The general tenour of Mr McKenna's speech was very pessimistic for France, and it may be, as Mr Keynes suggests, that profound changes, political and economic, which are in progress to-day as compared with pre-war conditions will render obsolete our old ideas as to the trading relations of European nations, not only with one another, but with the rest of the world, and that we are entering a new and more difficult phase of historical development. If this is so, the whole discussion of reparation and debt is of no practical importance. But, if anything like pre-war conditions are to be expected in Europe, it is still possible to hope for a solution of the Reparation question somewhat less vague and illusory than Mr McKenna suggests.

With regard to the other international debtors, Mr McKenna considers that England has the capacity to pay to the United States interest and sinking fund on her debt, but that the other debtors are none of them in a position to meet more than a small part of their external liabilities; that they should be granted indefinite postponement at present, and that the amount that they could ultimately pay should, as in the case of Germany, be "ascertained by inquiry into their exportable surplus at a full and frank conference between creditors and debtors." England's exceptional ability to pay he ascribes to our possession of a large accumulation of foreign assets, which he believes to be still, in spite of an immense sale of securities to the United States during the war, sufficient to cover our debt to America two or three times over. He seems to believe that only a nation possessed of such a stock of foreign assets can "discharge external obligations to anything more than a comparatively small amount." He shows that the American nation, thanks to the war, in a few years almost entirely discharged a capital liability which had been growing for over two centuries, and so proves that, though a debtor nation may in certain circumstances pay off its foreign debt with remarkable ease and rapidity,

"the indispensable condition for such rapid repayment is that there should be an extraordinary demand for its goods, a demand which is a natural accompaniment of war, but does not exist in peace." Arguing along the same line, Mr McKenna shows that if we were at war and France were at peace, "she might pour upon our shores war material and stores equal to the whole amount of her debt to us." From all which it seems to follow that the simple solution of the international debt problem is war between America and England, which would enable all our European debtors to make profits out of the two belligerents so fast that they could pay all debts to us and to one another! Surely Mr McKenna is proving too much. There is no question of any of the debtor nations being asked to pay the whole capital sum forthwith. Even the Entente has not been guilty of this absurdity in its demands on Germany. Meeting the service of a debt, with a reasonable sinking fund, is a very different matter from paying it off at one blow. But if Mr McKenna has weakened a good case by overstating it, at least he has made a timely utterance on the side of good sense and moderation, which is particularly valuable in bringing out the many common characteristics of Reparation and the inter-Allied debts.

HIGH PROTECTION IN AMERICA.

THE United States "Tariff Act of 1922," which came into operation on September 21st last, does not attempt to conceal its purpose. There is no pretence about it. The intention is to prohibit the competition of foreign goods with similar goods produced in the United States, and to give the President powers to make the prohibition effective should the high rates laid down in the tariff prove to be inadequate for the purpose. What is more, the principle of the "American valuation" of imported goods, though considerably modified, is not wholly in abeyance; it remains in the background as a weapon protectionists regard as an emergency. Thus we see the United States at a stage in their history when they have become a creditor nation and show an indisposition to remit debts owing to them, displaying at the same time a disposition to make it more difficult for their debtors to make payment. The Americans, who were quick to perceive the illogic of France, have displayed a greater illogic themselves. They described France's eagerness to exact penalties and reparations from Germany as combining a desire to squeeze the last drop of milk from the cow, with an insistence that its turn insist that foreign debtors shall pay their debts, but deny to them the one form, goods, in which these debts can be paid.

The peculiarity of this new tariff is that, even after its long and stormy passage through Congress, and after its signature by the President, its form is not final. Merit rates of duty as determined and make the best of them, to the "American valuation" and changes in regard duties remain suspended, like some sword of Damocles, ready to descend and cut the thread of business operations. The original scheme of the "American valuation," applicable to all imports, was to assess the *ad valorem* duties on imported goods, not on the foreign values as declared, but on the wholesale selling price in the open market of the United States of "comparable and competitive" domestic products. If such valuation could not be paid was to be an imaginary "constructive selling to the appraisers. This scheme was subjected to intense criticism, and was cut about a great deal in the Senate designed, in the words of the President, "to make for flexibility and elasticity, so that rates may be adjusted to meet unusual and changing conditions which cannot accurately be anticipated."

As finally adopted, the Tariff Act authorises the President to increase or decrease duties, and to change classifica-

tions, whenever necessary to equalise the ascertained differences in costs of production in foreign countries and the United States. No duty may, however, be increased or decreased more than 50 per cent. of the duties specified in the tariff, and no duties may be changed from specific to *ad valorem*. Goods may not be transferred by the President from the dutiable list to the free list, or *vice versa*. The differences in costs of production are to be ascertained in the United States and in the principal foreign country from which competing goods may come. The "American valuation" may be substituted by the President for the foreign declared value whenever necessary to equalise ascertained differences in costs of production of all products (not only of certain classes of goods) in the dutiable list. It is, however, stipulated that the rates of duties on articles for which the American valuation is adopted may not be increased above those laid down in the Tariff Act. These discretionary powers allowed to the President are obviously very extensive, and in themselves constitute a complete departure from precedent. In no previous American tariff has the President been empowered to alter the statutory scale of duties or valuations.

We have, then, in this new tariff two embarrassing uncertainties which can scarcely endure for long—the President's powers to vary the duties and to apply the "American valuation." It may be true—an exact comparison between tariffs is most difficult to make—that the general scale of duties in the tariff, though higher than those of 1913, are little, if at all, more severe than those enacted in the Payne-Aldrich Tariff of 1909. That may be true, but there is little consolation to be got from it. For this new tariff is "elastic" and "flexible," it is not definitive, as were the tariffs of 1913 and 1909, and no one can tell where he is in regard to it. If the President can vary the rates up or down by 50 per cent., and can apply the "American valuation" as an emergency measure, the effect is to make business with the United States practically prohibitive in goods which compete with American products. If the tariff itself does not shut them out, then the President can himself apply the desired stop. That is unless the Supreme Court of the United States declares that the emergency powers allowed to him are unconstitutional. There is sufficient opposition to the tariff in the United States to ensure that the best legal advice will be taken, and that the constitutional issue will be fought out if there be any prospect of success in the Supreme Court.

THE POSITION IN THE COAL TRADE.

(BY OUR CARDIFF CORRESPONDENT.)

THE outlook in the coal trade has not been in any sense improved by the important meeting of the National Joint Board held in London this week. In July last the workmen's representatives on that body submitted to the employers the following proposals for the improvement of the financial position of the industry:—

1. That selling arrangements should be made between colliery owners on a district, if not on a national, basis, so as to secure an increase in the average selling price of coal.
2. That arrangements should be made for the co-operative buying of timber, stores and materials.
3. That costs of production other than wages should be scrutinised with a view to their reduction.
4. That the owners should join the workmen's side in approaching the Government for assistance.

These proposals, it will be seen, were only less revolutionary of the prevailing organisation of the industry than that of the National Pool advocated and fought for unsuccessfully by the Federation in the three months' strike of 1921. The principles of commercial policy contained in the first two of the above proposals are at present in actual operation in the industry on a restricted scale. In some of the districts methods of combination or of consultation are adopted in the regulation of the prices of certain special qualities of coal of which the supply is limited, and the control of such supply is in the hands of a comparatively small number of colliery owners. The principle of the collective purchase of pitwood, stores and other materials is also adopted by some, at any rate, of

the combines created in recent years. Indeed, the conviction that economies in the cost of management could be effected by this method has been one of the considerations which has stimulated the absorption of smaller by bigger undertakings and the fusion of adjoining big properties. The overwhelming opinion, however, among employers in the mining industry is that, while these expedients may be practicable and desirable in special cases on a limited scale, they are inapplicable to the conduct of the industry as a whole on an efficient basis. The council of the Mining Association came to the conclusion that (1) arrangements for the fixing of selling prices either on a whole district or national basis was impracticable; (2) that arrangements for the co-operative purchase of timber, stores, and other materials was undesirable, inasmuch as such co-operative action would stimulate similar combinations among the sellers of such commodities; (3) that the scrutiny of the costs of production other than wages was a matter for individual undertakings, and was already the subject of close attention on their part; and (4) that there appear to be no common grounds on which the owners and the miners could approach the Government.

These conclusions were approved by the district associations of coal owners. One or two of the smaller coalfields were prepared to experiment on the lines suggested by the Miners' Federation if general agreement was attainable, but all the greater coalfields were uncompromisingly hostile. The complaint of the workmen's representative that coal was being sold at too low a price owing to underselling by middlemen and merchants was met by the argument that the present pithead price of coal was only about 60 per cent. above the pre-war price, and that that was approximately also the Board of Trade index number showing the increase over the pre-war level of wholesale prices. In so far, however, as the regulation of prices was practicable by the interchange of opinions between colliery salesmen as to current market prices, both within a district and between colliery owners in various districts, the employers were prepared to do all that was in their power to maintain prices, and in the South Wales coalfield action on these lines had already been taken with a certain measure of success.

In view of this rejection by the employers of the scheme submitted to them in July, the Miners' Federation suggested the alternative proposal of raising the minimum from the present figure of 20 per cent. on the new standard to such a new figure as would secure the workmen a wage equal to the increase in the cost of living. The present minimum is 20 per cent. on the new standard; a minimum equivalent to the increase in the cost of living would be approximately 50 per cent. on that standard, and the raising of the minimum to that level would involve an addition to the base labour cost of production of many shillings per ton. In the South Wales coalfield it would render imperative a large coal price of over 30s per ton. The coalowners opposed this demand on the ground that the industry could not bear the cost of it; that even the present minimum was entailing the majority of collieries in a loss, and that cheaper and more abundant coal was demanded by the industry of the country. Moreover, the employers complained that the miners' representatives were exaggerating the depressed economic condition of the workmen, and drew attention to the following among other facts:—(1) That the mining industry was to-day employing nearly as many workmen as in 1913; (2) that these workmen were employed on an average over 5.33 days per week, compared with 5.4 days per week; (3) that the wages of pieceworkers had been advanced by over 14 per cent. to compensate those workmen for the reduction in working hours from eight to seven; (4) that the day wage workers had been granted subsistence allowances in addition to their ordinary rates; (5) that the average wage in the industry was about 45 per cent. above the pre-war level without taking into account the indirect benefits of cheap coal, low or free house rents, &c.; and (6) that it was within the power of the workmen to increase the net proceeds available for distribution as wages by agreeing to the restoration of the eight-hour day system. Moreover, the owners intimated that it would be necessary in the near future to reconsider the terms of the national agreement relating to the distribution of the proceeds of the industry, and to the recoupment of deficiencies in

periods in which the standard profit of 17 per cent. provided for in the agreement was not realised.

It will be seen that the differences between the two sides of the joint board were fundamental and irreconcilable, and the miners' representatives have now decided to appeal to the Government for financial assistance. The Government, however, is opposed to the reintroduction of any form of subsidy, and, anticipating that the appeal to the Prime Minister will be ineffective, the executive committee of the Miners' Federation has decided to leave the decision in regard to the adoption of any further measure aiming at the improvement of the wage position to a delegate conference to be convened in the course of the next few weeks.

OUR INDEX NUMBER.

THERE has been a further fall in wholesale prices in September, but the decline is considerably smaller than that recorded in August, our Index Number dropping by 68 points in September, which compares with a fall of 139 points in August. The latest total is now 4189, the lowest touched since March, 1916. September's decline is mostly due to changes in the miscellaneous section, movements in the other four groups having offset one another. The actual changes are shown in the following table:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.)	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Lead, Oils, &c.)	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	579	352	616½	464½	553	2568	116.6
" Dec., 1915....	897	446	731	711½	848½	3634	165.1
" Dec., 1917....	1286½	686	1684½	839½	1348½	5845	263.2
" Nov., 1918....	1289	782½	1848	903	1389½	6212	282.6
" Dec., 1918....	1303	782½	1805½	866	1337	6094	277.0
" Dec., 1919....	1441½	881½	2442½	1145	1453½	7364	334.7
" Mar., 1920....	1508	914	2974½	1246	1709½	8352	379.6
" Dec., 1920....	1344	805	1284	1216	1275	5924	269.3
" Dec. 1921....	921½	636	1106	762	931½	4357	198.0
" Jan., 1922....	907½	654½	1066½	730	925½	4284	194.7
" Feb., 1922....	948	640½	1037½	696½	936½	4259	193.6
" Mar., 1922....	980	687	1038	700	892	4297	195.3
" April, 1922....	1008½	667	1010	709½	885	4372	198.7
" May, 1922....	1040½	657	1079	710½	885	4372	198.7

" Aug., 1922....	880½	674	1123½	691½	887½	4257	198.5
" Sept., 1922....	873½	682½	1116	699	818	4189	190.4

There has been a larger number of changes during the past month than usual, there being only 10 out of the 44 quotations which have not moved. A rise in foreign wheat was offset by a decline in home-grown wheat. Flour and barley were slightly higher, but oats and potatoes declined. Beef dropped sharply, but there was an advance in mutton, while pork was unchanged. Among subsidiary foodstuffs tea and butter were higher, but there was a slight decline in sugar.

In the textile group cotton quotations are lower, but other changes are all upwards. In spite of a bullish crop report, the price of American cotton has fallen away, while the manufacturing side has been very quiet. According to Messrs. Robt. Barbour and Brother, Limited:—

The feeling of uncertainty is just as apparent as ever, whilst the Near East menace has not only brought business for that important outlet to a complete standstill, but has affected all markets and added to the complete lack of confidence which is so marked a feature in every direction. Inadequate bids from India have continued to come along with frequency, but only occasional sales of dhooties have been made for Calcutta. Madras has taken a certain quantity of light goods, and Bombay and Karachi have inquired for white shirtings. Singapore and Java have only bought from hand to mouth, and the same may be said of Central and South America. With the exception of a few lines of fancies China has practically done nothing. It was hoped that by now most of the old dear stocks had been cleared, but recent advices show that

liquidation both in India and China is still going on, and the forced sales made from time to time are no doubt responsible for much of the irregularity in values as conspicuous as it is misleading.

Australian wool is higher, and there was a sharp advance in jute. Other textiles were slightly higher.

In the minerals section quotations for pig-iron and steel rails were advanced, and the minor metals were slightly higher, but coal declined a little. The large decline in the miscellaneous group results chiefly from substantial reductions in petroleum, tallow, and soda crystals. In the table below we show the month's changes of each commodity's index number as compared with the level at the end of August, the figure 50 in each case representing the average price during the basic period 1901-5:—

Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.	Index Number.	Inc. or Dec.
Wheat—For... 96	+ 10	Cotton, A... 115½	— 9½	Copper... 53½	+ ½
English... 57½	— 10	Cotton, B... 119	— 5	Minerals... 699	+ 7½
Flour... 84	+ 4	Yarn... 118	— 4½		
Barley... 81	+ 1	Cloth... 120½	— 10		
Oats... 70	— 3	Wool, Eng... 113	+ 7	Baltic timber... 103	..
Potatoes... 47	— 2½	Aus. Wool... 104½	+ 1	Amer. timber... 89	..
Rice... 107½	— 2½	Silk... 134½	+ 2½	Leather... 76	..
Beef... 87½	— 6	Flax... 45	+ 10½	Petroleum... 116½	— 20½
Mutton... 107½	+ 6	Hemp... 113	+ 10½	Oils... 77½	..
Pork... 125½	— 7	Jute... 1116	— 7½	Tallow... 62½	+ 7½
Cereals & Meat... 873½	— 7	Textiles... 1,116	— 7½	Indigo... 113	— 14
Tea... 113½	+ 5½	Pig-iron... 99½	+ 5½	Crystals... 93½	— 31½
Coffee... 89½	— 3½	Steel rails... 84½	+ 6	Rubber... 11	..
Sugar cane... 152½	— 3½	Iron bars... 84½	+ 6	Miscellaneous... 818	— 69½
Sugar beet... 106	— 6½	Coal, steam... 120	+ 5		
Butter... 104½	+ 6½	House coal... 94	+ 2½	Total... 4,189	— 68
Tobacco... 116½	+ 8½	Lead... 64	+ 2½		
Other foods... 682½	+ 8½	Tin... 64	+ 1		

The net result of these changes is that the increase in the total index number as compared with July, 1914, has dropped from 66.4 per cent. to 63.5 per cent., as may be seen from the next table, which also shows the movements in each group:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100.0
Dec., 1918....	226	222	293	186	241	237.5
Dec., 1919....	249	250	396	247	263	287.1
March, 1920....	261	260	484	269	309	325.6
June, 1920....	261	263	415	278	281	305.9
Dec., 1920....	233	229	209	261	230	230.9
June, 1921....	203	188	158	210	185	187.5
Dec., 1921....	159	180	180	164	168	169.6
March, 1922....	169	195	168	151	161	167.5
June, 1922....	174	192	184	149	160	171.1
July, 1922....	172	190	181	153	163	171.4
Aug., 1922....	153	192	183	149	160	166.4
Sept., 1922....	151	194	181	150	148	163.5

The sharp drop in the miscellaneous group now brings it down to the position of nearest to the pre-war level, but primary foodstuffs and minerals are not far above. Subsidiary foodstuffs are still the furthest from the normal.

In the final table we show the percentage changes in the indices of wholesale prices of commodities as compared with the pre-war level for several foreign countries:—

	United States.	France.	Italy.	Germany.	Switz'r. land.	Sweden.	Denmark.	Japan.
Nov., 1918....	205	358	438	..	325	367	292	214
Highest, 1920..	227	591	679	..	325	403	373	332
End 1921....	123	326	594	..	325	366	278	208
End Jan., 1922	124	314	577	3,585	176	172	177	208
" Feb., 1922	126	307	562	3,955	171	170	177	208
" Mar., 1922	125	308	562	4,888	170	166	182	208
" Apr., 1922	127	315	527	5,899	161	165	178	208
" May, 1922	129	318	524	6,572	160	164	178	197
" June, 1922	131	326	537	7,841*	161	164	180	197
" July, 1922	131	326	558	9,140*	163	165	180	201
" Aug., 1922	131	332	..	13,935*	163	165	180	201
				28,919*	163	165	180	201

* Altered to include 16 finished industrial products.

American prices remain very steady, but in France and Italy there is a distinct rise. In Germany the adjustment of prices to meet the decline in the mark has been speedier than might have been expected.

THE STOCK EXCHANGE AND ITS FUNCTIONS.

THE President of the New York Stock Exchange, Mr Seymour L. Cromwell, recently delivered an address in New York on the conditions under which dealings in securities are warranted. He discussed the matter of contracts between brokers and clients, and went at some length into the explanation of the necessity for such contracts. The lecture itself was subsequently printed by the Committee on Library of the New York Stock Exchange, an enterprising branch which collects and publishes information, views, lectures, addresses, and the like, which are available for members of the New York Stock Exchange, and copies of which are sent to other countries likely to be interested. In the particular address just mentioned, the President held that the fundamental purpose of the Stock Exchange is to provide an open market for the free and untrammelled purchase and sale of the securities in which its members are authorised to deal. That short sentence opens a very wide field for debate. In not far distant days, the subject will be considered sufficiently important to warrant a Conference of representatives from the various stock exchanges of the world, in order that some of the questions may receive the close attention of those who have sufficient foresight to recognise how closely the wheels of international finance interlock with each other, and the progress of which makes so considerable a difference to the smooth running of international relations, as well as to those of millions of individual investors. The Stock Exchange, as such, of the world, is slowly marching from the position of second or third-rate importance which it has been hitherto content to occupy, as its various members went about their business of earning bread-and-butter, making and losing fortunes, and playing subsidiary parts in the world's economy. The war demonstrated how much greater than it had been supposed is the consequence of the stock exchanges, but it remains for the latter themselves to give such a lift to their business—even yet it is not regarded as a profession—as will place Stock Exchange work on a plane with banking and other branches of what, for lack of a better term, may be called high finance. To the minds of many, the true function of the Stock Exchange will be seen to provide a market in which securities can be, first of all, readily bought. Selling comes into it as a matter of course, but sales are a minor part of the matter. The investor wants channels in which to utilise spare capital. In his dealings with stock-brokers, he looks for every protection that can be afforded to safeguard him from accepting spurious bonds, forged transfers, and the wiles of unscrupulous share-sellers. The London Stock Exchange has a code of rules and of honour that stands above the laws of the land. In a recent case, for instance, a firm of Stock Exchange dealers bought stock from a broker, who sold on behalf of a client, at a price much in excess of the proper value. The Stock Exchange Committee declared that they saw no reason for interference with the transaction. The bargain had been done; that was sufficient. The client received a higher price than he was properly entitled to get for stock bought by dealers under a misapprehension as to what the true quotation was. But the bargain stood under the House rules, and while the individual firm suffered heavily, the honour of the House is maintained.

The President of the New York Stock Exchange lays down certain basic rules of procedure that must be enforced if the Stock Exchange is to provide an open market, and he sets out a few propositions which may be very briefly stated as follows:—

"1. Any security offered for sale shall be sold at the best possible price which any member of the Exchange is willing to pay at the time the offer is made, and, conversely, any purchaser of securities shall obtain them at the lowest price at which anyone is willing to sell.

"2. Every transaction shall represent a *bona-fide* purchase and sale, this fact to be made manifest by the prompt publication of the transaction and reporting to the principals on both sides of the name of the broker on the other side.

"3. Both sides of every transaction shall be responsible and good for their bargains. The moment there is the slightest doubt on this point, the facilities of the Exchange must be immediately withdrawn."

It has frequently been claimed that when members of the Stock Exchange are bound by strict rules and regulations in the manner enforced by the principal establishments, those members are entitled to the protection that would be afforded by incorporation of their body, since this would preclude competition from outsiders, even when the latter may be honest. London, however, definitely declined the offer of a Royal Charter when it was held out to the Stock Exchange by the Commissioners some 40 years ago, and in New York the same considerations are held to apply in regard to freedom of dealing being of greater importance to such an institution than could be possible under a method whereby governmental interference would have the right to make itself felt.

NEW ZEALAND'S TAXATION AND BUDGET.

(FROM OUR CHRISTCHURCH CORRESPONDENT.)

THE most important financial document presented to the Dominion Parliament for many years is the report of the Taxation Committee recently set up by the Prime Minister to inquire into the taxation system of New Zealand in all its aspects. The Committee was selected by the Government from names submitted by various business interests, and consisted of five members representing Chambers of Commerce, three the farmers' unions, two the Sheep-owners' Federation, and one each representing the Society of Accountants, the Law Society, and manufacturing interests. No order of reference was provided, but the committee submitted a statement in the widest possible terms, and that statement of the ground to be covered was approved by the Minister.

Naturally, the first aspect of the financial situation to which attention was drawn was the serious disproportion between revenue and expenditure in the present state of the country's prosperity. Attention was drawn to the point made in a previous communication to the *Economist*—the fact that prices of New Zealand exports have fallen considerably more than the prices of the commodities which the Dominion must import, so that the purchasing power of the Dominion has fallen to an extent which is not at first realised, because of the heavy production of the good season just past.

The heavy increases in Governmental expenditure are next set out as between 1914 and 1922. In this period the public debt (apart from sinking fund) has grown from £100 millions to £217 millions, and expenditure from £11,825,863 to £28,466,838. Much of the increase both in the public debt and the public expenditure is attributable to the war; but, the Committee point out, the ordinary expenditure has grown from £8,494,530 to £17,344,235, an increase of 104 per cent. Partly this is due to over-expansion of the administrative services, partly to the fact that the various Government enterprises are leaning heavily upon the taxpayer. In the case of the railways, in the last financial year out of a gross revenue of £6,683,986 there was a net revenue of £210,753 which was the only amount available to pay interest on the capital invested in the railways, amounting to over £41 millions.

The Committee, therefore, came to the conclusion "that the limits of taxation that this country can bear have been reached—indeed, exceeded—and that there is now practically no reserve of taxable capacity"; and in another part of the Report advocate that the annual Budget, instead of determining expenditure and then endeavouring to raise the necessary revenue, should assess the taxable capacity and adjust expenditure thereto.

An interesting table shows the manner in which (apart from borrowing, which the Committee sternly discountenance for the future) the great increase in expenditure has been met. In the last pre-war Budget the Customs and Excise duties accounted for 60 per cent. of the total taxation, land tax for 13 per cent., death duties for 10 per cent., and income-tax for a little more than 9 per cent. In the financial year ending March, 1922, however, the income-tax provides nearly 37 per cent., Customs 34 per cent., land tax 10 per cent.

It is plain, therefore, that the outstanding problem of the present taxation system in New Zealand is the collection and incidence of the income-tax, which for the financial year 1920-1 showed an increase of 1,388 per cent. over 1914, and even in 1921-2 showed an increase of 982 per

cent., despite the reduction in income owing to the slump. Indeed, the rate of tax was actually increased in that year 1921-2.

The present rates of income-tax in the Dominion are considerably higher as regards their incidence on companies than in any other part of the British Empire, while, on the other hand, the rates of taxation on small incomes are lower, and the exemptions more generous than usual. New Zealand stands alone in levying taxation from joint-stock companies as if they were individuals, with the result that any company in a fairly large way of business (with an annual income of over £10,000) pays tax at the high rate of 8s 9 3-5d in the £. Where such companies have a monopoly and the business is efficient only in large units (e.g., meat-freezing), such a tax results in a very heavy burden being passed back to the producers or forward to the consumers. Where private firms compete with companies it is almost impossible for the latter to continue trading.

The further anomalous position is reached that wealthy individuals, by distributing their capital through many small concerns or by investing in tax-free securities, are able to secure the advantage of much lower rates of taxation, while the small shareholder who invests in a large company pays the highest rate of taxation.

The Committee unanimously agreed that it was imperative to reduce the present rate of taxation to a maximum not exceeding 5s in the £; but on the question of levying taxation from companies as at present, or from individuals as in other countries, the Committee disagreed. The majority recommend that as soon as possible the change should be made, but they recognise the administrative difficulties in the way. The over-taxed shareholder would be relieved by this change to such an extent that the present rates of tax on individual incomes between £300 and £2,000 would have to be doubled to compensate for the loss. The minority, however, consider such a change inexpedient, and report against it. Of the other recommendations of the Committee, most are concerned with minor improvements, such as provision for the carrying forward of losses, the taxation of Government and public body trading operations, and the setting off of losses against profits in other branches of business.

The most important recommendation, besides the proposed lowering of the income-tax, is that the super-tax imposed on land as a war measure should be removed, and this has already been done by the Government. The farming industry has been passing through a time of serious difficulty, as is evidenced by the latest bankruptcy returns, published just after the Committee rendered its report. The number of bankruptcies rose in the first five months of 1922 to 407, as against 160 in the corresponding period of 1921. Of the industries represented, farmers are easily first (110), the motor trade, which is connected closely with farming, next (38), then labourers (34), and Maoris (24). Evidence is accumulating also concerning the extent to which land is either going out of productive use or is being less utilised than formerly. The Committee reports, also, that last year the importation of fertilisers showed a distinct falling-off. The Government's decision to repeal the super-tax will, therefore, be regarded with relief by the farming community.

In a country where the State undertakes such a great variety of functions, and where the level of taxation is high, as it is in New Zealand, the delivery of the annual Budget is an occasion of more than ordinary importance. In the financial statement delivered by Mr. Massey in the House of Representatives on August 15th, following as it did a few days after the publication of the report of the Committee of business men on the taxation system of the country, there is much of public interest. The general feeling seems to be one of disappointment that no mention is made in the report of any reduction in the burden of taxation, and of dismay at the continued high level of expenditure, despite the Government's measures of economy. Mr. Massey claims that economies have been effected amounting to the (for New Zealand) large annual sum of £5,190,419.

Despite these economies, however, the expenditure is still slightly higher than in the previous year, though it is something to have checked the enormous increases previously recorded. For the last six years the expenditure has been :—

1913-4	£ 11,825,864
1916-7	14,058,770
1917-8	15,120,287
1918-9	18,673,599
1919-20	23,781,524
1920-1	28,068,730
1921-2	28,466,838

For the forthcoming year the expenditure is estimated as £27,938,215.

The increase in expenditure has come partly as a result of the growth of such fixed charges as the interest on the public debt, and pensions. The public debt has grown from £100 millions in 1913-4 to £219 millions; and the interest charge has grown more than in proportion, till it now amounts to £9,604,393, to which must be added an annual charge of over a million and a quarter for sinking funds. Within the next few years large amounts of the debt fall due, and New Zealand is likely to be frequently seeking accommodation for these maturing liabilities. Partly, however, the increased expenditure has come from the growth of the ordinary administrative charges, and while some retrenchment has been made here, there is room for much more.

The revenue for the year just past shows clearly the effect of the depression through which the country has passed. The total revenue has fallen from £34,260,962 in 1920-1 to £28,127,007. The main items of decrease have been a drop of nearly £3½ millions in the Customs receipts, and a drop of £2½ millions in the income-tax. In both these cases the rates of taxation have been increased slightly, so that the drop is due to reduced purchasing power and reduced trade.

For the ensuing year the revenue is estimated as £26½ millions, after allowing for further decreases in income-tax, but not in Customs duties. The Minister of Finance is, therefore, departing from the New Zealand tradition, and budgeting for a deficit of rather less than two millions. This deficit, however, will be more than covered by the remainder of the accumulated surpluses carried forward from this year. Owing to the prosperity of the Dominion during the war and the after-war boom, a large accumulated surplus had been built up by the year 1920-1, amounting to over £23½ millions. Of this amount £13½ millions has been used in settlement of returned soldiers on the land, and £2½ millions in other ways, leaving a balance still available of £7½ millions.

Beyond the recital of retrenchment now under way, the announcement of a Public Works loan following the successful £5 million loan already issued this year, and the abandonment of hope of reparation money from Germany, the Budget is nothing more than a rather colourless and tedious statement of the present position of the national accounts. This is election year, and any further rigid economy is hardly to be expected with such a large Civil Service vote and so few financial interests. Of the recommendations of the Taxation Committee, the only one likely to carry many votes—the remission of the super-tax on land—has already been carried out.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

CUBA.—Notwithstanding the proffered intercession of influential financial interests and the threats of forcible interference by the United States Government, the economic affairs of Cuba still leave much to be desired. The end of the fiscal year finds the national Treasury practically empty, with a current indebtedness variously estimated from \$60,000,000 to \$140,000,000, mainly consisting of back salaries due to Government employees, bills for supplies, and claims for work done on public contracts. To meet these and other substantial obligations, heavy taxation, such as a gross sales tax of 1 per cent., is impending. The 1922-23 Budget estimates the total revenue for the fiscal year at \$55,638,800, and the total expenditures for the same period at \$54,852,102; few expect that these figures will be realised, but that, on the contrary, there will still be a deficit. On the other hand, late advices show that part of the floating debt has been retired, and that current expenses are now being met from income, by arrangement with the banks of the Habana clearing-house. Unrest among the working classes recently threatened to interfere with the prosperity

of the British-owned railway system known as the United Railways of the Havana and some American-owned transport lines. The Cubans insist that further dictation from the United States is unwarranted, and declare, moreover, that "vicious commercial legislation at Washington has added materially to their financial difficulties without in the least degree benefiting them." The declared desire of the President, Dr. Alfredo Zayas, to introduce financial reforms is being continually frustrated by the decision of Congress, the majority of the members of the Senate having declared themselves in opposition to foreign interference. On August 31st the House of Representatives passed five important financial reform measures, recommended by General Crowder, of the U.S.A., but the Senate has yet to endorse them. Even the lure of a further large loan of \$50,000,000, to be granted by American bankers, by means of which outstanding Government obligations could be met, has tended to alleviate the situation but little, while it has been aggravated by the disclosure of official thefts from the public Treasury. One of the delinquents has already committed suicide, while others would have fled but have been impeded from doing so.

Apart from railway systems and some large tobacco estates, British interests are concerned in the cultivation and manufacture of sugar. They will learn with some concern that the United States Senate has recently passed a Bill increasing the import duty on this product; if carried out, this measure must seriously affect the prosperity of the sugar refineries which find in America their chief market. Until this announcement was made the prospects of the industry appeared decidedly brighter, in view of the sensible reduction in costs and the increased operating efficiency of many of the mills. The present sugar crop, previously estimated at no more than 3,500,000 tons, has already exceeded expectations; in all probability, when the last of the mills has ceased to grind, something over 4,000,000 tons will have been produced. The greater part of the crop has already been sold at favourable prices, while little or nothing of last season's crop remains undisposed of.

EL SALVADOR.—The loan contract completed, at length, between the Republic of El Salvador and Mr. Minor C. Keith, a well-known American financier controlling considerable interests in Central America, acting through Mr. René Keilhauer, his representative, is in furtherance of the arrangement for a settlement of the External Debt entered into at the end of 1921 between American financiers and the trustees of the loan, first rejected but subsequently approved by the bondholders. According to the new contract, the Republic of El Salvador sanctions and creates an issue of bonds to be issued in three series, designated "A," "B," and "C" respectively. Of these the "A" bonds will aggregate the principal amount of \$5,000,000 (£1,000,000), and bear interest at the rate of 8 per cent. per annum, to be placed in the United States; the "B" series, £1,050,000, bearing interest at the rate of 6 per cent. per annum, to be exchanged for the existing External bonds; and the "C" series, \$6,500,000 (£1,300,000), at the rate of 7 per cent. per annum, to be at the disposal, apparently, of the Government. Mr. Keith has also secured for his nominee the important appointment of Fiscal Agent and, possibly, later on, of General-Collector, with head offices in New York and a salary of \$15,000 (£3,000) per annum, an influential appointment, it would appear, which is likely to bring about the complete—if gradual—Americanisation of El Salvador. It seems hardly likely that the Agency, once established, will stop short at the simple duty of "certification and supervision of the Republic's Customs collections," regarded as security for the loan. Powers are taken for the creation of a foreign-directed Customs Administration and the appointment of a General-Collector (of American nationality) "should the Salvador Government fail in any of its obligations under the new contract." This chance may be measured from what has previously occurred. The position of British bondholders, however, under the above cited conditions, has been adequately considered. It may be recalled that in 1915 the Salvador Government was obliged to compound with these holders of its bonds, and has since failed to provide the funds required for the coupons falling due in

February, 1921, on both the 1908 6 per cent. loan and the 7 per cent. Funding Bonds.

With slight exceptions, the steamship and railway transport arrangements in Central America, including El Salvador, have passed under the domination of North American interests, at the head of which stand Mr. Minor C. Keith, president of the International Railway of Central America, and his associates. During the lifetime of Mr. Mark J. Kelly, for many years chairman and managing director of the Salvador Railway Company), (and formerly of the Salvador Steamship Company), strenuous efforts were made to exclude these enterprises from American domination; hitherto the railway has been spared absorption. It would appear, however, that this British-owned enterprise may ultimately be engulfed by irresistible North American interests, which have ever regarded the system (the first to be constructed in the Republic) with envy, and as destined to form part of the Pan-American Railway project. In 1919-20 the Salvador Railway made a profit of £93,254, as compared with £64,138 in the previous year, but showed a heavy decline in 1920-21. To date, the receipts are a few thousand pounds up on balance. The Government still owes the railway company £44,000 on account of arrears in payment of the £24,000 per annum subsidy, originally granted to extend over a period of eighteen years.

Notes of the Week.

The Conference at Mudania.—As we go to press comes the grave news that the Mudania Conference has collapsed. Alarmist deductions from this news may, we hope, be discounted, but obviously a situation of fresh danger has arisen, and the obstacles are apparently political rather than military. If the position as it appeared yesterday morning can be regained, the danger would be practically over. The danger then centred, and presumably still centres, round the local problem of Eastern Thrace, rather than round the ultimately far more important questions connected with the Straits. The Turks, it then appeared, were willing to retire from the Asiatic shores of the Dardanelles and from the immediate neighbourhood of Chanak, and to keep behind a line during negotiations. This point once achieved, the exact whereabouts of that line becomes a matter of secondary importance. Nor was there need to be harassed by rumours of a partial or complete withdrawal of the British force at Chanak. If that were to be agreed to on our side, we might be satisfied that the simultaneous withdrawal of the Turks would have made our presence at Chanak no longer necessary in the opinion of those British military authorities who are in the best position to judge. The points to be settled about Thrace are more complex, for while the first and last steps are virtually agreed upon, there are several alternative means of traversing the interval between them, and the well-being, or even the life, of the inhabitants of the province may depend upon the choice made at Mudania. In the first place, the Greek military forces are to retire forthwith, under Allied supervision, to the west bank of the River Maritsa, and in the end, when the peace treaty has been drafted and agreed upon in detail, the Turks are to recover the full rights that restitution of sovereignty carries with it (saving always in certain zones reserved for demilitarisation). But what civil administration, and above all, what gendarmerie is to be installed in the province during the intervening period? The Turks apparently demand that their own civil administration shall return at the heels of the retreating Greek forces. This may not be an unreasonable stipulation on their part, but at the same time, if we are to be stake-holders, we have to keep some asset temporarily in our own hands, and the asset indicated in the circumstances is surely the gendarmerie control. Anyone who has studied the calamities to which Near Eastern populations are exposed when their homeland (generally the common homeland of several intermingled nationalities) passes from one sovereignty to another, must realise the great desirability of effecting the transfer through the agency of some third party. In Western Anatolia both the Moslem and the Christian civilians, Greeks, Armenians, and Turks, have undergone the maximum amount of suffering, and in the process of

hanging hands politically the country has been ruined economically. It is a common interest of all the inhabitants of Eastern Thrace that this tragedy should not be repeated there. It must be emphasised, however, that this is not a possible *casus belli*, nor would suffering be saved in the long run if, in attempting to postpone the complete restoration of Turkish sovereignty, we broke the confidence of the Turks in our good faith. It is not a question of irreconcilable desiderata, but a case for compromise. In spite of the breakdown of the Mudania Conference, the elements of the situation remain such that a real will to secure peace should find plenty of scope for effective exercise.

The League's Plan for Austria.—The signature at Geneva on October 4th of the three protocols which form the Agreement for granting financial help to Austria is a notable achievement that will give Austria new hope, and will also enhance the prestige of the League of Nations. The Austrian Chancellor, Dr Seipel, admitted his doubts of success—doubts which, incidentally, were widely shared—when the London Conference, in despair, turned the Austrian question over to the League. "Thank God, we can say to-day," remarked Dr Seipel, "that the League of Nations has not failed us." The three protocols are capable of brief summary. In the first, Great Britain, France, Italy, and Czecho-Slovakia, the four guarantors of the service of the projected Austrian loan, undertake in no way to compromise the independence, territorial integrity, or sovereignty of Austria, and, should occasion for dissatisfaction arise, to appeal to the Council of the League. Austria, at the same time, undertakes not to compromise this independence. This protocol remains open for signature by all States that may desire to adhere to it. Under the second protocol, the Austrian Government is empowered to create a loan of not more than 650 million gold crowns. The service of the annuity of this loan is to be guaranteed by the four Governments mentioned above up to a maximum of 84 per cent. Under the third protocol, Austria is to furnish as securities for the loan the gross receipts of Customs and of the tobacco monopoly, "and, if the Commissioner-General should deem it necessary, other specific assets determined in agreement with him." Mention of the Commissioner-General brings us to the vital question of the form of control to be exercised over the measures which Austria undertakes to introduce with a view to achieving financial reform and a Budget equilibrium two years hence, which include increases in railway, postal, and telegraphic rates and in the sale prices of monopoly products, the surrender of all right to issue paper money or to contract loans, "except in conformity with the programme set out above and with the authorisation of the Commissioner-General." The important point is that the Commissioner-General is to be appointed by the Council of the League, and is responsible directly to that body. The original proposal of the Italian Government was that the control should be exercised by the guarantor Powers. This, obviously, would have created a very dangerous precedent, and that this demand has been waived is one of the most satisfactory features of the Austrian Agreement. The difficulty was surmounted by means of a compromise, through which an advisory council of the four guaranteeing Powers (apparently with an Italian chairman) is set up to sit periodically at Geneva and to consult with the Commissioner-General. Through this arrangement, Italy's concurrence has been secured, while the vitally important principle of control being vested in the League itself is preserved. Although the signature of this Agreement is an achievement of first-class importance from many points of view, it must not be supposed that the path of Austria towards financial and economic rehabilitation is thereby magically rendered easy and pleasant. Of the difficulties in store we wrote in some detail in an article in the *Economist* of September 23rd. We are glad to see, therefore, that the Financial Committee of the League points out to the Government and people of Austria in strong terms the necessity for energetic action. The Committee says: "At the best, the conditions of life in Austria must be worse next year, when she is painfully re-establishing her position, than last year, when she was devoting loans intended for that purpose to current consumption without reforms. The alternative is not between continuing the conditions of last year or improving them.

It is between enduring a period of perhaps greater hardship than she has known since 1919 (but with the prospect of real amelioration thereafter—the happier alternative), or collapsing into a chaos of destitution and starvation to which there is no modern analogy outside Russia. There is no hope for Austria unless she is prepared to endure and support an authority which must enforce reforms entailing harder conditions than those at present prevailing, knowing that, in this way only, can she avoid an even worse fate." These are strong words, but they do not overstate the task which faces the Government and people of Austria. We hope the Austrian Chancellor is justified in saying that "after a few weeks at the most the Austrian people would be ready to make every sacrifice that is necessary." If this view is justified, then Dr Seipel may realise his dream of coming to the League a few years hence and saying, "Austria is rehabilitated.....You may now set her free from financial control." At the eleventh hour Austria has been given a new chance; but the road before her people is stern, painful, and long.

Government Trading.—Some of us condemn Government trading as undesirable on principle, and maintain that the less the Government dabbles in commerce and industry the better for the country. Others are content to judge by results, but they also will be led into the paths of condemnation by the report of the Auditor-General on the accounts and balance-sheets of Government trading or commercial services, which has been issued this week as a Blue Book (No. 126, price 6s net). The report gives results of some services from their initiation during the war up to March, 1921, and the critic must make allowances both for the stress of war conditions and for the difficulties of the post-war period, which every private business has encountered. Moreover, permanent Civil Servants eagerly point out that many of the transgressions which catch the public eye were committed by "temporary" officials. But when all allowances have been made, there is much in this document that makes disquieting reading for the taxpayer. A few illustrations of the fact will suffice. Considerable imports of Chinese bacon were paid for by the Ministry of Food at the rate of £40 instead of £30 per case, with the result that a certain importing firm received £250,000 in excess of the proper figure. "The two officers primarily responsible for the oversight in question have now left the Department." But only a portion of the public money has apparently been recovered. As the result of a "most unsatisfactory transaction" in cattle-feeding stuffs a loss of £143,000 was incurred, and the Treasury "consider that the proceedings showed a lamentable lack of precision, for which it is impossible to relieve the officers of the Ministry of Food of responsibility." We are not told whether these same officers are or are not still in some position of authority where they can continue to play ducks and drakes with public money. The re-control of currants appears to have been a bad business for the taxpayer, a loss of £962,606 being recorded in 1920-21 on the disposal of stocks valued at £1,849,767. The accounts of printing works under control of the Stationery Office make a poor showing. In the case of Dugdale street a loss of £8,000 was incurred, while the Harrow printing works showed a trading loss of £32,839 in nine and a-half months. We refrain from increasing the list of illustrations, nor have we referred to the loss of £162,000,000 on the bread subsidy, which was, of course, a loss deliberately incurred as a matter of Government policy. But the instances quoted from the report are perhaps sufficient to support the contention that business men are more likely to conduct with success businesses in which they have been thoroughly trained than Government officials whose training has been on very different lines. The work of the Comptroller and Auditor-General is of great practical service, not merely in disclosing past faults and irregularities, but in its implicit reminder of this important fact.

The Outlook for Shipping.—With the coming of October the outlook for shipping has improved considerably, and all the homeward markets have of late been showing signs of more activity after the dull period experienced from June to late in September. There is still too much tonnage offering, but the elimination of most of the Greek

steamers from the open market has helped matters considerably, and the supply of carrying space is now more equally distributed over the various sections. The loading of grain from the Canadian ports continues brisk, and numerous steamers are under engagement to take in wheat right up to the close of navigation. Chartering interest from the Gulf and Northern Range has been somewhat restricted, but as soon as the American railways are working on normal lines again a very busy period is assured. Rates from the Northern Range to the United Kingdom or Continent are kept down by the competition met from the liners which are willing to take grain parcels at cheap rates in order to fill up. Philadelphia/United Kingdom-Continent has this week been done at 3s per qr, which compares with 2s 6d taken in July, 1914. In the homeward River Plate market there has been a good recovery, and now that the supply of steamers has been reduced somewhat, values have lifted, with 25s secured for November engagements, against 17s 6d and 18s done a few weeks back, when the market was depressed by the weight of seeking tonnage. Nitrates from Chili offer prospects for shipowners, and 35s Chili/Continent for November-December should soon be obtainable. In the East the outlook is decidedly better, and the Indian and Australian markets should soon be enjoying their full measure of activity. Neither is over-supplied with tonnage, and now that the Indian Government has removed the embargo on the export of wheat, flour, &c., 20s to 22s 6d per ton from Bombay to the United Kingdom or Continent should be possible. Several steamers have already been engaged to load wheat from Western Australia at 38s 9d to 40s to the United Kingdom/Continent or Mediterranean, and thus owners are looking forward to freight money of 45s per ton from South Australia as soon as chartering for the new season's wheat comes on. With an improved tone in the iron and steel markets, ore receivers have been showing more interest in tonnage from the Mediterranean and Bay ports, and now that the position in the Near East is better, chartering for grain from the Danube may go ahead, some business having been done this week on the basis of 20s 9d to 21s per ton to the United Kingdom/Continent. Cottonseed from Alexandria will soon be needing steamers to lift the new season's crop, and business should start at round about 11s to 12s London/Hull. In the outward coal markets there is a steady demand from South Wales to South America, Algiers, Constantinople, and Genoa, and the general tendency of rates is harder, with an expanding inquiry.

Freights for Cotton Goods.—Our Manchester correspondent writes:—Considerable satisfaction has been expressed in Manchester trade circles this week at the report that, owing to representations of the Manchester Chamber of Commerce, steamship owners had decided to make a reduction in freight rates between this country and Bombay for cotton piece-goods and yarn. The concession of 37½ per cent. reduction has been granted in return for an undertaking on the part of Manchester exporters to ship their goods by the lines of the Bombay Steam Trade Conference for a period of five years. The new rate will be 50s per ton, as against the old charge of 80s per ton plus 10 per cent., and less 10 per cent. deferred rebate until December, 1923. It is understood that the revised freights will mean a saving of about 2½d per piece on cloths known as shirtings, which are shipped extensively from this country to India, and a saving of 1½d per lb on yarn. Merchants believe that anything that can be done to cheapen the cost of placing goods in outlets abroad will be to the benefit of Lancashire.

American Cotton Crop.—The Agricultural Bureau of the United States Government has this week published important information relating to the cotton crop for the season 1922-23. The condition of the growth on September 25th is given as 50 per cent., against 57 per cent. a month earlier, 42.2 per cent. at the same time last year, and the ten-year average of 59.5 per cent. The statement indicates a yield for the season of 10,135,000 bales. The amount of cotton ginned so far this season up to September 25th is given as 3,883,000 bales, against 2,920,392 bales at the same time last year, and 2,249,606

bales in 1920. These reports when published were about equal to the expectations of market operators, and the figures did not result in any particular change in values. There is a disposition in some quarters to reduce forecasts of the consumption this season in view of the continued unsettled conditions throughout Europe.

The Economics of Land Drainage.—Although the occasion was nominally private, the paper which Mr C. H. Clayton (principal adviser in engineering to the Ministry of Agriculture) presented to the Society of Engineers on Monday evening last is before us in print, and the facts adduced invite attention far beyond that of a limited gathering, however distinguished, in a room at Burlington House. Briefly stated, there are some millions of British acres where the saturation level, as it is called, lies only six inches below the surface, thereby rendering the land unfit for all but the most purely surface-rooted of growths. First-class agricultural land should have this saturation level 30 inches down. Now, apart from one consideration, which lay beyond Mr Clayton's point of view, the economics of making a saturation level of six inches beneath the surface into one of 30 inches are absolute. But, in any economic consideration, the cost of transport must be included. So long as the freight of potatoes from Lincolnshire to London is higher than from Rotterdam and Esbjerg to London no dividend can attach to converting a Lincolnshire field of grass and rushes into a potato-growing area. None the less, the areas which lie within easy distance of crop-consuming centres of population are very considerable, and it is probable that Mr Clayton could take half a million of the unemployed into immediate work, which would in forty years have paid for itself, leaving the yearly production of the future at an average of two guineas per acre, where it had previously been at seven shillings. This sixfold increase would remain as a permanent enrichment of British soil. The economist happily has little difficulty in locating "the bad lands," and the Land Drainage Act of 1918 gives him considerable powers of intervention. In nine cases perhaps out of ten we shall find quite near these lands, with their reeds and coarse grasses, a watercourse whose normal level is too high to permit of the successful drainage of the affected areas. All interests, therefore, must be concentrated on getting rid of this excess water, on conveying it safely past and on its way to its eventual sea outfall. No single owner is likely to have the means to do the entire work, but those who undertake it might safely look to a profit wherever they could levy a charge on land near enough to a market for its produce. The British Ministry of Agriculture in this matter almost cer-

tainly fears its fate too much. In India 50 million acres of agricultural land have now been drained and irrigated, and the rents of these treated lands are the most secure in the world; as the tenants fear to be replaced, there are often six or seven applicants on the rota for "safe soil." In England and Wales a fiftieth of what India has done would be greeted as a considerable economic step forward. The strange thing is that next to nothing has been done in a juncture when unemployment has been rife and the number of hands available almost unprecedented. Another point. The application of drainage always increases the carrying power of an artificial manure—that is to say, that, whether we apply one ton of sulphate of ammonia or nitrate of soda or of any other fertiliser, the stimulating and enriching ingredients added invariably go further and produce more effect in drained land than in undrained. Thus with every acre of land brought into a drained state, with saturation point low down instead of high up, we wipe out the possibility of waste and make every case of high farming more likely to be a success. Of course, the best drainage works begin at the sea outfall and proceed upwards, but if economical working be postponed until that ideal is achieved, all the impetus and momentum of local effort will be lost. One would, therefore, encourage a frank attack on all "bad cases" felt and seen to be scandalous, and leave the drainage of the countryside on an ideal basis to a golden age.

United Steel Companies.—No doubt shareholders next week will have something to say at the annual meeting of the United Steel Companies, Limited, about the uninformative nature of the report and accounts which have just been published. It is quite intelligible, as the company mentions in its report, that it "has suffered from the great trade depression which has existed during the whole of the period under review," but the position as shown in the balance-sheet is by no means clear. Here are the results set out for the past four years as revealed by a cryptic profit and loss account:—

	1918-19.	1919-20.	1920-21.	1921-22
Gross revenue	1,164,585	930,521	711,146	388,034
Administration expenses and income-tax	48,133	38,007	81,485	148,026
Interest	209,820	146,853	146,254	148,026
Net profit	906,632	745,661	483,407	240,000
Brought forward	64,674	80,381	308,293	440,743
Reserve and written off	906,632	810,335	563,788	548,301
Preference dividend	41,822	119,369	32,021	79,890
Ordinary dividend	79,024	79,051	55,356	27,568
Carried forward	721,112	507,042	168,138	(nil)
	(10 %)	(10 %)	(3 %)	(nil)
	64,674	104,873	308,293	440,743

Readers may, however, probably be intrigued by these figures, after reading in the report that "the losses for the year of the branches already liquidated amount to £156,675, and if the loss of £348,856 made by the associated companies, for which they possess ample reserves in hand, is added, there was a total loss for the whole undertaking of £505,531." Further details of the accounts of the constituent companies are revealed when it is stated that "in arriving at this loss stocks have been written down altogether by £208,667, and the charge of maintenance of idle plant has amounted to £312,321." It would be interesting to know if the value of the shares in associated companies has been written down in accordance with these losses. At present the balance-sheet conveys little to the inquirer. The process of liquidation of various interests continues, and though we know that total assets are down from £16,687,593 to £16,340,947, the items comprising the total are obscure. Property and plant, less depreciation (the amount of which is unstated), which formerly figured at £2,324,685, now stands at £4,174,145, and goodwill at £253,369 to £816,825. Holdings in associated companies, taken at cost, are down from £8,934,025 to £6,766,179, and advances to associated companies are also down from £4,221,587 to £2,774,702. The merger is an interesting development of our times for bringing into closer co-operation financial and industrial interests, but it is highly desirable that assets and liabilities of constituent companies should be valued on some common basis, and the figures published for shareholders as supplementary information. The balance-sheet is analysed in our usual column, but the most intelligent

observer will find considerable difficulty in drawing any satisfactory conclusion from the items as set out.

Clerical and Medical Life Office.—As expositions of life insurance finance the reports of this company are always of great interest. The new report, for the year ended June 30 last, shows the promise of the valuation report of last year well on the way towards fulfilment. It will be remembered that for the seventh time in succession the company valued its liabilities at 2½ per cent., provided for all depreciation in securities and other war losses, and maintained its rate of bonus at the high level of 1911 and 1916. Two or three years ago the directors took the drastic step of realising a large amount of long-dated securities, upon which there had been heavy and continuous depreciation, and reinvesting the proceeds in short-dated assets. This involved an immediate book loss, which was written off, but it materially helped towards the improvement in values which was seen at last year's valuation. During the year ended June 30th last there was a profit on securities realised of no less than £61,212, and at the close of the year the value of Stock Exchange securities held exceeded the book value by £206,495. The next most striking feature in the new report is the advance in the net rate of interest realised by the invested funds. The net rate was £4 7s 8d per cent., £1 17s 8d per cent. more than the rate assumed at the valuation, and representing a profit from interest of over £130,000 in the year. The death claims remain low, and the profit from a favourable mortality should also be considerable. The death rate experienced was less than 60 per cent. of that "expected" by the mortality tables employed. We have more than once had occasion to point out that the low rates of mortality experienced by the best life offices since the war ended tend to make nonsense of the British offices tables, which deal with the experience of the later Victorian England. In these nineteen hundreds we are becoming every year healthier and healthier.

North Broken Hill.—The accounts of this important Barrier Range undertaking for the year ended June 30th last make a very different showing from those of the preceding period. In 1920-21, not only were operations in abeyance for nearly seven months, but during the remainder of the year work proceeded on a small scale only owing to the low price of lead; moreover, there was a disastrous fire at the smelters. But for substantial receipts in respect of concentrates produced in earlier periods a considerable loss would have resulted, instead of a small profit. Last year the output largely expanded and metal prices improved, giving the company a net profit of £43,000, after allowing £10,000 for depreciation. Of this £13,300 has been placed to debenture sinking fund, leaving exactly sufficient to provide a dividend of 1s per share. A further like distribution is declared on account of the six months ending December 31st, from which the inference is obvious. The current price of the shares, however, makes allowance for dividends much in excess of 2s per share per annum. The surplus liquid assets have expanded to £452,650. It may be mentioned that the Broken Hill South Company paid 2s in August, and will disburse another 2s early next month.

British-Canadian Mining.—This subject has been rather to the fore the past few days. Statistics for the first half of the current year issued by the Ontario Department of Mines reveal a noteworthy increase in the output under several headings. Thus the gold production totalled 476,300 ounces, as against 286,000 ounces in the corresponding period of 1921, presaging a large gain for the whole year; nickel oxide, 437,300 lbs in place of 331,100 lbs; unseparated cobalt-nickel, 647,250 lbs, as compared with 26,600 lbs; and pig-lead, 1,993,900 lbs in place of 1,505,800 lbs. Metallic nickel and copper record large decreases; still, the value of the whole figures at \$14,448,300, an increase of \$3,084,700. It was an open secret at the time that the prospectus of the Porcupine-Davidson Gold Fields met with a poor response, investors on this side considering that the element of speculation was too great. At the informal meeting, of which a

THE REVENUE.

last, the total payments made by Germany, both in cash and in kind, were as follows:—

	Gold Marks.
Payments of all kinds down to May 1, 1921	5,099,753,000
Payments of all kinds from May 1, 1920, to April 30, 1922	1,877,567,729
Total	6,977,567,729

From this statement it is apparent that the assertions made by Mr Lloyd George to the Supreme Council meeting that took place in London on August 7th last was seriously inaccurate. In that statement the British Premier insisted that Germany had already paid to the Allies, on account of reparations, cost of the Allied armies of occupation, &c., over ten milliards of gold marks, "in spite of three revolutions and the weakness of its Government." This statement, it will be remembered, was made in reply to M. Poincaré's arguments against the granting of a moratorium to Germany. The figures contained in the statement just issued merit close study on the part of those whose duty it is to keep public opinion informed as to the exact situation of the reparation question, and it is admittedly for this reason—"for the information of the public"—that it has been issued.

The Chambers are to be called together for the customary autumn session next week, and all parties in both Houses are now focussing attention on the most serious financial situation that the country has been called on to face for many years. M. de Lasteyrie's Budget proposals for 1923, to sum them up in a nutshell, foreshadow a deficit, when all is taken into consideration, of something like 24,000,000,000f. This colossal deficit is made up as follows:—Estimated excess of expenditure over revenue on the ordinary Budget, 4,500,000,000f; estimated deficit on the Budget for recoverable expenditure (in other words, projected expenditure on reconstitution work in the devastated regions), 10,000,000,000f; arrears on Crédit National loans for the devastated regions, about 9,000,000,000f. The explanation of the deficit lies in the fact that it corresponds appreciably in amount to the total of the arrears of the loans contracted by France on account of Germany.

M. de Lasteyrie, on his appearance before the Finance Commission of the Chamber, stated frankly that he did not propose to put forward any suggestions for the purpose of meeting the deficit, and that he proposed to confine himself to "immediate problems." For the rest, he expressed the hope that a solution of the essential problem facing the country would be found in November, after the pending conference at Brussels, at which, it is hoped, both the Reparations question and that of the inter-Allied debts will be settled. In view of his belief that the limit of taxation has been reached, M. de Lasteyrie intimated that he adheres still to his decision not to propose any new taxes, and to get over immediate difficulties by an issue of 6 per cent. Treasury bonds, redeemable in three or five years at the choice of subscribers. These bonds will have a nominal value of 500f, and will be issued at 497.50. They will be redeemable at par on September 25, 1925, or at 507.50 on September 25, 1927. The interest will be free of all taxation, and will be payable half-yearly. In view of the success of last year's issue of 6 per cent. two-year Treasury bonds, the Minister is distinctly optimistic as to the prospects of the new issue, the lists for which will be opened on October 9th, and will remain open not later than November 10th (subject to an earlier closing should circumstances direct).

So far as the ordinary Budget is concerned, M. de Lasteyrie proposes to make certain minor modifications in the tax on turnover, which will be collected in certain cases (such as agricultural products and coal) not at the moment of consumption, but at the time of production or importation. As to the Government monopolies (on which there have been many categorical reports) the Minister informed the Finance Commission that "for many reasons, both technical and social," he has no intention of modifying the present régime in regard to tobacco. He was favourable, however, to the suppression of the match monopoly; but he vouchsafed no information as to what proposals he will bring forward for the future handling of this interesting source of public revenue. In

the absence of specific proposals, the discussion that followed the Minister's statement was necessarily lacking in interest. The best the Commission found itself able to suggest, for the purpose of dealing with the deficit, was that the adverse balance of four milliards odd in the ordinary Budget—which represents, approximately, as I have stated, the arrears of loans for the Liberated Regions—should be carried to the extraordinary Budget. Obviously, such a device is purely artificial, and can in no way transform a deficit into hard cash. M. de Lasteyrie, indeed, has himself already condemned the idea as inadmissible, in his own preliminary Budget statement. In the circumstances, however, something had to be done. "When a patient feels uncomfortable on one side," one of the deputies remarked, apologetically, "he turns over on the other!" and the Finance Minister offered no objection to the adoption of the suggestion. This apparently is to be the sole method adopted for getting rid of the estimated deficit of four and a-half milliards in that portion of the national burden for 1923, which is known as the ordinary Budget.

Another interesting announcement made by M. de Lasteyrie was that he proposes to raise the level of abatement allowed in respect of income-tax on wages or salaries by another 2,000f. As the law stands at present, persons in receipt of incomes from wages or salaries are exempt from income-tax if resident in the smaller communes, unless the amount exceeds 4,000f a year, the limit of exemption in important towns being 5,000f, while in Paris it is 6,000f. The Minister announces that he proposes to introduce a Bill raising these abatements to 6,000f, 7,000f, and 8,000f respectively. It may be said without hesitation that M. de Lasteyrie's decision amounts to an admission by the French Treasury that the attempt to extend the incidence of direct taxation, by the imposition of a universal impost on incomes, has proved a failure. The income-tax, as I have more than once stated, is a novelty in this country, and has not yet got beyond its teething stage. It came into operation for the first time only a year or so before the war, and it was only under the stress of the nation's need for every franc that could be extracted from the taxpayers that its tentacles were lengthened out, some three years ago, to reach the working classes. It is from the working classes that has come the revolt that has compelled the Treasury to confess the tax a failure.

After a relatively long period of high prices on the Bourse there has been this week a marked decline, not so much on account of the Eastern question as for purely financial considerations. In view of the general tendencies towards a rise there has been a considerable amount of speculation, and the news that there will shortly be large issues of capital has resulted in depression. Royal Dutel is one of the few securities that have avoided the slump but even it has fallen back, dropping from 23,400 to 23,050. French funds are lower. The 3 per Cents at 60.55 have lost 1f 30c, the 1915-16 5 per Cents at 77 1f 20c, and the rest similarly. Banks for the most part have fallen, but not seriously, though Banque de France has dropped from 5,820 to 5,755, and Banque de l'Union Parisienne from 640 to 632. Railway have lost much of their previous advance, Nord falling from 1,211 to 1,190, Est from 794 to 778, and Orléans from 950 to 910. Shipping, as a result of strikes act and threatened, have weakened, Chargeurs Reunis dropping from 390 to 375, Chargeurs Français from 6 to 652, while Messageries Maritimes have remained unchanged at 181. Both electrical and metallurgical undertakings have shared in the general depression, and have followed suit, Tintos falling from 1,580 to 1,5 Bolée from 470 to 460, and Penarroya from 885 to 830.

GERMANY. — CURRENCY, BUREAUCRACY, AND "SOCIAL JUSTICE."

(FROM OUR CORRESPONDENT.)

BERLIN, October 2.

As recent days passed without any event of importance and as State financial and business developments are mostly mere reflections of mark exchange movements, may be useful to give a picture of one evil of present German administration, which is a cause of over-offici-

dom, of waste of private citizens' time, and of Budget deficits. Most of the evil arises from official theory (ignored when convenient) that "a mark is a mark." An efficient Government, after observing for years the phenomena of currency depreciation, would begin to take into account the progressive diminution in substance of nominal mark currency values. Every business man follows this rule; if he kept ten clerks to manage a turnover of 1,000,000 marks worth £50,000, he would not keep ten clerks to manage 1,000,000 marks worth, as now, £130. Normally, the business man avoids this by maintaining the real substance of his business, and therefore largely increasing his mark turnover. Official business is also in general maintained in volume; and mark revenue and expenditure grow rapidly. But while the business man continually adapts the details of his methods to the new currency values, the State has not yet learned this elementary principle; and the expenditure of official time and money is very often not justified by the values involved. Of late this abuse has reached the extreme of farce and public scandal.

The Sickness Insurance Bureaux of all Germany to-day issued circulars demanding information from employers. The circular which came to your correspondent as a mere employer of domestic labour is signed by a "President" and a "Director," and embraces two large printed papers of calculations, instructions, and demands for information. After an elaborate table of premiums and policy amounts, from which it appears that the kinsmen of a deceased employee of the lowest rank will receive a capital payment of 60 marks, or 2d, if a premium of 27 pfennigs, or 1-100th of a penny, is regularly paid, the President and Director give precise rules for calculation of the premiums. The premiums of employees who are housed, boarded and clothed must be calculated according to the values so given, and the law lays down the values. After stating separately what is the daily value of free housing and free heating and lighting for each of three classes of employees, the highest value being 3 marks, or 1-10th of a penny, the President and Director present a table showing on what basis should be calculated the value of each of five daily meals. They state that for an employee of class A the first breakfast should cost 6 marks, or 1-5th of a penny, for an employee of class B 5 marks, for an employee of class C 3½ marks, and so on. Listed altogether are 30 different kinds of meals, of which the most costly is 21 marks, or 3/4d. Clothing is worked out with the same minute care. The employer, under a threat of fine, is required to make his return after mastery of all these figures. (There are a great many more.) Every employer knows that weeks, if not months, have been expended on compiling and printing this surprising circular, and knows also that the circular has no meaning whatever, because during the weeks or months the whole standard of values has changed, so that it is impossible, even in a cheap country, to house and feed an adult male on the 60 marks, or 2d a day, which the President and Director proclaim to be the maximum legal amount. The officials, to be fair to them, realise the difficulties which these computations create for normally educated citizens, because the circular ends with an example, the first part of which may be quoted textually: "Example: 900 marks wage, divided by 30, gives the quotient 30."

That is only one example. The *Berliner Tageblatt* lately reported that a large Government fund accumulated for house-building has disappeared without one house being built. While the officials were honestly administering a fund of unchanged nominal total, their nominal salaries had risen so much that they swallowed the whole capital up. The municipal regulations under the new House Rents Law make this occurrence comprehensible. The principle is that the houseowner gets in paper marks instead of gold his exact pre-war net rent. As the tenants live practically rent free, and are *de facto* owners of the houses, they are naturally required to pay management costs, taxes, repairs, and so on. The net rent falling to the landlord from a five-storey flat-house may be £2; the payments falling on the 15 to 25 tenants may be £8 or £10. The authorities have decreed that every single item in the administration and repair of a flat-house with such insignificant finances

THE BRITISH LINEN BANK.

shall be apportioned separately between the tenants; and that, though rents are usually paid quarterly, the landlord shall present every tenant with a separate monthly statement of every single liability. The landlord is compelled to calculate separately for every flat, according to its rent or floor area, the taxes, the drainage rate, the street-cleaning rate, the water rate, the garbage-removal rate, the ash-removal rate, the lighting of staircases, three different kinds of insurance, and, finally, the chimney-sweeper's bill. Each of these items, mostly paid quarterly, must first be reduced to months, and then apportioned between 15 to 25 flats, in proportion to the varying rents and floor areas. Further, the landlord is to demand in advance varying percentages of the estimated, but unknown, cost of each item. The chimney-sweeper's last quarterly charge in your correspondent's house was 105.70, at exchange then about 2s; and the 8d charge per month must be divided up between 23 flats, and a statement of the fraction payable by every tenant must be rendered to the tenant. Already there was a complicated and fearfully costly system of Housing Offices and Rent Conciliation Offices; but under the new law the authorities have seen fit to create yet a third organ, the Arbitration Office, with the special function of deciding whether the chimney-sweeper's eightpence has been correctly apportioned between 23 flats of varying rents and sizes. And, again, every citizen knows that this regulation, which took from July 1st until late September to prepare, is wholly meaningless, because most of the legal charges are limited to a fixed percentage of an unchanging nominal rent, and have therefore no meaning whatever since the last price-rise took place. A Minister lately expounded the rent-calculation system with approval, declaring that it was required by "social justice." If the tenant is to pay the exact administration cost, said the Minister, social justice requires that the accounts shall be exact. The manager of your correspondent's house, having laid in all the dozen commentaries and numerous housing ready-reckoners, goes about declaring that "Deutschland ist ein Tollhaus"—"Germany is a lunatic asylum"; and as he himself owns three houses worth £70,000—from which his income, as limited by law, must not exceed £7—he has not the least respect for social justice.

Other public authorities conduct their business on similar principles. Some accounts are worked out to 1 pfennig, which is the 1-3,000th of an English penny; and as no one has seen a pfennig coin since 1918, citizens must always pay several pfennigs too little or too much, and social justice is perverted. The income-tax bailiff appears (a concrete case) to distrain for 147 marks, or 5d, and explains that the debtor was not first asked to pay because the warning would have cost the State the postage fees. The comedy of the 1,000 mark forced loan to the telephone administration continues. The 1,000 marks were originally worth about £5; they are now worth 3s. But in its zeal for social justice the State keeps on paying 4 per cent., or 1½d. a year, interest; in its zeal for revenue it deducts from the 1½d. 10 per cent., or the 3-20ths of a penny; and in its zeal for accuracy it delivers to every creditor a special account and a special acknowledgment of payment of the annual 3-20ths of a penny tax.

That social justice would not revolt if the 3s debt and 1½d interest were repudiated, if the 3-20ths of a penny tax were remitted, and if the hundreds of bureaucrats who are

kept busy administering the Telephone Loan were put to useful work, no official seems to dream. The thinking citizen says that such minutely scrupulous social justice is out of place in a country where every extra official means extra deficits and currency depreciation, as a result of which hundreds of thousands of citizens are ruined. Newspapers report that, including the social-insured, 1,250,000 millions of Germans classed as "petty capitalists," mostly savers of the working-class, have been beggared. But the bureaucrats are remorseless. At present they are campaigning against alleged profiteers. Old women from the country are punished for selling eggs at 25 marks, the ground being that social justice and natural law have fixed an egg's price at 20 marks; and the Price-Testing Board of Upper Silesia, a telegram relates, suggests that persons who charge too much for eggs be sent to penal servitude in the mines for five years. Yet the citizen who borrowed £10,000 on mortgage and pays his debt with £250, is acclaimed as a wise man. Further, the Government continues to put heavy taxes on the unprivileged citizens in order to provide luxury for the privileged. This month, after railway fares have been raised 50 per cent., a first-class journey from Berlin to the Lake of Constance, which is the same distance as from London to Aberdeen, costs under 5s; and the *Frankfurter Zeitung* shows that it cost 55 per cent. more to send 200 lbs of apples by rail than to carry a passenger, with his hand luggage, first class for the same distance. The Government neglected to put up fares when it ought to have put them up, and, having been caught unawares by the new currency depreciation, it now declares that it cannot put them up too much at once. But Berlin theatres, which six months ago charged 200 marks for a seat, are now able to charge 1,500 marks; and the theatres, despite the increase, are full—the trains, naturally, are even fuller.

For the system above described nothing can be said. In principle the difficulties which the currency depreciation raises for State administration are precisely the same as the difficulties which it raises for private business. In degree, the difficulties are a little greater, because even the most vigilant State cannot adapt its charges to a varying currency as rapidly as the business man. The almost complete cessation of bankruptcies shows that business men have learned from experience to overcome currency depreciation obstacles. But the officials learn nothing, or rather, having the inexhaustible resource of the printing press, do not apply in practice what they learn. It is because business men have not the resource of a private note-printing press that they act with speed and intelligence, and leave social justice alone.

ITALY.—CENSUS OF POPULATION—SULPHUR AND SHIPBUILDING QUESTIONS.

(FROM OUR CORRESPONDENT.)

TURIN, September 30.

THE Central Department of Statistics publishes the final results of the Census taken on December 1, 1921. Population statistics at various dates are as follows:—

	Population.	Average Annual Increase per 1,000.	Inhabitants per Square Kilometre.
1770	16,477,000	2.51	57.5
1816	18,383,000	8.89	64.1
1848	23,618,000	3.95	82.4
1862 (January 1)	25,000,000	7.66	87.2
1901 (February 10)	32,475,253	6.00	113.3
1911 (June 10)	34,671,377	7.51	121.0
1921 (Dec. 1), old territory ..	37,276,738	..	130.0
Territory with the new provinces	38,835,941	..	125.7

The war and the influenza epidemic have not left very marked traces on the Italian population; the growth between 1911 and 1921 is not appreciably lower than the average of the best periods of the past. The density of population per square kilometre is increasing fast, and is a most potent cause of emigration in an agricultural country like Italy, which is not capable of absorbing the annual surplus of births over deaths.

In the new provinces acquired from Austrian Empire the population decreased between the two last censuses from 1,592,278 to 1,559,203 (2.08 per cent.), but the

decrease is very easily explained as a consequence of the war.

Two problems are being keenly discussed at present—sulphur and shipyards. Interested circles petitioned the Government with the object of obtaining Royal decrees in favour of these industries, which are said to be gravely hit by the economic crisis. Sicilian sulphur is not freely sold. All producers are obliged to consign sulphur to a compulsory Consortium, which fixes prices and advances immediately a provisional sum, settling accounts every year. At the end of 1921 the official price was 750 lire per ton, and the provisional advance 500 lire. Producers hoped that the residual 250 lire would be paid in due time, subject to a deduction of 90 lire for taxes and Consortium expenses. But for the whole of 1922 sales have been much restricted. The Louisiana producers are underselling Sicilian sulphur, and the menace is growing, thanks to better situation and better appliances of American sulphur mines. Stocks of 270,000 tons had been accumulated by the Consortium at April 30, 1922, and this stock, though now somewhat reduced, is obstructing the sale of new sulphur. The Consortium had continued up to September to accept new sulphur, making advances on it by means of funds accumulated in the past and of loans from the issue banks. But now banks have refused to go on with new loans; the Consortium in their turn had to stop advances on new sulphur, and producers, who cannot sell to the public, are obliged to stop production. To avert unemployment the Government has been persuaded to recommend to Parliament a Bill for a State guarantee of a loan of 120 millions lire, with which the Consortium would start a sort of sulphur-valorisation scheme. The old stock of 200,000 tons would be put aside and left unsold until better times and better prices.

The production would go on, and the Consortium, free from the care of the old stock, would endeavour to sell only the new production. The affair is a wild gamble on the continuance of the present high foreign exchange rate and on the probability of a pool with American producers. If the lira improves and American competition becomes keener, internal prices would tumble down and the bubble explode. The Chamber, however, has voted the Bill, which is awaiting discussion in the Senate. During the recess producers, growing impatient, have petitioned Government to sanction the State guarantee of the 120 millions loan by means of a Royal decree. Ministers and Under-Secretaries of State backed this unconstitutional request, the acceptance of which would cancel Parliamentary control of public money. In the face of a vigorous newspaper campaign started against the abuse of Royal decrees, the Government have not dared to issue the decrees.

Another decree, which is from time to time mooted in the public Press, is one which would aim at giving orders for from 35 to 40 thousand tons of steamers for goods and passenger service in the State-subsidised lines. In pre-war times Italy possessed 10 private shipyards capable of turning out 80,000 gross tons annually. They should have had plenty of work, for, as the mercantile fleet was 1,500,000 tons, the demand of new ships should have been greater than the production. But shipowners did not renew the fleet in the rational proportion of 1/15 every year; moreover, they preferred to buy old ships sold in foreign markets or to order more cheaply in foreign shipyards. The normal national production was limited to a few tens of thousands of tons. Practically the only shipyards which were sometimes busy with work were the Ligurian ones.

The war changed things. In 1918, and in the two years after the Armistice, shipbuilders screamed for Government aid, obtained it, and sank in the improvement of old and the building of new yards a sum not less than 250 million lire. To-day there exist in Italy 27 shipyards, with a total productivity of 250,000 gross tons. The fleet, it is true, has doubled to 3,000,000 tons, and should furnish a theoretical sum total of orders of 200,000 tons annually. But this figure is to-day purely theoretical, owing to the shipping crisis. Building has been begun on 74 ships for a total of 436,520 gross tons, but is proceeding only on 34 ships for 210,890 tons, mostly in an advanced state of construction. In a year the work in hand will be terminated, and no new work is forthcoming.

Shipbuilders are therefore clamouring for Government orders, to be equally distributed among all shipyards, old and new. As the number of 27 shipyards is evidently excessive, only the best equipped and best managed ones should survive, and the survival of the 12 or 15 best ones would be greatly beneficial to the shipbuilding industry and the nation. But the technically or financially weak yards die hard; and as they possess influence through their banking and political connections, they hope for a new lease of life, if only the State can be persuaded to give their orders to all yards, bad and good alike. These are the circumstances under which, during parliamentary recess, the Government is asked to issue a Royal decree placing 35 or 40 thousand tons of shipbuilding orders.

ROUMANIA.—THE NEAR EAST CRISIS—TIMBER TRADE BOOM—DEVALUATION RUMOURS—FOREIGN CAPITAL.

(FROM OUR CORRESPONDENT.)

BRASOV, September 25.

THE Near East crisis is causing much uneasiness in financial circles, as well as in public opinion, for everybody is aware that this country cannot remain an indifferent observer should the war be transferred to European territory. There is hardly another country for which the freedom of the Straits, from both a political and commercial point of view, would be of such an importance as for Roumania. Political events have naturally reacted on the financial situation of the country. Everybody is adopting a reserved attitude, with the result that the scarcity recently prevailing in the money market has been accentuated, and that the Bucharest Bourse is experiencing a marked downward trend. Foreign rates have undergone a slow, but steady, appreciation during September, in spite of the considerable increase of exports, the favourable effect of which has been thus more than counteracted by the unfavourable effect of the international situation.

While in the past the hopes of those interested in the improvement of the lei were directed to corn trade, their attention is now being attracted by timber trade, which, apparently, is going to enjoy within a short time an extraordinary boom. According to recent rumours, the Stinnes group will purchase large quantities of Roumanian timber for the purpose of carrying out the Stinnes-Lubersac agreement. The Hungarian market is nearly completely conquered by Transylvanian timber; the Hungarian State railways contracted an agreement with the Roumanian State railways, in virtue of which the former will lend to the latter a great number of railway trucks in order to accelerate the delivery of timber purchased in Roumania for the needs of the Hungarian State railways. The countries on the north coast of Africa are placing important orders in Roumania. A few weeks ago an important quantity of timber was shipped for South America—an event entirely without precedent. A rapid development of the port of Constanta, to the detriment of Galati and Braila, is to be expected, but Constanta requires much improvement in order to be able to swallow the traffic of the two other ports.

In the Press, as well as in banking circles, there is much talk about the alleged intention of the Government to devalue the lei to the proportion of 1:25—i.e., approximately the actual value of the gold lei in paper lei. Although it is certain that no Roumanian Government will attempt the impossible task of restoring the lei to its mint parity, still, it is hardly possible to believe in the accuracy of rumours of fixing such an unfavourable proportion as 1:25. The internal value of the lei is much superior to its external value, therefore a stabilisation on the basis of its present external value would necessitate a huge increase of inland prices, with all its detrimental consequences. Apart from this, gold standard could not be re-established, even if the note circulation be reduced to 1/25 of its present volume (i.e., to about 550,000,000 lei), and even if the gold stock of the National Bank be restored from Moscow, for the resumption of cash payments would result in the immediate depletion of these gold stocks by holders of notes. Even a gold exchange standard could hardly be maintained under the present fluctuations of foreign trade and international prices, so long as Roumania remains isolated. A devaluation of the lei is only

desirable if it takes place as part of a general European devaluation and stabilisation scheme, and if it takes into account the internal value of the lei, as well as the extent of improvement which may reasonably be expected in the near future.

Foreign capital continues to come into the country. The cement factory of Torda has been bought by a French group for 80,000,000 lei; the Berlin banking house of Bleichroeder intends to establish a branch in Roumania, according to the report of a local financial newspaper; the "Mok," a syndicate of several important Czechoslovak timber enterprises, has established a branch, and several big foreign timber firms intend to follow its example. Negotiations recently carried on with several English promoting houses concerning the participation of English capital in some big industrial enterprises, fell through, for English investors insisted on fixing the joint-stock capital in sterling.

A memorandum signed by every important oil undertaking of the country has been addressed to the Government, demanding the re-establishment of the freedom of the oil industry and the reduction of export duties. The Bucharest-Paris air line was opened a few days ago by the Compagnie Franco-Roumaine, for passengers, small parcels, and letters. A journey between Bucharest and Paris takes about 15 hours.

SOVIET-RUSSIA.—CROP OUTLOOK—PETROLEUM PRODUCTION—FINANCES.

(FROM OUR WARSAW CORRESPONDENT.)

THE statisticians of the different Government departments have tried to estimate the amount of this year's crops. Though the figures at which they have arrived differ sometimes widely, the results of their investigations can be summarised as follows:—Area under cultivation, 55–60 million dessiatines; yield per dessiatina, 50–55 poods; total crop, 2,750–3,300 million poods.

For supplying the rural population with corn, 2,560 million poods are necessary, divided as follows:—Food, 1,740 millions; seed, 520 millions; reserve, 300 millions. In estimating the crop at 3,000 million poods, 440 would remain for the rest of the population. Of this one-half goes to the Government as "corn tax," the remaining 220 millions could be sold on the free market. Last year only 100 million poods were available for this purpose, so that according to the data which are now available, an improvement in the supply of towns with food may be expected.

The statistics of petroleum production for the first half-year reveal a marked increase of the output, as shown by the figures below:—

	ROCK OIL PRODUCTION. (000's omitted.)		
	First Half-year, 1921.	First Half-year, 1922.	Increase in 1922.
	Poods.	Poods.	Poods.
Baku	79,470	92,827	+ 13,357
Groznyj	40,813	45,067	+ 4,254
Emba	761	3,962	+ 3,201
	121,044	141,856	+ 20,812

The output has increased by 20.8 million poods in comparison with the same period of last year. This improvement is due in the first instance to a greater quantity of wells which are being exploited actually. In this respect there is a steady upward tendency, as may be seen from the figures below:—

	WELLS IN OPERATION.		
	January, 1921.	January, 1922.	June, 1922.
Baku	804	1,133	1,170
Groznyj	88	160	162
Emba	8	33	38

The boring operations are equally showing signs of development. During the first half-year 1921 1,116 sashen have been broken up, while during the same period of 1922 this area was five times greater (5,655.2 sashen).

The Soviet Government is trying to put its new financial programme (see the *Economist*, August 12th, page 276-277) in execution by introducing high taxes. The revenues from this source were in June 62 times greater than in January. The taxes collected by the Central Government and by the local authorities, expressed in the new roubles

of the type 1922 (the new rouble equals 10,000 old roubles) amounted to:—

	Million Roubles.	Index.
January, 1922	45.1	100
February, "	104.7	232
March, "	279.2	603.5
April, "	589.9	1,038.0
May, "	2,298.0	5,084.4
June, "	2,811.8	6,234.6
July, "	937.7*	2,079.1
	7,050.2	

* Provisional figures.

Of this total 4,962.2 millions, or 74.4 per cent., were collected for the Central Government, and 29.6 per cent. for the local authorities. The revenues of the Central Government were divided according to the different groups as follows:—2,096.6 millions, or 42.2 per cent., Customs duties; 1,864.4 millions, or 37.6 per cent., direct taxes; 1,001.2 millions, or 20.2 per cent., indirect taxes. From nationalised undertakings and from other sources 6,773 millions were obtained.

The heavy increase of taxes enabled the Soviets for the first time to put the brake on the policy of paper inflation. The percentage of total expenditure covered with the help of the printing press amounted in January to 90.5 per cent., in February to 80.7 per cent., in March to 74.9 per cent., in April to 70.5 per cent., in May to 63.3 per cent. While in January only 9.5 per cent. of the whole expenditure was covered by other revenues than the issue of paper roubles, this percentage amounted in May to 37 per cent. This financial policy, however, had a very detrimental influence on the whole economic life. The high industrial impositions forced a great number of undertakings to stop work. The traffic on the railways decreased, the lack of a sufficient amount of currency caused a severe economic crisis. In consequence, the Government is obliged to resort again to the printing press for saving industry. Lately 5 million roubles have been brought to the Southern coal district (Donbas) for the payment of wages and the purchase of food. Great credits have been opened to the National Trusts, and important exemptions from taxes have been accorded to them. Russia affords us only one more example of the fact observed everywhere, that the return to a sound monetary policy is a very painful process.

AUSTRALIA.—THE NEW BUDGET—REDUCED TAXATION—QUARTERLY BANKING FIGURES.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 26.

THE Commonwealth Budget for the financial year ending June 30, 1923, shows that on an unaltered basis of taxation there would be an estimated surplus of £494,557, after including a sinking fund of $\frac{1}{2}$ per cent. on local war debt (inclusive of the war indebtedness to the British Government, for the reduction of which provision is also made on the scale arranged). The corresponding sinking fund for 1921-22 was $\frac{2}{3}$ per cent., and the difference of $\frac{1}{6}$ per cent. is equivalent to over half a million. With an estimated surplus of £494,557, and with an accumulated credit balance of £6,408,424 brought forward, together £6,902,981, the Government propose to reduce taxation, and make other alterations to a total extent of £3,200,000, leaving an estimated credit balance of £3,702,981 at June 30, 1923. A comparison of the estimated Commonwealth revenue and expenditure (excluding payments to the States) with the actual figures for the previous year reads as follows:—

	Actual. 1921-22.	Unaltered Basis. 1922-23.	Modified Basis. 1922-23.
Taxation	£ 49,678,842	£ 47,800,000	£ 44,850,000
Other revenue	15,218,204	14,718,250	14,468,250
Gross revenue	64,897,046	62,518,250	59,318,250
Deduct payments to States	7,035,535	7,155,000	7,155,000
Net revenue	57,861,511	55,363,250	52,163,250
Expenditure	58,071,414	54,868,693	54,868,693
Deficit for year	209,903	..	2,705,443

The remissions of taxation include £2,100,000 from the Federal Income-tax, £400,000 from Federal Land Tax, £100,000 from Entertainments Tax, and £350,000 reduction in duties on wire netting, fencing wire, galvanised iron, and traction engines, making altogether £2,950,000. To compensate the local manufacturers of wire, &c., for a loss of protection, they are to receive bounties estimated at £250,000, making up the total of £3,200,000. The changes in the Income-tax include a 10 per cent. reduction and a number of readjustments, the general exemption being raised to £200, and the tax on companies' undistributed profits being reduced from 2s 8d to 2s 5d.

With the remissions in taxation, the Budget is generally regarded as being intended for display, in view of the approaching general election, the means being provided by drawing on the accumulated surplus. This surplus has been built up by including in former years the earnings of German shipping in Australian possession during the war, to which any German claim was waived under the Peace Treaty, and by including last year the German payment on account of the army of occupation.

In addition to expenditure out of revenue, as above, loan expenditure for 1922-3 is estimated at £17,250,924, including £10,340,893 for soldier land settlement, war service homes, and other expenditure due to war. Loans to be raised are estimated at £10,087,952, part of which, according to the figures presented, will be raised by a loan of £4,000,000 in Australia, and by drawing on the general trust fund and Australian notes fund, and part by a London loan. The Commonwealth public debt at June 30, 1922, was £416,070,509, including £16,750,000 borrowed in London on behalf of the States. The total includes £367,574,753 war debt, of which £266,121,465 is held in Australia.

The quarterly average returns to June 30 of banking liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show an increase of £4,460,271 in deposits as compared with the previous quarter, and a decrease of £1,354,810 in advances (inclusive of Government securities). The movements are those usual after realisation of wool, wheat, and other articles, supplemented in the case of wool by the distribution in May of about $\frac{1}{4}$ millions sterling by the British Australian Wool Realisation Association to complete the retirement of its priority certificates. The following is a comparison of the principal totals with those for the previous quarter and the June quarter, 1921:—

	June Quarter, 1921.	March Quarter, 1921.	June Quarter, 1922.
Deposits—			
Australia	£ 218,936,020	£ 217,672,828	£ 219,600,338
New Zealand	53,699,629	44,866,839	47,399,600
Total deposits	272,635,649	262,539,667	266,999,938
Advances—			
Australia	192,742,752	183,675,755	182,758,449
New Zealand	61,112,085	52,415,359	51,977,855
Total advances	253,854,837	236,091,114	234,736,304
Cash items—			
Coin and bullion (Australia and New Zealand)	27,435,031	27,557,996	27,333,068
Australian notes	29,564,235	29,604,826	25,577,119
Legal tender notes of other banks (New Zealand only)	971,180	1,312,967	1,109,907
Total cash	57,970,446	58,475,789	54,020,094

As compared with twelve months ago, Australian deposits show an increase of £664,318, but New Zealand deposits a decrease of £6,300,029, leaving a net decrease of £5,635,711. Advances show a decrease of £9,984,303 in Australia and £9,134,230 in New Zealand, making a total decrease of £19,118,533, due largely to the reduction in trading overdrafts as the heavy stocks of imported goods held in 1921 have been realised, and also to the reduction of War Loan advances.

The principal figures (within Australia) of the Commonwealth Bank of Australia compare as follows:—

	June Quarter, 1921.	March Quarter, 1922.	June Quarter, 1922.
Deposits	£ 26,638,879	£ 22,628,567	£ 30,048,727
Savings Bank deposits	34,324,917	36,144,999	36,097,731
Discounts, loans, &c.	14,896,362	15,141,497	14,130,679
Govt. and municipal securities	33,640,763	34,693,610	34,760,870
Coin and bullion	1,857,556	2,207,552	2,349,869
Australian notes	4,922,840	2,299,336	4,730,492

These figures of the Commonwealth Bank are not included in the previous tables.

Letters to the Editor.

STABILISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am much surprised by your article under the above heading upon Professor Cassel's recent book. You make game, not merely of Professor Cassel's particular arguments and suggestions, but of currency and exchange stability as an ultimately feasible or desirable ideal. It appears to strike you as fundamentally absurd, as a shallow refusal to recognise the "dynamic" character of "unfettered economic and natural forces," and even if it could be realised, it would only have, in your opinion, "the doubtful advantage of giving us stagnation instead of chaos."

Surely this is to misconceive altogether the place of money in the economic system. Money is a measure, a standard of value; and stability is not only an appropriate but an essential attribute of any measure or standard. A stable standard of value is no more connected with stagnation or inconsistent with progress than a stable standard of length or weight or force. Nor is there anything ridiculous in the idea of ultimately realising it. Stability of the foreign exchanges was effectively realised before the war over the greater part of the world. Did this make for stagnation? Would "equilibrium" (whatever that may mean in this connection) have served us better? The idea of ultimately stabilising the commodity value of money is no more fantastic (though less familiar) than that of the re-establishment of gold standards. It would involve the arbitrary definition of the combination of commodities which the unit of money was to represent; but all standards involve such arbitrary definitions. The particular definition adopted might become unsuitable in the course of time, and we might decide to change it, as we sometimes change the standards of our weights and measures. The administrative difficulties of making such a standard effective would be great; certainly, but here there is some confusion.

Monetary stabilisation of any kind, new-fangled or old-fashioned, is not possible to-day, and will not be possible for several years. It requires as an essential condition some approach to "equilibrium" (I see your phrase has its uses) in international trade and international payments, to say nothing of internal finances, which is not at present within sight. This cannot be too strongly emphasised. It is premature to formulate in detail, as though they were immediately practical propositions, elaborate schemes for stabilising the European exchanges; and I have always regretted the serious attention given to such schemes at the time of the Genoa Conference. This has served to distract attention from such questions as Reparations, which must be settled first, to suggest that a settlement of these questions is not so very urgent, that we can make progress while we have them on one side, that the root of the trouble is some defect of the monetary mechanism to be set right by the monetary expert. A minor misfortune is that, when nothing comes of such projects, the unduly exalted monetary expert becomes

unduly depreciated as a monetary crank. Even as regards this country, it is in my judgment foolish to think of re-establishing an effective gold standard, either at the old parity or at a lower one, until we have seen what happens when we begin to pay our debt to the United States, and can judge more clearly the future trend of prices there. The only sensible monetary policy for the immediate future is "to wait and see."

But, when stabilisation of the exchanges becomes a practical proposition, the question of the stability of the commodity value of gold will inevitably arise. We shall have to reckon with the effect on the value of gold of a general return to the gold standard, which if "unfettered," might so seriously disturb price-levels, as to outweigh the advantages of exchange stability. Accordingly, no one proposes to have this economic force "unfettered." It is agreed on all sides that, when the world returns to gold standards, special measures must be taken, involving co-operation of the central banks, to prevent an undue appreciation of the value of gold. Since we thus mean to control the value of gold, the only issue appears to be whether we shall set about it half-heartedly and confusedly, or try to make a good job of it by having the definite objective of stability. Meanwhile, the practicability of such a policy is being tested by a unique experiment which is being undertaken in the United States. If the United States, with their vast accumulations of gold, succeed in preventing a great increase in their price-level during the next few years, they will go far to demonstrate the feasibility of making gold our servant and not our master. It is too early to judge the success of that experiment; the real test will not come until trade is more active. But it is certainly premature to dismiss the idea as impracticable. It is well to pour cold water on the notion that there is any monetary panacea for our economic ills; but this does not require us to deny that stability is "the proper goal of monetary policy."

Yours, &c.

H. D. HENDERSON.

Clare College, Cambridge, October 3rd, 1922.

GERMAN TREATMENT OF FOREIGNERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The misconduct and illegality of the German minor authorities in their relations with foreigners are a matter of discussion here. If abuses are not checked by publicity, they will probably be checked after a violent explosion, which nobody desires. In reporting it to the *Economist*, I bear in mind that the majority of British subjects in Germany in future will be business men. If complaints have not appeared before this, the reason is that nearly all British subjects now in Germany live in hotels, and have little or nothing to do with authorities. I say nothing about treaty obligations, because the offences complained of are all breaches of German law.

1. As a result of a violent anti-foreign agitation, local authorities have begun to discriminate against foreigners in the matter of property rights. Certain emergency laws give different authorities the right to expropriate, or restrict the use of, property. Instances—the right to expropriate goods, and to expropriate temporarily dwellings or parts of dwellings. The authorities, e.g., can expropriate scrap-iron, of which there is scarcity, and deliver it to consumers, paying the owner what is considered fair compensation; and on the same ground they can expro-

priate houses, flats, and single rooms, give them to other persons, and decide what is fair compensation. None of these laws discriminates against foreigners, and until lately no authority commissioned to execute the laws has discriminated. Lately, as a result of the agitation mentioned above, the housing office of Schöneberg, a large Berlin municipality, ordered a visitation of the dwellings of foreigners only, with aim of determining what foreign dwellings or part of dwellings should be expropriated, and on the basis of the data supplied to its officials ordered seizure of part of the foreign tenants' dwellings. Germans did not undergo the visitation. One British subject at least (but there are probably very few with their own dwellings in Schöneberg) received a written official threat to break into his flat if he did not tolerate this illegal measure. Naturally, he did not tolerate it, and he awaits the break-in.

That the ways of some housing offices are as corrupt as they are illegal is proved by numerous Press and judicial exposures. Before the threat against the British subject could be executed, an unknown person called at the flat, and promised that he would have the confiscation order rescinded on payment of from 75,000 to 100,000 marks. To prove his claim that he was in touch with the housing authorities, he gave details of the Housing Office document.

2. The police persistently break the laws at the expense of foreigners, and, therefore, of British subjects.

Without legal ground, they demand the appearance of foreigners at the police stations. In order to mislead the foreigners into the belief that the demand is enforceable, they misuse, if not forge, a subpoena form, erasing a part of the printed matter which shows that the form was intended for an entirely different purpose; and they also misuse the Police-President's printed signature, which is given in advance for the entirely different purpose.

They obtain foreigners' passports on false pretences, and even when the foreigners have full residence rights, acknowledged by all competent authorities including the police themselves, they stamp on the passports a declaration that the foreigner has no right to reside.

As a condition for granting lawful but not enforceable requests, they demand signed statements of income from foreigners. That is forbidden by German law, which makes income a matter of confidence between the citizen and the taxation authorities. The proper course for the foreigner is to give and sign the statement under duress, and to initiate a criminal prosecution of the police.

Foreigners on arriving at their German place of residence have the same obligation to register themselves (*anmelden*) as Germans. The police (with doubtful legality) refuse to accept registration without a permit from the housing authorities. The central Housing Authority in Berlin declares that it will not give this permit unless the applicant appears at 7 in the morning (in one case 7.30). An English lady known to me, who is staying six kilometres from the Housing Office, spent three mornings trying to get a permit. She is now living unregistered and "illegally," and she is liable to be fined. On my advice, she abandoned the attempt to register; the ground of the advice being that according to German judicial decisions (which are, of course, self-evident) reasonable facilities must be given for the fulfilment of a legal obligation.

I ought to say that, as far as I know, the police, though ignorant of or contemptuous of the laws, are extremely polite, and that the housing authorities, though still more ignorant of or more contemptuous of the law than the police, are very often rude and impertinent. I ought also to say that all British subjects get proper protection from their Embassy; that the German Foreign Office, even when appealed to by foreigners without diplomatic support, shows consideration, and has at least twice admitted that the police and housing offices are law-breakers; and, finally, that no foreigner need fear to appeal to a German Court. But as it has been proved that individual measures result only in stoppage of individual illegalities, a little publicity will do good. The above statements are provable under oath; the more serious charges are provable by production of official documents.—I am, yours truly,

ROBERT CROZIER LONG.

Berlin, September 19th, 1922.

Books and Publications.

LABOUR POLICY AT HOME AND ABROAD.*

THIS volume is a survey of the political Labour movement and of Labour legislation, in the broad sense, in Great Britain, France, and the Scandinavian countries, with special reference to the last two decades. It is historical, descriptive, and analytical and informative rather than polemical. On the whole, it is as detached a piece of work as one is likely to get, and much more accurate than most volumes of the kind.

The book falls into two parts. The first deals with the history of the Labour movement and social economic conditions in France, Sweden, Norway, Denmark, and Great Britain. The second is a survey of Labour problems, and deals with the legal position of trade unions, conciliation and arbitration, the minimum wage, the legal regulation of hours of labour, unemployment, joint industrial organisation, and the nationalisation of industries in France, Great Britain, and the Scandinavian countries.

There is no work covering precisely the same ground so far as this country is concerned, though Beer's "History of British Socialism" and Webb's "History of Trade Unionism" cover more adequately than Mr De Montgomery the history of British Labour. On the other hand, there is no similar volume devoted to the range of questions with which Mr De Montgomery's book deals. The work, therefore, is to be commended on that account. But what renders it of particular value to the British reader is the history of Labour and of Labour problems in certain Continental countries. In his treatment of the Scandinavian countries Mr De Montgomery writes with a certainty of touch and a thoroughness which marks him as an expert. The pages devoted to France are almost equally good. The volume is the only work in English traversing the ground covered by Mr De Montgomery and British economists, publicists, and students of Labour problems are under a heavy debt of gratitude to him for this volume. It is, however, a pity that at least Germany and Italy should not have found a place in the book.

There are, of course, grounds for criticism. The Labour party would not agree, for example, that it "miscalculated its own strength" at the last general election when it put 361 candidates into the field. It would explain that there is a considerable value in propaganda fights. Again, it is a defect of the book that whilst it brings many sections down to the end of 1921, as, for example, unemployment, the story of the organisation of the British Labour movement, which entered on a new phase with the scheme of co-ordination between the political and industrial sides which came into operation in 1920, stops short with the end of war. There will also, we imagine, be French critics of his treatment of the recent history of the Socialist movement in France. But the author has, on the whole, succeeded in a difficult task, and Socialists and non-Socialists alike have great reason to thank this non-Socialist writer for his comprehensive survey of Labour movements and problems.

Mr De Montgomery, it should be noted, was incorrectly described as a Frenchman in last month's survey. He is a native of Sweden.

THE RUSSIAN OUTLOOK.—A BANKER'S VIEW.

It is to be hoped that the remarkable survey of Russian conditions which occupies the first six pages of the Monthly Review issued by the London County and Westminster Bank will be widely read not only by bankers, but by politicians. The author's name is not given, but his marshalling and analysis of evidence shows a clear and powerful mind, while his literary style is admirable. Beginning with a brief and eminently sane review

* "British and Continental Labour Policy." By B. G. De Montgomery. (Kegan Paul, Trench, Trubner, and Co., London, 1922)

of the early years of Bolshevik government, he proceeds to discuss, with knowledge and acuteness, the state of public opinion in Russia before and after the Genoa and Hague Conferences. "The gradual and scarcely perceptible transfer of power" from extremist to moderate began in 1920 is still going on, and "is the dominant factor in the present situation." The desire of all classes for stability has caused the number of people who saw anything to be gained by a successful counter-revolution, even if it were possible, to diminish out of sight the new economic policy which expressed and accelerated this process. "Both in the country and in the town, and more especially in the country, people began to take a philosophical view of the Government, and only sought patiently by continuous imperceptible pressure to remove the obstacles in the way of reconstruction. People ceased taking the Government seriously, just as they ceased to contemplate overthrowing it." But at Genoa things were complicated by the fact that the first effect of the new economic policy had been to cause the rouble to fall twenty times, and that a grave transport crisis, caused by difficulty in coping with relief supplies, had arisen in the early months of 1922. The extremists argued that the advent of foreign capital would produce an even greater crisis, and place the Government in the hands of world finance. Genoa failed, with profound disappointment in Russia. "There can be no doubt that the bulk of Russian opinion desires a settlement. The necessity of a settlement, sooner rather than later, is dictated by the inexorable logic of an economic situation in which Russia hastens from one crisis to another, and in which accumulating process of disorganisation unceasingly stimulates pressure upon the Government." How far the moderates are being pushed away from Communist theory by this pressure of public demand for a settlement is shown by the fact that in Moscow a new code of law is being prepared "based upon the legal systems in use in civilised countries."

CARGO INSURANCE.*

MERCHANTS and underwriters have, as Arnould points out, "adhered with persevering tenacity to the old and hardly intelligible form" of marine insurance policy, which is indeed "an absurd and incoherent instrument." Mr Lea applies similar epithets to the three hundred-year-old policy which is still the prescribed form. It appears, he says, "an absurdly inadequate instrument for a precise contract. In several places it does not mean all it says, and in many more it does not say all it means." The results of litigation have, of course, been to attach a definite meaning to the absurdities and incoherencies. The contract is precise, but the real import of the words cannot be learned without reference to books. Mr Lea has added to the considerable number of works already existing, but he has added, at a nominal price, an exceedingly concise and practical handbook, which should serve very well its purpose of affording everyday guidance to shippers. As the author recognises, the subject is very wide. He does not pretend to present an exhaustive study, but, within the limitations indicated, he has done well. Avoiding the mistake of some "practical" writers, he does not forget to indicate the fundamental principles upon which daily business proceeds. In a passing reference, Mr Lea observes that "the Hague Rules, 1921, mark a definite, equitable, and standard contract between shipowners and cargo owners, fixing the responsibility for the proper delivery of goods upon shipowners, and excepting only loss through the overwhelming and unavoidable perils of transport. Legislation on the basis of the Hague Rules is certain in this country and probable in many other countries."

The text of the Marine Insurance Act, 1906, and trade clauses in general use are given in appendices. These are about equal in length to the body of the book. The volume altogether runs to a hundred pages. It is an example of well-compressed information, but would, perhaps, have been improved if a page or two could have been found for a table of contents and index.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 18.	October 19.

From the standpoint of public interest, the principal feature in the Stock Exchange markets this week is the ascent of the War Loan to a trifle over par. This was accomplished through the investment of a good many thousand pounds in the stock on behalf of people who, noticing that the price will be quoted ex dividend in three weeks' time, reasonably considered it cheap at the equivalent of 97½ ex dividend. Gilt-edged stocks, as a whole, are comparatively quiet, the international complications affecting them but little. No alteration was expected this week in the Bank rate. Further improvement in the War Loan is suggested as likely, in view of the known desire on the part of several big borrowers to place loans in the London market at prices which they are scarcely likely to obtain unless the War Loan should be standing better than it does to-day. Curiosity attaches to the result of the recent conversion offer by Victoria; details have not yet reached the market.

With the German mark down to the neighbourhood of 9,000, German bonds of all kinds have naturally been flat, and the Threes fell to 20s. French bonds pursued a somewhat erratic course, keeping, however, to the harder side on balance, in which display of strength the French Railway issues led the way. Peruvian Corporations, after their shake-out on profit-taking sales, recovered substantially from the worst. Chinese bonds are better in places, though the 8 per cents., Vickers and Marconis alike, fell back to 71, after being about 2 points higher. Brazilians have taken a turn for the better, and what are termed the purely investment stocks of the foreign market show a harder tone.

The rise in the price of coal and the possibilities of reduction in railway fares have made no difference to subdued bullishness in the Home Railway market, where the Heavy stocks started a recovery that spread into other sections. Once more the market has been expecting, almost daily, news in regard to the grouping arrangements in connection with the Southern lines. Certain of the Home Railway pre-ordinary stocks are better. Grand Trunk Pacific 4 per cent. debenture further advanced. Mexican Rails are marked up. Argentine Rails strengthened again, on anticipations of the present six months providing better dividends than those distributed for the corresponding period last year. Leopoldinas recovered materially, and other Brazilian Rails are steady.

The rubber share market further advanced, on a stiffening in the price of the raw produce to 8½d per lb. Oil shares remain hesitating, by reason of the uncertainty felt in regard to the way in which the effect of the petrol cut is likely to make itself felt upon the next dividend announcements. Banking shares are inclined to ease-off, but in the insurance market, a mild amount of investment demand caused a few

prices to harden. Shipping shares are rather better; P. and O. deferred remained at 295, on the declaration of a 6 per cent. tax-free dividend, making 12 per cent. for the year, the same as that for the previous period. The iron, coal, and steel market is hardening up a little, though in armaments there is next to nothing doing. Gas stocks went better; electric lighting shares are virtually unchanged. The introduction of the 700,000 *Daily Mirror* shares was effected this week on the basis of 3s, the price subsequently improving to 3½. A *Daily Mail* debenture issue was over-subscribed promptly. Amongst the stores, catering and provision shares, Whiteleys are better, on the expectations of increased dividends. Aerated Breads, at 36s, show improvement, on the proposed acquisition of the Lockharts' business. Barkers, Harrods, Lyons, Liptons, and others of this class are maintaining their prices with noticeable strength. Some of the motor shares are better, in consequence of the advertisement afforded by the near approach of the show at Olympia. Something of a feature has been a sharp rise in Associated Portland Cements. Textiles, while enjoying a good deal of market activity, are not greatly changed on the week.

Kaffirs recovered much of the buoyancy which forsook them when the Near Eastern trouble drew so close. Most of the dealing is professional, but there is also a small amount of public attention paid to the market by those who recognise the manner in which working costs are coming down and the profits are, automatically, advancing. De Beers and other diamond shares, together with Rio Tinto and other copper shares, have hung upon the advices of Paris, being higher on the week. Russo-Asiatic, which touched 10s 6d, rallied 1s, and then went back to 11s. Mexico Mines came into active demand at higher prices. Broken Hills received a moderate support from the Colony, and a few of the Middle East mining shares are slightly better.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

1914 ..	173,141,036			

Lung-Tsing-u-Hai Railway.—Five per cent. gold loan of 1913, principal and interest being guaranteed by the Chinese Government. The authorised amount is £10,000,000, of which £4,000,000 has been issued. This is an offer for sale of £50,000 in bonds of £20 at £13 17s 6d per bond, redeemable at £20 from 1923 to 1952. The total loan is specially secured as a first charge on the railway, and it is stated that the interest has been met to date. It is not quite clear why the offer should have been made at this price, a marking having recently been recorded in the Supplementary Stock Exchange List of 5½ per £100. This offer, however, works out at £69 7s 6d per cent., and in view of prevailing conditions in China, it may be that the moment is not opportune for the offer.

The Daily Mail Trust, Limited.—Authorised share capital £1,600,000, in ordinary shares of £1 each, with 2s paid up. The loan capital is stated to be £1,600,000, consisting of 7 per cent. guaranteed first mortgage debenture stock, which is now offered at 99 per cent., repayable at 107 per cent. by 10 equal annual drawings, beginning in 1927 and ending in December, 1936. The company reserves the right of redemption after January 1, 1928, at 110 per cent., on giving three months' notice. A further £900,000 of loan capital ranking *pari passu* to this issue can be created. The security offered for these debentures is varied, though specifically secured by a trust deed. Firstly we have a block of 400,000 deferred shares in Associated Newspapers, Limited, a security not mentioned in the official London Stock Exchange Lists, and therefore difficult to place a market value upon. Secondly we have the uncalculated capital of the trust, "representing £1,440,000." This, of course, though excellent contingent cover, is not a very tangible security for a first specific charge, mainly depending upon the financial status of the holder and the power to transfer. Thirdly there is an unconditional guarantee by the *Daily Mirror* Newspapers, Limited, and *Sunday Pictorial* Newspapers (1920), Limited, "which between them," we are told, "are subscribing for 70 per cent. of the share capital of the trust." The guaranteeing companies have given reasonable undertaking that they will not issue prior charges, and profits of the interested companies, which are clearly set out, show that if the popularity of publications can be maintained the necessary services for the present issue can be easily found. As regards the security for capital, the position is not so clear. There is a brief statement as to the value of net assets of the three companies. These are £2,733,214 for Associated Newspapers, Limited, and £1,063,432 for the two guaranteeing companies. Surely, if only in the interest of setting a good example to concerns which are not quite so prosperous, the main items comprising these figures could be given, together with some manner of the basis of valuation. At present we are quite in the dark. It would be also interesting to know why the promoters decided to approach the public by the way of "an offer for sale" instead of the usually more informative prospectus. However, the issue was heavily oversubscribed, and no doubt those applicants who paused to consider these little deficiencies in respect of detailed information decided that the admittedly generous yield offered was sufficient compensation.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.			
	Price Last Week.	Latest Price.	Rise or Fall.
War 5½ % 1925-28 ..	94½	94½	..
Loans 4½ % 1925-45 ..	96½	97	..
4½ % 1927-36 ..	99½	100	..
4½ % 1929-42 ..	100	100½	..
Funding Loan 4½ % ..	83½	83½	..
Victory Bonds 4½ % ..	87½	87½	..

COMPANY MEETINGS, &c.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

SUCCESSFUL RESULTS—BONUS PROSPECTS.

The annual general meeting of the Clerical, Medical, and General Life Assurance Society was held, on the 6th inst., at the chief office, St. James's square, London, Mr Francis E. J. Smith (the chairman) presiding.

The general manager and actuary (Mr. Arthur Digby Besant) having read the circular convening the meeting and the certificate of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: In connection with our investments, I should like to read to you an extract from a speech made in this room by Sir John Mowbray at the declaration of our bonus in January, 1887: "With respect to our assets, the securities, as you are told, have all undergone the usual careful examination by the directors. Now, that is a matter, I need not say, of the most profound importance. The directors themselves in the month of November in every year carefully see to every security the society possesses. Every title-deed, every voucher for every debenture, every security for every mortgage of property, whatever it may be, is produced to a committee of directors. The assets exist, the directors know them to exist; the actuary knows them to exist. The actuary does not pledge himself to calculations based upon an hypothesis that there are certain assets in existence, but he says they are there, and we ourselves know it also. We not only vouch them, but we tell you in estimating them that you may go to the share list of the Stock Exchange, and test the value at which we state them in our assets."

When our chairman made that speech in 1887, there had been a wide discussion in the Press over the failure of a certain insurance office, and, as you are all aware, there has been great uneasiness amongst the public during the past few months as to the sufficiency of the Parliamentary safeguards for controlling the administration of insurance companies' funds. Acts of Parliament certainly can do much for the protection of the public, but even more essential is the duty of every member of a board of directors to see that the control of the assets does not pass into the hands of any one man. This doctrine of collective knowledge and collective responsibility preached so forcibly by Sir John Mowbray 35 years ago is held with equal conviction by his successors on the board to-day, and it forms the keynote of our investment policy.

The first item on the assets side of the balance-sheet is the mortgages. These show an increase of about £140,000, and we have been fortunate in obtaining some very good mortgage securities during the past year. No penny of interest was in arrear on June 30th last. With regard to capital also, the history of our mortgages is remarkable. During the whole of the war period when Stock Exchange securities suffered such serious depreciation, we did not lose a single penny on our mortgage investments. We thought it advisable in 1916 to set aside a small mortgage reserve fund, but no claim has ever been made upon it, and this fund now constitutes a precautionary reserve for future emergencies. For any realised loss on our mortgages we have to go back 16 years to 1906, and I find from our records that we then wrote off the sum of £221 on a small mortgage which proved to be insufficiently secured. With that exception, we have not incurred any capital loss on this class of security during the past half century.

The value placed upon our Stock Exchange securities are those adopted in our balance-sheet of last year, at the date of the close of our latest bonus period. They were then valued at middle market prices, less accrued interest. I am sure you will be pleased to know that, with one trifling exception, every item of these securities shows an increase in value this year, though credit is not taken for such increase in the figures before you. The directors and auditors, however, have certified that the excess over the book value of our Stock Exchange securities on June 30th exceeded £206,000. Since the close of the financial year on June 30th, some

</

The report and accounts were unanimously adopted.

He would make no forecast for the current year, but he hoped none would leave the meeting in an unduly pessimistic frame of mind. They had got increased railway rates, commencing from April 1st last; the output of coal already showed healthy expansion, and there were now no coal contracts showing a balance on the

The report and accounts were unanimously adopted.

The Chairman, in moving the adoption of the report, said : The balance-sheet represents the results of the first year's working since the scheme of arrangement came into effect, and it is now possible to make some comparison in the accounts. The sundry creditors on February 28 last stood at £16,074, as against £32,578 in the previous year. Last year we took the liquid assets and liabilities in San Paulo at the rate of 93d to the milreis, but we included a provision for fluctuations in exchange of £75,000. At February 28th last exchange stood at 73½d, with the result that on the other side of the balance-sheet you will note an item "Exchange suspense account, £104,029," this amount representing the difference between 93d and 73½d on the surplus of our liquid assets over liabilities in San Paulo. Since that date exchange has again declined by another penny, but it must be remembered that the chief item in our liquid assets represents debtors for land sold, and that these debts are collectable over a period of six to eight years, so that it

LAND SALES.

"Improvements, house property, plant, &c.," stand at £70,477, but you must understand this is not the actual figure expended, as it has always been our custom to write off a considerable amount against the land sold from time to time. The debtors for lands sold, loans for house construction, &c., amount to £299,431, as compared with £178,444. This amount would naturally be larger, except, as I told you above, the exchange has been taken at 7½d, as against 9½d. These debts are collectable over a period of six to eight years, and carry interest at 6 per cent. for the land sold and 10 per cent. for loans for house construction. The cash on hand is £91,252, as against £95,544 last year.

The machinery for the carrying out of the scheme has been that a company called the San Paulo Mortgage and Finance Company, Limited, has been registered, with £100,000 ordinary capital, which has all been subscribed by this company, and £95,000 of this money has been lent back to this company against the security of a certain amount of our book debts. The San Paulo Mortgage and Finance Company, Limited, has issued and will continue to issue debentures for the purpose of supplying cash for loans for house construction, and we apply from time to time for such amounts as are necessary. The procedure is that the party purchasing a

FUTURE PROSPECTS.

Mr. H. E. Cradock seconded the motion, which was unanimously carried, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

It has been the good fortune of my predecessors to present to you balance-sheets showing large and, generally speaking, progressive profits. At first blush it may be thought that I should enlist your sympathy in presenting to you in the first year of my chairmanship a report of a less favourable character; but, in spite of the figures that are before you, I do not propose to apologise for the results, but rather to congratulate you on having weathered the storm in such a satisfactory manner—a storm which has disturbed the industrial world during the last two years. Those of you closely connected with industry, and especially with industries involving the carrying of stocks, will appreciate the enormous anxiety of those in control during the early months of the year 1921. I believe I am right in saying that few business experts in the industrial world had foreseen the world-wide collapse in values that occurred in that period. Now, what was our position? We have a huge business, engaged in supplying a staple article of food to a very large proportion of the population in this country and abroad. Our business does *not* consist in buying a commodity to-day and selling it to-morrow. We import from overseas the raw materials, consisting of the nuts and seeds necessary for the manufacture of margarine, and we have an

extensive organisation dealing with the crushing, extracting and refining of these materials.

MARKET FLUCTUATIONS.

We have large factories for this purpose, and in order that we may be able to fill the weekly requirements of our customers, it is necessary that provision for keeping these factories supplied must be made *months in advance*, and that sufficient margin be allowed to meet any emergency. Therefore, we are bound to buy ahead, and are consequently always subject to the fluctuations of the market. In this case the abnormal fall affected us greatly. It must not, however, be forgotten that there was a great readjustment of values, as an aftermath of the war. Fortunately, markets have now come down to more normal levels, and such great fluctuations are not likely to occur again in the future. We are therefore in a better position with regard to raw materials, but we have still the fluctuations of the foreign exchanges to reckon with.

The final figure in the accounts is a balance on the credit side of £106,566, from which accrued dividends are deducted on the front page reducing this figure to £106,064, not a big sum compared with former amounts carried forward, but we have the reserve fund of £500,000 untouched, and we thus start with £600,000 to the good in the following year. In the course of the year all the factories in which we are interested have been visited by one of the directors of your company. They are now fully equipped, and have been brought well up to date. The directors have given unremitting attention to the effecting of economies and the adoption of new methods of manufacture, by which superiority is secured. I believe that in this respect we are not behind any of our competitors; in fact, our great experience places us *above* a great many of them.

A GOOD AND EXTENDING TRADE.

We have succeeded in retaining all our connections, and are doing a good and extending trade in the various countries in which we and our associated companies are working. I will not trouble you by mentioning the various brands which are held in such high estimation in the many countries in which we operate, but I will again allude to the "Blue Band," with which you are all familiar, and which, after having been in the market for some years, is continually adding to its popularity. We have had no strikes to contend with, and are pleased with the way the factories have been conducted, and we cannot praise too highly our staff, which has given us every assistance in difficult times. In conclusion, I feel confident that the character of your company as a profit-earning concern, proved by the results in former years, has been maintained unimpaired. Since the beginning of the present year we have seen the adverse conditions under which it commenced gradually change for the better, and although it has taken some time for these improvements to develop, we are fully satisfied with the results obtained during the last months, which, I am glad to say, are being well maintained. We have not deemed it advisable to recommend a dividend on the ordinary shares. At the same time, I think it is only right for me to point out that we have paid the full dividend on the preferred ordinary shares, resulting from splitting the old £1 ordinary shares, and on the bonus shares, which is equivalent to no less than 2½ per cent. on such original £1 shares.

Sir Walter Townley seconded the adoption of the report, and it was unanimously agreed to.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £55,000,000 in three months' Treasury Bills dated from Monday to Saturday, October 9-October 14, were opened on October 6, 1922, and the total amount applied for was £78,775,000. Tenders for Monday to Friday bills at £99 7s 9d about 84 per cent. and above in full; Saturday bills £99 7s 11d and above in full. The average rate of discount for Treasury bills was £2 8s 3.57d. The amounts allotted were as follows:—In bonds, nil; in bills at 3 months, £50,000,000.

British South Africa	927,065	U.S.A.	114,700
		British India	64,244
Total value of imports of gold	978,252	Total declared value of exports registered in the week	181,190

Messrs Samuel Montagu and Co. write on October 5th, as follows:—

GOLD.

A large amount of gold came on offer, the greater part of which was taken for the United States of America, India being only a moderate buyer. Gold to the value of \$8,800,000 has

arrived in New York—\$4,500,000 from Rotterdam and \$4,300,000 from London. The Government of India have announced the removal of all restrictions on the export of wheat and other grains, pulses and flour. This should tend to encourage remittances to India. It is rumoured that in the course of some trading negotiations between Jugo-Slavia and Czechoslovakia the question of establishing some sort of a currency union between those two countries was discussed—such a rapprochement seems reasonable in view of their proximity and many common interests. For nearly 50 years past the three Scandinavian countries modelled their currencies—gold standard, &c.—upon the same system, and also passed identical legislation regarding bills of exchange.

CURRENCY.

We have received the following interesting communication relating to Indian copper nickel coinage, to which reference was made in our letter dated September 21st:—"Copper nickel alloy money, being of a yellowish colour and liable to tarnish, is not difficult to counterfeit; but coins of pure nickel metal are not subject to tarnish, and, being of a bright white lustre, are practically proof against successful counterfeitures. Moreover, while copper nickel is a comparatively soft alloy, and consequently easy to work, pure nickel is very hard, thereby offering almost insuperable difficulty to successful counterfeiture, and, in addition, pure nickel being subject to magnetic attraction, spurious coins composed of alloys can be immediately detected. As a fact, we believe that the Government of India has in contemplation the replacing of their copper-nickel coinage by pure nickel coins, with the object of preventing counterfeiture."

SILVER.

Again the market has shown a lack of vitality. As supplies continued to be scanty, the tendency was inclined to be upward during the early part of the week, but the absence of any eagerness to buy from India and China rendered prolonged improvement in prices out of the question. A slight scarcity of spot silver—brought about to a large extent by the covering of bear operations—has maintained a small premium here or in the East to speculate, owing to the difficulty of obtaining a clear lead as to the future, is the chief reason for the recent inactivity of the market. The Eastern trade, which used to be a stimulant, has for a long time past been absent. From demonetised East African coins. We understand that these consisted of rupee currency struck by the German Government for use in its East African possessions, and that the supply is now nearing its end.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Sept. 15, 1922.	Sept. 22, 1922.	Sept. 30, 1922.

NOTICES.

The directors of the Standard Bank of South Africa, Limited, have appointed Mr Francis E. King to be chief inspector, in place of Mr J. T. Pringle, who has retired after 45 years' service with the bank.

Barclays Bank, Limited, announce that they will open on Monday next, October 9th, new branches at Victoria road, New Brighton, under the management of Mr J. L. W. Solley, and at 75, High street, Deal, under the management of Mr E. G. Wilkinson.

A branch of the London County Westminster and Parr's Bank, Limited, was opened on October 2nd at 5, Royal parade, London road, West Croydon, under the management of Mr E. H. Worsfold. Hours of business, daily 9 to 3, Saturdays 9 to 12. A branch is now open at 13 Institute place, Albert road, Silvertown, E. 16, under the management of Mr A. P. Warr, with Mr W. J. Lemmon as clerk-in-charge.

Lloyds Bank, Limited, announce that a new branch of the bank was opened on October 2nd at 12 Royal parade, Finchley road, Temple Fortune, N.W. 11, under the management of Mr H. F. Scott, of the Golder's Green branch. A branch of the bank is now open at 149 High street, Clapham, S.W. 4, under the management of Mr B. M. Rumbold.

Mr J. A. W. Gain, late of Barclays Bank (Overseas), Limited, and formerly general manager in Spain of the Anglo-South American Bank, Limited, has been appointed manager of the Export Credit Section of the Department of Overseas Trade.

Tenders for Rs.100,00,000 six months' Indian Treasury bills were opened on September 28th. The total amount applied for was Rs.4,27,90,000. Tenders at Rs.97 15a were allotted about 75 per cent. and above in full. The average accepted rate was Rs.97 15a 3p per cent., equivalent to a rate of discount of 4.1793 per cent. per annum. Intermediate bills will be offered for sale in India during the week at Rs.98 1a per cent., and tenders were received on Friday, October 6th, for Rs.150,00,000 six months' Treasury bills for issue during the week commencing October 9th.

† Free of tax. (k) United Steel Companies' interim preference dividend to December 31, 1921

distribution is made, the directors also declared at the same time a further and final dividend of 4 per cent., less income-tax, on the preference shares in respect of the year ended December 31, 1921. The above dividends were paid on July 8, 1922, and absorbed £91,000, leaving a balance to the credit of the profit and loss account of £90,408 2s 1d, which will be carried forward to the current year's account.

TRAFFORD PARK ESTATES, LIMITED.—Profits for the year ended June 30, 1922, amount to £60,563, which, together with the balance brought forward of £98,790, makes a total of £159,359 available for distribution. The directors recommend the payment of a dividend at the rate of 8 per cent. on ordinary shares, which will absorb £52,000, and the balance of £107,359 is carried forward. The profit and loss account of this company is an informative affair, and stands out in striking contrast to some of the abbreviated documents now being issued. Gross receipts are shown under six headings, while expenditure is analysed and divided into eleven items. The report mentions that Lord Ashburton, who is the largest shareholder and who has been a director of the company since its formation, has retired from the board in favour of Sir D. Drummond Fraser.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated gross production of crude oil for the month of September was 77,604 barrels, equal to approximately 11,000 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 10,100 tons, in addition to which a further 2,500 tons have been sold elsewhere, making the total deliveries for the month 12,600 tons.

STEUA ROMANA (BRITISH), LIMITED.—Crude production of the Steaua Romana, Bucharest, during the month of September was 21,630 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, September 27, 1922, amounted to 1,200 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions remain unsettled, with further heavy rains, which hindered agricultural operations. Fortunately most of the wheat crop has been secured, but there still remains a good deal of grain to be carted. Harvesting is proceeding in Scotland, and the wheat crop shows fair condition. Firm conditions prevailed at market, and a fair business transpired. Native wheat is in fairly liberal supply, but quality variable and often inferior. Suitable milling grades rule at 39s to 42s, with best dry samples 44s

per 504 lbs free on rail. Imported descriptions were firm to again dearer, Manitoba qualities being sparingly offered. No. 1 Northern Manitoba 56s, Australian 53s, No. 2 hard winter 52s, all ex ship to arrive, and Rosafie 64 lbs 54s 6d landed terms. The cargo section proved generally quiet, although rather more inquiry was experienced for Manitoba and Pacific descriptions. Prices, however, ruled fully steady in the absence of any pressure to sell. Steamers of Pacific on passage sold at 47s 3d, No. 1 Northern Manitoba, October-November, also December 15th shipment from Pacific seaboard, at 46s 9d per 480 lbs. A feature in the international position is the continued heavy crop movement in North America, while crop reports from the Southern Hemisphere are very favourable. Visible Flour quieter, and prices of home milled were reduced, particularly Canada sack. London standard straight run milled were reduced is 6d per holds 30s 6d, patents 43s 6d to 44s 6d, all English straight run 38s 6d per sack delivered to London bakers. All English country straights 32s to 34s per sack delivered up. Foreign makes quiet, but prices fully steady to occasionally is dearer. Manitoba patents to 39s, all per 280 lbs ex store. Maize ruled irregular for Plate ex ship sellers 39s, ditto landed 41s, No. 2 mixed American 36s 9d ex ship, 38s 3d landed, No. 6 yellow round African 37s 3d ex ship, 39s 3d landed. The cargo section showed more activity, and prices I.a Plata, October shipment, sold at 35s 9d to 36s 3d, October-November 35s 3d, and November-December 35s 6d per 480 lbs. Barley firmly held, and there is a good demand for imported descriptions. English ranges from 35s to 52s per 448 lbs, free on rail, as to sample. Of imported, Australian Chevalier quoted 51s

to 6os, Californian 39s to 45s per 448 lbs ex store, Danubian 33s 6d to 34s 6d, and Persian 3os 6d, both ex ship, per 400 lbs. A good business transpired in European cargoes. Some 20,000 tons Persian changed hands November at 26s 6d, and December to March shipment 25s 9d, Danube-Kustendji afloat 31s 9d, while Karachi parcels October-November made 31s per 400 lbs. Oats firm, and imported again dearer. Native ranges from 23s to 3os as to sample per 336 lbs, free on rail. Of imported, Plate f.a.q. quoted 28s 3d, ditto clipped 3os, No. 2 white clipped American 38 lbs 28s, ditto 36 lbs 27s 6d, and No. 2 Canada Western 33s 6d, all landed per 320 lbs. Oatmeal in fair demand at late rates.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated October 5th, is as follows:—Pig-iron : Cleveland foundry pig-iron is still in demand for the United States, and although the strikes there are settled, it will be some time before they return to normal. No. 3 Cleveland G.M.B. is maintained at 92s 6d for forward and mixed numbers. East Coast hematite pig-iron is round about 90s per ton. Manufactured iron and steel : The recovery in the steel trade is very slow indeed, and it takes works all their time to keep going even at the present limited rate of output. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £11; steel rails, £9 10s. Iron ore : No change is to be reported in iron ore. Business is scarce and slow.

Our Sheffield correspondent writes:—The local trade position is somewhat brighter, as the number of orders coming in is increasing steadily, although none of them are for bulk quantities. Conditions as regards work continue uneven, and there is not enough to go round, but a good deal of business is believed to be on its way. As the winter progresses, therefore, a steady decrease of unemployment with a corresponding absorption of idle plant can be counted upon with some certainty. The heavy steel branches are more active than was the case a few months ago. Engineering is not bringing much work to Sheffield, and the shipbuilders want practically nothing. The British railways are still holding off, but their requirements are known to be large, and an embarrassing rush of sudden orders on a big scale is feared. Makers of basic steel are fairly busy, and there is much activity in steel strip and rolled steel of the cheaper kinds. A scarcity of basic billets is mentioned. The alloy steel trade is badly hit by the new American tariff, but any further depreciation of the British currency in America may bring the prices of our material within the means of buyers in that country. The foundry trade continues very quiet, nor is the motor industry in a flourishing state. Collieries are giving out good contracts for equipment and tools. A good demand is reported for steel for the drills used in gold mining industry. Indian trade has lately come to a sudden stop. Rather more is doing with South America and South Africa. The pig-iron market is gathering strength. The silver and electro-plate branches are busier than they have been for two years, chiefly on orders in connection with the coming Christmas season trade. Shopkeepers and export merchants are buying on a fairly liberal scale. The cutlery branch has also improved. The demand for house coal is so quiet that summer prices still obtain, and large quantities of seconds quality are being sold at figures which yield no profit to the merchants. Coke is in strong demand. The home price is 20s at ovens, and anything up to 25s for export. Steam coals are going freely to the Continent. Best South Yorkshire steams are 21s at pits, and best Tynes 24s.

Our Glasgow correspondent (writing on Thursday) says:—
 Steelmakers are credited with having made several concessions this week in the prices of plates and sections, specifications for which on home orders are very scarce. On export account, however, demands for these sorts of material is rather more general, but buyers are slow to act, covering only immediate wants from time

to time. It is calculated that not more than one-half of the productive power of the steel plant in the West of Scotland is in operation, and a larger proportion of that idle is being wholly dispenished for good, the purposes for which it was laid down being no longer in force, or ever likely to be, in the opinion of those concerned. Bar iron and steel bar makers are quieter than they have been at any time for a couple of years past. On the other hand, several of the more important bridge and general structural engineers are fairly busy with both home and export orders, and their prospects are encouraging. Wagon and truck builders are well employed, as are black sheet makers with light gauges, and mainly on shipment account. A good business is passing in steel tubes, in bolts, nuts, and rivets. Scotch pig-iron is moving away freely—to the United States, and despite the increase to the number of blast furnaces blowing, stocks are not accumulating. At yesterday's meeting of the "ring" market sellers were naming 105s a ton for Scotch No. 3 g.m.b. f.a.s. Glasgow, while No. 3 Cleveland was called 95s f.o.b. Middlesbro', and mixed numbers East Coast hematite 92s 6d f.o.b. Middlesbro'. A good tone rules in the coal market, the export side of business being active.

Our Cardiff correspondent writes:—The position on the coal market has been better than it was last week. The improvement evinced towards the close of last week has been maintained, and buying generally has been more active. There has been very little alteration, however, in market quotations, and the following are the current prices:—Best Admiralties, 26s to 27s; seconds, 25s 3d to 25s 9d; best drys, 28s to 28s 6d; best black veins, 25s to 25s 6d; Western Valleys, 25s to 25s 6d; Eastern Valleys, 24s to 25s; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 14s to 15s; anthracite big vein, large, 55s to 57s 6d; anthracite machine-made cobbles, 65s to 70s; anthracite French stove nuts, 70s to 72s 6d; rubbly culm, 12s 6d to 13s; coke for export, 35s to 37s 6d; inland blast furnace coke, at ovens, 25s to 26s; patent fuel, 26s 6d to 28s 6d; pitwood, ex ship, 26s to 27s 3d. In the tin-plate trade, the market has been a little more cheerful this week, largely as the result of an improved demand from the Near East, and prices are a shade firmer at 18s od. basis I.C., f.o.b.

MANCHESTER, October 5.

MANCHESTER, October 3.—The tone of the market this week has been slightly better, chiefly on account of the more favourable news from the Near East. Merchants, however, are still nervous, and in certain quarters business continues to be restricted, as a result of the financial stringency, which is still acute. Favourable reports have been received relating to the trade outlook in India, and towards the end of the week rather more cloth offers have been about for Calcutta. Lighter fabrics have attracted some attention for Madras and Karachi. Operations for China have been confined to sorting up lots, chiefly in fancies. For the outlets of Central and South America a moderate turnover has taken place. There has been no activity worth mentioning in home trade circles. Yarn quotations continue very irregular. Sales of importance in either American or Egyptian qualities have been few and far between. Comparatively little has been done in shipping yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market retains all the recent strong features, and although it cannot be said that business is really brisk, there is, in the aggregate, a fair amount passing. Spinners and manufacturers are obviously adopting a waiting policy in the hope that wool values will come on to a more reasonable level, and they are looking to the auctions which open in London next week to give them a definite lead. The very high level of prices established at the opening sales in Australia and in South Africa came as something of a shock to importers, and there is still a feeling in some quarters that current prices cannot be maintained in face of the large weights of wool to be marketed during the next few months. However, there is undoubtedly a strong world demand for the best combing merinos, and if London is firm, it seems that users will have to follow the market or stand aside completely. It is largely a question whether the consumers will pay more for the best fabrics, for if wool continues to sell as it has done recently there is not the slightest doubt but that the price of the manufactured article will have to be brought into line. Meanwhile, warp 64's tops are quoted here to-day at from 5s to 5s 1d, and while the higher figure cannot be made with freedom, it is doubtful if many topmakers are prepared to accept less than 5s. Fine cross-breds are firm, with a fair amount of business passing, but there is not much doing in the lower qualities. Spinners are still busy on old contracts, and firms engaged on the production of Botany mixture yarns are especially active, most of them wanting anything from 16 to 18 weeks for delivery of new orders. There is more doing in the finer counts, and some big orders have been placed for 2-48's out of 60's quality. The piece trade presents no new feature, the principal difficulty at the moment being to book new business on to-day's basis of yarn quotations.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It can now be said that the new Australian season has opened in good earnest, and, judging from the private cables received in Bradford and London, a most optimistic note is sounded in selling circles. A well-defined policy of wool disposal appears to have been formulated; selling brokers are not to flood any centre with a surplus of raw material which the trade is not ready to absorb,

and in that way it is hoped that current values will be fully maintained, if not further improved. Of course, growers and selling brokers view the whole position from a different angle from those interested in the use of the raw material for manufacturing purposes. The former are out to sell at the best prices possible, and the latter in buying at what they consider to be reasonable figures. The writer has always contended that one end of the trade cannot suffer without the other being sympathetically affected. The great slump of 1920-21 would never have occurred if due attention had been paid by wool users to important principles. For greasy merino wool to be sold in London at from 6s to 9s was in itself an indication of something much worse to come. Income-tax assessors are staggered with the colossal losses incurred by wool merchants, topmakers, spinners, and manufacturers in 1921. Income-tax officials need to be brought to realise the meaning of the fact that in February, 1920, greasy merino wool, which in pre-war days would not have realised more than 20d per lb., was sold at 9s 1d per lb, and the former price was one which could be regarded as economically sound, whilst the other was brought about by abnormal conditions. Merino wool values are again getting out of hand, for fine wool is not intrinsically worth what it is fetching in the markets of the world to-day, and attention is drawn to this fact in the hope that users will not take any further steps which will finally result in another slump being brought about.

The general state of the wool textile industry at the present time is such that no single section can stand any extensive decline. Every further upward movement in wool values will only encourage another catastrophe, in which hundreds of firms who had a very great struggle to turn the corner during the last slump without calling together their creditors will be brought to grief. In view of the fact that there is well on towards 2,000,000 bales of new merino wool in sight, prices for this class of raw material are quite high enough.

In making the above statement, it is not being forgotten that a very large consumption of merino wool is proceeding, but even that is not of itself sufficient to justify a further advance. Though for a long time the raw material has appeared to be setting the pace, what can be realised for fully-made goods is the real deciding factor. It is quite correct to say that spinners and manufacturers are experiencing a very real difficulty in getting new business at prices which will cover what has to be paid for tops and yarn. In spite of the improvement which has undoubtedly taken place, the manufacturing end of the trade is not responding willingly to the increasing prices, particularly for fine wool. More attention needs to be paid by the public to medium and fine crossbred cloths. If a stronger demand were to develop for these, a remarkable effect would eventually be produced upon the raw material end of the trade, for with a saner demand for merinos and a stronger call for crossbreds, the very adjustment in prices which is so urgently needed would be brought about, this without any adverse influence upon aggregate consumption. The lower qualities of wool go largely into hosiery fabrics, medium and coarse crossbreds having their normal outlet in serges which in pre-war times went in large quantities to Central and Eastern Europe.

Next Tuesday another series of London sales will commence, during which buyers will have an opportunity to be in attendance for three weeks. A good, healthy market is expected, but there is nothing to justify any further advance whatever in merinos.

VEGETABLE OILS AND OILSEEDS.

In sympathy with dear seed, and consequent upon supplies being inadequate to meet demand, raw linseed oil has continued firm, with values somewhat higher round £38 to £38 10s for spot and £37 for October-December. A large business in September oil is reported, principally on the covering of speculators caught short, but consumptive demand, both home and export, is by no means great. There are indications of a further shortage of oil for October in oil in the near positions at present. Very little seed, however, is available for the mills. Arrivals have been slightly better, but the quantity of linseed on passage to the United Kingdom shows a further decline, and is at the low figure of 15,100 tons. The quantity afloat for the Continent is 61,700 tons. Rather more interest has been evinced in forward positions, and values have advanced to £32 15s, January-February, all ex Hull mill. After a fair trade done in both crude and edible cotton oils at advancing prices, the market is again inactive. Crude Egyptian

quotes £34 10s, and ordinary refined (soapmakers' grade) £35, ex Hull mill. Soya bean and other soft oils are quiet, and only a small business is passing at about unchanged rates.

In the oilseed section, old crop Plate linseed is very firm, and at Hull is quoted up to £18 10s spot, and £18 to £18 5s for October-November shipment. Trade in new crop hangs fire, current value being round £16, January-February loading. Calcutta linseed has again been in good demand for London, £19 10s being paid for afloat and £19 for shipment. Black Egyptian cottonseed (new) has been done at £9 15s to Hull, and White Brazilians at £7 5s to Liverpool. The Continent has paid £10 12s 6d for soya beans, October-November shipment, but crushers here show no interest in this article.

The world shipments of linseed from January 1st to September are 983,465 tons, as compared with 1,089,625 tons in the same nine months last year. These include to the United Kingdom 134,225 tons from India and 181,900 tons from Argentina—together, 316,125 tons, against 447,775 tons; to the Continent, 100,350 tons and 352,000 tons respectively, together 452,350 tons, against 486,850 tons; and to North America, 215,000 tons from Argentina, against 155,000 tons. The total shipments of Plate linseed to date are thus 748,900 tons, against 1,023,800 tons, a decrease of rather more than 25 per cent. The shipments (Plate and Indian) to the U.K. and the Continental total 768,475 tons, against 934,625 tons, a decrease of 166,150 tons. The shipments of cottonseed (Egyptian and Indian) for January-September to the U.K. were 268,270 tons, and to the Continent 13,400 tons; together, 281,670 tons, against 227,430 tons.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

On the average, prices at Thursday's Bermondsey auctions were steady to firm. Fractional advances of 1/4d. to 1/2d. were noted in several classes. Cows were steady at last prices, with calf also firmer in seconds, which advanced 1/4d. per lb. Firsts were sold at last prices. Wools realised 4s 10d to 8s 6d, and hogs 3s 2d to 9s 3d, both prices indicating slight firming up.

The tone of the foreign hide market is firmer, and \$5 1/2 is now being paid in the River Plate for frigorifics; Liebig's have sold Fray Bentos ox at 9 1/2d. f.o.b., the rise in Liebig's hides having been quite 1d per lb. during the past month. Latest cables from New York report the Chicago hide market as firm, with best heavy packers now selling at 2 1/2 cents.

The attention of the allied trades has this week been directed to the Shoe and Leather Fair at the Agricultural Hall, Islington. The attendance has probably been a record one, as visitors from all parts have been noted, including the Continent and the Colonies. The demand for sole leather is reported to be good, and tanners have done big business. Prices have been very firm in view of the rising hide market, and little in the way of bargains has been secured. American and Canadian sole was little offered, as the spot demand is improving, and the exchange makes business difficult. Offal has done well, and large parcels of cheap dry hide bents have changed hands.

Holders of upper stock have secured orders at advancing prices, the American position being very firm indeed, as cables from the U.S.A. have reported advances of one or two cents per foot. Box calf has sold in large parcels, whilst the demand for glacé kid has also improved.

Boot manufacturers appeared to be busy at the Fair, and some of them reported good orders from overseas. Caution, however, has been the key-note all the week, and even the war cloud hanging over the land has not affected prices very much. Generally speaking, the outlook is regarded with more confidence.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 6.

SUGAR.—With an improved demand, mostly for white sugars, quite a fair amount of business was effected, and prices are 6d to 1s per cwt higher on the spot. Messrs Tate and Lyle's cubes, 55s 6d to 56s 6d; crushed, 53s 6d; granulated, 49s 9d to 50s 3d; pulverised, 52s 3d; caster, 52s to 52s 6d; finest, 54s 3d; yellow crystals, 44s 3d; pieces, 34s 6d to 39s 6d for yellows, and fine white, 45s. Granulated, November-December delivery, 49s 6d. Glebe K granulated, spot, London, 49s; November-December, 48s 6d. Crystallised West India steady at 41s to 44s 9d, according to sample; muscovado quoted 33s to 37s. American granulated, spot, London, sold, 48s 9d to 48s 10 1/2d; afloat, 22s, c.f. and i., London. White Mauritius, spot, 46s 3d to 46s 6d; Brazilian, 46s 6d; white Java, spot, 47s to 47s 3d; fine, 48s 3d; afloat, 19s 6d, c.f. and i., London. Belgian crystals, October-December, 19s; granulated, 19s 1 1/2d, f.o.b. terms, Antwerp, Dutch granulated, November-December, 20s 9d, f.o.b., Amsterdam. Czecho-Slovakian granulated, November-December, 21s; cubes, 24s, f.o.b., Hamburg. Cuban basis 96 per cent., October, quoted 17s 6d; Dutch, No. 17 standard of Java, October, 18s 3d. Brazilian basis 96 per cent., October, 17s; and ditto basis 80 per cent., 8s 6d, c.f. and i., U.K. Terminal market firmer, with a fair amount of business. White, December, sold, 20s 6d to 21s 1 1/2d and 20s; May, 20s 9d to 21s 4 1/2d and 21s 1 1/2d. Cuban stocks stand at 333,400 tons, against 1,187,500 tons same time last year.

COFFEE.—Business pursued a quiet course, but prices on balance show little or no alteration. Nairobi, fair to fine bold, sold, 98s 6d to 111s 6d; Uganda, bold, 90s to 92s. Future delivery market remained in a slow state.

COCOA.—Market quiet, on account of former terms. Trinidad plantation, sold, 65s; Grenada, fine, 53s; Accra, 41s. Butter quiet at 1s 7d per lb.

TEA.—Indian auctions embraced some 51,000 packages during the week, and all grades up to 1s 3d per lb were actively competed for at full to dearer prices, while others encountered a firm market. 16,000 packages Ceylon were catalogued. Brisk competition was experienced, and common kinds sold at higher rates, good medium to fine being fully maintained.

RICE.—Market steady, but trade moved quietly. Two stars, spot, 15s 3d; October, steamer, 13s 10 1/2d. Broken descriptions quiet, but held steadily. Rangoon beans, spot, 7s 3d. Japanese peas, afloat, sold, 29s; September-October, 25s 6d; December-January, 23s 6d to 24s, and 23s 3d.

SPICE.—Pepper in quiet request, but prices ruled steady. Fair black Singapore, spot, 33d; October-December, steamer, 33d; Aleppy, spot, 44d. Tellicherry, 43d. White Singapore, 54d; Muntok, ditto, 6d; October-December, 53d. Zanzibar cloves, spot, 1s 4d; October-December, 73d. Pimento, spot, 2d. Flake tapioca, spot, 23d, all per lb. Fair Penang seed pearl tapioca, spot, 19s. Sago flour, October-December, 12s. Desiccated coconut, spot, 34s 6d; October-November, 34s.

FRUIT.—A steady, but somewhat quieter tone governed the market for currants. Gulf quoted 83s to 88s; Vostizza, 90s to 98s. Sultanias steady, but rather quiet. Smyrna, good average, quoted 145s; fine to choice, 160s to 170s. 357 tons Valencia raisins were offered in auction, and fully 260 tons sold at full rates to 10s per cwt advance for the finer qualities. Choice quarters sold 140s to 148s; extra choice, 158s. Muscatels, medium to good, sold, 115s to 122s 6d; loose, 95s to 115s. Dates easier for old crop Siar, on spot, but a large business resulted, some 50,000 boxes being disposed of at 18s. New crop, first tide, Siar, sold 20s; Halloween quoted 30s, and Khredowie, 27s per cwt.

JUTE.—After showing a firmer tendency in the early part of the week the market reacted and disclosed some irregularity, while business proceeded quietly. First grade, October-November, Continent, sold, £34 5s to £33 10s; November-December, £34 15s to £33 17s 6d, and £34. Lightning grade, October-November, £31 15s; and November-December, £32 5s to £32. Hessians steady, 10 oz, spot, 35s 6d; September, steamer, sold, 34s; 8 oz, spot, 25s 6d; September-October, 25s; A twills, spot, 80s 6d; September-October, 79s; B, spot, 67s; October-December, 67s; salts, spot, 62s; sugars, 77s 6d; flour, 77s 6d.

HEMP.—Manila steady, but trade ruled slow. Small sales include J grade, October-December, at £31; K, quoted £30; L, £29; M, £28; G, £34. New Zealand dull. H.P.F., spot, £33 10s; forward, £32 10s; fair, spot, £32; and forward, £31. Italian P.C., spot, £60. African sisal, No. 1, G.E.A., October-December, quoted £35; and B.E.A., £34 10s.

SHELLAC.—Market quiet, with forward positions unsettled and lower. T.N., spot, quoted 28s; October, sold, 25s; December, 250s to 245s, and 250s.

COPRA.—Market quiet. F.M.S. Straits, September-November, Rotterdam, sold, £22 12s 6d; October-December, £22 17s 6d; November-January, £22 18s 9d to £23. Ceylon, October-December, quoted £24 5s. Java, £23 7s 6d; mixed, excluding Padang, £22 5s. South Sea Islands, £22 5s. Dutch East Indies, sold, £23. Cebu quoted £22 5s. Palm kernels steady, quiet. October-December, Liverpool, sold, £16 5s.

RUBBER.—Market steadier on balance, and quite a fair amount of trade was done during the week. Standard crepe and sheet, spot, sold, 84d to 85d and 85d; October, 84d to 85d; November, 84d to 9d; December, 84d to 9d; January-March, 84d to 9d; April-June, 94d to 9d. To New York, standard sheet, European estate, October-November and November-December, sold, 88d to 9d, c.f. and i. terms. Fine hard Para, spot, quoted 10 1/2d; soft, fine, 10d; and Caucho ball, 7 1/2d.

MENTHOL. spot, 31s; October, Continent, sold, 26s 6d. Japanese peppermint oil, spot, 7s 4 1/2d; forward, 6s 5d; aniseed, spot, 2s 3d; forward, 2s 1d; slab camphor, spot, 3s 7d; crude, 3s 4d per lb. Japanese wax, spot, 80s; forward, 74s per cwt.

OILS.—Linseed market closed firm. Spot, net, naked, 39s; October, 38s; October-December, 37s 3d; January-April, 33s 3d. Rape dull. Crude, spot, nominally 41s; refined, 43s. Cotton steadier. Crude Egyptian, spot, 34s; common edible, 43s; deodorised (in barrels), 47s. China-wood firmer. Hankow, spot (barrels), 64s 6d; shipment, 63s. Coconut quiet. Ceylon, spot, 38s; October-November, 36s 3d; Cochin, ditto, quoted 41s. Soya quiet. Oriental barrels, October-November, 34s 6d. Japan fish quiet. October-November, cases, 20s. Cod inactive. English, spot, 29s to 30s. Ground nuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 53s. Turpentine unsettled. American, spot, 104s; November-December, 104s; January-April, 105s 3d. Rosin firm. American, grade B, 15s; G, 15s 6d; H, 15s 6d; N, 16s 9d; W, 19s 6d; WW, 21s. French, F/G, 15s 6d; WW, 18s 3d per cwt. Petroleum steady. American standard white, spot, 1s 2d; and water-white, 1s 3d per gallon.

OILSEEDS.—Linseed quiet, but tone firm. Bold Bombay, afloat, £20 15s. Small Bombay, ditto, £19 15s. Calcutta, afloat, sold, £19 10s to £19 15s; September-October, £19 5s to £19 and £19 10s; October-November, £19 to £19 2s 6d. Plate afloat, £18 5s;

National Provident Institution,
48 GRACECHURCH STREET, LONDON, E.C.3.

October-November, £18; January-February, new crop, sold, £15 15s. Rapeseed dull. Toria, October-November, quoted £17; real bold Ferozepore, October-November, quoted £16 12s 6d. Cottonseed quiet. Egyptian black, October, sellers, £9 18s 9d, and white, £9. Bombay, October-November, quoted £8. Gingly quiet. Chinese, new, October-December, Continent, £22; large Bombay, October-November, £21. Castor, Bombay, October-November, sellers, £16 10s, to Hull. Groundnuts steady. Coromandel, machine-dried, October-November, £19 15s; ordinary, £19 5s; East African, £18 5s; Nigerian, £19 5s; bold Bombay, December-January, £18 15s. Chinese, November-December, £19. Soya beans, Manchurian, October-November, £11 15s; new crop, November-December, £10 7s 6d per ton.

METALS.—Tin opened the week with a firm and active tone, and fairly liberal offers were readily absorbed at full to firmer rates, especially for distant positions. Sales comprised standard, cash, up to £164 7s 6d; October, £164 10s, and three months, £165 10s. On the following day the tendency was again dearer, although subject to the slight irregularity. Standard, cash, reached £165, and three months, £166. By the middle of the week a reaction occurred on heavy selling pressure and a lack of demand. Standard, cash, sold at £163 12s 6d; October, £164 5s to £163 12s 6d, while finally at £163 12s 6d; three months, £165 2s 6d to £164 7s 6d. At Thursday's market, after opening easier, an improvement set in. Standard, cash, sold at £163 to £163 12s 6d, and in. Standard, cash, to £164 15s, while finally registered at £164 10s. At Friday's session moderate dealings took place, and values ruled rather firmer. Cash sold at £164 to £163 15s, and three months, £165 to £165 5s, while finally at £164 15s. English ingots, months' at £165 to £165 5s, but in the absence of undue selling desire little interest; but in the absence of undue selling desire values were tolerably steady. Business included standard October at £64; November, £64 7s 6d; and three months, £64 12s 6d to £64 8s 9d. Prices since showed a declining tendency under the influence of lower American advices, together with a slow demand and anxious sellers. At Wednesday's meeting sales were concluded in standard October at £63 5s; December, £63 17s 6d; and three months, £64. At Thursday's market the tone was easier, and a good business transpired in cash at £63 2s 6d to £62 17s 6d to £63; and

three months at £63 15s to £63 10s to £63 12s 6d. Copper proved a quiet and easier market at Friday's session. Standard, early November, sold at £63 2s 6d to £62 17s 6d, and three months' £63 10s to £63 5s. Electro, £71 5s to £72; best selected, £66 to £68; strong sheets, £96; wire bars, £72. Lead firm, at £25 to £24 2s 6d, to position. Spelter dearer, at £33 to £32 7s 6d, according to position. Antimony, ordinary, £27 to £29 10s. Aluminium steady. Home £100; export, £105.

TALLOW.—Messrs Colchesters and Woolner write on October 4th as follows:—The tallow market was steady during the week, and prices are partly 3d dearer to-day. Inferior sorts again commanded the wharves, amounted to 19,482 packages, showing a decrease during the month of 978 packages. At auction to-day 1,965 cask mutton: Fine, 41s; good to fair, 40s 6d to 40s; dull to dark, 39s 1 3/8s 6d to 37s; dull to dark, 36s 6d to 34s 6d; sweet, 41s. Presen shipment from Australasia: Mutton, fair coloured, 48 degs., 39s and mixed, 43s, c.i.f., London, 37s. The market letter is unchanged. Town tallow, 34s 6d per cwt. Rough fat, per 8 lbs, 1 1/4d; melted stuff, 24s 6d per cwt. Quotations are:—Town, 33s 6d net cash naked, ex works. Country: Frail casks, 33s; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 34s 6d to 33s 6d. Bone fat: White, none; pale, none; benzine, 30s 6d; melted stuff 29s 6d, f.o.b.

a lower rate than had been expected, but no effect was produced on market quotations.

	Oct. 13, 1922.	Oct. 6, 1922.	Sept. 29, 1922.	Sept. 22, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	2½ ..

The Bank Return showed a decrease of £630,000 in the circulation, an increase of £4,000 in the stock of gold, and a consequent increase of £634,000 in the Reserve. Government and Other securities dwindled by £5,375,000 and £6,885,000 respectively, chiefly at the expense of Other deposits, which declined by more than 10 millions. The currency notes return dated October 12, 1922, showed an increase in the total notes outstanding of £254,000 to £291,396,600, which includes £1,551,600 for notes called in but not yet cancelled. The fiduciary issue is £240,695,000, or £69,293,400 below the maximum.

Further contraction is shown in the statement of the average weekly balances for September of the clearing banks, printed in detail on a later page. In the table below we compare the aggregate for nine English banks with the figures for previous months:—

(Million £'s.)

	June, 1921.	Dec., 1921.	March, 1922.	June, 1922.	Aug., 1922.	Sept., 1922.
Capital and reserves	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	57.7	57.7	57.7	57.7	57.7	57.7
Deposits (incl. undiv. profits, &c.) ..	1,768.4	1,818.6	1,746.9	1,755.2	1,688.4	1,660.6
Total liabilities	1,942.0	1,990.8	1,919.9	1,928.3	1,854.6	1,826.4
Coin, notes, balance at bank, and cheques in course of collection ..	265.1	273.5	245.8	251.3	239.1	233.2
Money at call	38.0	105.7	102.5	113.0	105.0	104.4
Investments	335.9	343.3	329.7	412.0	414.4	405.8
Discounts	346.2	424.3	350.5	346.2	305.8	295.9
Loans and advances	815.4	762.3	746.2	723.3	714.3	711.3
Cover for accept., premises, &c. ..	8.14	90.7	82.2	80.5	76.0	75.8
Total assets	1,942.0	1,990.8	1,919.9	1,928.3	1,854.6	1,826.4

There has been a drop of £95 millions in deposits in three months, and in the same period cash has fallen by £18 millions, discounts by over £50 millions, and advances by £12 millions. The drop of £41 millions in deposits in August has been followed by one of £28 millions in September, the principal declines on the assets side being £6 millions in cash, £9 millions in investments and £10 millions in discounts, while advances were £3 millions lower.

THE STOCK MARKETS.

Markets have responded to the better political outlook, and the public is showing more disposition to do business. War Loan has been up to 100½, and Conversion Loan has improved. German bonds have been weak, but French bonds have hardened. Home Rails are better, with improvements in the Heavies and Undergrounds. Rubber shares have risen on a fresh advance in the price of the raw material, but the oil market is dull. A feature of the industrial market has been a big rise in British and Argentine Meat shares, on the offer to purchase the ordinary shares at 65s and the preference at 32s 6d. Shipping stocks are harder, and there is some inquiry for banking shares. Kaffirs have been active on support from the Cape, and diamonds have been strong.

THE COMMODITY MARKETS.

The commodity markets have benefited from the improvement in the foreign situation. Buyers have displayed more interest in prices for cotton yarn and cloth, and there has been increased inquiry for piece-goods for India and China. A general revision of wool quotations has followed the upward movement at the London auctions, and a feature has been the keen American demand for wool. Pig-iron is scarce, owing to American demand, but the Continent is taking little. Our Glasgow correspondent reports a few additional contracts for new steamers and the relighting of furnaces. Improvement in the Sheffield steel trade is mainly in cheaper qualities, and the main industries of the city are said to be still in a bad way. South Yorkshire collieries are busy on

export account, and are obtaining a large portion of the trade with Germany. In South Wales the improvement in the coal market has been fully maintained, and there has been a general rise in quotation for large steam coals. Near East inquiries are responsible for an advance in tinplate prices. Timber prices are showing a slight upward tendency. The hide and leather markets are firm, but oils and oilseeds are quiet. Detailed reports from our trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

Operations in the foreign exchanges have again been overshadowed by the Near East crisis, and until this is definitely out of the way very little improvement in the activity of the markets can be expected. The outstanding feature of the week has been the fluctuations of the German mark, which on Monday had a phenomenal fall, from 9,700 to 12,700, one of the main causes of this violent depreciation being the fact that Germany was obtaining foreign currency to purchase raw materials and also grain necessary for domestic purposes. On Tuesday the market was 12,800-13,000. On Wednesday, however, owing to a partial clearing of the political atmosphere in the Near East the rate improved to 11,500-11,700, and yesterday, following the announcement that the German Government was instituting restrictions to check speculation, the rate went back to 10,100, but a subsequent reaction left the closing price 12,200-12,400. To-day the market is 11,500-11,700, showing a slight improvement on yesterday's rate. In regard to the American exchange, the dollar value of sterling has risen to 4.43, no doubt in sympathy with the general improvement in the political situation, and to the fact that the opinion prevails that the previous fall had been somewhat overdone. The French franc, after various fluctuations, is now 58.45, the rate having been remarkably steady. The Belgian is 63.05, after having been 63.78 on the 11th, and no explanation appears to be forthcoming in this connection. The lira has been round about 103 for most of the period under review. Holland has risen slightly, and is now about 11.40. Switzerland has created a new record, having moved from 23.60 to 23.80. The peseta rate has been maintained at about 29.05. In the Scandinavian exchanges there appears to be very little business; Norway has, however, fluctuated violently, and is now 24.63, whilst Sweden and Denmark are respectively 16.62 and 21.78. The Finnish rate is down to 192, but the market is not an active one. Austria, after falling to 350,000, is now back at 333,000. The Polish mark stands at 48,000, showing a depreciation of 8,000 during the week. Prague, 122 on the 10th. Belgrade shows no change, being steady at 270. The drachma is 170, and the Turkish pound 730. It is rumoured that the exchange restrictions in Greece have been completely removed, but official confirmation is lacking at the moment. Roumanian lei has appreciated to 705. Amongst South Americans, Valparaiso is 31.70, Rio is 6½, and Buenos Aires is 44.00. With grain shipping in this particular exchange is broadening out to some extent, and the value of the Argentine dollar has parity, but big crop movements might materially change the position. The Eastern exchanges have kept fairly steady. The rupee is 1s 3½d. Business conditions still recognised that no definite trade revival can possibly occur until international conditions become more stable, and a final settlement of the many Continental difficulties is arrived at.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 7, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	19,153	Permanent charge of Debt ..	2,139
Amount borrowed	12,617	Interest on Debt	26,824
Taken from Exchequer Balances ..	5,093	Supply Services	7,900
	36,863		36,863

Receipts from Property and Income-tax amounted to £9,137,000, against £7,240,000 in the first return of the same quarter last year. Customs yielded £2,031,000,

against £3,122,000. Excise receipts amounted to £1,704,000, against £1,872,000. The revenue from Interest on Sundry Loans amounted to £2,296,663, against £36,166. The week's operations increased the National Debt by £12,616,793, and caused the following changes:—

	Min. £	National War Bonds paid off	Min. £
National Savings Certificates ..	+ 800	— 40,534	
Bank of England Advances	+ 15,500	— 40,534	
Public Dept. Advances	+ 30,350		
Treasury Bills	+ 5,539		
Unemployment Insurance	+ 1,060		
	+ 53,249	— 40,534	

The floating debt was increased by £51,405,000 to £923,329,500 during the week ended October 7, 1922.

FINANCIAL YEAR, 1922-23 (April 1 to October 7, 1922).

FROM MUDANIA TO MANCHESTER.

The signature of an agreement at Mudania by the Allies and Turks—to be followed, we hope, quickly by Greek adhesion—has dispersed the war clouds which gathered again so threateningly at the end of last week. Given the critical position which had arisen when the Mudania Conference began, the Agreement reached on Wednesday may be regarded with relief and satisfaction. The chief point gained is that the evacuation of Eastern Thrace by the Greeks will take place under conditions which should make quite impossible any repetition of the deplorable events which have followed evacuations in other regions of the Near East. The Turkish armies will not cross the Bosphorus until the peace has been signed; meanwhile they undertake to respect the neutral zones as delimited by agreement, and it is of comparatively small importance that these zones appear to have been slightly reduced in area during the recent negotiations. No delay, we trust, will be allowed in summoning the peace conference. Another important point that is now assured is that the Turks will not come to the conference with the prestige of a threatening military advantage or with all the temptations which such a position

would have provided. That is one important gain at Mudania. But the highest hopes of lasting results from the peace conference cannot be entertained unless all the parties vitally interested in the forthcoming settlement are properly represented, including Russia and the new countries of the Balkans. These nations are vitally interested in the settlement, and no conference at which their voices are not heard can hope to sow the seeds of real peace and security in those regions which have so frequently proved themselves to be the danger zone of European politics. In any case, the peace conference will find an adequate supply of problems bristling with difficulty. Of all these problems that relating to the "freedom of the Straits" will not be the least difficult. But we do not propose at this juncture to count the stones that will strew the path of the peace conference. For the moment it is sufficient that a very dangerous corner has been negotiated without disaster, and that the pressing problem of the safety of the East Thracian population during the transition from Greek to Turkish administration has been satisfactorily solved.

However, although the ship has been steered through a dangerous reef, the whole affair of the Near Eastern crisis has left an uneasiness behind it which has reacted strongly upon domestic politics. The disclosure of the narrowness of our escape from a new war has brought upon the Premier vigorous attacks from quarters hitherto friendly, and has fanned into flame the smouldering discontent inside the Coalition ranks. At a hastily arranged function at Manchester to-day, Mr Lloyd George will answer his critics. The speech will be a critical event in home politics. Indeed, Manchester has replaced Mudania as the cynosure of political eyes. No doubt Mr Lloyd George will make great play with a claim to have vindicated British prestige and at the same time to have averted war. But the country, we believe, will give less time to a study of these inevitable passages in the Premier's speech than to the search for an answer to the question as to where the responsibility lies for creating that dangerous crisis in the Near East, from the worst results of which we have been narrowly saved by the tact and determination of General Harington and the diligent efforts of Lord Curzon to clear up a tangle with which he ought never to have been confronted. Coalition stock has without question been falling rapidly and severely in the country. If by his Manchester speech the Premier can restore public faith in the Coalition as being what Earl Balfour once described as "a pure, harmonious, altruistic concentration upon national affairs of the nation's best brains," then he will indeed have earned his nickname of "the wizard." But it is not the strictures of his opponents that will principally exercise the Premier's powers of eloquence and political strategy. His chief preoccupation must be the growth of schism within the Coalition ranks. Last spring, it will be remembered, when signs of mutiny occurred in the Conservative rank and file, Mr Lloyd George threatened resignation unless the Conservative leaders could make their followers toe the Coalition line. Their efforts to do so were not conspicuously successful, but at that time the Premier, intent upon the approaching Genoa Conference, contented himself with the refreshing tonic of a vote of confidence in the House

of Commons. The position to-day differs in two main essentials from the position that arose in the spring. The discontent inside the Coalition is very much more formidable, and there is to-day no illusive phantom of triumph to play the part which his high hopes of Genoa played then in reconciling the Premier to uncomfortable tenure of office.

Such being the main elements in the situation, the widespread assumption that a General Election is close at hand is natural and obvious, although it may quite possibly be premature. From many points of view an early General Election would be welcomed by those who, like ourselves, are convinced that any new Premier and Government would find it far easier than Mr Lloyd George finds it to solve pressing international questions, especially those in which French and British interests are most closely intertwined. Any new Premier, of whatever party colour, would start with the immeasurable advantage of a clean slate, and would be free from the harassing atmosphere of distrust and suspicion which Mr Lloyd George has created between himself and French statesmen and French opinion. Nevertheless, an immediate General Election would have some serious disadvantages. Unless some time elapses in which clear and concrete programmes can be laid before the country, the electorate will be asked to choose between a series of blurred and indistinct policies. It would be difficult to describe in brief language what Coalition policy is, judged by its past history. As regards external affairs (including Ireland in that phrase) it is perhaps fair to say that the Coalition policy has steadily veered towards liberal lines after having tried the illiberal and found them to be impossible. Coalition policy at home, on the other hand, may fairly be described as illiberal. It has embraced Protection and has thrown overboard its programme with regard to labour which helped to win so many votes at the General Election. On all these matters the country has sufficient data on which to form an opinion, but it is unfortunately without information as to what the Conservative policy is on many of the leading questions of the day. It may probably be assumed that in foreign affairs the policy of a Conservative Government would not differ greatly from that of the Government which it would be succeeding. But what is the Conservative policy towards Indian Reform, and at home towards Protection and Free Trade, and also towards labour questions in general? On none of these questions is it clear what the official Conservative policy would be. Mr Chamberlain has hinted in rather striking language that he is not so great a Protectionist as he was, and the present week has brought about a very significant event in the change of the name of the Tariff Reform League, which will in future be known as the Empire Development Union. Free Traders may suggest that the wolf may be even more dangerous when he assumes sheep's clothing. But they will probably be more justified in regarding this event as new evidence of Conservative shyness in the matter of tariff advocacy. But the public should not be left to guesswork. It is in our opinion of the highest importance that before the General Election takes place the country should be given an adequate opportunity of knowing and studying the official Conservative policy towards these and other matters of vital importance.

This leads us to study the alternatives which exist to an immediate General Election. Mr Lloyd George has several courses open to him. He may join with the Conservative leaders in a strenuous defence of the Coalition and carry on for a time in the hope either that something favourable to Coalition fortunes may turn up, or with the intention of using the breathing space to ally his fortunes with one of the great parties in the State. It is open to him, on the other hand, to make use of the mutiny in the Conservative ranks as a reason for resignation, and to leave Mr Chamberlain either to form a Conservative Government and to carry on, or to advise a dissolution. It is certainly arguable that national interests would be best served by the assumption of office by the Conservative party—the only party which can meet Parliament with the hope of maintaining a majority. If this were to happen, the Conservative party would then

be obliged to formulate a clear policy, of which the country, with its eyes open, could approve or disapprove at the General Election, which, in any case, is unlikely to be delayed very long. This possibility would perhaps be the most desirable, and is also, perhaps, the least likely *dénouement* of the present political disturbance; for if the political pundits are correct, so far from being in the mood for resignation, Mr Lloyd George is in fighting fettle; while Mr Chamberlain would hardly have uttered at Birmingham yesterday the old cry of "stand by the Coalition against the Labour menace" if he had thought that Mr Lloyd George was about to dig the Coalition's grave. What the Premier's political plans are it will be possible to deduce from, if not to read plainly in, his speech at Manchester to-day. But we should like to underline the disadvantages, from the point of view of national interest, of sending the nation to the ordeal of the polls while party politics represent the present blurred and confusing outlines. A final point to remember in connection with the approach of a General Election is this. There is every prospect of a widespread epidemic of three-cornered, four-cornered, or even five-cornered elections. If electoral law is left to stand as it stands to-day, it is quite within the bounds of possibility that the next House of Commons will actually be elected by a minority of the electorate. Few events could be more damaging than that to the system of Parliamentary Government. If the present Coalition meets Parliament next month as arranged, or if a Conservative administration does so in its place, we sincerely hope that past decisions will be reconsidered, and that some reform of the electoral system will be attempted in order to secure that a majority and not a minority of the voters of the country will be represented in the membership of the next House of Commons.

RAILWAY ACCOUNTS AND CHARGES.

SOME reduction has already been made in railway goods rates, and there is a confident expectation that 25 per cent. will shortly be knocked off the 75 per cent. addition made during the control period to pre-war fares. Writing in February and March of this year we pointed out how the release of the home railways from Government control—which took place on August 15, 1921—and the total sum of 60 millions to be paid in compensation under the Geddes settlement, should place the companies in a position to pay reasonable dividends during the reconstruction period, and to make those reductions in both rates and fares which were essential if traffic were to be encouraged and trade assisted to lift its head out of the deeps of depression. We have now the Ministry of Transport's detailed returns of the working of the railways during 1921, showing the enormous reductions in traffic during that year in comparison with 1920, and the tale of losses made good by the Government guarantee of net earnings, which expired with control on August 15th. Much of the loss in goods revenue may be attributed to the three months' coal stoppage, with the almost entire cessation of mineral traffic, but the reduction in passenger travel must largely be the direct resultant of prohibitive railway fares and the withdrawal of cheap excursion facilities. Left to themselves the railway companies have this year been endeavouring to cut loose from the worst of the entanglement in which they had become enmeshed during control. Coal and other stores have fallen greatly in price, and the wages of railway servants based on the "cost of living" index. A comparatively small portion of the first instalment of compensation there remain 28 millions to be received next spring. After the expenditure of this compensation money or on their own feet, and conduct their operations as before the war on an economic basis. They must encourage instead of driving it away, help a trade revival immediate dividend distributions than of the ultimate interests of the railways and of the country's industries. Now let us turn to the adjusted figures for 1921 as disclosed by the Ministry of Transport. The gross

receipts were 246 millions and the gross expenditure 256.3 millions, showing a deficiency of 10.3 millions. The proportion of expenditure to receipts was 104 per cent., as compared with 98 per cent. in 1920 and 64 per cent. in 1913. Net miscellaneous revenue yielded 4.4 millions, so that the final deficiency in net revenue was 5.9 millions, as compared with a surplus for 1920 of 9.9 millions. The Government paid 53.2 millions under its guarantee of the net earnings of 1913 up to August 15th, and an additional sum of 4.6 millions in respect of the settlement of claims, so that the net income finally came out at 51.9 millions. The one category in which the railways made a net profit for 1921 was hotels, refreshment rooms, and cars. The expenses of the railways proper were 104 per cent. of the gross receipts, of passenger road vehicles 109 per cent., of steamboats 117 per cent., of canals 186 per cent., and of docks, harbours, and wharves 105 per cent. Even in 1920 none of the undertakings except railways proper and hotels made a profit; passenger road vehicles, steamboats, canals, and docks were all run at considerable losses.

Freight and passenger traffic fell heavily. In tonnage general merchandise was down by 26.3 per cent., coal, coke, and patent fuel by 29.3 per cent., and other minerals by 42.6 per cent. In tonnage the totals of all standard gauge railways showed a decrease of 30.4 per cent., and in ton-miles a decrease of 30.6 per cent. in comparison with 1920. The receipts per ton and per ton-mile were up in consequence of the increases in rates, which took effect at various dates in 1920. An average rate of 24s 6.22d per ton on general merchandise, being an increase of nearly 4s 3d per ton, may explain in part, at least, the falling off of over 26 per cent. in this category. Excessive railway rates in a period of trade depression must have an accelerating effect on the depression and on the decline in traffic which is its expression.

In passengers carried, we see the double influence of high fares and tight money conditions. The passengers holding ordinary tickets declined in numbers by nearly 200 millions, or 17.4 per cent. Workmen's tickets diminished by 153 millions, or 33 per cent. Season tickets dropped by 86,768, or 8.4 per cent. On the London tubes and District Railway there was a fall comparable with that in general traffic. Passengers holding ordinary tickets were down by 42 millions, or 16.5 per cent., and workmen by 20.7 millions, or 31 per cent. "Notwithstanding," says the Ministry of Transport's Report, "the heavy falling off (in the number of passengers during 1921 as compared with 1920), the number of passenger journeys during the year 1921 was 232 millions, or 14.6 per cent. greater than in 1913."

The capital accounts of the railways are always of great interest. It is clear that during the years which elapsed between the Armistice and the termination of Government control and guarantee of net earnings, the companies expended large sums in making good war damage to their systems. A considerable part of that expenditure on deferred upkeep must have been charged to revenue account, and made good out of the Government guarantee, yet a large amount remained as a debit against capital. We see that on December 31st last the railways had spent on capital account 52.5 millions in excess of capital receipts, and that they increased this excess by 5 millions spent during 1921. The total capital expenditure is given as 1,213.4 millions, as against capital receipts of 1,160.9 millions. The railways were allowed under the Geddes settlement 60 millions in settlement of all claims against the Government, and were not restricted in regard to the manner of its expenditure. But if they had previously spent 52½ millions more on capital account than had been received, then very little of that 60 millions would appear to be available for making up dividends to shareholders.

NINE MONTHS' OVERSEAS TRADE.

THE Board of Trade returns of overseas trade in September and the nine months are not without encouraging features, although in making comparison with the first nine months of 1921 it must be remembered that those figures reflected the havoc of the long coal stoppage on British export trade. Taking a comparison with August,

one finds September showing an increase of £2½ millions in exports of British produce and manufactures, a decline of over £1 million in re-exports, and a large drop of nearly £5½ millions in imports. The comparison of the summary figures for September and the nine months with the figures for the corresponding periods of 1921 reads as follows:—

MONTH OF SEPTEMBER.

	1921.	1922.	Increase or Decrease in 1922.	
	£	£	£	%
Imports	86,878,012	76,943,609	9,934,403	- 11.5
British exports	55,247,578	62,511,099	7,263,521	+ 13.1
Re-exports	8,594,644	6,381,443	2,213,201	+ 25.8
Total exports	63,842,222	68,892,542	5,050,320	+ 7.9
Excess of imports over total exports	23,035,790	8,051,067	14,984,723	- 64.8

NINE MONTHS ENDED SEPTEMBER 30.

	1921.	1922.	Increase or Decrease in 1922.	
	£	£	£	%
Imports	827,627,658	728,543,304	99,084,354	- 12.0
British exports	518,661,311	534,723,767	16,062,456	+ 3.1
Re-exports	77,639,668	77,873,526	233,858	+ 0.3
Total exports	596,300,979	612,597,293	16,296,314	+ 2.7
Excess of imports over total exports	231,326,679	115,946,011	115,380,668	- 49.7

Of the increase of £7½ millions in British exports over September of last year, nearly £3 millions is accounted for by coal, which was in exceptional export demand, owing to the labour troubles in the United States. But British manufactures exported show a rise of over £4½ millions, £3 millions of which is due to better cotton goods shipments. But the list of exports of British manufactures shows a large number of advances in value over the previous September, the merit of which is increased when it is remembered that in the past 12 months severe cuts have been made in the prices of many leading British products. The September balance of merchandise trade, an import surplus of £8 millions, is well below the pre-war monthly average; while the nine months' import surplus of £116 millions is not far above it. This last-named figure is just half the surplus recorded in the first nine months of 1921, when, owing to the coal troubles, exports were seriously contracted. Influences affecting exchange movements to-day are many and complex, but the halving of the visible import excess must be ranked among the causes of the rise in sterling exchange.

The following table shows at a glance how the quantity exported in the past nine months by 20 important sections of British production compared with the corresponding figures for 1921, 1920, and 1913:—

BRITISH EXPORTS. January 1st to September 30th.

	1913.	1920.	1921.	1922.
Coal	54,517,788	19,851,555	13,351,554	45,476,573
Coke, &c.	2,380,420	3,185,089	898,734	2,627,477
China-ware and earthenware, &c.	3,065,631	2,907,393	2,013,071	2,421,422
Cement	587,353	454,596	231,282	278,582
Pig-iron and ferro-alloys	850,869	498,775	99,937	459,127
Railway material	593,515	231,883	217,217	373,315
Agricultural machinery	60,185	8,278	4,748	6,140
Textile machinery	130,525	35,816	111,637	108,031
Total machinery	513,697	316,121	386,856	282,483
Cotton yarn	154,761,750	118,447,700	90,592,600	158,363,900
Cotton piece-goods*	5,350,278,900	3,540,677,100	1,886,341,100	3,068,278,700
Wool tops	331,141	153,982	257,184	303,647
Woolen tissues*	81,997,400	151,721,800	55,449,900	89,896,000
Woolen piece-goods*	142,307,300	181,827,400	24,720,900	59,014,400
Woolen goods*	32,656,200	30,479,200	17,364,500	25,671,300
Jute yarn	129,668,700	120,587,500	47,185,900	95,360,800
Jute piece-goods*	3,117,385	2,498,623	1,330,257	1,533,500
Jute sacks and bags	1,069,120	623,816	234,964	334,855
Boots and shoes	1,359,716	1,599,589	596,285	824,086
Soap	3,150,495	2,310,201	872,515	1,233,530
Fur skins, dressed				

* Yards in 1913, square yards in 1920 and 1921.

Coal is the outstanding feature. Coal exported was nearly 2½ times the quantity recorded in 1920, and is steadily overhauling the pre-war figure. In value, however, the nine-months' coal exports are £27 millions less than those of the corresponding period of 1920. Cotton yarn exports and wool tops show very well in the list, while cotton piece-goods have recovered strikingly from last year's depression. But, on the whole, though the improving tendency in many directions claims notice, the above list is a reminder of the long way we have to go before our export trades can regain the

activity of 1920 or of pre-war days. The nine months' list of imports of raw materials show that we took 9,153,995 centals of raw cotton, against 7,380,574 in 1921, and 14,722,687 in 1920; of sheep's and lambs' wool, 9,155,567 centals, against 5,527,130 in 1921 and 6,944,026 in 1920. In view of recent developments, the rubber figures will be read with interest. They read as follows for September and the first nine months of the past three years:—

	Imports. Centals.	Re-Exports. Centals.
First nine months, 1920.....	1,817,206	1,099,733
" " 1921.....	1,560,907	601,120
" " 1922.....	1,042,366	875,997
September, 1920.....	203,375	42,686
" 1921.....	109,662	127,983
" 1922.....	95,960	98,367

The statistics of shipping engaged in the foreign trade provide evidence of a larger employment of tonnage. The tonnage cleared with cargoes last month was 5,730,518, as compared with 4,101,436 in September, 1921, and 3,016,720 in September, 1920. The tonnage cleared in the nine months was 43,288,822, which compares with 24,387,333 and 27,630,643 in the corresponding periods of 1921 and 1920 respectively.

The gold import and export figures for the nine months compare as follows with those of preceding periods:—

	1920.	1921.	1922.
Gold imported..	32,169,986	38,903,831	23,744,845
Gold exported..	58,323,690	47,062,507	29,490,145

In spite of the somewhat heavy shipments of a few months ago, the total sent to the United States in the past nine months was only £17,734,962, against £44,385,390 in the corresponding period of last year.

Among market information and statistics on later pages of this issue will be found a detailed analysis of leading import and export values in September and the nine months of this year and last. On the whole, it may be said that, while the returns furnish important evidence of improvement, they are, nevertheless, a stern reminder of the restrictions upon active trade imposed by war impoverishment and by the failure to establish security and financial stability abroad.

INDUSTRIAL PROFITS.

SUCH statistics of industrial company earnings as are available are unfortunately not sufficiently up to date to afford any indication of the present condition of industry. At the same time, although the figures are some months behindhand, they are of interest as indicating how the earnings of industry have been affected by the fluctuations in trade, and to what extent the return on shareholdings in industrial undertakings has moved. During the past three months the profit and loss accounts of 209 industrial concerns have been analysed in a weekly table in the *Economist*. It is obvious that all these accounts cannot cover a period ending in the past quarter. Indeed, some of them refer to the financial year ended March 31st, and even to the calendar year 1921, since for various reasons a long period is allowed to elapse after the close of the financial year by some company directors before the presentation of the annual report. The net profits disclosed during the past quarter by the 209 companies mentioned aggregated £12,120,153, as compared with £15,853,920 disclosed by the same companies in their previous financial years, a decrease of £3,733,767, or 23.5 per cent. As will be seen from the table below, which gives the results of our analyses for the past five quarters, there has been a distinct decline in the percentage decrease in profits in the last three quarters:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in	Decrease.
		1920-21.	1921-22.
Third quarter 1921.....	232	£ 24,157,772	£ 13,912,771
Fourth quarter 1921.....	311	30,272,382	14,268,278
First quarter 1922.....	442	47,368,926	26,785,952
Second quarter 1922.....	401	38,044,790	25,195,690
Third quarter 1922.....	209	15,853,920	12,120,153

The first quarter shown in the table represents a comparison with a period when profits were still rising, whereas in the succeeding quarters profits were on the down grade. The point may perhaps be more clearly seen from the following list of increases or decreases in net profits recorded in our quarterly analyses since the beginning of 1918:—

	1918.	1919.	1920.	1921.	1922.
First quarter.....	-1.0	+10.4	+26.9	+3.5	-43.4
Second quarter.....	-5.8	-5.1	+37.8	-8.4	-33.7
Third quarter.....	+12.3	-3.4	+41.9	-42.4	-23.5
Fourth quarter.....	+4.7	+10.5	+27.1	-52.9	..

In the next table we classify the companies whose reports have been examined in the past quarter into 13 groups, and show the increases and decreases in net profits:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Sept. 30.	Increase.	Decrease.
		1921.	1922.	
Breweries.....	19	£ 4,349,753	£ 5,201,800	19.6
Gas.....	6	85,122	187,330	117.2
Hotels, restaurants, &c.....	6	18,311	46,608	254.1
Iron, coal, and steel.....	19	2,204,703	819,164	1,385,539
Land mortgage, &c.....	13	190,114	413,368	117.0
Rubber, &c.....	42	329,159	193,940	135,259
Shipping.....	6	1,198,810	938,630	260,180
Tea.....	4	211,052	170,802	40,250
Telegraphs.....	4	439,427	414,230	25,197
Textiles.....	6	1,145,680	1,234,413	238,093
Trust companies.....	9	301,178	286,022	15,156
Waterworks.....	5	12,346	17,420	41.2
Miscellaneous.....	64	8,060,689	2,196,426	5,864,263
	209	15,853,920	12,120,153	3,733,767

Seven of the 13 groups show an increase in net profits, the most striking recoveries being those of the tea and textile groups. Very large increases are also shown by the gas, hotel, and land mortgages and financial groups. The largest decrease is recorded by the iron, coal, and steel companies, and this follows a decline of 29 per cent. shown by the same group a year ago. Twelve of the companies in the miscellaneous group show a net loss, including one of £1,794,800 by the African and Eastern Trade Corporation, which compares with a profit of £854,500 for the previous financial year.

The next table shows the apportionment of profits between shareholders and reserves in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
	£	£	%	£
Third quarter 1921.....	13,912,771	10,646,266	76.5	2,834,956
Fourth quarter 1921.....	14,268,278	11,464,889	80.4	3,386,145
First quarter 1922.....	26,785,952	22,171,510	82.9	9,689,030
Second quarter 1922.....	25,195,690	20,066,774	79.7	6,156,048
Third quarter 1922.....	12,120,153	10,010,136	82.7	3,328,074

The proportions going to ordinary and preference shareholders in the last three months are much the same as in the previous four quarters. The last column includes, in addition to specific appropriations to reserve, the amounts by which the balances carried forward exceed or fall short of the amounts brought in, and the reduction of £1,218,000 is due to heavy entrenchments on the balances brought forward. The table below shows how each group has apportioned its profits in the past quarter:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Carried to Reserve, &c.
	£	£	%	£
Breweries.....	5,201,800	3,364,540	64.8	535,245
Gas.....	187,330	128,207	68.5	9,871
Hotels, restaurants, &c.....	46,608	25,180	54.0	12,125
Iron, coal, and steel.....	819,164	1,005,524	122.3	18,350
Land mortgage, &c.....	413,368	227,942	55.1	610,480
Rubber, &c.....	193,940	216,292	111.5	2,727
Shipping.....	938,630	595,569	63.5	87,898
Tea.....	170,802	61,364	35.9	15,220
Telegraphs.....	414,230	552,971	133.4	9,218
Textiles.....	1,234,413	658,095	53.2	177,353
Trust companies.....	286,022	248,307	86.9	21,992
Waterworks.....	17,420	12,718	73.1	4,502
Miscellaneous.....	2,196,426	3,003,427	136.8	1,756,613
	12,120,153	10,010,136	82.7	3,328,074

Four groups, including miscellaneous companies, have paid to ordinary shareholders more than was actually earned in the year, and the iron and steel and miscellaneous

groups are conspicuous for having paid respectively sums equal to 75 and 80 per cent. of profits to preference shareholders. The shipping group maintains a conservative policy, and places nearly 37 per cent. of profits to reserve, and is only second in this respect to the tea group, which sets aside over 55 per cent. of profits. Breweries and textile companies make a fairly good showing as regards reserve allocations, but the miscellaneous group depletes the funds in hand by an amount considerably larger than the year's earnings.

We show next the ratio of net profits and of reserve appropriations to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
	£	£	%
Third quarter 1921.....	166,443,500	13,912,771	8.4
Fourth quarter 1921.....	218,246,700	14,268,278	6.5
First quarter 1922.....	442,936,400	26,785,952	6.1
Second quarter 1922.....	350,840,200	25,195,690	7.2
Third quarter 1922.....	205,481,600	12,120,153	5.9

Two years ago the ratio of profits to total capital was 16.6 per cent., but since then it has steadily diminished to the latest figure of less than 6 per cent. The final table gives the average rates of interest and dividend on debenture, preference, and ordinary capital paid in the last three months, together with the average ordinary dividend shown in our article a year ago:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate of Dividend. Year Ago.
	£	%	£	%	£	%	%
Breweries.....	12,572,933	3.9	10,172,889	5.3	23,250,523	14.4	13.4
Gas.....	892,845	4.8	156,417	6.3	2,010,682	6.4	4.1
Hotels, restaurants, &c.....	1,878,875	4.8	1,170,000	1.0	2,355,381	8.8	2.0
Iron, coal, and steel.....	8,445,021	6.7	13,086,152	4.7	27,888,968	3.6	10.0
Land mortgage, &c.....	3,199,856	4.4	2,362,955	4.1	3,574,668	6.4	12.4
Rubber, &c.....	762,921	4.4	565,968	0.5	8,177,423	2.7	3.9
Shipping.....	2,282,720	3.8	4,990,700	10.1	101,104	1.0	1.4
Tea.....	189,400	6.1	451,007	3.4	825,127	7.4	1.9
Telegraphs.....	59,280	6.4	4,183,830	13.2	156,102	12.1	1.6
Textiles.....	1,684,271	4.1	3,726,947	4.1	6,436,800	6.3	10.1
Trust companies.....	815,080	4.1	578,680	3.8	3,371,725	6.3	10.1
Waterworks.....	46,081	4.6	5,781	3.5	257,601	4.9	2.3
Miscellaneous.....	15,009,781	6.4	38,743,309	4.5	43,755,380	6.9	7.4
	45,556,684	5.2	73,302,825	4.5	132,178,808	7.6	9.1

We have included with debenture capital the various short-term note issues which were so popular a year or two back, and this accounts for the comparatively high average rate of interest in one or two groups. On the other hand, the passing of preference dividends explains the rather low average rate of dividend on preference capital. The average dividend of 7.6 per cent. on ordinary capital compares with an average of 8.6 per cent. for the four previous quarters, and of 9.7 per cent. in the corresponding quarter of last year. It will be observed that six groups have paid a higher rate to ordinary shareholders than they did last year, and that the brewery group heads the list with an average of 14.4 per cent.

BRITAIN'S OILSEED AND OIL INDUSTRY.

A MUCH larger quantity of oilseeds, &c., reached the crushing mills of the United Kingdom in the first six months of the current year than in the corresponding half of last year. This, and the fact that there was also a substantial increase in the exports of vegetable oils, may be taken as evidence of some improvement in the position of an industry, which, after a phenomenal post-war "boom," entered upon a prolonged period of acute depression. The gross imports of oilseeds, oilnuts, and kernels in the first half-year were 710,336 tons, or 79,577 tons, equal to 12.6 per cent., better than a year ago. Should this rate be maintained, the full year's imports will exceed 1,400,000 tons, and approximate to an average normal year. Less than 1 per cent. of oilseeds and 7.5 per cent. of nuts and kernels were re-exported, and, allowing for these, the imports represent 205,000 tons of vegetable oils, including linseed oil 63,000 tons, cottonseed oil 41,000 tons, and nut oils 82,000 tons. The exports of unrefined oils produced

in the United Kingdom reached the high figure of 57,921 tons, against only 31,738 tons and 48,530 tons in the corresponding period of 1921 and 1920 respectively. The increase was almost solely due to the heavy exports of linseed oil, viz., 43,788 tons, against 19,650 tons, the principal shipments, fully 80 per cent., being to the United States to supplement the shortage in domestic production of this commodity. The raising of the tariff and the arrival of the new crop in the States may affect adversely the demand for English and Continental linseed oil in the near future. Nevertheless, the trade has been very welcome to oilmillers on this side of the Atlantic, and has enabled them to dispose of stocks not required by more or less stagnant home industries. The exports of refined vegetable oils at 7,046 tons are 1,720 tons behind a year ago, owing to smaller shipments of cotton and palm kernel oils.

This country also imports considerable quantities of vegetable oils from abroad, the gross figures for the half-year being unrefined 69,003 tons, and refined 10,358 tons. The former consists principally of palm, coconut, and soya bean oils, and the latter of olive, coconut, and cotton oils. About 30 per cent. of the crude palm oil, which is derived from British possessions, is re-exported. Another feature is the larger imports of crude soya bean oil, which at 11,687 tons compares with only 4,713 tons a year ago. This is now shipped from Manchuria in bulk, the water ballast tanks of the steamer often being used for the purpose, and competes strongly with English soya-bean oil, of which only something over 4,000 tons was produced here in the half-year, and practically all exported. The operation of the tariff has had the effect of reducing American imports of Oriental soya bean oil to about 7,500 tons per annum, or about 10 per cent. of the average of 1919 and 1920, the larger quantity thus left for consumption elsewhere depressing the world markets, and as in the case of other oils subject to a heavy American import duty, making it easier for Europeans and other oil producers to compete with the American product. The net imports of vegetable oils into the United Kingdom in the half-year were 67,963 tons, or 3,000 tons more than the exports of similar oils manufactured or refined in this country.

Apart from vegetable oils, Great Britain is a large importer of animal fats and fish oil. These, excluding butter and margarine, in the half-year under review aggregated 123,000 tons. The leading items are hog's lard 57,891 tons, of which the United States sent 54,836 tons; tallow, 26,818 tons, of which Australia and New Zealand together furnished 18,630 tons; oleo oil and oleine 13,238 tons, and fish and marine animal oils 18,597 tons. About 12 per cent. of the imports was re-exported, principally tallow oleo and fish oils. The supply of vegetable oils and edible fats, leaving out of account butter and margarine, remaining for home consumption may be put down roughly at 300,000 tons for the half-year, which is at about the normal rate, although the distribution somewhat varies. The quantity of refined vegetable oils and animal fats consumed in the manufacture of margarine has undoubtedly fallen away to an enormous extent. It is less than half of what it was when the butter shortage was most pronounced, and when little or no foreign-made margarine was finding its way into this country. Nevertheless, it is in excess of pre-war times, when we produced only 2,600 tons of margarine on the average weekly, as against something under 4,000 tons a week at present. In this connection it is interesting to note that our imports of butter have got back to fully pre-war level, and that those of margarine are also creeping up again, as will be gathered from the following figures of gross imports for the six months' period in the pre-war and post-war years:—

	Butter. Cwts.	Margarine. Cwts.
1913 (pre-war).....	2,079,137	725,417
1919.....	1,001,006	6,801
1920.....	1,057,785	359,439
1921.....	2,145,705	487,019
1922.....	2,397,340	422,212

The re-exports of butter in the past six months were 419,837 cwts, a notable expansion when compared with an average of less than 6,000 cwts in 1920-21 and 61,070 cwts in the first half of 1913. Net imports were thus only 40,564 cwts behind 1913. The home production of butter is again at pre-war level. Re-exports of margarine are

negligible. Assuming the consumption of butter and margarine in the United Kingdom to be at the same rate as pre-war, viz., 25½ pounds per head of the population per annum, the difference in the imports of margarine, which are almost solely derived from Holland, is probably made up by increased home production of that commodity. Exports of margarine made in this country showed some signs of expansion in 1920, but have since fallen back to pre-war level, and in the first half of this year were no more than 11,294 cwts.

With regard to the future, the outlook in the oilseed crushing industry is uncertain, and to some extent obscure, but not without hopefulness. Works' costs are coming down gradually, and prices of the raw materials are finding a more or less stable basis. The great hope, however, lies in an all round revival of trade and industry, both here and abroad. Good export markets for the oil products have in recent years been opened out in Europe and elsewhere, and English crushers, with a century of experience behind them, and by the adoption of modern principles in business, are pretty confident that they will be able to claim a fair share in the world's markets. Indications are not wanting of a revival in the consuming trades, most of which have experienced the full effects of the industrial set-back of the past two years. For example, the paint and varnish trades are looking up considerably, and would look up still more were not the cost of labour in applying paint, &c., out of all proportion to the cost of the materials used. The exports of paints and painters' materials show a marked advance in quantity as compared with the first half of last year, but are still only a little more than 50 per cent. of those of 1913. Linoleum and oilcloth exports also record an improvement, and together were 16,789,923 square yards, as against 28,327,900 square yards in the corresponding half of the pre-war year. Soap exports are also reviving again, 587,898 cwts for the half-year comparing with 314,821 cwts a year ago, while candles at 70,303 cwts compare with 17,615 cwts. In the first half of 1913 the figures were 930,010 cwts and 137,857 cwts respectively. Slight as the indications are, they are in the right direction, and at least afford ground for encouragement that the worst has been left behind, and that better times are in sight. The process of co-ordination in the oilseed crushing industry goes on, the latest absorption being that of the Hull Oil Manufacturing Company by the British Oil and Cake Mills, Limited.

WHAT GERMANY OWES AND HAS PAID.

MUCH of the discussion, political and even economic, which has gone on for the last three years about Reparations has been entangled in ambiguity owing to the lack of really precise figures. Gratitude as well as congratulation is therefore due to the general secretary of the Reparation Commission for having extracted from its accounting records and put out in a clear and intelligible form the data upon which useful argument depends. The "Statement of Germany's Obligations at April 30, 1922" (H.M. Stationery Office, 2s), is a model document in its kind. Issued "with a view to giving to the public, and more particularly to the economic public, information as to Germany's payments under Part VIII. of the Treaty of Versailles and the distribution of such payments between the Allied Powers," it gives everything that a reasonably informed person needs to enable him to understand the situation.

Its broad governing factors are given by a study of three tables, numbered IX., I., and IV. Table IX. gives a condensed statement of Germany's obligations. From this it appears that up to April 30, 1922, Germany's pre-Reparations obligations (as set out in Art. 235 of the Treaty) amounted to 3,535 millions of gold marks (i.e., 392 millions under coal advance, 3,143 millions for the net costs of all the armies of occupation). On this there was on April 30, 1922, a balance still due of 940 million gold marks. The capital debt, fixed by the Reparations Commission at 132,000 millions of gold marks, plus 4,000 millions (estimate for Allies' loans to Belgium), stood on April 30, 1922, after striking off the 2,504 millions credited for cessions and properties, at 133,496 million gold marks.

Against this there stands an item of German Treasury bonds handed over to a nominal value of 12,000 million ("A" series), 38,000 million ("B"), and 82,000 million ("C"), whose actual marketable worth is a matter into which the Commission's accountants naturally do not enter. The formal picture is completed when the two tables I. (Statement of Deliveries and Payments on Account prior to May 1, 1921) and IV. (Summary of Credits to Germany for Cash Payments and Deliveries in kind from May 1, 1921, to April 30, 1922) are taken together. From them the following situation emerges:—

WHAT GERMANY HAS PAID.	
November 11, 1918, to April 30, 1921—	
Payments in cash	Gold Marks. 112,121,000
Deliveries in kind (materials, &c.)	1,251,064,000
Deliveries under Armistice terms	1,183,226,000
Submarine cables	49,000,000
Portable property	2,504,342,000
Total	5,099,753,000
May 1, 1921, to April 30, 1922—	
Payments in cash	Gold Marks. 1,313,660,496
Deliveries in kind	560,475,417
Deliveries under Armistice	3,678,816
	1,877,814,729
Grand total	6,977,567,729

An important point is made in the introduction which must be kept in mind in reading the tables. It is this: The Reparation Commission has two main series of accounts to keep. There are the accounts of the Commission with Germany, and second, accounts with the various Powers who participate, on the basis agreed upon at Spa, in receipts. Between these two sets of figures there is not the close correspondence that might have been expected, and that for two main reasons. The first refers to ships. At Spa the ships handed over by Germany were valued on the basis of the actual sale prices realised on the British market between July 16, 1920, and May 1, 1921, subject to adjustments rendered necessary by repairs or the expenses of delivery, and it is upon the basis of those prices that they enter into the accounts showing what the Allies have received. On the other hand, the Reparation Commission entered the value appearing in its statement of what Germany had paid on "the best estimate the Commission could frame of the value of the ships at the time of delivery." Thus while the values of ships assigned to the different Allies on the first (Spa) basis is only 269,166,000 gold marks, the sum credited under ships by the Reparation Commission is 659,867,000 gold marks, a difference of 390,701,000 gold marks.

The second reason for the apparent discrepancies in the two sets of figures is that under a series of inter-Allied agreements subsequent to the Treaty, while Germany's obligations have not been affected, the distribution as between the Allies has "not in all respects strictly followed the Treaty scheme." This applies particularly to the costs of the armies of occupation. The Report stages in the period under review. From January 10, 1920, when the Treaty came into force, down to April 30, 1920, Germany's obligation was defined by Article 235 (printed in a useful appendix), under which the first charge including 1,010,614,000 gold marks for the American armies, these costs amounted to 2,131,904,000 gold marks. Since of the credits passed in Germany's favour "applicable to the restoration of industrial and economic life," were included, capital payments (such as the transfer of State property to Poland) being excluded, and attributable to the costs of occupation were barely sufficient to meet this first charge.

In the period opening May 1, 1921, and running to the end of the year, a clear distinction is made between Reparations on the one hand and reimbursements of occupation costs on the other; in the latter the Commission is only interested in virtue of a special mandate from the interested Powers.

In the first period occupation costs were charged generally against Germany's liquid assets; in the second specifically against deliveries in kind. These costs are

set out for the separate countries, in table VI., to which is appended a note explaining that the Commission has in neither period exercised any form of control; its function is one of accountancy. (Presumably the figures are in thousands of gold marks, but this is not stated.)

The schedule of payments notified to Germany in May, 1921, prescribed for payment of a fixed amount of 2,000 millions of gold marks, plus 26 per cent. of the value of exports; 1,000 million gold marks to be paid at once, as the first two quarterly instalments under the first head. On December 14, 1921, the German Government asked for a partial postponement of schedule payments. Under the general terms of the Cannes decisions the partial moratorium granted on March 21st of this year was confirmed on May 31st. At the same time, however, the Genoa decision—that army of occupation costs, as from May 1, 1921, in so far as not covered by the requisition of paper marks by the armies, deliveries in kind, &c., should be repaid to each of the creditor Powers—"produced retroactively a deficit in German reparation payments even before the period for which a partial moratorium was demanded."

It is unfortunate, perhaps, for the lay reader, though probably necessary, that the figures in all the tables are expressed in gold marks. Some of the tables are highly complicated, but they deal with immensely complicated matters, e.g., with those covering deliveries in kind. There is material for an article longer than this, for example, on the whole matter of the estimation of the value of the coal deliveries to Germany who makes and to France who receives them. Enough has, however, been said to indicate that this is a document which must be mastered by everyone who wants to have an intelligent opinion on the Reparations issue.

THE P. AND O.

WE are pleased to observe that the accounts of the Peninsular and Oriental Steam Navigation Company, after undergoing severe compression for a number of years, have been allowed to expand a little. It is true that the reaction so far is only very slight indeed, but it may not be too much to hope, now that a beginning has been made, that the accounts may grow into a shape worthy of so important and renowned an undertaking. Shipping companies have been the principal offenders in respect of the abridgement of accounts, and we trust that the example of the P. and O. will be followed by other shipping concerns, and that there will be growing evidence of a desire to give information to shareholders rather than to withhold it.

These remarks are called forth by the subdivision of the usual "portmanteau" item on the assets side of the company's balance-sheet into four separate items. For several years one amount for the whole of the assets had been given. Two of the four items now shown are of relatively little importance, while a third is still of a comprehensive nature, but we are now told what is the valuation of the fleet, namely, £12,633,300; this includes payments on account of new ships, so that from the tonnage figures given it is only possible to say that the average book value per ton is less than £22. In 1913 the average value per ton was between £7 and £8. Investments, cash, and debtors are still lumped together in one item. The report is silent as to the valuation of the investments, nor do the auditors venture any remark on the subject beyond announcing that they have examined and verified them. The company holds a controlling interest in the British India Steam Navigation Company, the Mercantile Steamship Company, the New Zealand Shipping Company, the Union Steamship Company of New Zealand, the Hain Steamship Company, the Orient Steam Navigation Company, the Khedivial Mail Steamship Company, and the General Steam Navigation Company. But whether holdings in these companies and other investments stand at cost or at market value it is impossible to say, nor is it possible to judge

the strength of the balance-sheet. As a matter of interest, we give below a comparison of the latest balance-sheet with that issued a year ago:—

September 30, 1922.		September 30, 1921.	
LIABILITIES.	Amount.	LIABILITIES.	Amount.
Prefd. stock	3,040,000 ..	Steamers, tugs, &c., and payments on acct. of new ships	12,633,256
Def. stock	3,592,518 ..	Coal: Naval and victualling stores	275,213
5½% deb. stock	1,487,560 ..	Freehold & other property	717,287
5½% deb. stock	3,500,000 ..	Sundry investments, cash and debts owing to company	12,077,305
Reserve	1,607,950 ..		
Conting. fund	1,000,000 ..		
Insurance fund	3,094,242 ..		
Provident fund	300,000 ..		
Redempt'n fund	60,000 ..		
5½% deb. stock	60,000 ..		
Sundry balances	7,627,441 ..		
Profit and loss	333,350 ..		
Total	25,703,061 ..	Total	25,703,061 ..

It is not possible to ascertain how the money obtained from the issue in March last of 5½ per cent. debenture stock has been used, but creditors have been reduced by over a million, and the prospectus stated that the proceeds of the whole issue would be applied to the general purposes of the company, and more especially to the construction of new vessels "when prices come down to an economic figure." The report states that five steamers of the "B" class have been delivered, and are in service, and that the "Moldavia," which had been building at Birkenhead for four years, was delivered in the middle of September.

Turning to the results for the year ended September 30th last—the directors are to be congratulated on the promptitude with which the accounts are produced—we find that the profit and loss account is still almost as attenuated as in recent years. In pre-war days a very interesting general working account was published, which not only gave separately the amount of freight and passage money received and the amount of the mail subsidy, but also analysed navigation expenses, showed the cost of provisioning passengers, ships' repairs, canal dues, and several other interesting details. There was, perhaps, a certain justification for suppressing some of this information during the war, but why should shareholders, nearly four years after its end, merely be told that after providing an unstated amount for depreciation and placing £60,000 to debenture sinking fund, the "net result" is £696,660, which compares with a "net result" of £623,531 a year ago. In the body of the report it is stated that the insurance fund has been increased by £94,242, whereas last year £500,000 was added to this fund, but we are left in the dark as to how the depreciation allowances compare. The comparative summary below is therefore only of value as showing how the "net result" has been appropriated:—

YEAR ENDED SEPTEMBER 30TH.

	1914-15.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
	£	£	£	£	£	£
Net revenue ..	494,160	882,360	1,614,585	..	..	..
Reserves, &c. ..	..	100,000	1,000,000	..	..	..
"Net result" ..	494,160	782,360	614,585	710,430	623,531	696,661
Brought forward ..	68,703	92,712	91,727	115,230	111,939	100,305
	562,863	875,072	706,312	825,660	735,470	796,966

The dividend on the deferred stock has been maintained at 12 per cent., and the balance forward slightly increased, after bearing £60,000 for the redemption fund of the new 5½ per cent. debenture stock. The report states that the company has applied for and obtained a supplementary charter to issue a further £3½ millions of 5½ per cent. debenture stock, to rank *pari passu* with the March issue, and that the sanction of the proprietors to accept it, and to authorise the directors to make the further issue or any portion of it when occasion arises, is to be sought at the annual meeting, which is being held earlier than usual, on Wednesday next, owing to the chairman's departure for India on the following day.

Notes of the Week.

Conditions in Ireland.—Our Dublin correspondent writes:—The dominant notes audible in general discussion in Dublin are a note of satisfaction with the proceedings of Dail Eireann, and a note of depression regarding the general situation. The satisfaction with Dail Eireann is well warranted. The deliberative spirit, the sense of collective responsibility, respect for minority views, promptitude and a practical handling of controverted issues, as well as a high level of ability, particularly on the Government side, have marked its proceedings in an increasing degree. The depression is intelligible, if less well founded. The reaction of Ireland against the poison which has found its way into her veins has been sluggish, but the patient's natural force, in no way abated, is gathering itself for a supreme effort to expel it from her system. The moderated attitude of the Labour party, both inside and outside the Dail, is at once a consequence and a proof of the unmistakable resolution of the great bulk of the community. Both the Government and the Roman Catholic Hierarchy have watched the ripening of opportunity, and, probably more skilful than their critics, have simultaneously selected the same moment as appropriate for crucial action. The Government, by public proclamation, has offered a *locus penitentiae* for rebels and thereafter the most drastic treatment that martial law can provide. On or before October 15th any rebel irregular may hand in his arms and return to his home, secure of amnesty and a free pardon. After that date the military authorities take charge, and the military Courts are to have power to enforce military decrees by punishments ranging from death, penal servitude, and deportation downward. On Tuesday last the Irish Bishops, under the presidency of the venerable Cardinal Logue, threw the full weight of their spiritual authority upon the side of the Free State Government in a pronouncement which justly castigated the casuistical absurdities of the rebel apologetics as well as their insurrectionary campaign. The Committee stage on the Constitution is practically concluded, and the possibly awkward corners have been turned without trenching upon the provisions of the Treaty and if the time-table continues to hold good the Constitution, after ratification by Parliament at Westminster, will be put into operation on or before December 6th by Royal Proclamation. Doubts and objections as to certain peculiar and novel provisions were met by arranging that the new Parliament may revise the Constitution—free from the impediments designed to restrain constitutional amendments—at any time during the next eight years. It was stated officially that, as the voters' lists prepared on the basis of adult suffrage cannot be ready sooner, there can be no General Election under the new Constitution for some seven or eight months. On Friday last Mr Cosgrave made his promised financial statement, and obtained a vote on account of £18,953,475 for the financial period from April 1 to December 6, 1922. Expenditure for the full financial year he estimated provisionally at £37,709,586 and revenue at £27,000,000. He laid considerable stress upon the urgent need for economy and also upon the inevitably provisional character of both estimates. So far as may be gathered from previous Treasury estimates of the revenue of Ireland (excluding the six counties of North-East Ulster) Mr Cosgrave's revenue figure has made some allowance for loss of revenue due to the civic turmoil which still exists. His estimated expenditure provides for a sum of £10,020,000 for compensation for destruction of property likely to be payable before March 31, 1923, a sum which may be taken roughly as a quarter of the full figure, and also £250,000 for "property losses advances." It also includes outgoings of an emergency character, such as £7,245,000 for the Army, which is probably £5,000,000 in excess of what will hereafter be the normal figure, also superannuations £1,803,306—a diminishing and terminable charge attributable to the transition period, and

£348,000 for relief grants. Public education is an increased figure, as the teachers are now receiving their admittedly long overdue increases of salary. After referring to the adjustments—to which reference has previously been made in the *Economist*—which are necessary to convert "collected" into "true" revenue until the new fiscal arrangements are started, he added:—"It is a matter of much guesswork to form an estimate of the full amount from real revenue for the current financial year. As a rough indication of the position it is, perhaps, not safe on present indications to count upon a total of more than £27,000,000." It is clear, therefore, that the Irish Free State must shortly become a borrower, and given the restoration of order, it will have good security to offer. The Irish Exchequer returns for the week ending October 7, 1922, show total revenue collected at £11,908,209, expenditure at £9,751,398, and a balance of £2,176,811. All things considered, the figure for collected revenue is almost surprisingly good.

A Treaty with Iraq.—Having accepted the mandate for Iraq, our Government cannot retire from the country and leave the way open for the return of the Turk. It is an obligation upon it to support the Iraq Government, which it has set up under King Feisal. On the other hand, the British taxpayer has a right to insist that no more of his money should be poured into Mesopotamia than is strictly necessary; while, in view of the unpopularity which King Feisal and his Government reap from those who regard them as mere tools in British hands, it is also politic that British interference in Iraq should be limited as closely as may be. The treaty signed this week between Great Britain and Iraq appears to satisfy in the main these conflicting desirabilities. It lays down with customary formality the lines of a *régime* of freedom, toleration, and justice, while it exacts from Great Britain the undertaking to support the Iraq Government, as occasion may demand, with financial and military aid. This undertaking, necessitates, of course, the stipulation that the British High Commissioner shall have a voice in fiscal matters and foreign policy. Article 6 is one of the most important in the document. This article reads as follows:—"His Britannic Majesty undertakes to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible." Such admission would bring the British mandate to an end, and this clause, therefore, raises the possibility that, although the Treaty is to run for 20 years, Article 6 may in this way be ended very much earlier. The depends for its success upon the spirit in which it is administered. So far as the verbal text goes, it is an arrangement which appears to conform to the peculiar difficulties that face both the contracting Governments. But he would be a rash prophet who would predict that big and costly difficulties in connection with that country are yet over. We trust that the new Treaty will prove them within tolerable limits.

Russo-Asiatic and the Soviet.—Lenin has refused to ratify the agreement between Mr Urquhart and Krassin for the important concessions described in some detail in our issue of September 16th. The grounds on which he takes this action are political, and the Russo-Asiatic shareholders, it seems, are made to suffer because of Lenin's dislike of the British Government's attitude towards Soviet Russia. That is rather hard on the company and on Mr Urquhart. But the fact that the rise in the shares, which the news of the agreement caused, were not too confident about counting chickens before they were actually hatched. Mr Urquhart has issued a statement in which he describes the disappointment as a "hitch" and not a "breakdown," and everyone will share his hope that his hard and successful work in negotiation has not been wasted. It is possible to argue that the present "hitch"—as Mr Urquhart calls it—may

prove to be a blessing in disguise. For there was some room for scepticism as to whether the time was yet really ripe for such a transaction. It is not yet quite clear that the moderates are in control in Soviet Russia, and there are some who found it possible to argue that Mr Urquhart would have been wiser to hold together with other prospective concessionaires and refuse to sign an agreement until the Soviet Government showed a clearer recognition in general of the rights of private property. Such a line of argument may or may not be justified. But it must in any case be admitted that in any negotiations at present between foreign capitalists and the Soviet Government, the two parties to the negotiations proceed from ideas of the rights of private property that are by no means identical. Mr Urquhart is confident that at a later date his agreement will go through. This belief is supported by the abundant evidence that the Soviet thoroughly realises the vital necessity of attracting foreign capital. There is no doubt in the minds of educated Russians that the new economic policy of the Soviet has come to stay, not for the sake of the foreigner, but because it is essential to Russia. Since the economic policy of the Soviet changed, shops have been opened in Moscow, cabs can be hired, and such events have transformed a dead city into a city presenting some signs of life. A return to the old *régime* would mean blank despair for Russians. Politics, as Mr Urquhart says, have suddenly been interjected into this business affair. By the time they have been disentangled, and this agreement can come up again for consideration purely as a business contract, it may be that Russian ideas of the rights of private property will, under the pressure of the need for foreign capital, have approximated more closely to Western ideas. Possibly, therefore, the present disappointment may be fully compensated later in. One important point which Mr Urquhart makes in his statement is the following. Lenin's statement, he says, "may leave on some minds an impression that the Russo-Asiatic Consolidated was being granted a new concession. That is not so. The agreement set forth the conditions, financial and otherwise, on which the properties already owned by my companies were to be handed back to them and managed by them. I mention this because it is important to know that neither we nor any other foreign interests in Russia have admitted, or have any thought of admitting, the right of the Russian Government to nationalise our undertakings without compensation. Our claim, for instance, for £56,000,000 against the Russian Government is at once revived by the failure to ratify the agreement, and will naturally be persisted in until we receive satisfaction." Naturally, the report just issued adds little to the information already available regarding the position. It contains, however, some interesting particulars relative to the second string to the company's bow—the silver-lead property in Southern France. To deal with this, a French company has been formed, with a capital of 20,000,000f, in which the Russo-Asiatic will have a 78 per cent. interest, subject to certain rights of Mr Leslie Urquhart; the new undertaking possesses "sufficient cash capital to complete development and equipment of the mine and reduction plant." Boreholes and other data indicate the existence of an extensive ore body. The Russo-Asiatic also is testing under option some large silver-lead workings in Nigeria. The Cavallo (iron-ore) Concession in Northern Algeria has been purchased at a much lower price than that originally asked. These interests having been secured and handed over to the company at cost price by Mr Urquhart, who agrees to continue like activities, the board has undertaken to give that gentleman the option to purchase from the company within one year from acquisition a 20 per cent. interest in any new business. This, in reality, is a revival of an old arrangement, and will doubtless be readily approved by the shareholders. Similarly, no opposition may be expected to the proposed extension of the existing options for the purchase of shares and the conversion of the debentures. At the date of the balance-sheet the net cash resources stood at some £700,000. This amount has since been reduced by expenditure in connection with the French property and otherwise to about £500,000—still a very substantial figure.

The Maritime Conference.—The thirteenth conference of the Comité Maritime International, held in London this week, accomplished some very practical work on the two questions of clauses in bills of lading and legal immunity of State shipping with which the members set themselves to deal. The Comité can look back on a quarter of a century's work, and it represents 17 nationalities. The three days sittings at Lincoln's Inn Hall were about equally divided between the two questions, the recent history of which was summarised in an article in the *Economist* on September 30th. Immunity was debated on the first day and referred to a sub-committee. The Hague Rules went through the same process on the second day. At the concluding sittings reports were received and adopted (in the case of the Hague Rules after considerable further discussion) which may lead to draft international conventions on both subjects being considered by a Diplomatic Conference in Brussels during the coming week. In international business this is phenomenally quick work, but the diplomatic gathering had already been convened to deal officially with the results of some of the earlier labours of the unofficial Comité, and so rapid progress may be possible with the new subjects. As to the Hague Rules in particular, an international settlement is strongly desired by commercial men. The atmosphere of conciliation in which the original Hague Rules were settled seems, however, to have been left behind. It has been assumed in recent discussions that the incorporation of the Rules in bills of lading as an agreed and customary standard set of conditions (which is their present use in practice) is to give place to legislation. That legislation, it is recognised, should conform to the model of an international convention, but there were clear indications at this week's conference that, failing a prompt international settlement, independent and doubtless divergent legislative proposals would make their appearance in various countries. The Rules were, however, further revised by the conference, and are to go forward as the unofficially agreed terms for an international convention, to be followed by national legislation in each country giving effect to it. Similarly, if Governments agree, there should, it is proposed, be a convention under the terms of which State shipping would be subject to the same liabilities as that privately owned, but there would be exceptional arrangements covering men-of-war, State ships employed only in Governmental non-commercial work, and Governmental non-commercial cargo carried in State ships. In respect of the excepted property legal proceedings would be able to be taken only in the national courts, and would not admit of any seizure of the property.

Industry and Railway Rates.—The Press has devoted much space this week to the discussion of the possibilities of the reduction of railway fares, and the general opinion seems to be that a reduction of 25 per cent. will be announced on Tuesday next, leaving fares 50 per cent. above the pre-war figure. A much greater effect on the cost of living would, however, be produced by a reduction of railway freight rates. These are still in the main 75 per cent. above the pre-war level, although the operation of the flat rate addition makes the percentage considerably greater in many cases. When negotiating the last reduction in rates in July, the Federation of British Industries, on behalf of the majority of the trades in the country, agreed not to make application for a further reduction until after July 31, 1923, but the principal users of the

ilways, viz., the coal and iron and steel industries, were left parties to this agreement, and left themselves free to press for further reductions as occasion arose. The coalowners have already placed their case before the railway companies, and it is understood that the iron and steel interests are also seeking an interview with the railway managers to press their claim for further consideration of the prejudicial effect of the high railway rates has been referred to by the chairmen at all recent meetings of the coal, iron, and steel concerns. Mr Benjamin Talbot, of the Vale Cargo Fleet Iron Company, Limited, has shown that the increase in railway charges for steel angles and joists on export between August, 1914, and August, 1922, amounted to 108 per cent., while at the meeting of the United Steel Company on Monday last Mr Albert Peech stated:—"Transport charges on raw materials for the manufacture of our steel, and transport charges on finished material to the port taken together, average an increase of 19s to 20s per ton over 1914." Between 20 and 25 per cent. of the goods traffic of the British railways consists either of materials for, or the production of, the iron and steel industry, and in no manufacture does cost of transport bear so high a proportion of the total cost as in iron and steel. The industry, therefore, not unnaturally, feels itself entitled to special consideration. It has itself made great sacrifices in order to gain trade, and has reduced the price of its products to between 20 and 30 per cent. above pre-war; rails, to quote an instance of special interest to the railway companies, are now 175s per ton compared with an average of 133s per ton in 1913. Sir Sam Fay has recently stated that the financial situation of the railways was never so sound as at present, but industrialists feel that the railway companies have not taken their fair share in assisting a trade revival, and that with the *Economist* wholesale index number at 63 per cent. above July, 1914, railway rates at more than 75 per cent. above pre-war are unjustifiable.

Iron and Steel and Coal Output.—The monthly statistics published by the National Federation of Iron and Steel manufacturers show that the production of pig-iron in September amounted to 430,300 tons, or 18,600 tons more than August, and the highest figure attained since February, 1921, when production amounted to 463,600 tons. Production is still, however, only 64 per cent. of the average monthly production in 1920, and 50 per cent. of the average monthly production in 1913. The furnaces in blast at the end of the month numbered 139, or 13 more than at the end of August. The production included 123,700 tons of hematite, 137,800 tons of basic, 113,400 of foundry, and 25,900 tons of forge pig-iron. The production of steel ingots and castings amounted to 555,900 tons, a figure higher than in any previous month since December, 1920, when it was 746,600 tons; this represents 73 per cent. of the average monthly production in 1920, 87 per cent. of the average monthly production in 1913, and about 50 per cent. of the steel-making capacity of the country. Coal output from the mines of Great Britain in the week ended September 30th was 5,177,200 tons, as against 5,143,900 tons in the previous week, and 4,118,200 tons in the corresponding week of last year.

The Quarter's Shipbuilding. — *Lloyd's Register* shipbuilding returns for the September quarter were published on Wednesday, and show that the merchant tonnage under construction in the yards of the United Kingdom at the end of last month was 1,617,045 tons, or about 302,000 tons less than at the end of the June quarter. The total includes 419,000 tons on which work has been suspended for some time, leaving the figure for tonnage on which work was actually proceeding at 1,198,000 tons. This is 692,000 tons less than the average merchant tonnage under construction during the twelve months immediately preceding the outbreak of the war. The total merchant tonnage building abroad is given as 1,085,511 tons, but this includes about 256,000 tons upon which work has been suspended, leaving the effective foreign figure at 829,000 tons. The foreign yards figure is about 230,000 tons lower than at the end of June, the decrease affecting most countries, but particularly

France, Holland, and Italy. The figures of merchant tonnage under construction in leading foreign countries are:—Italy, 210,114 tons; France, 197,065 tons; Holland, 177,024 tons; United States, 147,056 tons; and Japan, 96,897 tons. The foreign figure does not take into account tonnage building in Germany and at Danzig, for which no figures are available, but estimates place the German figure at about 350,000 tons, and the Danzig figure at about 40,000 tons. In two respects the past quarter's British returns indicate improvement, namely, in the launchings and in new vessels commenced. The tonnage figures for the former were 158,346 tons higher, and for the latter 43,551 tons better than those recorded in the June quarter. Total launchings in the world during the last quarter were 476,070 tons, of which 307,232 tons were launched in the United Kingdom.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that very slow progress was made with the corn harvest during September, but in the south practically all the crops had been secured by the end of the month, only a little of the barley remaining uncartered. Owing to the showery weather and lack of sun, many crops have been carted in rather damp condition, and stacks have heated in consequence. Wheat is mostly of a very fair quality, but the grain is often soft. Barley is variable, the sample is poor where there were two growths, and much is discoloured, so that the proportion fit for malting will be less than usual. Spring oats are of inferior quality, the grain being light, but the quality of winter oats is fairly satisfactory. Owing to the late corn harvest and wet weather, the lifting of main crop potatoes has hardly been begun as yet in most districts. Heavy crops will be obtained in all parts of the country, except in the north-west, where they are considered about average. The yield per acre is now forecasted at 6.9 tons per acre, or 15 per cent. above average, which would give a total production of about 3,860,000 tons in England and Wales, against 2,960,000 tons last year. Mangolds have made fair growth during September, but more sun is now required to ripen the crop. Yields well over the average will be obtained in the east and south-east, but in the north the roots are small and yields somewhat below average are expected. In Wales also yields will not be heavy, as the plant is patchy. Turnips and swedes have improved, but the roots are still rather small in most districts. These crops also have done best in the east and south-east, whilst in the north-west and in Wales under-average yields are expected. The yields per acre of both mangolds and turnips and swedes over the whole country are expected to prove about 7 per cent. above average, mangolds being forecasted at about 20 tons and turnips and swedes at about 13 tons per acre. These yields would give a total production of mangolds of 8,500,000 tons, against 6,250,000 tons last year, and of turnips and swedes 10,800,000 tons, against 6,600,000 tons in 1921. Owing to the late harvest and the abundance of keep in the pastures, catch crops have not been sown to the same extent as usual, but in the eastern counties a fair breadth of mustard has been sown, and the crop is doing well. Some white turnips, rape, and the crop rye have also been sown, and good plants have been secured. Owing to the absence of sunshine apples are lacking in colour, and late varieties are very variable, the fruits being generally small. Most varieties of cooking apples are good crops in Worcester, and fair to the Isle of Ely yields are light. In Kent, Newton Wonders have yielded well, but Bramley's Seedlings and good crops of dessert apples in most districts, though only fair crops of Blenheim are being obtained in the west, and in Middlesex yields generally are about average. The principal districts. Winter greenstuffs have made succulent growth during the wet weather, so that they are very liable to damage by frosts. Brussels sprouts promise an over-average crop in most districts, and autumn cauliflowers are better than usual. Broccoli plants have made very rapid growth, and celery has also made good pro-

THE ECONOMIST.

621

gress during September. Carrots and parsnips are very good crops and beet about average. Onions are a heavy crop but are not ripening well.

Rubber Shares and Restriction.—The Stevenson Committee has this week issued a supplementary report, in which it recommends adherence to the standard production based on that recorded in the 12 months ended October 31, 1920, and suggests the imposition of a sliding scale of export duties, starting at a minimum of 1d per lb for exports of 60 per cent. of standard production, and ranging up to 1s per lb where the whole standard production is exported. This scheme should, the committee recommends, be put into force by Government action in Ceylon, the Malay States, and the Straits Settlements. The effect of the publication of this report was to send the raw material up to 10½d, and to stimulate the rise that has recently been taking place in rubber shares. This rise was due to several considerations. The weekly stocks of rubber in London warehouses are being steadily decreased; new uses to which rubber is being put appear to be making inroads upon the available supplies. Many thousands of acres have gone out of cultivation, whether permanently or not has yet to be seen, but the immediate result is to benefit the companies that carry on business. American tyre manufacturers are quoted as being busy; the cut in petrol and the near approach of the Motor Show are two subsidiary factors which may be reasonably brought into the field of favourable consideration; the general outlook is cheerful enough to encourage a better tendency in the prices of rubber shares. It has always been the habit of the rubber market to march well ahead of events, and people who are to-day buying the shares admit that they are fully prepared to regard their investments as a locking-up of capital which may not receive dividends for a year or two. At the same time, the impartial observer does not shut his eyes to the less favourable factors that continue to exist. How a great many of the companies have managed to struggle along during the past year, without going under altogether, is a matter for surprise even to those most intimately connected with the market; and no doubt there are a number of concerns which are only just hanging on to an existence by the complacency of their sponsors, who continue to supply the cash for upkeep, &c., on the estates. In discussing from time to time the various aspects which affect the rubber share market, reference has been made in the *Economist* to the fact that most shareholders of weaker faith (and stronger foresight) got rid of their rubber shares long ago; the people in whose hands rubber shares now rest are grimly determined to see the thing through, as the Stock Exchange phrases it, the result being that, when any demand for shares arises, very little supply is forthcoming to meet it. The natural consequence is for prices to go up in a manner disproportionate to the actual volume of buying. To run after shares at rising prices is dangerous. Those who are tempted to embark a little cash in the market, now that the industry at last gives signs of working towards a better position, should ask their brokers to exercise a wise discretion in the selection of shares in companies which are well supplied with money, which have not risen overmuch during the past month, and which can be bought at a modest valuation, per planted acre, of the rubber on the estate.

Bleaching for India.—Our Manchester correspondent writes:—For many months negotiations have been taking place between the India section of the Manchester Chamber of Commerce and the Bleaching Trade Advisory Board with regard to a definite contract for the bleaching of goods. New terms have now been arranged, and they replace those in force before 1915, when war conditions rendered it necessary to abandon hard-and-fast arrangements. Under the new contract bleachers will again give guaranteed dates of delivery of goods, reinforced by penalties for late delivery, and the merchants will guarantee delivery of grey cloths subject to a scheme of penalties. An important feature of the arrangement is an arbitration clause, by which any disputes are to be settled by the arbitration tribunal of the Manchester Chamber of Commerce. The new conditions are to come into operation for all India contracts placed on and after November 1, 1922.

Trade Restrictions in Jugoslavia.—A correspondent writes:—In a speech made to representatives of Croat industrial and banking interests at Zagreb on October 1st, Under Secretary Plavsic outlined the programme proposed by the Government further to improve the position of the dinar—which, be it remembered, during the last month or so has already appreciated over 25 per cent. The Yugoslav Government has received from the Blee group \$30,000,000 as a first instalment of the loan recently contracted in New York. A portion of this is to be used for providing importers with the necessary exchange. The remaining \$70,000,000, said M. Plavsic, will have to be transferred in dinars. On the other hand, the granting of import permits is to cease for a certain time, though when this restriction results in an improved exchange level, normal import conditions will be resumed. More important still, increased production is necessary. This year between 150,000 and 200,000 wagons of cereals are available for export, and exportation will in fact begin as soon as the needs of those parts of the country, whose grain production does not suffice for their own consumption, have been met. The crop of plums has been quite satisfactory, though in this Jugoslavia is more fortunate than most exporting countries this year. Accordingly, a further improvement in the dinar rate seems a certainty, though when the limit of 2,125 in Zurich is reached, a halt will have to be called, as a further rise would be most harmful to Jugoslav commercial circles. As M. Plavsic admitted that the present exchange value of the dinar already approximates to its internal purchasing power, it is hard to see what useful purpose will be served by a further appreciation in foreign centres. It is, of course, most important that the country's trade balance should be on the right side, and present conditions certainly do not warrant a large import of luxury goods. At the same time, when one bears in mind the great need for railway material, agricultural machinery and similar articles which can hardly be provided in sufficient quantities by native industry, it is hard to see why these millions of dollars will necessarily have to be transferred into dinars. The desire rapidly to force the national currency upwards seems to be a disease to which the Little Entente countries are particularly liable. Czechoslovakia and Jugoslavia are succeeding, thanks to foreign loans. The leu is at present more or less immune—though certainly through no lack of desire on the part of M. Vintila Bratianu.

Harrisons and Crosfield's Year.—It might have been supposed that a company with rubber interests as extensive as those of Harrisons and Crosfield would inevitably show very poor results for the past year. A drop in net profits for the year ended June 30th last of less than £15,000, from £164,466 to £149,138, is therefore a matter for congratulation, when regard is paid to all the adverse conditions of the period. Financial results of this company in the last pre-war year and the past six years are summarised below:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
	£	£	£	£	£	£	£
Net profit	134,269	187,181	212,190	200,571	249,204	164,466	149,138

Reserves, &c.	30,000	52,500	70,000	37,177	45,344	5,941	1,250
Deferred ord. shares	35,118	69,756	74,000	41,024	24,922	14,075	9,495
Carried forward	35,530	37,340	15,500	50,088	59,382	44,073	41,949
				36,147	37,873	44,525	44,525

It will be seen that full dividends of 6 per cent. on the cumulative preference shares and 10 per cent. on the preferred ordinary shares have been maintained, while the management shares and deferred shares each get 5 per cent. The report says:—"Owing to the continuation of the general trade depression, the crisis in the rubber industry and the disorganised condition of many of the foreign exchanges, the past year has again been one of great difficulty. Further considerable sums have had to be provided for depreciation, and the stocks stand in the balance-sheet at replacement values or cost, whichever is lower." A study of the balance-sheet, which is analysed in the usual column of this issue, shows that

ocks are £197,736 lower at £306,008, while the property item is £72,121 lower. Investments are entered at less than £4,000 below last year's total. With regard to this, the report says:—"As compared with their cost to the company, the investments continue to show considerable depreciation; but the directors believe the depreciation will disappear whenever there is any real recovery in the position of the rubber industry." This resumably must be taken as an expression of confidence that the rubber plantations in which the company is interested can weather the storm. The speech of the chairman, Mr Heath Clark, at the annual meeting next Wednesday will be awaited with interest, for he is accustomed on these occasions to review the position and prospects of the plantation industry. With regard to his own company's operations, he has at any rate a satisfactory record to place before the shareholders.

Armstrong, Whitworth, and Co.—The report of Sir W. G. Armstrong, Whitworth, and Co. for the year 1921 shows a decline in profits, after payment of debenture interest, from £675,200 to £438,900. No profit and loss account has been published since 1915, and the accounts contain a conspicuously small amount of information, and even show a retrograde tendency in this respect. The comparative summary below shows results since 1910. The accounts for the four years 1916-19 were submitted together in September, 1920, and for this period and for the year 1920 no mention is made of debenture interest, and comparison of the profit figure is therefore vitiated:—

	Profit.	Interest and Expenses.	Prof. & Ord. Div.	Ord. Div. Rate.	To Reserve &c.	Carried Forward.
	£	£	£	%	£	£
1910	597,637	119,772	361,000	10	50,000	184,997
1911	627,227	119,401	441,250	12½	50,000	201,573
1912	798,547	123,020	443,250	12½	100,000	335,850
1913	856,673	167,626	568,122	12½	133,059	323,716
1914	940,195	158,309	591,563	12½	200,000	334,038
1915	1,055,620	303,272	615,000	12½	100,000	461,387
1916-19 ...	4,053,605	?	2,465,093	12½	1,000,000	1,049,899
1920	675,180	?	803,750	10	..	921,329
1921	666,060	227,172	528,125	5	..	832,092

The accounts do not show how much of the dividend payment goes to ordinary and how much to the preference shares, nor do the directors trouble to intimate the rate of ordinary dividend in the report, the shareholder being left to find these things out for himself as best he may. The balance-sheet, which is analysed in detail on a later page, has suffered from condensation. Investments in and advances to subsidiary companies, hitherto shown as a separate item, are now included with property, the new total showing a reduction of over £3 millions on last year's two separate figures together. This decline is possibly to be accounted for by reductions in accounts with the subsidiary concerns, for creditors are down by over £4½ millions. The report states that some special contracts have been secured, and that the directors hope to secure other important work regarding which negotiations are now in progress.

The Diamond Revival.—There have been several indications lately of a revival in the market for diamonds, which, after its spell of war prosperity, relapsed into stagnation. Instead of endeavouring to tempt purchasers by substantially lowering prices, the selling syndicate kept a stiff upper lip, and all the principal producing companies in Africa shut down. The Union official statistics for the first half of the current year showed sales to the value of over £1,000,000, or well on the way towards half the 1921 total, although the average of 73s 8d per carat compares with 81s 7d. Work at the mines continues on a very restricted scale generally speaking, but the recent announcement of the Consolidated South-West Africa Company as to the resumption of production has now been followed by the intimation that the scale of operations is to be extended. Naturally, the market price of the shares responded, and favourable conclusions were drawn with regard to the other companies of the Continent. Indeed, it has been stated that De Beers will start again in January. The appended table contrasts the

lowest prices since the beginning of 1921 with those current at the close of business on Friday afternoon:—

	Lowest. 1921.	Lowest. 1922.	Friday Closing.
De Beers, Deferred (50/-)	8½	9½	13½
Ditto Preference (50/-)	8½	9	12½
Consolidated S.W. Africa (£1) ..	16/-	16/6	24/-
Jagersfontein (£1)	36/-	40/-	3½
Premier, Deferred (2/6)	3½	4	6
Ditto Preference (5/-)	4½	4½	6½

That big consolidation, De Beers, paid a total of 40s per ordinary share for 1918-19, 60s for 1919-21, and 10s interim on account of 1920-21. The preference interest is in arrears since June, 1921. The South-West Africa undertaking—an amalgamation of the previously German-owned properties—has, so to speak, scarcely yet got into its stride. The New Jagersfontein, somewhat to the surprise of many people, lately declared a dividend of 2s 6d per share; the first since the interim distribution of October, 1920. The Premier Company has duly met its preference obligations, but has made no distribution on its ordinary shares for two years. Speculative interest is reviving in the above-mentioned shares.

Rio Tinto.—Like other base metal producers this important European copper proposition has been affected by high wages, low prices, and labour trouble; it has also suffered from the heavy export taxes imposed by the Spanish Government. However, the results of the past half-year have so far justified the mildly encouraging tone adopted by the chairman at the last annual meeting that the company is able to declare an interim dividend of 10s per £5 share. The last preceding distribution was 20s early in 1920, making a total of 40s for 1919. The high-water mark of recent years was the £4 15s paid in respect of 1916, when the price of copper was inflated by war requirements. On the basis of 20s per annum the yield at current market price of 28 is barely 2 per cent., hence it is not surprising that the declaration exerted little effect upon the quotation. The preference, at about £4, yield slightly over 6 per cent. As the company operates what is virtually a mountain of low-grade copper ore, the question of "life" does not require to be taken into account.

Transvaal Output in September.—The figures of gold output in the Transvaal sent to us by the Chamber of Mines continue to be of an encouraging character. It will be noted from our table below that the September output is practically up to the level of August, and well above the month of July, both of which contained a day more. The recovery since the beginning of the year is significant, and it will be interesting to see what progress is made in the three remaining months of the year. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
January..	787,467	782,634	714,182	676,059	670,503	651,593	639,728
February..	753,594	781,321	659,759	636,728	625,330	558,137	511,338
March	736,689	787,094	696,281	712,379	707,036	671,123	623,786

Totals ..	9,296,618	9,018,084	8,418,292	8,330,091	8,153,625	8,114,516	4,686,764

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	Dec., 1921.	March, 1922.	April, 1922.	May, 1922.	June, 1922.	July, 1922.	Aug., 1922.	Sept., 1922.
Gold mines....	177,836	124,169	138,277	155,425	170,464	172,886	175,054	174,565
Coal mines....	13,230	11,155	11,385	11,525	12,117	12,371	12,270	12,000
Diamond	1,224	1,204	1,232	1,219	1,211	1,211	1,219	1,234
Total	192,290	136,528	150,894	168,169	183,792	186,468	188,543	187,799

The number of natives employed at the gold mines shows a slight decline.

Oversea Correspondence.

UNITED STATES.—RAILROAD CAR SCARCITY—INDUSTRIAL REVIVAL—STEEL MERGER ABANDONED—MONEY FIRMER—PROSPECTIVE GOVERNMENT REFUNDING.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 2.

ALTHOUGH the railway shopmen's strike is practically ended, much concern is felt over the transport situation in this country. In many sections railroad facilities are already heavily overtaxed. Unless all signs fail, the most serious congestion of freight and acute car shortage ever witnessed here will be experienced within the next few months. In addition to being fully occupied at present with the movement of the crops, iron and steel products, lumber, and other building materials, besides miscellaneous commodities and merchandise, the carriers are being called upon to meet unprecedented conditions in the coal industry, owing to the prolonged miners' strikes, which were settled only a month or so ago. Thus far the railroads have done remarkably well, all things considered, in moving a rapidly increasing volume of coal and other freight; but, apparently they have about reached the limit of their capacity, and the freight movement, always heaviest during the autumn months, is not yet at its peak. During the week ended September 16th the railroads loaded more cars with all classes of freight than in any other week since October 29, 1921. Of more significance, however, in its bearing upon the future, is the fact that the heavy increase in car loadings has absorbed practically all of the idle cars throughout the country. According to the Car Service Division of the American Railway Association, the carriers on September 15th had pending requests for nearly 86,000 freight cars, which could not be filled immediately. In all probability, reports on the car situation in ensuing weeks will reveal an increasing scarcity. Extraordinary measures to clear up the freight congestion which has already developed are being taken by various railroads, notably the Pennsylvania; the latter company has just declared a ten-day embargo on all non-essential freight. Car scarcity in all sections is seriously retarding the movement of grain, and may interfere with shipments to European countries when they enter American markets on a larger scale for grain, as they are expected to do before long. In a way it is fortunate that purchasing for the account of Europe has not been very heavy recently, because, as Secretary of Commerce Hoover points out, transportation facilities in the United States are now insufficient to bring foodstuffs to the seaboard for export. Railroads throughout the country have recruited their shop forces up to about 90 per cent. of normal, and are also placing heavy orders for new rolling stock, but it is doubtful if the latter can be manufactured early enough to be of much help in relieving this season's car shortage.

In virtually all lines of trade and industry there was a marked revival during September, especially in the second half of that month. In the iron and steel market the outstanding feature of the past week was the rush on the part of all railroads to place orders or reservations for steel rails before the advance of \$3, making the new price \$43 a ton, became effective on October 1st. Such orders, in the aggregate, are said to have exceeded 1,000,000 tons—probably the largest weekly total ever recorded. Steel mills generally are now operating at close to 90 per cent. of capacity, as against about 50 per cent. in August. Iron and steel concerns, however, are now being seriously affected by the car shortage.

Fall buying has expanded in all centres, notably in primary textile and apparel markets. Trade in finished and unfinished cottons, particularly, was more active during September than for many months past. All lines of dry goods have shown a firmer tendency. The output and movement of bituminous and anthracite coal have greatly increased, but supplies, especially of hard coal, are still far short of requirements, and the scarcity is likely to

continue acute in many sections for some time. Buying of automobiles was of large volume, while improved business conditions and inadequate railroad facilities increased the demand for motor-trucks. Exceptional activity in building operations was in evidence in all sections of the country last month, and this was reflected, naturally, in markets for building materials and house-furnishing lines, especially carpets and rugs. The carpet and rug industry here is enjoying a greater volume of business than for many years. The number of men unemployed throughout the country is probably less than at any time this year; in some industries there is a labour scarcity. Business failures during the last week in September were fewer in number than in the preceding week, and well below a year ago.

The proposed consolidation of three big independent steel companies into one corporation, which was to be known as the North American Steel Company, has been abandoned, for the present at least. The companies which were to be merged were the Republic Iron and Steel Company, the Midvale Steel and Ordnance Company, and the Inland Steel Company. The impossibility of financing the merger under existing circumstances is given as the reason for dropping the plan. Bankers, it is understood, were unwilling to guarantee the new securities, owing to the objections raised by the Federal Trade Commission. The latter has been investigating the contemplated merger for some time, and in a recent report attacked its legality, although the Commission fixed a date in the latter part of this month for another hearing. An official announcement says that, pending final determination of the questions involved, the financing of the proposed amalgamation would not be possible. The abandonment of this undertaking was rather unexpected in view of the fact that the Bethlehem-Lackawanna steel merger was consummated, notwithstanding that the latter combination was also opposed by the Federal Trade Commission. The Bethlehem Steel Corporation, however, absorbed the Lackawanna Steel Company through an exchange of stock, and the merger did not involve the raising of new capital.

The United States Department of Justice is continuing its activities against associations or combinations suspected of operating in restraint of trade. Following a long investigation, the Federal grand jury here has returned indictments under the Sherman Anti-Trust Law against some 20 companies and members of the Sanitary Potters' Association. The latter, embracing the leading potteries of the country, is composed of concerns engaged chiefly in the manufacture of porcelain and earthenware fixtures used in houses and buildings, while several of the indicted companies make bath tubs and accessories. The defendants, who manufacture about 85 per cent. of all such pottery produced here, are charged with having entered into a price-fixing combination, and with having unlawfully restricted their sales of merchandise to a specially selected group of so-called "legitimate jobbers," thereby eliminating competition.

Unsettlement in the Near East is considered responsible to some extent for the recent weakness in securities markets here, the drop in foreign exchanges and in cotton, and the irregular fluctuations of prices for leading grains. The stock market, however, after advancing vigorously for several months, with scarcely any set-back, was plainly due for a substantial reaction. The lower tendency of bonds is believed to reflect more the recent hardening of money than apprehension of hostilities abroad. Some of our Liberty bonds fell below par in the recent slump, while foreign Government issues and domestic corporate bonds were distinctly weak. Although nothing even approaching stringency in the money market is expected to develop during the remainder of this year, present indications are that money rates will continue to be firmer than they were last summer. Furthermore, with an increasing revival in trade and industry in ensuing months, it is conceivable that a great deal of business capital, as well as surplus bank funds, will be withheld or withdrawn from the bond market in order to meet trade and industrial requirements. Perhaps the bond market has lately been discounting the future in this respect. Another factor, which probably accounts partly, at least, for the recent depression in domestic bonds, is the long-term bond issue which, it is understood, is contemplated

by the Treasury Department to refund in part the Government's obligations maturing in the latter part of this year and early in 1923, amounting to \$2,000,000,000 approximately. Unofficial reports state that the new loan will consist of 30-year bonds bearing 4½ per cent. per annum interest, with tax exemption features to increase their attractiveness. Current reports place the amount of the new issue at \$1,000,000,000, to be floated before December 15th, in order to take up the Victory notes which have been called for redemption on that date. The remaining billion of maturing obligations, it is expected, will be refunded by the issuance of Treasury notes and certificates of indebtedness.

FRANCE. — NATIONAL DEBT — REDUCTION IN MILITARY EXPENDITURE—REVENUE—FUTURE LOANS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 10.

ACCORDING to figures that have this week been published by the Ministry of Finance, the public debt of France amounted on April 1, 1922, to 316,984,988,953f. In this sum the floating debt figured for 86,555,322,300f, including over 60,000,000,000f in respect of National Defence Bonds. A new issue of 6 per cent. three to five years Treasury Bonds, as stated in this column last week, is now being offered to the public, and will be open for subscription down to November 10th.

These figures may well form the prelude to an epitome of a remarkably frank and clear address that was delivered last Thursday by M. Lasteyrie, the Finance Minister, on the occasion of the annual luncheon of the Paris Chamber of Commerce. In this address the Minister, after alluding to the pessimism that has existed for some time in certain circles, where doubts appeared to be entertained as to the country's power to right itself, said he believed his first duty was to tell the country the truth and to display the financial situation of France exactly as it appeared to him to be. It would have been easy for him, he pointed out, by a little manipulation of figures, to give the impression that receipts and expenditure had been very nearly made to balance. Such a method, however, would be unworthy of a country that had so heroically faced other crises of equal gravity during the war, and he preferred to let it be seen openly that there would be a deficit of 4,000,000,000f in the Budget for the coming year. The ordinary Budget—the real "French" Budget, as it might be called—had been balanced by the aid of the taxes imposed under the Finance Law of 1920. The deficit of 4,000,000,000f was directly due to the fact that Germany had paid nothing on account of reparations, so that France had been obliged to borrow the money necessary to provide for her recoverable expenditure. The interest on these loans amounted to-day to nearly 4,000,000,000f, or within a few hundred million francs of the deficit in question. "Our budgetary difficulties to-day are in no way due, as certain foreign newspapers insinuate, to our lack of fiscal courage, but solely to Germany's failure to carry out her engagements!"

Dealing with French efforts towards economy, M. de Lasteyrie said the country had accomplished an enormous amount in this direction during the past three years. The Extraordinary Budget, which amounted in 1920 to 4,128 millions, had been suppressed, and ruthless war had been made against the "special accounts" (revictualment, merchant shipping, coal, &c.) that had been such a burden on the Budget. All these special accounts had been reduced, or would be shortly, merely to liquidation services, and the State had definitely ceased to carry on ruinously expensive experiments as a trader, and thereby compete unfairly, at the expense of the taxpayers, with ordinary commercial undertakings. The Minister insisted that he will not rest until all such special accounts

are suppressed and budgetary unity has become a reality.

Referring to the charge of Imperialism made against France, M. de Lasteyrie quoted the following figures as evidence of the manner in which military expenditure has been reduced in this country during the past four years:—

	Francs.
1919—Total expenditure on national defence	18,185,000,000
1920	7,648,000,000
1921	6,312,000,000
1922	4,910,000,000

Simultaneously France had reduced the period of military service by one-half, while the number of men with the colours is 200,000 fewer than in 1913. Of all the Great Powers, France had effected the greatest reduction in expenditure on national defence. Estimated in gold, on the basis of prices current in 1913, French expenditure had been reduced by 7.9 per cent., whereas British expenditure had increased by 19 per cent. and that of Japan by 71 per cent. Civilian expenditure had been also reduced to an enormous extent, as shown by the following comparative figures of expenditure under this head:—

	Francs.
1920	11,377,000,000
1921	9,938,000,000
1922	7,023,000,000

During the first half of the current year 28,000 public officials had been suppressed, and this number would be increased to 50,000 by December 1st. Complete reorganisation of the administrative services would enable still greater economies to be effected later on.

Defending the income-tax, M. de Lasteyrie affirmed that to suppress this new impost and return to the old forms of direct taxation was impossible. The new fiscal resources placed at the disposition of the Treasury in 1920 (when the incidence of the income-tax was substantially modified upwards) had already yielded 6,000,000,000f of supplementary revenue, and if the recasting of the incidence of the income-tax had encountered some opposition in practice, this impost had, nevertheless, given an increased result that would only grow more important as time went on. The yield from income-tax for the last three years had been as follows:—

	Francs.
1919	892,000,000
1920	1,639,000,000
1921	2,197,000,000

The yield from income-tax on the total revenue (apart from scheduled assessments) had grown in the same years from 562 to 896, and then to 1,137 millions, and was estimated to reach two milliards within the next two or three years.

Dealing with the tax on turnover, the Minister foretold a great extension of the system of imposing on traders an agreed bulk payment for the year, based on the general total of his business, instead of continuing the present system of collecting the tax on each individual per month. During 1921 this tax yielded 138,000,000f ever, the yield averaged 183,000,000 per month, how- July being 200,000,000f, and better results still were to be expected in the future. The revenue from taxation as a whole had increased as follows during the past three years:—

	Francs.
1919	11,586,000,000
1920	19,821,000,000
1921	21,543,000,000
1922 (estimated at about)	24,000,000,000

Referring to Germany's failure to make reparation, the Minister insisted that if, as France demanded, a Debt Commission had been installed in Berlin when the treaty came into operation and real control had been established over Germany's finances, many of the present difficulties would have been avoided. The Wiesbaden, Lubersac-Stinnes, settlement of the problem of reparations in kind. The only method that would now enable France to obtain payment from Germany was for the latter to be compelled to put her affairs sufficiently in order to enable her to contract foreign loans.

Owing to Germany's failure to pay, France had been

compelled to raise sums which, by the end of the current year, would amount to over 100,000,000,000f for pension charges and reconstruction work in the devastated area. During the war France had resorted too largely to raising money by increasing the note circulation of the Bank of France, which had risen from 5,713,000,000f in 1913 to 37,901,000,000f at the end of 1920. While every effort would be made to ensure the regular repayment of the advances made by the Bank of France, there would be no effort at any sudden reduction of the note issue, which would be a serious danger to commerce and industry.

Referring to the question of future loans, M. de Lasteyrie said it was only by this means that the Treasury could this year obtain the necessary money for "recoverable expenditure." The time for a great consolidation loan had not yet come, and would not come until the great international questions that are now pending have been settled. For the moment, a short-term loan, in view of the dearth of money, would be more advantageous to the Treasury. "I remain faithful to the policy of cheap money which I have tried to practise since I came into office. I am confident the present loan will succeed, like its predecessors. I had the same confidence when I reopened the Rente market, and I was not disappointed. In spite of the trouble provoked by the Genoa Conference and the storms in the East, that operation has proved completely successful, in spite of its delicate and difficult nature and of the always unsettled foreign outlook." The loans that had been necessary during the past four years had been as follows:—

	Francs.
1919	51,331,000,000
1920	42,822,000,000
1921	31,120,000,000
1922	21,000,000,000

The reduction in the amount raised had been enormous, but it was still too great, and it was absolutely necessary to get Germany into a position where she could contract foreign loans, the greater part of the yield from which would be used to pay its debt towards the Allies, so that France could progressively reduce and suppress the loans she was compelled to issue.

France, the Minister claimed in conclusion, was working hard, and already a very real recovery in business had occurred. Railway earnings this year would be 400,000,000f greater than last year, which showed 600,000,000f more than 1920; the adverse trade balance, which amounted to 24,000,000,000f in 1919, fell to 2,000,000,000f in 1921, and would not exceed that figure in 1922; imports of raw materials, which amounted to 15,000,000 tons in the first six months of 1921, increased to 21,000,000 tons during the first half of 1922; unemployment allowances were made to the merely trifling number of 3,350 persons at end of August, as compared with hundreds of thousands in other countries, while savings bank deposits were constantly and regularly increasing. "By work and energy we shall re-establish our financial situation.....Our iron, phosphates, potash, water-power constitute incomparable wealth that will enable us to face the future with confidence."

The Bourse this week has been marked by no very definite tendency, though early in the week there was a recovery owing to the improved news from the Near East. The most important factor has been the approaching issue of Treasury bonds, which has resulted in a number of sales. There has been in consequence considerable fluctuation. French Rentes have on the whole improved, though the Three per Cents fell back from 60.55f to 59.60f. The 1914 Five per Cents. improved from 77f to 77.45f, and the Six per Cents. from 91.10f to 91.60f. Both Russian and Turkish bonds showed improvement, though only to a slight degree. Banks were generally stronger, the Banque de l'Indochine rising from 2,800f to 2,845f, the Banque de Paris et Pays Bas from 1,246f to 1,268f, and the Banque de l'Union Parisienne from 632f to 640f. Railways showed similar advances, Est improving from 778f to 795f, Nord from 1,185f to 1,224f, Orleans from 910f to 920f, P.L.M. from 922f to 940f, and Metropolitan from 440f to 449f. Shipping reacted favourably to the improved situation regarding the strike, Chargeurs Français rising from 652f to 690f, and Messageries Maritimes from 181f to 189f.

GERMANY.—INFLATION—FINANCES—CURRENCY—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 8.

THE third quarter of 1922 brought not only the greatest absolute, but also, as measured by the total at end of the second quarter, the greatest relative inflation of recent years. In former despatches from here the nature of the inflation process has been stated fragmentarily, but with figures and dates. It is useful to trace the process by stages. 1. The mark exchange falls abroad and the foreign exchanges here simultaneously rise. 2. The result is a rise in prices. 3. The price rise causes an increase in State expenditure and (at least at first) in State deficits, and makes private working capital insufficient. 4. The State deficits are covered and the insufficiency of private capital is repaired by credit operations; the Finance Ministry presents Treasury bills to the Reichsbank for discounting, and private business men raise money by various means, of which the discounting of bills is one. 5. The Reichsbank disposes of the discounted bills to private capitalists as far as these can take them up. 6. Against the undisposed-of residue the bank prints and issues notes, holding the bills as security, and the note circulation is correspondingly increased. This chain constitutes the inflation process.

As inflation may admittedly be the cause, and not the result, of an exchange decline, and this is indeed usually considered the normal sequence, the above scheme of German inflation can only be established by close examination of the features of an inflation wave. Inflation waves there are, in that the inflation rate is not constant, and once even there was, apart from occasional weekly decreases, deflation (though very slight) over a considerable period. That was in January-March, 1921. The features requiring examination are: the fluctuations in the mark's foreign exchange, in the home and foreign price levels, in the floating debt, and in the note circulation, attention being paid to the state of the money market during each wave. Such data have already been given from here. The contrary view, that inflation is the primary cause of the mark exchange's decline, is very natural, because this sequence, as stated, is usually considered normal. Serious inflation occurring before an exchange decline would (among other effects) raise home prices, check export, reduce the demand for the inflating country's bills, and produce a decline in its exchange. A mere statement that inflation was the cause would not, however, be satisfactory, because the cause of the inflation would also have to be determined. But, conversely, a decline of an exchange caused, for instance, by lack of foreign confidence as a result of a political upheaval, would raise prices and increase State expenditure, and if deficits resulted the Government might inflate instead of taxing in order to cover the deficits. The figures given from here in the past show that this is the order in the German inflation process. As figures do not seem to have convinced everyone, authorities (who naturally also work with figures) may have more influence. German authorities are unanimous that the mark collapses lead. Germans are sometimes considered interested parties; but the Swede, Prof. Gustav Cassel, describes the German inflation process in the same way. The Helsingfors newspaper *Hufvudstadsbladet* of October 2nd prints his analysis. After admitting (what is obvious) that "in general the creation of new buying power is the cause and the price rise is the result," Prof. Cassel proceeds: "But in this case it was the violent depreciation of the mark's international value that caused the new wave of high prices, which in turn caused the increased demand for currency." This statement is merely a paraphrase (intermediate links being omitted) of the sixfold chain of causes and events described above. Given a heavy mark fall inflation could not be avoided unless money was abnormally plentiful, so that all bills would be taken up. In the *Economist* it was stated from here that "the increased circulation is not only inevitable, but also desirable and indispensable if business is not to stop." After considering the effect on the new high prices of a possible Reichsbank refusal to issue more notes, Prof. Cassel says that such a refusal

would have "caused unheard-of and, in view of the present social unrest, dangerous perturbations." The last sentence may be taken to mean that production and employment would be badly hit; but as it is also true that the Government could not pay its officials or pay for materials, the inevitable and indispensable nature of the inflation caused by a mark exchange decline is made plain. But the mark fall, though rightly put first, must have a cause. This cause is always the same, the passivity of the foreign payment balance; but the passivity is determined by several factors: by the import excess, by Reparations payments, by panic purchases of stable currencies by Germans, and, perhaps most of all, by panic realisations of marks and mark securities by foreigners. As such realisations take place whenever Germany's prospects look bad, an entirely non-economical event may produce a mark exchange decline. The last great decline began as a result of, and within a few hours of, Dr Rathenau's assassination.

The latest State financial and Reichsbank reports supply a practical commentary on the above. In the last ten days of September the floating debt increased by 89,748,400,000 marks, and reached a total of 528,370,370,106 marks. Since April 1st (the beginning of the financial year) this debt has grown by 178,963,082,000 marks, and almost exactly half of the big increase took place in ten days, between September 20th and 30th. In all September the increase was 129 milliards, in all August 23½ milliards, in all July 12½ milliards. In June, towards end of which the mark exchange collapse began, the floating debt increase was only 5½ milliards. The cause of the tremendous increase towards end of September was not Reparations; of the 89 milliards only 9½ milliards went in this direction. The cause was the enormous increase in expenditure, due to the price rise, which was in turn due to the mark collapse. Thus whereas expenditure in the first four months of the financial year averaged 21 milliards, in August, which began five weeks after the beginning of the mark fall, expenditure was 45½ milliards, and in the third ten days of September was nearly 94 milliards. (Apart from the price rise, the total was swollen by certain payments in advance.) Early in a mark exchange fall period some items of revenue do not rise as rapidly as expenditure, hence the increased deficits. Owing, however, to the fact that part of the revenue increases automatically with the currency depreciation, August receipts from taxation totalled the large sum of 31,466½ milliards, from posts and telegraphs 2,821 milliards, and from railways 18,053 milliards, so that total receipts were over 52 milliards, which is more than 52 times as much as the receipts of January, 1920. If the mark exchange fall and the price rise cease, the tendency will be for revenue to catch up. But before that, an entirely new and much higher level of values will have been established, and even though the real deficit (deficit of substance, or proportion of deficit to revenue) may be no greater than before the last mark fall, the nominal paper mark deficits, the nominal increases of floating debt, and the nominal inflation are bound to remain upon the new level, and to be therefore very much greater. Only deflation could prevent this.

The Reichsbank in the last week of September beat its records. In the three months (twelve report weeks) preceding the Rathenau panic and the beginning of the new mark decline, the bank's holding of discounted Treasury bills grew from 132,060 millions to 167,620 millions, or by about three milliards a week; private bills from 1,491 millions to 4,161 millions, or by 222 millions a week; and note circulation from 122,903 millions to 157,935 millions, or by about three milliards a week. In the 12 following weeks Treasury bills rose from 167,620 millions to 349,760 millions, or by about 15 milliards a week; private bills from 4,161 millions to 50,230 millions, or by nearly four milliards a week; and note circulation or by nearly four milliards a week. Although these figures look very alarming, it cannot be shown that they in themselves involve any threat to business activity. The first money panic was got over weeks ago, and business rapidly adapted itself to the new values level. But the new mark fall which began last week involves, unless it soon ceases, a repetition of the process. The inflation, though it does

not depreciate the mark exchange by means of throwing home prices over foreign and so checking export, is well advertised to the world, and the advertisement may easily frighten foreigners into further realisations of their mark interests, in which limited sense a statement that inflation causes, as well as is caused by, a fall in mark exchange would be true.

The currency controversies continue. It is noted that the Austrian Alpine Montangesellschaft has taken to invoicing home sales in gold crowns, while accepting payments in paper crowns at their current gold exchange. In Germany the burning question is the "reproduction price." As manufacturers cannot finance new production with the depreciated yield of past sales, they fix their prices when selling not upon the production cost of the goods being sold, but upon the future production cost of similar goods. In theory this is sound. But in practice it involves the demand from buyers of enormous percentages of profit on past production cost, and on this score there have been several prosecutions under the anti-extortion law. The number of such prosecutions is increasing, and some offenders have even been sent to penal servitude. The Ministry of Industry declares that the charging of "reproduction prices" is not allowable, but has authorised textiles traders to base their prices not on future production cost, but upon the mark exchange depreciation. Creditors, being losers when payment of debts is delayed, are threatening dilatory debtors to make them pay an increased sum in marks if the dollar exchange rises. This is not legally enforceable, but it is in the spirit of the Court of Appeal's *clausula rebus sic stantibus* decisions. It is officially stated that as a result of the fact that the mark's gold exchange has fallen much more than company capitalisations have risen, the gold value of all company capitalisations has fallen from 31 milliards at the end of 1913 to 6.80 milliards to-day. The conditions on which the Finance Ministry has authorised big industrial concerns to issue their own emergency notes are: That the highest denomination is 1,000 marks; that the longest term of validity is two months; and that full cover is deposited with the Federal Credit and Control Board. The shortage of small notes is still acute.

Foreign trade in August was: Imports, 4,676,170 metric tons, against 4,798,200 tons in July, value 56,472 million marks, against 60,257 millions; exports, 1,406,700 tons, against 1,636,500 tons, value 60,295 millions, against 49,941 millions. The reality of the export surplus of nearly four milliard marks is doubtful. The dates at which the totals of foreign trade conducted in foreign currencies are converted into marks are not the same for imports and exports, and in times when the exchanges are violently moving this leads to big over or under estimates. In the first eight months of 1922 imports were 26,619,203 tons, of value 245,267,912,000 marks; exports, 15,118,700 tons, of value 226,839,932,000 marks. The Import and Export Board has agreed to reduce export duties when and the date of the granting of an export licence exchange of the foreign currency of foreign currency the 33½ per cent. or more. The Bourse last week was active and rising. The *Frankfurter Zeitung's* index for dividend-payers shows a rise of from 79,220 to 97,880.

AUSTRIA.—PROSPECTIVE FOREIGN CREDITS—FINANCIAL CONDITIONS—PRICES AND WAGE DIFFICULTIES.—CURRENCY SCARCITY—NEW ISSUE BANK

(FROM OUR CORRESPONDENT.)

VIENNA, October 1. The main interest in political and financial circles is: present centred in the reports on the negotiations in Geneva, according to which the guarantee for the credit to be granted to Austria seems to be secured. The consequence of this fact politically is that the Chancellor Dr Seipel, will remain in office, and the immediate danger of the Socialists' accession to power is removed. The position of his Cabinet, however, is still very difficult. Personal changes in the Cabinet are expected, especially the finance Minister, Dr Segur, who is likely to retire. I

will probably be replaced by Dr Brauneis, who is acting as negotiator in Geneva at present.

In spite of the guarantee obtained for the Austrian credit, both Governmental and financial circles are rather doubtful as to the date when the International credits will be available, and it is to be feared that a long time will elapse before the whole transaction is concluded. First of all, therefore, it will be necessary to grant Austria an interim credit as, without one, the Government cannot carry on. Though it was not officially announced, the Treasury has already used up on current expenses the greater part of their share of profits from the winding-up of the Austro-Hungarian Bank, amounting to 30 million gold kronen. In spite of the enormous increases of taxes and railway fares effected lately, the public funds are at a low ebb.

By pawning the first half of the Italian credit (75 million lire) and another instalment of 20 million francs of the French credit at the Austro-Hungarian Bank in return for kronen bank-notes, the Government may carry on till early in October. Then it must try to keep the management going for another few weeks by the proceeds of the internal loan and by any foreign credits which may result from the Conference in Geneva. Several attempts to increase the public revenue by increasing the postage and railway fares and the price of tobacco by some 100 per cent. were practically of no help at all, as the expenses for salaries and wages, continuously augmenting owing to the "index law," swallow up all additional receipts.

The financial reconstruction programme of the Government, as set out in my previous letters, has become completely obsolete on account of the depreciation of money, and the Finance Minister has already announced that it must be revised. The fatal "index law," passed in June, by which all State and private employees were granted the concession that each increase in the index figure would in future automatically increase their salaries and wages, has caused the greatest entanglement in public and private administration.

The maintenance of industrial production meets with growing difficulties as it becomes increasingly difficult to raise the necessary means. Owing to the "index law" most commodities already have reached or even exceeded the world-market parity. Articles of dress textile goods in general, shoes and leather goods are no longer cheaper in Vienna than in Czecho-Slovakia, and since in this country the market is completely stagnant at present, Austrian industry is threatened by the possible importation of cheaper goods from abroad. As matters stand, one has to reckon on unemployment in the next months inasmuch as the latest index figure published shows a further increase of the cost of living of 91 per cent. compared with last month. The union of metal industries has already declared to its employees that it is quite unable to increase salaries and wages according to the index and proposes an increase of only 30 per cent.; even the Government itself realises the impracticability of the "index law," and is preparing a Bill of amendment, according to which only 50 per cent. of the increase corresponding to the index figure should be paid out. Next month the index figure will probably show a decrease, in itself a favourable sign, but it may bring with it the danger of opposition on the part of the workmen to a reduction of wages.

For the first time for many months the prices of some important commodities have considerably decreased, as they had already exceeded the world-market price; flour has gone down from K.14,000 per kilo to K.8,000; fat from K.40,000 to K.30,000; sugar from K.22,000 to K.11,000. In textiles and shoes also a slight fall in prices has taken place, as the economic crisis in Czecho-Slovakia has compelled the manufacturers there to reduce their prices considerably. In Vienna, however, the policy of taxation adopted by the Socialistic municipality will always be a serious hindrance to a thorough decrease of the cost of living. This policy, faithful to Socialistic doctrines, is inspired by strong animosity to industry, commerce, and all property in general. On the hotels, for example, a tax amounting to 50-60 per cent. of the gross earnings has been imposed recently. The Government tax on the profits of banks, industry, and commerce has

been increased by additional municipal charges to such an extent that by this tax alone 42-48 per cent. of the net profit is seized. By such measures Viennese industry is seriously handicapped, as became obvious at the last Viennese Industrial Fair, which turned out a complete failure.

The managers of the Austro-Hungarian Bank are making desperate efforts to throttle the demands for credit rushing upon them from all sides. Nevertheless, the amount of bills discounted has increased by 205,000 million kronen in the last week of August, and by about 150,000 million kronen in the first week of September. It is estimated that the bank-note circulation, which at the end of August amounted to 1.35 billion kronen, will increase by the end of September to at least 2.2 billion kronen. In spite of this colossal circulation, money is so tight that industries can hardly get loans under a rate of interest of 40-50 per cent. Big concerns are obliged to go about begging from bank to bank in order to raise money for the payment of wages at the week-end. The Austro-Hungarian Bank finds itself compelled to print bank-notes of 500,000 kronen and bills ("kassenscheine") for 1 and 5 million; these bills, however, are refused by the public, and can only be used for payments from bank to bank.

Last year and this the Government and several County Councils set about building large water-power electrical works, with a view towards reducing the consumption of coal by running part of the railways and factories by electricity. Such plants are in course of erection in Lower and Upper Austria, Styria, and the Tyrol. Owing to the depreciation of the currency and the ever-increasing cost of labour, the continuation of the building operations in some of these undertakings is meeting with serious obstacles, and the joint-stock companies which have been founded for their construction are in financial difficulties, as a further issue of shares or debentures is hardly possible.

After long negotiations, the amendments have been published which the head office of the Anglo-Austrian Bank in London and the head office of the Laenderbank in Paris have made as a condition for their participation in the new Issue Bank. The main substance of these amendments is the demand that the paid-up share capital of the bank, consisting of gold and foreign bills, should be deposited outside Austria. Besides this, the right is claimed for the members of the "general board" ("generalrat") to enter a protest against resolutions which might contain an unjustifiable granting of credit to the State. Both demands, fully justified as they may be, have roused heated excitement among the Socialists. It seems as if, also, the German party would, for political reasons, join them, so that the Government may possibly not be able to pass the amendments demanded, and the foundation of the Issue Bank is thus becoming rather problematic.

CANADA.—MARKETS AND WAR RUMOURS—SUCCESS OF CONVERSION SCHEME—HARVESTS—THREAT OF MORATORIUM IN SASKATCHEWAN—FEDERAL REVENUES—MERCHANTS' BANK TRIAL—INDUSTRIAL PROSPECTS BRIGHTER—NEGOTIATION OF COMMERCIAL TREATIES WITH FRANCE AND THE U.S.—THE FORDNEY TARIFF.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 26.

THE news of the war crisis in the Near East caused on September 18th a sharp collapse on the stock markets, practically every type of issue being affected. But the scare turned out to be purely local, for the European exchanges failed to reflect the alleged situation. Sterling dropped a cent and a fraction on the 18th, but it came back at once. When the steadiness of the exchanges was realised, there was a covering movement, and many stocks within two days had made up a considerable portion of their previous losses. Since then the market has been unsteady, and stocks are not quite back to their old level, but many people had forecasted a reaction as overdue on technical grounds. The bond and money markets were very little affected by the crisis. Money appears to be reasonably plentiful, and the Finance Department are said to have met with a most gratifying

response to their conversion proposals for the liquidation of the first Victory Loan, which matures December 1st. It is unofficially stated that not more than 5 per cent. of the holders of this expiring loan will be found unwilling to convert when the time for acceptance of the offer expires.

About the middle of September the Western Provinces experienced a spell of extremely bad weather, which interfered with harvesting and threshing operations, but improvement has now taken place, and the fields are being rapidly cleared. However, owing to the lateness of the seeding season, some areas were very late in ripening, and on the 24th it was reported that 10 per cent. of the crop in the Regina district, which is normally early, was still to be cut. Grain prices had a welcome fillip for a few days from the war rumours, but they have now receded, and the farmers regard them as thoroughly unsatisfactory. However, the crop must still be regarded as one of the most bounteous in the annals of Canada, and the following estimates, which are based on crop forecasts and the current Winnipeg prices, anticipate that Canadian field crops for 1922 will be worth at least 200 million dollars more than the 1921 crops:—

	1921. Value. \$	1922. Value. \$		1921. Value. \$	1922. Value. \$
Wheat	242,936,000	369,334,350	Corn, husking	12,317,000	11,927,200
Oats	146,395,300	234,510,360	" fodder..	44,880,800	34,937,000
Barley	28,254,150	40,107,630	Potatoes	82,147,600	35,940,100
Rye	15,339,300	34,721,260	Turnips	26,620,400	35,550,240
Flax	5,338,400	10,306,000	Hay, clover..	267,764,200	264,265,000
Peas	5,439,400	5,301,000	Alfalfa	13,211,000	8,714,362
Beans	3,155,800	2,791,000	Sugar beets..	1,742,000	1,722,000
Buckwheat..	7,285,100	7,825,000			
Mixed grains	13,901,220	21,178,000	Total.....	908,381,870	1,119,273,582

However, Mr C. A. Dunning, the Premier of Saskatchewan, still contends that the farmers of his province are confronted with disastrous conditions, and threatens unless the creditor organisations, the banks, mortgage corporations, and implement companies, show sympathetic consideration and do not press the farmers unduly for full payment of their debts, that he will summon a special session and establish a local moratorium by legislation. The creditors are naturally annoyed at this threat, and Sir John Aird, Vice-President of the Bank of Commerce, declares that the financial situation in the west does not warrant such extreme measures. The financial papers accuse Mr Dunning of trying to make political capital by a cheap threat. Mr Dunning insists that one of his chief motives in proposing a moratorium is to prevent debt collecting on a scale which would force the new crop on to the market with a rush and depress prices to an even lower level. For some time there has existed in Saskatchewan an official designated the "debt adjustment commissioner," and his duties have consisted of acting as "last resource" to the settler debtor who found himself harassed to the detriment of his own and his family's welfare. Mr Dunning in the end will probably content himself with increasing the scope of this office.

The Federal revenues continue to be satisfactory, but even with the increased rates of taxation they will not yield many millions more than in 1921-22. The heavier sales tax has undoubtedly had the effect of checking the fall in the cost of living, and is clearly in the end paid by the consuming public. But the mercantile classes like, and at intervals their organisations pass resolutions urging, the abolition of the income-tax, and proposing to supply the gap by further increases in the sales tax. During the month of August the net Federal debt showed a decline of \$4,866,000, but it must not be taken as an indication that Canada has started in earnest upon the path of debt reduction. It happened that no interest on any loans fell due in August, and also that public expenditures were abnormally light, and the interest payments due in the last two months of the year are likely to wipe out any gains made in the earlier months.

Mr D. C. Macarow, the former general manager of the wrecked Merchants' Bank, has been acquitted on his second trial by a Quebec judge. In the judgment in the Macarow case the main reason for the acquittal was the fact that it was the chief accountant of the bank who added up the figures taken from the various books of record, and the general manager, having had nothing to do with the making of the report, "cannot be held

criminally responsible for an act which he has not committed." Such people as are disposed to accept the judgment as an authoritative pronouncement upon the virtues of the Bank Act will have some justification in arraigning its provisions as a pitiable farce for the protection of the interests of shareholders or depositors. The *Financial Post*, of Toronto, which cannot be suspect of radical tendencies, roundly assails the judgment, and demands that the Finance Department institute a real investigation into this strange and disturbing case. In the past fortnight the industrial clouds have lifted. The coal strike in Nova Scotia has been settled, and the railways and their shopmen have agreed to start negotiations again on a fresh basis. The ending of the American coal strike also opens up prospects of at least some of the normal supplies of fuel from the mines of Ohio and Pennsylvania, but most communities have only in sight at present a fraction of their usual supply, and great economy in fuel will have to be observed for some weeks. The need, however, for a Fuel Controller and rationing system, which was at one time demanded, has now disappeared.

The Government cherish high hopes that Mr Fielding will be able to conclude a good commercial treaty with France; he evidently expects success, for he has taken with him experts to assist in working out the schedules. It is also announced that Mr Robb, the Minister of Trade and Commerce, will shortly leave for Australia to bring to a head the negotiations for a reciprocity treaty which have been proceeding by correspondence for the past year.

The long-dreaded Fordney tariff has now become law, and the Government tariff experts in Ottawa are making a close study of its effects upon trade across the boundary line. Its full effects will not be felt for some weeks, but they have already been partially discounted by the operation of the Emergency Tariff. However, the new tariff has a wider range, and its rates are, in many cases, higher; in a few cases they are lower, the duty on wheat, for instance, being cut from 35 cents per bushel to 30 cents.

JAPAN.—TRADE BALANCE—GOLD HOLDINGS, NOTE ISSUES, AND PUBLIC DEBT.

(FROM OUR CORRESPONDENT.)

TOKYO, September 3.

WITH the end of August Japan's foreign trade for the first month out of the eight since the beginning of the year has shown a favourable balance, the excess of exports over imports amounting to some 8,500,000 yen, as compared with an unfavourable balance of more than 26,000,000 yen for the same month last year. This does for the eight months as a whole, now totalling more than 359,731,000 yen. The favourable turn in trade currents is easily seen to be due to heavy shipments of silk, in imports of raw cotton; but since even a slight excess of exports is so encouraging a contrast with the large adverse balance for the same month last year, the outlook is regarded as hopeful. Yet the total adverse balance for the eight months, amounting, as already stated, to 359,731,000 yen, is considerably larger than the adverse only 263,369,000 yen.

Under the head of exports, 17 out of 28 of the most important articles gained, including rice, fish, tea, refined sugar, waste silk, raw silk, silk braids, silk fabrics, cotton fabrics, cotton hosiery, hats, caps, buttons, and machinery. As compared with August last year, tea more than doubled, rising from 1,555,000 yen to 3,583,000 yen; refined sugar from 1,115,000 yen to 2,175,000 yen; silk from 40,174,000 yen to 69,904,000 yen; silk fabrics from 7,891,000 yen to 10,115,000 yen; cotton cloth from 14,438,000 yen to 19,075,000 yen; and machinery from 825,000 yen to 1,063,000 yen. Out of 23 principal items of import, 17 registered increases, including rice, wheat, beans, peas, hemp, flax, woollen yarns, woollen cloth, paper, and iron. The largest gains were in such commodities as beans and peas, which rose from 1,089,000

yen to 2,373,000 yen; hemp and flax from 1,366,000 yen to 2,008,000 yen; wool from 2,206,000 yen to 2,754,000 yen; iron and steel from 9,297,000 yen to 14,937,000 yen. Japan's trade with China made more remarkable gains than with other countries, the total of exports during August amounting in value to 23,234,000 yen, against a value of 19,839,000 yen for the same month last year. Imports from China amounted to 10,655,000 yen, compared with 12,074,000 yen for last year.

Bank clearances registered a decline in August, but as an increasing tendency has been well maintained since the economic crisis in 1920, this is perhaps no indication of instability. The total bills and drafts passing through the Tokyo clearing house for the month numbered 2,294,825 valued at 5,638,993,042 yen, and the total value has been over 5,000,000,000 yen each month up to the end of July. The bank note issue now amounts to 1,148,177,000 yen, with an equivalent in gold reserve. The decline in the national gold holdings, now amounting to 1,855,000,000 yen, as compared with a total of 2,100,000,000 yen at the close of the war, has not been so rapid of late. Of this total, 617,000,000 yen belongs to the Imperial Government, and 1,238,000,000 yen to the Bank of Japan. The amount in Japan is 1,218,000,000 yen, leaving a balance of 637,000,000 yen abroad, chiefly in England, with a smaller portion in the United States. It is noticeable that the national debt of Japan continues to increase. Reaching an unprecedented sum at the close of the Russo-Japanese war, a sinking fund was organised for the reduction of the national debt, by which a sum of 50,000,000 yen was to be set aside annually; but very soon raids began to be made on the fund for the purpose of balancing deficits, and it was reduced to 30,000,000 yen, and then dropped altogether. The Finance Minister is now discussing with the banks the possibility of reviving the sinking fund. The expansion of the national debt in spite of Japan's enormous war profits is not regarded with approval by many leading financiers of the nation. Prices of commodities in Japan have not declined to the same extent as in western countries since the close of the war, and the cost of living is oppressive. There is a hot discussion going on with regard to abolishing the embargo on exports of gold, which some hold to be largely responsible for the high cost of living. As winter approaches, and nearly all forms of enterprise are discharging workers, prospects of much unemployment become pronounced, with numerous strikes, especially in steel and iron works.

SPAIN.—POST OFFICE AFFAIRS—COMMERCIAL TREATY WITH ENGLAND—CONFLICTING INTERESTS—MADRID UNDERGROUND RAILWAY—COMING GOVERNMENT ISSUE.

(FROM OUR CORRESPONDENT.)

MADRID, September 20.

AS was anticipated, the Postal strike terminated by the unconditional surrender of the employees, who presented themselves *en masse* to resume work, but who were informed that the Royal Decree published a few days previously made it necessary for them to apply for readmission as if they had never been in the service. A considerable number of them have been refused, their places having been taken by girl clerks, and the lesson has gone home not only in the Postal Service, but also in other Government departments.

This is one of the few countries in which the Post Office produces substantial revenues instead of being a charge to the national budget, but the advantage to the country as a whole is a very doubtful one. The Post Office revenue amounted in 1906 to 17,903,713 pesetas and 22,468,846 pesetas in 1912, falling to 12,874,402 pesetas in 1920. On the other hand, statistics show that the efficiency of the service has greatly diminished, inasmuch as the number of letters, parcels, &c., circulated per employee during the year has fallen from 77,733 in 1906 to 26,533 in 1920. It is not, therefore, astonishing that the general public, which is well alive to the fact that the Postal Service in Spain is dear and inefficient, was opposed to further concessions to the employees during the past strike.

The proposed Commercial Treaty with England has

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

given rise to a wordy conflict between the coal-producing regions in the north and the fruit exporters in the south. Press campaigns, interviews and speeches have followed in quick succession, and the sentiments on both sides are all the more bitter from the fact that large personal, not national, interests are at stake. The coal producers are naturally opposed to the treaty, and endeavour to prove that Spain can produce the quantity and quality of coal necessary for national industries, whilst the fruit producers argue that the number of persons employed in the Asturian mines only represents one-sixth of those employed in the fruit industry, and that the Mediterranean coast would suffer very heavily if the Treaty were not to be carried through. The South is especially bitter in its criticisms of the coal producers, and some of the more exalted sections went to the extent of threatening a revolt unless they receive satisfaction. They state that whilst the coal producers in the North were making fortunes during the war it did not occur to them to help their less fortunate brothers in the South, and that they have therefore now no right to ask for help against a legitimate competition which benefits the nation as a whole. The North is also divided on the question, as the iron foundries are mainly interested in the Treaty going through. To settle the matter, the Minister of Finance, Senor Bergamin, will call a meeting of the principal interested parties to discuss the matter thoroughly. Although it will be very difficult to obtain unanimity, it is probable that the majority will be in favour of the Commercial Treaty with Great Britain.

The underground railway of Madrid is turning out to be even more satisfactory than the promoters expected. In the past year the number of persons carried reached 20,633,886, as against 14,627,466 in 1920. During the past year an extension of the line was put into service, and the receipts in all stations immediately rose considerably. The net profits in 1921 amounted to 1,596,784 pesetas, which allowed a dividend of 10 per cent. to be distributed to the shareholders. Work is actively proceeding on two other branch lines, which will be opened to the public shortly.

The Stock Exchange in Madrid continues inactive, but Government securities are firm. National railways, after a sudden rise, returned to their former level. It is anticipated that the Government will shortly make a further issue of Treasury Bonds, but it is not known whether these will take the same form as previously—that is to say, short period 6 per cent. bonds. In any case, the announcement of such an issue will further reduce the amount of business transacted and destroy any hopes of an improvement for some time.

Letters to the Editor.

CONDITIONS IN GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—So much has been written and spoken of late on the above subject, and so many different opinions expressed, that I determined to pay a short visit to the country and ascertain, if possible, at first hand the true state of affairs. I have just returned from a three weeks' tour.

The casual observer has good ground to jump to the conclusion that the country is in a state of great pro-

prosperity. The streets of the big towns are in many instances filled with decently dressed and apparently well-to-do people, the cafés and places of amusement well patronised, and no great poverty discernible. It is only when close inquiries are made that one learns the truth. In many towns I inquired the amount of the earnings of the working people, and the replies were practically entirely in accord. The wages paid appear to vary from 60 to 100 marks per hour—say an ordinary maximum of 800 marks a day, or 4,800 marks per week. In isolated cases more may be paid, but the instances are not numerous. From this weekly wage a tax of 10 per cent. has to be paid to the Government, leaving a trifle over 4,000 marks per week. This up to the end of September represented about 14s in English money, but it had a somewhat greater purchasing power in Germany. All food is, however, very dear—butter 400 marks per lb. (The German pound is 500 grammes, a little more than our 16 ounces.) Meat, which used to be under a mark a pound, is now 200 to 300 marks. Clothing has, I believe, been moderate in price, but is now mounting up, and such articles as men's shirts, which used to be about 5 marks, are now about 1,000 marks, and generally prices seemed to average quite 200 times pre-war figures. It will thus be seen that a man with wife and family is in a very poor condition, and I am assured that many are living on margarine and potatoes. In reply to my inquiry as to why one did not see any evidence of this distress, I was assured that it was because these people would not exhibit their poverty to the world. The people one finds in the cafés at night are not the married workmen and their families, but mostly young men and women who earn the same wages as married people, but have no family responsibilities—the rest of the guests are mainly foreigners, English, American, French, &c. There is practically no unemployment at present, but there are indications that there will be very soon. At one hotel I stayed at 32 of the staff were being dismissed at the end of this month, and they had nothing to go to.

Your own columns have borne evidence of how the great class who were living on their savings have been wiped out, but I think it is yet hardly realised in England how "retired" people who had an income equal to £500 a year still have the same number of marks coming in, but these have only to-day a purchasing power of £3 or £4. The state of those who are too old to work is really deplorable. The professional classes are also suffering very seriously. The editor of one of the most famous of the German newspapers said to me: "People do not go to lawyers now, but settle their differences between themselves; neither do they go to doctors, because they cannot afford to do so."

On October 1st prices were increased enormously. Bread from 60 marks to 120 marks per lb; railway fares, 100 per cent., to go up a further 150 per cent. in a month; postage, 3 marks to 6 marks; foreign postage, 6 marks to 20 marks per letter, 3½ marks to 12 marks for post-cards. These increases will doubtless bring about a demand for higher wages, but the general ratios are not likely to be much altered.

As regards the large question of payment of Reparations and indemnities, everything I heard and everything I saw force me to the conclusion that Mr McKenna is absolutely right in the views he has just expressed in his American speech, and yet how hard it is to make many people in England believe that Germany has not some great secret fund, some well into which she has only to dip a bucket in order to bring up sufficient wealth to satisfy her most exacting creditors!

If of any interest to your readers, I may say that up to the end of September the charges in hotels of good class averaged about 700 marks each for room, lunch and dinner say 2,100 marks, with 200 extra for breakfast and afternoon tea—2,300 marks, with 10 per cent. added for service, say 2,530 marks—or about 8s. at that date in English money.

If going for a stay of not longer than three or four weeks, I should recommend a traveller to take bank or Treasury notes rather than a letter of credit, my reason for this being that the banks have not a uniform rate of

exchange, and I found the number of marks offered by different banks varied on the same day as much as 1,000 marks to the £. With notes one can take advantage of the best rate, but with a letter of credit one is tied to one bank and is at its mercy.—Yours truly,
Sheffield, October 9th, 1922. A. SELLS.

STABILISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You very generously shelter your contributors under the aegis of your name, but I should be sorry to let you bear the brunt of Mr H. D. Henderson's assault.

Yet, if I may say so without offence, I think both you and I escape comparatively scatheless, if the attack was directed against what we actually said. We gently deprecated too much stabilisation; Mr Henderson sings the praises of stability. But stability is one thing, and stabilisation is another. We ventured to prefer the analogy of equilibrium, compatible with progress, and attained, for example, by an aeroplane moving to its chosen destination. Does Mr Henderson really suggest that the economic ideal is (to continue the vicious mechanical metaphor) inertia?—Yours, &c.,
YOUR CONTRIBUTOR.

London October 10th, 1922.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

THE most important contribution to economic literature that has appeared for some time is Professor Gustav Cassel's *Money and Foreign Exchange* after 1914 (Constable, 10s 6d). As this was the subject of a leader in the *Economist* of September 30th, any detailed comment here is superfluous, though the attention of readers may legitimately again be drawn to a work distinguished both in style and treatment, packed with first-rate material, both by way of argument and illustration. A month which includes this volume is entitled to hold its head high.

Otherwise, although the number of books falling within the specific category here dealt with is not very large, there are more than usual which deserve comment. For clearness, they may be classified.

(a) Elementary.

Two volumes, in the excellent series published, at 10s each, by M. Giard, of Paris, under the general direction of M. Alfred Bonnet, recommend themselves to the teacher and student. There is *Premiers Elements d'Economie Politique*, by the veteran Luigi Cossa—an more interesting to the general reader, *Histoire des Doctrines Economiques et Sociales*, which an enterprising English publisher might do worse than translate, whether from the French or from the original Russian. The University of Moscow, now at the University of Prague. His survey of economic opinion goes back to China, India, and Greece, deals with the medieval scholastics, Sun Tzu and More's "Utopia," and summarises the views of more modern schools of thought, whether orthodox or manner. He calls his chapters "lessons," and they are teaching, as they apparently did of his own, before he confined his economic instruction to the doctrines of Marx. It is curious that he does not mention a single Russian economist.

Public Finance, by M. E. Robinson, is the third volume of the excellent series edited by J. M. Keynes, and published by Nesbit, at 5s, in which Mr Henderson's "Supply and Demand," and Mr Robertson's "Money," have already been warmly commended here. The high standard survey.

Arithmetic of Citizenship, by E. and J. Riley (Sidgwick

and Jackson, 2s 6d) is described by its authors as a "serious attempt to link up the arithmetical teaching in school with the actual problems of social life"—and a very successful attempt. Under "Work and Wages," "Family Budget," "Rent and Rates," "Insurance," "Income-tax," and so on, there are clear, explanatory paragraphs, followed by illustrative examples, in the form of sums. Arithmetic so taught ought to be far more instructive in itself, and, for the first time, definitely connected, for the learner, with the real things among which he and she will afterwards have to use the principles acquired. Compare this with the old-fashioned "Practice" and "Bills of Parcels" on which some of us were brought up, and the difference is immense.

(b) Advanced and Technical.

Here, of course, the first book that calls for mention is Professor Cassel's. Next comes Professor H. Stanley Jevons' *Future of Exchange and Indian Currency* (Humphrey Milford, 18s 6d). The professor at Allahabad has written this book mainly for his Indian students, but it will be interesting and suggestive to readers at home interested in such topics, as well. Side by side with it the intelligent reader will place the *Report of the Indian Fiscal Commission*, as published by the Government Press. Simla—the full text of the Report of which summaries have recently appeared in our papers, and the *Report on the Operations of the Currency Department, the Movement of the Funds, and on the Resource Operations of the Government of India for the year 1921-22*, by A. C. McWalters (Calcutta, 1 rupee). Professor Jevons' book is an admirable introduction to the intelligent reading of the official reports.

(c) Descriptive, and Works of Reference.

Thoroughly readable, and, at the same time, illustrative of all sorts of thorny problems in economics and politics, and in the close inter-relation between the two, is Mr Edwin A. Pratt's *Scottish Canals and Waterways* (Selwyn and Blount, 10s 6d). The story of the Scottish canals is a peculiar and very interesting one, about which most people, even when they have sailed through the Caledonian or the Crinan, know little or nothing. Mr. Pratt's book is, of course, not descriptive merely; he has a policy to suggest, and one that deserves careful examination. The *Insurance Blue Book and Guide for 1922* (London, Ritchie and Darling, 10s 6d) is too well known to need more than a mention.

For once in a way there are practically no books that go under the rubric "political and propagandist."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 18.	October 19.

Stock Exchange markets gladly responded to the changed political outlook. Nor has the threat of an imminent General Election served to cloud the brightness which replaces the anxious despondency of a fortnight ago. Business is better, too, in most of the markets. The public are showing more disposition to speculate, as well as to invest. The fact of the War Loan rising over par once more is in itself a bull point for any stocks and shares connected with investment, while the fact of Paris sending buying orders instead of being an incessant seller, has tended to wipe out a good deal of the gentle melancholy felt previously.

The War Loan touched 100½ before it went back a little. A mild boomlet occurred in Conversion 3½ per cent., as buyers hurried to pick up the stock while it remained in the neighbourhood of 73. The Funding Loan spurred, and there has been a general rally of prices in the gilt-edged issues. Home Railway prior charges are better. Colonials remain with scarcely an alteration.

In the foreign market Germans have, of course, been weak, owing to the further drop in the exchange, but French bonds, on the whole, have been a harder market. Brazilians, still under the unhappy influence of the slump in milreis, gave way further in the early part of the week, to rally from the worst. The Argentine and Chilean list keeps tolerably steady. Sharp rises in Peruvian Corporation stocks stand out as one of the features of the week, bringing into renewed life the vague rumours circulated earlier as to the possibilities of the preference stock receiving arrears of dividend.

The Home Railway market is a trifle better, with moderate improvements in the Heavy stocks and Undergrounds. Attention is fixed eagerly upon what may be the terms of the Southern grouping arrangements. It is said that these were all cut and dried a week or more ago, but that the Chatham objected to some of the proposals. Amongst Canadians, Grand Trunk Pacific 4 per cent. debenture stock advanced to 50½, upon the more favourable view taken of the prospects of the stock receiving its interest. Argentine rails spurred again, while Brazilians remained in the background, with Mexicans a rather dormant market. Antofagasta rose briskly, on account of the improvement in the traffics.

Fresh advance in the price of raw rubber caused a general recovery in shares of the rubber-producing companies, but the oil market is dull, for various reasons, of which the cut in petrol stands out prominently. The Shell pool, formed to take over from the Royal Dutch Company about a million and a quarter of the latter's holding in Shells, is due for dissolution at the end of this month, and this may have accounted for some of the selling of Shells, though possibly the life of the pool may be extended. The principal feature in the industrial market has been the sharp rise in British and Argentine Meat shares, the company having received an offer to buy the ordinary shares at 65s, and the preference at 32s 6d. At the beginning of the week the ordinary stood in the neighbourhood of 30s. Courtaulds improved to a mild extent, though textiles as a whole continue quiescent. Shipping stocks are distinctly harder, on the steady improvement shown in shipping circles, referred to in the *Economist* last week. Inquiries have come in for banking shares, home and foreign alike, with the result

GOLD.

A fair amount of gold came on offer, and was divided betw the United States of America and India. Gold value \$1,150,000 has arrived in New York from London. The Re 6,500 paper marks.

SILVER.

This week the market shook off the inertia which has a feature for many weeks, and silver came on offer from India, and the Continent. It is evident that the on

absorption in present conditions can come from Far Eastern countries. Hence, when buying is poor from those quarters, sellers must hold off, hoping for an improvement in such demand, or prices must fall. The inactivity of late has been owing largely to supplies not being pressed. Now, however, that the Eastern countries have turned into sellers, the sole purchasers are bears, who, naturally, will be slow to cover whilst prices seem upon the slide. The production of Canada during the first six months of the year has been about 8,500,000 ounces. If this rate be continued, the output will show the substantial increase of 4,000,000 ounces for the year. We hear that the production of Mexico during the same period was 37,000,000 ounces, and a fresh annual record is, therefore, likely. The United States output is also increasing, so that a world's total of at least 175,000,000 ounces may be expected. If the amount obtained from demonetisation and from partial demonetisation be added, the combined supplies available are not likely to be far short of the 226,192,923 ounces which formed the record world production in 1911. This year some 60,000,000 ounces will be bought under the provisions of the Pittman Act, but, considering that European purchases for coinage have now ceased, and that the world's luxury trade—into which silver largely enters—is in bad fettle, it is astonishing that prices should have kept up as well as they have done of late.

9.....	93 1	35 1/2	35 1/2	19, 1917
10.....	93 4	35 1/2	35 1/2	19, 1918
11.....	93 0	34 1/2	34 1/2	17, 1919
12.....	93 0	34 1/2	34 1/2	15, 1920
13.....	93 0	34 1/2	34 1/2	14, 1921

NOTICES.

The directors of the London County Westminster and Parr's Bank, Limited, announce the retirement, on 31st instant, after 42 years' valued service, of Mr W. H. Inskip, who has been one of the joint general managers of the bank since 1919. They have appointed as his successor Mr P. H. Mortimer, at present an assistant general manager. Mr. E. F. Robinson, the manager of the Chancery lane and Holborn branch, has been appointed an assistant general manager.

The National Provincial and Union Bank of England, Limited, announce that an agency to the Wombwell branch is now open at 98 Snape hill, Darfield.

The offices of the Bank of Roumania, Limited, are now at 64 Cornhill, E.C.3.

A branch of the Commercial Banking Company of Sydney, Limited, has been opened at Double Bay (Edgecliff), Sydney, New South Wales.

Cabled advice has been received from the head office of the Bank of Adelaide in Adelaide that a branch will be opened on October 17th at Surrey Chambers, St George's terrace, Perth, Western Australia.

Barclay's Bank Limited announce that they will open on Monday next, October 16th, a new branch at 115 Shaftesbury avenue, W.C.2 (to be known as Cambridge Circus Branch),

under the management of Mr J. W. Jarvis, also manager of Soho branch.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 2 and 3, Cannon street, Westminster, near Bristol, 1 and 3, Leigh road, Eastleigh, Hants, and 1 Fore street, Torrington, Devon.

BRITISH BROKEN HILL PROPRIETARY.—Returns for fortnight ended Oct. 7th:—lead and 23,344 ozs silver; also 1,000 tons zinc concentrates, containing 689 tons lead, 10.5 ozs silver per ton, and 44.5 per cent. zinc; 215 tons carbonates raised. Two days' stoppage.

BROKEN HILL SOUTH.—For the four weeks ended Oct. 7th, 15,630 tons of crude ore and 8,799 tons of dump slime were treated, and produced 3,976 tons of concentrates, assaying 62 per cent. lead and 25 ozs silver per ton. 11,246 tons of lead-bearing material were smelted in the blast furnaces, producing 4,004 tons of hard lead for treatment in the refinery. Refinery products were:—Lead, 3,464 tons; silver, 360,768 ozs.

NORTH BROKEN HILL.—Production for September:—2,300 tons lead concentrates, averaging 63 per cent. lead, 30 ozs silver per ton and 8 per cent. zinc; also 2,050 tons zinc concentrates, averaging 47 per cent. zinc, 6 per cent. lead and 7 ozs silver per ton.

SAN FRANCISCO DE MEXICO.—September (five weeks):—Ore treated, 8,800 tons; lead concentrates produced, 1,920 tons. Estimated net smelter return, \$101,750 (U.S. currency). Operating expenses, \$47,825. Estimated operating profit, \$53,925. Capital expenditure (including development), \$2,850.

Reports and Notices.

The Meadow Dairy Company, Limited, has opened a branch at 7 Otley road, Headingley, Leeds.

Messrs W. H. Chaplin and Co., Limited, 48 Mark Lane, E.C.3, announce that they have incorporated with their company the business of Messrs Bowen and McKechnie. Mr Percy F. Chaplin continues to fill the office of chairman of the board of directors, and Mr George McKechnie, of Messrs Bowen and McKechnie, has joined the board.

Mr D. B. Hanna, Mr A. J. Mitchell, and also Mr R. M. Horne-Payne are retiring from the positions of president, vice-president, and financial representative in London of the Canadian National Railways after the election of the new board of directors on October 10th.

The Hon. Windham Baring has been elected a director of the San Paulo (Brazilian) Railway Company, Limited.

We are informed that Mr Charles Comins, F.C.A., has been placed upon the Commission of the Peace for the county of Suffolk.

We are informed that a contract has been entered into between the Rubber Company, Limited, of New York, and the General entire output of standard rubber from January 1st next to the end of 1924. The rubber is deliverable ex godown on the estate, the price to be the average of the daily quotations for London spot standard and a maximum of 1s 4d per lb, with a minimum of 8d per lb amount of any export tax in existence at the time the price is calculated. This contract is automatically renewable for further periods of two years, unless terminated by six months' notice by either party.

The Associated Australasian Banks in London announce that on and after the 13th inst. the London selling rates on Australia and New Zealand will be altered as follows:—Drafts and mail transfers, 12s 6d per cent. premium; cable transfers, 20s per cent. premium.

BANKS.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.—Net profit for the year ended June 30, 1922, after making provision for all charges, rebate, &c., amounts to £644,138, which, together with £310,914 brought forward, makes a total of £955,052. Of this, £183,409 was absorbed by the interim dividend paid on April 22nd last, so that there is now available a balance of £771,643. In view of the trade depression by the bank's operations, and which has had a detrimental influence upon the position of many commercial houses, the board having carefully considered the accounts in detail recommend that the sum of £300,000 be set aside as a special allowance for certain debts, which are able. It is their considered opinion that this sum should prove amply to cover all contingencies. After providing for this allocation, the directors recommend that the sum of £189,959 be applied to the payment of a final dividend of 6s per share, less income-tax, payable on October 30th, making a total distribution for the year of 12 per cent. that £25,000 be added to the staff pension fund, and that £256,684 be brought forward is arrived at by the deduction of excess profits and corporation tax to the amount of £91,871 from the total of £402,785 carried forward a year ago.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With improved weather conditions during the week, farmers were busily engaged preparing the ground for the autumn seedbed. Official reports speak of wheat as the best crop of the year, and of fair quality. The condition of barley is variable, and spring oats generally inferior, though winter oats are fairly satisfactory. Firm conditions prevailed at market, and further advances were recorded for both bread and feeding stuffs. Native wheat was in much larger supply, while quality and condition shows improvement. Prices rule firmer, and suitable milling lots realised 41s to 46s per 504 lbs, free on rail. Imported descriptions firmer in sympathy with higher forward offers, and Manitoba qualities sparingly offered. No. 1 Northern Manitoba quoted 54s to 57s, ex ship, to arrive according to position, No. 2 hard winter 54s 6d, and Australian 55s 6d, both ex ship, per 496 lbs. The cargo section displayed firm features, and a good business transpired in Canadian qualities at again dearer prices. Steamers of No. 1 Northern Manitoba, October-November shipment, sold up to 49s 3d, and ditto, December, 49s; No. 2 white Western Pacific, affoat, and ditto; and Rosafé, 63 lbs affoat, done at 50s 6d, all per 480 lbs. Offers from India are at present above market values on this side. Favourable crop reports are to hand from Australia, India, and Argentina, while a very large movement of grain continues in North America, and floating supplies show a substantial increase. Flour ruled firmer owing to the wheat position. London standard straight run now quoted at 43s, patents 43s to 45s, town households 41s per sack delivered to London bakers. Imported main-tained Manitoba export patents range from 38s to 43s as to quality: Pacific 38s, and Australian 37s 6d to 40s per 280 lbs, ex store. Barley continues firm, with a steady demand for im-

ported varieties. English ranges from 35s to 54s per 448 lbs, free on rail. Of imported, Californian 39s to 45s, Australian Chevalier 51s to 55s per 448 lbs, American malting 48 lbs 32s, ex ship; Persian 30s 6d, and 35s, both landed per 400 lbs. A good business transpired in European cargoes, and several steamers of Dan-Bess-Kustendji, on passage, changed hands at 31s 6d to 31s 7½d per 400 lbs. Maize ruled firmer, with more inquiry. American mixed, ex ship, quoted 38s, La Plata ex ship 39s 6d, ditto landed 41s. Cargoes were in moderate request, and prices firm for near October 5th, loading sold 38s; ditto October 10th shipment, passing. Native ranges from 25s to 32s per 336 lbs, free on rail. Of imported, Plate f.a.q. 29s, ditto clipped 29s 6d, No. 2 Canada 36 lbs, 28s; and Chilian tawny 29s, all per 320 lbs landed terms. Oatmeal in good demand, and quotations advanced by 10s per ton for home milled. London made, all cuts, £19; rolled oats £18, American, all cuts, £18 10s per ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

	1922-1923.	1921-1922.	1920-1921.	1919-1920.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 12th, is as follows:—Pig-iron: Prompt Cleveland Foundry iron still remains very scarce, owing to the American demand. This is fortunate for our makers, as there is no Continental demand. No. 3 Cleveland G.M.B. is 95s per ton. There have been some good sales of East Coast hematite lately, and the price has improved to 92s per ton. Manufactured iron and steel: The steel position is a shade better. There is a rather improved inquiry for ship-building material. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £11; steel rails, £9 10s. Iron ore: Some sales of best Bilbao Rubio are reported at prices between 23s and 24s per ton.

Our Sheffield correspondent writes:—Statistics of output during September indicate further progress in the iron and steel trades. So far as pig-iron is concerned, however, the increased business done was wholly due to American buying. The same cannot be said of steel ingots and castings, as most of the output is being absorbed at home, and there has been a heavy drop in the importation of such material. Germany scarcely counts now as a shipper of steel to this country, and the rivalry of Belgium and France is not very formidable. Our production of pig-iron is now about half the average of the last pre-war year. The output of steel in September represented 73 per cent. of the monthly production in 1920, 87 per cent. compared with 1913, but only one-half of steel-making capacity of the country. The improvement in the steel trade is mainly in the cheaper qualities. The position of special Sheffield steels is better, but not much, and the main industries of the city are still in a very bad way. It is true that unemployment is dropping, but the figures remain at a seriously high level. The chief problem in Sheffield is the vast quantity of idle machinery, furnaces, and shops, all of which costs money to maintain. The chairman of United Steels, Limited, stated this week that the maintenance of idle plant last year cost his company no less than £300,000, and but for that item there would have been some profit to distribute. Heavy local rating has also become a serious problem in Sheffield, the present rate being 21s 6d in the £. With the prospect of having to maintain many thousands of unemployed during the winter, traders do not expect much relief this year. The plate and cutlery branches are fairly employed just now on orders for the Christmas season trade. The South Yorkshire shire collieries are now very busy on export account, and are obtaining a large slice of the trade with Germany. North Russia is beginning to take a little coal from this district. The home trade remains much as before, with a steady increase in the Lancashire demand for boiler fuel. Coke is dear and none too plentiful.

Our Glasgow correspondent (writing on Thursday) says:—While it cannot be positively reported that an improvement in the industrial position has taken place during the past week, it can be safely affirmed that conditions are no worse, and that ere long they may be even better. There have been a few additional contracts for new steamers placed with builders on the Clyde, and that in interested circles there is talk of negotiations proceeding relative to the booking of several large "tramps." In this latter connection much depends on the outcome of the pourparlers passing between employers and employed as to the wiping off by the former of the last 10s a week paid under what is known as the war bonus wage to the latter. It looks to-day as if this cut (which it is hoped will be a final one) will be assented to, and in that event, it is speculated, a big and favourable departure in ship construction will follow. After a long period of extreme dullness, the steel trade situation here and there has picked up a bit, one or two good lines for plates and angles having been booked (by the Steel Company of Scotland), leading to the lighting-up of furnaces which have been drawn blank for months. Present demand for material comes mainly from home sources, but there is evidence of increasing inquiry from export markets, notably our own colonies. Quotations are given as steady, with a slightly easier tendency in home connections. Boiler plates remain at £12 10s, delivered Glasgow stations; ship plates, £9; sections, £8 15s. For heavy structural steel (plates, &c.), the outlet keeps reasonable and prospects for bridge and other builders continues pretty encouraging. Bar iron makers and steel bar rollers are not too well off, yet producers speak of the probability of an early change for the better, and are standing firmly by recent prices, say, ten guineas for crown bars, and downwards. Various reports are in circulation as to the position in the sheet-making branch. There has been a moderate contraction in the demand for heavy gauges, but that is being overcome, owing to the growing inquiry for all sizes from India, Australia, and Canada.

Our Cardiff correspondent writes:—The improvement in the coal market has been fully maintained this week. Its strength, indeed, has been more pronounced, and there has been a general rise in the prices of large steam coals. The pressure of the demand from the States is diminishing, but it is being replaced by demands from other markets, and the great majority of the collieries are fully stemmed for the present month, and also well into November. The docks are fully and regularly employed, and the difficulties in the way of securing prompt loading positions have reacted unfavourably on outward rates of freight, and colliery prices have indirectly benefited from this circumstance also. The returns of shipments for the month of September are the best since the war. The total quantity of cargo coal exported from the South Wales ports in that month amounted to 2,524,718 tons, and that quantity is about 35,000 tons in excess even of the average monthly rate of export in the record year of 1913. It is quite possible that the shipments in October will be almost as good. The stoppage at the Ebbw Vale collieries is responsible for a reduction in the export capacity of the coalfield by anything from 10,000 to 20,000 tons per week, but the outputs of other collieries are improving. Canada is still an active buyer of anthracite coal, and the shipments to that country are increasing weekly. A project is under consideration for the conclusion of a permanent contract between one of the leading anthracite colliery owners in South Wales and Canadian interests, and the erection at Montreal of an anthracite breaking and sizing installation.

The following are the current market prices at the end of the present week:—Best Admiralties, 27s 6d to 28s; second Admiralties, 26s to 27s; best drys, 28s to 28s 6d; best black veins, 25s to 25s 6d; Western Valleys, 24s 6d to 25s; Eastern Valleys, 24s to 25s; best bunker smalls, 16s to 16s 6d; ordinary cargo smalls, 12s to 14s; anthracite big vein, 55s to 57s 6d; anthracite machine-made cobbles, 65s to 70s; anthracite French and stove nuts, 70s to 72s 6d; Rubby Culm, 13s to 13s 6d; coke, for export, 35s to 37s 6d; inland blast furnace coke, at ovens, 25s to 26s; patent fuel, 26s 6d to 28s 6d; pitwood, 27s 6d to 29s 6d, ex ship. The position in the tinplate trade has also improved largely as a result of Near-East enquiries, and quotations have again been advanced to 10s 6d. A recent reduction in the Australian import duties

botany noils and thread wastes. If prices remain reasonable, a good steady business will be done in raw and partly manufactured materials. All along I have contended that there was no real reason for merinos to advance any further, that is if the larger interests of the outside world were to be considered. Starting a new season in Australia on a fully 5s basis for 64's tops necessitates a very considerable readjustment of the views of practically the entire trade, and after the slump experienced eighteen months ago, no section can stand another serious fall. However, the warnings given appear to have fallen on deaf ears, for a certain section of the trade are preaching the gospel of advance, and one wishes that such comments as that made by Mr Harry Dawson, to the effect that "the high level of merinos is causing no little apprehension to those who find new opportunities of business, and who desire to see prosperous trade in fine worsteds," could receive greater consideration.

The sales this week have gone to the satisfaction of importers and sellers, who are wisely meeting the market. Most merinos are 7½ to 10 per cent. dearer than last sales; fine crossbreds have advanced fully to the same extent, and even coarse and medium wools are often 5 per cent. dearer. There is at last a general awakening in crossbreds, entirely due to the increased sales to America. This will be essentially a crossbred series, and it seems as if there is more than enough crossbred wool to meet all requirements, but if the demand for merinos could be reduced, and that for medium and coarse crossbreds enlarged, it would be the best thing that could happen for both growers and users. Fashion, however, still favours fine, soft-handling fabrics, and it seems as if buyers of botany cloths will not be choked off until prices are again prohibitive, when the general public will perhaps see what a big difference there is between merino cloths and good, sound crossbreds.

Publicity has been given to the statement that the forthcoming South African clip will show an increase of 60 per cent. One wonders if 6 per cent. was really intended. No country in the world could increase its wool production anything like 60 per cent. in twelve months. Even in the most favourable season Australia could not increase its output of merino wool in twelve months by more than 15 to 20 per cent. at the most. The average output of South Africa is about 525,000 bales per annum, and if the output is 25,000 bales more this year, it will be a splendid accomplishment. It is gratifying to know, however, that there is greatly awakened interest among South African sheep farmers, and the prices ruling for merino combing wool are a real incentive to grow that class of material.

MANCHESTER, October 12.

The conditions prevailing in the market this week have not been any worse, and owing to the better foreign news, and the hardening tendency in raw cotton, some buyers have displayed more interest in prices for yarn and cloth. An increased inquiry has been reported in piece goods for India, but buying has been very patchy and not of any importance. After being very relating to freight rates have been very welcome. Further concessions a dull for two or three months, there have been indications of a little more activity for China in standard makes and fancies. It remains to be seen whether this is the beginning of extensive

buying. Printing and bleaching cloths have been sold in moderate quantities for the Straits Settlements, Egypt and South America, and in suitable goods the home trade has provided a few more orders. Yarns have been firmer in quotation, and in a quiet way the turnover in home counts shows a slight improvement. Very little has been done in shipping yarns.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

In the spot market for North of Europe woods—i.e., from Sweden, Norway, Finland, and Russia—prices have continued steady in an upward direction, and those who months ago anticipated a slump about this time have found their expectations un-errealised. It cannot be said that the higher prices are due to any great expansion of the demand here (though it continues to im-), but to the steady, consistent demand from France, Holland, assisted considerably in reducing the Swedish unsold stocks to dimensions that have greatly relieved the anxiety of importers here, asking a little more from time to time, the way for increased spot buying competition.

At present rates of home consumption, however, the stocks in this country appear to be ample, supplemented as they have been much larger than expected, and has had the effect of putting more deals on the market here than can be healthily absorbed for months.

It, therefore, will not be surprising to learn that there is but little f.o.b. business now being negotiated for Swedish and Finnish woods for prompt shipment, and there also is little yet to gauge the basis of prices that will be asked for next season's shipments, remainder of this year's business without troubling about 1923. It is believed that f.o.b. asking prices for f.o.w. deliveries will be on a slightly higher basis than that ruling at present.

As regards the Canadian spruce market, there is still an appreciable amount of old Government stocks yet to go into consumption, and trade in this timber will not completely recover until this is got rid of. The import, however, has been light, and as there is a little improvement in the demand the position is more promising. For American pitchpine the demand is more pro-merchants. In addition to the quiet demand on account of dull trade in shipbuilding and other consuming industries, enhanced consumers who are looking for cheaper rates to set business going.

The mahogany market can be described as strong, Honduras logs at public auction showing an advance of 15 per cent. on previous sales, with stocks on the small side. For cedar, logs of long prime quality for boat-building are still in demand, but stocks generally are sufficient, particularly of inferior wood.

Head Office: BRITISH DOMINIONS HOUSE, ROYAL EXCHANGE AVE., E.C.3.

BRANCHES AND AGENTS THROUGHOUT THE U.K.

ASSETS EXCEED £20,000,000.

VEGETABLE OILS AND OILSEEDS.

So far as linseed is concerned, the market continues very quiet, crushers' purchases being only of a hand-to-mouth character, owing to the high level of the old Plate crop in near positions. The quantity of linseed afloat for the United Kingdom is, however, very small indeed, only 10,800 tons (Plate and Indian together). That to the Continent amounts to 57,000 tons, thus giving a total of 67,800 tons, against 76,800 tons last week and 132,800 tons a year ago. The official estimate of the Argentine surplus yet to be shipped is 69,000 tons, which, with 112,000 tons Indian, would appear to be adequate to meet current requirements in the present condition of trade. English crushers show no anxiety to increase their commitments with old Plate linseed on spot, and for early shipment quoting 55s to 60s premium over new crop, which Hull has bought this week at £15 15s for January-February loading. Some business has been done in old crop to Rotterdam at £19 on passage and £17 15s November-December. Calcutta linseed to London has been done at £19 5s, October-November. Cottonseed has been easier, and a good trade done in Sakellaris to Hull at £9 5s, and to London at £9 7s 6d, October-November loading. More interest has been shown in Manchurian soya beans, Hull being a good buyer of new crop round £10 7s 6d, November-December.

A quantity of linseed oil crushed in Holland has been absorbed in the Hull market, thus meeting the shortage of this commodity in near positions. It, however, had little effect upon prices, which are steadily maintained round £38 for spot, £37 15s month, and £37 to the end of the year. For January-April the position is slightly firmer round £33 5s, ex-Hull mill. Cotton oils have met with a poor inquiry, and are slightly lower, crude Egyptian offering at £33 10s, and soapmakers' grade of refined at £34 15s, ex-Hull mill. Crude soya bean oil is in rather better demand round £35, but other oils are dull, and more or less neglected.

According to the *Cotton Oil Press* (Washington), the final rates of import duty under the Fordney Act, as signed by the president, are:—Linseed oil, 3.3 cents per lb (i.e., \$3.75 per cwt); cotton and castor oils, 3 cents; soya bean oil, 2½ cents; ground nut oil, 4 cents; olive, 7½d cents; and coconut oil, 2 cents per lb; rape oil, 6 cents per gallon; linseed, 40 cents per bushel of 56 lbs (i.e., \$16 per ton); cottonseed, ½ cent. per lb; soya beans, ½ cent.; ground nuts (unshelled) 3 cents; ditto (shelled), 4 cents per lb. Oilcake and meals free.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The firmness in the hide market continues, and most classes of ox and heifer advanced on Thursday at the Bermondsey auctions from 4d to 4d per lb. Calf were steady, with here and there fractional advances of ½d and falls of ½d. Wools made from 4s 6d to 8s 6d, and hogs 3s 2d to 6s 6d. There is at present a little commotion in the hide market, as one prominent firm of hide merchants has withdrawn from the Hide Improvement Society, whilst the Tanners' Federation have passed a resolution not to trade with markets who do not abide by the rules of the above society. Imported hides are firmer, and at the Mincing Lane sales last week a quantity of old stock of dry hides sold at better prices, several Continental buyers being in evidence. The American position is strong, cables reporting that best Chicago packer hides are now selling at 22½ cents and native cows at 10 cents.

The sole leather market is very firm, in view of high hide prices; trade this week is a shade quiet, as buyers filled requirements at last week's Shoe and Leather Fair. No big business, however, was reported, buyers still following their old policy of extreme caution. Cheap bends are the best selling line, consumers, as a rule, wanting bends at 1s 9d to 2s. Shoulders are selling fairly well, with a moderate demand for export. Split hides are moving off slowly, the French trade being quiet, in view of exchange difficulties.

A moderate amount of business was done in boots and shoes at the Fair, but overseas buyers seemed content to only order small quantities. Rumours were current that one large firm ordered a huge parcel of boots from Germany, but this turns out to be a small order for slippers at a low price! The shoe outlook is still uncertain, but sampling is frequent.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 13.

SUGAR.—With steady inquiries, a fair amount of business was effected in refined descriptions, and prices on the week are mostly a shade dearer. Of British refined, Messrs Tate and Lyle's cubes sold 55s 9d to 56s 9d; crushed, 52s 9d; nibs, 55s 3d; granulated, fine and coarse, 50s 9d. No. 1, 50s 6d, London; also No. 2, 50s 3d; caster, 52s to 52s 6d; finest ditto, 54s 3d; yellow crystals, 44s 6d; pieces, 35s to 39s; fine white, 45s. Granulated second half, November-December, 49s 9d. Crystallised West India met with quiet support, but market ruled fully steady at 47s to 45s, as to quality. American granulated, spot, sold, 49s 3d; afloat, 22s 3d, c.f. and l. London. White Java, spot, sold 47s 3d to 47s 9d for medium qualities, and fine grocery grainy, 48s 3d to 48s 9d. White Mauritius, spot, 46s 9d to 47s 3d; white Brazilian, 46s 9d. Czech granulated, November-December, 21s; cubes, 23s 6d, f.o.b., Hamburg. Dutch granulated, November-December, 21s 6d, with J, 21s 3d, f.o.b., Amsterdam. Belgian crystals, October-December, 19s 1½d; granulated, 19s 3d; and F. W. ditto, 19s 4½d, f.o.b., Antwerp. Cuban

basis, 96 per cent., October, quoted 18s 3d. Brazilian ditto, 17s 3d; ditto basis, 80 per cent., 8s 10½d, c.f. and l. terms U.K. Cuban stocks stand at 316,500 tons, against 1,183,500 at same time last year. Terminal market ruled rather quiet on balance. White, December, sold, 21s to 20s 9d to 21s 3d; May, 21s to 21s 6d. Liquid glucose, 27s 6d.

COFFEE.—There was no new feature to record in this market, trade being carried on quietly with but little alteration in prices. Nairobi bold sizes sold, 96s; Vera Paz, 101s. Futures remain dull.

COCOA.—No auctions held this week, and by private treaty only small transactions occurred at previous quotations. Grenada, fair to fine, sold, 51s to 53s; Accra, F/F quality, November-January, done 37s 6d, f.o.b. terms.

TEA.—The liberal quantity of 55,120 packages Indian were brought to auction during the week. All good to fine parcels engaged fair support at full recent rates, but common, also medium, experienced a quieter demand, and prices were frequently weaker. Some extra fine broken orange pekoe sold, 3s 8½d. Only 8,890 packages Ceylon were catalogued and soon cleared under brisk competition at full values. Java, especially tippy teas, ruled firm with a good demand.

RICE.—Market remains in a dull state. Two stars, spot, 15s to 15s 3d; ditto, October-November, 13s 6d; Spanish, prompt shipment, 20s, c.f. and l. terms. Broken kinds slow on about former terms. Rangoon beans steadier. Spot, hand-picked, sold, 7s 6d. Japanese peas, September-October, sold, 26s 9d to 27s 3d; December-January, 23s 6d to 24s 9d.

SPICE.—Pepper ruled quietly steady. Fair black Singapore, spot, 33d; October-December 33d; Aleppy, spot, 43d; Tellicherry, 48d; white Singapore, 54d; Muntok, 6d; ditto, October-December, 53d. Zanzibar cloves, spot, 1s 4½d; October-December, 7d. Pimento, spot, 24d; flake tapioca, spot, 23d per lb. Fair Penang seed, spot, 20s; sago flour, October-December, sold, 12s; desiccated coconut, spot, sold, 34s 6d; October-November, 34s. Ginger in quiet request on former terms.

FRUIT.—There has been a fair trade doing in currants at full rates. New Pyrgos, spot, sold, 70s; Amalia, 82s, 85s; Vostizza, 93s to 100s. Valencia raisins in fair demand, and fine ruled firm, but inferior rather easier. 48s tons were offered in auction on Tuesday last and partly sold; half-boxes, 85s; quarters, 90s to 148s; very choice, 164s; seedless, 110s to 133s. Sultanias steady, but general trade moved quietly. Smyrna, 145s to 165s; choice, 185s. Dates quiet. Siar, spot, 20s.

JUTE.—After being quiet and easier the market developed more steadiness, and during the week quite a fair business resulted with spinners closing lower. First grade, October-November, and also November-December, continent, sold, £33 to £33 5s and £32 5s; lightning grade, ditto, £31 5s, £30 15s; heart grade, spot, Dunkirk, £28; 10 oz hessians, spot, 33s 6d; forward, 32s; 8 oz, spot, 26s. A twills, afloat, sold, 81s 6d; B, on spot, quoted, 67s.

HEMP.—A quiet and easier tone ensued for Manila parcels, owing partly to larger receipts. F grade, October-December, quoted, £39; G, £33 10s; H, £32; J, sold, £30 10s; K, quoted, £29 10s; L, £28 10s; and M, £27 10s. New Zealand high point fair, spot, quoted, £34; October-December, £32 10s; fair, spot, £32; and October-December, £30 15s. Italiana P.C., spot, £55. African sisal: No. 1, Tanganyika, October-December, £34 10s; No. 1, B.E.A., £34.

SHELLAC.—Market generally quiet. T.N., fair quality, on spot, 285s; December delivery, sold, 260s to 252s 6d and 262s 6d.

The prices in the following list are revised with the assistance of an eminent firm in each department.

PLENTY of money was reported in the first few days of the week, but on Thursday borrowers found some difficulty in supplying their needs, though they succeeded in doing so without recourse to the Bank of England. This scarcity was ascribed to the transfer of collected taxes to the Government's account, while the figures of the Bank return indicated a further contraction of credit through liquidation of Ways and Means advances. The demand for money brought some "second-hand" Treasury bill

to market, but otherwise discounts were hardly affected, the extreme scarcity of commercial paper being once more a matter of general comment.

	Oct. 20, 1922.	Oct. 13, 1922.	Oct. 6, 1922.	Sept. 29, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Bank Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discount Call	1	1	1	1	1% (Jly. 13, '22)
Houses Notice	1½	1½	1½	1½	1½% (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	..

The Bank return showed a further decline of £881,000 in the note circulation, and an increase of £8,000 in the stock of gold, making the Reserve £889,000 higher. Government securities had declined by nearly nine millions, while Other were two millions higher. There was thus a net decline of six millions in the deposits, nearly equally divided between Public and Other. Currency notes outstanding were reduced, in the return dated October 19, 1922, by £2,058,100 to £289,338,500, which includes £1,548,300 for notes called in, but not yet cancelled. The fiduciary issue is £239,640,100, or £70,348,300 below the maximum.

THE STOCK MARKETS.

The passing of the acuteness of the Near Eastern crisis brought relief to the Stock Exchange, where business showed some signs of increase and broadening until the dramatic developments in home politics came to provide, as such events always provide, a strong restraining influence. The weakness of the French franc was another unfavourable factor. War Loan rose at one time to 101, but did not hold its best price, while the course of other leading gilt-edged stocks was similar. The only feature of the foreign market was the flatness of French bonds, in sympathy with exchange movements. However, the prospect of a Conservative Government resulted in a marking up again of War Loan and French bonds yesterday. Apart from one or two stocks, the Home railway market has eased off. The revision of fares, on the whole, tended to produce hesitation. Argentine Rails were strong on the publication of the reports. It was left to the rubber share section to provide the feature of the week, the recent advance continuing strongly until Thursday brought some reaction. Oil shares were depressed, but in the industrial markets one or two shares, such as Listers, Babcock and Wilcox, and United Alkali preference enjoyed brisk rises. The excitement in British and Argentine Meat subsided, but other meat shares received attention. The Kaffir market, after buoyancy produced by support from the Cape, eased off. The tin share list includes some substantial rises.

THE COMMODITY MARKETS.

The improvement in the commodity markets noticed in our columns a week ago has spread itself over a wider area, and business prospects all round appear to be better. The further upward movement this week in raw cotton prices has to some extent stimulated demand for yarn and cloth, and inquiries have been on a larger scale. The wool market generally presents a strong and active appearance, and prices at the London sales were very firm, with a tendency to go even higher. The home market for pig-iron continues to show signs of strength, prices being well maintained by the demand and inquiry from America. Our Sheffield correspondent, while reporting business as extremely quiet, mentions that there "is a multitude of inquiries" for high-grade steels and tools. There has been no slackening in the demand for South Wales coal, and the average of prices is a shade higher; notwithstanding weaker exchanges, inquiries from the Continent have increased. Meanwhile, coal exports to United States and Canada continue on a substantial scale. The price of raw linseed oil shows no signs of weakness, although a steady demand has been succeeded by rather quieter markets.

FOREIGN EXCHANGES.

Active movements and much excitement have again marked the foreign exchange market. Until the news of Mr Lloyd George's fall came out on Thursday evening, the pound continued to appreciate strongly in New York, in contrast to what might usually be expected at this time of the year, the rate moving up from 4.43½ on the 13th to as high as 4.48½ during Thursday. After the resignation of the Cabinet was announced there was a sharp reaction, the closing rate for the day being 4.45½, but there was a decided recovery yesterday morning, when rates again reached just under 4.47. The main market explanation for this movement was the transfer of funds in connection with the decision of the Norwegian shipping case in the United States, but there is no doubt that the payment of the first interest instalment by the British Government has had a very strong sentimental effect. After its temporary recovery the German mark has entered on a new period of rapid disintegration, the rate having risen from 11,750 on the 13th to a new high record of 15,700 yesterday morning. Hurried legislation to prevent exchange speculation, and the proposed issue of gold Treasury bonds as a basis for internal transactions, have not succeeded in stemming this movement. The only relatively satisfactory feature is the sign that a more reasonable attitude towards reparation is at last making itself felt in France, and although it is unlikely that Sir John Bradbury's new scheme will be accepted by the Reparation Commission, a more satisfactory treatment of the problem may now be expected. Unfortunately, there is still a serious risk that a reasonable attitude may come too late. In the meantime, the franc has continued to depreciate, the Paris rate having moved up from 58.50 on the 13th to as high as 60.80 on Thursday, the recovery to 59.95 on the political news in England having been followed by a renewed rise yesterday morning to 60.15. Apart from an increasingly unfavourable trade balance, a study of the recent Budget figures throws a gloomy light on the immediate financial future of the country. Italy has moved up on balance from 104.40 to 106.10, but at the same time shows a tendency towards increased steadiness. Apart from the general reaction on Thursday evening, Amsterdam and the three Scandinavian countries have moved in our favour, while the rise in the Swiss rate, from 23.90 to 24.52, has been especially marked. The Helsingfors rate has moved from 193½ to 189½, in spite of considerable purchases of foreign currencies. At 320,000 the Viennese rate is rather better than the proposals of the League of Nations will result at last in Government hope to repeal in the near future the recently introduced exchange restrictions. Poland, however, after its recent improvement, has again depreciated rapidly, from 44,500 to 47,500. Prague during the week has shown an upward tendency, from 130½ to 135½. In Greece, the rate has risen rapidly, from 170 to 220. In the East is slightly dearer at 2s 1½d. The silver market has been Mint, sales from China having more than counterbalanced an active Indian demand. The Hong Kong rate yesterday was 2s 5½d, as compared with 2s 6½d a week ago. The Shanghai rate 3s 3d, as compared with 3s 5d. In South America, aViparaiso is a little cheaper at 32 (las week 31.70) pesos, Buenos Ayres has moved very slightly from 44½d to 44 17-32d, Monte Video from 42½d to 42d and Rio from 63½d to 6d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 14, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	12,552	Permanent charge of Debt	1,437
Taken from Exchequer Balances	258	Interest on Debt	707
		Supply Services	343
		Reduction of Debt	48
		Sundries	1281
	12810		1281

Receipts from Property and Income-tax amounted to £3,271,000, against £3,577,000 in the same week last year. Customs yielded £3,029,000, against £2,367,000

Excise receipts amounted to £1,576,000, against £2,397,000. Special Receipts under Miscellaneous amounted to £2,038,128, against 839,234. The week's operations reduced the National Debt by £3,432,953, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates	+ 1,020	National War Bonds paid off ..	- 1,750
Public Depts. Advances	+ 1,515	Bank of England Advances ..	- 6,500
Treasury Bills	+ 4,018	Unemployment Insurance ..	- 250
		Sundries	- 486
	+ 5,553		- 8,986

The floating debt was reduced by £970,000 to £922,359,500 during the week ended October 14, 1922.

FINANCIAL YEAR, 1922-23 (April 1 to October 14, 1922).

	£		£
Total spent	393,664,571	Raised by revenue ..	435,598,765

THE PASSING OF THE COALITION.

THE resignation of the Government following on the adverse vote of Conservative members of Parliament at the Carlton Club on Thursday brings to a close a remarkable chapter in British history. The post-war period, of which the present crisis marks the end in the political sphere, has been almost as full of great events as the war itself. In external relations particularly the historian will date some of the most decisive changes of the 20th century from this epoch. The new Ireland, the independence of Egypt, the application of a more responsible constitution in India, the admission of the British Dominions to independent membership of the League of Nations, and the actual launching of that great organ of international co-operation, these are all events which herald or inaugurate great evolutionary changes. The Peace Treaties themselves are also the work of this epoch, but they are perhaps to be regarded rather as temporary patch-work than as a secure foundation for the new Europe. But though Mr Lloyd George's second Premiership has been fraught with great events, the plan of governing the country by a Ministry composed of men of divergent political views and traditions, which proved both necessary and effective in time of war, was very much less successful when the time came to make peace; and as the Great

War and the unity of purpose and opinion which it engendered receded into history, it became an ever more hollow pretence. The conception of Coalition has at last met with such complete condemnation that it is superfluous to dwell upon its defects. One of the primary factors in the present situation is the almost universal recognition that inconsistencies and vacillations in foreign policy have steadily undermined British prestige abroad, and that the same defects have gradually alienated one section after another at home. It is only fair to add that to some extent the instability of the late Government's attitude towards many of the great home and foreign problems of politics, for which everyone now criticises it, has been a reflection of the change in national opinion itself which has taken place as the widespread illusions of 1919 have been dissipated by the aftermath of the world war. At the same time, the maintenance too long of the system of Coalition, which has long since been abandoned by many of the nations associated with us in the war, has been responsible for keeping the real issues of political life hidden in a fog of compromise, and played into the hands of a leader, the most pronounced of whose very great gifts is an unrivalled capacity for producing extemporary solutions and reconciling apparently irreconcilable opponents by means of compromises which too often ignored all but the emergencies of the moment.

It is because the Coalition had produced these unfortunate results in national life that we have urged for some time past that the national interest required that the Conservative party, which has held power in the House of Commons for the last four years, should assume responsibility for policy, and restore consistency of outlook in national affairs. The overwhelming welcome given to the Carlton Club decision of Thursday last shows that this view is predominant to-day in the country. It is not yet certain whether Mr Bonar Law will decide to meet Parliament, and to carry on the Government of the country until the Irish Treaty is ratified. There are strong reasons why he should do so, and we feel that the party situation in the House will certainly enable him to adopt this line. But even in this event the General Election cannot be very long delayed, and public interest must for the next few weeks be devoted to study of the policies for which the chief parties now stand, and of the situation that would arise if one or other of them is successful at the polls. Broadly there seem to be two main possibilities. On the one hand the Conservative party may be returned with an absolute majority in the House. This may perhaps be regarded as the most probable event, and if it comes about it will be because the country, tired of changes and makeshifts of the last few years, is not in the mood for new experiments in economic affairs, and is attracted by the idea of a quiet political life. It is true that the Conservative members of the present House have voted for some very radical measures, but the Conservative party, fighting alone, even though it include many who have felt as a result of the war a great desire to see an improvement in our economic system, or have acquired great sympathy with the ambitions and hopes of the mass of the people, will now have to carry with it the opinion of the political right, which, if not actually reactionary, has as its main political instinct a belief in things as they are. But even if events allowed a Conservative Government to follow a quiescent policy—which is doubtful—there are some questions on which the country will look for enlightenment from the Conservative leaders. America was able to "pull out" of Europe some years ago, but Great Britain's external obligations cannot be thus shelved, and we must know what the party leaders' policy in international affairs is going to be. In the party fight which lies ahead the opponents of Conservative candidates will quite reasonably endeavour to saddle them with responsibility for many of the events of the last two or three years, and, indeed, it is not possible for the party which has, in fact, by its vote kept the Coalition in power, and which has a very substantial majority over all parties in the House, to make Mr Lloyd George the scapegoat on all points which the electors may be disposed to criticise. But if the Conservative Government repudiates our recent foreign policy, what is their alternative? Lord Balfour admittedly stands for a League of Nations policy, but in that

latter. With their not inconsiderable resources and their practical identity of interest with the Government, they should be able materially to assist the progress of the ship of State. And if, by realising their position and its potentialities and entering upon a policy of prudent activity, they establish relations of a progressively confidential character with the Irish Exchequer, they may find that by ousting from the counsels of the Irish Free State the sporadic promptings of paradoxical or interested amateurs, they will have protected their shareholders and their clients, as well as the financial prosperity of the community of which they are part. The Irish Government itself could not but welcome a closer connection with the Irish banks united in action upon a common policy, and bringing to bear upon their economic problems the accumulated weight of their expert advice and abundant resources.

NEWSPAPER INSURANCE.

(BY A CORRESPONDENT.)

SOME months ago we dealt with the surprising development of the free insurance campaign, and pointed out the difficulties in which insurance offices accepting the risks were likely to be involved. Since that article was written our warnings have been fully justified, and free newspaper schemes are to-day more unpopular with insurance offices than ever. The main trouble arises from the fierce competition among the newspapers, each of which pushes its own scheme against its rivals' by wholesale advertisement of the claims settled, from the consequent education received by the public in the pretty art of claim-making, and from the enormous increase of circulations which these insurance schemes naturally produce. The calculations on which the original premiums were based have been falsified for these reasons, and most of the companies who carried the risk have found it a losing proposition. On the other hand, the scheme once started is not easily dropped, and a newspaper which first proclaims from the housetops the value of its free insurance and then finds that it has lost its market is not in an enviable position. It may safely be said of both newspapers and insurers that if eighteen months ago they had possessed the knowledge which they have to-day the venture would never have been started.

It is one of the curious facts in insurance that the more you offer to policyholders the greedier and more dissatisfied they become. In the old days, for example, when the householder was content to take out a fire policy on his furniture, and did not worry himself about other risks, no branch of insurance was more profitable to the offices than policies on the contents of private houses; but as the market widened and competition increased, the householder was invited by companies and brokers to take out policies of a more generous kind, covering risks that he had never before contemplated. Competition between the insurers forced them to add further attractions, and considerable sums were spent in advertising the merits of the new policies. What was the result? Policyholders realised for the first time that all sorts of little things for which they had not hitherto claimed could be made to constitute claims on their policies, and assumed that they had also the right to claim for other things that were not covered by the terms of their policy. The claims ratio increased enormously, the policies became less and less remunerative to the insurers, and by a curious paradox, there was growing discontent among policyholders who took the terms of the policy for granted and because they got much presumed that they were entitled to everything.

A similar process has resulted from the widely advertised newspaper schemes. Educated in the process of claim-making by the daily published tale of claims, registered readers put in claims whether they attached to the policy or not, and many of them (failing good claims) fabricated false ones, with the result that the settlements were heavy beyond all expectation, fraudulent claims were paid much too widely, and the companies found that schemes from which they had anticipated a fair profit led to heavy losses.

We have said enough to show that in our opinion free insurance, as it has been managed during the last year or

eighteen months, is from the insurers' standpoint not a sound proposition, and we are prepared to believe that the papers themselves begin to find it a millstone round their necks. But it is one thing to say that free insurance as hitherto in force is bad business for the offices, and doubtful business for the papers. It is another and a far more questionable thing to say that it is valueless to the insured registered reader, and it is with this point that we propose to deal.

An agitation has recently been started in a section of the Press which has no insurance scheme, directed at the "exposure of newspaper insurance," from the reader's point of view; and a large pamphlet has been published intended apparently for circulation among a not very intelligent class of reader. The central feature of the pamphlet is a large cartoon headed "What a Game," and depicting two men playing tennis. One man represents the insurance companies, and the other the daily Press, and they are engaged in smashing from one court to another a ball marked "registered reader." The picture is apparently meant to show that the insurance offices which have lost thousands over free insurance, and newspaper proprietors who have invested thousands in premiums for their readers, are playing a game with the insured, who gets nothing from the scheme but what is bad. This theory is developed in the letterpress, which contains statements such as these:—"The newspapers have had a good laugh at you," "the registered reader is not insured in any proper sense of the term," "the public as a whole gets no advantage out of newspaper insurance. It is, on the contrary, a heavy loser."

Whatever may have been the intention of this pamphlet, the general effect is to throw doubt on the fair dealing not merely of the newspaper proprietors, but of the insurance companies which drafted the schemes and accepted the risk. The papers can be left to look after themselves, but some protest should be made against this daily attack, open or implied, on companies of high standing, whose duty it is to settle the claims, and who are made to appear as quibbling claim resisters. The impression is gained partly by the use of statistics which are obviously inaccurate, and partly by the reproduction of *ex parte* statements from dissatisfied claimants. By the use of very hypothetical figures the registered reader is made to believe that an insurance which he could not get in the only 8d per annum, and which $\pounds 1$ per annum is really worth claimants a number of complaints are collected, many of which are found even at first sight to be baseless.

No man with any experience of insurance claims would accept at face value the one-sided statement of a dissatisfied policyholder, who always makes himself out to be a much-injured person. But here are one or two of the complaints recorded in the pamphlet:—

A reader whose child was insured by a paper against a broken leg or a broken arm claimed because the child broke its collar-bone, and was disgusted to find that the company which had contracted for one risk would not admit liability for an entirely different one.

A man insured by a paper against death by accident in steps of a theatre, which is not a public thoroughfare, and the insurance company, having clearly accepted liability another.

These are two cases taken at random from the pamphlet intended to show how catchy and deceptive the insurance companies are. As an appendix to these much-advertised grievances, and to show what can be done by taking intakes not from newspaper insurance, we add a few cases of insurance office which is probably more considerate than the average to its claimants. They illustrate the well-known fact that in insurance, and particularly in those branches where simple definition is not easy, policies are constantly misread and misunderstood by their holders.

A lady whose furs were insured against theft had a fur covered theft from the house, and the fur was stolen out-side the house. Great discontent.

A man whose goods were insured against thieves had a claim for theft rejected because "thieves" in the policy

The New York Trust Company

Capital, Surplus & Profits - \$26,500,000

COMPLETE INTERNATIONAL BANKING FACILITIES

100 Broadway

New York City

mean violent thieves, not clandestine thieves. Great discontent.

A man who claimed for a broken mirror and a broken vase had his claim for the mirror settled, but the claim for the vase declined, because the policy covered one and not the other. Great discontent.

A man who insured a furniture removal had a claim for $\pounds 3$ rejected because the policy was to pay only the excess of $\pounds 5$, a condition which he had not noticed. Great discontent.

Now, each of these claimants, like those mentioned in the pamphlet, considered that he had been trapped because he had thought the policy covered something it did not cover. In other words, the policyholder had not troubled to read his policy or understand it.

And that is really the foundation of this charge against the British insurance offices in the matter of free insurance. In 999 cases out of 1,000 policyholders will not read their policies until the accident occurs, and whether they are covered through a newspaper or independently with an insurance company of their own choice, they are equally careless. But it is grossly unfair to launch an attack on respectable British insurance companies because of this notorious slackness of their policyholders, which is not a thing of to-day or yesterday, but has been a source of trouble to insurers from time immemorial, and is likely to continue so long as insurance lasts. We shall want a good deal more evidence than any yet provided before we believe that British insurance offices have fooled the public or made a deliberate policy of dodging their just claims.

TIN AND TIN SHARES.

(BY OUR MINING CORRESPONDENT.)

IN 1920—that memorable year of post-war inflation—metallic tin touched the record price of nearly $\pounds 420$ per ton. During the "deflation" period which followed, it was at one time down to $\pounds 148$ —also a record for recent times. Between the beginning of the present year and the middle of September the tendency of values was erratic, but since the latter date substantial net gains have been recorded each week, until the current quotation stands some considerably higher than it did then. Several important factors have combined to bring about this appreciation. Restriction of output on the part of Nigerian and some other producers is one; but the main influence has been the persistent demand for the metal on behalf of the United States' canning industry, in which marked activity has prevailed recently. In our own South Wales business the tendency has been less favourable, but even here a measure of revival has been reported; and this week's stabilisation of prices for steel bar and tin plate is expected to result in an increased demand—indeed, it has already done so. Observing the tendency to enhancement in value, producers in the Far East are inclined to limit their realisations. Thus, altogether, a distinct change for the better has come over the statistical position. At the moment much interest centres around what may happen with regard to the stocks in the hands of the Malayan Governments.

Except for occasional transactions in the scrip of some of the better-class undertakings, the tin section of the mining market was for the first three-quarters of the current year little better than dormant. Indeed, some dealers deserted it in disgust. The recent sharp advance in the price of the metal has transformed practically the whole list. Speculative investors and professional operators naturally argued that if the Far Eastern companies could make fair profits with tin at $\pounds 150$, they would be prosperous with the metal over $\pounds 170$; and that if a well-managed Nigerian concern could pay its way at the lower price, it would fare pretty well at the higher level. A moderate demand found the market practically bare of stock, and some sharp advances occurred. To quote a few of the more striking examples, Siamese Syndicate shares now stand at $2\frac{3}{4}$, as against the October 2nd make up price of $1\frac{1}{8}$, Mongu at $12s\ 6d$ in place of $9s\ 6d$, and—among the smaller concerns—South Bukuru at $4s\ 6d$, as compared with $3s$.

The appended table shows the returns for the past four months and contrasts the share prices of the more important tin-mining companies which declare monthly returns:—

Operating by means of dredges and sluices, and large with cheap native labour, many of the Far Eastern undertakings have been able to continue in the dividend list notwithstanding the low price of tin. For example, the Gopeng—a favourable illustration—has paid three quarterly dividends of $9d$ apiece this year. The Kinta paid in June and the Kramat a like sum in August. The Ma

yan disbursed 1s and the Pahang 9d (on a 5s share) at the end of 1920. About the same time the Renong paid 1s 6d. The Rambutan distributed 8d per share in April last. Siamese Syndicate's rate for 1921 was 2s per share, and 1s interim has lately been declared. Sungei Besi paid 1s in February last, Tekka 4½d in June, Tekka-Taiping 6d in December, 1921, Tongkah Harbour 2s in January, 1921, and the Tronoh 1s in July last. As regards the miscellaneous companies, the Aramayo has paid three dividends of 5 per cent. each so far this year, and the Berenguela one of 7½ per cent. in June.

To meet the position created by the fall in the value of their product, the Nigerian companies adopted a policy of drastic curtailment of output, in conjunction with a campaign of economy. Naturally, in these circumstances, the shareholders have received nothing for some little time. To this general statement there is one exception, the Ropp having succeeded in paying 10 per cent. in July last. Most of the companies are, however, in a position to increase their rate of production as soon as conditions warrant, although the financial position is in some cases far from good.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the past quarter cotton spinners and manufacturers in Lancashire have lost ground. Demand has fallen off, and owing to the absence of fresh contracts there has been a tendency for more machinery to stand idle, with the result that unemployment is on a larger scale than three months ago. Up to the end of July the improvement which began in the spring was maintained. In the following month, however, less activity showed itself, chiefly owing to the holiday season of the year. It was confidently expected that another buying movement would come round at an early date. Early in September there were indications of an increased turnover in certain sections, but the political crisis in the Near East had a most adverse effect upon developments, and since then the confidence of merchants has been destroyed. The financial situation has caused anxiety, and many cases of difficulties have had to be dealt with.

As is usual at this time of the year, there have been many changes in raw cotton prices, according to the varied reports relating to the outlook for supplies. On July 3rd the quotation for fully middling American on the spot in Liverpool was 13.16d. On the following day there was a smart advance to 13.94d. The rise was not maintained, and by the 11th the price had fallen to 13.41d. Wide fluctuations occurred, and the lack of stability had a disturbing effect upon trade. On August 1st the quotation was 13.02d. On August 10th the figure was 12.25d, but there was an advance to 13.80d by the 21st. Early in September there was a downward movement to 12.70d on the 7th, but by the 14th the price had advanced to 13.42d. An easier movement set in, and 12.40d was the rate on September 29th. Since the beginning of October there has been an important rise in values, the quotation on Wednesday last being 13.89d.

The demand on the spot in Liverpool from week to week has been of limited dimensions, but recently there has been rather more forward buying by spinners. Imports to this country from the United States have been rather small, and there has been a tendency for stocks to be reduced. With regard to the American crop for the current season most people have now made up their minds to a yield of about 10,500,000 bales, as compared with 8,500,000 bales in the previous season. During the 12 months ended July 31st last the consumption of American cotton was estimated at 12,800,000 bales. On the whole, it is believed that the requirements of users during the current year will not be so large, and some people are forecasting the takings of spinners at only 11,500,000 bales. With regard to Egyptian cotton, the quotation for fully good fair Sakellaridis on the spot in Liverpool at the beginning of July was 20.25d. By the 27th of that month the price had fallen to 18d, and there was a further decline to 16.75d on August 9th. Prices were then firmer, and 18d was posted on September 1st. A few days later there was a decline to 17.25d, and on September 29th the figure was 17d. Since then a rise has occurred, the quota-

tion on Wednesday last being 17.75d. The new crop in Egypt is reported to be doing very well. No official estimate of the yield has yet been published. There seems to be, however, every probability of an output of about 5,000,000 cantars, and owing to there being large stocks there is no likelihood of any shortage of long staple cotton during the next 12 months.

It has been a disappointing three months for manufacturers of piece goods. In July engagements and demand were of such a character that many firms were able to secure contracts at prices which showed a fair profit. A distinct improvement had taken place since the beginning of the year. The better state of affairs, however, has not been maintained, and there has been a distinct falling off in the orders available. Some firms have been compelled to allow more looms to stand idle, and there has been a tendency for unemployment to increase. On the whole, favourable trade advices have been received from India. Stocks in the bazaars are not heavy, and the Monsoon season has been very satisfactory. There seems to be a limit to the prices which can be paid by dealers in the bazaars, and if goods cannot be secured at the figures put forward negotiations come to an end. Of the several outlets Calcutta has been the best, and fair sales have been arranged from time to time in grey shirtings and lighter fabrics. Very little fresh business has been done for Bombay. There has not been any development in the offtake for China. Manchester shippers have been discouraged by reports from Shanghai, especially with regard to finance. Trading throughout the quarter has been confined to sorting up lots in standard makes, but a fair amount of activity has shown itself in fancies and specialities. As can easily be understood, trade with the Near East has been brought to a standstill, and manufacturers have been requested to stop deliveries. This week, however, the news has been better, and exporters to Turkey and the Levant are now asking makers to complete old contracts. A rather improved demand has been experienced for the outlets of Central and South America. Business has been fairly healthy for some of our colonies, especially Australia. The home trade houses were rather badly hit during the summer by the disappointing consumption in light fancy materials as a result of the unseasonable weather, but latterly conditions have been rather healthier.

The following comparative table gives particulars of shipments of cloth from Great Britain, the figures being given for the pre-war year 1913, and the last three years:—

NINE MONTHS ENDED SEPTEMBER.			
	Yards.		£
1913	5,350,278,900		73,659,119
	Square Yards.		
1920	3,540,477,100		242,732,477
1921	1,866,341,100		100,045,277
1922	3,068,278,700		106,637,067

As compared with last year, we are exporting much more freely to Switzerland, China, Australia, Bombay, and Bengal in the order given. There are small decreases in the takings of Roumania, Mexico, and Cuba.

Spinners of yarn are in a worse position than three months ago. Early in August the conditions were so bad that the Master Spinners' Federation recommended the members to close their mills for a week before the end of that month, in addition to the usual holidays. The state of trade was again considered early in September, and a ballot was taken of users of American cotton as to a scheme of short time, the proposal being that the factories should close on Saturdays and Mondays for a month. The necessary majority of votes was secured, and the scheme came into operation. Since then the Masters' Federation has recommended American spinners to continue working only four days a week until the end of November. Outside the auspices of the Masters' Federation an Emergency Provisional Committee of Spinners has been formed, and the members have had an interview with the Federation Committee on remedies for relieving the severe trade depression. In November there is to be an extraordinary general meeting of the members of the Masters' Federation to consider the state of affairs. Special meetings of this kind are seldom called. In all kinds of yarn the production is more than equal to the

requirements of consumers, and in most counts and qualities the prices ruling show a distinct loss.

The following is a comparative table of yarn shipments:—

NINE MONTHS ENDED SEPTEMBER.			
	Lb.		£
1913	154,761,700		11,022,055
1920	118,447,700		37,656,977
1921	90,592,600		15,987,327
1922	158,363,900		20,763,425

In comparison with last year, the principal instances of increased exports are the Netherlands, Germany, Bombay, China, and Switzerland.

The conditions prevailing in the Manchester market at the moment are not at all encouraging. There is a tendency for raw cotton prices to harden, and this is not likely to help matters. Some orders in yarn and cloth may be forced out, but the opinion is generally held that Lancashire spinners and manufacturers will not experience a real trade revival until it is possible to supply our customers with goods at lower rates than those ruling to-day. It is quite apparent the world cannot consume large quantities of manufactured cotton goods at current prices. Trade prospects in India are healthy, and probably more business will be done in the near future. The China outlook is very uncertain. In numerous distributing outlets throughout the world an unsettled feeling prevails, and foreign trade cannot flow freely when merchants are nervous and lack confidence. There is also the question of finance, and it is feared that more difficulties will have to be met with before trade revives.

CENTRAL EUROPE.—IV.—ROUMANIA.

THE new Roumania, as it has emerged from the peace settlement, is a country of over 16 million inhabitants, and possesses some of the richest lands of the whole Continent of Europe. It is, of course, true that the provinces of Wallachia and, in less degree, Moldavia were exploited in a most scientific fashion by the German armies of occupation, but nearly four years have passed since then, and the province of Transylvania, acquired from Hungary, was almost entirely untouched by the war. Thanks to this acquisition, in fact, the old kingdom was enabled to make up for its great losses in cattle and stock and start its agricultural activities anew with a minimum loss of time. On the other hand, the political position was such that the pledge given by King Ferdinand during the battle of Marasesti had to be carried out to the full, and a veritable social revolution precipitated at the very moment when economic reconstruction was the first need of the country. It is, of course, as yet too soon to judge the ultimate results of the new Agrarian Reform. The immediate consequences, however, are hardly satisfactory from the economic point of view. Whether the production of cereals has greatly diminished or not as a direct consequence of the expropriation of the large owners it is hard to judge. That the balance available for export is less is, however, perfectly clear. Equally certain is the fact that the commodity exported is not as clean as it was formerly. Violent oscillations in the exchange, and, consequently in the price of wheat and maize in lei, have made the peasant suspicious, and recently much wheat has been kept back in the hope of higher prices. But it is, of course, obvious that it was fear and not economic considerations that led to the Agrarian Reform. This, in fact, was the price paid by the governing classes to save the country from Bolshevism.

A second important factor that has hindered the economic restoration of Roumania is the question of transport. It is certain that much damage was done to the railways during the war years—when the regulation of the Danube by the European Commission was also impossible. Nevertheless, railway reconstruction has been inordinately slow. Temporary bridges are still the rule, as witness the accident to the Orient express near Sinaia some months ago. Wagons exist in abundance, but facilities for repairs are very restricted, with the result that the effective rolling stock available for service is relatively small. Improvements have, of course, been made, though it is significant that the opening of the Jasi-Chisinau normal gauge line (in place of the old broad gauge of Russian days) was

fêted as a great event last month. The length of line involved was 167 kms., and some years have elapsed since the war. To the foreign observer it would appear that the immensity of the damage caused by the invading armies is not the only limiting factor. The administration seems to have been thrown out of equilibrium at least as much as the other productive agents.

Thirdly, the position of the Government officials calls for comment. Their numbers are perhaps excessive, but it is even more certain that their remuneration is wholly inadequate. Abuses under such conditions are bound to arise, and the present Minister of Finance is surely right in insisting that the first need of the country is a reduction in the number of officials, together with the earmarking of the money thus economised for a fund to be devoted solely to improving the remuneration of the officials who remain. The new Roumania possesses great natural resources. Whether their successful exploitation will be possible without the active co-operation of foreign capital is, however, quite another question. In this connection our Roumanian Allies of yesterday would do well to remember that foreign capital necessarily implies a measure of foreign control over the undertakings in which it is applied. This fundamental consideration is only too frequently lost sight of in the various schemes which crop up for discussion from time to time. In the hands of an enterprising syndicate the port of Galatz, for example, would rapidly become one of the most important centres of Eastern Europe. The situation is ideal and the trade potentialities immense. Whether much progress is to be looked for under present conditions, however, is perhaps doubtful.

The new Agrarian laws have necessitated a change in the legal conception of property. At present it seems likely that mineral rights will belong to the Government throughout the whole country. But the uncertainty of the moment is certainly impeding the development of the oil industry, and it is to be hoped that both the legal question and that of Government policy with regard to future concessions will be definitely settled with the least possible delay. It is satisfactory to note that no new money has been printed for nearly a year, and great hopes are entertained of the Budget yielding a considerable surplus. If this is in fact realised, and if, further, the present taxes can be made more productive—for the present basis of taxation of land values in Transylvania, for instance, is the cadaster of 1875, while the position in Bessarabia is simply absurd, the peasant paying some 25-30 bani only per hectare—M. Bratianu's policy may be crowned with success. The basis of his contention is that an improved administration of the existing system will amply suffice without recourse to new methods. But the Minister of Finance is an avowed deflationist of the most uncompromising type. Will the possibility of a fairly early stabilisation, together with the wise application of the available Budget surplus for the economic rehabilitation of the country, be summarily sacrificed for the fierce joy of burning notes withdrawn from circulation? Some of us, however, will perhaps prefer to await the realisation of the first part of the programme before worrying unduly about the second.

This week has witnessed the solemn festivities of a coronation. The royal couple have managed to dispense with this ceremony for the first eight years of their reign, but we are told that the time has now come for a formal manifestation of the unity of "Great Roumania." Viewed from this point of view, the ceremony of Sunday last must needs have fallen somewhat flat without the powerful auxiliary of a downpour of rain. The Transylvanian politicians were most conspicuous by their absence, and the personal triumph of the ruling Liberal leaders somewhat diminished thereby. To take sides in the internal politics of another country is usually a dangerous proceeding, as is shown in a recent article on Roumania in a prominent London daily. It is, of course, undoubted that electoral manoeuvres in Transylvania savoured more of Hungarian days than of this enlightened post-war period. It is equally true that the electoral law of that province was framed by these self-same Transylvanian Liberals, whose outraged moral sense has now prevented their being present at the little church in Alba Julia, and that it is not the same law as that which applies to the rest of the

country. This episode is an unfortunate example of political dissension.

From the economic point of view, one can only hope that Roumanian politicians will follow the precept of a distinguished English professor, and proceed to do as little harm as possible. The great wealth of the country needs scientific exploitation, and political wrangling has done much to make this unnecessarily difficult.

Notes of the Week.

Anglo-American Affairs.—One unfortunate result of the disturbance in domestic politics is the postponement of the visit of the Chancellor of the Exchequer to Washington. Sir Robert Horne was to have sailed this week, accompanied by the Governor of the Bank of England, to arrange a scheme for funding the war debt of this country to America. This week has produced the first concrete proof of this country's determination to meet its obligations to the United States, for £9,000,000 have actually been handed over on account of the first interest instalment of £25,000,000. All the same, it is to be hoped that the new Government will send out a mission for this purpose as quickly as possible, for any delay in placing the Anglo-American debt on a definite footing would be very unfortunate. The question of this debt and its repayment has in recent times vied with the Irish question in raising barriers of suspicion and misconception between the two countries. The Irish barrier has been broken down, for American opinion was quick to realise that Ireland has been offered the opportunity for self-government which she claimed, and that the credit or blame for future happiness or disaster in Ireland rests primarily with the Irish, and not the British, people. When once a definite settlement of the debt question has been reached, another barrier between the two countries will have been removed. It is felt by many close students of international affairs that, such settlement once behind us, the way would gradually open to co-operation between the two countries in many important branches of international problems. We share that hope and belief, in spite of frequent evidence of widely divergent opinions, such, for instance, as is disclosed by Mr Hoover's assertion that Continental countries can pay their war debts. We at least believe that a settlement of the Anglo-American debt will bring close co-operation between the two nations a definite stage nearer to achievement. Since such co-operation is one of the principal desiderata in world affairs to-day, it would be a thousand pities if such trivial occurrences as the "dry ship" controversy were allowed to arouse petty irritations between the two countries. If the recent ruling of the American Attorney-General were really to be translated into action the galling restriction upon British shipping would certainly cause great resentment. Moreover, the questions of principle involved would be important. But we refuse to believe that our American friends have any intention of inflicting pin-pricks upon British shipping, or of incurring even the suspicion of unwarrantable interference with the rights of other nations. Probably the whole affair is not worth a tithe of the sensational headlines with which it has been dignified.

A New Bradbury Scheme.—The serious situation in Germany reflected in the latest slump of the mark to a new low record makes it imperative that opinion, sick and tired though it be of the whole subject, should return once more to the consideration of the latest phase of the reparation situation. For the moment the stage is held by a scheme put forward by Sir John Bradbury, who has proposed to the Commission a comprehensive plan for enabling the German Government to balance its budget and to stabilise the mark. His proposals are:—(1) To relieve the German budget almost entirely of the Peace Treaty charges for two, or possibly for four years, by enabling Germany to obtain credits to cover such charges; (2) to fix the exchange value of the mark

by an arrangement under which the Reichsbank would sell gold for paper marks at a fixed price to be determined by a Mixed Commission; and (3) to reorganise the Reparation Commission, and transfer it to Berlin. It is explained that the plan of stabilising the mark by the sale of gold at a fixed price is only feasible if the Reichsbank is relieved of the necessity of creating new credits through being compelled to discount Treasury bills for Government expenditure. If the further expansion of the floating debt could be stopped, Sir John is of opinion that there would be no serious difficulty in stabilising the mark at a level very much higher than its present exchange value without danger to the gold reserve, seeing that at the present price level the existing supply of currency is much below the requirements of the country. The alternatives, in Sir John Bradbury's opinion, are either a complete suspension of cash payments, and an almost complete suspension of deliveries in kind for a considerable period, or some arrangement under which the German Government shall be enabled to obtain resources for financing the Peace Treaty charges without expanding the floating debt. The arrangement proposed is that the Powers receiving the Peace Treaty payments should agree to guarantee German five-year Treasury bonds to the respective amounts to be received. The Powers entitled to receive cash payments would accept these payments in the form of five-year bonds which they would themselves negotiate under their own guarantee. Those receiving deliveries in kind would give their guarantee to German bonds, to an amount equal to the value of these deliveries, which the German Government itself would be entitled to negotiate. The arrangement would operate in the first instance for two years, but the Reparation Commission would have power to continue it so far as might be necessary for a further two years. The Allied Governments would be asked to undertake that before the plan is brought to an end they would consider the whole question of the aggregate liabilities of Germany under the Peace Treaty, with a view to their permanent adjustment to her capacity of payment and to their liquidation by a series of foreign loans. The plan contemplates that the final adjustment of debts between the Allies should take place at the same time as this settlement, and recommends that the Allied Governments should consider the possibility of immediate arrangements to meet the difficulties which will arise in the interval between the present time and this general settlement. The underlying idea of the plan is to avoid the suspension of Peace Treaty payments—a course which would create very serious embarrassment to the budgets of the Allied countries—but at the same time to extend to Germany the credit facilities necessary to enable her to re-establish her own currency and budget. The expedient of the guarantee is intended, however, only as a temporary arrangement to tide over the interval until Germany can adjust her system of taxation to the new level of values, and re-establish her own credit. The scheme is, in fact, a notable attempt to reconcile two opposing influences—the imperative need of Germany for a substantial period of freedom from external payments, and the tendency for the strength of the reparation claims of our Allies to be weakened as the war recedes into history. We must not put France in the position of having to argue her case *ab initio* in 1927, and it is this fear of the blunting effect of time and habit which is the underlying cause of French dislike of Sir John's proposal. Our Paris correspondent writes that counter-proposals have been drawn up by M. Barthou which have been elaborated in collaboration with the French Ministers for Finance and for the Liberated Regions, and their experts. A notable feature of these proposals, it is understood, is a demand for much stricter control over the German finances by the Allies. They also provide for fresh and distinctly more practical guarantees, and for the imposition, in case of need, of further sanctions. Their tendency, moreover, is said to be markedly in the direction of bringing about a settlement with special regard to peculiarly French reparation interests. Another point that will, incidentally, be insisted upon is that nothing in the present proposals shall be allowed to interfere with the decision that the Inter-Allied Conference in regard to inter-allied debts shall take place at Brussels before the expiration of the present year.

International Free-trade.—On Monday last Mr Hoover made an important speech at Toledo on the question of inter-Allied debts. The gist of his argument was that, with trifling exceptions, these could, and should, be paid. There was no doubt as to the legal and moral character of the obligations; in Mr Hoover's opinion there was also no doubt as to Europe's ability to pay, and, moreover, to pay in such a manner as would be acceptable to the United States. The remarkable part about this statement is that Mr Hoover was referring not to British payments, which were being arranged for, but to the huge load of Continental war obligations. The theory is sufficiently startling to cause doubt whether Mr Hoover was correctly reported. The remainder of the speech, however, contained much excellent advice to Europe. The economic frontiers in parts of the Continent must be redrawn so as to render possible the survival of certain countries which no financial aid will be able to bring about. There must be a political and economic readjustment of international relations which shall lead to the re-establishment of an atmosphere of peace in place of the prevailing atmosphere of war. Finally, the limitation of armaments is indispensable, both for reasons of economy and as a guarantee of peace. Given these conditions, the burden of payment, which will range from 2 per cent. to 12 per cent. of the total national budgets of the different countries, should not be too great. On the following day (October 17th), surrounded by high tariff walls, an International Free-trade Congress began operations at Budapest, at the invitation of the Magyar Cobden Society. Count Apponyi pleaded for the economic co-operation of the nations, and Lord Sheffield rightly insisted on the fact that post-war passions prevented the free exchange of economic values. One imagines that most of Mr Hoover's friendly advice would have been loudly applauded at the Congress. But Sir Charles Hobhouse, in a speech on Thursday, went a step further. After deploring the present state of Europe, and adding that all might have been avoided by foresight and vision at Versailles, Sir Charles argued that, as the greatest obstacle to trade was the taxation it had to carry, some international agreement might perhaps be reached as to the aggregate maximum expenditure of every nation. That resulting from war debt would, of course, have to be excluded, while the national maximum should be calculated chiefly on the basis of population. Subject to a maximum import duty on foreign goods, the raising and the spending of revenue (save on armaments, where a separate agreement would be necessary) might be left to the choice of each individual Government. As a counterblast to Mr Hoover, Sir Charles Hobhouse insisted that payments to America could only possibly be made in the form of goods, gold, services, or territories. This last mode of payment was out of the question, and the American Government had itself pronounced against goods and services, while gold was lacking. Accordingly, the voice crying in the Central European wilderness solemnly warned the American nation that Europe had little to offer but economic education. We may perhaps doubt whether Budapest was really the best forum to choose for this purpose. This city is the centre of a region that is hardly a good advertisement for the constructive wisdom of European economic statesmanship.

Employment in September.—Employment continued to be unsatisfactory in September, the recent improvement having been practically checked. For while the percentage of unemployed among all workers insured under the Unemployment Insurance Act declined very slightly, from 12.0 to 11.9, during September, the percentage unemployed among members of trade unions which furnish returns to the Labour Ministry reacted from 14.4 to 14.6 per cent., which was the figure in force at the end of July. How the trade union percentage has moved in recent months, and how it compares with pre-war experience, may be seen in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.							
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4
September ..	2.3	1.3	0.5	1.6	2.2	14.8	14.6
October	2.2	1.1	0.4	2.6	5.3*	15.6	..
November ..	2.0	1.1	0.5	2.9	3.7	15.9	..
December ..	2.6	1.4	1.2	3.2	6.0	16.5	..

* Excluding coal miners.

The Ministry of Labour Gazette reports some improvement in the pig-iron industry, in iron and steel manufacture, in the woollen and worsted industry, and in the pottery trades, but among workers in the cotton industry there was a further decline in employment. The total number registered as unemployed at the exchanges at September 25th was 1,368,000, as compared with 1,378,000 at the end of August. The employment outlook for the winter months is by no means encouraging.

Cost of Living.—According to the calculation of the Ministry of Labour Gazette, the cost of living fell one point in September, and at the close of that month was 78 per cent. above the level of July, 1914. How the percentage rose to its high record of 176 two years ago and has since fallen with scarcely a break is traced in the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st	85.90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90.95	110	132	133	82
May "	95.100	105	141	128	81
June "	100	105	150	119	80
July "	100.105	105.110	152	119	84
August "	110	115	155	122	81
September "	110	115	161	120	79
October "	115.120	120	164	110	78
November "	120.125	125	176	103	..
December "	120	125	169	99	..

Retail food prices remained on the average steady at the previous month's level of 72 per cent. above the figure of July, 1914. In September there was an advance of nearly ½d each in the average price of eggs, while fish and butter became dearer. But these movements were contracted by reductions in the average prices of bread, flour, sugar, potatoes and British meat.

The Rubber Revival.—Oil is no longer king, its place having been taken by rubber, the rise in the price of which has fired men's imaginations to such an extent that during the week just ended the rubber market has taken on some of the characteristics that prevailed during the mad days of the two previous booms. The physical condition of the market, writes a Stock Exchange correspondent, has changed completely from what it was even a fortnight ago, when, to thread a way through the concourse of jobbers was an easy matter, and when, day by day, desertions occurred from those ranks into the other parts of the Stock Exchange which apparently offered greater scope for business and enterprise. Now, however, it is the turn of rubber once more. The report of the Stevenson Committee, followed, as it was, by a rise in the price of rubber to 1s per lb, acted as a match placed to the dry tinder under which, for many months past, there has been slumbering the wistful hope that one day the rubber industry might re-establish itself amongst the profitable trades, and would reward the sorely taxed patience of those who had the courage (or misfortune) to keep their shares throughout a period of unexemplified dryness. At first the revival, sharp though many of the rises were, led to little business being transacted. People who wanted to buy rubber shares found that they were unable to do so, owing to the insistence of proprietors that since they, the proprietors, had stuck to their shares so grimly, it was not

likely they would sell them at the first glimmer of hope that better times might be within sight. The report of the Stevenson Committee, criticised in some quarters as putting forward an admirable but an unworkable scheme, is now hailed as likely to prove the long-expected saviour of the industry, the rise in rubber from 7d a lb to 1s being the best proof that the report receives serious consideration, not only from rubber-producing companies, but from the purchasers of the produce. As share prices improved in the market, business started slowly to expand by reason of a little selling on the part of those who, having bought shares all the way down, were content to let go a few of them in order to induce market flexibility, and, moreover, to ensure the sellers a profit on what they had bought at the bottom prices. The new buyers, glad enough to get the offer of shares, found that the prices again improved as public interest widened. By selling at small profits what they had bought previously, and by turning the money into other rubber shares which had not yet responded to the reviving conditions, they added their contribution to the growing fluidity of the market. By the end of the week, therefore, something like a real market had once more come into being. Lines of shares have been changing hands. Brokers found no difficulty in placing 50,000 of this, or 100,000 of the other, amongst clients who discovered a ready willingness to take shares which, a fortnight ago, they would have peremptorily refused at half the current prices. The supply of shares has been augmented, it may be permissible to add, by sales on behalf of ex-enemy holders, while amongst the buyers an unexpected development was the appearance of American houses on the look-out for shares which offered reasonable chances of appreciation if the price of rubber continued to rise. In various ways, therefore, the rubber share market has acquired a new and welcome degree of elasticity. As may be supposed, the tendency was to rush from one extreme to the other. Profound dejection has been succeeded by exuberant optimism. The rubber companies themselves are publishing reports which prove how valuable in the matter of reducing costs has been the bitter lesson which they have been forced to learn during the past few years. With rubber at 1s a lb, quite a number of rubber companies can make reasonable profits. The mere fact of their not working at a loss is held as something novel and exhilarating. The critical and the austere will feel that the present excitement is likely to be overdone, but a cheerful point in the situation is the fact that the policy of restriction is likely to turn losses into profits. For the time being, at any rate, there appears to be no necessity to sell rubber shares that have been bought at higher prices. Erratic fluctuations there are certain to be. No market could maintain for long the headlong pace set by the irresistible demand of the past few days. Breathing-space is bound to come, but behind the speculators who will rush to snatch profits when the market turns, there stands a more cautious crowd of people who want to get in when the boomlet prices cool.

The Reduction in Railway Fares.—The railway companies have decided, not too soon, to reduce passenger fares and rates on perishable traffic by passenger train. From January 1st next ordinary third class fares will be reduced to 1½d per mile and first class fares to 2½d per mile. Roughly speaking, this represents a reduction of one-seventh of present fares, and brings the charges down from 75 per cent. to 50 per cent. above the pre-war level. The reduction in charges for carrying perishable goods, including fish and meat, is similar. Judged by the course taken by wages and prices, the reduction is as large as could reasonably be expected for the present. Season and contract tickets, which have only been increased to 50 per cent. above the pre-war level, are not to be changed, nor are workmen's fares, which are on a low basis. Both these omissions cause disappointment, but in both cases the railways' case for retention of present rates is reasonable. Tourist and excursion fares are, generally speaking, to be reduced proportionately to ordinary fares, and the railways "will endeavour" in these cases to bring the reductions into force in time to apply to the Christmas holiday traffic. A delay of 2½ months in bringing the general fare reductions into play is rather a long

one. It is explained thus in the official announcement:—"In connection with the general reduction of fares now announced, opportunity is being taken to make a move in the direction of standardisation." Again: "The reductions now announced involve detailed examination of a vast number of existing passenger fares, an undertaking so big that there is no possibility of completing it before January next." Everyone knows that there are many glaring anomalies in railway fares that need correction; but the cynical passenger will not fail to remark that by taking time for this task the companies secure two and a-half more months of revenue on the present basis. Nevertheless, on the whole, the railway companies' decision in the matter of fares is just about on the lines that seems to be called for by a review of the economic circumstances. Results of conferences with industrial interests who are claiming further freight reductions will be awaited with interest. It is officially estimated that on the basis of present traffic the fare reductions now announced will cost the companies approximately £10,000,000 per annum, but will go a little way towards regaining some short distance traffic from the roads.

Czechoslovak Industrial Crisis.—The Czechoslovak Ministry of Social Welfare has just published figures relating to unemployment in Czechoslovakia. The real extent of the crisis may be seen from the following figures. In September 33,000 persons were in receipt of Government support (the August figure being 25,000) in addition to 43,750 persons, who were partially unemployed and supported by the industrial undertakings. It is interesting to note that prices are being slowly but surely reduced, and that during the ten months ending September last wholesale prices fell 44 per cent. The greatest reduction took place during September, when the general index number dropped by 12½ per cent. If 100 is taken for a basis (July, 1914), the index numbers for the different categories of goods were as follows:—Agricultural products in August, 1,019; in September, 872; textiles and leather goods, in August, 1,164, in September, 933; coal and metals, in August, 1,451, in September, 1,268; oil, paper, building material, timber and glass in August, 1,344, in September, 1,237. The general index number for all the categories was as follows:—1,875 in October, 1921, 1,438 in June, 1922, 1,233 in August, and 1,076 in September last. The drop in retail prices is also considerable. Figures published by the Statistical Office show a fall of 14 per cent. in the price of foodstuffs.

Argentine Railway Results.—The "big four" Argentine railway reports are now available. The two following tables show the dividend records of the companies since 1915-16, and a comparison of receipts in the past two years:—

Company.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
B.A. and Pacific, ord.	% 1	% nil	% nil	% 2	% 5	% nil	% nil
Do 5% 2nd non-cum. pref.	5	1½	5	5	5	nil	5
B.A. Great Southern	4½	4	2	3	7	4	4
B.A. Western	5	3	2	4	7	4	4
Central Argentine, ord.	4	1	2	2	6	4	4
Do deferred	nil	nil	nil	nil	6	nil	nil

	Gross Receipts.		Net Receipts.		Wrkg. Percentg.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.
Buenos Ayres & Pacific	£ 6,853,624	£ 7,465,112	£ 981,397	£ 2,146,604	85.68	77.24
Buenos Ayres Gt. Sthrn.	£ 7,732,527	£ 8,419,836	£ 1,368,254	£ 2,160,273	84.35	74.34
Buenos Ayres Western	£ 4,145,130	£ 4,098,030	£ 377,884	£ 871,967	90.88	78.73
Central Argentine	£ 9,746,664	£ 9,442,562	£ 1,966,865	£ 2,052,611	79.79	78.26

A feature of the second table is the substantial rise in net receipts, and the striking reduction in the ratio of working expenses to gross receipts. We hope to devote an article in a future issue to a detailed examination of the results.

Uruguayan Railways.—The reports of the Central Uruguay Railway Company of Monte Video and its three extension systems for the year ended June 30th last show a very substantial improvement on the previous year so far as receipts and expenditure are concerned. As will be seen from the following comparative table, which gives the results of the combined system, there was a small

increase in gross receipts, a large reduction in working expenses, and a rise in net profit of over 82 per cent. :—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1912-13	1,243,393	669,008	574,385	53.81
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87

Practically the whole of the reduction in expenses is attributable to coal, the average issue price of which was £3 14s 11d per ton, as compared with £6 19s 6d per ton in the previous year. The number of passengers carried increased by 5 per cent., but the passenger train mileage decreased by 9 per cent.; the tonnage of freight-paying traffic declined by 16 per cent., the total being the lowest handled since 1914-15. Revised tariffs, however, were in force during the whole of the year as against only six months of the preceding year, and the average receipts per ton were 26s 10.36d as against 21s 10.98d. The separate figures for the main line and the extensions for the past year are shown below :—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,323,521	923,181	400,340	69.75
Eastern Extension	283,975	134,888	149,087	47.50
Northern Extension	147,708	71,960	75,748	48.72
Western Extension	136,097	77,886	58,211	57.23

The ratio of expenses to receipts for the main line has dropped from 94.69 per cent., but the Eastern and Northern Extensions each show a slight increase in this figure, while the Western records a trifling decline. Unfortunately, the satisfactory results of the main line are nullified by the loss in transferring revenue funds to London, which amounts to no less than £182,100, as against £25,700 a year ago, and after payment of fixed charges and 5½ per cent. preference dividend and withdrawing £50,000 from reserve there remains a balance of £35,300, which is carried forward. The Eastern Extension pays 6 per cent. on its ordinary capital, as against 7½ per cent. a year ago and 9 per cent. two years ago, while the Northern Extension distributes 4½ per cent., against 5 and 8 per cent. one and two years ago respectively.

United Dairies.—The seventh annual report of the United Dairies, Limited, just issued shows the position of the company as at June 30, 1922, the accounts including dividends from investments in subsidiary undertakings to March 31, 1922. It will be recalled that for some years past this company has been mainly engaged in absorbing dairy businesses and companies, issuing its own shares in exchange. The following table shows the remarkable progress made in this direction by the controlling company during the past four years, and it will be observed that profits and dividends are on a sufficiently generous scale to encourage further expansion on the same lines :—

Year Ended June 30,	1919.	1920.	1921.	1922.
	£	£	£	£
Preference shares	1,344,508	1,555,284	1,652,564	1,881,674
Ordinary shares	1,086,173	1,726,052	1,798,677	2,027,125
Issued share capital	2,430,681	3,281,336	3,451,241	3,908,799
Net profit	233,445	279,668	356,186	452,692
Divd. on ordinary share	10%	12½%	12½%	12½%

The balance-sheet and accounts are in themselves clear though concise statements of affairs, as far as they go, but this is clearly a case where the general investing public is entitled to know something further about the

controlled companies. All we are offered in the way of information about the many undertakings absorbed is an item of £3,837,018, "Investments and loans in subsidiary and other companies including amount paid for benefit of contracts." Even the auditors are driven to observe in their report that "The investments and loans in subsidiary and other companies are taken at, or under, cost price," and proceed to say that subject to this observation the balance-sheet is properly drawn up. What the precise value of this observation may be we do not know. Surely it would be better to state definitely the cost value of investments, showing market values of any quoted securities, and in the case of unquoted holdings in subsidiaries to show the cost price, less any sums written off for depreciation. Total assets amount to £5,336,912, and as the reserve fund is recorded in the balance-sheet as but £33,159, we are led to conclude that the subsidiary companies have each their own reserve fund. The annual general meeting is to be held on October 27, and perhaps the chairman will then shed a little light on the points which we have raised.

The McGrigor Suspension.—The suspension of payment by Sir Charles R. McGrigor, Bart., and Co., army agents and bankers, is an isolated affair, and little importance has been attached thereto in financial circles. A receiving order in bankruptcy has been made against the two partners in the firm, and Mr Russell Kettle, of Messrs Deloitte, Plender, Griffiths and Co., has been appointed special manager to assist the receiver. Founded over 80 years ago by Sir Charles McGrigor, the second baronet, the undertaking has mainly catered for the distribution of War Office payments on account of certain army corps, and apparently up to the time of closing its doors, possessed the complete confidence of the War Office. It is said that the origin of the business was in the nature of a grant for services rendered by a distinguished member of the family. The general opinion appears to be that liabilities will be somewhere under a million, but it is perhaps of more than passing significance that other banks who are usually anxious to absorb or assist less fortunate concerns could not be induced to take over its affairs. This is one of the few remaining private banks which do not publish balance-sheets. Messrs Cox and Co., the most important army agents, have always published balance-sheets, while during the last two weeks Messrs Holt and Co. and Messrs Grindlay and Co., both well-known army agents and bankers, have issued accounts. One must to some extent sympathise with those officers who left their funds with Sir Charles R. McGrigor, Bart., and Co., in view of its close connection with the War Office, and there would certainly seem to be some ground for the surprise shown that the War Office should not have required some tangible evidence from time to time as to the financial position of the bank. In this connection it would be interesting to know what is the practice of the Admiralty with regard to its agents.

National Savings.—The sixth report of the National Savings Committee recently issued as a white paper covers a period of 15 months ended March 31st last. It records that in 1921 the number of savings certificates sold was 54,385,739, as compared with 57,787,499 in 1920, the cash receipts being £42,148,948, against £44,785,311. The amount repaid (excluding accrued interest) during 1921 was £30,959,083, as compared with £31,829,879 in 1920. In the first three months of the present year sales received a great stimulus from the announcement of the impending increase in the purchase price from 15s 6d to 16s. The result was that in the three months ended March 31st last the number of certificates sold was 80,608,964, of a cash value of £62,471,947. The amount repaid during these three months was £11,593,422. Since the inception of the scheme in February, 1916, up to March 31st last, 575,436,093 certificates were sold, the cash value being £445,962,971. Repayments over the whole period totalled £103,957,174, leaving the amount remaining invested at the end of March at £342,005,797. As is well known, the national savings movement is based on voluntary effort, directed and co-ordinated by a paid headquarters staff, and the figures in the report testify to

the national value of enthusiastic voluntary workers up and down the country. The total expenditure of the Committee in the 15 months covered by their recent report was £105,368, of which £83,077 was absorbed by salaries and wages. For the calendar year 1921 the total expenditure at £84,606 is over £10,000 less than in 1920. A change to more convenient premises has facilitated economy in the staff, which has been reduced from 299 at the end of December, 1920, to 232. The report quotes the following references to this organisation in the Report of the Geddes Committee:—"The staff position has been carefully watched in order that the number might always be kept in strict proportion to the volume of business.....We are of opinion that this system and organisation brings in real savings very largely contributed from sources hitherto untapped, and that it encourages thrift. In these circumstances we recommend the continuance of the organisation, provided that the headquarters' staff is constantly kept under review."

Japanese Trade and Finance.—Cabled advices from Tokyo relating to economic conditions in Japan during the first half of October record the maintenance of a favourable balance of trade owing to a general reduction in imports and an increase in foreign demand for raw silk. September exports were 149 million yen and imports 134 millions; whereas in September, 1921, imports were 129 million yen and exports only 95 millions. The Bank of Japan's index number for wholesale commodity prices in Tokyo in September was 255, which compares with 273 a year ago. In the cotton yarn market optimistic expectations recently entertained have not been fulfilled, for the home demand is poor and exports to China not so good. In these conditions supplies have become excessive and a fall in prices has resulted. Manufacturers have discussed measures to check the price fall, but no unanimous agreement has yet been reached. The first rice crop forecast was 63 million koku, an increase of 7 millions on last year's actual crop. The publication of this forecast, coupled with the continuance of fine weather, has caused farmers to clear out their stocks of old rice, and the price has continued to give way. Re-exports of foreign rice are increasing gradually. The stock markets have remained idle, with no more than slight movements in quotations. The money market has been steady owing to tax collecting and subscriptions to the new Government loan; day-to-day money being quoted at about 6 per cent., while the rate for two months' loans and the discount rate remained unchanged. On October 16th the note issue of the Bank of Japan was 1,104 million yen, as compared with 1,132 millions a year ago, discounts and advances at the same date being 175 million yen, against 97 millions.

Oversea Correspondence.

FRANCE.—SIR JOHN BRADBURY'S PROPOSALS—GERMANY'S PAYMENT—A FURTHER STATEMENT—PRICES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 18.

THE new proposals that have been put forward by Sir John Bradbury, the British delegate on the Reparation Commission, may be described in a nutshell as a plan to give Germany a moratorium for two, and possibly four years, to enable her to put her financial house in order, and also to provide her with a scheme to stabilise the mark and prevent it from falling to a more hopeless figure than that at which it now stands. It is scarcely necessary to say that the British delegates' latest proposals have met with a very chilly reception here, both from public opinion and from the financial experts. By the man in the street the new plan is regarded with deep suspicion, if only on account of its British origin. By the Press it is condemned as a hopeless attempt at squaring the circle, as a "monstrosity," and as being as "valueless as a poultice on a wooden leg." In political circles it is looked upon as a British attempt to postpone

indefinitely the meeting of the Brussels conference, on which French hopes are based for a comprehensive consideration of the joint problems of reparations and the inter-allied debts; and surprise is felt that, although Germany has made no application for a further moratorium, the British delegate should have suddenly put forward this new plan for her benefit at a moment when France is preparing through M. Barthou to make a stronger effort than ever to compel her debtor to fulfil her obligations. The new plan is to be opposed during the next few days by another of purely French origin, which may possibly be made public by the time these lines appear in print.

A note that has been sent out by the Reparation Commission, in reference to the recently published Statement of Payments made by Germany on account of her reparation obligations (published by the Stationery Office, and referred to in this column recently), deserves special attention from all who have access to the figures set forth therein. The statement in question, it will be remembered, was brought down to April 30, 1922, and is to be supplemented by further publications covering every six months after that date. The Reparation Commission, as the publishers of the statement, now announce that it should be made clear the accounts set forth "refer only to the charges upon Germany under Parts VIII. and IX. of the Treaty, for which the Reparation Commission is responsible, and are not a comprehensive statement of all the payments made by Germany under the Treaty." For instance, the figures published in the general statements of Germany's deliveries and payments between November 11, 1918, and April 30, 1922, do not include the value of paper marks requisitioned by the Armies of Occupation (including the American Army) down to the latter date, amounting to 571,000,000 gold marks. "In addition, there are other charges under the Treaty which do not appear in any of the tables of accounts in the publication in question, as, for instance, (1) the value of other requisitions and services required by the Armies of Occupation and paid directly by the German Government, which is officially stated by that Government as 14,000,000,000 paper marks, between the Armistice and March 31, 1922 (a sum which might be estimated as representing a gold value in the neighbourhood of 1,000,000,000 marks); (2) the payments to the Allied Clearing Offices on account of private debts down to April 30, 1922, 546,000,000 gold marks. Furthermore, the figures given by the Reparation Commission (as may be seen from the published statement) do not include any estimate of the value of the Government properties in the portion of Upper Silesia ceded to Poland, in respect of which a further credit will eventually have to be given to Poland."

The index figures of wholesale prices in France for September, as issued by the Statistique Générale de la France, show a slight fall in all categories of foodstuffs, while certain raw materials are found to have gone up in price. The general index figure, however, shows an appreciable fall, as compared with that for August. The details (based on 100 as the average figure for the years from 1901 to 1910) are as follow:—

	August (corrected)	September (provisional)
General index figure for 45 categories (whole sale)	382.9	380.7
Foodstuffs—		
General figure for 20 categories	378.5	367.9
Vegetable foodstuffs (8 categories)	350.6	334.8
Animal foodstuffs (8 categories)	417.4	408.2
Sugar, coffee, cocoa (4 categories)	356.5	353.4
Raw materials—		
General figure for 25 categories	386.6	391.0
Minerals and metals (7 categories)	329.9	334.4
Textiles (6 categories)	493.1	489.6
Various (12 categories)	366.3	374.8

Retail prices in Paris of 13 categories of foodstuffs appear to have risen by 2 per cent. during September, as compared with the previous month. The index figure for these commodities during September is returned as 3131, or 191 per cent. higher than the prices recorded during 1914, as compared with 3107 for August, which showed an increase of 189 per cent. on the 1914 prices. Taking France as a whole, and also the six regions into which the country may be divided, the comparative index figures for the second

and third quarters of the current year show some curious variations, as follows:—

1922.	North.	East.	South-East.	South.	West.	Alsace-Lorraine.	Whole of France.
2nd quarter.....	3378	2996	3130	3059	3015	3134	3163
3rd do	3264	3091	3101	3103	2995	3185	3135

Thus, while retail prices fell during the third quarter of 1922 in France as a whole and regionally in the North, South-East, and West of the country, there was an appreciable rise in the East and South and in Alsace-Lorraine.

Under the influence of the appreciation of foreign money there has been a tendency on the Bourse to an increase in the price of foreign securities and of real property, but the market generally has remained firm despite the inevitable effect of the numerous issues of fresh capital. French Rentes have been irregular, with gain or loss to be recorded to the amount of two or three centimes, but railways have continued to improve. Thus Nord has gone from 1,225 to 1,259, Est from 795 to 810, Orleans from 920 to 930, and P.L.M. from 940 to 950. Shipping has fluctuated, Chargeurs Français moving from 690 to 725, while Chargeurs Réunis have dropped back from 405 to 395. In electrical undertakings Thomson is typical in improving by 11 points at 797. Metallurgical shares have been in demand, Miceville moving from 870 to 858, Electro-Mechanique from 570 to 578, Sambre et Mouse from 2,575 to 3,051, and Saint-Nazaire from 635 to 645. Though Tintos have dropped from 1,655 to 1,620, Boléo moved the other way, rising from 505 to 535 and closing at 527, and Penarroya from 840 to 865. Petroleum shares have remained practically without change.

GERMANY.—GOVERNMENT POLICY—EXCHANGE DECREE—FINANCES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 17.

THE Federal Government, in agreement with national opinion, has often proclaimed, and always implies, that an unreasonable policy on the part of the Allied Governments is the main cause of the mark-currency depreciation, and of the misfortunes, real and imaginary, associated therewith. While much may be said in support of this assertion, it is not possible to acquit the Berlin Government and other public authorities of aggravating already bad conditions, and bringing unnecessary new evils by the potent instrument of suggestion. Recent policy may be described as neglect, panic, unreasoning self-sufficiency, and ill-timed, unthinking vigour. During the honeymoon of the Fulfilment Policy (*Erfüllungspolitik*), the Allies, even including M. Briand, lavished flattery on the Chancellor, ignoring that mere good intentions are a sterile virtue, and the Cabinet acquired the too happy temper of the flattered Kerensky Administration of mid-1917, which, in the words of a cynical Russian, was destroyed by the prayers for its preservation in American churches. The Wirth Cabinet, like the Kerensky Cabinet, proceeds, with breathing spaces of inactivity, from blunder to blunder, and, like the Kerensky Cabinet, it is so assured of its mission to save the German Republic that it resents the mildest personal criticism. While its mistaken recent measures are almost universally condemned, no man dares to imply that the mistakes are outside the limit of error of normally competent statesmanship. When, in regard to the unlucky Exchange Control decree, a reputable Berlin newspaper printed a perhaps mistaken, but in itself entirely reasonable, statement on Reichsbank policy, the Cabinet issued a hot-headed declaration that the supposedly false news had been circulated "by an interested party for entirely transparent reasons," and so without any grounds made the charge of corrupt influence. Since the Rathenau assassination the Cabinet has been alternately or simultaneously lax and drastic,

HARRISONS & CROSFIELD, Ltd.
1-4 GREAT TOWER STREET, LONDON, E.C.3.
With Branches and Associated Companies throughout the Far East and in North America, Australia and New Zealand.
The Company acts as Agents for manufacturers and others and invites correspondence with the view of developing foreign trade.

indolent and precipitate, complacent and panicky. As the three passive qualities in this list cannot inspire to action, policy's only leader has been panic. While the Chancellor put the whole responsibility for the last mark collapse upon the French Government, his subordinate States Secretary, Dr Hirsch, rightly declares that "the murder of Rathenau and the consequent 'domestic political occurrences' were responsible; but that these consequent political occurrences were wholly unnecessary is shown by the fact that the panic decree authorising the summary execution of persons who belonged to murder associations led this week to the sentence of the one survivor of three actual murderers to a mere fifteen years' penal servitude.

The subordinate authorities also show no discretion in the discouragement of panic. The Reichsbank president last week, according to an unrepudiated Berlin newspaper report, declared to an American correspondent that Germany "sees before her a winter without bread." This statement, spread over half a page of an American newspaper, might easily have provoked a new mark collapse, but hardly had it been made when the Federal Breadstuffs Board declared that the part purchases already made are sufficient for a full three months. The official *Labour Journal*, on the basis of an increase in unemployment from six or seven per thousand of organised workmen, declares that "the prospect for the coming winter months is extraordinarily serious," owing to "vanishing buying-power of the mark," and forgets that in December, 1920, the Ministry of Industry predicted (wrongly) serious industrial stagnation, owing to the temporary mark recovery. It is true, although not yet shown by statistics, that the demand for labour is slackening. But the chief of a big Lothringen metal concern, Privy Councillor Kloeckner, states that, while the shortage of working capital is troublesome, selling is very easy. "Foreign countries," says Herr Kloeckner, "are still willing to buy, the overseas demand is lively, England is always among the order-givers, and in general we have more work to do than we can do." Concerning the Frankfurt Fair, the *Frankfurter Zeitung*, summing up earlier prophecies of failure, says that "No one would offer goods and no one would buy even a few days before the beginning of the Fair; it seemed as if all these black vaticinations would be fulfilled. But they were not fulfilled." It would be very dangerous to assert that the mark currency collapse may not some day cause or accompany, a general business collapse; but in order to prove the association of the two collapses, the reality of the business collapse must be independently proven.

The Exchange Regulation Decree has been very badly received. Its headlong issue under Article 48 of the Constitution is a wrongful application of this article, which merely authorises legislation by decree, "in order to restore public security and order." Articles of this kind appear in many Constitutions, and their aim is to legalise exceptional measures against a physical threat to public security. The Wirth Cabinet uses the article for everything. The Exchange Decree is illegal, all the more so because the Constitution declares that Art. 48 may not be used in order to impose economical restrictions. Outside the Cabinet probably nobody believes in the efficacy of the measure. Similar measures have been and are in force in countries with worse exchanges than Germany's, and if these measures were efficacious, the exchanges of all Europe could be very easily restored. Dr Wirth's prohibition of home trading in foreign currencies cannot be enforced. The Bremen Cotton Exchange declares that it is impossible to import cotton, which must be paid for in dollars, if the importer cannot secure himself by getting dollars at home. The Government is considering the issue of gold Treasury bills, to be secured by the Reichsbank's gold. This measure, or the more reasonable one of Treasury bills on a buying power basis, ought

to have been tried long ago. The *Vorwaerts* criticises the Reichsbank for not buying up gold. Even for gold coins it pays only three-fifths of the gold exchange value, and it neglects to organise a department for purchase of uncoined gold and jewellery gold, of which, owing to the impoverishment of the middle classes, large quantities are being sold to dealers at much below value. The sales tax is to be raised from 2 to 2½ per cent. Postal charges are to be doubled—they ought to be trebled. A report to the Reichsrat states that the Budget paper mark cost of the Reparations payments under the March moratorium agreement has risen from 151,900,000,000 marks to about 1,500,000,000,000 marks. The Berlin Chamber of Commerce has protested against the excessive taxation of unreal (nominal paper-mark) profits, on the ground that thereby all working capital is eaten up. The debt of Berlin city has risen by half a milliard in the last three months, and is now 1 milliard higher than last year; but the real debt has, of course, declined. The municipality has raised the tram fare unit to 20 marks.

The Finance Ministry's report for October 10th shows revenue since April 1st (the beginning of the financial year) to have been 342,823,218,000 marks, of which 217,787,702,000 marks were the proceeds of floating debt operations, and 122,583,746,000 marks were taxation (emergency levy receipts of 1,615,945,000 marks and forced loan receipts of 2,451,770,000 marks not included). In six and one-third months the taxation receipts estimated for the whole twelve months have been considerably exceeded. Of expenditure, also 342 milliards, 35.5 milliards were for posts and railways. The floating debt of discounted Treasury bills in the first days of October increased by 38,824,620,000 marks, and reached 489,722,867,000 marks. Eight milliards of the new borrowings went on fulfilment of the Peace Treaty. The Reichsbank statement for October 7th shows a small decline in the credit pressure, Treasury bills dropping from 349,769 to 345,600 millions. But private discounts rose from 50,234 to 54,015 millions, and note circulation had another large increase from 316,869,799,000 marks to 344,171,631,000 marks. The "Kassenscheine" circulation, which usually changes little, has now risen to 14,032 millions, and the "Kassenscheine" booked by the bank among its assets have risen to 22,848 millions against 2,850 millions in the same week of last year.

The Bourse has been active, with a strong bull movement, which reached its highest point yesterday. In the week October 6th-13th the dividend-payer index rose from 97.880 to 113.132. Dividend-payers are now about 3½ times as high as at beginning of the year, nearly 10 times as high as at beginning of 1921, and 14 times as high as at beginning of 1920. Home loans also rose, the index being 1,396 against 1,345 a week earlier, and 902 at beginning of the year. Loan quotations to-day were:—War Loan, 77.50; Federal 4 per cent., 234; 3½ per cent., 138; 3 per cent., 580.

The Federal Court of Appeal has given a new and very remarkable judgment against the inviolability of the paper mark as compulsory currency. The dispute, which concerned compensation for an estate inventory, did not differ in principle from the recent *clausula rebus sic stantibus* decisions. The striking feature is that the Court of Appeal constituted itself an Arbitration Court for revision on basis of equity of all economical contracts. The judgment declares that, "The gold mark, which was the basis of the original valuation, and the paper mark, in which compensation would now be paid, are, in spite of their legal equality, not economically equal. The judges must, therefore, within the limits of this definition, make their own decisions in a creative spirit. . . . The determining factor is the principle that an equalisation of the economic interests of the parties ought to take place on the basis of justice and equity. . . . The Court does not ignore the fact that in the above it has laid down principles which are not purely legal. However, in cases in which the elements of fact and of law are so closely welded that they cannot be separated, the Court of Appeal has assumed the right not only to give its own decisions, but also to promulgate the determining principles of these decisions." This dignified language means that the Court intends to make its own laws as it goes along, because it considers the formal law to be unreasonable.

DENMARK.—LANDMANDSBANK RECONSTRUCTION—BANKING SITUATION—NOTE CIRCULATION—EXCHANGES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 10.

AN event in the Danish banking world last month had effects which have been traceable in very wide fields of the trade and industry of the country. This was the second reconstruction of the Landmandsbank, which became necessary in the middle of September. After a meeting in the Nationalbank a communiqué was published during the night between September 17th and 18th, commencing as follows:—"As it has proved that the support which the Nationalbank agreed to grant the Landmandsbank in July last has not created the necessary reassurance and confidence in the bank, thorough negotiations have been carried on during the last few days between the Government, the Nationalbank, the Eastasiatic Company, the Great Northern Telegraph Company, and other institutions, as well as the Inspector of Banks. As a result of these deliberations, it was decided to effect a further strengthening of the financial basis of the Landmandsbank, and also a thorough reconstruction of the management." To preclude any doubt as to the safety of the bank a capital of Kr.100,000,000 was immediately subscribed. As the Government took part in this subscription, the Rigsdag was convened for Tuesday. The matter was debated by both Houses in the course of a couple of days, and the outcome was an Act, the first paragraph of which prescribes:—"The Minister of Commerce shall be authorised to participate on behalf of the State, and jointly with the Nationalbank in Copenhagen, the Eastasiatic Company and the Great Northern Telegraph Company, in the reorganisation of Den Danske Landmandsbank, Hypothek og Vekselbank, by which a capital of Kr.100,000,000 is provided for same. The reorganisation shall take place by the provision of a preference capital of Kr.70,000,000, of which the Government shall take over Kr.40,000,000, and by the provision of a reserve fund of Kr.30,000,000, which shall be paid in only after the writing down of the old shares. The Minister of Finance shall be authorised—after consultation with the Minister of Commerce and with the sanction of a Parliamentary Committee of nine members—on behalf of the State, to guarantee the Nationalbank any advances, which the Nationalbank might consider it requisite to grant to the Landmandsbank owing to possible difficulties during the transition period."

The Act providing financial support of the Landmandsbank further contained rather far-reaching rules for the constitution of the management of the Bank. And at the same time an Act was passed authorising the Minister of Justice to appoint a commission of up to three members for the purpose of investigating the bank's affairs, especially the causes of the difficulties of the bank, and such affairs in connection therewith, as might be referred by the Minister of Justice to the commission for investigation. This commission has already been appointed and has commenced work.

In accordance with the Reorganisation Act, and the negotiations in connection with it, the new articles of the bank were drawn up. By these it is stipulated, for instance, that the ordinary share capital shall be written down from Kr.100,000,000 to Kr.10,000,000. The last-mentioned amount is considered a provisional representation of the ordinary shareholder's interest in the concern, also in consideration of the considerable reserve fund supplied by the National bank after the reconstruction, i.e., the amount of Kr.30,000,000 mentioned. On the asset side of the balance-sheet this amount is offset by a compensation account. By the articles, which have now been agreed upon by the extraordinary general meeting in the bank, it was further stipulated that—while the owners of the preference shares until further notice constitute the general meeting—the old shareholders may gradually regain their rights in the bank, successively as new income has accrued or in case income should accrue from the asset items written down at the reconstruction of the bank. The redemption of the preference capital takes place through a sinking fund account.

The above are the main points of the reconstruction now effected, by which are secured great capital resources for the bank, and which in every respect provides a sound basis for continued working. As far as the management is concerned, it should be mentioned that the managing director, Counsellor of State E. Glückstadt, resigned on September 17th. In future the board of directors will consist of seven members, the chairman being Mr Vagn Aagesen, Lawyer of the Supreme Court. Counsellor of State H. N. Andersen, the managing director of the Eastasiatic Company, will not be a member of the board as presumed in the first instance. After mature consideration he has found it incompatible with his position in the Eastasiatic Company to be a member of the board of directors of the Landmandsbank, as he is of the opinion that if he accepted the directorship the Eastasiatic Company would have to discontinue its business connection with the Landmandsbank.

Even if Mr Andersen will therefore not personally be a member of the board, provision has been made to ensure that the bank will benefit from his great experience and insight, as close co-operation between the owners of the preference shares and the board has been agreed upon. Up to the present two members of the new management have been appointed—Mr Ernst Meyer, chairman of the Merchants' Guild, and Mr Oluf Nielsen, who was previously a vice-manager of the bank.

In the course of a fortnight the note circulation of the Nationalbank was rather considerably increased, whereby the proportion of cover—between the bullion reserve and the note circulation—was decreased. Even this development, which otherwise was connected with the usual demands at the end of the month as far as the second week was concerned, has now been regulated. At the beginning of October our note circulation was Kr.467,000,000, and the percentage of cover was 49.9 per cent. During the following week, however, the note-circulation was reduced by Kr.20,000,000, and the bullion reserve thereafter amounted to 52.1 per cent. of the note circulation. According to the Act of August 30, 1919, a bullion reserve of at least 33⅓ per cent. of the note circulation must be present, the said reserve to consist of gold in coin and bars, and coined change. The Nationalbank has therefore still a very considerable note reserve. Lately the Foreign Exchange quotations, with a few exceptions, have moved in disfavour of Denmark. It should be pointed out, however, that the normal curve of the quotations points upwards during the autumn owing to the purchase of overseas crops at this season.

GREECE.—THE NEAR EAST CRISIS—FINANCIAL AND ECONOMIC CONSEQUENCES—FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

ATHENS, October 12.

THE military reverses in Anatolia, followed by the precipitate evacuation of Asia Minor, produced a great agitation throughout the country. The revolution of the army and the navy has been welcomed by the people as a movement devoid of party influences and designs, and as an effort to save the country from the grave political consequences of the unfortunate end of the Asia Minor campaign. The general feeling is that Greece has been the victim of the antagonisms of the Great Powers, especially of Great Britain and France. It is held to be due to the lack of agreement between the Allies that the war has lasted so long. Anyhow, it would never have terminated by such a catastrophe had Great Britain supported Greece as the two others helped Kemal. Whereas the Kemalists were supplied by the French and Italians (not to mention the Bolsheviks), Greece not only was arbitrarily forbidden to exercise the elementary right of searching boats carrying contraband of war, but was even refused all credit on the part of British firms, and was thus constrained to depend on her own means alone for carrying on a war which was vitally affecting British interests as well as her own. The consequences were quite natural. No victory has been won by the Turk. The Greek soldier, seeing himself for-

saken and even betrayed by certain of his former allies, and, moreover, exasperated by internal political quarrels, and knowing that he was fighting for a country which, in any case, and despite his great sacrifices, he would be called to abandon by a decision of the Powers already taken, simply refused to fight, after being almost ten years under the flag. Thus, Turkey has profited by the want of a common policy of her former enemies regarding the Near East, and has finally come out intact and morally strong from the Great War, for the prolongation of which, however, she is greatly responsible.

The economic effects of the evacuation of Asia Minor and the return to Turkey of Eastern Thrace cannot, of course, be underrated. Greece has been deprived of two of the richest and most promising provinces, for the development of which money has been spent on a large scale. The difficulties of the moment, however, overshadow the significance of that loss. The problem of sheltering and feeding the refugees, amounting to many hundreds of thousands, and the financial needs of the Treasury, are the most pressing questions of the day. The balance of the forced loan at the credit of the Government with the National Bank will help the Treasury to meet temporarily its obligations. But more drastic measures must be immediately taken to face the situation. A foreign loan will have to be raised soon after peace is concluded to give the Government the necessary time to bring before the Assembly a well-prepared programme of financial measures tending to restoration of equilibrium in State revenue and expenditure.

The reaction of the recent events on the prices of securities, and the rates of foreign exchanges, has been great. Shares and bonds, especially Government securities, have fallen heavily. Foreign exchanges are kept at low levels. There is a scarcity of money, due partly to seasonal crop requirements, and partly to a demand for drachmæ, in exchange for Turkish pounds, by the wave of refugees. The pound sterling, after having risen to Dr.240, was yesterday around Dr.170.

The Bankers' Consortium for handling the exchanges has been virtually in abeyance, as little or no exchange has been granted to applicants for some time past. A communiqué issued by the Ministry of Finance states that a law decree, signed yesterday, puts an end to the Consortium, and that from to-day dealings in foreign exchanges are left free, save for the exchange representing the value of exports of currants, tobacco, oil, and figs. This, it is understood, will be bought by the National Bank of Greece for account of the State at lower rates, and will be utilised for the service of the public debt, for other needs of the Government, and for the purchase of foodstuffs, some of which are still imported by the State. According to Press reports, the law decree provides further for the obligatory cession by the other banks to the National Bank of Greece of 15 per cent. on their daily purchases of foreign exchanges, at the free market rates, which will be utilised by the State for the same purposes as above. The issue of bank notes by the National Bank for the purchase of exchange is also provided for, according to the same reports. The injustice done to producers by the forced sale of their exchange at lower rates than those prevailing in the market is obvious, and cannot be made good by some trifling concessions to them promised by the Government. Besides being unjust, this measure is also ill-conceived, as it hits a most important wealth-producing class of the country. Moreover, with the profits of the mercantile marine reduced to quite small figures, and the remittances of Greek emigrants greatly lessened, the country depends to a large extent on the exportation of these articles to pay for her imports and other obligations; consequently, their production should be encouraged by all means, and this will certainly not be obtained by putting producers at a disadvantage. The Government could, of course, secure a priority on the exchange thus imported, but should pay for it at the current rates.

With the application of the new regulations, the exchanges jumped to-day, the pound sterling having risen from Dr.167 to Dr.184, and this despite the news of the signing of the armistice, which must have exercised a lowering force on the rates. The National Bank's buying rates for exchange on London are Dr. 167 for its own account and Dr.140 for account of the State.

NORWAY. — BANK FIGURES — PRICES — PUBLIC SECURITIES STRONG—CROPS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 3.

THE monthly reports of the private banks generally appear about a month after the lapse of the period for which the report is rendered. Thus, the report for August was published about the end of September. It comprises the figures of 101 private banks, and shows assets and liabilities balance at an amount of about 4,781 million kroner. This compares with 5,256 millions a year ago, and the difference shows partly the progress of deflation and partly the diminution of trade. Loans, as compared with July 31st, have gone down 69 millions, which place them at the same amount as at the beginning of 1919. But as prices have gone down to the average level ruling in 1916, it will be understood that the figure remains abnormal. Deposits have been reduced by less than the loans, and the excess of loans over deposits was 259 millions, as against 614 millions on August 31, 1921. The debt of foreign banks was, during August, increased by 3 millions, and amounted to 36 millions, which is not a very considerable sum.

The wholesale price index number, according to Farmand, when 1913 is taken at 100, exhibits the following average figures for 28 to 40 different commodities:—1897, 70 per cent.; 1907, 93.7 per cent.; 1917, 296.6 per cent.; 1920, 395 per cent.; end of August, 1922, 219.1 per cent. As will be seen, the downward movement has gone a long way.

During the week just ended the note circulation of the Bank of Norway was increased by 10 million kroner as compared with the previous week, and now amounts to about 383½ millions. The bank's lendings increased by 14 millions, and the reserve went down from 48,600,000 kroner to 38,700,000 kroner.

There is a continued, though slow, fall in the cost of living in Christiania. According to official statistics, the cost of living of a working man's family of four, which in 1913 was 1,550 kr., in June, 1922, was 3,848.29 kr., and at September 15, 1922, 3,779.07 kr.

It is 60 years to-day since the first Norwegian State Railway was opened. The first railway in this country, made by Robert Stephenson, had been opened eight years earlier; but that was a mixed State and private undertaking, whereas the railway opened on October 3, 1862, was a purely State undertaking; it had a length of 79 kilometres. To-day the State railways of Norway are over 3,000 kilometres, and there are, besides, 436 kilometres of private railways.

The Stock Exchange is extremely quiet. Public bonds are almost the sole objects of activity, and their quotations are rising. Bank shares and industrials are practically neglected, and so are shipping shares. The foreign exchanges do not show great fluctuations; at present there is an improving tendency in the Norwegian krone.

Weather conditions have been tolerably favourable for the harvesting of the different crops. Practically speaking, harvest work is now completed, and the yield of hay and cereals is good; potatoes show almost an unprecedented yield, but one hears of disease in this crop here and there.

Books and Publications.

"INVESTMENT ANALYSIS."

THIS monumental work of eight hundred pages* considers in one volume a large number of aspects relating to the embodiment of wealth in investments which hitherto have only been found scattered in many specialised books upon accountancy, law, finance, taxation, and government, and it commits to the printed page a large amount of technique and experience that is embodied in the practice of financial companies and banks. The preface contains

* "Fundamentals in the Analysis of Investment Securities." By Walter Edwards Lagerquist, Professor of Finance in North Western University. The Macmillan Company, New York, 1921.

an imposing list of financial houses and their experts, whose advice and suggestions have been taken advantage of in this work. The appendix of seventy pages, which comprises a fairly exhaustive and completely representative list of works bearing upon the subject and classified under main headings such as general investments, accounts for investments and stockbrokers' accounts, bonds, capitalisation, crises and panics, and all the various specialised securities for electricity, gas, &c., is, in itself, an informing and interesting document.

However skilled and practised the financier may be in judging investment values, there can be little question that this great collection of data and careful enunciation of principles would be of service to him. Although much of it is bound up in his everyday practice and is, to that extent, platitudinous and commonplace, it is quite necessary to have it cited in any book which is to pretend to completeness. Indeed, it is well to clear up what is fundamental and what is incidental, and it is equally true of England, as of America, that one of the most difficult things for the student, whose knowledge of any applied subject in business has been acquired in the haphazard way of daily work and without any specific direction, is to begin with fundamentals. It cannot be any great hindrance, and it often may be of great assistance, to develop a sound system of methodology or classification upon which to "anchor" daily practice. Perhaps the author goes too far when he says "There is no far-reaching grasp of investment problems to be acquired until experience has taught the investor the true appreciation of the correct application of principles." Some of our most striking examples of successful financial standing have had an uncanny judgment as to what should be done in these matters, without having the faintest notion why.

The subject matter in this text has been grouped into four main divisions, viz., (1) general fundamentals in the analysis of securities; (2) corporation securities, i.e., company securities; (3) securities dependent primarily upon land and real estate, and (4) civil loans. In discussing the general principles, the fundamental elements are separately considered under such headings as (1) safety of principal; (2) certainty of income; (3) rate of income; (4) legality (i.e., the legal rights and limitations of securities); (5) stability of market prices; (6) marketability; (7) appreciation, and (8) diversification.

On the question of marketability, Professor Lagerquist considers that a great deal has been sacrificed by American investors in their payments for ready marketability when it has served no good purpose, and that European investors are not so often guilty of purchasing something they do not need. The latter remember that they are purchasing to retain until maturity, and that the safety of their principal is equally good, the slower market being compensated for by a higher rate of return. "Though less frequently considered by the average layman, the question whether it is essential that income be sacrificed for convertibility should be given more consideration."

In discussing "appreciation" the author deals trenchantly with the confusion attaching to the term. That improvement in the value of a security which reflects an increase in the company's surplus through paying smaller dividends than it need is not true appreciation. Similarly, where a bond bought at a discount is paid for on maturity at par, the upward movement is not true appreciation—it is reflected in the yield. Neither will he admit as appreciation that alteration in values which the security may enjoy in general with other securities, owing to a common movement in prices due to changes in currency levels or the demand for capital.

Under the heading of "diversification" he rather discounts the value of the teaching of a well-known English school on the subject of geographical diversification; he considers that the advantages have been greatly over-emphasised, and that the investor loses as much in the impossibility of obtaining detailed information of a reliable character over a wide area, as he gains in an equation of physical risks. He makes the interesting statement that so far as the United States is concerned, only 20 to 25 per cent. of the stocks quoted on the more important Stock Exchanges have an active market, and there are many issues underwritten by bankers and never listed that have

a wider and freer market than the inactive listed stocks. Although New York bankers lending on collateral still give preference to the active listed securities, the bankers of the interior may be distinguished by their readiness to accept the high grade bonds that are not active.

In discussing the classification of securities Dr Lagerquist first proceeds by classification according to the character of the corporation issuing the security; then a classification according to the purpose for which the issue is made—i.e., physical embodiment, such as drainage, irrigation, paving, docks, &c.; thirdly, a classification according to the character of the lien and the degree of its security; and, fourthly, a classification according to the methods of payment and redemption. Each of these four methods emphasises aspects of importance.

In his chapters on the analysis of companies' reports he makes a rather surprising statement that the United States have still much to learn on the question of costs from English and French practice, and he takes the view, which must be hard reading for Britishers, that, in the case of holding companies, both the consolidated balance-sheet and the balance-sheets of the subsidiary properties should be forthcoming, and that no investor should ever give consideration to any other than a consolidated statement with supporting schedules.

The author's treatment of goodwill is scanty and disappointing considering its great importance. It conveys very little that is new or of much guidance in practical life, but in other respects the teaching upon analysis of accounts is interesting and important.

His information on negotiation and issuance is very American in its illustration, and the chapters upon railroad bonds, street railway bonds, and all the other specific kinds of securities, being illustrated almost entirely from American experience, with American terminology, would read very strangely to the British investor, though even here, to all financiers dealing with American investments it should be of great value.

The chapter on market influences deals with broad economic conditions and trade cycles, gold movements, and banking systems, without conveying anything like an original contribution to the subject. The chapter on industrial bonds has a closer parallel to British conditions.

Rather illuminating are his comments upon the prevailing virtue of securing soundness in balance-sheets by the existence of hidden reserves at the expense of the investor's knowledge of the facts. "Where an inside controlling interest has desired to conceal the amount of current earnings.....surcharging the maintenance account has often been resorted to. This practice of concealing earnings under the cloak of depreciation or maintenance may cause a sagging of the security price and enable the controlling interests to acquire securities at low prices, but to the loss of the deceived minority security holders."

Despite the American orientation of the chapters on civil obligations, valuation, taxation and validity, this work is of great value for purposes of reference to all engaged in the practical business of finance.

features of each company together with its present position. As noted in the preface, the price of rubber has improved, and with steadily increasing demand for the raw material, both for new uses and increasing motor traffic, there are indications that the industry is slowly shaking itself free from the grip of depression and moving once again in a forward direction. This volume certainly fulfils the needs of investors in the rubber industry.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 31.	November 2.

Business in the Stock Exchange markets has been somewhat broken by the prospect of a General Election this year, and the Premier's resignation introduced a somewhat unexpected development into the world of domestic politics. Though the war-clouds in the Near East have been chased away, other influences which tend to make for depression have come in the shape of further demoralisation in the French franc and by the General Election prospect. The latter has the effect of casting that uncertainty over the prospect which the bare possibility of a Labour Government invariably causes. The main feature of the past five days proved to be a *crescendo* volume of activity in the rubber share market, where prices have been bounding up in response to the advance in the raw produce, and where the rise went too rapidly, in accordance with Stock Exchange tradition.

The War Loan will be quoted ex dividend next Thursday morning. Consideration of this has induced further investment that lifted the price at one time to 101, though the top level was not held. A spurt in Funding Loan, and in some of the other Government stocks, brought in sellers, with the result that the market left off last night below the best. The issue of the balance of Tube railway debenture stock at 93 caused no surprise. Stock Exchange talk toys with the possibility of a Metropolitan Water Board issue in the near future.

French bonds are naturally flat, owing to the slump in the franc, but recovered yesterday. Germans have been dull, attracting little attention. Improvement in financial conditions is mentioned as the reason for advance in some of the Finland bonds. There is nothing doing in Russians, and Peruvian Corporation stocks came in for profit-taking on the part of those who deem it wise to

shorten sail in the speculative markets. Brazilians moved irregularly. Argentines and Chileans are mostly steady.

South-Western deferred, and some of the other Southern passenger stocks, stood out with strength in a Home Railway market which otherwise, after showing subdued firmness, tended to give way for want of public support. In none of the Home Railway sections is there any fresh animation, and the conference of railway managers, to discuss the forthcoming revision of fares, served to check enterprise on the part of investors. Argentine railway stocks went a-booming, gains of several points being shown by the leading descriptions, in which the preference stocks joined, and, although a wave of selling dimmed the brilliance of the optimism in regard to the future, prices are substantially better on the week. United of Havana has also been strong, and Antofagasta, after a spurt, relapsed into quietude.

Rubber shares hold the board in the matter of sparkle and activity amongst industrials. The ranks of the market have been augmented by the accession of many jobbers from other parts of the House; and, for a few days, there was enough, and more, for everyone to do. The report of the Stevenson Committee, which probably had something to do with the rise in the price of the produce, is the switch that has turned on this unaccustomed brightness in prices and orders. The question on the lips of many thousands throughout the country is whether the strength is going to last, whether rubber will go better, and whether it is safe to buy shares on the top of the big rises that most of them have secured. Hesitation on these points led to a general reaction on Thursday.

The diversion of interest into rubber shares has proved a further cause of depression to the oil market, where people have been selling their shares in order to turn the proceeds into the latest candidate for popular favour. The wild excitement over British and Argentine meat shares subsided when the terms proposed by the Western Union Investment Corporation had been announced. Some of the other meat companies' shares have been taken in hand, though speculation scarcely needs a warning as to the riskiness of building great expectations in other shares upon the British and Argentine Meat foundation. Listers, in the textile market, stand out with noticeable strength, on revival of the rumours that the company is to be taken over, reports linking Listers with Courtaulds or Coats. Shipping stocks are firm, with Indo-China deferred harder, and fresh improvements occurred from day to day in the banking share list, though the insurance group remains languid. Babcock and Wilcox enjoyed a brisk rise, upon an increase in the interim dividend. United Alkali preference went up with a run, on the announcement that the full dividend is to be paid. Tobacco shares are more or less marking time. The rise in Dunlops reflected the satisfaction felt with the improvement in the price of rubber. In motor shares there is nothing much doing. The cable group is extremely good, all the Eastern issues showing advances, but Marconis were held back by the announcement of the new debenture issue, particulars of which were unfolded at the meeting yesterday. Armstrongs are better, in consequence of the company having secured an important new contract; Vickers remain quiescent. Electric lighting shares continue to progress upwards, and gas stocks remain hard, although the official warning from the Gas Light and Coke Company, in regard to over-optimism concerning the next two dividends from that undertaking, were duly observed. Daily Mail Trust debentures opened about 6 premium, and gave way a little, on sales by stags who regarded the amounts which they were allotted as too small to make worth while for them to take up. Trust companies' stocks show a string of rises.

After an outburst of exuberance on Cape support, the Kaffir market gave way to some extent, and the activity, recently noticeable, suffered by reason of the revival of attention paid to rubber shares. Rhodesians have been dullish; the result of the forthcoming elections, which will decide whether Southern Rhodesia agrees to join the Union of South Africa or not, is regarded as being in the nature of a toss-up. Russians have rallied. Diamonds were at one time good, though Paris checked the buoyancy with selling orders when the franc collapsed in the middle of the week. The greater strength shown by tin, the metal, brought about substantial rises in various of the Mid-Eastern tin producers, and had the effect, also, of improving prices of West African and Cornish tin shares. The Indian group moved narrowly, and copper shares have been somewhat neglected.

Lord Balfour will unveil the Stock Exchange War Memorial on Friday next. He is due to arrive at the House at 10.45 a.m. Near relatives of those Stock Exchange men who have fallen in the war will be invited to attend the ceremony, which will be concluded by the trumpeters of the H.A.C. with the Last Post and Reveille.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded....	..	513,881,637 ..	..	..
4½% Treasury Bonds (by Tender October 13, 1922), £1,155,000, at 99½% ..	..	1,144,172 ..	..	..

NATIONAL SERVICE CERTIFICATES.

NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED OCTOBER 14, 1922.

April 1 to Oct. 14, 1922, £24,618,000	£	£	£
To the Public—

London Electric Railway Company.—4½ per cent. redeemable second debenture stock, 1942-72. Further issue of £2,250,000 stock, being the balance of a total authorised issue of £3,250,000 stock; **City and South London Railway Company.**—4½ per cent. redeemable second debenture stock, 1942-72. Further issue of £1,250,000 stock, being the balance of a total authorised issue of £2,250,000 stock; **Central London Railway Company.**—4½ per cent. redeemable debenture stock, 1942-72. Issue of £458,000 stock. All the above stocks are guaranteed as to principal and interest by the Treasury under the provisions of the Trade Facilities Act, 1921. The price of issue is £93 per cent.—These issues are repayable at par on June 30, 1972, but the respective companies have the option to repay, after July 1, 1942, on giving three months' notice. They rank *pari passu* with similar stocks already issued, and the proceeds will be utilised in extensions and improvements in connection with the various systems. They are investments authorised by the Trustee Act of 1893. Assuming that these stocks were redeemed at the earliest date, the yield would compare very favourably with those obtainable from existing gilt-edged securities.

Calcutta Improvement Trust.—Issue of £350,000 6 per cent. debentures at £100 10s. per cent., repayable in 1952 at par. The prospectus states that "the loan is offered by the Board of Trustees for subscription with the sanction of the Government of India, and is secured upon the taxation, rents and other charges authorised to be levied by them within the Municipality of Calcutta." It ranks *pari passu* with other loans of the Board of Trustees as a first charge upon the properties vested in the trust. The proceeds of the loan will be utilised in the acquisition of land. Redemption will be made by means of a sinking fund extending over a period of 30 years, and will commence on June 1, 1923. Up to March 31, 1922, it is stated that the trustees had expended £3,537,733 on capital works, against which £333,333 only had been borrowed. For 1921-22 receipts amounted to £238,000, and as expenditure totalled out £76,000, including £22,000 on the above-mentioned borrowing, a surplus of £162,000 is recorded. Thus interest and sinking fund services are well covered. The issue is attractive in its class.

Burgon's Extensions and Investment, Limited.—Authorised capital £100,000, divided into 97,620 6½ per cent. cumulative participating preference shares of £1 each and 47,600 ordinary shares of 1s each. The prospectus states that "The preference shares are entitled to receive out of the divisible profits of the company a fixed cumulative preferential dividend at the rate of 6½ per cent. per annum. After payment of such dividend one-half of the surplus profits of the company will be either distributed by way of additional dividend on the preference shares, or carried to a special reserve fund, and the other half will be divided among the holders of the ordinary shares." It is difficult to understand from this if these are participating rights, or additional dividends payable at the option of directors. The

company was formed in 1914 by Burgons, Limited, multiple grocers, "primarily to acquire some of its premises," and mainly to carry on a "real property and general investment company." The position of the company is clearly set out in the prospectus, and while its operations in property may be excellent business, it would be of interest to know to what extent directors can utilise funds in investing in shares of other concerns. It is stated that there are no debentures, but it must not be overlooked that properties are mortgaged, and therefore the security for preference shareholders cannot be clearly defined.

Haslemere and District Gas Company.—Incorporated by special Act of Parliament, 1917. Authorised stock and share capital £38,435, of which £28,028 has been issued, including premium. This is an offer for sale by tender of 1,197 £5 6 per cent. redeemable preference shares. The minimum price of issue is £4 17s per share, and the issue will be redeemed at par on March 31, 1930. Loan capital for £12,812 has been authorised, of which £6,200 has been borrowed. Presumably these preference shares will rank with £4.015 existing preference shares, and immediately after the loan capital. The net revenue of the company for the year ended June 30, 1922, was £2,310; interest on loan capital absorbs £307, and as the dividend on all preference shares will require but £600, there is an ample margin of security. At the minimum price of issue the shares are not without merit, but regard must be paid to the narrow market for such a small issue.

The Chocolate Express Omnibus, Limited.—Authorised capital £15,000, divided into shares of £1 each. The company has been formed to take over one motor omnibus, to acquire five others, and to run them on the streets of London. The vendors are asking £6,000 for the business, which consists of one omnibus, and they show five weeks' traffic receipts averaging £81 per week. On this figure profits for six vehicles are estimated at £10,116 per annum, an estimate which time alone can prove to be correct. This is a speculative, though interesting, proposition, and while the courage of the inceptors may be admired in challenging a powerful rival transport combination, it does not follow as a matter of course that the directors of the small concern can profitably compete with the larger undertaking.

ACTIVE SECURITIES.

BANK FIGURES AND POLICY.

IN our Banking Number of May 20th last, we showed that the process of banking expansion, which was unhindered until the end of 1919, was checked in 1920, and was again retarded in 1921. The figures then given marked a rate of increase in deposits of only 1.4 per cent. in the previous calendar year, as compared with 5.7 per cent. in 1920, 18½ per cent. in 1919, and 16½ per cent. in 1918. In this Autumn Banking Number, which only covers the figures of those English banks which publish statements showing the position on June 30th, we are able to record for the first time since the war period an actual decrease in the figures of the bank balance-sheets at the end of a half-year. The following table shows year by year the process of expansion and the decrease arrived at during the year ending June 30th last:—

DEPOSITS.		Million £
June 30, 1915		+ 196.6
" 1916		+ 44.5
" 1917		+ 81.1
" 1918		+ 282.5
" 1919		+ 406.2
" 1920		+ 105.5
" 1921		+ 19.8
" 1922		- 30.2
		+1,106.0

This belated beginning of deflation in banking figures has been at last achieved during a time in which money rates, as regulated by that of the Bank of England, have been declining. Bank Rate was brought down from 7 to 6½ per cent. on April 28, 1921, and to 6 per cent. on the 23rd of the following June, and during the next twelve months came down to 3½ per cent., and it is under these conditions that the contraction of banking credits, with a corresponding decline in deposits, has been brought about. This point is of considerable importance, in view of the suggestions that have been put forward for the regulation of prices by means of raising and reducing rates of interest, and so, as is theoretically assumed, contracting and expanding the volume of banking credit. For example, Professor Cassel, in his book on "Money and Foreign Exchange after 1914," states that "if the banks allow more credit than they are . . . economically justified in giving, then the active purchasing power in the country is raised without a corresponding increase of purchasable commodities. The inevitable result, therefore, is a rise in prices. This conclusion brings us to a new rule for a true bank policy. The supply of credit must be so regulated that no rise in prices, and, naturally, no fall in prices either, takes place. In order to keep demands for credit within the limits of available means, the banks must apply interest rates fixed with that object in view, but, in their continual scrutinising of the demands for credits, must also be able to effect the necessary restrictions." The same writer observes "that the obviously far too low discount rates of the Bank of England during 1919 proved exceptionally effective, first by restraining the tendency of prices to fall, and then as a powerful factor in causing a rise in prices, is as indisputable a fact as it is instructive." If we have correctly understood the argument of this distinguished authority, he seems to hope to secure a much greater steadiness in wholesale prices by what he calls his "new rule for a true bank policy." By regulating the rate of interest, we are to affect the volume of banking credit and the course of prices. Everyone must admit that in normal times a considerable effect on the volume of banking money, and so on the general price level, might be secured by the adoption of such a policy; but, after all, a policy which is only effective in normal times is one which breaks down just when it is most needed to do its work, and recent experience shows that, during the abnormal times through which we have lately passed, the influence of official rates on credit contraction and

expansion is certainly very slow, if it can even be proved to have had any certain effect. As everyone remembers, Bank Rate was raised at the end of 1919, but the upward rush of prices continued until March, 1920, and was then followed by two years of decline, whereas the contraction of banking credit has only just begun. It may be true that the fall in prices which began in the spring of 1920 was produced by the psychological effect of the official raising of the price of money which had preceded it by some months. But even if this is so, it did not work through the contraction of banking credit as it ought to have done if the new scheme for regulating prices is to work as its authors desire. For banking credit continued to expand for a long time afterwards. On the other side of the problem the case for the new rule of banking policy seems to be even more weakly supported by the experience of recent events. During the year covered by the banking figures that we are now discussing, Bank Rate has come down from 6 to 3½, and fell to 3 per cent. last July, and yet there has been a substantial contraction in banking credits, and the rise in prices which ought to have appeared as the result of the lower level of money rates has been conspicuous by its absence. As was recorded in the *Economist* of October 7th, our Index Number total was 4189 for last September, the lowest touched since March, 1916, and little more than half its figure—8352—when Bank Rate was more than twice its present height. It thus appears that the policy of raising Bank Rate in order to influence prices may be effective—where it is a question of producing a fall—by its influence on the temper and expectations of borrowers, who restrict their demands because they are afraid of high rates that they may have to pay; though whole-hearted acceptance of this conclusion is made difficult by the fact that credit expansion continued long after the official screw had been turned. But even if those who govern our monetary policy can terrify industry, by high rates, into drawing in its horns, it evidently cannot induce it to put them out again, and to emerge from its shell ready for a fresh campaign of enterprise, merely by the offer of cheap money when other conditions are adverse. It seems to be the case, as might indeed have been expected from all that we know of the business man, that as long as industry can rely with confidence on a profitable market for any goods that it may turn out at continually rising prices, it can only be deterred from production by rates for money such as are nowadays hardly conceivable in the Western world. While, on the other hand, if trade conditions are such that markets are unresponsive even in the case of goods offered below cost of production, it is doubtful whether enterprise will be quickened with anything like the speed that the scheme of price regulation implies, even by the offer of credit facilities on terms which are abnormally cheap.

Returning to the question of the year's figures, it will be seen from the table given below, showing the Bank of England's position at different periods, that between June 29, 1921, and June 28, 1922, there had been a decline of 22 millions in the Government and Other securities held. During the same period the note circulation had declined by six millions, in spite of further small additions to the Bank of England notes held in the Currency Note Reserve, and since the Public deposits contained one million more, there was thus a net reduction of nearly 17 millions in the Other deposits. As usual, one must put in a caution against too implicit confidence in the validity of these figures as a basis for drawing inferences concerning the monetary position. In the first place, because the date of the Bank Return was in 1922 a day further than in 1921 from the end of the half-year, and the expansion that is then usual. And in the second, because the Other deposits contain many accounts besides those of the great Joint Stock banks.

(In Million £.)

When we come to the figures of the Joint Stock banks we find a decline of 11 millions in their holding of Cash in Hand and at Bank of England. As already recorded their deposits had fallen during the year by 30 millions, so that it will be seen that the proportion between their Cash and Deposits, which was 15.3 on June 30, 1921, has now declined to 15.0. This decline is not at all serious, but it may perhaps account for the "stickiness" of which the Discount Market has often lately complained in the attitude of the banks towards borrowers in Lombard Street. As our readers know, ingenious theories have been put forward to account for the alleged reduction of the Short-loan fund in

London. It has been suggested that this has been brought about by the policy of the Government in redeeming Treasury Bills held by banks out of money subscribed for Treasury Bonds by the banks' depositors. This process, however, would, if one thinks it out, have the effect of reducing the banks' deposits and, at the same time, their investments or discounts, and leaving their holding of cash unchanged, with its proportion to liabilities consequently the higher. In fact, as has been shown, the opposite has happened, and the reduction in the banks' lending power may be very simply accounted for by the slight decline in their cash holding, both absolutely and in proportion to deposits. Other interesting features in the aggregate balance-sheet are the very large increase in investments, which have risen by nearly 90 millions, and the still larger decrease in discounts, loans, and advances (including money lent in Lombard Street and Capel Court), this item having declined during the year by no less than 105½ millions. Presumably the greater part of this decline is connected with the reduction in volume of outstanding Treasury Bills, but, at the same time, the great advance in investments seems to indicate that the banks' Treasury Bills that have been paid off have been largely met not out of money provided by the banks' customers, but out of money found by the banks themselves.

BANK SHARES.

CHEAP money is never supposed to be popular with banks, or an inducement to investors to put their money into bank shares, and in this respect the developments of the past twelve months have not been of assistance to the bank share market. On the other hand, bank shares of a good kind have provided the puzzled investor, sometimes at his wits' end to find a good security with a decent yield, with almost exactly the article that he was looking out for. At the present time, with politics distrusted at home and abroad, and trade showing the first unmistakable signs of revival, the capitalist is not as anxious as he was in the early part of the year to buy shares or stock before the price was against him, but in the spring, when everyone was discussing the probability of war loan being converted in 1929, and conversion loan was being talked up to 80 and beyond, when good preference shares and debentures were being hunted for in every market, bank shares were naturally not overlooked. A sound investment combining a yield of over 5 per cent., with little or no risk, and a fair prospect of capital appreciation, they were of a quality much to the prevailing taste.

The result of this movement in investment values was to reduce very considerably the yield on good bank shares, but, on the other hand, the difficulties involved in the back-wash of the industrial slump, and the stagnation of cheap money, tended to keep the price from rising, though the market was working on the basis of a lower yield. In the table below we show some of the profits and dividends of the more important foreign and colonial banks whose balance-sheets are set out elsewhere in this issue:—

Name of Bank.	Year Ended.	Whole Year's Net Profits and Dividends.

† Free of income-tax. (t) Accounts for 15 months to March 31, 1921.

This table indicates clearly enough that many of the overseas banks have not been having an easy time. Heavy failures of trading firms in various parts of the world have landed considerable losses on the banks that financed them, and dividends have been more commonly reduced than raised, and in one case the bank made a big loss instead of a very large profit. In consequence the prices of foreign and colonial bank shares have not risen in the same proportion as those of many other high-class securities, the reduction in the yield necessary to adjust the market to the new monetary conditions being produced by the falling dividend without an increase in price. The table which follows shows the prices of a number of British, foreign and Colonial banks in 1914, 1921, and 1922, and also gives the yields obtainable at recent prices:—

Share.	Am't of Share.	Paid up.	Price July 30, 1914.	Price Sept. 30, 1921.	Price Sept. 29, 1922.	Yield.

† Free of tax. (b) £54 shares fully paid. (c) £10 with £4 paid. (k) £40 fully paid shares. (t) £20 shares fully paid.

Going through this table from the bottom to the top we note that the price of the African banks' shares has scarcely varied, but, in fact, the return per cent. has fallen very materially. The Bank of British West Africa, for example, at the same price, yields over one per cent. less than last year, and the National Bank of South Africa nearly 4 per cent. less, while the Standard Bank of South Africa returns about ½ per cent. less. It says much for the regard in which these banks are held that, in spite of the difficulties through which they have been passing, there has been no pressure to sell, and shareholders are content to wait until better prices return. Among the Eastern banks, share prices, as a whole, have risen, and the average yield has dropped by 1½ to 2 per cent., Chartered bank shares having risen three points, with a reduction in yield from about 7 to about 5½ per cent. Canadian bank shares have not altered much, and there is, perhaps, less difference in the yield here than elsewhere. Australian shares have been firm, and the yields are now, for the most part, below 6 per cent., where last year they varied from 6 to 7 per cent.

Among the great English banks there has been a fairly general appreciation, and the yield in almost every case is well below 6 per cent.; the following table gives a comparison of the yields in September, 1921, and September, 1922:—

	Yield per Cent.	1921.	1922.

THE AMERICAN BANKING POSITION.
(BY OUR NEW YORK CORRESPONDENT.)

ALTHOUGH improvement in the general banking situation in the United States has not been so marked or spectacular as in the preceding six months, nevertheless the position has steadily grown stronger. Several interesting and important changes are disclosed by a comparison of the latest consolidated statement of the twelve Federal Reserve banks with that of April 26th of this year. Total gold reserves of those institutions, for instance, increased during that period approximately \$94,000,000 to more than \$3,000,000,000, a new high record; the gain in gold reserves this year, however, has been much smaller than in 1921. Since January 1st the increase amounts to only \$214,300,000, as against an increase of \$669,800,000 in the corresponding period of last year. Total reserves have increased \$88,166,000 since last April, and now stand at \$3,213,000,000, in round numbers, while total resources, amounting to \$5,060,694,000, as of October 4th, are some \$200,600,000 larger. Bills purchased in the open market, aggregating \$235,458,000, show an increase of nearly \$153,000,000 over the April figures. In the six months prior to last April there was a heavy decrease in bills on hand; but rediscounts have been increasing lately, and the latest statement for the entire system reveals a total of \$669,654,000, or about \$87,000,000 larger than on April 26th. There has been only a moderate gain in earning assets. On the liability side perhaps the most noteworthy changes are in deposits and note circulation. Deposits now total \$1,877,697,000, representing an increase of \$44,400,000 approximately, as compared with the April statement, while Federal Reserve notes to the extent of \$2,274,651,000 are at present in circulation, an increase

We are getting, on the present scale of dividends, very near a 5 per cent. basis in this list.

As the very cautious type of investor is sometimes deterred from buying bank shares by the uncalled liability attaching to them, we append a list of a few shares on which there is either no uncalled liability, or only a comparatively small one:—

Bank.	Denomination.	Amount Paid Up.	Price, Sep. 30, 1921.	Price, Sep. 29, 1922.	Yield %
Anglo-South American ..	£ 10	£ 5	8½	9½	8 4 3
Australian B. of Commerce	1	1	1½	1½	5 15 0
B. of New Zealand	1	1	2½	2½	4 17 0
Barclays "A"	4	4	6½	7½	5 3 3
Do "B"	1	1	2½	2½	5 6 9
British Overseas, "A" ord.	5	5	5½	5½	5 9 0
Lloyds	5	1	2½	2½	5 14 0
London and Liverpool B. of Commerce	10	10	5	7	5 15 0
London County Westminster and Parr's	1	1	2½	2½	5 0 0
Lon. Joint City & Mid..	2½	2½	7½	8½	5 1 9
Munster and Leinster	5	2	5½	6½	6 3 3
National B. of S. Africa ..	10	10	10½	10½	3 17 0
Williams, Deacons "A" ..	5	1	1½	2½	5 11 6
Do "B"	1	1	1½	2½	5 2 0

In estimating the uncalled liability the investor must take into account not the nominal value, but the market value of the share, for the higher the share stands, the less serious is the proportionate liability.

Taking bank shares as a whole, we may still say that they offer an attractive field to the investor. Many banks are still dealing with problems arising out of the industrial slump and the fall in commodity values, but the position has been firmly handled, and as trade revives, and opportunities for employment of money increase, bank profits are likely to rise, and in these days a sound share yielding 5 per cent., and offering a good prospect of higher profits in the future, is not a security to be overlooked.

of more than \$117,000,000. The increase in the amount of such circulation is a comparatively recent development, and no doubt reflects, among other things, the larger pay rolls necessitated by the re-employment of men long idle on account of strikes, and the employment of additional labour in many lines of trade and industry that have shown a revival in the past month or two. An interesting and perhaps significant development recently is the fact that banks, in New York at least, are putting gold certificates into circulation. As is well known, such certificates, or "Yellow-backs" as they are commonly called here, are legal tender notes certifying that the equivalent in gold has been deposited with the United States Treasury, and is payable to the bearer of such notes on demand. For a long time past the paper currency in circulation has consisted almost entirely of silver certificates—that is, notes payable in silver upon demand; as a rule banks have not been handing out the gold certificates unless requested to do so. Now, however, "Yellow-backs" are becoming quite plentiful, and banks here are paying them out without special request from the payees. From this fact it is inferred in some quarters that the banks are endeavouring to put a portion of their enormous gold holdings into circulation. What their object may be is not entirely clear; various opinions are expressed on that point. One suggestion worth noting, perhaps, is that the banks feel that the retention of such large gold reserves and continued reports of them in their weekly statements might serve to encourage inflation, and they are trying, therefore, to reduce their holdings in the manner indicated. Obviously, if a substantial part of the gold now held by Federal

Reserve banks is put into circulation (by being deposited with the Federal Treasury against notes issued) their gold reserves would be reduced.

The improvement that has taken place in the past few months has embraced all of the twelve Federal Reserve districts, as is shown by their present reserve ratios and discount rates. On the other hand, there have been some interesting changes in the relative position or strength of different Federal Reserve banks, as shown by their reserve ratios. In April these, except at New York, ranged from 58 per cent. to 78.8 per cent., whereas the present range, including all the twelve banks, is from 64.4 per cent. to 86.3 per cent. The strengthening of reserves has been followed by a general reduction in discount rates by all Federal Reserve institutions. Last spring a 5 per cent. discount rate prevailed at Minneapolis, St. Louis, Kansas City, and Dallas, and 4½ per cent. at the eight other centres. The present rate, which has been in force for some time at New York, Boston, and San Francisco, is 4 per cent., while all other Federal Reserve banks have a 4½ per cent. discount rate. There appears to be little, if any, likelihood of lower rates in any central reserve districts during the remainder of this year at least.

All of the Federal reserve banks report a remarkable improvement in recent months in the position of the individual member banks in their respective districts; there has been further and general liquidation of frozen credits, a strengthening of other credits outstanding, and a marked decrease in the number and amount of over-extensions.

Commercial paper discounts, which during the summer ruled at 4½ per cent., have lately shown a firmer tendency; prime names now discount at 4½ per cent., and less desirable paper at 4¾ per cent. The business paper market has lately shown increasing activity, reflecting the revival of trade and industry. Time money likewise is more active, especially for the longer periods, and within the past week or two rates have stiffened somewhat; 30 to 60-day funds now command 4½ per cent., while loans for three to six months are being negotiated at 4¾ per cent., with the borrowing demand confined principally to the longer maturities. Fixed-date funds are being offered more freely than for some time past, but demand for accommodation is also increasing. The new acceptance

rates recently established are more in line with the rates for call and time money, and with Treasury certificates of indebtedness, and it is expected that hereafter a larger part of the money which has been attracted to Treasury certificates and short-term money markets will find lodgment in prime bankers' bills.

A particularly noteworthy development is the action of banks in shifting funds from investments to loans. During the past year, especially during the business depression, the tendency was in the opposite direction. According to reliable estimates, banks throughout the country absorbed in the past year or so at least \$1,500,000,000 of securities, on account of the poor demand for loans. With funds rapidly piling up, they found it necessary to invest in securities, or else allow such accumulations to remain idle. Most of their investments are in Government bonds, eligible at Federal reserve banks as a basis of discounts and currency issues, and are liquid assets. With the demand for funds in the regular course of trade, and industry increasing, banks are now showing a disposition to turn their funds from investment securities to commercial loans. In fact, there has been a decided increase in the volume of such loans during the past few weeks, especially among interior banks.

Conditions generally are far better than they were a few months ago. The strikes have practically been ended. Abundant crops are assured, with the exception of cotton, which now promises a short yield. Enactment of the tariff has removed a big uncertainty. Domestic trade and industry generally are reviving. As to prospects for the future, one of our foremost bankers, in addressing the American Bankers' Convention here this week, said in substance that, after a year of easing money, we have begun to move forward again. The country, however, has not yet cause for unbounded confidence, he added, but has many obstacles to overcome, many important problems to solve. Regarding the effect of the new tariff, we will be fortunate indeed, he remarked, if we do not find that it protects many industries which do not require protection, while shutting out our farmers and manufacturers from numerous foreign markets that are ready to purchase our merchandise and commodities. Those views are widely entertained in financial and business circles.

GERMAN BANKING.

(BY OUR BERLIN CORRESPONDENT.)

No big banking deals have been announced since the fusion of the Deutsche Bank with the Deutsche Petroleum Company. Banking, like everything else, is dominated by the currency depreciation, which causes paradoxically at least as much difficulty to banks as to industrial and commercial concerns. The banks' complaint that the depreciation makes business ever less profitable, however, is hard to understand, as while administration expenses rise rapidly, the totals of transactions rise at least in accord; and as most banking charges are a percentage upon transaction totals, gross profits should be in general unchanged. While the merchant usually keeps to his old percentage of profit, and covers his great increase in expenditure out of the increase in his nominal turnover, the banks have constantly to raise their percentage rates. A fortnight ago the Berlin banks decided to treble their commissions on sales and purchases of fixed-interest and dividend-bearing securities, but the rates later announced shown only a little over 100 per cent. increase. Foreign bonds, for which commissions are trebled, are an exception. The banks are still heavily burdened with statistical and informatory work for the taxation authorities. The agitation for rescindment of the so-called "deposit-compulsion," under which divi-

dends and interest are paid only when the scrip is deposited in the banks, continues. This measure, it is held, tends to keep the quotation of State loans low; and it is further alleged that the suspension of banking secrecy is a cause of hoarding and of the shortness of cash. The repeal of these measures was lately considered, but it is not likely. The banks are now mostly making up accounts in units not smaller than 50 pfennigs; but within the last months the 50-pfennig and 1-mark notes have hardly been seen; and the present smallest circulating note, that for 2 marks, is only about a quarter of the price of a newspaper, and is tending to disappear.

The emission operations of the banks have been less active than they should be if measured by the currency depreciation, the cause being the tightness of money. This year up to the end of September, increases of capitalisation totalled 19,595 millions, against 9,428 millions in the same months of last year; issues by new foundations, 8,383 millions, against 2,726 millions, and bond issues, 9,009 millions, against 3,891 millions. As between the end of September, 1921, and the end of September, 1922, the wholesale price-level rose about thirtyfold, the real value of new capital issues is much smaller than last year. The banks have not yet resumed the issuing of monthly balance-sheets. The last balances, published in June, show the position at the close of last year as follows:—

	Capital and Reserves, Millions of Marks.		Percentage of Liabilities Thereto.		Liquid Assets, in Millions of Marks.		Percentage of Liquid to Total Assets.	
	1920.	1921.	1920.	1921.	1920.	1921.	1920.	1921.
Deutsche	850	950	2794	4088	19,292	31,041	88.8	79.9
Dresdner	370	370	2006	2006	9,188	14,239	78.6	73.2
Disconto	500	679	2422	3279	8,805	15,585	72.7	69.9
Commerz.	270	702	2087	1368	3,674	6,370	70.2	66.8
Darmstaedter. .	285	613	2274	2323	4,334	9,711	71.4	67.7
National	200	466	1450	1239	1,699	4,072	65.0	72.0
Handelsg.	300	200	1717	2348	1,644	3,058	66.2	65.1
Mitteldeutsche.	110	300	1497	828	1,223	1,865	78.8	75.0

The reserves of all the banks increased materially during last year, that of the Deutsche by 72 millions to 450 millions, the Disconto by 100 millions to 240 millions, the Dresdner by 280½ millions to 360½ millions, and the Darmstaedter by 149 millions to 196 millions. Treasury bills continue to be the chief investment. The exact figures are not forthcoming for all banks; but at the beginning of this year seven of them (Handels-gesellschaft excluded) had invested in Treasury bills 50.5 milliards out of 111.3 milliards deposits. The amount is certainly much larger now. The eight above banks' holdings of bills and non-interest bearing Treasury bills fell from 60 per cent. of deposits in the balance-sheet for the end of 1920 to 46 per cent. in the balance-sheet for 1921. Apparently, a smaller proportion of public money is going to finance State needs; and the proportion of commercial bills is on the increase, although the gold value, and even buying-power, of the money raised on these bills is still a mere trifle of what it was before the war. The Deutsche Bank's combined holdings of bills and Treasury bills increased from 1,018 millions in 1915 to 24,244 millions at the close of last year; the Disconto's from 629 millions to 8,878 millions, the Dresdner's from 353 millions to 8,479 millions, and the Darmstaedter's from 191 millions to 3,670 millions. By far the greatest part of the increase represents Floating Debt liabilities of the Federal Finance Ministry.

As with all public companies, the nominal increase of banking companies' profits and dividends is much more than obliterated by the fall in the currency value. The Deutsche's 24 per cent. dividend, on a share capital of 400 millions, amounted when declared last summer to

1,477,000 gold marks; in 1913 the Bank paid 12½ per cent. on 200 millions, or 25,000,000 gold marks. The gold dividend had therefore fallen to about 1-17th of the pre-war dividend; and the buying-power dividend probably to one-eighth.

(In Millions of Marks.)

	Gross Profits.	Net Profits.	Dividend.	
			1921.	1920.
Deutsche	1,173.0	278.2	24	18
Disconto	672.5	220.0	20	16
Dresdner	831.7	203.2	16	12½
Darmstaedter	577.4	89.0	14	10
Handelsgesellschaft	151.1	61.5	16	12½
National	265.0	77.5	14	10
Commerz und Privat	452.4	98.4	16	12
Mitteldeutsche Credit	150.0	33.8	12½	10

As compared with 1920, the nominal gross profits naturally greatly increased as a result of the increase in business. The clearings of the Deutsche Bank were 2,125 milliards in 1921, against 1,281 milliards in 1920; of the Disconto, 1,460, against 840 milliards; of the Dresdner, 1,664, against 1,090 millions. All four "D" banks recorded a more rapid increase of expenditure and of taxes than of gross profits. The percentage of the two items to gross profits in 1921 was: Deutsche, 72.6; Dresdner, 75.5; Disconto, 66.9; Darmstaedter, 77.5. Concerning the burden imposed by obligations to the State, the Disconto reported that one out of every ten officials in Berlin work exclusively on fulfilment of these obligations.

The position of the banks is considered to be sound; and it is not easy to see why it should be threatened by fluctuations in the value of the currency. The Treasury bills which play such a big rôle in the banks' investments are an ideally liquid security, because the Reichsbank is obliged to rediscount them at sight; and the worst result to be expected from a new money crisis would be new inflation, a process which proves to be by no means so dangerous as it appears to be when only the vast nominal totals which are involved are taken into account.

FOREIGN BANKS WITH LONDON OFFICES AND BRITISH BANKS TRADING WITH FOREIGN COUNTRIES.

UNDER this heading each year we review the progress of three very important groups of banks and financial institutions. Of these, the first for notice is a small number of purely English undertakings engaged in overseas banking and financial operations, the majority of which have been formed during recent years as a result of a more intensive foreign trade development policy. In this group, the British Trade Corporation, launched as a State-aided enterprise, stands out prominently, although, perhaps, failing to achieve the success expected. In striking contrast the British Italian Corporation has now completely freed itself from Govern-

ment support, and is making good headway. The British Overseas Bank continues its active career, which, after all, is not surprising, considering the powerful banking interests behind it, and the efficiency of its management. The Anglo-Polish Bank, formed in the spring of 1920 under its auspices, has shown highly successful results; the development of the latter concern is said to have been so rapid that the directors had to make special effort to keep level with the work required for its internal organisation.

The following table shows the comparative positions of this group over a period of two years:—

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts and Advances.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.
British Bank for Foreign Trade	£ 840,000	£ 240,000	£ 763,186	£ 541,082	£ 266,239	£ 100,909	£ 801,828	£ 437,082	£ 641,285	£ 244,812
British Italian Corporation....	1,233,418	1,233,418	1,539,324	968,704	1,022,758	760,394	453,481	149,470	959,569	764,480
British Overseas Bank.....	2,000,000	2,010,000	1,401,899	1,799,941	3,039,334	3,062,570	132,162	65,278	829,487	445,091
British Trade Corporation	2,000,000	2,000,000	2,478,861	1,460,064	954,441	571,996	1,599,765	1,008,245	1,977,445	1,640,202
Hambro's Bank.....	2,050,000	2,050,000	17,816,283	15,169,333	3,888,978	3,075,969	4,289,950	6,857,174	11,676,142	8,140,603
P. and O. Banking Corporation	2,500,000	3,684,160	2,662,391	6,316,980	1,525,776	2,918,796	644,957	868,863	2,316,414	7,202,922
	10,623,418	10,217,578	26,701,444	26,350,054	10,647,520	10,490,694	7,921,593	8,376,062	17,899,292	18,438,151

The P. and O. Banking Corporation continues to make good progress, as will be noticed by the substantial increase in deposits, and Lord Inchcape's speech at the second annual meeting provided some interesting sidelights on this institution's activities. Its interest in the Allahabad Bank has proved a profitable and useful extension, and the future of the Corporation will be watched with considerable interest. Sir Everard

Hambro, presiding at the annual meeting of Hambro's Bank, mentioned that the balance-sheet reflected the period of trade slackness through which the world is passing. "This," he said, "is shown by the decrease in acceptances and holding of bills and the increase in Government securities. Of these securities 60 per cent. are short-dated, which we feel justified in regarding as cash."

The second group which comes up for consideration is that of foreign banks having branches in London. Of these the most numerous and influential are the Continental institutions, and in a third group we have those British undertakings formed in London with the expressed intention of giving financial aid in the generally defined areas, and using the resources of the London money market.

One of the chief difficulties in compiling comparative tables of banks trading internationally is that of finding some reasonable method for reducing balance-sheets in foreign currencies to sterling. In cases

where banks show their returns in foreign currencies without giving English equivalents, we have taken the figures at the par of exchange—a rough-and-ready method, it is true, and one which certainly reveals the need for some post-war par of exchange. Some banks have adopted rates of exchange more in keeping with changed conditions, and in accordance with the dates when fresh assets or liabilities have been taken into account. At present, however, there is a lack of common practice, which at times leads to considerable confusion.

In the following table we show those banks engaged mainly in developing European commerce:—

CONTINENTAL BANKS.

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts and Advances.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.

Italo-Belgian Bank	2,128,024	2,957,190	26,234,568	34,668,087	9,621,372	7,082,430	301,225	98,679	23,510,884	23,326,428
Société Générale de Crédit Industriel	2,428,475	2,471,550	16,982,858	21,069,155	1,968,002	1,501,592	2,162,389	2,654,571	15,643,767	19,994,121
Soc. Générale pour Favoriser, &c.	12,069,725	12,122,832	194,782,907	205,056,987	25,179,648	14,736,873	4,212,877	3,625,030	186,687,170	198,876,343
Swiss Bank Corporation	6,040,000	6,120,000	37,192,150	34,802,460	9,473,532	9,925,458	1,325,078	2,156,046	36,409,403	30,682,841

Owing to the uncertain exchange position, and the various currencies involved, we have omitted the figures of the Banco Nacional Ultramarino from our table. As this institution, however, covers such an important area we give a few items in escudos. Capital and reserves now amount to 50 millions, while deposits total Esc.412,669,592. Cash is given as Esc.34,493,483, and investments Esc.8,762,217. Inland bills discounted appear as Esc.68,654,704, and bills receivable Esc.86,618,253. Total assets are Esc.940,369,983, as against Esc.879,134,611 for 1920. In the report of this bank, in referring to its note circulation in East Africa, it is stated that a decrease of 50 per cent. is recorded in this quarter, and the report proceeds to explain that "the English notes are naturally preferred to ours, as they have a larger circulating area." It is, however, pointed out that "the insinuations made that our sterling notes do not possess the corresponding reserve, and that we could not exchange them," are not substantiated by facts. This is demonstrated in the report by giving actual reserves held of gold, silver, and notes of the Bank of England and other British banks.

The feverish activities recorded in these columns a year ago of numerous banking extensions and developments have now somewhat slackened, and most concerns are now engaged in consolidating their positions and perfecting organisations. The Société Générale pour Favoriser, &c., after recording a favourable year's progress in its report, announces that its subsidiary concern—La Société Générale de Banque pour l'Etranger et les Colonies—is creating a useful sphere for future activities, especially in Syria, while the Comptoir National d'Escompte de Paris, probably the unique among banks for its world-wide activities, surveys its situation at December 31, 1921, with satisfaction. The Crédit Lyonnais, probably the most important French bank with an international reputation, continues its prosperous course, while the Société Générale de Crédit, &c. maintains its traditional prestige as an industrial domestic banking institution. Belgian overseas banking, though affected by political and economic conditions, made considerable strides, and it will be noticed that deposits of both the Banque Belge pour l'Etranger, which is the subsidiary of the Société

Générale de Belgique and the Italo-Belgian Bank, show substantial increases. The Banca Commerciale Italiana, whilst reporting that business abroad was fraught with many more difficulties than in the previous year, and notwithstanding a set-back in Constantinople, states that conditions were favourable in London and New York. Some idea of the widespread interests of this bank may be gathered from its report, which gives a brief account of its associated companies. It states that the Banca della Svizzera Italiana shows a good profit, whilst the activities of the Banca Commerciale Italiana (France), with head office in Marseilles and branches along the French Riviera, expanded favourably. The Società Commerciale d'Oriente has not been able as yet to make a fresh start, nor will this be possible, it is stated, until conditions improve in the Near East. However, the Banque Française et Italienne pour l'Amérique du Sud is doing as well as ever, and on the same Continent the Banco Italiano, Lima, and the Banco Francés e Italiano de Colombia are giving satisfactory results. As regards affiliations in neighbouring countries, which suffer more particularly from depreciated currencies, the Banca Commerciale Italiana e Romana and the Banca Commerciale Italiana e Bulgara have already attained prominent positions. Its great rival concern, the Credito Italiano, records similar activities, and fully maintains its position, while the Banco di Roma has now firmly established itself as an overseas concern.

A drastic course was decided upon by the directors of the Bank of Roumania. The chairman stated that: "Until now we have continued to follow our established custom of converting the accounts from Roumania in the balance-sheet at the parity rate of 25 lei to the £ sterling. The difference between this rate of 25 lei to the £ and the current market rates was covered by the reserve accounts (including the contingency account). In view of the further heavy and continuous depreciation in exchange which has occurred since the last report was issued, the accounts from Bucharest are now converted into sterling in the balance-sheet before you at the rate current on December 31st last (550 to the £)." Certainly the directors are to be congratulated upon their decision, more especially as we learn that

reserves are "more than ample to cover any further exchange depreciation in the funds actually employed in Roumania."

The next table shows the position of Asiatic banks:—

ASIATIC BANKS.

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts, Loans, and Credits.	
	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.	1920-21.	1921-22.

	42,018,417	46,940,526	203,422,303	192,879,755	58,138,573	42,659,925	48,044,557	47,326,297	160,542,181	155,695,869

It is a striking testimony to the strength of the Eastern banks, and the skill with which their operations are conducted, that in spite of the many adverse influences to which we have referred, their figures all make so good a showing. The Hongkong and Shanghai Banking Corporation made a net profit of \$10,821,295, which compared with \$8,841,166 for 1920. The total dividend and bonus paid was, on the old shares, £8, and on the new shares, £3. The capital was increased in May, 1921, to \$20,000,000 by the issue of 40,000 shares of \$125 each at £70 per share. Of the premium thus realised \$630,281 (£84,037) was allocated to silver reserve, and £2,000,000 to the sterling reserve fund, the latter being thus brought up to £4,500,000. A further \$1,369,718 was transferred from profit and loss account to silver reserve, bringing it up to \$23,500,000 (£2,858,494); \$1,000,000 was written off bank premises, and \$3,331,778 carried forward. The problem of foreign currencies was referred to by

Viscount Goschen at the general meeting of the Imperial Ottoman Bank. He explained that in the bank's balance-sheet "assets and liabilities in foreign currencies have been converted into pounds sterling at the rate ruling on December 31, 1921. Francs have been converted at the rate of 52 to the pound sterling," and further that "that part of our assets which, in the ordinary course of events, we are obliged to keep in francs for the normal purposes of our establishment must necessarily be subject to fluctuations in the exchange of the franc in its relation to the pound sterling, since our balance-sheet is established in the latter currency. Principally as a result of the appreciation in the balance-sheet of the sterling value of the funds employed in francs, the balance of the difference on conversion, which figured in the last balance-sheet at £702,569, has been reduced to a figure considerably lower, which is covered by the £511,461 devoted to this purpose at our last general meeting."

Here is the position of South American banks:—

SOUTH AMERICAN BANKS.

In South America the position and outlook is reflected in the recent accounts and report of the big British undertaking, the Anglo-South American Bank, which, by efficient management and a process of amalgamation, has secured for itself a predominant position in South America. In its very useful comparative table of profits and balance-sheet items—a practice which it could be wished that other banks would copy—a decrease in deposits and profits are noticeable during

the past three years, but the wide field which the bank possesses for operations probably amply compensates for set-backs in the direction indicated. The Banco Espanol del Rio de la Plata, mainly linking up Spanish interests with South America, makes excellent progress, and its profits of £838,625 on a paid-up capital of £8,642,099 is an eloquent expression of its operations during its last financial year.

The following concerns are representative of American banking and trust companies with offices in London:—

UNITED STATES BANKING AND TRUST COMPANIES.
(\$5 = £1.)

Although these concerns are perhaps surprisingly few in number considering the trend of financial events, the lack of numbers is probably made up by the enter-

prise and initiative displayed by the few companies established on this side.

AFRICAN BANKS.

THE figures appended to this and to the three following articles trace the development of banking business in the Overseas Dominions, so far as is shown by the balance-sheets of the banks which have branches or head offices in London. The statistics are taken from the summary table which appears on another page. So far as South Africa is concerned, the outstanding recent event has been the coming into operation, on July 1st last, of the chief functions of the new South African Reserve Bank, formed under the terms of the Currency and Banking Act, 1920. From that date the commercial banks operating in the Union lost the privilege of issuing their own notes, and their issues are gradually being replaced by the notes of the Reserve Bank. The figures below do not, of course, show the effect of this, since they refer to periods ended June 30th, or earlier. There has been considerable criticism of certain provisions of the Act, but the chairman of the Standard Bank of South Africa, at the annual meeting held at the end of July, while admitting that the bank was sorry to lose its note issue, "both from a sentimental point of view, and also because it was a source of considerable profit," pointed out that "it is a matter of great congratulation that the retirement of such a very large amount of bank paper, and its replacement by the new Government notes, has been effected by us so very smoothly and without any trouble, and without having recourse to facilities from the Reserve Bank, or restricting facilities to customers in any degree. When you think that this bank's note issue was over £4,000,000, and that we have already taken over nearly £3,000,000 in Reserve Bank notes to exchange for our own issue, you will realise how large an operation this has been, and how easily a little mismanagement might have caused considerable friction in the financial world." The chairman of the National Bank of South Africa went more fully into the matter. With reference to the contention that the Act accentuates financial stringency at the time when elasticity and enterprise should be stimulated, in order to assist the country through a period of depression, he said:—"In the first place, we have had to deposit with the Reserve Bank 10 per cent. of our demand liabilities to the public, and 3 per cent. of our time liabilities, which include interest-bearing deposits. Expressed in figures, this means that we have at present lodged with the Reserve Bank, in respect of these specific liabilities to the public (which do not, of course, include banknotes), actual cash to the extent of close on two and a-half million pounds. Now, in order to substantiate the contention that this requirement of the Reserve Bank scheme makes for stringency, it would have to be established that we could utilise these two and a-half millions of money, or a substantial portion of it, in making advances to our clients. But, in point of fact, and as a matter of prudent banking, it would have been incumbent upon us, even without a Reserve Bank, to keep at least this proportion of our resources in absolutely liquid form, so as to be in a position to meet all claims that might reasonably be expected to arise. Nor are there as yet any opportunities in this

country of profitably employing such large sums, e.g., by means of short loans affording the necessary degree of liquidity and security. So that, from the point of view of our own financial elasticity, it really does not matter very much whether these balances are preserved in our own treasury or in the Reserve Bank; and, if we consider, on the other hand, that the concentration in the Reserve Bank of all balances of this nature derived from the commercial banks provides a basis for the creation of a considerable amount of fresh credit, of which the commercial banks may make use for their own profit and the country's benefit, then I think it must be acknowledged that, far from being regarded as an evil, this provision in the recent legislation should be welcomed by all who are interested in the country's financial development along sound and, at the same time, flexible lines."

On the question of notes, on the other hand, the chairman of the National Bank pointed out that, with the replacement of the bank's own notes for Reserve Bank notes, the bank has to put down pound for pound in respect of Reserve Bank notes required as "till money," whereas, up to now, "till money" has not even been subject to the 40 per cent. gold cover applicable to notes in circulation. He admitted, however, that there are compensations in the scheme.

"Since Reserve Bank notes can only be acquired by the commercial banks against an equivalent amount of gold, or of gold plus commercial paper, it follows that, in addition to securing a full backing for the Union's paper currency, an automatic check is applied upon the quantity of notes in circulation, which will henceforward be regulated by the amount of gold and commercial paper available in the country. This check must make for a greater degree of stability in our monetary system, and the advantage thus secured will benefit the commercial banks as well as the community in general."

As regards business conditions in the period to which the banking figures given below refer, South Africa felt the effects of the world trade depression later than the majority of countries, the full force not being experienced until 1921. The Standard Bank, however, although showing a drop in profits, was able to maintain its dividend. The National Bank, however, made a net loss of over £100,000, as a result of "specific losses of substantial amount"—notably in New York, which were characterised by the chairman in his speech as "losses attributable to lack of judgment, disregard of instructions, or neglect." The process of paying for the over-importation of goods continued a feature of the trade situation, and is reflected in the decline in deposits shown in the appended table. This includes the statistics of two banks operating in Egypt and the Bank of British West Africa. The decline in deposits is common to each of the banks. According to the chairman of the National Bank of Egypt, the decline in that bank's deposits was due to the final liquidation of the accounts of the Cotton Control Commission, to the favourable opportunities for investment which have presented themselves to customers, and to the gradual dispersal of funds accumulated during the war.

AUSTRALASIAN BANKS.

THE Australian exchange situation has been greatly eased by the improvement in the trade position. In 1920, it may be remembered, there was a very heavy growth in imports, the financing of which caused a considerable strain upon the ordinary machinery and upon the resources of the Australian banks in London, and ultimately restrictions were placed upon drawings on London. Increased exports of wool and agricultural produce in 1921 did something to relieve the pressure, but, as will be seen from the trade statistics given below, the balance of trade in the year ended June 30, 1921, was heavily against Australia:—

	(Million £'s.)		Excess of—	
	Imports.	Exports.	Imports.	Exports.
1914-15....	64.4	60.6	3.8	..
1915-16....	77.7	74.8	2.9	..
1916-17....	76.2	97.9	..	21.7
1917-18....	62.3	81.4	..	19.1
1918-19....	102.3	113.9	..	11.6
1919-20....	99.0	149.8	..	50.8
1920-21....	163.3	13.9	31.4	..
1921-22....	101.0	127.9	..	26.9

These figures include gold, and show that in the year ended June 30th last there was a change over in the balance between imports and exports of over £58½ millions. The *Australasian Insurance and Banking Record* points out that the comparison with 1920-21 is actually more in favour of the past fiscal year than is indicated by the figures, for in both periods there were shipments of wool on account of the British Government purchase, in addition to wheat in 1920-21, payments for which had been made at an earlier date. On the other hand, the exports representing fresh payments to be received by Australia do not closely reflect Australian production, since at June 30, 1921, a considerable proportion of the 1920-21 wool clip was still in Australia awaiting sale and shipment, while at June 30, 1922, only a small proportion of the 1921-22 wool clip was in a similar position. The balance of £27 millions in favour of Australia for 1921-22 has been materially supplemented by payments on account of the half-share in profits on resales of the wool purchased by the British Government. The amount available during 1921-22 from this source is represented by the Bawra distributions of £10,000,000 in respect of the priority certificates, leaving further amounts to be obtained in the future. The above two items make together nearly 37 millions in favour of Australia for the past 12 months. Provision has to be made for the annual amount required to pay interest and profits on British capital invested publicly and privately in Australia. This item, however, is fully balanced by the large fresh borrowings effected in London and elsewhere by the Commonwealth and the various States. Thus between the excess of exports over imports, the instalment of wool profits, and the Government borrowings on the one side, and interest to be remitted on the other, the net result has been to replenish Australian balances in London, which have recently been on a full scale, in contrast to the lean position which existed early in 1921.

The table below, which includes the figures of two New Zealand banks, shows an upward movement in deposits after the drop of the previous year, but this is more than accounted for by the figures of the English, Scottish, and Australian Bank, which relate to the year ended June 31, 1921, the report for the following year having not yet appeared. The deposits of this bank as at June 30, 1921, were £10½ millions higher than at the same date of 1920. This bank absorbed the London Bank of Australia in 1920 and the Commercial Bank of Tasmania in 1921. If the figures of this bank are excluded, there is a decrease of some £5 millions in deposits, which is a result of the improvement in the exchange situation, for early in 1921 deposits were swollen for a time by money awaiting the opportunity of remittance. Advances are lower as a result of repayments by traders whose overdrafts had been swollen by payments for the large stocks imported, and also to a reduction of War Loan advances. Investments have been almost maintained at last year's figure. Of the total of £8 millions of notes in circulation, over £6½ millions are those of the two New Zealand banks. The Australian bank-note circulation is in course of withdrawal, and since June, 1911, £3,508,600 has been withdrawn. The Australian note issue is now in the hands of issue department of the Commonwealth Bank of Australia, whose figures are not included in the appended table. The notes issued on June 26, 1922, amounted to £53,582,011, of which the banks (including the banking department of the Commonwealth Bank) held £30,279,015, leaving £23,302,996 in the hands of the public. The total issue, £53,582,011, shows a reduction of £4,646,059 as compared with 12 months previously.

The movements of the deposits and advances of the New Zealand banks can be ascribed to the same causes as those of the Australian banks, trading conditions in the former country having followed a very similar course. In his speech at the annual meeting of the Bank of New Zealand in June the chairman gave some interesting figures, showing that while the deposits of the Australian banks exceeded their advances by £182 millions, and the deposits of the South African banks exceeded advances by £16 millions, the advances of the New Zealand banks were £4½ millions in excess of the deposits, withdrawals of the latter having been greater than the reduction in advances. The speaker added: "Our advances in the Dominion are much higher than we care to see them, and are justified only by the extreme need of so many of our customers, and by our consciousness that in the great majority of cases it is only a matter of reasonable time for the position to right itself. As these advances are reduced, our London reserves will be built up, but they will be built up in investments yielding a much lower return than those we had to realise."

The table below shows a reduction in the number of banks by one, the Bank of Queensland (an amalgamation in 1917 of the Bank of North Queensland and the Royal Bank of Queensland) having been absorbed by the National Bank of Australasia.

CANADIAN BANKS.

THE very considerable contraction shown by various items in the last line of the subjoined table is due in part to the economic forces which were at work in Canada, as in other countries, but also specifically to the disappearance of the Merchants' Bank of Canada. This bank, whose affairs have been the subject of inquiry and litigation in Ottawa, was founded in 1851, and had a large business in Western Canada. In December of last year it had to seek refuge from disaster by amalgamation with the powerful Bank of Montreal, and the effect of the absorption will no doubt be traceable in the next accounts of the latter institution. This absorption presumably prevented ramifications of financial mishap that might otherwise have been expected, and when, at the end of March, it received the final approval of the Finance Department, Bank of Montreal stock rose to a point above the highest recorded in 1921.

Canadian bankers found the year 1921 as full of difficulty as did their fellow-bankers in other countries, owing to slackening trade and falling prices. At the meeting of the Bank of Montreal, Sir Vincent Meredith described the year as being one "of unremitting anxiety, entailing constant vigilance in order to avoid serious losses." With the exception of the one instance mentioned above, the leading Canadian banks appear to have succeeded in exercising the necessary degree of vigilance. Of the efforts to do so Sir Frederick William Taylor spoke at the Bank of Montreal meeting last January as follows:—"I think it may be asserted that in Canada banks generally have been fortunate when compared with those of other countries, and while doubtless all Canadian banks have lost money in loan accounts that have 'gone bad' during the past year, no disaster has developed. We do not blind our eyes to the fact that 1921 has been an exceptionally hard year for many of our customers, and, therefore, we have considered it prudent to take an even more conservative view than usual of our loan accounts in estimating what might be classed as doubtful." Mr H. B. Shaw, the general manager of the Union Bank of Canada, laid similar stress upon the difficulties of the deflation and depression that marked the year, which, indeed, provided most of the chairman and general managers with the principal theme for their annual addresses to shareholders. It may be claimed, however, that while the boom yet lasted the coming difficulties were foreseen and preparations made for meeting them. Once more the Canadian banking system has proved itself equal to a period of severe trial.

The dramatic change over from boom to depression

not only meant bad debts, but also contracted the demand for credit, and therefore reacted doubly upon Canadian bank profits. The following table compares net profits and dividends in 1920 and 1921 of the banks whose figures are aggregated in the table at the bottom of this page:—

	1920-21.		1921-22.	
	Profit.	Dividend.	Profit.	Dividend.
Bank of Montreal	£ 806,799	14	£ 789,959	14
Bank of Nova Scotia	465,484	16	422,347	16
Canadian Bank of Commerce	679,365	13	640,302	13
Colonial Bank	155,837	10	121,151	8
Dominion Bank	237,702	13	203,252	13
Royal Bank of Canada	850,730	14	807,567	14
Union Bank of Canada	320,768	12	268,478	10

The fall in prices and the breakdown of the boom of 1920 is illustrated in the following foreign trade comparison:—

	1920.	1921.	Reduction in 1921.
	Mln. \$	Mln. \$	Mln. \$
Imports	1,336	799	537
Exports	1,273	803	470

In considering how far these declines were due to falling prices, and how far to contracted volume of trade, it should be noted that the official Canadian index number of wholesale prices fell from 270.1 to 230.7 during 1921—a fall of over 14 per cent.; while the decline in the total external merchandise was over 38 per cent. A good crop—though it was not a bumper crop, it was larger than that of the previous year—greatly assisted the export figures in the later months of the year. But although the crop was satisfactory, the big fall in wheat prices hit the Western farmers very hard, and their inability in many cases to liquidate their obligations was a factor which caused bankers considerable difficulty and uneasiness.

When the story of Canadian banking in 1922 comes to be written, the general tone of the story should be brighter than is possible in making survey of 1921. At the moment of writing the news of the crop is satisfactory, and although the farmer does not yet find himself free from embarrassment, owing to the lowered prices—and in Saskatchewan a moratorium is even mooted—there is no reason to take desponding views. Our Ottawa correspondent has for some time past been steadily reporting signs of general business improvement, and a few months ago an official statement from the Department of Trade and Commerce summed up the outlook in the Dominion in optimistic terms.

We have on former occasions mentioned the increasing attention paid by Canadian banking to West India business. Interesting reference to this field was made by Mr E. L. Pease at the last meeting of the Royal Bank of Canada, who said the benefit of the recent commercial agreement with the West Indies was already being felt.

INDIAN BANKS.

IN reviewing the Indian exchange problem in the *Economist*, we have quite recently reviewed at considerable length the economic factors that have been at play in that country. We do not propose to re-traverse that ground here. But in approaching the consideration of the experience of Indian banks in 1921, it must always be remembered that difficult as were the consequences of the collapse of the boom in all countries, the difficulties were, perhaps, peculiarly acute in India. They were also aggravated by political disturbance. In facing the period of deflation and falling prices, Indian bankers were facing a very formidable period. Their difficulties did not end with 1921; but that year saw the full force of the emergency. In view of these facts, the results achieved by the Indian banks may be regarded as conspicuously successful from the shareholders' point of view. The following table compares profits, dividends, and reserve appropriation of the four banks whose aggregate figures are tabulated at the foot of this page:—

	1920.			1921.		
	Net Profit.	To Reserve.	Dividend Rate.	Net Profit.	To Reserve.	Dividend Rate.
Chartered	£ 676,771	£ 235,000	20 1/2 %	£ 780,069	£ 175,000	20 1/2 %
Eastern	121,363	40,504	8 %	144,171	54,000	9 %
Merchants	260,208	75,000	16 %	263,033	85,000	16 %
National	553,398	240,000	20 %	555,064	140,000	20 %

* Free of income-tax.

The Chartered Bank of India, Australia, and China placed £100,000 to reserve, making that fund £3,700,000; added £25,000 to officers' superannuation fund; wrote £50,000 off premises, and carried forward £215,169. The balance-sheet reveals a position of great liquidity, though some of the totals have declined as the result of Indian and other trade depression. The note circulation is down from £2,837,818 to £1,926,923, current accounts have also decreased by some £6,000,000, but fixed deposits have increased by about £20,000. Bills payable, acceptances, and loans were all smaller.

The figures of the other note-issuing bank, the Mercantile Bank of India, are based on an exchange of 1s 4d per rupee, and as exchange has not been varied by the bank throughout the year, it was unnecessary to make allowance for exchange in comparison with previous years, except in management expenses, which showed a shrinkage of about £20,000, owing to conversion of foreign payments at a lower rate. Some falling-off in figures is noticeable, owing to what the chairman termed the "thawing of frozen credits," that is, in loans receivable and advances, which show a diminution of £2,837,000. The ratio that liquid resources bore to current account and fixed deposit moneys is high, about 75 per cent., all of which bespeaks dull trade. This is also reflected in a rise in Government

and other securities, which have increased to £1,894,016.

The National Bank of India placed £100,000 to reserve, wrote £20,000 off premises, and added £20,000 to officers' pension fund. The National Bank of India has also reverted to the pre-war practice of converting rupee assets and liabilities at 1s 4d, and as the previous year's rate was 2s, comparisons are a little difficult. However, if the results are viewed from the same standpoint of exchange as 1920, there do not appear to be many alterations of note. The cash balance was £6,236,423, and this, the chairman remarked, can be easily augmented from securities, which total £5,000,000, most of them being short-dated. There was a reduction in bills of exchange, discounts, and loans, owing to the liquidation of outstandings, and dull trade. The experience of the Eastern Bank has been very similar to that of its larger confrères.

The Imperial Bank of India, in which was merged as from January 27, 1921, the Bank of Bengal, the Bank of Bombay, and the Bank of Madras, continues to make good progress. The report for the half-year ended June 30, 1922, shows net profits for the period of Rs. 63,52,241, as compared with Rs. 58,14,792 for June, 1921, and Rs. 62,27,800 for the half-year ended December 31, 1921. With the balance brought forward from December, 1921, the bank had a sum of Rs. 76,26,735.11.7 for disposal, and the governors paid the usual dividend of 16 per cent., free of tax, Rs. 44,98,300; transferred to reserve fund, Rs. 10,00,000, to pension funds Rs. 5,00,000, and carried forward Rs. 16,28,435.11.7.

What the accounts and balance-sheets for the current year will show it is difficult to prophesy. "I am not able," said the chairman at the annual meeting of the National Bank of India in April, "to describe our outlook for the current year as bright." Optimism is, therefore, to be guarded against, but since he spoke there has been some tendency towards improvement. The balance of trade has once more been swinging round to India's advantage, though it has not brought back an export surplus comparable with the pre-war normal. The huge glut of stocks of commodities has been to some extent liquidated, and consequently credits to some extent have been "unfrozen." Seeing that the banks managed to produce satisfactory results in 1921, shareholders need have no great apprehension about the accounts for 1922.

The large reduction in the main balance-sheet items in the composite table appended hereto is due partly to the causes which have caused such contraction in many countries, but is also partly due to the fact that one bank at least has converted its figures into sterling on this occasion, not at the statutory rate of 2s to the rupee, but at 1s 4d to the rupee.

BANK OF NOVA SCOTIA.
(Incorporated 1832.)

BALANCE-SHEET—December 31, 1921.

LIABILITIES.		ASSETS.	
Capital stock paid in	9,700,000	Current coin	11,528,450
Reserve fund	19,000,000	Domestic notes	20,934,292
Balance of profits, as per profit and loss account	65,329	Notes of other banks	2,748,212
Dividends declared and unpaid	390,530	Cheques on other banks	9,089,111
Notes of the bank in circulation	15,852,568	Balances due by banks and banking correspondents in the United Kingdom	1,086,935
Notes of the bank in circulation	\$35,297,384	Balances due by banks and banking correspondents elsewhere than in Canada and the United Kingdom	3,038,168
Deposits not bearing interest	141,242,408	Deposit in the central gold reserves	6,500,000
Deposits bearing interest, including interest accrued to date	176,539,792	Domestic and Provincial Government securities, not exceeding market value	22,914,222
Balances due to other banks in Canada	716,301	Canadian municipal securities and British, foreign, and Colonial public securities other than Canadian, not exceeding market value	10,676,092
Balances due to banks and banking correspondents in the United Kingdom	107,472	Railway and other bonds, debentures and stocks, not exceeding market value	4,131,566
Balances due to banks and banking correspondents elsewhere than in Canada and the United Kingdom	1,342,464	Demand loans in Canada secured by grain and other staple commodities	19,905,380
Bills payable	11,079,799	Call and demand loans elsewhere than in Canada	11,751,284
Acceptances under letters of credit	411,344	Call and demand loans in Canada secured by bonds, debentures, and stocks	7,502,163
		Deposit with the Minister of Finance for the purposes of the circulation fund	484,286
		Loans to Governments and municipalities	3,066,660
		Other current loans and discounts in Canada (less rebate of interest)	71,663,385
		Other current loans and discounts elsewhere than in Canada (less rebate of interest)	10,547,582
		Liabilities of customers under letters of credit, as per contra	411,344
		Overdue debts, estimated loss provided for	117,900
		Bank premises at not more than cost, less amounts written off	6,764,547
		Real estate other than bank premises	74,141
		Other assets not included in the foregoing	380,681
	225,306,399		225,306,399

JOINT-STOCK BANKS OF ENGLAND AND WALES.

BANK OF ENGLAND.

At the half-yearly Court of the Bank of England, held on September 21st, Mr H. A. Trotter, the Deputy-Governor, stated that the profits of the half-year ended August 31st, after making provision for all contingencies, had been £601,334, making the amount of the "rest" on that day £3,616,170, and that after providing for a dividend of 5½ per cent., less income-tax, the "rest" would be £3,015,858.

Outposts of
Canadian Trade.

WHILE over 100 of our Branch Banks abroad perform services for all requiring them, irrespective of nationality, it is natural that their interests in Canadian trade should be unusually deep. Each one is in effect an outpost of Canada and a reliable source of information both for business men who wish to develop their foreign business, and for the local firms who wish to get in touch with Canadian importers. Our Branches are able to furnish reports on markets and conditions, the names of importing and exporting houses, and credit information on any foreign firm. This type of Banking service has come to be so important that we have created a special department at Head Office to handle all enquiries. Our Foreign Trade Department is prepared to render any reasonable service.

When sending men to Canada, the West Indies, Cuba, Central and South America, English houses should not hesitate to ask our London Manager for letters of introduction to our local Managers.

THE ROYAL BANK
OF CANADA

UNITED KINGDOM Temperance and General PROVIDENT INSTITUTION

ESTABLISHED 1840.

A Mutual Office in which the whole of the Profits belong to the Members.

FUNDS EXCEED - - TEN MILLIONS.

By drastically giving effect to the low values obtaining at the end of 1920, and by keeping intact the reserves required by a stringent Valuation the Institution has been placed in an exceptionally strong position.

INCREASED INTERIM BONUSES.

In view of the substantial rise in security values, and as an indication of their confidence in the future prosperity of the Institution, the Directors have substantially increased the rates of Interim Bonuses formerly announced and have decided to allot these increased bonuses on the Compound System. Interim Bonuses on policies now becoming claims accordingly range from 32s to 34s per cent. per annum, calculated on the Sum Assured and existing Bonuses.

Head Office - - 196, STRAND, LONDON, W.C.2.

JOINT-STOCK BANKS OF IRELAND.

BANK OF IRELAND.

The net profits of the bank for the half-year to June 30, 1922, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amount to £208,515, to which must be added the sum of £43,626 brought forward from the last account, making a total of £252,141. Out of this amount the proprietors, at a general court held at the Bank of Ireland on July 21, 1922, declared for the half-year a dividend at the rate of 12 per cent. per annum, less income-tax, payable on August 1st, which absorbed £120,461. The governors and directors have now transferred to the rest £120,000, leaving a surplus of £71,679 to be carried forward.

BALANCE-SHEET—June 30, 1922.

LIABILITIES.	£	ASSETS.	£
Capital paid up	2,769,231	Cash at head office, branches, and Bank of England	4,455,680

HIBERNIAN BANK, LIMITED.

The report submitted to the meeting held on July 31st states that, after providing for rebate on bills, interest on deposits, and bad and doubtful debts and contingencies, the net profits for the half-year amount to £50,648, to which has to be added balance of undivided profits from last account, £12,809—£63,457. The directors have transferred to the reserve fund the sum of £29,530, and they recommend that the balance be applied as follows, viz.: in payment of a dividend for the half-year at the rate of 9 per cent. per annum (subject to deduction of income-tax), £22,500; to next account, £11,427—£63,457. A special profit of £60,470 has been realised on sale of investments. The amount has been added to the reserve fund, which now stands at £300,000.

BALANCE-SHEET—June 30, 1922.

Australian Mutual Provident Society

Estab. (A.M.P.) 1849.

SEVENTY-THIRD ANNUAL REPORT.

Remarkable Figures.—Ordinary Department.

NET NEW BUSINESS.—25,568 Policies Assuring £9,831,717, with Annual Premiums of £308,118.
DEATH CLAIMS.—£1,291,558, including Bonus Additions of £409,057. This is only 52 per cent. of the "Expected."
MATURITY CLAIMS.—£941,225, including Bonus Additions of £247,839.
ACCUMULATED FUNDS (including Industrial) have increased by £2,863,227 and amount to £46,711,178.
WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £13,660,000.
THE DIVISIBLE SURPLUS (after strengthening the Reserves by the application of £253,076) is £1,502,572, which represents a return of 42.4 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £2,562,000.
THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 2s 11d per cent. There is therefore an Interest Margin of over 2½ per cent.
THE EXPENSE RATE (excluding Taxes) was 12.7 of the Premium Income. This is only about two-thirds of the provision for expenses included in the Premiums.
THE TOTAL ASSURANCES issued in 73 years amount to £216,874,999, of which £116,316,710, or over 53.6 per cent., are still in force.

LONDON OFFICE: 73-76, KING WILLIAM STREET, E.C.4.
W. C. FISHER, Manager for the United Kingdom.

THE LARGEST BRITISH MUTUAL LIFE OFFICE.

The report states that the profit and loss account for the half-year ended June 30, 1922, including £27,604 brought forward from December 31st last, shows a balance of £168,235 available for distribution. The board declared an interim dividend for the past half-year at the rate of 12 per cent. per annum, or 12s per share (£10 paid), less income-tax, which absorbed £65,250, leaving a balance of £102,985 to be dealt with. Of this sum, the directors have transferred £75,000 to the income-tax and contingencies account. £27,985 has been carried forward to profit and loss new account.

The report to be submitted to the meeting, to be held on October 26th, states that the net profits for the year ended August 31st last, after making full provision for all bad and doubtful debts, rebate on bills discounted, and interest due on deposits, amount to £164,072, less bonus to bank's officers, £32,266—£131,806, which, with the balance brought from last year, £87,457, and a special profit on realisation of Government securities of £106,876, makes a total for disposal of £326,139. Dividends at the rate of 17½ per cent. on the "A" shares and 8½ per cent. on the "B" shares have been paid to the shareholders, amounting in all to £91,875, less income-tax, £25,685. £9,907 has been

applied in reduction of bank buildings account, £100,000 has been transferred to reserve, and £100,000 to contingency account, leaving balance of £50,043 undivided profits to be carried to next account.

PROVINCIAL BANK OF IRELAND, LIMITED.

The report for the half-year to June 30, 1922, states that, including £48,862 brought forward from last account, there remains a profit of £103,138. Out of this the directors declared a dividend for the half-year at the rate of 13½ per cent. per annum, less income-tax, paid on August 1st, £26,426. They have added to reserve fund, £15,000; written off bank premises account, £5,000; placed to contingency account, £15,000; and carried forward, £41,712—£103,138.

BALANCE-SHEET—June 30, 1922.

ROYAL BANK OF IRELAND, LIMITED.

The report submitted to the meeting held on September 28th states that the net profits for the year ended August 31, 1922, after making provision for all bad and doubtful debts, amounted to £54,011, which, with the amount brought forward from last year of £5,849, make together £59,860. From this an interim dividend at the rate of 8 per cent. per annum (less tax) for the first six months of the year has been distributed to the shareholders, £8,400, leaving a balance of £51,460, out of which the board have appropriated to reserve fund, officers' superannuation, and other contingencies £32,004, leaving available a balance of £19,456, which they recommend should be appropriated as follows:—A further dividend at the rate of 12 per cent. per annum (less tax) for the six months ended August 31st last, £13,500; the balance to be carried forward to the credit of next year's account of £5,956.

BALANCE-SHEET—August 31, 1922.

LATEST BALANCE-SHEETS OF FOREIGN BANKS HAVING LONDON OFFICES AND OF BRITISH BANKS TRADING ABROAD.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

The report to be presented to the meeting, to be held on October 24th, states that the trade depression which has affected South America and other countries covered by the bank's operations has had a detrimental influence upon the position of many commercial houses, and the board, having carefully considered the accounts in detail, recommend that the sum of £300,000 be set aside as a special allowance for certain debts which, in prevailing conditions, might not be considered as really recoverable. It is their considered opinion that this sum should prove ample to cover all contingencies. The net profit, after making provision for all charges, rebate, &c., amounts to £644,138, which, together with £310,914 brought forward, makes a total of £955,052, of which £183,409 was absorbed by the interim dividend paid on April 22nd last. There is now an available balance of £771,643, of which the directors recommend that £189,959 be applied to the payment of a final dividend of 6s per share, less income-tax, payable on the 30th inst., making a total distribution for the year of 12 per cent;

BANCO ESPANOL DEL RIO DE LA PLATA.

The report for the year ended June 30, 1922, states that the net profits realised amount to £838,625, which, after deduction of £284,901 distributed and allocated in January last, leaves a balance of £553,724, which the directors propose to apply as follows:—allowance for bad and doubtful debts, £121,366; allowance for furniture and fittings, £14,235; and of the balance 91 per cent. to the shareholders: 951,274 shares fully paid at December 31, 1921, at \$4.00 per share, 144 shares fully paid on March 31, 1922, at \$3.60 per share, 48,582 shares, 80 per cent. paid, at \$3.20 per share, £345,808; 2 per cent. to the directors and auditors, £7,600; 2½ per cent. to the staff pension and benevolent fund, £10,450; ¼ per cent. to contributions to charity, £950; to the reserve fund, £5,424; to undistributed profits account, £9,776—£515,609. The above distribution, added to the 3 per cent. paid in January last, will make a total distribution of 7 per cent. for the year. The balance will be carried forward.

BANK OF ROUMANIA, LIMITED.

The report presented to the meeting held on July 26th states that the profit, after making provision for bad and doubtful debts, income-tax, corporation tax, &c., and placing £2,000 to pension fund, amounts to £25,385, which amount has been transferred to the contingency account. Until now the board has continued to follow the established custom of converting the accounts from Roumania in the balance-sheet at the parity rate of 25 lei to the £ sterling, the difference between this rate of 25 lei per £ and the ruling rates being covered by the reserve accounts (including the contingency account). In view of the further heavy and continuous depreciation in exchange which has occurred since the last report was issued, the accounts from Bucarest are now converted into sterling at the rate current on December 31st last up to an amount sufficient to cover the contingency account at this rate of 550 lei per £ in the bank's funds account from the reserve account (old) the sum of £124,059, which amount is more than ample to cover any further Roumania. The accounts from Bucarest in lei show a large expansion for the past year, the reduction in the sterling total of the balance-sheet compared with recent years being due against 25 lei per £ previously.

WATCH NEW SOUTH WALES GROW!

AUSTRALIA'S AMBITION is to MANUFACTURE and export as a FINISHED ARTICLE as much as possible of her WONDERFUL PRIMARY PRODUCE; the Governments of the Commonwealth and of New South Wales are anxious to assist, and public opinion sustains the adoption of a policy by which this ambition may be achieved.

NEW SOUTH WALES PRODUCES THE RAW MATERIAL, and MEN OF FORESIGHT, BUSINESS ABILITY and CAPITAL are required to assist in BRINGING IT TO FRUITION.

Many POWERFUL INTERESTS have already BROKEN NEW GROUND. During 1920, £20,000,000 was subscribed to establish new industries. The field is still large and inviting.

TURN TO THE NEW WORLD FOR OPPORTUNITY!

AUDITORS' REPORT TO THE SHAREHOLDERS OF BAKER, DUNCOMBE & CO., Limited.

In accordance with the provisions of Section 113 Sub-section 2 of the Companies (Consolidation) Act, 1908, we report to the Shareholders as follows:—

1. We have audited the above Balance Sheet and have obtained all the information and explanations required.
2. We have examined the Securities, Bills and Cash in Hand, and verified those in the hands of various Banks.
3. We are of opinion that the Balance Sheet is properly drawn up and as shown by the True and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Company.

THIRD IMPRESSION WITH ADDITIONAL CHAPTER AND STATISTICS.

AN INTRODUCTION TO THE STUDY OF PRICES

with special reference to the History of the Nineteenth Century.

By **WALTER T. LAYTON, M.A.** 7s. 6d. net.*The Economic Journal*:—"The high qualities he possesses and exhibits will, we are sure, recommend his 'Introduction' to all who would make at once the easiest and the safest approach available to the fascinating but complicated 'study of prices.' That is, perhaps, the most crucial of present popular economic questions, and it must always occupy a prominent place in the scientific discussions of professional economists."*The Westminster Gazette*:—"Mr. Layton, who is one of the ablest of the younger Cambridge economists, has refrained deliberately from a long exposition of the theory of the relation between price levels and the quantity of circulating currency. He has adopted that historical method which appeals to the instinctive empiricism of the practical man. His tracing of the price fluctuations of the past ninety years in England, and his analysis of their causes and results are admirably lucid. And if the book secures the wide circulation which its merits deserve, it should do much to draw public attention to the vital importance of a neglected question."*The Economic Review*:—"His excellent and clear little book ought to be in the hands of every student of social conditions."*The Practical Engineer*:—"This book should be valuable to the student of monetary values and prices, especially of the nineteenth century."**MACMILLAN & CO., LTD., LONDON, W.C.2.**

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM NAVIGATION
COMPANY.

LORD INCHCAPE ON THE TRADE OUTLOOK.

SHIPPING POSITION—NECESSITY FOR LOWER COSTS.

"EGYPT" DISASTER—COMPANY'S FINE RECORD.

The eighty-second annual meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 18th instant, at the offices, 122 Leadenhall street, London, Lord Inchcape (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the meeting had been called a few weeks earlier than usual, as he had been commandeered by the Secretary of State and the Viceroy to be Chairman of an Indian Economy Committee, and he was leaving next day for Delhi. Incidentally, stockholders would get their dividend earlier. He felt he had acted rightly in obeying the summons of the Government to take up a duty which he hoped might lead to economy and an arrest of increased taxation in India.

THE " EGYPT " DISASTER

Referring to the loss of the company's steamship "Egypt" by collision during fog, his Lordship remarked that the board had lieutenants and experienced technical advisers to guide them, and the regulations laid down by the directors were, as the Court stated, very complete. The record of the P. and O. and Associated Companies spoke for itself. During the past year the ships of the combined companies had traversed over 16,000,000 miles and carried 2,500,000 passengers and crew. Nothing had been or would be wanting to ensure the carrying out of every possible precaution to protect the lives of those entrusted to them. He had travelled on a great many P. and O. steamers and ships of other lines, and could safely say that the organisation and discipline in the P. and O. were second to none, but, no matter what the regulations or instructions might be, the human element had always to be reckoned with. The "Egypt," expensively reconditioned after five years' Government service, was commanded by a man who had an unblemished record of 34 years' service in the P. and O.; she was well manned and well found, and a slight variation in speed of either of the vessels would have averted the disaster; but nothing was more dangerous at sea than fog which came down suddenly and in patches.

ADVERSE TRADE CONDITIONS.

Many of their voyages had shown an adverse result. Outward freights had been scarce; homeward rates of freight to a great extent unremunerative; operating expenses had continued far in excess of the pre-war level. The strike of ship repairers, ended by an acceptance of the masters' terms, had involved the company in serious difficulties, and ships had consequently had to go to sea with dirty hulls, or, in some cases, to be docked and overhauled at Continental ports, where money was spent in labour and material instead of in London.

The company had raised £3,500,000 by debenture issue on favourable terms for new construction. These debentures, chiefly taken up by the company's own stockholders, had considerably increased in value. The new debentures were redeemable not later than 1940, and the directors had set aside an initial sum of £60,000 towards the sinking fund; they had, besides, written off the discount and expense of issue, about £192,000. They had obtained authority under a supplementary charter for a further £3,500,000 of debentures, but had no immediate intention of making the issue. Although the insurance account had not gone so well as in the past year, they had increased the amount at credit by £94,242 7s 11d, bringing it to £3,094,242 7s 11d.

DIVIDENDS.

Recently, in reply to a question by Sir Eric Geddes, he (the Chairman) had said that shipping was doing badly. Sir Eric's caustic reply was, "Oh, I suppose you will be paying your dividend out of your losses." (Laughter.) It had not come to that; their associated companies had helped materially; their conservative policy had assured a handsome sum from their investments, and the directors felt justified in proposing dividends of 5 per cent. on the preference stock, less tax, and 12 per cent. on the deferred stock, tax free.

Although there were signs of a break in the clouds they had apparently a poor year or two ahead. Operating costs must come down to secure an equilibrium, or disaster must follow. Fortunately, the P. and O. and associated companies had provided for

bad years, and could carry on; but meantime they must try to get back to something more than making both ends meet. The Chancellor of the Exchequer was, he continued, manfully grappling to reduce public expenditure, and the country looked to him to bring down taxation. The community wanted to be permitted, by saving again, to build up the wealth of the country for reproductive enterprise.

Five large new vessels for the branch service were now all in commission, and, for their special service, were second to none. Last year this service was able to fill only 30 per cent. of its outward cargo space, and although things were now no better they hoped for an early revival in the Australian trade.

AUSTRALIAN TRIBUTE TO SHIPPING COMPANIES.

Of the enormous stock of Government wool in Australasia the last of the New Zealand wool had, under a contract made soon after the Armistice by their lines and others, been transported; the last of the Australian wool would not be shipped before the spring. He mentioned this because in the report of the Government Controlling Committee, just issued, the following passage occurred:—

"As shipping companies generally have the reputation of enforcing the highest rates, the present is an opportune occasion to state that the treatment received by the British Australian Wool Realisation Association, Limited, from the contractors has been most considerate in respect of freight rates, and particularly in respect of the extension of the period for the shipment of wool stored in Australia."

He would like in return to say that in all the negotiations there had been that policy of give-and-take essential to the conduct of large operations.

REDUCTION OF WAGES.

Dockers' wages had been brought down to 11s a day, with a further agreed reduction of 1s as from June next. It had been agreed that where necessary piece-rates should be reviewed by the special committee, and it was hoped that consequently peace in dockland all over the country was assured for some time to come. Under the National Maritime Board reductions in sea pay had been agreed—£2 a month for seamen, firemen, and stewards, and more in the higher-paid grades. Distasteful as it was, he feared there must soon be further considerable reductions if the ships were to be kept running. The directors were greatly indebted to their colleague Mr Allen for the work he had done as Chairman of the Employers' Committee in these negotiations and for the patience he had exercised in bringing about these amicable arrangements.

With regard to the accounts, it would be observed that the items on the assets side were now given in more detail, but it was not in the stockholders' interest to disclose, for the benefit of competitors, the whole of the working of the company.

CHANGES ON THE BOARD.

He regretted that Mr Ernest Cunard had had to retire from the board owing to ill-health. Lord Chalmers had also retired, and the directors had co-opted Mr G. F. Hotblack, Mr F. C. Allen, and Sir John Denison-Pender, all business men of large experience, who would be invaluable on the board, and whose appointment he hoped the stockholders would confirm.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Walter R. Lawrence, Bart., seconded the resolution.

In reply to some points regarding passenger arrangements, the Chairman thanked Mr Hastie, the speaker, adding that suggestions from passengers were always welcomed by the board. Recently some improvement had been made regarding special trains from Plymouth for the service of homeward passengers disembarking there.

VALUE OF THE FLEET.

Dealing with questions on the accounts raised by Mr Grinnell-Milne, his Lordship remarked that the sum shown in the accounts as the value of the fleet did not include any steamers owned by the associated companies; it did include the cost—some £900,000 apiece—of the five new steamers built during the war for the branch

line and the cost of the "Moldavia," about £1,200,000, and payments on account of their new 16,000- and 20,000-ton steamers. They hoped soon to reduce the book value of their new ships—he would not say how. As he told them last year, of the total £12,000,000 cash and securities no less than £7,500,000 were represented by Government securities which had cost £6,893,784. Their investments were all very much under market value, but it would not be in the interests of the shareholders to disclose the figures. The credit balance was arrived at by the profit they had earned on running their ships and dividends on investments. As to the effect on the insurance fund of the losses of the "Egypt" and "Wiltshire," P. and O. steamers were not included in the fund—they never had been—but the loss of the "Wiltshire" was charged to that account. Cash in hand varied from day to day, and it was now in the neighbourhood of a quarter of a million. The average valuation of the fleet was considerably under the figure of £20 a ton mentioned by Mr Milne, even taking the new ships into consideration.

The resolution was carried unanimously, and the dividends recommended were declared.

The appointment of the new directors was confirmed, and the retiring director was re-elected, as were also the auditors. A further resolution was passed consenting to the acceptance of the tenth supplemental charter sanctioned by His Majesty in Council.

Sir Fortescue Flannery, in moving a vote of thanks to the chairman and the board, said that the results attained in a difficult year must be a source of satisfaction to the shareholders.

The vote was unanimously accorded, and, the Chairman having briefly responded, the proceedings terminated.

COLTNESS IRON COMPANY, LIMITED. RESULTS OF A DIFFICULT YEAR. COLLIERIES' IMPROVED OUTPUT.

The annual general meeting of the Coltness Iron Company, Limited, was held on Friday, 13th instant, within the registered office of the company, 138 West George street, Glasgow.

In the unavoidable absence of Mr Robert Russell, the chairman of the board, Mr J. Hamilton Houldsworth presided.

He said that the report now before the meeting shows that during the past year, owing to the serious and continued depression in trade—the blast furnaces and bye-products plant having been practically idle during the whole year—the results are regrettable poor, but, at the same time, they may not be regarded as unsatisfactory.

YEAR'S PROFIT.

The accounts for the year showed a profit of £14,733 on the year's operations, as against a profit of £111,013 in the previous year, and after writing off £24,948 for redemption and depreciation, and bringing in £7,000 for appreciation in the value of the special reserve fund for investments, and transferring £40,000 from the ordinary reserve fund, there was a credit balance of £36,785.

ALLOCATIONS.

They have set aside this year to meet the expense of relining of blast furnaces, &c., £9,000, and after deducting this sum and adding the amount brought forward from the previous year of £19,703, there is a balance left of £47,488. Interim dividends have already been paid on the first and second preference shares amounting to £12,875, leaving a balance of £34,613, which the directors recommend should be dealt with as follows:—

In payment of the dividends on the first and second preference shares for the second six months of the year, £12,875, leaving a balance to be carried forward of £21,738.

Owing to the continued depression in trade, he regretted that, for the first time in the history of the company, the results did not admit of any dividend for the ordinary shareholders.

BLAST FURNACE DEPARTMENT.

With regard to the blast furnace department, which includes the bye-products plant, these had been idle for the whole of the year, and while there might be some little sign of improvement in the condition of the iron trade, he regretted that the difference between the cost and selling price of pig-iron did not yet admit of the relighting of the furnaces. The effect of the introduction of the three-shifts system into coal-fed furnaces, such as they had in Scotland, was a severe handicap to the Scottish works in their competition with English coke-fed furnaces, with their large production.

Before the manufacture of pig-iron can be successfully carried on in Scotland, the cost of labour, railway charges, and the price of coal and other materials must all be reduced.

COLLIERIES.

As to the collieries, these were working steadily all the year, although during the first three months the full output of coal was

not reached owing to the disastrous strike of last year. The output was better this year than last by about 300,000 tons. It appeared that the only way to reduce the cost of coal and add to the wages of the miners was to increase the output by working 11 days per fortnight and eight hours per day. The output at Kingshill Colliery was now well over 20,000 tons per month, as compared with 9,000 tons at this time last year, but it is still handicapped for the want of houses for the workmen.

The steel foundry was practically at a standstill nearly all the year, and the immediate prospect of securing more work was far from being bright.

The brickworks were fully employed all the year.

ALQUIFE MINES.

The Alquife Mines were idle during the whole of the year. The railway service has been most unsatisfactory, only 5,000 tons of ore having been transported to the shipping port. In the negotiations with the railway company no arrangements have as yet been arrived at, but a Bill for reorganising and developing the railways is now being considered by the Spanish Parliament, and it is hoped that when this is passed an adequate service, conforming to contracts with the railway company, will be given. The stock of ore at the mines is still about 250,000 tons.

WARWICKSHIRE COALFIELDS.

With regard to the Warwickshire coalfields, the Coventry colliery was now sufficiently developed to allow of the present output of 10,000 tons per month being doubled, but owing to the state of trade in Warwickshire, the demand at present was less than we could produce. Even were there an improvement in the industrial situation, the output could not be increased much further owing to the shortage of houses. The company were hopeful of the Government building houses, but they had stopped further building meantime. It was imperative that other arrangements be made, and it had therefore been decided to form an industrial housing company for providing the necessary houses. The Government, knowing the necessity for providing houses for the working classes, were lending 75 per cent. of the cost, and the company to be formed would provide the further 25 per cent. of the capital.

The directors' report and the balance-sheet as at July 31st last were adopted, and the retiring directors, Mr Peter Rintoul and Sir Henry Hamilton Houldsworth, Bart., were re-elected.

The auditors (Messrs Kerr, MacLeod, and Macfarlan) were re-appointed, and the usual vote of thanks terminated the proceedings.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED. INCREASE IN TRAFFIC RECEIPTS.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London. Viscount St Davids (chairman of the company) presided.

The secretary (Mr F. Sanders) read the notice convening the meeting and the auditors' report.

The Chairman said that when he addressed the stockholders a year ago he said that they were in for a bad year. It had been a bad year, but bad as it had been, it had been a good deal better than he expected. The board had been able to put a pretty fair face upon things, but that had only been possible by exercising the most drastic economy in Argentina. There was one most gratifying feature during the last twelve months in their case. The reports of most of the other Argentine railways showed a decrease in traffic of something like £500,000, but the Buenos Ayres and Pacific had an increase of £600,000, and he wanted to point out that what had saved them had been the irrigated districts. This traffic had not come from a good crop here or another, he believed they could reckon on holding it.

There was a great deal more land in these provinces which could be put under irrigation. He was so immensely struck when out there with the success of these branches that he telegraphed to ask the board to let him authorise the construction of three £100,000 of that would be cash outlay. The other £200,000 would be found by using up stores which they had had by them for many years, which had been producing nothing, but which from the day they put them into the lines would begin to produce revenue. There was another reason for building the lines. They had been very fairly and honourably treated by the Government in the matter of their rates, and he thought it was a good thing and a decent thing that before the stockholders got a penny benefit from the increased rates they should show the Government that they were ready to meet them and at once do their best to resume the development of the country. Happily the decent thing was the wise thing as well. The stockholders might ask, Did this mean raising capital? It meant nothing of that

kind. For any plans which they had before them he saw no need to raise any fresh capital.

As to the immediate future, he asked the stockholders to watch the traffic returns. Up to date they had an increase of £58,000. To make a gain of £350,000 on the year they had to have an average increase from now to the end of June next of £8,200 a week. In the three months July, August, and September, which were in the lean half-year, they had had a gross increase in traffic of £30,000. Last year in those three months they made a net profit of £209,000, whereas this year their net profit for the corresponding period had gone up to £424,000, or more than double. If they got an average crop, and exchange stood where it was, he was very confident that next spring they would be paying an interim dividend on their second preference stock and on their ordinary stock. He remarked, generally, that any forecast as to the remoter future could only be guesswork. He pointed out, however, that for many years past many of their branches, and especially the long branches through the desert, had been a heavy burden upon them, but in those districts the traffic was now growing up to the branches. This was irrigated traffic, and not dependent on the fluctuations of weather to any great extent; it was traffic, therefore, on which, taking one year with another, they could depend. Unless he were quite wrong in his expectations, they had better times ahead of them.

In conclusion, he moved the adoption of the report and accounts.

Mr J. A. Goudge, C.B.E. (the managing director), seconded the motion, and after some discussion it was unanimously carried.

EASTERN TELEGRAPH COMPANY, LIMITED. REDUCED EXPENDITURE—INCREASED PROFITS.

The ninety-first ordinary general meeting of the Eastern Telegraph Company, Limited, was held, on the 17th instant, at Electra House, Moorgate, London, Sir John Denison-Pender, G.B.E., K.C.M.G., chairman of the company, presiding.

The secretary (Mr A. R. Hardie) having read the notice calling the meeting and the auditors' report,

The Chairman said: The gross revenue for the year was £4,124,976, as against, for the preceding year, £4,381,856, showing a decrease when comparing the two years of £256,880.

In considering these figures it should be borne in mind that the year 1920 produced the highest gross revenue in the history of the company, a figure which we could scarcely hope to maintain under the adverse conditions of general trade depression which affected commercial undertakings generally during the period with which we are now dealing.

As regards the expenditure side of the revenue account, I am pleased to say that the total expenses for the year show a reduction of £550,682 when compared with the preceding year, the respective totals being, for the year 1920, £2,988,783, for the year 1921, £2,438,101.

SALARIES.

Several items of expenditure, particularly salaries and wages of staff, show increases. Regarding the question of salaries, I explained to you fully on a former occasion the principle on which we had dealt with this rather difficult problem. Owing to the revolution which took place in the scales of pay for all classes both at home and abroad, in consequence of the radical change in the conditions of living occasioned by the war, it was necessary to reconstruct our standard scales of salaries and wages. In our case the position was complicated on account of the adverse effect which the depreciated currency in several countries had on the local salaries abroad.

To enable us to ascertain with a greater degree of certainty how far the new standard scales should be permanently increased so as to be more consistent with the altered conditions at home and abroad, we decided in the interests of all concerned to defer the final consideration of the matter until affairs become more settled and the economic conditions more stable. In the meantime, however, we made special payments to the staff and granted temporary allowances to compensate them for the extra cost of living. As you are aware, it has always been our policy to consider the welfare of our staff, and the special payments and temporary allowances were given on a liberal scale.

The standard scales were increased in 1920, and finally reconstructed and increased as from January 1, 1921, and a suitable reduction made in the special temporary payments, which are £263,000 less than the previous year. Although these special payments amount for the year under review to the very substantial sum of £433,000, they will be further reduced gradually as circumstances warrant.

YEAR'S PROFIT.

The net result of the year's working shows a profit of £1,686,875, as compared with, in 1920, £1,393,073, or an increase

of £293,802, and as there was a reduction in taxation to the extent of about £39,000, due to the abolition of the excess profits duty, the final balance available for distribution was £332,472 more than for the preceding year.

In 1920 we made a special contribution of £100,000 to the maintenance ships fund, and no similar item appears in this year's accounts, but, on the other hand, we had to meet the full extra dividend equal to £100,000 on the ordinary stock consequent upon the issue of £1,000,000 additional capital raised to provide part of the expenditure on new cables to which I shall refer later.

As a final result of the year's business, not only have we been able to maintain the dividend of 10 per cent., free of tax, but we have also carried to reserve the same amount that we have transferred to this fund for the past five years—namely, £500,000, and to carry forward the substantial balance of £568,000. (Hear, hear.)

I am glad to be able to say that the new cables already laid, the extensive renewals, &c., all of which were held up during the war, have had a beneficial effect in reducing the delay in the transmission of telegrams and have improved our system generally. We hope to complete our programme early next year, when we will be in a position to deal satisfactorily with any eventuality that may arise.

We do not think that H.M. Post Office is treating us fairly in the matter of competition for Australian traffic. They are actively supporting the Pacific Cable Board route against our route to Australia.

You will also have noticed the practice lately adopted of obliterating stamps on envelopes containing the correspondence of the public—including our own—soliciting the public to send their telegrams by the Government Pacific route to Australia.

We have asked for a similar facility to advertise our route, but the request has been refused. This is not treating us fairly, and, to use a common expression, is not playing the game.

The resolution was carried unanimously.

EASTERN EXTENSION, AUSTRALASIA, AND CHINA TELEGRAPH COMPANY, LIMITED. EXPENSES CONSIDERABLY REDUCED.

The eighty-eighth ordinary general meeting of the Eastern Extension, Australasia, and China Telegraph Company, Limited, was held, on the 18th instant, at Electra House, Moorgate, London.

The secretary (Mr R. T. Wolfe) having read the notice convening the meeting and the auditors' report,

Sir John Denison-Pender, G.B.E., K.C.M.G., who presided, said that the gross receipts for 1921 amounted to £2,394,324, against £2,514,824 for 1920, showing a decrease of £120,500, due, without doubt, to the general depression in trade. The working and other expenses amounted to £1,051,684, against £1,196,241 for 1920, showing a decrease of £144,557. This was mainly accounted for by the reduction in the item "special payments to staff and temporary allowances, &c.," (£108,376). This item first appeared in the accounts for 1915, and had increased to a very high figure, but as conditions of living were becoming more normal, it might confidently be expected that further reductions would be shown on this item in the future. The excess profits duty having been abolished, there was also a very big reduction in the item for taxation—namely, £481,285.

The balance they had to deal with was £1,127,100, plus the carry forward from 1920 of £80,779, making altogether £1,207,880. From this sum £500,000 had been transferred to the general reserve fund, £400,000 paid in dividends, and the balance, £307,880, it was proposed to carry forward to the 1922 account. On comparison with the account for the year 1920, it would be seen that the amount placed to general reserve fund had been increased by £50,000; that was, from £450,000 to £500,000. The directors considered it advisable to make this further provision in order to meet expenditure in connection with the laying of new cables. They also considered that, in view of the decrease in traffic receipts, as evidenced by the returns for the first six months of the current year (the working expenses still being very high), it was expedient to carry forward £307,880. Further capital expenditure had been incurred during 1921 to the amount of £409,740, of which amount £280,265 represented the balance of the cost of the Madras-Singapore direct cable, and £129,475 new offices and houses for the staff, &c.

IMPROVING TRANSMISSION TO FAR EAST.

Since the last meeting, delays in the transmission of Far East and other traffics had been very greatly reduced. A new cable between Madras and Singapore was successfully laid and opened for traffic on April 18, 1921. A contract had since been entered into with the Telegraph Construction and Maintenance Company for the manufacture of a cable to be laid between Colombo and

Penang, which they hoped to have working in April next. When this had been effected, it was confidently hoped that they would be in a position to give a good and fast service to the Far East. The work of installing automatic apparatus was being pressed on as much as possible, which, it was hoped, would eventually lead to a reduction in working expenses. The Great Northern Telegraph Company, with whom, in the interest of general cable communication, this company was associated, and whose lines across Russia and Siberia to China and Japan had been interrupted since 1914, had recently been able to restore their communication with those points. Although this had, so far, not been quite satisfactory, owing to the difficulties against which they had to contend, it was hoped that before long their service would improve, thus enabling them to take their share in the transmission of Far East traffic.

The resolution was seconded by Colonel the Hon. Arthur C. Brodrick, T.D., A.D.C., and carried unanimously.

The formal business having been transacted, Mr Bisgood, in proposing a vote of thanks to the chairman, directors, and staff for the magnificent way in which they had looked after the company's interests, said he had had a lot to do with companies, and he knew of no concern whose affairs were more capably managed than their own.

The vote was unanimously accorded.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED. INCREASE OF CAPITAL APPROVED.

An extraordinary general meeting of Marconi's Wireless Telegraph Company, Limited, was held, on the 20th instant, at Connaught Rooms, Great Queen Street, Kingsway, London, W.C., to consider resolutions increasing the capital and extending the borrowing powers of the board. Senator G. Marconi, G.C.V.O., the chairman, presided.

The secretary (Mr A. Ogle) having read the notice convening the meeting,

The Chairman said:—

Ladies and Gentlemen,—We have called you together to-day for the purpose of passing two resolutions, the first of which provides for the increase of the capital of the company to four million sterling by the creation of one million new ordinary shares of £1 each, and the second that the powers of the board to raise or borrow money be extended in order that a sum equivalent to the

amount of the capital for the time being of the company may be borrowed if the directors think it advisable to do so.

I would remind you that Article 40 of the Articles of Association gives power at the present moment to borrow up to 50 per cent. of the nominal capital, and this amount cannot be exceeded unless authorised by resolution of the shareholders.

WIRELESS DEVELOPMENTS.

The development of wireless telegraphy throughout the world is making very great progress, and a number of important stations are being or have yet to be built. To ensure efficient working, avoidance of interference, and provide the highest degree of economy, both in the matter of construction and subsequently in the conduct of the telegraph services, the Radio Corporation of America, the Compagnie de Telegraphie Sans Fil, of Paris, the Telefunken Company of Berlin, and our company have joined together to erect these stations in many foreign countries. At Buenos Aires, in the Argentine Republic, a station is in the course of erection, and it is hoped will be opened for service about May 1st next. In Rio, and elsewhere in Brazil, similar work has been commenced. At Bogota, in the Republic of Colombia, a service will be opened very shortly, the station having been recently completed. Other arrangements are in course of negotiation, and, it is contemplated, will shortly establish direct telegraph services between the several South American republics and Central America, and also from the South American republics and Central America to the United States of America, the principal capitals of Europe, and by relays from these to pretty well every part of the world.

AGREEMENTS WITH COLONIAL GOVERNMENTS.

You have no doubt read of the increase of the capital of the company in Australia, in which the Australian Government is taking a considerable share interest, and which company is to construct a station for direct service with this country. We are taking a substantial part in that company.

You have also been informed through the public Press that our company has signed an agreement with the Government of the Union of South Africa to create a direct wireless telegraph service between South Africa and this country.

Very big developments are taking place in Canada in which we shall be taking part, with the Canadian company, two of our directors being at the present moment in Canada for this purpose.

It is also public property that we have signed an agreement

with the Austrian Government to take over the existing wireless telegraph stations in Austria and to construct additional stations for the purpose of conducting telegraph services with foreign countries.

There are a number of very important arrangements which by now may be completed or on the eve of completion, particulars of which, I regret, I must not give you at this moment, but I have already told you sufficient, perhaps, to satisfy you of the progress which we are making and the considerable building programme which we have in front of us, I hope, both at home and abroad.

In addition, however, to the construction of telegraph stations, we have the advent of broadcasting. This is an entirely new business, which we have every reason to believe will assume very big dimensions and will add very considerably indeed to the earning powers of our company. This is a business which, according to our present estimates, will keep a sum of approximately seven or eight hundred thousand pounds, more or less, continuously and profitably employed for some time to come.

SCHEME EXPLAINED.

In these circumstances, you will no doubt all appreciate that additional capital must be found, and therefore it is that we have asked you to meet us to-day and furnish us with the necessary authority to provide the moneys which are required. You have no doubt understood from the circular which you have received that we are intending, subject to your approval, to issue short-term debenture stock giving to the holders of that stock a right to convert it into ordinary shares of the company at any time prior to April 1, 1929, at the rate of £3 of debenture stock for one ordinary share. Our view is that this is the most economical and the most satisfactory way of raising additional capital at this moment. When our construction work is complete, and our vast telegraph service gets into full operation, we have great confidence that additional capital will then be fully justified, and the debenture holders will have readily availed themselves of their option to convert the debenture issue into the ordinary shares which we shall be holding in reserve for that purpose. I want to make myself quite clear upon this point that there may be no misunderstanding. Whilst we are increasing the capital of the company to-day, there will be no issue of the shares—they will be held in the treasury of the company for the purpose of giving to the debenture holders the right of conversion.

The resolutions were adopted.

HARRISONS AND CROSFIELD, LIMITED. SATISFACTORY RESULTS OF YEAR'S TRADE. TEA AND RUBBER PROSPECTS.

The fourteenth ordinary general meeting of Harrisons and Crosfield, Limited, was held on Wednesday, the 18th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 3 Idol Lane, Eastcheap, London, E.C., Mr C. Heath Clark (the chairman) presiding.

The secretary (Mr E. C. Cleveland-Stevens, D.Sc.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—

The year's profit amounts to £149,138 os 7d, an amount which does not fall very far short of the profit made in the previous year, and, in view of the stagnation in trade, we have, I think, done as well as we could have expected.

We brought forward a balance of £44,525 os 8d from the previous year, and consequently the total available profit is £193,663 7s 3d.

ALLOCATIONS.

Out of this amount we have already paid the full dividends on the cumulative preference and preferred ordinary shares, amounting in all to £137,800. This leaves a balance of £55,863 7s 3d, out of which we propose paying a small dividend of 5 per cent. on the capital subscribed in the deferred ordinary and management shares, leaving a balance of £45,114 is 3d to be carried forward to the current year.

After referring to the difficulties of the past year, Mr Heath Clark expressed a hope that there would be continued improvement in the future, but did not think this could go very far until some degree of stabilisation in the foreign exchange position and a practical settlement of the "reparations" question had been attained.

PROSPECTS OF THE TEA INDUSTRY.

With regard to the tea industry, he said: At the end of August, 1921, the stocks of tea under bond in the United Kingdom amounted to 197,000,000 lbs; at the end of August, 1922, they had fallen to 140,000,000 lbs.

The production this year has been held in check by weather that, on the whole, has been against heavy flushing, and in the case of

many estates by an insufficient labour force, and also by a continuance of careful plucking on the part of most producers.

The outlook for tea production in India, Ceylon, and the Netherland Indies is at the present time very promising, and remunerative prices throughout the present season appear assured. If trade with Russia were to expand appreciably, and if coarse plucking is not again put into practice by producers, I think the tea industry should now experience a period of prosperity.

THE RUBBER POSITION.

The plantation rubber industry showed some signs of improvement at the time of our last meeting. Unfortunately, the good effect of the restriction practised throughout the year was not sufficiently realised by many producers, and the Rubber Growers' Association were unable to obtain the necessary support to continue their restriction scheme to the end of June, 1922.

The actual production during 1921 agreed closely with the estimate of 280,000 tons which I gave at our last meeting, and represented an output of just over 70 per cent. of the normal output.

The actual output of plantation rubber during the current year will probably be about 340,000 tons, against a possible unrestricted crop of between 380,000 and 390,000 tons, excluding the output of wild rubber, which will be about 20,000 tons.

WORLD'S ABSORPTION OF RUBBER.

With regard to the amount of rubber used by manufacturers during the current year, I estimated at our last meeting that it would amount to from 300,000 to 350,000 tons. It is now possible to estimate this more accurately, and the experience of the first eight months indicates that the absorption for the year will prove to be about 340,000 tons, of which the United States will take 230,000 tons and the rest of the world 110,000 tons.

I think there is no important use of rubber in respect of which the consumption is not increasing. The American production of automobiles continues on a colossal scale. The output during this year will be well over 2,000,000.

The new uses to which rubber is put are also increasing, and some of them promise to affect considerably the figures of future consumption.

I should incline to the opinion that the absorption of crude rubber next year will not prove to be anything less than 360,000 tons.

RESTRICTION OF OUTPUT.

Referring to the Colonial Office Committee's scheme for the compulsory restriction of rubber shipments, Mr Heath Clark showed how it had proved impracticable to arrange any voluntary restriction, and said: That being so, we are clearly left with only one alternative to Government control—that of letting the present crisis, and loss continue until eventually it works out its own remedy. I think most of us who have heavy responsibility resting upon us as trustees for large amounts of capital invested in the industry, as well as for the well-being and employment of the large labour forces equally necessary to its continuance, must support the former rather than the latter course. At the same time, I venture to express the hope that the Committee who may be chosen to advise the authorities in regard to the working of the proposed scheme may give it all the elasticity possible in the working, so that supplies may be kept available in sufficient quantities to prevent anything approaching high prices being artificially maintained, as that would, I am convinced, be against the true interests of the industry.

The report was adopted unanimously.

EDWARD LLOYD, LIMITED.

IMPROVED POSITION AND PROSPECTS.

The thirty-second ordinary general meeting of Edward Lloyd, Limited, was held, on Monday, the 16th instant, at the head office of the company, 4-7, Salisbury court, Fleet street, London, Mr Frank Lloyd, the chairman and governing director of the company, presiding.

The secretary (Mr T. Gerald Denson) having read the notice convening the meeting, the Chairman said:—

Your directors regret that they are not yet in a position to present the balance-sheet and profit and loss account for the year ended December 31st last owing to the delay in obtaining a settlement of the company's claim for repayment of excess profits duty.

The fall in the value of the stocks of raw material on hand on January 1st, coupled with the reduced production of paper owing to the coal strike in the first half of the year, resulted in a serious loss to the company, and it is evident that, even after recovery of the estimated amount of our claim for return of excess profits duty, the accounts will show a heavy loss for the year. We shall consequently be unable to declare any dividend on the ordinary shares for 1921.

PRESENT POSITION AND OUTLOOK.

The stocks of raw materials we carried at the beginning of the year, though very large, were only sufficient to meet the anticipated demand of our customers at that time, who relied on us to meet their full requirements of paper.

We are now making a fair profit on a largely increased production, sufficient to justify us in paying the interim dividend of 1½ per cent. which has recently been declared on our ordinary shares for the current year.

All the machines at Sittingbourne are now running at their fullest capacity, and, thanks to the cordial co-operation of our employees, with an even greater efficiency than in pre-war days. We have gone through a period of great difficulty, and I think we can congratulate ourselves on having emerged from it successfully with our resources unimpaired and with the goodwill of all our customers.

I believe we can now look forward with the greatest confidence to a return to normal conditions and to further expansion in the near future.

TRIBUTE TO STAFF.

We owe a debt of gratitude to our staff and employees for their effective help in making good the aftermath of the war and in bringing up our machinery and plant to its former high standard of efficiency, and I cannot let this opportunity pass of expressing our warmest thanks to them for the zeal and energy which they have exhibited in bringing about such happy results.

The retiring directors, Mr Harry Lloyd, Mr F. N. Lloyd, and Mr R. B. Miller, were re-elected, and Messrs Turquand, Youngs, and Co. were reappointed auditors.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

The Rev. F. E. Coggin, in proposing a hearty vote of thanks to the chairman, directors, and staff, stated they fully understood the debt which they owed to them, especially in view of the difficulties which they had been called upon to face.

Mr H. W. Clarke drew attention to the fact that the chairman, Mr Frank Lloyd, had completed 50 years of business life, 32 years of which he had been the supreme head of the firm, and the position which it now held was due entirely to him.

The Chairman, in replying, stated it was one thing to look back upon the past, but the future was more important, and he could look forward with confidence, as he knew the traditions of the company were in good hands.

The Chairman then moved that the meeting be adjourned until the accounts were ready for presentation, and the motion, upon being put to the meeting, was carried unanimously.

FREDERICK HOTELS, LIMITED.

SATISFACTORY RESULTS—GOOD PROSPECTS.

The twenty-fourth ordinary general meeting of the Frederick Hotels, Limited, was held, on the 18th instant, at the Hotel Russell, Russell square, London, Mr Ronald Peake (the chairman) presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: I think you will all agree that the result of the past year's trading is satisfactory. After paying the debenture and mortgage interest there is a balance of £89,871, out of which the preference dividend, amounting to £27,500, has already been paid. The payment of the ordinary dividend will absorb £13,750, leaving a balance of £48,531, out of which we propose taking £10,000 to add to the existing reserve, making it £30,000 in all, and carrying forward £38,531. The trading for the year under review has been good, although the business done

is less than that of the previous year, this being due to the reduction in prices and not to the number of visitors catered for, as prices have been considerably reduced and the drop in the receipts from wine, spirits, and cigars to which I referred last year, still continues. The course of business at our various hotels has been very much as we anticipated, except at the Hotel Bristol, Beaulieu-sur-Mer, which, I regret to say, in common with the other hotels on the Riviera, suffered from a very bad season.

With regard to the profit and loss account, the only item to which I need refer is compensation paid for the occupation of the Hotel Great Central by the Government. Our claims are now finally settled, and I feel free to express the opinion that we have been treated very badly in the matter of compensation.

There is a certain advantage in having our annual meeting in the middle of October, as we have the results of the three months' trading before us, and it enables us, in a measure, to express an opinion on the outlook for the current year. I am pleased to say that the result for the three months to the end of September has been satisfactory. During these three months our seasonal hotels do most of their business, and the returns from the London hotels are also satisfactory.

At last year's meeting a shareholder suggested that more detailed information might, with advantage, be given in the balance-sheet, and particularly that the values of the properties should be shown separately from that of furniture, equipment, &c. I fear that this suggestion cannot be adopted—we have no means of knowing what proportion of the purchase price was in respect of the buildings and what proportion was in respect of the furniture, equipment, &c. I can assure the shareholders that the amount at which their properties stand in our books is considerably less than the hotels would cost to build and equip at the present time.

Sir John M. Bethell, Bart, M.P., seconded the motion, which was carried unanimously. The proceedings terminated with a vote of thanks to the board.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.
COMPANY'S STRONG POSITION.

The thirteenth ordinary general meeting of the Kern River Oilfields of California, Limited, was held, on the 18th instant, at Kingsway Hall, Kingsway, London.

Mr William Ivey (the chairman) presided, and, in moving the adoption of the report and accounts, said that he thought they might feel proud to think that the company stood practically alone in the world of oil companies, as a large producing company, in having done as well as it had under the conditions existing. Some companies with a much larger amount of capital involved had had to reduce their dividends considerably, and in a few instances their trading had resulted in a heavy loss. There was one great advantage which the Kern Company had over many other companies—even the larger companies—and that was its strong financial position, which was due to the conservative policy followed by the directors in the past in having refrained from paying large dividends and giving bonus shares.

The dividend of 17½ per cent. this year, as he had said, was no doubt a disappointment to shareholders, but when compared with the results of other companies, they could hardly have expected anything better. Last year they paid 20 per cent. on the capital then paid up, which amounted to about £900,000, whereas this year they were paying 17½ per cent. on a paid-up capital of £1,200,000—a vast deal of difference. It took only £149,447 to pay 20 per cent. last year, whereas this year it took £209,969 to pay 17½ per cent.—a difference of nearly £60,000. It would thus be seen that they were not doing so badly after all, and that the company was practically maintaining its dividend. Having referred to the results achieved on the several leases forming the St. Helen's properties, and to the substantial reduction which had been effected in operating expenses as a result of rigid economy, the chairman said that the purchase of the Sunset gasoline plant had been an excellent "deal" for the company. Their object was to enable them more effectively to use their own gas and thus make an additional profit.

In Rumania everything was in an excellent condition, but at present they were only "marking time," because the rate of exchange was so heavily against them. In Trinidad they had discovered oil in every well which they had sunk, and recent cablegrams announced that on a new area a well had come into production yielding 2,000 barrels a day. If the water trouble Mexico should again be a very rich oil-producing country. In Texas their "wait-and-see" policy had been the means of saving them an immense amount of money.

The future was more than hopeful, and their strong financial position was a stone wall of defence against any crisis that might arise.

The motion was seconded by Mr Henry H. Haldin, K.C., and carried unanimously.

civil war was being waged, and there is a prospect of a discount instead of the premium which recently obtained on such coins. In these circumstances, the mint's working may be suspended for an indefinite period. Much of the silver imported into China of late has been sent into the Canton Mint, hence the marked effect upon the silver market of the changed conditions. The Indian bazaars have bought moderately for shipment by this week's—the settlement—steamer; but, unless China is in a position to help absorption of supplies, India is hardly likely to tackle the work unaided, unless, of course, prices reach a more tempting level.

A certain amount of bear covering is due for near dates; but, failing confidence in the future of the market, bears will probably be tempted to prolong their shortage for a further two months. The Government has announced that silver coin, other than coin current in the United Kingdom, may now be melted without a special licence.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Sept. 30, 1922.	Oct. 7, 1922.	Oct. 15, 1922.

NOTICES.

The directors of Lloyds Bank, Limited, announce that Mr Evan Williams, J.P., of Glyn-Dwr, Pontardulais, has been elected to a seat on the board. They also announce that a branch of the bank is now open at the corner of Beel street and Blackburn road, Accrington, under the management of Mr W. A. Jones and at 30 High road, Kilburn, N.W. 6, under the management of Mr T. C. Merry. A sub-branch of the bank is now open on Fridays at Ruskington, under the management of Mr A. R. Thomas, of the Sleaford branch.

The London Joint City and Midland Bank, Limited, announce the opening of new offices in Halifax road, Todmorden, Yorks; at 9 West street, Wilton, Salisbury; and in Hatherley, Devon.

A branch of the Queensland National Bank, Limited, has been opened at Wardell, New South Wales.

We are informed that the branch at Smyrna of Banco di Roma, which was recently destroyed by fire, has resumed business there in temporary premises.

BRITISH CANADIAN AND GENERAL INVESTMENT.—For first time for many years directors are unable to recommend dividend.
ELECTRIC SUPPLY COMPANY OF VICTORIA.—Directors regret they are unable to recommend a dividend on ordinary share capital.
LAWES' CHEMICAL MANURE.—Accounts for two years ended June 30, 1921, and for two years ended June 30, 1922. Directors do not recommend a dividend.
SABANA AND SANTIAGO RAILWAY.—No interim dividend is paid on either the preference or ordinary shares.
UNITED PREMIER OIL AND CEMENT COMPANY.—The directors recommend that the July 8, 1922, be confirmed as a final dividend, making a total distribution of 5 per cent., less tax, for the year.

THE BEST INVESTMENT For Capital, Effort & Enterprise

Is in the participation in the quick industrial development of the splendid Pastoral, Agricultural, Mineral and other resources, aided by the increasing population and settlement, of

NEW ZEALAND.

Good ports, expanding railways and other communications, convenient sites, cheap electricity, efficient workers, reliable markets, well established for all kinds of produce, raw materials and manufactured goods.

THE STATE FACILITATES PRODUCTION

APPLY TO—
THE HIGH COMMISSIONER FOR
NEW ZEALAND, 413, Strand, W.C.2.

THE STOCK EXCHANGE. NOTICE.

Members of the Stock Exchange are not allowed to advertise for business purposes, or to issue Circulars or Business Communications to persons other than their own Principals. Persons who advertise as Brokers or Share Dealers are not Members of the Stock Exchange, or in any way under the control of the Committee. Members issuing Contract Notes are required to use such a form as will provide that the words "Member of the Stock Exchange, London," shall immediately follow the signature. A List of Members of the Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance to the Bank of England, or obtained on application to EDWARD SATTERTHWAITE, Secretary to the Committee of the Stock Exchange, Committee Room, The Stock Exchange, London, E.C.2.

THE INVESTOR'S MONTHLY MANUAL. Estd. 1864.

Published at the beginning of each month.
Price, 1s. 8d., post free. Annual
Subscription £1 1s. 0d.

THE MOST COMPLETE PERIODICAL RECORD OF THE DEALINGS THROUGHOUT THE UNITED KINGDOM IN EVERY DESCRIPTION OF STOCKS AND SHARES IN EXISTENCE. OVER 4,000 SECURITIES ARE DEALT WITH EACH MONTH, SHOWING RECENT DIVIDENDS AND YIELDS AT LATEST PRICES.

NEW YEAR DOUBLE NUMBER (Post Free, 2s. 3d.).

The Double Number of *The Investor's Monthly Manual*, to be published on January 2nd, 1923, will give, in addition to the usual information, the highest and lowest prices of all stocks and shares for 1918, 1919, 1920, 1921 and 1922, the latest quotations for 1922, a tabulated chronicle of the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign and Colonial Governments, to Railways, &c., &c. In addition, there will be furnished the addresses of the various companies, with the names of the Chairmen and Secretaries, or managers.

TO ADVERTISERS.

The above Double Number is subscribed to by investors of all classes. Its circulation, therefore, is of a widespread and influential character, and affords a most valuable medium for advertisements of all descriptions.

LONDON ELECTRIC RAILWAY COMPANY

4½% Redeemable Second Debenture Stock, 1942-72.

FURTHER ISSUE OF £2,250,000 STOCK.
Being the balance of a total authorised issue of £3,250,000 Stock.

CITY & SOUTH LONDON RAILWAY COMPANY

4½% Redeemable Second Debenture Stock, 1942-72.

FURTHER ISSUE OF £1,250,000 STOCK.
Being the balance of a total authorised issue of £2,750,000 Stock.

CENTRAL LONDON RAILWAY COMPANY

4½% Redeemable Debenture Stock, 1942-72.

ISSUE OF £458,000 STOCK.

ALL THE ABOVE STOCKS ARE GUARANTEED AS TO PRINCIPAL AND INTEREST BY HIS MAJESTY'S GOVERNMENT UNDER THE PROVISIONS OF THE TRADE FACILITIES ACT, 1921.
Interest payable half-yearly on the 1st JANUARY and 1st JULY. A first payment of 5s. per £100 will be made on the 1st JANUARY, 1923.

PRICE OF ISSUE - £93 Per Cent.

	Payable as follows:	
On Application	£ 5 per Cent.	
On Friday, the 3rd November, 1922	£18	
On Thursday, the 7th December, 1922	£35	
On Monday, the 8th January, 1923	£35	
	£93 per Cent.	

THE STOCKS ARE INVESTMENTS AUTHORISED BY "THE TRUSTEE ACT, 1893."

The GOVERNOR and COMPANY of the BANK OF ENGLAND are authorised to receive applications for the above Stocks.

The Stocks are repayable at par on the 30th June, 1972, but any or all of them may be redeemed at par, in whole or in part, at the option of the respective Companies on, or on any interest date after, the 1st July, 1942, on three calendar months' notice.

The present issues by the London Electric and City and South London Railway Companies are authorised by the London Electric and City and South London Railway Companies Act, 1922, under which they respectively rank pari passu with the similar Stocks already issued, which are also guaranteed by H.M. Treasury. This Act provides that notwithstanding anything contained in Part III. of the Companies (Clauses) Act, 1863, or such Act (a) any subsequent Act which authorises either of the Companies to raise money by borrowing or by mortgage or by the creation and issue of Debenture Stock may authorise such Company to raise the same so as to rank as regards the principal and interest thereof and the security therefor either in priority to or pari passu with the Second Debenture Stock which such Company is authorised to create and issue by its Act of 1919 and such Act or otherwise as such subsequent Act may provide and (b) the interest on all Debenture Stock which is at any time created and issued under any subsequent Act so as to rank pari passu with the Second Debenture Stock which either of those Companies is authorised to create and issue under its Act of 1919 and such Act shall (subject to the provisions of such subsequent Act) have priority over all principal monies secured by such Debenture Stock and by the second Debenture Stock which such Company is authorised to create and issue by its Act of 1919 and such Act or either of them.

The present issue by the Central London Railway is authorised:—

(1) As to £374,000, by the Central London and Metropolitan District Railway Companies (Works) Act, 1920, Section 29 (1).

(2) As to £76,322, Debenture Stock to a total amount of £1,160,000 was authorised by the Central London Railway Acts, 1891 to 1909, but owing to the payment of interest out of capital, this amount was reduced by £76,322, the issue of which was again authorised by the Act of 1920.

(3) An unissued balance of £7,673 is also included in the total amount now offered for subscription.

Power to make the issue in the form of redeemable Debenture Stock is conferred by the said Act of 1920. The Debenture Stock, the subject of this issue, ranks pari passu with the existing Debenture Stocks of the Company under the provisions of Section 24 of the Act of 1891 and Section 29 (1) of the Act of 1920.

The interest on the Stock of each Company is a "Revenue Liability" of that Company and is secured:—

(1) In the case of the London Electric and City and South London Railway Companies by the balance of their respective earnings remaining after payment of interest upon their respective First Debenture Stocks, and in the case of the Central London Railway Company by its earnings; and
(2) In the case of all Companies by the "Common Fund" established under the London Electric Railway Companies Facilities Act, 1915.

His Majesty's Government, under the provisions of the Trade Facilities Act, 1921, have agreed to guarantee both principal and interest in respect of the present issues.

The proceeds of the present issues will be applied towards

all or any of the purposes to which they are respectively applicable under the Agreement dated the 26th May, 1922, Treasury and the London Electric and City and South London Railway Companies, and the Agreement dated the 13th October, 1922, made under the same Act between H.M. Treasury and the Central London Railway Company, including

(a) In the case of the London Electric Railway Company the construction and equipment of the Edgware and Hampstead Railway forming an extension from the terminus of Golders Green, to Hendon and Edgware, as authorised by the London Electric Railway Acts, 1902 and 1912; construction of connecting railways at Camden Town to City and South London Railway and the London Electric Railway, as authorised by the London Electric Railway Act, 1913; and the construction of the connecting railways at Hammersmith, authorised by the London Electric Railway Act, 1914, to enable through services of trains to be worked between the Piccadilly section of the London Electric Railway by the Metropolitan District Railway from Hammersmith.

(b) In the case of the City and South London Railway Company, the enlargement of the tunnels, the improvement of the stations, and the provision of new rolling stock and Railway Acts, 1913 and 1919.

(c) In the case of the Central London Railway Company the installation of escalators at Tottenham Court Road, Oxford Circus, Bank, Shepherd's Bush, Bond Street and Liverpool Street Stations, and the re-arrangement and re-equipment of the booking offices at those stations.

Interest upon the Stocks will be payable half-yearly on the 1st January and 1st July in respect of the half-year first payment will be made on the 1st January, 1923, and will be at the rate of 5s. per £100. Interest Warrants for Dividend due on and after the 1st July, 1923, will be transferred by post.

The Registers of the Stocks will be kept at the Bank of England.

The Stocks will be transferable by ordinary transfer deed in sums which are unbroken multiples of £1.

Applications, which must be accompanied by a deposit of 5 and 6 Lombard Street, London, E.C.3. In case of partial allotment the balance of the amount paid as deposit will be there be a surplus after making that payment such surplus will be refunded by cheque.

Applications must be for sums which are unbroken multiples of £100.

Installments may be paid in full after allotment under discount at the rate of £1 10s. per cent. per annum. In the case of full payments made before the 3rd November, 1922, the discount will only be allowed from the latter date. Default in the payment of any instalment by its proper date will render the deposit and any instalments previously paid liable to forfeiture, and the allotment to cancellation.

Scrip Certificates to Bearer, with Coupon attached for interest payable 1st January, 1923, will be issued in exchange for the Allotment Letters. Fully paid Scrip Certificates may be registered on and after the 2nd December, 1922.

THE MONEY MARKET.

ON Monday the market found itself in the Bank of England borrowing a large amount, once more proving that except when the Bank is providing credit for the Government it has to do so for professional borrowers. Discount rates accordingly hardened, especially when it was found, later in the week, that even with this addition, the market's resources were by no means overabundant, and that 2 per cent. was easily obtained by lenders for loans over the night. But commercial bills remained ex-

tremely scarce, and so prevented any substantial advance in quotations.

	Oct. 27, 1922.	Oct. 20, 1922.	Oct. 13, 1922.	Oct. 6, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discount/Call	1	1	1	1	1% (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	2½

The Bank return showed an increase of £197,000 in the note circulation, and a decrease of £3,000 in the stock of gold, and a consequent decrease of £200,000 in the Reserve. Government and Other securities advanced by 1½ and 2½ millions, and so Public and Other deposits rose by three millions and one. Currency notes outstanding were reduced by £2,168,500 to £287,170,000 in the return dated October 26, 1922, which includes £1,545,100 for notes called in but not yet cancelled. The fiduciary issue is £237,475,900, or £72,512,500 below the maximum.

THE STOCK MARKETS.

Apart from the disturbing effect on markets of the political situation, there have been several minor factors contributing to the slight depression in most of the Stock Exchange markets. The sudden offer of the new Indian Loan came as a jar to the Consol market, while French bonds have been upset by the pronounced weakness of the franc, and this led to weakness in other foreign bonds. Brazilians have been falling sharply but steadied yesterday. Stocks of the railways in the Southern group have fallen since the publication of the amalgamation details, but Argentine Rails have been prominent owing to official optimism as to the outlook. Rubber shares suffered from realisations, and the oil market is neglected. Iron and steel shares have been strong on the settlement of the strike in South Wales, while the shares of the Eastern cable companies have advanced, but the banking, insurance, and shipping share markets have been dull. Weakness has been the feature of the mining markets.

THE COMMODITY MARKETS.

The announcement of the General Election has had no appreciable adverse effect on commodity markets, which continue, in the majority of cases, to give the impression of better trade conditions. A perceptible improvement is noticeable in the cotton industry; prices have continued to harden, in sympathy with the further upward movement in the raw material, but spinners and manufacturers have found it difficult to do business on the higher values. Signs of decreased activity are, however, apparent in the wool trade; there is little speculative buying, but prices have been fairly well maintained by American demand. Although quotations for pig-iron continue firm, business is reported as dull, and the American demand rather easier. No improvement is reported in the manufactured iron and steel trades, but our Sheffield correspondent takes a brighter view of the industrial outlook. A healthy tone prevails in the South Wales coal trade; prices are slightly higher, and an increasing demand both for export and inland trade is recorded. Better business is reported in the vegetable oils and oil-seeds markets, prices, if anything, being a shade higher. Further details of markets and prices from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

On the foreign exchange market the week has been disturbing, with a further rapid depreciation in several of the leading currencies. The Paris rate, which on the 20th was 60.07½, has risen with exceptional rapidity, till at one time on Thursday it was over 65. On Friday morning, after some recovery on the previous evening, it was again offered, and a short recovery on some covering was followed by a renewed rising tendency to 64.60. This renewed outbreak of depreciation is attributable not so much to any new factor, as to the growing appreciation of the seriousness of the financial position in France, and the recognition in increasingly wide circles in France itself that little is to be hoped for from Germany, at least for

a long time to come. A significant illustration of this change in attitude is the determination which is now being shown in all parts of the French Press to face squarely this decidedly unpleasant situation. As usual, the Belgian rate has moved in sympathy, and stood yesterday morning at 69.50. It is surprising, in view of the relatively more favourable position of Belgium, that the two rates remain so closely interlocked, and that, indeed, the Belgian franc is showing a tendency to depreciate slightly more rapidly than the French. The quotation for forward francs is about 15-20 centimes per month over spot in Paris and 2 to 3 centimes under spot in Brussels. In Italy depreciation, mainly as the result of renewed Fascist activities, has been even more rapid, the lira having risen during the week from 106½ to 116½. In Germany during the first part of the week the collapse continued unabated, from 17.150 on the 20th up to 20.200 on the 24th. Since then there has been some steadying of the rate to 19.400, round which it has remained for the last few days. It is possible that for the moment the recent panic movement has been arrested, but there can be little confidence of any lasting stability, nor can much be hoped for from the advice of experts summoned from Berlin or from the presence there of the chief members of the Reparation Commission unless a drastic revision of Reparation payments can be arranged. At the beginning of the week came the expected reaction in the dollar rate, which moved on Monday from 4.47½ to 4.45. Since then it weakened quietly to just below 4.44½ on Thursday, but yesterday morning was rather firmer again at 4.44½, and is showing a remarkable power of resistance to the general European collapse. Among the neutral exchanges, the Swiss rate has again moved markedly in our favour, from 24.44½ to 24.70½, apparently as the result of fears of a drastic capital levy in Switzerland. Amsterdam, after a sharp movement against us, is rising again, but is still slightly below last week. Madrid continues to rise quietly, and has now reached 29.24, while Portugal has had a sharp improvement to 3½d on reports of a Lisbon loan in London. Among the Northern countries, both Christiania and Copenhagen have moved against us, and Stockholm also to a less marked extent. Helsingfors has also appreciated, though less rapidly than last week, from 186½ to 186. It is surprising that efforts are not made to keep the Finnish rate more steady at a slightly higher level, and one more season has passed. In Poland the upward movement continues, the rate being now 58,000, as compared with 48,000 a week ago. At 320,000 the Viennese rate is undoubted being felt in Austria as to whether the drastic of Nations' assistance can be carried through. The Prague rate has moved upwards rather rapidly, from 135½ to 144, but this, in view of a too rapid appreciation and its effect on Czech industry, is lower than the 730 of a week ago. Athens at 215 shows some recovery from the high figure of 228 reached earlier in the week. In the East the rupee shows little change at 3½d, while the yen is rather more expensive. The demand from India, has been very strong, but this has seemed high. Hongkong and Shanghai, after both being more expensive, reacted again yesterday morning. In South America, Rio is rather dearer at 6½d, Buenos Ayres at 44½d is ½d higher, and Monte Video ½d higher at 42½d. Valparaiso, on the other hand, at 33 has depreciated 1 peso.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 21, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	20,338	Interest on Debt	12,721
Amount borrowed	314	Supply Services	7,000
		Added to Exchequer Balances ..	301
		Sundries	630
			20,652

The principal item of revenue during the week ended October 21, 1922, was Excise, which yielded £9,308,000, against £12,887,000 in the corresponding week a year ago. The yield from Property and Income-tax at £4,419,000 compares with £2,863,000. Customs pro-

duced £2,721,000, against £2,634,000 in corresponding week last year. Special Receipts amounted to £1,360,551, against £2,060,736. The week's operations increased the National Debt by £314,227, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 450	National War Bonds paid off ..	- 750
Public Depts. Advances	+ 2,408	Bank of England Advances ..	- 6,750
Treasury Bills	+ 3,762		
4½% Treasury Bonds	+ 1,144		
Unemployment Insurance ..	+ 50		
	+ 7,814		- 7,500

The floating debt was reduced by £627,000 to £921,732,500 during the week ended October 21, 1922.

FINANCIAL YEAR, 1922-23 (April 1 to October 21, 1922).

THE ELECTION PROGRAMMES.

POLITICAL events this week have conformed closely to expectations. Mr Bonar Law, having received a unanimous mandate from his party, has accepted the Premiership, and has already announced the composition of the greater part of his Government. His list is adequate rather than inspiring, but it will perhaps find a lack of brilliancy no handicap with an electorate that has wearied of the results of clever opportunism. The new Premier has decided, as was expected, upon an immediate election, and this has forced the various political parties to issue manifestoes of policy. Mr Bonar Law himself outlined the Conservative policy at Glasgow on Thursday; Mr Lloyd George his "national unity" programme a day earlier. In addition, the public have been treated to three manifestoes—one from the Independent Liberals, one from the Labour Party, and one from the Manchester Liberal candidates. At the same time, the torrent of oratory, which will swell to full force in the next three weeks, has begun to flow, notable contributors this week having been Mr Bonar Law, Lord Grey, Mr McKenna—who provided a sensation by appearing on a City Conservative platform—Mr Lloyd George, Mr Henderson, Mr Clynes, Sir Donald Maclean, and Lord Birkenhead. In a very few days the country will have plunged into the thick of the political battle. Before the plunge is taken we

should like (leaving detailed criticism for a later occasion) to analyse as briefly and as dispassionately as possible the programmes officially promulgated by the various parties, with the assistance in interpretation, here and there, that may be culled from the speeches of the respective leaders. At the outset we may notice and welcome the fact that several features are common to all the programmes. All recognise tacitly or explicitly that the Irish Treaty must be ratified. All preach peace abroad and economy at home. In their broad diagnosis of the country's needs all the political doctors agree; in the prescriptions they differ widely. This diversity, confined as it happily is in this country, within the bounds of constitutionalism, we welcome as a sign of public health. The country, we believe, is glad to get back to more or less clear cut divisions of political principle, and to have the opportunity of returning to power a Government whose preoccupation will be, not compromise and conciliation between conflicting views, but a frontal attack upon its tasks along lines of declared political tenet.

Let us take a rapid glance at some of the most important points in these manifestoes and pronouncements. Take first some outstanding points in the wide field of foreign policy. All parties include support of the League of Nations in their programme, and their support differs only in emphasis. Mr Bonar Law promises "whole-hearted and practical support." Mr Lloyd George and the Labour Party pledge themselves to the attempt to make it a League of All Nations. Labour and the Independent Liberals would approach the whole problem of peace and disarmament through the League; the Manchester Liberals would make the League "the pivot of international policy." Lord Grey makes the statesman-like pronouncement that agreement with France must be inside and not outside the League. Remembering that the new Government contains in Lord Derby a powerful advocate of a straight pact with France, we should like to see Mr Bonar Law more explicit on this point. We hope, too, that he will tell the country that he is in favour, as Mr Lloyd George and, apparently, all other parties are, of including ex-enemy countries as full members of the League. As regards other points of foreign policy, Mr Bonar Law and Mr Lloyd George both realise the necessity of close co-operation with America, and we trust the former will, therefore, allow no delay in sending to Washington the postponed financial mission. Elsewhere he will honour old obligations, and resist, "and on suitable occasions curtail," new commitments. He is clearly aware of the folly of the Coalition's Greco-phil policy, and better still, is determined to restore to the Foreign Office its proper functions, thus obviating, we trust, the recurrence of such blunders as the Balfour Note and the Near Eastern imbroglio. Liberals and Labour demand the dropping of costly adventures abroad. As the election progresses, it will, perhaps, become clearer whether either advocates a clean cut of the responsibilities accepted in Palestine and Iraq, which Mr Bonar Law apparently accepts, as he must, in our opinion, accept, but will curtail as occasion arises. Labour demands independence for Egypt and self-government for India. Mr Bonar Law, silent as to Egypt, promises India development on present lines.

is more noticeable than divergence. Nor do divergencies develop very strikingly on the all-important questions of Reparations and Inter-Allied Debts. The Independent Liberal, the Manchester, and Labour manifestoes all demand revision of Reparations in accordance with German capacity to pay. Mr Lloyd George takes the same line; but stands on the Balfour Note position that we cannot, while paying America in full, remit all Continental debts, and he adds that Reparation reductions should not be entirely at the expense of this country. Mr Bonar Law frankly recognises that old estimates of Reparation possibilities were fantastic, but thinks there is a disposition to underestimate them now. The subject does not perhaps lend itself to definite and detailed election pledges, and we are glad at least to find nothing in his words to preclude the hope that he will try to get back to the position as it stood before the Balfour Note—a position which appeared to provide a unique opportunity for achieving a Reparations agreement with France, and making a gesture that would unlock the door to Anglo-American co-operation.

It is when we approach the more domestic problems of finance, economy, unemployment, social reform, and trade and industrial policy that the divergencies between the various programmes emerge more sharply. Mr Bonar Law promises administrative economy. The Cabinet Secretariat is to go—a small saving in money, but a welcome reversion to old machinery, although many will doubt whether, in addition to a Secretary to the Cabinet, a co-ordinating official for League of Nations work should not also be retained. The Pensions Ministry is to be merged with another Department (a decision unacceptable to Labour), and it is thought possible that the same fate awaits the Labour Ministry. Other economies are also to be pursued. But here, as in much of his programme (by his own admission) his policy is negative. Economy is to be pursued by masterly inactivity as regards social reform. The unemployment burden he cannot shelve, and he will give "assistance" to agriculture, as also would Mr Lloyd George. Labour would "reorganise" agriculture at the expense of the landlord rather than of the worker. But Mr Bonar Law gives no pledge as to housing. Labour insists upon "a national housing scheme"; Liberals promise "defence of such essential social services as education, housing, and public health." Labour demands larger old-age pensions and pensions for widowed mothers. The Independent Liberals and the Manchester Liberals would further industrial peace by co-operation between employers and unemployed; Labour demands work or maintenance; Mr Bonar Law, while promising emergency unemployment measures now, looks forward to the time when industries will shoulder their own unemployment problems, and would in the main leave industry to work out its own salvation. It is on industrial matters that the cleavage between parties is most pronounced. For Labour would nationalise railways and mines. As regards the latter, the Manchester manifesto is in favour of the acquisition by the State of mining royalties, but is vehement in general support of private enterprise. Mr Henderson has been trying to commit Labour to a war on the whole present system of industry, while his Labour colleagues are at pains to tone down his declarations.

Turning to finance, we find the Labour party under the necessity of explaining how to find the money for big social expenditure. They, like Mr Bonar Law, and everyone else, preach administrative economy, and like the Liberals they would hope to save money through disarmament. But they would also increase the death duties and super-tax; they would tax land values, as also would the Liberals. Labour advocates further the redemption of debt through a graduated capital levy on fortunes over £5,000. This proposal, coupled with State control of industry, will serve to rouse the fierce antagonism of the business community, and will doubtless scare away from the Labour party many moderate progressives. It is safe to assert that, had a capital levy been instituted after the war, it would have collapsed with the sensational drop in values. Of its imposition in today's difficult circumstances, no man could foresee the ramifications of effect, and to put it into force in the teeth of fierce and general opposition of those subject to it might be well nigh impossible. But it is perhaps worth while to remember the possibility that if prices remain at

their present level, the time may come before many years are passed, when the business world itself will at least consent to consider such a scheme as one of two very unpleasant alternatives.

Only two manifestoes mention the House of Lords, the Labour party and the Manchester Liberals demanding the abolition of the hereditary principle; while the Independent Liberals support proportional representation. Labour also stands for adult suffrage, while the Independent Liberals desire "political and legal equality for men and women." All parties are aware of the important fact that this is the first party election at which the women's vote will operate. Mr Bonar Law will doubtless have something to say on the question of sex equality when he addresses a mass meeting of London women. To many other points in the manifestoes space forbids reference. But we have left to the last one that is of vital importance—namely, the question of Free Trade and Protection. Mr Bonar Law said at Glasgow that his policy of "leaving things alone" applies to fiscal matters. That is satisfactory so far as it goes. But it does not go far enough. We trust that he will state plainly whether he will or will not repeal the Safeguarding of Industries Act, and the so-called "McKenna" duties, and with them all the tinkering attempts at Imperial preference which have marked the legislation of recent years. The "free breakfast table" demanded by Labour may be a distant goal to aim at rather than an immediate possibility; but as regards the safeguarding of Industries Act and other post-war changes in our fiscal system, the clean sweep advocated alike by Liberals and Labour is in our view one of the first postulates of economic sanity.

In reading this brief summary of political programmes the citizens of many foreign nations would probably be struck mainly by two things. First, the similarities of view on many vital points; secondly, the absence (in intention, at any rate) of subversive or unconstitutional proposals. Even the Labour Party, two or three of whose proposals will in some quarters be regarded as subversive, are at pains to state that their policy is neither Communism nor Bolshevism, but is, on the contrary, "the best bulwark against violent upheavals and class war." Of equal importance is the contrast between the election promises of 1922 and of 1918. In 1918 Utopia was dangled before the electorate, and from the folly of that intemperate electioneering we have been suffering ever since. In 1922 promises everywhere are sober, except, perhaps, in parts of the Labour programme. Mr Bonar Law is cautious in the extreme. He may, if returned to power, find himself forced to give far more than he promised at the polls. Tranquillity is the most modest of all election mottoes in recent times, and Mr Bonar Law's refusal to go vote snatching with glittering gifts is entirely creditable. Nevertheless, although we agree with Mr McKenna that peace and quiet are what we need, there are some urgent problems that cannot be solved by inactivity, and we predict that quiescence will prove less possible in many directions than Mr Bonar Law imagines. The Liberals, as well as the Conservatives, frankly avow that this is not a time when the country can afford costly reforms, which in happier financial circumstances they would advocate. So the electors are to go to the polls in no unreal atmosphere, but with the hard limitations of economic fact before their eyes. In some respects issues are still confused. But the next week or two will produce clearer definitions of doubtful points; and we are confident that from the multitude of counsellors and the conflict of principle will emerge a better Government and a better Parliament than that which was born of emotional stress and insincerity in 1918.

MR LLOYD GEORGE: SOME GLIMPSES OF HIS CAREER.

WITH the fall of his Government Mr Lloyd George brings to an end one of the longest continuous terms of Cabinet office in our political history. That it is the close of his public career we do not for one moment suppose. The ex-Prime Minister is the same age to-day as Mr Gladstone was when he entered on the first of his four Premierships, and if Mr Lloyd George is young in years, as age is reckoned among politicians, he is equally young in those

essential qualities of vigour and vitality. It is not surprising—indeed it can hardly be otherwise—that of late months the Prime Minister has been ageing somewhat and showing evidences of fatigue, but a man, who after 17 years of the most strenuous public service, can display the energy which Mr Lloyd George is putting forth to-day is anything but a spent force. This, therefore, is not the occasion to write Mr Lloyd George's political obituary; but it is appropriate to recall, before the new chapter opens, some of the leading features of the part which he has played in our political history since the resignation of Mr Balfour's Government in December, 1905.

In the three phases of history which have occurred since that date, Mr Lloyd George has made a quite distinctive contribution. Even if the war had not made him one of the leading statesmen of Europe, Mr Lloyd George would have secured, and, indeed, had to some extent already secured when the war broke out, a European reputation. The eight years before the war were as full of Liberal legislation, or attempted legislation, as any in our recent history, and although many of the most notable contributions of this period were the work of other Liberal Ministers, Mr Lloyd George himself was in popular estimation associated with the most outstanding economic developments of this period. The two most important features, and far-reaching in their effect, were the principle of National Insurance of the working classes against ill-health, accident, and unemployment, on the one hand, and on the other the development of the system of graduated and differential taxation culminating in the super-tax and graded estate duties of the Budget of 1909. A moment's thought will show the immense importance of these two conceptions, in enabling Great Britain to shoulder the financial burden of the war on the one hand, and on the other to maintain a population free from acute distress in the unexampled post-war slump in world production. It is interesting to find in many text-books on public finance published on the Continent of Europe that "Lloyd Georgeism" has nothing to do with international affairs or even homes for heroes, but is a synonym for very steeply graduated direct taxation. It is still possible that the most abiding developments associated with Mr Lloyd George's name may be the principles embodied in Liberal legislation between 1906 and 1914.

This is not the place to enlarge upon Mr Lloyd George's personality. The number of persons who have come into personal contact with him during his long period of office is so large, his personality is so clearly mirrored in his public activities, and his exceptional manner and charm have been so frequently analysed and publicly discussed that every citizen interested in public affairs feels that he has an intimate knowledge of Mr Lloyd George's characteristics. But if our conception that the achievements of Mr Lloyd George in 1910 may outlive all but one of the achievements of the post-war Ministry, even if they do not rival his war successes, is correct, it will perhaps illustrate the view that the ex-Premier is a bad captain, but a superb first mate. The partnership between Mr Lloyd George and Mr Asquith was one in which, at all events until 1916, the guidance of the older statesman was a help to and in no sense fettered the energy and enterprise of his younger colleague, and it will perhaps be the verdict of history that a better result is achieved when great driving force and imagination are under the direction of balanced judgment and highly trained intellect than when the process is reversed.

As regards the vexed question of Mr Lloyd George's war activities, we number ourselves among those who have profound admiration for the contribution he made during that great struggle. His measures at the Treasury on the outbreak of war were those of a man of action, and throughout the war his fundamental conceptions in such matters as the foundation of British credit in America, of the part that artillery and other material implements would play at the front, and of the need of unity of command were often intuitively seized months or even years before they came home to his colleagues. The story of his ordering of heavy artillery in the teeth of the active opposition of the War Office, the Treasury, the Board of Trade, and the barely concealed distrust of many of his Cabinet colleagues, and the sudden vindication of his foresight within a week of the opening of the Battle of the Somme, reads almost like a

fairy tale. It may perhaps be said by his critics that his early support of the introduction of conscription, which involved so radical a departure from the principles of his political faith, illustrates the lightness of the hold which Mr Lloyd George's mind has upon fundamental political ideas, but the events proved that he was right in urging this break with deep-rooted British tradition, and it illustrates Mr Lloyd George's ability to gather ideas from all and every source that he was able to urge on his side that among many of the progressive political parties on the Continent the idea of national service was defended as the most democratic form of national defence. In our opinion the time is still not yet ripe to speak of Mr Lloyd George's accession into the highest honour in the Kingdom. But the criticism that the administrative changes which he made in the first twelve months of his Premiership, such as the institution of the War Cabinet, the establishment of the Ministries of Food, Shipping, and National Service, were changes which had been prepared, and would have taken place under his predecessor, cannot in our opinion rob him of the credit that it was his régime which carried them into effect, and that under his leadership there was undoubtedly a great speeding up of the machinery of war administration. The friction between overlapping departments was eased, and though in a few cases, perhaps, ineffective pieces of machinery were instituted, which were subsequently jettisoned, the war administration developed gradually increasing power and efficiency. Against these achievements, no doubt, something has to be off-set on the score of Mr Lloyd George's confirmed distrust of the professional soldiers, which led him to intervene in strategy, and sometimes to thwart the considered views of the General Staff. But even if the verdict of history is given in favour of the full indictment against him, which General Maurice and Sir William Robertson have made on these grounds, there will remain, in our opinion, a very heavy credit balance to his account with the nation during the greatest struggle in its history.

With the Armistice, however, in November, 1918, came his great miscalculation, which is mainly to be attributed to the little strand of self-distrust which is woven into the warp of Mr Lloyd George's mental equipment. Before Mr Lloyd George took the decision of appealing to the people, the possibility of an indemnity from Germany had been very fully examined and explained to the Government by both Treasury and Board of Trade experts, and although Mr Hughes, Lord Cunliffe, and others differed from the very modest estimates of the Government's official advisers, the Prime Minister had all the material available for forming a fair judgment on this vital question. Moreover, Mr Lloyd George had before him all the arguments for a peace of reconciliation, and his prestige both here and in Europe was sufficient to enable him to put such a policy before the country. All the world knows how his courage failed at the critical moment, and although he himself was guarded in his statements about Germany, he became a party to the coupon election, and allowed the Coalition candidates to go to the polls with rash promises of impracticable reparations and Utopian social reform. The election promises of 1918, and the Conservative majority in the House of Commons, which was never really in sympathy with the radical tendencies of the head of the Government, have been mill-stones round his neck from that day to this.

Into the record of post-war Coalition we do not propose to enter here, but will leave the record of its merits and achievements, no less than its blunders and vacillations, to be dissected into atoms before the public gaze by the political protagonists in the electoral battle of the next three weeks. But it is impossible to close any retrospect of Mr Lloyd George's career, however sketchy, without some reference to the possibilities of the future. At the moment Mr Lloyd George is preaching the doctrine of national unity. But national unity is not a policy. It is either a fact or not a fact. We are, for example, as a nation united in loyalty to the Throne, and in affection to its present occupant, and we are at one in our fight against disease and misery. But to call for "unity" where there is no foundation of agreement is a harmless but futile pastime. Devotion to such a pastime is explicable in the case

of a Minister still sore at the destruction of the edifice of political compromise which he had laboriously constructed. But this phase is one which the country is not likely to take very seriously. Of far greater importance is the question as to where Mr Lloyd George will eventually find his political home. Of the direction of his future orientation there can be little doubt. The roots of the Tory revolt against his administration lie in the belief that Mr Lloyd George has been and remains a Liberal in outlook, tradition, and sympathy. When he realises that the forces which produce unity—such as the pursuit of victory, or the vindication of national honour—are no longer operative, and that there are no substitutes, he will turn in the direction in which the whole of his past history tells us he must turn. The political ideals of to-morrow, or those of them that will appeal to his mentality, will be such as can only be furthered by the organisation of the progressive forces. Among the chief organisers Mr Lloyd George must in the end inevitably be found.

THE AGENDA OF THE PEACE CONFERENCE.

THE moment that the danger of a new war between Great Britain and Turkey was removed, the Near Eastern question relapsed into its usual place in the far background of the public consciousness. Our interest in the crisis abroad was diverted to the domestic crisis which it had precipitated. Yet though the Mudania Armistice ensured the meeting of a peace conference, and settled—or shelved—one or two of the most dangerous questions, a host of other questions (equally important, though less immediately conducive to a breach of the peace) were passed over in silence; and all or any of these may produce a deadlock when the parties assemble.

A controversy as to who the parties are to be threatened difficulty. The principal Allied Powers were apparently ready to admit Russia to a separate conference on the régime to be established in the Straits, but not to the peace conference between Turkey, Greece, the Powers of the Little Entente, and themselves. Russia, on her side, however, maintained, with good reason, that the status of the Straits will virtually be predetermined by the conditions of the peace treaty. We are, therefore, glad to see that the Allies have advanced a step towards meeting Russia's case by inviting her to participate in the peace conference so far as it relates to the question of the Straits. Bulgaria receives a similar limited invitation; but Bulgaria, it must be admitted, has also a direct interest in any change of sovereignty over the province of Eastern Thrace, with which her frontier marches, and a still more vital interest in the future of Western Thrace, which involves her promised outlet to the open Aegean Sea. Lastly, when the question of the Capitulations is raised, as it certainly will be (and that in a rather truculent way) on the Turkish side, Powers which have carefully held aloof from Near Eastern affairs will suddenly find themselves affected. It will be curious, for instance, to see what line is taken by the United States—a country that has founded a number of important educational, medical, and philanthropic institutions in Turkey, with valuable land and buildings and large American staffs. The American people are bent upon non-intervention, but they are also tenacious of established claims and vested interests in foreign countries. The denunciation of the Capitulations by Turkey would force this issue upon the Americans, especially in view of the fact that their capitulatory rights, secured under a commercial treaty of 1830, are so favourably formulated in respect of consular jurisdiction that (on the "most-favoured-nation" principle) they have become one of the pillars of the entire structure which the Turks now hope to overthrow. It is hoped that Washington will accept in some form the invitation extended to her to take part in the Conference.

The Capitulations are a body of rights, vesting partly in foreign Governments and partly in individual nationals of foreign Powers when resident in Turkey; and these rights are derived partly from bilateral treaties, still more from unilateral charters promulgated by the Ottoman Government, to which the name "Capitulations," or in plain English "Articles," seems properly to belong, and still more again from custom and case law. The essence

of a legal system is its interpretation, and, during the last century and a-half, the Capitulations have been construed more and more in favour of the foreigner and less and less in favour of the Turk, in proportion to the weakness of Turkey and the strength of the Powers. When interpretations conflicted, as they frequently did, in dealing with such a miscellaneous and amorphous body of law, the Powers generally got their way, because in the last resort they could exercise naval and military pressure upon the outlying extremities of the Ottoman Empire. But how will the bargaining go now when the tables are turned, and the Turk, secure in the fastnesses of Anatolia, can threaten the Powers either at the Straits or along the open frontiers of Syria and Mesopotamia? The Turks are determined to compensate themselves for the loss of their non-Turkish provinces by becoming masters in their own house, and, apart from any questions of justice or expediency, the factors of geography and strategy are certainly working in their favour.

Possibly a compromise may be sought by an analysis of the capitulatory rights into their component elements. The Powers might consent to give up their capitulatory veto upon changes in the Turkish tariff, or their minor privileges, such as their right to maintain their own post offices on Turkish soil, in order to retain at least part of their consular jurisdiction. And individual foreign nationals might reconcile themselves to losing their present immunity from most Turkish taxes, so long as they retained the privileges included under "Personal Statute." Both sides have a genuine case. The Turks feel that they cannot carry on the Government of their country with the Capitulations in their present form, and the foreign residents feel that, without Capitulations, they cannot carry on their business in Turkey. There is infinite possibility of compromise, and it is to the interest of neither party to push their contention to extremes, but, unfortunately, that is no guarantee that they will not do so in practice. The stakes are great, and the negotiations will be extremely hard.

An equally difficult matter of negotiation will be the protection of those non-Turkish minorities in Turkey who are not foreign, but Ottoman subjects. Their ancient privileges of cultural and religious autonomy have ceased to be effective during this last period of internecine strife between the various Near Eastern nationalities, while, on the other hand, considerable Turkish minorities have come under the government of the non-Turkish Near Eastern countries, and are in need of safeguards as well as the Greeks and Armenians who may remain under Turkish rule. Reciprocity is the key to a solution of this problem, and the Turks, in their National Pact, have declared themselves willing to grant to their minorities the same privileges as are secured, under the peace-treaties, in defeated, aggrandised, or newly-created States in Europe. It may be argued, however, that these privileges, whether sufficient, or not in Western or Central Europe, are inadequate for minorities in Near Eastern countries, and if this is so, the diplomatic difficulties in the way of getting a satisfactory charter will be serious, for Turkey, Greece, Bulgaria, Roumania, and Jugoslavia will be up in arms against any proposal, even if applied to all of them, which differentiates them from other Powers. There is a question of status and amour propre involved here of a very delicate kind.

In addition to these general questions, there are a number of territorial problems to be disposed of, even after the settlement of Eastern Thrace. There is Western Thrace, for instance, where the Turks will demand a plebiscite and the Bulgars an economic right of way. There are the Greek islands of Cyprus and the Dodekanese, on which all three of the principal Allied Powers have liens—liens that differ from one another in effectiveness, but which are all alike invalidated by the principle of self-determination. There are the non-Arab parts of Mesopotamia, which contain not only the Kurds, but the oil-fields of that blessed country, and which the Turks are determined to reclaim. And finally, there is the Armenian National Home, which we have a last faint chance of bargaining for in connection with a revision of frontiers in Kurdistan.

This formidable list of items by no means exhausts the catalogue. We have still to define, by agreement, the very

elastic formula regarding the freedom of the Straits, which has been implicitly embodied in the Armistice of Mudania. And there are all manner of financial, military, naval, and air controls asserted over Turkey in the text of the Treaty of Sèvres. It is true that these have never been operative, because the major part of Turkey had come *de facto* under the government of Angora more than a year before the treaty was signed. Yet even this litter of waste-paper has its dangers, for if the negotiators trip over it, they may fall upon the sharp edges of swords.

THE REDUCTION IN WAGES.

IN searching the economic horizon for signs of a real revival in trade it is natural and necessary that attention should be largely concentrated upon the great outstanding problems of international finance, whose solution must precede the restoration of activity in international trade and of prosperity in a manufacturing and exporting country like Great Britain. But it is desirable occasionally to turn from the study of those problems and to consider what progress British industry is making in respect of the domestic adjustment which is necessary if it is to be in a position to avail itself to the full of better world trade conditions when they arrive. In particular, attention is claimed by the degree to which this country has achieved the drastic reduction, which was so essential, in the costs of manufacturing those commodities which are exported in return for imports of the food and raw materials which the country requires for its livelihood. Unfortunately, data are not available for any generalisation as to the extent by which industrial production costs as a whole have been curtailed. But with regard to the essential item of wages, it is possible to trace the course of recent reductions.

In an article entitled "The Wages Tangle" in the *Economist* of January 21st we gave some figures showing average wage reductions in certain leading industries in the calendar year 1921. With the assistance of statistics compiled by the *Ministry of Labour Gazette* it is now possible to continue those figures by showing the average reduction for the same industries in the nine months ended September 30th last. In the following table the first three columns appear as printed in our January article, while the last column adds a calculation with regard to the past nine months, based on the latest official information:—

	No. of Work- People Affected by Wages Changes in 1921.	Net Reduc- tion in Weekly Wages Bill in 1921.	Net Reduc- tion per Head per Week in 1921.	Net Reduc- tion per Head per Week in Period Jan. 1 to Sept. 30, 1922.

In the coal mining industry the fall in average wages in the past nine months has been little more than a quarter of the fall recorded in 1921. But a drop of over 50 shillings per week over the whole period of 21 months from January 1, 1921, to September 30, 1922, is sufficiently striking. The iron and steel industry, however, shows even more remarkable figures. Here an average weekly wage decline of only 5d short of £2 in 1921 has been followed by a further fall of 19s in the past nine months. These large wage cuts have been the principal factor in restoring the British iron and steel industry to an economic basis, and in enabling it to produce at prices at which foreign competition can be met. In the engineering and shipbuilding trades the average wage has fallen more heavily in the past nine months than in the whole of 1921, and the same is true of the building trade, and of public utility and transport services.

There are, as we pointed out on a former occasion, great diversities in the levels of wages prevalent for the same classes of work in different districts. Naturally, also, the fall in wages has taken place in widely varying proportions in different branches of industry. The *Ministry of Labour Gazette* points out that while in some

cases full-time weekly rates at the end of last month were only 20 per cent. above the pre-war level, in other cases they were as much as 120 or 130 per cent. higher. But our official contemporary ventures, in a very tentative fashion, on an estimate that the average general level of full-time weekly wages is now 75 or 80 per cent. above that of July, 1914, whereas it was estimated to be 170 or 180 per cent. above that level at the end of 1920. We quote the relevant passage: "The information in the possession of the Department is not sufficiently complete to enable the average percentage increase for all industries and occupations to be calculated exactly, but it is estimated that at the end of September, 1922, weekly full-time rates of wages of adult workpeople, in the industries for which particulars are available, averaged about 75 or 80 per cent. above the pre-war rates. As the length of the normal working week had been considerably reduced in the same period, the usual range of full-time working hours in industry generally being about 44 to 48 weekly at the end of September, 1922, as compared with 48 to 60 before the war, the percentage increase in hourly rates of wages would be substantially greater. At the end of 1920, shortly before the decline in wages began, the increase on pre-war rates in the same industries is estimated to have been about 170 or 180 per cent. The average reduction in rates of wages from the beginning of 1921 until the end of September, 1922, therefore, would appear to have been equivalent to about 35 per cent. of the rates current at the former date."

It will be noticed that the average increase in the wage level, as here tentatively computed, is in close correspondence with the Ministry of Labour cost of living index number, which showed at October 1st an increase of 78 per cent. over July, 1914. The close similarity in the two percentage calculations is rather remarkable. But there would still appear to be considerable scope for adjustment not only as between one industry and another, but also between one district and another in which the same industry is pursued.

One important point that emerges from a review of the wage position is that the unskilled labourer in many industries seems to have been able to retain a larger proportion of his war and post-war advance in wages than his skilled companion. The following figures illustrate the point. In the building trade the latest figure for the labourer's wage shows an advance of 98 per cent. on the 1914 level; that for bricklayer, 76 per cent. In the engineering trades fitters and turners are now earning on an average 48 per cent. more than before the war, and labourers 77 per cent. more. Similarly, in the shipbuilding industry, shipwrights' average wages are 42 per cent., and labourers' 75 per cent. above the level of August, 1914. But it also appears that the position as between skilled and unskilled, in the matter of wage increase over the pre-war level, has been undergoing some readjustment. For at December, 1920, the excess over the pre-war level shown by labourers' wages was 225 per cent. in the building trades, 210 per cent. in the engineering trades, and 208 per cent. in shipbuilding, while in the three industries the excess shown at December 30, 1920, in the average wage levels of the skilled workers mentioned above was 149 per cent., 130 per cent., and 121 per cent. respectively.

The close approximation, to which we have referred above, between the relative position of wages and costs of living to their respective pre-war levels is no doubt satisfactory from some points of view. But the time has come to remember that the cost of living, which in times of war stress served as a handy and perhaps necessary standard, is not an ideal wage level criterion even for trades which are not subject to acute competition. In the long run the standard of living in the country as a whole must be regulated by wage levels in the export industries, and wage levels there must be regulated in accordance with the ability of these industries to pay. One of the most satisfactory features of recent industrial tendencies is that wages in export and competitive industries have been steadily adjusting themselves to the levels dictated by the economic necessities of these industries. But in other industries, particularly those engaged in transport and distribution, the tendency is still to regulate

wage levels by the cost of living. This mere fact may in itself be an influence tending to keep up the cost of living, and therefore to depress the real value of wages of other workers whose money rates of pay are determined by the pressure of international competition. Herein lies an important problem, demanding the careful attention of organisations of employers and employed—namely, whether economic wisdom and common interest do not lie in the direction of modifying the too rigid use of cost of living standard (where it is still adopted) in such a way as to permit more rapid adjustment to those levels which in other industries are being fixed by purely economic considerations.

ARGENTINE RAILWAYS.

THE year ended June 30, 1922, is described by the general manager of one of the four great Argentine railway companies as colourless, and it appears to be a true description in so far as it compared unfavourably with the boom year 1919-20, and was considerably better than the year 1920-21, one of the poorest on record. Labour troubles were conspicuously absent, and while industrial depression was responsible for some falling off in traffic, the fall in prices, especially of fuel, enabled the companies to show considerable expansion in net receipts, although tariff increases did not come into operation during the year under review. The previous year's dividends are repeated, with the addition of a payment of the statutory dividend on the 5 per cent. second non-cumulative preference stock of the Buenos Aires and Pacific Company, which received no distribution a year ago. The dividend record of recent years reads as follows:—

Company.	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
B.A. and Pacific, ord.	% nil	% nil	% nil	% 2	% 5	% nil	% nil
Do 5% 2nd non-cum. pref.	5	12	5	5	5	nil	5
B.A. Great Southern	5	4	2	3	7	4	4
B.A. Western	5	2	2	2	7	4	4
Central Argentine, ord.	5	1	2	2	6	nil	4
Do deferred	5	nil	nil	nil	6	nil	nil

The dividends paid for 1920-21 were only possible in the case of the Buenos Aires Western and Buenos Aires Great Southern Companies by withdrawals from reserve of £500,000 and £550,000 respectively, while the Buenos Aires and Pacific, after payment of fixed charges, showed a debit balance of £587,160. Fortunately this company had a large carry forward, upon which it was able to draw to the extent of over £647,000. In the next table the results for the year 1921-22 are set out:—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Gross receipts	7,465,112	8,412,836	4,098,030	9,442,562
Working expenses	5,318,508	6,259,563	3,226,063	7,389,951
[Ditto for 1920-21]	(5,872,227)	(7,364,273)	(3,767,246)	(7,779,799)
Net receipts	2,146,604	2,160,273	871,967	2,052,611
[Ditto for 1920-21]	(981,397)	(1,368,254)	(377,884)	(1,966,865)
[Ditto for 1919-20]	(2,487,990)	(2,938,813)	(1,603,196)	(3,164,809)
Other income (less charges)	Dr 112,562	168,003	157,175	73,993
Net income	2,034,042	2,328,276	1,029,142	2,126,604
Fixed charges	1,881,054	818,473	454,776	873,337
Balance	152,988	1,509,803	574,366	1,253,267
Preference dividends	110,000	400,000	129,855	436,306
Ordinary dividends	nil	1,163,600	598,494	1,127,479
		(4 %)	(4 %)	(4 %)
Reserves	..	..	Dr 120,000	Dr 150,000
Inc. (+) or dec. (-) in carry-forward	+ 42,988	- 53,797	- 33,983	- 160,518

A year ago the Central Argentine showed by far the best results, but the accounts for the past year show a less favourable position, net income being nearly £300,000 lower, while there was no profit on exchange, whereas for 1920-21 nearly £341,000 was credited on this account. To maintain its dividend the company has not only to withdraw £150,000 from reserve, but reduces the carry-forward by over £160,000. The Western withdraws £120,000 from reserve, and reduces the carry-forward to less than £4,000, while the Great Southern carries forward only £2,700. The B.A. and Pacific carries forward £70,000, or less than $\frac{1}{4}$ per cent. on the ordinary capital.

The next table distinguishes the receipts from passenger train traffic and goods traffic, giving a comparison with the figures for 1920-21:—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1921-22.	Inc. or Dec.	%	1921-22.	Inc. or Dec.	%	1921-22.	Inc. or Dec.	%
B.A. Pacific	1,975,874	- 65,803	3.2	5,466,732	+ 713,026	15.0	7,442,606	+ 647,223	8.9
B.A. Gt. Sthn.	3,731,693	- 133,733	3.5	4,688,143	- 175,958	3.8	8,419,836	- 312,691	3.6
B.A. Western	1,348,602	- 75,899	5.3	2,749,428	+ 28,799	1.1	4,098,030	+ 47,100	1.1
Central	2,816,438	+ 15,943	0.3	6,201,665	- 290,070	4.5	9,018,103	- 304,102	3.1

A year ago passenger receipts showed an increase, while goods traffic receipts were all substantially down. In the past year the changes are by no means uniform, but with the exception of the B.A. and Pacific, total receipts are slightly lower. The changes in total receipts are compared in the table below with those of recent years:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
B.A. Pacific	- 12.7	+ 2.6	- 5.0	+ 19.2	+ 19.0	+ 30.8	- 16.4	+ 8.9
B.A. Great Sthn.	- 16.8	+ 12.3	+ 3.3	+ 1.8	+ 25.6	+ 30.1	- 8.4	+ 3.6
B.A. Western	- 13.0	+ 7.6	- 7.7	+ 14.8	+ 30.3	+ 41.0	- 21.1	+ 1.1
Central Arg.	- 6.6	- 0.3	- 8.5	+ 17.8	+ 12.0	+ 41.0	- 0.2	+ 3.1

The best showing is made by the Central Argentine, whose receipts during the past two years have fallen away only slightly after the substantial rises of the three preceding years. This company, however, has conspicuously failed to effect the substantial reduction in the ratio of working expenses to receipts recorded by the other three lines, as may be seen from the appended table:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
B.A. and Pacific	62.63	61.16	65.68	65.80	71.51	69.69	85.68	71.24
B.A. Great Sthn.	58.56	57.04	61.06	76.16	77.96	69.19	84.33	74.34
B.A. Western	58.82	58.22	66.88	75.68	75.08	69.48	90.88	78.72
Central Arg.	58.54	64.53	68.71	73.93	84.60	67.66	79.82	78.26

Three of the companies now show a lower ratio than in 1918-19, but the Western, which last year recorded an abnormal increase, although it has achieved a considerable reduction, has not been able to reduce the ratio below the 1918-19 level. The next table shows the divisions of expenditure in which the reductions have been effected:—

(000's omitted.)

	Running Expenses.				Maintenance.				General and Miscellaneous.							
	1920-21.		% of Revenue.		1921-22.		% of Revenue.		1920-21.		% of Revenue.		1921-22.		% of Revenue.	
	£	%	£	%	£	%	£	%	£	%	£	%	£	%	£	%
Pacific	3,832.1	55.9	3,279.5	43.9	1,519.2	22.1	1,472.3	19.8	520.8	7.6	566.7	7.8				
Great Southern	4,680.2	53.6	3,598.6	42.7	1,950.1	22.3	1,954.9	23.2	733.9	8.4	706.1	8.1				
Western	2,272.8	54.8	1,843.5	45.0	1,132.9	27.4	1,029.5	25.1	361.5	8.6	352.7	8.8				
Central	5,021.8	51.5	4,668.8	49.4	1,003.7	20.6	1,942.6	20.7	754.1	7.8	773.6	8.1				

Running expenses have been substantially lowered, thanks to a very large fall in the price of coal. The case of the Great Southern is probably typical of the other companies. The general manager in his report says:—"Whereas in previous years the price of fuel has been the main factor of increased expenditure, this year our fuel bill is the influencing item of decrease, the reduced expenditure under this head amounting to £1,025,457, or 49 per cent. This is chiefly due to the fall in the price of coal, for which the average issue rate over 1921-22 was £3 11s 3d per ton, as against £7 0s 1d per ton over 1920-21." The Central Argentine report, on the other hand, mentions that while the cost of fuel was lower, the settlement, after protracted negotiations, of various outstanding staff matters involved higher pay bills, whilst the upkeep of the carriage stock was higher than in the previous year. Maintenance expenditure, on the whole, however, was no higher than in the previous year, and the rate per mile of track was lower in all cases, except the Pacific:—

	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	Ten Years Average.
Pacific	248	295	451	414	429	290
Southern	254	367	464	507	500	320
Western	312	422	411	371	273	328
Central	376	426	525	606	588	393

From this brief examination of the statistics it is clear that a considerable recovery from the bad year 1920-21 has been made, and from the traffic returns for the current year to date it would appear that a further improvement will be shown in 1922-23:—

	Gross Receipts.		Net Receipts.	
	Amount.	Inc. or Dec.	Amount.	Inc. or Dec.
B.A. Pacific	£ 2,069,000	+ 90,000	£ 544,000	+ 311,000
B.A. Great Southern	2,341,000	- 34,000	544,000	+ 311,000
B.A. Western	1,213,000	- 52,000	309,000	+ 151,000
Central Argentine	2,988,000	+ 130,000	..	..

Moderate increases in tariffs came into force at the end of July last, the necessary decree having been issued on June 24th. The general manager of the Great Southern states that official sanction was given to tariff increases a year ago, "but no sooner was this given than it was annulled, and the companies were obliged to withdraw the increases in October and November." Prospects are undoubtedly brighter than they were a year ago. The soberly optimistic forecasts of the managers of the companies are confirmed by the remarks of Mr R. J. Hose, chairman of the Anglo-South American Bank at the annual meeting on Tuesday, who said that all indications pointed to a bumper crop, while the labour situation is satisfactory, and the general outlook is regarded optimistically. Reference was made by the chairman at the meeting of the Great Southern Company to the oil undertaking in which three of the companies are interested, and he stated that steady progress was being made with exploratory work, and that there had been a small but regular output of oil throughout the year, which had been used on their railways. He also held out the hope that for 1922-23 there might be a return to the pre-war rate of dividend, namely, 7 per cent., provided that the harvest proved to be an average one.

ECONOMIC CONDITIONS IN VENEZUELA.

(BY OUR CORRESPONDENT.)

VENEZUELA, more favoured than other Latin-American nations, suffered little from the effects of the European war during its spell. But, as in other countries of the New World, the post-bellum results of the conflict have been reflected in the trade and commerce of this Republic. These are particularly noticeable in the figures for the fiscal year ended June 30, 1921, when the revenues showed a deficit of 21,095,026 bolivares, as against a surplus of over 26,000,000 bolivares in the previous year, the revenue then having reached the record total of 104,887,330 bolivares. The notable difference in the two periods may be accounted for by the fact that in 1920 the Government enjoyed special revenue receipts from imports, while expenditures had been kept down to a reasonable figure.

On the other hand, the estimates for 1921-22 showed a marked reduction from 1920-21, revenue being reduced from 81,560,716 (actual) in 1920-21 to 63,234,000 bolivares (estimated) in 1921-22, or a decrease of 18,326,716 bolivares. Expenditures were reduced from 102,655,743 bolivares (actual) in 1920-21 to 63,234,000 bolivares (estimated) in 1921-22, or a decrease of 39,421,743 bolivares. Although, at the time of writing, the figures showing the actual revenues and expenditures for 1921-22 are not to hand, there are indications to suggest that receipts have dwindled considerably.

The Budget for the current year (1922-23) displays a more hopeful aspect. Revenues and expenditures are reduced by something like 1,500,000 bolivares from the corresponding estimates of 1921-22, the Budget balancing at 61,706,000 bolivares against 63,234,000 bolivares in 1921-22. The reduction in revenues is due to a decrease in the Treasury reserve, and in no way to a decrease in the actual receipts as estimated for the fiscal year. The Minister of Finance, in fact, points out that this Treasury reserve was calculated in the 1921-22 Budget

estimate at 8,205,000 bolivares, whereas it actually amounts to no more than 809,140 bolivares in the estimates for 1922-23. It is, therefore, due to this decrease in reserve that the total of estimated revenues is reduced, and not to any decrease in Customs receipts, Consular receipts, or other sources of revenue. On the contrary, most of the items on the revenue side have increased, notably Customs, which have advanced from 11,550,000 bolivares in 1921-22 to 15,566,000 bolivares in 1922-23; while mines, for the same period, are estimated to produce a revenue of 2,700,000 bolivares for the current year, as against 1,400,000 bolivares for the past twelve months. Other considerable advances are displayed by reason of the imposition of 30 per cent. and 25 per cent. tax respectively on certain import duties, by the transit tax, sanitation tax, and Consular receipts.

A noteworthy feature of the last Venezuelan Budget is the reduction effected in the National Debt, notwithstanding the difficult economic conditions which have prevailed during the past two fiscal years. Comparing the figures of 1921 with those of 1920, it appears that, in spite of the deficit in the Budget for 1920-21 of 21,095,026 bolivares, the National Debt has been reduced by as much as 6,837,059 bolivares. There is only one foreign obligation, namely, the 3 per cent. Diplomatic Debt of 1905, from which date the financial history of Venezuela may be said to begin, following upon the consolidation of the debt of 1880-81 and the 5 per cent. 50,000,000 bolivares German loan of 1896. Of the total Diplomatic Debt, namely, £5,229,700, there had been redeemed up to the end of 1921 £2,590,520, leaving the outstanding total at £2,639,180. In striking contrast to certain other Latin-American States, the Venezuelan Government, both during and since the war, maintained the service of its debt in sterling with commendable promptitude. But objection is taken in certain quarters, and not without reason, to the non-payment of coupons which were not presented at the proper dates during the war period in consequence of the occupation of parts of France and Belgium by the enemy. While investors would appear to have here a substantial grievance, there is reason to believe that the resumption of Presidential power, for a further period of seven years, by General Juan Vicente Gomez, will lead to favourable consideration of these claims and an equitable adjustment.

General Gomez's first Executive term was in 1908, from which date may be traced the gradual economic revival of Venezuela. The several international troubles which had been occasioned by the policy of his predecessor in office, General Cipriano Castro, had first to be straightened out, particularly the serious dispute with Washington, which had originated over expelling some Americans from Venezuela and the cancellation of their concessions. The controversy between Venezuela and Holland (which resulted in the Venezuelan guardship "23 de Mayo" being taken by the Dutch battleship "Jacob van Heemsterker" and towed to Willemstad, Curaçao); and that between Venezuela and the United Kingdom, relative to the British surcharges on imports from Venezuela into the West Indian Colonies, as well as the frontier dispute between Venezuela and Colombia (settled by arbitration as recently as April last in favour of the latter State), were all amicably arranged, thanks to the sound, commonsense, and tactfulness of President Gomez, whose attitude also towards the Allies during the war was wholly sympathetic. In fact, the President-Elect has proved himself as good a statesman as he is a soldier, with all his personal interests engaged in agriculture, which he has done much to promote and encourage throughout the Republic. It is no less noteworthy that under his régime foreign capital has had little reason to complain, in marked contradistinction to experiences gained under previous Venezuelan presidents.

British capital is interested in many Venezuelan industrial enterprises, such as railways, ports, public works, &c., representing a total of £2,382,756. It is understood that it is the intention of the Venezuelan Government, through its Legation in London, to initiate an economic propaganda throughout Europe with the object of encouraging investors to assist in the further exploitation of the minerals of that country.

THE MACHINERY OF INDUSTRIAL NEGOTIATION.

(BY OUR LABOUR CORRESPONDENT.)

FEW people realise the extent and complexity of the machinery of industrial negotiation. It is doubtful whether those who are engaged in industry and from time to time take part in negotiations are aware of the network of machinery which now exists. How many employers know how negotiations are carried on in industries other than their own, how wages are adjusted, to what extent and by what means unions in the same industry co-operate, whether agreements are national or local, and whether they are long term, short term, or undetermined agreements? And yet if industrial relations are to be put on a proper basis and industrial controversies settled by the most expeditious methods, these things should be known and studied in order that the best possible instruments of negotiation may be devised.

It has been left to the General Council of the Trades Union Congress and the Labour Party to collect the facts on the subject. They are to be found in a volume of 76 large pages published under the title of "Industrial Negotiations and Agreements," with a Foreword by Mr J. R. Clynes (2s net). The volume in question is analytical and descriptive, and not polemical. It will, therefore, be of service to a wider public than that for which it was produced, its object being, quite naturally, the enlightenment of the trade union movement. It is confined to the machinery by which negotiations between trade unions and employers are carried on, the provisions, where they exist, for common action and consultation by trade unions in the same or allied trades, and the extent and duration of collective agreements. Two special types of agreement embodying the sliding scale method of readjusting wages are singled out for special consideration.

Industrial agreements are broadly of two kinds—those which are legally enforceable and those which are not. The Trade Boards' decisions are the chief example of the former. The vast majority of agreements, however, depend for observance on the goodwill of the parties to them, and, notwithstanding the charges which have been made in the Press as to the violation of agreements, the terms of negotiated agreements are almost always observed. These voluntary agreements, operating to-day over a large part of industry, cover a wide field and regulate, often in very considerable detail, the general conditions of labour, though, as might be expected, wages questions take a prominent place in agreements.

The most striking feature of our system of industrial negotiation is its diversity as regards both structure and powers. Before the war there were in existence a large number of conciliation and arbitration boards and other devices for preventing or settling disputes. Though the number of these bodies increased rapidly in the years before the war, the proportion of workers covered by this machinery was not very great. In 1913 no less than three-quarters of the disputes, involving over two-thirds of all workers directly affected, were settled by direct negotiation.

Recent years have witnessed the development of a good deal of new machinery for discussion and negotiation. The Reports of the Whitley Committee inaugurated the policy of Joint Standing Industrial Councils for each industry, with district councils and works committees, and though these bodies have not fulfilled the dreams of their enthusiastic supporters, they have at least extended the scope of our permanent negotiating machinery. At the present time there are 70 Joint Standing Industrial Councils and 32 less formal Interim Industrial Reconstruction Committees on the same model. In addition, there are 93 other joint bodies on Whitley lines. The total number of workers covered by standing joint bodies of all kinds is about three and a half millions.

Where there is no Whitley Council or similar body there may be a permanent committee for negotiation when differences arise. In many industries *ad hoc* bodies are set up in cases of dispute. In others reference is only made to a permanent or *ad hoc* body when direct negotiations have failed. In some cases, again, there is a hierarchy of bodies, so that if agreement is not reached on

the first committee the dispute may be referred to a higher body, and ultimately, perhaps, to arbitration. Though the organisation varies from industry to industry, there are certain common broad features. The body usually consists of equal numbers of employers' and workers' representatives, with an independent chairman. There is often recourse to arbitration as a final way out, in which case there may be an independent board whose decision is binding. In other cases the final recourse is the strike or lock-out.

In every industry of importance there is to-day a well-defined procedure for the settlement of disputes and an agreed method of negotiation. Only in a small proportion of instances does the prescribed machinery fail in its object of securing agreement. This may appear to many to be a wild exaggeration, but it is literally true that vastly more disputes are settled by negotiation than by resort to strikes or lock-outs. The fact is, of course, that the public rarely hears of settlements reached by discussion, but is made fully aware of every stoppage following a breakdown of negotiations. It was pointed out not long ago that involuntary unemployment accounts for far more loss of time in industry than stoppages arising from disputes.

The development of this machinery has meant that the operation of collective agreements has become more widespread. In 1910 there were no less than 1,696 agreements in force, covering directly about two and a-half million workers, and indirectly many more. This, however, represented only about a quarter of the total number of wage-earners in the United Kingdom. Detailed statistics have not been published since 1910, but it is well known that the number of agreements and the number of workers covered by them have very largely increased. To-day at least three times as many workers are covered directly by agreements, and a substantial proportion of the remainder are employed on similar conditions, and their conditions are, therefore, indirectly determined by agreements. With the growth of organisation amongst both employers and workpeople agreements have in recent years operated over a greater field than heretofore. The tendency has been towards national agreements. In localised industries, such as cotton, "national" agreements are much easier to secure, but even in widely dispersed industries there has been a strong movement towards agreements covering the whole trade. It does not, of course, follow that national agreements lay down identical conditions all over the country, though there is more uniformity to-day than there was a few years ago. In the building, mining, printing, transport, textile, boot and shoe, and metal industries there are national agreements in operation. In some of these trades, and in hosiery, dyeing, bleaching and finishing, and furnishing there are district agreements. What may be termed local agreements are nowadays unimportant.

The duration of agreements varies very considerably from trade to trade. In some cases agreements are made for two or three years; in others, for a year or even less. In the majority of cases, however, agreements are not made for a fixed period, but there is provision for due notice to terminate on the part of either side, the period of notice sometimes being stated in the agreement. Policy varies from industry to industry, and in the labour movement there are at least two schools of thought on the subject. On the whole, employers are more strongly in favour of long term agreements, though the attitude of both trade unions and employers' associations towards the question of the duration of agreements depends very largely upon the state of trade when they come into operation. Employers naturally avoid as far as possible the termination of agreements at a time when labour can by a fresh agreement secure better terms, whilst the trade unions attempt to avert agreements terminating when economic conditions are such that less advantageous wages and conditions will be imposed by the employers.

One of the difficulties in the way of effective negotiation is the number of trade unions. The recent engineering dispute provided an excellent illustration. There were over 50 unions ultimately concerned, but only one employers' association. The employers have, indeed, in most industries, come nearer to "industrial unionism" than the workers. This question of the multiplicity of unions is one which, on its practical side, concerns the workers

alone. The movement towards amalgamation is primarily the result of a recognition of the weakness of overlapping organisations. When complete amalgamation has not been reached, many unions have formal agreements to consult each other, and there is frequently a permanent joint body or federation for this purpose. Many unions, again, have informal consultations whenever matters of common interest arise, but others, unfortunately, have no arrangements for joint consultation and action. The force of events is, however, making for the provision of means of consultation between unions concerned with the same problems.

Collective bargaining and all that it implies is now well established in British industry, and imperfect though the machinery may be in some industries and under some circumstances, it has, nevertheless, proved itself to be workable, and has been of enormous service in securing the settlement of disputed questions without an appeal to force. It may be argued that the logical outcome of a system of consultation and negotiation must be compulsory arbitration. That is a large question which cannot be discussed here. It may, however, be said that it is ruled out of court because the trade union movement will not accept it, and many employers' associations would refuse to surrender the power to lock out the workers. Moreover, agreements reached by give-and-take are more likely to work in practice than the edicts of an independent body. So far as industrial peace is attainable, it is attainable only by voluntary agreements, made by those directly concerned with observing them.

Notes of the Week.

Ireland and the New Government.—Our Dublin correspondent writes:—In Ireland, as in Great Britain, the downfall of the Coalition Government and the pending General Election are prominent, if not the predominant, factors in discussion of public events. Irishmen have been interested to hear from Mr Lloyd George that Mr Bonar Law is honest to the point of simplicity. And although neither the positive attribute nor its alleged qualification have been markedly characteristic of Mr Lloyd George's political record, they do not view the advent of his successor with any greater apprehension on that account. Yet apprehensions there are. It is of vital importance for Anglo-Irish peace and for the internal peace of Ireland not merely that the Treaty should be finally ratified by both sides, but that the policy and the spirit which underlie the Treaty should continue to guide British statesmen in the handling of all the detail matters leading up to the final ratification of Treaty and Constitution at Westminster, and incidental to carrying it into effect. It is true that Mr Bonar Law voted for the Treaty in the critical division, and that in the last few days he has given assurances that he intends to go through with it—indeed, for the honour of England he could do no less. On the other hand, Mr Bonar Law's record as an Ulster Covenanter in 1913-14 is not forgotten, and his avowed willingness in those days to resort to revolutionary bloodshed in defiance of the will of the Imperial Parliament in which he led the Opposition. The Irish public has noted the elaborate propaganda conducted in Great Britain by the N.E. Ulster faction, and now it is announced that strong Ulster deputations are to interview the Unionist associations throughout Great Britain before the elections. The Constitution is now complete and merely awaits ratification at Westminster before coming into operation on December 6th next. It is by no means a triumph of the draftsman's art nor a monument of ripe thinking on problems of political theory, but it can be amended at will during the next eight years by the Irish Parliament so long as the amendment does not touch the Treaty. Indeed, amended or not it should work well enough with any Parliament marked by the intelligence, moderation, industry, and respect for minority interests which Dail Eireann, acting as Constituent Assembly and Provisional Parliament, has displayed during the last two months. While the N.E. Ulster Parliament has been abolishing the proportional representation designed by

Westminster for the protection of its Nationalist and Catholic minorities, Dail Eireann, preserving proportional representation intact, has almost unsolicited and certainly unconstrained made special provision for the direct representation of the Protestant and Unionist Dublin University in the popular Chamber as well as in the Senate. Meantime the business community is feeling the pinch of adverse conditions which, however soon terminated, will continue to operate with ever-increasing effect for many months to come. One instance will illustrate. The Irish Agricultural Wholesale Society is a co-operative organisation designed primarily to buy and sell for the farmers on wholesale lines; it has branches and affiliations, it accepts deposits of money and pays interest on them, and it had grown to the point of having an annual turnover of some £1,500,000. It is the protagonist of the co-operative movement—which, as a whole, has a turnover of some £14,000,000—started by Sir Horace Plunkett's Irish Agricultural Organisation Society. The purchase of large stocks just before the rapid fall in prices, the giving of long credits, the consequent piling up of overdrafts, the victimisation of co-operative stores and creameries, the great losses of agriculture both in the pre-truce and the post-truce disturbances, have created for this undertaking a situation of extreme difficulty. The I.A.O.S., realising that the fate for a generation at least of the whole co-operative cause in Ireland is at stake, is assisting by seconding its secretary, Mr R. A. Anderson, the practical and organising brains of the movement, and the I.A.W.S. yesterday appointed him managing director, with special powers in view of the emergency. Many proprietary and joint-stock concerns are very similarly situated for similar reasons. It is most inexpedient in the public interest that sound enterprises honestly and efficiently conducted should be submerged by the shock of political upheavals. It is to be hoped, therefore, that there are official plans for dealing with the crisis, and that they will be ready in time. If, as has already been suggested, the banks and the Government will act in concert, each within their own province, they could mutually assist each other, and could certainly do much to forestall a great deal of private hardship as well as a definite economic loss and dislocation for the business community at large. There is everything to be gained and little to be risked in an effort to maintain the prestige and the financial credit of the country. The latest Exchequer returns show revenue received at £13,770,453, and the balance to credit on October 21st, £2,171,050.

Anglo-American Debt—A Stock Exchange View.—A

Stock Exchange correspondent writes:—Political diversions do not abate the profound interest taken by more thoughtful City circles in the approaching discussion, between British and American authorities, upon the subject of funding the war debt due from this country to the United States. The Mission may be prevented from going next Wednesday, the date previously arranged, and, if so, American opinion may not be the more placated by a second postponement of the Mission, which was to have included Sir Robert Horne, as Chancellor of the Exchequer, with the Governor of the Bank of England and a Treasury representative. That the Americans are not unprepared in some quarters to take a courageous view may be observed from many indications. "There should be no attempt on our part," says the fortnightly Review of a firm of New York Stock Exchange brokers, "to

disguise the fact that Europe needs our help, and that it is to our advantage to give it.....Even assuming that there is to be a substantial cancellation of foreign indebtedness to us, we still have to face the problem of obtaining payment for our surplus products. We need a foreign outlet for our wheat, corn, and other food-stuffs.....If the basic attitude of Europe towards its own problems changes, and a more conciliatory policy is adopted, we may be encouraged to make concessions that will provide a new basis for rehabilitation. First of all, however, it would seem that Europe must set its own house in order." Ten thousand bankers from all parts of the United States met in convention at New York during the first week of this month. The assembly was convened by the American Bankers' Association, and papers were read, to be afterwards discussed, by men experienced in the subjects upon which they spoke. It is reported that an influential Wall Street authority summed up the addresses, after the conference, by saying they expressed most clearly three things that the world required for its readjustment to-day. Readers of the *Economist* will at once recognise a familiar ring in the speaker's call for a "common honesty, hard work, and economy by governments and individuals alike the world over." To America, Europe may reply that hard work on Europe's part would be the more willingly undertaken if her produce were assured of a market where high tariffs did not inevitably exclude it. Yet, in the teeth of the rampart deliberately raised higher by the latest revision of American tariffs, the trade between our own country and the United States might be stimulated by the adoption of a wise, far-sighted method for repayment of our debt. One proposal suggests the handing to America of a bond issue possessing an international character of negotiability, with interest coupons payable at fixed rates on both sides of the Atlantic. Such bonds might easily become popular investments in our own country, and would be bought back by British investors appreciative of their security. The gradual effect would be to replant the loan in its country of origin, and thus to make Great Britain debtor to her own citizens instead of owing money to the United States. This is one of several plans put forward for making repayment of the debt an assistance to industry, and, whoever may be its members, the Mission to the United States to discuss the question of funding our war loans will have a great opportunity for demonstrating that present-day statesmen are capable of living up to the best traditions of British financial foresight inculcated in the past.

The American Trade Revival.—All communications from the United States dwell upon the business revival that has set in in that country, and recent letters of our own New York correspondent have given many facts and figures illustrating the movement. Of the improvement in American trade that has taken place and is progressing there can be no question, but it may be of interest to our readers to have before them the views as to the future of this movement of an American observer, who is in an exceptionally good position to form an accurate estimate of the position. Without in any way applying the cold douche to current optimism in this matter, he sounds a note of considered caution:—"Some of the more optimistic elements of the business community," he writes, "have been insisting that a new period of inflation was about to begin. This claim was supported by numerous facts, such as the recent increase in wages in the iron and steel, coal, and textile industries, the failure to reduce wages in the railroad industry, and by advancing prices of steel products and all building materials, which took place during August and early September. Probably the soundest basis for this claim was the fact that business houses have been buying from hand to mouth, and have only carried the smallest stocks of goods possible. The banked-up demand caused by the railroad and coal strikes and the tightening in the money market which took place early in this month gave the optimists an opportunity to advance their claims. However, in considering the various important industries of the United States, I cannot

be optimistic of the immediate future of many of them. The steel industry will quickly respond to every advance and setback in business. Although the railroads, which are one of the main sources of demand for steel products, are in need of equipment, this need is not nearly so keen as it was eighteen months ago, and it is doubtful if it will be filled, except in a very gradual way. There has been an enormous amount of apartment house, hotel, and office building throughout the country during the past two years. This market for steel will undoubtedly diminish. The demand for steel from the automobile, agricultural implement, and oil industries is good at the present time, but prospects for the future are not so encouraging. Many firms which had large surpluses at the end of the war built new plants and installed new machinery, rather than pay dividends and excess profit taxes. It is estimated that the machinery in factories and mills is in good condition, and the demand from this market should not be unusually heavy for some time to come. The lumber industry has been enormously stimulated during the last few years, but it is the consensus of opinion that the peak has already been passed in building. Although the demand for lumber will not stop suddenly, it will undoubtedly slacken during the winter, and it is very doubtful whether the spring demand will be anything like as much as it was this year. Rubber manufacturing plants in the Cleveland area are reported running to capacity, working especially on automobile tires. Prices of hides and skins have shown an upward trend. The leather markets in consequence have remained firm, with many tanners effecting increased prices. Prices of shoes and leather goods are still high, however, and until these show greater reductions demand will probably continue cautious. Woollen mills are reported very active, and textile mills are gradually resuming normal operations. Activity in the knit goods and hosiery trade is excellent. There is a question, however, whether or not the woollen and textile industries will continue to show such activity." The views of this well-placed observer may or may not prove to be unduly cautious. But his contention that the appearance of boom is accentuated by the natural revival of overdue activities after the strike period (a point of view by no means left out of calculation in the articles from our New York correspondent) is one that is apt to be overlooked, and of which sight should not be lost.

A Loss to the Treasury.—It has been announced this week that Sir Basil Blackett, Controller of Finance at the Treasury, has been appointed to the post of Finance Member of the Legislative Council of India. We offer him our sincere congratulations on his well-deserved promotion, but we cannot fail to regret that the Treasury is deprived of his services at a time when the problems of finance, both at home and abroad, are of supreme importance. As a rule, the outside public knows very little of the personality of its leading Civil Servants, but Sir Basil Blackett is one of those forceful men whose opinions have not only visibly influenced from time to time the policy of his political chiefs, but have also impressed themselves upon the City and upon the business world. It is matter for public regret that on the problem of international debts the views of Sir Basil and his colleagues at the Treasury, voiced by the Chancellor of the Exchequer in the Cabinet, were overruled when the late Government by a narrow majority decided on the policy of the Balfour Note. Sir Basil's work on all the international conferences which have taken place since the end of the war has earned for him the confidence of the financial experts of the Ministries of Europe. Not the least of his achievements has been his service on the Finance Committee of the League of Nations. To his perseverance in wrestling with the baffling problem of the rehabilitation of Austria is due in no small measure the final elaboration of the scheme which was recently unanimously adopted at Geneva. Sir Basil goes to India at a time when the finances of that country call for the best brains that can be made available for their service, and his departure from the Treasury is an instance of the price which home administration has to pay for Imperial responsibility.

The New Indian Loan.—In another column we give particulars of a new loan of the Indian Government for £20,000,000, which is the largest loan of the kind put upon the London market since war borrowing ceased. It will be recalled that the Indian Government proposes to spend £100,000,000 during the next five years upon its railway system, and this issue is the second of a series of which part of the proceeds are to be devoted to this specific purpose. The prospectus, however, states that the proceeds of the loan may also be utilised for "general purposes." In view of the fact that certain taxes were rejected by the Legislative Assembly, with the result that there is a deficit in the Budget, it is to be presumed that these words in the prospectus are intended to enable part of the proceeds to be used to cover the ordinary current expenditure of the Budget. It has been announced that the loan has been underwritten, but the terms are not stated. The yield of the present issue, calculated at the latest date of redemption and allowing for the profit at maturity, works out at approximately £5 10s per cent. The previous issue, which was for £12,500,000, gave a yield of £6 1s per cent., but this it should be noticed was a short-dated loan running for but ten years, while the present issue is redeemable at the earliest in 1950 and at latest in 1955. Thus, when the comparatively generous offer of the 7 per cent. Indian loan and the subsequent successes of the various issues following are considered, it must be admitted that the Indian Government has been able to take considerable advantage of cheaper money rates, although whether to its fullest extent may be a questionable point. Indeed, assuming that the political risks in India are not of serious moment, and that the Budget deficit is only a passing phase, the issue, when considered in relation to yields of home gilt-edged securities, look cheap at the price offered. According to an India Office return issued last May, the total outstanding debt of the Indian Government on March 31, 1922, amounted to just under £185 millions, and the interest payable on this sum for the half-year ending on this date is given as slightly under £3 millions. The internal debt at this date was, we are informed, approximately 420 crores of rupees. The most promising point about these debt figures is that the greater part of the proceeds has been devoted to building and equipping railways and undertaking irrigation schemes. It is stated that reducing the sterling debt to Indian currency (10 rupees to the £) the total of sterling and internal debt is about 532 crores, out of which 500 crores represent productive debt. These figures, showing the vast sums invested in productive undertakings, reveal in a striking manner the prosperous course which India could steer given efficient administrative officials and reasonably stable but progressive government.

Lloyd's Register.—The annual report of *Lloyd's Register* for 1921-22 shows that the world-wide depression in the shipbuilding industry referred to in the previous report has not been relieved during the past twelve months. "Disturbed political and economic conditions, disorganisation of the exchange, and stagnation of international trade, provide adequate explanations for the continued falling off in shipbuilding." Although at the time of writing this report there are in some directions signs which may be indicative of a possible recovery in the shipbuilding industry, it will take much more than is at present on the horizon to enable builders to have any confident expectation of re-filling the berths which are left vacant by the completion of tonnage now in hand; and, with the world outlook as it is, it would seem that the only consideration which would dispose shipowners to make themselves responsible for outlay on new tonnage, except as regards passenger liners and vessels intended for special trades, would be the knowledge that there will be a sharp demand for the most up-to-date types as soon as the upward movement of freights begins, in order to meet the severe competition which must then arise. The total tonnage of merchant vessels afloat at the end of June, 1922, holding the classification of *Lloyd's Register*, was 27,231,129 tons—the highest figure ever recorded. The British share of this total was 13,724,562. If to this total be added those vessels coming under the heading "Class Contem-

plated" we find that the aggregate of shipping coming under the aegis of *Lloyd's Register* classification comprises 10,325 vessels, of more than 28½ million tons gross. This compares with 24,809,000 in 1914. The following table, contained in the report, gives particulars of the new tonnage classed by the Society during the last nine years:—

Year.	Steam and Motor. Tons.	Sail. Tons.	Total. Tons.
1913-14	2,014,397	5,788	2,020,185
1914-15	1,289,827	5,796	1,295,623
1915-16	789,688	521	790,209
1916-17	1,371,915	4,210	1,376,125
1917-18	2,552,607	16,517	2,569,124
1918-19	3,760,806	40,415	3,801,221
1919-20	4,186,882	66,641	4,253,523
1920-21	3,229,188	15,943	3,245,130
1921-22	2,517,513	6,479	2,523,992

The annual shipbuilding returns, particularly for the post-war period, afford an admirable illustration of the extraordinary fluctuations which form so typical a feature of the shipbuilding industry.

The Southern Railway Group.—The long awaited details of the terms of amalgamation of the principal railways forming the Southern group of railways under the terms of the Railways Act, 1921, were issued at the end of last week. The companies concerned are the London and South-Western, the London, Brighton, and South Coast, the South-Eastern and the London, Chatham and Dover, and the South-Eastern and Chatham Companies' managing Committee. The terms of the scheme, which is to come into force on January 1st next, are necessarily somewhat complicated owing to the divergence in the capitalisation of the companies concerned. An estimate has been framed of the revenue of the constituent companies of the group, and when applied to the payment of interest and dividends on the several amounts of the amalgamated company's stock proposed to be allocated to the constituent companies, the amalgamated company's debenture, guaranteed, preference and preferred ordinary stocks would yield an income equal to that received by the holders of similar stocks for the year 1921. The circular issued by the South-Western mentions that the balance of standard revenue is estimated to produce a dividend of £2 18s per cent. on the new company's deferred shares. Market anticipations as to the terms of exchange of the junior stocks were rather on the optimistic side, and prices of both South-Western and South-Eastern deferred have fallen this week, while some criticism on the part of prior-charge holders has been heard. Details were published on Wednesday by the directors of the London and North-Western and Midland Railways of the terms of the agreement for amalgamation of the Furness, Glasgow and South-Western and Highland Railway Companies into the group of which the North-Western and the Midland Companies will be the chief constituents. The name of the new company will be subsequently decided upon.

Ebbw Vale Dispute Ended.—Our Cardiff correspondent writes:—The outstanding events in the South Wales coalfield this week have been the failure of the policy of the men's leaders on the question of non-unionism and the settlement of the Ebbw Vale dispute. Last week the Executive Council of the Federation instructed the workmen throughout the coalfield to hand in notices on Monday, October 23rd, to terminate contracts on November 4th. Only 28 per cent. of the workmen complied with those instructions. The following are the official figures issued by the Monmouthshire and South Wales Coalowners' Association:—(1) Numbers of collieries from which returns have been received, 282; (2) Number of collieries at which notices were given, 201; (3) Number of collieries at which notices were not given, 81; (4) Number of workmen employed at collieries from which returns had been received, 195,361; (5) Number of workmen who had given notice, 55,631. There is no precedent for so general a revolt against an official Federation policy, and it effectually removes the menace of a stoppage of work a fortnight hence, in order to compel workmen to pay their arrears to, or, if not members, to join the Federation. The figures reveal a remarkable degree of disunity among the miners, and Mr George Barker, one of the leaders, stated in the course of a speech on Tuesday

that he was "appalled" at it. A conference has been convened to consider the position. The immediate effect of the disclosure of the above figures was the termination of the Ebbw Vale dispute. The company had previously agreed to reopen the pits if the leaders guaranteed that there would be no stoppage at Ebbw Vale on the non-unionist question if the pits were reopened as proposed on October 30th. The leaders would not give that assurance. They have now given it, and work will be recommenced at the Ebbw Vale collieries next week.

Organisation of the Cotton Trade.—Our Manchester correspondent writes:—During the last month or two there has been considerable discussion in Lancashire cotton trade circles with regard to organising the industry on a better basis, and the Federation of Master Cotton Spinners' Associations has considered proposals for sectionalising the mills that use American cotton. With a view to more readily ascertaining in the event of depressed trade in what particular section of the trade the depression is most acute, it is suggested that steps for dealing with it may more promptly be taken with the prospect of success if the trade is split up into several departments. It has been decided to consult the members as to what should be done. The first proposal is that the mills should be divided into ring mills and mule spinning mills, the latter section to be sub-divided into—(a) coarse counts up to and including 30's, (b) medium counts 31's to 46's inclusive, and (c) fine counts 47's and upwards. An alternative scheme is that mule spinning mills should be divided into two sections—(a) yarns up to and including 24's counts, and (b) all other counts. A ballot of the members is now being taken on this question, and the result is expected to be known at the end of next week. There is some difference of opinion in trade circles as to whether the proposals now being made will be to the advantage of the trade, but it is believed that in the future when the question of short time is considered, the varied position of coarse and fine mills will have to be taken into consideration.

British Gas-Mantle Industry.—The effect of a new Order of the Board of Trade is to impose an import duty of 33.3 per cent. on the value of mantles for incandescent lighting (and component parts thereof), whether finished or not, manufactured in Germany. There is already an import duty on the thorium and cerium content of gas mantles equivalent to about 5 per cent. of the value of the whole mantle, but whether this will be levied in addition to the general duty of 33.3 per cent. is not clear. Presumably it will. The Committee which recently inquired into the state of the gas-mantle industry in this country, more particularly in reference to competition from Germany, reported that while German mantles can be sold profitably at 21s per gross wholesale in Germany, they are offered here at 34s 6d wholesale, "free to door," this latter price being fixed by a Convention comprising all the gas-mantle manufacturers in Germany. German policy, the Committee added, appears to be, firstly, to give the British public no benefit of the cheap production, and secondly, to adjust export prices in such a way as to secure a large volume of trade. In March last, when the English Association reduced prices, the minimum wholesale prices of British-made mantles varied from about 47s to 54s per gross. The gap between the German cost of production and the selling prices in England is a wide one, and apparently sufficiently so to allow for the new import duty without materially affecting German sales in this country. Before the war the annual consumption of incandescent gas mantles in the United Kingdom was about 70 millions, of which rather more than 50 per cent. was imported from Germany. In addition a considerable quantity was imported in an unfinished state, to be burnt off in German-owned factories in this country. If this be included, the total of German mantles of German origin probably amounted to between 70 and 75 per cent. of the total consumption. British production was estimated at

about 20 per cent., English manufacturers being considerably handicapped by the fact that Germany had practically a monopoly of monazite sand, from which thorium and cerium salts are extracted. During the war, when German supplies of mantles were cut off, they adapted themselves to the circumstances, and helped by expropriation of German rights over monazite sand deposits in Travancore (India), extended their factories and made Great Britain almost self-supplying. Latterly, however, German mantles have again found their way into the English market, about one in every three sold now being of German manufacture. German imports, which were round three millions in 1920, rose to nine millions in 1921, and this year have been at the rate of 16 millions per annum, as will be seen from the following:—

	From Germany.		From Other Countries.		Total.	
	Gross.	£	Gross.	£	Gross.	£
1920.....	21,357	51,710	56,998	125,506	78,357	177,216
1921.....	63,756	111,917	47,780	92,915	111,536	204,832
1922 (Jan-June)	56,825	86,123	17,072	30,067	73,897	116,190

Sales by the associated English firms representing 95 per cent. of the trade were, according to the figures presented to the Board of Trade Committee, 443,731 gross in 1920 and 275,931 gross in 1922, and 64,619 gross in the first three months of this year. Exports of British mantles fell from 51,737 gross in 1920 to 21,005 gross in 1921. Adding together British production and imports and deducting exports, the consumption of gas mantles in the United Kingdom would appear to be 71 millions in 1920 and 55 millions in 1921, the present year indicating about the same rate as last year. Compared with pre-war figures there is a substantial decline in consumption, which may be accounted for to some extent by the increasing popularity of electricity as an illuminant, and, coincident with high prices, the more economical use of gas. The capital invested in the incandescent gas-mantle industry in the United Kingdom is £1,500,000, apart from £350,000 invested in subsidiary industries.

The Future of Bawra.—A full meeting of the London board of directors of the British Australian Wool Realisation Association was held on Wednesday, and, amongst other subjects, the discussion was renewed of the proposals recently made in Australia by an important section of shareholders to convert Bawra into a permanent co-operative institution for the defence of Australian farmers' interests, not only in the matter of wool, but also mutton and beef and possibly also wheat and dairy produce. It was unanimously agreed by the London directors that this question was one for the sole decision of the Australian proprietors of the company. It is understood that Sir John Higgins intends to call an extraordinary general meeting of shareholders to meet within the next five or six weeks. The Supreme Court of Victoria on October 19th granted consent to the reduction of capital in Bawra to £6,000,000 paid up. It is not understood that the present proposals will interfere with the cash payment to the shareholders of £6,000,000, which was agreed to at the last extraordinary general meeting. The proposal is to retain in the hands of the company the remaining £6,000,000.

Amalgamated Zinc.—The dividend policy followed by the directors of this Australian undertaking is a trifle puzzling. In respect of the half-year ended December 31st last a distribution of 1s per share was made by means of the transfer of the necessary amount from the equalisation reserve, being profits earned prior to the end of 1912. In March last a distribution of 1s was announced, and another in September. The cabled summary of the report for the half-year to June 30th indicates that the profits of the period were sufficient to cover one of these distributions; the other was provided by transfer from the reserve of profits earned prior to June, 1914. It is satis-

Obersea Correspondence.

UNITED STATES.—BOND ISSUE SUCCESS—CROP OUTLOOK—FURTHER TRADE IMPROVEMENT—STOCK DIVIDENDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 13.

The most important financial event in the United States this week was the offering by the Treasury Department of approximately \$500,000,000 4½ per cent. 25-30-year gold bonds, at par, and accrued interest, for refunding purposes—the first long-term financing undertaken by the Government since the war. The new bonds are dated October 16, 1922; they will mature October 15, 1952, and are redeemable in whole or in part at the option of the Government at par and accrued interest on and after October 15, 1947, on four months' notice by the Secretary of the Treasury. They are exempt from all Federal, State, Municipal or local taxes, present or future, with the exception of estate or inheritance taxes, surtaxes and excess profits and war profits taxes. Although the offering was limited to \$500,000,000, or thereabouts, the Treasury reserved the right to allot additional bonds to the extent that 4½ per cent. Victory notes or Treasury certificates of indebtedness maturing December 15th of this year are tendered in payment. Subject to the limitations on the amount of the offering, allotments will be made in full upon subscriptions for amounts not exceeding \$10,000 for any one subscriber and upon subscriptions for which either 4½ per cent. Victory notes maturing December 15th are tendered in payment. Applications for amounts exceeding \$10,000 will be subject to allotment. Holders of the Victory 4½'s, whether or not the latter are called, and holders of the December 15th Treasury certificates of indebtedness were given the privilege of presenting their holdings in lieu of cash as subscriptions to the new loan. In his letter to banking institutions throughout the country requesting their co-operation in the undertaking, and urging them to assist in securing the widest possible distribution of the new bonds, Secretary of the Treasury Mellon pointed out that this was a refunding issue, which afforded "a particularly favourable opportunity to holders of 4½ per cent. Victory notes to acquire a long-term Government bond on attractive terms in place of Victory notes which will mature or be redeemed within the next few months." He gave also interesting data showing what has already been accomplished in the refunding of the Government's short-dated debt, and what remains to be done. On April 30, 1921, according to Secretary Mellon, when the Treasury first announced its refunding programme, the gross public debt, on the basis of daily Treasury statements, approximated \$24,000,000,000, of which over \$7,500,000,000 was maturing within about two years. On September 30, 1922, the total gross debt on the same basis stood at about \$22,800,000,000, and of the early maturing debt about \$4,000,000,000 had already been retired or refunded, chiefly into short-term Treasury notes, with maturities spread over the next four fiscal years. There will fall due this fiscal year, he says, about \$1,100,000,000 of Treasury certificates of indebtedness, approximately \$625,000,000 maturity value of war savings certificates of the series of 1918, and about \$1,800,000,000 of Victory notes. After October 16th, when about \$100,000,000 of loan certificates will mature and will be paid out of funds already in hand, the next maturities fall on December 15th, and include some \$870,000,000 face amount of 4½ per cent. Victory notes called for redemption, and about \$420,000,000 of maturing tax certificates, against which the Treasury will receive in December approximately \$250,000,000 of income and profits taxes. Through exchange and otherwise, the new bonds now being offered are expected to provide a substantial part of the heavy Government maturities on December 15th; those which remain to be refunded after that date will be met, according to the Treasury's plans, through issues of refunding securities, adjusted to market conditions. The new bonds, in the opinion of bankers, meet every requirement of investors who desire absolute safety, a moderate interest for a long

Cornish Tin Mines.—The shares of some of these undertakings having participated in the share market revival, it will be useful, writes our mining correspondent, to elucidate the position. One important factor consists in the grant of Government assistance to several of the leading concerns. The doyen of the group—the Dolcoath—is now in process of reconstruction. A circular just issued sets out the terms of the scheme, and gives extracts from a report on the development programme by Mr Frank Merricks, who is to supervise on behalf of the authorities. In brief, members are offered one 10s share credited 5s paid in respect of each £1 ordinary share now held, while those who provided funds to cover maintenance during the period of stoppage, receiving priority shares of 1s each, are to get one new share, fully paid, for every ten priority. Debenture-holders are offered in respect of each £100 bond, 133 new Dolcoath shares, with arrears of interest in the same currency; also 50 Tehidy Minerals shares. The Government will lend £1 for £1 up to £50,000, as provided by the shareholders, repayment—by annual instalments of £10,000—not to commence until the expiration of four years. It may be well to emphasise the point that the undertaking is virtually a new one, as fresh property is to be exploited, although the mill of the former company will be available. Production is not expected to be resumed until 1925. The East Pool early this year placed itself in funds for the sinking of a new shaft by an issue of preference shares. Crushing has been in abeyance since February, 1921. The Geevor is marking time, except as regards improving the machinery. It is claimed that profits could be made with tin at its present price. While proceeding with the erection of the new mill, the Levant is producing tin and arsenic on a small scale. For this company a loan of £10,000 was guaranteed by the Government. The South Crofty, which enjoyed such high prosperity during the war period, has been shut down since February, 1921. To enable the company to provide additional pumping facilities, a loan of £30,000 has been made by the Treasury; the directors were also successful in effecting an advantageous arrangement with the Inland Revenue authorities on the question of taxation. A moderate further advance in the price of the metal, in conjunction with the changed position as regards labour, would put the Cornish tin industry on its legs again.

period of years, and liquidity. That they have been highly attractive is evidenced by the fact that the offering met an immediate and widespread response from large and small investors, corporations and financial institutions in all sections, to such an extent that the new loan has already been heavily oversubscribed. No official figures are available at the time of writing, but it is confidently expected that the total of applications will exceed \$1,000,000,000, and may approach \$2,000,000,000. The flotation, it might be added, caused no disturbance whatever in the money or bond markets.

During September heat and drought in agricultural sections adversely affected many crops, as is shown by the Government's latest estimates of yields. Some of the principal losses were spring wheat 8,351,000 bushels, corn 21,360,000 bushels, oats 25,230,000, white potatoes 5,383,000, apples 2,900,000, and peanuts 16,382,000 bushels. Barley, on the other hand, gained 2,581,000 bushels, tobacco 2,819,000 pounds, and a few other crops made a substantial gain. It is noteworthy that the staple crops this year suffered little or no damage from frosts—an exceptional occurrence in this country. The following table summarises the estimated yields in bushels, unless otherwise indicated, based on the September 1st condition, as compared with the harvests last year and in the record years of the past:—

	Production in Millions of Bushels.			Year.
	1921.	1922.	Past.	
Winter wheat	587	542	760	1919
Spring wheat	208	268	356	1918
All wheat	795	810	1,025	1915
Corn	3,080	2,853	3,208	1920
Oats	1,061	1,230	1,593	1917
Barley	151	196	256	1918
Rye	58	79.6	91	1918
Rice	36.5	39.1	51.7	1920
Buckwheat	14.1	14.0	23	1866
Total seven cereals	5,195	5,221	5,896	1915
White potatoes	347	433	442	1917
Sweet potatoes	98.7	105	104	1920
Tobacco, pounds	1,075	1,355	1,582	1920
Flax	8.1	11.7	29	1902
Hay, all, tons	96.8	108.7	111	1916
Cotton, bales	8.0	10.1	16.1	1914
Apples	98.1	203	253	1914
Peaches	32.7	56	64	1915
Peanuts, pounds	816	674	1,234	1917
Grain sorghums	115	96	137	1920
Beans	9.1	13	17.7	1918

From the foregoing figures it will be seen that the winter wheat crop is 45,000,000 bushels smaller and spring wheat 60,000,000 larger than last year, making a total crop of 810,000,000, or 15,000,000 bushels in excess of last year's harvest. Corn shows a yield of 2,853,000,000 bushels, which is 227,000,000 below that of 1921, and 355,000,000 under the record harvest of 1920. Oats show an enormous increase, amounting to 169,000,000 bushels, over last year. The level of prices paid to producers for the principal crops declined about 2 per cent. during September, as compared with a 10-year average drop of 4.5 per cent. in that month. As at October 1st, the index figure of prices was 1.3 per cent. lower than a year ago, 45.5 per cent. lower than two years ago, and about 30 per cent. below the average of the past 10 years on October 1st.

Further improvement is seen in practically all lines of trade, and many industries are becoming increasingly active. More seasonable weather is stimulating business everywhere, especially retail, and the expansion in such trade is reflected in wholesale and primary markets. Fears of a scarcity of merchandise, or delays in deliveries, due to transportation congestion, have caused something like a rush to get additional supplies. The freight congestion and car shortage are becoming more serious, delaying shipments of lumber from the Pacific coast and the south, finished steel from mills, coal from the mines, and crops from farms to market. The volume of railroad business continues to grow, and is apparently taxing the carriers' facilities to the utmost—in fact, overtaking them. Car-loadings in the last week in September, the latest statistics available, show a total of 988,381, the largest ever recorded, barring a few weeks in the autumn of 1920, but requisitions for cars exceed supplies by more than 130,000. Building operations continue very active; reports to *Bradstreet's* from the largest cities throughout the country show that September expenditures were only

9.4 below those of August, the fourth largest month on record, while building expenditures for this year to October 1st exceed those of 1921, hitherto the record year, by 60 per cent. Improvement in the steel industry is reflected in the increase of 741,502 tons in the volume of unfilled orders on the books of the United States Steel Corporation during September, the total at the end of that month amounting to 6,691,607 tons—the highest point reached since February of last year. Owing to the heavy railroad buying of steel rails in anticipation of the advance of \$3 a ton on October 1st, a greater increase in the corporation's unfilled tonnage had been expected. A large part of last month's rail buying, however, was probably in the form of reservations, and actual orders or specifications under such reservations will doubtless be reflected in the corporation's report at the end of October.

Wild speculation and violent price swings in certain groups of stocks have featured this week's stock market. Activity centred chiefly in shares of oil companies, and industrial corporations have large surpluses, which are expected to declare big stock dividends. Such action has already been taken by four of the Standard Oil companies, including the Standard Oil Company, of New Jersey, which declared a 400 per cent. stock dividend, and by two large manufacturing concerns. Advances of 10 to 20 or more points have been common in such shares, while the stock of the Atlantic Refining Company soared nearly 200 points this week. Profit-taking caused sharp reactions from top levels. A desire to reduce the par value of stock and to secure a wider distribution is generally given as the reason for the huge stock dividends. It has also been suggested that the possibility of additional taxation on surplus accounts of corporations has prompted the stock dividend movement. A report was widely circulated that Federal legislation to that end would be undertaken, but the rumour was promptly denied from Washington. It is probably realised that any attempt to increase the tax burden at present would be most vigorously opposed.

FRANCE.—REPARATIONS COUNTER-PROPOSALS— THE LUBERSAC-STINNES AGREEMENT—LATER REPARATION FIGURES—THE HARVEST AND GERMAN FERTILISERS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 24.

THE French counter-proposals, put forward in response to those of Sir John Bradbury, as to the steps to be taken by the Allies to bring about the restoration of the public finances of Germany and the stabilisation of the mark, may be summarised thus: really effective control by the Allies over Germany's revenue and expenditure; refusal to admit that Germany is even provisionally totally unable to meet her engagements, in view of her economic activity; the gradual inclusion of the reparation debt in the German Budget; the German Treasury to be forbidden to discount bonds of any kind through the Reichsbank, and to be compelled to submit all issues of Treasury bonds to Allied control; the Reichsbank to be placed under Allied control to prevent exportation of German capital; German Treasury bonds to be issued, the yield from which to be devoted (1) to increase the gold reserve, in view of assisting monetary reform, and (2) to pay that portion of the reparation debt not provided for in the Budget; the 25 per cent. on the value of the German exports which the Government is allowed to levy in gold or foreign currencies, together with the yield from Customs duties, to be paid into a special account at the Reichsbank, which shall be under the control of the Allies, the money in this account to be at the disposal of the German Government as long as it fulfils the obligations imposed upon it, or to be imposed upon it, by the Reparation Commission.

The plan put forward by Sir John Bradbury and the French counter-proposals have been discussed by the Commission during three long "semi-official" sittings, during which, it is asserted, the British delegate drew appreciably nearer to agreement with his French colleagues. Sir John's principal argument appears to have

been the irrefutable one that really effective control over the German internal finances, in the English sense of the word, is impossible, except at the cost of an infringement of the provisions of the Treaty of Versailles, which forbids the Allies to interfere in German internal affairs. "If you can induce the Germans to consent, without compulsion, to your proposals," the British delegate said, in effect, "I am entirely in agreement with you." In the result, the Commission unanimously decided to visit Berlin in a body, and negotiate with the Germans on the spot, with a view to seeing if it is impossible to obtain their consent, in the interest of all parties, to place the control of their finances in the hands of the representatives of the Allies. M. Barthou and the other delegates are expected, according to present arrangements, to leave Paris for the German capital on Sunday evening, and to be absent for about a fortnight. It is obvious, however, that no progress is likely to be made until the results of the British General Elections are known, therefore, it is not expected that the Commission will obtain much satisfaction from their trip to Berlin until after November 15th, at the earliest.

Meanwhile there are circumstantial reports that, owing to the continued fall of the mark, the German Government is placing obstacles in the way of the carrying out of the Lubersac-Stinnes agreements. If this system of payments in kind is utilised for the purpose of hastening on the reconstitution of the devastated regions of France, it is argued in German political circles, the Government will be compelled to issue an enormous additional amount of paper currency for the purpose of paying the manufacturers and others by whom the goods will be furnished, for delivery to their French creditors. Many important German firms are reported to have declined, for these and similar reasons, to associate themselves with Herr Stinnes's plans. At the time of writing there are fears that the fall of the mark, which has hitherto apparently proved so beneficial to him and his fellows, will be a fatal obstacle to the fulfilment of Herr Stinnes's ambitions to reap a profit from the restoration of the devastated regions of France.

Reliable figures have recently come into my possession which enable me to set forth the situation of Germany in regard to her reparation debt, down to the end of September, or five months later than the accounts given in the official statement recently issued, showing the position down to April 30th last. The whole effect is to show that not only is the capital debt of Germany still on the increase, owing to accrued interest charges, but that she is scarcely covering such current expenditure on her behalf as the cost of the Armies of Occupation. The statement recently issued by the Reparation Commission shows that Germany's capital debt for Reparations amounted on April 30th last to 133,895,823,000 gold marks. Since then this amount has been increased by 2,104,177,000 marks. Accrued interest on the capital debt has already reached 39 milliard gold marks. The cost of the French, British, and Belgium troops on the Rhine is being reimbursed as incurred, but nothing has yet been paid on account of the maintenance of American troops. This amounted on September 30th to 78,000,000 gold marks, as compared with 56,000,000 on April 30th, but is secured many times over by sequestered German property in America. Allied advances to Belgium during the war were originally returned as 4,000,000,000 gold marks. This, under the fresh valuation made down to September 30th, including interest at 5 per cent., is now estimated at 6,160,000,000 gold marks. The special Gold Marks Bonds that were to have been issued by the German Government against this debt, and which were to have been redeemed on May 1, 1926, are not yet in existence. Of Belgium's priority Reparation claim of 2,250,000,000 gold marks, 250,000,000 gold marks are still outstanding. The delivery of German shipping to the Allies has now been completed, and 598 vessels have been handed over. Germany was credited with 660,000,000 gold marks in respect of these ships, but they realised on sale only 280,000,000 marks, so that it appears as if she has been overcredited with 380,000,000 marks, which the Reparation Commission will doubtless be called on to write off as irrecoverable. Between April 30th and October 1st Germany paid over to the Reparation Com-

mission 20,538,845,000 gold marks in cash and 216,866,291 gold marks in kind, which just met the cost of the Allied armies of Occupation.

French economists are beginning to show some anxiety in regard to the serious shortage in the wheat harvest for 1922, which yielded only 64,000,000 quintals, whereas the normal requirements of the population amount to 88,000,000 quintals. This shortage of 24,000,000 quintals, or over 25 per cent. of the total requirements, means, of course, that France will have to make good the difference from overseas. Taking the average price of wheat at 80f the quintal, this will involve purchases of foreign wheat by this country during the next six or eight months, to the extent of about 2,000,000,000f. The effect of this substantial increase in foreign purchases must inevitably tend to keep the franc down, and to render still more onerous the burden of the cost of living. The decree issued some weeks ago fixing the quality of bread-making materials at 80 per cent. of pure wheat flour is already having a good effect in economising the national stock of wheat, but it is felt that this will have only a very limited effect in compensating for the reduced yield from the last harvest. Appeals are now being made to the public, and particularly to housewives, to restrict the consumption of bread to the minimum necessary, and to avoid all possible waste, in the National interest. The French Government has decided to take advantage of its situation in regard to the reparation problem to see if it is not possible to utilise its claims against Germany for the purpose of increasing the capacity of the French wheat fields. M. Paul Petit, of the Nancy Faculty of Science, recently called attention to the fact that France might be rendered independent of foreign-grown wheat if agriculturists had a larger quantity of nitrates placed at their disposal. He suggested that the German payments in kind should include the supply of 500,000 tons of sulphate of ammonia per annum, this being the amount of this manure of which France is at present short, and which is ignored by the reparation provisions of the Versailles Treaty. The matter was brought before the last Ministerial Council by M. Chéron, the Minister of Agriculture, and the Council decided to include the necessary amount of sulphate of ammonia in the payments in kind that are to be demanded from Germany. As a matter of fact, the Treaty at present calls on Germany to supply 30,000 tons of sulphate of ammonia per annum during the three years that follow its coming into operation. Not only will this supply cease, however, at the end of that period, but it is in any case much below the quantity necessary to complete the normal requirements of the country. At present France produces a bare 50,000 tons of sulphate of ammonia every year, and has to buy some 295,000 additional tons of nitrates per annum from Chile and England. On the other hand, Germany produces something like 1,500,000 tons of nitrates every year, so that France should from this source not only be able to obtain all the chemical manures she requires, but should also be able, at one and the same time, to liquidate a substantial portion of the debt owing to her by Germany and also avoid having to expend money on purchasing this material abroad.

So far as live stock is concerned, the outlook is rapidly

improving. In a speech at Moulins a day or two ago, M. Henry Chéron stated that the French flocks and herds are being reconstituted with such rapidity that in two or three years this country will certainly again be able to export produce of this kind.

The resignation of Mr Lloyd George, as might have been expected, has been welcomed with distinct satisfaction in this country, and has brought a feeling of relief to the Bourse. It is generally felt that whatever Government may succeed to that of the fallen Premier, there is every probability that the financial world has now in front of it a period of at least less unsettlement and more consistency of policy. Whatever bull factors may exist in the change of political direction in England, however, have been more than counterbalanced by the sudden and serious fall in the value of the franc. The pound sterling, which stood at 58 a fortnight ago and 58.66 on October 12th, rose slowly during the following week to 60.69, and then soared spectacularly until during the earlier part of the present week it touched 64, the highest point reached since April, 1920. So far there has been little sign that French holders are inclined to dispose of their international securities, under the influence of the sudden drop in the value of the franc, and the tendency of the Bourse, generally speaking, may be regarded as based on a policy of wait and see.

GERMANY.—POLITICS—FINANCES—BARTHOU PLAN—EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 24.

A REICHSTAG majority has voted for the postponement of the presidential election until June 30, 1925. The ground is the unsettled state of the country, but it is not clear what the unsettlement, other than unsettling official speeches, is. The postponement involved an amendment to the Constitution, and as President Ebert would almost certainly have been re-elected, this amendment, according to many of his adherents, might have been avoided. A re-election against the small Royalist minority would have strengthened the Republic. The practice of amending the Constitution for special, immediate party aims is becoming common, and is all the more remarkable because the last preceding amendment provided for the severe punishment of persons who impugn the Constitution. Dr Wirth has made a useful statement to a Vienna newspaper that the present panic is "economically baseless," and that there is no fear of disorders resulting from the latest currency depreciation. With the dollar at around 4,000 this statement is all the more welcome, because when the dollar rose to a mere 1,000 Dr Wirth told the foreign correspondents in Berlin that the result would be "revolts of desperation by the masses and subversion of governmental authority." Nothing more has been announced about the gold Treasury bills. The bills will be welcome, not merely because they will secure savings against depreciation, but because they will also give good opportunities, as does the hoarding of dollars and pounds, for increasing real wealth. The holder of a gold bill will be able to sell it for paper marks immediately after a heavy mark exchange drop, and to buy goods immediately before the exchange fall has materially sent up prices. The decree restricting purchase of exchange and forbidding home sales in foreign currencies continues to evoke criticism, but the Cabinet does not seem inclined to abandon it. The critics point to the new rise in the foreign exchanges as proof that the measure was, if not injurious, at least ineffective. The Social-Democrats, now strengthened through reunion with the Independent Socialists, threaten to leave the Cabinet if their numerous demands are not fulfilled. They stand strongly for exchange control, demand support of the mark by means of a special fund fed with the Reichsbank's gold, the reintroduction of the food control (*Zwangswirtschaft*) system, and the expropriation of food supplies in private

hands. From October 30th the 1,900 gramme loaf will cost 98½ marks. The old quarrel about the price of the compulsorily deliverable part of the harvest has revived, and the Cabinet has to find a compromise between the demand of the Socialists, who hold that breadstuffs should be delivered at below production cost, and the resistance of the farmers, who refuse to sell at a loss.

The Reichsbank statement for October 14th showed further large increases in the credit pressure and inflation. Had the mark stayed at around 2,000-3,000 to the dollar the credit demand and the inflation would have tended to decline sooner or later, but now, before the supply of credit and cash has had time to increase into proportion with the new higher price level, a new exchange collapse has come. Unless there is a great recovery the money crisis is bound to be worse for some time to come. Again this week the banks rationed their distribution of cash to customers. The present biggest note, 10,000 marks, of gold value about 10s and buying power of perhaps £1, is much too small for business use. The Reichsbank statement, side by side with that of the same week in 1921, shows the great change in the money value that has taken place:—

	1921.	1922.
Metal reserve	1,038,565,000	1,051,414,000
Thereof gold	1,023,633,000	1,004,854,000
Darlehns-notes	3,193,609,000	31,480,080,000
Notes of other banks	5,895,000	3,601,000
Bills and cheques	1,047,408,000	63,648,932,000
Treasury Bills	94,981,626,000	389,721,358,000
Advances	12,883,000	239,544,000
Investments	270,454,000	387,270,000
Other Assets	5,964,091,000	19,556,218,000
Note Circulation	87,728,207,000	374,506,332,000
State Deposits	5,708,288,000	30,624,698,000
Private Deposits	11,178,677,000	85,488,004,000
Other Liabilities	1,598,006,000	15,102,119,000

A new increase in the Reichsbank's discount rate is being discussed. The present 8 per cent. is far behind the rates of the private banks. The rate was raised on August 29th from 6 to 7 per cent., and on September 1st to 8 per cent. On the credit demand an increase would probably have no visible effect. A private Bill has been submitted, reducing the nominal income-tax rates by means of raising the rate limits. The minimum 10 per cent. will be imposed on taxable income not exceeding 200,000 marks, 15 per cent. on the next 200,000, 35 per cent. on taxable income exceeding 2,000,000 marks, and thereafter 5 per cent. increases on each additional 500,000 marks until the maximum 60 per cent. is reached. The October railway rates will be quadrupled on December 1st. A table in the *Berliner Tageblatt* shows that on September 30th, with the dollar at 1,650 marks, English first-class fares were more than 30-fold German, English third-class actually 50-fold more. At present dollar exchange, and allowing for the October rise in German fares, English fares are about 100-fold more in gold, and perhaps 50-fold more in buying power, which is the proper test. Official salaries are again being raised. Salaries of the highest rank of permanent official, which in 1913 were about 6-fold more than those of an unskilled labourer, are now under 2-fold. If half the officials, who are doing unnecessary and even vexatious work, were dismissed, the rest might be properly paid, and the ever-increasing crop of corruption trials might dwindle. The Ministry of Posts is dismissing a large number of officials, but against this the Socialists protest, not seeing that it is better to pay unproductive forces permanently. The Reichsbank has raised its price for the 20-mark gold piece to 10,000 marks, at which low price nobody will part with coins.

The English political crisis is considered by some persons to be a cause of the new mark fall. These persons hold that the prospect of French independent action is increased by England's preoccupation. The Barthou scheme provokes very little comment. At first sight the plan to put a great country under permanent tutelage looks impracticable, and in view of the confusion of the plan with political and military designs, it looks highly undesirable, but experience shows that Germany, after a first emphatic *non possumus*, yields to any Ally demand. The ability of foreigners to improve the mark currency and the State finances is very doubtful; the currency depreciation is not due to lack of skilled financiers, and

there are other countries which would willingly accept foreign skilled advice if they believed that their finances could be bettered thereby. The grounding of M. Barthou's plan does not (if the German translation is correct) show the knowledge of facts which might be expected from experts with such comprehensive designs. The memorandum states that the real value of the German Revenue is declining, and it speaks of the very considerable profits of German industry. These statements are both incorrect. The value of German real revenue, though often temporarily, as just now, thrown back by a price-rise, coming ahead of an increase in nominal revenue, has over any long period increased very much; and that is the cause of the decline in the proportion of deficit to revenue. That may be seen from the following table, showing monthly receipts in millions of marks:—

	Revenue.	Wholesale Index.	Real Revenue Index.
1920—January	1,014	100	100
1921—January	8,721	143	..
1922—January	14,619	317	..
„ —March	23,414	435	..
„ —May	30,040	584	507

Since May, as in any short time of rapid exchange fall and rise in the price index, the real revenue has declined (though not below that of January, 1920), but during the exchange lulls or recoveries the real revenue always increases, hence though the above 2½ years embraced some heavy mark falls, the real revenue as a whole greatly increased. Calculated partly on the basis of the cost of living index, which governs official salaries, the result would be even more favourable.

Industrial real buying power profits have fallen so much, and gold profits so much more, that the whole net income of a very great industrial concern would not provide much more than a middle-class income for a single citizen. A good instance is the report of the important Steelworks van der Zypen and Wissener Smelting Company, a limb of the new Wolff Trust, which last week had the daring to announce a dividend of 100 per cent. (most companies which earn such high nominal dividends distribute them in various oblique ways). In 1916-17 this company had a capital of 17,000,000 marks, and paid a 25 per cent. dividend of 4,250,000 marks, worth, at the then exchange, about \$900,000. For 1921-22 the company, now capitalised at 27,000,000 marks, pays 100 per cent., or 27,000,000 marks, of gold value about \$6,000, and buying power probably \$12,000. At the present Bourse quotation, 18,000, a new buyer would receive a paper mark dividend of about ½ per cent. Practically all companies are in the same way or worse, the reason being that the war burden must be borne by someone, and that it is not borne by the manual worker, who manages, and must manage, to maintain his minimum existence real wage. The shareholder pure capitalist has been expropriated almost as much as the bondholder capitalist. The prosperity of German industry does not lie in profits, but in the fact that it gives productive employment to the whole nation at a fair real wage.

The Bourse boom continues. The Deutsche Vereins Bank and the Frankfurter Bank have formed a combination. Both are subordinates of the Deutsche Bank. Herr Stinnes has acquired a third of the shares of the leading bank, Berliner Handelsgesellschaft, a preserve of Herr Karl Fuerstenberg. Owing to pressure on banks and stockbrokers, resulting from the stock boom, the Bourse is closed two days this week. The *Frankfurter Zeitung's* dividend-payers' index for October 20th shows 162,459, against 113,132 a week before, and 33,442 on January 5th. Since January the mark's gold exchange has fallen to one-quarter, so that the gold price of stocks has dropped to one-quarter, this although the "liquidation value" (capital value of company assets) has not in general decreased. Reasons for the drop in gold prices are (1) the shortage of money, and (2) the fall in the gold dividends. State loans yesterday were:—War Loan, 77.50; Federal Fours, 250; Three and a-Half, 150; Threes, 800 (jump from 625 on preceding day); Colonial Fours, 166; Savings and Premium, 82.25. Federal Threes continue to be an object of foreign and home speculation. Prussian Threes, which are much better secured, but not so well advertised, sell at 94.75.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.
The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

CANADA.—SIR H. THORNTON AS PRESIDENT OF THE C.N.E.—HARVESTING CONDITIONS—TRANSPORT DIFFICULTIES—PRICE LEVELS—BUSINESS AND INDUSTRIAL CONDITIONS—STOCK AND MONEY MARKETS—EXCHANGE—TRADE NEGOTIATIONS WITH AUSTRALIA—HYDRO-ELECTRIC COMMISSION.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 10.

The Government are regarded as having done a good stroke of business in securing the services of Sir Henry W. Thornton, the American-born manager of the Great Eastern Railway, as President of the Canadian national system. The appointment has had a very good Press, and the public, which was becoming impatient at the long delay in filling the post and inclined to suspect the pressure of hostile influences, has hailed it with positive gratification. Sir Henry has a great asset in his complete dissociation from local political cliques and business interests, and the country expects him to grapple heroically with the problem of slashing many millions off the deficits which at present make the national system bear the aspect of a white elephant. Simultaneously, the Government have appointed a new board of seven directors to assist him. The calibre of some who have obviously been chosen to represent political and sectional interests could have been improved upon, but men like Mr James Stewart, the former chairman of the Wheat Board, Mr J. H. Sinclair, an ex-M.P., Mr Graham Bell, the Deputy-Minister of Railways, and Mr Ruel, formerly counsel for the C.N.R., are all competent, and command public confidence. Sir Henry Thornton will assume his duties within a month, and his first task will be to accomplish the amalgamation of the Grand Trunk lines with the rest of the C.N. system. The selection of the headquarters of the unified system threatens to produce a bitter controversy between Montreal and Toronto, and to solve it Ottawa may be chosen. The problem of the American lines of the G.T. may also present difficulties, but the fact that the new president is an American by birth may smooth his path in this connection.

A prolonged spell of warm sunny days and cool nights, which lasted almost a whole month to the 9th, has produced ideal conditions for harvesting and threshing, and even the latter operation is practically completed in many districts of the west. A tremendous volume of wheat and other grain is now pouring down to the seaboard, and a serious congestion is threatened at the Lake ports. It is charged, and not denied, that the Canadian shipping lines on the Great Lakes have been giving discriminatory rates in favour of American ports, and their excuse is that they can get return cargoes more easily there than from smaller ports on the Canadian side. Accordingly, the Minister of Trade and Commerce is threatening to suspend the Canadian coasting laws, and introduce the competition of American vessels. This year four times as many cars of wheat had been inspected by September 25th as at the parallel date in 1921, and the average quality is much better. But prices, though slightly advanced by the war scare, continue to keep low, and the farmers complain that the selling pressure exercised by the creditor groups, like the banks and mortgages companies, is flooding the market with grain, and forcing prices lower than they need be. Mr Dunning, the Premier of Saskatchewan, has repeated his threat to cure this condition by the enactment of a special moratorium; but the farmers' creditors indig-

nantly retort that they can be trusted to accord sympathetic leniency. The final returns of the wheat crop will probably exceed the 371 million bushel estimate of the *Manitoba Free Press*, but Professor Gilbert Jackson, of the Political Economy Department of Toronto University, has lately advanced in an able pamphlet, and fortified by statistics, the theory that bumper crops are not really a source of any great profit to farmers in new countries.

The American Fordney Tariff is at last in force, and the tariff experts of the Government are studying its effects, many of which had previously been discounted by the Emergency tariff. One result will be to lower the price of foodstuffs grown on Canadian farms, and the latest index figures show that 20 average foodstuffs declined in September from 175.7 to 171.5. There was, however, in the same period a small rise in the price of manufactured goods, but the general index figures of wholesale prices showed a drop of from 164.7 to 162.9. Until new markets are discovered for the Canadian farm produce the dwellers in Canadian cities are likely to benefit by cheaper costs of living.

Now that the farmers are realising on their crops they are beginning to purchase their winter supplies, and wholesalers report a gratifying flow of orders from country storekeepers, who find it necessary to supplement or replenish their stocks. Most manufacturers are reasonably busy, and expect to be able to run their factories at fuller capacity than last winter. The barometer of railway traffic returns also points to a growing pressure of traffic. Up to August the Canadian Pacific Railway had to confess a decrease of \$2,858,205 in net earnings, but in August it showed an increase of \$370,297, as compared with August, 1921, and it is now prophesied that increases in the last four months of the year will almost wipe out the losses of the earlier months. Another sign of prosperity is the activity of the building trade, which in some cities is enjoying a minor boom. During September contracts totalling \$29,300,000 were awarded; this is four million dollars greater than the August figures, and ordinarily the September contracts in view of the approach of winter show a steep decline. The iron and steel industry is still in rather a lame condition. The almost complete cessation of railway construction has affected its rail business, and though betterment is shown in other branches of the industry, such as the manufacture of nails, wire products, bars, pig iron, and so forth, it can only regain its old prosperity once the C.P.R. and the C.N.R. are in a position to place substantial orders for rails and structural steel for bridges.

The stock markets have continued feverish, and reacted to the varying quality of the news from the Near East. Money continues to be fairly plentiful, and domestic bond sales for the year just passed the 300 million dollar mark at the end of September. The new Dominion of Canada bonds, which will be issued in exchange for the \$178,000,000 of the 1922 issue, have now been listed on the Montreal Exchange, and will be traded in flat until the new securities are distributed to their owners on October 31st. The Finance Department reports a most satisfactory response to its conversion invitation, and about 60 per cent. of the holders of 1922 bonds are accepting it. Bank clearings for September totalled \$1,220,120, which is a decline of 6.5 per cent. compared with the figures of September, 1921, but is a great improvement on the 11.7 per cent. decline recorded in August. The progress of deflation is shown by the decrease of 31 per cent. in Dominion and chartered bank note issues between November 30, 1918, and July 31, 1922. This fact is largely responsible for the return of the Canadian dollar to par in New York; in fact, last week, Americans were forced to pay a premium on Canadian funds.

Mr Robb, the Minister of Trade and Commerce, leaves on October 20th for Australia, to continue the negotiations for a reciprocity treaty, but in view of the fact that Australia and Canada are competitors in many lines, no high hopes of a far-reaching agreement are entertained. If some reductions on the duties on agricultural machinery were conceded by the Australian Government they would be welcome, but local protectionist influences will resist them. Trade between the two countries is at present decidedly one-sided, for while Canada exported to Australia during the twelve months ended August 31st, goods

valued at \$13,595,000, she only took imports worth \$1,362,782.

The Gregory Commission, which was appointed by the Ontario Government to investigate the operations of the Hydro-Electric Commission, has already disclosed some very disturbing facts about the system. The Commission finds that the provincial treasury will this year have to provide \$348,000 to take care of the deficit on the Nipigon plant, which was built to supply the needs of Thunder Bay district, at the head of Lake Superior. Figured at strict cost according to the agreement, the city of Port Arthur ought to be paying \$60 per h.p. for its power, but it refuses to pay even the \$25 demanded by the Hydro authorities, and offers \$20. Other disclosures justify the alarm felt by many taxpayers that a dangerous policy of extravagant expenditure and unjustifiable expansion had been embarked upon by the Hydro management.

SWEDEN.—BUSINESS CONDITIONS—PRICES—LABOUR—TRADE BALANCE—PROFESSOR CASSEL AND RUSSIA.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 19.

THE situation in general remains unaltered, but the better tendency and the optimism and faith in the future is not slackening. The fall in prices is continuing for some goods, probably mostly because of very strong competition among the retailers. In the grocery trade, for instance, a union has been formed, which is promising a certain rebate on all purchases for cash, and even those outside the union have to join in giving the rebate so as not to lose their customers. In Stockholm the retailers in the main business streets have organised special advertising weeks, when they are doing their utmost in arrangements of all kinds to attract the public. On October 1st a reduction in postal and telephone charges came into effect, which has been much approved of. The Government has also consented to a great reduction—of about 30 per cent.—in the price of sugar from November 1st. The sugar industry in Sweden belongs to a Trust, and the prices are under the Government's special control. The price index issued quarterly by the Board of Social Welfare, and including all necessities of life (not to be confused with the index issued monthly, which only includes foodstuffs, light, and fuel), has remained unaltered at 190 since last quarter, owing to increase in some foodstuffs, while the prices for fuel, light, and clothing have gone down. The situation on the labour market is rather good, and the number of unemployed, which at September 1st was 36,000 persons, shows a decline of 2,300 during August, and is lower than was expected at this time of the year. The sum of 85 million crowns granted by the Government as unemployment money is not yet exhausted. As to the unemployment in Norrland, which was very bad last winter, some improvement this year is expected, as the timber cutting is to be more lively during the forthcoming winter. The trade agreements for most of our home industries expire on January 1st, with three months' notice to be given on October 1st. That day, however, passed without much trouble, as hardly any notices were given, and it is thus expected that we shall have a peaceful labour market during next year, at least as far as the home market is concerned. Those who belong to the export industries were in 1920 estimated at 150,000, but this number is, of course, during present circumstances considerably reduced, and as their agreements expire at other dates or not, it is not known whether there will be any troubles or not. The strike at the private railways, which has been going on since the beginning of August, and now involves 5,000 workers, seems to be drawing to an end, as the negotiations now going on, of which the result is still secret, are said to be in favour of a settlement. The latest negotiations have taken part on the intervention of the Social Minister. The Ironworks Association has issued a warning of a lock-out at the ironworks, to begin November 1st if the strikes now going on at some ironworks are not previously settled. Hitherto it has been impossible to get the negotiation proposals accepted by the workmen.

The report on the crops has now been published, and for wheat the crop is estimated to possess a value of 135 million crowns, reckoned upon an average price of 16 crowns per 100 kilos. The average price for the same quantity in 1920 was 40 crowns, so that the farmers have no reason to congratulate themselves, as their expenses have by no means fallen as quickly as the price of wheat. The aggregate crop figures are looked upon as normal, and in some parts are a little above the average. The quotation of the German mark is down at rock-bottom level—i.e., 0.13½ crown for 100 marks, and even 0.12½ has been quoted in the open market. The value of sterling has been low, too, the quotation having been down to 16.60, but it has now recovered a little, and is to-day 16.80. That the sterling quotation is low at present is quite natural, as the payments from England are large, and the exporters convert their cheques as quickly as possible, thus depressing the quotation.

The export surplus for August is 27.1 million crowns, compared to 29.6 million crowns for July. Both imports and exports were larger in August than in July. For the first eight months of this year the import total amounts to 15.3 million crowns, and the export to 668.8 million crowns, compared to 832.3 million crowns and 681.7 million crowns during the same period last year. The import surplus has thus been reduced from 150.9 million crowns during January-August, 1921, to 46.5 million crowns for the same period this year. The timber market is lively, and it does not seem unlikely that this export will amount to about the normal if present progress continues. At present the quantity sold is estimated as 775,000 standards. The low sterling quotation has, however, proved a great trouble to the exporters, as not only the English sales, but also those made to France and Belgium (owing to the heavy drop in these countries' currencies) have been made on a sterling basis, and thus the small increase in prices obtained has been lost by the fall in sterling. The demand on the cellulose market is strong, but the prices obtained are but poor.

The early days of October are always a strenuous time in the money market, but the State bank has been able to meet the situation very well. The famous economist, Professor Gustav Cassel, is reported to have been appointed economic adviser to the Russian State Bank. He has declared to one of the papers that as he is deeply interested in the general restoration of the world, he has, after much consideration, consented to act as adviser to the Russian Bank, and he is studying, and has for a long time past been studying, the Russian problem. Of course, this new work of Professor Cassel will not interfere with his present occupation.

SPAIN.—NEW TREASURY BOND ISSUE—OBLIGATORY FORM FOR BANK ACCOUNTS—MADRID MOTORBUS COMPANY—STOCKS AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

MADRID, October 20.

As anticipated in my last letter, the Spanish Government has published a decree authorising the issue of one-year Treasury bonds for a total of 500,000,000 ptas. bearing interest at the rate of 5 per cent. per annum. The subscription was opened on the 15th inst., and was a complete success, being considerably over-subscribed in one day. The greater portion of the loan was taken up in Madrid (313,333,500 ptas.), Bilbao (296,000,000 ptas.), and Barcelona (147,000,000 ptas.). This issue increases the present circulation of Treasury bonds to 3,077,644,500 ptas.

The Minister of Interior has decided upon the form of balance-sheet which it is now obligatory for all banks and bankers in Spain to publish on the last day of March, June, September and December of each year. The rumours of a reduction of the Bank of Spain's official discount rate proved to be unfounded, and it is stated that such a measure is not deemed necessary at the present moment.

With a view to helping coal mine owners in this country to face British competition, certain dispositions have been set forth by the Government, in a Royal Decree, which embody premiums on coal exported from Spanish ports and a reduction of taxes at the mine. This measure may

offset to some extent the effect of the Commercial Treaty which is to be signed with England, and thereby reduce the opposition of the mine owners to it.

It is announced that an issue will shortly be made of shares of the Madrid Motorbus Co., the capital of which, representing principally the motorbuses themselves, is held by Messrs Vickers, Limited, with the exception of that part which is to be offered for public subscription. The motorbuses, of English make, are already in service, and were very well received, without the usual adverse comments which usually accompany any innovation in Spain. I am told that when the Madrid Tramway Company opened their first lines they were obliged to give a free service for a week or two in order to accustom the people to the new mode of locomotion, and a big detour which the Northern Railway makes just before reaching Madrid is explained by the opposition put up by a village to being contaminated by such "inventions of the evil one." After some hesitation and a lot of ridicule, the Metropolitan Railway proved to be a success, and now any innovation which tends to relieve the congested traffic of the centre will encounter welcome instead of difficulties.

Parliament will not open again until after November 11th, when it will have to decide, amongst other things, the question of an increase of the railway tariffs, and will have to make some definite declaration as to what progress has been made in the pacification of Morocco, and consequently what prospects there are of a serious reduction of national expenditure.

The issue of Treasury bonds, as was expected, caused some weakness in the share market, but the effect will soon pass, especially as it is anticipated that only 40 per cent. of the bonds subscribed will be allotted. Apart from this, the Stock Exchange showed signs of increased animation, favoured by the return to "winter hours," i.e., at 3.30 p.m. instead of 1.30. The foreign exchange ring also plucked up a little courage, and the business done was above the usual average.

ARGENTINA.—PROJECTED U.S. LOAN REJECTED—THE GOVERNMENT AND FOREIGN CAPITAL—THE BANCO DE LA NACION—MONETARY CONDITIONS—CROPS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, September 26.

DESPITE the large majority which the present Government can boast in the Chamber of Deputies, it is now certain that it will be unable to persuade the legislators to sanction the *ad referendum* agreement made with a group of American financial interests relative to a 25-year loan of \$200,000,000 U.S., terms of which were published early in September. The issuing bankers (Blair and Co., and the Chase Securities Corporation) offered 97, while the rate of interest was to have been 6½ per cent. per annum, with 1 per cent. amortisation. It was, however, far from clear as to what actual amount the lenders proposed to take at the outset; the conditions being so vague, and capable of such distinct interpretations as to lead to somewhat caustic comment by the Argentine Press, and, eventually, to unanimous rejection of the proposals by the Budget and Finance Committee of the Deputies. Coming as it did after a sharp discussion in the Chamber over the advisability of archiving a peremptory request for prompt sanction of the agreement aforesaid, which the Minister of Finance declared to be unquestionably the best in point of terms that could be looked for, this rejection is generally regarded as highly significant. It bears out the opinion expressed on previous occasions in this correspondence, to the effect that Argentine national finance will be subject to closer and more reasoned investigation by the legislature in the course of the next administration than has been the case during the presidency of Señor Irigoyen. Meanwhile, the Government has no difficulty in renewing its short-date obligations at 5 per cent. per annum, close on \$100,000,000 Argentine paper having been arranged on these terms during the past month. Money being exceedingly plentiful, and likely to remain so over the turn of the year, the Argentine banks are glad to undertake what is, after all, perfectly safe business. It leaves but a small margin, with time deposits

earning from 3 to 4½ per cent. per annum, and current account balances being paid 1 per cent. per annum, but, so high are the cash percentages of the Argentine banks, considered collectively, at the present time, that the failure of the effort to obtain an external loan is, temporarily, at any rate, a blessing in disguise viewed from their standpoint.

Another proposal to seek a foreign loan has been sanctioned by the Senate of the Province of Buenos Aires, but it is yet uncertain whether the measure will be approved by the Deputies. It calls for \$30,000,000 Argentine gold, its equivalent in Argentine paper, \$68,000,000 approximate, or any foreign currency on a gold basis. The issue price is not to be under 92, nor the interest above 6½ per cent. per annum, amortisation being the usual 1 per cent. per annum. Efforts are also being made to obtain offers for the extension of the provincially owned railway system known as the Meridiano V., on the basis of payment in bonds; but although certain American contracting concerns are reported to be studying the matter, it is hanging fire. Dr. Cantilo, the Governor of the Province, has protested against the comments of certain London financial journals who saw in the proposed extensions damaging competition for the Anglo-Argentine lines. He stigmatised the idea that a tariff war would be initiated as absurd; affirmed that the steady development of the province afforded ample scope for all; and generally enunciated his determination to maintain cordial relations with all forms of productive enterprise financed by foreign capital throughout the province. Admitting the personality and reputation of the speaker, it is felt that full weight should be given to this timely statement by a man who, next to Dr. Alvear, will have the most direct political influence on the development of what is the richest and most populous region of the republic. It must, however, be borne in mind that, sooner or later, and probably sooner, the ever-growing tendency towards nationalisation will lead to a conflict of interests which is bound to affect the situation of the railways in Argentina. Again and again the Socialist deputies, with Catonian persistency, call for reconsideration of the various enactments dealing with the railway tariffs, while already, with the recent increases scarce a month old, a private proposal has been laid before Congress by one of the Deputies, Dr. Bauschi, calling for a reduction of freight on sundry items of livestock and goods traffic classified as being calculated to benefit agricultural, pastoral, or mining interests. It is probable that Argentina does but follow her destiny in this matter of giving special preference to national as opposed to foreign initiatives, but one sometimes doubts whether London interests fully realise that this trend of events must be followed sympathetically and closely if its subsequent development is not to prove unpleasantly abrupt. Abrupt, that is to say, to those who have not followed step by step the reasoning and the ambitions of the present-day young Argentine, who, be it said *en passant*, is both technically and intellectually on a far higher plane than his immediate predecessors.

Many were the official measures placed before Congress by the executive power during September, but few of them are likely to become law. One proposal which is likely to be approved, however, is that which seeks to empower the Banco de la Nacion to open foreign branches. Should the necessary change in its statutes be sanctioned this institution will in all likelihood establish offices in London, Paris, Madrid, Rome, Berlin, and Rio Janeiro. Transacting 38 per cent. of the banking business of the Republic, and covering the republic with a network of branches, the Banco de la Nacion Argentina is to-day beyond all question the most powerful financial entity in South America. At the present moment, in addition to having \$76,396,000 Argentine paper out on cattle and agricultural pledges and financing the treasury of the Argentine Government to an extent far in excess of the 20 per cent. of its capital—\$150,000,000 paper—authorised by its statutes, it carries a large amount in rediscounted paper, chiefly treasury bills, endorsed by the other Argentine banks. Unquestionably solid and admirably managed though the concern must be considered, the official tendency to treat it as a sort of financial *deus ex machina*, able of itself to discharge any and every financial obligation that the Government may see fit to assume, from the regulation of

international exchange to the arrangement of credits to cover shipments of foodstuffs to Germany and Greece, is disquieting at times. It is, therefore, expected that one of the first measures of Dr Alvear's Government will be to bring practice and precept into line, either by increasing its capital, or by reducing the total of official indebtedness. This latter course was recently taken by the province of Buenos Aires. Being above its statutory limit in regard to loans incurred with the Bank of the Province of Buenos Aires, the provincial government borrowed from various Argentine banks, and with the proceeds reduced its overdraft by \$12,000,000 paper. The four banks interested in the transition took provincial government notes at par to mature on February 27, 1923, the interest being 6½ per cent. per annum. It is understood that they were at once rediscounted with the Banco de la Nacion, and an interesting point, which well illustrates the nature of local business is afforded by the fact that one bank handled \$5,000,000 Argentine paper of the \$12,000,000 above-mentioned, notwithstanding that its total deposits are but \$2,300,000 paper, and its capital one and a-quarter million; both capital and deposits being presumably fully employed, seeing that its loans and discounts totalled \$4,259,000 paper on August 31st. Indeed, it is not too much to say that the banking position of Argentina generally considered rests to all intents and purposes on the shoulders of the Banco de la Nacion. While well able to bear the burden in fine weather under its existing constitution, it might find itself heavily overlaid should the sea get up; hence the growing feeling in favour of measures calculated to promote safety as well as expediency in the near future.

General business during the past month has been more satisfactory in promise than in performance. Money, as has been said, is barely worth 5 per cent., and first-class discounts have been even listed at 4½ per cent. Exchange, following on the news that nothing was to be expected from the loan negotiations, moved still further against Argentina for U.S. dollars, and sterling appreciated in sympathy. \$125 Arg. gold p.\$100 U.S. is the latest quotation for banks' sight drawings on New York, with sterling at 43½. News from the Near East probably accounted for the weakness of lire and francs, but in truth there has been very little real business offering, export bills being almost non-existent. In the cereal markets an attempt was made to force up wheat quotations on the ground of probable trouble in Europe, but with small effect. \$12 Arg. paper p.100 kilos was touched in Buenos Aires, but latest quotations were \$11.50 for spot wheat and \$11.70 November shipment. Quotations are being made in the futures market for the new season's crop, \$11.20 being listed for February delivery. The maize position is very uncertain. Much damage has been done by excessive moisture, but it may well be that a month's fine weather will still be in time to condition a fair quantity. The actual quotation of \$8.40 includes more or less a dollar for mechanical drying. Wool quotations are at present purely nominal, but it is worthy of mention that the new clip is expected to be one of the smallest registered for the past 20 years; which should prove satisfactory to those as has been the case with many, especially among the Rios. Hides and sheepskins are very firm. Freight rates, which fell away to even lower quotations than the 12s 6d grain to U.K. mentioned last month, are improving with Lorenzo-U.K./Cont.; and berth rates also moving upwards. German, Scandinavian, and Dutch ports are, however, still over-supplied with available space, and for these destinations little improvement is noticeable. It is now admitted that Argentina has had more wheat and linseed to ship than was first indicated by the official estimates. These latter have been revised, and give 3,850,000 tons of wheat and 770,000 tons of linseed as the probable export total for 1922. Which is virtually proved correct by the fact that down to September 10th shipments had reached 3,237,000 tons of wheat and 657,000 tons of linseed. Crop prospects for 1922-3 are at present almost too good. Should no abnormally bad weather supervene the yield of linseed is likely to be a record. Wheat is not so satisfactory, being weak in the stalk and unduly advanced,

though this is not universal, and opinion inclines to the belief that, barring accidents, the yield should be fully normal, and may even be on the large side. It must be remembered that it is still too early for any opinion to be of more than merely speculative value.

Letters to the Editor.

THE MARK AND INFLATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In glancing back at your issue of September 2nd I was amazed at the attempt of your correspondent in Berlin to prove (a) that fluctuations in the mark exchange are having no seriously detrimental effects on Germany's economic life; (b) that German State finances are in a pleasantly healthy condition, and "are far better than in 1919"; (c) that the fall in the mark has been actually beneficial to the German industrial system; (d) that "there is no basis at all" for the belief that currency difficulties are bringing Germany to the brink of a serious economic crisis. More amazing than his contentions were the arguments with which he supported them.

First, he appears to think that the claim that a falling exchange brings an economic crisis is cancelled out by the claim that a rising exchange also involves danger of an economic crisis; and in this way he endeavours summarily to dispose of the economists' statement that *instability of exchange rates is economically harmful*. He then refers to "stable-exchange countries," and claims that they are also "deep in industrial commercial crises." What does your correspondent mean by "stable-exchange countries"? Britain may have a stable exchange with U.S.A., but a very unstable exchange with Germany. If he calls Britain a "stable-exchange country" then his remark is pointless in this connection. If he does not, then "stable-exchange countries" do not exist.

Second, he maintains that "the more the mark has depreciated, the better have grown the State finances," because an increasingly large part of expenditure is met by floating debt operations. This burden, he says, is removed from the State to "foreign creditors," and to "native pure capitalists"; and, moreover, "the ratio of interest charges (on the floating debt) to revenue becomes ever smaller and smaller" as the nominal value of revenue is raised. But he neglects the fact that the need for fresh floating debt operations (and hence the interest burden) increases faster than revenue, so long as the mark continues to slump, and State expenditure as a result rises faster in proportion than revenue! Further, he seems regardless of the fact that the existence of a large floating debt is a continual element of instability in State finances, and that a point may be reached where the Government is incapable of meeting its needs by this method.

Third, he tries to make out that, because the trade boom in Germany has increased profits and employment, therefore this indicates the economic soundness of the German industrial system. Is he oblivious of the fact that a trade boom, especially when artificially stimulated by inflation, produces great maladjustment between the various parts of the economic machine—maladjustment which can only be corrected by a painful process of trade depression? Does he not realise that in judging the "health," say, of the British industrial system since the war the depression of 1921 has to be put in the balance over against the boom of 1919?

Fourth, whatever warrant has your correspondent for assuming that the German trade boom is "mainly a home boom"? His statement that because "buying power is a result of production, and buying power cannot cease first," therefore an economic crisis could not occur in Germany, need, surely, only be stated for its absurdity to be manifest? If this is so, how has a trade depression ever occurred?

Fifth, it is no contradiction, as your correspondent assumes it is, to say that production must cease because the slump in the mark makes it difficult to purchase imports, and at the same time to say that "ruin is impending because of the threatening surplus of imports over exports." Is not the existence of an unfavourable trade

balance one of the symptoms of the inability of Germany to purchase necessary imports—an inability which will manifest itself in a crisis, so soon as inflation and borrowing prove inadequate to supplement the deficit?

Finally he quotes figures of imports in metric tons, which are completely inadequate to prove what he tries to make them prove, simply because in attributing certain effects to an assumed cause it is always advisable to ensure that "other things are equal," and in this case "other things" are very far from being "equal."—Yours, &c., MAURICE H. DOBB. Cambridge.

PROCESS OF INFLATION IN GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Berlin correspondent gives the following links in the chain of rising prices in Germany:—

1. The mark exchange falls abroad, and the foreign exchanges in Berlin simultaneously rise.
2. The result is a rise in prices.
3. The price causes an increase in State expenditure and (at least at first) in State deficits, and makes private working capital insufficient.
4. The State deficits are covered, and the insufficiency of private capital is repaired by credit operations; the Finance Ministry presents Treasury bills to the Reichsbank for discounting, and private business men raise money by various means, of which the discounting of bills is one.

5. The Reichsbank disposes of the discounted bills to private capitalists as far as these can be taken up.

6. Against the undisposed-of residue the bank prints and issues notes holding the bills in security, and the note circulation is correspondingly increased.

Link 6 in the process of inflation calls for some explanation. It is generally understood in this country that in Germany the currency is inflated because the Government uses the printing press instead of resorting to direct taxation to meet expenditure charges. In this way the community is paying taxes through the invidious process of increased prices for everything. But according to the information your correspondent supplies increased prices do not end the matter, because it is the bank and not the State that prints the notes, and the State practically pays the bank a discount for doing this work. Before the effect of this operation can be gauged the rate of discount charged would require to be known, and perhaps your correspondent can supply this information. If the situation is as he sets out, then the German people will not only have to face the huge task of having to redeem, at some future date, those milliards of notes that have gone through the printing press, but they will have to pay an immense annual tribute to the bank for printing them. This process of raising revenue suggests two questions: first, why should the State not print the notes itself; and second, what will be the competitive position of Germany in world markets with this heavy load weighing down its industrial and commercial resources?—Yours faithfully, JAS. MCCONECHY.

Books and Publications.

THE LAST OF LORD BRYCE.*

THE career of Lord Bryce as a historian falls in a curious interval between two periods of historical writing. When he was a young man (he remembered a speech delivered at Glasgow by Kossuth in 1850) historians were the magnates of literature. The world waited breathlessly for Lord Macaulay's next volume, and fastidious stylists disputed eagerly over the anfractuosités of Mr Carlyle. History in those days was a form, and almost the highest form, of literature. But before Lord Bryce reached middle life the scene was changed. Clio began to speak with a strong German accent; the adornments of litera-

* "International Relations." Eight lectures delivered in the United States in August, 1921. By James Bryce. Macmillan, 10s 6d net.

ture were laid aside with shamefaced alacrity; and the new vogue for research and the *manie de l'inédit* installed the bricklayers of history in the seat of the architect. In the earlier period history had been florid, in the later it was dull; and the contemporaries of Lord Bryce, finding themselves a shade bewildered in the interregnum between the two, evolved a historical method which combined the qualities of both. Floridity was ensured by the retention of mechanical eloquence and facile characterisation from the repertory of the literary historians; and a belief, borrowed from the researchers, that facts were ends in themselves, lent a saving modern quality of dulness. With this remarkable equipment they set out in pursuit of historical generalisations. They explored the archives of the past for the form of political wisdom usually described as "the teachings of History"; and Lord Bryce was true to the tradition of his time when, lecturing in America so late as the summer of 1921 upon the relations of States, he undertook "to supply some materials for answering the questions aforesaid by throwing upon them the light of history."

In the broad sweep of his preliminary survey of the past he is true to his period. The old gods of Nineteenth Century history sniff once more the rich Victorian incense which they must almost have forgotten. Italian patriots and Hungarian patriots put on again the lofty ideals in which they appealed to their British contemporaries; and the hateful despot who was so disobliging as to do most of their work for them appears in the lurid light in which Mr Swinburne used to see him—"Cavour when dealing with Louis Napoleon gave expression to much less than he thought; but then Cavour knew the kind of trickster he had to handle." One rejoices to catch the brave old ring of a past era of historical criticism.

But when Lord Bryce approaches the problem, he becomes more serious. His condemnation of the Peace treaties is whole-hearted and weighty:—

"There is not one of the treaties of 1919-20 which is not already understood to need amendments. Some are utterly condemned by results already visible. Some are seen to be leading straight to future wars." His Turkish policy is refreshingly Gladstonian, and there is a gallant attempt to bring the shadow of a blush to American cheeks for the desertion of Armenia. He takes his audience, with a wealth of instances, through the history of modern wars and alliances and emerges with the rather cheerless discovery that "alliances, meant to secure against war the nations that make them, have proved more often causes of strife than remedies against it," whilst the Super-State is "outside the range of practical politics." Nothing remains but the chilly realisation that he must endeavour to break the League of Nations—gently—to his American audience. He points out its minor faults; he calls it by another name; he wrings his hands and almost declaims to the solemn rows of his complacent hearers that "You in America are well fitted to set an example"....."your help, your powerful and disinterested help".....But somehow beneath the rhetoric and self-abasement of his appeal one seems to detect a faint note of reproach, almost of scorn, for the amalgam of selfishness and ignorance which, with a few parts of natural diffidence, made up the Republican policy that failed civilisation.

A BOOK ON SOUTH AMERICA.*

IF it may be said that practically everything here set forth in this volume with so much patient persistence has been said before, and, in many cases, with a greater degree of accuracy, the industry of the author should be duly conceded. It would have been, perhaps, more precise to have entitled this work "An Anthology of Industrial and Commercial South America," since the collection of statistical and descriptive matter, amounting to some 500 pages of closely printed matter, has been largely, if not wholly, collated from existing volumes, to the authors of which, however, no special reference is made except in the large paragraph of the "Foreword," which records the "grateful appreciation" of the writer for cer-

* "Industrial and Commercial South America." Annie S. Peck. A.M., F.R.G.S. (London) T. Fisher Unwin. Price, 18s net.

tain unspecified (but none the less often recognisable) assistance afforded by existing volumes.

While much of the geographical information (obtainable in any encyclopædia or other book of reference) might without disadvantage have been abbreviated, a great deal more might have been said regarding commercial banking operations carried on in the Latin-American States. Trade and industry of South America depend, as in other communities, largely upon the assistance rendered by monetary institutions; yet little or nothing beyond a bald list of some of the banks, their branches and respective addresses (Appendix II.), can be found, nor is any reference made to the valuable services accorded by such old-established institutions as the London and Brazilian Bank, the London and River Plate Bank, the Commercial Bank of Spanish America, the British Bank of South America, &c., &c. Of commercial, marine, or fire insurance companies there is no mention either, nor, indeed, is any reference to either banks or insurance to be found in the Index.

It would be surprising to those interested in Colombia and who have expended—not without advantage—considerable capital in developing its mines, to learn that "as yet bare scratching of the surface has taken place," a statement refuted by the author on page 49, where it is shown that "the sum of \$400,000,000 (£80,000,000) was taken by the Castilians from shallow waters," and that "the gold production in Colombia since the Spanish Conquest is above \$600,000,000 (£120,000,000). For a mere 'scratching of the surface' these results (assuming the accuracy of the figures) would appear to have been remarkable. Further on, investors are advised "upon no account to attempt to obtain a possible concession for emerald mining in Colombia without thorough investigation and ample capital." No concessions for emerald mining are now—or for many years have been—granted by the State, the enterprise being a strict monopoly of the Government.

Among the information furnished in connection with Venezuela (p. 98), investors are advised to purchase for agricultural purposes land which "is so cheap that little capital is needed for the agriculturist unless engaging on a very large scale." Nothing is said—perhaps nothing is known—of the heavy taxes and royalties payable to the Venezuelan Government, which imposts in the past have proved a heavy burden upon enterprise of this character, one which must be carried on to no small extent in competition with State-aided interests. Neither is it possible to endorse the further assurance "to individuals with small capital the gold region of Orinoco would be attractive" (p. 99). The climate in this part of Venezuela is generally found so unhealthy that even the Americans find it difficult to work there. For Europeans or chance.

Under the Argentine Republic we are afforded certain information respecting its railways. Here reference is made to the "Central Argentina" (p. 308), and the "Argentina North-East Railway" (p. 311), the author the Argentine North-Eastern Railway and last-named system traffic statistics carry us no further than the years 1917 and 1918. In other cases such as that of the Buenos Aires Great Southern Railway, the figures Western Railway they are for 1912 and 1913. For the and the Entre Rios Railways no traffic statistics whatever are given. It would have been a simple matter to have obtained the 1921 traffic figures, since all these and other Argentinian transport companies publish their returns with commendable regularity. In the account given of the *grigori*-American capital, the latest export figures are those of 1918 and the first four months of 1919. Of land companies' operations we learn nothing, notwithstanding the are devoted to stock-raising. The subject is also dealt with under Paraguay, concerning which State we are informed "perhaps no other country of South America presents to the small farmer and willing worker, with or without small capital, openings more favourable than

Paraguay." No regard is paid to the damage that can be, and has been, inflicted upon foreign vested interests in land and other securities during the time of revolution, such as that which has now been in existence since last May.

Criticism is largely disarmed by such a defensive statement as "it may seem presumptuous that one with no practical experience should venture to discuss foreign trade" (p. 434). But the author proceeds to discuss the subject over nearly 500 pages, and to lay down regulations for the conduct of commerce with the South American countries. Apart from occasional crudities in construction and ungrammatical sentences, this volume is likely to offer but little practical assistance to British traders or shippers, while it is noticeable that it has been written for Americans. The volume contains eight well-drawn line maps relating to countries dealt with, while several pages are devoted to a bibliography which, however, is singularly incomplete. The index, extending over nearly 20 pages, is a mere record of geographical names, and provides no useful guide to the labyrinth of subjects treated.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 31.	November 2.

The stock markets have been unfavourably affected by the political developments at home, and the renewed slump in the French franc. Various minor factors have contributed to bringing about depression in most of the markets, though in some parts of the House there are indications that, if the home and foreign political atmosphere were lightened, people will not be unwilling to adventure money where possibilities exist for sound investment on the one hand, and speculative opportunities on the other. The War Loan is ex dividend, but the Consol market, as a whole, came under the influence of the General Election, with the mild apprehension that this might result in a substantial increase in the Labour Party's seats. Moreover, the new twenty million pounds India 4½ per cent. loan offered at 85, while it provides a useful addition to the lists of trustee stocks, tends to divert money from existing securities. The Conversion Loan showed a fair amount of strength, and attracted a good deal of business.

French bonds, of course, are extremely flat, on the slump in the franc, the pessimists jumping to the conclusion that this fall, which has succeeded the presentation of a gloomy French budget statement, is the prelude to further acute weakness. French railway bonds naturally suffered to some extent with the weakness of the Government issues. In Germany there is not much doing. Brazilians gave way heavily as the milreis sank beneath 6d. The franc demoralisation led to depression in the bonds of other foreign countries, and the recent buying of Danish, Scandinavian, Finnish, and other such issues has been checked. Peruvian Corporation stocks have been turned out by the speculating brigade.

Publication of the grouping terms for the Southern railways had the effect of bringing in sellers who had been nursing the stocks for some time past in the hope of what the actual announcement would be. Consequently, the deferred stocks of the Brighton, South-Eastern and South-Western companies are lower. Chatham's fell sharply, and the company's two preferences also gave way, though the debenture stocks are better. The final terms of the North-Western-Midland grouping appeared on Friday, and caused a smart drop in Furness ordinary, although some of the prior-charge issues hardened. The Undergrounds have been dull for choice, and the new debenture issues of the three tube railways, which came out at 93, dwindled to a small discount, in spite of the fact that the subscription lists were closed before the advertised date.

Grand Trunk Pacific 4 per cent. debenture dropped to 42, before recovering to 46. Mexican Rails are lower. Argentine Railway stocks declined to sympathise with the general tone throughout the Stock Exchange, and rose substantially, thanks to the chairman's speeches at this week's meetings of the B. A. Great Southern and Central Argentine. Brazilian railways gave way, in company with the prices of the country's bonds. United of Havana rose on the good dividend announcement of 4 per cent. Nitrate shares, including those of the railways carrying the produce, are lower where they have moved at all.

Rubber shares suffered a shake out in the middle of the week, as profit-takers came in to secure the handsome gains which many were able to take who had bought before the boomlet started. The price of the produce keeps steadily about 1s per lb, and the Stevenson report having been adopted by the F.M.S. and Ceylon Legislatures is held as a bull point, though it would appear as though a good deal of opposition may yet be encountered before the scheme can become fully operative. The oil market swung idly at the tail of whatever mood has prevailed in the leading markets, and speculative interest has died out completely from this section. The banking, insurance, and shipping markets have relapsed into quietude, changes being few and far between. Something of a feature is the way in which the stocks and shares of the Eastern cable companies have been advancing, material gains being established on the week. On the other hand, Marconis dwindled as a result of the meeting at the end of last week, when the proposal to issue debentures was duly carried. Iron and steel shares stand out with conspicuous strength in consequence of the settlement of the strike in South Wales. In the textile market the disposition has been to let prices drift. Daily Mail debentures hold their premium of 6 points, and it is expected that dealings will begin on Monday or Tuesday in the deferred shares of the Associated Newspapers. The recently issued debenture stock of the Cellulose Holdings Company dropped to 4 discount. Gas stocks are a trifle better, and electric lighting shares show no halt in their steady upward progress. Sudan Plantations, after their vivid rise, gave way from the top, while Hudson's Bays, which had been bought on the prospect of oil discoveries being announced at an early date, also reacted. Forestals, on the other hand, are improving, in spite of the expectation that the next dividend announcements may be disappointing. Fresh rises occurred in the leading tea shares, where the supply of stock is extremely meagre. Ridgways strengthened by reason of the terms offered to the shareholders. Gramophones advanced on a satisfactory dividend statement and report. United Dairies have held their improvement. The motor group has been less active, and prices began to dwindle. Dunlops went back to 9s sellers, though the debentures stand higher on the week. Breweries have moved somewhat irregularly, and the Tobacco market weakened on sales by stale bulls.

The Kaffir market is weak, in sympathy with other departments affected by French and Belgian influences. A good many options fall due at next week's settlement, and sales against these emphasised the prevailing depression. Rhodesians, diamonds, and other mining shares are also heavy. This week's rise of £6 per ton in the price of tin failed to galvanise either activity or strength into shares connected with the metal. Russians have given way, and the tendency in other mining sections sympathised with that shown elsewhere.

Earl Balfour unveiled yesterday the Stock Exchange Memorial which has been erected to the memory of members and clerks who fell during the war. Invitations were issued to the near relatives of those whose names appear on the Memorial. No business was transacted in the House until after the ceremony, which was both solemn and impressive.

NEW ISSUES.

Government of India 4½ per Cent. Loan, 1950-1955.—Issue of £20,000,000 at 85½ per cent., repayable, presumably in London, at par in May, 1955, but right is reserved to redeem the loan at par on giving three months' notice after May 15, 1950. Interest is payable half-yearly at the Bank of England in May and November. This stock is a trustee investment as laid down in the Trustee Act, 1893, unless expressly forbidden in any instrument creating the trust. We refer further to this loan on another page under "Notes of the Week."

South Staffordshire Waterworks Company.—Issued capital £1,348,509. This is an issue of £400,000 5½ per cent. redeemable preference stock at 99½, and an offer for sale by tender of £150,000 ordinary stock at a minimum price of £95 per cent. The preference stock now offered will be redeemed at par on January 1, 1938. It will rank equally with £181,300 existing preference stocks, and after £175,000 of preference issues and a £276,960 debenture issue. The existing ordinary stock is £715,240, while the statutory maximum dividend payable on the ordinary stock now issued is 8 per cent. For the last few years dividends on ordinary stocks have been limited, it is stated, by the operation of the Temporary Increase of Charges Act to 4½ per cent., and this rate was paid for 1920 and 1921. This limit has now been removed, and an interim dividend at the rate of 6 per cent. per annum has been paid for the first half of the year 1922. The prospectus contains much matter which may be of general interest, but a short table showing the actual surplus revenue of the undertaking over a period of, say, ten years would have been better welcomed by cautious investors.

The Mediterranean Asbestos Quarries, Limited.—Authorised capital £200,000, divided into 175,000 per cent. cumulative participating preferred ordinary shares of £1 each and 300,000 ordinary shares of 1s each. The issued capital consists of 113,227 preferred and 458,227 ordinary shares. The following details are taken from an advertisement published in accordance with the rules and regulations of the Stock Exchange Committee, in order to secure official quotations for shares of the company. Briefly, participating rights are that after the 10 per cent. dividend on preferred shares has been paid preferred shareholders are entitled to one-third of remaining available profits. The company has been formed to exploit about 3,000 acres of asbestos-bearing deposits in Corsica, and the purchase consideration is given as £82,750 in cash and 345,000 fully-paid ordinary shares, the vendors subscribing for 45,000 £1 shares and 45,000 1s shares. A speculative proposition, which possibly has merit, but only suitable for the consideration of those with knowledge of this industry and this particular locality.

Chelonia, Limited.—Share capital £125,000, divided into 100,000 10 per cent. cumulative participating preference shares of £1 each and 500,000 ordinary shares of 1s each. This is an offer of 80,000 preference and 80,000 ordinary shares at par. Subscribers are entitled to apply for one ordinary share for every preference share applied for, but application for ordinary shares alone will not be considered. The participating rights are that all profits after payment of the 10 per cent. dividend on preference shares shall be divided equally between ordinary and preference shareholders. The company has been formed to acquire a concession from the Government of Western Australia to take the turtle, and it is intended to market turtle soup in this country and utilise by-products. The purchase price is £35,000, of which only £2,000 is payable in cash. It would be interesting to know the consideration given to the Government of Western Australia for this concession; in the prospectus no payment is mentioned, and the valuation amount of £35,000 appears to be a fairly large sum in the absence of more information. It is noticeable that it will be difficult for preference shareholders to make their opinions effective at meetings owing to the voting powers laid down in the prospectus. A highly speculative proposition.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.				
	Price Week.	Price Last Week.	Price Week.	Price Last Week.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

CONSIDERABLE REDUCTION IN EXPENDITURE.

CHAIRMAN'S REVIEW OF GENERAL TRADE AND FINANCE.

CONDITIONS AND PROSPECTS IN SOUTH AMERICA.

The thirty-fourth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 24th instant, in the Great Hall of Winchester House, Old Broad street, London.

Mr. Robert John Hose (chairman of the bank) presided.

The secretary (Mr E. E. Hayes) read the notice convening the meeting and the auditors' report.

The Chairman (who was received with cheers) said: Ladies and gentlemen,—When addressing you a year ago I more than once referred to the uncertainties of the outlook, and when I found it possible to speak of a coming improvement it was more in hope than in expectation. As I said, I did not think that we were by any means completely out of the wood, and, as matters have turned out, the doubts have been justified. The year which has just ended has been the reverse of satisfactory, for the world is still unsettled, economic conditions in many countries are still inherently unsound, and recovery in trade still tarries. And for the root cause of this unpleasant condition of affairs we have again to look to the political factor, or, rather, to the politico-financial factor, which has been in the ascendant since the Armistice, now nearly four years ago.

INFLATION IN GERMANY.

In the first place, a settlement of the Reparations question is still wanting, and, in the absence of such settlement, Germany is becoming daily more and more involved in the toils of inflation, and, to all appearances, daily less able to meet her liabilities under and the Treaty. Whether she is so, in fact, time alone can show, but there are many who feel that the continued drop in the exchange value of the mark is secretly applauded in Berlin, and that the depreciation is fostered rather than feared, for every rise in the quotation can be pointed to by Germany as evidence of her growing financial impotence and as an argument for lighter treatment in regard to reparations, while it can also be made to illustrate the inevitability of devaluation, which term, amplified, means an enforced composition with her creditors and a partial repudiation of her debt.

Amongst other political factors which have troubled the financial world of late has been the revival of the Near Eastern problem, now happily solved, and we are now confronted with the prospect of a General Election at home—an event which is almost invariably accompanied by disturbing effects on business.

PROGRESS TOWARDS NORMAL CONDITIONS.

Politics have not been the sole cause of disturbance, however, for the world has not even yet fully recovered from the shock to credit which followed the post-war boom, the restoration of confidence to-day being all the more difficult of achievement by reason of the over-confidence of two years ago. The reaction has been comparable only with the extent of the rise; and the fact that prices to-day, although very substantially below the top, are yet so much in excess of the old-time level calls for continued caution in our estimates of the future. Even so, however, the past year, although it has had its disappointments, has not been altogether unfavourable, and there are many directions in which we have progressed towards more normal conditions. It is true that we have still been suffering from the effects of deflation, but we have to some extent reaped deflation's benefits.

FACTORS ESSENTIAL TO COMMERCIAL RECOVERY.

As I mentioned a year ago, there were two main factors which were essential to commercial recovery—a greater degree of financial and political stability amongst our potential customers, and the power on our part to supply them at competitive prices. As to the latter, much has been done during the year to reduce working costs, though to some extent the effect has been offset for the time being by the stimulus to production in other countries arising from a seemingly chronic depreciation in exchange. Wages have fallen, and with them the cost of raw materials and of foodstuffs, and as a result we are again approaching a sounder level of prices, which of itself at once warrants and induces greater enterprise.

On the other hand, there is evidence that some of the Continental countries are struggling towards financial and commercial con-

valence, and in South America one of the bright spots is the recovery in the nitrate industry which has taken place since the end of our financial year, and which is of such good promise for Chilean finances in general. Argentina, like many another country, has suffered during the greater part of the year from the over-importations of the past, but evidence accumulates that the surfeit is passing, and also that Argentina's purchasing power is likely to be increased during the present year by bountiful crops. Further, as I mention later in dealing with individual countries, Peru reports a noticeable reduction in the stocks of old-imported goods, and after very many years of travail, there is the hope of better conditions in Mexico if only she can be blessed with a stable and progressive Government. It will be a disappointment to us, therefore, if, 12 months hence, we are unable to report some revival in the demand for goods, not only in Argentina, but other parts of Central and South America served by our institution. Our advices from Spain, also, report a greater confidence as to the outlook there, and the matter is of the greater importance to us in view of the signing of the commercial treaty between Spain and Great Britain, which should increase the commercial interchange between the two countries, to the advantage, we will hope, of both.

CONDITIONS IN GREAT BRITAIN.

I have dwelt rather particularly upon the conditions obtaining in those countries abroad where the bank is established, and upon the prospects there so far as these may be gathered from the evidence at present available, but I know you will not think it out of place if I now refer briefly to affairs nearer home. If you will contemplate the financial history of the past few months, I think it will be agreed that we are entitled to congratulate ourselves on the manner in which Great Britain is bearing the financial burdens which have fallen to it as a result of the recent war. Waste has not been entirely eliminated from our expenditure programme, and taxation, consequently, is still unnecessarily, and, I fear, uneconomically high, but, on the other hand, something has been done to straighten the financial tangle which resulted from four years' war finance. The first half of the nation's financial year ended on September 30th last, and in the six months to that date the revenue amounted to just over 400 millions sterling and the expenditure to 347 millions, there being thus a surplus of revenue over expenditure of about 56½ millions sterling. Partly as a result of this, but mainly owing to conversion operations, a further substantial reduction has been effected in the floating debt, which, by reason of its magnitude, constituted one of the most unpleasant features of our financial position. During the six months, the total of the ways and means advances and Treasury bills together were reduced from 1,029 millions sterling to 872 millions, a contraction of 157 millions during the period, while if the comparison is carried back six months further, it will be found that our floating debt since September of last year has been reduced by no less than 450 millions sterling.

BRITISH CREDIT IMPROVED.

There can be no doubt as to the soundness of this policy, which, indeed, has not been without its effect upon the national credit, as is evidenced by the general rise in British Government securities since we last met, which rise has in many cases ranged from about 10 per cent. to 18 per cent. Expressed in another way, British credit during the period, as gauged by the long-term securities of the Government, has so improved that the yield in interest is reduced from over 5½ per cent. to under 5 per cent., while its short borrowing is now being effected at less than half the interest cost of a year ago, the average rate for Treasury bills being about 2½ per cent. as compared with nearly 4 per cent. in October of 1921. The movement has been assisted by the steady decline in the value of money in the open market, and while, in so far as this has resulted from the stagnation of general trade, it has necessarily militated against our activity as an element in commercial finance, it has at the same time offered opportunities of profit in other directions which have not been lost sight of.

Apart from any such consideration, however, it must be a matter for general satisfaction that British credit, as indicated by

her principal Government securities, should again be approaching a level more consistent with peace, and it may be hoped that this movement will not be interrupted in the coming year by any event less desirable than a real recovery in trade. Before this latter can be attained, however, political settlement is necessary, and an agreement not only on the question of reparations, but of inter-Ally debts, for no country can turn her serious attention to meeting a liability until its limit is fixed. So far as our own war liabilities abroad are concerned, of course, the question of amount does not arise, that having been fixed at the time the original loans were raised; but the rate of interest to be paid on these huge sums must be a matter of arrangement, and negotiations to this end are now impending between representatives of the United States and British Governments.

With your consent, I will now briefly review the economic and trade conditions in the principal foreign countries in which the bank is interested.

ARGENTINA.

Although from an economic standpoint Argentina, with her immense production of the primary commodities, might have been expected with comparative ease to weather the storm caused by the world-wide commercial depression, that country has been unable entirely to escape from its effects, and business activities during the past year have to a large extent been reduced to a holding of the position pending the return of more propitious times. When I last addressed you the effects of the crisis were already being felt, and in the interval matters appear to have reached a climax, so that it may be felt to-day with a certain amount of confidence that the worst has been seen. The matter may be expressed in a word—deflation—and the continued fall in commodity prices which is symptomatic of this condition has brought with it the usual crop of commercial difficulties, which have had a widespread effect upon the business situation. The liquidation of last year's large stocks of manufactured goods, imported at high prices, has, however, proceeded steadily, and while there may still be a certain amount of such merchandise awaiting disposal, the figures have undoubtedly been reduced to much more manageable proportions.

IMPORTS AND EXPORTS.

The official statistics of foreign trade for 1921 are not yet available, but the President in his Message to Congress in July last, estimated the imports at \$320,000,000 (gold) and the exports at \$670,000,000 (gold), the former being based on Custom House values and the latter on average market quotations. The actual value of the imports would be in the neighbourhood of \$710,000,000 (gold), thus showing for the first time for many years an adverse balance of trade, which amounted to about \$40,000,000 (gold) as compared with an export surplus of \$109,000,000 (gold) in the previous twelve months and one of \$375,000,000 (gold) in 1919. The volume of imports in 1921 was more or less equal to that of the previous year as regards quantity, but the real value declined by about \$224,000,000 (gold), while the exports registered a substantial falling off in both quantity and value. No statistics are available for the first part of the present year, but some guide to the position is afforded by the figures of the Buenos Aires Customs House, the import and export duties for the first eight months of the present year being practically the same as a year ago, at \$131,600,000. The railway traffic receipts, however, showed a moderate decline in the first nine months of the present year, notwithstanding the advance in rates, and there was also a reduction in the amount of bills, cheques, &c., passed through the Buenos Aires Clearing House, the total for January-June last being \$17,400,000,000 (paper), as compared with \$18,785,000,000 in the first half of 1921. The credit statistics also are not very favourable, the total liabilities in commercial and private failures throughout the Republic during 1921 having amounted to 145 million dollars paper, as compared with 58 millions in the previous year, while in the first seven months of the present year the total was \$82,969,000 (paper) as compared with \$83,097,000 for the corresponding period of 1921.

Further indications of the unfavourable trend of Argentina's foreign commerce during the twelve months are to be found in the fact that the repatriation of Argentine securities was on a much smaller scale, while, on the contrary, New York, aided by the favourable exchange position, was able to absorb certain issues which are payable in that city. As has already been indicated, the Argentine exporter has not derived any advantage from the exchange position, many of the local industries suffering severely in sympathy with the unfavourable conditions at the principal consuming centres.

CEREALS.

A partial recovery has followed the heavy reduction in exports of the principal cereals reported a year ago. The position in regard to wheat is especially satisfactory, the shipments for the first nine months of the present year being nearly double those for the whole of 1921, the exact figures being as follows:—

	1920. Tons.	1921. Tons.	To Sept. 21, 1922. Tons.
Wheat	5,033,000	1,680,000	3,204,000
Linseed	1,050,000	1,360,000	731,000
Maize	4,410,000	2,835,000	1,437,000
Oats	410,000	390,000	259,000

With regard to market movements, the price of wheat is lower than a year ago, though at the same time above the lowest point touched. Quotations of maize, oats, and linseed, on the other hand, are substantially higher on the 12 months, as may be gathered from the following table:—

	Oct. 21, 1921. (\$ paper).	Oct. 21, 1922. (\$ paper).	Highest Level touched 1921-22. (\$ paper).	Lowest Level touched 1921-22. (\$ paper).
Per 100 kilos.				
Wheat	12.35	12.50	14.35	10.95
Linseed	15.90	22.18	22.74	15.90
Maize	6.90	9.00	9.51	6.90
Oats	7.40	10.25	10.25	7.30

It is officially estimated that at September 10th last the quantity of wheat available for export was 615,000 tons, and that of linseed 106,800 tons. A recent estimate of the maize available for export placed the amount at 2,000,000 tons.

PROSPECTS FOR CURRENT YEAR.

With regard to the prospects for the current year, some apprehension has been felt as to the position, owing to superabundant rains. The actual damage caused was not great, however, and though seeding was delayed in many parts, the latest reports are very satisfactory, and, given only comparative freedom from frost damage, all the indications point to a bumper crop.

As regards flour, Brazil continues to be Argentina's chief market for this product, but there is an increasing tendency on the part of merchants in the former country to import wheat for the purpose of treatment in their own mills rather than the finished product. As was the case with wheat, exports in 1921 were comparatively negligible, amounting to only 46,500 tons, against 172,900 tons in the preceding 12 months, but the figures for the first half of the current year are more favourable, the shipments amounting to 59,000 tons, as compared with 15,500 tons in the corresponding period of 1921.

MEAT AND SUGAR.

The livestock industry has been passing through a period of acute crisis. The consumption of meat in Great Britain, which is the principal market, has been reduced, owing, presumably, to the unfavourable economic and industrial conditions prevalent. As a result, Argentine stock breeders have experienced very difficult times, and were it not for the liberal manner in which the industry has been assisted by the national and private banks the financial consequences might have been truly disastrous. The principal difficulty has been in regard to frozen beef, the exports of which during the first seven months of the present year amounted to only 934,000 quarters, as compared with 2,115,700 quarters in the corresponding period of 1921, but much better figures are reported for chilled beef and for frozen sheep and lamb, exports of the former for the periods mentioned amounting to 1,803,500 quarters, against \$44,200, and those of the latter to 2,138,000 carcasses, as compared with 1,795,000 carcasses. The present price of chilled beef quality cattle is about 20 cents (paper) per lb., this and as it is not generally expected that prices will go higher, the freezing establishments will doubtless make strenuous efforts to add to their output.

The local production of sugar during the current year is estimated at 193,000 tons, or practically the same as a year ago, while the stock of this commodity in hand at June 1 last was placed at 45,000 tons, and since that date about 15,000 tons has been imported. As the annual consumption in the Republic equals approximately 230,000 tons, local requirements for the next 12 months would appear to have been covered.

WOOL.

The wool situation has been one of the brightest features of the year, there having been a distinct improvement both as regards the quantity shipped and the prices obtained. The volume of exports greatly exceeded any previous record, and prices, too, have been satisfactory, particularly for the fine wools, current quotations for the latter being in the neighbourhood of \$12.50 (paper) per 10 kilos, as compared with \$8.50 a year ago, while the price of coarse wools is about \$3.00, against \$2.50. At the corresponding \$5.00 per 10 kilos, and fine wools were quoted at about for the period October 1, 1921, to September 21 last were 193,000 tons, as compared with 121,000 tons in the corresponding period of the previous year. The principal buyer was Germany, which absorbed about 60,000 tons, or nearly one-third of the total

sales, partly under the special barter agreement, which, in effect, provides for the exchange of Argentine wool for German iron and steel materials for the construction of railways and bridges. The stock of wool held at the Buenos Aires Central Produce Market at about the middle of September last amounted to 4,878 tons, as compared with 9,727 tons at the corresponding date last year, and was in the main composed of low-grade qualities, for which the demand is small.

WINE HARVEST.

The wine harvest of 1921-22, after promising exceedingly well, did not come up to that of the previous year, the total production being estimated at 5,630,000 hectolitres, as compared with 7,200,000 hectolitres in the previous year. Of this total, Mendoza was responsible for 3,630,000 hectolitres and San Juan for 1,400,000 hectolitres. The average annual consumption is about 5,000,000 hectolitres, and, including stocks, there would appear to be an excess supply of about 1½ million hectolitres. Endeavours have recently been made to foster the export of Argentine wines to Brazil and other countries, but, so far, little progress has been made, and in view of the surplus crop referred to above, the fall in the price from 32 cents per litre a year ago to 28 cents at the end of August is by no means surprising, even though the current quotation compares with one of 53 cents per litre in 1920.

Owing to the heavy supplies of Danish, Australian, and New Zealand butter, the demand for the Argentine product in Great Britain (the principal consumer) has been smaller, and prices have consequently been less remunerative. Exports for the current year up to the beginning of last month amounted to 11,100 tons, as compared with 15,040 tons for the corresponding period of the previous year.

QUEBRACHO, HIDES, AND PETROLEUM

The shipments of quebracho extract during 1921 amounted to 123,000 tons, as compared with 114,000 tons in the preceding year and 172,600 tons in 1919, while the total for the first eight months of the present year was 111,350 tons.

The United States remains the principal market for Argentine hides, and the premium on the U.S. dollar has stimulated exports, 2,616,300 salted ox-hides being shipped during the first eight months of the present year, as compared with 1,385,100 in the same period of 1921, the corresponding exports of dry ox-hides being 1,739,400, against 495,700.

The possibilities of the oil zones of Comodoro Rivadavia, Neuquen, and Santa Cruz continue to attract attention, and representatives of all the leading petroleum interests in the world are actively engaged in boring operations. Owing to administrative difficulties, the production of the State oilfields at Comodoro Rivadavia has not increased to the extent which might have been expected, the total output for 1921 being 1,730,500 barrels, against 1,425,200 barrels in the preceding year, and that for the period January-June last, 1,013,000 barrels, against 949,300 barrels in the first half of 1921.

GOLD MOVEMENTS AND EXCHANGES.

The Government has continued to maintain the closure of the Caja de Conversion and the prohibition of gold exports, and there has consequently been very little change in the figures of that institution. The stock of gold held in the Caja remains at \$466,476,969, the amount deposited at the Argentine Legations abroad being \$4,123,158. In addition, \$10,000,000 (gold) is held by the Banco de la Nacion on account of the conversion fund. The note circulation on September 14th last amounted to \$1,362,563,073 (paper), and the proportion of gold to the total note issue was therefore 80.16 per cent., \$1 paper being the legal equivalent of 44 cents gold.

As regards foreign exchanges, the value of the peso shows very little change on balance as compared with the principal foreign currencies, yesterday's sterling quotation for telegraphic transfers, for instance, being 44½, as compared with 44½d at the date of our last meeting. This comparative steadiness would hardly seem to be warranted by the trade figures so far as these are available, but the position has been affected to some extent by the loans raised by the Argentine Government in the United States and by heavy exports to that country coupled with reduced imports therefrom, the effect of which is seen in a reduction in the premium on the U.S. dollar as compared with the Argentine dollar from 51 per cent. in July of last year to about 18 per cent. a month or so ago. In the same period the sterling value of the Argentine dollar showed an improvement of about 3½ per cent., the difference being accounted for by the appreciation of sterling in New York.

POSITION OF LOCAL BANKS.

In the following table, the position of the local banks at June 30th last is compared with that at the same date in 1921:—

	June 30, 1922. (\$ Paper).	June 30, 1921. (\$ Paper).
Deposits	3,347,576,314	3,455,410,554
Advances	2,474,430,961	2,538,108,743
Cash holding	1,139,754,158	1,179,676,936

It will be noted that there has been a slight reduction in both deposits and advances, and similar changes are shown in the position of our own bank and the British Bank of South America.

Money is cheap, the demand being very poor, and the fact that large sums still await remittance abroad on any substantial improvement in exchange continues to have an important bearing on the situation. The lack of other outlets for capital has doubtless also been a factor in the rise in prices of gilt-edged securities.

The general labour situation is satisfactory, and in this connection the only unpleasant incident during the year was the outbreak in Patagonia, which, however, was promptly and very effectively dealt with by the Government. The cost of living appears to be adjusting itself, though very gradually, to the new conditions ruling. Building operations are on a more extensive scale, but a scarcity of housing accommodation remains apparent and rents are still very high.

GOVERNMENT FINANCES.

With regard to the Government finances, the revenue for the year 1921 (including about \$60,000,000 from various loans) was estimated at \$495,841,000 (paper), and the expenditure at \$558,950,000, and the Budget for 1922, which has not yet been passed, estimates the revenue at \$572,548,000 (paper) and the expenditure at \$599,956,000. It is proposed to cover the resultant deficit of about \$27,000,000 by the issue of bonds of internal or external debt up to an amount of \$30,000,000, these to be subject to interest at 6 per cent. per annum and 1 per cent. amortisation. The new taxes proposed in the Finance Bill include a 3 per cent. *ad valorem* tax on income from movable property (*i.e.*, dividends, interest on bank deposits, &c.), and also an ordinary income-tax scheme, the revenue from each of these new taxes being estimated at \$25,000,000 (paper). At the end of September of 1921, the Government floated a loan of \$50,000,000 (U.S.) in New York for the purpose of repaying advances made by the Banco de la Nacion. The loan, which runs for two years from October 1, 1921, bears interest at the rate of 7 per cent. per annum, and was offered at 97 per cent. A further issue of \$27,000,000 was made in New York in March of the present year, the rate of interest in this case being 7 per cent. per annum and the issue price 95 per cent., the loan running for five years. Negotiations for another issue of \$100,000,000 have recently been in progress, the proceeds of this loan, with another of similar amount, being required for the purpose of funding the floating debt, which at December 31st last was officially stated at \$558,360,000 (paper). The consolidated debt of the nation at the same date was \$1,217,690,000 (paper).

LATEST CONDITIONS.

As usual, we have received cable advances from our Buenos Aires branch giving us the latest conditions in Argentina, and these read as follows:—

"Railways showing increased takings. Labour situation satisfactory all round, and views business and general outlook optimistic. Hides strong. Wool prospects excellent. Cattle situation obscure and meat prices low. Pasturage good. Cereal crop prospects considered excellent, and ploughing and sowing for next harvest are proceeding under favourable conditions. Textiles dull, current stocks being reported large. Much interest being evinced in prospects oil industry. Sales wine slow. Money abundant and difficult to employ. Government floating debt September 30th amounted to 700 million dollars paper."

URUGUAY.

Although trade conditions in Uruguay have certainly been no better during the past year than in the 12 months preceding, the tendency of exchange has been more favourable to that country, owing, no doubt, to a large extent, to a natural reaction from the heavy fall recorded in the first few months of 1921. During that period, it may be recalled, the sterling value of the Uruguayan dollar fell from about 51d to about 38d, having in the previous 12 months dropped from the record height of 76d, and it is, therefore, not surprising that, despite the continued inactivity of trade, there should have been a moderate recovery during the past year. From a level of 39½d quoted in July last year, the quotation advanced in the following month to nearly 45d. After falling to 40½d in January of the present year, it had recovered again at the date of our accounts to about 44½d. As already mentioned, however, the trade position is, on the whole, less favourable than a year ago, for, while the value of imports was practically unaltered, there was a further substantial falling-off under the head of exports, and as a result an import surplus of over 38 million dollars was established, as compared with one of 29 million dollars in the previous year and with an actual excess of exports over imports of 8½ million dollars in 1919-1920. The figures may be summarised as follows:—

Year Ended June 30th.	Imports. \$	Exports. \$	Excess of Imports. \$
1921	104,252,260	75,335,078	28,917,182
1922	104,406,371	66,273,795	38,132,576
Increase or decrease +	154,111	9,061,283	+ 9,215,394

The reduction under the head of exports was almost entirely due to smaller shipments of livestock products, which were valued at 63 million dollars as compared with nearly 72 millions in the previous twelve months, while in imports, the year's purchases from abroad of ironmongery and paper were valued at only seven million dollars, against 11½ millions, and those of textiles at nine million dollars, against 10½ million dollars. On the other hand, comestibles and groceries imported increased by 3½ million dollars, to \$25,211,000, and there was a sharp advance under the head of fuel, the total for the past year being 22 million dollars, as compared with 10½ millions in 1920-21. It should be noted that the exports are given at real values, as shown in the official returns, but the value of imports is taken on a basis of 163 per cent. over the "official" values as compared with 140 per cent. premium a year ago, indicating a moderate advance in prices of imported articles in the interval.

LIVESTOCK AND WOOL.

Referring now to the principal local industries, it may be reported, with regard to livestock, that the winter was milder than had been feared, and that the prospects appear good if normal weather prevails in the coming summer season. Values, however, have been, and still are, very low, and although there is a fair demand for the many animals coming into the market, breeders complain that, owing to the low prices obtaining and the high cost of transport, the proceeds in many cases are hardly sufficient to cover expenses. Killing in the freezing establishments continues, but the demand is still only for the best class of cattle, and the Uruguayan Rural Association is persevering in its endeavours to induce breeders to purchase pedigree sires, with the object of improving the standard of cattle generally and thus obtaining the class of animal which is productive of the high quality of beef required for the European markets. During the twelve months ended June last, 310,513 head of cattle of a total value of \$10,872,407 were sold in the Montevideo market to various freezing establishments, these figures comparing with 369,702 and \$22,491,897 in the preceding year. The average price per head of cattle sold in June, 1922, was \$30.25, as compared with \$45.04 in June, 1921, and \$73.74 in July, 1920.

The wool clip was disposed of readily at prices which were considered satisfactory, although naturally far below the abnormal figures realised in previous years. Hides, both dry and salted, are being sold without difficulty, and there is a ready market for most of the by-products.

From the above, it may be gathered that general trading conditions were not very favourable during the period, and the position of several of the large importing houses was so seriously affected as to involve losses to some of the local financial institutions.

LABOUR CONDITIONS.

With regard to labour conditions, strikes have occurred in various public services, and the municipal council, which has given its support to the employees of the tramways and telephone companies in their demands for higher wages, is now itself involved in a dispute with sections of its own employees, who have also ceased to work in the hope of obtaining better conditions. On the whole, however, labour troubles have been comparatively unimportant.

The revenue and expenditure returns for the financial year which has just ended show a deficit of over eight million dollars, and in order to cover this there has been some discussion of the raising of a further foreign loan of \$10,000,000 (U.S.), though, so far, no definite proposal for this purpose has been presented to Congress. As I mentioned at our last annual meeting, the deficit for the previous year amounted to about six million dollars, which was covered by a loan of \$7,500,000 (American). Of this amount, \$7,023,634 (U.S.) was drawn for, and produced \$9,306,387 in Uruguay currency, the balance of \$476,366 (U.S.) being left in the United States for the purpose of meeting part of the services of the loan. The shortage of eight million dollars above referred to is accounted for in part by a reduction in Customs receipts of \$1,669,791, and also by the provision of \$1,500,000 for amortisations of the three external loans, which have been suspended since 1915. The Government now seems to be showing a commendable desire to effect economies, and in the Budget now before the Senate the estimated deficit, so far, is only two million dollars.

CHILE.

During the 12 months ended June 30th last, conditions in Chile were distinctly unfavourable, and, indeed, one has to go back many years to find its equal in commercial depression; but I am glad to say that, as recent events suggest, it seems to have been a case of "the darkest hour before the dawn," and all indications to-day point to the fact that Chile is once again on the high road to recovery.

The worst period was during the second half of 1921, and some measure of the depression which prevailed during that time may

be gauged by the sudden drop in the figures covering 35 principal articles of import and 28 of export, which was nothing short of remarkable. In the half-year ended June, 1921, Chile's exports of the commodities in question were valued at 276 million dollars gold of 18d, but 12 months later—that is to say, during the second half of the financial year covered by the present accounts—the total dropped to 119 million dollars, while in the same period the value of imports was reduced by about 60 per cent., dropping to a little over 30 million dollars gold of 18d. Such figures are obvious evidence of a considerable shock to confidence, and they were naturally accompanied by a very heavy fall in the exchange value of Chilean currency, which in January last touched the lowest point recorded for very many years—namely, 5½d.

DROP IN EXCHANGE.

In view of the general trade position, the drop in exchange is not surprising, but, as is so often the case, Chile's difficulties have to a large extent brought their own remedy, the trade position in the first six months of the present year having shown a gradual improvement, which has been accompanied by a fairly consistent, though at the same time moderate, recovery in exchange. By the end of June last the quotation had recovered to about 7d, and it has since been nearly 1d higher, the actual quotation yesterday being 32 pesos to the £, or 7½d per peso. The highest point touched during the bank's financial year was on October 7, 1921, when the rate was 7½d. As is our custom, we reproduce below various statistics of Chilean trade during the past few years:—

Year.	Imports. \$ Gold of 18d	Exports. Gold of 18d	Excess of Exports. \$ Gold of 18d	Excess of Imports. \$ Gold of 18d
1918.....	436,074,000	763,622,500	327,548,500	..
1919.....	401,324,000	301,458,000	..	99,866,000
1920.....	455,079,000	778,885,500	323,806,000	..
1921.....	381,302,500	433,758,500	52,456,000	..

The following table compares the values of the principal Chilean products exported from the country in each of the past five half years:—

	1920. Jan.-June.	1920. July-Dec.	1921. Jan.-June.	1921. July-Dec.	1922. Jan.-June.
	\$ Gold of 18d	\$ Gold of 18d	\$ Gold of 18d	\$ Gold of 18d	\$ Gold of 18d
Nitrate	214,675	243,753	204,845	39,934	40,480
Copper	70,584	17,787	21,626	16,006	36,381
Cereals, &c..	21,439	11,038	13,162	13,692	21,651
Borax	9,495	13,736	18,353	13,972	20,645
Wool	22,210	5,905	5,609	1,667	2,664
Iodine	3,662	4,325	9,358	633	3,132
Hides	3,959	1,299	109	499	454
Frozen meat	2,465	5,057	2,292	6,240	2,319

CHILEAN LOANS.

Striking though the above figures are, however, they do not, of themselves, seem to justify the exceptionally low level of exchange during the past year (when, after all, an excess of exports was still maintained) as compared with, for instance, 1919, when, although Chilean trade showed an adverse balance of nearly 100 million dollars, the lowest point touched by exchange was \$ 29.32d, and the real explanation seems to be that while Chile's national revenues, which are mainly derived from export duties, were thus being considerably curtailed, the expenditure, if any, was again under the necessity of borrowing abroad in order to her foreign debt during 1921 increasing by £549,400 sterling and cent. loan for £1,657,500 was issued in the London market at 95 per cent. This last was a distinct success, for, although the offered was nearly three times over-subscribed. In passing, I may mention the reports of further negotiations in this market for approximately £4,000,000, and, subject to the arrangement of the result should be satisfactory. Chilean loans being well spon-sorred in this market, while, also, the recovery in the nitrate in January last should not be without their effect upon the demand for any new stock which may be offered. The extent to which the internal revenue has been reduced during recent half-years may be gathered from the following table:—

(000's omitted.)

Year.	January-June.	July-December.	Total.
	\$ Gold. \$ Paper.	\$ Gold. \$ Paper.	\$ Gold. \$ Paper.
1918.....			167,410 54,308
1919.....			74,472 50,442
1920.....	75,150 30,719	66,137 20,515	141,287 51,234
1921.....	56,425 19,039	29,753 7,957	86,178 26,996
1922.....	28,054 1,979		

AGGREGATE OF NOTE ISSUES REDUCED.

As already mentioned, the expenditure was considerably in excess of the revenue, and in order to meet the deficit, the Government during 1921 issued a further internal loan of 130 million dollars (paper), while further borrowings of up to 135 million dollars (paper) have been authorised on account of the current calendar year, which have not yet been fully availed of. It is gratifying to note, however, that there has been no attempt on the part of the Government to meet the position by inflating the currency, which subterfuge has been resorted to by so many of the European countries. Indeed, the aggregate of the various note issues has been slightly reduced during the 12 months, as is shown below:—

	Fiscal Notes Against Conversion Fund.	Fiscal Notes Against Private Deposits of Gold or Lien on Nitrate.	Treasury Vales Issued to Banks and Nitrate Producers.	Total.
June, 1920	150,853,119	59,619,152	78,988,500	289,460,771
December, 1920....	150,853,119	44,845,800	107,123,000	302,821,919
June, 1921	150,853,119	46,480,334	131,869,500	329,202,953
December, 1921....	150,853,119	43,576,001	130,202,000	324,631,120
June, 1922	150,853,119	40,788,125	104,706,000	296,347,244

In addition, it is estimated that the silver and nickel coins in circulation amount to \$11,000,000. The conversion funds held against the fiscal notes now amount to \$114,724,780 gold of 18d, of which \$21,502,780 is held in the Bank of England and \$93,218,999 in the Treasury at Santiago, the proportion of gold to the issue of fiscal notes in question being thus about 77 per cent.

The same freedom from inflation is also shown by the figures of banking deposits, the total of which during the year has contracted moderately. The gold deposits of the banks as a whole on March 31st last amounted to \$125,644,000 gold of 18d, as compared with \$184,502,000 12 months previously, and the currency deposits with \$960,208,000, as compared with \$890,495,000. You will be interested to note that of the total deposits in Chile our bank holds about one-sixth, the gold deposits amounting to \$36,200,000 and the currency deposits to \$140,498,000, as compared with \$76,673,000 and \$112,927,000 respectively a year ago.

NITRATE STOCKS.

You will recall that, when reviewing the nitrate situation at our last meeting, I stated that although, in my opinion, the outlook had recently become much brighter, there were several points which had to be specially borne in mind, these including the great reduction in the demand for the fertiliser, the large stocks then held by the Pool, and the still larger accumulations which remained in the hands of the producers. As one result of these accumulations, many oficinas had to be closed down altogether during the past year, and others reduced their output, and this materially assisted in bringing about a healthier situation; but, drastic though the remedy was, it failed to meet the situation, for although the production in the nitrate year ended June 30th last was very substantially curtailed, the falling off in the export demand was greater still, and, as a consequence, the stocks of nitrate in Chile showed a net increase as compared with 12 months previously. The principal statistics for the past two years are given in the following table:—

Nitrate Year.	Production. Metric Quintals.	Export. Metric Quintals.	Stock in Chile at End of Year. Metric Quintals.
1920-1921	21,740,994	20,515,120	13,586,987
1921-1922	8,909,643	6,120,352	16,262,816

IMPROVED CONDITIONS.

In addition to the reduction in output, however, there were three other important factors during the year which were chiefly responsible for the restoration of more healthy conditions in the nitrate industry. In the first place, there was the arrangement made between the Producers' Association and the Pool, whereby the fixed selling prices for 1921-1922 were gradually reduced; secondly, we had the fixing of minimum selling prices for the new nitrate year (1922-1923) at still lower figures; and, finally, the

practical liquidation in July of this year of the balance of the Pool's stocks. The minimum prices fixed for the current year vary according to season, ranging from 18s 6d to 20s 8d per metric quintal of 100 kilos, which measure, I may mention in passing, has been adopted by the nitrate industry as the common unit, in lieu of the Spanish quintal of 46 kilos. These prices are equivalent to a range of from 22s 3d to about 30s 6d in the nominal prices fixed in the previous nitrate year; and the reduction gave an immediate impetus to the demand, as is demonstrated by the fact that the sales of nitrate for delivery from July 1st to the 20th instant amounted to no less than 9½ million metric quintals.

In view of the quantity sold for spot and forward delivery in the first four months of the new nitrate year, there seems to be a reasonable prospect that the estimate of total sales of 18,000,000 to 19,000,000 metric quintals may be realised within the 12 months ending June 30th next, but this, as is the case with other commodities, depends upon a number of more or less extraneous factors whose influence it is impossible to gauge, including, for instance, the condition of the exchanges, the value of money, &c., &c. Failing a more or less substantial revival in demand on the part of countries such as Germany, the world consumption for the current 12 months seems likely to be considerably short of the pre-war standard, perhaps to the extent of about 33 per cent.; but so good a beginning has been made that it is perhaps not unreasonable to anticipate the gradual development of a greater activity, which should bring with it an all-round improvement in business in Chile, where so much depends upon the prosperity of the nitrate industry.

ARTIFICIAL NITRATE.

With regard to the production of artificial nitrate by Germany, which country was formerly so large a consumer and distributor of the Chilean nitrate, it has to be remembered that the marked progress made in this comparatively new industry has been much assisted by the heavy depreciation in the exchange value of the mark, and when a stable unit of currency is established in Germany, as is bound to be the case some day, it remains to be seen whether that country can compete successfully with the natural product of Chile, especially if, as is hoped, greater efficiency in working can be secured at the oficinas. I may here mention that in Chile there has been considerable activity of late in research work and in practical experiments with a view to reducing the working costs in connection with her staple product, and also with a view to the utilisation of a lower grade of raw material than is now possible, thereby prolonging the life of a nitrate property. Good progress has already been made in this direction, and we may hope to hear more of the matter in the course of the next few months.

While on this subject, it may perhaps also be usefully recorded that tests which have been made demonstrate that although synthetic nitrate may be as effective as the natural product in the manufacture of explosives, the value of the latter is immensely greater for fertilising purposes, owing to the much shorter time which it takes to affect a soil treated with it. I look forward to the time when the value of Chilean nitrate as a fertiliser will be appreciated as fully by agricultural interests in this country as it is on the Continent and elsewhere. Not only in Germany, but in France, Belgium, and many other countries, much greater quantities of nitrate are used for this purpose than in Great Britain, yet there is no country which imports such enormous quantities of foodstuffs as we do. The point I desire to make is that the import and use of one cargo of Chilean nitrate would result in an increased output of foodstuffs equivalent to very many cargoes of such products which at present have to be obtained from abroad. The matter, I think, is one of great practical interest from several points of view—labour, social, and economic—and I commend it especially to the very serious attention of all engaged in the agricultural industry in this country.

TRIBUTE TO CHILEAN NITRATE PRODUCERS' ASSOCIATION.

As I have indicated above, the better conditions which now prevail in the nitrate industry are to be attributed almost entirely to the wise policy of the Chilean Nitrate Producers' Association and the able manner in which that policy has been carried into effect. The reduction in the price of the fertiliser, as we have seen, quickened the demand therefor, but quite as important a factor in the revival was the steps taken for stabilising prices at the lower level, which greatly facilitated the financing of imports. Had selling prices been liable to the ordinary market fluctuations the financing of shipments would have been very difficult to arrange, but with stability of value assured by the action of the association, this difficulty was at once removed and the way cleared for the steady movement of nitrate into consumption. The valuable work done by the association for the industry, and consequently for Chile, cannot be spoken of too highly, and so long as this body continues in being we have every reason to hope for a greater prosperity in this important branch of our business.

The labour situation has continued to cause some anxiety during the year, principally because of the large amount of unemployment inseparable from the temporary closing down of certain of the nitrate oficinas and mines and partly owing to dissensions between different workers' organisations in the coalfields and differences between the miners and colliery owners, which the latter consistently, and ultimately with a fair measure of success, have endeavoured to settle.

COPPER.

The better tendency in the copper market during the last few months has also had a favourable effect upon this, the second in importance amongst Chile's industries. Exports of the metal, which in the 12 months ended June, 1921, amounted to 66,584 tons, as compared with 78,968 tons in the preceding year, showed a further falling-off in the second half of last year, shipments for that period being only 24,530 tons. With the expansion in demand and the recovery in the price of the metal by which it was accompanied, Chile's exports showed a substantial improvement, the total for the period January-June of the present year amounting to no less than 58,650 tons, bringing the total shipments for the 12 months up to 83,180 tons. The outlook may, therefore, be said to be much more satisfactory than it was a year ago.

NEW TRANS-ANDINE RAILWAYS.

Before closing this review of Chilean conditions, I would mention two international events which may have an important and lasting effect upon the trade of the country. The first in order of date was the signing in April last of an agreement between Argentina and Chile for the construction of two new trans-Andine railways, one to join the Argentine town of Salta with the Chilean port of Antofagasta, and the other to prolong the Argentine railway systems from Bahia Blanca to join the Central Chilean Railway system in the southern sector. The second was the provisional signing of the Protocol between Chile and Peru as a basis for the settlement of the long-standing dispute regarding Tacna and Arica. It is to be hoped that both these will be ratified by the Governments concerned, and that they will lead to practical results.

PERU.

Owing to the low prices ruling for Peru's principal products—cotton and sugar—the trade statistics for 1921, which are the latest available, show a very heavy drop in the value of exports from that country, the value being £P.15,700,616, against £P.35,322,226 in 1920. The imports totalled £P.15,521,706, against £P.17,956,758 in the previous 12 months, and the net result was a slight balance of trade in favour of the country, the excess of exports over imports amounting to £P.178,910.

It is some satisfaction to note, however, that the position during the second half of the year was decidedly better than in the first six months, owing to a considerable contraction in purchases from abroad, as the result of which an import surplus of about £P.2,000,000, established during the months January-June, was entirely negated during the second half of the year, being replaced, as already mentioned, by a small surplus of exports. Later figures are not yet available, but from the course of the exchange it would seem that this favourable tendency has continued, for, although in March last the premium on sterling at Lima rose to about 29 per cent., it has since fallen back to under 4 per cent., and is now in the neighbourhood of 11 per cent. The better conditions recently prevailing in the exchange market, however, have been partly due to the recovery in prices of sugar and cotton and to the increase in the country's foreign balances resulting from the Government loan of \$2,500,000 contracted in New York in July last.

REVENUE.

As was only to be expected, in view of the reduced volume of trade, the Customs revenue has shown a very considerable falling off, the total receipts for the twelve months ended June 30th last being £P.1,527,939, of which £P.1,106,148 was derived from import duties and £P.421,791 from export duties. In the year ended June 30, 1921, the total of the import duties was £P.2,203,435 and that of the export duties £P.1,391,492. The reduction in the yield from export duties is mainly due to the fall in prices of cotton and sugar, which during the greater part of the year were at prices which rendered them free from export duty.

Naturally, in view of this great reduction in revenue, the pre-occupation of the Government has been to raise money to carry on the administration. Early in 1922 a law was passed authorising the withdrawal from circulation of notes of the denomination of one sol and 50 cents up to a total value of over £P.700,000, and providing for their replacement by nickel coins of similar denominations, and as a result of this operation the gold and good-class securities which were previously held against the cancelled notes have been released and made available for the purposes of the Treasury. In addition, the previous existing nickel coinage of twenty, ten, and five cent pieces, having a total value of £P.260,000, was declared inconvertible, and the guarantee fund held by the

Junta de Vigilancia for redemption purposes was also freed. By this means the Government obtained the equivalent of an additional revenue of nearly £P.1,000,000, thus offsetting to the extent of about one-half the contraction in the yield of the import and export duties.

BANCO DE RESERVA DEL PERU.

In May last, the long-talked-of State Bank, which was formed through the instrumentality of the Government, commenced operations, under the title of the Banco de Reserva del Peru. The new institution, which has a capital of £P.716,890, of which one-half has been paid up, is modelled on the lines of the Federal Reserve Bank of the United States. It took over the assets and liabilities of the Junta de Vigilancia, which latter was a committee nominated by the interested bankers and by the Government for the purpose of controlling the issue of "cheque circulares." These latter will shortly be withdrawn from circulation, and the Reserve Bank will then have the sole right to issue notes, at least one-half of which, under the regulations, must be covered by gold, and the balance by approved securities.

The political situation has remained satisfactory, and labour troubles have been few, but, taking it altogether, the year has been a difficult one for traders, and the position of some of the smaller merchants has consequently been adversely affected. Practically all the merchandise which had accumulated in the Customs House at the end of 1920 has now been liquidated, and although the prices obtained have been exceedingly low, and must have entailed heavy losses upon the American and European suppliers of the goods in question, their dispersal has considerably improved the outlook for the import trade, especially in view of the recent recovery in prices of the principal Peruvian articles of export.

MEXICO.

In Mexico, the principal event of the past twelve months has been the agreement reached between the Government and the International Committee of Bondholders for the resumption of interest payments and the general service of the debt, though this has yet to be given practical effect. In this connection, it may be interesting to note that, according to a recent statement, the total debt of Mexico at June 30th last amounted to \$1,056,973,713, of which about 666 millions was in the form of external debt, 392 millions having been incurred prior to the Revolution and 274 millions during its progress.

GENERAL MINING SITUATION.

The general mining situation in the Republic has been satisfactory, the total output of silver for the first half of this year amounting practically to 1,200,000 kilos., and if the present rate of progress is maintained the total for the twelve months promises to be one of the largest in Mexico's history. The market prices of metals mined in Mexico, principally silver, copper, lead-silver, and zinc, have shown an upward tendency during the past year, and in June were about 12, 18, 35, and 34 per cent. respectively higher in New York than a year previously.

OIL INDUSTRY.

Conditions in the oil industry have not been altogether satisfactory. Production reached its highest point in 1921, with a total of about 193,000,000 barrels, but by October of that year a number of operating companies had closed down owing to the incursion of salt water in the Southern Fields. At the end of that month 56 wells were showing a high percentage of emulsion, and the daily output was heavily curtailed. In spite of this fact, 173 oil companies were still operating, according to the official returns, but by April of the present year 60 per cent. of these had closed down.

OIL TAXATION.

Very little exploration work has been done, and new development has been on a small scale, owing to the attitude of the Government regarding Article 27 of the 1917 Constitution. Briefly stated, the Government claims that this article gives it rights over the subsoil since May, 1917, and even where a company has purchased the land prior to that date, or has secured tenancy by rental or otherwise, the right of continued exploitation is only to be granted on payment of 3 pesos per hectare, plus 5 per cent. royalty on the gross production, over and above the 5 per cent. royalty which has to be paid on all wells brought in. On export of oil, also, the taxation has been increased by 125 per cent., and by May last it had reached 37 cents gold per barrel of 42 gallons, but since then a lower rate has been fixed. There is every reason to believe that once Article 27 is clearly defined and the export tax fixed at a set figure, oil companies will begin exploration on a large scale. It is known that big programmes are laid out and waiting for the right moment to be started, and of late a certain amount of interest has been exhibited by European companies in taking up large tracts of oil-bearing land.

Although, therefore, the outlook for the moment is not bright, the general belief seems to be that, given reasonable treatment of

the producers by the authorities, still greater activity will be developed in the future, and that Mexico will retain her place as the second largest of the oil-producing countries of the world.

TRADE OUTLOOK.

As regards general trade, it may be said that the difficulties experienced by import houses a year ago, resulting from the long delays in the execution of orders, from the slump in prices after such orders had been placed, and from the transportation troubles, have to a large extent disappeared. Notwithstanding this, however, it is still impossible to report anything very favourable with regard to the commercial outlook, the internal economic situation being still adversely affected by labour troubles, the effect of which is increased by the continued socialistic tendencies of the Government. The national revenue, however, has been well maintained, the total for the six months ended June last being \$143,779,000, as compared with an aggregate of \$280,602,000 for the whole of 1921.

FRANCE.

It is satisfactory to be able to report some increase in commercial activity in France, where, as you know, we are now rebuilding the premises of our Paris branch. In most of the principal lines of business an increased turnover is reported, but the complaint is general that the margin of profit is small. The labour situation, generally speaking, has been satisfactory, and there has been no lack of employment, notwithstanding the contraction in the values of French imports and exports, as shown by the official returns, which have been due in the main to the set-back in prices during the period. For the 12 months ended June 30 last, the imports were valued at about 23½ milliard francs, as compared with 34 milliards in 1920-21, the exports totalling 20 milliard francs as compared with 25½ milliards.

There was thus an excess of imports over exports of about 3½ milliard francs as compared with one of 8½ milliards in the previous year; but this is not the only satisfactory point about the returns, for if account is taken of the weights of goods imported and exported rather than their value, it will be found that French trade, instead of contracting during the year, showed a quite considerable expansion.

It is a regrettable fact, however, that the national finances of the country are still in a somewhat unsettled state, owing to the continued absence of the receipt of reparations payments from Germany, and, until this question is settled, it seems impossible to look for any real recovery, either in the general finances of the Republic or in commercial activity there. For the time being, the total expenses of the extraordinary budget are still being met by the offer of additional blocks of National Defence Bonds issued either by the Credit National or by associations of various industrial works under the guarantee of the State.

HANDICAPS TO TRADE.

When viewing the situation across the Channel, it should never be forgotten that France is greatly handicapped by the loss of production in the devastated areas and by the heavy costs of reconstruction which she has so far had to bear; but the efforts that are being made towards better things financially find some reflection in the return of the Bank of France, the total advances of that institution to the State having been reduced in the 12 months ended June last from 25,000 million francs to 23,300 millions, and, as a consequence, it has been possible to curtail the paper currency, the Bank of France having reduced its note circulation in the same period from 37,422 million francs to 36,039 millions.

An important legal decision during the year was that involving the revision of the *Règlement Transactionnel*, so as to prevent these arrangements from being too easily obtainable, and as the law now stands only those debtors who can undertake to effect a settlement in full within a period of five years are entitled to the benefit of this law.

SPAIN.

In Spain the trade position has been worse rather than better. Exports have shown a heavy reduction, owing partly to the special competition of countries whose currency has depreciated in relation to the peseta and partly to the restrictions imposed by successive Governments upon the export trade in oil and the obstacles placed in the way of the shipment of Spanish wines to France and Norway prior to the signing of the trade agreements with those countries. Exports of iron ore have fallen off appreciably, owing principally to the reduction in the demand on English account, while the same remark may be applied to copper pyrites and to lead. The Spanish textile industry has also suffered as a result of the smaller South American demand, heavy stocks of Catalan goods being still held in that country, and the financial crisis in Cuba has also found reflection in Spanish manufacturing circles. While the export trade has suffered, however, imports have been on a larger scale,

this applying in particular to foodstuffs such as wheat, maize, flour, and also to dry goods, while purchases of English coal, despite the campaign by Spanish mineowners, showed an increase of fully half-a-million tons over those of the preceding year. The internal trade of the country has been more active, the demand being principally for Spanish manufactured goods, and, taking everything into account, it may be said that Spain, also, is on the road towards normal conditions, although, like so many other countries, she is still far distant from the goal.

TAXATION OF NON-SPANISH COMPANIES.

One unsatisfactory feature of the year has been the continued heavy expenditure necessary in connection with the military campaign in Morocco, though there seems to be reason to hope that this latter is now nearly at an end. It is also regrettable that the difficulties amongst certain of the Spanish banks, to which reference was made a year ago, have not yet been entirely settled. Certain of the foreign institutions have, for various reasons, found it necessary to cease operations in the country; but, as we have already taken occasion to emphasise, this bank has no intention of relinquishing the business which it has been building up in Spain during the past few years, and, given reasonable conditions of trading, such as are granted in Great Britain to all comers, we have every ground for expecting continued good results from our branches there, constituting as they do a ready channel for business between Spain and the numerous territories in Central and South America which look to her as their Motherland. The future, however, will depend very largely upon the trend of taxation proposals, to which reference has been made in the past, and in this connection it may be mentioned that there have been certain modifications during the year as regards the taxation of non-Spanish companies operating in the country. From a perusal of the Act it would appear that such companies may be called upon to bear even heavier taxation than at present, but it is to be noted with satisfaction that it contains a reciprocity clause conceding specially favoured treatment to the companies of those nations which, in their turn, favour Spanish undertakings operating within their borders.

UNITED STATES.

If only because of the extremely important position which the United States now occupies in the financial and commercial world, we would that we were able to give something like a comprehensive review of financial events in that country during the past 12 months, but, recognising the impossibility of effecting this in the limited time at our disposal, I would still like to touch upon a few points which may be taken as illustrative of the trend of affairs there.

In some respects America's experience has been different from that of other countries, and this has been particularly so in regard to the general value of money, quotations for both loans and bills having remained high in comparison with other markets. With regard to general conditions, one unsettling factor has been the unsatisfactory labour conditions which have prevailed during the year, especially the long-drawn-out strike of the workers in the coal and railway industries; and the new tariff legislation has been another. This latter has now come to a head, and in well-informed quarters the general opinion is that it must result in a further all-round advance in commodity prices, and that, with other of the circumstances which I have enumerated, it points to a period of renewed inflation in the United States, with an unsatisfactory effect upon the export trade of the country. Already the latter has shown a great falling-off during the past few months, the value of the United States exports in the period January-July of this year being only 2,126 million dollars, as compared with 2,860 millions in the corresponding period of last year, but the imports for the period reached 1,670 million dollars, as compared with 1,499 millions a year ago. In other words, the excess of exports over imports, which in the first seven months of last year amounted to 1,361 million dollars, totalled only 456 millions in the corresponding period of 1922.

CONTRACTION IN U.S. TRADE.

In considering these figures, it may be of interest to mention that the total exports from the United States to Europe during the 12 months to June 30th last fell from 3,403 million dollars to 2,067 millions, while her imports from Europe were valued at 830 million dollars against 938 millions, and that there has been a similar contraction in United States trade with the principal South American countries may be gathered from the following table:—

U.S. Imports—			
	June 30, 1922.		June 30, 1921.
	\$		\$
Argentina	60,767,964		124,299,424
Brazil	100,435,733		147,529,040
Chile	38,912,591		77,854,552
Peru	14,442,775		40,822,263
Uruguay.....	11,588,604		17,564,731

U.S. Exports	
	June 30, 1922.
Argentina	80,595,060
Brazil	38,330,449
Chile	16,716,462
Peru	12,496,790
Uruguay.....	9,702,557

When consideration is paid to the difference between America's present-day position and that of pre-war days, this falling-off in trade, and especially in export trade, may not seem to be a matter of great moment. Before the war, America had to remit abroad large sums each year in respect of interest and dividends on United States railway and industrial securities, which were then so largely held by the foreign—and principally by the British—investor. Not only, however, have remittances on this account been very greatly reduced, but they are now being replaced by contra remittances from certain of the European countries, and notably from our own, the first half-year's interest on our debt to the United States Government having been paid only quite recently.

TARIFF LEGISLATION AND ITS EFFECTS.

In view of the importance of these interest payments, which are only now beginning, it has been questioned whether America has been well advised in the tariff legislation which has recently been introduced. The effect of such legislation, it must be assumed, will be to reduce her imports, and this, almost inevitably, will result in a further contraction in her export trade also, especially as it comes at a time when she is beginning to secure a substantial annual revenue from abroad as a result of services rendered during the war period. With a growing population, such a result would be highly undesirable, and it seems probable that in course of time any such tendency must be corrected either by a reversal of legislation tending to reduce imports or by a direct encouragement of America's export trade by the inculcation among American investors of the habit of purchasing foreign securities.

REPORT AND ACCOUNTS.

I will now refer briefly to the accounts for the year, which, you will observe, reflect in the general contraction of the various items the lower prices of commodities and the condition of trade, to which I have already alluded. I think that, in the circumstances, we may regard the diminution, especially so far as it relates to the moneys due by us to the public, as being quite satisfactory. It is true that the deposit and current account balances, which in 1920 totalled £58,458,000 and last year £49,473,000, are now £45,467,000, but this figure, after making due allowance for the lower values now current, actually represents a larger clientèle. This reduction in deposits is well within the normal, for it represents a contraction during the 12 months of only 8 per cent.

The issued capital shows a trifling increase, due to a few more shares of the British Bank of South America having been delivered in exchange for our own shares, and we now hold practically the whole of the shares of that institution. The sight drafts and bills payable together total £8,708,000, as compared with £10,270,000 a year ago, whilst, on the other side of the account, the advances to customers are £19,673,000, against £27,181,000 in 1921. The cash holding, together with bills receivable and investments in high-class securities, which are practically equivalent to cash, aggregate £37,000,000, or about the same amount as last year. These items together represent a larger proportion of our liabilities than a year ago, and this circumstance has naturally reduced the amount of our earning power.

The bank premises item has been increased by £430,000, and later on will show a further small addition, but the new buildings which we have in hand are in large part paid for and completed, and there will not in the near future be any very large increase in this item, which has gone up so very much in the last two years owing to the necessity and desirability of rebuilding at various places in order to cope with our increased trade.

BRITISH BANK OF SOUTH AMERICA.

Our holdings of shares in other banks deserve some special mention at the present juncture, and I may say, as regards our holding in the British Bank of South America, that the surplus of assets over liabilities of that bank shows that the shares have an intrinsic value about equal to that at which they appear in our balance-sheet, except in regard to depreciation of capital, which, as you may know, has been somewhat serious in the last two or three years, especially in Brazil. We do not, however, regard this question of depreciation of capital by reason of a fall in exchange as one that should be dealt with from year to year, because it is a fluctuating quantity, as liable to recover as to depreciate. For this reason, two years ago, we refrained from taking credit in our accounts for the appreciation which then existed, nor do we propose now to deal with the depreciation which has since occurred. I think you will agree that, in principle, it is wise to pursue this course.

COMMERCIAL BANK OF SPANISH AMERICA.

You will note that our investment in the Commercial Bank of Spanish America appears for the first time in our balance-sheet as a separate item, it being considered more correct that any institution in which we hold practically the whole of the capital should be brought to your notice in that manner, whilst those in which we hold only a small percentage are included in the item of holdings in foreign banks and kindred companies. In common with many institutions of a similar character engaged in commercial banking of a somewhat different class from that which we ourselves transact, the Commercial Bank of Spanish America has had a very difficult and unprofitable year, and it is conserving its resources by refraining from paying a dividend. You will observe that the shares of that bank stand in our books at somewhat under par, and we hope that in the course of a little time they may be of a value equal to the price which we paid for them.

BANQUE GENERALE BELGE.

For the year ended December 31st last, the Banque Générale Belge earned a profit of 7,000,000f, and paid a dividend of 10 per cent., placing 2,000,000f to extraordinary reserve. The paid-up capital of this bank now amounts to 50,000,000f, but only one-half of this sum was available for six months of the year.

BANCO DE A. EDWARDS AND CIA.

During the year we participated in a new issue of capital by the Banco de A. Edwards and Cia., raising our holding to 126,000 shares of \$100 each, being rather over 50 per cent. of the total capital of \$25,000,000. The profit for the year ended June 30th last amounted to \$2,606,628, this having been earned on a capital of \$10,000,000; and the bank has paid a dividend at the rate of 14 per cent. per annum on the old capital, adding \$800,000 to the reserves. In addition to this amount, taken from profits, the reserve was also increased to the extent of \$3,875,000 out of premiums on the new issue of capital, raising its total to \$88,275,000, or about one-third of the capital of the bank.

As regards the Banque Générale Belge and the Banco Edwards, the current valuation of the shares held is about equal to the amount which we paid for them.

BRITISH OVERSEAS BANK.

The British Overseas Bank secured a profit for its second year of £102,090, as compared with £199,000 in the first year. This institution has been conducted on extremely conservative lines—no doubt a wise course in existing circumstances, but one which has naturally affected earnings. The liquid position of the bank is evidenced by the fact that in their last balance-sheet they showed a total holding of cash and first-class securities almost equal to the total amount of their liabilities to the public and their paid-up capital together.

Our holdings in other banks are of much less importance than those to which I have alluded in detail, and I may mention that they now stand in our books individually and, in the aggregate, at prices which are represented by the value of their shares to-day.

BURDEN OF TAXATION.

Turning to the profit and loss account, you will notice that we have an item of £91,000 deducted from the previous year's surplus in respect of the item of excess profits duty and corporation profits tax for the year ended June 30, 1921. It was quite impossible for us, when last year's balance-sheet was published, to be quite sure of the basis on which these items would be settled by the authorities, and the provision which we made required this addition. As you are no doubt aware, the item of excess profits duty will not appear again. I regret that I cannot say the same of the corporation profits tax, which, in itself, appears to me to be a most unfair and burdensome addition to the already heavy load that we have to bear in the form of taxation, and one can only trust that the very general condemnation which it receives at the hands of the business date. You will notice that the excess profits duty, income-tax, and for 1921, amount to £430,000, so that actually the year's accounts are charged with a larger sum for these items than our shareholders receive in the form of dividend.

DECREASED CHARGES.

Our gross profits are more or less the same as in the previous year, but our charges have been reduced by £167,000. Of this I may say that about £67,000 is due to the lower rates of exchange, but there is a real saving of £100,000, and we are endeavouring to effect further savings, always taking care that we do not thereby reduce efficiency.

ALLOCATIONS AND PROSPECTS.

As regards the distribution of our profits, the board has felt that the worst has now been realised in regard to the effect of the fall

in prices on the position of the customers of the bank, and they therefore deemed it wise to review in a spirit of healthy pessimism the condition of many of the accounts. As a result of that process they have concluded that the sum of £300,000 should be set aside out of profits as a special allowance to provide for certain book debts which in prevailing conditions may not be readily recoverable; and, as you will observe from the report, it is their considered opinion that this is ample to provide for all necessities.

After providing for this allocation, the disposable balance is £655,051, and we propose to pay a further dividend of 6s per share, making a total of 12 per cent. for the year, to place £25,000 to the staff pension fund, and to carry forward £256,684. I look forward to the future earnings with much hope, but I must warn you that, in our opinion, the recovery can only be gradual, and that we must ask you to very kindly regard the profits of a year or two ago as having been due to wholly exceptional circumstances, and to look upon the earning capacity of the bank as being on a somewhat lower basis than then obtained, until, possibly, a considerable improvement takes place in trade.

I now have the pleasure to move:—

"That the report and balance-sheet as distributed be adopted, and that a final dividend of 6s per share, less income-tax, be, and is hereby, declared, payable on 30th inst."

This resolution will be seconded by Sir Robert Harvey, and, after he has done so, any shareholders who wish to make any observation will receive our careful attention.

Sir Robert Harvey: Ladies and gentlemen,—I have great pleasure in seconding the chairman's proposition.

The Chairman: Has any shareholder any remarks to make?

SHAREHOLDERS' REMARKS.

Mr S. S. Seal: Mr Chairman and gentlemen,—No one can doubt that you have had great difficulties to contend against, as all banks have had, during the last four years, as we all know during the first two years of that period there was a boom which led to much inflation and subsequent losses by many industrial concerns. Doubtless some explanations have been sent to you at home accounting for the loss of £300,000 to which you have referred. No one suggests that there has been any lack of attention on the part of our board here, but I personally should think a matter of this kind should be dealt with in greater detail than you have dealt with it in your report and accounts, or even in your address to-day. With regard to other items, a diminution here or there is perhaps necessarily incident to a banking business, and no advantage or good could arise from anything like a protracted discussion of such matters; but I do think with regard to this £300,000 loss that something more should be told us, and in that direction I venture to make the suggestion I put before you.

A Shareholder: Mr Chairman and gentlemen,—I think the amount of the liability in depreciation of foreign currencies should be incorporated in the balance-sheet.

Mr W. J. Welch: In reply to the gentleman who first spoke, I think those acquainted with all the conditions which have obtained in South America during the period covered by our present account may regard the diminution of profits as a surprise, yet I think a greater surprise would be that the diminution is so small. A variety of export and import figures could easily be given to illustrate the adverse trend of business not only in South America, but in every country of the world. I, however, will

content myself by giving you one set of figures which I think fully illustrates my point. During the year ending June 30, 1921, 46 million quintals of nitrate were made, and of those 46 millions, 44½ million quintals were exported. Now, for the year ended June 30, 1922, only 19 million quintals of nitrate were made, and 13 million quintals exported. Everyone in this room knows that nitrate is Chile's staple industry, and when you reflect what a difference the discrepancy in the figures I have given must make to that country, you must realise how business conditions generally have suffered.

Mr W. Johnston: I am sorry to intervene in the proceedings, but in view of the remarks made by the first speaker in the discussion with regard to your having written off £300,000 to meet bad debts, I think it only right to say that I myself was in South America last year, and I can testify to the fact that there have been a great many commercial bankruptcies in those countries, as a result of which a bank like this must have incurred some losses. I consider that the bank has acted very wisely in writing off this £300,000, and I, personally, as a shareholder, am very grateful to the directors for the careful way in which they have managed our affairs. That they have escaped from this crisis with a possible loss of only £300,000 is to my mind very creditable.

CHAIRMAN'S REPLY.

The Chairman: I think, Mr Seal, you have already been answered by the two gentlemen who last spoke. Mr Seal may not have had experience in South America, but he is an experienced man of the world, and I ask him if he knows one quarter of the globe where prices of commodities have not fallen, and if prices fall, the securities a lender holds from his debtors necessarily have a lesser value, and in certain cases securities may contract to a point at which they are not equal to the amount lent upon them. This contingency naturally has to be provided for by such allocations as that made on account of the past year, which, as I have said, we regard as quite ample, if not, perhaps, a little more than may be necessary. As regards the districts in which the losses have been incurred, I can only say that there is no particular business or locality in which the losses or possible losses have been incurred, but they have been experienced in a variety of places owing to the fall in values and the ordinary risks of trading.

The resolution was then submitted, and passed unanimously.

RE-ELECTION OF DIRECTORS.

Mr Thomas Woodsend: Mr Chairman and gentlemen,—It is with very great pleasure that I rise to move the following resolution:—

"That Sir Robert Harvey, retiring director, in accordance with the articles of association, be and he is hereby re-elected." There is no necessity for me to say more than half-a-dozen words in regard to this matter. Sir Robert Harvey, as you all know, is a gentleman associated with the West Coast, and a gentleman who has been associated with the nitrate industry for over half-a-century. During that time it has been my privilege to regard him as one of my friends, and, though that may not of itself necessarily be a recommendation for his re-election, yet at the same time it gives me a little extra weight in proposing this resolution, and I think the bank is very fortunate in having such a vice-chairman as Sir Robert Harvey, whose knowledge and experience, as I have already stated, are almost unique.

Mr Alfred Naylor: I have great pleasure in seconding the resolution.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

The resolution was unanimously carried.

Baron Emile Beaumont d'Erlanger: Mr Chairman, ladies, and gentlemen,—I have much pleasure in proposing, "That Mr Auguste de Lantscheere, retiring director, in accordance with the articles of association, be and he is hereby re-elected." Mr Lantscheere is a director whose advice is valued very highly by his colleagues.

Sir Clarendon G. Hyde: I have much pleasure in seconding the resolution.

The resolution was unanimously carried.

Mr F. N. Joordain: I have much pleasure in moving, "That Messrs Price, Waterhouse, and Co. be and they are hereby re-appointed auditors for the year ending June 30, 1923."

Mr John D. Strathmore: I beg to second that resolution.

The resolution was unanimously carried.

VOTE OF THANKS TO STAFF.

Mr J. A. Goudge, C.B.E.: Mr Chairman, ladies, and gentlemen,—I have been asked to propose the next resolution, which is a vote of thanks to the staff at home and abroad. Without permission, the circumstances of the day and the circumstances of the bank have induced me to ask you to include the whole of the executive staff in the resolution, and that necessarily brings in our chairman, who is also the managing director of the whole business. I will not detain you long, but I would say that most of us here at some time or another must have been bound on a voyage when the winds were contrary, and it was borne in upon us then as at no other time that, however stanch the ship, the great responsibility for the safety of everybody lay in the foresight, character, and leadership of the captain, in the promptness and loyalty of the officers, and the hard and unremitting work of the crew. Gentlemen, I think to-day we ought to have somewhat the same feelings. The weather may have been contrary, and the officers may have had to spend a good deal of time "on the bridge," but they have come through with a good heart and a smile on their faces. Gentlemen, I beg to propose a hearty vote of thanks to the whole of the executive staff of the bank, at home and abroad.

Mr Andrew Geddes: I have much pleasure in seconding.

The resolution was carried with acclamation.

GENERAL MANAGER'S ACKNOWLEDGMENT.

Mr William E. Wells (general manager): Ladies and gentlemen, once again there is accorded to me the pleasure and privilege of acknowledging on behalf of the staff at home and abroad the vote of thanks which has just been proposed in such kindly terms by Mr Goudge. During the past year, as our chairman has told you—and as, indeed, every one here is well aware—the ways of commerce and finance have not been of the easiest and smoothest. There have been pitfalls to avoid, and problems to be solved almost daily; never, perhaps, has experience been so trying, or has earnest co-operation been so essential as under the circumstances which have prevailed during the reaction from the abnormal and artificial conditions which set in some two years ago. But, under the guidance and inspiration of our chairman and his colleagues, these difficulties have been surmounted, and we look forward to the future with perfect confidence. The kind expressions and hearty manner in which this vote has been passed will be deeply appreciated by all the staff, and will prove a real encouragement. Ladies and gentlemen, on behalf of my colleagues at home and at the branches, I thank you.

VOTE OF THANKS TO DIRECTORS.

Mr W. J. Welch: I should like to propose a vote of thanks to the directors for the successful administration of our bank. Now I say "bank" advisedly, for whether it is the London office or any of the branches, you invariably feel at home, and assured that any reasonable facilities you require will be granted. Now, in my humble opinion, it is that spirit which has been the dominant factor in the phenomenal success of our business, and I therefore put it to you that we should pass a very hearty vote of thanks to the directors, and will ask one of the many satisfied shareholders I see around me to second that motion.

Mr M. B. Snell: Gentlemen, I shall be pleased to second the proposition moved by the gentleman on my left. I am sure that all of us recognise the fact that we have been going through a period of great anxiety all the world over. Therefore I think we owe a debt of gratitude to the board for the way in which they have conducted our affairs during the past year, and I hope that next year we may, at any rate, look forward to a change in the position, and that we shall go ahead again before very long.

The resolution was carried with acclamation.

The Chairman: On behalf of my colleagues and myself, I thank you very much for the kind way in which this vote has been proposed and seconded and for the enthusiasm with which you have passed it.

The proceedings then terminated.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED. BRIGHTER FUTURE PROSPECTS.

The 23rd ordinary general meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held, on the 23rd inst., at Winchester House, London, the Viscount St. Davids, (the chairman) presiding.

The Chairman said that the Bahia Blanca Railway, as a system, was the last built of all the Argentine railways, and had not had a very long time for development. Moreover, the zone which it served was mainly a wheat zone, and progress had been retarded by their having had several bad seasons. One thing, however, which had helped them recently was the fact that, whereas the wheat from the northern part of the Bahia Blanca line used to go almost entirely to Buenos Ayres, of late years more and more of it had been coming to Bahia Blanca. Proceeding, he said: But you must remember that the main feature of the railway is the Nueva Roma line, which joins up with the Pacific line at Huinca Renanco and serves as a trunk line for other purposes. It has served the Pacific company very well, because it has helped to develop the Province of Mendoza by giving an outlet to the products of that province to the south of the Republic. For wine, for instance, to travel to all the branches of the Western Railway and Southern Railway, the route for it is from Mendoza down the Pacific line, and then down our Nueva Roma line, and this traffic is bound to increase as the population of all those great districts in the south of Argentina increases, which it is sure to do. Besides that, we have the fact that at the end of our line there is the town of Bahia Blanca, which is an important town, and one which is increasing in size and has great possibilities. You know there is a big output of oil at Comodoro Rivadavia, from various enterprises, Government and others, working there. It looks as if there was a very great amount of oil at Comodoro Rivadavia, and if the output increases, as it looks like doing, the probability is that sooner or later that oil will be brought up to Bahia Blanca, which is the nearest big town, and will be refined there. If so, Bahia Blanca will undoubtedly increase and go ahead, and all this must add to the value of our property—the Bahia Blanca line. At the moment the prospects of the whole zone are better than they have ever been, as an unusual amount of rain has fallen in the district. One can never be certain about the wheat crops in the Argentine until very much later than this, but at the present moment, at any rate, there is an increase of 20 per cent. under cultivation, and prospects could not possibly be brighter.

The report was unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED. INCREASED RATES—REDUCED WORKING EXPENSES.

The ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 24th inst., at River Plate House, London, E.C., Sir Henry Bell, Bart., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the accounts, although better than last year's, showed an altogether inadequate return for the services rendered, and the cost of such services. This was in consequence of the delay on the part of the Government in settling the question of the increases in the company's rates and in spite of the advantage of cheaper fuel. The rates under which they had been working had been restricted by the Government against their most earnest protesting that their applications for increased rates were "just and reasonable," and authorising the company to put them into force. The principal increases did not come into operation until August 15th. Though the gross receipts were £47,100 less, the net profit was £494,083 greater owing to the decrease in the working expenses of 12.16 per cent., a result which reflected great credit on the general manager and staff. There would be a further improvement as they used up the high-priced stores which they had still for in all directions. To enable them to pay 4 per cent. for the year they had transferred £120,000 from the general reserve fund. To have so small a balance as £255,530 for the ordinary stockholders in a company like this, which rendered such important and good services to the public and the country generally, and had an ordinary stock capital of £17,000,000, could only reflect upon those who precluded them from obtaining a fair and just return to those who found the capital to expand from a small system of 334 miles to one of 1,882 miles. In addition to a fair return to the ordinary shareholders, it was also essential that they should build up adequate reserve funds.

The labour situation was far easier than it had been for a long time past, but this was not altogether surprising in view of the

concessions made to the men. It was not only in Argentina that harsh Acts were imposed, for in this country they were suffering from the iniquitous Corporation Profits Tax. As regarded the future, there were distinct indications that in Argentina the worst was passed, and there would be an improvement in the future. There had been a net increase for the 16 weeks of the present working year of £151,000, notwithstanding that their gross traffic was down £52,000.

The report was unanimously adopted.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED. SUCCESSFUL YEAR—INCREASED NET RECEIPTS.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held at the offices of the company, River Plate House, Finsbury circus, London, on the 25th instant, Sir Albert Bowen, Bart. (chairman of the company), presiding.

The Chairman said: It is satisfactory to be able to report that, mainly as a result of cheaper fuel, the net receipts at £2,160,000 show an increase of no less than £792,000, or nearly 58 per cent. You will see from the general manager's report that, excluding fuel, the direct expenditure is decreased by £123,620, and I must ask you to remember that our efforts in the direction of reduction of working expenses have not been focussed upon merely transitory cheese-paring economies, so much as on the achievement of equal or, if possible, greater efficiency at less cost, by the adoption of the most modern methods, which we hope will prove of permanent benefit to the railway.

Apart from direct expenditure, we have maintained contributions to the various renewal and other funds on the usual scale, these items aggregating £638,849 for the year, additional evidence that we have no intention of starving the line.

Turning to the capital account, there is a new entry for the purchase of the freehold of River Plate House at a cost of £57,329 6s. We formerly held leases of the ground upon which this building stands, and in view of building operations in the near neighbourhood, and in order to consolidate our position, we decided to open negotiations for the acquisition of the freehold. These have been brought to a successful conclusion.

The capital invested in the Compania Ferro-Carrilera de Petroleo—£204,431—shows an increase over last year. Steady progress is being made with exploratory work; there has been a small but regular output of oil throughout the year, which has been used on our railways, and there are at present some 12 wells producing.

It will no doubt interest you to know that so far as the board can see at present there will be no necessity to ask for any further capital in the immediate future.

The report and accounts were adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED. BETTER PROSPECTS FOR THE CURRENT YEAR.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 26th instant, at River Plate House, Finsbury circus, London, Sir Joseph White Todd, Bart., presiding.

The Chairman said that the results of the past year had been very disappointing, owing to the general state of the world and its consuming markets, the adverse effects of exchange, and abnormal rains, which had contributed to a curtailment of the usual exportation of Argentina's national products by way of cereals and cattle. The gross receipts, at £9,442,600, exhibited a decrease of £304,000. The past year's income had not benefited from increased rates. These higher tariffs would apply to the revenue of the present financial year, and, therefore, whatever accumulation of traffic there was in the company's zones and all new traffic would fall to be transported at the higher rates now in force.

The shrinkage in gross income had been accompanied by a reduction of £389,850 in working expenses, giving a net profit larger by £85,750. Whatever capital had been expended had been of an indispensable nature, and no new capital works of importance were contemplated. The debit in the capital account would require to be set right sooner or later, but he was not yet able to indicate when an issue was likely to be made, or whether they would have recourse to notes or debentures. Without in the smallest degree desiring to appear unduly optimistic, he felt justified in giving the stockholders hopes of a distinctly more promising and prosperous anticipation as far as their railway was concerned. The increased tariffs recently put in force should, if they had the same traffic to deal with this year as last, benefit them to the extent of perhaps some £700,000, and they might reasonably anticipate a reduction in fuel costs by another £500,000. If the harvests should fail, those amounts would vary accordingly, but if they were no better than last year that £1,200,000 ought to materialise, and practically the whole of it should prove net income. On the other hand, if the crops were better and the European demand for Argentine products

reverted to anything like normal, the actual increase in net receipts should exceed his estimate. The aggregate gross receipts for the 17 weeks from July 1st last were £2,988,000. The net receipts for the first three months of the present financial year amounted to some £540,000, or £160,000 more than in the corresponding period of 1921-22, and it was only in six weeks of the quarter that they profited by the more reasonable rates.

The report was unanimously adopted.

UNITED PREMIER OIL AND CAKE COMPANY, LIMITED.

MR GUEDALLA ON TRADE AND TAXATION.

POSITION OF THE SUBSIDIARIES.

The third ordinary general meeting of the United Premier Oil and Cake Co., Limited, was held, on the 24th inst., at Winchester House, Old Broad street, London, Mr Herbert Guedalla, F.C.A. (the chairman), presiding.

The secretary (Mr F. S. Tomkins) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—In rising to move the resolution—"That the report of the directors and the statement of accounts for the year ended December 31, 1921, thereto annexed, submitted to this meeting, be received and adopted, and that the two dividends each of 2½ per cent. less income-tax on the ordinary shares of the company paid in respect of that year on January 16 and July 8, 1922, respectively, be approved"—I would remind you that this is the third ordinary general meeting of the company, and again I have to apologise to you for the long delay in issuing the accounts. We are a holding company, and are dependent on the dividends declared by the various subsidiary companies, and I can assure you that the accounting system of these concerns is thoroughly up to date, and would permit us to know in the ordinary way the results for the financial year within a few weeks after the date of its expiration.

The delay in presenting the accounts is solely caused by the lengthy negotiations with Government officials in coming to a settlement on various taxation questions. Some of these matters are not yet finally settled, but in declaring their dividends our subsidiary companies have made provision for claims which they do not admit. It is a great relief to think that this is the last time, as far as we know, when these complications will arise, and the management will be able to devote all their energies to the actual business of their companies.

BALANCE-SHEET

I trust you will permit me to take the report and accounts as read, and, if you will now turn to the balance-sheet, I shall endeavour to explain the various items to you. The preference and ordinary capital of the company remain the same, and with regard to the debenture stock, the amount of £394,250 outstanding at the end of the financial year is the same as in the preceding year, but you will note that a provision of £4,715 was made for the purchase of debenture stock, and since that date £5,000 of this stock has been purchased with this amount and redeemed. The sundry creditors and credit balances this year amount to £12,352, as against £41,137 last year, thus showing a reduction of about £29,000. In this year's accounts we have added £9,775, being the sinking fund for the debenture stock, to the reserve, where it more properly applies, so that the reserve now stands at £59,775.

Taking the other side of the balance-sheet, our investments in subsidiary companies show an increase of some £52,000, and now stand at a total of £1,396,952. This is due to the fact that this year we have re-classified our chief assets so as more clearly to

exemplify the position of the company, distinguishing between fixed investments, advances to our own subsidiaries for the purposes of their business, and other secured loans.

The intrinsic position of our various holdings has been carefully investigated, and I am happy to say that the result confirms my opinion that the value of these holdings, taken as a whole, has not deteriorated, and that therefore we are fully justified in taking them in our accounts at their cost price. The cash and loans amount to about £150,000, whilst the item for discount on debenture stock will gradually eliminate itself by the process of the redemption of stock year by year. We have applied £9,675 to writing off the balance of preliminary expenses, so that this charge finally disappears from the accounts.

THE SUBSIDIARY COMPANIES.

Our chief subsidiary concerns are, as many of you are aware, Wray, Sanderson and Co., Limited, J. L. Seaton and Co., Limited, the Premier Oil Extracting Mills, Limited, Sowerby and Co., Limited, and the Universal Oil Co., Limited, and these are managed by our able Hull executive, who are untiring in their efforts to produce successful results in these difficult times. During the year under review these companies practically completed the immediate programme of capital expenditure which had been embarked upon. The buildings, plant, and all other equipment have been maintained in the highest possible state of efficiency, and are in a condition capable of meeting any competition and of dealing with a very large output, when the opportunity occurs, and on this point I may remind you that the association of interests provided by the combine puts it in a position to reap advantage from a revival in many differing trades. In addition to a considerable expenditure on maintenance, reserves for depreciation have been made on the usual liberal basis.

REVENUE ACCOUNT.

Turning now to the revenue account, the dividends received from our subsidiary companies amount to £89,330, as compared with £156,521 in the previous year, and, if we add income-tax recovered, interest received, and transfer fees, we have a total of £103,785, as compared with a total of £172,038. After charging general expenses and directors' fees, we have a balance of £93,943, against which we charge the debenture interest and sinking fund and also write off £9,675 for preliminary expenses, leaving a net profit for the year of £55,898. To this must be added the net balance of £24,920 brought forward from last year, so that there is an amount of £80,819 to the credit of revenue, out of which the preference dividend has absorbed £34,431, leaving a net balance of £46,388. The two interim dividends on the ordinary shares, amounting to £26,250, and representing 5 per cent. in all, less tax, have been paid during this year, and therefore, as no further dividend is recommended, there will be a balance of £20,138 to go forward to the current year's accounts. The interim dividend of 2½ per cent, which you received on July 8th last was in reality the final dividend for the year under review, and it was declared in this way because we were of the opinion that you would prefer to receive the dividend before the accounts could be approved owing to the delay with the revenue authorities.

I would like to add in connection with the revenue account that commission is only due to the directors after a 10 per cent. dividend is paid to the ordinary shareholders, and that therefore this year no commission is due, but also with regard to the future, when we hope for better results, your directors have decided to waive this commission altogether, and it will possibly be necessary to hold an extraordinary meeting for the purpose of altering the articles in this respect. This commission arrangement, which was clearly set out in the prospectus and articles of the company, only comes into operation in normal or good times, and it is in the difficult period through which we are passing that, as you can imagine, we have to pay the closest attention to the business. We, however, prefer to seek our reward in seeing your company attain the prosperity which the hard work of your Hull executive and the solid value of your undertaking fully justify.

COST OF PRODUCTION AND FOREIGN EXCHANGE.

Now, with regard to trade, the two main factors have been the cost of production and the far more important question of foreign exchange. With regard to the former, all possible economies in working are being effected, but despite this there are many charges which are beyond the control of the management. The effect of much economy is nullified by the heavy standing charges, which continue to run even when the mills cease working entirely. I might point out, for example, that local rates last year absorbed about £9,000, or about 25 per cent. of the amount distributed as dividends to the ordinary shareholders. Many of our men have unfortunately been compelled to work on short time, but the executive are doing their utmost to spread out the work as favourably as possible, and so obviate the working of full time by some of the men and the complete standing off of others.

Our industry is not alone in this respect, and others are perhaps in a worse position. There are thousands and thousands of shareholders who receive no return on their industrial investments, and yet within a few hours' journey of this country you will find overtime being worked, practically no unemployment, and fair wages, according to conditions, being paid. We have to recognise that the spending power of the nation has been sapped by vicious taxation, and therefore that it is all the more necessary to seek markets abroad. The exchange position makes fair competition an impossibility, and this is the great problem upon which those who govern us must concentrate. Every rise in the value of the £1 sterling abroad spells continuance of unemployment at home, and what is considered to be sound finance is gradually killing some of the most important industries of the country.

SOUND FINANCIAL POSITION.

I have deviated thus far to explain some of our difficulties where trade is interdependent, but in supplying a necessity we always must have a certain amount of business, which our management and equipment enable to be carried through at a profit. Our financial position is sound, and I know that our Hull executive are doing everything in their power to expedite the time when our works can be fully employed and when a larger margin of profit can be secured. With regard to the current year, it may interest you to know that the profits for the first six months were as satisfactory as we could expect in the circumstances, and we believe that the September quarter will maintain the same average. We shall have to bear a large charge for income-tax, and we have sold a holding in a subsidiary business which involves a loss of £12,000, but this perhaps may be more fairly charged against reserves. I now have pleasure in moving:—"That the report of the directors and the statement of accounts for the year ended December 31, 1921, thereto annexed, submitted to this meeting, be received and adopted, and that the two dividends each of 2½ per cent., less income-tax, on the ordinary shares of the company paid in respect of that year on January 16th and July 8, 1922, respectively, be approved."

Sir Frank B. Sanderson, Bart., seconded the motion, and it was carried after a short discussion.

The retiring directors (Mr A. T. Cocking and Mr F. Dalton) were re-elected, and the auditors (Messrs Price, Waterhouse, and Co.) having been re-appointed, the proceedings terminated.

RUSO-ASIATIC CONSOLIDATED, LIMITED. MR URQUHART CONFIDENT OF RATIFICATION.

The annual general meeting of Russo-Asiatic Consolidated, Limited, was held, on the 23rd instant, at Winchester House, Old Broad street, London, Mr Leslie Urquhart (the chairman) presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said that at to-day's date cash in hand amounted to £36,000, they held Government securities worth to-day £637,000, and secured debtors amounted to £8,817—a total of £681,817. Creditors amounted to £102,780, leaving a surplus in cash and War Bonds of £579,037 at to-day's date. In addition, exercised, would bring in a further £275,667 cash, giving a total cash position of £854,704.

NEGOTIATIONS WITH THE SOVIET GOVERNMENT.

After mentioning that developments at Villemagne continued to be satisfactory, and that diamond drilling had already proven a large tonnage, he went on to allude to their recent negotiations with the Soviet Government. "You will remember," he said, "that the Conference at The Hague broke up without having achieved anything very definite. It was not, however, a failure. It elicited from M. Litvinoff an offer, which will, I think, come to be regarded as a milestone in the progress of Russia from a ruinous and unpracticable Communism towards a modified form of Capitalism. We supported and did everything we could to assist the Government in trying to make the Conference a success. When decided, at the suggestion of the Soviet authority, to resume negotiations on our own account. We felt confident of finding them in a more tractable mood than they were a year and a-half ago, when our attempt to reconcile Communistic theories with business realities proved a failure. But a great deal has happened in Russia since then, and it has all been in the direction of convincing the rulers of the country that nothing but ruin resulted from a system under which the State owned everything and tried to manage everything itself; that Russia desperately needed foreign capital, and that foreign capital would never think of coming in so long as the Russian Government repudiated Russia's debts, and imagined it could seize and nationalise anything and everything that didn't belong to it without paying a penny of compensation.

WHY AGREEMENT WAS NOT RATIFIED.

"As you are aware, our agreement with the Soviet was not ratified. It is still in suspense. It failed to secure the necessary endorsement for reasons that had nothing whatever to do with its business aspects. They were political reasons, and they were set forth in a document that must always rank as a curiosity among State papers. This document began by proclaiming the 'extreme desirability' of getting foreign capital to help in the reconstruction of Russia. It went on to lay stress on the particular desirability of an agreement with the Russo-Asiatic Consolidated. But it held that before any such agreement could take effect there ought to be 'friendly, stable, and regulated relations' between the Soviet Republic and the British Government. Such relations, it proceeded to argue, did not at present exist. On the contrary, it charged the British Government with the intention of denying to Russia an equal right with other nations in settling the Near Eastern and the Black Sea questions. Therefore, this amazing document concluded, the ratification of the agreement ought to be withheld. My very strong belief is Moscow already understands the blunder it has made, and that the agreement will before very long be duly ratified. There is simply no other way in which the Soviet rulers can now hope to win the confidence of the British investing public and undo the harm done by an act of precipitate stupidity. From other Governments they have nothing to hope in the way of financial assistance. But there is no reason why they should look to any Government for the means to set Russia on her feet again. If they get the goodwill and the confidence of the investing public in Great Britain, France, the United States, and Germany they will be in possession of resources infinitely greater than any Government can provide. But to do this they must act sensibly and straightforwardly, and not play fast and loose with an agreement on which the attention of business men in all countries has been focussed.

THE POSITION.

"While I do not wish to give you too optimistic an impression, it is right we should have a fair conception of our position. Our properties are in the richest country in the world, so far as natural resources are concerned. We have suffered from temporary decrees and laws of the Soviet Government, but laws of Nature are natural laws, and above those made by human kind. Natural laws have forced the Government of Russia to accede to the economic requirements of the peasant population against their Communistic theories. I have, therefore, a certainty of conviction, and very good reasons for my belief, that the time is now very near when we shall be called back to work for the benefit of Russia and of ourselves, as shareholders in this corporation."

The report and accounts were unanimously adopted. From both sides of the table striking tributes were paid to Mr Urquhart for his zeal and work on behalf of the shareholders.

UNITED DAIRIES, LIMITED. GOOD RESULTS—INCREASED PROFITS.

The annual general meeting of the United Dairies, Limited, was held on the 27th inst., at the Connaught Rooms, Great Queen street, London. In the absence of the chairman, Sir Reginald Butler, Bart., Mr Joseph H. Maggs presided.

The secretary (Mr John Butler, A.C.A.) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profit and loss account spoke for itself. The total increase in profits of £96,506 was very gratifying. The trading year was not free from anxieties, but the wisdom of spreading their interests in various directions had again been justified by results. All the shareholders had received during the past few days an illustrated brochure dealing with the multifarious activities of their subsidiary companies, and that would serve to bring home to them better than anything he could say the magnitude of their business, and remove the impression that their business was practically confined to the retail delivery of milk in London; that trade represented less than one-third of their turnover. Almost every article, if not every article that could be made from milk, they made, and they aspired to make every article the very best possible of its sort.

IMPORTS OF CONDENSED MILK.

The business of the subsidiary companies continued to show healthy growth. On the manufacturing side, in spite of such competition from abroad as had never before been known, Diploma Condensed Milk continued to grow in public favour. England had been the dumping ground of the U.S.A., and other countries for condensed milk, and had absorbed enormous quantities of that product, not all of which was above suspicion. The quantities of condensed milk imported into this country during 1921 reached the enormous total of 259,355,212 lbs. Whether that was for the good of the nation as a whole he was not enough of an economist to say, but there could be no two opinions as to its discouraging effect on our greatest industry, agriculture. Under the New Milk

Bill, the Ministry of Health had taken powers to make regulations as to the standards and labelling of condensed milk, and they could only hope that effective use would be made of those powers so that in the near future the British public might be to some extent safeguarded in its purchases of that article.

Their relations with the milk producers were, he was pleased to say, on a better footing than ever before. On the vexed question of milk prices, the National Farmers' Union put forward a scheme this autumn, the effect of which was that every farmer's dairy was automatically graded according to the regularity or otherwise of his supply. Now that scheme was in operation for the 12 months ending September 30th next, and having settled prices, it behoved everyone to do their utmost to develop the consumption of milk. To effect this purpose, the National Milk Publicity Council had been formed, and if sufficient support was obtained this Council hoped to launch a definite "Drink more milk" campaign early in the new year. He was very glad to note that milk was really coming to the front in this country. The Guildhall Milk Conference marked the beginning of a new era. All this public discussion on milk must have a good effect on the trade, if the trade itself kept abreast or ahead of public opinion on the question. The New Milk Bill, although not going so far as many would have liked, was undoubtedly on the right lines, and did furnish the machinery for setting an official and independent certificate of standard which would carry weight with an educated and discriminating public.

STEPS TO SAFEGUARD THE PUBLIC.

For United Dairies, he could honestly say they were all out for co-operation with the health authorities for the betterment of the milk supply. The growth of United Dairies milk trade in the Metropolis had been coincident with a remarkable decrease in infantile mortality, and in that connection it would interest the shareholders to know something of what they did to safeguard London's milk. In London alone, in the 12 months ending August 31st last, United Dairies, by its own inspectors, took 354,921 samples of milk and cream, which were submitted to chemical analysis. Of that number, 20,580 were samples taken while the milk was being sold or delivered to customers, and of these, less than one-third of 1 per cent. were slightly below the Government standard, while the rest of the samples averaged over 20 per cent. above the Government standard for butter fat.

MILK AND TUBERCULOSIS.

Dangers in connection with the milk supply had been grossly exaggerated and misunderstood. That applied particularly to the question of tubercle in milk. In London the figures of the London County Council showed that samples containing tubercle germs only amounted to 3.48 per cent., none of which could be United Dairies milk. He submitted that that difference was due to the fact that so much of the milk reaching London had been submitted to pasteurisation. United Dairies, Limited, had adopted the position that every particle of milk, with the possible exception of Grade "A" certified, had to be pasteurised before sale, and this process assured the freedom of their supplies from that and all similar dangers. London led the largest cities of the world in the lowness of its infant mortality rate. It was recently remarked by the *Times* that the infant mortality figures in London for the twelfth week in succession, during the dreaded third quarter of the year, was below 50, and that paper also recommended the pasteurisation of all milk supplies as a great factor in such results. United Dairies recognised the responsibility and the privilege which was theirs of placing the milk supply of this country, and particularly of London, on a plane of absolute safety. They were prepared to take any steps to effect this, and would co-operate with any workers having the same objects.

The report and accounts were unanimously adopted.

PICCADILLY HOTEL, LIMITED.

The thirteenth annual general meeting of the Piccadilly Hotel, Limited, was held on the 25th inst., Sir Charles T. Ruthen, F.R.I.B.A. (the chairman of the company), presented to the shareholders the accounts for the year ending July 31, 1922, and said:—

The accounts you have before you have been arranged in such a form that you are able to compare the trading figures of this year with those of the previous year. I am pleased to be able to inform you there has been a satisfactory increase in turnover, and this during a period when the prices charged to customers have had a tendency to fall. The extra volume of business may, therefore, be considered very encouraging, and from the figures we have at our disposal, since the close of the year, it is apparent that this increase is being maintained. The popularity of the hotel, the restaurant, and the grill room is as great as ever, and the success of the ball room has been so marked that your directors decided to enhance the attractiveness of that magnificent room, and have therefore just completed extensive alterations and improvements. I have no hesitation in saying that we now have the finest ball room

in London, and we look forward to a great increase in receipts from this department. The condition of the hotel, including furniture and fittings, has been kept up to the usual high standard, and the comfort of the visitors is one of our greatest considerations.

From the accounts before you it will be seen that the trading profit has exceeded last year by nearly £9,000, and we are satisfied that the strict supervision which has been exercised in the management of the hotel and the economies that have been effected will doubtless result in a still further increase of profit during the year. The year under review has had to bear heavy charges in respect of mortgage interest, but I am glad to be able to announce that owing to the arrangements we have made the present year will show a considerable saving in this item. The directors recommend that the balance of profit should be utilised in strengthening the position of the company, as they feel that it would be unwise at this time to make any distribution on the shares. To this end they propose that the sum of £11,000 should be transferred to general reserve.

I have every confidence in the future of the hotel, and, with the prospects before us of a gradual revival of trade throughout the country, I look forward to giving you next year a report which will again reflect the increasing prosperity of the company.

INDIAN TREASURY BILLS.

	March 31, 1922.	Oct. 21, 1922.
Outstanding with public	54,01,65,000	27,57,85,000
In paper currency reserve	57,89,00,000	51,65,00,000
Total	111,90,65,000	79,22,85,000

Tenders for Rs.1,50,00,000 six months' bills and for Rs.50,00,000 nine and twelve months' bills together were opened on October 18th. The total amount applied for was Rs.1,21,75,000 six months' bills, Rs.10,00,000 twelve months' bills. All tenders for six months' bills at Rs.97 13a and above were accepted in full. Tenders for twelve months' bills were rejected. The average accepted rate for six months' bills was Rs.97.13.6 per cent., equivalent to a discount rate of 4.4075 per cent. per annum. Intermediate bills for six months only will be offered for sale in India during this week at Rs.97 14a per cent. Tenders were received on Friday, October 27th, for Rs.1,00,00,000 three months' bills, and for Rs.50,00,000 six months' bills for issue during the week beginning October 30th.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended October 25, 1922, the stock of coin and bullion shows a decrease of £2,920 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

British West Africa	U.S.A.
British South Africa	British India
British Guiana	
Total value of imports of gold	Total declared value of exports registered in the week

Messrs Samuel Montagu and Co. write as follows on October 26th:—

GOLD.

A fair amount of gold was available, and was taken by India and the United States of America. Gold to the value of \$4,468,000 has arrived in New York, \$4,168,000 from London and \$300,000 from Sweden. Excellent gains have been made in the output of gold by the two important producing provinces, Ontario and British Columbia. The total for Canada during the first six months of the year amounted to about 63 per cent. of the whole of the 1921 production, and is an increase of 42 per cent. over the production for the corresponding period last year. The following figures, which are in lacs of rupees, and include bullion and rupee paper movements, show the Indian monthly balance of trade:—

	Year 1920-21.	Year 1921-22.	Year 1922-23.
April	+ 13.87	— 6.85	+ 4.17
May	+ 5.74	— 2.00	+ 3.48
June	— 82	— 1.67	— 1.11
July	— 3.14	+ 1.35	+ 32
August	— 9.36	+ 2.34	+ 2.96
September	— 4.69	+ 93	+ 10
October	— 10.32	— 8.65	
November	— 11.07	— 9.22	
December	— 9.02	— 2.55	
January	— 8.97	— 7.12	
February	— 7.03	— 59	
March	— 4.86	+ 1.42	

(+) denotes balance in favour of India, and (—) adverse balance.

SILVER.

The tendency of the market during the earlier part of the period under review was distinctly heavy, and prices reached on the 20th inst. the lowest level (cash 33 1/4d, two months 33 1/4d) since mid-April last. The downward impetus was derived from China sales, which, coupled with a reluctance upon the part of buyers, left no alternative. Some revival of demand, however, set in from the Indian bazaars for prompt shipment by this week's, the settlement, steamer. Supplies of spot silver being somewhat scarce, quotations naturally stiffened, but the market had no real stamina, for speculators, China, and the Continent readily offered supplies on the rise yesterday to 34 1/4d for cash and 34 1/4d for two months' delivery. To-day some stringency was shown in the demand for cash delivery, but other inquiry languished, and a fall of 1/4d ensued for cash and 3/4d for two months' delivery. The difference between the two prices is the largest since March 15th, when 3/4d premium was established for cash delivery. According to the American Mining Congress, reports from Fitzgerald, Alberta, Canada, indicate that silver has been discovered on barren lands north-east of that town which will equal silver mines of Northern Ontario. The ore is said to have been gone over by geologists, who have pronounced the find valuable. Examinations of geologists were conducted independently and at different times, one stating that the ore would run \$800 to the ton, while another estimated the value of silver at \$775 a ton. It is reported as being a high-grade free milling ore. Prospectors have been at work in the territory since 1921. The shipments of silver from San Francisco to China during the month of September amounted to 3,514,000 ounces.

INDIAN CURRENCY RETURNS.

	Oct. 7, 1922.	Oct. 15, 1922.	Oct. 22, 1922.
Notes in circulation	18,132	18,116	18,028
Silver coin and bullion in India	9,017	9,072	9,079
Silver coin and bullion out of India	2,432	2,432	2,432
Gold coin and bullion out of India	6,099	6,028	5,932
Securities (Indian Government)	584	584	585

No silver coinage is reported during the week ending 22nd inst. The stock in Shanghai on the 21st inst. consisted of about 40,700,000 ounces in sycee, 37,500,000 dollars, and 1,820 silver bars, as compared with 40,300,000 ounces in sycee, 38,000,000 dollars, and 2,450 silver bars on the 14th inst.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

1922.	Gold.	Silver.	Forward.	Dated.	Silver.
	Per Ounce.	Cash Per Ounce.	Per Ounce.		Cash Per Ounce.
Oct. 21 ..	21.92	33 1/4	33 1/4	Nov. 3, 1916	32 1/2
23 ..	22.5	33 1/4	33 1/4	2, 1917	45 1/2
24 ..	22.7	34 1/4	34 1/4	2, 1918	49 1/2
25 ..	22.9	34 1/4	34 1/4	3, 1919	65 1/2
26 ..	22.10	34 1/4	34 1/4	Oct. 29, 1920	52 1/2
27 ..	22.8	34 1/4	34 1/4	28, 1921	40 1/2

NOTICES.

A branch of the London County Westminster and Parr's Bank, Limited, is now open in Upper Kennington lane, Kennington, under the management of Mr A. J. White, with Mr R. A. Smith as clerk in charge.

We much regret to announce the death at his residence, Wood Norton, Evesham, on the 21st inst., of the Hon. Algernon Henry Mills, the senior partner in the banking house of Glyn, Mills, Currie and Co., 67 Lombard street, E.C.3.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 512 and 514 Brixton road, London, S.W.9, 30 Bridge street, New Swinlon, Wilts, under the management of Mr G. Fry and Mr A. J. T. Davies respectively. A new branch has also been opened at 176 High street, Camden Town, London, N.W.1, under the management of Mr R. S. Clark.

† Free of tax.

and tax, £6,303; dividend on preference shares for the year ended June 30, 1922, £5,000; dividend of 6 per cent. on ordinary shares for the year ended June 30, 1921, £45,000; income-tax and corporation profits tax, £23,102; leaving a balance of unappropriated profits of £166,555. The directors recommend that out of such unappropriated profits there be paid a dividend of 15 per cent. on the 750,000 ordinary shares, less income-tax. In making this recommendation the directors consider that so large a distribution in proportion to the profits earned is justified only by the arrangements made as to preferential dividend at the time of the increase of capital in 1920, and by the sound cash position as shown in the accounts.

MONTEVIDEO TELEPHONE.—The report for year ended July 31, 1922, shows that, after providing for all charges in Montevideo and London and making provision for income-tax and corporation profits tax, the net profit amounts to £28,996. The sum of £12,156 is brought in, making £41,152 available. An addition of £10,000 is made to reserve fund, while the ordinary dividend of 8 per cent., free of income-tax, absorbed £17,370, leaving £13,782 to be carried forward.

SMITHFIELD AND ARGENTINE MEAT COMPANY, LIMITED.—Notice is given to holders of share warrants to bearer that the committee of shareholders appointed at the general meeting held on July 28th last, to investigate the company's affairs, have informed the board that their report upon the result of their investigations cannot be ready in time to be considered on the 31st inst., the date to which the general meeting was adjourned, and the meeting must take place on that date as arranged, viz., at Winchester House, Old Broad street, E.C., on Tuesday, October 31, 1922, at 12 o'clock noon, but will be of a purely formal character, and the only resolution will be a resolution to be put by the chairman that the meeting stands adjourned for a further four weeks, viz., to Tuesday, November 28th, at the same time and place.

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for week ending Wednesday, October 18th, amounted to 1,265 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Fine open weather has prevailed during the past week, and ploughing operations are now in full swing. In some districts the new plant is already above ground, and presents an even appearance. Potatoes are being lifted, the crop being very heavy, while other roots are also plentiful. Quieter conditions prevailed at market, and rates displayed an easier tendency, especially with regard to breadstuffs. English wheat in fair demand, but prices gave way slightly in sympathy with imported descriptions. Suitable milling qualities rule at 43s to 44s 6d per 504 lbs, free on rail. Imported descriptions exhibited a quieter tone, and rates eased owing to liberal arrivals, though closing steadier. No. 1 Northern Manitoba quoted 55s. No. 2 hard winter 54s 6d, and Rosafé 63½ lbs 55s, all ex ship to arrive, per 496 lbs. Cargoes moved off slowly at easier rates. Australian February-March shipment changed hands at 50s 3d, No. 1 Northern Manitoba December 48s 6d, Pacific November-December 50s 9d per 480 lbs. Crop prospects in the principal exporting countries continue favourable, while North American visible supplies show a substantial increase. Flour trade generally quiet, and prices were reduced by 1s per sack for home milled. London standard straight run quoted 42s 6d, patents 44s 6d to 45s 6d, town households 40s 6d per sack delivered in London area. Imported firm. Manitoba patents range from 39s to 44s as to quality, Pacific 37s 6d, and Australian 39s to 41s per 280 lbs ex store. Barley, English, tended firmer, with a better demand, and prices range from 35s to 60s per 448 lbs free on rail according to sample. Imported quiet. Californian quoted 39s to 43s, Australian 49s to 53s ex store per 448 lbs. American malting 48 lbs 33s, Persian 32s landed, Danubian ex ship to arrive 32s, landed 33s per 400 lbs. Maize in moderate demand, and occasionally rather easier for shipment. American mixed ex ship 39s 6d, yellow La Plata ex ship 39s, ditto landed 41s. Cargoes in quieter demand, and values somewhat irregular. A steamer of yellow La Plata shipment guaranteed by October 31st sold at 36s 6d per 480 lbs. Oats in generally good demand, and prices firmer. English grey and black quoted 25s to 28s 6d, and whites 29s to 31s per 336 lbs free on rail. Of imported, Plate f.a.q. quoted 29s 9d, ditto clipped 30s 6d, No. 2 Canada Western 35s 6d, No. 1 Canadian feed 32s 6d, American white clipped (38 lbs) 29s 3d, ditto (36 lbs) 29s, all per 320 lbs landed terms. Oatmeal in demand, and prices the turn dearer. London made, all cuts, quoted at £19 15s, rolled oats £19 15s, flaked oats £22 15s. Ordinary Scottish oatmeal £19 10s to £20, and American, all cuts, £18 to £18 10s per ton. Millers' offers meet with fair attention at full rates.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

	1922-1923.	1921-1922.	1920-1921.	1919-1920.

IRON, STEEL, AND COAL.

Our Sheffield correspondent writes:—Business in the steel trade continues to expand but very slowly. The outlook for the early future is improved by the certainty that two battleships are to be built, as this work will bring many orders to Sheffield for tools and materials wherever the contracts are placed. Sheffield will also make the bulk of the armour-plate. Outside this district the recovery of trade is proceeding apace, and the Sheffield industries are certain to benefit by the movement before long. Railway work is coming in rather more freely, and a few foreign orders for the best tool steels are reported. Pig-iron has quietened down in this district, and consequently makers are unable to raise their prices to cover the increased cost of production caused by dearer coke and scrap, and their operations for the moment are unremunerative. American buying has declined, but is expected to continue on a smaller scale than heretofore. Belgian and French billets are being offered here at cut prices. The output of the steel furnaces is mostly going into consumption at home, as the export markets are not taking large quantities. Russia is buying saws and files on satisfactory terms as to payment, and continuous business from this source is anticipated. Makers of files and various hand tools report that trade is picking up a little, but the condition of these branches leaves much to be desired. Silver and electro-plate is active, both in the Sheffield and Birmingham centres, and the brass and copper trades are better employed than formerly. The cutlery trade is patchy, but some lines are selling freely. The home demand for steam coal continues to gain strength. The house coal market is quiet for the time of year, but there are signs of a buying movement. Gas and railway companies are specifying substantial tonnages. Exports of steam coal and coke are active. Slacks are selling readily in the Lancashire district. South Yorkshire best hards are quoted at 21s, and best quality house at 33s. Seconds house coal can be bought at favourable rates.

Our Middlesbrough correspondent's report, dated October 26th, is as follows:—Pig-iron: Although prices are firm, business is dull, and will probably continue so until after the General Election. The American demand is easier. 62s 6d per ton still remains the price for No. 3 Cleveland G.M.B. and East Coast mixed numbers hematite pig-iron. Manufactured iron and steel: There is little improvement in the demand for steel. Cheaper foreign currency is likely to have an adverse effect. The principal quotations are: Steel ship plates, £9 to £9 10s.; steel ship angles, £8 15s to £9; iron bars, £10 10s.; steel rails, £9 10s. Iron ores: Consumers are still holding for lower prices, but with firmer freights they cannot well buy at lower prices. Best Bilbao Rubio is nominally 23s per ton.

Our Glasgow correspondent (writing on Thursday) says:—Ship plates have been cut 10s a ton at £8 10s for export to both China and India, while the home figure is £9. Sections are the turn lower at £8 for export, and £8 10s. for home (Glasgow) delivery. Interest in the locomotive industry centres round several Indian inquiries for powerful engines that are in the market, including one for 92 engines. Bar iron branches are in a poor way for orders, and steel bar producers are feeling the effects of keen Belgian competition. Locally, steel bars are quoted £9 5s. for home consumption, and 5s less for export. Black sheet makers remain fairly well off, on colonial commissions, but they are quieter on near-by work. Several respectable lines of steel tubes have been secured this week, on Indian and Australian accounts, as prospects are more encouraging. An active trade, comparatively, continues to pass in Scotch foundry pig-iron, almost entirely, however, as for some time past, with the United States. Singularly enough, there is no lack of inquiry on home interest, and buyers are starving for material, for no sooner are purchases fixed than their delivery is pressed for, showing that consumers have no reserves. Yet purchasers decline to go ahead, and if any

forward emergency were to arise, they, it is seen, would be sharply caught short. Nearly the whole of the current make is going across the Atlantic. Last week the shipments reached 7,700 tons, and practically all outputs for the remainder of the year are booked up, and these will not, it seems, be added to until the forward situation is more clearly defined. Prices keep firm at 10s for No. 3, and 10s 7s for No. 1, both f.a.s. on trucks at Glasgow. Coals strong in tendency, the feature continuing the generality of inquiry—for all qualities—from Scandinavia, Germany, Belgium, Italy, and France. Authorities are satisfied that the foreign markets are gradually being regained.

Our Cardiff correspondent writes:—The position in the coal market is a very healthy one. The American demand has been practically exhausted. The shipments last week to the United States and Canada were only about 27,000 tons, compared with an average of over 150,000 tons per week in August and September, and chartering for the States has now been almost entirely discontinued. Demand from other markets, however, is very active, and particularly for South America, where bumper crops are promising good homeward charters. Outputs are being maintained at over one million tons per week, but an active export and an improving inland demand is absorbing all that is being produced and prices this week-end are even a little higher than they were last week. The following are the current market prices:—Best Admiralties, 27s 6d to 28s 6d; second Admiralties, 27s to 27s 6d; best drys, 28s to 29s; best Black Veins, 25s 6d to 26s 6d; Western Valleys, 25s 6d to 26s; Eastern Valleys, 24s 6d to 25s; best bunker smalls, 16s to 17s; ordinary cargo smalls, 12s to 14s; anthracite Big Vein, 57s 6d to 60s; anthracite machine-made cobbles, 65s to 67s 6d; anthracite French and stove nuts, 70s to 73s; Rubbly Culm, 14s to 14s 6d; coke for export, 35s to 40s; inland blast surface coke at ovens, 25s to 26s; patent fuel, 25s 6d to 27s 6d; pitwood, ex ship, 30s to 31s. Coke is an improving market, but patent fuel is extremely depressed. The high cost of pitch, the high cost of small coal, the increased cost of labour, the effects on the depreciated currencies of France and Belgium on the relative cost of labour, and the increased severity of competition from those countries, have all combined to reduce the patent fuel trade of South Wales to approximately about 50 per cent. its pre-war volume. In the upplate trade there is more activity. The effect of the recent price regulation agreement has so far been beneficial; there is a better understanding between the steel bar manufacturers and the tinplate manufacturers; and foreign demand generally is stronger. Prices are firm at from 10s. 3d. to 10s. 4½d. Galvanised sheets are also a brighter market, with corrugated sheets at £16 4s to £16 10s per ton f.o.b., while the scrap market is also steadier.

THE COTTON TRADE.

certain makers of well-known styles have sold more freely. Plenty of inquiry has been about for India, and a fair trade has been done, chiefly for Calcutta. Sized goods have been in request for Egypt, finishing descriptions for South America, and fancies for the United States. More activity is now showing itself in home trade goods. All kinds of yarns have been dearer in quotation, and the total sales have been rather better. It is still hard work for spinners to obtain remunerative rates.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market has not been quite so active during this week, at least so far as home trade is concerned. Users have evidently bought sufficient during the last three weeks to cover their immediate requirements, and many are now inclined to take things easy for a bit before adding to their commitments. Some firms are uneasy about the position of merinos, and it is noticeable that none will do anything in the nature of speculative buying. The contention appears to be that merinos have gone up to a dangerously high level, and although there are no indications of any easing in values, it is felt that trade would be on a sounder basis if prices could be brought to something like 4s 9d for 64's tops instead of, as at present, about 5s 3d per lb. But while the home trade has been less active, there has been considerable activity on American account, and some very big weights of crossbred tops have been taken off this market for export to the States. This, combined with the strong demand for fine crossbred wool in London, has had a hardening effect on quotations, and if only the recent spurt can be maintained the position of crossbreds should greatly improve. It is also noticeable that the present high price of merino is bringing fine crossbreds more into favour, though the piece trade shows little change in the popular taste for the soft-handling Botany fabrics. Spinners are busy, and most firms report a fair amount of new business, though current quotations are mostly too high for manufacturers. The manufacturing section, indeed, is still rather under a cloud. Reports of financial difficulties, both in Manchester and Bradford, are having a disturbing effect on trade, and it is obvious that merchants are in anything but a comfortable position. Wool, tops, and yarns appear to be very strong, but pieces cannot be sold at anything like to-day's production costs.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales finished on Thursday, and though the prices paid during the closing days did not include such extreme figures as were made during the second week, the final results cannot but be regarded as exceedingly good. The series has been characterised by the fact that crossbred offerings have been in the majority, and this may have had something to do with the figures during the last few days for fine crossbreds scarcely coming up to the previous level. The offerings, however, have been good as well as large, and have indicated the popularity among growers of the rotation breeds. American competition has given a real "lift" to prices. At one time 50-56's fleeces were as much as 20 per cent. above September rates, but at the close 15 per cent. covered all the advance. Medium and coarse qualities were 7 1/2 to 10 per cent. dearer; in fact, the demand experienced and the distinct increase in prices has left behind a very satisfactory impression, both with the directors of B.A.W.R.A. and those watching the interests of Australian and New Zealand growers. It would have been just as well if there had been a better selection of merinos, but, all the same, the wools available have been satisfactorily cleared. The home trade has again been the mainstay of the series, although increasing quantities have been taken on export account, America proving to be a most valuable customer. French and other Continental buyers have felt the effect of the depreciation in their

currencies, and it is regrettable that practically all Continental exchanges have been so severely depressed. If this does not arrest the upward tendency of wool values, one can almost conclude that the wool trade can stand anything.

America purchasing so extensively of crossbreds augurs well for the future, and it is to be hoped that this class of staple will continue to be bought on trans-Atlantic account. By the means indicated the outlook for crossbreds has been very greatly changed for the better, and there is every likelihood of the New Zealand sales opening next month under far better conditions than last season. Many think that, owing to the excessively high cost of botany suits, the American public will go on to crossbreds. Evidently American clothiers are doing their utmost to provide wearing apparel at little more than the prices current for the spring trade. Clean-cut serges made from 48-56's will present a very good appearance, the American public not being entirely used to such fine, soft-handling fabrics as the general populace in this country. Many have been expecting the high prices for botany cloths to drive demand on to fine and medium crossbreds, but although there are better signs to-day of fabrics made from 56's becoming popular, spinners and manufacturers are finding that fashion still largely leans towards botanies. At the same time, more interest is being shown in crossbreds in manufacturing centres, which is always the first move towards these cloths being taken by the public.

The manufacturing situation to-day is such as to give rise to a fair degree of optimism, but, as I have repeatedly said, I see no necessity for higher prices for merinos. There are indications that the quantity of wool available, even merinos, will be sufficient to cover all requirements. The trade would be wisely advised to push the sale of crossbred cloths. The higher merinos go the greater will be the probability of an increased demand for crossbred fabrics from the general public. America can do a good deal by setting fashions in this respect, and if the weight of crossbred wool of 48's upwards purchased by that country during the past month is anything to go by, the outlook for that class of raw material has substantially improved.

VEGETABLE OILS AND OILSEEDS.

The improved tone in the oil and seed markets has been maintained, and seeing no immediate prospect of reduced prices home consumers have shown more interest. Raw linseed oil has been in good demand, and this, together with scarcity for prompt delivery, has assisted to maintain values, which, if anything, are somewhat dearer on the week, 4s 4d having been paid for spot oil and 4s 3d for the later months of the year. The January-April position has been done at 4s 3s 10s, but has since eased off to 4s 3s 10s. Cotton oils have been a firm market, with a brisk inquiry for both crude and refined at advanced prices. Crude Egyptian has been very scarce in near positions, but relief is promised by the first arrivals of new crop seed, oil from which is commanding good prices. A substantial trade has been done in old crude, which is firmly held for 4s 3s, while ordinary refined (soap makers' grade) quotes 4s 3s 10s per ton naked, ex Hull mill. Crude soya bean oil has benefited in sympathy, and has sold well at 20s advance. Rape oil in prompt and near positions is still very scarce, though home supplies of late have been supplemented by imports from Belgium. Ground nut oil is firm and dearer, and palm kernel oil steady at about unchanged values. Castor oil (first pressure) offers at 4s 4s ex Hull mill (barrels free).

Linseed continues firm, old crop Plate offering sparingly and shippers holding out for full quotations. Late last week Hull crushers were in the market, and bought between 4,500 and 5,000 tons on spot at 19, current value being 19 10s spot and September-October shipment. For December-January 17 has been paid, and for January-February 16 12s 6d; but these positions are now easier, new crop January-February offering at 16 5s. Calcutta to London has commanded up to 21 7s 6d, October shipment. The new Egyptian cottonseed has begun to move off, and a good trade to Hull has been done in black at 10 2s 6d. October, and in sakellarides 9 10s to 9 12s 6d, October and November, since when prices hardened to 10 10s for black and 10 10s for sakellarides. Soya beans are steady. Fair quantities have been taken by Liverpool at 10 11s 3d to 10 6s 3d for shipment. Rapeseed quieter, and what trade there is is chiefly on Continental account.

Rather a better demand for both linseed and cotton cakes is reported, but prices show little change.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market appears to have reached its maximum as far as price is concerned, at any rate for the present, as all classes were steady at Thursday's Bernandsey auctions. Best ox again made from 8 1/2 to 10d, the only advance being on Herefords and Runts, which made from 9 1/2 to 10 1/2. Cows and calf showed no alteration, wools again making from 4s 10 to 9s, and hogs 3s 2d to 11s. Tanners are buying very sparingly of imported hides, although the price in the River Plate still shows an advance owing to the demand of the U.S.A. for River Plate hides. Dry hides are selling rather better, sales of Capes being reported at 9 1/2 to 9 3/4 for best grades. The American position is cabled as strong, with best Chicago packers selling at 23 cents.

The demand for sole leather remains steady, although some operators report a decline in their turnover. Tanners are doing their best to obtain higher prices for sole bends and butts, but consumers resist this, and pass to something of a lower grade. Repairers have been in the market for 12 1/4 lb bends, which are wanted round about 24d to 30d. Rough dressing leather is selling slowly, as tanners have advanced prices. E.I. kips are slow, as shippers' prices are too high for carriers.

The tone of the upper leather market is quiet, although better inquiry has been felt for wax butts and splits, whilst semi-chrome at a low price is also again wanted. Glacé kid is moving off better, but the low grades seem to be the most popular. Prices are very firm, and importers of American leather asking advances for many grades.

The boot trade remains fairly good, and news from the most important centres is to the effect that spring sampling has been the great feature of late. Fear is expressed in the leather trades, however, that the coming election will again adversely affect business.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 27.

SUGAR.—The market opened the week with a generally dull tone, the trade in general being content to operate merely to satisfy pressing requirements, but subsequently transactions were on a more extended scale, while trend of values is still firm. This is due to the fact that supplies of refined coming forward from producing countries remain small, also stringency existing with regard to raws. Of British refined, Messrs Tate and Lyle's cubes, quoted, 50s 6d to 57s 6d; crushed, 53s 6d; nibs, 56s; granulated, fine and coarse, 51s 10 1/2d; No. 1, 51s 7 1/2d; No. 2, also London, 51s 4 1/2d; Easter, finest, 55s 1 1/2d; A, 53s 4 1/2d; B, 52s 9d; yellow crystals, 45s 4 1/2d; pieces, 35s 6d to 40s for yellows, and fine white 46s 1 1/2d. Forward granulated, December, sold, 50s 9d; and January-March, 50s 6d. Glebe K granulated, spot, London, 50s 9d; and orchard, fine, 59s 7 1/2d. Crystallised West India sold quietly at 42s to 45s 6d, as to quality. White Mauritius, spot, changed hands at 47s 3d to 47s 9d, as to sample; good dry white Brazilian, 47s 3d. American granulated, spot, done 50s; white Java cleared at 48s 1 1/2d to 48s 9d for fair to fine, with afloat parcels 20s 7 1/2d to 20s 9d, c.f. and i. terms, London. Czecho-Slovakian, granulated, December, held for 22s, and cubes 24s 9d, f.o.b., Hamburg. Dutch granulated, W.S.R., &c., 22s 9d; cubes, 27s; J granulated, 22s 3d, all prompt shipment, f.o.b., Amsterdam. Belgian crystals, October-December, sold, 19s 10 1/2d; granulated, October, 20s 4 1/2d, and November-December, 20s 3d, f.o.b., Antwerp. Good grocery French crystals, November-December, sold, 20s 3d, f.o.b., Boulogne. Cuban basis, 96 per cent., November, quoted 19s; Peruvian ditto, 17s 9d; Brazilian basis, 80 per cent., November-December, 9s 3d, c.f. and i. terms, U.K. Terminal market steadier. White December sold, 21s 3d to 21s 6d, and May, 21s 6d to 21s 9d, 21s 7 1/2d. Cuban stocks stand at 254,100 tons, against 1,163,400 same time last year. Liquid glucose, spot, 25s.

COFFEE.—There was a moderate trade doing, and prices for the main part ruled steady. In auction, good bold Nairobi, sold, 102s 6d. Vera Paz, 103s to 105s 6d; good middling, Costa Rica, 113s 6d. Future delivery market very quiet, and small sales include December delivery at 60s 3d.

COCOA.—Actual dealings on spot were confined to a limited compass, but sellers adhered to steady asking prices. Fine Grenada, sold, 53s. Accra, FF quality, November-January, sold, 37s, f.o.b. terms. Butter slow at 1s 7d per lb.

TEA.—During the week 43,650 packages Indian were brought to auction, and with no abatement in demand, a strong market resulted, most medium and common qualities being higher. Fine sorts realised very full rates. Slightly over 9,000 packages Ceylon were catalogued, and while fine samples fetched full rates, grades up to 1s 7d per lb were eagerly competed for, and values ruled 4d to 1d per lb dearer. Some stand-out lots of Indian broken pekoe sold 3s 6 1/2d to 4s 6d per lb in bond. Java and Sumatra sold readily 1d to 3d per lb advance.

RICE.—Market firm forward, but general course of trade is quiet. Two stars, spot, 15s to 15s 3d; October-November sold, 14s, c.f. and i. Continent. No. 1 garden Siam, October-November, double bags, quoted 14s 7 1/2d. Broken kinds slow, unaltered. Rangoon beans dearer, and hand-picked, spot, sold, 7s 9d. Japanese peas firm, but general trade quiet. September-October, sold, 26s 9d to 28s 6d; October-November, 25s 6d to 27s; December-January, 24s 6d to 25s 6d.

SPICE.—Only quiet trading resulted in pepper, and prices forward tended in buyers' favour. Fair black Singapore, spot, sold, 3 1/2d; October-December, 3 1/2d; December-February, 3 1/2d. Aleppy, spot, quoted 4d; Tellicherry, 4 1/2d; Ceylon, 4d; white Singapore, 5 1/2d; Muntok, 6d; ditto, December-February, sold, 5 1/2d to 5 3/4d. Zanzibar cloves, on spot, quoted 1s 5d; October-December, 6 1/2d; January-March, 6 1/2d, c.f. and i. terms. Pimento, spot, quiet at 2 1/2d; flake tapioca, spot, 2 1/2d per lb; ditto, October-November, steamer, to Havre, sold, 23s 6d; fair Penang seed pearl, spot, 20s 9d. Sago flour, October-December, done, 12s 6d. American corn flour, spot, 14s 1 1/2d. Desiccated coconut, spot, sold, fine cut, 36s; medium, 36s; halves, October-November, 35s 6d. Ginger steady, quiet.

FRUIT.—The market for currants remained steady, and there was a moderate inquiry. Pyrgos quoted 74s; bold Patras, 77s to 80s; Vestizza being quiet at 95s to 100s. Valencia raisins firm to slightly dearer, and during the week the bulk of the 328 tons offered was disposed of. Quarters sold from 77s to 130s; eights, 104s to 130s; seedless, 96s to 118s. Muscatels in auction met with rather quiet support, and prices gave way to the extent of 5s to 10s per cwt on the week. Ordinary 10 good, sold, 70s to 90s; fine to choice, 95s to 132s 6d; and extras, 140s to 145s. Sultanais quiet of sale. Smyrna, 132s to 148s; choice, 150s to 160s. Figs quietly, steady. Layers range from 130s to 160s; pulled, 160s to 200s; Malaga, on edge, 42s to 50s. Dates steady, quiet. Siar, spot, 20s.

JUTE.—After ruling dull and prices lower, this market improved owing to buying orders coming to hand from Calcutta, and which caused sellers to exercise reserve. First grade, November-December, Continent, sold, 430 15s to 431 10s; December-January, 431 5s to 431 15s; lightning grade, November-December, 428 10s to 429 10s. Hessians quiet, and rates much lower on the week. 10-oz, spot, 30s; October-December, 28s; January-March, 28s; 8-oz, spot, 24s; October-December, 23s. A twills, spot, 81s; October-December, 76s; B, spot, 64s; October-December, 63s; sugars, spot, 75s; flour, 75s.

HEMP.—Manila in moderate support, and market steady. F grade, October-December, quoted 439; G, 434 10s; H, 433; J, 431 10s; K, 430 10s; L, 429 10s; M, 425 10s. New Zealand idle, and quotations largely nominal. African sisal, No. 1 G.E.A., October-December, 434 10s; and B.E.A., 434.

SHELLAC dealer, with fair general inquiries. T.N., spot, 315s; D-cember, sold, 285s to 302s 6d.

COPRA.—Market slightly unsettled during the week, and actual trade was confined to a moderate compass. F.M.S., Straits, November-January and December-February, Rotterdam, sold, 423 17s 6d to 424 3s 9d and 424 1s 3d; Ceylon, October-December, done, 425 5s; Java, 424 12s 6d, sellers; Dutch East Indies, sellers, 424 5s; mixed, 423; South Sea Islands, 422 17s 6d. Palm kernels, November-January, Liverpool, sold, 416 15s to 416 18s 9d.

“UBBER.”—Quite a good volume of business was carried through daily, but irregularity prevailed at times. Standard plantation crepe and sheet, spot, sold, 11 1/2d to 1s 0 1/2d, 11 1/2d; December, 1s to 1s 0 1/2d, 11 1/2d; January-March, 1s 0 1/2d to 1s 0 1/2d, 1s; April-June, 1s 0 1/2d to 1s 0 1/2d. To New York standard sheet, December-January, sold, 1s 0 1/2d to 1s, c.f. and i. Fine hard Para, spot, 1s 1/2d; soft fine, 1 1/2d; bail, 10d.

EGG PRODUCTS.—Market firm, and prime liquid yolk, spot, sold, 105s; October-December, 99s per cwt. Dried yolk, spot, 0 1/2d; native dried whole egg, 8d; spray, 10d. Albumen, spot, 3s per lb.

MENTHOL.—Spot, 32s 6d; forward, sold, 28s 6d; aniseed oil, spot, 2s 2d; forward, 2s. Japanese peppermint oil, spot, 7s 6d; forward, 6s 9d; slab camphor, spot, 3s 7d; crude, 3s 4d per lb. Japanese wax, spot, 81s cwt.

HAVING succeeded, rather to its own surprise, in paying the Bank of England on Monday, and, nevertheless, getting through the demands of the last day of the month without further borrowing, the market experienced unexpected stringency on Wednesday, when a considerable sum was disbursed in interest on Government debt. A mysterious demand for short Treasury bills eased the position on the last day of October, and gossip, as usual, talked of the "hidden hand," but a more commonplace explanation suggested that one of the big banks found itself with more

cash in hand than it had anticipated. On Thursday ease had returned, thanks, as was shown by the Bank of England's figures, to fresh borrowing by the Treasury, and discount rates slackened slightly in sentiment, though there was hardly enough business to test them. Yesterday money was in fairly comfortable supply, but the unexpectedly high rate at which the Treasury Bills were allotted had some effect on market rates of discount. Commercial bills, which had been placed previously at $2\frac{1}{8}$ per cent., were quoted rather nominally at $2\frac{3}{8}$ per cent.

	Nov. 3, 1922.	Oct. 27, 1922.	Oct. 20, 1922.	Oct. 13, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	$3\frac{1}{2}$ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Discount (Call)	1	1	1	1	$1\frac{1}{2}$ (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	..

The Bank return showed an increase, owing to the end-of-the-month demands for currency, of £1,272,000 in the note circulation, but as there was a small increase in the gold stock, the Reserve declined by only £1,270,000. Government borrowings increased the Government securities by three millions, and the market's repayments diminished the Other securities by $3\frac{1}{2}$ millions. There was a small decline in the Public deposits, and Other deposits were a million and a quarter lower. The circulation of currency notes was increased by £822,900 to £287,992,900, on the return dated November 2nd, which includes £1,543,200 for notes called in, but not yet cancelled. The fiduciary issue is £238,299,700, or £71,688,700 below the maximum.

THE STOCK MARKETS.

The monthly settlement, the November 1st holiday, and the approach of the General Election, naturally proved to be a sufficiently strong combination of influences to keep the stock markets quiet. War Loan, Consols, and other British Government stocks were worked down, but rallied towards the end of the week on the results of the municipal elections. That the Indian Government had chosen an unfortunate moment to float its huge loan was proved by the announcement that 91 per cent. was left on the underwriters' hands, the stock being initially quoted at $1\frac{1}{2}$ discount. French bonds have moved sharply with the exchange, but lower levels have brought in speculative purchasers. Brazilian stocks rallied on an improvement in the milreis. Among home rails, Great Westerns were a strong feature in a market that improved in the latter part of the week. Argentine rails continue to show strength. The rubber share market remains fairly active, and was encouraged by news that the Stevenson Committee's recommendations have been put into force in Ceylon, Malaya, and Straits Settlements. Among industrials the iron and steel section has been prominent on provincial support, but the motor show has produced no more than a languid interest in motor shares. The oil market is quiet. South African mining shares developed fresh strength, and were supported by Cape orders.

THE COMMODITY MARKETS.

Markets as a rule are dull, most of them probably being affected by the amount of energy diverted to preparations for the General Election. Although the larger inquiry in the Manchester cotton market has been well maintained, reports of actual business are rather disappointing, and though there is little sign of any weakening in wool values, the market is quieter, business being on restricted lines. Our wool trade correspondent mentions that "it is generally admitted that the state of the piece trade does not warrant current prices for tops and yarns." There is still some demand for pig-iron from America, and this tends to keep prices steady, both for Cleveland and hematite; whilst the price of the former remains at 92s 6d per ton, the quotation for mixed numbers East Coast hematite is now 93s per ton. A slight improvement is noticeable in the demand for steel. A further improvement is this week reported in the tinplate industry, while considerable strength is recorded in the South Wales coal market; coal shipments at South Wales ports recorded by Customs authorities last week amounted to 698,000 tons, as against

an average weekly export trade in 1913 of 600,000. The good demand continues for linseed oil, and the price is well maintained. Further details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

Speculation has dominated the exchanges during the past week, and in consequence the markets have shown great activity. The depreciation in the principal exchanges which started a short time ago has continued, and there appears nothing to stop this movement until the international political situation has been cleared. The French franc now stands at 65.10, compared with 62.90 on the 28th ult., no doubt on account of the serious view taken in regard to the financial position of France at this moment and her great dependence on the German Reparations payments and the deficit shown in the Budget. The German mark has fallen to 28,500, showing a depreciation of over 10,000 since our last report. Herr Schröder's evidence before the Reparation Commission, indicating that he estimated the present deficit in the German Budget at 450,000 million marks had a disastrous effect on the quotation, and it would appear that there is nothing to prevent Germany's bankruptcy under present conditions. Belgian francs have moved in sympathy with France, and are now 70.00. The Italian lira has appreciated to 106, after having been seen as high as 117, the rate being sympathetically affected by the Fascist triumph. Rumours are current of exchange control again being introduced, but no confirmation is obtainable, and Italian financial circles are against this official interference. The dollar has moved between very narrow limits, and in view of the fluctuations in the other principal exchanges, it is satisfactory to note that the dollar value for sterling has maintained its high level, being now 4.46. The Swiss franc has risen to 2.458; this movement is attributed to the proposed introduction of the tax on capital, which, if introduced, must have a serious effect on the banking position of the country, owing to the large balances held by the Swiss banks on account of foreigners. Holland is round about 11.38, showing very little movement, and this exchange has not so far been seriously affected by the fall in the mark, in spite of the obvious liquidation by holders of this currency which must be occurring in view of the large amounts held there. Madrid is about 29.25, showing a further rise, and Portugal is $3\frac{1}{2}$ d. In regard to Scandinavian exchanges, these have been very quiet, Sweden having fluctuated very little at 16.56, Norway at 24.45, and Denmark 22.16. The Finnish rate still continues to appreciate at 17.2. In Poland the depreciation in the quotation continues, the Polish mark now being seen at 65,000; very little explanation appears to be forthcoming as to the actual cause of this. Vienna is approximately 320,000, and pessimistic opinions still prevail as to the country's financial position. Prague is 140, showing a slight improvement, and Bucharest at 710 also shows an appreciation. The Athens rate has depreciated to 230. In the East the rupee shows very little alteration at 1s 3 21-32d; whilst the yen has been steady at 2s 1 31-32d. In South America, Buenos Aires is quoted at 44 $\frac{1}{2}$, whilst Brazil is slightly better at 64. Valparaiso is 33d, and there is talk of a 20-year loan from America to Chile to the extent of \$18,000,000, to be issued at 91 $\frac{1}{2}$.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 28th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	11,332	Interest on Debt	1,735
		Supply Services	6,370
		Added to Exchequer Balances ..	435
		Sundries	936
		Reduction of Debt	1,856
	11,332		11,332

Property and Income-tax at £2,806,000 was the largest item of revenue during the week ended October 28, 1922, which compares with £1,877,000 in the corresponding period. Customs yielded £2,743,000, against £2,869,000, while Excise receipts at £1,719,000 compare with £1,842,000. Estate, &c., Duties amounted to £1,270,000, as compared with £1,172,000. Special Receipts yielded only £180,000, against £2,816,000 in the corresponding week last year. The week's operations reduced the

National Debt by £1,855,864, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 400	National War Bonds paid off ..	- 250
Treasury Bills	+ 2,929	Bank of England Advances	- 250
4½% Treasury Bonds	+ 2,380	Public Depts. Advances	- 354
Unemployment Insurance	+ 100	War Loan Surrenders	- 532
		Funding Loan, &c.	- 500
		Depreciation Fund	- 758
	+ 5,809		- 7,664

The floating debt was reduced by £2,654,000 to £919,078,500 during the week ended October 28th.

FINANCIAL YEAR, 1922-23 (April 1 to October 28, 1922).

	£		£
Total spent	423,057,857	Raised by revenue ..	467,269,129
Dec. in balances	7,958,409	Net repayments	52,169,681
Total	415,099,448	Total	415,099,448

ESTIMATES for YEAR 1922-23.

	£		£
Ordinary Expenditure	823,846,000	Ordinary Receipts ..	820,775,000
Special Expenditure	61,223,000	Special Receipts ..	90,000,000
Contingencies	25,000,000		
Total	910,069,000	Total	910,775,000
		Surplus	706,000

NEGATIVE AND POSITIVE.

We attempted last week to review and summarise as impassionately as possible the programme of the various parties in the coming election, and in doing so studiously avoided detailed criticism and intricate controversy. Having thus dissected the programmes, we are free to turn to matters of detail and to lay stress on what, in our opinion, are sins of omission and of commission in various quarters. There is one point, above all, that cries out for urgent notice. There is one supreme problem that will face any British Government which may be returned to power on November 15th, and that is the problem of German Reparations, together with its allied problem of international war debt. Upon the sane solution of these problems everything else depends. The parties and their leaders all talk, and rightly talk, of economy and other important subjects, but there is no policy which can possibly bring adequate alleviation to the troubles from which this country is suffering, so long as the great outstanding problems of international finance remain unsolved. On these questions Mr Bonar Law has so far been practically silent. He has, indeed, up to the present, contented himself with saying that while former estimates of Germany's capacity to pay were grossly exaggerated, the present tendency is to make an under-estimate. But he has given us no hint at all of the line of constructive policy which he proposes to adopt. Here, at any rate, is

a problem in which a negative policy is not only useless but impossible. The late Coalition Government declared its policy on these questions in the notorious Balfour Note, the harmful effect of which we hope may now be dying down. The Liberal leaders, Mr Asquith and Lord Grey, have made it clear beyond question that they are prepared to forgive the war debts of our Allies if by such paper sacrifice a sound economic solution of the Reparations problem can be reached. But so far Mr Bonar Law is silent. We are anxious to do Mr Bonar Law no injustice. To expect him to parade before the electorate a detailed programme of solution would be the height of unreasonableness, but we do regard it both as reasonable and as of vital importance that before the country goes to the polling booths the new Premier should make it quite clear along what lines his policy in this matter will be developed. We do not for one moment assume that his intention is to adopt the disastrous policy of the Balfour Note, but we do ask that he should, as the Liberal leaders have already done, define his attitude towards those great problems upon the solution of which must depend in the first instance the return of prosperity to a great manufacturing, trading, and exporting nation like Great Britain. There is still plenty of time for him to tell the country what is the general line of his policy in these matters. It is to be hoped that he will take the earliest opportunity to do so.

When we turn to the subject of economy, we are still left facing first of all the old problem of reparations and inter-Ally indebtedness. It is impossible to get away from it. As advocates of severe retrenchment in the public expenditure we yield place to none, and we join with those who maintain that there is still plenty of room for administrative saving. But until the leading international questions are settled, it is only upon what we may call the trimmings and minor items of national expenditure that saving can be achieved, for until these problems are solved we shall not get the peace and stability in Europe upon which alone great savings in the principal spending departments can be based. Let us look at the problem from another aspect. A large part of the present harassing burden of taxation is due to the huge debts piled up during the war. Interest payments upon these are obligations that no Government can fail to meet or can eliminate from its Budget. They are a lasting burden. The weight of this burden can only be made less galling to the shoulders of the taxpayer if the national income is increased; and the national income cannot be increased to a satisfactory degree until the wheels of international trade have been set into revolution at their full speed. This cannot possibly be done by any human device unless and until we have reached a solution of the outstanding problems of international finance, and of the Reparations problem first of all.

There is one essential election issue on which Mr Bonar Law's negative policy appears to imply a positive which is profoundly disquieting. In his Glasgow speech Mr Bonar Law ranked fiscal reform among those measures which must wait for a more propitious opportunity. This negative is satisfactory in so far as it reveals the temporary abandonment of tariff reform by the party which before the war found it a millstone round its neck at three General Elections. But the negative seems to imply the positive policy of maintaining on the Statute Book the Safeguarding of Industries Act and of continuing the "McKenna" duties, the patchwork measures of preference, and all the petty interferences with the free flow of trade which in recent years, some of them under the pressure of war conditions, have been imposed upon our fiscal system. It is not enough, in our opinion, that Mr Bonar Law should refuse to go further along the tariff road. It is necessary that the steps that we have taken along that road should be immediately retraced. The interests of our own trade and industry demand it; but leaving those considerations out of account, a clean sweep of the recent tariff-mongering experiments is imperatively demanded in the interests of international trade and economics generally. One of the curses of post-war economic development has been the world-wide epidemic, particularly among the new States, of the passion for raising high tariff walls. In all these countries there are Free-trade parties which have valiantly attempted to stem the tide of economic nationalism, but their hands have undoubtedly

been weakened by the failure of Free-trade England to stand by the doctrine which she has preached to other nations and on which she has waxed prosperous herself. To retrieve the reputation which England has earned in recent years of preaching Free-trade while she herself was flirting with Protection is an essential duty to the nation which is long overdue. A clean sweep of the Safeguarding of Industries Act and all the legislation in the direction of trade interference which recent years have seen would be an object-lesson, the result of which would surely redound to the economic advantage of the whole of Europe. Labour's attitude towards Free-trade is apparently dictated not so much by economic as by class feuds. Free-trade as an industrial and trade policy is glossed over. That Labour's view of the problem is a class view is suggested by the fact that while disapproving of all indirect taxation, they propose to exempt all incomes up to £250 from income-tax. In simple language, the Labour party's policy aims at entirely exempting the great mass of the people of this country from paying any taxes at all. Such a proposal is as dangerous socially as it would be unacceptable financially to any Chancellor of the Exchequer trained in the tradition of sound finance.

But however important these questions are, their consideration inevitably brings us back in the end to our main thesis, namely, that all other problems are transcended in urgency by the problem of securing a sound economic reparations settlement. So long as that problem is allowed to drift, sound policies on other questions cannot have full scope for beneficent effect. We have frequently indicated our belief that solution can only be reached through a bold offer of remission to our Continental debtors. Any political programme which places in the forefront the determination to secure a reparations settlement through the only channels by which it can profitably be approached has fulfilled the first essential requirement. Any political programme which does not explicitly include an effective policy in this matter is found fatally wanting, however sound it may be on other political and economic questions. We hope that Mr Bonar Law will let no more time pass without making it quite clear to the electorate that he intends to seize the first favourable opportunity to attempt a solution of reparations and inter-Allied debts on the broad line that we have indicated. It is, of course, possible that even on such a line he might fail, but a new Premier and a new Government will have a better chance of success than the old Premier and the old Government, and on any other lines failure is almost a foregone conclusion. The attempt may fail, but it ranks first among the national interests that the attempt should be made speedily and with determination. In some spheres of public affairs a negative policy may provide a steadiness that will be welcome after the fluctuations and variations of the past few years. But on this main question, policy must be positive, and the country ought to know quickly what Mr Bonar Law's positive policy is.

THE FASCISTI IN POWER.

THE fall of the Government of Signor Facta, and the assumption of office by the Fascisti under the leadership of Signor Mussolini, is an event of outstanding importance in Italian political life. To place in power whatever Government they like is the business of the Italian people and of no one else. But there are many reasons why the processes and causes of the Fascist rise to power should be clearly understood in this country. In the first place, we are at this moment very closely and materially interested in Italian policy in international affairs. Secondly, the path by which Signor Mussolini reached the Premiership may seem to English eyes to lie too much through the fields of force and unconstitutionality; and thirdly, there is an erroneous impression abroad that the Fascist *coup d'état* is, in the first instance, a direct demonstration against the Socialists. The Fascisti, it is sometimes supposed, are a purely bourgeois party. This supposition is keenly disputed by well-informed Italians, who point out that the party, born in the country among peasant proprietors, rapidly spread to the towns, and now recruits a large proportion of its members from the ranks of industrial workers. It must be admitted that the threat of a march on Rome

by the "black shirts," which preceded Signor Mussolini's invitation to form a Government, leaves an unpleasant taste in English mouths. It inevitably also provokes the question whether this precedent of a successful threat of force will not eventually recoil with great danger to Italy's social and political fabric. That question can only be answered by the future course of Italian politics. Meanwhile, those who base disapproval of the new Italian Government on that ground alone, will be forming an immature judgment which leaves out of account the action of political forces that have recently been at work in Italy.

Any intelligent review of the episodes in Italian history which have led up to the recent *coup d'état* must recognise that recent political and social developments in that country have to be divided into three periods. The first period opens in August, 1920, with the Socialist Revolution, if revolution it can be called. We refer, of course, to the industrial disturbance in the north of Italy, in the course of which the workers seized control of the factories and of the industries in which they were engaged. Signor Giolitti, who was Prime Minister at the time, deliberately adopted the policy of allowing the workers the fullest possible scope and opportunity for giving the experiment of workers' industrial control a good trial. Very speedily the trial proved a complete failure, and before long the failure became so manifest that the workers themselves and the Socialist party could not hide it, and even eliminated workers' control from their official programme. That is the first episode.

The second episode starts with the creation of the Fascisti party. This party, which had its origin in agricultural regions, and was doubtless "bourgeois" in its original conception, was formed with the avowed object of putting an end to subversive strikes and unreasonable industrial disputes. It is, however, claimed by those who have authority to speak that the period following on the failure of the workers' control experiment—that is to say, roughly, the latter part of 1920 and the early part of 1921, was abnormally free from strikes and industrial disputes. The general strike on May Day may be written off as an annual observance, while other strikes in which the Fascisti came into conflict with strikers were mainly political in nature. Thus, indeed, the principal purpose for which the Fascisti were avowedly brought into being did not arise in serious form.

Now we come to the latest episode in which we see the Fascisti devoting their power to an attempt to procure stable politics and efficient administration. It is necessary to follow this phase closely in order to see how erroneous is the idea that the latest *coup d'état* by the Fascisti is a direct answer to the Socialist seizure of the workshops. It is nothing of the sort. In recent times the political situation in Italy has been tending to become more and more confused. For many years there has always been a tendency in Italy towards unstable Coalition Government, because of the existence of a larger number of parties than we are accustomed to in this country; but since the introduction after the war of proportional representation—or rather as a result of the unsuitable form in which that perfectly sound principle was superimposed upon the peculiar electoral conditions of Italy—the position has become doubly confounded. The method by which this electoral system has been applied in Italy appears to have been unsuited to Italian conditions, and it has greatly intensified the evils of the group system; and whereas before the war there were, perhaps, five or six parties, there are now perhaps 20 or 25 groups, and any Government that hoped to hold a Parliamentary majority of an enduring nature was bound to include in its Cabinet ministers nominated by possibly as many as ten or a dozen groups. We in this country, with our unfortunate but limited experience of Government by the coalition of only two parties, can conjure up some dim imagination of the result. To the idea of remedying the instability and administrative inefficiency that resulted, the Fascisti turned their attention, and a strenuous campaign culminated in a demand for a share in the Government. The stage was thus set for a political crisis, but what precipitated it was this. The late Italian Government decided that Martial Law for the whole of Italy was desirable. They drafted a decree to that effect and presented it to the King for his signature. The King,

exercising what apparently in Italy is a constitutional right, refused to sanction the Martial Law project. This, of course, meant the fall of the Government, and after sundry other attempts the King sent for the head of the Fascisti to form a Government. Incidentally the powerful support which the Fascisti derive from the ranks of the Army would probably have made the application of Martial Law a fiasco.

Apparently the object of Signor Mussolini is to form a Government of the best men of his own choice, not at the dictation of the groups from which they come, and one of the first planks in his programme is drastic cutting down of public expenditure. The grave urgency of this question will be realised by all who are aware of the financial position in Italy, some features of which are discussed by our Turin correspondent on a later page. The task will not be an easy one, for the new Premier will, in the first place, have a stern battle with the bureaucracy, and will also find that, as in other countries, drastic economy is the reverse of popular, so soon as its effects begin to be felt. The attempt to perform it will be watched with sympathy by observers of whatever nationality, who realise the crying need for sane finance in Europe. But it is naturally the foreign policy of Signor Mussolini that will be awaited with the most acute interest in this country. In this sphere the new Italian Premier's first steps have been happily conducive to confidence, both in France and Great Britain. To the Premiers of both countries he has addressed letters announcing his determination to work for Allied solidarity; and he has made a declaration calculated to dispel anxiety over the Dalmatian question. If this happy beginning strikes the true note of his foreign policy, and if he is able to assure a steady policy in place of the frequent variations, due to changes of Government, which in recent years have helped to add to the confusion of European politics, then Signor Mussolini will have merited and won abroad the confidence which he hopes shortly to receive at the polls from his fellow countrymen; and the growth of confidence will dispel any suspicions or misconceptions that certain steps on his way to power have inevitably tended to arouse.

THE FRENCH EXCHANGE.

THE recent fall in the French exchange has once more directed attention to the economic and financial position of France. It is suggested that one of the proximate causes of the weakness of the franc is to be sought in an attempt by the Banque de France to repay a portion of the money borrowed from the Bank of England during the war, while perhaps an even more important factor is the payment made for American wheat, the importation of which has been necessitated by the relative failure of this year's harvest in France. But overriding these temporary factors is the fact that the failure to secure adequate reparations from Germany has seriously prejudiced the financial, as distinct from the economic, outlook in France. With the removal of the influence of the proximate causes making for weakness, the markets are being forced to form an opinion on the future of French finances.

While it is true that the balance of trade is not this year as satisfactory as it was in 1921, exports having diminished and imports increased, the difference is not such as to give rise to anxiety. Employment remains fairly constant, and the production figures for coal, pig-iron, and steel are decidedly better this year than last. Ignoring local issues, it is true to say that up to the present there has been no new inflation. In fact, the circulation of notes of the Banque de France has been very slightly reduced during the last few weeks. These considerations have not, however, been sufficient to remove the sense of uneasiness which has arisen. Speculation, of course, plays a part in this as in all exchanges. But though it is impossible to state with any degree of accuracy the extent of foreign holdings of francs, it is in some quarters believed that the total has been reduced during the last 18 months or so. If so, the tendency may not be unconnected with a distrust of the French budgetary position.

So far the Government has made good the Budget deficit by increasing the amount of the floating debt. National Defence bonds now total over 60 milliards of francs, and the unfunded debt is more than a quarter of the total public debt of France. M. de Lasteyrie has made no attempt to conceal the fact that the ordinary Budget of 1923 will show a deficit of 4 milliards, in addition to the amount required for work on the devastated areas and other extraordinary expenditure, and people are beginning to understand that if the accumulation of national indebtedness continues very much longer at present rates, the annual debt charge will soon be greater than the present total revenue. Some are even wondering whether it will be possible to continue internal borrowing indefinitely in this manner on a sufficiently large scale. The "ordinary" Budget may well be made to balance, with a little fiscal effort, but the extraordinary expenditure is far beyond the capacity of the taxpayer, even were the burden of taxation raised to a level approximating to that of Great Britain.

What courses of action then remain open to restore the finances of France, and to check the growing concern as to the future of the French exchange? There are five ways in which France may fill the gap between her immense expenditure and her revenue:—(1) The continued issue of internal loans for the work of reconstruction in the devastated areas. The peasant class is rich; it has profited by the war, and by the fact that taxation has hitherto been comparatively light. The most serious feature of the present situation is the doubts that have recently been raised as to whether these loans can be maintained, in spite of the relative success of the 7 milliard loan recently. (2) Reparations from Germany. This, the favourite French device, is perhaps not so much believed in as a practical proposition as it used to be. (3) A foreign loan. In the present state of opinion this would certainly be impossible to carry out until the moratorium question is settled, and the whole Reparations problem solved in a manner consistent with economic facts. (4) Inflation. This, the simple remedy, might be welcomed by numbers of Frenchmen who desire above all things to reduce the burden of the National debt. It is, however, interesting to remember that the eminent French industrialists, bankers, economists, and professional men, who in June last met together for a monetary conference (called the "Semaine de la Monnaie") unanimously decided on every count against inflation. (5) The Postponement of Restoration. Much progress has already been made in rebuilding and generally making good the damages of the war. To stop this important work would certainly be regarded as a counsel of despair. But, failing the adoption of one of the other methods referred to, the postponement of the work of restoration follows as an inevitable consequence. An internal loan would almost certainly be inadequate. No immediate help can be looked for from Germany, though even such papers as the *Journal des Débats* have reopened the question of "pledges." Inflation would be disastrous, and no Government would dare to advocate the postponement of restoration. There remains, therefore, the one sensible course. Almost every European problem to-day is connected, directly or indirectly, with the problem of reparations. Until the debtor's liability is determined in accordance with his capacity to pay, there is no hope of economic peace. The recent fall in the French exchange will serve as a reminder of this obvious fact.

THE FACTS OF UNEMPLOYMENT.

UNEMPLOYMENT, with nearly a million and a-half persons unemployed, is bound to figure in the election. An issue it can, however, hardly be: since, while every party agrees that it must somehow be met, no party, not even the Labour Party, has a definite plan of how to do it. This is in the nature of the case. There is no solution for the unemployment problem, as it exists to-day, of a purely domestic character. The remedies, like the causes, lie to an overwhelming extent outside these islands.

* See their Report: "La Politique Financière et Monétaire de la France." (Paris) Maison du Livre Français.

This is not to say either that no solution is possible, still less to refer responsibility to superhuman or quite general causes. On the contrary, the vagaries of British foreign policy in the last four years—particularly in the economic field—have much to answer for, and the account of their stewardship which is given on this most vital of all questions will be a very important factor in the elections.

The object here, however, is neither to discuss responsibility nor search for remedies, but to set out the facts. This is the more necessary that the first problem with which the new Government will have to deal will be that presented by the unemployed. For about this there can be no dispute; even if the signs, which some deary and others deny, of gradual trade recovery begin to operate and arrest the growth in the numbers of the unemployed, distress will this winter be more acute than last. The very interesting and careful report issued the other day from Toynbee Hall makes this clear. A main reason why the abnormal unemployment (twice as bad as in 1909, and four times as bad as in any other year before the war) had not already produced acute misery and revolt is that the doles from the State and from the guardians have been supplemented by the savings the workers had been able to make, whether in the form of purchase of furniture, clothes, &c., or in deposits. "The absence of distress is accounted for by the savings that men and women accumulated out of the generous wages of the war period, the liberalised scale of allowances adopted by the Boards of Guardians, and the benefits derivable from unemployment insurance." The savings are now exhausted. The houses and the cupboards are bare.

In this connection it must be borne in mind that a heavy rate of unemployment has been resting on our major industries for 18 months. Since January, 1921, the percentage of insured workers unemployed has never been below 10 per cent. Of these, only 80 per cent., according to official estimates, are normally in receipt of relief. The enormous sums expended by the great trade unions in out-of-work benefit (nearly 7½ millions in 1921) have exhausted their resources. As unemployment protracts itself, the funds out of which it can be relieved (whether voluntary, in the form of union contributions, or compulsory, under the insurance scheme) become depleted; the wage-cutting process, described in last week's *Economist*, further impoverishes them; and, meantime, the distress and deterioration are progressive and cumulative.

With this in mind, we may look at the figures. According to the latest issue of the *Labour Gazette*, the total number of people registered as unemployed through the machinery of the exchanges was 1,414,378, or 11.9 of those insured. The trade union figure was 14.6, as compared with 14.4 at the end of August. Thus, the latter figure shows a slight increase in unemployment; the insurance figure a very slight decline. Neither of these figures gives a complete picture. The official 1,414,378 does not include all the unemployed in the insured trades. (1) A feature of the scheme is that, at any moment, considerable numbers have run out of benefit; others, being in receipt of National Health Insurance, are excluded. (2) The insurance scheme itself is not comprehensive. Those, e.g., employed by local authorities, on railways, in agriculture, are excluded. (3) Many persons are on short time; 47,724 in September, or 0.6 of the insured, are given as in receipt of benefit; but the short time figures are very incomplete, and give no real idea of the amount of short time in the country.

That 11.9 per cent. of the working force of the country should be out of action, and have to be supported, in unwilling idleness, by the exertions of the rest—for it must not be forgotten that the whole insurance scheme is on a basis of contributions from employers and employed—is a sufficiently serious fact, representing a very heavy drag on production. But this 11.9 per cent., being an average figure, conceals the true gravity of the problem. Unemployment is highest and the burden heaviest on all major, and, in the true sense, key, industries. Thus shipbuilding, engineering, the iron and steel trades, toolmaking, iron mining, constructive trades, all had more than 20 per cent. of unemployment. In industry generally, one in eight is idle, but in shipbuilding one in three, in engi-

neering and the iron and steel trades one in four, in constructional industry, mining, and at the docks one in five.

Sept. 25, 1922.	Number Unemployed.	Percentage.
Shipbuilding	130,416	37.1
Iron mining	7,219	29.4
Other mining	2,631	27.8
Iron and steel trades	77,195	25.4
Cutlery and tools	6,576	22.9
Bolts, screws, &c.	8,593	23.2
Engineering	261,062	22.9
Construction (works)	24,459	21.7
Glass (inc. optical)	8,815	20.2
Transport—Seamen	21,977	19.1
Do canal, river, docks, &c.	38,225	19.6
Building	117,423	15.2

If one looks at numbers, rather than percentages, in the following groups there were, in September (and had been for the past year and a-half) nearly two-thirds of all unemployed.

September, 1922.	Number Unemployed.	Percentage.
Engineering and ironfounding....	261,062	22.9
Building, construction, saw-milling	156,728	15.3
Metal trades	153,686	19.8
Shipbuilding	130,416	37.1
Transport	119,212	13.0
Coal mines	70,693	6.1
	901,797	

In addition, cotton had 37,229 unemployed; the distributive trades, 58,638; food and drink manufacture, 37,517; ammunition, explosives and chemicals, 28,093; clothing trades, 43,141.

Employment, it is true, is much better than in the summer of 1921 (when 23 per cent. of trade unionists were out of work), or than January 8, 1922, when 17 per cent. of trade unionists and 16 per cent. of insured workers were out; but it is still very bad. The winter is upon us, and winter means seasonal unemployment in many groups, as well as a marked aggravation of distress to all either out or on short time. Any really general marked improvement depends on trade recovery, and trade recovery is, in these days, a political as well as an economic question. What prospects of improvement can be discerned? The blackest spots in the employment picture are represented by shipping, shipbuilding, and the industries dependent upon them. Here the outlook is still dark. The Russian market is still practically closed; the Central European market is chaos. For the shrunken trade of the world there is far too much shipping in existence. There were more unemployed in shipbuilding in September (37.1 per cent.) than in July (36.8) or August (36.4 per cent.); more than in January, February, or March. Employment at the docks, too, fell back, though it is better than last year. True, Lord Inchcape stated the other day that, in his opinion, "there is a break in the clouds of bad trade, although not much of sunshine yet"; and Lord Aberconway thinks that in twelve months' time there will be a shipping revival. On the other hand, Sir Frederick Lewis, of the Prince Line, refused to be cheerful about the immediate future. Tonnage launched in the third quarter of 1922 (307,232) is better than in the June quarter (158,348), though behind that for the first quarter (334,246).

In engineering there are signs of improvement, though on a restricted scale. The number of unemployed—over 25 per cent. throughout the first half of the year—was down to 22.9 in September, and exports are climbing up. In the iron and steel trades, hampered though they are by the American tariff and the disappointingly small reduction in railway rates, there has in the last six months been a slow but sustained gain of ground. The number of unemployed—37 per cent. in January and round about 30 per cent. throughout the first six months of the year—was 25.4 in September. The general position is better than last year: then there were 77 furnaces in blast, now over 140. In the coal trade the spurt due to the United States strike is being maintained. Not only are exports improving: the average price realised has risen from 22s in July to 22s 11d in September. The weekly output for the week ending October 21st is the highest for three years. The chemical trade is another department in which things are definitely on the mend, with an improvement in overseas inquiry. The textile

position is at the moment dubious: in cotton things are reported to be slowing down, owing to dearer raw materials; in wool, apprehension is caused by the sharp rise in prices. Hosiery, on the other hand, continues to flourish. Building, of course, is depressed; timber quiet. The general outlook gives room for hope; but the translation of that hope into actuality depends on policy.

FISCAL CONSEQUENCES OF THE IRISH TREATY.

(BY OUR DUBLIN CORRESPONDENT.)

INTERESTING and important consequences will arise from the ratification of the Irish Treaty. Although the British House of Commons last December passed a resolution approving the Treaty, full and formal ratification awaits the assembly of the new Parliament. All parties in England are pledged to support the Treaty, and none more so than that led by Mr Bonar Law, whose manifesto of October 26th proclaimed his intention of "making good that Treaty both in the letter and in the spirit." Any party that sought to do otherwise would get short shrift from public opinion.

Now, under the Treaty, Ireland acquired full fiscal and financial independence, and the six counties of N.E. Ulster obtained the right to "contract out" of the new Irish Free State. Nothing is clearer than that Ireland will set up her own Customs-houses, and it is almost equally clear that N.E. Ulster will, by "contracting out," insist on remaining under the immediate jurisdiction of the British Parliament, and within the Customs and Excise system and boundaries of Great Britain. The results will be almost startling to the business community in Ireland and to the British taxpayer. A land frontier, with its line of Customs-houses, and its preventive service is an absolute novelty in Great Britain. But, if N.E. Ulster exercises its option of "contracting out," a land frontier there has got to be. Great Britain must be satisfied that dutiable articles cannot be introduced into her territories without paying toll to her Customs and Excise officials, and that all her regulations as to the collection of statistical information, immigration, health, and the like, are carried into effect for the protection of her own interests, and of her own territories. And the same is true of the Irish Free State. It is almost an under-statement to say that the resultant inconvenience and expense will be colossal.

The Customs frontier in Ireland will be represented by a line starting near Newry at the northern end of Carlingford Lough and pursuing a devious and deeply indented course in a W.N.W. direction to a point within ten miles of the Atlantic Ocean; thence it proceeds, again deviously, in a N.E. direction to a point on the western side of Lough Foyle near the city of Derry. It will cut off County Donegal from direct land communication with the rest of the Irish Free State, except for the narrow belt of some ten miles wide upon the Atlantic coast, where that county and County Leitrim adjoin. Its total length is not less than 225 miles: it is coincident sometimes with the watershed, sometimes with the waterways, and frequently with no natural geographical or economic dividing lines at all. It is crossed by at least 20 different lines of railway, and by roads, lanes and paths innumerable—a train running from Clones in Monaghan to County Cavan crosses the frontier six times in less than eight miles. What, then, will be the cost of establishing the whole paraphernalia of a Customs frontier, new railway stations, toll stations on the roads, rivers and canals, smuggler-proof fences in the fields, the acquiring of land and the building of offices? What will be the cost of maintaining a 24-hour service, in three shifts, of officials and frontier patrols? The inconvenience to the public may ultimately adjust itself, but the adjustment will mean that domestic trade and commerce will so regulate their flow that their arterial circulation will be practically confined within each fiscal area, and that all crossing of the frontier will be reduced to a minimum.

The prospect from the economic standpoint is preposterous; from the political standpoint it may be inevitable, and it may conceivably be deemed worth the cost by those

who subordinate pounds, shillings and pence to considerations of sentiment. But is this wildly uneconomic arrangement really inevitable? Must Great Britain really be saddled with this large administrative expenditure in addition to the millions she has given for the upkeep of the Special Police and for emergency relief of unemployment in N.E. Ulster? Must N.E. Ulster really subject itself to an economic and political isolation from the rest of Ireland which may very gravely imperil her future prosperity? Must the Irish Free State really burden its annual Budget with the cost of a huge army of Customs officials and frontier patrols, the mere organisation of which will be a most severe additional tax upon her at present admittedly overstrained administrative resources? The business community in each of the three would be positively revolted by the idea that the answers to these questions must necessarily be in the affirmative.

It is undeniably probable that N.E. Ulster will take the first step towards realising this undesirable prospect, but it is quite certain that, having demonstrated her undoubted right under the Treaty and her willingness at all costs, if need be, to stand aloof, she will persist in it to the bitter end? Following upon her "contracting out," there comes under Article 12 of the Treaty the Boundary Commission, to "determine in accordance with the wishes of the inhabitants, so far as may be compatible with economic and geographical conditions, the boundaries between Northern Ireland and the rest of Ireland," which will lead to a fuller consideration of some, at least, of the problems touched on above than has hitherto been accorded to them. With further consideration, ripper judgments may emerge on all sides. If the Irish Free State would arrange with Great Britain to continue the present transitional arrangements as to tax collection and tax disposition for a little while longer, it would ease its own burden in the hasty improvisation of elaborate administrative machinery. But it would do more. It would give a breathing space, in which, while it re-establishes order within its own boundaries, conciliatory tendencies and the persuasive force of economic factors would have time to operate. And with domestic peace restored in the Free State, the result might quite probably be the practical restoration of Irish unity. A short and convenient delay is the only price to be paid for the chance.

OUR INDEX NUMBER.

THERE was a general upward tendency in wholesale prices of commodities in October, as a result of which our Index Number has reacted from the low level to which it fell at the end of September to approximately the figure recorded at the end of August. During September there was a decline of 68 points, and in October there has been a rise of 75 points, which makes the present total 4,264, as compared with 4,588 at the end of October last year. The advance in October was fairly general, each group, with the exception of miscellaneous products, showing an increase for the month. The table below shows the monthly changes in the five groups and in the total:

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Base (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	382	618	464	551	2594	118.6
" Dec., 1915	497	446	731	711	848	3634	165.1
" Dec., 1917	1286	686	1684	839	1348	5891	268.2
" Nov., 1918	1289	782	1848	903	1389	6211	282.6
" Dec., 1918	1303	782	1805	866	1337	6094	277.0
" Dec., 1919	1441	881	2442	1145	1453	7364	334.7

" Sept., 1922	873	682	1116	699	818	4189	190.4
" Oct., 1922	885	700	1154	712	813	4264	193.8

As regards individual commodities, there are far more upward than downward movements. In cereals foreign wheat is lower, largely owing to heavy arrivals, but home-grown and other cereals are higher on balance. Beef and mutton have dropped, but pork is higher. Among subsidiary foodstuffs the outstanding feature is a sharp advance in tea. There has been keen competition at the auctions, and prices of nearly all grades are higher. Sugar is also a trifle higher, but butter has lost most of the September rise. In the textile section both cotton and wool prices have advanced. There has been a sharp upward movement in American cotton, and yarn and cloth prices have advanced in sympathy, though not to the same extent. Wool prices rose substantially in the first part of the month, but in the closing days there was a slight relaxation. Flax and hemp were unchanged, but jute fell considerably.

In the minerals group pig-iron and steel rails are unchanged, but iron bars, which were stationary in September, have dropped a little. A small rise in steam coal is partly offset by a decline in household coal, but both lead and tin show an increase. In the miscellaneous section, the only group to record a net decline for the month, is the principal movement is a decline in petroleum, which is partially counterbalanced by minor increases in oilseeds and rubber. The appended table gives the month's changes in each commodity's index number, as compared with the figure for the end of September, the figure 50 in each case representing the average price during the base period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	91½	— 4½	Cotton, A.	134	+ 18½	Copper	55	— ½
English	74½	— 7	Cotton, B.	122	— 5	Minerals	712	+ 13
Flour	83	— 1	Yarn	125½	— 7½	Britic timber	103	—
Barley	89	— 2	Cloth	125	— 4½	Amer. timber	89	—
Oats	76	— 6	Wool, Eng.	118	—	Leather	76	—
Potatoes	47	—	Aus. Wool	113½	—	Petroleum	108	— 8½
Rice	107½	—	Silk	138½	—	Oil	75½	+ 2
Beef	84½	— 3	Flax	134½	—	Oilseed	61½	— 1
Mutton	101½	— 6	Hemp	45	— 15	Tallow	115	—
Pork	130½	— 5	Jute	98	— 38	Indigo	115	—
Cereals & Meat	885	+ 11½	Textiles	1,154	—	Crystals	93½	+ 2½
Tea	135	+ 19½	Pig-iron	99½	—	Rubber	131	— 5
Coffee	89½	—	Steel rails	79	—	Miscellaneous	813	— 5
Sugar cane	156	+ 3½	Iron bars	81	—	Total	4,264	+ 75
Sugar beet	106	—	Coal, steam	123	— 5			
Butter	99	— 5½	House coal	93	— 1			
Tobacco	116½	—	Lead	113	— 8½			
Other foods	700	+ 17½	Tin	70½	+ 6½			

The increase of 75 points brings the increase on the figure at the outbreak of war up to 66.2 per cent., which compares with the increase of 63.5 per cent. recorded a month ago. The next table shows the present position of each group as compared with the pre-war level, the index for the end of July, 1914, being taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Dec., 1919	249	250	396	247	263	287.1
March, 1920	261	260	484	269	309	325.6
June, 1920	261	263	415	278	281	305.9
Dec., 1920	233	229	209	261	230	230.9
June, 1921	203	188	158	210	185	187.5
Dec., 1921	159	180	180	164	168	169.6
March, 1922	169	195	168	151	161	167.5
June, 1922	174	192	184	149	160	171.1
July, 1922	172	190	181	153	163	171.4
Aug., 1922	153	192	183	149	160	165.9
Sept., 1922	151	194	181	150	148	163.5
Oct., 1922	153	199	188	154	147	166.2

Minerals and primary foodstuffs remain together with an increase of not much over 50 per cent., while the increase in the miscellaneous group is slightly below this figure. Subsidiary food is still furthest from the normal, while textiles are climbing to a point which they have not touched for many months.

In the final table will be found the percentage changes in the indices of commodity wholesale prices as compared with the average in 1913 for some of the principal foreign countries:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	..	..	367	292	214
Highest, 1920	227	591	679	..	325	366	403	322
End 1921	123	326	594	3,585	176	172	178	209
End Jan., 1922	124	314	577	3,855	171	170	177	206
Feb., 1922	126	307	562	4,888	170	166	182	205
Mar., 1922	125	308	534	5,899	163	164	178	200
Apr., 1922	127	315	527	6,572	161	165	177	197
May, 1922	129	318	524	7,841	160	164	179	194
June, 1922	131	326	537	9,146	161	164	180	197
July, 1922	131	326	558	13,935	163	165	180	201
Aug., 1922	131	334	571	28,919	163	163	178	195
Sept., 1922	136	330	..	..	..	..	..	192

* Altered to include 16 finished industrial products.

The increase in the figure for the United States (Bradstreet's) is noteworthy as being the first pronounced movement in either direction for quite a long period. The September increase brings the figure to the highest point since January, 1921, and it is now 11.8 per cent. higher than at the corresponding date of 1921. As compared with August 1, 1914, the increase is 43.5 per cent. In France foodstuffs fell in September, but raw materials were higher.

Notes of the Week.

Preparing for the Lausanne Conference.—The Turkish Peace Conference is scheduled to open on November 13th at Lausanne. The Angora Government has accepted this venue under protest, affirming that the choice of Smyrna (their own proposal) would have made for speed owing to the greater facilities there for communication with their capital. This difficulty should, however, be diminished if the Turkish delegates are to be plenipotentiaries, as is reported. There is perhaps less certainty about the date than about the place. No sooner had the British request for a postponement, on account of the elections, been withdrawn than the Fascista Revolution occurred in Italy. Still, if Great Britain is to attend the Conference at the time agreed, in spite of domestic crises, it seems reasonable to expect the same from Italy. Under such energetic leadership as Signor Mussolini's, it ought not to be impossible for her to comply. The full members of the Conference are to be the Principal Allied Powers, Turkey, Greece, Rumania, and Jugo-Slavia. Bulgaria has been invited, but she is only to be called in where her special interests are concerned. Presumably this refers to the economic outlet to the Aegean, which has been promised her in a separate convention between her and the Principal Allied Powers. But the details of frontiers in Thrace, and the military status of that province, cannot leave her unaffected. Russia, as we mentioned last week, has been invited to attend the second part of the Conference, which is to regulate the status of the Straits, but not the main Conference for making peace with Turkey. This proposal does not satisfy Russia, her view being that the settlement of the Straits is an integral part of the Peace Treaty, and that the second part of the Conference will be little more than a formal ratification of things prejudged already. According to an interview with Lenin published in the *Observer*, the rejection of the Urquhart agreement is a direct retort to the British attitude towards the participation of Russia in the Conference. In the same context, Lenin vigorously denies that M. Herriot's visit to Moscow, and the consequent prospective *rapprochement* between Russia and France, will have any adverse effect on Anglo-Russian relations. At the same time, the likelihood of this *rapprochement*, or at any rate of a very important change in Franco-Russian relations, is foreshadowed in the marked change in the tone of the French Press towards Russia which has followed upon M. Herriot's visit, and this cannot fail to affect the peculiar triangular relation between France, the Soviet Government, and Angora. One party that is evidently not destined to be represented is the shadowy Government of the Sultan-Caliph at Constantinople. The Turkish Nationalists are now taking publicly the course which in private they have long indicated their intention of taking. The Sultan is to be "Vaticanised," and his "spiritual" divorced from his "temporal" power—and this not by Christian enemies of Islam, but by the national representatives of the leading Muslim people, as a measure essen-

tial to the well-being of their State. The proposal, put in terms of a resolution in the National Assembly, seems to have aroused contention, but evidently it has the support of the Government, and Mustafa Kemal spoke on behalf of it in person. It is bound to be a shock to Indian Muslim opinion, which is much more orthodoxly inclined than Turkish Nationalism. For the Muslims of the Dispersion, the Caliphate has recently become the main symbol of unity, and fears for the Caliphate were a leading motive for the support which Indian Muslims have given to Angora. From the academic point of view, moreover, the Indian Muslims are probably right. Historically the Caliphate is a temporal office, and its spiritual functions are included in or derived from its temporal aspect. Shorn of temporal power, it is hard to see how it can exist, and the arguments of Refet Pasha and Mustafa Kemal seem like misleading analogies from Western conditions. The Turk has been deeply affected by French culture and political doctrine, and evidently laicism attracts him. The Indian has remained more under the influence of the Islamic tradition. But even for the Indian Muslim, the Caliphate is only a means towards an end—that end being the preservation of a strong independent Islamic Great Power in the contemporary world. Obviously the Turks are the best judges of the measures necessary for this object, and Indian Muslim opinion will no doubt acquiesce in Turkish decisions, albeit with some searchings of heart. Fortunately, this difficulty concerns others than ourselves. The difficulties in store for us are sufficiently formidable already. It is enough to mention Western Thrace, Mosul, Southern Kurdistan, and, above all, the Capitulations, though it is premature at the moment to discuss them in detail.

Austrian Politics and the League Plan.—The *Times* correspondent in Vienna refers in the issue of Monday last to some of the difficulties in the way of carrying out the League plan for the financial rehabilitation of Austria. He says:—"For the last ten days the financial delegate of the League has been settling with the Austrian Government the details of the administrative and financial reforms which are to be carried out, and this week the Geneva Convention comes before the National Assembly for ratification. Under the terms of the Convention the National Assembly is required to give whatsoever Government may be in office during the next two years *carte blanche* to carry through reforms agreed on without bringing them before Parliament in detail. Dr Seipel, the Chancellor, apparently assured the delegate of the League at Geneva that provided the necessary credits were guaranteed he would be able to induce the Austrian Parliament and people to submit to the control proposed by the League. The credits have been guaranteed, but it is not so sure that Dr Seipel will be able to get the clear mandate to agree to the League's conditions without a very hard struggle and at the price of some concessions. The Socialists are evidently bent on making a very determined resistance." The real difficulty in the way of Austrian recovery is undoubtedly political. Even if the wranglings between the different bourgeois parties could be finally overcome—and this is not the issue at the present moment—the country would still be faced with the weakness of any and every Government when confronted with class antagonisms and the very real opposition between the provinces and the capital—"red Vienna," as it is usually referred to by the peasants. Any scheme of financial reform would, of necessity, conflict with the desires of the lower officials and the industrial proletariat. Wage rates on the basis of index numbers of cost of living, for example, for which the Socialists fought so long before gaining their point, would certainly have to be given up in principle, and ruthless reductions made in the number of the officials—of whom the railwaymen are perhaps the most important. To give a Government in which they had no part *carte blanche* to deal with these matters would be tantamount to unconditional surrender on the part of the Socialists. At the same time one cannot help feeling that the administration of the reform, backed by foreign credits, to be given any reasonable chance of success, should be removed from the heated atmosphere of the Parliament. The *Times* correspondent sums up the matter thus:—"What under-

lies the Socialist opposition is the fear that Dr Seipel will try and turn the League of Nations and the Geneva Convention into a weapon for the capitalists to use against Labour. It should be for M. Jansen, the League's delegate, to show that the League is as impartial in social questions as it is in national questions, and to ensure that the sacrifices which Austria has got to make are to be borne evenly by the capitalists and the working classes alike. The next fortnight should see some delicate three-cornered negotiations between Dr Seipel, Dr Otto Bauer, the leader of the Socialist Party, and M. Jansen. If all goes well, the Socialists will be induced to drop their opposition in return for some modification in the programme of reform and a share in the Government which will give them the guarantee that the reforms will not be carried through in a class or party spirit. The present plight and threatening menace of the financial position and financial prospects will, we trust, be sufficient to bring about a denouement of the political tangle, and provide conditions under which the League plan will have a real chance.

The Municipal Elections.—At the moment of writing, it is not possible to sum up the aggregate results for the entire country of the municipal elections which took place on Wednesday, November 1st, but it is at least abundantly clear that the net result is a defeat of Labour with very heavy casualties. In London a clean sweep of Labour representatives has been made in eleven boroughs. Before the election 14 out of London's 29 boroughs had a Labour majority. Now a Labour majority is only left, we believe, in the case of four, and nowhere is there a completely Labour Council. Apparently in London alone Labour lost over 300 seats. The *Morning Post* has taken out figures for 70 provincial boroughs. According to this calculation for these areas Labour put forward 574 candidates and 215 were successful; the Conservatives put forward 450 candidates, of whom 350 were elected; and Liberals with 250 candidates secured 167 seats. Without further investigation, the fact of a very severe setback for Labour must be accepted. This setback will presumably produce some effect upon the Parliamentary elections, although it would not be safe to take the municipal results as a guide to what will happen on November 15th. For one thing, the proportion of electors going to the poll is much smaller in municipal than in national elections. It is being claimed in certain quarters that Labour's defeat was brought about mainly by the influence of women's votes. How much truth there may be in this claim we do not know. But the claim serves to remind us that the forthcoming General Election is the first in this country at which the force of women voters

will make itself felt in deciding between conflicting party programmes. The circumstances of the 1918 election divested the women's vote of real importance in deciding the issue; in this election its influence is all-important.

Stock Markets and the Election.—Apart from the usual effect which the advent of a General Election exerts upon Stock Exchange markets, through the diversion of public interest from financial affairs into the field of politics, there are several special factors operating at the present time which have their influence upon various sets of prices in the Stock Exchange lists. Next week, writes a Stock Exchange correspondent, the House is more likely to feel the effect of the political excitement, caused by the Election, from the merely general point of view. Up to the present, whatever injury has been inflicted upon markets through the direction of attention to politics, has been comparatively slight. It is noticeable that amongst industrialists a certain amount of selling has taken place during the past week or so, with the evident intention of obtaining money for carrying on the campaign. The cost of fighting an election may not be a great deal in each individual case, but, taken in the aggregate, and allowing an average of two candidates for every constituency, it is obvious that a good deal of private selling of stocks and shares must be necessary in order to finance the fight. Sellers of industrial shares, especially of those issues which belong to the investment order, find no difficulty in getting good prices for their securities. With Ordinary stocks and shares, however, the effect of a number of selling orders, though they may be small regarded individually, is to depress prices unless there is sufficient demand on the part of the public to counterbalance the sales, and as people are not very keen at the present time upon the purchase of the ordinary run of industrial shares, in which may be included Home Railway stocks—the dullness in a good many descriptions is traceable directly to the shadow of the forthcoming Election. On the War Loan and other gilt-edged securities of this nature, the Labour manifesto had an uncomfortable influence, in that it checked, for the time being, a good deal of what may be described as the mechanical investment business that goes on day by day on behalf of trustees, not to mention other people who have the strength of mind, and the wisdom, to adhere to the best-class stocks. It is assumed that the Labour manifesto is so refreshingly frank that it will carry considerable weight in swaying the votes of those to whom security of income, as well as stocks and shares, is a matter of moment. The House, however, is a little dubious about the result of the present Election, the opinion being frequently heard that, although next week's results are likely to show a majority for Mr Bonar Law, the figures may not be sufficiently overwhelming to enable the new Premier to remain in office for long, and that a second General Election may be within early sight. That this view is not confined to the Stock Exchange may be seen from the fact that some of the underwriters at Lloyds are issuing policies which pay a total loss in the event of a Labour party being returned to power by the end, not of November, but next February. The man with money to invest even in purely investment securities is tempted to await the event of the November Election before he puts his money into stocks and shares, however unimpeachable the security. In the Home Railway market there is a very marked determination on the part of the public to take no hand until the polling results are declared. This factor, coming on top of the state of anti-climax at which the market has arrived by reason of the publication of most of the grouping arrangements, is making prices dull as a whole. When a few of the principal investment markets develop such a tendency, the rest of the House is frequently disposed to follow the sympathetic suit. Kaffirs are put forward as amongst the shares not likely to be influenced, one way or the other, by the Election, and the rubber market also claims that its wares cannot be benefited or damaged by the party in power. Nevertheless, personal experience shows that while the air is charged with uncertainty, whether it be political or financial, the disposition is for the ordinary man to stay his hand from investment of money in Stock Exchange securities. Therefore, during the next fortnight, the Stock Exchange looks for its business to be circumscribed by the effect of the political situation, while investors and speculators alike wait upon the results to be shown by the polls.

The Trade Facilities Act.—A correspondent writes:—The Trade Facilities Act fixes November 10th as the date on which all granting of Government guarantees under the Act shall cease. The scheme has, therefore, now virtually finished its 12 months' run, so it might not be out of place broadly to weigh up its success or failure. The Act is one of the many empirical remedies for the present vast unemployment—empirical because it is frankly based wholly upon expediency, and has no relation to any principle of political economy. Moreover, the procedure was confessedly one which could be defended only when carried out on a very limited scale, namely, the backing of miscellaneous private enterprises by Government guarantees. In the present Act the margin, indeed, is very limited, a guarantee of £25,000,000 being fixed as the maximum. So, in judging of the effectiveness of the Act, full regard must be given to this unavoidable financial limitation. I point this out because the effective relief to unemployment achieved by the projects under the Act is correspondingly restricted; in fact, unless this is borne in mind the results would look as though the Act after all was hardly worth while. The present unemployment figure is 1,368,000. The projects to be set afoot through the Government guarantees under this Act might be estimated at 250,000,000 men-hours, or, say, work sufficient for 50,000 men for two years. But although this figure on the face of it shows only a fractional relief of the vast total volume of unemployment, additional credit must be given on a further score, namely, that the special enterprises which have been set going are of a character (namely, public utility concerns) which should of themselves facilitate the restoring of industry generally. An inspection of the various guarantees given will show this. The total guarantees up to date amount to £17,742,145. (It is possible that one or two further guarantees may be put through before November 10th, say, to bring the total up to £20,000,000, but these would not materially affect the broad result.) The bulk of the guarantees up to the present have been devoted to Public Utility concerns or enterprises akin, commercial projects obtaining less than 10 per cent. of the total. Considering the Public Utility guarantees in detail, £1,306,600 goes to the electric supply industry in England. Part of this guarantee is allocated to the Shropshire, Worcestershire, and Staffordshire Electric Power Company, which, together with certain smaller undertakings (to which loans are guaranteed), are engaged chiefly on the supply of electric power to industries, the availability of which is a direct impetus to cheap production generally. The most extensive grant is to the railway companies, namely, £12,500,000, which covers improvements in the City and South London Railway (which will afford greatly improved facilities for suburban traffic), an extension of the London Electric Railway from Golder's Green to Edgware, and the electrification of the suburban section of the S.E. and C. Railway, which will indirectly greatly benefit the North Kent industrial district. Dock and harbour construction and allied matters, which also has an important bearing on trade, obtain guarantees of about £2,000,000. It may fairly be said, therefore, that the Act has fulfilled its object. Mr Lloyd George, in his speech on October 25th, said: "We had the experiment of the Trade Facilities Act—it has been a great success"—to which should be added, "within its limited scope." Further, and this is the important point, the whole of this has been achieved without drawing on the National Exchequer, as the Government do no more than guarantee as to principal and interest. It is only if one of the projects fails that the Government will be under any liability. This contingency is decidedly remote, as the Treasury Advisory Committee (Sir Robert Kindersley, Sir William Plender, and Col. G. Schuster) have been scrupulously careful (too careful according to many non-suited applicants) as to security. This can be seen by the fact that only 25 or so out of many hundreds of applications have been approved. There is a good possibility that representations

will be made for an extension of the period. If so, and in view of the present list of approved loans, it would appear that the scope might very well be restricted to Public Utility undertakings. This would give guarantee in a sense as to the projects being of public value in themselves, and also of good security. Further, it would relieve the Advisory Committee of the prodigious task of weeding out among the almost multitudinous applications that are sure to flow in whenever anything like provision of capital is mooted.

The Fall in Brazilian Bonds.—It is unfortunate that the celebration of the centenary of Brazilian independence, which has drawn many foreign visitors to the Exhibition at Rio Janeiro, should have been accompanied by a heavy fall in Brazilian bonds, as exhibited in the following table:—

Brazilian Securities.	Prices of 1921.		Highest Price, 1922.	Price End of Sept., 1922.	Price, Nov. 2, 1922.	Fall from High st. 1922.
	Highest	Lowest				
5% Funding Bonds	76½	62½	87	86	78½	8½
4% Railway Recession Bonds	51½	33½	56	48	44	12
5% Loan, 1913	62	44	67½	58	52	15½
5% Funding Bonds, 1914	66½	49½	75½	68	61½	13½

This week, however, there has been an appreciable recovery. Rumours of a coming default had been contradicted by an authorised intimation in the *Times* of October 10th that a remittance had been arranged of the amount necessary to pay the next interest and sinking fund due on the External Debt. But the recovery has been slow in coming. No doubt the fall is mainly due to the world-wide trade depression and the fall in exchange. The Customs receipts last year were some 30 per cent. less than in 1920; and the London and Brazilian Bank withheld its usual bonus last April, and has since reduced its interim dividend to 10 per cent. per annum, as compared with 14 per cent. in 1921. But there are further reasons in the political troubles last summer. The unsettlement following the dispute over the Presidential election and culminating in the military revolt last July, checked business considerably, though, according to the trade report for October of the London and Brazilian Bank, to which we are indebted for much of this information, there were signs in September of a revival, especially in the North. The Budget, even when reduced after President Pessoa's veto, showed the largest deficit on record, and until Senhor Bernardes, who takes office as President on November 15th, is firmly established, the outlook must continue uncertain. He has a reputation in his own State as a sound administrator and financier, and it is hoped that he will carry on the prudent policy of his predecessor; but, unfortunately, extravagance and reliance on paper currency are established habits in Brazil.

The Central American Conference.—A correspondent writes:—The conference of representatives of the Central American States, to be held on December 4th at Washington, at the invitation of the American Government, may conceivably, if successful, serve as the first step in the formation of a League of American Nations; but its primary and ostensible purpose is to promote peace and peaceful intercourse between the States of Central America. For that end the United States Government desires to effect a limitation of their armaments and to re-establish machinery for the pacific settlement of their disputes. With the increased and increasing interest in them of American financiers their good order and tranquillity is more important than ever to the Washington Government. It intervened in 1907 to secure peace between Nicaragua, which then controlled Honduras, and her neighbours, and induced the five States to conclude treaties facilitating reciprocal intercourse and binding them for ten years to submit differences not otherwise settled to a Court of five judges, one from each State, which should also try suits brought against any of the Governments by citizens of any other Central American State. To protect the Court as far as possible from political influences, its seat was fixed at Cartago, in Costa Rica, where the late Mr Andrew Carnegie provided it with a court house; and when this building was destroyed by an earthquake, he offered to erect another at San José,

the Costa Rican capital, to which the Court was removed. Unfortunately, the Court was not a success. The salaries were large enough to make a judgeship a prize for political services; the States objected to the cost; the Court, indeed, stopped war in 1907 between Nicaragua and Salvador, but the members voted as politicians rather than as judges; the few individual plaintiffs were all non-suited on the ground that they had not previously exhausted other means of redress; and when, in 1910, Honduras and Salvador took proceedings against Nicaragua on the ground that its canal treaty with the United States threatened their interests in the Bay of Fonseca and the Corn Islands, where the treaty permitted the United States to establish naval stations, the Court decided in their favour as against Nicaragua, but declared that it had no jurisdiction over the United States Government. Nicaragua, therefore, ignored the decision, and the agreement establishing the Court was not renewed on its expiration in 1917. Presumably, therefore, the conference will have to seek some simpler and less costly means of settling disputes. But jealousy of the influence of the United States is notoriously acute in Central America. Judging from certain provisions in the abortive Federal Constitution of 1921, federation, which has been favoured in the past at Washington, seems to have been taken up recently as a means of checking such influence. The same jealousy has been shown in the temporary interruption last May of the negotiations for an American loan to Salvador, and in the refusal of Honduras to accept a similar boon. The State Department at Washington will therefore require to bring to bear on these questions a generous supply of caution and tact.

Mr Hoover's Speech.—Our attention has been called to a statement in the *New York World* which purported to be the editorial opinion of the *Economist* on Mr Hoover's statement that it was possible for the Allies to pay their debts, and that America could receive payment in the form of tropical products. We are reported to have cherished the suspicion that "America wants Jamaica," or else that "she wants Jamaican sugar and other products in payment of the debt, but she puts the heel of the tariff on manufactured commodities." We have never suggested that America desires to take Jamaica in part payment of the British debt to the United States, but have always maintained that Great Britain can and will pay her debts provided that reasonable terms are arranged between debtor and creditor. An extreme protectionist policy in America will, however, make this difficult. The suggestion that Great Britain should pay by means of goods sent to raw material producing countries such as Jamaica or the East Indies, who in turn would supply the sugar, rubber, or other tropical products which America requires, is not an adequate solution of the problem, for Great Britain's national economy would be seriously upset unless we could get these raw materials for our own requirements. We cannot hope to pay America unless we are able to make the greater part of the payment direct in the form of goods to the United States, the greatest market for manufactured goods in the world.

Charges for Finishing Cotton Goods.—In Lancashire cotton trade circles it has been realised for some time that it was most desirable to reduce prices as much as possible to a level at which goods can be placed in consuming outlets abroad. Charges of one kind and another have fallen, writes our Manchester correspondent, but the opinion is held that there is still plenty of room for a further drop in the rates for finishing processes. It is believed that until prices for this kind of work are further reduced, there is little probability of Lancashire regaining her pre-war trade. It is rather difficult to give reliable figures in connection with this matter, but it may be said that the bleaching cost of a piece of shirting of 40 yards in 1914 was 1s. 3d. Prices were raised during the war, and the trade boom which followed, to 4s. 3d. and the price to-day is about 3s. With regard to printing costs, the price for a certain quality in pre-war times was 1½d. per yard, and the charge ultimately rose to 4½d. The price to-day is about 3½d. With regard to dyeing, the cost in 1914 for a piece

of shirting of 39 yards was 1s 1d, but the charge advanced to 5s about two years ago. Since then there has been a reduction to about 2s 10d. In trade circles there is a feeling that bleachers, printers, and dyers are not doing their share in assisting to re-establish Lancashire goods in markets abroad. It is much cheaper to send goods to the Continent for these processes. The Board of Trade returns indicate very clearly that this sort of thing is being done. In the nine months ended September last Great Britain exported over 137,000,000 square yards of cotton piece-goods to Switzerland, against less than 18,000,000 square yards in the same period of 1921. It is significant that out of the big total sent this year, over 131,000,000 square yards have been unbleached goods. The figures relating to Germany are also striking. So far this year we have shipped to that market over 88,000,000 square yards, against less than 12,000,000 square yards in the same period of 1921. Of the goods sent to Germany this year, over 75,000,000 square yards have been unbleached cloths. The high prices for finishing processes in this country are not only adversely affecting our trade with Eastern countries, but bleachers, printers, and dyers on the Continent are doing a large amount of work which should be done in this country.

Cotton Trade Wages.—The wages settlement of last April in the Lancashire cotton industry provided for an immediate reduction of 40 per cent. on list rates, and a further reduction of 10 per cent. on list rates in six months. The latter fall has come into operation this week, and means a reduction on present wages of 11.7d in the £. The new wage rates are 95 per cent. above the lists, or 90 per cent. higher than at the outbreak of War in July, 1914. During the War and the trade boom which followed, the operatives secured advances amounting to 210 per cent. on list rates. Last year there was a fall of 70 per cent. on list rates, and this year a reduction of 50 per cent. on list rates. It must be remembered that the rise of 30 per cent. on list rates obtained in July, 1919, was to compensate the operatives for the loss of earnings as a result of the reduction in working hours from 55½ to 48 per week. It is estimated that the 10 per cent. reduction on list rates which has now come into force will mean a saving to the employers of about £30,000 per week in their wage bill. According to the agreement of last April, no further change in wages can take place until next May, and if when that time comes round either the employers or the workpeople want another alteration it will be necessary for one month's notice to be given.

Union Cold Storage.—The report of the Union Cold Storage Company for the year 1921 shows a further substantial increase in profits, the business of the company having been "fully maintained." The balance of working accounts and other receipts was £558,700, as against £467,400 a year ago, and £306,400 in 1919, there having been purchased and cancelled out of earnings £66,500 debenture stock and £12,200 paid off specific mortgages. The table below compares results for a number of years:—

	1913.	1917.	1918.	1919.	1920.	1921.
Gross profits	£ 137,094	£ 289,922	£ 293,424	£ 306,360	£ 467,393	£ 558,675
Deb. int., &c.	31,727	66,637	62,333	58,133	72,118	74,676
Net profit	105,367	223,285	231,091	248,227	395,275	483,999
Brought forward	20,806	45,014	45,454	51,066	71,717	87,497
	126,173	268,299	276,545	299,293	466,992	571,496
Res. and depr.	43,185	75,048	76,679	78,777	87,939	108,667
Prof. dividends	46,109	117,797	118,800	118,800	261,556	328,800
Ord. dividend	..	30,000	30,000	30,000	30,000	30,000
	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carry forward	36,879	45,454	51,066	71,716	87,497	104,028

The allowance for depreciation has been considerably expanded, while the dividend on the new 7 per cent. preference stock is for a full year this time, and requires £140,000, as against £95,400 a year ago. In spite of this there is sufficient to maintain the ordinary dividend at 10 per cent. and to increase the balance forward by over £16,000. The report states that properties which

the directors found it advantageous to dispose of have been sold at a profit of £498,800, of which amount £26,050 has been used to write off the item of goodwill, the balance having been placed to depreciation reserve account, which raises it to £1,442,100. Nevertheless, there is an increase of £299,100 in the property item shown in the balance-sheet. The most striking changes in the latter, however, are increases of £3,206,300 in debtors and stocks and of £3,042,000 in creditors. An analysis of the balance-sheet is set out in another column.

The Swedish Iron Trade.—Recent figures show a considerable revival in the iron trade of Sweden. The export of iron ore in September last was 587,953 tons, as compared with 402,991 tons in the same month in 1921. The total exports of iron ore for the nine months January-September, 1922, were 3,804,150 tons, as compared with 3,359,045 tons for the corresponding period in 1921. While the imports of bars, plates, rails, and similar products show a decline, the exports of almost all iron goods show an increase over the first nine months of last year. The importance of Swedish ore makes these figures doubly interesting as an indication of the general revival of trade.

Cam and Motor.—Rather more than three years ago, writes our mining correspondent, this Rhodesian enterprise was reconstructed with the fairly heavy assessment of 7s 6d per £1 share. In the great majority of instances joining a reconstruction simply means throwing good money after bad. In this case, however, those who had faith in the future have met with a substantial reward. For several weeks past an active speculation has proceeded in the shares up to about 24s, on the strength of statements that the forthcoming report would make a good showing, and that the lower levels of the mine were opening up particularly well. The annual statement is now issued. It has a good story to tell, but the facts fall a long way short of some of the figures talked about. For instance, the ore reserves, at 666,000 tons, value nearly 40s, record an increase in both quantity and value. Still, the increase in the former amounts to no more than 66,000 tons, and in the latter to only 1s 9d (averages based on the normal price of gold). It should be noted that these estimates take no account of the exceptionally rich ore proved to exist at and below the eleventh level of the Motor mine. Some operators attach much importance to what may be said on this point at Tuesday's meeting. On the basis of current costs, &c., the "profit in sight" may be reckoned as equivalent to about one-half the market price of the share. This is fairly good. Nevertheless some properties on the Rand can show almost £1 for £1. As regards the finances, it may be recalled that the sum provided at the reconstruction proving inadequate, substantial advances were made by certain guarantors, who received an option on 120,000 shares at par until July, 1923. Of this loan, all but £58,050 had been paid off at June 30th last, so that the company will soon be out of debt, and in the event of the option being exercised—as may be expected—ample funds will be available for the extension of the scale of operations. Last year's profit of £46,900 is applied to depreciation and towards preliminary expenses.

New Rand Treatment Method.—Full particulars are now available of the simplified process for the extraction of gold from the Rand ores, to which reference was made in our columns some time ago. The salient features consist in the elimination of the stamp battery—which, in constantly improved shape, has been in use from the earliest days of the field—and the production of one finely-divided residue. The ore goes direct from the rough-crushers into the tube mills, and the product classified in such a way that the whole is eventually treated in the slimes plant. Not only does this method effect an appreciable reduction in working expenses, but it practically eliminates the possibility of gold stealing, besides effecting a large saving in the initial capital expenditure. Whether the economy in costs is sufficient to warrant the conversion of existing works remains to be proved, but there can be little doubt that new installations will be laid out on

the "all-sliming" system. It has already been adopted at the New State Areas, which is due to commence production early next year.

The Newmarch lectures on statistics will be delivered by Mr A. W. Flux, C.B., on Wednesdays, at 6.15 p.m., beginning November 8, 1922, at University College. The subject will be "The Foreign Exchanges." The syllabus is as follows:—(1) Effects of the War on the Exchanges—the Balancing of International Payments; (2) the Relations of Prices in Different Countries—Facts and Theories; (3) Purchasing Power Parities in Theory and Practice; (4) Inflation and Deflation—the Reaction of Foreign Exchange Movements on Business Conditions at Home; (5) Discount Rates and Exchanges; (6) Stabilisation of Exchanges—Methods and Limits of Control—the Resumption of Gold Payments. The lectures are open to the public without fee or ticket.

The Women's Guild of Empire announces a course of lectures on "Economics for Everybody," to be given in the Caxton Hall, on Monday afternoons during November, at 3 p.m. Sir Henry Penson, the well-known Oxford lecturer, and former Director of the War Trade Intelligence Department, will open the series, taking as his subject the "Danger of Economic Ignorance." The other lecturers include Mr Herbert Williams, M.Sc., who will explain "Why Things are Dear"; Professor Winifred Cullis, who will deal with "The Human Factor in Industry"; and Mr Harold Cox, who is to speak on "The Imperial Aspect of the Population Problem." Full particulars may be obtained in London from the Secretary of the Guild, at 24 Buckingham Palace road.

Obersea Correspondence.

UNITED STATES.—SEPTEMBER TRADE—GOVERNMENT BONDS OVER-SUBSCRIBED—SOUTHERN PACIFIC—CENTRAL PACIFIC CONTROVERSY—SECRETARY HOOVER ON ALLIED WAR DEBTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 23.

ALTHOUGH there had been no evidences of a general rush in this country to import goods in anticipation of the extraordinarily high tariff that went into effect last month, nearly everyone expected that the returns of our foreign commerce for September would show a substantial increase in imports. It was a distinct surprise, therefore, to learn from the Department of Commerce figures that September imports were actually \$51,000,000 less than in August, and much the smallest aggregate of any month since April. The total value of imports was \$232,000,000, approximately, as compared with \$271,000,000 in August, and \$179,200,000 in round numbers during September of 1921. The decrease last month is all the more puzzling because of the abnormally large orders for coal, which it is understood were placed in your market. One quite plausible explanation for the falling off is that importers, expecting an earlier passage of the tariff, were governed accordingly, and brought in additional merchandise before last month, especially in August, when imports reached a larger total in value than in any month since November of 1920. Exports during September were valued at \$317,000,000, as against \$302,000,000 in August, and \$325,700,000 approximately, in September a year ago. The trade balance in favour of this country in September was \$85,000,000, as compared with \$20,000,000 in August, and \$145,500,000 in September, 1921. For the nine months ending with September, exports were valued at \$2,741,000,000, and imports \$2,174,000,000. As compared with the like period of 1921, exports decreased \$811,000,000, but imports increased to the extent of \$301,000,000. For the first nine months of this year the total trade balance in favour of this country was only \$566,000,000, as against \$1,679,000,000 for the corresponding period of 1921. Since the new tariff did not

become operative until the latter part of September, no conclusions can yet be drawn as to the effect of the higher duties on import trade.

While there was no doubt that the Government's recent issue of \$500,000,000 4½ per cent. long-term refunding bonds would be over-subscribed, the response to the offering greatly exceeded expectations. Total subscriptions received up to and including October 14th, according to a Treasury Department announcement, amounted to \$1,550,000,000, of which approximately \$1,400,000,000 represented cash subscriptions, and about \$150,000,000 represented cash subscriptions for which either 4½ per cent. Victory notes or Treasury certificates of indebtedness maturing on December 15th were tendered in payment. Cash subscriptions for amounts not exceeding \$10,000 for any one subscriber amounted to more than \$325,000,000, which reflects the widespread demand from investors throughout the country. All of such subscriptions were allotted in full. Bonds will be issued to meet \$500,000,000 of the cash subscriptions, and also to absorb the \$150,000,000 of Victory notes and Treasury certificates offered in exchange. In other words, allotments already made total \$650,000,000. Subscription books remained open until last Saturday for those who wished to exchange their holdings of Victory notes and Treasury certificates, and it is quite likely that additional subscriptions of that kind have been received. Should the latter reach, say, \$100,000,000, as estimated in some quarters, the total allotments will amount to \$750,000,000.

One of the most important cases brought before the Interstate Commerce Commission was begun last week, when the Southern Pacific Railroad Company filed an application to retain control of the Central Pacific Railway Company. For several reasons the outcome of this controversy is awaited with keen interest and some concern by railroad and financial interests. Primarily, the purpose of the application, it is explained, is to enable the Southern Pacific to control the Central Pacific, pending the determination by the Commission of its plans to group the railroads of this country into some 18 or 20 systems. The

GERMANY.—REPARATIONS COMMISSION— EXCHANGE DECREE AND GOLD BILLS—RAIL- WAYS—FINANCES—EXCHANGE AND BOURSE— INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, October 31.

THE Reparations Commission delegates were to-day received by the Chancellor. It is expected that the foreign financial experts may take part in the coming deliberations; but little is known as to the programme of either group of visitors. It is assumed that the question of mark stabilisation will be handled; and private financiers are not optimistic about the result. The balancing of the Federal Budget, the cash Reparations payments, and the coal deliveries will presumably also be debated. The more precise and very drastic programme published unofficially in the French Press is here discredited, and the programme contains items which are impracticable, and which indicate imperfect knowledge of German conditions.

As supplementary to what was stated last week as to the profits of German industrial companies, the following data, compiled by the *Berliner Tageblatt*, may be useful. The value of German company stocks at Bourse quotations of December 31, 1913, was 31.24 milliard gold marks; in January, 1921, at the then gold exchange, 8.23 milliards gold marks, which rose to 14.5 milliards in November, 1921, and fell to 6.8 milliards in July, 1922. Apart from the paper mark's gold exchange, the factors in this calculation are (1) the Bourse quotation, and (2) the nominal capitalisations. The lowness of the final figure is due to the fact that this year (unlike last year) Bourse quotations did not rise in anything like the measure of the rise in the mark's gold exchange. Since July, stocks have risen much, but the mark's gold exchange has risen more; and a calculation for October would show a still smaller gold value. Concerning gold dividends it may be added that the value of the 50 per cent. dividend of the Mannesmann Tube Works, one of the largest concerns, is (exchange depreciation 1:1,000) 60,500 gold marks, or £3,250 gold, of the United Königs-und-Laurahütte, the leading Silesian coal and iron company, £810 gold, and of the Lothringer Company and Hasper Iron Company, the two biggest limbs of the Kloeckner Concern, £15,700, and £13,500. These figures show the Reparations value of industrial yields; but (in addition to the fact that the gold value was somewhat higher when the dividends were paid) such calculations have doubtful elements. On the one hand, the real value of the companies' assets, and their potential gold earning power, is unimpaired; on the other hand, the transaction of transferring the dividends abroad would probably lead to further dwindling of their gold value. A Reparations settlement based on direct tribute from industry might equally have the opposite effect; by its influence on the sentiments of the foreign mark interests, that is, it might send up the mark exchange. This shows how unreliable are estimates of the effect of wholesale transfer of wealth from one country to another in paper currency times.

The exchange decree has been amended radically. For first home sales of imported goods payment in foreign currencies may be demanded, also for commissions on import deals, and shipping insurances. Already, pending exchange deals remain legal; and payment in foreign currencies for the wares and services of foreigners in Germany is again legal. The last amendment is objectionable, because the increasing demands for payment in high currencies from foreigners in Germany are mostly a means for extorting unreasonable prices. The gold Treasury Bill plan has not yet been divulged. The *Frankfurter Zeitung* states that the bills will be purchasable in marks at the preceding day's dollar exchange, will be in denominations of 25 to 1,000 dollars, interest 3 per cent., term three to six months, and not discountable at the Reichsbank or accepted as security by the "Darlehnskassen." The bills, it is expected, will be quoted on the Bourse.

The Reichsbank statement for October 23rd shows a continuation of the pressure for credit and cash. Treasury Bill discounts rose from 389,721 millions to 405,820 millions, private discounts from 63,648 to 76,481 millions, and note circulation from 374,506 to 409,973 millions. The

floating debt on 20th inst. was 619,643 millions, against 567,195 millions, the funded debt 64,423 millions, against 85,899 millions on September 30, 1920, since when it has steadily fallen. Both debts total 684,066 millions, against 375,993 millions at the close of the June quarter. The result of the mark exchange decline is visible. The total debt is 139.1 fold more than on March 31, 1913; but the gold debt at present exchange is only about a seventh of that before the war, the burden having been transferred to home and foreign bondholders. The Customs-gold surcharge for the week September 1st-7th has been raised to 70,400 per cent., or 705 fold the nominal.

The State Railway account for the first half of 1922 shows, for the first time over any long period since the war, a balance of revenue and expenditure, in fact, a small surplus. The account is:—

	In Millions of Marks.
Revenue—	
Passenger traffic	10,550
Goods traffic	78,714
Other sources	2,973
	92,237
Expenditure—	
Central direction	74
Traffic operation	89,900
Other outlay	6
Service of debt	2,200
	92,180

This favourable result is due in part to the competent management of the Minister of Railways, General Groener, who has been at his post for more than three years. It is due also partly to the shrinkage, caused by the currency depreciation of the real interest on the railway debt. The main reason for the improvement is that January-June was in general a time of stable exchange, and therefore of (for Germany) moderate price-rise. Until June 25th the dollar never rose more than 20 points above its highest level of November, 1921. On the basis of the November, 1921, falls, rates and fares were put up drastically, and they were not reduced when the mark recovered temporarily (December, 1921) about 100 per cent.; hence revenue continued to come in on nearly the highest values level. Under precisely the same conditions, general State finances improved in this period, the proportion of deficit to revenue falling from 154.4 per cent. in December, 1921 (immediately after the lowest mark level of 1921), to only 27.2 per cent. in May, 1922. The new mark decline has badly upset railway finance (as it has upset State finance), and the reason in both cases is inability (in part neglect) to raise charges in accord with the currency depreciation. The present plan is to raise passenger fares several times, until in December they are (third class) six times higher than in September, and 90 times higher than in 1913. The 90-fold rate lags very far behind the mark's external and far behind its internal depreciation; and it still remains a mystery why rates and fares are not put up as ruthlessly as theatre seats. All prophecies that past increases would kill traffic (or theatre-going) have been falsified; and it seems (on grounds both of theory and observation) wrong to assume that if the real substance of national wealth is not decreasing, an increase of charges up to the full internal currency depreciation would kill traffic. The postal rates are also unreasonably low; the home unit letter rate is at present exchange 1-15th of a penny, the foreign rate about 1d. Citizens who use the railways and posts for business could bear the higher rates, adding the increase to prices as they do in the case of dearer coal, materials, and labour; and citizens who use railways and posts for entertainment ought not to travel at the cost of citizens who do not use them at all. The latest estimate of the posts deficit is 30 milliards; the railway deficit, until a proper relation is established between costs and charges, will be enormous, and the burden will be thrown wholly on the mark-interest part of the population, in the form of avoidable floating debt borrowings followed by inflation. A Government which in eight hours solves the exchange problem by means of proclamation under an exceptional martial law ordinance might be expected to show reasonable speed over problems which could probably be solved.

The Bourse last week continued active, and, owing to inability to cope with work, it is being closed on certain days; but the upward movement slackened. Whereas

The industrial outlook is less favourable than it was a month ago, but it is hard to say whether this is the beginning of the normal seasonal depression, or whether the trade boom is breaking up. Last winter, but some weeks later than now, there was a sharp and brief increase in unemployment, with reports of declining orders; but this condition passed, and trade activity, with an increasing and often unsatisfied demand for labour, continued up to the last weeks. Of the iron and steel branches, Berlin newspapers publish very alarming accounts and prophecies; but the trade journal *Bergwerks-Zeitung* says that the reports are exaggerated, and that "of any tangible reaction, or of considerable discharges of workmen in the heavy industry, there is no possibility." Orders are abundant, but the shortness of working capital threatens danger. The news from the finishing metal industries—in particular the locomotive and car branches—is less favourable. The Solingen branch complains of the new American tariff (70 per cent. of Solingen's exports this year went to the United States); but good orders are coming from England, South America, and the East European frontier countries. The *Vorwärts* holds that the employment statistics show the number of men engaged in industry (on the present area) to be greater than in 1907, while the number engaged in agriculture has declined. Some textile firms (district Rheydt) are working shortened hours; but this, says the *Deutsche Allg. Zeitung*, "is not due to want of orders, but to financial troubles," caused mainly by the Exchange Decree. Since the decree was amended, adds the report, things have improved. The mere scarcity of working capital is likely to be got over—the declining value for industrial financing of the paper mark is met by increasing the quantity of paper marks, so that the predicted crisis may, if the will to buy remains, be avoided. The influential Westphalian iron magnate, August Thyssen, declares that Germans must return to the ten-hours day.

The Potash Syndicate reports a remarkable recovery. Potash sales in the first three quarters of 1922 are described as extremely satisfactory, being 10 million double-centners of pure potash, against 6.2 millions in the same time of 1921, while exports for all 1922 are put at 12½ millions d.c., materially exceeding the exports (11 millions d.c.) of 1913. This is a very good result, because, owing to American unwillingness to buy at the high German export prices, potash exports up to last year were very small.

ITALY.—THE FASCISTI AND THEIR PROGRAMME— GLOOMY SPEECHES OF GIOLITTI AND NITTI— EXCHANGES AND PRICES RISING—ECONOMIC AND FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

TURIN, October 28, 1922.

THE important question is, what is the economic platform of the new party? Signor Mussolini, the chief, is not an economist. Passionate and full of vigour, he is able to commit his party to headlong plunges into unknown seas. For the moment, he has uttered at Naples only one economic sentence: "Italy needs at the helm a man capable of saying No to all requests of new expenditure." So far, so good. All leaders are saying the same thing. Signors Nitti and Giolitti have recently made speeches, in which Italy's situation was coloured very darkly, and public opinion was seriously and gravely warned of the necessity of putting an end to the increase in public

expenditure, and of reducing even useful expenses. Signor Giolitti was very resolute on the topic, and prophesied the lira going to ruin, following the evil example of the German mark, if the State Budget were not put in order in a reasonably short time. The words of the old statesman, who is passing his eightieth birthday, had an immediate effect. The lira went tumbling in foreign markets, and in a few days the pound sterling rose from 105 to 117 lire, and the dollar from 24 to 26 lire.

From this rise was born in the Italian bourses a faint approximation to a tentative valuta boom, as is apparent from the following table:—

	September 26.	October 25.
Consols 3½	72.70	72.15
.. 5%	81.80	80.30
SHARES.		
Bank of Italy	1,347	1,375
Banca Commerciale	863	878
Credito Italiano	650	670
Meridional railways	293	291
Libera Tristina (navigation)	445	430
Cantoni (cotton)	1,001	1,250
Casacani seta (silk)	582	688
De Angeli (cotton printing)	429	480
Rossi (wool)	2,000	2,120
Terni (iron and steel)	476	468
Fiat (motor car)	233	240
Edison (electricity)	440	466
Fondi Rustici (agricultural land)	230	232
Immobiliari (house property)	510	540
Nebiolo (printing machines and types)	326	397
Silos (wheat elevators)	238	268
FOREIGN EXCHANGES.		
Paris	178	179
London	102.80	115
Switzerland	435	465
New York	23.30	26.45
Berlin	1.67	0.68½

Nearly all shares have participated in the boomlet, rise of prices being the highest in textiles, where high profits are obtained. Consols and all other fixed interest securities are low. Although prices are increasing, the following figures on the cost of living of a working man's family of five in Turin do not yet bear the full repercussion of recent rises in foreign exchanges. This rise in the cost of living has, however, not been accompanied up to date by requests for higher wages.

	Food.	Clothing.	Rent.	Fuel and Light.	Miscellaneous.	Total.
First half of 1914	100	100	100	100	100	100
June, 1920	410	434	100	385	425	374
June, 1921	445	433	110	368	438	429
January, 1922	524	454	120	436	591	465
April, 1922	470	433	120	378	587	494
May, 1922	473	433	120	368	586	436
June, 1922	484	432	120	366	584	437
July, 1922	487	436	120	372	584	438
August, 1922	489	436	120	387	587	458
September, 1922	521	436	120			

Will the new party have the will and the power to redress the awkward financial situation of the State, which is the only true cause of the present unfavourable movements of exchanges and prices? I say the only cause of the trouble, as the economic situation of the country is not bad. Far from it. Agriculture has had some adverse experiences—the wheat harvest under the average, and a deficiency of rain, which in various regions made havoc among the cattle; but the cocoons and vintage seasons went very favourably, and prices of agricultural products are high, so that the agricultural community is faring well. Textile products are, therefore, in good demand, and

building shows, after years of complete quiet, some signs of vitality. State and banking circulation are not increasing, and the State finances itself by means of Treasury bills sold to real investors. The deficit of the current fiscal year was estimated by Signor Giolitti at not less than seven billions lire—i.e., Italian savers are buying this year State securities to the tune of seven billions lire for the sake of balancing the State Budget. If we assume that the present lira is worth only 20 per cent. of the old good money, we must conclude that the minimum capacity to save of Italians is not less than 1,400 millions gold lire. At present, unfortunately, all these savings are poured into the all-devouring State Treasury.

Therefore, the most urgent necessity is the reduction of public expenses. Even if taxes should be somewhat increased, the balancing of the State Budget would set free a large margin of savings for industrial and agricultural investments. Economy in public services is possible; the huge deficit of the State Railways of over one billion lire is related to two principal causes: high exchanges, which raise the price of coal, and the bad organisation of the eight hours day, in virtue of which many railwaymen work effectively only for two or three hours a day. In the postal services the tale is very much the same. Large sums could be saved if the State could buy all they want in the cheapest market; if State bounties and subsidies were suspended or reduced; if war pensions were revised, so as to limit them; if plans for public works were restricted to a minimum. But the man who will attempt to put in practice the Mussolini dictum of replying No to all requests of expenditure will possess remarkable courage. Populists and Socialists have not this sort of courage, as they cater for the vote of multitudes crying always after State aid, and it is to be feared that Fascisti, who are proud of marshalling 800,000 adherents, will hesitate before the task.

SWITZERLAND.—STOCK MARKET PANIC—CAPITAL LEVY PROPOSALS—REJECTION EXPECTED.

(FROM OUR CORRESPONDENT.)

GENEVA, October 24.

DURING the past fortnight the Swiss stock markets have been completely panic-stricken. The panic concerned especially the bonds of public bodies. Within a few days the average yield of public securities dealt with in the Swiss markets rose from 4.1 to 5.4 per cent. The 4 per cent. Federal Loan, which was launched at the beginning of September with quite extraordinary success, was quoted four weeks later 10 per cent. below the price of issue. The causes may be briefly reviewed. On September 24th the Swiss people rejected by a very large majority a project of law suppressing revolutionary attempts. This was how the law was officially described, but the population in many parts of the country considered the law as a breach of constitutional liberty, and rejected it, without, however, the least intention of granting any support to the revolutionary parties. The refusal of the law by a very large majority was, of course, unanimously interpreted by the Socialists and by the reactionaries as a Socialist victory. Now, on December 3rd, the Swiss people will have again to vote concerning an initiative—a constitutional proposal presented by the left wing of Socialists, and providing for a levy on capital of from 5 to 60 per cent. of private fortunes. The proposal differs from all similar laws in other countries in this respect, that the money raised by such a drastic measure shall not be used for the purpose of clearing off public indebtedness, but in the creation of a fund for social insurance. At first glance it looks as if this law would have some chance of being accepted; 99.4 per cent. of the population will have to vote whether 0.6 per cent. of the population is to pay over part of its fortune. But notwithstanding this, the possibility of a Socialist victory in the voting is a very small one. It is only a false interpretation of the result of the vote of September 24th, which really created the fear.

The panic caused a flood of orders to sell at the best price obtainable. There were days when federal, cantonal, and municipal securities depreciated to an

absurd extent. At the same time, foreign holders of Swiss francs, especially Germans, were influenced by these feelings, and bought Dutch florins and English pounds. Under such conditions banks were not in a position to interfere, and the intervention of the National Bank in its capacity as a semi-Government institution came, of course, too late. In this way the nervous elements among the stock-holders in effect voluntarily paid far higher a levy on capital than they would have paid in most cases in the event of the acceptance of the law.

A considerable number of projects of new public loans urgently necessary for the consolidation of public finance which were intended for the month of October of this year have been postponed till next spring, which is not to the advantage of the taxpayer. Some leading industrial shares were, however, not touched by the panic. As to banking shares, they dropped considerably, but recovered far more quickly than public securities. The foreign securities of the kind dealt in in the Swiss markets, especially several American loans, Scandinavian loans, the lately-issued Amsterdam loan, and others, rose when the panic was at its height, and their yield is now somewhat smaller than that of Swiss securities of similar standing.

There are people who believe that this panic, although unjustified in itself, will have lasting and perhaps beneficial effects. First of all, the law will be rejected by an enormous majority, for the peasants, who form the majority of the electorate, and who counted on enjoying a reduction of mortgage interest for this autumn, have now the disappointment of the maintenance of high mortgage interests, and they will make the Socialists pay for it. (Some 99 per cent. of the peasants have smaller net fortunes than would be necessary to be touched by the levy.) Secondly, the orientation in the direction of foreign investment will last, and may to a certain extent weaken the unilateral national tendency of the average Swiss investor since the beginning of the war. Switzerland's balance of foreign payments after the heavy depreciation of her foreign assets in neighbouring countries needs fresh foreign investments.

HOLLAND.—GENERAL SITUATION—BANKRUPTCIES —LOAN TO GERMANY—BALANCE OF TRADE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 19.

THE general situation is one of serious depression. Although there are some indications of a rather favourable character, as, for instance, the receipts of the taxes, which might be worse, there is a total lack of initiative and enterprise. It seems as if we are going through a second wave of depression. Six months ago there was a feeling that the most serious phase of the crisis had more or less gone by. To-day it is otherwise. Those banks which expanded too rapidly during the war, and the short period of revived activity after the war, are still suffering from the ill-effects of their too light-hearted policy. Undoubtedly, the network of branch offices affords more banking facilities than normally required. Some of the banks have lost quite considerable amounts of deposits, partly because the Government paid a better rate of interest on Treasury bills, and partly because the public had grown a little alarmed after the disastrous experiences of Marx and Co.'s Bank and the Bank Associatie, and numerous smaller financial institutions and private firms. The elections in the summer brought about a somewhat increased majority of the Conservative parties. The nation had hoped that a strong Cabinet, with a drastic policy of economy, would restore confidence in the Government, but the Minister of Finance has disappointed expectations. The unfavourable condition of business life is illustrated by the number of applications for bankruptcy in the first three quarters of this year, which was 2,243 as compared with 1,565 in the same period of 1921—an increase of 43 per cent.

It will be remembered that this country was the first to grant a credit to Germany after the war. This credit amounted to 200,000,000 fl, of which 60,000,000 fl were to be used for foodstuffs and 140,000,000 fl for raw mate-

HARRISONS & CROSFIELD, Ltd.

rials. A year ago Germany had availed herself of the first-named credit to the extent of 20,500,000 fl, but in the meantime 24,100,000 fl had already been paid back, so that practically the whole of the credit was still available. The present position as regards this part of the credit is not known. Of the other part, destined for financing raw materials a year ago, 11,700,000 fl had been utilised. Those who denied that this credit assisted the German industry in competing against the Dutch industry found support from this low figure. But now the situation is quite different. Up to October 2nd, the Dutch Government had granted credits to the amount of 40,000,000 fl, of which 31,000,000 fl were utilised. The increase in the number of applications from the German industries for credits under this arrangement is very rapid, owing to the fact that German banks are much restricted, and are bound to ask exorbitant terms, whereas for loans under the Dutch scheme 8½ per cent. is charged (including commissions), plus ½ per mille. Although not exactly low, these terms are far better than those of the German banks. It may be anticipated that within six months the whole of the credit of 140,000,000 fl will be exhausted, and undoubtedly this means a heavy charge on the floating debt of this country, which already amounts to 735,000,000 fl, of which 295,000,000 fl has been lent to the Colonies. We now face the contrast that Dutch trade and commerce languish while the Government finances German industry, which is the severest competitor of Dutch industry. It must be admitted, however, that the trustees in Berlin try as far as possible to use the funds of the loan for enterprises which do not compete with Dutch industry. And if a considerable part of German industry is being enabled to expand its activity, it cannot be denied that this was exactly what the credit was meant for. The Dutch Government was very soon after the Armistice convinced that an impoverished Germany, incapable of developing her productive energy, would mean a danger for this country. It is only a pity that the impoverishment has come just the same, and to a larger extent than anyone anticipated, and that the credit granted by this country has been, taken all together, of little use.

The value of British imports in September was 164,000,000 fl, and of exports 110,000,000 fl. The balance of imports was thus 48,000,000 fl, which is the smallest monthly balance of this year. The largest was 86,000,000 fl in May, and the lowest 50,000,000 fl in June.

CZECHOSLOVAKIA.—POLICY OF DR RASIN—COAL—THE NEW BUDGET.

(FROM OUR PRAGUE CORRESPONDENT.)

DR ALOIS RASIN, who at the recent reconstruction of the Czechoslovak Cabinet took office as Minister of Finance for the second time, has been credited with the intention of attempting sensational changes in the financial policy of the country. Among other things, it was predicted that his advent would be followed by another sharp rise of the Czechoslovak exchange, which was to culminate in a currency reform, having the gold standard as a basis. The new Minister took the first opportunity to contradict these rumours, and, in an interview with representatives of the local Press, gave an outline of the general policy he intended to adopt. He said that nothing was further from his mind than to have recourse to sensational measures. During his tenure of office he would rather trust to the gradual process of consolidation and healthy evolution than carry out a plan which, in the present condition of the international money market and of the economic state of the neighbouring countries, would be doomed to failure.

So far as a further rise of the Czechoslovak exchange is concerned his forecast has been borne out by subsequent events. At Zurich the crown is quoted at about 18, while the sterling exchange at Prague has slightly receded to between 135 and 137 to the £. In view of the in-

dustrial crisis, which is almost entirely due to the disproportionate cost of production, this, in all conscience, is high enough. Any additional rise could not fail to aggravate the position. Strenuous efforts are being made all round to raise the internal purchasing power of the crown, and the Government have foreshadowed certain measures tending to alleviate the strain. A small beginning was made with a general lowering of food prices, while textiles and boots show a considerable drop. On the strength of this, labour, being the easiest to be got at, was asked to consent to a cut in wages, amounting to roughly 30 per cent. Notices were served in the mining, metal, chemical, textile, and some other industries terminating existing contracts, and, although in some instances the new scale of wages was accepted without demur, the miners in the Ostrava-Karvin coal district replied with a strike. But strike funds were low, and the large stocks of coal available proved sufficient to meet the restricted demand for some time to come. Thus the strike broke down after a few days' duration, when a compromise was reached, by which the miners accepted an immediate wage cut of 25 per cent., another 5 per cent. to come off in a month's time. The dispute in the Ostrava-Karvin district was considered as a test case for the whole Republic, with the result that the terms agreed upon have become general throughout the land. The consequence will undoubtedly be a drop in the price of fuel, but this will hardly be sufficient unless the Government be prepared to make sacrifices in regard to the coal tax and railway freights. As Dr Rasin admitted, it is an anomaly that Czechoslovak coal should be dearer than British, or Saar Valley coal, delivered in Czechoslovakia. But, from the fiscal point of view, he is reluctant to sacrifice such an important item in the national revenue, and prefers to cast his eye in another direction, viz., the decontrol of coal. The free import of coal for a certain period would, in his opinion, bring down the price of the local commodity without the Exchequer being made any the poorer, and, when this is accomplished, the frontiers might once more be closed against the import of fuel. However this may be, considerable damage to the coal industry has already been done by the reduction of coal exports to Germany, which is directly due to the higher price of the Czechoslovak commodity. The coal exports to Austria have also diminished, and, at the time of writing, negotiations are proceeding at Prague with a view to recapturing this market. To sum up the position, it may be stated that the excessive price of coal is due to three factors: exorbitant profits of the owners, high wages of the miners, and the levy of the coal tax. As these seriously affect the cost of production in almost every industry and render the export of the large surplus output impossible, the only remedy seems to lie in a cut all round.

Of the Budget estimates for 1923, which are to come up in Parliament almost immediately after the opening of the autumn session on the 24th inst., Dr Rasin spoke to the representatives of the Press in an optimistic vein. Without going into figures, he declared that the national revenue would almost certainly exceed the expenditure. The latter, he said, was based upon the prices ruling at present, but, as there could be no doubt that during the coming year prices, wages, &c., would show a drop, very considerable savings would be made on the estimates. He also pointed out his intention of placing the State undertakings, which at present are jumbled up with other national expenditure, on a separate footing, in order to see clearly which of them were carried on at a profit and which entailed a loss. Any unprofitable State enterprises should either be given up or else sublet to private companies under Government supervision.

Letters to the Editor.

FOREIGN INTERESTS IN TURKEY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The satisfaction at the re-establishment of full Turkish sovereignty over Constantinople and Thrace, which has been greeted as a triumph of French diplomacy by Mr Franklin-Bouillon and a considerable section of the French Press, does not seem to be shared by the French commercial community at Constantinople, if one is to judge by a memorandum recently forwarded by the French Chamber of Commerce in Constantinople to the French Government. The memorandum is signed by the President, and is dated October 5, 1922. The views expressed therein and the misgivings as to the future so entirely accord with those of the majority of British business men in Turkey that it is worth reproducing it *in extenso*. It might appropriately be entitled "Le revers de la médaille."

The text is as follows:—

"At a time when negotiations with the Turkish Government are about to begin, it is the duty of our Chamber of Commerce to enlighten the Ministry and all those in France who take an interest in the Near East concerning the facts of a situation to which events give a peculiar significance."

"As a result of numerous errors, the responsibility for which largely devolves on our great Allies, we find ourselves faced with unfavourable conditions."

"In 1918, after our victory, the Turks were timorous and meek. At that moment it was possible to organise the country on a practical basis favourable to the Allies. Today those same Turks, who have come to consider themselves the greatest military nation in the world, because they happen to have defeated the Greek army, have become extraordinarily arrogant and want to dictate terms. Outwardly they make a great show of friendship for France, but we know what Turkish professions of friendship are worth; Turkish friendship towards non-Moslems cannot be sincere. Anyhow, it will shortly be possible to put it to the test."

"France and Italy have so openly declared their determination never to fight the Turk that they have lost all prestige with that warlike people, who despise these flatteries."

"What we have to fear is the following:—Firstly, as regards the security of our persons and our property, the suppression of the capitulations."

"Given the character of the Turks, their present temper, and the state of their laws, one can boldly state that it is impossible for honest Europeans to live in Turkey without these indispensable guarantees. Consequently, all that is best in our colony, that element which is the defender of our influence and our interests and the maintainer of our commerce, will be forced to leave the country, which will be an irreparable loss to France."

"It is therefore absolutely necessary—and on this point there are no two opinions even amongst the most ardent Turcophiles—to have guarantees. The most essential of these is the maintenance of the Consular jurisdiction and the Mixed Tribunals, thus securing the inviolability of our persons and our homes."

"In order to give some satisfaction to the Turk's inordinate pride, one might say that the capitulations are abolished while establishing the above-mentioned guarantees in some other form. One might justify this by stating what is undeniable, viz., that the Ottoman laws are defective and need to be recast. On the other hand, the Turkish magistracy is beneath contempt. Not only are the judges ignorant of the law and lacking in judicial experience, but they are scandalously corrupt. In 1914, when they suppressed the capitulations, the Turks themselves recognised the inferiority of their judicial system, and promised reforms which were never realised. Consequently, the judicial guarantees which we demand must go on existing until the reforms become an accomplished fact. The minimum period which one can fix for the disappearance of the capitulations, if Ottoman justice does contrive to give the necessary guarantees, is 15 years; by then those Frenchmen who are wise will have had time to prepare for their departure, if they think fit."

"If the remaining capitulations disappear, Frenchmen,

and other foreigners as well, will be subject to the same taxation as Ottoman subjects. At first sight this seems fair, but those who know the country understand all the dangers underlying such a step. One will have to stipulate that such taxes shall be the same for foreigners and Ottomans."

"What is still more serious is that Turkey is probably going to recover her economic freedom. She will thus be free to modify her Customs tariffs, which until now was subject to the approval of the Powers, and as the leaders labour under the childish illusion that they can create a powerful industry in this impoverished and depopulated country—in the Konia Vilayet, the most prosperous of all, the population, according to the Turks' own admission, is three to four inhabitants per square kilometer—they are sure considerably to raise the tariff, which will become protective. We have already published the tariff in force in Anatolia, which, by its prohibitions and exaggerations, excludes from the Anatolian markets practically all French goods."

"But that is not all. Still with the object of favouring home industries, the Turks intend to put a heavy export duty on raw materials produced in the country, of which France is, after England, the principal purchaser, in order to keep them in the country."

"Further, there is a great risk of Turkey going 'dry.' Prohibition is already in force in Anatolia, and is enforced with the greatest severity; a Frenchman at Zoungouldak spent several months in prison for having taken to his brother a few bottles of wine. After the occupation of Smyrna and Broussa, the Nationalists at once closed the wine shops, seized the wines and spirits, and threatened to search houses. It is practically certain that prohibition will be imposed in Constantinople and the rest of Turkey, which will mean to France the loss of a big market—more than fifteen millions a year."

"Our French companies, representing very big interests, who have been obliged to assume Ottoman nationality, will lead a very difficult existence. The boards of directors, at present in Paris, will have to be transferred to Constantinople, and to include Ottoman members; the management will be closely and unsympathetically controlled, the Government will insist on the accounts and correspondence being in Turkish, and on all the staff being composed of Turks, which means that many of our compatriots will be left without jobs. We have also reason to fear for our shipping, our schools, our hospitals, and our societies. The French, British, and Italian Post Offices will have to disappear, which will deprive us of the secrecy and security of our correspondence."

"In view of this gloomy situation, we must try and rescue a few remnants of our ancient privileges, if it is impossible to preserve them all, which would be preferable."

"We have indicated the indispensable minimum of the personal guarantees required."

"As regards the tariff, we must try to have the duties on our principal articles reduced, to obtain the most favoured nation treatment, for, though to-day we may be their best friends, to-morrow that friendship may go to the Russians, the Germans, and even to our worse adversaries of to-day."

"As regards prohibition, we must try to get round it. We must appear to accept in order to satisfy Turkish pride; but must obtain the admission of imports by means of additional conditions. At the worst, we can throw overboard the "aperitifs," brandies and liqueurs, and save the wines, all the wines. In case of stocks being returned, we must be given a refund on the Customs collected."

"Finally, we must do all we can to defend our shipping, our hospitals, our various companies, and to get our trade-marks respected."

"Never accept verbal assurances, however friendly and effusive. Always have everything in black and white."

"And even if we obtain all this, the economic future of France in Turkey will still be very dark."

Such is the pleasing prospect which the Kemalist triumph, so sedulously fostered by France, opens out for Europeans and European trade in the new Turkey. Yours faithfully,

A. A. PALLIS.

Constantinople, October 21st, 1922.

CURRENCY AND BUSINESS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your issue of October 28th contains a letter by Mr Maurice H. Dobb expressing certain opinions on economical questions which are presented as in some way concerning me. I am not interested in Mr Dobb's opinions, and I shall not engage in controversies in the *Economist* unless the accuracy of the figures and facts which it is my duty to report to you is challenged. They are not challenged by Mr Dobb's expression of amazement at them.

Amazement is the quality and charm of innocence. As one of many men who have suffered from the world's oversophistication, I shall do nothing to dispel it.—I am, yours truly,

YOUR BERLIN CORRESPONDENT.

INFLATION IN GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Since writing you last Saturday I find, on looking over my notes on economics, that the German Bank Act 1875 allows an amount of issue against securities, and should the note issue exceed the limit assigned, a tax of 5 per cent. on the excess issue is charged. In this case the permanent burden on the nation for discount charges on Treasury bills will be reduced to the extent of the tax the Reichsbank will have to pay the Government for the privilege of printing the bank-notes.—Yours faithfully,

JAS. S. MCCONCHY.

Books and Publications.

MERCHANT SHIPPING: THE OFFICER AND THE OFFICE.

BETWEEN the officers who run the vessels belonging to a shipping company and the office staffs which administer the affairs of the same company there is, as Mr Clement Jones observes, a gulf fixed which is unnecessarily and undesirably wide. "The clerk working overtime, perhaps far into the night, in order to get a manifest finished, envies the officer his regular hours, and pictures him, arms akimbo, on the bridge of his ship in a glassy sea. Similarly the officer, peering into the blackness of a foggy night, may perhaps give a passing thought to those lucky shipping clerks safe abed." The groups have no points of contact. No one except the master visits the office, and the office staffs, except at the docks, do not venture upon the decks of the ships. And yet the interests of both groups are the same: the prosperity of the company which it is their lot in life to serve.

What Mr Clement Jones, of the Booth Line, has set himself to do is to reveal the officers to the office and the office to the officers, and both to that vague personage, the "general reader," and has discharged his self-appointed task most excellently. He has technical knowledge of both sides of the shipping business, for, though brought up in the office, he has made it his job to sail the seas and to enter into and sympathise with the difficulties and responsibilities of masters, officers, and seamen. It is a book which in essence is very human, and no book about the sea service, whether of the Navy or the Mercantile Marine, is of any account unless it be human. Ships are the material expression of the stout hearts and souls of men, and so Mr Jones always regards them. No one can make a real success of owning or running ships unless he so regards them.

We have not come across many books in the vast literature of the sea which are so entirely satisfying as this one. It is not long, no longer than an average modern novel, yet Mr Jones packs into it not only a brief account of the rise of British shipping and the slow turn over from sail to steam—which after a hundred years is not yet complete—but gives us a clear view of the various types of ships, their construction, the manner in which they are

* "British Merchant Shipping." By Clement Jones, C.B. (London) Edward Arnold and Co. 10s 6d net.

run, the duties of officers and seamen, the administration of shipping offices on shore, the handling of cargo, accounts, statistics, and insurance. Though everything is there, and presented adequately, there is no overcrowding. Regarded as a piece of "journalism," the condensation of a vast subject into a small readable space, Mr Clement Jones's book commands our professional respect.

There are few men, however long they may have served the sea afloat or ashore, who will not learn much from this book. For Mr Jones reveals how much the men afloat depend upon the men ashore, and how much the men ashore risk their fortunes upon the men afloat. And watching over both appears again and again in the author's pages that sometimes abused yet deeply respected Fairy Godmother, the Mercantile Marine Department of the Board of Trade. This, the most human of Government Departments, receives at the hands of Mr Clement Jones no less than justice. He smiles kindly at its form and ceremonies, yet is evidently on the best of terms with it. We have read countless books upon British merchant shipping, though never a one more sympathetic or illuminating than this.

ACCOUNT.
November 16.

South Africans have developed a fresh accession of strength. Assisted by the Cape, prices of Deep Levels went ahead briskly. Shares in the old-producers took up the running, and the market is decidedly stronger, though there is not much public at the back of the movement. De Beers recovered from the unfavourable effect produced at first by the announcement of a new issue of shares. Chartered fell back upon the reported announcement that the Referendum had gone in favour of the

Pease and Partners, Limited.—Authorised share capital £3,000,000, of which £2,186,399 has been issued and paid up. The loan capital outstanding consists of £400,000 4 per cent. perpetual debenture stock, and £100,045 5 per cent. second debenture stock, which is to be repaid out of the proceeds of the undermentioned issue. This is an offer for sale of £1,000,000 5 per cent. debenture stock at 93 per cent. It is to be redeemed on or before April 1, 1954, by an annual cumulative sinking fund, which may operate either by purchase in the market or drawings at par. This issue will be secured by a trust deed constituting a floating charge upon assets, subject to an existing floating charge securing the £400,000 4 per cent. perpetual debenture stock. The company reserves the right to borrow from its bankers at any time up to £250,000, and to give prior charges for such loans, and there is an elastic scheme for creating fresh borrowings, which can rank *pari passu* with this issue according to the amount of the paid-up

The Welwyn, Knabworth and District Gas Company, Limited.—The authorised share capital of the company is £24,000, and there is an authorised loan capital of £12,000. Up to the present £6,000 of "original shares," 10 per cent maximum dividend, and £6,000 "additional shares," 7 per cent maximum dividend, together with £1,500 5 per cent first mortgage debentures, have been issued. This is an offer for sale by tender of 400 £10 new ordinary shares ranking for a maximum dividend of 10 per cent, equally with existing original

COMPANY MEETINGS, &c.

ERINOID, LIMITED.

RESULTS OF THE YEAR "VERY SATISFACTORY."

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The seventh annual general meeting of the shareholders of Erinoid, Limited, was held, on Tuesday, the 31st ultimo, at the Institute of Chartered Accountants, Moorgate place, London, E.C., Mr Andrew Binnie (chairman of the company) presiding.

The secretary (Mr A. E. Parker) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I have pleasure in submitting for your approval our seventh annual accounts. Having regard to business conditions during the year, the result is very satisfactory. In October and November last year the sales were quite good, but in the succeeding five months trade became stagnant and sales dropped away by about one-third. In May business revived again, sales came up to the old level, and we have been doing very well indeed ever since. If sales be maintained at the present rate, we ought to have a very good account to submit to you next year.

FINANCIAL VITALITY OF THE COMPANY.

One striking feature is the financial vitality of the company. At August 31, 1921, the bank overdraft was £36,000 and the creditors £12,000—in all, £48,000. At August 31, 1922, the bank overdraft was only £12,400 and the creditors £3,596—in all, £16,000—showing a reduction of £32,000. The overdraft to-day is only about £6,000, and that is after placing £3,000 abroad to pay for raw material when delivered, and the whole liability is very much more than covered by the book debts. In this connection you will bear in mind that we have invested £11,000 in cash in the Omnith Company. Were it not for this investment, about which I shall have something to say, the bank overdraft would by this time have been extinguished. I can give you a still more striking illustration of the vitality of the business. I had occasion to look into the figures early in August and to compare them with the position in May, 1921. At that date—May, 1921—the total liabilities, excluding the bank overdraft of £15,000, were £43,000. In August, 1922, they were only £2,000, and the bank overdraft was round about £13,000. These figures speak for themselves, and disclose the remarkable recovery we have made since the disastrous year we had in 1921.

TRADING PROFIT.

The figure to which I would draw your special attention is the trading profit, £27,934, in a year in which, as I have already explained, five months were months of abnormal depression. These trading profits in a lean year are an index to the earning capacity of the business under normal conditions. The profits are depleted this year by two items of an exceptional and, I hope, non-recurring nature. One is the reserve for bad debts, which makes its appearance in our accounts for the first time. The slump of 1921 has brought down many businesses. Owing to excessive taxation, they had no cash reserves with which to face the sudden fall in values and stagnation in trade, and they simply collapsed. As regards the paper stocks, a shareholder has asked me why we use so much stationery. I had better, therefore, explain that in our process we, until recently, used a very large quantity of specially prepared paper. We always had to carry an ample stock lest our factory be brought to a standstill. As everyone knows, paper has fallen very heavily in value this year. We have, therefore, written down the stock in accordance with our usual conservative practice. Our resourceful manager has recently found a more economical substitute for this special paper. The saving in less than a year will outweigh the loss on the stock, and it will be an annual saving in future. These two items, the bad debts and the loss on paper, may be looked upon as the last phase as far as this company is concerned of the evil effects of the great slump.

The professional charges include surveyors' and audit fees and law costs, and should be less in future. We have also made the usual reserve in respect of plant and machinery, £6,783. The total reserve now amounts to £24,000, and, in the opinion of the board, is more than ample. Raw material has risen in price this year, and our stocks, so drastically written down last year, are, therefore, very much on the right side, and we will reap the benefit in due course.

Thanks to the ingenuity of a shareholder, we have found a new opening for the use of Erinoid. This opening has led to further developments, which we anticipate will lead to new business on a considerable scale.

OMNITH COMPANY.

As regards the investment in the Omnith Company, the French tariff has, as you know, given us considerable concern for some years past. We had contemplated manufacturing in France, but

were approached from more than one quarter to co-operate with existing French companies which were making, as we think, an inferior article. The proposition made by the Omnith Company was, however, the only one which we felt we ought seriously to entertain. After an exhaustive investigation by our technical and financial experts we decided to join hands with this company.

The facts are outlined in the report, and I would only add that the shareholding is so arranged that both British and French interests are duly considered. The managing director of the company was formerly with us at Stroud, and therefore we are in very safe hands. We shall get the benefit of our French trade, coupled with the connection which the Omnith Company itself has. We enjoy all the amenities which attach to a French company, and are associated with men of good standing in France. We look forward to the successful issue of the business there, and have achieved our purpose by a modest outlay in cash, besides utilising the plant bought for use at Yate and until now lying idle on our hands.

It is too soon to say what the effect of the new American tariff will be, but it seems to me that what we lose owing to tariffs we ought to gain in the home trade, for, as we are always told, if the foreigner restricts imports he cannot export. Consequently, the manufacturers at home who buy from us ought to find their trade stimulated.

DIVIDEND OUTLOOK.

If, as a shareholder, I might put a question to myself, it would be this: "All this information is quite interesting, but what about a dividend?" The answer is: "We have earned a dividend this year in spite of adverse conditions, and we are earning another one now. When I visited the factory last week every machine was at work, and there is no apparent reason why this state of affairs should not continue. As soon as our cash resources permit it, we shall not delay in making a distribution."

The position as I see it now is this. In order to buy raw material at the most opportune time and on the best terms it is necessary to have a floating cash fund in our hands. When we pay for the raw material this fund will decrease, but when we realise our sales it will be replenished. Our bankers have always given us accommodation and enabled us to pay cash, but that is not the same thing as having a liquid fund at our backs. This fund could be created, as was done before the slump, out of profits, but in the meantime the shareholders would be deprived of what is due to them by way of return on their capital. We are, therefore, negotiating for a loan which will provide us with the floating cash fund which we think necessary. We can then apply our profits in paying dividends, in reduction of the loan, and in building up reserves to maintain the floating fund, and except for additional plant from time to time we do not anticipate any further capital outlay of moment, so that there is nothing in that direction to reduce the fund.

TRIBUTE TO STAFF.

I should like to take this opportunity of expressing our satisfaction at the loyal and able manner in which the staff at Stroud have worked throughout the year, and to testify to the spirit of goodwill which exists between employer and employees in this company.

Coming up from Stroud last week, and with this meeting in my mind, I was somewhat consoled to read of a strong attack by one of the Bishops on companies which pay big dividends. His Lordship did not refer to companies like ours, which are passing their dividend, but continue to pay good wages. The position of directors is really becoming rather awkward. If we do not pay any dividends our shareholders do not like it. If we do pay dividends we may be excommunicated by the Bishop. This year the Bishop has no case against us, but I hope that at an early date we shall give him a mild shock by declaring a dividend.

I have now pleasure in moving: "That the directors' report and accounts for the year ended August 31, 1922, as submitted, be received, adopted, and approved."

Mr W. G. Waldron seconded the resolution.

After two or three questions had been asked and answered to the satisfaction of the shareholders, the resolution was carried unanimously.

Mr W. G. Waldron, the retiring director, was re-elected; and Messrs Woodhouse and Wilkinson were reappointed auditors.

A hearty vote of thanks was accorded to the chairman, directors, managers and the staff, and the proceedings terminated.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.

GROSS EARNINGS HIGHEST ON RECORD.

HEAVY EXPENSES, BUT BRIGHTER OUTLOOK.

The sixty-fourth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held, on the 2nd instant, at Gresham House, Old Broad Street, London, Mr Robert Miller (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross earnings for the year were Rs. 677 lakhs, which gave an average of Rs. 482 per mile per week, and Rs. 5.63 per train mile. These figures were the highest on record for the undertaking. Passenger traffic continued to show an increase in numbers, though the total receipts fell slightly short of the figures of the previous year, being Rs. 188.7 lakhs, as compared with Rs. 191.5 lakhs. This was due to a decline in the average distance travelled. During the year now in progress, 1922-23, the company had obtained sanction to raise passenger fares, and, as a consequence, fares had been enhanced; but in a case of this kind enhancement had to be made judiciously, so as to avoid the risk of repressing traffic. Goods traffic showed a fall-off in tonnage and an increase in freight, the figures for public traffic being in volume 7,611,308 tons, and in freight Rs. 3,92,90,312, as compared with 7,717,815 tons and Rs. 3,76,77,094. Although the decline in the tonnage of manganese was not made good by the increase in the tonnage of general merchandise and foodstuffs, the additional freight produced by the latter more than covered the freight lost by the former.

WORKING EXPENSES.

The working expenses during the year were Rs. 4,84,29,146, absorbing 71.53 per cent. of gross earnings, as compared with Rs. 4,24,08,509, absorbing 66 per cent. of gross earnings. The amount was admittedly very high, and would no doubt be regarded as serious if it were indicative of a permanent alteration in the normal rate of working expenses. That, however, was not the case. Though there was some increase in operating expenses, which had come to stay, it was not large; the bulk of the increase occurred under maintenance and renewals, mainly rolling stock, and was due to an unusually large number of engines having been repaired, to more coaches than usual having been repaired, to heavy repairs done to a large number of goods vehicles, and to an adjustment against working expenses of the cost of 135 American wagons put on the line, being part of a consignment obtained by Government, and later apportioned to various railways. The working expenses of the current year were estimated to show a decrease in the percentage of gross earnings absorbed in working from 71.53 to 60.14, which was less than the percentage (65.98) of 1920-21, and not much in advance of the percentage of 1919-20, namely, 58.57. He would not conceal from the stockholders, however, that he was anxious about the outlay to be incurred on the item of repairs of wagons. His anxiety arose out of the experience obtained of the effect on the wagons stocks of railways of the continuance of the system of the general pooling of broad-gauge wagons. Pooling might, theoretically, be an excellent plan, but it could be successful and economical to the railway systems of India as a whole only on fixed conditions of fact, which in reality did not exist. If the commodities forming the traffic of Indian railways were alike in bulk and rating value all over, and the types and designs of wagons alike or similar, their mutual advantage might ensue. The directors of this company were not in favour of the general pooling of wagons, and had strenuously opposed its continuance from year to year. Hitherto, however, they had not received support from other railways; but there were indications that other administrations were becoming more keenly alive to the disadvantages to them of the system. He hoped that, as a result of the conference of railway administrations, which had recently been held, some more or less radical change would be made which would result in removing from this company the heavy burden of repairing foreign wagons not originally intended for coal or ore.

NET EARNINGS.

The direct effect of this heavy outlay on working expenses was shown in the net earnings, which fell to Rs. 1,92,71,087, as compared with Rs. 2,18,57,718 in the previous year, a difference of Rs. 25.87 lakhs. This shortage by itself was nothing much to worry about, but, unfortunately, the abnormality of the year was not confined to working expenses, and reappeared in the charge on net earnings for interest on capital, where, under the influence of the rapid decline that occurred in the exchange value of the rupee, the charge for sterling interest paid during the year in rupees at an (amounting, roughly, to £500,000) was converted into rupees at an average rate of a little over 16d to the rupee, as compared with an average rate of about 25d in the previous year. This decline in exchange had the effect of increasing the rupee equivalent of the

sterling paid by Rs. 25 lakhs. During the present year the downward tendency of exchange had been arrested, and the value of the rupee had varied between 15½d and 15½d, so that the element which disturbed the financial net results of the undertaking during 1921-1922 was unlikely to operate in creating any appreciable rise in the rupee equivalent of sterling interest charges since made.

These explanations would enable the stockholders to appreciate that, although the net earnings fell short by approximately Rs. 8 lakhs of the interest charges, and consequently produced no surplus profits for division, there was nothing in the position to cause anxiety. The Freight Tax Act of 1917, which was repealed as from April 1 last, enabled the Government to put a tax on all goods consigned by railway, thereby preventing railways from bringing in a readjustment of freight rates. The tax realised by the Government in this way from the traffic of this company amounted last year to about Rs. 50 lakhs, and it would be patent to the stockholders that had the proceeds of the tax been included in the gross earnings of the undertaking, as they should rightly have been, there would have been no deficiency of gross earnings, but substantial profits to divide, and the credit of the railway would have been proportionately enhanced.

PROSPECTS FOR CURRENT YEAR.

With regard to the prospects of the current year, the gross earnings were expected to be something like Rs. 100 lakhs ahead of the corresponding figures for 1921-22, while the working expenses were estimated at some Rs. 20 lakhs less than those of last year. The periodic returns from India indicated that expectations as to gross earnings would be fully realised, the approximate figures for the half-year ended September 30th last being about Rs. 44 lakhs in advance of the figures of the corresponding half of the previous year. At the same time the expenses were likely to be a little less than the estimated figures. It was on the strength of these facts that the directors had felt themselves fully justified in recommending the payment of a dividend from reserves. They realised that 1921-22 was what might be called a freak year, and that there was every likelihood that its successors would, like its predecessors for past years had done, pay dividends from surplus profits year by year as earned.

The development of industries in India had not increased to the extent that might have been expected. One cause of this retardation arose out of the fact that various industries which were started some two years ago failed to come up to expectation, with the result that capital for industrial enterprises could not at the present time be raised in India. Moreover, this reluctance of capital to invest in industrial enterprise had been aggravated by the large loans raised by Government on very favourable terms to the industry.

NEW COAL FIELDS.

With reference to the development of the company's main sources of traffic, namely, coal, stockholders would be interested to hear that progress had been made in the opening out of the new Karanpura and Talchir coalfields—two great fields widely apart and of great value to India. The development of the Karanpura field had progressed rapidly, and the Mohuda branch line of this company was now in course of extension to this field. It had now been established that the Talchir coal area contained a large tonnage of excellent coal sufficient to justify the immediate construction of a branch line from a point near Cuttack on the undertaking to open the field out. The coal traffic of the undertaking would, therefore, shortly be largely increased. The development of the manganese industry was steadily advancing, and a considerable quantity of the ore was now being shipped to Calcutta from the Central Provinces.

STEEL INDUSTRY.

When the expected revival in the steel and iron trade took place, the company would benefit by the increased tonnage of ore which it would be called upon to carry. The necessity for the manufacture of a large tonnage of steel in India, if Indian industries were to be self-supporting, were so apparent that the prospects should be sufficiently attractive to investors and other countries and to public-spirited Indians of means to induce them to subscribe liberally towards raising the required funds. Complete plans and designs had been carefully thought out by a combination of one of the largest firms in India controlling the necessary raw materials, and one of the largest steel companies in England, Messrs Cammell, Laird, and Co., for the establishment of large up-to-date steel manufacturing shops. With regard to the traffic in agricultural products, this year the monsoon had been very favourable, prices were falling, and he understood the restriction on exports had been removed. They could now look forward to considerable increase from this traffic. After a careful review of the present position, he adhered to the opinion he had always held, that their undertaking would steadily maintain its position and steadily increase in prosperity.

The report and accounts were unanimously adopted.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.**BRIGHTER PROSPECTS FOR CURRENT YEAR.**

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held on the 31st ultimo, at Winchester House, Old Broad street, London, the Right Hon. The Viscount St Davids (the chairman) presiding.

The secretary (Mr J. T. Dillon), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, you know that your railway is a railway guaranteed by the Buenos Ayres and Pacific Railway Company, but that by the terms of the guarantee the amount which you receive annually depends upon the fortunes of that company.

Now, I want to remind you exactly what your rights about dividends are. Your preference stock ranks with the Pacific 5 per cent. first preference stock, which is a cumulative stock, and so your first preference dividend of 5 per cent. is paid year in year out, because the Pacific pays its own fixed cumulative preference dividend. Your ordinary stock ranks with the Pacific second preference stock, which is a non-cumulative stock, and the dividend on which is not paid if it is not earned. Last year, for instance, when the Pacific Company had a very bad year, you received nothing at all. I should like to remind you, however, that your stocks have some contingent advantages. Your preference stock is a 5 per cent. stock, but if the Pacific pays anything over 5 per cent. up to 6 per cent. on its ordinary, your preference stock ranks equally with it, so that if the Pacific were to pay 6 per cent. on its ordinary stock your preference stock would become a 6 per cent. stock instead of a 5 per cent. stock. Again, your ordinary stock with 5 per cent. ranks with anything the Pacific pays above 5 per cent., so that if the Pacific pays 5½ or 6 per cent. on its ordinary stock your ordinary would receive a similar amount. You have certain further contingent rights, which I need not go into at the present moment.

You may be struck by the fluctuations of the Pacific Company, which is your guarantor—fluctuations from which you have sometimes been unhappy sufferers—and may ask the reason for it. The reason is that the Pacific has a very small ordinary capital; it has a large amount of debentures and guaranteed stock, including your own stock, and a very small ordinary capital. The position works out in this way: Supposing there is some unfortunate feature in regard to Argentine railways, and all the big

railways in any particular year have a loss in their net revenue as compared with the year before of £600,000. On the other hand, the big railways that would strike 2 per cent. off their dividend; in the case of the Pacific it strikes off 6 per cent.; on the other hand, supposing there is a wave of good times for the Argentine railways, and something happens which produces £600,000 extra for all the big railways, that would mean 2 per cent. extra dividend for the other companies, and 6 per cent. extra dividend for the Pacific. That is the way the thing works, and I thought that as you are directly concerned you would be interested if I put it before you. (Hear, hear.)

The Hon. Charles N. Lawrence seconded the resolution, which was carried unanimously.

COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.**RESULTS OF A "PARTICULARLY TRYING YEAR."**

The eighteenth annual general meeting of the Commercial Bank of Spanish America, Limited, was held, on the 2nd instant, at the offices, 9 Bishopsgate, London, Mr W. E. Wells, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross profit for the past year was £238,267, and, after adding the balance brought forward from the last account and deducting all charges, there remained a balance of £60,301. Having regard to the unsatisfactory state of trade and the adverse conditions which had prevailed during the period covered by the accounts, the directors, after carefully reviewing the position, considered it advisable to create a "contingency account," as a provision for bad and doubtful debts, by transferring £77,750 from reserve fund and crediting thereto £60,000 from profit and loss account, leaving a balance of £301 to be carried forward.

ADVERSE TRADE CONDITIONS.

In common with institutions doing a similar business, the bank had suffered through the effect of the continued universal trade depression. When they met a year ago signs were not wanting in most of the countries where the bank operated to inspire the belief that the worst had been seen, and that a steady improvement in the situation might be looked for. In this way the directors had been disappointed. The much-needed restoration to a more normal condition of affairs had been longer delayed than was then anticipated. Many firms in South and Central America of long

standing and undoubted stability before the "boom" period had not only themselves had to face heavy losses in writing down the depreciation in stocks, but, in addition, and through a similar cause, their debtors had in their turn been unable to discharge their indebtedness. While normal conditions would fully justify the bank in obtaining a foothold in those places where they had more recently become established, the results had not been up to expectations. Opened up during a time of activity and to meet the then existing trade demands, the uncertainty which followed the crisis constrained the directors to discourage operations which in more normal times would have been desirable and profitable. In Manta, Ecuador, in view of the continued poor outlook, it had been considered advisable to close down and so avoid further expenditure in a place where the prospects of a recovery in business seemed remote. The violent fluctuations in exchange rates had added to their troubles, and were no less a problem in the lesser-developed countries where the bank operated than they were in the more advanced sister Republics. The depreciation of capital employed abroad had been provided for in the figures presented. Expenses, relatively high as compared with the profits earned, had claimed, and continued to claim, the directors' earnest attention, and economies, without impairing efficiency, were being given effect to. By reason of the enormous additional work entailed in handling merchandise export drafts, due to the difficulty in obtaining payment or acceptance and by frequently having to take over merchandise for disposal in order to give the customers of the bank adequate service, the staffs abroad had to be considerably augmented and the moderate tariff of charges designed for more normal times had not compensated the bank for the extra expense incurred. He emphasised this point, as some shippers had not appreciated the services rendered in this regard. These remarks applied particularly to Barranquilla, where but slow progress in readjustment had been made since the crisis of 1920, and heavy losses had been suffered by exporters from here and the United States.

CONFIDENCE AND CESSATION OF POLITICAL UPHEAVALS.

Having reviewed the financial and economic situation existing during the period under review in the various countries covered by the activities of the bank, the Chairman said he thought the shareholders would agree that they had passed through a particularly trying year. The board of management had been confronted with forces virtually beyond their control. A restoration of confidence and a world less disturbed by political upheavals was what was needed to encourage traders to carry as in former years the surplus production of raw materials. Agricultural Latin-America provided, besides foodstuffs, numerous raw materials which highly developed industrial countries, such as England, employed to advantage in their factories, and any improvement in the demand would increase these producing countries' purchasing power and enable them in their turn to buy more freely the manufactured articles of this country. It was regrettable that, after the many vicissitudes through which it had passed in bygone years and the hopes expressed three years ago that it had at least emerged from adversity into a period of progressive prosperity, this institution should have suffered a setback, and this in spite of the utmost care exercised in the selection of, and, indeed, an abstention from, much of their usual business at a time when prices of commodities appeared to be on a dangerously high level.

Mr E. Norman seconded the resolution, which was carried unanimously.

CITY LIFE ASSURANCE COMPANY, LIMITED.**CHAIRMAN'S CONFIDENCE IN COMPANY'S FUTURE.****ACTUARIAL POSITION IMPROVED.**

The twenty-fourth ordinary general meeting of the City Life Assurance Company, Limited, was held, on the 27th ultimo, at the Cannon-street Hotel, London.

Mr Arthur E. Turner (deputy chairman) presided.

The secretary (Mr Ernest H. Neville), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, explained that Sir Sydney Lea had resigned and the Earl of Hardwicke been appointed chairman of the company, but did not wish to undertake the chairmanship until more familiar with life insurance business. There had been no disagreements with the board on matters of policy. From things said in certain quarters some of them might think they were attending a funeral ceremony, but there was no corpse. On the contrary, the patient was making a rapid recovery, and would live to enjoy a hale and hearty old age. The revenue accounts were the most satisfactory for several years. The life assurance funds had been increased by £109,973, and management charges and commissions had diminished by £72,283. The premium income was £371,739, a falling off of £70,000, owing to the closing down of business which

was considered undesirable. It was, however, an increase of £19,000 on classes of business considered satisfactory. The increase in sound premium income for the first six months of 1922 had been £213,645, as compared with £182,869 in the previous year. On the contingent liabilities mentioned in the balance-sheet he did not think there would be any claim on the company. With regard to the assets, £656,000 had been advanced to policyholders, of which £137,000 was advanced last year. Considering the housing, unemployment, and general trade conditions, he regarded this as a great public service. The investments, £140,000, were worth £122,000 on December 31, 1921, and by September had appreciated to £133,000. There had since been a further appreciation.

FEATURES CAUSING ANXIETY.

He was anxious to be perfectly frank as to two features which had caused the board some anxiety. The first was the "purchase of business" account, which stood at £297,047. It was clear that this was worth a substantially greater figure. The only remaining feature which the board felt to be open to legitimate criticism was the investment in the "United General," but he wished to take the shareholders into their confidence as fully as possible. The loan amounted to £63,459, secured by a first debenture, and the board were satisfied that this was a good security. With regard to the 320,000 ten shilling-paid shares, which stood at £160,000, records showed that the previous board contemplated the addition of marine and general insurance, and the United General offering the facilities required, they acquired a controlling interest in it, but unexpected difficulties arose. The board had insisted on an independent inquiry into the business of the United General, and the report received satisfied them that that company had an excellent prospect of establishing a sound general insurance business.

With regard to the unfortunate difficulty with the Board of Trade, exceptional causes made the accounts late, and the board had wished to produce simultaneously with the accounts the actuarial valuation. They were still awaiting the Actuary's report.

DEFICIENCY REDUCED.

The Chairman had stated at the last annual meeting that the deficiency might be reduced within twelve months. This hope was based on certain negotiations which had now been successfully concluded, and the matter was being submitted to the Actuary. The outcome would be that the company would be relieved of a very substantial part of their actuarial deficiency. The directors would have preferred to announce the details of this arrangement at this general meeting; an announcement would, however, be made at the earliest moment, probably within a fortnight. It could, moreover, be reasonably deduced from the revenue accounts (apart from these special negotiations) that the actuarial position had been improved during 1921 by over £100,000.

They should, in fairness, remember that the present board were in no way responsible for the actuarial deficiency at the end of 1918, nor for any increase up to the end of 1920, with one important exception, that he had referred to at length; this was also true of all recent criticisms levelled at the company's position. On the other hand, the new board had succeeded in effecting substantial improvements in many directions. A change of board

did not, however, give immunity from criticisms made in the interests of the public; he therefore thought it desirable to state explicitly that the board had not the slightest doubt that the company could, without difficulty, meet the obligations under the new policies they were issuing, and that otherwise they would not be parties to the continuance of the business.

Lieutenant-Colonel H. F. Lea, C.M.G., D.S.O., seconded the motion, and it was carried after a discussion, in the course of which the appointment of a committee of shareholders was moved, but ruled out of order by the chairman.

The retiring directors, the Rt. Hon. the Earl of Harwicke, Lieutenant-Colonel H. F. Lea, C.M.G., D.S.O., and Mr. Stafford C. Talbot, were re-elected.

The auditors (Messrs. Sissons, Bersey, Gain, Vincent, and Co.) were reappointed.

RUBBER SECURITIES, LIMITED.

CHAIRMAN'S SUGGESTION FOR CENTRAL SELLING AGENCY.

The thirteenth ordinary general meeting of Rubber Securities, Limited, was held, on the 2nd instant, at the registered offices of the company, 7 Martin's Lane, Cannon Street, London, Mr. W. Arthur Addinsell (chairman of the company) presiding.

Mr. C. H. Smallwood, on behalf of the secretaries (Messrs. Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I move "That the directors' report and accounts for the year ended June 30, 1922, as submitted to this meeting, be, and they are hereby, approved and adopted."

After nearly two years of extraordinary difficulty and anxiety to everyone connected with the rubber industry, it should be a genuine pleasure to meet to-day under the brighter conditions now existing owing to the adoption by the Malayan and Ceylon Governments of the scheme of the committee appointed by the late Secretary for the Colonies.

COMPANY'S INVESTMENTS.

The accounts for the year are prepared in the usual clear and concise manner. Turning to the balance-sheet, you will notice that the book cost of the company's investments stands at £91,521. The market value at June 30th was £46,865. There was, therefore, at that date a depreciation of £44,656. Values taken out this morning show a deficit of £32,978.

Now that the position has improved, this deficit should, however, quickly disappear, and I hope at our next meeting to be able to report that the value of our investments has appreciated, and show a considerable margin over book cost.

As you are well aware, the majority of the companies in which our funds are invested have materially reduced their working costs during the last twelve months. More enlightened methods of tapping have been introduced and many economies have been effected.

As an indication of the financial strength of most of these companies, you will be pleased to hear that, notwithstanding the adverse results of the past year, their balance-sheets show substantial amounts to the credit of their profit and loss accounts, and in normal times dividends would have been declared. It is anticipated that several will have declared dividends by this time next year, and in due time we shall be participating in those benefits.

FORWARD CONTRACTS.

I spoke at more than my usual length last year, and once again particularly emphasise my views on the all-round mischief of "forward contracts."

Although there have been a few brilliant—and well advertised—illustrations of the results of companies who have not seen any inconsistency in adopting such a policy, I have not seen any reason to alter my views—and I still consider the procedure unhealthy, and I anticipate that sooner or later the evil will be acknowledged more widely, and eventually the demoralising practice will cease.

I am not without hope that the planting companies will be so enamoured of the benefits secured by acting together over restriction, that they will be tempted to test the consequence a central selling agency will have, and when once it is tried, I am sanguine of its success.

CONTROL OF SELLING PRICE.

In my opinion the Rubber Growers' Association will never be the real force that it should be until it is able to control its members both as regards output and selling prices.

Have you noticed how the decision regarding restriction has been received? The lamentations of the manufacturers are ludicrous, and go to prove that if for a little time one gives a person something for nothing, it is soon claimed as a right.

It is estimated that during the last two years £40,000,000 sterling has been lost by rubber investors owing to the unremunerative price of the commodity.

Is it sound and honest to again run the slightest risk of selling below cost when combination as regards tapping and co-operation in selling should now so easily be achieved?

Mr. Edward F. Slade seconded the motion, which was unanimously adopted.

The retiring directors and the auditors were re-elected, and a vote of thanks to the chairman and directors concluded the proceedings.

THE STOCK CONVERSION AND INVESTMENT TRUST LIMITED.

CAPITAL ADJUSTMENT PROPOSALS APPROVED.

The ordinary general meeting of the Stock Conversion and Investment Trust, Limited, was held, on the 30th ultimo, at Winchester House, London, Mr. Nathaniel Spens (chairman and managing director) presiding.

The Chairman said he was thankful to say that on this occasion he was meeting the shareholders with a very much more satisfactory report than he had been able to submit since the beginning of the war. The shareholders were aware that in the early part of the war the board thought it was wise and prudent largely to reduce the Trust's liabilities, and as a result of that policy the liabilities had been reduced from £800,000 to under £535,000, and the restoration in the value of securities had put them back in all save one group to the position of pre-war valuations. He had always told the shareholders that when the war came to an end the board would take them into their counsels with a view to rearranging the affairs of the Trust, so that there might be a complete restoration of its power to go forward and to do the business which in the past they had conducted with considerable success. It was for that reason that the proposals now being submitted to the shareholders were put before them. Having pointed out that the creditors of the company were in a position of paramount security, he said that the object of the Trust when it was founded in 1889 was to enable people to find investments which would yield a greater income than the 2½ per cent. on Consols, and yet to rely upon that income being forthcoming as regularly as the income on Consols. He had been associated for the greater part of his business life with this and other companies whose business it was to provide such investments, and he could claim that they had been most useful organisations in assisting the people of this country to obtain better returns with equal security. Those who had invested in them were not only receiving good rates of dividend, but were daily seeing their capital improve in value.

The board had received so large a measure of support to their proposals for adjusting the capital that unquestionably it might be said that they were approved. The proposal was an eminently fair one, and he could recommend it in all confidence to the preference stockholders.

The report and accounts were adopted, with only two dissentients, the Chairman pointing out that this carried with it the general approval of his scheme. He added that meetings to approve it formally would be held later.

The payment of a dividend of 6 per cent. on the preference stock for the past year was approved.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED.

SALE OF SOUTH AFRICAN ASSETS.

An extraordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 30th ultimo, at Winchester House, London, when an agreement for the sale of the South African assets of the company to the Anglo-American Corporation of South Africa was unanimously approved. Mr. W. McDermott, chairman of the company, presided.

He said the close co-operation of this company for years with the Anglo-American Corporation, and the general similarity of their holdings, had developed into a form of joint management in South Africa, which was cumbersome and more expensive than seemed necessary. Many indirect benefits might be expected in future from the proposed change in administration. There was no stipulation in the agreement which limited this company in the undertaking of new business in South Africa or elsewhere. By the scheme they would also be freed from present liabilities, and be in possession of assets of such market value as would permit of easy financing for any inviting new outlay. Although the value of the assets to be sold represented much the greater part of their total liquid assets, there would remain a number of small interests of a speculative character and two important investments, the whole standing in their books at a price which promised substantial profits in future. The two important interests were the Itabira Iron Ore Company and the Mexican Mining Corporation. The

former was a valuable concession, awaiting favourable financial occasion, and the latter was earning a good profit on the working of a great surface deposit of low-grade silver ore, and with extremely promising speculative value in the higher grade ore of the old mine, now being unwatered and developed.

As regarded the future position of the company and the prospect of dividends, assuming that the Anglo-American Corporation could be trusted to administer their valuable interests to the best advantage of their shareholders, this company would stand to benefit by the successful operation of the very same mining properties as they now depended on for dividends, but those dividends would reach them through their holding in the Anglo-American Corporation. They considered the prospects of continued good profit from the mines better than for some years past, and by the change in organisation now proposed the shareholders might expect dividends much earlier than it would be advisable to make distributions from income with their present financial commitments, unless they had first increased their capital or issued debentures.

The adoption of the scheme was carried unanimously.

NORTH ANANTAPUR GOLD MINES, LIMITED.

DEVELOPMENT AT CHOTA NAGPUR.

The fifteenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 3rd instant, at 6 Queen's Street place, London, Mr. V. Herget Smith (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the past year was £21,309, as compared with £30,354 in the previous year. The diminution would have been anticipated by the shareholders, as he had informed them at the last meeting that the underground works had not resulted in the discovery of any further payable ore bodies. Subsequent mining work had not revealed any further payable ore bodies, and milling had been stopped in July last. Since then they had had two further gold returns from the clean-up of the mill, namely, one in August, when 1,756 ounces were obtained, and the other in September, when 965 ounces were won. They would not receive any further returns from those sources, but it was anticipated that the tailings work at its full capacity until about January next. The distributions for the 12 months amounted to 5s per share on the preference and 1s per share on the ordinary, both less income-tax.

Information had been received from the superintendent of the discovery of ancient workings on gold-bearing quartz reefs in Southern India, about 35 miles from the Anantapur field. As a result of his inspection, prospecting licences had been taken out by this company over three areas, containing ancient workings of considerable extent, and instructions had been sent to India for preliminary operations to be commenced, with a view to ascertaining the size and character of the lodes below the depths to which the ancients worked. At the Sideshur Block, Chota Nagpur, over which the company held an option, they had installed machinery and commenced exploratory work, to prove the value of the copper lodes on this property. The company had become interested in other mining properties. A company called the Continental and General Exploration Company, Limited, had been formed, with the object of exploring a gold mining property in Sumatra, near which other mines were successfully working. Another proposition was the Anglo-Canadian Explorers, Limited, which had been formed for the purpose of investigating and exploring areas in Canada, with a view to dealing with such of them as might be found worthy of acquisition.

The report was unanimously adopted.

INDIAN TREASURY BILLS.

	March 31, 1922.	Oct. 28, 1922.
Outstanding with public	Rs. 54,01,65,000	Rs. 26,82,30,000
In paper currency reserve	57,89,00,000	50,65,00,000
Total	111,90,65,000	77,47,30,000

India Office, November 1, 1922.

Tenders for Rs.1,00,00,000 three months' bills and for Rs.50,00,000 six months' bills were opened on October 27th. The total amount tendered for three months' bills was Rs.2,92,50,000. Tenders at Rs.99 1a received about 66 per cent. and above in full. The average accepted rate was Rs.99 2a 1p, equivalent to a discount rate of 3.5096 per cent. per annum. The total amount tendered for six months' bills was Rs.82,30,000. Tenders at Rs.97 12a received about 66 per cent. and above in full. The average accepted rate was Rs.97 12a 1p, equivalent to a discount of 4.5926 per cent. per annum. Intermediate bills for six months only will be offered for sale in India during the week at Rs. 97 13a per cent. Tenders were received on Thursday, November 2nd, for Rs.1,00,00,000 three months' bills, and for Rs.50,00,000 six months' bills for issue during the week beginning November 6th.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended November 1, 1922, the stock of coin and bullion shows an increase of £2,788 compared with the previous return.

Other Countries	..	Total declared value of exports registered in the week	1,816,014
Total value of imports of gold	958,987		

Messrs Samuel Montagu and Co. write, on November 2nd, as follows:—

GOLD.

A fair amount of gold was on offer, and was taken for New York, with the exception of a small amount required to meet inquiry from India. Gold valued at \$3,686,000 has been received in New York—\$3,536,000 from London and \$150,000 from France—while \$500,000 in gold has been despatched from New York to Montreal.

SILVER.

The market has lacked animation during the week, and the undertone kept rather poor. In Indian bazaars have sent a few buying orders, and easier rates tempted bears to cover some of their commitments. Scarcity of spot supplies has checked the tendency of prices to fall. Offerings have been somewhat freer from the Continent, and China sales have been frequent, though not large in amount. America has been inclined to let out silver now that China requirements seem to be satisfied for the present. To obtain effective support from China, a lower level of prices must be attained. It is announced from Washington that the total amount of silver purchased under the Pittman Act up to October 23rd last was 137,075,576 ounces,

including a purchase of 300,000 ounces on that date. The State banks of France, Germany, Austria, Hungary, Spain, the Netherlands, and Switzerland, return in their official statements from time to time a certain amount of silver as part of the reserve against their notes. Others, such as Italy, Belgium, Denmark, &c., simply state so much bullion. It is therefore difficult to ascertain the exact quantity of silver, coined and uncoined, thus held—especially as in the case of France, Spain, and Switzerland, the three largest holders, no distinction is drawn between coin of .900 and .835 quality. Including the £7,000,000 of silver coin held by the Bank of England on account of the British Treasury currency note reserve, it is a fair estimate that the banks above mentioned hold the equivalent of about 200,000,000 standard ounces. Notwithstanding that the note circulation of India is almost as large as it has ever been (October 22, 1922, 18,028 as compared with 18,691 lacs on January 15, 1920), the ratio of the bullion reserve to the note circulation is on the increase—63 per cent. on October 22, 1922, as compared with 31 per cent. on July 7, 1918. Of the reserve on the later date, 9,079 lacs of the combined total of 11,511 lacs, consisted of silver. It is not surprising, therefore, to read in the *Times of India*, of October 7, 1922, that it had been suggested that "the Government of India should, therefore, sell off some of the huge holding of silver in the currency department before the inevitable slump comes, and specially in view of the Controller of the Currency's report on the growing popularity of the paper rupee and the waning use of the coined rupee. The suggestion, therefore, needs to be carefully considered, both by the Government and the mercantile community in India, as the percentage of silver in the currency appears to be abnormally large." The silver contents of the holding on October 22nd last are equal to 337,395,270 standard ounces. No fresh Indian currency returns have been received. The stock in Shanghai on the 28th ult. consisted of about 40,900,000 ounces in sycee, 38,000,000 dollars, and 2,080 silver bars, as compared with about 40,700,000 ounces in sycee, 37,500,000 dollars, and 1,820 silver bars on the 21st ult. The Shanghai exchange is quoted at 3s 3½d the tael. Statistics for the month of October are appended:—

NOTICES.

Some interesting changes in the banking world have been announced this week. Mr Angus McPhail, one of the managers of the British Overseas Bank, has resigned his position in order to take up the position of managing director of the London and Eastern Trade Bank, Limited. The other manager, Mr F. H. Hope Simpson, and Mr W. J. Carnegie, have resigned their position with the B.O.B. to act as joint managers to the same institution. Meanwhile, the British Overseas Bank has appointed Mr R. Stephenson as foreign exchange manager, but no general manager has been decided upon as yet. The London and Eastern Trade Bank, Limited, has an authorised capital of £600,000, divided into shares of £10 each, of which £385,100 has been subscribed and paid up. These appointments form part of scheme for increasing the scope of the latter bank's activities.

Sir W. H. N. Goschen, K.B.E., has been appointed chairman, and Mr J. W. Beaumont Pease deputy-chairman, of Lloyds and National Provincial Foreign Bank, Limited.

Barclays Bank, Limited, announce the opening of a new sub-branch at Pitsea, Essex, on Wednesday, November 1st, under the management of Mr I. C. Paddison (also manager of Stanford-le-Hope branch). They also announce that they have opened a new branch at 10 South street, Dorchester, under the management of Mr H. W. Hodgetts. On and after November 1st their office at Welling, Kent, will be converted into a full branch under the management of Mr W. H. Chamberlin, also manager of Bexley Heath branch. On and after Monday next, November 6th, their Manchester foreign branch will be

removed from 45 Fountain street to more commodious premises at 94, Portland street, Manchester. Manager, Mr A. C. Booth.

The agency of the Bank of British West Africa, Limited, at 100 Beaver street, New York, will be transferred to the Standard Bank of South Africa, Limited, at 68 Wall street, New York, as from January 1, 1923. The Standard Bank's agency will give full facilities to the customers of the Bank of British West Africa, Limited, whose agent in New York, Mr Rowland Smith, will join the service of the Standard Bank.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED, announce that the dividend on the second preference shares, postponed from October 1st last, will be paid on November 22nd.

DENT, ALLCOCK.—The directors announce that they are unable to recommend the payment of dividends (or any arrears thereof) on the 7 1/2 per cent. cumulative first preference shares.

ENGLISH MARSHALL WORKS (1919).—It is decided to postpone payment of the preference interim dividend.

NATIONAL BANK OF SOUTH AFRICA.—The directors, in accordance with the policy explained at the general meeting on June 30, have decided not to declare an interim dividend for the half-year ended September 30th. For the corresponding half-year a dividend at the rate of 8 per cent. per annum (8s per share), less tax, was paid.

† Free of tax.

cargoes is restricted, and values moved in buyers' favour, especially for distant positions. La Plata, part cargoes, October-November, sold 35s 3d, January-February 36s to 35s 9d, and December 15th-January 35s 6d, all to Bristol Channel per 480 lbs. English barley somewhat irregular, and large deliveries are now being made, but really choice samples appear in small compass. Prices range from 35s to 63s per 448 lbs f.o.r. Imported quiet, and tendency weak. Californian, 39s to 45s; Australian, 49s to 53s per 448 lbs ex store. American malting 48 lbs 33s, Danubian 33s 6d to 34s 6d both landed, and Persian 28s ex ship, all per 400 lbs. European cargoes were obtainable on easier terms, with a limited inquiry. English oats were in less demand, and larger supplies are now coming forward. Black and grey winters rule at 25s to 28s 6d, with best whites up to 32s 6d per 336 lbs f.o.r. Imported dull and occasionally the turn easier. Plate f.a.q. 29s 9d, ditto clipped 30s 3d, black Irish 27s 3d, No. 2 white clipped American, 36 lbs, 28s 3d, No. 2 Canadian Western 35s 6d, No. 1 Canadian feed 32s 6d, all landed terms per 320 lbs. Oatmeal in good demand owing to cold weather and lighter shipments from the United States, which resulted in a firm price level. London made, all cuts, quoted £19 15s, rolled oats £19 15s, flaked £22 15s, ordinary Scottish oatmeal £19 10s to £20 10s, and American, all cuts, £18 5s to £18 10s per ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated November 2nd, is as follows:—Pig-iron: We shall not have much change until the General Election is over. Two blast furnaces are expected to re-start shortly on Cleveland foundry pig-iron. There is still some demand for pig-iron from America, and this tends to keep prices steady both for Cleveland and hematite. Whilst the price of the former remains at 92s 6d per ton, the quotation for mixed numbers and East Coast hematite is now 93s per ton. Manufactured iron and steel: Some slight improvement may be recorded in the demand for steel. Prices remain unchanged. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £10 10s; steel rails, £9 10s. Iron ore: There is a considerable difference between buyers' and sellers' ideas of the value of ore, and consequently business is slow. Best Rubio is reported as having been offered as low as 22s 6d.

Our Sheffield correspondent writes:—The volume of business in this district continues to progress, but still lags behind the improvement which is in operation in other great metal centres, and the distribution of orders is exceptionally uneven. Local works producing basic steel in various forms have a good deal of work in hand, and while unremunerative for the most part, it employs labour, and keeps plants moving. The call for acid steel, while improving a little each week, must be described as disappointing. The rolling mills and forges are working considerably below capacity, and the busier ones cannot earn a profit. In fact, the complaint of unremunerative operations is pretty general here, and the prospects of shareholders for the next year or two are the reverse of encouraging. The extent of the revival in pig-iron is seen in the fact that the number of blast furnaces at work has doubled since the beginning of the year. Allowance must be made for the recent heavy purchases of pig-iron by the United States, as this trade is now coming to an end. The further depreciation of the European currencies has tended to curtail the business which Sheffield is doing with Belgium and France in tool steel and engineers' small tools, while it has also given the steel workers in those countries an advantage over Great Britain in various overseas markets as regards mild steels, strip, and so forth. Makers of edge and agricultural tools, saws, and files report that business is picking up at home and in colonial markets, but the orders, while numerous, are individually small, and prices are being severely cut. The plate and cutlery trades are busy on seasonal orders in certain departments, and here again competition for the business is abnormally keen. The coal market is gaining strength in all departments. Sales of household coal have been below the average for this period of the year, but a buying movement now appears to have set in. The call for steam coal and smalls from the steel, iron, and general manufacturing trade has been progressive for some time. Prices are firm, but unchanged.

Our Glasgow correspondent (writing on Thursday) says: Scotch pig-iron shipments from Clyde ports to the United States last week reached 1,339 tons, comparing with 230 tons in the same week last year. The home conditions for foundry iron are far from cheerful, consumers continuing to confine their operations within narrow and non-speculative limits, and as production is increasing and producers' stocks slightly accumulating, values have inclined to ease. Yesterday sellers were quoting No. 1 at 102s 6d and No. 3 at 97s 6d (on trucks at works), or 25s 6d a ton back from what was commanded eight days ago, with certain dealers naming 1s 3d a ton less, or 3s 9d for a cut. Conditions in the steel trade are quiet, and that though a number of transactions in plates and sections have been put through. Prices are a shade off, at barely £9 for ship plates, for home delivery, and £8 10s for export. Sections run from £8 to £8 10s. A slightly better inquiry is experienced for bridge-building material. Black sheets are in more general request, round £10 10s for 3-inch gauge. Crown bars idle at £10 10s. Hematite iron firmer at £5 7s 6d. Scrap steel not so plentiful as of late, and therefore inclined to harden. Tube-makers are better off than has been the case for months. Bolt, nut, and rivet makers are pretty well off, and have fair prospects. The coal trade position is strong on the presence of an active inquiry for rounds and large sizes from nearly all Continental markets. Over 30 steamers have been daily waiting at Clyde and Forth ports this week for cargoes.

Our Cardiff correspondent writes:—The South Wales coal market has shown considerable strength this week. There has been no sharp advance in prices; salesmen are reluctant to exploit the situation. They might easily ask from 6d to 1s per ton higher, but they are profiting from their experience on other occasions this year when there has been a spurt in the demand, and are satisfied with filling up their stem lists at reasonable prices. The shipments recorded by the Customs authorities last week establish a record in the history of the South Wales ports; the total cargo shipments in that week amounted to 668,000 tons, compared with an average weekly foreign cargo export trade of about 600,000 tons in the record year of 1913. There has been no abatement this week in the

pressure of the demand. On the contrary, towards the end of the week the Great Western Railway Company were compelled to enforce regulations compelling vessels to wait in the roads until berths were ready for them, and thus avoid dock congestion. There has been a resumption of work at four of the Ebbw Vale Company's pits; these have an output of between 25,000 and 30,000 tons per week, and the market has absorbed the extra production quite easily. Inquiries are active for contract supplies over next year. Under pre-war normal conditions approximately between 60 per cent. and 80 per cent. of the following year's output was contracted for in the autumn. That practice is now being restored for the first time since 1914. So far very little coal has been sold for delivery over 1923, but colliery quotations are ruling from about 25s for Monmouthshire coals to 27s 6d for best Admiralty coals. One or two of the French railways have bought at prices less than these, but while contractors are hesitating about paying the prices asked by the colliery salesmen, they are reconciled to the prospect of having to pay several shillings per ton more for their coal next year than they have paid for supplies this year. The audit for September is disappointing. The wage certified is only 19.55 per cent., and to pay the minimum of 28 per cent. on the standard rates the owners are called upon to sacrifice £105,977 out of their standard profits, bringing the total sum thus sacrificed since last November to £2,665,000. The following are the current market prices:—Best Admiralties, 27s 6d to 28s 6d; second Admiralties, 26s 6d to 27s 6d; best drys, 28s 6d to 29s 3d; best black veins, 25s 6d to 26s 6d; Western Valleys, 25s 6d to 26s; Eastern Valleys, 24s 6d to 25s; best bunker smalls, 16s to 17s; ordinary cargo smalls, 12s to 15s; anthracite big vein, 57s 6d to 60s; anthracite machine-made cobbles, 65s to 67s 6d; anthracite French nuts 72s 6d to 73s; anthracite stove nuts, 70s to 71s; rubbly culm, 14s to 14s 6d; coke for export, 37s 6d to 40s; inland blast-furnace coke at ovens, 25s to 26s; pithead fuel, 28s 6d to 30s; pitwood ex ship, 30s 6d to 31s. There has been a further improvement this week in the tinplate trade. Prices have been advanced to 19s 6d per box, and demand is improving.

THE COTTON TRADE.

MANCHESTER, November 3.

Although the larger inquiry in the market has been well maintained, the reports as to the actual business passing have been rather disappointing. Buyers are very slow in coming up in price, and in most quarters much doubt is expressed as to whether

a really big trade can be done on the present level of values. Plenty of inquiry has been met with in cloth for India, and scattered sales have occurred in light bleaching descriptions, grey shirtings, and printing goods, the bulk of the buying being for Calcutta and Madras. Exporters to China have displayed more interest in quotations, but only isolated transactions have been mentioned in sheetings and fancies. For several minor outlets there has been a little more activity in stock lots, and a steady demand has been met with in home trade fabrics. All along the line it is very difficult for manufacturers to secure profitable prices. Home users of American yarns continue their policy of purchasing from hand to mouth, but there are indications of spinners improving slightly their position by reducing stocks. Fine Egyptian yarns have attracted rather more attention. Not much has been done in shipping bundles.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market is undoubtedly quieter, but although new business is being done on more restricted lines, there is as yet little sign of any weakening in values. Of course, the reports from the primary markets in Australia and South Africa indicate that the demand for wool is as strong as ever, and topmakers are inclined to pin

their faith to that demand being maintained. At the same time, it is generally admitted that the state of the piece trade does not warrant current prices for tops and yarns, and manufacturers are only covering their immediate requirements. On the other hand, it is obvious that consumption is very heavy, especially in the hosiery trade, and the strength of the raw material market is also partly due to the large purchases in recent weeks on American account. Generally speaking, it is these outside influences that are supporting values, and so long as the world demand for wool continues on the present scale, there can be little prospect of any material decline in prices. Compared with quotations ruling last Thursday, tops show practically no change. An occasional spot lot of 64's might be picked up at a fraction under last week's price, but the majority of topmakers are still very firm, and will not consider offers under current quotations. Cabled reports from the Cape indicate a reduction in the extreme prices recently ruling there, and on this market to-day good Cape tops are quoted at about 5s 6d per lb, a reduction of 2d compared with last Thursday's rates. These tops, however, are still relatively dearer than Australian. Spinners report a steady inquiry for most yarns, but present prices are checking business in Botanies, and fine crossbreeds are receiving more attention. There is no change in the piece-goods trade. Manufacturers assert that they cannot sell cloth on to-day's basis of yarns, and among users there is something approaching organised opposition to current prices.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

After three weeks' brisk sales in Coleman street, interest is now centred largely in Australia, where this week wool is being offered at three centres. Cables show a strong market, but the extreme prices of last week are hardly seen at Melbourne, and though there was a very good sale at Perth during the earlier part of the week, we think values are reasonable compared with either Melbourne or Sydney. If we reckon an average advance of 15 per cent. on merino fleeces (good topmaking wools), the improvement is barely what might have been expected in view of the extreme rise which has taken place in London since the middle of July, but as the bulk of West Australian wools are unsuitable for Continental requirements, and with America not being an extensive purchaser of the wools from this State, the rise is quite creditable. Really superior lines suited for America are reported to be 25 per cent. higher, and this is seen in the best Murchison and lightest conditioned South-Western wools, which come from two of the best growing districts in West Australia. There is no State in the Commonwealth whose wools have shown such a marked improvement during the past 10 years as West Australia. Not only have they increased in quantity, but also improved in quality and general appearance. This is largely due to the sound educational influence of Bradford appraisers during the time of Government control. Several Bradford valuers visited a good number of stations, and gave practical advice, which was much appreciated, and Murchison clips have since come to the front in a most wonderful way. Some of the West Australian station owners might be warned not to allow the quality of their clips to depreciate in the same manner as has happened to many South Australian clips, it being a fact that many of the pastoralists in West Australia are replenishing their stud flocks from South Australia. The very fact that Murchison wools sold last Tuesday at 30d and southern wools at 3½d is ample proof of the suitability of the West Australian pastures for producing really good, sound acceptable merino wool. There is no need for the pastoralists of this State to go in for cross-breeds. Surely the present era of low values should convince hundreds what a mistake they made in so doing, for the world is calling for bigger supplies of merinos, and Australia is well suited to turning them out.

According to the prices cabled by Dalgety and Co., Limited, from their Melbourne branch, excellent figures were made in that centre last Tuesday for well-known Riverina clips. One observes that Cobran touched 30d, Murray Downs/Spectacles 20½d, Wopelana 3½d, Boabula 28½d, and Hartwood 28½d. These are very good prices, and we should say that the best lines would give a clean yield of 53 to 54 per cent. It will be remembered that during the boom Murray Downs made a colossal price, while Cobran is a well-grown, shaggy clip, but no more than 64's quality.

Wherever one turns, wool markets are still found to be excellent, and the raw material is being absorbed with the greatest freedom. Prices at the Cape are easier, and, after the urgent needs of the trade have been satisfied, values look like coming down to a level with those current for merinos in Australia. After giving all possible credit to Cape wool, it must be said that there was no sound reason for paying from 4d to 6d more per clean lb for 12 months' Cape combing wools than the price at which corresponding descriptions could be bought in Australian selling centres.

VEGETABLE OILS AND OILSEEDS.

The feature of the oil market is the firmness of linseed oil for prompt delivery, due equally to a shortage and a good demand. Spot oil commands £40, but for delivery to the end of the year prices are about maintained round £38. More seed is now arriving, and there is an improvement in the quantity on passage to the United Kingdom, although this is much below that going to the Continent. A fair inquiry for January-April delivery is reported, current value again being lower on the week, and something under £34. Cotton oil crushed from the new Egyptian seed is now offering round £35 for crude, but trade generally is slow. Nevertheless, the market is firm and values sustained. Soya bean oil is in fair request, and rape oil is still very scarce for near delivery, and is somewhat dearer. Ground nut oil is firm and scarce, but palm kernel oil is quiet, and value unchanged. Castor oil (first pressure) offers at £48 (barrels free).

Rather more interest has been evinced in linseed. Plate on spot is scarce, and held for £19 10s, while £19 has been paid for October shipment to Hull. New Plate appears to have recovered some of the ground lost by the report of a bumper crop in the coming season, and for January-February shipment is quoted £16, after business done at £15 15s. Indian linseed for shipment has tended lower, Calcutta to London having been done at £19 15s October-November, and £18 12s 6d November-December. In competition with Continental buyers, English crushers have had to pay more for cottonseed, but prices now are 5s below the highest, with black Egyptian at £10 5s paid for early November to Hull. Rapeseed steady, and other oilseeds quiet, and little business done to test values.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Tanners and butchers seem to realise that hides have reached their maximum price, as all classes are steady. Few alterations worth note cropped up at Thursday's Bermondsey auctions, although most heavy selections of best ox again advanced ½d, and making as high as 10½d per lb. Cows sold from 7d to 7½d, and being noted in a few cases. Wools sold from 5s to 9s each, and hogs 3s 2d to 11s each. Foreign hides are still very firm, tanners only buying for pressing wants; fregorifics are still firm, and selling at \$61 on spot, the bulk of supplies having been bought by American tanners. Dry hides are moving off better, and Capes and Australians are now in request at firm rates. The American market is still strong, with best Chicago packers selling at 23 cents.

The trade in sole leather is steady, although business is checked by the General Election prospect. Bends from 17d to 23d are still the best sellers to shoe manufacturers, the repairing trade taking 10/16 lbs at a higher range of prices. Little American sole is arriving, so that domestic tanners have the market largely to themselves. The demand, however, is so uncertain that it is only here and there tanners can get any advance on leather.

The upper leather section is gradually improving, and curriers are getting inquiries for wax butts and splits on a larger scale. Semi-chrome is also wanted, but in very low grades. Glacé kid is selling much better, but tanners find the demand is for stock at 6d to 9d per foot, and as dressing costs round about 6d per foot, there is very little margin left for the skin merchant and tanner.

The boot trade is gradually improving, although the demand is for a lower-priced boot. Retailers find money very short, so that the public are often perforce obliged to buy a common grade of boot in spite of their better judgment.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 3.

SUGAR.—The market moved on steady lines this week, prices on balance showing but little alteration, and a moderate inquiry was experienced both on grocery and manufacturing account. Messrs Tate and Lyle's cubes, 56s 6d to 57s 6d; crushed, 53s 6d; mineral water, 51s 9d; granulated, 51s 4½d to 51s 10½d, as to quality; caster, finest, 55s 1½d; A, 53s 4½d; B, 52s 9d; pieces, 36s to 40s for yellows, and 46s 1½d fine white; yellow crystals, 45s 4½d; granulated, December, 50s 9d; January-March, 50s 6d. West India crystallised ranges from 42s to 45s 6d, as to quality. American granulated, spot, changed hands at 50s to 49s 10½d. White Java steady, and business resulted in spot goods at 48s 1½d to 48s 9d; ditto, afloat, London, 20s 7½d, c.f. and i. terms. W.S.R., cubes, prompt, 27s; granulated, 22s 9d; H.U.M., granulated, 22s 9d; J, 22s 3d, all f.o.b. terms. Belgian crystals, November-December, 19s 10½d; granulated, 20s 3d, f.o.b., Antwerp. French crystals, November-December, quoted 20s to 20s 3d, as to quality, f.o.b., Boulogne. Cze ho-Slovakian, granulated, December, 22s; cubes, 24s 9d, f.o.b., Hamburg. White Mauritius, spot, 47s 3d to 47s 9d; white Brazilian, sound, 47s 3d. Terminal market generally quiet. White, December, sold, 21s 6d to 21s 0d; May 21s 9d to 21s 3d. Cuban stocks stand at 223,400 tons, against 1,152,200 at same time last year. Liquid glucose, spot, 28s 6d.

COFFEE.—A steady tone governed this market, but general course

of trade ruled quiet. Uganda, fair bold greenish, sold, 83s; Vera Paz, 96s to 103s. Future delivery steady, quiet. December, sold, 62s 6d; May, 60s.

COCOA.—Actual transactions were on a limited scale, but sellers required steady prices. Accra, F/F quality, November-December, sold, 37s to 36s 6d, f.o.b. terms.

TEA.—About 41,400 packages Indian were catalogued in auction this week, and with no abatement in demand, a strong market resulted, prices being fully 1d to 1½d per lb higher. 16,800 packages Ceylon were eagerly competed for respecting qualities up to 1s 8d per lb, and these were frequently dearer. The finer descriptions disclosed some irregularity. Java and Sumatra met with active support at full to again dearer rates.

RICE. Held steadily, but there was not much response from buyers. Two stars, spot, 15s 6d; ditto, November, steamer, 14s 1½d. No. 1 garden Siam, double bags, November, 15s 1½d, c.f. and i. terms. Rangoon beans firmer, and hand-picked, spot, sold, 8s. Japanese peas steady, quiet. Afloat, sold, 28s 6d; November-December, 26s 3d; December-January, 25s 6d.

SPICE.—Pepper ruled rather quiet, but prices maintained a steady level as sellers were not pressing. Fair black Singapore, spot, sold, 3½d; December-February, steamer, 3½d. Aleppo, spot, sellers, 4d; Lampong, 4½d; Tellicherry, 4½d; white Singapore, spot, 5½d; Muntok, spot, 6d; ditto, December-February, 5½d. Zanzibar cloves, spot, 1s 4½d; ditto October-December, steamer, sold, 6d to 6½d. Pimento, spot value, 2d; flake tapioca, fair quality, spot, sold, 2½d per lb; fair Penang seed pearl, spot, 21s 6d. Sago flour quiet, but steady. October-December, steamer, sold, 12s 4½d; and November-January, sellers, 12s 3d. Desiccated coconut firm. Spot lots changed hands at 37s to 36s 9d for both fine and medium. 200 cases offered in auction, off colour, sold, 36s 6d. Ginger quiet, but steady.

FRUIT.—The market for currants again presented quiet features, though sellers required steady prices. Pyrgos quoted 73s; Amalia, 75s to 76d; Vostizza, 90s to 96s. In auction, some 348 tons Valencia raisins offered received but slow support, and prices were slightly easier for the lower qualities. Quarters sold, 85s to 121s; eights bought in. Muscatels steady for the lower kinds, but easier for finer. Trays and boxes sold, 81s to 95s; choice and extra ditto, 120s to 140s. Sultanias firm with a moderate demand. Smyrna, 135s to 145s; fine and choice, 150s to 160s. Dates steady. Hallowee from second-hands, 28s.

JUTE.—Market slightly unsettled this week, and business with spinners proved slow. First grade, November-December, Continent, sold, £31 5s to £32; ditto, December-January, £31 10s to £32 10s; lightning grade, December-January, £29 12s 6d to £30 15s. Hessians ruled rather steadier. 10 oz, spot, sold, 31s; December-January, 27s 6d; April-June, 27s 4½d. 8 oz, spot, 24s; December-January, 23s. A twills, spot, 81s; B, ditto, 64s; hessian bags, 56 by 28, spot, sold, 55s; ditto, December-January, 52s.

HEMP.—Manila eased slightly on larger receipts, and which amounted to 39,000 bales during last week, but later a steady tone prevailed. G grade, October-December, quoted, £34; H, £32 10s; J, November-January, sold, £30 15s; December-February, £31; K, November-January, £29 15s; L, £29; M, £28. New Zealand dull. H.P.F., spot, £33; forward, £32; fair, spot, £32; forward, £30 10s. African sisal—No. 1, G.E.A., October-December, £35; and B.E.A., £34 10s. Italian P.C., spot, £54.

SHELLAC.—Market advanced sharply in all positions, on strong buying orders. T.N., fair quality, spot, moved to 350s; December delivery, 330s; March, 310s. A.C. garnet, spot, 320s; G.A.L., 310s.

COPRA.—Market fully steady, and there was a moderate business doing. F.M.S. Straits, October-December, Rotterdam, sold, £24 7s 6d; ditto, November-January and also December-February, at £24 8s 9d; Ceylon, November-January, £25 5s to £25 7s 6d; South Sea quoted £23 5s; Cebu sold, £24; Java, £24 10s; Dutch East Indies, £24 7s 6d; miced, £23 5s. Palm kernels, December-February, Liverpool, sold, £17 7s 6d.

RUBBER.—Irregular movements took place this week, but there was a fair amount of business doing. Standard plantation, spot and November, sold, 1s to 1½d, 1½d; December, 1s 0½d to 1½d, 1s 0½d, 1s; January-March, 1s 0½d to 1s 0½d, 1s 0½d; April-June, 1s 1d to 1s 0½d and 1s 1d. To New York, standard sheet, December-January, sold, 1s 0½d to 1s and 1s 0½d, c.f. and i. Fine hard Para, spot, 1s 1½d; soft fine, 1s; ball, 10½d.

MENTHOL.—Spot, 32s; forward, 30s. Japanese peppermint oil, spot, 7s 9d; November, 7s; December-January, 6s 9d. Aniseed, spot, 2s 3d; forward, 2s 0½d. Slab camphor, spot, 3s 7d; crude, 3s 4d per lb. Japanese wax, spot, 77s 6d; forward, 72s per cwt.

OILSEEDS.—Linseed market quiet, but near positions steady. Bold Bombay, afloat, £21 5s paid. Small Bombay, ditto, £20 15s. Calcutta, afloat, £20 15s; October-November, £19 15s; November-December, £18 15s. Plate, afloat, sold, £19 2s 6d; October,

37 Avenue de l'Opera. New York: *Economist* Office, 20 Broad
street (Room 1,709).

THE MONEY MARKET.

MONEY has once more been inconveniently scarce, except
when special measures were being taken to make it
plentiful. Since the official return of public income and
expenditure showed no addition to Ways and Means
advances from the Bank of England, it may perhaps be
presumed that the addition shown to the Bank's Govern-
ment securities in the previous week had been caused by
its purchase of short Treasury bills, of which a con-
siderable proportion appears to have since matured. How-

ever this may be, money became quite scarce, and on Wednesday the market had to borrow from the Bank, while on Thursday early stringency was relieved by fresh activity on the part of what bill brokers call the "hidden hand." Discount rates were, in consequence, decidedly firmer. After the announcement of the high rate at which the Treasury bills were allotted, the market rate for commercial paper became nominally still firmer.

	Nov. 10, 1922.	Nov. 3, 1922.	Oct. 27, 1922.	Oct. 20, 1922.	Previous Rate and Date Changed.
Bank Rate	3	3	3	3	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount/Call	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½-8	2½	2½	2½	...

The Bank return showed an increase of £642,000 in the Reserve, owing to the return of notes from circulation, the stock of gold being lower by a trifle. Government and Other securities dwindled by 1½ million and £307,000 respectively, and since the Public deposits expanded by a million, Other declined by nearly 2½ millions. Currency notes outstanding were increased this week by £853,700 to £288,846,600, which includes £1,540,200 for notes called in but not yet cancelled. The fiduciary issue is £239,156,400, or £70,832,000 below the maximum.

At the meeting of the Court of Directors of the Bank of England, on Thursday, it was agreed to recommend to the proprietors in April next that Mr. Montagu Collet Norman, the Governor, should be re-elected Governor for the ensuing year. His re-election for the fourth year in succession, the longest term served by any governor with the exception of Lord Cunliffe, is a well-merited tribute to the skill and discretion with which Mr. Norman has carried out his onerous and difficult duties. Mr. H. A. Trotter, who has been deputy-governor for three years, is retiring from this position, and the directors recommend that Mr. Cecil Lubbock be elected deputy-governor in April next. Mr. Lubbock, besides being a director of the Bank of England, is a director of the London board of the Northern Assurance Company, of the Provident Accident and Guarantee Company, and of Whitbread & Co., and is also a member of the Council of Foreign Bondholders.

The changes in the monthly statement of average weekly balances of the London Clearing Banks, printed in full on another page, are of more interest than in recent months, for not only do deposits show the first increase for some time, but the total of acceptances, which has been steadily dwindling since the beginning of the year, is £7 millions higher. Below we compare the aggregate figures of the nine English banks for October with those of preceding months:—

	Dec., 1921.	March, 1922.	June, 1922.	Aug., 1922.	Sept., 1922.	Oct., 1922.
Capital and reserves.....	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	65.3	57.1	55.2	50.3	49.9	56.9
Deposits (incl. undiv. profits, &c.)	1,818.6	1,746.9	1,755.2	1,688.4	1,660.6	1,686.2
Total liabilities	1,993.8	1,919.9	1,926.3	1,854.6	1,826.4	1,859.0
Coin, notes, balance at bank, and cheques in course of collection	273.5	245.8	251.3	239.1	233.2	244.3
Money at call	105.7	102.5	113.0	105.0	104.4	104.7
Investments	343.3	352.7	412.0	414.4	405.8	394.4
Discounts	424.3	350.5	346.2	305.8	295.9	309.1
Loans and advances	762.3	746.2	723.3	714.3	711.3	723.7
Cover for accept., premises, &c.	90.7	82.2	80.5	76.0	75.8	82.8
Total assets	1,993.8	1,919.9	1,926.3	1,854.6	1,826.4	1,859.0

While it is difficult to derive definite evidence of an increase in trade activity from these figures, they are, nevertheless, encouraging, for, apart from the increase in acceptances, there is an advance of over £12 millions in loans and advances, not to mention the increase of £26 millions in deposits—the latter, however, may be due to a variety of causes, and cannot in itself be taken as a real indication of increasing trade.

THE STOCK MARKETS.

The chaotic movement of the Continental exchanges, the recurrence of anxieties in the Near East, and the approach of election day combined to check business on the Stock Exchange. But later in the week gilt-edged stocks recovered somewhat from their early weakness, owing to the favourable effect of Lord Curzon's speech

in the City. French bonds were naturally very flat on the depreciation of the franc. Home railway stocks fell somewhat heavily in the early part of the week, but recovered later on bear repurchases. Among foreign rails, the strength of the leading Argentine stocks has remained the chief feature. Excitement in the rubber share market has died down considerably, and oil shares weakened on Paris sales. On staple industrials there is little to report, but tea shares were buoyant until the last day or two, when some check developed. The Kaffir market has suffered from French selling, but this was to some extent offset by supporting orders from the Cape. Chartered fell back on the Rhodesian referendum, of which special mention is made on a later page. Irregular movements in the price of tin had little effect upon business or prices in the tin share section.

THE COMMODITY MARKETS.

As a result of the further advance in raw cotton rates transactions in yarn and cloth have been difficult to effect; opinion is expressed in most quarters that current values of manufactured goods are too high for consumers in Eastern markets. Although it is thought that the steady depreciation in Continental currencies may have an adverse effect on the values of some descriptions of wool, the raw material position remains firm. The demand for pig-iron shows no marked improvement, while, owing to the lower value of French and Belgian currencies, prices of foreign steel are under those of our home works. Complaint is made by our trade correspondent of severe price-cutting in the Sheffield district. Our Workington correspondent states that "the steel trade has never been duller," but reports the coal trade as brisk. The South Wales coal market continues busy, prices for best Admiralties being from 28s to 28s 6d per ton, and the improvement in the tinplate trade is maintained. Hide prices show signs of weakness, but conditions in the shoe trade are fairly good. Further details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

The recent movements of the mark and the franc culminated this week in fluctuations indicating a state very little short of complete demoralisation, and although the last two days have shown a marked recovery, the danger of a further "run" is by no means past. From 26,000 on the 3rd the mark had risen to 38,500 by the close of Tuesday. On Wednesday it rose to 42,000, but ended the day with a recovery to 35,500, and on Thursday was down again to 28,500. On Friday morning, however, there was a reaction again to 33,500. The rapid rise during the early part of the week was the result of growing panic in Germany, and the recovery was due almost entirely to the relatively favourable report published by the committee of experts in Berlin. But from the report to the practical execution of its proposals is a very long step indeed. In Paris the franc from 64.72½ on the 3rd rose rapidly at the beginning of the week, until 72.20 was reached on Wednesday evening. On Thursday it closed at 68.70, and on Friday morning, although it opened again better at 68.15, it showed some tendencies towards a renewed rise. The Belgian franc has moved in sympathy, being up to 80 at one time on Wednesday, and standing on Friday morning at 74.60. Vigorous attempts are being made in France to counteract this crumbling of confidence, but it remains to be seen at what point the movement can now be stopped. It is especially unfortunate that the panic should have coincided with the necessity of heavy purchases of foreign currencies for wheat imports. There has been talk of the introduction of exchange restrictions, but it is doubtful whether this unwise step will be taken. The Italian rate has moved much less violently, having risen from 106 on the 3rd to 108 on Tuesday, since when it has recovered again to 103, as the result apparently of confidence in the new régime. Throughout these fluctuations the dollar rate has remained remarkably steady. On Monday there was a sudden drop to 4.44½ from 4.46½ on the 3rd, but since then it recovered steadily to 4.46½ on Thursday. On Friday morning, however, it was again rather lower at 4.46½. Movements among neutral exchanges have also been relatively quiet, Amsterdam having gone in our favour from 11.38½ to 11.41, Switzerland, after some

fluctuations, being about the same at 24.45, while Madrid has depreciated again from 29.29 to about 29.40. In Scandinavia, Copenhagen and Christiania have moved somewhat against us to 22.14 and 24.05 respectively, Stockholm rather in our favour to 16.64. Helsingfors has reacted a little from its recent rapid appreciation, and now stands at 173½, as compared with 168 a week ago. In Central Europe the Vienna rate at 330,000 is relatively steady, and the discussions in Parliament over the financial reform measures are progressing more favourably than was at first expected. Warsaw continues to depreciate, having risen from 64,000 to 70,000, although trade continues active. Prague at 139 is very slightly lower than a week ago, while Athens has moved upward again from 235 to 295. In the East, the rupee is practically unchanged at 1s 32d-32d, the yen very slightly dearer at 2s 13d. In the silver market, apart from a slight recovery on Monday, prices have moved downwards on sales from China and America, and the outlook is not particularly good. Hong Kong and Shanghai have both moved a little lower. In South America, Monte Video shows a marked recovery from 42d to 43½d, Buenos Aires is also ½d dearer at 44½d, and Rio ½d dearer at 6 11-32d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 4th:—

	Receipts.	Min. £	Expenditure.	Min. £
From Revenue	14,047	8,546	Interest on Debt	7,529
Amount borrowed	2,387	1,984	Supply Services	764
			Added to Exchequer Balances	692
			Sundries	16,434
				16,434

Property and Income-tax yielded £5,892,000, against £4,115,000 in the corresponding period of last year. Customs produced £2,165,000, against £2,776,000, and Excise receipts £1,481,000, against £1,742,000, and Estate duties £1,610,000, against £650,000. The week's operations increased the National Debt by £2,386,942, and caused the following changes:—

	Min. £	National War Bonds paid off	Min. £
National Savings Certificates	+ 300	Other Debt	- 1,110
Treasury Bills	+ 771		
4½% Treasury Bonds	+ 1,984		
Unemployment Insurance	+ 100		
Public Depts. Advances	+ 600		
Sundries	+ 241		
	+ 3,996		- 1,610

The floating debt was increased by £1,425,000 to £920,503,500 during the week ended November 4th.

FINANCIAL YEAR, 1922-23 (April 1 to November 4, 1922).

POLICIES AND INTERPRETATIONS.

THE announcement has been made this week that on November 15th—the day on which the British electors go to the polls—a second \$50,000,000 will be handed over on behalf of the British Government to the United States as a further instalment of the first interest payment on the British war debt to America. It is also understood that the postponed financial mission to Washington will be despatched without unnecessary delay. In this instance action, or definite promise of action, has cleared up any doubts that might have existed about policy, and we are glad that it has thus been made clear to the United States that the change of Government in this country in no way affects the recognition of our financial obligations. But in respect of other important matters the policy of the new Prime Minister still remains, within four days of the election, a matter of obscurity. We endeavoured to show last week that the Reparations problem is the one paramount difficulty which any Government must first solve before it can proceed to bring better trade and happier conditions to this country. We pleaded with Mr. Bonar Law for a statement which would indicate whether he was prepared to approach this vital conundrum on the only lines which appear to give any reasonable hope of success. Since then Mr. Bonar Law has made several speeches, but has studiously avoided the subject. Moreover, we note with regret a passage in his speech at Leeds which, whether rightly or wrongly we do not know, lends itself to the unfortunate interpretation that he is not, even to-day, with the new riot of the exchanges before his eyes, fully alive to the supreme importance of a Reparations solution. Mr. Bonar Law talked to his Leeds audience last Saturday about Empire co-operation, and expressed the hope that from his proposed Empire Conference greater trade and some amelioration of unemployment might result. We share his hope. With our European markets in their present chaotic state it is essential that our trade within the Empire and with extra-European countries should be expanded as energetically as possible. But we are afraid that in this matter Mr. Bonar Law is living in an atmosphere of unreality. Although he guards himself at the outset by saying, "I am not at all one of those who think the chaos of demoralisation in Central Europe does not matter," yet he proceeds upon a statistical argument calculated to convey the impression that the relative importance of our trade with Europe to our trade within the Empire is very much less than in fact it is. Indeed, he seems to have compiled his figures with the express purpose of belittling the importance of our commercial relationship with Europe. "In the last year before the war," said Mr. Bonar Law, "we sent to the Empire alone two and a-half times the quantity of goods we sent to all those demoralised countries of Europe, including Germany, and in 1920 our export trade within the Empire

was four and three-quarter times as great as with those countries." Now, whether one agrees approximately with Mr Bonar Law's figures depends largely upon what one means by the phrase "those demoralised countries of Europe." Having examined the official figures of trade for the periods referred to, we find it extraordinarily difficult to arrive at any conclusion similar to his. Suppose we take France, Italy, Belgium, Germany, Austria-Hungary, Greece, Roumania, European Turkey and Russia—and surely all these countries can fairly be included among those whose exchanges and finances have been demoralised by the War and its after-events—we arrive at the following conclusion:—In 1913, our exports to these nine countries were £130.6 millions. In the same year our exports to countries within the Empire were £205 millions. The latter is scarcely "two and a half times" the former, as Mr. Bonar Law suggests. In 1920 our exports to the nine countries were £312.7 millions, and to countries within the Empire, £501.5 millions. The latter is scarcely "four and three-quarter times" the former, as Mr Bonar Law's calculations would suggest. Let us turn next to imports. Our imports from these nine countries in 1913 were £214.8 millions, while our imports from countries within the Empire were just under £213 millions, the latter being actually a trifle smaller than the former. In 1921 (this time Mr Bonar Law changes his year of comparison), our imports from the nine countries were £150.1 millions, and from the countries within the Empire £331 millions. The latter figure is by no means "five and a quarter times" greater than the former. We can only assume that the Prime Minister in his calculations has left out in his catalogue of financially demoralised countries such nations as France, Italy, Belgium, and some others. Such an omission entirely invalidates his statistical argument.

But the matter at issue here is not one of statistical accuracy or inaccuracy. It is the implication of the argument that matters. In spite of his opening reservations on the subject, Mr Bonar Law's argument, in our reading, is very distinctly tinged with the fallacy, so popular a year or two ago, that by pressing trade elsewhere we can make up for the loss of our European markets. Such argument can only lead to a loss of the true perspective. Because of the great gap in the circle of world trade represented by "those demoralised countries of Europe," it is necessary that all legitimate means should be used to expand our trade elsewhere. But the first great and overwhelming necessity is to mend that gap in the circle, and the work of mending will not be begun until a sane economic settlement of the Reparations problem has been reached. "If you get the idea," says Mr Bonar Law, "that there can be no improvement until Germany and all the rest of them have settled down, that is fatal, because it will be too long to wait." We agree that we have waited too long, and at the best shall still have a long wait. In the meantime, all efforts elsewhere are entirely welcome, and among them Mr Bonar Law's proposed Empire Conference—provided always that tariff-mongering and preference-patchwork do not mar its agenda. But at best such efforts are supplementary to the healing of Europe. To concentrate on them, while Europe is left to slide deeper into the slough, would be a counsel of utter despair. Our complaint last week was that the public does not know, and ought to know, whether Mr Bonar Law will go to Brussels with the only concrete policy that can hope to initiate that healing. To-day our anxiety is increased because we cannot read in the Premier's words that even yet the supreme urgency of a Reparations settlement has come home to him, as it came home long ago to the business world. The sands of election time are quickly running out. But even in the few days that remain we still hope to hear from Mr Bonar Law a pronouncement that will set fears at rest and convince us that our interpretation of his Leeds speech does not truly represent his real attitude of mind and his intended policy.

We have said above that we welcome the proposed Empire Trade Conference, provided that tariff-mongering and preference-patchwork does not mar its agenda. But about that proviso we confess to anxiety. Speaking at Dulwich on Tuesday night, the Premier made a reference to fiscal policy that is profoundly disquieting to Free-traders. After his opening speech at Glasgow, it was

widely, if hastily, assumed that the Conservative Party, in dropping the plank of Tariff Reform, had abjured all fresh tariff legislation. But all Mr Bonar Law can promise is that "this Parliament will not make any fundamental change in the fiscal system of this country." The word "fundamental" may cover a multitude of sins; and uneasiness on this score increases with the study of his supporters' comments upon this pledge. Thus the *Morning Post* says:—

"In respect of the question of Tariff Reform, the Prime Minister believes that, while protective measures are, in fact, requisite to the prosperity of industry, it would be a mistake to make great changes at this time. Indeed, with the Paris Resolutions and the passing of the Safeguarding of Industries Bill, the case for Free-trade has gone. It is no longer a choice between Tariff Reform and Free-trade, but a question of the best methods of protecting those industries which need protection."

Having made this frank comment, our contemporary proceeds to the two old and exploded tariff theories that better labour conditions can only be achieved by Protection, and that Free-trade is responsible for unemployment. These two hoary illusions lead up to the conclusion that "Mr Bonar Law, in postponing any further measures of Protection, may safely rely on the logic of events to enable him to meet requirements as they arise." These words, if they mean anything at all, can only mean that the *Morning Post*, and those who think with the *Morning Post*, are confident that Mr Bonar Law, though right in disclaiming tariff intentions now, will be driven to them later on "by the logic of events." Meanwhile, other supporters of the Premier are even more outspoken. Thus we find Mr Hewins, the ex-chief of the late Tariff Reform League, saying at Swansea recently:—"The programme of trade within the Empire, which was formed at the Imperial Conference of 1917-18, is ready to be put in operation within a week; and I ask you to give me the authority to go into the House of Commons to support it. Our real trade interests are not with foreign countries at all, but with the British Empire itself. If we carry out the great policy of trade within the Empire, prosperity will be restored, and social questions can be dealt with." We never hugged the illusion that Mr Bonar Law would so far recant his tariff faith as to sweep away the Safeguarding of Industries Act and other irritating obstacles to business expansion, or even to redeem his own pledge that the emergency tariff duties of 1915 should be removed in time of peace. But we had hoped that the country would not have been called upon to face, as it now is, a new threat of Protection, which is the more dangerously insidious because it is most studiously veiled. We trust Mr McKenna and many other leaders of the business world, who are supporting Mr Bonar Law because of the hope that steady Government will restore confidence, will remind the Premier of the powerful Free-trade manifestoes which, in May and July of last year, were signed by those who direct the fortunes of British banking and industry, and whose daily experience gives the unique knowledge of the needs of British trade and industry. Since the public's memory is short, we reproduce the bankers' appeal on a later page of this issue.

Nevertheless, although lively apprehensions on these and other points cannot be dismissed, there is good reason for looking forward to next Wednesday with comparative confidence. A comparison of the outlook on the eve of this election with the outlook on the eve of the 1918 election produces a sigh of relief. The Government which the country places in power will be elected to maintain a more or less definite attitude, not, as in 1918, to achieve by give and take a precarious and insincere balance between the wholly incompatible tenets of conflicting political beliefs. Moreover, whatever Government is placed in power will be faced with a strong and effective opposition. It is to the lack of such opposition that many of the worst faults and mistakes of the late Coalition may be ascribed. Whatever the results of the polling, we are practically assured of three great improvements:—political thought, the reassertion of the power of the House of Commons over the Cabinet, and the restoration of Cabinet responsibility. Those will be three great steps forward. In any case, the new chapter in political his-

tory that opens next week will be free from many of the worst features that made the last chapter so profoundly unsatisfactory.

CHAOTIC EXCHANGES.

If anyone could have seen eight years ago, or even four years ago, in a prophetic vision, the list of rates of exchanges published in the *Economist* of last week, and could have been induced to believe that it was really going to happen, he would surely have anticipated from it, as its inevitable result, much greater economic demoralisation than has actually taken place. Not only are the figures showing the values in sterling of the currencies of some of the principal European countries quite appalling when compared with the pre-war parities—a comparison which, as Professor Cassel is rightly fond of telling us, only darkens counsel—but the performance of these values even during the last 12 months would have startled any Victorian gambler out of his wits if he had believed them to be possible. Paris heads the list with a comparatively mild depreciation, since a year ago, of about 20 per cent. Before the war its normal range of fluctuation was less than 25 centimes; during the past 12 months it rose by over 117 to the pound. This performance pales before that of the German mark, which, on November 4, 1921, was quoted at 885—890, and on November 3, 1922, was called 26,500—27,500, having thus been divided by rather more than 30 in the matter of its external value. About the same relative depreciation, though on a more monstrous scale, is shown by the Austrian krone, the number of which is needed to buy a pound sterling has risen from 11,000 a year ago to 335,000 or so—for such figures are necessarily nominal—last week. In comparison with such skyrocket efforts, the performance of the Polish mark, which from 11,000 rose to 67,500, looks almost like stability, and as if to complete the chaos with a clash of harmonious discord, we find that the Czechoslovakian krone has considerably more than doubled in value, when measured in pounds, having come down from 405 to 141—a movement which might have been expected in theory to wreck the economic life of any country that suffered from it.

As everyone knows, most of the horrors expressed by the above figures have been intensified during the past week, and exchange demoralisation has once more been a leading headline, forcing itself even on the attention of the Stock Exchange when selling from Paris became insistent enough to affect the foreign market. And yet the most marvellous thing about this currency chaos, which has resulted from the ease with which modern Governments have been enabled to delude the citizens of all the nations with bad money, is the fact that the economic chaos produced by it has not been such as to produce complete paralysis of industry and commerce. Every schoolboy knows the picturesque passage in which Macaulay's history expands on the text expressing doubt "whether all the misery that had been inflicted on the English nation in a quarter of a century by bad kings, bad ministers, bad Parliaments, and bad judges, was equal to the misery caused in a single year by bad crowns and bad shillings." Macaulay thought it necessary to utter half an apology for mentioning such a thing as currency, as not generally thought worthy to occupy a prominent place in history; and the labourer whose lot moves his pity "found that the bit of metal which, when he received it, was called a shilling, would hardly, when he wanted to purchase a pot of beer or a loaf of rye bread, go as far as sixpence," while Dryden received from his publisher "40 brass shillings, to say nothing of chipped money." But what a page of history Macaulay would have written if he had heard the story lately told by Mr Lloyd George of the two men in Vienna, each of whom had ten thousand krone. One put his money in a savings bank, the other drank his, and in a few months' time, thanks to rapid currency depreciation, was able to sell his empty bottles for more than the money which the thrifty saver still had in the bank. How is it possible for things such as these to happen, and for international trade, nevertheless, somehow to get itself carried on, in a greatly shrunken volume, but by no means blotted out as *a priori* reasoning would almost certainly have anticipated? Nearly all evils cure themselves—often by

destroying those who practise them—if only they are carried far enough; and in international trade there is necessarily at least one other currency that can be made available in every transaction if that of any importing or exporting country is demoralised to a point at which it becomes useless. For purposes of international trade, the German mark has almost ceased to count. When Germany buys and sells abroad the bargains are closed in the currencies of her foreign customer, and quotations for the mark on the foreign centres reflect chiefly, not the ebb and flow of sales and purchases based on the transactions of trade and finance, but the views of speculators, German and foreign, and of those who have originally become possessed of marks through trading operations, and have held on to them because they thought that they must be worth more some day. Though the cry is no longer fashionable that Germany, by inflation and depreciation of her currency, is capturing the trade of the world, the fact that the mark declines more rapidly abroad than at home still gives an advantage to her exporters, who take payments in sounder currencies, and make them in marks; and it need hardly be said that in so far as external depreciation of the mark assists the German exporter, it also makes it possible for Germany to buy abroad; it is astonishing to hear from those who should be well informed as to the course of our foreign trade how comparatively good a customer of ours Germany still is in circumstances which might have been expected to dry up the springs of her demand altogether.

Internally the effect of rapid currency depreciation is dangerous and unsettling, and there is evidently much apprehension in Germany and Austria lest the race between wages and prices may lead to serious social upheaval. A traveller just returned from Germany, where he had principally consorted with members of the professional and pedagogic class, reported that only one of those with whom he had talked had not referred to "valuta" in the first sentence uttered. As everyone knows, the German Government has lately felt itself obliged to take measures to stop the use of the dollar and the pound, even for purposes of internal transactions, and if the public's mistrust of the mark becomes strong enough, no official measures will prevent its being simply ignored to the point of demonetisation. Rumour has lately been busy with schemes said to be under consideration by the German Government for the creation of a new currency involving whole or partial repudiation of the old, and it seems likely that the circulation of these reports has assisted the violent fall of the mark, owing to their effect on the sorely-trying nerves of its speculative holders. Additional reasons for the decline were the news of very slow progress in the Reparation Commission's efforts in Berlin; a statement that the Brussels Conference is not likely to be summoned until the Belgian Government feels certain that some practical result may be expected from it. Terrible as the decline has been, we have to remember that after a certain point the greater the movements are in exchange quotations the less significance they have. The fall in the mark from 20 per pound to 30 per pound had very grave significance, because it marked a breach in a system under which the world's money-changing arrangements had been carried on with extraordinary ease and economy. But when once the mark had been branded as a pariah among currencies by falling from a shilling to a penny, further sub-divisions of its value became comparatively meaningless, and more so as they grew more rapid and violent. Nevertheless, even when all allowance is made for the utter unreality of the market abroad in such a commodity as a seriously depreciated currency—depreciated to a point at which it simply is not used in foreign transactions—the fact remains that the exchange list is an appalling spectacle as a symptom of the impoverishment of the countries whose currency values it records. Mr. H. G. Wells has been telling an audience in Manchester that he has seen modern civilisation broken down in Russia, that the "process of collapse had already spread into Austria-Hungary" (with all deference to Mr. Wells there is no such country) "and Poland. It was coming further and further west. To-day they could see the process of collapse laying its hands upon Germany, and the outward visible sign of the creeping death of modern civilisation was the collapse of the currency system."

Let us hope that for once Mr Wells is wrong in his forecast, and there is this reason for the hope. For the first time French and Belgian francs have been really seriously affected by the fall in the mark, or by the causes which led to it. If once French opinion is alarmed by the sight of the franc following, even a very long way behind, the mark along the path to demoralisation, it surely is not too much to expect that the time will be ripening for a reversal of the policies that have led to chaos in European currencies during the past four years. If only policy would give economic forces a free hand to deal with Reparation and exchange problems, many reasons for hopefulness are to be found in the report of the foreign experts summoned to advise the German Government, which was published yesterday. We hope to be able to examine it in next week's *Economist*.

TURKISH DEVELOPMENTS.

THE new crisis with the Turks has arisen over two separate sets of questions: those provided for under the Mudania Armistice, and those not referred to in that agreement, and, therefore, implicitly left over for the Treaty of Peace. The second set of questions, though possibly the less dangerous at the moment, is of greater fundamental importance than the others, and this largely accounts for the perceptible—and most welcome—change of attitude on the part of our Allies, especially France. Because the French feel increasing disquiet regarding such matters as the capitulations and the Ottoman Public Debt, they are more disposed to join us in active measures for maintaining the interim Allied control of Constantinople, and command of the Straits, and for preventing the clandestine formation of a Turkish army in Thrace. These local and temporary advantages are so many guarantees that we shall get more rather than less of our way when we negotiate over the larger issues, and it is doubtless because the Turks realise this, too, that they are attempting, at some risk to themselves, to manoeuvre us out of our positions.

These tactical positions are also, of course, important in themselves. A sudden involuntary evacuation of Constantinople, for instance, by the Powers would certainly produce a stampede of hundreds of thousands of people—both foreign nationals and non-Turkish-Nationalist Ottomans—who would make the already almost desperate refugee problem completely insoluble, even if they got safely away (though their flight and panic would invite pillage and massacre as surely as the sight of a hare infuriates a hound). This is the central point immediately at issue, the situations in Thrace and at the Dardanelles being merely subsidiary to it.

Far more serious, however, are the questions in the background. Protection of minorities, for instance, cannot simply be allowed to go by default, or be written off as needless because the minorities have almost disappeared. One can understand the Turkish objection, in this as in other matters, to differential treatment, and admit that their suspicion of such measures, as being a method of undermining Turkish sovereignty, is confirmed by the history of the last century. Yet minorities remain and will remain—both non-Turkish in Turkey and Turkish in the countries of South-Eastern Europe. The old system under which they contrived to live has broken down, and they must obtain a new charter. It is the duty of their more fortunate kinsmen who are masters in their own respective houses to protect them by reciprocal concessions, and so long as the concessions are the same for every State concerned, no derogation of dignity is involved. On the contrary, mutual sacrifices of sovereignty, made on behalf of minorities, would raise the moral status of the Near Eastern countries, and counsels in this sense from Western quarters cannot be dismissed as prejudiced or fanatical. A few days ago the English Press published an admirable memorandum drafted for the conference of missionary societies by Mr Basil Mathews. This memorandum ought to be translated into Turkish, Greek, Armenian, Rumanian, Jugoslav, and other languages too numerous to be catalogued, and it would repay the plenipotentiaries of these nations at the Lausanne Peace Conference to study it.

The question of the capitulations touches the prosperity and security of far fewer people than that of minorities-protection, but these individuals are the link between Turkey and the rest of the world, and especially the intermediaries of her foreign trade. Therefore, the system under which they have lived and worked in Turkey cannot suddenly be altered, still less abolished, without producing a far-reaching disturbance of international relations.

The capitulations are a miscellaneous body of foreign rights enjoyed in Turkish territory. They can be analysed into rights of foreign Governments on the one hand (e.g., consular jurisdiction over their nationals in Turkey; official representation in Turkish courts when cases between their nationals and Turkish subjects are being tried; the maintenance of post-offices; and the veto upon any alteration of the Turkish Customs tariff), and the personal rights of individual foreigners on the other hand (such as exemption from the ordinary courts of justice and from most forms of direct taxation, and, above all, the faculty of residing in Turkey from one generation to another without losing their own and acquiring Ottoman citizenship).

The capitulations were taken over by the Ottoman Empire from the Byzantine Empire, the Crusader Principalities, and mediæval Muslim Egypt, and in their present form, as enjoyed by the principal capitulatory Powers, they go back to the 16th century. Turkey denounced them in 1914, between the outbreak of the European war and her intervention in it. Before the end of the war Germany had succeeded in replacing them, as far as she was concerned, by reciprocal treaties, granting what were virtually the old capitulatory rights to Germany and her nationals in Turkey, and to Turkey and her nationals in Germany—an arrangement which gave Germany all she wanted, while being of little practical benefit to Turkey beyond the satisfaction of her *amour propre*. After the armistice of Mudros, the Allies, who had never recognised the abrogation of the capitulations, simply reimposed them again, and this was confirmed in the Treaty of Sévres, though in the same document provision was made for the appointment of a mixed commission, in order to reform the Turkish judiciary and so make the capitulations unnecessary. In this connection, however, no dates were specified, and the Turks, in the last article of their National Pact, reaffirmed their repudiation of the system. Indeed, they attach at least as much importance to the abolition of the Capitulations as to the realisation of their territorial aims.

Down to the eve of the Greek defeat there were possibilities of compromise. If the immediate abolition of the capitulations on the fiscal side (in such matters as exemption from taxes and liens over the tariff) had been conceded, the juridical privileges might have been maintained for a term of years, until an agreed substitute had been established. As it is, however, the demand is more significant, it is being coupled with hostile action against the Ottoman Public Debt. The *Dette Publique* has hitherto not been a special object of Turkish dislike, partly because it was a body of private creditors and not a financial control imposed by foreign Governments, and was therefore less galling to Turkish pride, but also for practical reasons. The revenues ceded to the Debt in the increment went to the Turkish Treasury. The sequestration of income belonging to the Debt, which has apparently been ordered by Angora, is thus exceedingly ominous. Indeed, if the rights of the Public Debt are abolished outright, Turkey must expect to suffer as Spain suffered when she made life impossible within her borders for Muslims, Jews, and Protestants, or as Russia is suffering now for having successfully got rid of native and foreign bourgeois and intellectuals.

It is true that this disastrous trend in Turkish policy is only what is to be expected. To be beaten, treated with injustice, resist, and find yourself beyond all your dreams successful, is not an experience that makes it easy for a nation to be reasonable. Still, unreasonableness is not a necessity, even for Turks fancying themselves triumphant over principal Allied Powers, and still less is it a virtue. The Turks have shaken off the old relationship of

inferiority, discrimination, and coercion. On that we may congratulate them and also ourselves, for it was an essentially wrong relationship, which demoralised both parties. But if the Turks are really to achieve the freedom and equality towards which they do genuinely aspire, they must acquire the comity of manners practised between sovereign independent nations. Otherwise they have nothing better before them than isolation and impoverishment in the immediate future, with fresh coercion ahead, so soon as the rest of the world recovers sufficient surplus energy to put them in their place. If Mustafa Kemal sees this and acts upon it, he will have deserved as well by his fellow-countrymen as he has done by making their National Pact a reality.

A LABOUR VIEW OF THE LABOUR PROGRAMME.

(FROM A LABOUR CORRESPONDENT.)

EXPERIENCE has taught us that economic questions are rarely discussed on their merits at election time. For every 10 per cent. of valid economic reasoning there is generally quite 90 per cent. of bad reasoning or sheer misrepresentation and abuse. The Tariff Reform controversy was a good illustration of this. The Labour party can hardly be surprised, therefore, that the highly technical questions connected with nationalisation and the capital levy have not been treated either in the Press or on the platform in a very dispassionate manner. Underlying all these controversies is the age-old battle of social justice—the fight between the “haves” and the “have-nots.” The combatants are ranged into two opposing camps on this fundamental issue, and the concrete issues, which emerge in the course of the struggle, are largely secondary. Nationalisation and the capital levy are opposed not merely on their merits, but because they proceed from the Labour party, and because they are looked upon as the “thin end of the wedge” in the movement for redistribution of wealth. They have therefore been denounced as subversive and revolutionary, whereas the Labour party claim that their programme is “the best bulwark against violent upheavals and class war.” Whether this claim is justified or not, it is a gross exaggeration to identify their proposals with Bolshevism and Communism.

The awkward fact is that members of the late Coalition Government have themselves on different occasions either expressly endorsed, or at least seriously considered, both the capital levy and the nationalisation of mines and railways. They did so reluctantly no doubt, but their justification or excuse was precisely that which the Labour party now advance, namely, that these measures are a safeguard against violent upheavals. In a manifesto issued to the Press on December 5, 1918, Mr Lloyd George said, “I say to Labour, you shall have justice; you shall have fair treatment, a fair share of the amenities of life, and your children shall have equal opportunities with the children of the rich.” These and other generous promises, such as “homes for heroes” and “prosperity for agriculture,” are as embarrassing to the

late Government as their programme for hanging the Kaiser and making Germany pay.

On the nationalisation of railways and canals, Mr Lloyd George said to a deputation of the Trades Union Congress, on March 20, 1918, that “he was in complete sympathy with the general character of the proposals put forward. The credit of the State would enable them to pay lower interest for borrowed capital, to pay better wages to railway workers, and to provide better facilities for the travelling and trading public.” In a speech at Dundee, on December 4, 1918, Mr Winston Churchill stated that the Government policy was the nationalisation of railways. It is difficult now for Mr Lloyd George and Mr Churchill and their supporters to condemn nationalisation of railways as subversive and revolutionary. It is true that the railways have been unified into four big groups, thus securing some of the advantages of nationalisation; that the number of directors is being reduced from over a thousand to about a hundred, and that large economies have been rendered possible in this and other ways. But one of the most important economies, the pooling of privately owned wagons, has not been secured, although Sir Eric Geddes stated on March 7, 1919, that if the Railways Bill was passed, “one of the first steps which the Government would take would be to acquire on fair terms the private wagons of the country.” Nor can anybody contend that the question of railway rates has been satisfactorily solved under the Railways Act. It is still possible for the companies to keep rates too high at the expense of trade and industry and the travelling public. Complete unification under a statutory monopoly and an independent board of directors, similar to that of the Canadian National Railways, with the elimination of private shareholders and privately owned wagons, is the logical solution of the present compromise. If the Labour party fails to carry it, one of the other parties is quite likely to take it up sooner or later.

The position with regard to the nationalisation of mines is not dissimilar. The Coalition Government's attitude was expressed by the Home Secretary in February, 1919, as follows:—“The Government desire to go into the matter to see if it is a good business proposition. If it is that I accept it.” The Sankey Commission was then appointed, and in its interim report the chairman and three employers, not connected with the coal industry, reported in favour of nationalisation or unification. On March 20, 1919, Mr Bonar Law said in the House of Commons that the Government was prepared “to adopt the Report in the spirit as well as in the letter, and to take all the necessary steps to carry out its recommendations without delay.” In the final Report, drawn up by the chairman, Mr Justice Sankey, a detailed scheme of nationalisation was put forward, but in view of the opposition among coalowners and other interests, the Government refused to adopt it. The miners accuse the Government of breach of faith, but whether this be justified or not, Mr Bonar Law's statement quoted above is difficult to explain away. It seems pretty evident that even the leader of the Conservative party had at one time ac-

cepted the principle of nationalisation or unification by State purchase.

Taxation of land values, which is another of the unpopular proposals of the Labour party, was, of course, one of the chief planks in Mr Lloyd George's radical programme before the war. As long ago as March 4, 1903, Mr Lloyd George said, in a speech at Newcastle: "Take the question of overcrowding. This land question in the towns bears upon that. It is all very well to produce Houses of the Working Classes Bills. They will never be effective until you tackle the taxation of land values."

Even the capital levy, unpopular as it must necessarily be, has been advocated by experts who have no connection with the Labour party. The idea of a levy on war fortunes has received a large measure of support from all parties, and the late Government set up a Special Committee to examine the question. It was pronounced by the Board of Inland Revenue to be quite practicable, although it would involve a double valuation, first of pre-war and then of post-war wealth. A general levy on capital would, of course, necessitate only one valuation. As for its economic effects, some of our foremost economists, such as Professor Pigou and Mr Keynes, have maintained that so far from being injurious, it ought, in fact, to afford considerable relief and stimulus to trade and industry, by rendering possible a diminution of direct and indirect taxation. If the assessment was steeply graduated, it would no doubt hit the very rich, but the majority of middle-class taxpayers would benefit if the reduction of their income-tax exceeded the annual value of their contribution to the levy. Mr Bonar Law admits that he was in favour of the proposal in 1917. He is, of course, entitled to change his mind, but it is going a little too far for him now to denounce it as "absolute lunacy."

Neither the case for it nor the case against it is generally argued with much regard for economic science. Among serious objections it is sometimes condemned as involving inflation, and sometimes for the opposite reason that it would mean deflation. On the whole, its tendency would, of course, be in the latter direction; it is for this reason that it has been imposed in Czecho-Slovakia and other European countries, and that the Reparations Commission are now proposing to enforce it a second time in Germany. Those who wish to see prices fall still further, and the pound restored to its pre-war parity as soon as possible, should logically be in favour of a fairly drastic levy. But others may quite properly regard this as a strong argument against it. A trade depression, they would argue, is not the time to have a capital levy; if prices were to start rising again, and a period of inflation should succeed the present slump, then it might be necessary to have a capital levy. As against this view its supporters would argue that it is precisely in order to prevent the development of this so-called "secondary" inflation in the near future that a capital levy is desirable. Provided it is not too drastic, its tendency would then be not so much to reduce present prices, but to stabilise the existing level by eliminating one of the chief causes of potential inflation. Government debt, it is pointed out, has largely replaced gold as the backing of credit and currency; and if we desire to restore the gold standard and prevent any undue expansion of credit in the near future, it would be a wise measure to reduce the volume of Government obligations in the hands of banks and private traders. This, of course, would not be a popular measure. Neither banks nor traders are inclined to look with favour on any measures designed to check the manufacture of credit. In this respect the capital levy bears some resemblance to the raising of the Bank rate. "Dear money" was extremely unpopular in the City in 1919, and partly for this reason it was unduly delayed. But we now see that it was necessary, and that the Bank rate ought, if anything, to have been raised earlier.

These and other considerations of a highly technical kind are not likely to appeal to the average elector. A capital levy is, indeed, one of the worst possible subjects for political controversy at a General Election. The Labour party have shown more courage than discretion in raising the issue, and thereby giving their opponents abundant scope for misrepresentation and abuse. As Mr

Bonar Law said on November 14, 1917, it is a matter which concerns mainly the people who have money. But if, as our diagnosis tends to show, the effect of a capital levy would be to check an otherwise inevitable drift towards further inflation, it would be in the interests of the wage-earning masses if a levy were imposed; since wages always tend to lag behind prices during a period of inflation. It would also probably be the best for the majority of middle-class tax-payers, and certainly, as its supporters are fond of pointing out, for the men who fought in the war and are now starting in business. But to most middle-class tax-payers, and even to young men going into business, the fact that the Labour party supports it is sufficient to condemn it.

SOUTH AFRICAN MINING AND TAXATION.

(BY OUR JOHANNESBURG CORRESPONDENT.)

THE annual report of the Union's Department of Mines and Industries, which has just been published, contains some interesting statistics regarding the various mining industries of South Africa. The value of output of minerals from the earliest existing records to the end of last year has just exceeded a thousand millions, the total being £1,022,108,800. Of this, the Transvaal output represented £716,891,000, and the diamond production of the Cape £170,137,700. The diamond production of the Transvaal, being almost exclusively that of the Premier Mine, figures at £30,234,000. The combined coal production of the provinces which now constitute the Union is returned at £53,944,000, of which the Transvaal represents £28,006,000 and Natal £20,886,500. The only other large item is £29,924,000 for copper, of which all but £3,206,000 (Transvaal) is credited to the Cape, representing the production of Namaqualand. Of tin, the production has been rather over four and a-half millions, almost entirely in the Transvaal province. There has lately been an increase in the production of asbestos, but the total value for the entire period is only just over three-quarters of a million.

The value of minerals produced in the Union for the eight months of this year, a period embracing the disastrous strike, which lasted from January 10th to March 16th, during which the production both of gold and coal was considerably curtailed, is given at £22,150,000, including currency premium on gold. Adding this figure to that preceding, makes the total value of mineral production £1,044,258,000. Up to the end of last year the currency premium is reckoned at £23,393,000, and, adding that secured during this year, brings the total premium to about 25½ millions sterling.

A diagram in the Blue Book shows the value of mineral production for the past eight years, and the allocation of the principal items of expenditure by the producing concerns. In the first four years of the period the value of gold produced kept pretty steady, between £35,664,000 (in 1914) and £39,500,000 (in 1916). In 1919 the currency premium on gold first came into existence, though only for the last five months of the year. In 1920 the premium was operative for the whole period, increasing the standard of value by £10,951,000 to £45,605,750, while in 1921 the currency price of gold diminished, though the premium was still worth £8,554,000, the total value being £43,082,150. Very considerable fluctuation is evinced in the value of diamonds. In 1914 it was only £5½ millions, but in 1919 the value was twice as great at £11½ millions, and nearly three times as great in 1920, namely, £14½ millions. Just after the outbreak of the Great War, the diamond mines were closed, and the yield in 1915 was valued at less than £400,000. There was also a rapid reversal in 1921, when the mines stopped work consequent upon the meagre demand, the value being returned at a mere £3,103,500.

Before the war, the entire expenditure on salaries and wages for all the mining industries was under £16 millions; in the years 1917, 1918, and 1919 such outgo increased regularly, and very rapidly in 1920, owing to the increased wages paid on the Rand gold mines, and also to expansion in the operations of other industries, to over £22½ millions. Following upon the subsequent

reduction of the cost of living allowance in the gold mines there was a distinct shrinkage to about £20½ millions in the following year. Stores have shown an ever-increasing tendency, the bill having increased from £11½ millions to about £17½ millions in both 1920 and 1921. This is, of course, in the main explained by higher prices for commodities, though expansion of operations in directions other than on gold mines is also a factor. On the gold mines, taken by themselves, the expenditure upon stores has increased from £10½ millions to nearly £14½ millions. But this expenditure, except in so much as economies in consumption may be effected, a strenuous campaign in this direction being conducted in the mines at the present time, is beyond the control of the mines, prices being largely influenced, and in some cases dominated, by world conditions.

For the years 1914 and 1915 the direct taxation imposed on the mining industry was well under two millions, £1,853,552 in the latter year. In 1916 the total levy increased to two and a-half millions. The payments in each of the next two years increased to three millions, the Government Areas mine was making substantial profits of £700,000 and £820,000, in which the Treasury participated, and diamond production had increased in value to over seven millions. The Government participated in the profits of the Premier mine, while the export duty was increased. Against a total mineral production of £55 millions direct taxation in 1919 reached the maximum of £5,200,000. Chiefly owing to the handsome gold premium, helped by the high price of diamonds the mineral production of the Union in 1920 soared to £66,332,000, but the direct taxation was rather less than in the previous year. The Government's share of profits of gold mines increased by nearly £300,000 to £1,108,500, but receipts from diamond export duty dropped by half-a-million, to £810,500.

Last year the estimated value at the mine of diamonds was a mere £3,103,500, as against £14,763,000 in 1920. This and the diminished gold premium caused the total production to wane to £51,839,700. Details are not available at present, but the direct taxation is estimated at only £2,855,000, largely owing to diminished export duty on diamonds.

In 1914, 1916, and 1917, aggregate dividends were steady in the neighbourhood of £10 millions, but owing to the greatly increased costs on the Rand gold mines, they dropped to £8,572,215 in 1918, more than recovering to £11,169,360 in 1919, and amounting to over £13,000,000 in 1920, but relapsing to £8,469,368 in 1921. The value of coal produced, which was only £2,259,000 in 1914, improved gradually, until it reached £5,148,683 in 1921. Production of miscellaneous minerals is small (£1,328,644 in 1920, and only £505,431 last year). Sundry expenditure has fluctuated greatly, being about £2½ millions in 1921.

The Union Government participates in the profits made by the Premier Diamond Mining Company, and six gold mines. The Government has received up to date from the Premier Company practically £5½ millions, and from the Government Areas just over £3 millions. It receives from the Meyer and Charlton Company 10.87 per cent. of the annual profits, its share to date amounting to £317,000. From Brakpan Mines the Government has received £102,000, and from Springs Mines £57,000. In the case of Brakpan the sliding scale arrangement is only operative from the beginning of this year, while in that of Springs Mines it only starts from the beginning of next year. Before that the companies paid only 5 per cent. New State Areas and the West Springs Mines will also pay a proportion of their profits to the Government, but these concerns are at present only in the developing stage.

The Government has from time to time disposed of Bewaarplaatsen and Waterights, in most cases by lease on the basis of annuity or a share of the profits; and in other cases by out and out sale, the latter usually where the area is small. The revenue received from leases up to March of this year has amounted to £1,976,600, and from sales £12,438. The Union and Provincial Governments receive a very substantial revenue from the mining industry, the total last year (1920-1921) being £5,109,000, which is practically double the pre-war figure. The largest item is £1,190,000 paid in income-tax by the Transvaal Gold Mines, and the next largest is £1,108,500 ownership

revenue on gold mines, of which the Government G.M. Areas (Modderfontein) alone contributed £896,000, the Transvaal provincial gold profits tax amounted to £281,500, the export duty on diamonds figured at £810,000, a drop of £521,000 on the year.

The share of profits on the diamond mines amounted to £800,000, and income-tax to £538,750. Income-tax from the collieries brought in £93,750. The actual share of profits on the gold mines and the diamond mines accruing to the Government was £1,912,000, constituting 37½ per cent. of the total amount received by the Government from the mining industry. These figures may be considered in relation to the total output last year of £51,840,000, inclusive of the gold premium.

BANKERS AND FREE TRADE.

IN view of the importance of the Free-trade issue at the forthcoming election, which is discussed in a previous article, we reproduce below the appeal of the great bankers of the City of London, issued in May, 1921. It reads as follows:—

"A hundred years ago, in a time of depression following a great war, the merchants of London presented to Parliament a memorable petition against the 'anti-commercial principles' of the restrictive system then in force. To-day, moved by the same anxieties, weighed down by far heavier taxation, and face to face with proposals intended to renew the restrictive methods of the past, we submit that it is essential to the revival of confidence that no legislative or administrative measures should be taken which would diminish the total output of British industry or check the free exchange of British goods.

"The burden of taxation can only be lightened if the necessity for public economy is resolutely faced. The present rate of national expenditure threatens to cripple the country's resources and to impair its credit abroad. In our judgment, it is more than the commercial community can bear, more than the capacity of the nation can afford, more than, were proper economies effected, the nation need be asked to sustain.

"The system of Government regulating trade by licences, controls, and departmental orders has, admittedly, however well intended, had in many cases unfortunate results. Political interference with the natural course of commerce without regard to economic laws invariably does mischief. British trade needs nothing so much for its recovery as freedom to deal with its own difficulties, to study and provide for its own interests, and to work out its own salvation.

"It is as true as it was a hundred years ago that foreign commerce conduces to the wealth and prosperity of a country by enabling it to import the commodities which other countries are best able to supply, and to export in payment those articles which from its own situation it is best adapted to produce: that freedom from restraint is calculated to give the utmost extension to foreign trade and the best direction to capital and industry: and that the maxim of buying in the cheapest market and selling in the dearest, which regulates every merchant in his individual dealings, is the best rule for the trade of the whole nation.

"The policy of trying to exclude the productions of other countries, with the well-meant design of encouraging our own, cannot increase the volume of commerce or the total volume of employment here. But it may well compel the consumers, who form the bulk of our population, to submit to privations in the quality or quantity of the goods they buy. The importation of foreign goods does not diminish the activities of our people, because such goods can only be paid for by the produce of British capital and labour. The advocates of a restrictive system are too apt to lose sight of the elementary fact that nations, or rather individual members of nations, buy foreign goods because they need them, not to benefit others, but to benefit themselves, and pay for them by producing goods which the foreigner in his turn requires. We cannot limit imports into this country without limiting our export trade, and striking a grave blow at the world-wide commerce on which this island kingdom principally depends.

"Trade is exchange. No nation which lives by trading with others can prosper unless other nations prosper too. We hold to-day great stocks of goods. We are ready to manufacture more. There is a large and insistent demand for them abroad. But owing to the paralysis of Continental commerce—due in part to the restrictive barriers which the new States have set up between themselves—the would-be buyers of our goods have not the means to pay for what they want. We have to build up the market that we need by encouraging Continental nations to export to us. For it is only by exports that they can re-establish their credit and provide funds for the payment of their debts. In such a situation we believe that all expedients to control and hamper imports into this country, whether by licences, tariffs, or any other means, can only retard improvement in the Continental exchanges and prevent the natural recovery of trade. Legislation of this nature, while it may increase the profits of a few selected industries, cannot fail to check our output as a whole, and to increase the costs of production to a level which may make it increasingly difficult for British traders to compete successfully with others in the markets of the world.

"With party or political considerations we, as bankers, are not concerned. But in the interests of British industry and commerce, now menaced by anxieties which it would be a profound mistake to underrate, we desire to enter a respectful protest against every restrictive regulation of trade which tends to diminish the resources of the State.

"London, May 12th, 1921."

The appeal is a masterly exposition of the clear logic of the Free-trade case, and the signatories make an imposing array of the most weighty names in the City. This appeal was three months later specifically endorsed in a manifesto signed by a lengthy and comprehensive list of business men and business firms, including names representative of the great staple industries—cotton, wool, and other textiles, coal, iron, and steel, machinery and engineering, shipbuilding, chemicals, building, railways, shipping, and import and export trades. These historic pronouncements should be before the electors' minds during the next few days.

Notes of the Week.

Great Britain, Germany, and the League.—We have frequently urged in these columns that, in the interests of international peace and progress, Germany should at the earliest possible moment be afforded the opportunity of undertaking full membership of the League of Nations. Mr Lloyd George has on several occasions pronounced himself in favour of this policy. We are glad to see that Lord Curzon adopts the same attitude. His speech in the City on Wednesday contained the following passage:—"We have always felt that the economic recovery of Germany was essential to Europe, and that she ought to be given the chance to regain her own equilibrium and self-respect. For this reason we have always been disposed to favour her admission to the League of Nations when she made an application to do so." It is satisfactory to find the Foreign Secretary fully aware of the advantages of German membership of the League. But obviously Germany will not apply until she is reasonably well assured that full membership will be accorded, and it remains for our Government to win acceptance of their views in this matter from other Powers who at present are believed to view the proposal with disfavour.

The American Elections.—The results of the State and Congressional elections held on Tuesday throughout the
