufacturing briquettes which had none of the disadvantages of the present system, was much less expensive, and produced a far purer fuel.

Work had been actively proceeded with in regard to the conversion of semi-coking coals into coking coal. The problem was not yet completely solved, but was receiving close attention.

Turning to their coal business in foreign countries, and remembering that the solution of the briquetting problem had greatly increased the advantages arising from the use of their coal cleaners, the installation of a plant with a capacity of 1,000 tons at Nœux-les-Mines was proceeding satisfactorily, and tests having shown the advantages obtainable by the use of the briquetting system, a briquetting plant would be erected. They were quite satisfied with the progress made in France and other countries.

Having dealt with the ore treatment side of the undertaking,

[APOLOGY.]

In the High Court of Justice.
King's Bench Division.

BRITISH NORTH BORNEO COMPANY v. CHARLES SCRIBNER'S SONS.

The defendants in the above proceedings having submitted to an order and injunction restraining them from further publishing and circulating copies of the book entitled "Where the Strange Trails Go Down," by E. Alexander Powell, published by them in New York and London, on terms which include, among other things, payment of the costs of the plaintiff company of and incident to the proceedings and of advertising this notice, they desire to tender publicly to the plaintiff company their sincere apologies for the grossly libellous and untrue statements and criticisms of the plaintiff company and its administration contained in Chapters II. and III. of the book.

The defendants, having had their attention called to the libels in question, are satisfied that there is no foundation for the defamatory statements complained of, which were published by them without adequate investigation, and they express their great regret that those statements should have been published in a book issued to the public by them, and they hereby unreservedly withdraw all imputations on the plaintiff company.

decrease in the value of the reserves of $\frac{1}{2}$ dwt per ton. The cash position was a strong one, the cash and gold consignment account amounting to £187,445, against which there were creditors on current account and outstanding debentures, interest and dividends amounting to £22,200. The tonnage treated in the first three months of the current year was 46,840 tons, or 600 tons more than in the same months of last year, while the value of the gold recovered was £73,668, which was only £509 less. It was satisfactory to find that, apart from the price of gold, they were not losing ground. They had received a cable that morning stating that good values had been struck at Elandsdrift mine. It was hardly necessary to point out that a considerable amount of work would have to be done in the neighbourhood of the strike, but it encouraged the hope that good ore might be opened up as development proceeded. The new strike showed that at the lower levels prospecting gave good values.

THE NIGER COMPANY, LIMITED. COMPANY'S VALUABLE ASSETS.

The adjourned forty-first ordinary general meeting, followed by the forty-second ordinary general meeting, of the Niger Company, Limited, was held, on the 24th instant, at Cannon Street Hotel, London, the Right Hon. Lord Leverhulme, governor of the company, presiding.

At the forty-first meeting the appointment of certain directors was confirmed and the auditors were reappointed.

The Chairman, addressing the shareholders at the forty-second ordinary general meeting, said that the directors regretted that it was not possible to congratulate the shareholders on the result of the trading of the Niger Company and of its associated companies during the last two years. They need not be alarmed at that, however, for West African trade had had severely hard times to pass through many times in its past history, and had always recovered itself and resumed its interrupted course of prosperity, although, as far as memory or record served to show, it had never been so severely tried as during the two years covered by the accounts. Undoubtedly West African trade would recover again.

In November, 1920, owing to the very serious position in the West African trade and the rapid decline in the values of produce and trading goods, it had become necessary to put the finances of the company on a more secure basis, and an issue of £2,500,000 8 per cent. seven-year notes had been made. With regard to the value of the assets, the directors were satisfied that they were worth, as a going concern, considerably more than what they appeared at in the balance-sheet, and that if a sale of such assets were contemplated, which was not the case, there would be many financiers, especially in America and Europe, ready and willing to purchase those assets at a much higher figure in order to secure the entry into British, French and Belgian West African colonies which the acquisition of those assets would secure to them. In that connection he might say that the West African interests of Lever Brothers, now transferred to the Niger Company, had for the five years prior to that transference earned most substantial dividends, which, added to the earnings of the associated com-

the Chairman said that in the autumn they hoped to be able, from the plant at Ashington, to supply any shareholder with quantities of their "Ovoids" from two tons and upwards, on application to the secretary.

The report and accounts were unanimously adopted, the retiring directors and the auditors were re-elected, and the proceedings concluded with the vote of thanks to the chairman, directors, and staff.

MOND NICKEL COMPANY, LIMITED. CHAIRMAN CONFIDENT OF THE FUTURE.

The annual general meeting of the Mond Nickel Company, Limited, was held, on the 26th instant, at 39 Victoria Street, London, Mr. Robert Mond, J.P. (the chairman), presiding.

The Chairman said that the accounts now presented covered a period of two years to April 30th last. The publication of the usual accounts had been postponed with the consent of the shareholders, owing to the difficulties in settling complicated taxation problems in connection with the company. Although a final settlement with the Revenue authorities had not yet been reached, the ground had been sufficiently cleared to enable the board to submit figures showing the progress of the company during the past two years and its financial position at the end of the period under review. In respect of the two years 1921 and 1922 there was a balance of £610,383 left for distribution. An amount of £220,000 had already been allocated for dividends paid in respect of the year ended April 30, 1921, and in respect of the year ended April 30, 1922, an interim dividend on the preference and ordinary capital amounting to £110,000 had already been paid.

It was now proposed to distribute a further sum of £87,500 on the preference capital, making up the dividend of 7 per cent. for the year, and a further 1s per share on the ordinary capital, free of income-tax.

THE FUTURE.

As to the outlook, the clouds had not yet lifted so as to enable the board to see clearly ahead. The demand for metallic nickel was naturally far less than during the war. With a return, however, to stable conditions in the world and a general trade revival, there was no reason why they should not expect renewed prosperity in the nickel industry. New uses for the metal were constantly being discovered.

Some time must elapse until the consumption of metal for peace purposes reached a tonnage which would enable present producers to work their plants to normal capacity, and in the meantime the company would no doubt have to face hard competition. Thanks, however, to its unrivalled process and excellent organisation, the board had every confidence that they would continue to take the share of the trade to which they claimed the company was entitled. With the view of extending the use of nickel they had acquired the control of Henry Wiggin and Co., Limited, in this country, and had recently participated in the formation of the American Nickel Corporation of Clearfield, Pa.

The report was unanimously adopted.

TRANSVAAL GOLD MINING ESTATES, LIMITED. LARGE RESERVES—GOOD VALUES AT ELANDSDRIFT.

A meeting of the Transvaal Gold Mining Estates, Limited, was held, on the 27th instant, at Winchester House, London.

Mr. Matthew T. Brown, who presided, said the accounts showed a net profit of £28,416, of which approximately three-fourths were earned in the first six months, and one-fourth in the second half-year. With one exception that was the lowest profit since 1905, year. Last year he mentioned that the tonnage treated was 189,752. Last year he mentioned that the tonnage treated was a record, amounting, as it did, to 194,560 tons. This year they came slightly short of that total by 7,930 tons. For the year ended March, 1921, the average price realised for their gold was £5 10s 1d, whereas for the year under review it was only £5 0s 8d, and on their output of over 60,000 ozs of gold the drop in price made a difference of over £28,000, but what was of more serious import was that if they had only been able to get the standard price of gold they would have been faced with a serious loss. Their future depended largely on the results of an energetic prospecting and development programme in the hope of discovering and opening up ore of a higher grade than they had at present available, coupled with an earnest endeavour to reduce working costs.

The fresh ore developed during the year reached the high total of 257,525 tons, of which 186,630 went to replace the ore milled, and 70,895 to swell their already large reserves, bringing them up to 673,760 tons, or over $3\frac{1}{2}$ years' supply of ore for the mills; there were developed nearly 40 per cent. more tons than were milled. The one "fly in the ointment" was that there was a

[July 29, 1922.]

panies of the Niger Company already held, made an annual dividend return of considerably over 10 per cent. per annum on the amount at which those associated companies' properties appeared in the balance-sheet.

So much for earning power, but there was also their capital value in properties apart from and in addition to stocks and other floating assets. The West African associated companies of the Niger Company possessed in West Africa over 9,000,000 acres of freehold land and over 1,000,000 acres of leasehold land on which they had built eight towns and continued to expand them.

The figure representing stock-in-trade had been reduced by over £1,000,000, mainly due to the very drastic writing down which the directors had decided upon. The board had adopted a bold policy with regard to stocks, bringing them down to their replacement, or market, value. Those factors accounted for most of the loss which the company had made, but the future position of the company had been greatly strengthened by that bold course. The directors felt confident that the potentialities of the company were such that the ground which had been lost in the past two years would easily be regained when the rapidly approaching improvement in trade took place.

The report and accounts were adopted, and the formal business was duly transacted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

	</								

This week's experience has once more shown how narrow is the market's surplus, except at times when the Bank of England is lending either to it or to the Government on Ways and Means advances. On Monday the turn of the month brought a sufficient demand to drive borrowers to the Bank for a considerable amount—reflected in an increase of 4½ millions in the Bank's holding of "Other" securities—and on Thursday this unprofitable proceeding had to be repeated, the pressure being increased by the payments and withdrawals of cash for holiday purposes.

That is misleading. Had we been unable to obtain dollar credits our food situation would have become serious and our munitions effort would have been substantially curtailed. In this respect, also, the Note apparently overlooks credits given for the purpose of supporting the exchange. Secondly, it would lead the uninitiated to suppose that America refused to lend to France and Italy without our guarantee. Such a meaning cannot of course be intended by those who framed the Note, because, as everyone knows, America made huge loans direct to our Continental Allies. In the general consideration of the whole position of international debt and credit, the position of Great Britain is strong enough to have no need of the support of inexact statements, which, we fear, will serve only to increase the disfavour with which the Note has been received in America. We can only hope that Sir Robert Horne has succeeded in modifying that disfavour by stating in the House of Commons on Thursday: "I wish to make it clear beyond all possibility of misapprehension that we realise and recognise to the full our obligation to pay our debt to the United States of America."

The Note urges as the reason for the Government's "reluctant change of policy" towards allied debts, the burdened position of the British taxpayer, and this, indeed, was the foundation of the Prime Minister's defence of the Note in the House of Commons. Of the heavy weight of taxation pressing upon this country we are as fully aware as the Prime Minister, and we agree that it is the duty of the Government to give that aspect of the question its fullest consideration. But with the official argument that a bold remission of debt, without relation to American policy, is contrary to the interests of the British taxpayer, we join issue. What is most directly against the British taxpayer's interests is that the present financial tangle, with its potent and deplorable restraints on production, trade, and employment, should remain unravelled. If, on the other hand, in return for surrendering credits whose value is a great deal more than dubious, the British taxpayer could obtain a sound Reparations settlement, the rebirth of confidence, and the revival of world trade, then he would be greatly the gainer by the bargain.

But, although the Note is marred by misleading method of exposition as well as by its basic policy, it contains statements of great importance from which far-reaching results may conceivably arise. The door is left open, as we have shown, for an offer to cancel 15s in the £ of our claims on the Continental nations. If this means that we are to demand the remaining 5s, or £850 millions or so, from our most solvent debtors (viz., France and Italy), the deadlock is complete. But if this statement is to be regarded as purposely ambiguous, and is to be made the subject of sympathetic and broad discussion at next week's conferences in Downing Street, we may yet see some step forward, and this will become the less impossible if any accuracy is possessed by the French rumours of the plans which M. Poincaré will bring to London. Hopeful, too, is the offer (albeit conditional at present on general cancellation) to forego our share of German reparations. This represents a distinct advance on past statements of British policy. If it is in these passages which open the way to a 75 per cent. remission that the real significance of the Note lies, then the position created is less hopeless than a first perusal suggested. A great opportunity has been missed, but a lesser opportunity is still open for concerting the beginnings of a policy that would meet French needs, check Germany's plunge, and redound to the material advantage also of Great Britain and the world.

THE GERMAN BANK RATE.

It was announced last week that the official discount rate of the German Reichsbank, which had remained at 5 per cent. since December, 1914, had been raised to 6 per cent. This movement attracted the more interest because it was contrary to the general movement of money rates in the various centres of the world, which, as our readers well know, has lately been downward, and also because it called attention to what may perhaps be the last phase of the inflationary process as carried on in Germany. It was accounted for, according to a telegram published in the *Times* of July 29th, by the *Börsen Zeitung*, on the ground

that ever since 1921 the Reichsbank has been experiencing difficulty in placing Treasury bills upon the market, and that this difficulty has grown steadily in the current year, and especially of late. "An ever-increasing quantity of these bills has remained on the Reichsbank's hands, and the present developments indicate that the Bank's holding of these bills at the end of the month will be extraordinarily high." It thus appears that, in spite of the astonishing rapidity with which money has been multiplied in Germany by the use of the printing press, it nevertheless remains too scarce for the convenience of the Treasury as a borrower; and this development is an extraordinarily interesting example of the manner in which the process of inflation tends at a point to defeat itself by depreciating the value of the currency more rapidly than it can be turned out, and so making its total value less with each increase in its volume and producing a paradoxical scarcity in the midst of, and due to, a superabundant plenty. In Section V. of the *Manchester Guardian Commercial's* "Reconstruction in Europe," dealing with national finances, tariffs and cost of living, Mr J. M. Keynes has a lucid and interesting article on "Inflation as a Method of Taxation," in which he explains the self-defeating working of inflation when it reaches this point. "In the last stages of inflation," he says, "the prodigious increase in the velocity of circulation may have more effect in raising prices and depreciating the exchanges than the increase in the volume of notes, and the note-issuing authorities cry out against what they regard as the unfair phenomenon of the value of the notes falling more than in proportion to their increased volume. In Moscow the unwillingness to hold money, except for the shortest possible time, reaches a fantastic intensity. If you buy a pound of cheese in a grocer's shop the grocer runs off with the roubles as fast as his legs will carry him to a central market to replenish his stocks by changing them into cheese again lest they lose their value before he gets there. This is what keeps economists in naming the phenomenon 'velocity of circulation.' In Vienna mushroom exchange banks have sprung up at every street corner, where you can change your krone into Zurich francs within a few minutes of receiving them, and so avoid the risk of loss during the time it will take you to reach your usual bank. A prudent man at a café, ordering a bock of beer, will order a second bock at the same time, at the expense of drinking it tepid, lest the price rise meanwhile."

This tendency of notes to fall in value at a greater rate than the inflation is not, in Mr Keynes's view, an anomalous and temporary phenomenon, but merely "the burden." Presumably Mr Keynes does not mean that the public deliberately works the matter out in its own mind, and decides to adopt this method of defeating the attempts of its impecunious rulers to extract services from it for confidence in the value of the currency, except confidence in its money is to turn it into goods or other more reliable currencies, or into anything else into which it can be converted in preference to holding tokens which are certain to decline in value. Thus a wholly artificial demand for commodities is stimulated which puts equally artificial profits into the pockets of producers and holders of goods, turns the ordinary household into a sort of general warehouse, stuffed with articles that are not needed but are preferred to money as a means of hoarding, stimulates employment, and gives a pleasant appearance of industrial prosperity and activity to any country that is afflicted by the disease. In the case of Germany the process is complicated and accentuated by two influences: the eagerness of Germans to put their funds out of the reach of their Government's desire to take hold of them for reparation purposes, and for other objects which a Government finds it necessary to take its subjects' money, and also by the tendency of the citizens of other countries to act on the belief that a holding of German marks was bound to a point to be a profitable speculation. These two influences to a certain extent counteracted one another. In their effect, for example, on rates of exchange, the exigencies of the German to buy foreign currencies or commodities in foreign countries turned the exchanges of the world against Germany while they were moved in her favour by the purchases of marks by foreign

speculators. In each case, however, there was a tendency for these influences to freeze and immobilise a certain amount of German money, and so to assist, by a contrary method, the process of velocity of circulation in making the total value of available money less, in spite of the rapidity in its increase. In the article already referred to Mr Keynes gives tables showing that the German note issue had a volume of 81 milliard paper marks in December, 1920, its volume had increased to 178 milliards in June, 1922, but since the number of paper marks needed to purchase one gold mark had risen from 17 to 90, value of the note issue in milliard gold marks had fallen from 4.8 to 1.9. Thus, while the note issue has been a little more than doubled, the value of the note has been divided by more than 5, and the depreciation has been more than twice as rapid as the inflation, "and instead of having to issue twice as many notes to provide a given sum in gold, the German Government has to issue more than five times as many." It need hardly be said that if similar calculations were made, based on current quotations, they would produce still more striking results. As applied to Russia, the same process is shown by Mr Keynes to have reduced, in spite of the gargantuan activity of the printing press, the value of the total note issue to less than four millions sterling, a figure which evidently cannot be sufficient for carrying through Russian business even in its present attenuated condition. Russia thus points the way to the goal towards which German inflation is conveying her currency—namely, a state of affairs in which "the real value of note printing begins to diminish at a great pace." These alarming symptoms are doubtless evident enough to the careful German authorities, and they are apparently trying to remedy them by raising the Reichsbank's rate. To disinterested observers there seems much reason to doubt whether such a remedy can have any appreciable effect unless it is applied in doses so heavy that they would be likely to increase chaos instead of checking it. When currency is once sufficiently discredited, a Treasury bill or other form of gilt-edged promise to pay is the last form of investment that a far-seeing capitalist would desire. If he buys securities at all he would naturally put money into ordinary shares and stocks the value of which will tend to rise as the real assets of the owning company are pushed up in value by the process of currency depreciation. The claims of industry are always a keen competitor with governments that come into the market as borrowers, and under present conditions in Germany it seems likely that industry's claim will easily prove to be the stronger. Normally a Government by bidding a high enough price can supply its needs, but the German position seems to need much more drastic measures.

SOUTH AFRICA, AUSTRALIA, AND THE GOLD STANDARD.—II.

In our previous article under the above heading, we suggested that the apparent exchange stability under post-war conditions between the currencies of South Africa, Australia, and Great Britain would repay close examination. In the case of Australia (and also New Zealand) this stability has at times existed in appearance rather than reality. The Australasian banks have throughout stubbornly refused to make any appreciable alteration in their official exchange rates, but they have not always been willing to do business at these rates, or, indeed, at any rates at all. For a considerable period during 1920-21, while quoting London money at a premium of only 2½ per cent., they restricted remittance to Great Britain by a rough-and-ready rationing process, which greatly embarrassed Australasian importers who had obligations to meet in this country. These restrictions, however, were only temporary, and it was not very long before the banks had resumed their normal practice of remitting money freely in either direction at rates very close to parity. The South African banks displayed at first a similar reluctance to alter their exchange quotations, and were at one time in much difficulty over the remittance of money to South Africa. But they were quicker to learn the lesson of this experience, and for the past two and a half years they have altered their rates as economic conditions indicated, and have made it clear that they will continue to pursue that policy.

The South African quotations thus represent the actual course of exchange. They show a premium on South African money in the spring of 1920, reaching a maximum of 8 per cent., followed by a discount in the latter part of the year, reaching a maximum of 4½ per cent.; finally, a return to parity early in 1921, with no subsequent deviation of any magnitude. This may fairly be accounted a stable record in these days, especially when account is taken of the violent fluctuations, indicated in the following table, in the course of overseas trade.

(Million £'s.)

	Australia.			New Zealand.			South Africa.		
	Imports.	Exports.	Excess of Exports (+) or Imports (-)	Imports.	Exports.	Excess of Exports (+) or Imports (-)	Imports.	Exports.	Excess of Exports (+) or Imports (-)
1913.	80	79	- 1	22	23	+ 1	43	67	+ 24
July 1919-June '20	99	150	+ 51	39	47	+ 8	73	94	+ 21
July 1920-June '21	164	132	- 32	66	51	- 15	91	62	- 29
July 1921-Mar. '22 (9 months).	71	95	+ 24	22	33	+ 11	38	46	+ 8

Under such conditions, the comparatively small fluctuations of the South African exchange and even the devious devices of the Australasian banks might well seem no more than the momentary bowing beneath the storm of a securely-rooted system. The effective maintenance in both cases of parity throughout the past year strengthens this impression of fundamental stability. It is, therefore, not surprising that the business man, who would hesitate to predict the exchange-rate two years hence of the franc or the lira, the mark, or even the dollar, assumes as a matter of course that the pound sterling will mean the same thing in Cape Town and Sydney as in London.

This confidence, however, is not well founded. The truth is that the present maintenance of the pre-war rates of exchange is due to the conjuncture of a number of essentially fortuitous circumstances. It so happened that the inflation of currency and credit during the war and immediately afterwards reached fairly similar proportions in the Dominions and at home. The subsequent contraction, being due more to world-wide trade depression than to domestic monetary policy, has likewise affected each country in similar degree. Thus the actual trend of monetary events has so far been quite compatible with exchange-rates in the neighbourhood of parity. The great fluctuations in the balance of overseas trade, though they have greatly embarrassed the banks in their endeavours to keep their rates from varying from month to month, are yet far less serious obstacles to long-period stability than would be a trade balance of more moderate dimensions, which continued steadily in the same direction. Had it not been, indeed, for the fact that the balance of trade turning round as it did in 1920, and again in 1921, the pre-war parities must have broken down completely, and beyond the possibility of concealment. On the first occasion the balances of the Colonial banks had become so unduly concentrated in London that they could not have continued to provide facilities for remittance to the Dominions, but for the relief which was accorded them by the heavy import surplus that ensued. On the second occasion, when the converse difficulty arose, the Australasian banks, as we have seen, did in fact refuse to remit money to this country; and, had the balance of trade not turned once more in favour of Australia, they must either have raised their rates for London money or continued to this day refusing to remit.

To some extent, of course, these reactions in overseas trade were the logical consequence of the alterations in the rates of exchange, or the curtailment of the volume of remittance; and, if they could be attributed entirely to these causes, there would be no reason to cast doubts upon the fundamental stability of the exchange. After all, it is in this manner, by correcting rather than preventing an undue balance of trade, that the most unimpeachable gold standards do their work. But at this point it becomes important to think quite clearly. The premium of 8 per cent. on the South African pound in 1920 tended it is true, to check exports from South Africa and to stimulate imports; and certainly it would be possible at any time to bring to an end an undue trade balance in either direction by a sufficient movement in the exchange. But this does not entitle us to conclude that the exchange

[August 5, 1922.]

must ultimately revert to the old parity. On the contrary, precisely the same reactions hold true of the movements in the exchange value of any inconvertible paper currency. A fall in the franc, for instance, serves *pro tanto* to check the imports and to stimulate the exports of France. But the franc does not return to its pre-war value; nor can any stable parity be safely predicted for it in the future. The actual restoration of the pre-war rates for Australasian and South African money must thus be attributed in part to the other forces which have influenced the trend of overseas trade, and, for the rest, to the correspondence between their currency and credit conditions and our own. In the long run, it is upon this last factor that exchange stability must depend. Let us test, then, for a moment the soundness of this foundation.

The direct effect of an exchange movement upon the volume of credit is entirely different under present conditions to what it was when gold standards were working. Before the war, a movement of the exchanges in favour of Britain would have led to an outflow of gold from South Africa and Australia and to a consequent contraction of the credit basis there. To-day, it merely means that the reserves of the banks accumulate in the Dominions rather than in London, and credit conditions become easier. The ordinary credit reaction, which is the first line of defence of a stable exchange system, is thus entirely lacking. In order to secure it, it would be necessary for the banks to act, not merely without regard to, but in actual defiance of normal considerations as to the adequacy of their cash reserves, and to base their credit policies directly on exchange movements. Such a course would be novel and dangerous, and the banks, in fact, do nothing of the kind. In the long run, the volume of credit is governed by the volume of currency. There is no reason to expect that the issue of currency will pursue widely divergent courses in South Africa, Australia, and Great Britain. But there is equally little reason to assume any accurate correlation. The currency of Australia consists for the most part of the Australian notes, issued now by the Commonwealth Bank subject to the limitation of a minimum gold cover of 25 per cent. In South Africa, where hitherto each bank has issued its own notes, subject to the varying regulations of the different provinces, a monopoly of note-issue is now to be entrusted to the new Reserve Bank. These notes must be covered to the extent of 40 per cent. by gold, and the remainder must be secured by certain specified classes of commercial bills. There is nothing in these regulations to link these currencies with the Bradbury. There is nothing, moreover, to secure a contraction of currency when the exchange moves in favour of Britain, or a contraction when it moves the other way. It is, of course, conceivable that the South African Reserve Bank may eventually adopt the deliberate policy of adjusting its note-issue in this manner. But no such policy has been laid down as yet; nor, indeed, would it be practicable, until the Reserve Bank had obtained an effective control over the volume of credit. This they can hardly obtain for some years to come, as an organised discount market has still to be created. Thus, for the time being, both the currency and the credit reactions, which are essential conditions of a fundamentally stable exchange, are absent in both Dominions.

The present equilibrium of the exchanges with Australia and South Africa must, therefore, be deemed precarious. Really wide departures are improbable, unless foolish policies are pursued; but nothing would be a more astonishing coincidence than the successful maintenance of exchange, over an indefinite future, exactly or virtually at par. This conclusion has an important moral, bearing more particularly upon the policy of the Australasian banks. It is earnestly to be hoped that they, too, will in future move their exchange-rates freely and openly, as economic conditions indicate. Their reluctance to do so is intelligible in the light of their past traditions. The export trade of Australia and New Zealand is so predominantly seasonal in character that disturbing oscillations in the exchanges would have been of regular occurrence, if the banks had not been willing to see their balances accumulate, now on the one side and now on the other, without varying their rates. But methods, which are appropriate and laudable for dealing with seasonal or purely temporary fluctuations of trade, are entirely out of place for meeting a prevailing trend of

forces in one direction. The attempt to apply them in such circumstances can only lead to the ultimate inevitability of a more drastic exchange movement than would otherwise have been necessary, if not to a repetition of the preposterous conditions of a year and a half ago. The matter is one which presses for immediate attention. Owing to the recovery of Australia's export trade, coupled with the floating of large loans in the London market, the balances of the Australian banks have already accumulated on this side to an excessive degree. There is real danger that the remittance of money to Australia may become exceedingly difficult in the near future. It is urgently desirable that the Australian banks should meet the situation squarely, by quoting the Australian pound at a really substantial premium.

THE CONDITION OF CENTRAL EUROPE—II.—CZECHOSLOVAKIA—VIEWS OF DR. BENES.

(BY OUR SPECIAL CORRESPONDENT.)

Of the new States of Central Europe, Czechoslovakia is certainly the most advanced in economic development, and perhaps also the nearest to our Western world in everything—save the name. This little State, of some 13½ million inhabitants, has a series of problems of its own, and Dr. Benes, a keen, hard-working little man whose fame has by this time spread far beyond the borders of his own republic, was kind enough to help me in their elucidation.

In the first place, the dominant people here are represented by two branches of a West Slav race, the Czechs of Bohemia and Moravia, and the Slovaks, of what was formerly North-West Hungary. From time to time one hears talk of Slovak autonomy, and this was the burden of my first question. "There are three points to be noted in this connection," said Dr. Benes. "(1) The people of Slovakia are quite uninformed on the point. Further, have nothing to do with the question. Only one party, the so-called 'Popular party,' is in favour of the principle: and this is largely a personal question affecting the views and ambitions of its leader, Deputy Hlinka. (2) I personally have nothing to say against an autonomous Slovakia. It is a question which the Slovaks must decide for themselves. But one point should be emphasised. An autonomous Slovakia must be self-supporting. It must provide its own political and administrative officials, and these, having regard to the neglect of education under the old régime, are not at present available. More important still, it must pay the cost of its own administration, and this, under present conditions, means sacrificing what is in effect an annual subsidy of nearly £5,000,000 from Prague. Regarded from this point of view," continued Dr. Benes, "you will find that the enthusiasm for Slovak autonomy manifested in certain circles will be somewhat damped. (3) The Hlinka party must be admitted that some of the Czech officials who were sent to Slovakia in the first year of the Republic showed considerable lack of tact in dealing with a very religious people. But this has now been changed, and strict orders have long since been issued that all respect must be shown on the part of the school teachers and officials for the religious feelings of the Slovak people. But if political autonomy is not at present a question of practical politics, a scheme for what we might call administrative autonomy for Slovakia is now under discussion. This will provide a sort of super-county organisation (counties) into closer co-operation with the various *zupas* strengthening the bases of local government."

The next question referred to the possibility of a Customs Union between the various succession States. "I am most certainly of the opinion," said Dr. Benes, "that the old Austria-Hungary must be replaced by a new system. At the same time, I do not think that the formation of a permanent institution is now possible. Proposals for a Customs Union which, for various reasons, seem very popular in England and France, seem to me to

August 5, 1922.]

be somewhat doctrinaire, for they ignore the one fundamental fact in Central Europe to-day. The peoples of the old Austria-Hungary are disgusted at the very thought of life in common. The economic difficulties in the way of a 'Zollverein' are great, but these could be overcome. The psychological heritage of centuries, however, is not lightly to be ignored. Accordingly, the new system must be elaborated step by step. Any attempt to rush forward a scheme of reform would have the contrary effect to that desired. As a first principle, the political sovereignty of the various States must remain intact. In the second place, the Little Entente, which is the one stable element in the political life of Central Europe to-day, must be elaborated on the economic side. Temporary agreements must be replaced by normal commercial treaties. Thus the sovereign rights of all parties will be respected. From a realistic point of view, this alone should be our objective, because this alone is possible. On the other hand, this system of commercial treaties should not be solely confined to the States of the Little Entente. In fact," said Dr. Benes, "I have tried three times already to come to an economic understanding with Hungary, and each time I have failed. A similar fate has met my proposals to bring Austria into the orbit of this policy. Nevertheless, I shall continue along this line in the conviction that it is bound eventually to lead to success because it is in accordance with the economic needs of all the States concerned, without exception."

I then asked to what extent the Little Entente might be enlarged on the political side. Dr. Benes replied: "I am opposed, both in principle and in practice, to the old system of alliances based on a *quid pro quo*. In no case am I prepared to guarantee a point that is of no interest to my country in return for a like guarantee from another country on a question of no interest to it. Accordingly, identity of interest is to me the only possible basis for an alliance. The Little Entente, as a political agreement, is based upon the fact that all three countries would be equally threatened in their vital interests by an attempted Habsburg restoration, or by an active irredentist policy on the part of the Magyars. This is the only *casus fœderis*! Thus if the Hungarian Government should receive Otto Habsburg and designate him as future King of Hungary"—(rumours to this effect having appeared in certain newspapers, to which I called Dr. Benes' attention)—"the *casus fœderis* would at once arise, because all three States would feel themselves threatened. If, on the other hand, any of the States of the Little Entente should become involved with any other Power, the other two would be pledged to friendly neutrality but not to active assistance *manu militari*. This is the only principle consistent with Czechoslovakia's desire for peace and economic progress. But it none the less follows that the Little Entente—an agreement *ad hoc*—could not be extended to include other States unless and only in so far as identity of interest existed between all parties. In a recent Treaty with Poland, for example, Czechoslovakia pledged herself to neutrality in the event of a war between Poland and a third Power. But she is not prepared under any circumstance to guarantee a principle that does not affect her own interests."

As a last point, I referred to the question of the German and Magyar minorities in the Republic. Dr. Benes replied: "A change in the attitude of the minority leaders themselves is already observable. In all probability, the Germans will shortly settle down into two main divisions: (a) the party of opposition, an extreme party opposed, in theory at least, to the very idea of the Czechoslovak State; and (b) the party of participation, which will seek to achieve its ends by co-operation with the Czech parties. These two parties will both pursue as their objective the obtaining of the maximum possible of concessions in favour of their German fellow-citizens: they will differ only as to the means that should be pursued to attain that end. In any case, there are only very few irredentists amongst the Germans, and these are found mostly in academic circles. As to the Magyars in Slovakia, the great mass live in a fairly well-defined national block in the South-East, and these are ideal citizens, as the mobilisation last year showed. The Magyar intelligentsia in North and East Slovakia, on the other hand, distributed as it is through regions that are preponderantly Slovak, is dissatisfied

with the present régime and irredentist. In all cases, however, the need for co-operation, based on economic necessity, is bound to make itself felt in course of time, and it is my policy to grant to all minorities in the Republic who will recognise the present *status quo* the maximum of concessions consistent with the existence of the Czechoslovakia Republic itself."

OUR INDEX NUMBER.

ANOTHER very slight increase took place in July in our Index Number of wholesale commodity prices, the figure rising by a meagre seven points, from 4389 to 4396. This is 137 points above the lowest figure of the present year, which was reached at the end of February. For the past two months the aggregate movement has only been 17 points, and although it would be over-bold to suggest that the apparent stabilisation is necessarily more than temporary, recent months have certainly shown an increasing tendency to steadiness. The total figure at the end of July is 39 points above that recorded at the close of last year. But, as the following table shows, the narrow aggregate movement on the seven months is the net result of widely different tendencies in various groups of commodities:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Ber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100
End July, 1914....	579	352	616½	464½	553	2568	116½
" Dec., 1915....	897	446	731	711½	848½	3634	165
" Dec., 1917....	1286½	686	1684½	839½	1348½	5845	263
" Nov., 1918....	1289	782½	1848	903	1389½	6212	282
" Dec., 1918....	1303	782½	1805½	866	1337	6094	277
" Dec., 1919....	1441½	814	2442½	1145	1453½	7364	334½
" Mar., 1920....	1508	914	2974½	1246	1709½	8352	379½
" Dec., 1920....	1344	805	1284	1216	1275	5924	269½
" Dec., 1921....	921½	636	1106	762	931½	4357	198½
" Jan., 1922....	907½	654½	1066½	730	925½	4284	194½
" Feb., 1922....	948	640½	1037½	696½	936½	4259	193½
" Mar., 1922....	980	687	1038	700	892	4297	195½

" May, 1922....	1040½	657	1079	710½	885	4372	198½
" June, 1922....	1000½	676½	1135	690	887	4389	199½
" July, 1922....	994½	669	1120	712½	900	4396	199½

From a glance at the movement in the group totals, it will be seen that the small increase in the July total was produced by narrow conflicting movements in various groups. The decline in the main food group is due to the cheapening of potatoes and barley, which was more than sufficient to compensate for slightly dearer quotations for wheat, flour, oats, mutton, and rice. Among subsidiary foods a relapse in the price of butter, after its substantial advance in June, more than offset a trifling rise in tea. In the textile group, hemp, jute, and silk were all lower on the month, while flax and home-grown wool hardened. On the month American raw cotton, after fluctuations, was nearly stationary, but the Egyptian raw material became cheaper, and the quotations of yarn and cloth also moved downwards. Attention in the Lancashire industry—so far as it was not concerned with the fabric glove controversy—was focussed on reports of the American crop, the latest forecast of which is discussed in a later column by our Manchester correspondent. In their monthly report Messrs Robert Barbour and Brother, Limited, write:—

July and August are the most critical months in regard to the season's crop, but those who pin their faith on an ultimate shortage do not appear to be over-anxious to back their opinion by operations of any magnitude, and speculation, for the time being, at any rate, is at a discount. So far as business generally is concerned, it cannot, unfortunately, be questioned that there has been a marked shrinkage in inquiry, and a still larger diminution in actual bookings. No lasting improvement in the export of cotton goods can really be looked for until Europe is able to absorb to a much greater extent than at present the productions of overseas countries, and the recent renewed fall in the German and French exchange rates has further prejudiced the unsettled outlook in regard to international financial problems as a whole. On the other hand, a return to the pre-war figure of 3 per cent. in the Bank rate is all to the good, whilst news of the monsoon is so far satisfactory that something better might have been expected as India's contribu-

tion to the month's trading than the scattered transactions which are all that can be reported. Quite a hopeful view is taken of the possibilities in respect to China, but so far results have been disappointing in the extreme. As the month closes no relief has yet appeared to quicken into renewed life a dull and listless market, nor have the opportunities increased for really testing how far spinners and manufacturers are prepared to come down from the high rates recently current.

The minerals group shows the largest individual rise, chiefly attributable to steam coal, activity in which has been quickened by export demand, especially for the United States. Copper, lead, and tin also gained a little on the month, while pig-iron eased a little. In the miscellaneous group, the chief feature is a sharp advance in tallow. In the next table we show the movement of each commodity's index number as compared with the level at the end of June, the figure 50 in each case representing the average price during the base period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	104	+ 14	Cotton A	120	— 4	Copper	53½	+ 2
English	95½	+ 14	Cotton E	124	— 12	Minerals	712½	+ 22½
Flour	91	+ 2	Yarn	119½	— 4½			
Barley	85½	— 7	Cloth	113	+ 13	Baltic timber	101½	..
Oats	81	+ 3	Wool	97½	— 6	Leather	89	..
Potatoes	112	+ 7½	Aus. Wool	132	+ 34	Petroleum	73½	..
Rice	106	..	Silk	132	+ 12	Oilseed	85	+ 12
Beef	111½	+ 4	Flax	108½	— 9½	Tallow	127	..
Mutton	113	..	Hemp	125	— 24	Crystals	125	..
Pork	113	..	Jute	108½	+ 16	Rubber	11	+ ½
Cereals & Meat	99½	— 6	Textiles	1,120	— 15	Miscellaneous	900	+ 13
Tea	100	+ 2	Pig-iron	94½	— 24	Total	4,396	+ 7
Coffee	94	..	Steel rails	79	..			
Sugar cane	157	..	Iron bars	125	+ 16			
Sugar beet	106	..	Coal, steam	97	..			
Butter	95½	..	House coal	108	+ 3			
Tobacco	116½	..	Lead	63½	+ 4			
Other foods	669	— 7½	Tin	63½	+ 4			

The net result of these changes is so slight that the total remains, as at the end of June, roughly 171 per cent above the figure recorded at the outbreak of war. Taking the indices of each of the groups and of the total as at July, 1914, as 100, we trace the following movements:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1918	226	222	293	186	241	236
Dec., 1919	249	250	396	247	263	287
March, 1920	261	260	484	269	309	325
June, 1920	261	263	415	278	281	305
Dec., 1920	233	229	209	261	230	231
June, 1921	203	188	158	210	185	188
Dec., 1921	159	180	180	164	168	170
Jan., 1922	157	186	173	158	167	167
Feb., 1922	164	182	168	150	169	166
March, 1922	169	195	168	151	161	167
April, 1922	174	189	164	152	160	167
May, 1922	180	186	175	153	159	170
June, 1922	174	192	184	149	160	171
July, 1922	172	190	181	153	163	171

The minerals group, in spite of the July advance, remains nearest to the pre-war level, while subsidiary foodstuffs show the greatest rise. Taking a comparison with this time last year, primary foodstuffs, minerals, and miscellaneous commodities reveal a heavy fall, while textiles and subsidiary foodstuffs are higher.

In a final table we show percentage changes on the pre-war level for the commodity price index numbers of several important foreign countries:—

	United States.	France.	Italy.	Germany.	Switz'r-land.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	6,809	325	367	292	214
Highest, 1920	227	591	679	3,955	401	366	403	328
End 1921	123	326	594	3,955	171	172	178	209
End Jan., 1922	131	314	577	4,888	170	166	182	205
Feb., 1922	133	307	562	5,899	163	164	178	200
Mar., 1922	132	308	527	6,572	161	165	177	197
Apr., 1922	134	315	524	7,841*	160	164	179	194
May, 1922	137	318	524	9,140*	160	164	179	194
June, 1922	139	326	524	9,140*	160	164	179	194

* Altered to include 16 finished industrial products.

Bradstreet's index number for the United States showed during June the eleventh rise recorded in the past twelve months. The end of June figure is 39 per cent. above the pre-war level, but 41.9 per cent. below the high record of February 1, 1920. Prices in France and Japan also recorded a rise, while the advance in Germany was again very large.

THE FALL IN WAGES.

(BY OUR LABOUR CORRESPONDENT.)

MR FRANK HODGES, when dealing with the wage fall in the mining industry, has declared that it is the beginning of the British famine. And certainly in no industry have wages fallen so heavily. The wages of day workers in Scotland, Durham, South Wales, North Wales, South Staffordshire, Cumberland, Kent, Bristol, and the Forest of Dean are only 20 per cent. above the pre-war level. In the most fortunate districts—Yorkshire, Nottingham, Derbyshire, Leicestershire, Cannock Chase, and Warwick—the day workers are earning only 50 per cent. above the 1914 level. In Scotland day wage colliers who in March, 1921, were receiving 17s per shift are now obtaining 8s 5d. In the Bristol area the wage in March, 1921, was 14s 11d per shift, and is now 7s 2d per shift. The underground labourers all have sufficient reductions on a similar scale, wages being about a half what they were before the coal stoppage last year. The wages of the underground workers vary from 5s 11d per day in the Forest of Dean to 9s 11d in Derbyshire. Surface labourers' wages range from 5s 3d per day in Bristol to 9s 7d in Yorkshire. Many thousands of mine workers are to-day earning less than agricultural workers, and dreadful stories of hardship are being told of the South Wales and other coalfields. The position is so desperate that the Miners' Federation asked for a meeting of the National Wages Board to discuss the general situation with the mineowners. A meeting has been held, and further meetings are to take place.

The victory of the Engineering Employers' Federation has been speedily followed by a demand for a reduction of wages in the industry. It was anticipated that this demand would be made. The shipyard workers have already accepted a reduction of 16s 6d, and a similar demand has been put forward by the engineering employers. It is proposed that the war bonus of 16s 6d should be withdrawn in three stages by reductions of 5s 6d on July 31st, August 28th, and September 25th. The unions balloted their members on the employers' terms. The employers' terms were rejected by a substantial majority on a pooled vote. The officials and executive members, however, have recommended the acceptance of the reductions on the grounds that the unions are unable to put up a successful resistance, owing to the depletion of their funds, and that unemployment is still severe in the engineering industry. It is expected that the reductions will be accepted under protest.

The wages dispute in the printing industry led to the reference of the dispute to the Industrial Court, so far as the Typographical Association was concerned. The Court decided that the existing wages should be reduced "by 3s a week as from the beginning of the first pay week following July 11, 1922; by a further 3s as from the beginning of the first complete pay week in September, 1922; by a further 3s as from the beginning of the first complete pay week in November, 1922, and by 3s 6d as from the beginning of the first complete pay week in January, 1923." The total reduction proposed was 12s 6d per week in the case of men and 6s for women, in four instalments spread over the next 12 months, on the understanding that no further reductions should take place during 1923. The proposal has been accepted by the various unions concerned, with the exception of the Typographical Association. This union claimed that under its rules the executive must submit an agreement to the members before it can be adopted. The Typographical Association accordingly took a ballot of its membership, and, as a result, declined the award of the Court by 14,039 to 8,199 votes. There appears to have been a misunderstanding on the matter. The union Court was a court of enquiry and not an arbitration court. However that may be, an impossible situation has been created. There is a partial stoppage in the provinces. London has separate agreements, and is therefore unaffected. But in the country a number of newspaper and printing offices are either closed or are working under difficulties. In some places the lower wages have been accepted, and there is no likelihood of

the Typographical Association being able to secure better terms than those given in the award of the Court.

In certain smaller industries reductions have lately taken place. In the cocoa and chocolate trade, for example, a half-crown reduction was made on July 3rd in the wages of men and 2s in the wages of women, and on July 4th the London bus men lost 2s per week, the conductors and other outside grades 1s 6d per week. Notwithstanding Mr J. H. Thomas's optimism, there is some apprehension regarding the possibility of an attack on the wages of railway workers, and the dock employers have suggested a further reduction of 2s a day in the wages of the dockers. The union is striving to soften the blow, but up to the present no agreement has been reached.

It does not appear that there can be any further substantial reductions in wages, though no doubt attempts will be made here and there to bring them down still lower, and automatic reductions will take place in those industries governed by sliding scale arrangements, but these will not be considerable, as the cost of living seems to be stabilising about the present level. The greater part—probably three-quarters—of the increases in money wages obtained in industry since the outbreak of the war have now disappeared. It is difficult to see how the general wage level can be forced much lower. The workers are now waiting for the trade revival which was to follow upon wages reductions.

THE QUESTION OF OPTIONS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

In a recent number of the *Economist* (June 3rd, page 1146), occasion was taken to touch upon a few of the more elementary points which arise in connection with option dealing. The freeing of the Stock Exchange, on June 1st, from the war-time prohibition that forbade options, led to a somewhat remarkable increase of attention being paid to operations of this kind. The interest was kindled, and is being vigorously fanned, by a number of outside stockbroking firms, of which a small percentage honourably meet their obligations as these fall due. The greater number, however, judging by the letters which reach us on the subject, do all they can to evade payment, except in the case of small amounts, and even these latter are not always paid. The would-be speculator who sends money for the call option on shares which he sells at a substantial profit, and who demands a settlement of his difference, is told with veiled directness that if he takes the case into the law courts, he will stand no chance of winning a claim which the "bucket shop" can successfully resist by pleading the Gaming Act. This is generally sufficient to stop any troublesome client from pressing his demand for money which certainly belongs to him, but which he is willing to believe (on the strength of the bucket shop's statement) that he cannot possibly expect to get by resort to law. The happy position of the "bucket shop" is, therefore, that if the man loses the money which he is asked to send in the first place, the outsiders keep it; while, if he should happen to win, these so-called brokers can evade payment by pleading that the whole transaction is nothing more nor less than gambling, and accordingly they are under no legal obligation to pay. In other words, the impression is created that an option is nothing more nor less than a bet, from which, if the client wins, he stands a very good chance of receiving no profit. It is not necessary to labour the point that the ordinary man, concerned with the affairs of the general business, fails to understand, or to appreciate, the true nature of an option. This is abundantly manifested by the almost unanimous impression that, if a man gives money for the call of shares over a named period, and if he sells those shares at a profit on the following day, this sale automatically closes the option, and he is entitled to receive, then and there, the difference due to him. Such a view is to miss altogether the function and the possibilities which an option affords. In point of fact, it is very doubtful whether option dealing offers a suitable method of speculation for the man who is not in constant and close touch with Stock Exchange

markets, able to take prompt advantage of sharp movements, and to exercise the various opportunities which it permits. The Stock Exchange man knows well enough that an option, properly considered, is an intricate operation, to make the best of which it is essential that the speculator should realise its scientific character. To consider it as a bet is to miss not only the proper appreciation of what an option is, but also to run the risk of wasting the money, or part of it, given for the call of shares. We take the call as being the more easily explainable part of the business, though money can also be given, of course, for the put of shares, or for the double option, the put and call alike. Those books which deal with the subject, and which purport to explain the matter in a popular manner, are not always happy in carrying out the latter intention. Nor is it possible in the compass of a short article to explore the ramifications of this specialised form of dealing, the great attraction of which is that it limits the loss on a particular transaction. The man who thinks that certain shares are going to rise, but who wants to ensure against losing more than a certain amount of money, is able to support his theory by giving money for the call of the shares over a certain time, knowing that his loss is limited to the amount he stakes, and that, should there be a general catastrophe, he cannot be called upon to pay more than the specific amount of the option money. Whereas, with the purchase of shares, the price might slump heavily, and the loss become substantial.

The majority of options are done for three months, though this is by no means an arbitrary time; Stock Exchange dealers often give money for the call, or the put of shares for a single day. Assuming, however, that a speculator thinks well of the prospects of Chartered, and elects to give 1s 6d for the call of the shares over a period of three months, to the present price of 14s 6d is added about 3d for the value of contingencies throughout the period, and there is also the 1½d commission charged by the broker. This makes a total of 1s 7½d for the option money and expenses, over and above the 14s 9d, the price at which the option is done. If Chartered rise to anything over 16s 4½d, the buyer can sell his shares without loss. Assuming, however, that the price should advance so that he could sell the shares at 16s, it would probably pay him to do so, provided he felt pretty certain of being able to contango the shares until the option matured, because he would always have the chance of buying them back at a profit on any spasm of weakness, thereby lessening the amount of his full liability, viz., the 1s 7½d paid for the option. He might, however, become nervous if the market showed a strong tendency, and repurchase them at 16s 6d, which would add nominally to the loss, or, on the other hand, if the price gave way, this might give him the opportunity of repurchasing at a shilling or so cheaper. What we desire to make clear is the necessity for a man, wishing to make the most of his option, to be constantly on the *qui vive* for opportunities of snatching quick profits in either direction. The option itself runs to its full term. The operator has paid so much for the express purpose of keeping it alive during that period, and if he terminated his option before the latter expired, it would be tantamount to giving away more than was necessary. It will be obvious from even these brief notes that a man must be prepared to carry over his stock if necessary either as a bull or a bear, and therefore he has to be in the position of a principal, for the Stock Exchange rules do not allow contangoes to be undertaken for anyone who is an employee unless his employers provide written consent. Doubtless this short exposition of the nature of an option will not prevent the sending-off of fivers and larger sums to bucket shops by innocent people who are out simply for a "flutter," and who are prepared to treat the whole thing as a bet. At the same time, to those who go a little more deeply into what is a fascinating and a scientific side of speculation, it may be of service to correct some of the popular misapprehensions. Amongst these the chief is that the selling of shares, for which call money has been paid, before that call-money becomes due through the maturity of the option, by no means closes the transaction, nor extinguishes the possibilities of further profits, or losses, to be made through intermediate dealings.

Meetings" later in this issue, is a candid and concise statement of the position of affairs, and a definite assurance is given that the bank's methods have been thoroughly overhauled, and its executive officers given definitely to understand that under no circumstances whatever may they "undertake business which does not satisfy the ordinary and well-understood tests of sound banking practice." The New York Agency has been brought under effective control, and the chairman considered that having regard to the bank's very valuable business connection, and given a period of reasonably stable conditions, "it should not take long to re-establish ourselves on a dividend-distributing basis."

Guinness's Year.—A substantial decline from the big profits obtained by Arthur Guinness, Son, and Co., Limited, during the previous two years is recorded in accounts of this undertaking just published for the year ended June 30th last. Brewing profits fell from £18,184,545 to £14,567,344. The directors, however, succeeded in reducing expenses from £14,558,324 to £11,691,967, and were able to show a profit of £2,878,353, which compares with £3,629,190 a year ago. Results since 1908-9 are set out below:—

	Gross Profit.	Ex-penses.	Net Profit.	Reserve, Depreciation, &c.	Ordinary Dividend.	Rate %
	£	£	£	£	£	
1908-9	2,218,160	1,096,522	1,121,638	280,000	700,000	14
1909-10	2,465,713	1,195,090	1,270,623	325,000	775,000	15½
1910-11	2,629,180	1,301,511	1,327,669	335,000	825,000	16½
1911-12	2,541,030	1,328,241	1,212,789	255,000	825,000	16½
1912-13	2,527,237	1,443,119	1,084,118	185,000	825,000	16½
1913-14	2,752,974	1,514,726	1,238,248	235,000	700,000	14
1914-15	4,181,655	2,721,206	1,460,449	585,000	700,000	14
1915-16	5,472,922	3,962,122	1,510,800	531,000	800,000	16
1916-17	4,920,287	3,014,157	1,906,129	235,000	800,000	16
1917-18	4,105,393	2,083,307	2,022,086	235,000	800,000	16
1918-19	5,858,854	3,808,174	2,050,680	285,000	800,000	16
1919-20	12,941,420	9,677,513	3,263,907	735,000	1,000,000	20
1920-21	18,187,514	14,558,324	3,629,190	519,407	1,250,000	25
1921-22	14,570,320	11,691,967	2,878,353	235,000	1,450,000	29

To the reserve £200,000 has been added, bringing this item up to a total of £3,200,000, and £35,000 has been allocated to depreciation account. The balance-sheet, which will be found fully analysed on a later page, shows total assets valued at £17,139,789, as against £17,582,675 a year ago. The most significant change perhaps is "Stocks on hand," which are now down to £7,123,774, as compared with £8,186,431 recorded in the previous accounts. On the other hand, cash at bankers and in hand has increased from £902,843 to £1,609,744. Book debts are less at £1,187,248, previous figures being £1,371,299. On the whole, a very satisfactory and informative report, when regard is paid to the industrial and political situation.

Watney, Combe's Bonus.—For a brewery undertaking the annual accounts just published of Watney, Combe, Reid, and Co., Limited, are exceptionally informative, even if the directors are somewhat laconic over the sudden and huge increase of profits during what is generally regarded as a period of acute industrial depression. Profits for the twelve months ended June 30, 1922, are £614,614, as against a comparable figure of £281,524 for the previous twelve months, gross profits on trading having increased from £1,057,000 in 1920-21 to £1,412,961 in 1921-22. This enables the company to make a distribution of 32 per cent. on the deferred ordinary shares, as against 24 last year, and in addition £100,000 is allocated for proposed capitalisation purposes. While profits have increased, it is interesting to find that expenditure in many cases is lower. Thus, for trade, office, advertising, and miscellaneous expenses, in the new accounts we find £111,999, as against £142,034 a year ago, while carriage and delivery has fallen from £145,023 to £126,935. Cooperage at £62,969 compares with £64,128 and salaries are down from £87,476 to £79,340. Repairs show little change in amount, but it should be remembered that it is probable that the company were able to effect a greater volume of repairs on account of fallen values. Total assets

are now valued at £13,180,074, of which £855,368 represents cash in hand and £371,144 high-class securities. Reserves amount to £626,731, yet the company, in spite of its experience in 1906 of writing down deferred ordinary capital by 75 per cent., propose now to capitalise reserves, and with the aid of the £100,000 already referred to taken from the year's profits, increase the deferred ordinary stock from £796,353 to £1,592,706. What the future of the brewery industry may be it is difficult to say, but it is surely reasonable to consider that these are abnormal profits, and that substantial reserves should be laid by for possibly lean years.

The Rise in Spelter.—A correspondent writes:—It may be pure coincidence, of course, that zinc or commercial spelter showed a very pronounced tendency to rise almost immediately after the Board of Trade had completed arrangements with the British zinc smelters to take a further supply of the Australian concentrates. It is understood that the selling price of this raw material is 82s per ton of concentrates, based on zinc at £28 per ton, with a sliding scale of 4s per ton for every £1 movement in the metal either up or down. This material costs the Government something like £8 per ton delivered at Swansea, but probably it can now be brought over a little cheaper seeing that the freight from Australia is lower at 35s per ton. If the selling price of the concentrates is 80s per ton, with spelter selling at £27 10s per ton, the Government would be giving the British smelters a bonus of about £12 per ton of zinc, but this would naturally be reduced if the price went up over £31, as it did early this week. The British zinc smelters cannot take all the output of concentrates; thus no doubt the improvement in the selling price of the metal has paved the way for further contracts with Continental buyers of this raw material. Belgian spelter makers have been complaining for some time past that they have been kept short of concentrates, but they have now an opportunity of securing what they need, as the home smelters at present are not prepared to handle more than 50,000 to 60,000 tons per annum of the Australian supplies. The London spelter market was very active early this week, and prices for G.O.B.'s jumped to over £31 per ton, which is the highest figure touched for a long time. The buying was chiefly speculative in character, but galvanisers are understood to have been interested in the purchases made. This rise owes something to the extreme firmness of the American position. The stocks on hand in the United States on July 1st amounted to the small total of 29,576 tons, as compared with 40,409 tons in the previous month. The June production in the States was only 28,547 tons, notwithstanding the fact that 52,677 retorts were working against 35,789 at the end of June, 1921. The smelters' stocks are thus extremely small, and the coal strike on the other side, coupled with the delays on the railways, has created a very bullish undertone, sentiment in the American zinc market being strong. The stock on hand would not be sufficient for a full month's supplies, based on recent takings; thus if the output has to be further curtailed owing to the fuel shortages, &c., there may be a scarcity. All stocks in the United Kingdom are problematical. The Belgian output for June was 8,310 tons, making 50,600 tons for the half-year, but what quantity the Belgian smelters have on hand is unknown. It will thus be seen that the statistical position of the metal is good, and any urgent demand from needy consumers would tend to make the tension severer. The higher prices will eventually stimulate output, but at the moment the market lends itself to manipulation, and this probably more than anything else explains the recent display of strength.

The Tanganyika Territory.—The judicious tutelage of the native population and its protection from domestic or foreign oppression are the specific duties of the mandates under the covenant of the League of Nations who have charge of territory in tropical Africa, and the Report (Cmd. 1,732) on the British administration of the region which is now the Tanganyika territory, and was formerly the chief part of German East Africa, shows that the duties of the mandatory Power are being faith-

fully performed. Slavery is non-existent in the interior; it survives in the coastal districts in the form of domestic servitude, but it will shortly be abolished by law. Forced labour is forbidden, except for essential public works and services, and is only exacted when the taxes due are unobtainable in cash or in kind. Recruiting for employment outside the territory is permitted provisionally, but solely for public works in the adjoining regions, and under stringent safeguards for the welfare of the workers. The importation of intoxicants is carefully restricted, and that of trade spirits forbidden; and the land which the German administration took from the natives to increase its productiveness is being repurchased from the ex-enemy holders, and certain plantations are being restored. Government in the coast districts, where the tribal system is weakened, is conducted partly through native officials, in the interior through headmen chosen by the people, and minor cases, civil and criminal, are relegated to native courts under strict supervision. Remote districts have been visited, some of them for the first time, by the European officials, and the natives no longer bolt into the bush at their approach, as they used to do under German rule. Education—primary (in Swahili, and including English), agricultural, and technical—is progressing, and natives are being trained as sanitary inspectors and telegraphists, and in the elements of veterinary knowledge and to some extent in weaving and pottery. Ex-enemy missionaries are still excluded, but Anglicans, Nonconformists, and Roman Catholics—twelve missions in all—are at work, and are conducting schools unsubsidised, but inspected, by the Government; they may not set up schools without native consent. Since 1913, owing to the expatriation of German residents, the European population has decreased from 5,336 to 2,447, of whom 1,598 are British subjects. The Asiatic population has increased from 13,541 to 14,991, of whom 9,411 are British Indians, 798 Goanese, and the rest chiefly Arabs and Baluchis. The two former classes (mainly clerks and traders) are mostly in the sea-ports, in the lake port of Mwanza, and the great inland town of Tabora, a centre of caravan trade. The native population (mainly of Bantu stock), in 1913 4,145,000, is now estimated at 4,107,000, owing mainly to a famine in 1917 in two inland districts and the spread of venereal disease on the coast. Public health is carefully supervised. Trade has declined through the world-wide depression and the fluctuation of exchange, as well as through the substitution of the florin for the rupee. The country can produce coffee, sisal, cotton (possibly), ground nuts, hides, rock salt, and many valuable and little-known sorts of timber. There has been prospecting for mines, and there are signs of petroleum. Only small districts near Kilimanjaro are fit for European settlement, and there seems every reason to hope that with British aid and supervision the country will become a prosperous and well-ordered native State.

Effects of the Eastern Grouping Scheme.—Publication of the North-Eastern grouping terms, writes our Stock Exchange correspondent, lashed the Stock Exchange Home Railway market into a state of excitement strangely at variance with the ordinary calmness that prevails on the eve of the August Bank Holiday. Prices of the stocks affected were promptly hoisted. The figures, so far as they have been hastily digested, are regarded as being quite as favourable as anyone had expected. In the prior-charge stocks, no particular changes occurred. Dealers were deluged with inquiries, but the resultant effect in bargains has been rather barren. In Great Central 1894 preference, where speculation has run high, the price of 72 compares with 70½ on the previous evening. But the great rush, accompanied by selling orders after the first flush of buoyancy, came in the market for the ordinary and deferred stocks. To set out a few examples of the movements, this table was taken from the market at noon yesterday:—

Stock.	Thursday.	Friday.	Rise.
North-Eastern	124	125½	1½
Great Northern, def.	44	45½	1½
Do pref.	68½	71½	3
Do "A"	42	44	2
North British	18½	19	½
Do pref.	47	47	0
Great Eastern	41	42	1
Great Central	9½	9½	0
Do pref.	23½	24½	1

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

At the opening of the market, some people called North British 21 and Great Central deferred 11; but these guesses were quickly corrected by would-be sellers. The general first idea is that the terms are fair and likely to have a favourable influence over prices. Other Home Railway stocks are altered but little. Conservative estimate puts the value of the new North-Eastern 5 per cent. preferred ordinary stock at 75 as the probable price when a market is started in the stock.

Public Authorities and Co-operation.—A company has been registered, writes our Labour correspondent, for the purpose of enabling public authorities to obtain the various goods and materials they need on a co-operative basis. The company, which is limited by guarantee, has taken powers to buy, sell, and manufacture the things required by public bodies. The members of the company will be persons appointed by local and other public authorities, and the concern will be conducted on much the same plan as the Municipal Mutual Insurance, Limited, which appears to have been the precedent for Public Authorities Mutual Supplies, Limited. The company owes its inspiration largely to the London boroughs with Labour majorities, and is meeting with support largely because of the desire for economy. This experiment in the development of "municipal enterprise" will be watched with interest.

UNITED STATES.—RAILWAY, COAL, AND TEXTILE STRIKES — COAL OUTLOOK SERIOUS — AUTOMOBILE PRODUCTION — INCREASE IN BOND VALUES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 24.

WITH no prospects at present of an early settlement of the railway and coal strikes, increasing concern is felt here over the effect upon trade and industry generally. The railway strike, which thus far has not spread to any extent beyond the shopcrafts' unions, has nevertheless caused the cancellation of many trains and more or less delay in service throughout the country. Despite early promises that they would not strike pending further conferences, the 400,000 maintenance of way employees lately threatened to join the walkout. That possibility, however, seems to have been greatly lessened, if not entirely removed by the Railroad Labour Board's action in granting the maintenance of way men a re-hearing on the wage dispute. But so far as the striking shopmen are concerned, the board announced that it would take no further steps to bring about a settlement of the present dispute, owing to the improbability "of reconciling the antipodal views of the carriers and the men on the question at issue." The latter, it is understood, refers to the restoration of full seniority rights of the striking shopmen. The Federated Shop Crafts' unions insist that any settlement of the controversy must take into consideration the restoration of the men involved to their previous status as employees. The railroad executive

take the position that not only justice but the public interest demands that the seniority rights of men who are now working in places vacated by the strikers must be recognised. The only hope at present of ending the strike appears to be through separate settlements on individual railroads. In fact, several carriers have already started negotiations to that end, and have made some progress.

The situation brought about by the coal strike is even more serious. An actual scarcity of coal has already developed in many places, and, together with the tie-up of transportation, to some extent has caused a slowing down of operations in iron and steel and other industries. Generally speaking, reserve supplies of coal have been greatly depleted. In March of this year the output of anthracite amounted to 8,757,000 net tons. In April it fell to 26,000 net tons; in May it was only 35,000 tons; and in June 84,000 tons. For the first six months of this year the total was 21,900,000 approximately, as against 45,485,000 in the like period of 1921. There has also been a marked decrease in the production of bituminous. In March the output was 50,167,000 net tons; in April, 15,797,000 tons; in May about 15,802,000 tons; and last month showed only a slight increase over May. Owing to the increased production of soft coal in the first three months of the year, the total for the half-year makes a better showing than in the case of anthracite. For the first six months 187,129,000 tons of bituminous were mined, as compared with 196,173,000 tons in the corresponding period of 1921. Even should the coal strike be terminated in the near future, it would be many weeks before production could be brought back to normal. With reserve supplies already at a low point, the situation and outlook are admittedly serious. There is now talk of rationing supplies. Indications at the moment therefore point to a further slackening of industry. Our export coal trade has suffered severely as a result of the strike, although the foreign exchange situation and competition from English exporters have been contributory factors. During the first two months of the strike, April and May, there was a heavy falling off in coal shipments from this country. In April only 828,285 tons were exported, and in May 460,421 tons, as against 1,811,625 and 2,934,682 tons in the corresponding months of last year. For the first five months of this year the United States exported only 3,927,217 tons of coal, as compared with 10,294,495 tons in the like period of 1921.

The textile strike in New England, which has been in progress for more than six months, is gradually being broken. In practically all the leading centres operatives are drifting back to work. The manufacturers have made more rapid progress in resuming operations in Rhode Island, where the strike originated, than in other sections. Of the 40 mills in that State which were affected, virtually all are now running, many on full time. Cotton mills in New Hampshire are also showing substantial gains each week. All mills in Lawrence, Mass., are running, with the exception of two plants, one of which closed, owing to lack of forward business. Good progress is likewise being made by most mills at Lowell in resuming operations.

One industry which continues to show increasing activity is the automobile industry. According to the National Automobile Chamber of Commerce, the June production of motor vehicles was slightly in excess of 288,000 cars, including both passenger cars and trucks. That is about 12 per cent. higher than the May output, and establishes a new high monthly record in this American industry. The figures point to a total production for 1922 of more than 2,000,000 motor vehicles. For the second quarter of this year the output was 763,000 cars, and for the first six months, 1,137,000. In 1921 the production, according to the authority mentioned, was 1,668,000 cars, and in 1920, the record year, 2,205,197.

There has been no abatement in the investment demand for both old and new bonds. Prominent bonds continue to be purchased at rising prices, especially the Liberty loan issues, some of which established new high records during the past week. The rise in the price of Liberty bonds in recent months is one of the most noteworthy features of the financial markets. As compared with the

low level of last year, their value has increased by approximately \$2,311,187,397, according to figures compiled by the *Wall Street Journal*. The same authority points out that the average price of all classes of corporation bonds listed on the New York Stock Exchange has advanced more than 15 per cent. from the low point of last year, representing a credit expansion of about \$1,487,000,000. Furthermore, the uniform increase of billions of dollars in the price of municipal bonds and investment stocks has greatly increased the borrowing power of banks and investors. In the opinion of representative bankers, this remarkable improvement in our credit situation foreshadows a long period of low money rates; it is likely to have a far-reaching effect in promoting prosperity in the United States, and will make possible the granting of large foreign loans without undue strain upon our credit position.

FRANCE.—REPARATIONS AND INTER-ALLIED DEBTS —FRENCH OPINION AND POLICY—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 2.

It is now becoming fairly certain that M. Poincaré's forthcoming meeting with Mr Lloyd George in London will be devoted largely to the consideration of the reparations question. That a strong effort will be made by the British representatives at the conference to discuss at the same time the question of the settlement of the various inter-Allied debts is clear from the fact that Lord Balfour has chosen the eve of the conference as the moment for sending out his circular Note on the subject to the rest of the Allied Powers. It is shrewdly suspected here that, no matter what the addresses on the copies of the Note may have been, it is really intended much more for the edification of the Washington Government than for those of the Allies, and to this extent the Acting Foreign Secretary's step meets with distinct approval here. At the same time, French opinion entirely fails to see what object is to be gained by discussing the settlement of the inter-Allied debts if it is proposed that, in consideration of Great Britain consenting to cancel the debt owing to her by France, the latter shall agree to write off an equivalent amount of the reparation debt owing to her by Germany. The French view, at bottom, is that the wit of Allied mankind can find the means to make Germany pay if the Allies really make up their minds that she shall do so, and that if Germany is compelled to meet her treaty obligations, it will be comparatively easy to bring about a settlement of the inter-Allied debts.

Nevertheless, so far as this latter question is concerned, there is another aspect of the matter which is perhaps generally overlooked in England, and which is only occasionally referred to here, but which is regarded by Frenchmen as a distinctly valid argument. Why, it is asked, should Great Britain and America insist so strongly that France should pay her debts when they have made no real effort to compel Germany to compensate her victim? Further, why should England and America make such a marked distinction between the sacrifices in human lives that were made in the common cause, and the sacrifices in cash that were made in the same cause? France, in addition to being brought to the brink of financial ruin through Germany's aggression, lost 1,700,000 killed, and suffered the devastation of ten of her departments; while America, which lost only 77,000 killed, enormously enriched herself by the war, and accumulated a gold reserve which is now thirteen times what it was in 1913! Would it be regarded as "greedy" and "imperialistic" if France suggested that America's money France owes to her as part of America's contribution to the common cause? Or even as a thankoffering for the fact that she lost only one man killed for every 220 lost by France? It may be taken for granted that no such proposition will ever be made by France, if only from a sense of correctness, and because she has every intention of meeting her engagements so far as in her lies; nevertheless, it would be

and in French opinion, possible to put forward many suggestions that would be far less reasonable.

In view of the important rôle the reparations question will play in the London conference, the French Ministry held an important Cabinet Council meeting at the Presidential summer residence at Rambouillet last Thursday, when it is understood this question was discussed in all its details. Two long sittings were devoted to the subject. Little has been allowed to transpire as to the nature of the decisions arrived at, but it is understood that the bases of the future French policy in regard to reparations were laid down. The general lines of this new policy, as it may be called, will be made known to the rest of the Allies in the very near future—in the course of the London conference. In any case, it may be taken for granted French public opinion has come largely to the end of its patience, and that some kind of settlement of what is for France the most vital problem of the moment will be insistently called for. The French Government, in drawing up its new programme, has undoubtedly been considerably influenced by the disclosures that will be found embodied in the as yet unpublished report of the Committee of Guarantees that has been sitting in Berlin for some weeks past, and that has made a thorough investigation into Germany's real financial position.

The guiding principle of the new reparations programme, I understand, is that in order to secure speedy payments of a really practical character, France will be prepared to make much more substantial concessions to the international financial market than many people expect she will offer. French opinion will undoubtedly insist, however, that Germany shall give further—and substantial—guarantees, which may or may not meet with the approval of the other Allied Powers. "Conciliation and firmness" would, perhaps, best sum up the new programme. With this may be expected a fixed determination on the part of France to make it clearly understood that, if she again fails to secure satisfaction in co-operation with her Allies, she will be prepared to take definite action on her own account.

The Bourse has been firm, and well supported to some extent, because of the absence recently of new issues of capital, and also because of a growing feeling of confidence on the part of the public. French funds have again improved, on the whole, though the 1914 Three per Cents lost a point at 82. The 1915 Five per Cents improved from 76.25 to 77.35, the 1918 Four per Cents from 61.95 to 62.50, and the 1920 Six per Cents from 89 to 90.65. Banks have been on the whole in decline, Banque de France dropping from 5,840 to 5,705, and Banque de L'Union Parisienne from 599 to 585, but otherwise falls in value have been very slight. Railways have been well in demand, Metropolitan advancing from 404 to 410, Orléans from 910 to 965, and P.L.M. from 905 to 935. Est, however, dropped 5 points at 790, and Nord 15 points at 1,230. Shipping, owing to the increased demand for freight, as a result of the American coal strike, marked a brisk advance, Chargeurs Français moving up from 529 to 582, Chargeurs Réunis from 330 to 380, and Messageries from 167 to 179. Electrical undertakings have done little more than hold their own, though Electricité et Gaz du Nord, under the prospect of good receipts, advanced from 316 to 330. Metallurgical undertakings have remained almost stationary. Tintos improved from 1,487, and reached 1,512, but fell back later to 1,592. Penarroya, starting at 810, touched 830, but closed at 815. Mexican Eagles declined from 162.50 to 153.50 on the report that there had been salt water flooding. Royal Dutch also lost value, declining from 199.50 to 195.00. Shell, after paying a dividend, moved from 242 to 231, and Steaua Romana from 449 to 447.

GERMANY.—POLITICS—REPARATIONS—FINANCES —EXCHANGE AND BOURSE—TRADE—IRON PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 29.

At the time of writing, the conflict between Bavaria and the Republic, caused by the former's refusal to put in force certain provisions of the Law for the Defence of the Republic, has not been settled. The Federal Cabinet

has repudiated the constitutional contentions upon which Bavaria bases its action, and has further denied the Bavarian objection that the law is anti-democratic. The controversy has caused a lot of bad blood, and though it is not likely to develop to extremes, will not strengthen the bonds between Bavaria and the rest of the Republic. Views about reparations at the close of the week were not optimistic, and a new fall of the mark yesterday in New York and here to-day apparently reflects this sentiment. The pessimism is based on indications of delay, and of a policy of half-measures, which would repeat the history of last winter. A mark collapse panic both here and abroad never lasts long, and only while it lasts is the resolution to find a remedy convincing. This is natural enough, because the mark-exchange panics, like the intervening indifference, are usually overdone, especially through the mistaken conclusion that something sudden and dreadful will happen if a remedy is not immediately found. This time, as after former rapid mark exchange falls, there is no prospect of anything sudden and dreadful happening. The prospect is for further marks falls, followed by a retarded and imperfect readjustment of values, which, owing to the retardation, damages the State finances seriously, if not so seriously as is supposed. This can produce no crash, and does not even make absolutely impossible the continuation of Reparations payments. The State's problem with Reparations is therefore in principle the same as the importer's problem. Immediately after each exchange deterioration the importer finds difficulty in financing his foreign purchases out of the depreciated yield of former home sales and has recourse to credit for a short time, but during the long ensuing intervals of relative mark stability, or temporary recovery, his home mark intakings rise greatly, and his difficulty in buying foreign bills for import payments ceases. The State revenue is governed by the same process. The estimated revenue from taxation for 1922 was 108 milliards, or nine milliards a month; and, were only this estimate realised, the State expenditure, including Reparations, at the new levels of salaries, prices, and exchanges, would be hopelessly higher than revenue. But taxation receipts in April (the first months of the financial year) were not nine milliards, but 13 milliards, in May 17 milliards, and in June 18 milliards, so that the year's revenue on the June basis would be double the estimated, and, owing to the new rapid upward movement in values, it will probably be very much more. The following, showing a month's receipts, at half-yearly intervals, from all sources (including State undertakings), demonstrates this point. The failure of revenue to increase in the first half of 1921 emphasises the point, because this was a period of relatively stable exchanges, and of (owing to the simultaneous decline in the world-market price-level) falling German prices:—

1920.	Milliards of Marks.	1922.	Milliards of Marks.
January	1,014.7	January	14,619.5
July	3,749.2	February	15,374.3
1921.		March	23,414.0
January	8,721.1	April	23,517.6
July	8,531.9	May	30,040.7

Only a very small part of this vast increase came from new taxes; part is due to more efficient collection, but most is due to the saving fact that currency depreciation cuts both ways. Taking into account both exchange levels and revenue levels, it appears that it would have been harder for Germany to acquire Reparations currency in January, 1920, than it is to-day. In pointing this fact out I do not aim at disproving the current view of the gravity of the Reparations problem. But the problem does not lie so much in the technical side of buying currency, as in the fact that Reparations are at present mainly being paid by automatic expropriation of the classes, which suffer from the currency depreciation, that the gold value of what is now left to these classes has shrunk to very little, and that when this resource is altogether exhausted, the difficulty of paying will be greater than now. That, however, is no reason for proclaiming that every new mark exchange drop means a crisis, and, if no remedy is found, a sudden collapse.

The Bill reducing income-tax rates, owing to the fall in the buying power of money, has become law. For the same reason the Succession and Legacy Duties law has

been amended. The estate duty therewith connected has been abandoned. The new succession and legacy duty rates are fixable on a treble scale, according to the degree of relationship, the absolute amount falling to the beneficiary, and the beneficiary's own wealth. The maximum tax under the least favourable conditions is 80 per cent. The exempted sum has been raised tenfold, and for nearest relatives is 50,000 marks. The gold supplement on Customs duties has been raised to 11,400 per cent. (115 times the nominal) for the week August 1st-8th. The supplement in August, 1919, was 240 per cent.; January, 1920, 900 per cent.; October, 1920, 1,900 per cent.; March, 1922, 4,400 per cent.; June, 6,400 per cent. The supplement is now being fixed from week to week, according to the mark's gold exchange. The floating debt of discounted Treasury bills increased in the second July decade by 4,826,650,000 marks, and on July 20th was 300,294,635,000 marks. Since the beginning of the financial year the increase has been 28,359,470,000 marks, of which 24,503,431,000 marks went on fulfilment of the Peace Treaty. The deficit on Posts, Telegraphs, and Telephones in the financial year, 1921, was 2,965,000,000 marks, considerably less than the estimated deficit, 3,858,000,000 marks. A Berlin newspaper ascribes to official authority the statement that on the basis of the new price-level and increased salaries the Posts deficit this year will be over 20 milliards; but the Government will probably reply with a new increase of charges. The deficit on State Railways in the financial year 1921 was 6.9 milliards. Receipts were 45.1 milliards, expenditure 52 milliards. The estimated deficit for 1921 was 10.8 milliards, and the realised deficit in 1920 15.6 milliards. The greatness of this improvement lies in the fact that the mark of 1920 was a much more valuable unit than the mark of 1921, as shown by the above figures of increasing revenue. Railway receipts in the first quarter of the present financial year were 32,892 millions, against 5,696 millions in the same months of 1921, the increase being 477 per cent. These figures show how badly mistaken is the foreign belief that the currency depreciation, expressing itself in greatly increased nominal earnings and wages, does not also express itself in a corresponding increase of nominal burdens on the citizen. Railway expenditure in the three months was 30,400 millions, so that there is a surplus of 2½ milliards, more than confirming the Budget estimate of an even balance. The railways will now be faced with a new heavy increase of outlay, and still higher rates are inevitable. Business men complain, showing that for certain distances and classes of goods, rates are more than 300-fold higher than in 1914; but business has so far managed to transfer the burden to the home public, and competitive ability abroad has been saved by new falls in the mark.

The Reichsbank has raised its discount rate from 5 to 6 per cent. The reason stated by the bank is the increasing difficulty of placing Treasury Bills with the public, owing to the shortage of money. The Bourse early this week was without any clear tendency; but yesterday, under influence of the rise in the exchanges, most stocks rose moderately. Mining and metal stocks suffered a reaction later in the day.

Bond prices yesterday were: War Loan, 77.50; Federal 4 per cents., 117; 3½ per cents., 91; 3 per cents., 207; Colonial 4 per cents., 149; Savings and Premium, 79.30.

Foreign trade in June (details not yet published) was: Imports 4,030,000 metric tons, of value 34 milliard marks; exports 1,880,000 tons, value 30.3 milliards. Coal imports show a large increase. Trade in the first half of 1922 was: Imports 17,160,000 metric tons, value 142,900,000,000 m; exports 12,080,000 tons, value 130,800,000,000 m. There are signs of a new "Catastrophe Boom" in the form of crowding of shops by buyers. Unemployment remains low. The last report shows 16,029 publicly supported unemployed in 354 centres of over 10,000 inhabitants, against 19,108 on June 10. Coal prices have again been raised, by from August 1, 205.40 m per metric ton, or 305 m, including tax, for standard Ruhr (*Fettfoederkohle*); other qualities in proportion. The Iron Industry Union has raised pig-iron prices as follows (in marks per metric ton) from August 1: Hematite, 10,760 August, 8,265 July; Foundry Iron I., 9,868 August, 7,915 July; Foundry Iron III., 9,798

August, 7,845 July; Siegerland steel-iron, 10,092 August, 7,845 July; Spiegeleisen, 11,116 August, 8,869 July; Ferromanganese 80 per cent., 18,580 August, 17,855 July; Ferromanganese 50 per cent., 17,380 August, 16,698 July; Ferrosilicium, 12,620 August, 10,120 July. These prices were declared good until the end of August unless coal prices were raised; and as the above coal price increase was decided on after the raising of iron prices, new supplements will immediately be imposed.

SOUTH AFRICA.—MINING COSTS—COST OF LIVING—JOHANNESBURG BUDGET—MONEY AND MARKETS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 5.

As from the end of June the special cost of living allowances introduced during the war will fall away, as far as the rank and file of mine employees are concerned; but in the case of officials the allowances, which already have been reduced, will not finally disappear until the end of September. They were granted much later than in the case of the men. The average working costs for the Rand last month figured at 22s 8d per ton, compared with 24s 11d in the pre-strike December. The tonnage was rather over 1½ millions compared with the usual two millions. Mine development was about 60 per cent. of the normal, and there is reason to expect that the wider "spread" of administrative costs, coupled with lower wages, when the mills are crushing full time, should pretty well neutralise the cost of the balance of the 40 per cent. of development.

As regards working costs, as well as profit (£159,500), the most noteworthy achievement was that of the great "Barnato" group mine Government Areas, which crushed within a thousand tons of recent averages and within 6,000 of the record of August. Before the strike the average cost was 21s 6d, for May the figure was only 17s 5d, a drop of 4s per ton. It is probable that a similar amount of development was not accomplished on this occasion. At this mine the cost of development last year was 2s 3d per ton, so even if only half the normal development were accomplished the comparative figure would still be only 18s 6d. The operation of the royalty scale is such that the company benefits greatly from economy in working, whereas, conversely, the Government gets the larger proportion of profit derived from increased grade. Indeed, broadly, the Union Treasury received about 10d out of every shilling extra profit attributable to the gold premium. In the case of three other important mines of the Far East Rand costs were reduced by 2s or 2s 6d per ton, the figures being brought below the level sovereign both at New Modder and Modder Deep.

Whether the Rand is operated at 25s per ton, as before the strike, or at 20s per ton, which may be recorded in a month or two, makes all the difference to its future. Sir Evelyn Wallers, who is again acting as President of the Chamber of Mines during the absence on vacation of Mr H. O. Buckle, the official President, gave some instructive figures at the quarterly meeting of the Chamber a few days back. At the rate of costs prevailing last year (25s 8d per ton) there would have been only 316 million tons exploitable to profit in the mines at present producing. As the Rand crushes about 24 million tons a year, this would have meant a duration of only 13 years. But with working costs at the pre-war figure of 17s per ton the aggregate would be increased to 544 millions, implying a "life" of 22½ years. In areas other than those of mines at present producing there are a further 300 million tons on the lower basis of costs, extending the period to 35 years. As the finance of the Union Government is very largely based on the mines, both gold and diamond, and the whole commercial fabric largely depends on their prosperity, the significance of the foregoing figures is almost self-evident. The farming industry is in the doldrums owing to low prices for produce and heavy railway rates enhancing the cost of marketing, many areas have suffered from drought, while there has been a veritable slump in prices of cattle. Sir Evelyn was careful to explain that he did not suggest

that "an immediate reduction to 17s per ton was possible, but the basis on which we are now working has gone a great way towards the necessary reduction, and holds out the promise of its achievement in the not too distant future." I think if we get down to an average of 20s it will be as much as can be expected.

The finances of the town of Johannesburg have been brought into a far more healthy condition owing to the abandonment of excessive pay to its army of servants; the tramways, lighting, and gas services are operated by the Municipality. Rates, which are based on the capital value, instead of on the rentals, are being reduced from 10d to 7d; the price of water is being reduced to large consumers to assist industries, and tram fares when paid by coupon are from October to be only 1d per stage (averaging about a mile). The last Estimates budgeted for a revenue of £2,675,500 and an expenditure of £2,598,500, revenue and expenditure of the trading departments being included on both sides of the account.

The share market has been active during the past few weeks, the rise having started from the settlement of the ex-enemy share question. Money may be cheap in London, but it is neither cheap nor abundant here. In fact, it is very "tight." I hear of 12 per cent., and even more, being paid for Stock Exchange accommodation.

NEW ZEALAND.—BANK OF NEW ZEALAND—MONEY RATES—LAND VALUES.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, June 20.

The address of the chairman of the Bank of New Zealand, at the annual meeting of the shareholders, is always an important summary of the financial situation of the Dominion. The bank holds a very important and rather unique position in the Dominion. Not only is it by far the largest financial institution, but it discharges important functions which partake of the nature of those of a central bank of issue. It is the Government's banker, and the main channel of communication which New Zealand has with the London Money market. The other banks operating in the Dominion are much smaller, and are, in fact, branches of Australian or London institutions. The bank's relation to the Government is very close, since the Government is a large shareholder, and appoints the chairman and a majority of the directors.

The main interest in the address delivered by the present chairman, Mr George Elliott, at the annual meeting in Wellington on June 16th, concerns the relation between deposits and advances, and the rate of interest on overdrafts. The table given below from the chairman's address indicates the rapid and great change that took place as soon as the fall in prices in 1920 brought the after-war boom to an end in New Zealand.

	Minimum Overdraft Rate.	Advances.	Deposits.
	%	£m.	£m.
June, 1920	5½	34.8	54.6
September, 1920	6	39.0	53.1
December, 1920	6	47.1	49.5
March, 1921	7	52.4	47.2
June, 1921	7	54.4	45.5
September, 1921	7	48.0	43.4
December, 1921	7	47.6	40.9
March, 1922	7	46.5	40.4

Such figures as these disclose a very good reason for the financial stringency that has prevailed in New Zealand since the season 1920-1 opened with such disastrous prices to primary producers. On the Bank of New Zealand fell most of the burden, and much of the chairman's address is taken up with a recital of the methods adopted to provide liquid resources in order to tide clients over the crisis.

Though there has obviously been a considerable degree of improvement, there is room for a great deal of caution even yet. The disproportion of advances to deposits is indicative of difficulties that have yet to be surmounted. Under these circumstances the bank has to remember that the first duty of a banker is always to his customers, and his first line of defence must always be liquid assets. Australian and New Zealand banks should have learned that lesson well from their troubles in the last period of falling prices, and the Bank of New Zealand in particular will

remember that it was having its resources tied up in long period advances that forced it to the Government for assistance in 1893.

The root of the difficulty is, of course, the greatly inflated land values which will in many cases have to be readjusted before there can be any financial stability in the Dominion. The total registered mortgages amount at latest returns to £236 m., 98.7 per cent. of the freehold land of the Dominion being subject to mortgage. These figures represent a burden of overhead expenses, which, when added to the taxation necessary to pay interest on the Public Debt (also over £200 m.), may well give pause to those who control the finances of the country. With the recovery that seems to be heralded by the movements of prices and interest rates in the Old World, the Dominion will have a breathing space to put its financial house in order. But the general trend of falling prices cannot but strain the resources of a producing country which has such heavy overhead charges.

NORWAY.—COMMERCIAL NEGOTIATIONS WITH SPAIN—THE WINE QUESTION—TRADE OUTLOOK—NEW ISSUES—EXCHANGES—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, July 29.

THE negotiations with Spain for a renewal of the commercial treaty which have been going on for a year or two now seem to have reached a crisis. About the end of the Great War a provisional prohibition Act was introduced after a referendum. The consequence was a tariff war with Spain, who demanded free importation, or permission to export to Norway a fixed minimum quantity of 500,000 litres of specified wines per annum. The Conservative Government was unable to obtain agreement to any reduction in this quantity which is considered much larger than normal, and the Radicals, who succeeded them, have worked strenuously, but with the same negative result. There is a considerable diversity of opinion in the country which is worse of two alternatives, either to suffer disadvantageous terms in regard to trade with Spain, especially in respect of our sale of dry cod fish in that country, and in respect of our shipping, or to open the door to the free or excessive importation of alcoholic liquors. The country is greatly agitated, especially as smuggling and secret distillation of brandies have increased, and made the position very difficult. At the time of writing the issue is uncertain, but the reinstatement of a Conservative Government is not impossible, and in that case the prohibition would most likely be repealed, and negotiations be resumed on a free basis.

There seems to be a little brighter outlook in the trade circles, especially when one takes into consideration that the holiday season has begun. There is more inquiry and better prices for wood pulp, and a better inquiry also for paper and boards, though the buyers want low prices. During the second quarter of the present year new issues were put on the market to the amount of well over 56½ million kroner. This represents a considerable increase

over the figure of 36½ millions for the first quarter. It represents, however, a considerable decrease as compared with 1920, when the second quarter saw new capital issues to the amount of about 111 millions.

The exchange market has been particularly unstable, but on the whole foreign money stands about where it stood a month ago, though in the interval there have been violent fluctuations. To-day sterling is 26.05 kr, French francs 48.25 kr, dollars 5.85 kr, and Reichsmark 1 kr; all these figures are somewhat lower than the next preceding days.

After very copious rains, the crops of every description look very promising. Haymaking has begun everywhere, and if dry weather sets in in earnest everything points to excellent crops.

ROUMANIA.—EXCHANGE RATES AND INLAND PRICES —SCARCITY OF MONEY—FOREIGN TRADE SITUATION—PROSPECTS FOR BRITISH EX- PORTERS—INTRODUCTION OF FOREIGN CAPITAL —EXTERNAL DEBTS.

(FROM OUR CORRESPONDENT.)

BRASOV, July 25.

THE temporary depreciation of the Roumanian exchange rate that took place during the first half of July gave rise to the most contradictory Press comments. But in reality, it is evident that the fall of the lei during the first fortnight of July, as well as its recovery during the second fortnight, was merely the consequence of the corresponding fluctuation of other Continental currencies, especially of the German mark. As regards international affairs, the situation of the country is neither better nor worse than it has been during the last year or two. In spite of the failure of the Hague Conference and of the sabre rattling of Trotsky, a Russian attack against Roumania in the near future is most improbable. The unrest caused by the activities of Bulgarian irregular troops at the Southern frontier is not important enough to influence exchanges. As far as the internal political situation is concerned, the Government possesses a great majority in both houses of Parliament, and its position may be regarded as consolidated.

There are no economic reasons, either, for a depreciation of the lei. The trade balance is slowly but steadily improving, in spite of transport difficulties, export duties, and prohibitions. The state of public finance enabled the Government to check further inflation more than half a year ago. In spite of this, the inland price level is slowly but steadily increasing; however, this is not a cause, but an effect, of the depreciation of lei exchange.

Since the autumn of 1919, the lei exchange is permanently below its purchasing power parities with the currencies of Western countries—i.e., the home value of the lei is much higher than its value in the United Kingdom or France. Thus, the situation of the lei is similar to that of the German mark, as both are under-estimated abroad, as compared with their home purchasing power. The tendency to a readjustment of home price level to the international price level is much weaker in the case of Roumania than in the case of Germany. As is well known, Germany has to purchase from abroad the greater part of her food and raw material requirements, and consequently a depreciation of the mark exchange provokes an immediate rise of the price of most commodities. On the other hand, Roumania is completely self-supporting in agricultural products, and a fall of the lei does not affect directly the prices of most foodstuffs and raw materials. It is of particular importance that the manufactured articles required by the working classes are produced by the home industries out of home raw materials; thus the cost of living of these classes is not immediately enhanced by a depreciation of the lei. Yet manufactures required by the middle classes, as well as all sorts of machinery, are largely affected by the fall of the external value of the lei, as they are mostly imported from abroad.

The increase of prices of imported commodities brings with it a slow but steady increase of the general price level. As there is no simultaneous increase in the note circulation, money has become scarce and the rates of interest are rising. The rate charged by the big banks for advances is as high as 15 to 20 per cent., while for

certain branches of trade, involving greater risks, it reaches even 25 to 30 per cent. Still, it ought not to be overlooked that earning possibilities are also much greater in Roumania than in Western Europe. Profits of industrial and commercial enterprises of 50 to 100 per cent. are not exceptional.

In industrial circles there is no particular desire for the improvement of the lei exchange, because this would facilitate imports and handicap exports. The timber trade, in particular, is well satisfied with the present situation, which enables it to conquer Czechoslovak competition on the Hungarian market. But for the improvement of her exchange rate, Czechoslovakia would be able to secure a monopoly in the Hungarian timber market on account of the cheap waterways connecting the Slovak forests with the Danube and Budapest.

On the other hand, an improvement of the lei would be much welcomed by importers who are anxious to extend their connection with British and French manufacturers. They are greatly dissatisfied with German, Hungarian, and Austrian exporters, who often refuse to deliver the merchandise purchased and paid in advance by Roumanian importers, because of the increase of prices taking place in the meantime, or, if they are compelled to carry out the delivery, they give goods of inferior quality. Taking into account this, as well as the sympathy of Roumania towards the Western countries and her antipathy towards the Central Powers, it is not at all surprising that, in spite of the huge difference of exchange rate, the quantity of goods imported from the United Kingdom was not less in 1921 than in 1913. In consequence of the recent appreciation of the Czechoslovak exchange, it is to be expected that Roumanian importers will place important orders for textile and steel goods in England, which they would otherwise have placed in Czechoslovakia.

Foreign capitalists are active, and important enterprises have been established or acquired by foreigners. It was reported recently that several big blocks of oil shares have been purchased on the Bucharest Bourse for the accounts of English investors. Several well-known Swiss, Austrian, and French industrial enterprises are establishing branch factories in Roumania, so as to avoid the high Customs duties and to take advantage of the low cost of production prevailing in Roumania. Even in the domains of banking an expansion of foreign capital is noticeable. The Banque Belge Pour l'Etranger is carrying on negotiations with the view of acquiring a local bank in Cluj, the capital of Transylvania, and Italian banks are endeavouring to intensify their control over some Roumanian banks.

Though the terms of the loan concluded by M. Bratiano in London are considered as rather unfavourable, still, its conclusion caused general satisfaction in business circles, for it facilitates the repayment of overdue foreign debts, and thus contributes to the re-establishment of the external credit of the country.

Books and Publications.

RECENT ECONOMIC LITERATURE: A MONTH'S SURVEY.

ONE swallow does not make a summer, but this month has seen the publication, after a very long period, when there has been nothing of the kind to record, of a book which can be placed in the category of pure economics. This is the work of that distinguished veteran, Professor Achille Loria, one of the small band of economic writers who has an international reputation. Unfortunately, the *Fondamenti Scientifici Della Riforma Economica* (Turin, Bocca, 60 lire) is at present only available in Italian.

With this exception, of economic books in the strict sense, the past month has, like its predecessors, been barren; there are no other works of a purely theoretic kind, whether intended for the outsider or for the expert. There is, on the other hand, a considerable number of publications, notably in French, in which what is dealt with is not so much any theoretic point or general principle, but the more or less illustrative practice and

experience of the last few years. This is notably the case in the numerous volumes handling aspects of monetary and exchange problems, and indicating, from what has actually happened, what should be avoided. It is with the lessons of experience that the economic writer of to-day is mainly occupied. In view of this, to draw a hard and fast line between more or less technical works and such as must be called descriptive is hardly practicable. Such a work, for example, as that of Dr. André Pailhas, *L'Argent Métal: La Hausse des Cours de 1914-1920* (Paris, Librairie Générale de Droit et de Jurisprudence, 15f) is largely descriptive, containing, as it does, a history of the fluctuations and remarkable upward movement in the price of silver in the war period. It also contains much acute discussion of the function of the secondary metal, and the problem of the relative regulation of its price. Side by side with this may be read M. Adolphe Delemer's very acute *Le Bilan de l'Etatisme* (Paris, Payot, 10f). It again is largely descriptive; much of its space is occupied by a lucid exposition of the profit and loss (unfortunately mainly loss) accounts of the various French Government controls and monopolies. But all the facts are strictly related to an argument. "Etatism" in France is bankrupt, in M. Delemer's view (the condemnation of Professor Bardoux, who contributes an introduction, is even more outspoken and trenchant), and he has some admirable chapters of argument as to why this is, and on what is to take its place. A very interesting little volume is that by M. Levainville on the French iron industry, *L'Industrie du Fer en France*, in the excellent series published by Armand Cohn (5f). The author believes that, once war devastation has been made good, France's iron ore output will be second only to that of the United States; that of cast-iron only a little behind Germany. If France's North African possessions be included, it can claim to contain 57 per cent. of the iron resources of Europe. The economic picture of France may be completed by a volume on social insurance, in so far as it is developed there, *Le Problème des Assurances Sociales en France* (Paris, La Société des Etudes et d'Informations Economiques, 7f).

An important volume is the report prepared for the League of Nations by Professor Gini on *The Problem of Raw Materials and Foodstuffs*, published for the League by Constable and Co. (10s). The annexes, prepared under Professor Gini's direction, contain a mass of valuable statistical material. On the other hand, Professor Sargent's illuminating discussion of *Coal in International Trade* (P. S. King, 2s 6d) is concerned with general principles rather than facts, with the sort of considerations that must be kept in mind in arguing about any international trade question.

Mr W. F. Spalding is an experienced writer, and his former books are well known and *The London Money Market* (Pitman, 10s 6d) is a useful handbook. *The Elements of Actuarial Science* (Pitman, 5s), by R. E. Underwood will attract the notice of actuaries.

In *Labour and Social Credit* (the Labour Party, 3d) the fallacies of the so-called "Douglas" system are exposed in a manner that should prevent members of the party from fondly imagining that they have found a panacea; another pamphlet, *Labour and the War Debt* (2d) sets out the official view on the capital levy. We are here in the category of *Political and Propagandist*. No one writing on the Near East can be entirely clear of preconceptions, but Professor Toynbee, whether or no as impartial as he tries to be, has, in *The Western Question in Turkey and Greece*, (Constable, 18s), produced a volume of extreme interest. This question of the Near East is by no means without its economic relevance.

ABSTRACT ECONOMICS.*

A DEFECT of the English school of economists in the past has been a slight tendency towards a somewhat haughty insularity, which has expressed itself in neglect of many of the important ideas and conceptions introduced by Continental writers—for instance, those of the Austrian school. Dr Birkbeck has remedied this defect in a recent work of synthesis. Being Professor of Economics at

Every Description of Home and Foreign Banking Business transacted.

Copenhagen University, he has come more closely in touch with German, Austrian, and Scandinavian economists than do most English writers, and he has given us an important work on the Marginal Theory of Value, in which he combines the valuable features of the numerous variations of this marginal theory as expounded by Marshall, Pigou, Böhm-Bawerk, Scharling, Simon Patten, Roscher, Wieser, Westergaard, Schoenheyder, and others.

A principal part of Dr Birkbeck's work consists in a detailed analysis of the differences between short-period and long-period value. He considers that "many incorrect statements in economics are due to the fact that a distinction has not been drawn between Dynamics and Statics. In the static community there will be no difference between the short and the long market price; in the dynamic community there will be different rules affecting these two prices." In the static examination "we certainly start from a movement, but one which continually repeats itself, because the forces affecting it are unchanged." But in the dynamic view, "in the long market we not only see the action, the cause, of a certain effect, but also the reaction, the effect as the cause of its own cause altering this cause and rendering ineffective the forces affecting itself."

There are many original and stimulating ideas in this work as well as a patient restatement of existing theories. Dr Birkbeck's criticism of the orthodox denial of the possibility of over-production is worthy of notice; but it is marred by the fact that he appears to associate a perfectly sound criticism with the very doubtful theory of under-consumption. What is sound in criticism may be summed up in the statement, that although in the static view over-production is impossible, in the dynamic view it is possible. His treatment of wages and distribution is good. In dealing with the question of risk, he observes that in wages frequently risk-premium will not be included, "because the most dangerous labour often comes within the group 'unskilled labour,' where the number of persons seeking employment will keep wages low." His discussion of protectionist claims is original and interesting.

The argument of the book is conducted on purely deductive lines, and no practical social conclusions are drawn by the author. But there is a pleasing freshness about Dr Birkbeck's method and an easy lucidity about his style, and from an academic point of view his work has considerable value. An index would have improved the book considerably.

CAUSES OF ADVERSE RESULTS.

RESERVE BANK AND ITS EFFECTS ON OTHER BANKS.

BANK'S SOUND FINANCIAL POSITION.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The ordinary general meeting of shareholders of the bank was held in the Bank Building, Pretoria, on Friday, June 30, 1922.

Mr. James R. Leisk, C.M.G., chairman of the board and managing director, presided, and there were also present the following directors:—Messrs J. Emrys Evans, C.M.G. (vice-chairman), Charles Maggs, J. B. Taylor, Walter S. Webber, M.L.A.; also Mr. W. Dunlop (general manager), Mr. A. C. Duff (assistant general manager), and Mr. C. P. Mathews (secretary). Shareholders present were:—Sir Evelyn Wallers, K.B.E., Sir Harry Ross Skinner, Messrs D. H. Barnett, A. T. Brook, E. Davidson, T. N. de Villiers, Dr. F. V. Engelenberg, Messrs F. Hamilton, Robt. Hamilton, E. Haines, Fred Heys, E. H. Johnston, H. Katzenellenbogen, G. R. Matrauers, F. W. Meadley, J. G. Munro, F. Price, A. H. Rennie, R. A. H. Smith, and A. Sutherland.

By invitation of the board, the following were present:—Messrs W. H. Clegg, governor, S.A. Reserve Bank; H. C. Jorissen, deputy-governor, S.A. Reserve Bank; J. J. I. Middleton, Under-Secretary for Finance; H. L. Malherbe (of Messrs. Rooth and Wessels, the bank's solicitors), Robert Baikie and John Dougall (of Messrs. Dougall, Lance and Hewitt), the bank's auditors, J. C. H. Beynon, J. S. Burt, W. H. Everitt, and A. C. Turner.

The notice convening the meeting was read by the secretary, and the minutes of the previous ordinary general meeting, held on June 20, 1921, were confirmed.

The directors' report and statements of account having been taken as read, and the auditors' report read, the Chairman said:—

Gentlemen,—This being the first opportunity that I have had since assuming the chairmanship of the board in January last of addressing shareholders in general meeting, I should like to preface my remarks this morning by expressing my appreciation of the compliment paid me by my colleagues in electing me to this important office. It will be my constant endeavour, by close attention to the bank's interests, to justify the confidence which my colleagues have reposed in me.

Naturally, I regret very much that on the occasion of my first address to shareholders it is not my lot to review a more satisfactory position than is reflected in the accounts and directors' report for the year ended March 31st last.

BOARD'S ANNOUNCEMENT.

On the 16th of last month the board issued to the Press here and in London an official announcement, giving the substance of the results of our working for the financial year. It is desirable, I think, that I should quote to you in full the terms of this official announcement, so that they may be on record in a form readily available to all shareholders. They are as follows:—

"The National Bank of South Africa, Limited, announces that the balance at credit of its profit and loss account for the financial year ended March 31, 1922, amounts to £193,000. This figure is arrived at after taking into account (a) the balance of £34,000 brought forward from the previous financial year; (b) a transfer of £300,000 from reserve fund; and (c) a transfer of £25,000 to bank premises account.

"All bad and doubtful debts have been fully provided for, and the bank's investments have been taken at or below present market prices.

"At the general meeting of shareholders to be held in Pretoria on Friday, June 30th, next, the directors will recommend that the profit and loss balance of £193,000 be allocated as follows:—

	£	s	d
Interim dividend for the half-year ended September 30, 1921, at the rate of 8 per cent. per annum, which absorbed	118,000	0	0
Pension fund	50,000	0	0
Balance to be carried forward	25,000	0	0
	£193,000	0	0

"The bank has not escaped the effects of the grave disturbances that have characterised the financial world for a considerable time past, and in the result some specific losses of substantial amount have been sustained—notably, in New York. It should be explained

that certain of these losses have come to light since the declaration of the interim dividend as at September 30th last. The directors have considered it prudent, and in the best interests of the bank, that in the accounts of the year ended March 31st last the fullest provision should be made not alone for the specific losses above referred to and for all accounts of a doubtful character, but also for any unforeseen items that may come to light. After withdrawing from the reserve fund for this purpose the sum of £300,000 already mentioned, there still remains intact in reserve the substantial sum of £1,000,000; but the directors, being desirous of maintaining the bank in a position of undoubted strength and ability to meet all the requirements of its clients, think it desirable to withhold any recommendation as to payment of dividend for the half-year ended March 31st last.

"The circumstances under which the bank's losses were possible have formed the subject of close investigation by the directors, who are satisfied that the dispositions which they have made in this regard will avoid risk of recurrence of such losses, and will preserve unimpaired for the future the very valuable business which the bank possesses.

"The capital of the bank remains, as before, at £2,965,000, while the reserve fund, as above mentioned, now stands at £1,000,000—
together, £3,965,000."

SUPPORT FOR BOARD'S POLICY.

I need hardly say that it was most unpleasant for the directors to have to issue this announcement. But they recognised that their duty towards shareholders and the public generally was to publish without delay a clear statement of the position, and of their intention to recommend to shareholders that there should be no dividend distribution for the second half of the past financial year. In the result, I am glad to be able to say that this policy has received general commendation, not alone in South Africa, but also in London; and, while shareholders are naturally disappointed at the withholding of the half-year's dividend, they acknowledge that, in the circumstances, this is the sound and prudent course in order to preserve the bank's resources in a position of undoubted strength to meet all the requirements of our clients. The only criticism that has been offered on the board's announcement is that, having regard to the fact that our reserve fund remains intact at the substantial figure of £1,000,000, and that full provision has been made for bad and doubtful debts, the directors might have withdrawn from reserve an additional sum sufficient to meet the dividend for the past half-year. These critics argue that a reserve fund is designed to provide for just such a set of circumstances as we are faced with to-day, and that we have displayed over-caution in refraining from recommending payment of this dividend. I would only observe, in this connection, that the directors did not overlook this alternative, but they were unanimous that the best interests of shareholders, as well as of the bank's clients, lay along the lines announced.

ANALYSIS OF ANNOUNCEMENT.

I think we might devote a few minutes to an analysis of the contents of the announcement. It opens with a statement indicating, in round figures, what was the position on profit and loss account arrived at. The audited figures can now be observed from the printed accounts, which are in your hands, and you will have seen that there is so little difference between the two sets of figures that we can adhere, for the purposes of this analysis, to the globular balance of £193,000 on last year's profit and loss account had been undivided at after taking into account (a) the balance of £34,000 £300,000 from reserve fund; and (c) a transfer of £25,000 to premises account. It is the transfer of £300,000 from reserve fund and shareholders will have realised that if we had not drawn upon the reserve fund, the profit and loss account would have exhibited a loss of £107,000 on the year's operations. I need hardly say that when the September dividend was declared the board were unaware of the trouble that was in store for them in New York. Otherwise

they would have stayed their hand in the matter of distributing that dividend.

LOSSES EXPLAINED.

Now, as to the losses themselves, it would be most unusual and contrary to the bank's interests to give specific details regarding the various accounts involved. But in view of the circumstances under which we are met together to-day, the directors wish to afford to shareholders every bit of information that may be disclosed without prejudice to the bank's business. Accordingly, I would explain that, speaking generally, the losses in question may be grouped in three fairly well-defined categories. In the first place there are the losses arising out of the normal trading risks inseparable from the conduct of banking even on the most prudent and conservative lines. Secondly, there are the losses due to the well-established principles and traditions of sound banking practice being overmastered by the desire to retain or expand business connections. Finally, there are the losses attributable to lack of judgment, disregard of instructions, or neglect.

LOSSES FROM NORMAL TRADING RISKS.

As regards the first-mentioned category, it is common knowledge that the past year has been one of grave disturbance in the financial world, and it would have been an unique achievement, amounting almost to a confession of lack of courage and enterprize, if your bank had entirely escaped the consequences of these disturbances. The rapid break in prices and values, a break without parallel in the history of South African commerce and industry, was inevitably reflected in the banking returns, and imposed a very serious strain upon all concerned. In this respect, of course, our experience was no different from that of other banks. Even the great banking institutions in England have had to acknowledge the severity of the strain, as some of you, no doubt, will have noticed from the recently published reports of their operations for the past year. In consequence of this unprecedented break in prices and values, we have suffered losses which could not well have been avoided. They were sustained notwithstanding all the care and prudence that banking tradition and practice enjoin; and, in the aggregate, and having regard to the exceptional circumstances, the amount which has had to be provided under this category is not disproportionate to the volume of business transacted or to the profits earned.

LOSSES FROM COMPETITIVE ZEAL.

For losses falling within the second category there cannot, in my opinion, be any real or substantial justification. It is well known, of course, that sometimes, possibly in the frenzy of competition, bankers have been tempted to depart from the established and conservative principles of their profession. As a rule they have had cause to regret having succumbed to the temptation, and our experience in this respect is no different to that of the majority. It has been the subject of a good deal of comment that in the past few years the speculative class of merchant and trader in this country has been able to obtain facilities of unusual magnitude and against security wholly disproportionate to the risks involved. Unfortunately, there is a good deal of justification for this comment, and a direct result is that in the accounts now in your hands we have had to make considerable allowance for bad and doubtful debts. The indirect results are not capable of accurate estimation, but that they are substantial must be acknowledged when we reflect upon the dislocation caused to legitimate trade by this fostering of an artificial and speculative atmosphere.

Having made this admission as to the questionable character of some of the business undertaken by this institution in the past few years, I wish now to give you the assurance that our methods have been thoroughly overhauled and our executive officers given definitely to understand that under no circumstances whatever may they undertake business which does not satisfy the ordinary and well-understood tests of sound banking practice. The more effectively to enforce the board's determination in this respect, our advance and inspection departments are in process of being reorganised and strengthened, and we have not the slightest doubt that these dispositions will have the desired result. It is impossible, of course, to avoid a certain degree of generalisation in treating a subject such as this, and my remarks may have conveyed the impression that there was need in every case to improve upon our executive officers the importance of exercising greater prudence. I hasten, therefore, to remove any such impression, and to express the board's grateful acknowledgments to the large number of our executive officers who have resisted all temptation to entertain unsound business, and, by their prudence and foresight, no less than their energy and natural ability, have successfully guarded the bank's interests during these years of trial and strain.

LOSSES FROM LACK OF JUDGMENT.

I now come to a consideration of those of our losses which fall within the third and final category already indicated to you. I

refer to the losses attributable to lack of judgment, disregard of instructions, or neglect. I regret to say that the bank's losses under this heading have been severe. They arose mainly in New York, and, if the most ordinary judgment had been displayed by our branch at that point, they could not possibly have reached such noticeable dimensions.

NEW YORK MANAGEMENT CHANGED.

So soon as the board became aware of the situation, they took prompt steps to change the management, and an experienced senior officer from the London office was appointed in temporary charge at New York. His task was not an easy one, but he has succeeded to a most commendable extent in placing matters upon a more satisfactory basis, and has thus simplified very greatly the work of the specially selected officer recently transferred from South Africa to take substantive charge of the branch.

You will want to know, of course, why it was that head office did not take earlier steps to change the management at New York. The answer is that a degree of confidence that subsequently proved to be wholly unjustified was reposed in our New York manager. Moreover, owing to the delays in postal communication at that time, and other difficulties in the way of exercising effective control, some considerable time elapsed before head office became aware that the bank's interests were in jeopardy. The agencies of communication are now more regular, and in addition we have as our representative in New York a trained and experienced banker of proved ability, in whose judgment we have complete confidence. These factors, taken in conjunction with an effective scheme of control, in which London office participates with head office, encourage us to believe that henceforward our business in New York, which is now being confined mainly to South African exchange, will be conducted on sound lines and with credit and profit to the bank.

Now, gentlemen, I have endeavoured to give you the fullest information regarding the circumstances under which we show a loss on our banking operations during the past financial year. I have also indicated the measures which have been adopted to prevent a recurrence of these unpleasant experiences. It remains for me to add that, to the best of our knowledge and belief, the accounts now before you reflect full provision for our bad and doubtful accounts. All accounts which in any degree cause us apprehension have been most carefully scrutinised, and, wherever there was a doubt respecting full recovery, the necessary provision has been made. Having regard, therefore, to our very valuable business connection, and given a period of reasonably stable conditions, it should not take long to re-establish ourselves on a dividend-distributing basis. It must not be forgotten, however, that our earning capacity under prevailing conditions is materially affected by two most important factors, viz., the disappearance of our note issue, which from to-morrow will be replaced by notes of the South African Reserve Bank, and the low rates of interest earned on our surplus cash balances in London. The latter, it is to be hoped, is only a temporary disability. As regards our note issue, however, there is nothing temporary about its disappearance, and I shall deal more fully with this point later on.

INCREASE IN SALARY CHARGES.

Simultaneously with this era of diminished earning capacity we are carrying a burden in the shape of salaries that is altogether disproportionate to our revenues. It is necessary, therefore, that measures be taken to reduce the aggregate of our salaries bill, and in this respect we are in precisely the same position as all large employers, not excluding governments, the world over. At the end of December our staff in South Africa ceased to draw cost-of-living allowances. This, of course, involved a serious dislocation in their domestic budgets, but the factor of inevitable necessity was loyally acknowledged by our officers, who accepted the deduction with the best possible grace. It would involve great hardship therefore if, on top of the disappearance of those allowances, any reduction were to take place in substantive salaries; and, in any case, there are strong objections of principle to the adoption of such a course. We are accordingly thrown back upon the only other alternative, viz., a substantial reduction in personnel to be achieved by means of reorganisation of staffs on more efficient lines and the elimination of non-essential services. This, of course, will take time, and must be so devised as to inflict as little hardship as possible upon the individuals affected.

PORTUGUESE EAST AFRICA.

Before closing my remarks concerning our difficulties at the present juncture, I should mention the very difficult and onerous conditions under which the South African banks are carrying on business in Portuguese East Africa. I allude, of course, to the currency situation in that territory, in consequence of which the South African banks have been obliged to restrict their operations to a material extent so as to guard themselves against risk of loss. For some considerable time past our Portuguese neighbours have been exploring various avenues of possible relief,

but so far without any apparent success. On the contrary, the situation seems to be getting steadily worse, and the Union banks and merchants carrying on business in the territory are going through a most anxious and trying time. Discussions have recently been taking place at Capetown between the Union Government, on the one hand, and Portuguese representatives from Lisbon and Mozambique on the other, on subjects of vital interest to the Union and her Eastern neighbour. It was intended that these discussions should include consideration of the currency situation in Mozambique Province, and hopes were entertained that some remedy would thus be found for a situation that offers an effectual bar to the development of trade relationships between the territory and the Union. It was a great disappointment, therefore, when we heard last week that the negotiations had broken down for the time being, and I venture to hope that the two parties will come together again before long. Incidentally, I may mention that we have recently closed down three of our branches in this territory—viz., those at Inhambane, Mozambique, and Quelimane—in consequence of the very discouraging conditions to which I have alluded.

THE BRIGHTER SIDE.

Now, gentlemen, I think we might turn our attention to the brighter and more encouraging features in our position and outlook. Take, first of all, our gross revenue for the last financial year. As is shown in the profit and loss account, it aggregated over £1,653,000, excluding, that is, the balance brought in from the preceding year. It is not necessary for me to point out the evidence which this large figure affords of the value and earning capacity of our business. In comparison with the similar figure of 1920-21, it exhibits a shrinkage of only some £30,000, which must be regarded as exceedingly satisfactory when it is remembered how trying have been the general trade conditions during the twelve months ended March 31st last.

Now I would point to other items in our published figures which testify to the soundness of our position. You will notice from the balance-sheet that we show a marked and gratifying improvement in our cash position as compared with the preceding year. At March 31st last we had cash on hand and with bankers totalling £8,842,000, whereas the corresponding figure for the previous year was £7,407,000—an improvement of no less than £1,435,000. In the same period the amount of money which we had at call and short notice increased from £2,254,000 to £3,109,000, showing an improvement of £855,000. These, gentlemen, are large figures, and afford striking evidence of our progress along the path of liquidity.

Then, if you consider what are termed the bank's resources or quick assets—viz., our cash, remittances in transit, native gold, money at call and short notice, investments, and bills of exchange purchased, together aggregating £24,283,000, you will find by a simple arithmetical calculation that they represent over 58½ per cent. of our deposits, whereas the corresponding figure at March 31, 1921, was under 52½ per cent. I think, therefore, that there is every reason for taking a most confident view of the future.

SOUTH AFRICA'S POWERS OF RECUPERATION.

Moreover, our observation of business conditions generally throughout the different countries in which we are represented is, most distinctly, that the corner of depression and stagnation has been rounded, and that a tendency towards a slow but steady return to better conditions is manifesting itself. The banks, naturally, must benefit directly and indirectly through the restoration of normal conditions, and this affords an added measure of confidence in the future. A factor in South African economics that is often lost sight of is that, in comparison with most other countries, the Union has a relatively small proportion of unproductive public debts. Thus our system of public finance possesses in corresponding degree a greater measure of flexibility than is enjoyed by these other countries, with the result that our powers of recuperation from financial crises are proportionately stronger. So soon, therefore, as world conditions begin to mend, South Africa's relative economic advantage, upon which I have just touched, should prove a powerful factor in securing for her a more rapid return to prosperity than can be hoped for by countries less fortunately situated in this respect. Of course, the recent disastrous strike on the Rand has occasioned serious loss, not alone to those immediately concerned, whether as employer or employee, but also to that very large section of our community throughout the length and breadth of this land that is directly or indirectly dependent upon the active conduct of gold-mining operations. Nevertheless, it would seem that there is a substantial prospect of the country being compensated for these losses owing to the industry being now established upon a basis more in keeping with the economic necessities of present-day conditions. This is another favourable point in our outlook, and, taken in conjunction with the recent removal of the enemy share menace, it should stimulate a revival of interest in the mining industry and the flow of capital from outside for the development of our untouched mineral resources.

UNEMPLOYMENT.

Unfortunately, unemployment is still a problem, and must continue for a considerable time to be a matter of concern and embarrassment. But the Government are grappling with the subject in admirable fashion, and, by means of a substantial programme of useful new capital services—as witness the recently announced programme of new railway construction—will not alone provide work for a considerable number of unemployed, but, by this evidence of their faith in South Africa, will encourage private capitalists to undertake development services which must increase the field of employment. In addition to this, the Prime Minister recently announced in Parliament the Government's policy in the matter of fostering local industries, and his utterance has given fresh hope to those who, by bitter and costly practical experience, have come to realise the difficulties of establishing industries in a young country exposed to vigorous competition from the intensive production of the older States. If the Government persevere in this policy we shall, in my opinion, be preserved from the constant recurrence of periods of acute industrial unemployment, the basis of taxation will be broadened, and a larger local market will be provided for our agricultural produce.

But cost of production in this country has still to fall considerably before the full benefit of the Government's policy can be realised. In the words of a prominent American economist, which cannot be too frequently quoted, there is plenty of work awaiting completion, but it is peace-time work, and cannot be attempted on war-time wages.

REVIEW OF BALANCE-SHEET FIGURES.

I would ask you now to accompany me in a review of the figures appearing in our balance-sheet for the year ended March 31st last. Taking first the liabilities side, we find that the capital remains unaltered at £2,965,000, while the reserve fund stands at £1,000,000, after withdrawing the £300,000 with which I have already dealt at some length. At £4,426,000 our note circulation on March 31st last was £100,000 less than on the corresponding date of the previous year—a variation so inconsiderable as to call for no remark. When, however, we come to the heading "deposits, current and other accounts," we notice a considerable drop as compared with the preceding balance-sheet. The comparison is £41,502,000 at March, 1922, and £48,045,000 at March, 1921, a fall of 6½ millions. This, however, is but the outward and visible expression of the acute stringency that has prevailed throughout the past financial year and of the continuation of the process of paying for the over-importation of goods which has been a feature of our trade situation in recent years. As times improve, there is no doubt that bank deposits will similarly reflect the altered conditions.

BILLS DISCOUNTED, ADVANCES, ETC.

While on this head of the balance-sheet, it is convenient to consider also the item "bills discounted, advances, &c.," on the other side of the account, which stands at £25,909,000, as compared with £33,332,000 at the close of March, 1921—a fall of some £7,423,000. You will observe that while the bank's advances have been reduced in the twelve months by close on 7½ millions, our deposits have only fallen by 6½ millions in the same period, which shows a substantial margin in our favour. Naturally, too, the reduction in the amount of our advances has had a contracting influence on the amount of our deposits, since deposits respond at once, downwards or upwards, according as advances decrease or increase. As illustrating how the same stringent influences have affected the great London clearing banks, I may mention—quoting from a recent issue of the *Statist*—that the aggregate returns of the ten banks concerned exhibit a fall in deposits from £1,872,000,000 in January of this year to £1,782,000,000 in April—a shrinkage of £90,000,000. On the other hand, under the heading of discounts, acceptances, and advances, these banks recorded a contraction in the same period of £133,000,000.

CASH ON HAND AND WITH BANKERS.

On the assets side of the balance-sheet, the striking feature, as I have already had occasion to point out, is that in the twelve months' period our cash on hand and with bankers had increased by £1,435,000 over the corresponding figure of 1921, and our directed your attention to the fact that the bank's resources, or our deposits as compared with a percentage of less than 52½ at March, 1921. You will acknowledge that these figures indicate a striking improvement, and afford a valuable indication of the strength of our present position.

BRITISH AND COLONIAL GOVERNMENT SECURITIES.

Looking now at the item "British and Colonial Government and other securities," you may have noticed that, at £4,387,000, an increase is exhibited of some £630,000 over the corresponding figure of 1921. This increase is mainly due to investments in South African Treasury bills and in stock of the South African Reserve Bank. As is stated in the accounts, our investments appear

t or below the market prices prevailing at March 31st last, and, of course, since that date many of our holdings have appreciated considerably in value.

While on the subject of our investments I should mention that we have taken advantage of the opportunity recently afforded to all South African companies by the Custodian of Enemy Property of acquiring by purchase the parcel of 445 of our own shares hitherto held by his department. These shares, which were obtained at a reasonable figure, have been registered in the name of the bank's nominees in accordance with the authority conferred by the existing legislation on the subject of enemy shareholdings. With regard to the heading "bills of exchange," here again we have direct evidence of the trade contraction during last financial year. At March 31, 1922, we held bills purchased and current at that date aggregating £5,780,000—a fall of £3,200,000, in comparison with March, 1921. This variation coincides with the contraction in the country's trade during the period under review, the supply of commercial bills on the market naturally following the same course. The item "bank premises" exhibits a relatively small increase of some £40,000 over the corresponding figure of 1921, and does not, therefore, call for special remark.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, I touched, at an earlier stage in this address, upon the encouraging showing, under the heading of "gross revenue," as compared with the year ended March, 1921. Notwithstanding the abnormal conditions, our gross revenue last year was only some £30,000 less than for the preceding 12 months. On the other hand, our expenditure has considerably increased owing, mainly, to the additional staff charges which we had had to assume in consequence of the introduction a year ago of the bank officials' grading scheme. As already indicated, the board are alive to the need for reducing the heavy burden thus imposed upon the bank.

EDUCATIONAL DONATIONS.

Mention of our expenditure reminds me that there was recently published in the Press a list of donations to the Witwatersrand University, in which the National Bank figured as the donor of the very munificent sum of £10,000, and, while not questioning the claims of this deserving institution, shareholders might very properly inquire how it came about that we could act with so much generosity at a time when we are faced with the need for passing a half-year's dividend. The answer is that the publication of that subscription list is a belated event. In point of fact, our contribution was promised so far back as the year 1919, and was immediately written out of the profits of that year, which, as you will remember, were sufficiently substantial to justify the board in concluding that shareholders would endorse their action in giving this degree of support from your bank. Thus the profit and loss account of the year now under review is not affected by the donation. And, in case there be any shareholders who may infer from these remarks that the board has been unmindful of the claims of the sister universities, I may explain that, about the same time as the Witwatersrand University payment was sanctioned, donations were promised to the University of Capetown, to the Transvaal University College in Pretoria, and to the University of Stellenbosch. These donations also were immediately written out of that year's profits.

APPROPRIATION ACCOUNT.

As to the appropriation account, the only item that calls for remark at the present stage is the proposed allocation of £50,000 to our staff pension fund. It is essential, of course, as I am sure you will all agree that, in bad times as well as in good, the pension fund should be adequately protected. In order, however, that we may know with a reasonable degree of accuracy whether it will be necessary in future years to make such substantial provision as is reflected in the accounts of 1921-22 and of the years immediately preceding, we have decided to have an actuarial valuation of our pension obligations so soon as certain preliminaries have been completed.

SOUTH AFRICAN RESERVE BANK.

Let us turn now to an examination of the effect upon our operations of the establishment of the South African Reserve Bank. Some of you may not have realised that this June 30, 1922, is destined to become an historical date in the annals of South African banking, inasmuch as at midnight the commercial banks operating in the Union lose the privilege of issuing their own notes. From to-morrow onwards the notes of the Reserve Bank will gradually replace the commercial banks' circulation, in terms of the Currency and Banking Act, 1920. The provisions of that Act have come in for a good deal of criticism, and the contention has been urged that in the application of certain of its provisions the measure imposes upon our banking system, and, through it, upon our commerce and industry, a restriction that is not essential, and that accentuates financial stringency just at the time when elasticity and enterprise should be stimulated in order to assist the country through a period of unparalleled depression.

OBLIGATIONS IMPOSED BY THE ACT.

Let us consider for a moment what are the obligations imposed upon us by the Act. In the first place, we have had to deposit with the Reserve Bank 10 per cent. of our demand liabilities to the public and 3 per cent. of our time liabilities, which include interest-bearing deposits. Expressed in figures, this means that we have at present lodged with the Reserve Bank, in respect of these specific liabilities to the public (which do not, of course, include banknotes) actual cash to the extent of close on two and a-half million pounds. Now, in order to substantiate the contention that this requirement of the Reserve Bank scheme makes for stringency, it would have to be established that we could utilise these two and a-half millions of money, or a substantial portion of it, in making advances to our clients. But, in point of fact, and as a matter of prudent banking, it would have been incumbent upon us, even without a Reserve Bank, to keep at least this proportion of our resources in absolutely liquid form, so as to be in a position to meet all claims that might reasonably be expected to arise. Nor are there as yet any opportunities in this country of profitably employing such large sums, e.g., by means of short loans affording the necessary degree of liquidity and security. So that, from the point of view of our own financial elasticity, it really does not matter very much whether these balances are preserved in our own treasury or in the Reserve Bank; and, if we consider, on the other hand, that the concentration in the Reserve Bank of all balances of this nature derived from the commercial banks provides a basis for the creation of a considerable amount of fresh credit, of which the commercial banks may make use for their own profit and the country's benefit, then I think it must be acknowledged that, far from being regarded as an evil, this provision in the recent legislation should be welcomed by all who are interested in the country's financial development along sound and, at the same time, flexible lines.

Thus far I have been dealing only with the provisions of the Act, which prescribe what shall be the commercial banks' reserves against demand and time liabilities to the public; but mention has still to be made of the terms of the statute in relation to notes. As I have already indicated, from to-morrow the commercial banks may not issue any of their own notes, which will gradually be replaced by Reserve Bank notes, until finally the only paper currency circulating in the Union is that bearing the Van Riebeeck watermark.

EFFECT ON THE COMMERCIAL BANKS.

Now, how does this affect the commercial banks? Well, to take our own case, our note circulation at March 31st last, as you will see from the published prints, was over £4,400,000. Against this circulation the law obliges us to hold gold to an amount equal to at least 40 per cent. But to-morrow there begins the replacement to which I have just referred, and, for the wherewithal to effect this replacement, i.e., for Reserve Bank notes which will gradually take the place of our own, we must hand over to that institution a corresponding amount of gold, or arrange the matter in such a way that the Reserve Bank's reserves against their circulation consist of at least 40 per cent. of gold and the balance in commercial paper. Moreover, it should not be forgotten that so long as our own notes remain in circulation we must continue to hold gold cover to the extent of 40 per cent. of such remaining circulation.

Nor is this the whole extent of the disability which we suffer under this head, because we have similarly to put down pound for pound in respect of Reserve Bank notes required as "till money," whereas, up to now, "till money" has not even been subject to the 40 per cent. gold cover applicable to our notes in circulation. It will therefore be appreciated what a very considerable drain upon our resources is involved in this change over from our own note circulation, plus "till money," to Reserve Bank notes. I am glad to say, however, that we have satisfactorily completed all our arrangements for meeting these obligations as they mature; and I may add that this has been accomplished without any inconvenience to our clients.

Now, while the loss of our note issue, as I have indicated, necessarily affects the commercial banks adversely and to no inconsiderable extent, yet I must admit that there are compensations in the scheme which may not be observable at first sight. For the instance, since Reserve Bank notes can only be acquired by the commercial banks against an equivalent amount of gold or of gold plus commercial paper, it follows that, in addition to securing a full backing for the Union's paper currency, an automatic check is applied upon the quantity of notes in circulation, which will henceforward be regulated by the amount of gold and commercial paper available in the country. This check must make for a greater degree of stability in our monetary system, and the advantage thus secured will benefit the commercial banks as well as the community in general. Moreover, the pressure which the system will exert towards the financing of a larger portion of the country's trade on a bill basis cannot fail, in the long run, to react to our direct benefit.

It will be seen, therefore, that I do not ally myself with the critics of the Reserve Bank system. On the contrary, it is my firm belief that the provisions of the Currency and Banking Act, 1920, are sound and well conceived, and that they are destined to contribute very largely to the welfare of the community, not excluding the commercial banks. Moreover, I am glad to have this opportunity of giving public expression to these views in the hearing of the distinguished banker who so skilfully controls the affairs of the Reserve Bank, and who has paid us the compliment of responding to our invitation to attend our meeting this morning. I would assure him that we will do our best, by observing the spirit as well as the letter of the 1920 statute, to assist him in the responsible and complex work which he has undertaken.

REMOVAL OF EMBARGO ON EXPORT OF GOLD.

I have stated that this 30th of June, 1922, is destined to have an historical interest for the South African banks, owing to the loss which they sustain to-day of their privilege of issuing notes. In addition, it will go down in our financial history as the last day of the statutory embargo on the export of gold bullion and coin imposed by the Public Welfare and Moratorium Act, 1914, and amendments. In refraining from submitting to Parliament proposals for continuing this embargo after to-day, the Government have been guided by the advice of the Currency Conference which met in Pretoria in October of last year. The report of that conference has been published, and, accordingly, I need not weary you with the text of it. But it is appropriate that I should invite your attention to the important developments that may flow from the Government's decision. The gold-mining industry continues to be the mainstay of South Africa's economic life, and, accordingly, the earliest possible resumption of the gold standard, with a free and unfettered gold circulation, in this as well as other countries, is of paramount importance to us. However, circumstances are still such that we must maintain the inconvertibility of our paper currency, which was established by the Currency and Banking Act, 1920—and inconvertible the paper currency should remain until sterling reaches parity with gold. For this reason I am sorry that the Government have found themselves unable to adopt the recommendation of the Currency Conference that the period of such convertibility should be extended from June, 1923, to June, 1925.

It is true that recent indications point to the return of sterling to gold parity much sooner than was anticipated when the conference deliberated. Still, we are not yet out of the wood, and, as no one can accurately foretell the course of sterling exchange within the next 12 months, it would have been a relief to the banking community to know that any adverse tendency that may be met with had been guarded against for a longer period than a year, as is the position to-day. As matters stand, the embargo on the export of gold as bullion or coin ceases to-day, but we retain for another 12 months the inconvertibility of our paper currency, unless within that period the market price of gold in the Union recedes to £3 17s 10½d per standard ounce. So that, although, for our internal trade, we remain meantime on an inconvertible paper basis, gold will now be available for the settlement of our external debts, and can be obtained for this purpose, as well as to supply the needs of purchasers from abroad, at the recently completed refinery on the Rand. Bankers will watch with the greatest interest the results of this, our first steps towards getting back to a free market in gold, and I am sanguine that it will have a most beneficial influence on the restoration of stability and confidence in this country.

THE BURDEN OF TAXATION.

Of course, any benefit that may be derived from the removal of the embargo on gold exportations may be nullified if the country is to be constantly exposed to risks of additional taxation. I refer to the tendency of the provincial councils to increase the burden on the taxpayers. The Union Government have appreciated that in times like the present the only salvation lies in the reduction of their administrative expenditure, which has been vigorously attacked; and the country heaved a sigh of relief when the Minister of Finance announced recently that by such means he hoped to balance his accounts for the current year without having recourse to additional taxation. I venture to hope that the Provincial Councils will take a leaf out of the Finance Minister's book, and will look for the solution of their financial problems along the lines of reduced expenditure rather than of increased taxation, since any other policy must do serious injury to the country just at the time when there are substantial indications of a return to more prosperous conditions. The views of the community, as recently expressed in many quarters, furnish ample evidence that there is rapidly growing a volume of public feeling on this subject, the force and import of which should not be disregarded by our provincial legislators.

SURVEY OF INDUSTRIAL CONDITIONS.

So much of your time have I already occupied that I am reluctant to delay getting to grips with the resolutions on the agenda; but perhaps you will bear with me a little longer while I offer some brief observations on the industrial situation in South Africa, which so closely affects our welfare and prosperity. The gold-mining industry is still, of course, suffering from the effects of the disastrous upheaval which recently afflicted the Witwatersrand. It seems certain, however, that the sacrifices of these unhappy days will not have been in vain, since the resultant reduction in working costs and restoration of managerial control have saved the industry from the rapid decline which threatened, not alone the welfare of employer and employee, but also the economic future of the whole country. South Africa depends upon the gold industry to an extent which was not fully appreciated by certain sections until the recent enforced stoppage gave them unpleasant evidence of their community of interest in the premier industry of South Africa. As a prominent merchant friend remarked to me, on arriving from Capetown in the latter days of the strike, this was the first occasion on which the Witwatersrand gold mines had intruded in Adderley street. The outlook to-day for the mining industry is distinctly hopeful, and I am sanguine that its rejuvenation will assist materially in the restoration of more prosperous conditions throughout the Union.

The coal trade is still a disappointment. We had great hopes at one time of developing a large export business in this commodity, but circumstances with which you are all familiar have destroyed these expectations, for the time being at any rate; nor are there any very encouraging signs of a substantial improvement in the near future.

The diamond market, while showing a reviving tendency, is still far from the position which would justify us in looking for an early resumption of more active local mining, and the same remarks apply to most of the remaining mining interests in this country.

On the other hand, the overseas demand for our staple agricultural products seems to be improving. Particularly is this the case in regard to wool, which has had a sharp and welcome recovery, with every prospect of a continuance of these more encouraging conditions.

There is still some uncertainty in regard to the present season's sugar yield, but I gather from a well-informed source that if the acreage to be cut is not greater than that of last season the yield will be considerably less owing to the unfavourable climatic conditions prevailing in the early months of this year. On the whole, however, there is a confident belief in the sugar industry that, while the experience of this season may show a set-back both in price and yield, the application of more economical methods of production, manufacture and distribution will counterbalance these adverse factors to a considerable extent.

By the courtesy of the Department of Mines and Industries, and of other friends, I have been supplied with a mass of valuable and interesting statistics regarding the general industrial production of the Union, and I take this opportunity of expressing my appreciation of these welcome services. Unfortunately, however, I have had so much to say to you this morning that I am deprived of the opportunity of dealing further with this subject at the present time. On the whole, however, these reports confirm the opinion which I expressed to you earlier in the day—that the Union has turned the corner and is progressing steadily, if slowly, towards better and more stable conditions. We are justified, therefore, in taking a hopeful view of the future, and it must be a source of satisfaction to you to learn, from the figures which I have given you this morning, that, notwithstanding the abnormal conditions through which we have passed, the National Bank is so well able to contribute its share in the restoration of the Union's prosperity.

BRANCHES.

As you will see from the directors' report, there have been closed during the year under review nine of our branches, while 11 other branches have been converted into agencies. This list has been increased since the end of March by the closing of our branches at Bizana (in the Cape Province), at St Helena and, as mentioned at an earlier stage of my address, at Inhambane, Mozambique, and Quelimane in Portuguese East Africa. Since March, too, we have converted into agencies our sub-branches at Hankey (Cape), Tongaat (Natal), and Hartebeestfontein (Transvaal).

The foregoing comprises a fairly extensive list, but I venture to think that shareholders will readily affirm this policy of the board. It has to be admitted that during the boom period that followed the war our sense of proportion was upset, and we proceeded too rapidly in the matter of extending the field of our operations. In the light of experience it is clear that, under normal conditions, it will take years to develop a profitable business at many of these points, and while the directors regret the inconvenience that may here and there be suffered by valued

clients, they can justify to shareholders neither the retention of branches in areas which show no prospect of profitable banking for years to come, nor the preservation of branch representation at points where the business only merits an agency. With this policy before us, we are continuing to review carefully the conditions obtaining at all backward offices, and there is little doubt that at the next annual general meeting the list I have given you will reflect a number of additions. Perhaps I should add that as our principal competitor is also curtailing district representation, we have come together on the subject, and are endeavouring, by concerted and reciprocal action, to arrange that districts are not left altogether without banking facilities. In this way the public inconvenience at these points will be considerably reduced.

Before passing from this subject, a word is necessary regarding the disposal of the staffs released by the closing policy. We are under obligation to do the best we can for these officers by absorption, or otherwise, and the good and efficient men need have little apprehension regarding any interruption in their service.

DIRECTORATE.

Certain changes in the personnel of the board occurred during the year. The Hon. Hugh Crawford, who for so many years has held the chairmanship of the bank, relinquished that office and his seat on the board at the end of December last. A few months previously Mr E. C. Reynolds, who held the joint post of managing director and general manager, having completed 30 years' official service with the bank, intimated his desire to retire on pension. These two gentlemen are old and valued friends of many of you present here to-day, and I know that your good wishes go out to them for their happiness and welfare in the greater leisure that they are now enjoying. On the other hand, I have to record the appointment as directors of Mr Charles Maggs and Mr Walter Webber, M.L.A. Both these gentlemen are so well known and respected throughout South Africa that there is no need for me to dilate upon their unique qualifications for guiding the destinies of this large institution. Their colleagues on the board rejoice to have the benefit of their ripe judgment and wise counsels, and I am sure that you will most willingly confirm their appointments. I regret very much that our old and esteemed colleague, Mr Oliff, is not with us to-day. His health has been giving him and us considerable anxiety of late, but I am glad to say that he is now reported to be making satisfactory progress towards recovery.

In the composition also of our London Committee there have been certain recent changes. We deeply regret the death of Mr James Macalister, which occurred in February last. He had served as a member of our London Committee since its inception 31 years ago, and throughout this long period was unfailing in the interest which he took in the bank's affairs. Further, I have to record that Mr Henry Lewis has recently tendered his resignation from the London Committee. Extending over a very long period of years, his services have always been at the bank's disposal, and he carries with him the best wishes of his colleagues.

GENERAL MANAGEMENT.

On October 1st last Mr William Dunlop succeeded to the post of general manager, rendered vacant by Mr Reynolds' resignation. It is unnecessary to emphasise the heavy and arduous character of the responsibilities of this high office, and I am confident that I am echoing your views when I say that it is a matter of congratulation to the bank that the executive control of its business is in such very capable hands. I should state, too, that certain changes are pending in our senior head office personnel. In this connection I must mention that within the next few months we shall be losing the assistance of two valued officers of the bank, both of whom have to their credit a long record of faithful and successful banking service in this country. I refer to Mr D. H. Swart and Mr W. Fitzgerald, who have been discharging the duties of assistant general managers, and are shortly retiring on pension. I am sure you will join with me in conveying best wishes for their success in whatever sphere they may elect to employ their energies and manifold abilities after retirement. One of the vacancies thus created will be filled by the appointment of Mr G. R. Paterson, our senior branch manager at Capetown, whose record in our service leaves no doubt that he will prove a valuable addition to our administrative personnel. The second vacancy does not occur until some months later, so it has not been necessary as yet to decide upon the new incumbent for that post.

STAFF.

I am happy to say that the differences that have manifested themselves in recent years between the banking managements and the S.A. Society of Bank Officials seem, in the main, to have been overcome. Certainly in recent months no material issue has arisen which has been impossible of solution in an amicable spirit of give and take. A Conciliation Board, representative of all parties, assembled at Pretoria in January last, when the various out-

standing questions came under review and an agreement was arrived at upon all vital issues. So successful was this conference that, before it broke up, a scheme was agreed upon whereby similar conferences would be held at stated intervals to discuss any new difficulties that may come to light.

As regards our own staff, I must not omit to mention that within the last few months we have created a new post at head office styled "staff manager." The officer appointed in this capacity has been specially selected because of his peculiar qualifications for dealing with establishment problems, and he devotes his whole time to this work. Notwithstanding our short experience, good results from the appointment are already manifest, and I am satisfied that it will assist materially in avoiding staff grievances, since the staff manager's duties comprise, not alone the upholding of the bank's interests, but also the protection of the individual interests of our officers.

The financial year through which we have just passed has been a most trying one for the staff, particularly for the senior officials, and the board are glad to have this opportunity of acknowledging the difficulties under which they have laboured. In these days of stress and strain, bank managers have a difficult task to perform, and it is a marvel that their reserves of cheerfulness and patience have not long since been exhausted.

In past years it was the practice to grant the staff an annual bonus of a percentage on salary. This practice was interrupted in the year 1920-21, and for obvious reasons has not been revived in 1921-22. Nor am I in a position to venture any opinion as to when the practice may be resumed. I have already indicated that in recent years the bank's salary lists have been greatly augmented, and now amount to a most formidable figure, the increase being largely attributed to the application of what is known as the "grading award," which raised the emoluments of the great majority of bank officials in this country to a point which, under existing conditions, compares most favourably with the remuneration accorded by non-banking employers for the discharge of equivalent responsibilities. Nor may the fact be overlooked that these increased emoluments have a material effect upon the Pension Fund. It is true that during the period in question our staff has been very materially added to, but, making full allowance for this in addition, there is still observable a very large increase in the aggregate pay roll as compared with 1913. The factors which I have just mentioned cannot fail to affect the attitude of the management towards the bonus question, and, unless an avenue of relief be found—as, for instance, along the lines of more effective organisation and consequent reduction of personnel to which I have already alluded—it is hardly to be expected that the case for the resumption of bonus distribution will receive a very enthusiastic hearing.

That, gentlemen, completes my remarks this morning, and I thank you for your very patient hearing, and now beg to move the adoption of the report, balance-sheet, profit and loss statement, and the recommendation of your board.

MR J. EMRYS EVANS'S SPEECH.

Mr J. Emrys Evans, C.M.G., said: Mr Chairman, I rise to second the adoption of the report, and in doing so I would like to say I feel sure the shareholders, clients of the bank and the public generally will greatly appreciate the frankness which has characterised the speech to which we have just listened from the chair. No one can regret more than I do the necessity for acknowledging that during these past years of rising prices and extraordinary trade activity, when prudence and caution were especially necessary, transactions have been entered into—particularly in New York—containing elements of risk which should have been a deciding factor against the acceptance of such business.

The chairman has referred to the grave disturbance in the financial world, and in a business such as ours it is in the natural course of things that losses should be sustained through the extraordinary of things that losses should be sustained through the extraordinary break in prices and values which has taken place, but the regrettable thing is that, owing to excessive eagerness to do business, and faulty judgment, other losses in a quite different category have had to be faced. However, I have no doubt what interests you most is the future conduct of the business, and the chairman has referred to certain dispositions made by the board, which I am confident will ensure that proper regard will be paid to the fundamental and well-tried principles of banking.

Here I should like particularly to draw attention to a principle which, as an old banker, I desire to say must not only be kept well in view by the banks, but should also be impressed on clients, and in view of the true function of commercial banking institutions that is that the true function of commercial banking institutions is to assist capital, and not to furnish capital. This principle has been observed in recent years as closely as it should have been, and the sooner clients recognise that this is a principle of banking which for the future must be strictly adhered to, the better it will be for all concerned.

We have experienced a period of very severe depression, but I think we have every reason to believe, as the chairman has said, that

we have rounded the corner, and that we may look out for better times, although the process may be slow, and it is, perhaps, desirable that it should be gradual.

The troubles with which we in this country, as well as in other countries, have been confronted are primarily due to the inflation that occurred as a result of war conditions, and the process of deflation was something from which it was impossible to escape. As a consequence, whether we like it or not, the necessity for economy in both national and industrial life is brought home to us. In this connection, we are all aware that farmers are getting greatly reduced prices for their produce, and that, generally speaking, prices for livestock have not been so low for many years. Naturally, the cost of production should fall in sympathy, and this is what is taking place in other countries. Here in South Africa industries were started during the war period, many of which can only be continued successfully by coming on to a lower basis of production costs, and this emphasises the need for all sections of the community working together to this end.

While I have felt it necessary to refer to the difficulties with which the country is still confronted, I look forward with the utmost confidence to seeing these difficulties surmounted, and to a steady return to prosperity.

The Government proposes to spend a large sum on railway extension—a most commendable policy indeed—which will be of great assistance in the development of the resources of South Africa, and in helping forward that return to prosperity which we all hope for.

In the development to which I have referred, opportunities will be afforded the banks to render service, and I feel sure that the National Bank can be relied on to do its part in this respect, and that it will share in the resulting prosperity.

I formally second the adoption of the report, accounts, and the recommendation of the board.

SHAREHOLDER'S SUPPORT.

Mr A. H. Rennie, in supporting the motion, said: Mr Chairman, I think I am voicing the feelings of all the shareholders present when I take this opportunity of thanking you for the very clear, full, and frank statement made regarding the position of the bank. You have taken us into your confidence, and I feel sure that you have done the right thing, because a strong institution like yours can afford to own up to its mistakes, while the policy you have adopted is much better than trying to hide unpleasant facts. There can be no question that during the last few years many cases have occurred of the commercial community throughout the whole world departing from the safe and sure methods of their forefathers, and being carried away by a wave of gambling. Wherever one looked it would be found that some even of the biggest and best institutions had suffered in a manner similar to your own. We can but hope that the lesson has been learnt, and that a more careful policy will be followed in the future, in which case real prosperity will come, in which the National Bank will get its share. In your report, Mr Chairman, reference has been made to the disappointment regarding the failure of the coal mining industry, which at one time had hopes of developing a large export trade. That disappointment is entirely due to the attitude adopted by the Government, which would not face the fact that the industry must be enabled to meet overseas competition if success was to be obtained. The two great disabilities with which the coal industry has to contend are, first, the high railway rates and the uncertainty of truck supply; and, second, the lack of proper facilities at the ports. If these disabilities are not removed, the industry cannot cope with the overseas competition. It is imperative that large stocks of coal should always be kept on hand at the ports, as the requirements of the shipping trade call for prompt despatch, and unless ships can be supplied with coal and got away within 24 hours, the trade will not come our way. It is desirable that pressure should be brought to bear upon the Government in this matter, in order that proper facilities may be arranged. Amongst the shipping companies there is a distinct feeling of irritation against the South African coaling trade, and it is in the interests of the whole country that the grievances should be removed.

With regard to the report which you, Mr Chairman, have just delivered, I also am of the opinion that the corner has been turned, and that prosperity is in sight. The people of South Africa, however, should realise that if we as a country are to succeed, each one of us has got to put forward his best efforts. Hitherto there has been an idea that "anything will do." But if we are to hold our own in competition with the world's markets, our only hope of success lies in our realising that our best efforts are needed.

I congratulate you, sir, on the very frank and full statement you have made, and I am sure that the shareholders will all feel similarly.

HEAD OFFICE ACCOMMODATION.

Sir Evelyn Wallers, K.B.E., followed by saying: As representing

an industry which is vitally concerned in the maintenance of sound banking principles, I have listened with great interest to your admirable statement. The directness, the simplicity, and the extreme thoroughness with which you have explained the situation to us will, I am sure, be immensely appreciated by the shareholders and by the public alike, and will maintain among them the confidence which they hold (and rightly hold) in your institution. The dropping of a dividend is, naturally, some disappointment; but I am sure that no one will doubt the wisdom of the course which you and your colleagues have taken. You have candidly indicated the nature of the transactions in which your losses were sustained; you have shown the reserves and the value of your business, and have also indicated the weak spots and their remedies. In connection with the reorganisations to which you have alluded, it appears to me that the question of the provision of proper accommodation for the head office staff should receive attention. In other towns throughout the country the bank possesses buildings both of great attractiveness and convenience. It seems wrong to me, however, that for the head office of the bank, here in Pretoria, you should possess merely a collection of rooms, some in the main building and others in an adjoining building, with a communicating link in the form of a passage over a courtyard. Quite apart from the fact that the housing accommodation for the head office is by no means a credit to the institution, the inconvenience caused must necessarily militate against efficiency. The ramifications of the building are perplexing, and clients must have great difficulty in finding their way to the higher officials of the bank. In the interests both of the efficiency and of the health of the staff, therefore, I think it is advisable that the board should seriously consider the question of erecting new offices. I understand that a convenient site is obtainable, and I trust that the matter will receive due attention. It may be said that the present is not a suitable time for the expenditure of capital for such a purpose, but I feel sure that the outlay will be amply compensated by the considerably increased efficiency which will be derived, and will really constitute a very sound investment.

In conclusion, I would add a word of appreciation of what has been said regarding the South African Reserve Bank, because, notwithstanding the informative statement issued by the governor of that institution, one hears and reads a considerable amount of somewhat loose and uninformed criticism regarding the Reserve Bank, and of the disabilities which the commercial banks will suffer in this change-over which takes place to-night. The change is considerable, but I feel sure that the disabilities will be much more than outweighed by the advantages which will accrue, both to the commercial banks and to the community in general as the Reserve Bank grows in strength and influence.

Mr John Dougall said: As one of the bank's auditors, I would say that for three or four years we have had to perform our responsible audit duties at the end of a passage. The existing accommodation for the head office is most unsuitable, and I think it is most desirable and necessary that more suitable premises should be obtained, in order that the bank's business may be more efficiently attended to.

CHAIRMAN'S REPLY.

The Chairman, in replying, expressed appreciation of the remarks made by Mr Rennie in connection with the report presented, and also for the statement regarding the coal industry. He (the chairman) trusted that Mr Rennie's views on the subject would receive in the proper quarter the attention they deserved, and that the question of shipping facilities, railway rates, &c., would be duly dealt with. The coal mines of this country were an asset of enormous value, but it was obvious that no one would buy our coal if supplies of equal quality could be obtained cheaper elsewhere. It behoved all who had the interests of the country at heart to do what they could to educate and strengthen public opinion regarding the Government's policy towards the coal mines.

Referring to the remarks of Sir Evelyn Wallers regarding the accommodation for the head office, the Chairman said that the matter had not been overlooked by the board, but, owing to the existing conditions, they had not come forward with a proposal for the erection of a new building. What had been said at the meeting, however, was perfectly correct, and it was certainly bad for efficiency that the head office staff should have to work under the conditions at present prevailing. In view of the remarks now made, however, he took it that it was the wish of the meeting that the board should regard themselves as armed with a mandate to consider what could be done with a view to improving the position. Naturally, strict economy must be observed, but he agreed with Sir Evelyn Wallers that it would be a good investment to provide adequate head office accommodation.

The motion was then put to the meeting and carried unanimously. Sir Harry Ross Skinner moved that the appointments by the board of Mr Walter S. Webber, M.L.A., and Mr Charles Maggs as directors of the bank be confirmed.

Mr Robt. Hamilton seconded the motion, which was unanimously agreed to.

The retiring directors, Sir Ernest Oppenheimer, Mr J. B. Taylor, and Mr J. Emrys Evans, were re-elected.

On the motion of Mr A. H. Rennie, seconded by Mr E. H. Johnston, the remuneration for the past audit was fixed at six hundred guineas, and Mr Robert Baikie and Messrs Dougall, Lance and Hewitt were appointed auditors for the current year.

VOTE OF THANKS TO THE GENERAL MANAGER AND STAFF.

Mr J. B. Taylor, in proposing a vote of thanks to the general manager and staff, said: I would like to propose a vote of thanks to the general manager and to the staff. At this time last year the relations between the staff and the bank were not very satisfactory. Since then, however, we have heard from you, Mr Chairman, and from the report delivered this morning, that the relationship has improved. We are hopeful that it will continue to improve, and that any future differences which may arise between the staff and the bank will always be settled in a reasonable and amicable way.

Since we last met, Mr Dunlop has been appointed general manager, and he has given us the greatest satisfaction. We feel that we have been fully justified in making the appointment, as he has proved himself fully capable of handling all the manifold difficulties which have confronted him.

For those in and near Johannesburg the strike period was a very trying one, and we ought to congratulate ourselves on the excellent bearing maintained by the staff throughout the strike.

It is also a matter of congratulation for us to have Mr Leisk as our chairman and managing director. His brilliant career needs no eulogies from me. We are very fortunate, indeed, in having secured Mr Leisk's services, and we hope he will long be able to continue to direct the bank's affairs. I feel that we may rest assured that with our affairs in the hands of Mr Leisk and Mr Dunlop we may be well satisfied.

The General Manager briefly acknowledged the compliment, whereupon the proceedings terminated.

SOUTH-EASTERN RAILWAY COMPANY. NEW SCHEME UNANIMOUSLY ADOPTED.

A special general meeting of the proprietors and debenture stockholders of the South-Eastern Railway Company was held, on the 1st instant, at the Cannon street Hotel, London, for the purpose of considering, and, if so determined, of approving the preliminary scheme for the amalgamation of the South-Eastern Railway Company, the London, Chatham and Dover Railway Company, and the South-Eastern and Chatham Railway Companies Managing Committee, as outlined in the circular letter to the shareholders and debenture stockholders of June 27th last.

Mr H. Cosmo O. Bonsor (the chairman of the company) presided, and, in moving the resolution, outlined the course of the negotiations with the Chatham Company and the difficulties which had arisen.

Consequently, they came to the conclusion that absorption was impossible, and he deprecated the suggestions that this company was by Mr Rodocanachi and other gentlemen that this company was absorbing the Chatham. They had come to the conclusion that it was absolutely necessary to form a new company under the Railways Act to take over the two companies, and it was a new company that they were asking the stockholders to form that day. It was also the unanimous decision of the two boards that neither company was to gain advantage or to suffer disadvantage, and it was further agreed that the basis of amalgamation should be the net revenue of each company on the published figures of 1920. As a fact, when the 1921 figures came into existence, it so happened that

there was a fractional difference in favour of the Chatham shareholders if they accepted the 1920 figures. However, they, the South-Eastern board, said that the Chatham were welcome to that advantage. They had also come to an understanding that when the Southern Group was formed there should be five directors nominated by the South-Eastern Company and three directors nominated by the Chatham Company to serve on the new board.

ALLOCATION OF THE NEW CAPITAL.

The figures of the net revenue of the two companies having been ascertained and checked, the experts agreed that to produce the same joint income and not to interfere with the priority of any existing stocks the capital of the new company should, in rough figures, be as follows:—Debentures and annuities, £16,000,000; preference stocks, £21,500,000; preference stock (1922)—a new stock to cover some of the Chatham preference stock—£5,715,170; ordinary stock, £10,000,000; and then a contingent ordinary stock of £5,900,000. There was no possible dispute as to the accuracy of those figures. To the South-Eastern Company were allotted £9,900,000 of annuities and debentures, £14,100,000 of preference, and £10,000,000 of ordinary; to the Chatham were allotted £6,100,000 of debentures, £7,400,000 of preference, and £11,600,000 preference (1922) stock and contingent ordinary. That allocation was mathematically correct, and carried out the agreement that there was to be no advantage or disadvantage to any stockholder. So far as the board were aware, the South-Eastern shareholders had accepted the arrangement, and he would now deal with the Chatham position and the criticisms which it had aroused. He claimed that those criticisms were based on an absolute misunderstanding. The point was that the Act of Parliament made amalgamation compulsory, and the only fair way of achieving that was to arrive at the net revenue of the two companies, to capitalise those revenues, and to allocate to each company the total amount of debenture, preference and ordinary stock so as to facilitate eventually the amalgamation with the other constituent companies in the Southern Group. The Stock Exchange value of securities was often based on dividends without taking other considerations into account.

SOUTH-EASTERN DIVIDEND.

The South-Eastern board for the years 1920 and 1921 could have recommended the payment of an increased dividend beyond the 4½ per cent. on their undivided ordinary stock, but there was an understanding with the other large companies that they would not suggest an increase of dividend so long as they were drawing upon the Government compensation fund to make up loss of traffic. That the Chatham board did increase their dividend for 1921 was mainly due to an augmentation in the revenue of that company's separate estate. Criticisms on the treatment of the Chatham Arbitration preference stock had all been based on the fact that the South-Eastern Company paid 4½ per cent. on their ordinary stock. That was absolutely fallacious. It was 4½ per cent. on the ordinary stock of the new company that had to be taken into consideration in discussing the position of the Chatham Arbitration preference stock. The figures could not be disputed.

As regarded the opposition, they had the power to postpone the inevitable to a hearing before the Tribunal, but he respectfully suggested to the Chatham shareholders that they should consider the position they would be in under such conditions. There would be the South-Western, the Brighton, the South-Eastern, the managing committee, and, he presumed, the Chatham Board putting forward one scheme and a small body of Chatham shareholders putting forward another. That, too, was not the worst. They must amalgamate before January 1st or there would be absolute chaos. The risk and danger would be very great if the small number of opposition shareholders had their way.

Sir Alfred W. Smithers seconded the motion, which, after some discussion, was carried unanimously.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

BRAKPAN MINES, LIMITED. (INCORPORATED IN THE TRANSVAAL.) **REDUCTION OF GOLD PREMIUM.**

The nineteenth ordinary general meeting of shareholders was held in the board room, second floor, "The Corner House," Johannesburg, on Monday, May 29, 1922, at 2.30 o'clock in the afternoon. Mr F. R. Lynch, the chairman of the company, presided.

The Chairman said: In Brakpan Mines we have a large property, the major portion of which is unexplored, and it is desirable to push development forward as rapidly as possible. During the past year the development footage accomplished totalled some 22,555 feet, of which 1,024 feet were driven from the new No. 3 and No. 4 shafts. At December 31st last the payable ore reserve was calculated at 2,423,230 tons, averaging 8.61 dwt over 68.13 inches, or 587 inch-dwt, as compared with 2,526,517 tons, averaging 8.88 dwt over 70.08 inches, or 622 inch-dwt a year earlier. This is a reduction of 103,287 tons in the reserve of payable ore, while the value is slightly decreased.

The tonnage crushed during the year totalled 659,800 tons, which is an increase of 63,300 tons over the previous year. The yield was declared at 345 0.17d per ton milled, a fall of 2s 5.43d per ton, but as a set-off against this the working costs show a reduction of 2s 4.26d at 27s 2.36d per ton. The welcome reduction in working costs was mainly due to improved efficiency in breaking rock, although some improvements were made in other directions. For the current year a yield of between 33s and 34s per ton is expected.

Although the declared yield is returned at 34s 0.17d per ton, the actual yield for the year averaged 36s 5.53d. Your directors, having in mind that heavy capital expenditure would have to be incurred in connection with the equipment of the lease area, and also that there were no capital funds to draw upon, decided to overmine for a short period in order that a sum of £100,000 in excess of the average yield of the mine should be accumulated. In all 19,116 ounces of fine gold were placed to gold reserve, the standard value being £80,723. The overmining enabled us to take advantage of the premium on gold, and the actual value of the gold won was £100,619, or £20,000 in excess of its standard value. Difficult times call for extreme measures, and in this case the average value of the areas mined from was only .42 of a dwt above the average value of the payable ore reserve; therefore it had little influence on the value of the present ore reserve.

The total working profit for the year, exclusive of the value of the gold in reserve, amounted to £490,246, or £52,000 less than in 1920, but this is more than accounted for by a reduction of £71,000 in the amount received from premium on gold. The amount to the credit of appropriation account was £630,254, made up of £34,089 carried forward from 1920, £495,545 working profit, and £100,620 from gold in reserve. This sum has been dealt with as follows: £71,820 was appropriated for Government taxes; £24,169 was paid to the Government as its participation in profits, and £5,395 in respect of the Schapenrust claims; £49,493 was credited to development suspense; £180,000 was appropriated for capital expenditure, and £255,000 was absorbed in the payment of two dividends, each of 15 per cent. The balance of £44,467 was carried forward.

In order to meet the cost of development, a charge of 5s per ton milled is made to working costs, but the footage driven last year called for a larger amount than the fixed working cost charge, and it was necessary to appropriate the balance out of profits. Our capital commitments required £180,000, therefore we had to raise £80,000 over and above the amount provided through the gold in reserve, and this was done from the revenue for the year.

The report and accounts were adopted.

SPRINGS MINES, LIMITED. (INCORPORATED IN THE TRANSVAAL.) **INCREASE IN ORE RESERVES.**

The thirteenth ordinary general meeting of shareholders was held in the Board Room, 2nd Floor, "The Corner House," Johannesburg, on Monday, May 29, 1922, at 12 o'clock noon. Mr F. R. Lynch, the chairman of the company, presided.

The Chairman said:—Under the provisions of the Lease Agreement the Consolidated Mines Selection Company was called upon during the year to take up 60,000 ordinary shares in the capital of your company at £3 per share, and the issued capital was thereby increased to £1,327,236. Of the 60,000 shares called up, the proceeds of 57,000 shares were applied to shaft sinking and equipment, and the balance to the redemption of the debenture debt. There still remains 172,764 shares, of a nominal value of 20s. each, to be taken up in terms of the Lease Agreement at £3 per share. As is pointed out in the directors' report, debentures to the nominal value of £11,135 were purchased, and these, together with the surplus purchases from the previous year, exceeded the amount

required to fulfil the obligation under the debenture trust deed to redeem £17,110 debentures during the year. No drawing of debentures, therefore, took place. The amount of debentures outstanding at the end of the year was £86,945.

The profit for the year, including the gold premium, amounted to £397,803, which is some £40,000 less than the profit for the previous year. The revenue per ton milled was 37s 2.50d, against 37s 10.15d, but on the other hand working costs show a welcome reduction from 30s 8.11d to 29s 8.36d; thus the fall in value is more than counter-balanced for the reduction in costs. The reduced price realised for our gold is solely responsible for the fall in the profit.

The amount credited to appropriation account, including the £59,284 carried forward from the previous year, was £452,826, which sum was dealt with as follows: Taxation absorbed £38,929, Government participation in profits £15,641, development suspense account £127,239, and dividend account—two dividends of 7½ per cent. each—£197,585. This leaves £73,430 to be carried forward to the next account. I am pleased to say that the provincial gold profits tax was repealed during the year, and that the Provincial Government no longer has the power to tax the mining industry.

Development was pushed forward with all despatch during the period under review, as is shown by the fact that the total footage accomplished amounted to 22,969 feet, which is an increase of 4,561 feet over the previous year. Of this footage, 16,221 feet were on reef and 16,055 feet were sampled, the average value being 23.54 dwt over 17.25 inches. The payable footage totalled 8,630 feet, equal to 53.8 per cent. of the footage sampled, giving an average value of 30.74 dwt over 22.10 inches, or 679 inch-dwt. This result is the highest obtained since crushing was started.

The recalculation of the ore reserve at the end of the year showed an increase for the year of 330,053 tons, the total reserve being 3,056,231 tons, assaying 8.92 dwt over 61.54 inches, or 549 inch-dwt. In certain sections of the mine areas of considerable promise were opened up. I would specially refer to the eastern section off the East Haulage, where a shoot was encountered containing 674,000 tons—as far as it has been opened up—averaging 10.77 dwt over 60.12 inches. The limits of the shoot have not been reached, and there is a good prospect that this year's operations will result in a considerable additional tonnage of payable ore being added to the reserve from this ore body. Generally speaking, I may say that the development results for the past year were excellent, and there is every promise that the results for the present year will be equally satisfactory.

The report and accounts were adopted.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED. **BONUS DISTRIBUTION.**

An extraordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 1st instant, at the Institute of Chartered Accountants, Great Swan alley, Moorgate, London, to consider resolutions providing for an increase in the nominal capital to £1,500,000 by the creation of 500,000 additional shares of £1 each, and the distribution of a special bonus of 5s per share, free of income-tax.

Mr Richard Foster, who presided, said: Since our last increase in capital in August, 1919, we have more than doubled the reed space of the looms of the cotton mill; we have acquired more land round our factory; we have taken an interest in a biscuit factory which shapes well to be a paying concern; and, also, we have an interest in a small flour mill in Bahia, which, although not yet working—in fact, at present all the capital is not called up—we have little doubt should also be a paying business from the start, which, it is hoped, will be early next year. Beyond this we have made, and are making, many alterations to our flour mill buildings and machinery, which should not only materially increase the output and quality of our flour, but also reduce the cost of manufacture, not least of these being the improved facilities for discharging wheat cargoes.

Mr Richard Foster, who presided, said: Since our last increase in capital in August, 1919, we have more than doubled the reed space of the looms of the cotton mill; we have acquired more land round our factory; we have taken an interest in a biscuit factory which shapes well to be a paying concern; and, also, we have an interest in a small flour mill in Bahia, which, although not yet working—in fact, at present all the capital is not called up—we have little doubt should also be a paying business from the start, which, it is hoped, will be early next year. Beyond this we have made, and are making, many alterations to our flour mill buildings and machinery, which should not only materially increase the output and quality of our flour, but also reduce the cost of manufacture, not least of these being the improved facilities for discharging wheat cargoes.

All of these are essentially capital items, and the cost more equals the amount proposed for issued capital. It is, I think, needless for me to say that we have gone very carefully into things from every point of view before asking you to sanction an increase of capital, and the distribution of a bonus, to be taken, if you wish it, in the humanly possible that the company should be in a position to pay good dividends on the issued capital that we now recommend. The resolutions were carried unanimously.

The Chairman then stated that in view of the present market for shareholders to take the bonus in the form of new shares rather than in cash. The rights to the new shares could be sold on the Stock Exchange, through bankers or brokers, for considerably more than the cash value of the bonus. The allotment letters would be posted, they hoped, on the 17th instant.

THRELFALL'S BREWERY COMPANY, LIMITED. **ACQUISITION OF NEW PROPERTIES.**

The thirty-fifth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 2nd inst., at the Cannon street Hotel, London.

Major C. M. Threlfall (the chairman) presided, and, in the course of his address, after paying tribute to the late chairman, Mr Charles Threlfall, the late Mr M. C. Buszard, K.C., who was trustee for the debenture-holders, and Mr P. J. Feeny, who was the managing director, said: In the first place, I would like to state what a difficult year we have had to contend with—what with the tremendous amount of unemployment and the high beer duty imposed, it has become almost impossible for the working man to afford his national beverage, and as only the Government can alter this, it is time, I think, they reduced their expenditure so as to enable the working man to obtain his refreshment at a reasonable charge. The item "investments" is increased, as compared with last year, by the sum of £73,454; and the number of issued preference shares is increased by 16,965 shares. These increases are due to our having acquired practically the whole of the share capital of Messrs Thoroughgood's Breweries, Limited, of Waterloo, an old-established and renowned brewery concern on the outskirts of Liverpool. In addition, a number of valuable licensed properties have been purchased during the year, both in the Liverpool and Manchester areas.

PROFITS AND DIVIDENDS.

The net trading profit amounts to £338,340. After deducting interest on debenture stock, interest on deposits, directors' fees, and compensation levy, and adding transfer fees and bank interest, there is a net profit of £278,874 for the year, which, together with the carry forward from last year, makes a total of £502,821 to be dealt with. We are again paying a bonus to our employees in recognition of their good services throughout the past year. I now beg to move the adoption of the report and accounts, and that a dividend be paid at the rate of 6 per cent. per annum on the preference shares, and a dividend at the rate of 20 per cent. per annum on the ordinary shares for the half-year ended June 30, 1922, which, with the interim dividends, make 6 per cent. on the preference and 20 per cent. on the ordinary shares for the year; the amount carried forward to next year being £232,553.

Mr W. G. West seconded the motion, which was carried unanimously.

Since July 21, 1920, notes and certificates outstanding include notes called in, but not yet cancelled. Maximum fiduciary issue for 1920 fixed at £320,600,000, for 1921 at £317,555,200, and for 1922 at £309,988,400.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills dated from Tuesday to Saturday, August 8-August 12, were opened on August 4, 1922, and the total amount applied for was £71,675,000. Tenders for Treasury Bonds at £100½ will receive about 87 per cent., above in full. Tenders for Tuesday to Friday bills at £99 9s od will receive about 25 per cent. and above in full. Saturday bills at £99 9s 2d. The average rate of discount for Treasury bills was £2 2s 10.76d.

The amounts allotted were as follows:—In bonds, £6,000,000; in bills at 3 months, £44,000,000.

SALVADOR RAILWAY COMPANY, LIMITED, 7 PER CENT. 10-YEAR DEFERRED INTEREST CERTIFICATES.—Interest at 7 per cent. per annum for the six months to August 15th will be paid, together with coupon No. 46 of the 5 per cent. mortgage debentures also due August 15th, in cash on and after that date at the Anglo-South American Bank, Limited, 62 Old Broad street, E.C.

ANGLO-DUTCH PLANTATIONS OF JAVA.—We are informed that the directors of the Anglo-Dutch Plantations of Java, Limited, have concluded an agreement with the General Rubber Company of New York, whereby the latter agree to take the entire output of standard rubber of the former company from October 1st of the current year to the end of 1924, after providing for existing contracts. The rubber is deliverable, ex godowna, on the estate, and the price to be the average of the daily quotations for London, spot standard quality, calculated monthly, with a minimum of 8d per lb, and a maximum of rs 4d per lb, the maximum and minimum to be increased by the amount of any export tax in existence at the time the price is calculated. This contract is automatically renewable for further periods of two years unless same is terminated by six months' notice by either party. The directors of the Anglo-Dutch Plantations of Java, Limited, are satisfied with this agreement, as in their opinion methods of preparation will undergo drastic changes during the next few years, and to be working in co-operation with so important a manufacturing concern in America is, they consider, a very desirable position for the company to occupy.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The wool sales closed in Coleman street to-day with values at the highest point of the series, and the weakness which developed during the June auctions has entirely disappeared. It must be confessed that the raw material market is much stronger than actual conditions in the consuming centres would seem to warrant, but it is manifest that traders have the fullest confidence in the future of merinos, and the withdrawal of New Zealand crossbreds by B.A.W.R.A. has undoubtedly helped to place these qualities on a firmer footing. At the moment the fly in the ointment is the uncertainty caused by the continued slump in the German mark. Traders express the hope that a financial collapse, with its attendant demoralising effects on trade generally, will be avoided, but many are beginning to get very anxious. This need occasion no surprise, when it is remembered that Germany is normally one of the strongest props of the wool market. However, apart from this disturbing element, there is little for traders to worry about. The firmness in the raw material market is having a hardening effect on tops, and quotations are being advanced wherever possible in keeping with the cost of wool in London. A good 64's top is now worth about 4s 7d for delivery in October and later months, and at least 4s 6d is wanted for an average top. A fair amount of business is being done, though topmakers are adopting a more independent attitude in consequence of being so well sold ahead. Crossbreds are on the slow side, and while quotations are nominally unchanged, some firms are hoping to make rather more money as a result of the stronger tone in the raw material market. Spinners report a fair amount of new business in botanics and fine crossbreds, but thick counts out of low qualities are slow of sale. In the piece goods trade there is a moderate amount of business, and more activity is expected in the course of a few weeks.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales finished on Thursday in fine style, the competition seen throughout the whole series being of the best. It has surprised both sellers and buyers to find prices so very firm, with an undiminished demand for the raw material, and at the close there was not the slightest evidence of the trade being satisfied. At the same time, buyers confess to having had enough, and the majority can now well afford to cease operations for a considerable time. A month is to elapse before another series of sales takes place, and this will be the first month of the year when no auctions are taking place anywhere throughout the world. After the great quantity of raw material which has been lifted during the past 12 months, the trade can afford to remain quiet, and a chance will now be given to topmakers and spinners to work up a portion of their stocks, and prepare for the future. Practically speaking, there has been a good 5 per cent. advance for all descriptions of raw material, and even medium and low crossbreds are better at the finish than they were at the opening of the series.

The outstanding feature of the auctions has certainly been the widespread demand for merinos, and these occupy to-day a very strong position. Naturally, the situation has been somewhat disturbed by the renewed slump in German marks, and buyers from that quarter have certainly been less active than they otherwise would have been. Political considerations have given rise to some concern regarding the future, and an absolute breakdown in Germany is certain to be attended by disturbance in the commercial world in both France and Belgium. So far as her textile trade is concerned, the vast majority are of the opinion that some relief should be given to Germany in regard to future payment of reparations, and that time should be allowed in which to recover her lost ground. Germany is a mighty factor in the textile world, and, by her large purchases of raw wool during the past 18 months, she has taken off the market some huge weights of crossbreds. There has also been a marked improvement in our overseas trade with Germany in semi-manufactured goods (tops and yarns), and if further advancement is to be recorded, the co-operation of the Continent is essential.

Wool buyers went home on Thursday well deserving a good holiday, and the quiet month of the year is upon the trade with practically the whole output of mills sold to the end of September. We see no reason for merino prices to decline unless a determined "bear" effort is made to force values down, with a view to the opening of a new season in Australia in the middle of September. Trade is good generally, more machinery is running than at any time since the slump of two years ago, and we regard the outlook as favourable.

The next series of sales are due to begin on September 5th, the list of arrivals being closed on May 26th last. There will be avail-

able about 16,700 bales of free Australian wools and 37,000 bales of free New Zealand, totalling 53,700 bales, in addition to which B.A.W.R.A. will offer about 20,000 bales merino and 30,000 bales crossbred, giving a total of 103,700 bales, to which there should be added, say, 10,000 bales of Puntas.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The opinion expressed here by the writer a few weeks ago that hides values had reached their maximum seems to have justified itself, as prices again showed a decline at the Bermondsey auctions on Thursday. Best ox sold from 6½d to 9½d, prices showing a decline of ½d to ¾d down, as against last week's rates. Cows remained steady, but calf fell ¼d to ¾d, best light selling at 12d. Lambs at 2s to 4s 10d were 2d up, whilst pelts at 2s 5d to 3s 10d were 1d up. Tanners are buying imported hides very sparingly, as prices are regarded as too high, in view of the price obtainable for leather. Dry B.A.'s have been sold at about 10½d. Africans are quiet, except for cheap low-grade parcels. Cables from New York report the Chicago hide position as strong, with best packers selling at 20 cents.

The sale of sole leather has been of a limited character this week, and buyers cannot be tempted to speculate at present prices. Tanners remain firm as far as prices are concerned, but seem inclined to shade quotations if a big parcel of bends can be cleared. The repairers have been dealing a little in medium-class bends, but the demand from manufacturers still remains constant for dry hide bends at a low price.

The upper section is dull, but improving. Glacé kid is selling better for women's wear, whilst black box and willow are being sampled freely. Carriers report the outlook as better, and those who cater from the suit and attaché case trade have been agreeably surprised at the orders which have come in of late.

Shoe manufacturers report a falling off in business, but are still moving off sports and holiday goods. There is also a fair export trade passing, especially for the better grade of women's shoes of the Leicester and Norwich type. Most factories will close the whole of next week.

VEGETABLE OILS AND OILSEEDS.

Rather an easier tone prevails in the market for vegetable oils. Raw linseed oil, after a spurt of speculative interest, is lower. While "spot" oil is held for £43 10s ex Hull mill, August oil is quoted £42 15s, and September-December £39, the last named being 30s below the highest. Both home and export demand is very modest lines. Owing to this, trade in linseed has been slow and values have declined somewhat on better shipments from the Plate and lower options, down to £19 12s 6d having been accepted for August-September to Hull, with sellers now asking slightly in excess of this for shipment and £20 for spot. Calcutta Cotton oils have been neglected, and prices are again lower, £41 10s ex Hull mill. Egyptian cottonseed has continued cheap in sympathy with a fall in cotton, Sakellardis changing hands at £10 15s August, while about £8 17s 6d (paid) represents current value of Bombay for shipment.

Rapeseed continues steady, but the principal business is for account of the Continent, Antwerp paying £19 for Toria and shippers asking £12 5s for November-December. Palm kernels are without material change. Rape oil offers freely at the lower range of values—viz., £41 spot and £40 forward, ex Hull mill. Linseed (Plate and Indian) on passage to the United Kingdom has increased to 36,200 tons, and that to the Continent to 94,900 tons, together 131,100 tons against 123,000 tons a week ago. Shipments of Plate linseed, January-July, are: to the United Kingdom, 140,300 tons, Continent 267,000 tons, and North America 168,000 tons—together 575,300 tons, against 811,000 tons at same date last year. Those from India are:—To the United Kingdom 102,175 tons, and to the Continent 77,450 tons. Aggregate shipments to the United Kingdom to date are 242,475 tons, against 336,725 tons, and to the Continent 344,450 tons, against 362,600 tons. The estimated balances remaining for export are: Argon-

tina 179,000 tons (or possibly more), and India 171,000 tons—total, 350,000 tons, against 578,000 tons a year ago.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 4.

Business in most kinds of raw material proceeded very quietly, export trade being hampered by the position of various rates of exchange, but a steady offtake was again observable with regard to foodstuffs.

SUGAR.—This market evinced increased firmness during the week, steady inquiries both on grocery and manufacturing account, combined with reserved offers from producing countries, being the chief factors for the upward move. Messrs Tate and Lyle's cubes sold, 59s to 60s; crushed, 57s 6d; fine granulated, 52s 9d; coarse, 52s 9d, London; and No. 2, 52s 3d; caster, 55s 3d to 56s 3d; yellow crystals, 46s 9d; pieces, 36s to 37s 6d; fine white, 47s 6d; granulated, September, 52s 9d; October, 52s 6d; and November-December delivery, 51s 9d. Crystallised West India met with moderate support at prices ranging from 43s 6d to 46s 6d as to quality. White Mauritius, spot, 49s to 49s 6d; white Trinidad, 49s 6d; white Brazilian, 48s 6d to 49s. American granulated, spot, sold, 50s 9d to 51s 3d; shipped parcels, 24s to 24s 3d; July, 24s to 24s 3d; August, 24s 9d to 24s 10½d. White Java, July, sold, 22s to 21s 10½d, and 22s 1½d; August, 21s 9d to 21s 10½d, c.f. and i., London. Czecho granulated, November-December, 22s 3d; cubes, 25s 3d, f.o.b., Hamburg. Dutch cubes, prompt, 29s 9d; granulated, 25s 10½d, f.o.b., Amsterdam. Belgian crystals, October-December, 21s 3d; granulated sold, 21s to 21s 6d, f.o.b., Antwerp. White Brazilian, September-October shipment, sold, 21s 3d to 21s 9d, c.f. and i., London. Cuban basis 96 per cent., August, quoted 19s 6d; Java basis 98 per cent., ditto, 20s; and Brazilian basis 80 per cent., August-September, 9s 3d, all c.f. and i. terms, U.K. Terminal market ruled quieter. White, August, sold, 24s to 23s 7½d and 24s 3d; September, 23s 3d to 23s, and 23s 6d; December, 22s 6d to 22s, and 22s 7½d. Cuban stocks stand at 640,500 tons, against 1,410,800 same time last year. Liquid glucose, spot, 28s per cwt.

COFFEE.—A fair demand continued for the better qualities, and prices on balance show no material alteration. Nairobi, bold, sold, 95s to 104s; Uganda Robusta, 64s 6d to 67s; Costa Rica, 107s 6d to 110s. Futures remain quite idle.

COCOA.—No auctions held this week, and by private treaty only a small business transpired at about previous rates. Butter quiet at 1s 7d per lb.

TEA.—Indian auctions of 39,000 packages elicited active and well distributed competition, and prices on balance ruled firm. Quantity of Ceylon amounted to 27,400 packages. Good competition was generally experienced, but prices on balance disclosed some irregu-

larity. Finest kinds in some cases were dearer, medium ruling firm, but common and plain liquoring parcels tended in buyers' favour.

RICE.—Market steady, but with only a moderate trade doing. Two stars, spot, quoted 15s 3d to 15s 6d; ditto, afloat Antwerp, sold, 14s 6d; and August-September held for 14s 4½d. Broken descriptions slow at recent level of values. Beans firm, and Rangoon hand-picked, spot, sold, 7s 3d. Japanese peas quiet. September-November quoted 31s 6d.

SPICE.—Pepper steady in value, but buyers were not frequent. Fair black Singapore, spot, quoted 4d; ditto, August-October sellers, 3½d; Aleppy, spot, quoted 4½d; Tellicherry, 4½d; white Singapore, 6½d; ditto, August-October, 6½d; white Muntok, spot, 7½d; ditto, August-October, sold, 6½d-6¾d. Zanzibar cloves firm. Fair quality, spot, sold at 1s 2½d on further purchases on American account; and October-December, steamer, 7½d to 7½d. Pimento, spot, 2½d. Tapioca quiet. Fair flake, spot, 2½d per lb; ditto, August-September, steamer, London, 24s; fair Penang seed, spot, 20s 6d; ditto, August-October, London, 21s. Sago flour, August-September, 14s 7½d; September-October, 14s 3d; October-December, 14s 1½d. Desiccated coconut quiet. Spot parcels, sold, 36s 6d; afloat, 34s; and August-September, 35s. Ginger steady at late values. Cinnamon: Ceylon fourths, spot, sold, 8d per lb.

FRUIT.—Market still quiet, with actual dealings more or less of a retail character, with prices showing no appreciable alteration.

JUTE.—A dull and easier tone pervaded this market, demand from spinners being on limited scale. First grade, July-August, Continent, sold, £33 to £32; new crop, ditto, August-October, £35 to £34; lightning grade, afloat, £29 12s 6d; July-August, £30 to £29 10s; new crop, August-October, £30 10s. Hessians quietly steady. 10 oz, spot, 36s 6d; 8 oz, 27s. A twills, 75s; B, 65s; salts, 60s; sugars, 78s 6d; flour, 80s.

HEMP.—Manila received better patronage, and market ruled slightly firmer. G grade, September-November, sold, £34; J, £31 12s 6d to £31 15s; K, afloat, £31 15s; September-November, £30 12s 6d to £30 15s; L, £29 12s 6d to £29 15s; M, £28 10s to £28 12s 6d. New Zealand firm, quiet. H.P.F., spot, £33 10s; fair, £32. African Sisal, September-November, sellers, £37 for No. 1 G.E.A., and £36 value B.E.A.

SHELLAC quiet, and prices lower all-round. T.N., spot, 345s; August, sold, 315s; October, 315s.

COPRA.—Slightly irregular at times, and business proceeded slowly. F.M.S. Straits, May-July, Rotterdam, sold, £25 10s; July-September, £25 8s 9d to £25 5s; Ceylon ditto quoted, £26 10s; Java, £25 10s; Cebu, £25; South Sea, £24 8s 9d; mixed, excluding Padang, £24 5s. Palm kernels, July-September, Liverpool, sold, £17 12s 6d to £17 13s 9d; and September-November, £17 16s 3d.

EGG PRODUCTS.—Market quiet, but generally steady. Prime liquid yolk, spot, 110s per cwt. Albumen, spot, sold, 3s 3d per lb.

MENTHOL.—Spot, 24s; forward, 23s. Japanese peppermint oil, spot, 5s 3d; forward, 4s 10d. Aniseed, spot, 2s 3d; forward, 2s 4½d.

INVEST IN A
ROYAL TYPEWRITER
It Pays for Itself.

TYPING, copying and duplicating work can invariably be found by those who are anxious to earn money in their spare time.

The "Royal" Typewriter has a well-deserved reputation for producing the finest work. The clean-cut lettering, the ease of operation, and the adaptability for every class of work make it an ideal machine for home or office work—and it pays its own instalments.

If you think of hiring a typewriter or obtaining one on easy purchase terms, ask us to call, or call on us. Our terms are most reasonable. Please write for them.

Skilled operators provided at any time for special or temporary work.

Portable Typewriters Supplied.

Send your enquiries to:—

 street (Room 1,709).

WITH some difficulty the market repaid the Bank on Tuesday, and on Thursday succeeded, with an effort, in continuing the process of repayment, which was finally completed yesterday. It had been in the meantime assisted by the withdrawal of Treasury bills from offer on tap, a proceeding which caused much discussion and surprise. It seems, however, to have been the natural consequence of considerable sales of bills on tap to buyers who missed them at last Friday's tender, and also of a desire to enable the market to g

clear of indebtedness to the Bank by having no Treasuries to pay for on Thursday, when it had a large sum to meet, and when tax-gathering is usually an influence towards stringency. Discount rates, which had stiffened owing to the scarcity of short money, slackened again when the tap Treasuries were withdrawn, and then hardened once more when the result of yesterday's tender was announced.

	Aug. 11, 1922.	Aug. 4, 1922.	July 28, 1922.	July 21, 1922.	Previous Rate and Date Changed.
Bank Rate	5%	3%	3%	3%	3% (Jly. 13, '22)

Houses Notice	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	1½	1½	1½

The Bank return showed decreases of £233,000 in the note circulation and £1,000 in the stock of gold, and an increase of £232,000 in the Reserve. Borrowings and repayments were reflected in decreases of £1½ millions and £1½ millions in the Government and Other securities, and there was thus a decline of £3½ millions in the private deposits, Public being nearly a million higher. There was an increase of £2,364,800 to £302,094,400 in currency notes outstanding in the return dated August 10, 1922, which includes £1,580,000 for notes called in, but not yet cancelled. The fiduciary issue is £252,364,400, or £57,624,000 below the maximum.

THE STOCK MARKETS.

The stock markets have been comparatively little affected by international politics, and have been more influenced by other factors, which are favourable. Gilt-edged stocks have been firm, though business in the longer-dated stocks is not on a large scale, but buying of short-dated bonds was stimulated by the withdrawal of three months' "tap" Treasury bills. Among foreign stocks, Mexicans were prominent with a sharp rise on the news that President Obregon had signed the debt agreement. The animation in the Home Railway market has not ceased, stocks in the Eastern group being well supported on the strength of the amalgamation terms. In the foreign and colonial railway market the feature was a sharp advance in Grand Trunk Pacific 4 per cent. debentures. Oil shares received a little better support; rubber shares marked time, and in the industrial market there has been little feature. South African mining shares have been active on support from the Cape and from Paris.

COMMODITY MARKETS.

The uncertain European political situation and the holiday season have, in combination, caused considerable dullness in markets. Conditions generally in the Manchester cotton trade have been unsettled. Fully middling American cotton is now quoted at 12.25d per lb, as against 13.45d a week ago, and yarn prices have given way in sympathy. Prices remain firm all round in the wool trade, and merinos are inclined to improve slightly; business, however, is quiet, but it is expected to improve after the holidays. Some inquiries for foundry iron have been received from America, but dealings generally in pig-iron have been on a very limited scale. Our Middlesbrough correspondent reports that steel prices are expected to fall shortly, as makers are free from control and orders are scarce, and our Glasgow correspondent reports cuts in steel prices North of the Tweed as from Saturday last. Coal prices have retained their recent rise, America appearing to be still buying. Wheat prices fell by from 6d to 9d, owing to the ample supply and dull exchange. Raw linseed oil for August delivery has eased off appreciably, and there is little demand. Hide prices are steady at the lower range of values, and the boot trade is on holiday.

FOREIGN EXCHANGE.

Operations in the foreign exchange market are still awaiting the outcome of the London Conference, and business has in consequence been very quiet. Rates, which have nervously responded to varying rumours, as might be expected, have at times fluctuated wildly, and have frequently not represented the prices at which actual business could be done. The New York rate remained steady all the week, and closed at 4.45½-4.46, forward being 1½ over spot. A record of the week's fluctuations in the principal European exchanges merely reflects the hopes and fears entertained as to a settlement being reached by the politicians. Berlin, which opened the week with a firmer quotation of 3.375, relapsed on the 10th to almost 4,000, but is again better at 3,760, showing a rise in the week of almost 400 marks. Paris and Brussels have been equally sensitive, the quotation for francs being at one time over 56, from which point it has now recovered to round 55. Forward Paris remains practically unchanged at seven points per month over spot. Brussels, after fluctuating in accordance with the Paris franc, is now quoted at 58.10, with the forward price round spot quotations. Italian lire have been more inclined to firmness, and they are now 97.50. Swiss francs have remained steady during the week round 23.42, but Holland has moved against this country, the present quotation of 11.49 comparing with 11.51 a week ago. Spain, on the other hand, has moved fractionally in our favour, and is now quoted 28.83. Denmark, which opened on Monday with a weak tendency at 20.72, has since recovered the 20.68. Norway and Sweden have both moved slightly against us, and are now 25.90 and 17.02. Austria, which showed distinct improvement at the end of last week, has again relapsed to 233,000, while Warsaw has further slipped back, and is now at the new record figure of 30,000. Helsingfors, after fluctuating within narrow limits, is practically unchanged on the week, while as low as 425, has lost the improvement at 520 at the time of writing. In the Eastern exchanges, rupees, which were inclined to harden at one time, are practically unchanged at 1s 3½d, but the silver exchanges have declined fractionally, Shanghai being now 3s 4½d and Hong Kong 2s 6½d. South Americans have all been inclined to move in our favour, Buenos Aires being quoted 44, while Monte Video and Valparaiso are 43½ and 32.80 respectively.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 5, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	15,243	Supply Services	7,460
Amount borrowed	335	Interest on Debt	7,794
		Sundries	219
		Added to Exchequer Balances ..	15,578

The total revenue during the week ended August 5, 1922, amounted to £15,243,063, as against £14,845,817 during the corresponding week a year ago. The total expenditure during the same period was £15,358,927, against £24,161,388 a year ago. Customs produced £2,301,000 during the week, against £2,526,000. The yield from Property and Income-tax is £570,000 higher than a year ago at £7,715,000. Excise yielded £1,273,000, against £1,085,000 last year, while the yield from Estate duties at £1,550,000 compares with £1,035,000. The week's operations increased the National Debt by the sum of £334,985, and caused the

BEATING ABOUT THE BUSH.

THE trend of events at the Allied Conference in Downing Street this week confirms our worst fears of the effects of the Balfour Note. The assembled statesmen have apparently not been able even to approach the consideration of broad solutions of the problems of reparations and inter-Allied debts. Discussion, instead, has centred upon the subsidiary question of "productive guarantees," or, in other words, of ways and means of making Germany pay; and even over this subsidiary point a deadlock has arisen, which has brought Cabinet Ministers post haste to London, and, according to rumour, threatens the very foundations of the Entente. To appreciate the tragedy of disappointment which these facts represent, it is only necessary to cast one's mind back a few weeks. In the middle of July a new plunge of the German mark heralded a fresh crisis in international finance. An immediate meeting of the British and French Premiers was mooted, then mysteriously delayed, and then announced for August Bank Holiday. Then, when hopes were growing that Great Britain would go to that Conference with the bold and generous proposals that alone promised a cure of Europe's financial fever, came the Balfour Note, and with it the knowledge that the Prime Minister had renounced his great opportunity. The Note, as we showed last week, appeared still to leave a loophole for effective British initiative. But even that appearance seems to have been deceptive. A week or two ago we were hoping that at last the British Government would use its powerful creditor position in Europe with a generosity that would procure a sane economic settlement of reparations and at the same time revolutionise American opinion. To-day we face, as the firstfruits of the Balfour Note, an irritated America and an aggravated edition of the old Anglo-French squabble over methods of coercing Germany. The nations of Europe are vainly hammering at the door which shuts them off from the path of recovery and well-being. Mr Lloyd George has the key, and has put it in his pocket. It is, presumably, vain to hope that the Government can quickly retreat from their new policy, or that M. Poincaré will withdraw his "productive guarantee" proposals in favour of the broader and more statesmanlike plans with which rumour credited him before the bombshell of the

Balfour Note. Even the Paris Press, which is certainly not in advance of public opinion on these questions, recognises the futility of his present proposals, and only clings to them for fear that unless something is done Germany will be tempted to doubt the will of the Allies to extract any reparations at all. But unless M. Poincaré returns to his original brief, the best that can be hoped of the Downing Street Conference is that it will evade the crowning disaster of wrecking the Entente, and produce an unsatisfactory compromise. It may be that once again, as in May last, the experts will help the politicians round a dangerous corner. Once round it, the politicians may enjoy another breathing space during which time may obliterate the worst effects of the latest blunder, and enable us to work back to the position that prevailed before the Balfour Note appeared. Next month Treasury representatives are to visit Washington to discuss arrangements for funding the Anglo-American debt. These discussions cannot now be as amicable as they should have been; nor can the effect of the arrangements agreed upon be as fruitful in their effect upon American opinion. But when once this debt to America has been placed on a definite footing and is beyond the pale of diplomatic discussion, a new chance for a British initiative may arrive. What line this should take was clearly set out this week by Viscount Grey in his Oxford speech. Viscount Grey, starting from the concessions in the latter part of the Balfour Note, says:—"If we used our right to that £900,000,000 to get a real settlement of the question (i.e., reparations) it would be the very best investment we could make of the money." In return for such remission of these remaining debts, he would insist on four points:—

- (1) German reparations must be reduced to a manageable and practicable amount.
 - (2) There must be a moratorium of adequate duration for the payment of reparations.
 - (3) All that is possible must be done to put Germany on her feet.
 - (4) When all that is arranged, and provided that Germany fulfils her Treaty obligations, Germany should be admitted to the League of Nations.
- These points are, of course, features of the Government programme; but the Government has stultified itself by its conditions with regard to the American debt. Lord Grey, however, very clearly exposes the fallacy that the British taxpayer cannot afford to remit paper debts. In our opinion he cannot afford to do otherwise. "The British taxpayer," says Lord Grey, "the British workman, the whole country would gain far more, financially and economically, by a general settlement of the question of reparations and inter-Allied debts leading to a recovery in Europe than they will by the preservation of their paper right to the £900,000,000." That is surely the beginning of wisdom in this vital matter.

It is, of course, by no means certain that the Government could have put through Lord Grey's plan on the present occasion. Indeed, Mr Keynes suggested a week ago at Oxford that the French and British ideas as to how far the Reparation claim must ultimately be cut in any general settlement are so wide apart that there does not exist as yet any real basis of agreement on the most fundamental question of all. Moreover, the amount of money that could be raised by an international loan is so small that when the possibilities were realised by France she would have a shock of disappointment which might make an immediate settlement impossible. Those who read the French situation in this way are driven to the depressing conclusion that until France herself begins to slide down the slippery slope of exchange depreciation she will not be really ready to face facts. This view, in our opinion, is unduly gloomy, though in a matter of this kind it is extremely hard to read a nation's psychology aright. But, even if it is true, the offer that we have repeatedly urged upon the Government would still have been of the utmost importance, for it would have cleared us from any responsibility for the further deterioration of the state of Europe, and would have brought clearly into the open the real issue. After all, the crux of the question is whether France is willing—provided the Allied debt question is settled—to write down her Reparation demand to a figure which the world believes Germany can pay? Is she, in fact, prepared to

accept the estimate—however disappointing it may be—of a neutral bankers' committee as to the maximum annuity which Germany should be compelled to pay during the currency of an international loan? If so, the problem can be settled on Lord Grey's terms. If not, there is nothing to be done but to wait till the pressure of events brings France to reason. The blunder of our Government has been that it has lost the opportunity of putting this question to the issue. So long as it remains unanswered, there is nothing before us but a succession of exchange slumps, renewed crises, futile conferences, and constant friction between France and England, whose co-operation and good understanding are so vital to the rest of Europe.

FINANCIAL POLICY IN SOVIET RUSSIA—OLD AND NEW.

(FROM A CORRESPONDENT LATELY IN RUSSIA.)

THE 8th Congress of Soviets held on December 8, 1920, may be considered as a turning-point in the history of the Bolshevik régime. It marked a radical change in Soviet economic policy. The decrees no longer aim at the destruction of capitalism; on the contrary, they are characterised by a marked tendency towards re-establishing private initiative and economic liberty. To understand the revolutionary change which is noticeable since the end of 1920, it is necessary to have a clear conception of the economic policy pursued during the first three years of Soviet rule. This may be summarised under the following points:—(1) Gratuity of all public services. According to the decree of October 11, 1920, all services and products were delivered by the authorities to co-operatives, trade unions, and to the working population free of charge. This was done with the purpose of abolishing completely the monetary system, and preparations were made for the introduction of a labour unit as a measure of value. (2) All taxes in money ceased to be collected. (3) All credit institutions were closed. (4) The whole finance of the country was merged into one budget. Co-operatives, municipalities, rural councils, &c., were all provided with the necessary funds by the central authorities. (5) The principal and practically the only source from which the whole country drew the resources for maintaining the public administration was the printing press. A steadily increasing stream of paper money was poured into the market.

Not theoretical reasons, but hard necessity forced the Soviet Government to break radically with this policy. Experience convinced them that the system inaugurated by them contained the germs of its own destruction. The greater the mass of paper money issued the smaller became its value. The report of the National Commissariat of Finances for 1921 presented to the 9th Congress of Soviets, dwells on the fact that the printing press after 1917 was not able to keep pace with the depreciation of the rouble, as shown below:—

	Increase of Circulation.	Depreciation of the Rouble.
1917 as compared with 1916	3.3 times	7½ times.
1918 " " 1917	1.9 " "	6 " "
1919 " " 1918	4.8 " "	16 " "
1920 " " 1919	6.0 " "	8 " "

In the budget for 1922 (January-September) it is pointed out (p. 13) that the value of the paper roubles issued, expressed in gold, has been as follows:—

	Millions.
1918	525
1919	380
1920	186
1921	140.2

The printing of trillions of paper roubles could not prevent the monetary source from becoming every day more arid. There was no escape out of this dilemma but a radical reconstruction of the financial system on a quite new basis. The authorities responsible for the financial administration of the country are decidedly going in that direction. In reading the reports issued by the National Commissariat of Finances, one has often the impression of hearing a representative not of a Bolshevik but of a bourgeois Government. Economy and taxation, the panacea so often preached by Ministers of Finance in

Western Europe, are the two most important points in the new financial programme of the Bolsheviks.

The system of merging all finances into one budget has proved unsound. In consequence, the financial administration of local authorities has been severed from that of the Central Government by a decree of August 22, 1921. All local authorities now have their own budget, and they are authorised to levy special taxes in addition to those collected for the State.

The principle of monetary taxes has been re-established by a decree of July 26, 1921, introducing a tax payable by all industrial and commercial undertakings. As the financial administration is not yet sufficiently organised, the assessment to this tax is effected on a very primitive basis, on what is called "external appearances." The amount of the tax is levied according to the size of the undertaking, the stock of goods, &c. During the first four months (July to November, 1921,) 15 milliards were collected in Moscow alone, and it is expected that by the end of the year 30 milliards will be obtained from this source. In the provinces the results were much less favourable.

The Soviet Government is also resorting to indirect taxes. The principal articles subject to such taxes are tobacco, cigarettes, cigars, matches, beer, mineral waters, tea, coffee, drugs, perfumes, soap and candles, sugar, salt, petroleum, textiles.

The number of officials has been reduced, and a special committee has been appointed for introducing a more economical system into the public administration. The most sweeping change here is the abolition of the principle of a gratuitous supply of services and products to an important section of the population. All State and municipal undertakings are to be so administered as to produce a revenue. The State subsidy is withdrawn; they have become self-supporting. The principle of business administration is to be applied in all these undertakings. Their products are to be sold not at maximum prices, which during a long period were below the cost of production, but at free market prices (decree of October 11, 1920, and August 5, 1921).

Once the idea of providing the population with food and necessities by the State was abandoned and free trade introduced, the necessity of a sound monetary system arose. Here, too, an abyss divides the old policy from the new. For three years the Bolshevik decrees tried to destroy the monetary system, considered as the outcome of the capitalist régime. The cause of the debauch of the currency was not merely the financial embarrassment of the Government; the authorities hoped that by reducing the value of money to naught they would demonstrate the absurdity of the system. All possible difficulties were put in the way of monetary circulation in order to hasten this process. All money found in the possession of private persons was confiscated.

Recent official reports show a complete change. Russians are faced with the same problems as every other Government—how to stabilise the value of the rouble, how to facilitate its circulation. Two decrees issued with this aim may be mentioned. The gold rouble has been introduced by a decree of October, 1921, as the measure of value. All payments are made in paper roubles, but according to the rate of exchange fixed by the market quotation. To facilitate transactions, a new rouble, equal to 10,000 old, has been issued.

The break with the old economic policy also made the reorganisation of the whole credit system unavoidable. Credit institutions were unnecessary as long as the State was putting at the disposal of all undertakings the money they needed. Once, however, they were left without the financial assistance of the Government some other source of credit had to be created. With this purpose the old State Bank (Gosbank) was reopened on October 15, 1921. Its status, however, has been modified. The Gosbank is not a simple bank of issue: it has been created with the aim of putting at the disposal of industrial and commercial undertakings credits, enabling them to continue their work. This financial assistance is to be given in the first instance to Government undertakings. Co-operatives, however, and private firms can equally avail themselves of these credit facilities. The Gosbank is the cashier of the State. The capital of the bank has been fixed at 2,000 milliards, and the bank rate at 8—12 per cent. a month,

or 96—144 per cent. a year. Under present conditions the Gosbank cannot give any real assistance to industry as it does not possess any real assets. The 200 milliard paper roubles which have been put at its disposal by the central authorities are not sufficient for any serious credit operations.

The National Commissariat of Finances has published the Budget estimates for the first nine months of 1922. It is the seventh budget prepared by the Bolshevik Government, but in many respects it is different from the previous ones. The estimates are not based on the paper rouble, but on the gold rouble. For the first time also local finances are not included.

Expenditures and revenues are classified under two heads, "prjamye" and "oborotnye." The first group contains all transactions between the State and private individuals, co-operatives, &c., the second all payments between departments of the State. We may call the two groups external and internal. The Bolshevik Budget gives the following general items:—

	External.	Internal.	Total.
	—Million Gold Roubles.		
Revenues	177.4	1,394.6	1,572.0
Expenditures	407.4	1,469.8	1,877.2
Deficit	230.0	75.2	305.2

The revenues, in order of importance, are estimated as follows:—

	Million Gold Roubles.	%
Nationalised industry	899.4	57.2
Supply of food and other necessities	425.6	27.1
Transport	98.5	6.3
Government estates	70.0	4.4
Direct taxes	37.5	2.4
Indirect taxes	29.6	1.9
Customs duties	9.5	0.6
Other revenues	1.9	0.1
	1,572.0	100

The expenditure of 1,877.2 millions comprises the following items:—

	Million Gold Roubles.	%
National Commissariat of War	556.0	29.6
Transport	277.5	14.8
Council of National Economy	153.6	8.2
National Commissariat of Food Supply	139.9	7.4
" " Foreign Trade	141.7	7.5
" " Education	122.8	6.5
" " Health	117.2	6.0
" " Marine	71.8	3.9
" " the Interior	59.7	3.2
" " Agriculture	52.3	3.0
" " Social Insurance	48.3	2.6
" " Finances	39.9	2.1
" " Posts and Telegraphs	25.8	1.4
" " Justice	23.2	1.2

It can be hardly expected that the final accounts will correspond to these estimates. They are, nevertheless, interesting, as showing the direction of Russian financial policy. The figures extracted from the Russian official returns reveal a very strong desire to put the finances on a sound basis, similar to that existing in other countries. If Russia is still very far off from that aim, the rupture with the old financial policy, which was plunging the country into a steadily increasing chaos, must at least be considered as a great step forward.

SOUTH WALES COAL SINCE THE STRIKE.

(BY OUR CARDIFF CORRESPONDENT.)

THE coal mining industry of the United Kingdom has just completed the first year under the national wages agreement entered into on the termination of the coal strike of March-June, 1921. The year has been notable for a heavy fall in the price of coal, and a considerable expansion in the foreign demand. The increase in the volume of the export trade, however, has not balanced the loss in revenue from the fall in price. The result is that the profits have been reduced to a figure enormously less than that of the £28 millions which were guaranteed dur-

ing the period of control. It was originally intended under the national agreement that the employers should receive in profits an amount calculated over a district unit equal to 17 per cent. of the amount paid out as standard wages in such district. The assumption voluntarily by the coal-owners to pay a minimum wage 20 per cent. in excess of the average earnings of July, 1914, has, under such trading conditions as those which have existed during the twelve months, rendered the retention of those standard profits a financial impossibility. In some of the coalfields and particularly in those dependent on the export trade, the proceeds have fallen appreciably below the amount required to pay the minimum wage and the standard profits, and the consequence has been that the coalowners have been called upon to surrender not only their 17 per cent. share of the surplus proceeds in excess of those required to pay the standard wages and the standard profits, but also large proportions even of the standard profits. In South Wales, for instance, the standard profits surrendered in this way have amounted to nearly £2 millions in the eight months ending June 30th last. The fact, however, remains that the South Wales industry as a whole has been working at a profit in the twelve months ended June. The costs, proceeds, and net profits or net loss per month have been as follows:—

Month.	Costs.	Proceeds.	Net Profits (+) and Net Loss (—).
	£	£	£
1921.			
July	2,882,000	3,393,000	+ 511,000
August	3,335,000	4,111,000	+ 776,000
September	4,148,000	3,870,000	— 278,000
October	4,193,000	3,739,000	— 454,000
November	3,502,000	3,543,000	+ 41,000
December	3,580,000	3,533,000	— 47,000
1922.			
January	3,629,000	3,662,000	+ 33,000
February	3,327,000	3,331,000	+ 4,000
March	3,789,000	3,957,000	+ 168,000
April	3,228,000	3,265,000	+ 37,000
May	3,771,000	4,089,000	+ 318,000
June	3,246,000	3,136,000	— 110,000
Totals	42,630,000	43,629,000	+ 999,000

These net profits of just under £1 million are approximately one-fifth of the profits guaranteed under the Coal Mines Agreement Acts. The amount received by labour, however, amounts to roughly £26,500,000, so that capital has obtained in net profits only 4 per cent. that paid out in wages.

The collieries have shared very unequally in these reduced profits. What has determined the profits of each separate company has been chiefly the costs of working. These vary very considerably, and in some cases they have meant heavy losses, and in others substantial and even increased profits. Typical illustrations of the inequalities in the incidence of the depression during the past twelve months are given by the reports which have just been published of the Insoles, Limited, and the Windsor Steam Coal Company (1901), Limited. These two properties are under the same management, and are situated very near to each other. The approximate output of Insoles, Limited, is between 450,000 and 500,000 tons per annum, and that of the Windsor Company roughly 300,000 tons per annum. The capital expenditure on the property of the latter has been more than 50 per cent. that on the property of Insoles, Limited, but whereas Insoles has been paying a dividend of 20 per cent. on its ordinary share capital for many years, not a penny piece has been paid in ordinary dividend to the shareholders of the Windsor Company, and even the preference dividends are some years in arrear. In the year ended June 30th last Insoles, Limited, increased its profits from £43,124 to £78,594, and the Windsor Steam Coal Company suffered a loss of £24,049 compared with a profit in the previous year of £35,724. Similar inequalities in trading results will be shown by other companies, and as more than half the total profits of just under a million pounds have been made by two or three concerns, the overwhelming majority of the undertakings in the South Wales coalfield during the past twelve months will show losses.

RAILWAY RATES AND WAGES.

So long as the railway companies refuse to publish any statement of their net receipts, they cannot be surprised if the demand for reductions in railway rates and fares is conducted in a spirit that seems to them unreasonable. It may be that they have a strong case, but as it is, it is known only to themselves, and the average man is inclined to feel as more forcible the argument that cheap transport is an indispensable preliminary to trade and business revival than the reverse position taken up by the companies, that they can only afford to reduce rates substantially when trade has revived.

The reductions actually made in the railway freight index from 200 to 175 (except in a few special cases such as iron and steel, where the reduction is to 150) is only half what was asked for, and though half a loaf is better than no bread, it is inevitably not accepted with the same enthusiasm, and is felt as insufficient to help substantially.

At one time it was pretty generally said, unofficially, that no substantial cut in rates could be made without further reductions in wages. The position of railway wages is an interesting one, and, from some points of view, more hopeful than that of any other industry. The March, 1920, settlement, whatever it failed to do, has provided an instrument which has enabled substantial reductions to be carried out without friction. The biggest grade of railway workers—the operating staff—have, taking them all over, lost 17s per head per week in money wages, without counting the withdrawals on the advances given under the National Wages Board award of June, 1920, which brings the average loss per head up to 21s.

To make any general statement or give any general figures covering the vast complexity of grades in the railway service is very difficult. In a valuable article in the *Railway Gazette* for July 21st, a broad classification is adopted, under which the service is divided into (a) clerical or supervisory; (b) operative; and (c) shop. The other day the Industrial Court promulgated an award, to come into force on October 1st, covering the rates of pay, &c., of the shopmen employed by sixteen railway companies; they had to review, for this purpose, the conditions of about 110,000 employees in no less than 1,500 classes. In the discussions preliminary to this award, the whole issue of industrial and craft unionism was involved. It is only mentioned, here, however, as illustrating the complexity of the problem of railway wages, and the caution with which any broad generalisation about them must be read.

Before the war, in consequence largely of the regularity and permanence of their occupation, railwaymen as a group were among the lowest paid of industrial workers. In December, 1913, the average earnings of all men employed by railway companies was 27s 11d, according to the *Labour Gazette*; this figure includes payment for overtime and also men in shops. According to Professor Bowley, the average for a normal week in 1914 was about 26s 6d. Taking July, 1914, as 100, he estimates that by July, 1920 (after the strike settlement), the railway wage index stood at 280, a more rapid increase than the average of wages, which, according to the same authority, had risen to 264 at that date.

December, 1920, when the cost of living percentage increase over pre-war stood at 169, represents the peak of railway wages. Since then they have steadily come down. But the system is not quite the same for all classes. In the case of the clerical and supervising staff, the standard rates of the various grades of employment were fixed on a cost of living figure of 125 per cent. over pre-war; generally speaking they absorb the war bonus, or, since it had been paid in full to lads of 18, and the new rates were based upon age for the lowest class, more than the war bonus. Broadly, staff in this class have lost £40 per annum since the December, 1920, peak; but since the 125 per cent. line was passed the drop in the cost of living to 80 represents a rise on real (pre-war) earnings of about £45 per annum. In the case of the operating staff there are, in relation to every grade, two rates: the "B," or standard rate, which is fixed, and the "A," or current rate, subject to rise and fall according to the cost of living—is for every rise or fall of full 5 points. The rates are reviewed and adjusted quarterly by the National Wages Board. The "A" rates represent

the average pre-war rates, plus war bonus, &c. Since the flat rate war bonus gave the lower grades a higher proportionate increase than the better-paid, the "B" rates (representing an average all-round increase of 100 per cent. on pre-war) are not all reached by the sliding scale at the same cost of living level. Some grades are already on "B"; others will not reach it till the index has fallen very much further. The following table of current or "A" rates, given in the *Railway Gazette*, shows what has happened to typical operating groups:—

	Cost of Living Index—Percentage over July, 1914.	Porter (Grade 1) "A" Rate in London, Industrial and Rural Districts.		Parcel Postman (Grade 1) "A" Rate in London, Industrial and Rural Districts.		Porter (Grade 2) "B" Rate in London, 42s; Industrial and Rural, 40s.	
		Per Cent.	s d	s d	s d	London.	Industrial.
December, 1920 ..	169	72	6	89	6	70	68
March, 1921	141	68	6	85	6	66	64
June, 1921	119	63	6	80	6	61	59
December, 1921 ..	99	58	6	76	6	57	55
March, 1922	86	55	6	72	6	53	51
June, 1922	80	51	6	68	6	49	47

* Includes reduction of 2s under National Wages Board award.

It is obvious that if the cost of living falls much further, the "B," or minimum rates, which were fixed when very erroneous ideas were prevalent as to the future of prices, will have to be revised. In the case of shopmen the rates have not, and are not, by the Industrial Court's award, to be adjusted by any sliding scale, but by separate agreements. The reductions are those effected in the engineering trades generally, though with variable results in different places and trades, owing to differing systems of work and pay. Since 1920 the reduction, e.g., for a fitter, is at least 14s 8d per week, and in many cases 20s or more.

The main argument for the whole sliding scale system is that it is an attempt to establish something like a system of real wages, with a living minimum behind it. It ought to act, and so far on the railways it has acted, as a principle of stabilisation. But an impoverished country cannot afford to level up the wages of its railway workers unless it can secure from them at least as much work as before the war. Hitherto this has not been the case. There may be much room for a better organisation of work, and more elasticity in the arrangements as to hours, such as would effect working economies. These should be fully explored before any attempt is made to modify the basis of the sliding scale.

THE STOCK EXCHANGES OF LONDON & NEW YORK.

REFERENCES in American papers show that the return of the London Stock Exchange to the pre-war system of dealing, whereby introduction of contangoes, fortnightly settlements, &c., is established, arouses keen interest in New York, where the members of the Stock Exchange are watching developments on this side with close attention. In New York Stock Exchange business is carried on, as everybody knows, on a cash basis. This, at any rate, is the principle, though in fact it works out to shares being bought for cash, but paid for through the borrowing of money from day to day. In American eyes the contango system in vogue in this country seems to be cumbersome and antiquated. London brokers are told that they ought to "cut it out," in order to substitute the greater facilities offered by the New York system. Incidentally, of course, it is worth mentioning that the American plan of borrowing money introduces a variety of undesirable elements which do not enter into the London Stock Exchange markets, and it is doubtless owing to this fact that a kind of inquisition is being suggested in New York which shall inquire into the financial standing, &c., of Stock Exchange firms, which would certainly not be tolerated for a minute in Throgmorton street. Where the American theorist fails to grasp the essential difference between the dealings in London and New York lies in the fact that in London the bulk of the stocks and shares dealt in are registered, whereas in America they are bearer securities. This makes literally all the difference in the world. Anybody can deal in bearer stocks for money, because it is merely a matter of putting the certificates into a bank over-night, and borrowing money against them, without any further formality than that of filling up a loan-sheet. With

registered stocks, however, the case is totally different. It may, and usually does, take several days, sometimes several weeks, before stock which is purchased can be put into the name of the new buyer, and to attempt cash dealings on the principle of day-to-day money in registered stocks and shares from the speculative point of view would be impossible. This vital distinction between the two classes of business does not seem to have been grasped by the American critics, who are probably so familiar with the bearer stocks in which practically all their dealings are done, that they are tempted to assume equal facility of dealing with registered stocks and shares. The British habit of mind is so firmly ingrained in favour of registered securities that it would require a generation or two for this to alter. The Continental bourses, like the New York Stock Exchange, prefer stocks to bearer; to meet this predilection, a certain number of British companies whose shares enjoy interbourse popularity have made arrangements whereby registered shares can be made into bearer certificates and *vice versa*.

The New York Stock Exchange is a progressive and go-ahead institution, as is shown, to give one example, by the industrious manner in which the committee of that exchange collects information by way of lectures, &c., which they place before their members through the medium of printed pamphlets. We have in front of us at the present time five of these reprinted addresses, &c., which have been issued by the Committee on Library, New York Stock Exchange, and the titles of which give an idea of the general scope. The president of the New York Stock Exchange, Mr Seymour L. Cromwell, delivered one of these addresses at a luncheon of the New York Electric League in New York City on June 21st, when he dealt with conditions under which dealings in securities are warranted, with supplementary remarks on the question of contract between brokers and clients, and an explanation of the necessity for such contracts. Another pamphlet is a reprint of an interview with Mr Cromwell, in which he criticises the "politicians who would make it appear that the Stock Exchange is the barracks which houses the men of get-rich-quick brigade." "How to Maintain the Confidence of the Public" is the title of an address by Mr H. S. Houston, delivered before the members of the New York Stock Exchange and their partners on April 7th this year. On the same date, curiously enough, the same audience was invited to an address by Mr G. P. Mellick, who dealt with the interesting problem of handling O'd Lots. This latter is defined as a subject of greater interest to-day than ever before, and to the British mind it would appear as though the New York Stock Exchange were anxious to encourage the business of what we should call the small man, as distinct from the investor or speculator who deals in lines of stock. The New York Stock Exchange also invited Mr Jerome Simmons, general counsel to the vigilance committee of the Social Advertising Clubs of the world, to address its members. He led off by assuring his hearers that, so far from being there as a propagandist, his real object was to represent an organisation which seeks to serve industry in acquiring sinews of war, seeks to serve the people of New York, who are charged with the obligation of distributing securities, and in so doing to stop the "frightful economic waste that is going on to-day." The intention of his society is to "divert into legitimate channels the millions of dollars that are going into the pockets of the men—if I may use the expression—of the fakers and the false promoters of the United States." As already mentioned, these lectures are printed by the New York Stock Exchange Library Committee, and issued to its members. They contain a good deal of useful information and illuminating views in regard to Stock Exchange business carried on under whatever system. They are aimed at the maintenance of a high standard of honour in Stock Exchange dealings, and they speak in biting terms of the losses sustained by people who persist in dealing with bucket shops. In regard to this latter one sentence may be quoted in conclusion. Mr Simmons in his lecture remarks that a broker is not a salesman; he is a trustee. The client looks to the integrity and honesty of a stockbroker, and Mr Simmons reminds us that one circumstance which must be taken into consideration is the fact that ignorance is the handmaiden of gullibility.

LABOUR AND UNEMPLOYMENT INSURANCE.

(BY A LABOUR CORRESPONDENT.)

AN important document on unemployment insurance by industry has just been published under the authority of the National Joint Council, representing the General Council of the Trades Union Congress, the Labour Party Executive Committee and the Parliamentary Labour Party. It may be remembered that the Geddes Committee referred to the possibility of industries looking after their own unemployed. The Minister of Labour seized the opportunity to approach employers' associations and trades unions on the question, not because of the merits of the case, but solely in the interests of "economy."

The industrial and political Labour movements felt that the problem should be considered in its wider bearings and the trades unions were consulted on the subject. The Report on Unemployment Insurance by Industry (price 6d) traces the history and present position of unemployment insurance, sets forth the case for and the arguments against unemployment insurance on an industrial basis, analyses the returns received from the unions, and submits the outlines of a scheme designed to meet the needs of the various groups of industries.

The unions of cotton and woollen operatives support insurance by industry, as do also the clothing trades unions and the printers. The Iron and Steel Trades Confederation and the National Union of Distributive and Allied Workers are other important unions favouring this method. In the building trades the predominant feeling is against insurance by industry. The Miners' Federation and the National Union of Railwaymen oppose the principle, as do the Workers' Union and the National Union of General Workers. It will be seen, therefore, that there is a real cleavage of opinion within the trade union movement on the question. On the whole, however, the returns show a majority of two to one against the proposal, measured by the membership of the unions. The returns are not complete, but it is unlikely that a complete census would vary the general result. The figures are as follows:—

	No.	Membership.
Unions opposed.....	21	2,670,900
Unions approving.....	43	1,252,600

Though the number of unions disapproving of insurance by industry is smaller than the number favourable to it, the total membership of the opposing unions is much greater, as it includes the membership of the two great general Labour unions, the miners and the railwaymen. It can readily be understood that the organisations of general workers with members in almost every industry will prefer co-operating in a single state scheme to becoming involved in a number of separate industrial schemes. The miners and the railwaymen regard unemployment as a national problem to be dealt with on national lines.

It will be obvious from the difference of opinion which exists regarding the wisdom of unemployment insurance by industry that a simple declaration by the Labour movement in favour of this policy is out of the question. On the other hand, in view of the strong support given to the policy by some unions, it is clear that Labour cannot pronounce against it.

The National Joint Council has, therefore, put forward a policy combining a State scheme with provision for insurance by industry. In effect what is suggested is a revision of the Unemployment Insurance Act of 1920, which provides for industries contracting out and establishing their own schemes. The National Joint Council lays down two principles which it seeks to embody in its proposals—first, that for the industries covered by the general scheme the State assumes the main responsibility, and secondly, that under special schemes unemployment is made a first charge on the industry.

As regards the general scheme, it is suggested that the necessary funds should be raised by contributions from the State, employers, and, if this cannot be avoided, the workers. It is realised that industries where unemployment is relatively small will probably press for schemes of their own, with the result that the State scheme will be called upon to provide for industries where unemployment is above the average. To ensure the sol-

vency of the fund, therefore, it will be necessary to obtain increased contributions. In the opinion of the National Joint Council, "such increased contributions ought to come from the State, which should be required to face its responsibilities as regards unemployment." Whilst, however, the State would be called upon to pay more generously to the general fund than at present, the additional expenditure would be at least to some extent offset by the smaller State contribution paid in respect of workers insured under industrial schemes.

It is thought that the proportion paid by the workers themselves should be reduced. As the Report points out "the present State scheme, plus the total expenditure of trade unions on out-of-work pay, represents in the aggregate a very considerable drain on working class resources to meet an evil for which Labour is not responsible, and which is largely the result of defective industrial organisation and lack of policy." It is not anticipated in the Report that the Government will accept the principle of a non-contributory scheme. What is aimed at is, if possible, a reduction of workers' contributions and, failing that, the acceptance by the State of the whole of the net additional cost which may be necessary.

In the case of special schemes undertaken by particular industries, it is suggested that the question of workpeople's contributions need not arise, as the expenditure involved in a scheme of insurance by industry would become part of the art of production. In existing circumstances and under the present scheme it is true of employers' contributions. In the Guild of Builders, the "consumer" pays a charge above cost for the industrial maintenance of the workers in the guild when they are unemployed. In other words, industrial maintenance in this experiment is part of the cost of production. It is suggested that in industrial schemes this course could be followed. It is hoped that a heavier State burden with respect to the State scheme would compel measures for minimising unemployment, and it is suggested that, as regards special schemes, it should be a condition that approved measures be taken for the reduction of unemployment.

In order that the possibilities of special schemes may be considered the Report gives a number of schemes, actual and proposed, for dealing with unemployment insurance by industry. The only special scheme which is in operation under the Unemployment Insurance Act is that relating to the insurance industry. This scheme is more favourable to the workers than the State provision. In spite of the reduction of the State's contribution, it has been found possible to provide benefits at rates higher than those payable under the general provisions of the Unemployment Insurance Act, without at the outset levying any contributions on the worker at all. The employers are thus responsible for seven-tenths of all the cost of the scheme. A scheme was prepared for the wool textile industry, but was not carried into effect owing to the suspension by the Government of special schemes. The chief feature of interest is the provision for the special needs of the industry contained in the arrangement for under-employment benefit, and the adjustment of this in accordance with the cost of living. The scheme for the printing industry arranges for the payment of benefit through trade union branch offices and the establishment of a special system of employment exchanges for the industry. The benefits proposed are much higher than the State benefit and under-employment benefit is provided for, though this would not, as in the wool textile scheme, vary with the cost of living. The Cotton Control Board's scheme is outlined, though no longer in operation. It is interesting because the whole of the necessary funds were obtained from employers without assistance from the State or from workpeople's contributions, and the administration of the scheme was very largely left to the trade unions. There is in the match industry a voluntary scheme additional to the State scheme. It is non-contributory so far as the workers are concerned, and benefits are payable on the basis of a percentage of wages, and are thus adjusted to the varying standards of life of the employees.

These schemes will be scrutinised by trade unions favourable to the industrial basis for insurance, and when opportunity occurs efforts will no doubt be made to strengthen the present Act in the directions suggested in the National Joint Council's report.

Notes of the Week.

Holes in the Public Purse.—The work of the Select Committee on Public Accounts is sometimes regarded as merely closing the stable door after the horse has been stolen. This is an underestimate of its importance. The reports of this committee are of great value, in that they bring financial irregularities and leakages into the sunlight of publicity and tend to prevent future leakages. The latest report (No. 167, price 6d net) shows that the laxity and waste which are sometimes regarded by the easygoing as the inevitable aftermath of war muddles, have by no means been banished. Nor does such banishment appear likely so long as small irregularities are encouraged by Cabinet Ministers, as in a case which the report mentions. It is the case of the visit of Mr Churchill to Cairo. A scale of allowed expenses was pre-arranged by the Treasury, "but in response to a telegram from the Secretary of State from Cairo they waived this regular practice and agreed to allow actual expenses in lieu of the allowances, i.e., not to impose a limit. In reply to our questions we were told by the Treasury representative that this would have been unusual before the war, certainly; 'I cannot say that it is unusual now.' We are glad to see that the committee's comment is emphatic: 'It seems to us that it is very undesirable for unlimited power of spending to be given to any mission, and equally undesirable for a Cabinet Minister to set the example of asking it.' There are other points in the report that will make the taxpayer uneasy. In the words of the Accounts Officer 'the history of accountancy in Mesopotamia is a very black chapter indeed,' and the latest illustration mentioned in the report is the expenditure of £135,000 on a residence for the High Commissioner at Bagdad, of which neither the War Office nor any Home department was aware until the war was far advanced. The report tells also of gifts of public property unsanctioned by Parliament, of an ordnance factories scheme under which "money voted by Parliament was irregularly used to finance a commercial undertaking for which no vote had been taken." The committee agreed with the Treasury view that an estimate should have been presented to Parliament, but also hold that "the Treasury themselves should have called the Ministry's attention to this course at the time." An instance is also brought to light of "irregular use of Navy funds" in connection with running fishing vessels, while the Admiralty are also taken to task for expending £7,797 on a drifter which was sold for £750. There are still, apparently, plenty of holes in the public purse, which, we trust, will be mended by the closer application of Treasury vigilance.

Another Lesson in Protection.—The Board of Trade have made the following announcement:—"In exercise of the powers conferred upon them by Section 5 of the Safeguarding of Industries Act, the Board of Trade have directed that certificates of origin shall be required, so far as concerns the classes or descriptions of goods covered by the Schedule to the Safeguarding of Industries (No. 1) Order, 1922, in the case of goods consigned from all foreign countries in Europe. The necessary instructions have been issued to H.M. Consular Officers in the countries concerned, and the form of certificate of origin prescribed by the Board of Trade can be seen on application to any Customs and Excise Office." This is a perfectly logical step, and in taking it the President of the Board of Trade is merely carrying out the intentions of the Safeguarding of Industries Act. But of the difficulties and hindrances that it will impose upon traders every practical business man will be aware.

German Contracts.—Our Berlin correspondent, to whom we referred several inquiries concerning his report (*Economist*, June 17) of a decision of the Leipzig Court merely because of a fall in the value of money before the delivery date, writes as follows:—"A full report of this decision appears in the *Juristische Wochenschrift* of May 15th, page 702. The case is important, because earlier

Reichsgericht decisions in the same sense were mostly based upon an emergency law freeing from delivery contracts when in consequence of the war or revolution delivery was impossible. Earlier decisions held that the currency depreciation (rise in production cost) was such a consequence of the war or revolution; and conflicts arose with foreign buyers (mostly former neutrals) who could not get delivery of goods which Germans had contracted to sell at a fixed price. The new decision is based exclusively upon the *clausula rebus sic stantibus*. In general, German law recognises this qualification to the inviolability of a contract only when the contract so specifically provides. In the case in question, the defendant contracted to sell a spinnery at a fixed price, but withdrew, giving various grounds, of which only the ground that circumstances had altered remained to be ruled on by the Court of Appeal. The Court of Appeal pronounced untenable the ruling of a lower court that recognition of the right to repudiate contracts merely "because of the change in economic conditions" must lead to complete chaos in the domain of contract law. This apprehension, said the Court of Appeal, is unfounded; all that is necessary is to lay down the limits within which the objection holds good. A revolution in values, proceeds the judgment, may justify contract repudiation even when it is not accompanied by a difficulty in fulfilling the contract. A contract may be repudiated when "the continuation of the equivalence of consideration and delivery was assumed at date of the conclusion of the contract." The Court of Appeal added that a seller, before repudiating his contract on the ground of the disappearance of the expected equivalence between consideration and delivery, ought to demand an increase of the consideration. "If this is refused, he (the selling party) is free." This decision is sharply criticised. Prof. Rabel of Munich points out that the buying party also may lose from non-delivery, because he may have kept the contracted payment sum in cash (paper marks) or in German bonds. In fact, in the case in question the selling party had agreed to take part payment in War Loan at a stipulated Bourse quotation; and since then not only had the Bourse quotation fallen by about a quarter, but the gold value of the loan stock had fallen to a small fraction of its value at the date of conclusion of contract. In such cases the whole burden of the changed currency conditions is imposed on one party, the party which formally is in the right. Still more important for ordinary trade than the above decision is a second decision of the Leipzig Court. Here the defendant contracted to deliver iron wire at a fixed price, but withdrew on the ground of the subsequent enormous rise in production cost, which he had not foreseen. In an earlier similar case, the Third Senate of the Court of Appeal declared that such delivery contracts must under all circumstances, and regardless of consequences for the selling party, be kept. The Second Senate's judgment disputes this decision, and substitutes the equivalence test: "It is different when events alter values, in particular the value of money, to such a degree that . . . the equivalent, which was foreseen in the contract, cannot even approximately be attained. The creditor (*Gläubiger*, in this case the buying party) violates faith and honour if under such circumstances he insists upon delivery." The last decision has made a great stir in business circles. The editor of a legal-commercial journal informs your correspondent that business men strongly object to it, seeing in it the destruction of all confidence in contracts as long as the present currency instability continues; and states that the German Trade and Industry Congress is circulating its members in order to obtain opinions as to what should be done. (The second decision may be found in the *Aktenzeichen* of the Leipzig Court, II. 247/1921.)

Mexico's Foreign Debt.—A Reuter telegram from Mexico City, now confirmed officially, announces that the debt settlement arrived at in June between the Finance Minister and the American Bankers' Committee was approved and ratified by President Obregon, on Monday last. It will be dealt with early in the session of Congress which opens in September, and its acceptance should hasten the recognition by Washington of President Obregon's Govern-

ment. Certain New York papers, however, have been prophesying difficulties both in Congress and outside it; it is alleged that many of the election results are disputed, that the owners of oil lands threatened with expropriation under the Carranzist Constitution have not been properly assured that their rights are safeguarded by the decisions of the Supreme Court last year, and that other lands have been taken without proper compensation for that distribution among smallholders which is regarded as the surest provision against revolution. But Mexican news is seldom trustworthy, and is sometimes the more difficult to interpret when it comes through the United States, and these reports are unconfirmed. President Obregon has been ill, but is now recovered, and his illness was grossly exaggerated in certain New York journals. Still, such reports as those mentioned above indicate that even when Congress has confirmed the debt settlement there may be some delay in recognition.

Peace in Brazil.—The failure of the military revolt in July has been followed, according to a letter from Rio Janeiro published in the *Paris Temps* last Wednesday, by the acquiescence of the part of the leaders of the minority in Congress in its confirmation of the election of Senhor Bernardes to the Presidency. They have also undertaken not to oppose Senhor Estacio Coimbra, nominated for the Vice-Presidency *vice* Senhor Urbano Santos, deceased; so he will be elected on August 20th. Their opposition, backed by Rio Janeiro and four Northern States, is said to have been directed against what was virtually an official candidature. The opposition to Senhor Bernardes on the part of the officers, which culminated in the military revolt, was based on a private letter bearing his signature, published during the election and referring in offensive terms to the military chiefs. In spite of his disclaimers, they maintained its genuineness on the evidence of an expert in handwriting. Other experts declared it a forgery, and it has been finally proved to be so by the confession of the instigator of the forgery and the actual forger, who has given other specimens of his skill. So Brazil may now celebrate her centenary in peace.

Coal Output.—The production of coal at the mines of Great Britain made substantial improvement for the week ended July 29th last, when an output of 4,989,100 tons was reached. This output has not been equalled since April last, when for the week ended April 29th a total of 5,160,100 was recorded. In the table given below we show the weekly production since July 30, 1921:—

1921.	Tons.	1922.	Tons.
August 6	3,623,200	February 4	4,803,100
August 13	4,536,600	February 11	4,912,500
August 20	4,327,800	February 18	5,000,800
August 27	4,101,700	February 25	5,046,600
September 3	4,141,900	March 4	5,038,900
September 10	3,939,800	March 11	4,995,900
September 17	4,161,700	March 18	4,956,900
September 24	4,273,100	March 25	4,929,300
October 1	4,118,200	April 1	4,825,400
October 8	4,287,900	April 8	4,961,700
October 15	4,237,200	April 15	4,383,800
October 22	4,236,600	April 22	3,543,900
October 29	4,210,200	April 29	5,160,100
November 5	4,182,400	May 6	4,766,600
November 12	4,372,500	May 13	4,945,200
November 19	4,646,300	May 20	4,804,100
November 26	4,673,600	May 27	4,629,600
December 3	4,693,300	June 3	4,440,900
December 10	4,855,100	June 10	2,681,800
December 17	5,030,700	June 17	4,350,200
December 24	4,965,400	June 24	4,353,900
December 31	3,049,000	July 1	4,530,000
		July 8	4,597,800
		July 15	4,626,700
		July 22	4,390,800
		July 29	4,989,100
		1922.	
January 7	3,674,000		
January 14	4,719,100		
January 21	4,560,500		
January 28	4,738,700		

It will be interesting to observe the effect of the recent American demand for coal on future figures.

The Weather and the Crops.—The Ministry of Agriculture has issued a report on crop conditions in England and Wales at the beginning of August, which may be summarised as follows:—The weather during July was wet and cold, with some high winds. Coming after the previous dry weather, the effect was generally beneficial to

agriculture, although haymaking was much delayed and some hay damaged. Late-sown spring corn, grass, and roots all benefited. Wheat is hardly so promising as a month ago. The heavier crops have in many instances been laid by the strong winds and rains, and in some districts the ear is not filling well. The ears are rather small, and the probable yield, over the whole country, is estimated at about 32.0 bushels per acre. Barley was improved appreciably by the rains, but the straw is still short, and with thin plants, only poor yields can be expected. Spring oats did not benefit to the same extent as barley, and in most parts of the country are poor and thin, as damage by frit-fly and wireworm is frequently evident in these crops. Winter oats are very satisfactory, although they have been damaged to a certain extent by the storms. The yield of barley is forecasted at 29.9 bushels per acre and of oats at 34.4 bushels. Beans did not pod well in many districts, and have been damaged by blight, so that results will not be quite so favourable as was expected a month ago. Spring beans are very unsatisfactory. Peas are very poor in many districts, especially in the east; they did not recover from the drought and suffered considerable damage from fly. Forecasts of the yield indicate an average for the whole country of 27.2 bushels in the case of beans and 21.9 bushels in the case of peas. In the southern half of the country cutting of winter oats and barley was begun towards the end of July, but harvests generally will be rather late. Sun is now needed to ripen the crops. Present estimates of acreage and production compare with the actual figures for 1921 as follows:—

	Area.		Production.	
	1921.	1922.	1921.	Forecast, 1922.
	Acres.	Acres.	Quarters.	Quarters.
Wheat	1,976,000	1,969,000	8,722,000	7,880,000
Barley	1,436,000	1,362,000	5,309,000	5,090,000
Oats	2,149,000	2,161,000	10,033,000	9,290,000
Beans	237,200	272,000	778,000	920,000
Peas	105,700	123,000	313,000	340,000

Potatoes improved very considerably during July, and main crops are healthy and vigorous with few exceptions. In the Midlands and South-West yields may be slightly under average, but elsewhere good average crops are expected. Early potatoes lifted before the rains gave light yields, but improved considerably later. The area of potatoes is 561,000 acres, or 3,000 acres more than last year. Mangolds have grown well, but now require more sun. The plant is fairly good on the whole, but there are some patchy fields in practically all parts of the country. In the Eastern Counties good crops should be grown, but elsewhere they are not quite so promising. On the whole, nearly average crops are anticipated. Hay-making has been very much delayed by the wet weather, and is hardly finished even in the earlier parts of the country, whilst in the later districts much still remains to be cut. Most of the seeds hay was got in early in good condition, but a certain proportion of the meadow hay has been damaged. Crops of meadow hay have become heavier, but the delay in cutting has impaired the quality. The yield of meadow hay, on the whole, is estimated to be from 15 to 20 per cent. below average, and of seeds hay about 20 per cent. below. The rains improved the pastures, and during the second half of July there was plenty of grass in all parts of the country. Where the hay was secured early, aftermaths have made good growth. Cattle have done fairly well, but feeding cattle have not put on flesh so quickly as usual. Sheep have made satisfactory progress, but lambs have only partly recovered from their bad start. Some losses among hill sheep after shearing were experienced in Wales owing to the cold winds.

American Railways and Road Transport.—The competition of the automobile with the railway as a common carrier has created a new problem in America as well as here, writes a correspondent. In his latest annual report, Mr E. J. Pearson, President of the New Haven Railroad, called attention to the "extensive inroads" that motor trucks are making on short-haul less-than-carload traffic. These trucks, he points out, generally take only the cream of the traffic, leaving to the railroad the less profitable

business, coupled with the necessity of performing continuous service at all times, of readiness to handle excess traffic, and of operating during unfavourable weather when motor trucks cannot or will not run. They thus sap the revenues of the railroad, which cannot proportionately reduce its costs of operation. This complaint is heard not only from New England, with its dense population and short hauls, but from California, where the chairman of the Southern Pacific has been protesting against motor trucks running competitively on highways that parallel the railways—highways that are provided free to their users by the outlay of Federal and State money. In some cases the railways are trying to meet the difficulty by means of devices to reduce costs, such as the use of self-propelled motor cars and removable bodies on freight cars that will facilitate terminal handling. But no one seriously expects that such expedients will do more than alleviate the situation. The only hope of substantial and permanent improvement is believed to lie in Federal and State regulation of this serious competitor. As yet, this new carrier has not been placed under the jurisdiction of the Interstate Commerce Commission, and, in so far as its existence has been recognised by the State authorities, it has been subject only to the control of bodies that were created many years ago to regulate other common carriers and public utilities. Little has been done except to ensure that the company proposing to perform the functions of a common carrier is responsible and will run its services in such a way as not to menace the safety and welfare of the public. Several States require the payment of a higher registration fee or licence tax than is imposed on private motors, but this additional charge is quite insignificant when compared with the profits derived from the traffic. In Nebraska an order was issued in 1919 laying down a schedule of maximum rates for commercial motor traffic on the highways, but this was rescinded two years later. In some States there are signs of a movement in the direction of strengthening existing laws and adopting new restrictions, but, on the whole, public support for such measures is not easy to obtain. There seems rather to be an inclination on the part of legislative bodies to encourage the development of highway transport as a competitor of railway transport without a sufficient regard to the handicaps from which the railway suffers or for the ultimate advantage of the community. Perhaps the most remarkable illustration of this tendency is the introduction into Congress of a Bill authorising the Government to lend money at 5 per cent. to assist companies in organising highway transport, the loan to be contingent on whether the business of the proposed company offers a reasonable prospect of success. Against such measures the American railroads are naturally protesting.

The Marconi Report.—Gross profits of Marconi's Wireless Telegraph Company for 1921 show a slight decline, and expenses at the same time showing a slight increase, profits work out at £275,361, as compared with £267,156 a year ago. In the following summary we show the progress of the company over a number of years:—

	1913.	1915.	1917.	1918.	1919.	1920.	1921.
Gross profits ..	£ 246,682	£ 486,850	£ 540,185	£ 766,263	£ 1,538,040	£ 564,838	£ 554,515
Expenses	124,359	168,217	156,350	168,325	317,300	267,156	279,154
Net profit	122,323	318,633	383,835	597,938	1,220,740	297,682	275,361
Pref. dividend ..	42,500	30,000	42,500	55,000	117,500	30,000	30,000
Ord. dividend ..	150,000	183,403	244,537	305,912	617,824	391,567	397,088
To reserve	32,470	100,000	150,000	150,000	..	..	..
Balance	Dr 70,177	72,590	Dr 3,808	87,026	491,416	Dr 123,885	Dr 151,787
Brought forward ..	146,726	307,546	380,106	376,760	463,786	944,450	814,567
Carried forward ..	76,549	380,106	376,904	463,786	955,802	820,567	666,830

As a year ago, ordinary shareholders receive a distribution of 15 per cent. and preference shareholders 12 per cent., but the balance carried forward is reduced from £820,567 to £666,830. The directors point out that "the uncertain political conditions, the unstable exchange obtained in almost all countries throughout the world, have not only limited the scope of such a business as ours, so largely dependent in the past on Governments, but has also rendered every transaction difficult and anxious, calling for unusual caution." And shareholders

are informed that "no settlement has been made by any of the Government Departments in respect of any of the company's claims arising out of the war, or the services rendered during the war, and no sum, therefore, in respect of any of these claims figures in the past year's accounts." But it is added that "negotiations are continuing, and your directors would welcome the opportunity of adjusting many matters which must be as irksome and costly to the Government as they are to the company." In the balance-sheet total assets at £8,285,163 are £215,413 lower. There are, however, some important changes. Investments and loans have fallen to £1,318,875. This item alone shows a reduction of £1,164,904. Debtors, on the other hand, have increased by £448,575, while Cash shows a gain of £110,752 at £124,773. The most imposing figure on the asset side is the item "shares in associated and other companies and patents," valued at £3,237,212. This is an increase of £295,696 on the figures recorded a year ago. There is a footnote to the balance-sheet, which states that "shares held in associated and other companies are of a par value of £4,140,581," and this information is further supplemented in the directors' report by the considered opinion of the directors to the effect that the shares and debts of associated and other companies are worth the value placed upon them in the balance-sheet. Incidentally, it is also stated that patents and rights figure in the accounts at £283,691. This information is all to the good, as it enables us to analyse this huge item better. The auditors' report, which should be carefully perused, sheds yet further light on the company's investments. It states that "a large part of the investments and shares in associated companies are held abroad." The auditors are certainly to be commended upon their candour in admitting that—"We are unable to form an opinion as to the value of the shares in associated and other companies and patents." The same candour is displayed in commenting upon amounts due from associated companies taken in the balance-sheet at £1,584,777. However, the general reserve account at £3,986,914 is a substantial item, although slightly lower than a year ago, and if this is offset against these items, and the fact that creditors total only £230,886, the position appears to be quite satisfactory. Indeed, the directors are to be congratulated upon going into items with an evident desire to be informative, and stand out in striking contrast with the directorates of some undertakings which occasionally display unusual reticence in publishing detailed accounts.

Bass, Ratcliff, and Gretton.—Although trading profits for the twelve months ended June 30th last of Bass, Ratcliff, and Gretton, Limited, improved to £1,205,795, as against £1,158,172 for the previous year, expenses, increasing in larger proportion, reduced net profits to £279,849, as compared with the previous year's figures of £277,401. Rents, rates, taxes, insurance, and compensation fund charges increased from £193,600 to £302,300, being a rise of over £108,500, while an extra £11,000 went for repairs, &c. Salaries and other charges, however, were reduced by approximately £62,000, falling from £535,000 to £473,200, and interest charges at £7,900 show a saving of £14,000. The table below compares results for the past five years and for 1913-14:—

Year ended June 30	1914.	1918.	1919.	1920.	1921.	1922.
Gross trading profit	£ 749,607	£ 771,896	£ 890,294	£ 1,113,121	£ 1,158,172	£ 1,205,795
Expenses	455,611	463,416	568,151	817,546	880,771	925,946
Sundry revenue ..	293,996	308,480	322,143	295,575	277,401	279,849
Balance forward ..	143,153	207,086	232,693	282,965	236,894	200,528
	64,593	68,120	61,570	60,080	61,970	73,085
Deb. interest	501,742	583,686	616,406	638,620	576,265	553,462
Bad debts and in-vest. deprec. ..	80,800	80,800	80,800	80,800	80,800	80,800
Pref. dividend ..	34,266	65,766	24,646	43,450	29,980	13,514
Ord. dividend ..	68,000	68,000	68,000	68,000	68,000	68,000
Rate	204,000	204,000	217,600	224,400	224,400	224,400
Reserve, &c.	15 %	15 %	16 %	11 %	11 %	11 %
	50,000	103,550	165,280	160,000	100,000	100,000
Carried forward ..	64,676	61,570	60,080	61,970	73,085	66,748

Again bad and doubtful debt charges are reduced, the figure this year falling to £13,514. Reserve allocations at £100,000 are similar to those made a year ago, and the 11 per cent. ordinary distribution is maintained. On turning to the balance-sheet, which will be found fully analysed in our usual column, total assets have been reduced from £9,196,176 to £8,921,522. Stocks are now valued at £2,257,799, being a reduction of over £232,000 when compared with the previous year's figures, and debtors at £1,784,932 show a contraction of over £202,000. Cash in hand and at bankers has increased from £342,148 to £461,908, and creditors have fallen by over £368,000 to £2,471,574, and though goodwill and trade marks are, as before, retained in the balance-sheet at £800,000, the reserve fund has been brought up to exactly this amount. This is the third brewery report in the space of a week or two to show that the industry has been doing remarkably well in a time of great industrial depression.

Kafir Profits and Prices.—Our mining correspondent writes:—On the Stock Exchange favourable events frequently prove to have been discounted in advance, but this month's experience in connection with the Rand provides one of the exceptions. In the concluding portion of July and the commencement of August the share market displayed marked activity, large purchases being made in the expectation that the July returns would show substantial increases in profits due to reduction in costs. This expectation turned out to have been well founded, and publication of the actual figures led to a renewed demand on the part of speculative investors, especially for the shares of those companies whose returns made the best showing. As will be seen from the statistics given in another section of the paper, the great majority of the mines secured larger profits last month than in June. Appended is a comparison of the costs per ton and the working profits for July with those of December—just prior to the outbreak of the labour trouble:—

Company.	Working Costs.		Working Profit.	
	Dec.	July.	Dec.	July.

* Exceptional, owing to strike.

† Loss.

As already pointed out in our columns, the companies, as from the beginning of July, benefit from the entire discontinuance of the war bonus paid to the white miners, and while it cannot be expected that future economies will be on anything like the scale effected during the past half-year, there is reason to believe that the current results will, generally speaking, be maintained, if not improved upon.

New Jagersfontein.—Mining operations on the part of this company during the year ended March 31st last having been confined to the treatment of residues and debris, the yield of diamonds naturally shows a falling off in average as well as in total—the latter figures at 66,000 carats, as against 167,600 in 1920-21. The actual sales only brought in £18,500; thus the diamonds on hand at cost of production have been increased to £284,100. Pursuance of the company's philanthropic policy of providing work for its employees, irrespective of the nature of the return, has had the effect of reducing its liquid resources by £100,000 to £32,000. Obviously, this could not continue, and the shareholders will learn with relief that during the last few months some sales have been made by the Diamond Syndicate, which deals with the output of all the leading companies. A considerable improvement in the demand would, however, be needed to warrant the resumption of production on anything approaching the normal scale; and of this there is little prospect, even in the United States, which is the largest buyer. For 1919-20 the record dividend of 62½ per cent. was paid, this being followed up by an interim distribution of 25 per cent. in October, 1920. Since then the shareholders have had to "go without."

Gold and Silver Production in United States.—From a statement issued by the Bureau of the Mint at Washington we have compiled the following final estimate of refinery production of gold and silver in the United States during 1921:—

GOLD AND SILVER PRODUCTION IN THE UNITED STATES.

State or Territory.	Gold.		Silver.

Silver is valued at \$1 per ounce as provided by the Pittman Act for domestic production. Compared with 1920, these estimates indicate reductions of \$1,119,600 in value of gold production, and 2,309,132 ounces of silver production. The country's record production occurred in 1915, the figures being \$101,035,700 gold and 74,961,075 ounces silver.

Japanese Trade and Finance.—Cabled advices from Tokyo state that the money market was quiet during the second half of July. At the end of the month, however, the rate for day-to-day loans rose to 10 per cent., but soon dropped to 7½ per cent. National loans and debenture stocks enjoyed a strong demand from the investing public, and the new 5 per Cent. Exchequer bonds are expected to go off well. The general tendency of bank deposits is to increase while the recent tendency of bankers' loans to rise is now being checked. The commercial markets show little change except for a slump in prices in the rice market on account of the favourable weather for rice plantations. The stock markets have been dull, and the silk trade inactive. Arrangements are under consideration for decreasing the output of silk. The necessity for national retrenchment is becoming more clearly realised, and there is some talk also of regulating prices. The note issue of the Bank of Japan at July 31st was 1,224 million yen, as against 1,142 million yen a year ago, while discounts and advances at that date were 215 million yen, against 68 million yen at this time last year.

Obersea Correspondence.

UNITED STATES.—DEBT REFUNDING—INVESTMENT DEMAND ACTIVE—STEEL CORPORATION'S FIGURES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 31.

THE Treasury Department's action in calling for the redemption on December 15, 1922, of about one-half of the outstanding 4½ per cent. Victory notes, and at the same time offering on the usual terms a new issue of approximately \$300,000,000 four-year 4½ per cent. Treasury notes, with provision for an additional allotment up to a limited amount in exchange for the 4½ per cent. Victory notes, is another important step in the programme for refunding the Government's short-dated debt. Of the latter, about \$4,500,000,000 must be refunded during the current fiscal year, and most of that amount must be taken care of within the next ten months. The \$300,000,000 Treasury notes just offered for subscription, Secretary Mellon says, will provide for the Treasury certificates of indebtedness maturing on August 1, and for the Treasury's remaining cash requirements up to September 15th next. The allotment of additional notes, he explains, should accomplish the refunding of some more of the Victory loan and correspondingly reduce the amount of Victory notes to be provided for upon redemption or maturity. As a result of this operation, it is expected that by January 1, 1923, the outstanding Victory notes will have been reduced to about \$1,000,000,000. The latter is regarded as a "manageable maturity which can be dealt with as opportunity offers, without spectacular refunding operations that would upset the security markets and disturb the course of business and industry."

When this latest refunding is completed, and if the Treasury's expectations, as indicated, are realised, only about one-fifth of the total amount which originally fell due in 1923 will remain outstanding. All of the 3½ per cent. Victory notes have been taken up through short-term loans, most of the 4½'s have been converted into new 4½'s maturing in 1925 and 1926, or into 4½ per cent. notes due in 1925, while the present offering provides for conversion into 4½ per cent. Treasury notes maturing in 1926. Through the skilful handling of the problem by the Treasury Department, aided by a favourable investment market, what is perhaps the largest conversion operation ever undertaken by any Government with respect to its public debt will have been accomplished. The calling for redemption of such a large amount of notes might be expected to cause a sharp decline in their market premium. Instead, however, the 4½ per cent. Victory notes have lately registered a substantial advance. One influence from this fact is that investors look for a long period of easy money rates. There has been no slackening in the demand for Government War bonds and notes, as well as high-grade corporation issues, both old and new. A number of the Liberty bonds went above their previous high levels last week. New bond issues during the past week totalled nearly \$72,000,000, including some \$27,000,000 industrial, about \$15,000,000 state and municipal, \$10,000,000 public utility, and \$15,000,000 insular bonds, the last-mentioned issue consisting of Philippine Government 4½ per cent. gold bonds which were offered on a 4.55 per cent. basis. The only foreign offering was the Province of Nova Scotia \$2,000,000 two-year 5 per cent. bonds, which were sold to investors at 99.80 and accrued interest to yield more than 5.10 per cent. Most of the recent flotations have been disposed of promptly.

The United States Steel Corporation's report for the second quarter of this year shows that net earnings exceeded those of any three months' period since the first quarter of 1921. The total of \$27,286,945 compares with \$19,339,985 for the first quarter and with \$21,892,016 for the corresponding period of last year. After allowances for depreciation, interest and sinking fund charges, the balance available for dividends was \$11,196,355, which after the preferred dividend was equivalent to 96 cents a share on the \$508,302,500 common stock out-

standing. In the first quarter of this year the earnings available for dividends were not sufficient to meet the full preferred dividend, and there was nothing, therefore, for the common stock. During the past quarter the corporation actually earned more than enough to pay both preferred and common regular quarterly disbursements, but it set aside for replacements and sinking fund \$11,067,432, which was about \$2,400,000 greater than the amount similarly appropriated out of earnings during the first quarter of the current year. The result, therefore, after deducting both preferred and common dividends, showed a deficit for the second quarter of \$1,462,345. One of the most favourable features of the report was that monthly earnings steadily increased. In April they amounted to \$7,750,054, in May \$8,824,887, and in June \$10,712,004; net earnings in June were, in fact, the largest since January of 1921. For the first six months of this year net earnings aggregated \$46,626,930, as against \$54,178,734 for the like period of last year. After all charges, the balance available for dividends was \$17,105,587, as compared with \$23,562,637 for the first half of 1921. The amount remaining for the common stock dividends was equivalent to 88 cents a share, whereas for the first six months of last year there was a balance of \$2.15 a share for the common.

FRANCE.—EFFECT OF THE BALFOUR NOTE—REPARATIONS PLANS—CUSTOMS DUTIES AND DELIVERIES IN KIND—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 9.

FURTHER reduction of Germany's total debt is now regarded here as having been rendered impossible by Lord Balfour's Note, since Germany is the only source from which France can hope to secure the necessary means to pay her creditors. At the same time, it is regarded as established by the same Note that Great Britain will claim from her Allies only the amount which she needs to pay off her American creditor, or £850,000,000. As France's debt to Great Britain amounts to only 17½ per cent. of the total sum owing to the latter by the rest of the Allies, it is also regarded as established that the British Government does not intend to claim from France more than the equivalent of this percentage of the total; "otherwise," as it is pointed out here, "it would be equivalent to asking France to pay for Germany, Russia, and others of Great Britain's debtors, for whose debts we can scarcely be held liable!" Lord Balfour's Note is also held as having rendered all question of an international loan on behalf of Germany impossible, while another regrettable effect is that it will be found, in the future, that the Reparations Commission has been divided into camps, instead of being bound by a common interest as creditors of Germany.

All this concerns the future, however, whereas M. Poincaré's demand for productive guarantees, without which no kind of extension of the existing moratorium is to be granted to Germany, is of the immediate present. It may be taken for granted, I think, that the French Government's action on Saturday in notifying its intention to hold up the German banking accounts in Alsace-Lorraine, and in causing it to be understood that all Germans were to be expelled from the recovered provinces, was due to a desire merely to make it clear that on this occasion it means to take definite action—with the rest of the Allies, if the latter decide to co-operate, or without them if they do not so decide.

The proposal to "seize the German customs, railways, and forests" would evidently be much more difficult of accomplishment, particularly if the Allies were divided in their views. Further, it must not be overlooked that sums equivalent to 25 per cent. of the receipts from the German exports have already once been seized, under the provisions of the Peace Treaty, and that, under the Cannes agreement, this "productive guarantee" was reduced to the simple "control" which exists to-day. The weak point in the proposal to seize the revenue from the German customs is that these duties are payable in paper marks, and would produce only an illusory sum—300,000,000 gold marks, it is estimated—for distribution

among Germany's creditors. A similar objection is to be raised in regard to the seizure by the Allies of the German State property. This consists chiefly in the State railways, which belong to the Reich, and in forests and mines, which are the property of the various German States. The profits from the railways (if and when such exist) would also be in paper marks. As to public domains, we may take the case of Prussia, which is especially wealthy in this kind of property. Last year the total revenue from the Prussian State mines was 3,005,000,000 marks, it is true, but the working cost amounted, for undisclosed reasons, to 2,895,000,000 marks, which gives these undertakings the appearance of anything but that of a very attractive asset. The Prussian forests during 1922 brought a gross revenue of 1,406,000,000 marks, for an expenditure of only 436,000,000 marks, but this, with the paper mark at 3.500, would represent only about £280,000, after all.

A mere "taking over of the bankrupt estate," therefore, is obviously insufficient, and the suggestion is now often made here that some at least of the German State property, such as the forests and mines, might be sold outright. Another means that it is believed would prove effective is the participation by the Allies in German industrial enterprises. It was suggested some time ago by the French delegates on the Reparations Commission that the German industrial undertakings should be required to increase their share capital by one-third, and that the new shares, which should enjoy all the rights of the best of the existing scrip, should be handed over to the Reparations Commission, for disposal on behalf of the Allies. This proposal is understood to be among those favoured by Comte de Lasteyrie, and it certainly appears to have the merit of being likely to constitute a means of touching the holders of Germany's undoubted industrial wealth, if—and here is the weak spot of the proposition—foreigners possessing sound money could be found willing to invest in German industrial concerns (which at the moment does not appear to be the case), and if some kind of stabilisation could be lent to the mark. The ideal solution, from

the French point of view, would be the organisation of a huge international loan, to furnish Germany with the money with which to pay her debts, but this, as has often been stated, is regarded here as much less feasible than ever since the dispatch of the Balfour Note.

Theoretically, August 1 marked one of the most important dates in the history of reparations, for on that day it became possible for sufferers from war losses in the devastated regions to open direct negotiations with German firms for the purchase of materials, against the certificates handed to them by the French Government, entitling them to reparation payments. After long consideration, the French Government decided to bring the Wiesbaden and supplementary agreements into operation without waiting for the formal ratification of them by Parliament, and this is the situation in which a *sinistré* finds himself to-day: supposing he possesses a certificate entitling him to reparation for 60,000 of loss to his property, and he requires a wooden house priced at 30,000 and a motor-car valued at 20,000, all he has to do is to write to the prefecture of his department and a credit for 50,000 will be opened for him against his 60,000 certificate. With this credit arranged, he is in a position to order what he wants from any German firm he chooses. Once an agreement has been come to as to price and specification, the purchaser informs his prefecture of the facts, and has then only to await delivery of the goods, it being understood that the Customs duties, cost of transport from the frontier station, and other accessory charges will be added to the bill in due course.

Nothing could be simpler, apparently. Unfortunately, the long struggle that has been going on between the French trading classes and the Government in regard to the Customs duties that should be levied on these reparations payments in kind is by no means ended. As might be expected, however reprehensible the fact may be from the point of view of the sufferers and of national recuperation, the French trading classes have from the first been bitterly opposed to any system of reparation payments in kind that ignored their interests as intermediaries. In plain language, the trading classes have all along claimed that they have a right to a "rake off" in connection with these payments, as compensation for the loss of trading possibilities which they claim has been imposed upon them through the operation of this system. Whether they are justified in assuming this attitude depends, of course, entirely on the point of view assumed by the observer. The controversy is now focussed on the rate of Customs duty that should be levied on goods purchased by *sinistrés*. The trading classes argue that the maximum tariff should be applied to all merchandise entering France under these agreements, and that relief should be given to the purchaser by a subsequent rebate on these rates. The Ministry for the Liberated Regions, on the contrary, insists that such goods shall pay only the minimum rate, plus a supplementary tax based on a co-efficient. When it is recalled that the new French maximum tariff imposes what are intentionally absolutely prohibitive duties on a large number of categories of German exports, the difference that may accrue as a consequence of one or the other thesis being adopted may easily be imagined. The Ministerial Council, in deciding the question, adopted the view of the Ministry for the Liberated Regions, but emphasised its uncertainty by stipulating that the minimum rates should be given a trial for a fortnight only, after which modifications may be made in accordance with the results disclosed in actual working. The general effect of this indefinite arrangement, it is expected, will be that *sinistrés* will hold back their orders until the question of Customs rates has been finally settled.

As last week, the Bourse has been well supported, both *à terme* and *au comptant*. The reason generally attributed for this is that the investing public, in the absence of fresh issues of capital, has begun to return to its old habits. There is still some hesitancy, because clients of the Bourse do not yet know whether Germany will undertake to carry out her engagements or whether she will refuse, and so place French investors in a difficult situation. French rentes have been firm, and almost universally have gained trifling fractions. Banks have been stronger, the Banque de France, after dropping many points, recovering from 5,705 to 5,780, the Banque de

Paris improving from 1,144 to 1,179, and the Banque de l'Union Parisienne from 585 to 595. Railways are again stronger, Est gaining nine points at 799, Métropolitain 20 points at 430, Nord 40 points at 1,270, and P.L.M. 25 points at 960. Electrical undertakings are also in advance. Bréguet has moved from 795 to 830, Electricité et Gaz du Nord from 330 to 340, and Electricité de Paris from 452 to 496. In metallurgy the same general tendency is conspicuous. Micheville at 695 is 23 points up, Longueville at 310 has advanced 49 points, and Basse-Loire at 130 25 points. Mines are also better. Tintos started at 1,490 and soared steadily, reaching 1,546, and being well in demand at that figure. Boléo advanced from 420 to 451, and Penarroya from 815 to 880. In petroleum undertakings there has been little movement, except in Steaua Romana, which improved from 447 to 470.

GERMANY. — REPARATIONS — FINANCES — REICHSBANK DISCOUNT RATE — EXCHANGE AND BOURSE — PRICES — CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, August 8.

THE opening of the London Conference was accompanied by a slight fall in the foreign exchanges and by active foreign buying of Federal bonds, so repeating the temporary improvement of sentiment which has appeared at the beginning of all former attempts to settle Reparations. In general, sentiment is not optimistic. Lord Balfour's Note made a good impression; but it is considered certain that the United States will cling to her claims, and it is not considered likely that England will abandon her condition as put in the Balfour Note. M. Poincaré's suggestions, as telegraphed here in brief, are not well taken. The elaborate plans for further control of Germany's economic life presuppose the theory, which cannot be reasonably held, that lack of control is the cause of the present trouble. Reparations Settlement negotiations which do not admit that Reparations are the main cause of the trouble are likely to lead to little good. It is very doubtful whether Germany's own complicated control system—of taxation, private banking, capital flight, export and import—does not do more harm than good. The reported Poincaré plan for a foreign share in German industry will, if it gets past the suggestion stage, be resisted here. As there is no reason why one private interest should be confiscated more than another, and as agriculture is probably making more money than industry, a partial confiscation would be possible only if the victims were compensated; and compensation could be paid only by further inflating the currency. Already (apart from other taxes, direct or indirect) 30 per cent. of the profits of industrial companies are taken under the Corporation Tax before anything goes to shareholders. The gold value of industry's profits are small. Thirty per cent. is still counted as a high (though not the highest) dividend; in a paper mark depreciated to 1-200th, it is about one-seventh of 1 per cent. gold; and even if an average increase of capital since 1914 of 300 per cent. is assumed, the effective gold dividend would be about $\frac{1}{2}$ per cent. The causes of such low yields are no mystery. A minor cause is lower efficiency of labour. Another cause is that the selling prices of finished commodities at home have not risen in anything like the measure of the mark exchange's depreciation; and the manufacturer's gross profits, though probably representing a normal percentage of the selling price, and having, therefore, a considerable buying power at home, are very small when reckoned in gold. But the main cause is that the increased burden imposed on Germany by war losses and post-war liabilities has so far been escaped by the industrial employees. The employee has successfully kept up his real wage by using the strike threat, backed by the good argument that, at best, his wage provided only a minimum-standard existence; and as the burden could not be escaped by all classes, it has been borne by the classes drawing income from capital. Technically, plans to expropriate German industry, otherwise than by taxation, for the benefit of Reparations claimants do not seem practicable. They will not solve the foreign-payment balance problem, the cause of the

mark exchange depreciation, which is the particular evil which influences Ally statesmen to reconsider their Reparations measures. The uncompensated export of German industrial profits will have the same bad effects on the marks exchange as the direct payment of an equal value in Reparations instalments. In this connection the London experts might do worse than consider statistically who has been paying for Reparations so far. A competent German shows statistically that foreigners as a whole, including some citizens of Ally countries, have, through the mark exchange fall, "paid" (that is lost) to Germany a very much larger sum than Germany has paid for Reparations. Since 1919, for instance, the interest paid to the very numerous foreign holders of Federal 3 per cents. has fallen to about one-hundredth of its then already reduced gold value.

The floating debt on July 31st is reported at 329,044,566,453 marks, of which 307,810,465,300 marks were discounted Treasury bills. The floating debt increase in the last ten days of July was 7,515,830,000 marks, of which 3,242,581,000 marks went on fulfilment of the Peace Treaty. The revenue receipts in June (State undertakings excluded) were 17,775,951,098 marks, against 5,785,013,656 marks in June, 1921; the gross receipts from Posts and Telegraphs were 1,627,794,734 marks, against 457,318,485 marks, and from railways 12,780,715,000 marks, against 2,028,092,000 marks. The receipts from income-tax were five times as high as in June, 1921, from Customs also about five times, from the Coal Tax about seven times, from the Tobacco Tax four times, and from the Sales Tax about three times. The Government is considering the levying of a special tax upon foreigners. A Government Bill doubling the export duties has been submitted to the Reichswirtschaftsrat. Some weeks back exporters petitioned for a reduction of these duties (which vary from 1 to 10 per cent.), on ground of the increasing difficulty in competing. This the Government refused, replying that the new mark exchange fall has removed any difficulty there had been; and the aim of the proposed doubling is to get for the State some of the extra profits reaped from the larger mark yield from exports invoiced, as is the rule, in high-exchange currencies. Exporters are opposing the plan on the ground that any rigid export duties, which cannot be adopted rapidly to varying exchange rates, will hamper export. A further increase of postal charges from October 1st is announced. The present charges, reckoned in gold, are low, the home standard letter rate being only 3 marks, or about a farthing, the foreign rate 6 marks.

The Reichsbank's increase in its discount rate is not likely to reduce materially the demand for credit. Money is still extremely short. The bank has published the following figures showing the increasing difficulty of placing discounted Treasury bills. At the close of 1921 102.7 milliards of Treasury bills, or 43.7 per cent. of 235 milliards outstanding, were held outside the bank; on July 22nd 93.5 milliards, or only 32.3 per cent. of 298.5 milliards outstanding, were held outside. The demand for credit in the shape of private Bills has also grown greatly, the bank's holding being 7,008,533,000 marks on July 22nd, as against 1,470,787,000 marks at the same date of 1921. The capital market in July, as in June, reflected the money shortage. The total of new capital raised (including bonds) was 2,330,100,000 marks, against 2,761,800,000 marks in June. Capital increases by existing companies were only 952,300,000 marks, against 1,294,900,000 marks in June and 4,490,500,000 marks in March. The Reichsbank's statement for July 31st shows the usual large month-end increase in Treasury bill discounts, by 11,840,534,000 marks to 207,858,232,000 marks; an increase in private Bills by 1,113,533,000 marks to 8,122,066,000 marks, and of note circulation by 12,767,698,000 marks to 189,794,722,000 marks. The bank had difficulty in printing sufficient notes, its reserve having been depleted by the recent printers' strike. The bank's price for the 20 marks gold coin has been raised for the week beginning August 7th to 2,500 marks.

The Bourse last week was moderately active and firm, and was to-day very firm, the leaders being mining and metal stocks, which went up sharply and influenced the rest of the market. Federal loans were very strong,

French American Banking Corporation 67 William Street NEW YORK CITY

Cable Address - FRENAMBANK
Capital, Surplus & Undivided Profits - \$2,845,000

We transact a general foreign and domestic banking business and solicit your inquiries.

Threes to-day jumping from 240 to 265, Fours from 117 to 119, $\frac{3}{4}$ per cent. from 89.90 to 90.75, and Colonials Fours from 123 to 133, while War Loan remained at 77.50, and Savings and Premium at 79.20. The stock market has not this time followed the foreign exchanges upwards, with the result that the gold prices of stocks at current quotations are much lower than some months back.

Prices are rising very rapidly. The *Frankfurter Zeitung's* index (77 commodities and 16 finished products) for August 1st (basis, 100 in 1914) shows 13,935, against 9,140 on July 1st and 4,238 on January 1st. The figure for food is 13,691, against 8,323 on July 1st; textiles and leather 21,910, against 13,938; minerals 18,355, against 12,168; miscellaneous 10,993, against 6,881; and finished articles 8,549, against 6,750. The Federal wholesale index shows, average for July 9,957, against 7,030 for June. The Steel Syndicate's prices have been again raised. The new prices (marks per metric ton) are:—Ingots, 15,670; blooms, 17,140; billets, 17,770; slabs, 18,320; construction forms, 20,770; bars, 21,070; wire rods, 22,700; thick plates, 23,660; medium, 26,880; thin, 28,900; thin under 1 mm., 30,330. These prices are between four and five times as high as those of December last. All associations of manufacturers of finished metal goods have added heavy supplements to their prices. The trade boom is growing; and an increasing number of manufacturers refuse to deliver before the end of the year, and in all cases provide for alteration of their contract prices in case wages or other costing factors increase. Employment continues to improve, and the unsatisfied demand for labour materially exceeds the small number of unemployed. The number of publicly supported unemployed has fallen from 314,475 a year ago to 19,864 on July 1st.

Crops will not be as bad as was feared some weeks ago, but will not be as good as in 1921. Conditions at beginning of August were (2 being good, 3 middling, and 4 bad):—Winter wheat 3.4, against 2.5 in August, 1921; spring wheat 3.1, against 2.8; winter rye 3.2, against 2.6; summer rye 3.4, against 3.2; potatoes 2.6, against 3.5; oats, 3.4, against 3.2; clover, 3.7, against 4.0.

HOLLAND. — GENERAL SITUATION — TRADE BALANCE — RAILWAY RESULTS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 2.

The general situation is pretty bad in this country. The results of the various joint stock companies are mostly deplorable. Evidently many banks have been too liberal in granting credits. Criticism both as regards the management of commercial enterprises and banks is being heard from all sides. This is quite a natural phenomenon in adverse times, and although in many cases it is a fact that the leaders of our business life have failed, there is also a good deal of injustice in some of the criticisms.

Financial and commercial circles are looking with great anxiety to what is happening in Germany. Although a collapse of that country might to some extent make it possible for our industries to regain the ground lost to German competition, on the other hand the disastrous effect of such a collapse would be such as to far outweigh other advantages. The Balfour memorandum made a most favourable impression on this side, and everybody

incere hopes that your Government will succeed in bringing your French Allies to a reasonable policy and that the United States will understand the critical position of European affairs.

The value of goods imported into this country amounted in the years 1919 to 1921, exclusive of bullion, to 2,826, 3,336 and 2,240 million fls, that of goods exported to 1,411, 1,701 and 1,370 million fls. (Per capita of population the total imports and exports were 25 fls, 737 fls and 526 fls.) The balance of trade consequently shows import excesses of 1,415, 1,635 and 1,470 million fls. The chief imports consisted of machinery and utensils 147,000,000 fls, iron and steel 137,000,000 fls, coals, cokes 127,000,000 fls, wheat and flour 124,000,000 fls, maize 95,000,000 fls, timber 77,000,000 fls, seeds 66,000,000 fls, yarns 64,000,000, vegetable oils 54,000,000 fls, and the chief exports of drapers' wares 108,000,000 fls, vegetable oils 90,000,000 fls, cheese 68,000,000 fls, sugar 63,000,000 fls, milk, condensed milk 51,000,000 fls, margarine 58,000,000 fls, and butter 49,000,000 fls.

The two railway companies lost about 32,000,000 fls in 1921. Since 1913 the receipts have increased from 75,000,000 fls to 194,200,000 fls, i.e., 156 per cent. But expenses have increased in the same period from 50,000,000 fls to 194,100,000 fls, or 288 per cent. While the proportion of working expenses was 66.13 per cent. in 1913, it had risen to 99.95 per cent. in 1921. This increase is for the greater part due to higher wage bill, which amounted to 129,600,000 fls. Owing to the eight hours' working day the staff increased from 36,830 in 1913 to 51,078 in 1921. After wages and salaries, fuel is the most important factor in the increase of the working expenses. Fuel cost required 5,900,000 fls in 1913 and 29,600,000 fls in 1921. As the fares have already been doubled, the only remedy lies in economy, which can only be put into practice, according to the board of directors, by a reduction of the staff and of wages. This will naturally mean fresh labour troubles.

CZECHO-SLOVAKIA.—EXCHANGE FLUCTUATIONS—THE EFFECT ON INDUSTRY—THE 1921 TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

PRAGUE, July 22.

THE curious fluctuations of the Czecho-Slovak crown have come as a surprise. On the 8th inst., after being constant at 230 to the pound sterling for many months, it suddenly rose in Switzerland and London, so that the pound value sank to 185. On the 10th it even relapsed to 175, then rallied to 189, and the next day reached 217. Then again came a fall; from 210 on the 12th it fell to 197 on the 13th, where it remained. The reasons given for these strange variations are many and diverse. Contemplated deals in flour by the Government, foreign speculation, the fall of the mark, the trade returns for 1921, and the prospects of exceptionally good harvests all round are given among others. But at the same time it is a very serious matter for the exporters. It has been pointed out by a sugar expert that that most stable of Bohemian industries stands to lose over 600 million crowns should the crown remain at 13 on the Swiss exchange. The effect of the rise on textile and other industries, such as wood, would be even worse, with the exception possibly of the cotton manufacturers who can buy their raw material from America or England at greatly reduced prices.

The Finance Minister has stated that the crown is now on its own, and rises or falls on its own strength; but he also stated that the fall of the mark was one of the causes of the rise. Now the mark has leapt up, and it remains to be seen whether the crown will fall. So far it shows little sign of so doing.

Following an announcement that, unless help is forthcoming from the Government, the one gold mine at present working in Czecho-Slovakia will be forced to close

down, now comes the somewhat startling news that the hop company "Saazia," of Saaz (Zatec), is about to make a composition with its creditors, the assets amounting to three millions only, against debts of 27 millions. Other reasons than losses on hops are alleged for the failure; but the Saaz hops are claimed to be the best in the world, and to be sought after everywhere. It is true that the yield of hops last year was 58,900 qs, as against anything between 150,000 qs and 350,000 qs before the war, the crop being short owing to long droughts and heat. Of this amount, 50,000 qs were exported. The harvest this year is expected to be much larger, and although a very much reduced export to the United States is to be expected, the excellence of the Saaz hops should render their disposal assured. On the other hand, the fall of the mark and the krone will make any extensive purchases on the part of Germany or Austria impossible. It is worth noting that the acreage under hops in Czecho-Slovakia is not much more than half what it was before the war, while the production of beer is about one-third. In all these matters a dry America has its effect.

The height of the crown should enable British exporters to do business, especially in colonial produce—coffee, tea, cocoa, wool, and raw cotton—and steps should be taken to compete with America, in which country large quantities of raw material have recently been ordered on favourable terms for the buyers.

The trade returns for last year, which are given as a reason for the rise of the crown, are interesting. Imports for the year amounted to 22,435,356,046 kc against exports 27,312,189,300 kc, showing an excess of exports over imports of 4,876,833,254 kc, and it is this balance that has caused the optimistic feeling. On examination it is found that 37 per cent. of these exports were taken by Austria, and what Austria has to pay for these goods, beyond what she has received in loans from other countries, it is not possible to say. Loans have been granted to Austria by the Czecho-Slovak Republic itself, and the inference is obvious. Should, however, the Government see fit to extend the plan of barter to Austria, and, in so doing, allow the entry of Austrian motor-cars, for instance, the public would gain directly, and the Government, so far as one can see, both directly and indirectly.

Another remark to be made about the returns is that it was not until the very end of the year that the crown began its rise. In November it was over 400 to the pound, and this is a very important point which appears not to have been properly appreciated. For instance, owing to the present rise, the latest account of the wool industry is that it is in a desperate condition, and that it goes from one crisis to another. Some other items of the returns are worth notice. The imports of tobacco amounted to 778,836,770 kc, which shows how easy it would be to barter with Jugo-Slavia and Roumania to a greater extent, and causes wonder that none should be permitted from America and England. Probably most of the tobacco imported comes by way of barter with the countries mentioned. Again, the imports of cotton, including raw material, are almost as great as the exports, the difference being a little more than 26 million crowns. Wool and woollen goods are about half the figures, being 2,066,296,558 kc, against 4,134,127,599 kc. Leather and leather goods show an import value of 380,758,042 kc, against an export of 875,605,886 kc. Regarding leather, the regulations are that only leather and leather goods of a type not produced in the Republic can be imported. There is an over-production of almost every kind of boot, gaiters, boxes, bags, &c. Varnish is a thing which is largely imported, and a new company has just been started in Prague for its manufacture. Last year as much as 504,012,983 kc worth was imported and 173,416,254 kc exported. Fats also show an amount of 819,481,795 kc imported, against an export of 160,829,225 kc. Taking of 1921 in the light of to-day, the conclusion is that they have been misconstrued, and that what is triumphantly called the "balance" of exports over imports is an accident unlikely to recur in present conditions.

DENMARK.—BANKING AFFAIRS—THE INDUSTRIAL POSITION—EXTERNAL TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, July 31.

In my last letter I reported on the movements in the balance-sheets of the banks during the month of May. The developments in June have taken a similar direction. The aggregate of the balance-sheets has declined from 5,217,000,000 kr to 5,205,000,000 kr—i.e., by 12,000,000 kr only. Various movements in the separate items indicate a slow improvement in trade. For instance, the decrease in the amounts for permanent loans has been continued, while the item "Current Accounts," in which is also included documentary credits and loans against warehouse receipts, has shown an increase.

It should be pointed out, however, that the movements in a favourable direction are only small, and that the conclusions to be drawn from them must be cautious with no indication as to the stability of the movement. During June the note circulation of Nationalbanken increased by a few million kroner, viz., from 438,700,000 kr to 441,900,000 kr.

A few weeks ago an important agreement was made between Nationalbanken and Landmandsbanken. In spite of the considerable writings off effected by Landmandsbanken at the end of the last financial year the bank has realised that, as a consequence of the continued depression, further writings off to cover future loss would be required during the coming years. At a valuation recently made by the bank itself it proved that the proprietary capital of the bank would be reduced to the approximate value of the shares at the price then current on the Stock Exchange. After complete investigation and consultation with the Minister of Commerce and the Nationalbanken, the Landmandsbank has decided at the end of the present financial year to write off a total amount of 55,750,000 kr, by which the reserves of the bank, including the amount carried over from last year, will be reduced to just over 5,000,000 kr. In order to invest the bank with all requisite strength during the present difficult conditions of trade, the Nationalbanken has decided to undertake to subscribe a new reserve capital of 30,000,000 kr, when the above extraordinary writings off have taken place at the end of the financial year. The reserve capital subscribed by Nationalbanken is repayable successively as new reserves are provided in the ordinary course and in accordance with the articles of the bank. After the end of the financial year the share capital and reserves of the bank will amount to 135,000,000 kr. The news of the arrangement between the two banks has been received with general satisfaction.

Signs of improvement in general trade conditions, apart from those already mentioned in connection with bank statistics, are to be observed. Several of the leading industries, however, are still working under some depression, and during the last few days the Industrial Council has applied to the Government for protection against exceptional exchange dumping competition in order that those industries which are worst situated may obtain support. The Council has especially had its attention directed towards the system of import regulation, combined with exchange duties, which is at present practised in Switzerland.

According to the official unemployment statistics an improvement is traceable at present. The Industrial Council, however, dare not rely on this improvement being permanent. In spite of the improvement there is no doubt that many branches of industry are in a very difficult position, and that exchange dumping and competition from abroad must be reckoned with in future, especially in view of the recent very pronounced fall in the mark.

The wholesale price-index of the *Finanstidende* on July 1st was 180, or one point higher than that of the previous month. The paper states that the indicator is tending upwards, "which, however, ought hardly to be taken as evidence of the coming boom." The trade statistics up to the end of May are now available. During May the value of the imports was 159,000,000 kr, of exports of Danish

goods 103,000,000 kr, and of re-exports 5,000,000 kr. In the period January-May, 1922, the total value of imports was 560,000,000 kr, of Danish exports 417,000,000 kr, and of re-exports 23,000,000 kr.

SOUTH AFRICA.—UNION FINANCE—THE SUPPLY OF CAPITAL—SUBSIDISING IRON AND STEEL MANUFACTURERS.

JOHANNESBURG, July 11.

THE growth of public expenditure by the Central, or Union, Government, the Provincial Councils, and the Municipalities in relation to the income-earning capacity of the people of South Africa was severely criticised by Mr W. A. Martin, president of the Johannesburg Chamber of Commerce, at last week's meeting. Professor Lehfeldt, D.Sc., Professor in Economics in the University of the Witwatersrand, estimated that for the year ended June 30, 1918, the total income was £137,000,000 from mining, farming, manufacturing, transport, merchanting, professions, Government service, domestic service, and occupation of houses. He divided this into £107,000,000 as accruing to whites, equal to £74 per head, and £30,000,000 to coloured and natives, representing £5 10s per head. It is not possible to give similar figures for 1921, but Mr Martin thinks that with the exception of the premium on gold, which amounted to £8½ millions, all other income was much less than in 1918, when "farm produce realised good prices, and trade generally was prosperous."

The taxation for 1918-19 was £11,330,000 by the Union Government, as distinct from revenue raised for services rendered, and a further £2 million by Provincial Councils and Municipalities, equivalent to 10 per cent. of the entire national income. In 1921, however, the Union taxation had increased to £18,173,000, and that of the Provincial Councils and Municipalities to £3 million, the combined figure representing an increase of 50 per cent., and constituting 15 per cent. of the national income.

The trouble is that South Africa is industrially very poorly developed. There are important explosives and cement factories, a good deal of printing is done, a fair amount of furniture made; but, beyond that, very little. Even in the recent debate in the House of Assembly, the Minister of Railways said we could certainly build our own railway carriages of sufficiently good quality if the cost was less than for the imported rolling-stock. Mr Jagger apparently looks at the matter from the point of view of the importing merchant. I think he would have refused to grant lower railway rates to inland cement factories, at Pretoria and Slurry in the Transvaal, and Whites at Ventersburg road in the Orange Free State, so as to enable them to compete at the ports with dumped products from Europe sent to South Africa at nominal freights as ballast, had it had been for General Smuts, who, as usual, took the broader national view that with local production the whole of the expenditure in manufacture is retained in the country, whereas the other way the Union retains merely the merchants' profit. One would not think the reblading of a few dozen table-knives a difficult matter, but I applied to two leading firms, and the reply came they would have "to send them to Sheffield to be done." During the war local industries advanced, owing to the difficulty and delay of importing, but, unfortunately, the position then created has not been retained.

Including gold and diamonds, South Africa's exports considerably exceed its imports, but—

We are wholly dependent on our mines and farms for the income of our population, and for the payment of imports and debts. Unlike most other countries, we have no population drawing dividends from investments in other parts of the world, no shipping earning freights elsewhere, and no factories of importance export-

ing their wares to purchasers beyond our borders. Practically the whole of the taxation has, therefore, to be provided at the cost of production and industry, very much to the detriment of the development of the country.

Mr. Martin advocated drastic reduction in expenditure, increased production, and alterations in the incidence of taxation, relieving production of its present unduly heavy burden.

It was a little curious that while Mr. Martin was predicting a drying up of overseas capital, there should be the simultaneous announcement of the raising of £1,000,000 on loan at only 5½ per cent. interest at par, which compares with an issue price of 96 in the recent India loan. The flotation and management are under the auspices of the National Bank of South Africa, which receives a commission of 2 per cent.

The Board of Trade and Industries has been considering the subsidising of the iron and steel industry of the Union, which at present imports over £10 millions worth of iron and steel products. There are three schemes, the Vereeniging, which produces steel from scrap, the Pretoria Iron and Steel Works, still in the embryonic stage, and the Newcastle works in Natal. The resources of the Union are far greater than known some years ago. Though it still remains to be proved that the enormous deposits of titaniferous ore can be profitably worked, the Union possesses ample supplies of good iron ore, fluxes, and coke coal, all within moderate distance of one another in the Transvaal, besides other deposits in other parts of the Union. The inland market is strongly entrenched behind railway rates (Durban is 500 miles and Port Elizabeth and East London some 700 miles from the Rand market), while costs of production promise to be very low. There is no need for bounties for pig iron once the industry is firmly established; cheap railway rates and the establishment of industries are more essential. The real object of bounties is attraction of capital, which appears only half convinced by mere merits of the enterprise, and to require further inducement and the assurance that the Government is prepared to take some part of the risk, and that the nation is prepared, if possible, to see the undertaking through. The Board understands that with a capital of two to two and a half millions, an industry can be established capable of producing yearly at least 50,000 tons of iron and converting into steel. It proposes to grant bounties on the basis of 5 per cent. on the capital for three years during erection, and for the following eight years. An annual output of 150,000 tons is assumed for the whole period, and a bounty of 10s a ton would involve a total expenditure of £1,200,000. Advances should be made against bounties before they are actually earned to an amount not exceeding the estimated total bounties. Consideration of the question of bounties on subsidiary industries would be premature until the basic industry is established.

Letters to the Editor.

DOMINIONS AND THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As I read your able and interesting articles on "Africa, Australia, and the Gold Standard," I hoped that you would pursue the question to its logical conclusion if trade within the Empire is to recover that entire freedom of movement which is so essential. You point out very clearly the cause of the disorganisation—that there is nothing in the currency arrangements of the Dominions to link their currencies with the Bradbury. Therefore, is not the real remedy to provide this link? Another part of Africa—viz., Egypt—has done so, with the result that alone amongst the exchanges of the world the Egyptian exchange with Britain has remained absolutely stable, and that in the face of widely fluctuating trade balances and large movements of currency. The reason is that, from the early days of the war, Egypt adopted the British Treasury bill as the basis for its currency.

There may be reasons against the adoption of the

British Treasury Bill as a basis for the currencies of the Dominions, but it is difficult to see what real objection there could be to an issue of Imperial Treasury bills, in which each country in the Empire could share, being used for this purpose. Such an issue, which could be fixed in amount, would, of course, not be in addition to, but in substitution for, existing debt. It would be entirely in keeping with that free co-operative spirit which is the hope for the full development of the British Commonwealth. Each country would be free to join in such an issue, and free to withdraw from it on giving adequate notice. Each country would both receive and confer a benefit—the result being a benefit all round. In effect, each country would say to the other participating countries: "If you will agree to admit a portion of our debt as a basis for your currency, we will agree to admit a portion of your debt as a basis for ours." Such portion of the Empire's debt could be placed in commission—in the hands of Imperial Treasury Bill Commissioners representative of the countries interested. This portion of the debt would be pooled, and the Treasury bills could have marked on them the percentage for which each country is responsible.

Each country would, of course, agree not to issue currency unless Imperial Treasury bills, or gold, or (for India) silver were held as cover. But otherwise there need be no restriction on the issue of currency. Currency, which under present conditions is largely non-interest-bearing debt, would not be preferred to short-dated interest-bearing debt—interest bearing, moreover, at the current rate as determined by the free play of competition.

It would be desirable that a percentage of gold, which, however, need not be large, should be contributed by each participating country and held by the Commissioners as a common reserve. In the event of the competitive rate for Imperial Treasury bills being abnormally high, a portion of the gold reserve could be utilised and paid into the Commissioners' account with the Bank of England, thus increasing the Bank's reserve, and a corresponding gold could be re-transferred to the Imperial Treasury bill reserve and the bills increased. This would form a movement analogous to the import and export of gold of previous days.

With a common basis for the currencies of the Empire, the credit-controlling factor would normally be the rate of interest, and not the rate of exchange, between the different countries of the Empire. The latter would remain at parity. For example, let us assume that in the case of, say, Australia there was a consistent excess of imports. Imports have to be paid for, and it would fall upon the banks in Australia to provide the necessary funds. Conversely, the country or countries exporting in being the clearing-house, the banks there would receive either for British account or for account of the country exporting. The Australian banks could handle the situation for a time by allowing their Treasury bills to mature, up. But if the excess of imports was persistent, the position of the Australian banks would be weakened, not only through a diminution in their holding of Imperial Treasury bills, but in all likelihood by an increase in their advances. Sooner or later, then, the banks in Australia would be compelled to raise the rate of interest and to restrict their advances, and that apart from the Imperial Treasury bill rate, which would be subject to competition from the Empire. Normally, therefore, the credit-control against over-trading in any one part of the Empire would lie in the rate of interest, and not in the rate of exchange between that country and the rest of the Empire. The latter would probably not come into play unless the banks found their holdings of Imperial Treasury bills greatly depleted, and this they would have taken steps to avoid.—I am, yours faithfully,

Aviemore, N.B., August 8th, 1922. J. F. DARLING.

INTER-ALLIED DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is one governing fact that seems to be constantly overlooked in the discussion of the Allies' indebtedness to one another. It is that no creditor can force payment from a debtor who is willing to default. It vitiates every argument drawn from the ordinary relations of debtor and creditor, and makes the logic of the Balfour Note meaningless.

We cannot take France to a County Court and get judgment, and America cannot take us to a County Court and get judgment. Our capacity to collect what France owes to us is conditioned entirely by the value that France places on her own credit. If she is prepared to stand before the world as a defaulter, we must write off her debt as bad. In the same way if we are willing to brand ourselves as defaulters, America must write off our debt as bad.

As between France, England, and America, the position seems to be:—(1) America will insist on payment from any debtor who is prepared, however unwillingly, to pay. (2) France is not prepared to pay, and is willing to default. (3) We do not like paying, but we are not willing to default. This being so, what is the good of our finessing with an admittedly bad debt in order to be relieved of another debt which we protest both our ability and our readiness to meet?

If we choose to take the line France takes and repudiate, no one can prevent us. If we are so proud of our credit that we cannot repudiate, let us pay and look as pleasant as may be. The one thing not to do is to combine the pride of the pharisee with the whine of the beggar, which is the Government's present policy. If I were an American, nothing would harden my heart more surely than this manoeuvring to back out of a debt without admitting default.—Yours, &c., D. E. W. GIBB.

Lloyd's, August 9th, 1922.

Books and Publications.

NATIONAL INSURANCE IN FRANCE.*

THIS little book is packed with information and with criticism—the latter largely comment by industrial associations, and therefore often repeated in substance and sometimes in form. Its subject is the "Loi Daniel Vincent," now before the French Chambers, an attempt to solve the problem forced on France by the existence in Alsace and Lorraine of the German system of compulsory social insurance, but going much further than that system, or any other. To summarise this Bill properly in any reasonable space is impossible. It omits unemployment, for want of data, but it provides contributory old-age pensions normally at the age of 60, sickness, disablement, maternity, and death "benefits," and comprises all employees earning 10,000f a year or less. All the risks are covered by one premium, divided equally between employed and employers, but rising progressively with the six classes in which the insured are grouped according to their earnings; it is 10 per cent. of the mean earnings of each class. The benefits rise with the class premiums, and both are far above the British scale; miners and certain classes of public servants are provided for otherwise, but small masters, métayer tenants, independent artisans, and some others may be insured under the scheme if they like. To some extent the higher classes pay for the lower, the compulsorily insured for the "optionals," and the better-managed organisations for the worse. The friendly societies, and the benefit funds of the large establishments or the labour unions may come under the scheme, and even provide additional benefits, but the normal type of administration is by regional and local councils, half elected by the insured, one-fourth by the employers, and one-fourth appointed by the State to represent the public, with a guarantee fund and a central council to adjust the burdens as between the districts, and another to deal with contentious cases.

* "Le Problème des Assurances Sociales en France." Par Montchrestien. (Société d'Etudes et d'Informations Economiques.) Paris, Bernard Grasset, 1922. (Pp. 230. 7 francs.)

Solidarity, self-help instead of State aid, and democratic management are put forward as characteristic of the scheme; but a heavy burden is placed on capital and 300 million francs annually on the public revenue.

These burdens, coupled with the rigidity of the scheme and its bureaucratic features, provide the substance of the chief objections urged; but the most interesting criticisms are those made by the author. France, he maintains, is not ready for compulsion. The French workman means to rise by his own exertions to become a foreman, a small master, a shopkeeper, or, in the rural districts, a peasant proprietor. He resents State aid and compulsion; still more the projected alliance of the State and his employer to tax his wages and so keep him down. "Solidarity" and the needs of public health would justify all-round insurance, but not this class legislation, based as it is on the right of the State to protect the helpless; and the scheme will only encourage the insured to "get their money's worth," as it is said they do in Alsace and Lorraine. The State should go slowly, and educate the public gradually towards accepting compulsion, which should only come when voluntary effort fails. The conditions and the risks vary locally, and the better regions and administrative bodies should not bear the burdens of the worse. The law will never be enforced fully, and the burden on industry will be 2,780 million francs per annum, plus the 300 millions from the State. Superadded to the burdens imposed by the eight-hour day and existing taxation, it will preclude all competition of French industry in foreign markets, and prove altogether unbearable. And then the author outlines his even more modest plan. We hardly suppose the law will pass, in the present financial situation of France. But the book is an admirable compendium of information on national insurance in all its forms.

THE ELEMENTS OF ACTUARIAL SCIENCE.*

THE scope and arrangement of this work are in exact accordance with the course in actuarial science as outlined in the syllabus of the examinations of the Institute of Chartered Accountants. The subjects included are logarithms, compound interest, life contingencies, and the construction of relative tables, almost too extensive a range to cover in a work of the modest dimensions to which the volume is restricted. The treatment given is designed for students of limited mathematical attainments, but while the author has cleverly overcome some of his difficulties, his desire for simplicity has resulted in many definitions and statements lacking precision and polish; the writer seems almost to be reluctant to make important general principles clear. It may be teaching, but it is not education, to leave these to emerge from examples which, themselves, often extend rather than illustrate the preceding matter. The student is thus rendered incapable of working the examples for himself as a test of his grasp of the reading. Additional examples, with solutions briefly indicated, might have been included with advantage, and some of the lengthy logarithmic portions of the existing solutions curtailed.

The chapters on Life Contingencies are clearly written, although inevitably somewhat crowded. A preliminary note on the elementary theory of probabilities, analogous to that on indices appearing in Chapter 1, would be an improvement. There is also an absence of verbal interpretations of formulæ, which one would have welcomed as attempts to stimulate independence of thought and to counteract the tendency of students to place too much reliance on formulæ as such. The author himself points out the necessity of this, but fails to follow his own good advice. The chapters on the Construction of Tables are among the best in the book.

While the volume will be of service to the students for whose use it is especially designed, its value to actuaries and other advanced readers, as indicated on the wrapper, is quite another matter. It is far more a crammer's book than an intellectual explanation of a science. The student is rushed along at a great pace, conclusions are slapped on to the blackboard, and he is just told that he has got to learn them without worrying himself about the intellectual reasoning by which these are reached.

* "The Elements of Actuarial Science" By R. E. Underwood (London) Sir Isaac Pitman and Sons, Ltd. Price 5s net.

A SAVINGS' BANK'S CENTENARY.*

JUNE 30th marked the conclusion of a century since the "Christiania Sparebank" (Savings' Bank), one of the largest institutions of its kind in Northern Europe, was founded. To commemorate the occasion the directors of the bank have issued a centenary publication possessing historical interest. Whereas in other countries a multiplicity of works have appeared dealing with the hundred and one problems which the past century has witnessed coming to the fore, very little has hitherto been written by Norwegian pens concerning identical matters in Norway. Herein lies the chief importance of this publication. In the first part of the book the historian, Jacob Worm-Müller, presents an account of Christiania and its economic and social life in the first half of the past century. It was but a semi-independent existence that fell to Norway's lot on the close of the Napoleonic wars, but even that form of freedom was not to be gained and enjoyed without great sacrifices. The re-birth of a nation was not to take place without its accompaniment of agonies. The crisis came to a head in 1820. Wholesale business failures went hand in hand with acute social distress, and to this plight was added the oppressive burden of war liabilities, for the settlement of which the Powers were insistently pressing. That Norway in the end succeeded in regaining her economic equilibrium was in no negligible measure due to considerate treatment at the hands of Britain. The disastrous happenings in and around the year of 1820 unfortunately also did away with the greater part of the material indispensable for a faithful and comprehensive history of the economic life of the country at the time. The research work that Worm-Müller had to perform was therefore an onerous task indeed, but he was happily afforded access to much hitherto unpublished data.

It was purely with the object of serving as a benevolent institution for impecunious people that the "Christiania Sparebank" was eventually started in 1822 with the help of voluntarily subscribed funds. In its original character it was on the same lines as the first savings' banks that were growing up in Western European countries. By and by, however, it became the trusted guardian of savings from the middle and farming classes, and has, as such, experienced a remarkable record of growth. The first million kroner of deposits was reached in 1833; in 1850 these had risen to 3½ millions. By 1917 the 100 million mark had already been well passed, but all previous records were beaten when at the close of 1921 the deposits amounted to 308 million kroner. These figures are sufficiently expressive of the confidence the "Sparebank" has succeeded in cultivating among the middle, and, in more recent years, also the labouring classes in Norway. Through the able pen of Nils Vogt, the editor of the local *Morgenbladet*, a vivid description is given in the second part of this publication of the progress the bank has undergone in the course of its hundred years of existence.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 23. ACCOUNT. August 24.

The Stock Exchange has largely freed itself from political factors by its usual expedient of ignoring them, as is its custom when other factors are favourable. Cheap money is thought still to contain elements making for firm markets, and the politics react mainly upon trade, and trade depression means cheap money, the recurrent evidences of Allied differences over reparation matters are an argument for the prolongation of Treasury Bills on Wednesday, imparted not a little support to the gilt-edged market, for it stimulated buying of the short-cannot afford to leave money unemployed altogether, no matter how small the rate at which it can be invested without risk of securities, business in the gilt-edged market remains rather restricted, because general investors seek higher yields than are obtainable on most securities in the section. Nevertheless there are signs that more people are becoming aware of the absurdity of buying 4½ per cent. Treasury Bonds repayable in 1930-32 at a quotation which is under par if the accrued interest be taken off the price, because of its liability to repayment in 1929 threaten the holders of it with definite repayment if they will 5 per cent. War Loan, too, is a favourite with those people who can borrow money cheaply from banks and make a profit on the investment trust companies have been tempted to exchange requirements has kept the price so close to par. In the search for a little more attention towards the end of the week now newspapers.

Foreign bonds have not displayed much activity, the French war issues keeping remarkably steady in spite of the movements of the franc, while German Threes remain at about 1½. The investment boom, seem to be slow in finding permanent homes, and are weak in consequence, but the heaviness of the Czechoslovakian loan at about 85, as compared with its issue price of 60, causes comment. Turkish Unifed have been brought from look there. Mexicans had a sharp rise on the report that President Obregon had signed the Debt Agreement, but the still having to be ratified by the Mexican Cabinet and Congress.

The Eastern group railway stocks have enjoyed a good deal favourably impressed with the scheme. Their buying, in fact, bound to follow the announcement of the merger terms, prospect of an active market in the various issues right up to the time when the merger takes effect, for the reason that the of the uncertainty which must prevail as to its value until its dividend prospects can be estimated within narrower limits.

In the Colonial Railway market there was quite a sensational rise in Grand Trunk Pacific 4 per cent. debentures, but nothing was known as to the reasons for it, though it was regarded as a hopeful sign. Foreign railway stocks have been very quiet and rather dull, dividend prospects not being such as to attract the return of investors to the market.

In the more speculative sections, oils have enjoyed more support, the condition of the market being healthier, and the news of good developments on the San Geronimo field by the

Mexican Eagle has helped this particular share. Rubbers remain quiescent, awaiting some move in the direction of co-operation by the Dutch interests, and the Industrial market has been idle. Marconis improved on the annual report as the result of some bear closing, but textiles and iron and steels have been interesting. There has been some fresh buying of tobaccos after an earlier decline, and the nitrate group has revived to some extent. Bank shares are quietly firm, and in the insurance group General Accidents have continued to be swayed by the amalgamation rumours, finishing the week rather better.

The South African Mining market has been doing its best to keep up interest through August, but the public refuses to come in to any extent. The Cape has sent buying orders, and Paris has bought its favourites, "finance" shares being marked up as the consequence of appreciation in their holdings. Speculation in Chartered has somewhat died down, and business in Miscellaneous shares has not been active. Esperanzas have improved slightly, but the other Americans have fallen back.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	..	498,315,387 ..	..	..
4½ % Treasury Bonds (by Tender August 4, 1922), £4,000,000, at £100 65	..	..	4,013,500 ..	..

1915	658,668,876 ..	1914	612,522,633

Government of India Rupee Loan, 1922.—Subscriptions up to July 29th amounted to Rs. 29½ crores. The loan is issued in the form of 6 per cent. five and ten year bonds at par, free of Indian income-tax, and the subscription lists in India and at the London office of the Imperial Bank of India (5, Whittington Avenue, E.C.3) are open up to August 14th for cash subscriptions and up to September 26th for conversion of Indian War Bonds, 1922. Details will be found in the *Economist* of June 24th, page 1,302.

The Melbourne Electric Supply Company, Limited.—Authorized share capital £1,750,000, of which £1,300,600 has been issued. The debenture capital outstanding amounts to £1,248,999, out of £1,313,700 originally issued. Included in this amount of debenture capital is the present issue of £300,000 6 per cent. "redeemable general mortgage debenture stock." The issue will be secured by a "direct general mortgage upon the company's properties and undertaking." It will rank *pari passu* with a dollar gold bond issue, amounting at par of exchange to £513,700, and after two "redeemable" debenture issues, the first of which is a first mortgage charge with £217,883 outstanding, and the second debenture stock with £217,408 outstanding. It is significant to observe that the company retains the option of redemption on six months' notice, "as a whole but not in part, except for the sinking fund, at 102½ on any interest date after June 1, 1930." Provision is made for an annual cumulative sinking fund of 1 per cent. per annum "to be applied in the purchase of stock at or under 102½." These details are taken from an announcement in the Press made to comply with London Stock Exchange regulations. Information, however, taken from other sources shows that the undertaking can show a progressively prosperous record. A well-secured colonial public utility debenture.

The Regent's Canal and Dock Company.—Authorized capital £1,700,000, of which £1,358,100 has been created and issued. The authorised loan capital consists of £983,934, of which £842,284 has been created and £730,634 issued. This is an issue of £111,630 perpetual 5½ debenture stock at par. It ranks *pari passu* with existing debenture stock, and "is secured upon the undertaking of the company." The interest upon the whole of the debenture stock of the company, including that now outstanding and the present issue, will amount to £28,060 a year, while rents at present received amount to approximately £44,000 a year, and about September 1st an additional revenue of £12,290 a year will begin. These particulars are taken from a public announcement made to

comply with the requirements of the London Stock Exchange authorities, but it is stated that a firm "have been authorised to offer the stock for subscription at a minimum price of 100 per cent." It would be interesting to know why the proprietors sanctioned borrowing in the form of *perpetual* 5½ per cent. debentures. The italics are ours. From the subscribers standpoint, the offer at par appears to be attractive.

The Borneo Company, Limited.—The authorised share capital consists of 400,000 7½ per cent. cumulative convertible preference and 600,000 ordinary shares, all of £1 each. This is an issue to a London financial house of the whole of the preference issue at par, the subscribers taking a commission of 4 per cent. for expenses. Holders of these preference shares have the right to convert into a like amount of ordinary shares at any time within ten years from October 1, 1922, on giving one month's notice. The undertaking was formed in 1856, and now carries on a general trading business with the East. Recent records show that the company has paid substantial dividends during the past few years. No balance-sheet has been published by the company, but we understand that in future annual report and accounts will be published. We cannot advise investors to purchase these shares until they have further information about the accounts of the company. The details mentioned above are given in the Press in connection with an application to the Stock Exchange for leave to deal in the 7½ per cent. preference shares.

Ashley Wireless Telephone Company, Limited.—Authorized capital £50,000, divided into £1 shares. This is an issue of the whole amount at par. The advertised prospectus states that the company has been formed to exploit the commercial side of wireless telephony, "and has acquired an option" to acquire the business of Ashley Radio Company. It is stated that the purchase price is £7,000, and that the amount payable for goodwill is £1,000. There are also stated to be orders in hand for £65,000 of "wireless material," but nothing is revealed in the advertised prospectus about past profits, or the value of assets to be taken over. On the meagre information in front of us, it is impossible to gauge the value of the proposition.

ACTIVE SECURITIES.

Moss's EMPRES, LIMITED.—Having considered the accounts for the half-year to June 30th last, the directors regret that they do not feel justified in paying a dividend on the ordinary shares of the company. The adverse conditions as to trade and employment which affected the company's business during the last three quarters of 1921 have continued during the past half-year. Since the commencement of the current half-year the results of the business have improved.

COMPANY MEETINGS, &c.

WATNEY, COMBE, REID, AND COMPANY, LIMITED.
SATISFACTORY RESULTS OF YEAR'S TRADE.

The ordinary general meeting of Watney, Combe, Reid and Co., Limited, was held, on the 11th instant, at the Charing Cross Hotel, London, Mr H. Cosmo O. Bonsor (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company had had a satisfactory year's trading. Owing to the decrease in cost of materials and to the maintenance of the company's trade, the directors were able to show a very good return. The decreased cost of materials amounted to over £200,000, and they had had the full benefit of the investments made in 1920 and 1921. Rents showed an increase of something like £40,000—not from any increase of existing tenants' rents, but from investments they had been able to make in buying up leasehold properties, converting them into freeholds, and getting the benefit of the increased rents in that way, and also from additional investments in other ways. They had been able during the year to liquidate the Welch Ale Brewery business, and were quite satisfied with their purchase of the public-houses which they had acquired in this connection. He was glad to say that the company's beer had been uniformly good, and their bottled beer, which was most popular at the moment in London, showed a continuous increase in sales. They had bought the ordinary shares of the Cobham United Breweries, and hoped at a very early date to get that company into liquidation, close the brewery down, and secure the full benefit of the sales of the public-houses thus acquired.

DEMAND FOR CHEAPER BEER.

Brewers had to recognise that there was a public demand for cheaper beer. All brewers sympathised with that demand, but at the moment it was impossible to assist in reducing the price to the consumer. Taxation was too high. In 1914 the taxation was 7s 9d per standard barrel; now it was £5. The company's sales amounted, in round figures, to 900,000 barrels a year, or 250,000,000 pints. The demand was that there should be a reduction of 1d a pint, which would mean something over £1,000,000 a year. Their income was £770,000, out of which they had to pay debenture interest, preference interest, and dividend on their ordinary stock. Under the circumstances, it was absolutely impossible to reduce the price of beer to the consumer until taxation was reduced. The question really was between the public and the Government. Consumption was falling off, and the public demanded a cheaper beer; but it was very noticeable that in the company's trading during the year under review there had been a persistent demand for its better-class beers, showing that the public had endorsed their policy, which was to give the best possible value they could for the money the public had to spend. With the lessened spending power of the public—wages down, unemployment still serious—the demand for those better-class beers was already on the wane, and the cheaper beers were becoming more in vogue. If that continued, and the cheaper beers came into more prominence than the stronger beers, as they probably would until the beer duty was reduced, they could not possibly expect to maintain the good result shown for the period under review.

COMPANY'S RESERVES.

He would now like to refer to their proposal for doubling the deferred stock. Two years ago the demand had come from the

shareholders' side of the table, but at that time the company had not sufficient reserves for that purpose, and the directors did not approve of a revaluation of their assets. Their reserves were now sufficient. The reserves in the balance-sheet showed a total of £588,000. Those included £345,000, which were put aside to meet the demand for excess profits duty and for any other contingencies, and which was no longer required. Again, when they made up their accounts last year there had been a heavy depreciation on their investments in British Government securities, but that had now disappeared. The figure at which their British Government securities stood in their balance-sheet was appreciably lower than their actual market value. Beyond those two, in sundry creditors they had certain reserves which had been accumulating during the last 20 years. To begin with, there was an income-tax reserve which was not now required. Then there was another reserve that they had made owing to a number of their leases getting very short—a reserve against the repairs or dilapidations which they might have had to pay for when they fell out. The reserve had not been called upon, as they had in most cases purchased the freehold. On the other side of the accounts there was trade investments. A good many years ago, when they formed their amalgamation, two of the amalgamated companies had brought in three-quarters of the ordinary shares of Tanqueray Gordon and of the Distillers Company. They had been recently sold to the Distillers Company, of Belfast. They were paid for partly in cash and partly in shares, and the shares had been sold at a considerable profit. Consequently there had been a profit on both transactions. Those reserves were now ample.

In some of the newspapers there had been talk about a bonus distribution of shares. The word "bonus" was inapplicable. Those reserves had been made from time to time out of the undivided profits of the company, and those undivided profits had been invested in the business, and formed part of the capital of the undertaking. Consequently, it was merely a book-keeping entry, and one which he could strongly recommend the shareholders to adopt.

The report and accounts were unanimously adopted.

SCARAB OIL BURNING COMPANY, LIMITED.
CHAIRMAN OPTIMISTIC OF THE FUTURE.

The second ordinary general meeting of the Scarab Oil Burning Company, Limited, was held, on the 10th inst., at the registered

office, 65 Bishopsgate, London, Mr T. M. C. Stuart (the chairman) presiding.

The Chairman said: The total sales during the period under review amounted to £53,000, showing a gross profit of £24,000. In the early part of the year sales were considerable, and gave every indication of a highly satisfactory year, but unfortunately during the latter part of the period the volume of orders was materially reduced. This was due to the general stagnation, and I think that the result will not be considered altogether unsatisfactory by the shareholders.

During the year we have issued a further 12,000 preference shares, and, so far as our cash is concerned, we had in hand at the date of our balance-sheet over £23,000, as well as stocks of the actual value of over £9,000. With the opening up of oil properties in South America and the rapid developments which are taking place there in the use of fuel oil on the railways and in factories we are giving special attention to this market. We are developing our business in other foreign countries also.

We believe that in the Scarab burner we have the most efficient of all the oil burners at present on the market, and we continue to receive the most satisfactory reports as to its efficiency.

We are also devoting our attention to the question of central heating. We believe this will yield a large field for the employment of oil burners.

We have also completed our new equipment for use by small plants. It can now be fairly said to have passed the experimental stage, and we are taking steps to place it on the market.

Another important branch of our business which has been occupying a good deal of our time has been the calorising process, the British and certain foreign rights of which this company has acquired. The furnaces and works necessary have been erected, and the business is now starting actively.

Negotiations are pending for the acquisition by the company of the British rights on a royalty basis of a very high-class pressure burner for use on ocean-going liners. This burner has given excellent results, and would form a particularly useful adjunct to our business.

I am quite optimistic as regards the future of our company, and hope that we shall have a much more satisfactory report to put before you at our next meeting.

The report and accounts were unanimously adopted.
