United States have once more exhibited the obsolescence of the existing party divisions, and have severely shaken the Republican party and the Government. Thirty-five Senators, 32 State governors, with a host of State and municipal officials, and the whole Lower House of Congress were chosen, and the Republican party, having held office for the best part of two troublous and disappointing years, was certain to suffer heavily at the polls. Still, with a majority of nearly 170 in a House of 435, and of 24 in a Senate of 96, with only 24 Senators retiring, it was sure to maintain its control in the Senate, and might fairly expect a working majority in the House. But in the Senate its majority has fallen, even counting Senator La Follette, from 24 to 8, while seven or eight of the majority are "Radical"; in the House there are 221 against 212 Democrats, while the one Socialist and one Independent will probably vote with the minority; and as many of the majority here are more or less "Radical" and "Progressive," putting the interests of the Middle West agriculturists before those of their party, its orthodox section may find itself reduced to impotence. Many of the results are specially significant. In President Harding's own State, Ohio, a Republican Senator has only just got in; in Massachusetts, Senator Lodge, President Wilson's most active opponent, has had a hard struggle to keep his seat; in Rhode Island, a Democrat enters the Senate (through the Labour vote), and for the first time for 60 years in Michigan; New York, the "Pivotal State" *par excellence*, has elected a Democratic Senator and a Democratic Governor; so has ex-President Wilson's State, New Jersey, which, like New York, repudiates Prohibition; Illinois has demanded, by a popular vote, the permission of light wine and beer; and Mr Volstead, the sponsor of the Prohibition Act, has been defeated in Minnesota, where the Scandinavian element, with its alcoholic traditions, is strong. The women's vote appears to have been heavy, and women candidates have fared better in the State than in the Congressional elections. The determining issues, however, have been purely domestic; there has been no sign of a change in the attitude of the United States towards the complications in Europe. The electorate has resented Prohibition, the new Tariff, one of whose chief promoters, Senator McCumber, has been defeated, the heavy taxation, the Administration's treatment of the coal and railroad strikes and the pension bonus question, the high freight rates ascribed to the Esch-Cummins Transportation Act, and the Shipping Subsidy Bill. None of these, however, involve a fundamental difference of party principle; but the "Radical" gains have suggested afresh the possibility of a fresh cleavage, the Conservative elements in both parties standing together against the Progressives, who would be supported on occasion by organised Labour. Some such cleavage has often seemed probable, and was approached in Mr Roosevelt's Presidential campaign of 1912. But the existence of the party "machines" may continue to prevent its realisation.

Indian Cotton Duties.—The leaders of the Lancashire cotton industry, both employers and operatives, are placing great importance upon the attitude of Parliamentary candidates on the subject of the Indian cotton duties. At the end of last week the general committee of the Federation of Master Cotton Spinners' Associations at its meeting in Manchester decided to ascertain the views of candidates for textile constituencies. A circular has been sent out by the federation asking the candidates to reply to the following question:—"Are you in favour of taking action to secure the removal or lessening of the difference now existing between the Indian Excise duties and the Indian import duties, which difference benefits the Indian spinner and manufacturer at the expense of the Indian consumer?" It is the intention of the federation to publish the replies when received. The answer given is expected to have a vital effect upon the chances of the election of members.

Chilean Loan in the United States.—The London office of the National City Company announces that its head office in New York offered on Monday \$18,000,000 Republic of Chile 7 per cent. United States dollar gold

on the grass so well as usual. Sheep have benefited from the drier conditions, and are thriving. Lambing is now commencing among the earliest Dorset Horn flocks.

bonds, due 1942, at the price of 96½ and interest, New York terms. An annual cumulative sinking fund of 2 per cent. will commence on April 1, 1925, and will redeem bonds by purchase in the open market up to 100, or by drawings at 100. The issue is not repayable before maturity, except for the sinking fund. The bonds, which are payable, principal, interest, and sinking fund, in United States gold at the National City Bank of New York, without deduction for any Chilean taxes, present or future, are free of United States income-tax for those neither residents in, nor citizens of, the United States. The total public debt of Chile, including this issue, is only slightly in excess of the total as at December 31, 1913. During this period population and national wealth have materially increased, and the country has had an unbroken record of over 100 years of financial stability, no default on any external loan having occurred during that period. We are advised that the issue has been over-subscribed.

The Crops.—The following is a summary of the monthly report of the Ministry of Agriculture and Fisheries:—The dry, sunny weather of October was of great benefit to the farmer, coming, as it did, after a cold, wet summer. The very protracted harvest was completed during the month, except in isolated cases, and conditions were favourable for potato and mangold lifting. Cultivations also made good progress in practically all parts of the country, and field work generally is now much less backward than a month ago. In a number of districts the corn harvest was not finished until the last week of October, but over the greater part of the country all the corn had been carted before the middle of the month. In Northumberland and Durham, however, where the weather of October was not so favourable as elsewhere, there was still a fair amount of barley and oats in the fields on November 1st, and some crops in upland districts in other counties had still to be secured at the date of the reports. At the end of October probably about three-fourths of the potatoes had been lifted in the country as a whole, this work being most backward in Northumberland and Durham. Weather conditions have been very favourable for the lifting of the crop, which has been stored in dry, clean condition. There is little disease, and the tubers are of good size and quality as a rule, being the better where grown on the lighter lands. Slugs and wireworms have caused a certain amount of damage in some districts. Now that a large proportion of the crop has been got up, it is found that in most districts the yields are heavier than was anticipated a month ago. The yield is now estimated at seven tons per acre, or one ton above the average of the past ten years, which indicates a total production of about 3,920,000 tons, or nearly 1,000,000 tons more than last year. The pulling and storing of mangolds is in progress throughout the country, and in some districts the bulk of the crop had been harvested by the end of October, under favourable conditions. The yield per acre for the whole country is estimated at slightly over 20 tons per acre, or 1½ tons above average, and the production at 8,500,000 tons, as compared with 6,250,000 tons last year. Few swedes have yet been taken up, and both these and turnips have made fairly good growth during October. These crops are healthy and sound, but in many districts the roots are small. Over the whole country a yield of rather more than 13 tons per acre is expected, or nearly a ton more than the ten-year average, which would give a total production of about 10,860,000 tons, against 6,600,000 tons last year. The dry weather of October enabled very good progress to be made with autumn cultivation, but work is still backward, especially in the north. Except on some heavy lands the soil has worked well, and good seed beds have been obtained. The clay lands had become rather hard, and needed more rain before sowing could be done satisfactorily. In the eastern and southern counties very fair progress has already been made with the drilling of rye, oats, wheat and beans, and a few crops are now showing through the ground. On the whole, the land is not so free from weeds as usual. There has been a good supply of grass during October in most parts of the country, but the frosts and cold winds experienced towards the end of the month checked growth. Cattle have done fairly well, but feeding cattle have not finished

The Rise in Cotton Prices.—During the last two or three weeks there has been a striking rise in the price of cotton. According to our Manchester correspondent, the movement has been due to reduced estimates of the American crop for this season, increasing exports from the United States, and greater activity in American textile centres. Last Wednesday operators displayed considerable interest in the fourth ginning report relating to the American crop, the figures being compiled up to November 1st. The statement gave 8,140,000 bales, against 6,646,000 bales at the same time last year, 7,509,000 bales in 1920, and 6,305,000 bales in 1919. The amount was less than anticipated, and resulted in a rise in prices in New York and Liverpool. The condition report on the crop published by the United States Government early in October indicated an output for this season of 10,135,000 bales, but the market opinion is that the ginning figures indicate a yield of less than 10,000,000 bales. The question of supplies is causing much uneasiness. Last season the amount of American cotton grown was 8,500,000 bales, and the consumption totalled to 12,800,000 bales. This year a crop of, say, 10,000,000 bales and a consumption equal to last season means that stocks before the end of next July will be reduced to a considerable extent, and the carry over may be little more than 2,500,000 bales. In the circumstances, there is ground for anxiety. With regard to prices, it may be said that since a month ago there has been an advance of 2½d a lb, the quotation for fully middling on October 9th being 12.82d, as compared with 15.36d last Thursday. The higher prices are adding to the difficulties of Lancashire spinners and manufacturers, as it seems quite impossible to get buyers of cloth in Eastern markets to pay the advances required, and everything points at the moment to a reduced consumption of manufactured goods.

Czechoslovak Trade and Finance.—In the financial committee of the Czechoslovak Parliament, Dr Rasin, the Minister of Finance, announced the intention of the Government to introduce a new gold coin, which would be used for commercial purposes and sold on the financial market in accordance with the price of gold. It is, however, impossible to introduce the gold currency for general use, because under present conditions such a currency would inevitably be conveyed over the frontiers to the detriment of the Czechoslovak finances. The Minister added that no date could at present be given upon which a gold currency could be adopted for all purposes. The Sugar Syndicate has recently published statistics of the production and consumption of raw sugar for the season 1921-1922, to which we append those for the previous season for purposes of comparison:—

	RAW SUGAR (in Metric Tons).	
	Season.	Season.
	1920-21.	1921-22.
Taken over from the previous season..	44,566	29,090
Output	717,239	662,520
Total	761,805	691,610
Home consumption	318,339	309,376
Surplus for export	443,466	382,234
Exports	414,376	376,328
Stocks outstanding	29,090	5,906

The decline in output of over 10 per cent. is due to the increase in the cost of production and to the fall in the world price of the commodity in the winter of 1920-21. A further step in the trade policy initiated by Dr Benes was made on November 7th last, when the Commercial Treaty with Germany was signed in Dresden.

Chartered Shares and the Rhodesian Referendum.—Disappointment, writes a Stock Exchange correspondent, is the keynote of the feeling with which holders in the British South Africa (Chartered) Company have received the official news of the substantial majority-vote in Southern Rhodesia against inclusion in the Union of South Africa. This means, of course, that the colonists prefer a Responsible Government of their own. Had Southern Rhodesia agreed to go into the Union of South Africa, it had been taken for granted by the Stock Exchange market, whose views had become communicated by various ways to many of the Chartered shareholders, that this would involve a prompt payment to the Chartered company proprietors, such payment to be made either in cash or in the shape of Union of South Africa stock. Estimates had been busy in advance making out the value of Chartered shares as anything between 25s and 35s, whereas the price is now about 12s, a shilling a share having been lost since the announcement was first made known. From the market point of view, the objection to the present state of affairs is, of course, that a further period of waiting sets in. The Chartered Company has already announced its intention of pressing forward its Petition of Right for payment to itself of about four million pounds sterling by the Imperial Government in respect of the claims made by the company. This was not dependent, except very indirectly, upon the result of the Referendum, but if the colonists had voted to join the Union of South Africa, it had been pretty generally thought that the four million pounds would have been paid over without further demur, whereas now the prospect is a legal tussle, with all the uncertainty that this implies. The Stock Exchange market, so far as can be gathered, is inclined to think that inclusion into the Union of South Africa is only a matter of time for Southern Rhodesia, the assumption being that the colony can scarcely expect to be able to raise loans on the security that it has now to offer, whereas the Union of South Africa, also probably hard up, is a recognised borrower of credit in the London market. The Chartered Company retains substantial assets. The prospects of any dividend, however, seem to be as remote as ever, and with the disappointment felt over the result of the Referendum, it is not surprising that shareholders, some of whom have paid ten times as much as the present price for their shares, should feel inclined to cut the business altogether, with a view to putting the money that remains into something which offers better scope for increased value. From the purely speculative point of view, Chartered have attractions whenever the price goes to the neighbourhood of half-a-sovereign, but the present times are not propitious for speculative enterprise except of the lock-up order.

United of Havana.—As a result of conditions ruling in Cuba and of substantial reductions in tariffs charged the report of the United Railways of the Havana and Regla Warehouses, Limited, for the year ended June 30th last shows a reduction in receipts from £6,329,700 to £3,893,900. Substantial savings, however, were made in expenses, principally on fuel and wages, and net income at £1,164,000 compares with £1,481,500, the ratio of expenses to receipts being 70.11 per cent. as against 76.59 per cent. To this has to be added the profit on the working of the Regla Warehouses and other properties, the gain in exchange (£218,500, against £150,300 a year ago), transfer fees, &c., and to be deducted the payment for the Marianao Railway, leased to the company. After these adjustments there remains a balance of £1,442,400, as against £1,810,200 a year ago. After payment of fixed charges and taxes and transferring £105,000 to a special account for deferred maintenance, a dividend at the same rate as last year, namely 4 per cent., is paid, leaving £207,100 to be carried forward, as against £239,400 brought in. British

and Cuban taxes absorbed £319,000, as compared with £663,000 for 1920-21. In December, 1921, the Cuban Government passed legislation re-establishing the tariffs ruling before December, 1920, which represented a reduction in the company's rates of 20 per cent., which adversely affected the earnings during the crop period. In some instances further reductions in rates have been voluntarily made in order to stimulate business or to meet competition from road or sea transport. The general manager, in his report, mentions that a satisfactory disposal of carried over sugar stocks relieved the financial position of the planters and mill owners very noticeably, and had a marked effect on the company's collections of the large sums outstanding for freights of the previous crop. Altogether the sugar industry is on a much sounder footing than it has experienced for some time past. "This fortunate relief from the embarrassments of the last two years is due in a large measure to the far-sighted policy adopted by the foreign banks operating in the island." Summer rains have been exceptionally favourable to this year's crop, which is in excellent condition, and a harvest of over 3½ million tons is anticipated. The general manager "can see" no immediate reason why the current year's operations should not terminate with results no less favourable than those of the year now under review."

Dalgety and Co.—The profits of Dalgety and Co., the well-known Australasian company, for the year ended June 30th last show some recovery, and the position is still further improved by the refund of £158,210 of excess profits duty. Profits for the year, after allowing for depreciation, &c., were £775,660, as against £689,168 for the previous year, while expenses rose from £310,317 to £362,475. Taxation also increased from £134,858 to £204,015, but thanks to the recovery of excess profits duty mentioned above the available balance, after payment of debenture interest, was £252,790, as compared with £140,606 a year ago. A comparison of results since 1906 is set out below:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debt Interest.	Prof. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
	£	£	£	£	£	%	£	£
1906	371,591	148,171	114,439	..	70,000	7	40,000	55,381
1907	427,490	164,441	115,306	..	70,000	7	70,000	63,124
1908	430,746	170,328	113,230	..	70,000	7	70,000	70,311
1909	477,125	180,186	117,611	23,868	70,000	7	85,000	70,772
1910	542,534	198,362	122,364	25,000	80,000	8	110,000	77,579
1911	551,371	215,000	117,232	25,000	80,000	8	110,000	81,717
1912	546,877	216,446	112,992	25,000	80,000	8	110,000	84,155
1913	562,229	230,525	108,326	25,000	80,000	8	110,000	92,532
1914	570,510	245,434	105,593	25,000	80,000	8	10,000	197,015
1915	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112
1922	775,660	408,280	114,591	25,000	150,000	15	60,000	101,901

The directors state that the year 1921-22 was unusually varied in character, and though on balance there has been an appreciable recovery from the depression of 1920-21, this has been mainly confined to the Australian business. "New Zealand is still suffering from the effects of unremunerative prices for its pastoral products coupled with the serious fall in land values, but we look for some recovery during the current year." As will be seen from the table, the distribution on the ordinary shares has been restored to the 15 per cent. paid for 1919-20, the dividend of 10 per cent. and the bonus of 5 per cent. being paid free of income-tax. The reserve fund has been increased by profits on the sale of certain investments, and with an allocation of £30,000 out of the past year's profits now stands at £1,000,000. Premises are written down by £20,000, and £10,000 again goes to the staff provident fund. The balance-sheet, which is a full and detailed statement, is analysed in the usual column. The principal changes are increases of £812,200 in cash and of £453,500 in investments, and a decrease of £603,000 in advances on land, &c.

Gold Fields Rhodesian Development.—Our mining correspondent writes:—This undertaking pursues what may justifiably be termed the even tenour of its way, having paid dividends totalling 10 per cent. for five years in succession. Actually the 1921-22 net profit of £108,750—which compares with £114,100 previously—falls somewhat short of the amount required to cover the distributions; and as £46,300 has to be written off investments, the carry-forward is heavily drawn upon. The company's principal interests continued to be in the B.S.A. (Chartered), certain asbestos undertakings, and the Shamva, the holding in the former having been substantially increased and in the latter slightly reduced during the year. A new participation takes the shape of 100,000 \$5 shares in the South American Gold and Platinum. This investment was made "owing to the continued absence of favourable opportunities for investment in Rhodesia." The net liquid assets shown by the balance sheet to June 30th—£230,000—are equivalent to 3s 8d per share. Unless business improves during the current session it may be found difficult to maintain the dividend rate.

British-American Mining.—Interest attaches at the moment to the respective positions of a number of British-owned undertakings operating in one part or another of the American continent. Two of these, the Colombian Corporation and the Tomboy, have just issued their annual reports. The former—whose field is indicated by its title—is developing a property formerly owned by a local company, which paid dividends over a number of years. The programme of the present concern is to put up a mill having a capacity of at least 300 tons per day. Working on this scale, the consulting engineer calculates that a profit of £70,000 to £100,000 per annum could be made, but he recommends the installation of a 600-ton mill, which would permit the doubling of the profit, working a lower grade of ore at a lower cost ratio. The ore reserves are stated to be sufficient to supply a 300-ton mill for several years. The question of finance, however, arises. Already a loan to the extent of over £100,000 has been raised, and an up-to-date statement shows that the remaining capital resources only amount to £32,500. In the year ended June 30th last the Tomboy Gold Mines Company, whose properties are situated in Colorado, U.S.A., crushed 211,000 tons for a profit of \$71,100. Practically the whole of this was absorbed by depreciation, and the balance-sheet shows a cash deficit. In the Montana area, where encouraging results have been secured, the ore reserves are placed at 500,500 tons; including the reserves in the two other properties the total ore available is 812,750 tons, or four years' supply for the mill. Recent monthly profits have shown improvement. Many years ago the value of the San Francisco mine, Mexico, was recognised, but until lately the ore body has defied profitable treatment by reason of its complex character. During the current year, however, substantial profits have been secured from the operation of a new plant, the working profit for the five weeks ended September 30th being about \$50,000. This is at the rate of over £100,000 per annum, while the capital of the company is only £175,000. There is a debenture issue of £200,000, convertible into shares, and the balance of a loan of £100,000 provided by a well-known Kaffir house, the Union Corporation. When the remainder of this advance has been cleared off the company will be in a position to devote its earnings to dividends. The Mexican Corporation is unwatering a mine whose former owners had to suspend operations by reason of being unable to cope with the flooding of the lower levels. Values at the first of the levels cleared have been encouraging, and the next one—now reached—is expected to show larger quantities of ore carrying higher values. Meantime the company is treating a huge dump of material at the rate of 70,000 tons a month, getting a revenue of over \$3 per ton at a cost of about \$2.10. Early next year the returns should be increased by the treatment of ore from the mine. A third annual report just issued is that of the El Oro Mining and Railway Company. It shows the increased net profit of £83,600, which considerably more than covers the dividend of 1s per share, tax free—the same

as paid for a number of years past. A feature is a reduction in the cost ratio, largely compensating for an appreciable further decline in the average yield. Development enabled the ore reserves to be estimated at the somewhat enhanced total of 339,700 tons—which, however, represents less than one year's supply. An interesting item is the announcement that the company's Inversione subsidiary has acquired on lease, and is developing, a silver property. The directors have taken the conservative course of writing off \$500,000 out of \$835,600 expended.

The committee of the City of London Y.M.C.A. announces that Sir Herbert Hambling will speak on "Current Rates of Exchange and Their Relation to Pre-war Gold Parities: the Desirability for De-valuation," in the large hall of the City of London Y.M.C.A., 186 Aldersgate street, at 6.0 p.m., on November 15th.

At a meeting of the Royal Colonial Institute at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on Tuesday, November 14, 1922, at 8.30 p.m., a paper on "The Growth of Empire" will be read by the Right Hon. Sir Frederick Lugard, G.C.M.G., C.B., D.S.O. The Right Hon. Viscount Milner, K.G., G.C.B., G.C.M.G., will preside.

UNDER the auspices of the trustees of the London Savings Banks in Lambeth a conference has been called to discuss ways and means of eliminating default in connection with slate clubs, loan clubs, and kindred sharing-out societies which frequently occurs about Christmas time. It is pointed out that not only do such frauds impose acute distress upon those immediately affected, but this abuse on the part of a tiny minority tends to shake public confidence, and the whole movement of thrift-promotion is likely to be seriously retarded. The "Anti-fraud Conference" will be held on November 17th, at 8 p.m., at the Old County Hall, Spring gardens, under the presidency of Field Marshal the Lord Methuen.

Oversea Correspondence.

UNITED STATES.—TRADE AND INDUSTRY.—IRVING NATIONAL BANK SURRENDERS FEDERAL CHARTER—MR GARY AND INTERNATIONAL DEBTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 27.

THIS week's reports as to trade and industry generally throughout the United States are the best that have come to hand since the spring of 1920, and the outlook continues favourable in most directions. A survey of the situation, however, reveals some noteworthy contrasts in the volume of buying and in price movements in the more important trades and industries. In the extent of buying and strength of prices textiles easily lead. Iron, steel, scrap material, soft coal, and coke are lower. The recent easiness in steel is regarded as indicating not so much real weakness as it does the disappearance of scarcity caused by the railway and coal strikes. The shoe, leather, automobile, lumber, and furniture trades show varying degrees of activity. Builders' hardware, cement, and lumber continue more active than usual at this season. Lumber production apparently reached its peak a week or so ago, and there are widespread complaints of a scarcity of cement. In the steel industry railroads are still the best buyers, especially of rolling stock, and it is reliably reported that the largest steel producer has been obliged to enter the open market for supplies of steel to fill some orders. Complaints of car scarcity are becoming more general, conditions on the Pacific coast, in the coal and lumber regions of the south, in the spring wheat section of the north-west, and in the lower lake districts are said to be acute. Latest reports show that car loadings are somewhat below those of the last week in September, but only about 3½ per cent. below the peak total touched in

the second week of October, 1920. Wholesale and jobbing trade in all sections is exceptionally active, and bank clearings, although smaller than last week, greatly exceed those of a year ago.

As indicated, textile markets, particularly those for finished and unfinished cotton goods, have recently led all others in point of strength and activity. With spot cotton this week soaring well above 24 cents, a new high level for the year, the advancing tendency, which had already been pronounced in cotton goods prices, gained greater momentum, and has now embraced practically all descriptions of cotton textiles. While increased strength of the staple is considered largely responsible for the vigorous upturn in goods values, buyers themselves have rapidly bid up prices. The extent of the demand for cottons that has developed within the past fortnight is a revelation to mills and selling agents, who only a short time ago were apprehensive lest any substantial advances might check buying. From the apparent urgency and breadth of the demand, especially for finished cottons, it is inferred, and no doubt correctly, that distributors' stocks generally have become greatly depleted. Surplus stocks in first hands have become practically exhausted in many lines, and mills are so heavily sold ahead in numerous instances that they will be unable to take on additional business for a number of months. One of the factors largely responsible for the acute situation in the primary market for cottons is the fact that the loss in production, resulting from the New England strike, amounted to something like 400,000,000 yards. Reflecting the higher cost of the staple, cotton yarns, both weaving and knitting, have been advancing by leaps and bounds almost daily for the past week or two, and many numbers are now commanding prices from 3 to 8 or 10 cents a pound higher than a month or so ago. Some cotton yarn houses, despite the upward trend, have done a larger volume of business this month than in any corresponding period in their history.

The activity and rising tendency in textiles has not been confined to cotton goods. Woollens and worsteds have advanced sharply, and are moving quite freely at the higher levels. Increased cost of raw wool, together with scarcity of supplies, is given as the main reason for the advances in woollen and worsted fabrics, which probably mean higher prices for clothing later on. Broad silks of all descriptions are selling in exceptionally large volume in wholesale establishments, notwithstanding steadily advancing prices necessitated by the abnormally high levels ruling for raw silk, and demand exceeds supplies available for prompt and nearby delivery in many lines.

This week's announcement that the Irving National Bank will cease to be a "national" bank, and, after combining with the Columbia Trust Company, will operate under a State charter, is attracting a great deal of attention in banking circles. The announcement of the merger contains no reference to the reasons which prompt the Irving National to surrender its Federal charter—a step without precedent so far as important national banks are concerned—but it is understood that this course was taken for the purpose of allowing the bank to expand through branch banks in order to meet competition created by similar expansion on the part of other banks. National banks which are already operating branch banks are doing so under charters providing for such operations which were granted before amendments to the national banking laws, prohibiting such expansion, were enacted. The Irving National's action is considered likely to have an important bearing on the question of amending the national banking laws so as to permit national banks to operate branches. At the recent bankers' convention here there was an animated discussion of that subject, which ended in the adoption of a resolution opposing such an amendment. Comptroller of the Currency Crissinger and other officials of the present Administration, on the other hand, are said to favour an amendment which will confine branch banking by national institutions to the cities in which they have their main offices. That proposal is regarded as a compromise, apparently intended to allay fears of country banks that national banks may be allowed to open branches in small towns and thereby encroach upon their field. The laws

of New York and other States allow branch banking. Under the plan approved by the directors of both institutions, the consolidated company will be known as the Irving-Columbia Bank and Trust Company; it will have a capital of \$17,500,000, and surplus and undivided profits of \$10,500,000.

In addressing the annual meeting here of the American Iron and Steel Institute, its president, Elbert H. Gary, who is chairman of the board of the United States Steel Corporation, advocated another international conference at Washington for the purpose of adjusting the international debt question, and "for a full and frank discussion of all unsettled financial, commercial, and industrial matters in which our people are interested directly or indirectly, to be participated in by representatives from the different nations, such as those who appeared at the recent Limitation of Armament Conference. If there shall be such a meeting," he added, "and the delegates are all of the type referred to, there will result incalculable good to all who are parties. They would not decide or discuss how to abolish or overcome the old-established law of supply and demand, how to avoid or repudiate existing legal obligations, but rather how and when to fulfil them without irreparable injury to anyone, or the sacrifice of principle. It would be found that the United States is always disposed to be just, reasonable, lenient, impartial, and friendly." Commenting on the international debt question, Mr Gary said: "The doctrine of supply and demand, which is one of mutuality, is germane to the present public and private discussion relating to the enormous debts owing by certain foreign nations to the United States. They were voluntarily, openly and fairly contracted. They cannot properly be cancelled or disposed of on any other basis without doing violence to well-recognised principles of justice and rules of propriety. To cancel these debts or any part of them without full payment would be forced charity, and that is never agreeable to the donor, and, as a rule, is equally disagreeable to a self-respecting person or nation. It is the individual citizens of the different countries who are to be consulted, and whose decisions must control." Regarding general business conditions in the United States, the head of the Steel Corporation said that great prosperity was "right before us," and that it could be headed off only by artificial interference with the law of supply and demand. He favoured laws requiring "full publicity of economic transactions so far as they affect the public welfare." Regarding immigration, he advocated laws that would admit immigrants "on the basis of quality rather than number."

FRANCE.—BUDGET PROSPECTS—M. BERENGER'S ESTIMATES—INCOME-TAX—BOURSE. (FROM OUR CORRESPONDENT.)

PARIS, November 8.
PARLIAMENT is deeply engaged in the discussion of the Budget for 1923, but it must be confessed that so far no great light has been thrown on how the most difficult financial situation with which the country has ever been faced is to be satisfactorily met. One might almost go further, indeed, and insist that, so far, no two authorities are agreed as to what the exact financial situation really is. M. de Lasteyrie, in his Budget Estimates, forecasts a deficit of some four milliards; M. Henri Bérenger, the Rapporteur Général of the Senate Finance Commission, asserts that it will be at least 7,000,000,000, while M. Bokanowski, in the report on the new Budget which he has presented to the Chamber, puts it at quite another figure. All parties appear to be agreed, however, that it will be impossible to get through the coming financial year without further borrowing on an enormous scale, and that it is of vital necessity to France that the whole questions of German Reparations and the inter-Allied problem, at the earliest possible moment. The hope is still growing that British election results will clear up the political situation on the other side of the Channel sufficiently to enable Mr Bonar Law to see eye to eye with M. Poincaré on this all-important matter, and consent to participation—being called together in the very near future.

M. Henri Bérenger, in an explanatory statement on the national finances which he has just drawn up, has set forth some interesting figures which it will be as well to place on record. At the outset of his statement M. Bérenger expresses his astonishment that the Minister of Finance, four years after the end of the war, is still apparently unable to furnish Parliament with exact figures as to the nation's income and expenditure. In this connection the Rapporteur for the Senate Finance Commission makes the extraordinary statement that, strange as it may appear to be, no "general accountancy" exists, in regard to the national affairs, either at the Ministry of Finance or elsewhere. In the circumstances, M. Bérenger, like many others whose duty it is to criticise the national finances, has drawn up his own statement of the nation's financial assets and liabilities, which is as follows:—

LIABILITIES.		Frs.
Public debt.....		337,000,000,000
Unpaid interest on foreign debt.....		5,000,000,000
Reparation debt.....		132,000,000,000
Liquidation of special accounts.....		1,000,000,000
Total (in paper francs).....		475,000,000,000
ASSETS.		
Claim against Germany.....	124,000,000,000	
Claims on other foreign governments.....	15,000,000,000	
		139,000,000,000
So that, even if Germany carries out her obligations and the governments who owe money to France clear off their debts, this country would still have to face a final deficit of.....		
	Frs (paper)	336,000,000,000

M. Bérenger, in dealing specifically with the budgetary situation for the coming year, condemns flatly the purely artificial method of dividing the estimates for the year into two distinct parts, the one (or "Ordinary" Budget) comprising the normal expenditure of the country, and the other "Expenditure Recoverable from Germany." "Unless we wish to take the risk of a catastrophic error," Senator Bérenger remarks, "the French General Budget should include all the expenditure necessitated for the reparation of losses suffered from the war, the payment of interest on our debt, the sums necessary for our public services, and should show, on the other hand, nothing but the resources of which we actually dispose." If this were done, he asserts, the deficit on the Ordinary Budget for 1923 would be shown as 7,000,000,000 (and not four milliards), and the deficit on the Budget of Recoverable Expenditure would be at least 10,000 millions, making a total of over 17,000,000,000. If the Chambers agree to the Government's proposal, therefore, to meet the deficit for 1923 by loans, the nation's public debt will be increased during the next 12 months by 17,000,000,000, and from 1923 onwards will consist of considerably over 350,000,000,000.

After dealing with the various special accounts (over 1,000,000,000), supplementary credits (nearly 3,000,000,000), the advances by the Bank of France (over 23,000,000,000), the National Defence Bonds (over 63,000,000,000), and the Treasury Bond issues, &c., M. Bérenger sets forth the following figures as showing what he considers the real situation of the Budgets for 1922 and 1923 respectively:—

	1922.	Frs.
Known expenditure.....		55,517,000,000
Known revenue.....		24,691,000,000
Deficit (to be raised by loans).....		30,826,000,000
	1923.	Frs.
Estimated expenditure.....		54,519,000,000
Estimated revenue.....		19,285,000,000
Deficit (to be raised by loans).....		35,234,000,000

The fact that the only proposal put forward by the Government is that these enormous deficits, amounting together to over 66,000,000,000, should be met by the issue of further loans, M. Bérenger characterises as startling, and he expresses the opinion that such a policy cannot continue. He insists that the first steps towards the restoration of the French finances must be for the Chambers resolutely to forbid all arbitrary governmental action in financial matters, and for the strictest control over all expenditure to be applied, together with the civil and penal sanctions laid down for application in cases in which such control is infringed. The Ministry of Finance, further, should be thoroughly reorganised. "Created for a budget of five milliards, and for the control of taxes that no longer exist,

it functions badly for a Budget of 50 milliards and a new fiscal system." As a fiscal programme for the 1924 elections, M. Bérenger proposes "the progressive replacement of the new indirect taxes on articles of consumption, by bringing taxation on large incomes and inheritances into stronger and more precise operation," and a much stricter application of the income-tax law. "At the same time, we must revise our customs system and our railway rates, and put an end to the excesses of an agrarian policy which has resulted at home in raising the cost of living, while abroad it has caused reprisals to be taken that have closed foreign markets against us." M. Bérenger is convinced that henceforward the only method by which France will secure payment of reparations from Germany will be in kind, rather than cash, and that her payments will have to be financed by German Treasury bonds, countersigned by countries having a sound currency, and under the accepted control of the League of Nations.

M. Loucheur, who on Tuesday made one of his rare speeches in the Chamber, is also convinced that payments in kind are all that may now be expected from Germany. The former Minister for Reparations, who is always heard with great attention (and always in his capacity as one of the great French industrial leaders, rather than merely as a politician), insisted that the great blunder committed by the Allies was to allow currencies to depreciate after the signature of the peace treaty. "The real cause of the fall of the exchange in 1919 and 1920 was the decision of Great Britain and America to suppress all credits as between State and State. That decision marked the blackest day since the war ended. On that date millions of British workmen were sentenced to unemployment. To-day, as in 1919, we are faced with the dilemma of having to allow Germany to produce as much as possible, and to encourage her exports, or to get nothing out of her. It was because I realised this necessity that I urged the bringing into existence of the Wiesbaden agreements." Referring to the question of inter-allied debts, M. Loucheur once more surprised the Chamber by insisting that it was useless to include the debt owing to America in the total to be paid by France, "because it is impossible for us to pay it." To the exclamations with which this statement was greeted M. Loucheur retorted: "I shall be glad if anybody can tell me by what possible means we can transfer seven milliards of dollars from France to America. The British can no doubt pay their debt to the United States, but we, whose trade balance barely balances, find it physically and materially impossible to do so. If it is possible to demonstrate the contrary, we will pay."

Like M. Bérenger, M. Loucheur insists that much greater results could be obtained from the income-tax if those who should pay it were made to pay. He mentioned a district within his own knowledge where only 105 persons made returns for income-tax out of a population of 15,000, whereas his own inquiries showed that at least 900 were assessable. M. Loucheur urged that the local income-tax commissioners should have power to assess on external appearances of wealth. He went on to plead for cheaper money, and asked the Government to reduce the interest paid on its loans. The discount rate, he insisted,

covered by the balance of the gold reserve in the Austrian department of the Anglo-Austrian Bank and by the remainder of the provisional French and Italian credits.

The condition of the State finances is still very bad, and, according to even the optimistic reports of the Government, the international credits can hardly be expected to be realised before the end of next February. In order to carry on the administration of the State until then without a further recourse to the money printing press, a Bill was passed entitling the Government to issue Treasury gold bonds up to the amount of 130 million gold kronen, as mentioned in our last fortnightly letter. It is intended to place about half of this amount in Austria: 30 millions are to be taken over by the banks, and about 35 millions will be offered for subscription on the Austrian market and guaranteed by the banks. A mortgage on custom duties and the tobacco monopoly will serve as a guarantee for the bonds to be placed in Austria. The second half of the amount of the Treasury gold bonds, with a value of about 65 million gold kronen, is to be placed abroad with the assistance of the delegates of the League of Nations. This second half will be covered partly by the above-mentioned mortgage, partly by the balance of the gold reserve in the Austrian department of the Austro-Hungarian Bank, and by the remainder of the provisional French and Italian credits. It is doubtful, however, whether these efforts will really be able to stop the money printing press. Up to now no decisions have been made with regard to the foundation of the new issue bank, as the delegates of the League of Nations is still studying the project drawn up by the Government, and will probably make a great many alterations.

The greater part of the securities and shares dealt in at the Stock Exchange have fallen 40-50 per cent. in value since August. This is due, on the one hand, to the over-speculation made in these values recently, and, on the other, to the present stringency of money. Finally, it is due to the continuous new issues, which have diminished the intrinsic value of the shares of most Austrian firms.

The compulsory internal loan, which has lately been issued with interest at 6 per cent., has been fully paid up. As the bonds are not yet printed, they are only dealt in at a private market, on which the price is estimated at only 60 per cent. of their face value, so that the subscribers have already lost 40 per cent. of their subscription. During the month of September the bank-note circulation was increased almost a billion kronen, and for the month of October the same amount is estimated. The ill-effects of the State control of the money market (Devisenzentrale) grow more obvious every day, and hamper all business abroad. Austrian dealers who have bought materials or goods abroad in order to manufacture them here or to export them are quite often unable to meet their obligations, as the "Devisenzentrale" does not place the necessary amount of foreign currencies at their disposal.

Therefore, the opposition to the State control is growing in Austria, and it is hoped that it will at last have to give way before the general protest against it. For the first time in many months the index figure shows a considerable decrease. While it showed an increase of 91 per cent. in the previous month, it shows now a decrease of 8.9 per cent. for the period September 15th to October 15th. This fact must be highly appreciated, as it forms at least a moral hindrance to a further increase in prices. According to the Index Law, a reduction of salaries and wages can only take place if the index figure shows a downward tendency next month also. The postal tariffs were doubled on November 1st. A slight reduction in the prices of textiles, shoes and various foodstuffs, which took place during the last fortnight, is due to Germany and Czech competition, especially in those cases where dealers and manufacturers were compelled through lack of orders and money to make forced sales. The gold parity for payment of Customs dues, which amounted to 15,100 at the end of September, was fixed at 14,975 for the first two weeks in October. The amount of foreign currencies in the country has decreased considerably during the past few weeks, since export has practically stopped, and importers have to pay their obligations in foreign currencies at once. Beside this, numerous concerns are only able to carry on by selling their holdings in foreign currencies.

CANADA.—TRADE CONDITIONS—BRITISH EMPIRE EXHIBITION—IMMIGRATION SCHEMES—PROBABLE REPEAL OF WAR FINANCIAL LEGISLATION—NEW INDUSTRIES—EXPANSION OF PULP AND PAPER INDUSTRY—TRADE RETURNS—BANK ROBBERIES IN THE WEST.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 23.

THE hope that the last quarter of the year would bring solid evidence of widespread business improvement has been supported by developments in October. The field crops have now, with a few exceptions, been safely garnered under very favourable conditions, and their volume has been found to exceed the roseate estimates which were hazarded at the beginning of September. The only drawback is the lowness of agricultural prices, which are back at pre-war levels, and in some cases below them. There has recently been a slight rise in the price of wheat, but farmers complain that it still does not repay the cost of production, and coarser grains, like oats and barley, which are selling for about 25 and 30 cents per bushel even in the vicinity of Winnipeg, are a positive drag upon the market. The result is that after the farmers, particularly in the West, have satisfied creditors, such as the banks and implement companies, their purchasing power is low, and when they find that a large number of manufactured goods are still only available at 75 or 100 per cent. above the pre-war prices, they are disposed to criticise an economic system which permits this disparity. But so abundant a crop could not fail to set in circulation a very large sum of money among the farmers. It is being marketed more expeditiously than last year, and already three times as many cars of wheat have been inspected as at the corresponding date in 1921. The result is that while irregularities are visible, both wholesalers and manufacturers report a rising trend of demand for many lines of goods. The approach of winter has generated the usual activity in the drygoods trade through demands for warm clothing. A check in the upward price movement of certain basic commodities, like iron and steel, coupled with the satisfactory settlement of the coal-mining and railway labour disputes, has eased the tension in the industrial world, and where either complete stoppage or curtailment had been enforced. There are some transportation difficulties which might check the outward flow of grain is threatened at the ports at the head of the Great Lakes. As the result of the crop movement, the traffic returns of all the railways show a most gratifying improvement, but there is complaint that the recent reductions in freight rates have lowered the margin of profit in handling Western grain to a negligible level. But consumption is plainly increasing in many channels, and stocks of goods are everywhere in need of replenishment. Moreover, merchants are now abandoning the policy of hand-to-mouth purchasing which they have pursued for the last three years, and are providing for future requirements on a liberal scale, with the result that factories, being assured of orders, can purchase their raw material in larger quantities and at better prices, and guarantee steady employment to their workers. Seasonal conditions may account partially for the present expansion of business, but many of the gains are in fundamental basic industries, and likely to be of a permanent nature. The stock markets have recovered from the disturbance of the Near Eastern crisis, and while there have been few spectacular gains, prices have remained firm. The milling companies have all shown good returns, and their stocks have improved several points.

As the result of a visit of Major E. A. Belcher, assistant-general manager of the British Empire Exhibition, the other Dominions have agreed to follow the example of assistance which they will give will be determined after consultation with the provincial Governments, and should in the end be substantial. Immigration schemes are very much to the fore, and the Canada Colonisation Associa-

tion, which was backed up by representatives of the transportation companies, recently laid before the Government a number of suggestions for a vigorous immigration policy. Efforts are to be concentrated upon a rapid increase of the rural population, which, it is calculated, will swell the demand for industrial products and the traffic returns for the railways, but it is noticeable that the agrarian papers contain frequent letters protesting that an increase in the number of agricultural producers will simply mean lower prices for grain and livestock.

The position of Canadian funds in New York has been maintained, and American dollars have now to pay the customary small discount in Canada. In view of this situation, the approaching session is likely to see the repeal or modification of the relics of the war financial legislation, and possibly the return of Canada to a gold basis. To-day the proviso for the redemption of Dominion notes in gold is still suspended, and there is an embargo on the export of gold. The number of Dominion notes outstanding has been materially reduced, and the fear that the gold reserve might be heavily drawn upon by the presentation of Canadian notes held by Americans has been removed. Many bankers favour an immediate return to the old conditions, but Mr Fielding has not given any intimation of his views. He is at present in London, and will probably consult with the British Treasury upon the problem. The Board of Commerce which the Federal Government set up to regulate prices and check combines in restraint of trade was declared *ultra vires* by the Privy Council, but the Ontario Government has now in contemplation the establishment of a provincial board for Ontario, which will perform the same duties for that province; it would be empowered to regulate prices, suppress combines, and generally protect the consumer, and its constitutionality could not be attacked. Evidence about the possible effects of such a measure is being taken by a Parliamentary Committee at Toronto, and it met with unexpected support from representatives of the wholesale and retail trade.

New enterprises are being continually started in Canada, and one of the most interesting is a plan, which has made considerable headway, to manufacture the binder twine required for the Western harvest out of hemp grown on the prairies, where it can be produced in just as good quantity and quality as in Russia. At present the West imports all its supplies of binder twine from Eastern Canada, New England, or Belfast, and the transportation cost is a heavy item. It is largely manufactured from sisal, which is grown in Central America, and obviously there are great possibilities of economy if a local-grown product could be utilised. The preliminary experiments have been very encouraging, and capital is being raised for the erection of a factory.

The pulp and paper business is still very prosperous, and an agreement was recently reached for a slight increase in newsprint prices. The building of fresh plants goes steadily on, and at present, in addition to a new mill of the Belgo-Canadian Company in Quebec, three others will soon be in full operation at Bathurst, N.B., Fort William, Ont., and Wigwam, B.C. Far-seeing lumbermen, however, declare that the depletion of Canada's forest resources is going ahead at a dangerously rapid rate, and must sooner or later have disastrous results. The clearing of certain forest areas in which rivers rise has made the country through which they flow much more susceptible to droughts, and the problem is receiving the attention of the Ontario Government, which is encouraging municipalities to promote reforestation.

The trade returns for September are regarded as very satisfactory; the comparative figures are appended:—

	1921.	1922.
September—	\$	\$
Imports	59,805,487	60,318,410
Exports	58,263,182	71,592,628
Total trade	119,395,686	133,252,691
Favourable balance	1,542,305	11,274,218
Forward merchandise expend't re	1,327,017	1,341,653
Six months ended Sept. 30th—		
Imports	378,815,250	363,915,736
Exports	335,677,131	388,233,296
Total trade	721,710,724	759,374,880
Favourable balance	43,138,129	24,317,560
Forward merchandise expend't re	7,218,343	7,225,848

* Adverse.

The best feature is the increase of 13 million dollars, or more than 20 per cent., in the exports for the month. The decline in imports may be traced in part to the coal and railway strikes in the United States.

There has been a strange epidemic of bank robberies in the prairie provinces, which have always prided themselves on their freedom from lawlessness. In town after town local branches of banks have been held up and robbed by gangs of robbers who arrived in fast motor-cars, and had cut off all telegraphic and telephone communication before beginning their operations. In nearly every case they escaped with their booty over the American border, but vigilance committees are now being formed, and the police forces on both sides of the line are being strengthened.

POLAND.—INFLATION—EXCHANGES—COST OF LIVING—INTERIOR LOAN.

(FROM OUR CORRESPONDENT.)

WARSAW, October 26.

DURING the six months from October to March the financial situation of Poland was steadily improving. The quantity of new paper marks put into circulation fell from 30 milliards in October to 3.5 milliards in March. Since April the printing press has been working again under high pressure, as may be seen from the figures given below:—

		Circulation.	Increase
		Milliard Marks.	in Comparison with Previous Month.
January, 1922	239.6		+ 10.1
February, "	247.2		+ 7.6
March, "	250.7		+ 3.5
April, "	260.6		+ 9.9
May, "	276.0		+ 15.4
June, "	300.1		+ 24.1
July, "	335.4		+ 35.3
August, "	385.8		+ 50.4
September, "	463.7		+ 77.9

In September 77.9 milliards of new paper marks were poured into the market.

This debauch of the currency has a very detrimental influence on the economic life of the country. Foreign exchanges and prices are rising by leaps and bounds. The English pound, which was quoted at the end of June 20,000, has reached 55,000. The quotations of the other currencies were as follows:—

	June 27.	October 24.
Paris	382	900
Zurich	878	2,225
New York	4,550	12,175
Berlin	1340	30

With the exception of the German mark, which in the process of depreciation has outdistanced the Polish mark, all other currencies have increased during the last four months by nearly 200 per cent.

The cost of living in September was 129.7 per cent. higher than in January. The increase is becoming more pronounced every month, as shown below:—

		Cost of LIVING.	Increase in Comparison with Previous Month.
		Index.	%
January, 1922	100.0		0.30
February, "	102.6		2.56
March, "	111.7		8.89
April, "	125.1		11.97
May, "	136.4		9.02
June, "	146.0		7.03
July, "	168.2		15.19
August, "	193.8		15.26
September, "	229.7		18.54

The Ministry of Finance has opened a subscription for a new internal loan, hoping to obtain by this means the necessary funds for covering the expenditure of the Government. The loan bears 8 per cent. interest, and is redeemable after five years (October 1, 1927). To make it more attractive half of every bond has been issued in "zloty," equal to one gold franc each. The value of the other half is fixed in Polish marks. The price of the loan has been fixed as follows:—Polish marks are paid at par, while the rate of exchange for one "zloty" is 1,400 marks. A bond of 10,000 marks and 10 zloty costs 24,000 Polish marks. The principal, as

well as the coupons of the gold part, are payable in Swiss francs, American dollars, or in Polish marks, according to the rate of exchange of dollars in Warsaw during the month preceding the payment. The other half is redeemable in Polish marks according to their nominal value. The Ministry of Finance has tried to insure itself by this measure against losses which a rise of Swiss francs or American dollars would entail, if the whole loan were to be payable in these currencies. Under the present system the Government is compensated for these losses by the payment of the other coupons in a depreciated currency.

The Ministry of Finance expects that the rate of subscription fixed for gold francs (1,400 Polish marks, the Swiss franc is quoted at the exchange 2,200) will induce holders of Polish marks abroad to participate in the purchase of the loan.

Letters to the Editor.

THE ELECTORS' APATHY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Whatever may be happening in the sturdy North, electioneers in the industrial districts of the South are not finding it easy to whip up enthusiasm among the voters. I speak from 10 days' experience of canvassing in London, and after conversations with the party organisers. Complaints are heard from organisers of meetings that, except where a speaker with a big name is advertised, audiences are apt to be small and apathetic, while canvassers—the people who really feel the political pulse—are commonly met with avowed indifference, or with that still more crushing form of apathy—a cheerful and obviously insincere agreement. It may be that in the last few days before the election fresh interest will be aroused, but, so far, the election in most southern constituencies has not been marked either by enthusiasm or excitement.

The apathy of the voters is partly accounted for by the miserable conditions in which many of them are now living. The respectable workman who has been out of employment for six or nine months, the widow with precarious income and a steady burden of expenses, the young people existing as best they can without decent or adequate housing, are all inclined to look askance at politics, and say to the rival candidates, "A ban on both your houses." Never before have canvassers been taunted so often or so bitterly with the bad faith of politicians whose reckless promises and highly-coloured pictures of 1918 are contrasted with the poverty and misery of 1922. For the most part this odium falls on to the Coalition candidates, but it is not confined to them, for many electors embrace in a single condemnation all the political parties, Unionist, Liberal, and Labour, and declare that there is not a fig to choose between them. It is a deplorable, if natural, reaction, and it must stand as a bad item in Mr Lloyd George's account that his wild rhetoric and profuse promises of the last General Election have enormously lowered the esteem in which politics are held by the electorate. In our more cynical moments we are all of us inclined to sneer at the politician, but it is a disastrous thing for any country to depend for its government on men who are generally mistrusted and held in bad repute.

Another cause of apathy among the electors is the washing out of old landmarks and the confusion between parties. In reality, political differences are as deep and as wide as ever, but in an election where every address and every speech declares the candidates' life-long devotion to the principles of "peace, and the most rigid economy consistent with efficient government," when the canvasser for the Unionist candidate tells the voter that he stands for lower taxes and economy, and the canvasser for the Liberal candidate says that he stands for economy and lower taxes, the elector is liable to think that there is not a ha'porth of difference in the whole

crowd, and that the battle is a sham fight, with nothing at stake but personal ambition and a desirable income of £400 a year. If the voter probes the matter more deeply and discovers that on the one side is a Free Trader who voted for the Safeguarding of Industries Bill, and on the other a Tariff Reformer who pledges himself not to introduce a tariff, he is likely to be confirmed in his opinion that the election is a squabble between Tweedledum and Tweedledee, in which the ordinary person can gain nothing by taking sides and lose nothing by remaining neutral.

It is a strange irony that this deplorable indifference to political issues and principles should follow a period in which the world has suffered disaster after disaster through nothing but bad politics and bad government. Rightly read, the history of Europe and Great Britain since 1914 is a proof of the tremendous importance of politics, and the appalling injuries that the private citizen suffers through his political ignorance and his indifference to the method by which he is governed. If the common people of Europe had been in a political sense highly educated before 1914 it is incredible that a handful of statesmen could have plunged Europe into war, and sent millions of common men to suffer and die in the trenches. If we had had a higher standard of political intelligence in England since 1918 we should not have been duped as we were by promises of ease and prosperity to be achieved through the care of a paternal Government extracting thousands of millions from our enemies, and we should not have tolerated a foreign policy which has led to poverty and unemployment at home. Most of the troubles with which individual citizens are struggling in their private lives to-day are the direct result of bad politics and bad government, and at no time was there so little excuse as now for the ordinary man to be careless and indifferent about the *personnel* and principles of government. Almost the greatest need of the world at the present time is a revival of political interest, and the education of the common people in the philosophy of politics.

Two generations ago Bagehot pointed out as one of the great merits of the British Parliamentary system that it created and sustained a wide interest in politics. So long as Parliament is an interesting place, where parties debate by what they say and do in the House of Commons, ordinary people will always incline to take an interest in politics and government, and will unconsciously be taking a course of political education. In the last few years personal government has largely destroyed the importance of the House of Commons, which in the temporary extinction of one great party, was content far too long to endorse the actions and decisions of a single dominating politician. If this election destroys this autocratic system, and restores Parliament and the party system to their old places, it will have done something to kill the deplorable apathy of the voters, and allow the political education of the country to start afresh, and let us hope be developed until every Government realises that it is working under the eye of a reasonably well educated electorate.—Yours, &c.,

London, November 9th, 1922. AN OLD CANVASSER.

Books and Publications.

RECENT ECONOMIC LITERATURE.—A MONTH'S SURVEY.

AFTER the Election a great many people will probably have to do some thinking on economic lines, which, however salutary then, would have been more useful if done earlier. The month just passed has produced a considerable output of books, of a character more or less helpful in such an effort. If there is among them no outstanding work on the theoretic aspects of economic science, other departments are well represented, and notably that comprising books intended for the reader with little technical equipment, who is, however, prepared to use his head.

(a) Elementary.

Among them may be mentioned two volumes in Messrs Bell's useful series of Handbooks of Commerce and Finance, both from the pen of Mr A. Risdon Palmer. The first is devoted to *Banking, Stockbroking, Currency, and*

Exchange (5s net); the second to *Finance* (4s). They are clear but in parts brief surveys. The same may be said of Mr W. J. Weston's *Banking and Currency* (Clive University Tutorial Press, 5s 6d). The author understands his subject, and makes it intelligible. He would make no such claim for himself as is made by the publisher of "The Common Sense of Economic Science," by Edmund Dane (Mills and Boon, 5s), who describes it as an "exposition of economics for the million," which "resolves the problems of exchange currency and taxation, and the operations of finance." So much, or that it gives "economic study a fresh orientation," can hardly be claimed for it; conventional in point of view, it has the merit of a lively method of statement; but there is nothing particularly fresh about it. "The New Economics," by Marten Cumberland and Raymond Harrison (Cecil Palmer, 2s), is, of course, one more attempt at expounding the "Douglas Scheme," in such a manner as to make it at once intelligible and attractive. The attraction, however, is obviously connected with a certain degree of unintelligibility.

(2) Advanced and Technical.

There are really no books which can claim the right to appear here. In Mr Q. C. Dickinson's inquiry into *Economic Motives* (Harvard University Press, obtainable in England from Humphrey Milford, price 12s 6d), the real interest is, of course, psychological; the subject of investigation is the "psychological foundations of economic theory." A great deal of work is being done in the States at present on these lines. This particular volume does not carry the reader very far. On the other hand, under

(3) Descriptive and Works of Reference.

there are a number of very interesting and important volumes. *British Merchant Shipping*, by Clement Jones (Arnold, 10s 6d), was fully reviewed in the *Economist* of November 4th, and praised as it deserves; *Recent Economic Developments in Russia* (by K. Leites, edited by Harold Westergaard), Milford, 12s 6d, is one of the contributions to the economic history of the Great War, for which the directors of the Carnegie Endowment are responsible. It comprises three "preliminary monographs," one on the effects of war on Russian economic life up to the Bolshevik coup d'état; the one on the results of Bolshevik economic policy; and the one on the results of Bolshevik economic policy and the say, previous to the abandonment of Communism and the introduction of the new economy policy. Mr Leites is a Russian, at one time (in 1912) an official; his study is throughout based on public documents and the statistical reports of the Soviet Government. His view is thoroughly objective. His first section gives an impressive picture of the thoroughgoing economic disorganisation of Russia, which made it impossible for that naturally rich country to sustain the effects of war. This is a book which must be studied by anyone who wishes to pass a serious judgment on economic developments in Russia. The unprepossessing title given by Mr and Mrs Webb to the new volume in their *Monumental History of Local Government in Great Britain, Statutory Authorities for Special Purposes* (Longmans, 25s), is calculated to put the reader off unduly from a work that, in the main, is extremely readable and interesting, once one has overcome the repulsion created by the subject. A quantity of valuable material is collected in *La Politique Financière et Monétaire de la France*, published by Felix Acan, Paris, 30 francs, comprising speeches, reports, and financial statements, most of them not very exhilarating reading. *L'Inflation Dans l'Histoire*, by Albert Desprau (Paris Librairie de l'Information), is a useful survey of a not very consoling character. *Wholesale Prices, 1890-1920*, published by the Bureau of Labour Statistics at Washington, explains itself, as does the 1922 volume of *Rubber Producing Companies*, published at 7s 6d by the Financial Times.

(4) Political and Propagandist.

The most important work in this category, and in itself the most interesting and ablest volume so far mentioned, is Mr J. A. Hobson's *Economics of Unemployment* (Allen and Unwin, 4s 6d). In this Mr Hobson develops,

in a most suggestive and vigorous way, the idea of the "limited market," bringing a new and suggestive line of argument to bear on the theory expounded by him before of under-consumption as the main explanation of economic maladjustment.

LITHUANIA.*

To students of history Lithuania signifies an extinct and once powerful Grand Duchy, which shared the fate of Poland; to zoologists, the last home in Europe of the elk and bison; to scholars, a district the speech of whose inhabitants is closely akin to Sanskrit and Greek; but for a century and a-quarter it has been so Russianised and Prussianised that few people could indicate offhand where it lies. Mr Harrison, who has served on Colonel Tallents's mission to the Baltic States, and subsequently as Vice-Consul at Vilnius and Kaunas (formerly known as Vilna and Kovno), has, therefore, performed a considerable service by producing this comprehensive account of the country, its history, its revival during the war, and subsequently its economic resources, social life, literature, and art. The Lithuanian Republic, the nucleus of the former Grand Duchy, or Lithuania Major, should comprise the former Russian Governments of Kovno, Suwalki, and Vilna; nearly all the rest of ethnographic Lithuania, called Lithuania Minor, was absorbed in 1795 by Prussia. The Russian portion was persistently but ineffectually Russianised till the revolution of 1905; but, as in other oppressed countries, a literary nationalism revived the aspirations of the people and preserved their tongue. Early in the war the 135,000 Lithuanians in the United States and the exiles in Europe organised Congresses in Switzerland, and later at the Hague and Stockholm, which asserted the national claims; and Germany, hoping eventually to control the country, permitted a Diet at Vilna in 1917. This body elected a Taryba, or Council, which on February 16, 1918, proclaimed Lithuanian independence. After the Peace the inhabitants repulsed the Bolshevik invaders, and set up a Constitutional Assembly in May, 1920. But five months later Vilna, recognised by the Polish Government as Lithuanian, was seized by General Zeligowski, with the secret encouragement of Poland and of France; and the efforts for its restitution made by the League of Nations have so far been unsuccessful. Hence the Republic of Lithuania is shorn at present of about one-fifth of its territory and nearly two-fifths of its inhabitants. During the war it was "bled white" alike by Russians and Germans, but is rapidly recovering. Essentially agricultural, it has great resources in timber, several large cities, much undeveloped water-power, considerable actual and potential industries, important native handicrafts, and some coal and shale; and independently of Memel, reserved by the Allies, it has an access at Palanga to the Baltic. Agrarian reform is in progress on the same lines as in Latvia and Estonia, but with fair compensation to the landlords; the currency, until its fall in sympathy with the German mark, had escaped depreciation, and is now to be reformed on sound principles; ordinary revenue covers ordinary expenditure, and the foreign debt is small. The literature and art may astonish Europe. Mr Harrison has been converted by his official experience to enthusiastic support of the Lithuanian claims both to Vilna and to Memel, which under French supervision is becoming more German than ever. Our only regret is that he says nothing about the elks and the bison, so that probably they were all killed during the war.

Rapport sur la Commerce et l'Industrie de la Suisse en 1921. (Zurich) Union Suisse du Commerce et de l'Industrie.

Following the same plan as previous volumes, this report on Swiss commerce commences with statistical tables which furnish numerous particulars relating to Swiss economic conditions—population, resources, cost of living, foreign trade, Customs, banks, insurance, public companies, and finance. The second portion, very much more detailed, reviews in 40 chapters the various branches of commerce and industry. At the head of each chapter will be found an extract from the official Swiss *Journal of Commerce*, giving the export and import figures of the particular trade or industry in question. These tables afford detailed information on the relations of Switzerland with other countries, and being repeated year by year, enable the movements of Switzerland's external trade to be compared over a period of years. Numerous comparative figures on production, wages, prices, &c., are also given, and special attention is devoted to banking and insurance undertakings.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 15.

ACCOUNT.
November 16.

This week's course of the Stock Exchange markets has been very much like that of true love, never running smoothly for more than half a day in any part of the House. Business all round has been restricted, owing to the imminence of the General Election and, still more, through the slump in the franc due to the truculent attitude adopted by Turkey. The end of the week found prices better in a good many cases than they had been earlier, the recovery being assisted by bear repurchasing upon the more favourable view taken in regard to the outlook for maintenance of peace in the Near East.

While the War Loan kept steady about 98½, Conversion 3½ per cents. fell at one time to 74½, rallied to 75½, and finished at about 75. The new India scrip attracted a certain amount of investment at ½ discount. The new Marconi 6½ per cent. debentures, offered at 99, achieved prompt success, and several other new issues were well received. Next week, three or four other capital requirements are expected to be made public, though the fact of its being General Election week is not overlooked by promoters.

French bonds of all kinds went acutely flat as the franc dropped to 72. Although prices shot up and down with violent fluctuations, the actual amount of business passing was not commensurate with these movements. People fear a further fall in exchange, yet they are loth to sell bonds acquired at substantially higher figures in the past. Germans are more or less a nominal market. Brazilians showed a little strength, which they failed entirely to retain. Some of the Chinese bonds are easier, the Marconi Eights, for instance, being quoted at a nominal figure of 60-70, Chile seems to have got all the money which she requires, at present, from a loan issued in the United States.

The Turkish fears drove down Home Rail stocks heavily, but, as the week drew to its conclusion, bears started to buy back in view of the settlement next week, and this led to a moderate recovery. Grand Trunk Pacific debenture has given way, and Mexican Rails are dormant. Argentine Rails, however, developed a fresh boom, and the buying in the absence of any large floating supply caused brisk rises in the leading stocks. Debentures and preferences shared in the improvement, though less spectacularly. The strength of Argentines became communicated to some of the other foreign railway stocks, which previously had been somewhat heavy in tone. United of Havana, Antofagasta deferred, Leopoldinas, and Cordoba Centrals all came in for favourable attention.

Rubber excitement has quieted down not a little, business being on very much lighter lines than prevailed at the end of last month. The oil market weakened under pressure of sales from Paris, but prices recovered from the worst. Nitrates are disturbed owing to a reduction of the dividend on Catalinas. Amongst catering shares, Aerated Breads experienced a fall, as sellers came along in advance of the dividend announcement. Coats gave way, in spite of the company's dividend declaration showing remarkably good figures. Some of the gas stocks are a trifle lower, but the shipping market has scarcely changed. Cable stocks and wireless shares have been dull in tendency. Power Securities ordinary, dealt in for the first time this week, opened at 9d discount, and recovered to their par price, the preference being quoted at about 3d discount. Tobacco shares have been affected by the general conditions prevailing from hour to hour. The success of the Motor Show at Olympia caused a little interest to revive in motor shares, without this, however, affecting prices materially. The banking market is fairly steady, and trust companies' stocks hold all their recently acquired gains. American breweries went ahead with a rush, on the announcement of the result of the American elections, which are deemed to forecast a return to the lighter kinds of alcoholic drinks for the United States. Associated Newspapers deferred shares were introduced at 6½, and gained a small fraction, while *Daily Mirrors* hardened to 3½. Iron and steel shares showed a good deal of strength, which led to profit-taking, and the net changes are unimportant. Tea shares continued their boom; it was not until the last day or two that a few shares came to the market, giving a slight check to the previous buoyant tendency.

The Kaffir market has been under the harrow of French selling, diamond shares especially being hammered down from Paris. The Cape came in with supporting orders, which had the effect of rallying the market in gold shares to some extent. Chartered sagged on the disappointment felt with the result of the Referendum in Rhodesia. Tin, the metal, moving up and down in dramatic fashion, exerted singularly little influence over prices or business in the various markets connected with tin shares. Russo-Asiatics moved in accordance with the political news, while changes in Mexican and Broken Hill mining shares have been confined within narrow bounds. An election takes place in the Stock Exchange next Friday for a member of the committee in place of Mr H. W. Smith, who has resigned, but who has signified his readiness to stand again.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded ..	543,593,574	..	..	..
4½ % Treasury Bonds (by Tender November 4, 1922), £1,650,000, at £99 4s 8½d % ..	1,650,000	..	..	..
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED NOVEMBER 4, 1922.				
April 1 to Nov. 4, 1922, £25,768,000 ..	300,000	..	300,000	..
To the Public—				
Mortgage Company of Jamaica, 400,000 7½ % First Mort. Reg. Debs. (red. at par 1924-33), issued at 95½ (Nov. 7) ..	400,000	..	380,000	.. 40,000
Marconi's Wireless Telegraph Company, £1,500,000 6½ % Conv. 10-Year First Deb. Stk. (red. 1924-32 from 109½ to 101½), issued at 99½ (Nov. 6) ..	1,500,000	..	1,485,000	.. 150,000
Goode, Durrant, and Co., £200,000 5½ % 20-Year Notes (red. at par 1923-42), issued at 95½ (Nov. 6) ..	200,000	..	190,000	.. 10,000
Sir J. Hulett and Sons, 225,000 7½ % Cum. Pref. Shares, £1, at 21s (Nov. 6) ..	225,000	..	236,250	.. 28,125
Lastenia Nitrate, £1,000,000 6½ % 1st Mt. Deb. Stk., issued at 95½ % red. at par Dec. 1, 1940 (Nov. 9) ..	1,000,000	..	955,000	.. 50,000
Amdic Hardware Supplies, Limited, 50,000 10 % Ptg. Pref. Shares, £1, at par (Nov. 9) ..	50,000	..	50,000	.. 6,250
Total offered to public ..	3,296,250	..	284,375	.. 3,011,875
Total offered for subscription to date in—				
1922 ..	£548,826,208			£388,978,203
1921 ..	284,722,336			367,549,686

1919 ..	969,538,103			1,383,381,441
1918 ..	1,232,389,718			1,318,596,010
1917 ..	1,219,993,903			585,436,850
1916 ..	515,144,053			685,236,326
1915 ..	660,983,076			512,522,633

The Lastenia Nitrate Company.—Incorporated under the laws of the Republic of Chile. Share capital issued and fully paid, £3,000,000. This is an offer for sale of £1,000,000 6½ per cent. first mortgage debenture stock at 95½ per cent. This stock will be secured by specific first mortgage in accordance with the Chilean law over the eleven oficinas owned by the company; it is "redeemable" by purchase in the market or drawings through a sinking fund beginning in 1925, and any stock not previously redeemed will be repayable at par on December 1, 1940, "or on the trust deed becoming enforceable." Debenture stock holders appear to be protected against many contingencies, and capital and interest are fairly well secured. Though an "offer for sale," it is an informative document, but the risks attached to a foreign industrial investment must be taken into consideration.

Goode, Durrant, and Co., Limited.—Authorised capital £800,000, divided into 300,000 7 per cent. cumulative preference and 500,000 ordinary shares, all of £1 each. The issued capital consists of 165,000 preference and 251,250 ordinary shares. This is an issue of £200,000 6½ per cent. 20-year notes at 95. The company reserves the right to redeem these notes by applying, as from December 20, 1922, an annual sum of from £5,000 to £20,000 in drawings at par or purchase, on giving three months' notice. It is provided that as long as any notes are outstanding the company will not, without consent of noteholders, issue similar notes, debentures, debenture stocks, or other securities constituting a charge upon assets, except for borrowings "in the ordinary course of business." The vagueness of this very common phrase has been commented upon before in these pages. The company was formed in 1898 to acquire a business of Australian wholesale merchants and warehousemen. Profits are given from 1913, while surplus assets are valued at £609,791, exclusive of goodwill. A long-term note issue is of unusual interest, marking a departure from the many issues of secured debentures which have taken place of late. Investors should clearly realise that the position of noteholders is simply that of deferred creditors. Of course, providing the increased risk involved is compensated by higher interest, this becomes merely a matter of academic interest. This is a clear prospectus, and we understand that the notes were accorded a good reception by the investing public.

The Mortgage Company of Jamaica, Limited.—Authorised and issued share capital £50,000, divided into 5,000 shares of £10 each, of which £2 per share has been paid up. This is an issue of £400,000 7 per cent. first mortgage registered debentures of £100 each at £95 per debenture. These debentures "will be redeemable" on or before September 30, 1933, by annual drawings at par or purchase. The company reserves the right to redeem the issue at any time on giving six months' notice at premiums varying according to the date of redemption. The company was formed on

November 3, 1922, to lend money "on debentures charged upon estates in Jamaica." With this end in view, a loan has been arranged by "this company of £400,000 to Messrs Lindo Brothers and Co." These debentures will be secured on the uncalled capital of the company, and by a trust deed constituting a first specific charge upon £400,000 "owing to the company by Messrs Lindo Brothers and Co., of Jamaica." This firm will deposit with the company certain debentures and shares of companies owning lands, &c. These lands, &c., have been independently valued at £1,014,087. The prospectus itself is a somewhat involved document. A few facts, however, emerge clearly. Firstly, the paid-up capital of the company is but £10,000, which appears a somewhat small sum in comparison with the present first mortgage debenture issue of £400,000. Secondly, the policy of placing all one's eggs in the same basket and loaning the lot to one firm is open to criticism. Thirdly, if it is worth while giving rough figures showing the position of Messrs Lindo Brothers and Co., it would have been more business-like to show a duly certified balance-sheet. Fourthly, it is not stated if the securities deposited by Messrs Lindo Brothers and Co. are of a marketable nature, nor is the market value given. Lastly, though the difference between value of the land and the debenture issue shows a comfortable margin for security, we cannot ascertain from the prospectus to what extent the companies mentioned are to be restrained from charging lands in priority to the securities held in trust.

Sir J. L. Hulett and Sons, Limited (incorporated under the laws of the Colony of Natal).—Authorised share capital £900,000, of which £825,000 has been issued. This is divided up into issued ordinary shares £600,000 and preference £225,000, all of £1 each. There are also outstanding £298,900 of debentures and mortgage bonds. There are now offered for sale 225,000 7½ per cent. cumulative preference shares of £1 each at 21s per share. The company was formed in 1892, and engages in sugar milling and refining, tea growing and manufacturing. Profits and issued capital, together with distributions on ordinary shares, are shown in a table since 1912. After deducting loan capital and adding the proceeds of the present issue, it is stated that net assets, "as security" for preference shareholders, total £1,088,550. Voting powers are not mentioned in this "offer for sale," but the issue has been underwritten on reasonable terms, and the shares appear to be a fairly good investment in their class.

Amdic Hardware Supplies, Limited.—Authorised capital £70,000, divided into 60,000 10 per cent. cumulative participating preference shares of £1 each, and 200,000 deferred shares of 1s each. This is an issue at par of 50,000 10 per cent. participating preference shares. According to the advertised prospectus, preference shareholders have the right to apply for an equal number of both descriptions of shares. After a 10 per cent. cumulative dividend has been distributed upon the preference shares, two-thirds of surplus profits go to deferred shareholders, the remaining third going to preference shareholders. The company has been formed to run two brush factories, and also to exploit certain patents. The purchase price for these miscellaneous assets has been fixed at £35,000, of which £17,500 is payable in cash; profits are not very modestly estimated at £14,000 per annum, yet we are assured that "no part of the purchase price is attributable to goodwill." Apparently, for the £35,000, shareholders will obtain two factories worth under £5,000 and four patent rights. From the factories valued at under £5,000 it is estimated that £3,000 per annum can be made. Many business men to-day would like to see their factories making money at this rate. The paths of many promoters are strewn with prospectuses giving generously estimated profits from patents, but it is no exaggeration to say that few estimates materialise.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of October was 68,709 barrels, equal to approximately 9,700 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 9,900 tons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during October amounted to 108,071 barrels, or approximately 15,439 tons, including St. Helens Petroleum Company, Limited, 45,870 barrels, and Kern Trinidad Oilfields, Limited, 12,416 barrels.

LOBITOS OILFIELDS, LIMITED.—The production for October is cabled as 9,481 tons.

STEAUA ROMANA (BRITISH) LIMITED, are advised that the gross crude production of the Steaua Romana, Bucharest, during the month of October was 19,900 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during October, 11,250 tons; oil purchased during October from other companies, 10,100 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending November 1, 1922, amounted to 953 tons.

COMPANY MEETINGS, &c.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

TRADE CONDITIONS IN CUBA.

The twenty-fifth ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 10th instant, at Winchester House, Old Broad street, London, Mr C. J. Cater Scott, the chairman of the company, presiding.

The London manager and secretary (Mr W. J. Maslem) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that at the meeting a year ago he had drawn the attention of the shareholders to the very heavy decrease in the receipts of the company, and had then ventured to prophesy that during the year whose accounts were now under review, that decrease would continue. He had also, however, told the shareholders that the board hoped to be able to make a corresponding decrease in expenditure. That prophecy had been realised, and they were meeting together that way with a not less favourable report than a year ago. It was true that during the past year they had had to face enormous decreases, but by rigorous economy they had been able to reduce expenditure very considerably without sacrificing efficiency. The result was that after providing for fixed charges and placing £105,000 to a special account to meet deferred maintenance, the board were able to recommend the same dividend as last year. He ventured to think that, in the circumstances, that was not unsatisfactory. The directors, very naturally, would have been glad to recommend a bigger dividend, but, in the circumstances, that was impossible.

During the past two years, Cuba had been reaping the aftermath of the great prosperity which she had enjoyed during the years of war, a prosperity which had led to mad speculation, which had been followed by great depression and the inevitable financial collapse. He hoped that the island, however, had now turned the corner. It was true that the outward and visible signs of that were not very striking, but still the board believed that the position was improving. There was certainly more confidence in the island as to the future, and he thought that everything pointed to better times for the company in the years to come. All the same, the year 1922-1923 was certain to be a difficult period for everyone in Cuba, and would need all their care. During the year under review they had been face to face with a decrease in receipts of no less than £2,436,000, or 38 per cent. On the other hand, they had been able to effect economies amounting to £2,118,000, or 42 per cent., as compared with the previous year. There was a decrease in receipts under every heading, with the exception of that of live-stock, due in great part to their having hauled a much less tonnage, and in a lesser measure to the reduction in rates which had come into force in the second or busy half of their financial year. In connection with that reduction in rates he would point out that they could not very well complain of the action of the Government. During the boom period the Government had granted increased rates, and they had always acted very fairly towards the railway. Those increased rates were given to meet the higher cost of materials and the very high rates of labour. When the time of prosperity had passed the Government, to meet the altered circumstances, had found it necessary to reduce rates; they wanted to assist in reducing the cost of living in Cuba, which during the years of prosperity had soared to such an extent that the island was certainly one of the dearest, if not the dearest, places in the world for living. The reduction in rates was accompanied by a clause in the Bill stating that there should be no change for a period of five years either up or down. Accordingly, the railway was in a fairly happy position in that respect.

GENERAL POSITION IN CUBA.

Dealing with the general position in Cuba, the Chairman said that the slump had led to the general trade in the island almost ceasing to exist. They would understand that when he told them that in 1920 the imports into Cuba had amounted to £115,000,000, whereas in 1921 they were only £37,000,000. No country could show such figures as that without the figures

limit of the Motor lode had been reached, but developments on the eleventh and tenth had led the directors to believe that the lode continued much further to the south, and should that prove correct and the rise continue in rich ore, a very large tonnage of high value would be developed at a very low development cost.

Many shareholders were probably aware that it was Sir Abe Bailey who guaranteed the reconstruction of the company by an assessment of 7s 6d per share, amounting to £225,000 at a time when one could hardly raise money for any purpose in London. With that they had paid off all liabilities, which left some £60,000 for development of the mine. When that was exhausted, the company required a further £100,000 to complete their engineers' programme. At the time of the issue he had told them that further moneys would be required, but that the guarantor had promised to see them through. Their total indebtedness to-day to Sir Abe Bailey was very nearly £50,000, but whatever the amount might be at December 31, Sir Abe Bailey would take up shares at par in liquidation thereof, thus at once releasing profits as from January 1 for distribution purposes.

THE FUTURE.

Their engineers told them that during 1923 the tonnage might be so far ahead of the mill that an increase of capacity might have to be considered, as well as an installation of gas-engines, which would mean economies in power costs. But shareholders need have no fear that this would interfere with dividend prospects. He was confident that the balance of the option would be exercised, thus providing the necessary funds. The results would more than justify the increase of capital which would be necessary. Their mine had responded beyond their most sanguine hopes, and the present position at the mine was largely due to Mr. Bailey Southwell (one of their directors) and Mr. D. V. Burnett (the consulting engineer of the London and Rhodesian Mining and Land Company, Limited), and their thanks were due to those gentlemen for their untiring efforts towards success. In those efforts they had been most ably supported by the manager, Mr. A. S. Rome, and his staff, to whom their thanks were also due. As regarded the future, he ventured to predict for the present financial year, barring any accidents, an increase in tonnage of ore reserves, an increase in value of that ore, an increase in tonnage milled, an increase in extraction, and a decrease in working costs, with increased profits and a first dividend.

Lord Lurgan, K.C.V.O., seconded the motion, which was carried unanimously.

JAYA PARA RUBBER ESTATES, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The eleventh annual general meeting of the Java Para Rubber Estates, Limited, was held on the 9th instant in the Council Room of the Rubber Growers' Association, 2, 3, and 4 Idol Lane, Eastcheap, London.

Mr. R. J. Arnold (the chairman of the company) presided, and, in moving the adoption of the report and accounts, said that, as a result of negotiations with the authorities, they had paid nothing for excess profits duty, so that the large sum figuring in the last accounts as a debt to the Government was wiped out. That, added to the £40,700 carried forward, gave them the substantial sum of £64,754 to the credit of profit and loss. They had written off £50,000 from development expenditure, and had to provide for income-tax and corporation profits tax £4,678, leaving £10,075 to carry forward.

With regard to their rubber and coffee, they had passed through a very trying time, and but for some fortunate forward sales, their

accounts for last year would have shown a considerable loss. The price of rubber during 1921 had only averaged about 9d, whereas the company's crop had averaged 1s 2½d. They had thus, by judicious sales, obtained 3½d per lb over what their rubber would have fetched in the ordinary course of events. That represented close on £15,000, and, but for those sales, they would have shown a loss of £7,000, instead of a profit of £8,000. Their rubber costs worked out at 11.20d "all in," including all depreciation and London expenses.

A forecast of the future was next to impossible. That they were bound to see higher prices for rubber was a certainty, but for the moment it seemed to stick at 1s per lb, and there could be no question that if there was no rise during the next three or six months, the world would be faced with a shortage, for the Government scheme released additional crops only after the price had been 1s 3d for six months. Regarding coffee, they had had a rather disappointing year, both as to yield and as to price. As the result of a beetle pest, he was afraid that the 1922 crop would not be much more than 4,000 piculs. The price, however, was rather better than it had been last year.

On the whole, the board looked forward to a brighter future. With their large acreage and better prices, especially for rubber, they might certainly hope for good dividends in the future, more especially when, after restriction was a thing of the past, they would be in a position to tap over a much larger area. Happily, the bulk of their capital expenditure was behind them, and, with no excess profits duty to take their profits when they did come, anything they could earn in the future would find its way into the pockets of the shareholders.

Mr. Noel Bingley seconded the resolution, and it was carried unanimously.

UNION COLD STORAGE COMPANY, LIMITED.

GOOD YEAR—SATISFACTORY PROSPECTS.

The twenty-fifth annual meeting of shareholders of the Union Cold Storage Company, Limited, was held, on the 10th instant, at Winchester House, Old Broad Street, E.C., Mr. Roger P. Sing presiding.

The Chairman, in moving the adoption of the report and accounts, said that the volume of business had been fully maintained, and the net results achieved were, in the opinion of the directors, satisfactory.

Continuing, he said: During the war, to meet the requirements of the exceptional conditions, large extensions of cold storage became necessary, and were general throughout the country, with the result that to-day, particularly in London and Liverpool, there is far more space than those engaged in the business know what to do with. In a business so widespread as ours it is not possible in every department to achieve the good results which we so earnestly desire and so keenly strive after, but our activities are so varied and our field of operations so large that disappointing returns in any one department are more than likely to be offset by good results elsewhere; and as a result of the close attention given to all essential details and by having taken due care to see that our management is efficient, we are able to put before you to-day an account of our year's work of which we are not ashamed. Whatever business you turn to or to whatever quarter of the globe you look, you will periodically and inevitably come upon bad seasons, depressed trade and lean times. Our interests are so knowing that we can face this state of things with confidence, tends to stabilise results and to make for security.

There are really no other special comments for me to make, but I should like to explain that the increase in the amount of the sundry creditors, and the increase in the debts and stocks on hand on the assets side has arisen almost entirely in consequence of the developments to which I have already referred. We recommend the payment of the usual dividend of 10 per cent. on the ordinary shares, and there will then remain a balance to carry forward to 1922 of £104,028 which compares with £87,496 brought in from the previous year. You will notice that during the year considerable additions have been made to our depreciation reserve, which now stands at the substantial sum of £1,442,145. The special allocation to this fund during the year represents the balance of profit made on sales of certain properties belonging to the company. The directors found it advantageous to dispose of these properties, and after extinguishing the item of goodwill, £26,050, from the balance-sheet, the balance of profit has gone direct to the depreciation reserve, bringing that fund up to the figure I have named.

I assume that you agree with me that the results for 1921 are satisfactory, and I should like now to take the opportunity of referring to the current year's business. One of the advantages of holding our meeting so late in the year is that we are able to give a fairly accurate estimate of this year's business. I have pleasure in informing you that, although we have had many difficulties to contend with, there seems to me, owing to our varied ramifications, to be every prospect of the year 1922 proving to be a satisfactory one, and if I should have the pleasure of meeting you again next year, I think that both you and I will again be content with the progress which it seems likely our 1922 accounts will show.

The report was unanimously adopted.

INDIAN TREASURY BILLS.

	March 31, 1922.	Nov. 4, 1922.
Outstanding with public	54,01,65,000	26,35,05,000
In paper currency reserve	57,89,00,000	50,65,00,000
Total	111,90,65,000	77,00,05,000

India Office, November 8, 1922.

Tenders for Rs.1,00,00,000 three months' bills and for Rs.50,00,000 six months' bills were opened on November 2nd. The total amount tendered for three months' bills was Rs.2,61,00,000. Tenders at Rs.99 1a received about 67 per cent. and above in full. The average accepted rate was

Rs.99 1a 1p, equivalent to a discount rate of 3.7642 per cent. per annum. The total amount tendered for six months' bills was Rs.94,25,000. Tenders at Rs.97 12a accepted and received about 86 per cent., which is equivalent to a discount of 4.6036 per cent. per annum. Intermediate bills for six months only will be offered for sale in India during this week at Rs.97 13a per cent. Tenders were received on Friday, November 10th, for Rs.1,00,00,000 three months' bills and for Rs.50,00,000 six months' bills for issue during the week beginning November 13th.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended November 8, 1922, the stock of coin and bullion shows an increase of £2,389 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Nov. 8, 1922.	Countries to which Exported.	Week Ended Nov. 8, 1922.
Sweden	£ 15,981	Norway	£ 98
U.S.A.	4,163	Italy	1,298
British West Africa ..	1,730	Kenya Colony	1,150
British South Africa ..	725,516	U.S.A.	1,295,940
Other Countries	748	British India	109,373
Total value of imports of gold	745,128	Total declared value of exports registered in the week	1,407,859

Messrs Samuel Montagu and Co. write, on November 9th, as follows:—

GOLD.

The fair amount of gold on offer was absorbed mainly on account of the United States of America, India being only a small buyer. Gold valued at \$643,000 has arrived in New York—\$543,000 from Alexandria and \$100,000 from London—and \$500,000 in gold has been despatched to Canada from New York.

CURRENCY.

Finland is actively engaged in providing for a nickel currency. The forthcoming Budget is to provide funds for suitable machinery, and some 50,000,000 nickel coins are said to have been acquired in England and Denmark. Others beside the Shade of Shakespeare may take interest in the announcement that Czechoslovakia intends as a preparatory measure to promulgate a Bill authorising the mintage of gold coins bearing the time-honoured appellation of ducats.

SILVER.

Under the influence of continued sales on China account, prices have been subject to considerable depression. The weakness was aggravated by the fact that the Indian bazaars received substantial offers of silver from China direct, and therefore resold some purchases made here, and also practically ceased to support this market. The Continent furnished part of the supplies, and America has been a good seller. As most of the silver required for the December settlement in Bombay seems now to have been secured, the outlook is not very bright, for absorption of offerings can only be met at the moment by bears covering, and, conditions being in their favour, great eagerness to cover can hardly be expected. The weak tendency may continue until it is checked by China; in that event, trade relations of that country with world markets in food and other raw products will have to alter materially, otherwise a still lower level of prices may be touched. It is reported from Washington, under date of October 25th last, that the total silver purchases under the Pittman Act amounted to 138,645,576 ounces, including 1,500,000 ounces purchased on that day.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Oct. 15, 1922.	Oct. 22, 1922.	Oct. 31, 1922.
Notes in circulation	18,116	18,028	17,963

NOTICES.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch at 5 and 6 Chicago buildings, Morecambe, under the management of Mr M. S. B. King. A new branch has been opened at 99 Fore street, Devonport, under the management of Mr Gerald Digges. The following additional offices have also been opened: Sea Bank, Cooden, Sussex; Market square, Hatherleigh, Devon; 4 West Strand View, Preston; and Tydwell, Ederly, North Wales. The directors announce that they have elected the Right Honourable Lord Ashfield to a seat at their board.

Reports and Notices.

The Tanganyika Concessions regret to announce that Mr Tyndale White has resigned his chairmanship of the company and its allied companies on account of health. The chairmanship of the Tanganyika Concessions, Limited, has been offered to and accepted by General Sir Reginald Wingate, Bart., K.C.M.G.

Mr J. W. Beeby, who has been with Messrs Straker-Squire, Limited, for the past 22 years, has been appointed managing director of the company.

We are informed that Mr Eric G. Underwood and Mr H. W. Rapkin have been appointed joint managing-directors of Thomas De La Rue and Co., Limited.

The Meadow Dairy Company, Limited, has opened branches at 351 and 776 Stratford road, Sparkhill, Birmingham, and 62 Idlesleigh road, Bedford.

Mr Chas. G. Seife, formerly the general manager of the Junior Navy and Army Stores, Limited, has been appointed managing director of the Civil Service Co-operative Society, Limited (Haymarket Stores).

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 18s 4d, being the moiety of the seventh fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1922.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders notify the payment of the November instalment of the debt service in respect of the half-year ending December 31, 1922.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31 (new style, January 14 to September 13), 1922:—

	Monopolies, Tobacco, Stamps, Stamp Paper, Naxos Emery.	Piræus Customs.
Gross receipts, August, 1922	Drachmas. 432,076.85	Drachmas. 9,612,303.00
Do do 1921	6,062,883.38	1,172,990.25
Estimated receipts for eight months (Law of Control)	19,266,666.67	7,133,333.33
Actual receipts for 1922, eight months	49,334,581.75	79,707,422.40
Actual receipts for 1921, eight months	45,551,232.42	38,941,967.40

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893.

RAILWAYS.

CORDOBA CENTRAL RAILWAY COMPANY, LIMITED.—The results of working for the year ended June 30, 1922, as compared with those of the previous year, were as under:—Gross traffic receipts, 1920-21, £2,836,218; 1921-22, £2,635,390; working expenses, 1920-21,

£2,541,683; 1921-22, £2,245,303; net receipts, 1920-21, £294,535; 1921-22, £390,087; percentage of working expenses, 1920-21, 89.6 per cent.; 1921-22, 85.20 per cent. To the above amount of £390,087 add interest and transfer fees, £14,973—£405,060. Debit:—Loss on exchange, £42,268; one year's interest on 4 per cent. first debenture stock, £320,000; one year's interest on 6 per cent. second debenture stock (1923), £6,680; one year's interest on 5 per cent. second debenture stock, £311,146; the result being a debit balance of £275,033, which has been added to the amount already standing in the balance-sheet at the debit of net revenue account, increasing the total debit to £928,588.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.—The twenty-ninth annual report, together with a balance-sheet and profit and loss account made up to June 30, 1922, shows that the profits for the year, after making provision for bad and doubtful debts and other contingencies, amount to £1,094,685; less expenses of management, £566,325; income and other taxes, £182,885; leaving a net profit of £345,475. From this the following deduction has been made, £80,994—£264,480, and it is proposed to make further appropriations as follows:—

To reserve fund £150,000 for the year, when the fund will stand at £1,450,000; to the E. S. and A. Bank officers' guarantee and provident fund, £15,000; to the payment of dividend of 10 per cent. for the year, free of income-tax, £131,989; to the purchase and cancellation of deferred inscribed deposit stock in accordance with the articles of association, £43,996; leaving unappropriated from the profits of the year, £4,490; brought forward from June 30, 1921, £102,604; leaving a balance to be carried forward of £107,094. The sum of £42,935 set aside last year in accordance with the articles of association has been appropriated to the purchase of £50,000 deferred inscribed deposit stock, which has been cancelled and the amount passed, as before, to the credit of bank premises. The board consider that in the interests of the shareholders the time has come when it is desirable to alter the denomination of the bank's shares by sub-division into shares of a smaller nominal amount, as being more in accord with the general practice to-day, and they recommend that each of the present issued shares of £25 each, £12 10s paid and £12 10s uncalled, be sub-divided into 5 shares of £5 each, £2 10s paid and £2 10s uncalled, and the unissued shares of £25 each be sub-divided into shares of £5 each. The board also recommend that they be empowered to increase the authorised capital of the bank from time to time from £3,000,000 to an amount not exceeding £5,000,000, so as to provide as occasion may arise for the issue of such further shares as in their opinion the expanding business of the bank may render desirable.

RUBBER.

TANJONG MALIM RUBBER COMPANY, LIMITED.—The profit for the year ended June 30, 1922, after providing £6,000 for taxes, amounts to £18,790, to which has to be added the balance brought forward from last year, £33,583, making a total at credit of profit and loss account of £52,373. The directors do not recommend the payment of a dividend, and they propose that the balance of £52,373 be carried forward to next year. The yield of rubber during the year was 1,337,436 lbs, being 2,952 lbs less than in the previous year, and 112,436 lbs in excess of the estimate. The whole of the crop was sold in Singapore, 339,339 lbs under forward contracts made in 1919, and the balance at current market prices. The average gross price realised was 1s 0.98d per lb. The comparative "all in" costs for the years 1920-21 and 1921-22 have been as follows:—F.o.b. cost, 1920-21, 1s 3.72d; 1921-22, 9.07d. Freight, insurance, and selling charges, 1920-21, 1.21d; 1921-22, .39d. Office expenses in London, directors' fees, and exchange, 1920-21, .67d; 1921-22, .49d—total, 1920-21, 1s 5.60d; 1921-22, 9.95d. The labour force at June 30, 1922, numbered 1,265, as against 1,976 at the close of the previous year. Health conditions have improved and are reported as quite satisfactory both as regards the European, staff and the coolie force.

MISCELLANEOUS.

AUSTRALIAN MERCANTILE LAND AND FINANCE.—Net profit for the year ended June 30, 1922, was £169,855, less transferred to equalisation reserve, £50,000. Directors recommend final dividend of 5 per cent. (making 10 per cent., free of tax), leaving £29,855, plus £4,556 brought in, making to be carried forward, subject to provisions for income-tax and corporation tax, £34,411. Season

† Free of tax. (t) For nine months.

business and the manufacturing trade revealed a decline in earnings, and the net profit for year is £59,158, as compared with £71,181 in previous year. The amount is arrived at after making provision for corporation profits tax, and adequate depreciation of all buildings, plant, machinery, and fittings. The receipts from the automatic machines show a large decrease, due to the industrial depression which existed during the whole year. The realisation of certain securities during the year resulted in a profit of £13,688, which the directors have added to reserve fund, increasing it to £128,688. To the year's profit of £59,158 is added £12,977 brought in, making an available balance of £72,135. The directors have written off the cost of new machines and fittings purchased during the year amounting to £22,664. Dividend on ordinary shares of 10 per cent. absorbed £40,000, leaving £9,471 to go forward to next account.

CORDOVA LAND COMPANY.—The report and accounts for year ended September 30, 1922, show a profit of £5,511. Adding £35,432 brought in, there is a credit of £40,943. Dividend interest absorbed £20,339, and the remaining £20,604 is carried forward. The following table shows the number of cattle sold and average price realised:—

	Number of Cattle	Average Price Realised.
1922	10,063	£ 4 18 1
1921	11,363	£ 10 4 5
1920	9,351	£ 15 18 6
1914	10,998	£ 12 2 3

The report points out that the market for cattle in Argentina during the year has been passing through a period of extreme depression.

DARTFORD BREWERY COMPANY, LIMITED.—The report and accounts for the year ended September 30, 1922, show that the amount brought forward from September 30, 1921, was £24,253; the net profits for the year as shown by the accounts, after providing for depreciation, management expenses, income-tax, corporation profits tax, and interest on debenture stock, &c., amount to £28,647, making the total sum to credit of profit and loss account £52,905. After deducting the dividend at the rate of 5 1/2 per cent. on the cumulative preference shares (£7,975) and the interim dividend of 3 per cent. paid on the ordinary shares (£6,150), £14,125, the balance of profit is £38,780. The directors recommend that out of this sum £1,500 be placed to the reserve, which will then amount to £32,500. They also recommend that a final dividend be declared of 5 per cent. on the ordinary shares for the year ended September 30, 1922 (making with the interim dividend paid, 8 per cent. for the year); and they further recommend that a bonus of 2 per cent. be paid on the ordinary shares of the company. This will absorb £14,350, and leave a balance of £22,930 to be carried forward.

W. H. DORMAN AND CO., LIMITED.—The report for year ended July 31, 1922, and profit and loss account has just been issued. By the reduction of capital scheme, which was sanctioned by the Court on April 4th, the ordinary shares of the company were reduced from £1 to 5s each, and the sum of £221,250 thereby provided was utilised in writing off. After providing for interest on the 8 per cent. participating seven-year notes, and bringing to credit a sum of £28,677 on taxation recovery account, the profit and loss account shows a profit for the year of £10, which is carried forward. The company's trading during the past year has been seriously affected by the general trade depression.

SANTA CATALINA NITRATE.—Gross profit for year ended June 30, 1922, was £6,616, less London expenses, £2,226, leaving £4,390, plus £4,691 brought in and £5,000 retransferred from reserve, making

£14,081. After charging stoppage of works expenses, £5,459, and deducting interim dividend of 5 per cent., there remains £4,672. Directors propose final dividend of 5 per cent., £3,950, carrying forward £722.

TECKA (ARGENTINA) LAND COMPANY, LIMITED.—The report for year ended June 30, 1922, shows a net profit of £1,234, to which is added £20,023 brought in, making £21,257 available. The dividend for the year on the ordinary shares is 5 per cent., less income-tax. To pay the dividend £10,000 will be absorbed, leaving £11,257 to be carried forward. The report states that the depression in the live-stock market in Argentina has necessitated sales of sheep at very low prices throughout the year. The number of sheep disposed of amounted to 17,574 head, as compared with 16,325 during the previous year, and the average price obtained shows a decrease of 43 per cent. as compared with 1921, or 51 per cent. below the average price of the past six years during which the company have sold their sheep in the Province of Buenos Aires.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Ploughing and sowing operations are being actively carried on under seasonable conditions. A fair area has been laid under wheat, though prospects of any increase in acreage are discouraged by the low prices ruling, and which farmers consider as unremunerative. Revised official estimates for this year's crops in England and Wales show a decrease of 1,073,000 qrs wheat, 752,000 qrs oats, and barley 247,000 qrs compared with last year. English wheat was in fa- demand, and prices firmer at 45s to 48s for suitable milling grades per 504 lbs free on rail. Imported still sparingly offered, but tendency easier in sympathy with forward weakness. No. 1 Northern Manitoba quoted 53s 6d to 54s 6d., No. 2 mixed Durum 51s, Rosafe 63½ lbs 54s, all ex ship to arrive per 496 lbs. Only a moderate business resulted in cargoes at generally easier rates, and included steamers of choice white Karachi expected to load 13th inst. at 52s 6d, No. 1 Northern Manitoba November-December 49s 10½, Rosafe 62½ lbs. January 48s, and ditto January-February 47s per 480 lbs. Crop reports from the principal exporting countries are quite favourable, and Argentine official estimates show an increase of 4,500,000 qrs above last year. Flour was in steady demand, and prices again firmer for home milling. London standard straight run quoted 43s 6d, patents 45s 6d to 46s 6d, town households 41s 6d, all English country straights 34s to 36s per sack delivered. Imported firm but quiet. Canadian export patents 39s to 42s as to quality, and top patents 42s to 44s, with Australian at 40s 6d to 41s per 280 lbs ex store. Maize dull and easier. Plate ex ship 35s 6d, ditto landed 37s 6d. No. 6 yellow African 38s 3d landed, American mixed ex ship 36s 6d, and ditto landed 38s 3d. Only small sales resulted in cargoes at lower rates, and steamers of La Plata January-February sold at 34s 6d to 34s, ditto December 10th-31st at 33s 9d. English barley moves off quietly at about late rates —35s to 62s as to sample per 448 lbs free on rail. Imported dull and the turn weaker. Californian 39s to 44s, Australian Chevalier 49s to 53s per 448 lbs ex store, American malting (48 lbs) 31s ex ship, ditto landed 33s, Persian 28s ex ship, Danubian landed as to sample 32s to 33s, all per 400 lbs. Oats: English fully steady, with a fair demand for milling qualities which remain sparingly offered. Black and grey rule from 26s to 30s, and whites up to 33s per 336 lbs free on rail. Imported dull. La Plata f.a.q. quoted 29s 6d, ditto clipped 30s, No. 2 Canadian Western 35s 6d, No. 1 Canadian feed 32s 6d, No. 2 white clipped American (36 lbs) 27s 6d, black Irish (40 lbs) 27s, all per 320 lbs landed terms. Oatmeal firm to occasionally rather dearer, while in good demand. London made, all cuts £10 15s, rolled oats £10 15s, flaked £22 15s, ordinary Scottish oatmeal £10 10s to £20 10s, and American, all cuts, £18 to £18 10s per ton. Millers' offals rule firm, with sustained inquiries.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated November 9, 1922, is as follows:—Pig-iron: There is sufficient demand for pig-iron to keep pace with the present limited output. The moderate demand from America is very acceptable. There is not sufficient demand, however, to cope with a substantially increased output of pig-iron. Prices are maintained at 92s 6d per ton for No. 3 Cleveland G.M.B., and 93s to 93s 6d for mixed numbers East Coast hematite. Manufactured iron and steel: Owing to the lower values of French and Belgian currency, foreign steel is again being sold here at prices

which our steel works cannot touch. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £10 10s; steel rails, £9 10s. Iron ore: Business is slow, and competition for orders has made prices rather easier. Best rubio is 22s to 22 6d.

Our Sheffield correspondent writes:—The improvement in the steel trade is being robbed of its value in a monetary sense by a wave of severe price-cutting. Makers having large plants to employ are offering ridiculously low quotations to tempt business, with the result that hardly any work is being placed on a profitable basis. It is unfortunate that this tendency should begin at a time when costs of production are actually going up. If the situation becomes normal again, prices would have to be higher than a month ago. The demand is still mainly for the cheaper grades of steel in the form of bars, sheets, strip wire rods, and spring steel. A fairly good tonnage of this is going abroad. The continued deflation of the European currencies makes business with France, Belgium and Italy in some of Sheffield's more expensive steels and tools utterly prohibitive. Orders have been cancelled through this cause, and buyers in the countries named are unable to settle their accounts. Trade in crucible steels is as stagnant as ever. The rolling mills, which prepare materials for the local steel trade, are working better than at any time during the present year, but the forges are extremely quiet. The home and overseas demand for certain hand tools is picking up nicely, whereas makers of engineers' small tools are very badly placed for work. Pig-iron generally has been advanced 7s 6d per ton to cover dearer coke and scrap, but consumption, except for acid quality, continues quiet. Collieries are short of rolling stock and many kinds of stores, and at some pits there are accumulation of coal because of insufficient wagons to transport it to the buyers. A brisk export trade in steam coal and coke is proceeding; householders are now buying freely, and the home consumption of steam and small fuel steadily increases. Gas and railway companies are specifying considerable tonnages. Prices remain as previously quoted.

Our Glasgow correspondent writes:—Reports agree that a fair to encouraging volume of trade in iron and steel material has been transacted. The feature in iron connections has been the sustained exports of Scotch pig sorts to the United States and Canada. The total Atlantic shipments for the past week reached to 6,716 tons, which contrast with 645 tons a year ago. There is still a large quantity of No. 1 and No. 3 qualities to despatch, and will be, it is said, on to the end of the year; but there are no fresh inquiries in the market, and this fact has had a certain softening effect on quotations. On Wednesday No. 1 foundry iron for export was called 10s a ton, and No. 3 foundry 98s, both on trucks at makers' works; Glasgow delivery 5s more in each case. On home sumers are exceedingly short of supplies, yet they continue to operate in small lots, such as can only cover immediate and pressing wants. For good specifications in steel material steel producers are said to be "cutting" moderately, still officially they are skiplates £12 10s for boiler plates, £9 for ship plates, bridge and tank bars £10 5s, angles £8 15s, joists £9 10s, tees £10, and common bars £9 10s. Steel and iron bars are experiencing a slightly increased inquiry at £10 10s. The Indian and Australian markets are taking up more sheets ($\frac{3}{8}$ to $\frac{1}{2}$ inch), and are booking ahead at fully £10 10s. Corrugated (24 b.g., Glasgow) are firm round £16 12s 6d. An expanding inquiry is felt for Scotch hematite, which is held at £5 7s 6d, f.o.t. makers' works. The coal trade is brisk and strong, more so than it has been at any time this year. Demand runs on all descriptions, except the very small sizes. A prominent coalmaster estimates that the Continent is taking 50 per

Correspondence solicited.

cent. of the Scotch production, and is not satisfied, and that altogether the foreign, or export, market is absorbing 70 per cent. of the Scotch output at present.

Our Cardiff correspondent writes :—Coal shipments at the South Wales ports have been heavy this week again. The arrival of tonnage in the early part of the week was phenomenal in quantity. Dock accommodation was not large enough to cope with it without congestion, and the Great Western Railway Company was once more compelled to enforce regulations detaining vessels in the roads until berths were available for them. Colliery stems, therefore, were taxed to the utmost, and outputs were absorbed as quickly as they reached port for shipment. Under these conditions prices were very firm, but new business was comparatively slack, and the lull in demand was accentuated towards the end of the week by the withdrawal of French orders on account of the fall in the French rate of exchange. At the rate on Wednesday, the c.i.f. price of ordinary large steam coals delivered at Rouen was between 120 and 130 francs compared with only about 20 francs in pre-war years. Some French merchants had protected themselves against this week's depreciation by the purchase of sterling when the rate of exchange was under 60, but this precaution affected only a small volume of business, and the coals that are now being shipped have to bear the burden of the rate of exchange on the bill of lading date. The shipments from the South Wales ports were only 120,000 tons less in October than they were in the record month of September. Exports to the United States and Canada dropped from nearly 750,000 tons to 188,000 tons, but exports to France increased by 191,000 tons, to Italy by 110,000 tons, to South America by 34,000 tons, and to unclassified countries by 135,000 tons. Admiralties.

The following are the current market prices:—Best Admirals, 28s to 28s 6d; second Admirals, 26s 6d to 27s 6d; best drys, 28s to 28s 6d; best black veins, 25s 6d to 26s 6d; Western Valleys, 28s 6d to 29s 3d; best black veins, 25s 6d to 26s 6d; best bunker smalls, 25s 6d to 26s; Eastern Valleys, 24s 6d to 25s; anthracite big, 16s 6d to 17s; ordinary cargo smalls, 12s to 15s; anthracite big, vein, 57s 6d to 60s; anthracite machine-made cobbles, 65s to 67s 6d; anthracite French nuts, 72s 6d to 73s; stove nuts, 70s to 71s; rubble, culm, 14s to 14s 6d; coke for export, 37s 6d to 42s 6d; inland blast furnace coke at ovens, 25s to 26s; patent fuel, 28s 6d to 30s; pitwood ex ship, 31s 6d to 32s 6d.

The improvement in the tinplate trade is fully maintained, and the schedules of minimum prices have now been extended to other brands.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

The hematite pig-iron trade of Cumberland and North Lancashire may be said to be definitely out of the trough, and to be climbing upward again. The ascent to the crest will no doubt be a slow business, and set-backs may take place, but there is every prospect on the whole that steady progress will now be witnessed. The most hopeful and significant indication of recovery is the return after a far longer period than can be pleasantly contemplated to forward buying. Whatever stocks are lying still in works yards are sold, the production of the 13 furnaces in blast between Workington and Carnforth is being fully absorbed, and that at time when the steelworks are idle, and consumers are beginning to betray anxiety concerning the covering of their requirements during the next two or three months. It is not surprising, therefore, to learn that makers are now fairly well sold ahead, the immediate result, of course, being a stiffening of prices. Bessemer mixed numbers have risen more than 2s 6d per ton to between £5 2s 6d and £5 5s per ton delivered at Glasgow and Sheffield, and for export stand at the same figure. Quite a substantial proportion of the make is being shipped overseas. American needs have diminished, but those of Germany, France, and Belgium are not a whit less than they were three or four months ago. And on top of these are the wants of Scotland and South Wales, with the expectation of an increase as soon as shipbuilding activity is greater. An expansion of output cannot be much longer delayed, and indeed it is expected that two or three additional furnaces will be re-lighted before the end of the month. There is a better demand for low phosphorus iron, and prices vary according to analysis. There is a wonderfully steady market for ferro-manganese, most of which is going to America, and the price is maintained at £15 per ton. Spiegel, quoted at £7 per ton, is a weaker trade. The steel trade has never been duller, and at the present time no one looks for more than spasmodic activity. The mills at Workington rolled railway material for a week for India, and are now idle again. Business is very scarce, and the competition to secure whatever orders are being placed is very keen. Quietude prevails in the iron ore industry, the consumption being largely local, and little metal is passing outside the district. Selected ores command 25s to 27s 6d per ton; superior kinds up to 22s 6d per ton, and ordinary sorts up to 15s per ton. The coal trade is brisk, and the living-up of the landsale demand has relieved the competition in the Irish market, which is not now such a favourite dumping ground for Lancashire and Scotch coal. The north of Ireland is taking the bulk of the coal that is being shipped across Channel, but the Treaty ports allow steamers not Ulster-owned to enter, and the shipments aggregate nearly 11,000 tons per week. Continental business cannot be entertained, as soon there will be barely sufficient coal to go round. Smelters, as may be gathered from what is said of the iron trade, are calling for a bigger make of local coke, and it is hoped that all the ovens will be working at full capacity before the end of the year. There is no change in coal prices, but there will in all likelihood be advances to record, except in the case of local landale, in the course of a few weeks. Local furnace coke commands 22s 2d per ton. East Coast coke supplies to this

CONSTABLE 10-12 Orange St. W.C.2.

MANCHESTER, November 9.

The market this week has been distinctly dearer, as a result of the further advance in raw cotton rates. Buyers of yarn and cloth, however, have been very slow in following the higher quotations, and business to a considerable extent has been blocked. The opinion is expressed in most quarters that current prices cannot be paid by consumers in Eastern markets, and it seems likely that more machinery in Lancashire will run out of work. Scattered cloth sales have occurred for India, chiefly out of stocks. Standard makes for China have been dull, but moderate buying has occurred in fancies. A fair demand has been met with for Egypt. Home trade goods have been rather quieter. Business in American yarns has been checked by the higher prices, and spinners are losing ground. Some fair lines have been booked in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The raw material position remains sound, and although somewhat easier prices are ruling in Australia for topmaking wools, there does not appear to be any signs of a real weakening. Of course, there are some big weights of wool in sight, but so long as consumption is maintained on the scale of recent months, there does not appear to be much prospect of any material decline in the raw material. On the other hand, the steady depreciation in Continental currencies may have an effect on the market, though this would mainly concern short and carbonising merinos of typical Continental style. As a matter of fact, these wools were cheaper at the Hull sale to-day, but really good combing wool maintained recent prices. America is still taking some fair weights of wool, tops, and by-products, but her purchases are not nearly so large as they were two or three weeks ago. The American demand, however, is helping to steady this market and relieve the general quietness which has prevailed in the home trade. The recent advances in merinos seem to have checked demand, and users have been giving more and more attention to fine crossbreds. To-day quotations for merinos were distinctly easier all round, and warp 64's tops were obtainable at 5s 2d, which shows a reduction of about 1d on the week. Super 60's are now quoted at 4s 6d to 4s 7d, but crossbreds remain firm at about last week's rates. Spinners have plenty of work in hand, and most firms report a fair amount of inquiry. The hosiery trade requirements are again accounting for some large weights of yarn. There is not a great deal of business passing in botanics at current quotations, most users being unable to sell their cloth at prices to cover the cost of production. The lack of life in the piece trade, indeed, is the one disappointing factor in what would otherwise be described as a fairly healthy situation.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The chief event this week is the offering of 30,000 bales of Colonial wool at Hull, and although at the time of writing we have no knowledge of the actual course of prices, any further advance on recent London rates appears to be out of the question, indeed, slightly lower values would cause no surprise. The general move-

ment of Continental exchanges gives rise to serious concern, and while one naturally expects the mark to depreciate in value, the decline of the franc is, if anything, more significant, though it is no doubt largely due to what is happening to the mark itself. There was much complaining among French buyers when the value of the franc was around 50 to the £, and now that the value is over 70 to the £ one feels that the purchasing power of French firms cannot but be seriously affected. However, it is not likely that any really serious setback in wool values will take place. All along the trade have been eagerly longing for a better and safer buying basis in Colonial markets, and it may be mentioned that slightly cheaper wool has been procurable in Australia during the past week. Good warp 70's could be bought in Melbourne to bring in tops at 5s 2d per lb, and it is interesting to note that 64's have somewhat lessened demand in Australia for really shafty 60's and warp 70's, most of the call being for good 64's. At Perth combed, Bradford, and there will have to be a keen Japanese and American inquiry for merinos if to-day's prices are to be fully maintained. We have said all along that nothing would benefit the trade so much as to be able to buy good 64's combing wool on a basis that the tops could be sold in Bradford or Roubaix at 4s 9d, and are satisfied that the wool textile trade of the world to-day cannot lift the merino clip on a basis of 5s 3d for 64's, and a battle royal is proceeding between manufacturers and wholesale fabric buyers, and even Leicester hosiery manufacturers using the finest qualities of yarn are objecting seriously against the prices facts are mentioned without the least desire to bring about a depreciation of values, but the impoverished state of the Continent indicates the necessity for caution. If fashion could be directed to crossbreds of all qualities, it would be the best thing that could happen in the interests of the whole trade. For the time being, important accession of new business in piece goods, otherwise prices will ease. A developing inquiry for crossbreds would help to take some of the emphasis from fine wools, and though America share towards bringing about the desired end, and is even yet a by no means unimportant influence.

Information from South Africa indicates a distinctly easier tendency in the wool market out there, and it is certainly high time values came down to a level corresponding with Australian wools. The latest cables indicate that Bradford representatives of Cape houses can now offer 10-12 months' combing wools on a basis of 49d, and full 12 months' combing wools on a port. Now that the mad rush of buying seems to be over, the home trade should have a chance to operate. Prices have recently been steadied somewhat by American competition, buyers for that destination being interested in practically every description of Cape produce.

VEGETABLE OILS AND OILSEEDS.

Great interest is centred in the coming crops of linseed in the chief producing countries, and it would appear that next year's supplies are amply assured. The official statistics of the Ministry of Agriculture in Argentina indicate the areas under linseed at 4,048,000 acres, and an estimated yield of 1,774,000 tons, against 3,802,000 acres and 820,000 tons in the season now drawing to its close. The weather has been favourable to the growing crop, but had been generally accepted. Much, of course, still depends upon bumper yield will actually be realised. Good progress is reported in the sowing of linseed in India, and expectations of as large a crop as in the current season are encouraged. Supposing it gives a total of 350,000 to 400,000 tons, there would be about two million tons available for export from the Plate and India together. The World's shipments this year, January 1st to November 4th, are

returned at 1,087,200 tons, and this may be increased by another 100,000 tons or more by the end of the year. Stocks of seed and oil at the crushing centres are very low, and there would appear to be some hopes of a steady revival in trade and an enlarged consumptive demand.

The increased Argentine estimate had a depressing effect upon values, and there was a drop of 10s to 20s per ton in both old and new crop. Old Plate, on spot, declined to £18 10s, but has recovered to £19, and seed, loading, is steady round £18 10s, owing to scarcity of seed near at hand. New crop has, however, been dealt in at as low as £15 for fair, February shipment to Hull, with £15 5s quoted April-May. Crushers, however, are proceeding very cautiously, and are not making large commitments any distance ahead. A fair business has been done in Egyptian cottonseed, current value of black being round £10 10s to London or Hull. Bombay castorseed has been done at £17, October-November, to Hull, and Toria rapeseed at £16 10s, January-February, to Liverpool.

In the oil section raw linseed oil continues scarce for prompt delivery, and quotes £38 15s, ex Hull mill. For delivery to the end of the year the figure is round £36 15s, and for January-April £32. Cotton oils are in quiet demand, but values are about unchanged.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

As hinted in this report a week or two ago, hides are showing signs of weakness at last, and prices at Thursday's Bermondsey auctions prove my forecast. Hereford and runts dropped 1d, whilst best ox were nearly all withdrawn. Seconds sold at 1d less money, whilst cows and bulls were just steady. Kips and calf showed no alteration on last prices, so that it is evident tanners are tired of paying advancing prices in view of the immense difficulty in getting compensating advances on their leather. Wools sold from 5s to 9s each, with the hogg class selling from 4s 9d to 11s 6d each. The tone of the imported hide market is still firm, but there is less activity reported from the River Plate, although America is still buying at high figures. The American market is cabled this week as steady, with best Chicago packers selling still at 23 cents. The imported goatskin position is very firm, and stocks are limited. Indian sorts are scarce and dear, owing to the brisk demand on the part of American kid tanners. The demand for bends is less active, and the trade is running on 8/10 lbs average from shoe manufacturers. Tanners are still eager sellers, but find it extremely difficult to secure any advance, users at once substituting a lower grade sole leather. The French drop in the exchange has also affected the export of shoulders and split hides to France, and factors are holding larger stocks in consequence. Upper leathers are still hanging fire, and the only leather which seems in fair demand is glazed kid at a low price, round about 6d to 12d per foot. Curriers are a shade better off for orders, but the demand for wax butts and splits is patchy, and several firms have stopped making this leather for the time being. The shoe section is fairly well employed, but orders are small, as buyers have no faith in the stability of prices. Sampling for the spring seems to be the most important item just now in the shoe trade centres.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 10.

SUGAR.—After opening the week with a quite tone the market became steadier, refined descriptions being raised 3d per cwt. in most cases, and a moderate amount of business was carried through. Messrs Tate and Lyle's cubes sold, 56s 9d to 57s 9d; crushed, 53s 9d; nibs, 56s 3d; granulated stove, 52s 7 1/2d; fine and coarse, in cwt bags, 52s 1 1/2d. No. 1, 51s 10 1/2d; No. 2, also London, 51s 7 1/2d; caster, finest, 55s 4 1/2d; A, 53s 7 1/2d; B, 53s; yellow crystals, 45s 7 1/2d; No. 3 crystals, 51s 6d; granulated, second half December, 51s; January-March, 50s 6d. Crystallised West India, spot, changed hands at 42s 6d to 45s, as to sample. American granulated, spot, found buyers at 49s 9d to 50s; white Java, spot, sold, 48s to 48s 9d as to quality; ditto afloat, steamer, 20s 3d to 20s 4 1/2d, c.f. and i. terms. London. White Mauritius, spot, quoted 47s 6d to 47s 9d; white Brazilian, spot, 47s 3d to 47s 6d. Belgian granulated, ready, sold, 20s 3d; crystals quoted, 19s 10 1/2d, f.o.b., Antwerp; W.S.R. granulated, prompt, 22s 9d; cubes, 27s 3d; H.U.M. granulated, 22s 9d, f.o.b., Amsterdam; Dinteloord granulated, November, sold, 21s 9d; and Sasvagent, November, also at 21s 9d, f.o.b., Rotterdam. Czechoslovakian granulated, December, 22s; cubes, 24s 9d, f.o.b., Hamburg. Brazilian, basis 95 per cent., December-January, sold, 17s 3d; and basis 80 per cent., November-December, 10s 6d, c.f. and i., U.K. Terminal market ruled firmer. White, December, sold, 21s to 21s 3d and 21s 1 1/2d; May, 21s 4 1/2d to 21s 9d and 21s 7 1/2d. Cuban stocks stand at 173,200 tons, against 1,103,120 at the same time last year. Liquid glucose, spot, 28s 6d.

COFFEE.—Spot market very steady, and a fair inquiry prevailed

for mild parcels. Vera Paz bold sizes, sold, 91s to 103s 6d; washed San Paulo bold, 85s 6d to 91s. Future delivery market remained slow. December, sold, 60s 6d.

COCOA.—Only small transactions were effected this week regarding spot lots, but sellers required recent prices respecting most descriptions. Trinidad in auction sold at a shade less money, however, good plantation, at 63s to 64s; Accra, F/F quality, November-January, sold, 36s; and January-March, 36s 6d, f.o.b. terms.

TEA.—In auction during the week 43,330 packages Indian were catalogued, and while good to fine invoices engaged active support at firm rates, common and medium were quieter of sale, with trend of values against sellers. 9,360 packages Ceylon were also brought under the hammer, and with fair biddings a steady tone governed proceedings. Java and Sumatra sold steadily for all useful kinds, others irregular.

RICE.—Market steady, and business was of moderate dimensions. Two Stars, spot, 15s 6d; ditto, November, 14s 1 1/2d; No. 1 garden Siam, double bags, November, 15s. Spanish, prompt, quoted 19s 6d, c.f. and i. terms. Rangoon beans, spot, 8s. Japanese peas, spot, 36s; September-October, 27s 6d; December-January, 24s.

SPICE.—Pepper market generally quiet, but steady. Fair black Singapore, spot, 3 1/2d; ditto, December-February, 3 1/2d; Aleppo, spot, 4d; Tellicherry, 4 1/2d; white Singapore, spot, 5 1/2d; Muntok, 6d; ditto, December-February, 5 1/2d. Zanzibar cloves, spot, 1s 4 1/2d; October-December, 6 1/2d; November-January, done 6d. Flake tapioca, spot, sold, 2 1/2d per lb for fair quality. Fair Penang seed pearl, spot, 21s 6d; sago flour, November, sold, 13s; October-December, 12s 9d to 12s 10 1/2d; desiccated coconut, spot, fine and medium, sold, 36s 6d; coarse, 37s; January-February, halves, 35s 9d. Ginger quiet, unaltered.

FRUIT.—General trade in currants moved quietly. Pyrgos quoted 70s; Amalia, 71s; Patras, 75s; Vostizza, 85s to 97s. Sultanias ruled steady. Smyrna quoted 135s to 145s; choice, 155s to 160s. Figs steady. New layers, 125s to 145s; pulled, 180s to 195s. Valencia raisins steady regarding the lower qualities, but fine were slow of sale, and prices receded. In auction, 110 tons were disposed of, being about a third of the quantity submitted. Quarters, sold, 60s to 106s; seedless, 60s to 86s.

JUTE.—The market opened the week quietly, and after showing a firmer tendency, weakness again ensued, political and financial considerations outweighing firmness cabled from Calcutta. First grade, November-December, usual Continental ports, sold, £31 10s to £32 10s; December-January, £32 to £32 10s, £32, £32 15s; lightning grade, December-January, £30 10s to £30 15s, £30 10s, and £31. New crop, Ganish M assortment, dock Hamburg, sold, £34. Hessians steady. 10 oz, spot, 33s; January-March, sold, 31s; 8 oz, spot, quoted, 24s 6d; November-December, 25s; A twills, spot, 81s; B, 64s 9d; salts, 61s 6d; sugars, 80s.

HEMP.—The market for Manila after ruling very steady assumed a quieter tone. G grade, November-January, £34; H, quoted £33; J, £30 15s; K, £29 15s; L, £28 15s; M, £27 15s. New Zealand in very poor request. H.P.F., spot, quoted £33; fair, £32; and forward, £32 and £30 10s respectively. African sidal, No. 1 G.E.A., November-January, £35; and B.E.A., £34.

SHELLAC.—Market quiet, and forward positions easier. T.N., spot, steady at 350s for fair quality; A.C. garnet, 325s; G.A.L., 300s; T.N., December, sold, 320s to 315s and 325s; March, 295s to 280s and 292s 6d; November-December, steamer, sold, 290s, c.f. & i. terms.

COPRA.—Market opened the week with a firm tone, but became quiet and easier. F.M.S. Straits, November-January and December-February, Rotterdam, sold, £24 10s to £23 17s 6d and £24 2s 6d; Ceylon, November-December, done £25 10s to £25 5s; Java, £24 7s 6d to £24 2s 6d and £24 5s; Dutch East Indies, £23 18s 9d to £24 1s 3d; mixed, £23 7s 6d to £23; South Sea Islands, £23. Palm kernels, December-February, Liverpool, sold, £17 6s 3d to £17.

RUBBER.—Market somewhat unsettled, but there was a fair trade doing. Standard crepe and sheet, spot, also November delivery, sold, 1s to 1 1/2d and 1s; December, 1s 1/2d to 1 1/2d and 1s 1/2d; January-March, 1s 1/2d to 1s 1/2d, 1s 1/2d, and 1s 1/2d; April-June, 1s 1/2d to 1s 1/2d, 1s 1/2d, and 1s 1/2d; July-September, 1s 1/2d to 1s 1/2d. To New York standard sheet, December-January, sold, 1s 1/2d; first crepe, November-December, 1s 1/2d. Fine hard Para, spot, 1s 1/2d; soft, fine, 1 1/2d; and Caucho ball, 1 1/2d.

EGG PRODUCTS.—Markets ruled quite steady. Prime liquid yolk, spot, sold, 107s 6d; ditto, October-December, 105s per cwt. Albumen, spot, 3s per lb.

OILSEEDS.—Linseed market ruled easier on larger Argentine crop estimates, but steady at the decline. Bold Bombay, afloat, £21 5s.

Small Bombay, ditto, £20 15s. Calcutta, afloat, £19 5s; October-November, £18 15s; November-December, £17 15s. Plate, afloat, sold, £18 2s 6d; November-December, £16 12s 6d; December-January, sold, £15 15s; January-February, new crop, sold, £15 to £15 5s. Rapeseed quiet. Toria, November-December, £18; real bold Ferozepore, November-December, £17. Cottonseed firm. Egyptian black, November, £10 6s 3d, and white, sold, £10 1s 3d to £9 18s 9d. Bombay, December-January, £8 7s 6d. Gingly firm. Chinese, new, November-December, Continent, £21 10s; large Bombay, December-January, £22. Castor, Bombay, November-December, £16 12s 6d, sellers, to Hull. Ground nuts steady. Coromandel, machine-dried, November-December, £20 10s; ordinary, £19 10s; East African, November-December, £20; Nigerian, £19 15s; bold Bombay, December-January, £19 12s 6d. Chinese, November-December, £19 15s. Soya beans, Manchurian, November-December, £11; new crop, December-January, £10 17s 6d per ton.

OILS.—Linseed market irregular and easier. Spot, net, naked, 37s; November, 34s 9d; November-December, 34s 6d; January-April, 31s. Rape firm. Crude, spot, 41s 6d; refined, 45s. Cotton steady. Crude Egyptian, spot, new, 35s; common edible, 44s; deodorised (in barrels), 48s. China-wood firm. Hankow, spot (barrels), 72s; shipment, 67s 6d. Coconut steadier. Ceylon, spot, 39s; November-December, 38s; Ceylon, ditto, quoted 43s. Soya steadier. Oriental barrels, October-November, 35s 6d. Japan fish steady. November-December, cases, 21s 6d. Cod inactive. English, spot, 29s to 30s. Ground nuts firm. English crushed, naked, spot, 45s; deodorised, barrels, 52s. Turpentine dull and easier, irregular. American, spot, 116s; November-December, 116s; January-April, 118s. Rosin steady. American, grade B, 16s 6d; F, 16s 9d; G, 16s 9d; H to L, 16s 9d; WG, 19s 6d; WW, 21s. French, F/G, 15s 6d; WW, 17s 9d per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water-white, 2d per gallon.

METALS.—Tin opened the week with a strong and active tone, due to good covering orders. Later top rates were not maintained on slight selling pressure. Cash sold at £187 15s; November, £187 10s to £187 5s to £187 12s 6d; December, £187 5s to £188 to £187 12s 6d; and January at £187 10s to £189 to £187 15s. Business was reported in the East at £186 10s, c.i.f. The market subsequently ruled easier, due to heavy selling pressure, though fairly liberal transactions occurred. Standard cash by the middle of the week sold down to £180; November, £180 5s; and three months, £180 15s to £181 10s. At Thursday's market the tendency was dearer. Cash sold at £183 10s, and three months at £183 to £184 to £183 15s, while finally registered at £185. Prices showed weakness for forward maturities, cash being fairly steady on Friday, with a fair demand. Standard, cash, sold at £184 10s, and three months sold at £185 10s to £185 to £185 7s 6d to £184 15s. English ingots, £184 to £184 10s.

Copper opened with a dearer tendency, though somewhat irregular, with large sales in cash at £63 10s to £63 2s 6d to £63 5s; November, £63 5s to £63 3s 9d; and three months at £63 15s to £64 2s 6d. Under the influence of good buying orders, also higher American cables, the market continued to show firmness. Standard, cash, on Tuesday sold at £63 15s to £63 10s; November, £63 17s 6d to £63 11s 3d; and three months at £64 7s 6d to £64 10s to £64 5s. Later movements were attended by slight irregularity and further weakness. Standard, January, sold at £64 2s 6d to £63 18s 9d to £64; and three months at £64. On Thursday values were rather firmer, with good demand. Standard, cash, sold at £63 2s 6d to £63 5s; and three months at £64 to £64 2s 6d. The upward movement continued on Friday, when Standard, cash, sold at £63 15s and three months at £64 10s to £64 12s 6d; electro, £70 10s to £71; strong sheets, £96; best selected, £65 10s to £67 10s; and wire bars, £71 per ton. Lead firmer at £26 10s to £25 5s, as to position. Spelter dearer at £39 2s 6d to £40 10s to £25 5s, as to position. moly. Ordinary, £27 to £29 10s. Aluminium, home, £92 10s.

TALLOW.—Messrs Colchesters and Woolner write on November 8th as follows:—The tallow market was steady during the week, and prices are fully maintained to-day. The recent advance in prices appears to have been sufficient to reduce the demand to a moderate extent. At auction to-day 1,839 casks tallow were offered, and 706 were sold. Quotations are:—Australian mutton: Fine, 43s 9d; good to fair, 41s 9d to 40s; dull to dark, 37s 9d to 36s; hard, 42s. Australian beef: Fine, 44s; good to fair, 42s to 40s; dull to dark, 37s 6d to 36s; sweet, 45s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 40s; and mixed, 43s 3s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 25s 6d per cwt. Quotations are:—Town, 35s 6d net cash, naked, ex works. Country: Frait casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 35s 6d; melted stuff, 31s 6d, f.o.b.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."
Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the *Economist* may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Cophall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709).

THE MONEY MARKET.

MONEY has been distinctly more plentiful, thanks to the big transfer from Public to Other deposits shown in the Bank return, and the demand for bills, which had been very hesitating in the early days of the week, became rather keener. Commercial paper, however, remained exceedingly scarce, though the higher rates current in New York were said to be leading to a certain amount of international kite-flying. Yesterday the announcement of the Treasury Bill allotment increased the tendency to ease, but the market was nominal and idle.

	Nov. 17, 1922.	Nov. 10, 1922.	Nov. 3, 1922.	Oct. 27, 1922.	Previous Rate and Date Changed.

Market rate (3 months' bills)	2½-18	2½-18	2½-18	2½-18	..

The Bank return showed a decrease of £617,000 in the note circulation, and an increase of £3,000 in the stock of gold, so that the Reserve was £620,000 higher. Other securities indicated repayments by the market by a decrease of 1½ millions, but Government securities were three-quarters of a million higher. As to the deposits, Public had declined by nearly 3½ millions, of which 3 millions had gone to Other. Currency notes outstanding were reduced this week by £1,003,100 to £287,843,500, which includes £1,537,900 for notes called in but not yet cancelled. The fiduciary issue is £238,155,600, or £71,832,800 below the maximum.

THE STOCK MARKETS.

The tone of the stock markets has remained remarkably firm, and although the volume of business has been on the small side, prices have been well maintained. The gilt-edged market improved a little on expectations of a Conservative majority at the General Election, while fairly heavy purchases were reported of War Loan and other British Government stocks on the part of Continental capitalists, who have become alarmed at the prospect of a Swiss capital levy. The settlement was lighter than the previous one, and was arranged without difficulty. The feature of the foreign market has been the activity in French bonds, which have fluctuated considerably with the movement of the franc. Home Rails are better on balance, and the demand for Argentine Rails continues. Rubber shares have been steady, but there has been a slight reaction in tea shares. Oils show a little improvement, and the industrial market generally is a little better, though business is quiet. Kaffirs and Rhodesians have been firm, but Chartered are still heavy.

THE COMMODITY MARKETS.

There has been little activity in the cotton trade during the week, business to some extent being disorganised by the General Election. It is thought that cotton prices are too high, and that if manufactured goods are sold at current rates difficulty may be experienced in distributing centres abroad. The position in the wool industry is exceedingly difficult from the merchants' point of view. Our correspondent is of opinion that the present state of the world's markets does not justify to-day's standard of fine wool values. Business in pig-iron is improving, both hematite and Cleveland Foundry iron having been sold into the first quarter of next year. A considerable amount of inquiry is about for manufactured iron and steel, and our Sheffield correspondent reports that the trend of business has taken a decided turn for the better so far as steel is concerned. The position on the Cardiff coal market is slightly easier, the more immediate cause of the change being the disorganisation of traffic arrangements; more coal orders from France have been cancelled on account of exchange difficulties. Values in the timber trade display a decided firmness, and Swedish and Finnish exporters have cleared stocks at rising prices. Further details of markets and prices will be found on later pages from our special trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market there has been a decided recovery from the feverish collapse of the previous week, and, on the whole, business has been much quieter. Perhaps the most outstanding feature has been the remarkable improvement in the value of the lira, the quotation of 102.20 on the 10th having fallen to 94.25 on Tuesday, a quotation lower than at any time since the early part of July. On Wednesday there was a reaction to over 97.50, but by yesterday morning rates were down again to 94.75. No satisfactory explanation has yet been given of this movement beyond the general increase in confidence in Italy on the coming into power of the new Government. It would seem that the chief Italian banks have been spoken to by the new Finance Minister with

regard to exchange operations, but the exact nature of his instructions has not been divulged. The Paris rate has shown a somewhat irregular recovery, from 69.60 a week ago to 64 yesterday morning. There has been a good deal of bear covering, and a general feeling that the collapse of the previous week was too rapid, but there is at present no feeling of confidence in the market as to the future movement of the franc. The spread between Brussels and Paris has been very slightly reduced, but the discrepancy between the two rates remains as mysterious as before. Berlin, after some recovery in the early part of the week, reacted again, but yesterday morning the rate showed a tendency to fall sharply on the news of Herr Cuno's appointment, and at one time stood at 27.500, as compared with 35.000 on the 10th. In view of the probable opposition of the Socialists, however, the future of the new Government is most obscure, and a solution of the financial difficulties of Germany seems as far off as before. The dollar rate has been somewhat irregular, but, on the whole, the movement has been decidedly in favour of this country from 4.46½ on the 10th to 4.48 yesterday morning. The quotation for forward dollars is about ¼ of a cent per month above spot. On the whole, the recent election results in the U.S.A., with the possible consequence of more liberal assistance to the agricultural population, would seem to point to an improvement in sterling, but the situation is by no means certain. Among the neutral exchanges Amsterdam has moved against us, while Switzerland, too, shows signs of recovery from its fright over a possible capital levy. Madrid, too, is slightly lower, but the Scandinavian countries have all moved somewhat in our favour. Helsingfors, after rising from the low quotations of the previous week, would seem to be steadying down at about 180. In Central Europe, Vienna remains stationary at about 330,000, and reports as to the new financial measures in connection with the League of Nations' proposals are somewhat more optimistic. Warsaw, too, for the first time for some weeks, shows signs of more stability at 70,000, or slightly under, while Prague also remains steady at 140. At 370 the Athens rate is again somewhat higher, but the panic movements of recent weeks appears to have been stayed. In the East the rupee has moved up to 1s 4d from 1s 3 3/4d, while the yen at 2s 1 1/4d is slightly cheaper. Silver prices, as was forecasted last week, have continued to move downwards, and there is still little confidence in the future. As compared with a week ago, Hong Kong at 2s 4 1/4d is 1d cheaper, while Shanghai is 2d cheaper at 3s 1 1/4d. In South America, Buenos Ayres is about the same at 44 1/2d, Montevideo a little dearer at 43 1/4d, Rio slightly up at 6 1/2d, and Valparaiso, after being higher, is also a little dearer at 35.80.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 11th:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	12,964	Interest on Debt	7-81
Taken from Exchequer balances	316	Supply Services	4-92
		Reduction of debt	21
		Sundries	13-28
	13,280		

Property and Income-tax yielded £4,331,000, against £1,400,000 in the corresponding period of last year. Customs produced £2,564,000, against £2,682,000. Excise receipts £1,719,000, against £1,760,000, and Estate duties £780,000, against £650,000. The week's operations reduced the National Debt by £4,924,660 and caused the following changes:—

National Savings Certificates	Min. £	National War Bonds paid off	Min. £
Treasury Bills	450	Unemployment Insurance ..	20
4½% Treasury Bonds	1,138	Public Works Advances	7-46
	1,637	Funding Loan, &c.	25
	3,225		8-15

The floating debt was reduced by £6,330,000 to £914,173,500 during the week.

FINANCIAL YEAR, 1922-23 (April 1 to November 11, 1922).

Total spent	£	Raised by revenue ..	£

THE NEW PARLIAMENT.

The confusion here and there between party labels accounts for some discrepancies in the various estimates of the exact balance of parties in the new Parliament. But these discrepancies are trivial, and in the main the upshot of the General Election is perfectly clear. Mr Bonar Law will have a clear majority of at least four score over other parties combined. It is a majority of the size most to be desired by a wise Prime Minister. It is not large enough to be unwieldy, or to produce slackness and over-confidence; nor is it small enough to cause continual anxiety, or which is far more important, to lead to the temptation of insincere combination or unscrupulous bargains with any other political group. Coalition has been enthusiastically buried by the electorate, and the position in the new House of Commons provides no fears of its resurrection in the shape of "co-operation" or under any other guise. Mr Bonar Law is in the saddle without any pillion rider, and the electorate has given him full opportunity to prove his powers of horsemanship. These powers will be tested to the full by the rocky nature of the road which he has to traverse, and his performance will be watched with the greater anxiety because the electorate has given him his mount without knowing much about his plans for surmounting some of his most formidable obstacles. On several vital questions, upon which Mr Bonar Law has been rather surprisingly reticent, the electorate has shown him the way. The Conservative campaign throughout the country has shown at least a half-conscious realisation that the mass of the people are first and foremost in favour of a policy of peace through the League of Nations. The manifestation of popular feeling on this question throughout the length and breadth of the land should act as a stimulus to the Prime Minister. On another point the electorate has given an unmistakeable indication of its views. It has shown itself overwhelmingly in favour of Free Trade. The fact that Mr Bonar Law has succeeded in keeping tariffs well in the background has been an immense asset

to the Conservative party, and the large Conservative successes in Lancashire and some other districts would have been impossible on any other condition. There is at present on the Statute Book an administrative Act that opens the door very wide to the extension of tariffs; but we trust that this undoubted manifestation of Free Trade opinion will be fully realised by the Government, and will act as a strong restraining force whenever and wherever tariff temptations may arise.

From the party point of view the election results have brought surprises all round, and much rejoicing and disappointment in various quarters. The Conservatives have held their ground to a far greater extent than their most optimistic organisers expected; Labour's gains have been more extensive than the party chiefs dared to hope; the Independent Liberals have only doubled, where they hoped to quadruple, their representation; while the severest blow has been sustained by the Lloyd George Liberals. Sensations have occurred with regard to both personnel and localities. The Conservatives have surprised themselves with the extent of their hold upon the counties, and the Labour party by their sweep of Glasgow and the reversal of the bad municipal results in the great industrial centres. The Independent Liberals, on the other hand, record among their gains such unlikely constituencies as Great Yarmouth, Oxford, Birkenhead, and the Isle of Wight. As regards personnel, the defeat of Mr Churchill is the most sensational, while the loss of Sir Donald Maclean will be the most widely regretted by all shades of Parliamentary opinion. Ministerial casualties, numbering five, are lighter than might have been expected; but the victims among the Ministers of the late Government include, besides Mr Churchill, such notable figures as Sir Hamar Greenwood, Mr Kellaway, and Sir Arthur Griffith-Boscawen. Labour's severest loss is Mr Henderson. On the other hand, old Parliamentary hands returned, after a spell in the wilderness, include Sir John Simon, Mr Philip Snowden, and Mr Ramsay Macdonald, while a Labour protagonist in Mr Sidney Webb enters the House for the first time. The failure of women candidates has again been almost wholesale, Mrs Wintringham and Lady Astor being again left to represent their sex at Westminster. On the whole, a rapid review of the results suggests that in the matter of personnel the new House of Commons will be much more satisfactory than the last, one of the most interesting changes being the strong representation on the Labour benches of the intellectual side of the movement. But it is not only in the matter of personnel that the new House will be an improvement on the old. The Government party, as we have said, will be unified and cohesive, and it is of equal importance that the new House will have, what the late House so disastrously lacked, namely, a strong, effective, if not cohesive, opposition. In debating strength Mr Bonar Law may find his front bench over-matched by heavy artillery, and he will, we think, live to regret that so many of the high offices of State have been handed to members of the House of Lords. Another advantage of the composition of the new Parliament is that it appears to remove every obstacle, except the personal obstacle, to a re-union of the Liberal party, which is strongly desirable in the interests of the country. It is quite impossible for any party to retain its existence on a foundation which consists of nothing whatever but the personality of one man, even though that man's personality be so powerful as that of Mr Lloyd George. The path would, therefore, seem to be open to Liberal re-union, while on the other side of the House it would appear equally certain that Mr Austen Chamberlain and his personal followers will be quietly and unobtrusively merged again into the Conservative fold. These advantages arise from the fact that the need for coalition has gone, and that Mr Bonar Law has a complete working majority. A further advantage we hope will arise from the same fact. The country has elected a Government which we may hope will succeed in shaking off the mistrust and discredit which the late Coalition succeeded in earning throughout Europe.

These are the advantages, definite and prospective, of a clear majority. But there are some aspects of the election figures which are not so reassuring. A comparison of the elected members of the various parties, with the votes cast in the country, give food for serious thought

on the future of democratic representation. We extract the following figures (not quite complete) from yesterday's *Times* :—

	Members Elected.	Total Votes Received.
Conservative	341 ..	5,377,465
Liberal	60 ..	2,595,285
National Liberal.....	52 ..	1,510,734
Labour	141 ..	4,102,425
Other Parties	11 ..	453,652

The main feature that emerges from a study of these figures is that the Conservative party, with a clear majority of 77 members in Parliament, are in a minority of well over 3,000,000 votes in the country. This anomaly is, of course, due to the split votes and three and four-cornered elections. If Liberal and Conservative re-union reduces the political parties to three, the anomaly will become less serious. But in any case, it is difficult to see how, under the present electoral system, minority rule is to be avoided. Not the least important problem for the new Parliament to consider is how, by a change in the electoral system, majority rule may be assured. The problem of removing these present defects in the system of democratic representation is one that should not be allowed to drift.

THE EXPERTS' STABILISATION SCHEME.

THE Wirth Cabinet has fallen, but this does not detract from the importance attaching to the scheme for stabilising the German mark put forward by the distinguished experts summoned to Berlin to discuss the question by the German Government. It looked at first sight rather like a helpless confession of weakness for any Government, even though surrounded by all the financial difficulties that now beset Germany, to have to ask for outside advice about the solution of its economic problems; but, in fact, it was a very clever thought, as is evident as soon as it is admitted that the mark cannot be stabilised unless Germany is granted a moratorium on Reparation payments. For this obstacle to stabilisation, if put forward by Germany as an insuperable bar to the restoration of order to her chaotic financial position, would naturally be regarded by all her *jusqu'au boutiste* enemies as an attempt to evade her liabilities and escape the punishment that has been justly imposed upon her. But when it is laid down, as a first condition of stabilisation, that all payments under the Treaty of Versailles must be waived for at least two years—and this assertion is made in a document signed by Gustav Cassel, of Stockholm; Jeremiah Jenks, of New York; and Robert Brand, of London, and J. M. Keynes, of Cambridge—it is clear at once that very eminent and authoritative support has been given to the arguments in favour of a moratorium that have been used, untiringly and perhaps with more effect than has appeared, by Sir John Bradbury.

In the opinion of these highly qualified experts, the mark can be stabilised if the moratorium is granted, and if the mark is stabilised the Budget can be balanced. Unless the Budget is balanced, it is clear that the stabilisation of the mark could not be very long maintained, and the Berlin report thus in effect calls for effort both by Germany's creditors and by her rulers and people. The creditors must make an effort of renunciation, first by postponing all payments under the treaty, and, secondly, by shortly consenting to a final settlement of the Reparation question "on lines capable of being carried out"; but this renunciation is evidently more apparent than real, because if the creditors try to insist on immediate payments, or on demanding later sums that cannot be produced, they will only defeat their own object by being too greedy. This rather hollow concession once granted, Germany has to do the rest for herself. So the report says stabilisation "must primarily depend upon Germany's own efforts and own resources, and on the resolute action of her Government. It is hopeless at this stage to expect it to be accomplished by foreign assistance as its main foundation. Germany must have a constructive policy of her own, even though it involves a risk. No other course is open."

In the long run, as the report admits, the success of stabilisation depends on the balancing of the Budget,

while stabilisation is itself a necessary condition of Budget equilibrium. Thus at first sight we seem to be faced by a problem which means, until the crack of doom, to chase its own tail round and round a vicious circle. But according to the reasoning of the experts, we are rescued by the saving phrase, "in the long run." Stabilisation cannot be kept up indefinitely without Budget equilibrium, but it can be started—especially under the favourable conditions now, as will be shown, present in Germany—and if their Budget equilibrium is promptly secured, it will assist and maintain stabilisation, and so the circle becomes beneficent instead of vicious. Let us hope that things might work thus pleasantly. Probably the problem is largely psychological, and it is certainly true that if only a large enough number of the right people—including Germans who have foreign balances, and of the foreigners who have lost money by buying the mark too dear and would be stimulated to "average" if they thought it had touched bottom—believed with sufficiently robust conviction that the mark could be stabilised, then stabilised it would be.

Given stabilisation, the Budget, on the admission of the German Treasury, can be balanced "at an early date," if relieved of the present extraordinary charges. These charges include not only Reparation payments, but also capital expenditure for public purposes, which the German Government has hitherto been providing out of "revenue"—in other words, by means of the printing press, thereby, perhaps deliberately, making more confounded the confusion of its finances. The Berlin report says emphatically that expenditure of this kind should not be charged to loans, and also lays stress on the need for "the utmost rigour in the collection of taxes." In view of the well-known opinions of the reporting experts, those who are too ready to be critical of the French attitude on Reparations will do well to mark that out of their mouths coming in the matter of the most elementary fiscal virtues. A Government that wastes money and does not even enforce the full payment of taxes cannot be surprised and hurt if its creditors are sceptical about its protests against the intolerable weight of the burdens laid upon it.

Though granting that external assistance in the shape of credits would be a most helpful support to stabilisation and suggesting the early summoning of a bankers' conference to form a Consortium—not a very well-omened word—to secure it, the authors of the report maintain that, granted the necessary conditions of a moratorium in the matter of Treaty payments of at least two years, a Budget, and the restoration to Germany of normal prerogatives in international trade, immediate stabilisation is possible, and more than possible, through Germany's own efforts. Certain technical conditions are enumerated to control. Among them are the large gold reserve, the internal scarcity of currency (which has been finally made in its buying power), and the margin between external and internal depreciation. "At the rate of 3,500 marks about twice the value of the note issue.....No other support still unused." As to the rate at which stabilisation should be attempted, that, in the view of the reporting experts, must be fixed with regard to the internal and external buying power of the mark at the time when the collapse is made. They think that "the recent great that if the proposed remedies are applied to the position are certainly the materials for a very headlong 'bear stampede' in the mark, if all the Germans who hold if they did not bring their money home at once their mark; and if all the American and European speculators who have been nursing marks bought before the recovery ran away from them, the results might startle even the nerves of the market in exchange, duller as they are by the recent succession of sensational possi-

bilities. It should be noted that the report makes short work of the alleged adverse trade balance as an obstacle to stabilisation, bluntly saying that its authors doubt whether the many different figures supplied to them "deserve much credence."

They accordingly recommend a plan of stabilisation which is an ingenious mixture of gold standard and gold exchange standard. A Board of Exchange should be set up as a special department of the Reichsbank, and should be given the disposal of "adequate gold" from its reserves, and should buy paper marks on demand at a fixed rate to the dollar, presumably paying for them in gold or in dollars or other foreign currencies at the option of the seller, though this point is not made clear. At the same time a foreign currency reserve "on such scale as may be required," should be created on the security of the gold at the disposal of the Board of Exchange, and in conjunction with any credits that may be secured from the International Bankers' Consortium; and the Board of Exchange should buy and sell foreign currencies against paper marks at fixed rates, should also buy foreign exchange on the spot and sell it forward, and should issue gold bonds guaranteed by the Reichsbank with one or two years' currency in exchange for foreign currencies and balances.

The scheme is thus worthy of the eminent economists who sign the report that sets it forth. It is as simple as such plans can be made, and it seems to be as watertight as such a scheme can be made to look before it has been tried. But is it really workable, and have not its distinguished authors been working in a theoretical vacuum to which human nature with its prejudices is not allowed to penetrate? Everyone must hope that they have not built on sand, but there is nothing in the report to reassure those creditors of Germany who hesitate to give her breathing space because they do not believe that at the end of it Germany will be any more ready to pay. It is true that they are getting nothing now, but how are they to be convinced that they will get anything ever? Sir Robert Horne lately said that the French expected the goose to provide not only golden eggs, but also *pâté de foie gras*. There may have been a spark of truth in this questionable gibe, and at least it is true that unless the French can be assured of golden eggs at the end of the moratorium many of them will prefer the *pâté de foie gras* policy. And the moratorium was an essential condition of stabilisation. Moreover, will Germany make the effort which was also essential, even if the revision of the Reparation terms recommended by the experts is carried out? The Germans do not seem to favour a policy of effort on the part of themselves, backed by merely negative concessions from outside. Their late Government has handed a note to the Reparations Commission indicating an external loan of 500 million gold marks as a preliminary condition to stabilisation. When this has been granted they will add a like sum to it, and the total will be put under the control of a department of the Reichsbank, which will, according to the Berlin correspondent of the *Morning Post*, "seek to push the price of the mark upwards" by buying marks in the principal foreign centres. But is pushing the mark upwards the way to stabilise it? So far the Germans do not seem even to have understood clearly what stabilisation means.

OVERSEAS TRADE IN OCTOBER.

THE October trade returns are not quite so good as the favourable September figures, when the visible adverse balance stood at only £8 millions, but they have their satisfactory features. The excess of imports, it is true, has risen to over £16 millions, but this increase, as compared with September, is due not to any decline in exports, but to an increase in imports of food and raw materials, imports of manufactured goods in October figuring at the same amount as in September. Total imports in October were £85 millions, as against just under £77 millions in September; British exports were £60½ millions, against £62½ millions in September, and re-exports, £8½ millions, against £6½ millions. A comparison of the October

figures and the totals for the ten months, with those of the corresponding periods of 1921, is set out below :—

MONTH OF OCTOBER.				
	1921.	1922.	Increase or Decrease in 1922.	
Imports	£ 84,734,191	£ 85,014,529	+ £ 280,338	+ % 0.3
British exports	62,265,379	60,398,843	- 1,866,536	- 3.0
Re-exports	10,385,614	8,277,151	- 2,108,463	- 20.3
Total exports	72,650,993	68,675,994	- 3,974,999	- 5.5
Excess of imports over total exports	12,083,198	16,338,535	+ 4,255,337	+ 35.1

TEN MONTHS Ended OCTOBER 31.

	1921.	1922.	Increase or Decrease in 1922.	
Imports	£ 912,273,387	£ 813,556,825	- 98,716,562	- % 10.8
British exports	580,926,690	595,122,610	+ 14,195,920	+ 2.4
Re-exports	88,025,282	86,150,677	- 1,874,605	- 2.1
Total exports	668,951,972	681,273,287	+ 12,321,315	+ 1.8
Excess of imports over total exports	243,321,415	132,283,538	- 111,037,877	- 45.6

As already mentioned, the increase of £8 million in imports, as compared with September, is in the right direction, occurring as to £3 millions under food and as to £5 millions under raw materials, raw cotton accounting for £4 millions of the latter. As compared with October of last year, imports of food are nearly £6 millions lower, principally as a result of lower prices; imports of raw materials have increased by £5 millions, mainly under textiles, while imports of manufactured goods rose by over a million. British exports of food and manufactured goods declined by £400,000 and £3½ millions respectively, while exports of raw materials rose by £1½ millions, the value of coal exports alone rising by over £2 millions. In making these comparisons with October of last year, the fact that at that time the effects of the coal stoppage had by no means been overcome has to be borne in mind. But this influence confuses the issue very much more in the comparisons of the figures for the ten months. British exports for the ten months, for example, show an increase of over £14 millions, but in coal exports there is an increase of over £25½ millions, while exports of cotton yarn and piece goods are nearly £10 millions higher. British exports of machinery, on the other hand, are nearly £21 millions lower, and there is a considerable decrease in exports, iron and steel, and manufactures thereof, and in electrical goods and apparatus. But here, again, the question of price is a complicating factor. For instance, the tonnage of iron and steel and manufactures thereof exported in the ten months expanded from 1,301,600 tons in 1921 to 2,688,000 tons, an increase of over 100 per cent., whereas the value declined from nearly £53 millions to less than £50 millions.

In the large decline in the value of the ten months' imports the fall in prices plays a conspicuous part. The quantity of grain and flour imported, for example, fell by not much over 2 per cent., but the value dropped from £121½ to £84 millions. The total decline in food imports, as compared with 1921, was over £102 millions, while imports of raw materials dropped by over £18½ millions, towards which iron and steel and manufactures thereof contributed £11½ millions, and refined oils, including motor spirit, lamp oil, and fuel oil over £16 millions. Imports of raw materials, on the other hand, in spite of a reduction of over £12 millions in coal imports, expanded by over £22 millions, including increases of £6½ millions in timber, £13½ millions in raw cotton, £18 millions in wool, and £4 millions in hides and skins.

The average monthly adverse trade balance for the ten months of £13½ millions compares very favourably with that for the same period of 1921, namely, £24½ millions, but it will be seen that the excess of imports for October is well above the 1922 average. An increase in imports of raw materials is a necessary prelude to an expansion in industrial activity, and in so far as this has occurred in recent months, it may be taken as a sign of trade improvement. Beyond this it is difficult to derive any solid evidence from the October returns of a recovery in this country's industrial prosperity.

Exports of gold in October were £6½ millions, as compared with £2½ millions in September and £4½ millions in October, 1921. Of last month's total nearly £3 millions went to the United States and £2¼ millions to France. A detailed comparison of the principal import and export values in October and the ten months will be found on a later page.

THE STOCK EXCHANGE AND ITS COMMISSION.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Stock Exchange had a local election of its own yesterday, when two members, a broker and jobber, were in competition for the place on the Stock Exchange Committee, which had just been vacated by the former. The result of the poll had not been declared up to the time that this was written, but whatever the result, it will make little difference to the position of House affairs, or to the question upon which this by-election was fought. The broker in the case succeeded in obtaining election to the Stock Exchange Committee last March, his two planks being "abolition of present system of commission sharing" and "earliest possible return to pre-war conditions" in the Stock Exchange. The latter came about in the ordinary course of events last June, but when the point of commission was raised the Stock Exchange Committee decided, once more, by a majority to let matters remain as they were. Agents, that is, bankers and others, are allowed to receive 50 per cent. of the gross amount of commission charged on all business which they introduce to members of the Stock Exchange. For country brokers a special scale of commission has been established that is, generally speaking, on a similar percentage of division. Some of the provincial stock exchanges strictly forbid their members to divide commission with anybody, and the result is what may be expected. For instance, it is nothing unusual for a London stockbroker to receive an order from a Northern agent in stocks and shares in which the main market exists in the town whence the order emanates, but the members of whose Stock Exchange are forbidden to share commission with agents. In order to obtain his half-brokerage, the agent will send the order to a London house. The Londoners will return it to the same town, where it will be executed on behalf of the London broker, who sends the contract to his Northern agent and credits the latter with half-commission. Had the client gone direct to a stockbroker in the town itself, he would obviously have saved the London broker's remuneration, whereas, by doing it through an agent, although the agent receives half-commission, the expense to the client is practically doubled. This is bound to be the case so long as the various stock exchanges of the country are not in line in regard to their commission rules.

Nor is this the only way in which clients are placed at a disadvantage through the present method. In some of the smaller towns bank officials are known to canvass with all their energies for orders, which are collected, sent up to London, and the brokerage upon which is shared with the banks, the staffs receiving recognition in one shape or another. From the point of view of the London broker, the practice has the disadvantage of being expensive, and by no means satisfactory in several other respects. Agents make mistakes like everyone else, but if the agent is an important one he (or his stock department) will claim almost as a matter of right that the broker shall rectify the consequences of such errors as those which arise over misinterpretation of orders, losses in regard to dividends and the like. The tacit understanding is, of course, that for shouldering such losses the broker shall be compensated by the receipt of other orders in the future. Leaving out the country brokers, the banks are, of course, the principal agents in bringing business to the London market, although of individual clients the Public Trustee is certainly the most important. The office of the Public Trustee has come in for sharp criticism on several occasions in regard to the department's payability, and no doubt it would be loth to surrender even a part of the half-commission, which must prove a very substantial source of revenue in the course of a year. It is arguable whether the Public Trustee

is entitled to the same amount of consideration as the banks, because, had he not been there, the business would in any case come to the Stock Exchange when it is a matter of realising deceased accounts and of making reinvestments for trusts.

The footing upon which the banks stand, however, is different, and deserves to be acknowledged by the Stock Exchange. The banks are large advertisers. Of late years some of them have adopted the admirable practice of sending out carefully-written reviews and reports, all of which have the unquestionable effect of increasing interest in Stock Exchange securities and of quickening public attention in the markets. This costs money, and with the Stock Exchange prohibited from advertising, most members of the House acknowledge readily enough that the banks perform a useful service in bringing business to the House. This being so, they are entitled to a share of the profits arising out of these orders. There are some members who would abolish return of commission altogether, in the same way as is done by the Northern stock exchanges, already mentioned, but on the other hand, many brokers appreciate the work done by the banks, and are quite willing to credit the latter with a share of the brokerage, provided that it be an equitable proportion. To assume that a broker's expenses are fully 50 per cent. of his receipts is not unreasonable. It follows that, if the agent is given back 50 per cent. of the commission drawn from his business, and the broker's expenses also swallow up 50 per cent., then there is not much advantage left to the broker other than that of being able to maintain a large staff, and to gather what kudos there may be from the knowledge that he is on the rota of a bank's list of brokers.

Various proportions have been suggested as reasonable in the circumstances, but the obvious and the easiest plan would be for the broker to retain two-thirds of the gross commission, crediting the agent with the other third. Even so, this would not give the broker any too much. The total abolitionists, as they may be called, urge that the banks make their profit out of banking, and for them to expect any commission at all is to take bread-and-butter from Stock Exchange members for no reason other than the advertisements which the banks publish, and which, as already observed, bring business into the Stock Exchange markets. It may seem to the outsider a little reasonableness of making the shares two-thirds and one-third. Yet, time after time, the proposal to rearrange the proportions has been blocked by a very small number of brokers, most of whom deal for the banks, and whose business is regarded with a certain amount of jealousy by fellow-members who claim that the whole trend of business nowadays is for orders to go to the big men at the expense of the smaller brethren. The question having already been raised during the current Stock Exchange financial year, and the proposal to alter the prescribed percentage having been defeated, it is possible that when a new Stock Exchange Committee will be elected. In the meantime, however, the subject deserves serious consideration, because, although it would appear to be a domestic matter purely between the Stock Exchange and its agents, in point of practical fact, the public's interest through his banker if he considers that this course insures him against any possible fear of Stock Exchange failures. The facility of having purchases of stock debited to one's passbook, instead of being obliged to draw a cheque, may seem small, though it is a consideration that appeals powerfully to many men and women alike. On the other hand, any outsider can realise that, in dealing for a per-buoy cheaply, and selling dearly, than in such cases as probably at some late hour in the session, to execute possible, and is unable, though he is willing, to take the interest in the client giving the instructions. It would appear that, although the present system of returning half-commission is open to question, there is a

good deal to be said for the agent, especially a bank, receiving a third of the broker's charge while the broker himself retains the remainder.

Mr R. M. Holland Martin, honorary secretary to the Bankers' Clearing House, has addressed the following letter to Sir Wilfrid Atlay, chairman of the Stock Exchange Committee, under Wednesday's date, and the letter has been posted in the House:—

DEAR SIR WILFRID.—The banks have noted with surprise statements in the Press and elsewhere that their attitude has changed with regard to the position they have always taken up in respect to sharing of commission between the banks and the Stock Exchange. I am, therefore, instructed to inform you that such statements are without any foundation in regard to the clearing banks.—Yours truly, (Signed) R. M. HOLLAND MARTIN.

Bankers' Clearing House, Lombard street. Before the war, the bankers' attitude on the subject was that they expected to receive half of the gross commission from business introduced to the Stock Exchange by themselves. This was reiterated at a meeting held about five and a-half years ago, and its reaffirmation at the present time exhibits a somewhat uncompromising attitude on the part of the bankers.

SEARCH FOR OIL IN GREAT BRITAIN.

(FROM A CORRESPONDENT.)

IT is now possible to place on record a final report of the results obtained from the search for petroleum in both England and Scotland. The proceedings have extended over no less than eight years, commencing as far back as 1914, at the instigation of Lord Cowdray. In a letter published in *The Times* of October 25, 1918, Lord Cowdray stated:—"Prior to 1914 it was almost universally believed that the chances of finding oil in Great Britain were non-existent. Dr Veatch, the head of my geologic staff, thought differently, and seized the opportunity of a break in his other work to turn his attention to England. Geology and chemistry were prompt to confirm his anticipations and to justify us in an attempt to find oil." Lord Cowdray was so impressed with the importance of a home supply of petroleum, and so hopeful of the possibility of getting it from Derbyshire, that he approached the Government with alternative offers—he was prepared to bore at his own expense, to the extent of £500,000, provided that some protection was given against competitive boring, which might diminish or extinguish the value of his work, or he was prepared to place the expert knowledge of his firm freely at the disposal of the Government, should the Government decide to undertake the work itself. Lord Cowdray was informed on March 5, 1918, that no oil would be found in paying quantities by an English geologist. It was ultimately decided that the Government would provide the necessary funds. These preliminary investigations extended over 3½ years; Lord Cowdray and those associated with him had the greatest confidence in the reliability of the conclusions which his experts propounded; they confidently asserted that oil in paying quantities existed in Great Britain, and that it was merely a question of finding and tapping it.

The question which Lord Cowdray's expert staff had to answer was, Where were the boreholes to be located? There is no difficulty in surmising the line of reasoning by which the answer was reached. Large areas of the country would be ruled out at once—those covered by the old red sandstone and the underlying older rocks, which have been so faulted, denuded, and folded that any oil they may have contained must long since have been lost, and those areas of Great Britain covered by rocks above the new red sandstone that would in effect limit the sites for the boreholes to the carboniferous series, including the coal-bearing rocks; they cover wide areas. Dr Veatch and his associates might have had a tough task to suggest suitable sites; but, fortunately for them, the accidental discovery of a pocket of oil in 1847 in the Riddings Colliery, known as the New Deep Pit at Pye Bridge, Codnor Park, South Derbyshire, which produced a dribble for nearly two years, gave them the clue. The vicinity of that old find was made the starting-point for a line of boreholes extending over a length of about 18 miles, in approximately a northern and

southern direction. By a remarkable coincidence the old oil find of some 75 years ago is not very far from a great anticlinal of the coal-measure rocks (the rocks originally level being compressed into a reversed U, with the limbs spread outwards) extending from the vicinity of Mansfield to the east of Chesterfield and then towards Sheffield. Ample evidence of it occurs in railway cuttings and rock exposures, which can be readily found. Oil experts associate oil deposits with anticlinals. The selection of suitable and possible sites was, therefore, rendered a very easy one.

With the old find of oil as a starting-point, two sites were selected, one south and the other north of it; the former in the Golden Valley, 12 miles south of Chesterfield, and the latter a mile east of Alfreton Railway Station. Depths of 3,655 feet and 4,006 feet were reached, but no oil in quantity was found. Both sites have now been abandoned, the derricks and plant removed. Only concrete foundations, cinder heaps, excavated tanks about 50 feet by 30 feet, and wood barracks left standing indicate where the boreholes were situated. It follows from this abortive attempt that the oil find of 70 years ago was only a pocket, and did not indicate the existence of extensive oil deposits extending over large areas of ground. Omitting all geological details, it may be pointed out that the carboniferous rocks consist of four sections—the uppermost contains the coal seams and the lowest consists of the limestone, which yields the noted scenery of Buxton, Matlock, Dove Dale, and other parts of the country. These boreholes were sunk through the coal measures far into limestone. Just at the level where the bores entered the limestone a good showing of thick oil was obtained, enough to raise the hopes of the explorers. At several points within the limestone other oil shows were obtained, notably at 2,500 feet and 3,630 feet. At this level it was decided to shatter the rock to give any confined oil an opportunity of escaping; 180 lbs of dynamite containing 75 per cent. of nitro-glycerine were exploded, January 8, 1921, but nothing followed, greatly to the disappointment of the searchers.

The next step was to find two suitable sites intermediate between the one near Alfreton and Chesterfield, one on the slope of the anticlinal, the other directly on the top of it. Following the main road extending south-east from Chesterfield, a waterworks reservoir is prominently situated on high ground, with a field between it and the road, the very place for a borehole—99 persons out of a 100 would have selected it—that is, the site of the well-known Hardstoft bore, which has tapped a pocket of oil approximately similar in quantity to that found 75 years ago. The boring has been carried as far down as has been thought desirable, the whole of the plant is standing overgrown with weeds, just as the workers left it. Work boring began at Hardstoft on October 15, 1918, and May 27, 1919, at a depth of 3,077 feet, the pocket of oil was tapped which has been flowing for three years and six months and appears now to be dying off. For a long period the flow was at the rate of one ton per day, or 7½ barrels, equal to 315 gallons. The flow is now only 101 gallons per day. The pocket found 75 years ago gave out at the end of two years. It was predicted when the work at Hardstoft commenced that other pockets similar to the old one may exist, and may be found, and that has actually occurred. The Hardstoft pocket is somewhat larger than the old one at Riddings, near Codnor Park. The total outflow to date, September, 1922, may be taken at 1,000 tons, or 7,500 barrels, that is, equal to 50,400 cubic feet of oil. Assuming the area of the oilfield tapped to be a mile square (twice the length of Whitehall), then the thickness of the layer of oil found is about a 50th of an inch. As that is the greatest flow of oil found in Great Britain as the result of eight years' work, and the expenditure of unlimited funds, the prospects of our becoming one of the oil-producing countries of the world are extremely remote; that is precisely what practically all British geologists foresaw when Lord Cowdray first announced the suggested search. The opinion was sent to him, if possible to save the expenditure. In the hope that further penetration of the limestone might increase the flow, the borehole was carried down from 3,077 feet to 3,133 feet, without that having any effect on the flow.

The precise volume of oil which has been flowing may be gauged by comparison with the flow of water from a

half-inch kitchen tap. With an ordinary 10 lbs pressure the flow in 24 hours would be 4,512 gallons; with 20 lbs pressure 7,056 gallons. The flow of oil at Hardstoft at its best was about 315 gallons every 24 hours; it is now about half that quantity.

The fourth bore is in the pretty village of Heath, four miles south-east of Chesterfield, on the north side of the road running through the village, immediately behind the smithy. The field has been entirely restored to its original condition, the only remaining evidence of the bore is one of the wooden barracks. No oil was found, only a show immediately above the limestone, which was reached at a depth of 3,940 feet. A large quantity of natural gas was encountered during the boring, which was carried down to 4,014 feet. The fifth borehole was also placed as near as possible on the top of the anticlinal. It is near the village of Brimington, 1½ miles north-east of Chesterfield. An extremely rough waste pasture was selected adjoining the road running south from the village, the foundations, excavated tank, and one of the wooden barracks mark the site, the derrick was taken down about a year ago. The depth reached was 4,040 feet. No oil was found, not a trace was encountered when the limestone was reached, as at Heath and Hardstoft, but a slight show some distance above it, slight indications of gas occurred at various levels. These five boreholes, as well as the sixth, are in a district riddled with coal mines. If any oil existed within the coal-bearing rocks it would have been found long since. Seventy-five years' coal mining from countless shafts has only led to the discovery of the two pockets mentioned above; that is the reason the boreholes have been carried down to and into the limestone. It is quite possible that there may have been other pockets, which have been lost. It would appear that an accumulation of oil tends to form gas and evaporate. Should a vent occur through which the gas can escape (such as some fracture) in the rocks, the oil is gradually dissipated, but a thick residuum is left. Such remains occasionally occur in coal workings. Lord Cowdray's experts appear to have traced some, and to have based their belief on the possible occurrence of oil in this country on that foundation, as he stated in the House of Lords (November 6, 1918): "his chemist, who had made a study of oil, was able to prove chemically that they were the product of crude oil. Having made this discovery—for discovery it was—he expected to get a commercial advantage from it." The results obtained from the boreholes have shattered the expectations. The sixth borehole is south of the village of Eckington, on some waste land, adjoining a colliery line in Foxsten Wood. There are both working collieries and abandoned shafts near the site, which is some three miles from the anticlinal; all the plant has been removed, only the concrete foundations and excavations remain, all overgrown with weeds.

The recorded depth is 4,235 feet, no oil has been found, a considerable quantity of gas was encountered, and heavy brine was met with at a depth of 3,198 feet. The last of the boreholes, the one at Ridgeway, is in the open country, completely away from the colliery district, not quite three miles from the sixth borehole, and about six miles north of Chesterfield. A depth of 2,996 feet was reached; the bore was shut down in January, 1920, as great quantities of hot water were encountered after the bore had penetrated the limestone a short distance. This hot water is probably due to the smouldering of shale in some abandoned coal mine. It is remarkable that these two boreholes should differ from all the others by the occurrence of brine and hot water, at a temperature of 120 degrees Fahrenheit. No less than 100,000 gallons every day escaped. Here, again, only concrete foundations, excavated tanks, partly filled with black mud, and one of the wooden barracks mark the site.

That completes the record in Derbyshire. There are two boreholes in Staffordshire, both on anticlinals, one at Werrington, about one mile from Cellarhead, on the main road between Bucknall and Kingsley, and the other near Apedale, about three miles north-west of Newcastle-under-Lyme. The Werrington bore is down 2,670 feet; it differs from those in Derbyshire completely, as it is placed in a locality from which the coal-bearing rocks have been completely weathered away. It is evident that

Lord Cowdray's American advisers did not expect to find oil in them, but in those below, in spite of the fact that in some of the Staffordshire collieries "shows" of oil have occurred. The site is on very high ground, nearly the highest for miles round, in a level field, with no collieries near it. The derrick has been taken down, but the wooden barracks and concrete foundation mark the site, some distance from the main road. At Apedale two boreholes have been sunk. One was abandoned at a depth of 1,350 feet, owing to some of the boring tools becoming wedged in the bore. A second bore was then started close to. The site is in a remote rural district, difficult to find, prominently placed on very high ground. Nothing remains except the usual foundations, not even the barracks.

No oil in quantity has been found at the Werrington and Apedale bores. The other two boreholes are in Nottinghamshire, worked by the "Oilfields of England, Limited," a private company. Shows of oil have been met with, but no quantity suggesting the existence of an oilfield. There are two boreholes in Scotland within easy reach of Edinburgh. No oil has been found, and both have been abandoned.

An approximate estimate of the cost of the 11 boreholes ordered by the authorities and carried out by Lord Cowdray's firm, Messrs Pierson and Son, Limited, may be made as follows:—The estimated expenditure for the year 1921 to wind up the work was £25,000; the actual expenditure for the year 1920 was £126,000, during which 7,670 feet in the aggregate were bored—that would give an average of £16 8s 6d per foot. The total depth bored to January 1, 1921, was 30,870 feet. At the same rate per foot the total would be £506,999—that would give a total of £531,999. The estimated value of the Hardstoft oil may be taken at £20,000, showing a loss in round figures of £500,000.

THE NEW RAILWAY COMPANIES.

WITH the recent publication of the proposed scheme of amalgamation between the Southern railways, the details of the principal amalgamation proposals of the railways of Great Britain into four groups in accordance with the provisions of the Railways Act, 1921, are completed. These schemes have not yet all been agreed to by stockholders, but it may at this juncture be of interest to give a brief résumé of the present position. The Act provides that the Constituent companies of the four groups shall be amalgamated and Subsidiary companies absorbed, and amalgamation scheme embracing the absorption of the Subsidiary companies before January 1, 1923. The Constituent and Subsidiary company, is to be submitted by the Minister of Transport to an Amalgamation Tribunal, and to come into operation on or before July 1, 1923. No scheme is to be approved by the Tribunal within 21 days of publication, and should the Tribunal postpone the scheme the undertakings may be worked as a joint undertaking.

The four groups are to be formed into four new companies, and if all the proposals are approved the amalgamations will take effect as from January 1, 1923. The first group in the field with its schemes was the Western group, and the newly-formed company in this case is to retain the title of Great Western Railway. The Constituent companies are the Great Western, Alexandra Cambrian, Cardiff, Rhymney, and Taff Vale Railway Companies, and there are 28 Subsidiary companies. According to the latest edition of the "Railway Amalgamation Up to Date," published by Mathieson and Sons, in connection with 19 railways in this group, stockholders in which receive in varying amounts the equivalent of Great Western Railway stocks, the different sorts of charge, and debenture, preference, guaranteed, rent will not share in dividends until earned after January 1, 1929. The old quotations and other particulars of these companies have been removed from the Stock Exchange Official List.

The next group to bring forward its main proposals was the North-Western, Midland, and West Scottish group. The title of the new company is to be the London, Midland and Northern. Besides the North-Western and the Midland Companies, this group embraces six other Constituent companies, namely, the Lancashire and Yorkshire, the North Staffordshire, Furness, Caledonian, Glasgow and South-Western and Highland Railway Companies, and 27 Subsidiary companies. The Lancashire and Yorkshire was absorbed by the North-Western in 1921, the scheme being published as early as April of that year, that is to say, about four months before the passing of the Railways Act. Shareholders in these companies receive the equivalent of London and North-Western stocks, which consist of consolidated ordinary, 4 per cent. preference, 1902, 4½ per cent. redeemable preference, 1925, 5 per cent. redeemable preference, 1926, 4 per cent. consolidated preference, 4 per cent. consolidated guaranteed, and 3 per cent. perpetual debenture.

The North-Eastern, Eastern, and East Scottish group published its terms of amalgamation in August, and it has subsequently been announced that the title of the new company is to be the London and North-Eastern Railway Company, that Mr Wm. Whitelaw, chairman of the North British Railway, is to be chairman of the new company, and that Mr R. L. Wedgwood is to be the chief general manager. The Constituent companies are the North-Eastern, Great Central, Great Eastern, Great Northern, Hull and Barnsley, North British, and Great North of Scotland Companies, and there are 26 Subsidiary companies. The terms of amalgamation have to be submitted to and approved by extraordinary general meetings of the Constituent companies to be held on November 17th, with the exception of those relating to the Hull and Barnsley, which has already been amalgamated into the North-Eastern system, receiving stock which will be exchangeable into that of the new London and North-Eastern Company. The equivalent stocks of the new London and North-Eastern Company to be given in exchange for those of the Constituent and Subsidiary companies will consist of deferred ordinary, 5 per cent. preferred ordinary, 4 per cent. second preference, 4 per cent. first preference, 4 per cent. second guaranteed, 4 per cent. first guaranteed, 3 per cent. debenture, and 4 per cent. debenture.

The fourth group, to be known as the Southern Railway, produced its scheme at the end of last month, the divergence of the capitalisation of the companies concerned having occasioned some delay which gave rise to considerable speculation in the stocks of the various companies until the scheme was published. The Constituent companies are the London and South-Western, London Brighton and South Coast, South-Eastern, London Chatham and Dover, and South-Eastern and Chatham Managing Committee, and there are 28 Subsidiary companies. At the end of June last the South-Eastern and the Chatham and Dover Companies came to a provisional agreement for amalgamation between the two companies. This scheme, which, no doubt, facilitated the arrangement of terms for the whole group, will be abandoned if the proprietors and debenture holders approve the scheme with the Southern group. The equivalent stocks of the amalgamated company of the Southern group to be given in exchange will consist of 5 per cent. preferred ordinary, deferred, "A" ordinary ranking with deferred but limited to 3½ per cent., "B" ordinary participating with deferred in any dividend over 3½ per cent. paid on the deferred; irredeemable and redeemable 1924 and 1926 5 per cent. preferences, 5 per cent. guaranteed, 4 per cent. debenture stock, and terminable loans.

Space will not permit us here to reproduce the full financial details of each amalgamation and absorption scheme. It may be mentioned, however, that criticism has been heard of the terms offered in some cases, principally from the senior stockholders. But the obvious answer to these criticisms is that grouping involves the simplification of capital accounts, and while this simplification may perhaps prejudicially affect to a slight extent the position of some stockholders, this disadvantage is outweighed by the advantage of increased marketability

and of better security, for many of the prior charge stocks, hitherto secured on the property of one company, will now be secured on the property of several railway systems. Further, if the objects of the Railways Act are achieved, the financial position of these systems will be improved. It has been estimated independently by two separate committees that there will be a saving of £20 millions, or about 8½ per cent. of the total expenditure of the railways. The provisions in regard to "standard revenue," namely, that the Rates Tribunal shall fix charges on such a basis as will, with the other sources of revenue, so far as practicable yield an annual net revenue equivalent to the aggregate net revenues in the year 1913 of the Constituent companies and the Subsidiary companies absorbed by the amalgamated company, together with certain additions specified by the Act, must have an important bearing on the future market value of the ordinary and deferred stocks in the direction of stability and improve the security of preferred stocks. The directors of the London and South-Western, in their circular giving the proposed amalgamation terms, went so far as to state specifically that it was estimated that the balance of net revenue would be sufficient to pay a dividend of £2 18s per cent. on the new deferred ordinary stock. Whether this anticipation will be realised remains to be seen.

The capital of the new companies will be approximately: Southern, £145 millions; Great Western, £136 millions; London, Midland and Northern, £380 millions; and London and North-Eastern, £348 millions. There will be a very substantial reduction in the number of railway directors, and a resultant decrease in expenditure on directors' fees, but all the alterations in this respect have not yet been made. Several meetings of shareholders were called for Thursday and yesterday to approve the various amalgamation schemes, and the question of compensation for those directors who are relinquishing their duties was discussed and arranged for. This will involve a considerable sum, as will also the compensation of the salaried staff, which, we understand, has been fixed on a generous scale.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

PARAGUAY: Economic conditions in Paraguay, which show little evidence of amendment, may be attributed in some measure to the legacy of the disastrous war of 1864-1870, but mainly to the revolution which has now been in progress since May last, following upon the determination of the former President, Dr Ayala, to resign. The war of sixty years ago cost the Allies (Argentina and Brazil) \$500,000,000 and 190,000 men, and a correspondingly heavy loss to Paraguay, whereas the present less sanguinary internal upheaval is playing havoc with property, exports, and currency. The Paraguayan dollar has fallen gradually from its one time parity, 96.475 cents U.S., to about 3 cents. This troubled Republic is peculiarly afflicted in the matter of currency and foreign exchange. The Paraguayan paper peso is non-convertible, the value resting fundamentally upon credits in Argentine gold. The practice of employing this method of commercial transaction has worked but badly, Paraguayan commerce being adversely affected by any fall in exchange at Buenos Aires. Paraguay having no exchange value except in terms of Argentine gold or paper peso, all international transactions must be negotiated at exchange rates that vary from day to day. From time to time, notably in 1899 and 1902, spasmodic attempts have been made to introduce conversion measures, but no Government has been enabled to obtain sufficient support in Congress to carry through such a measure.

Unlike some Latin-American States, which profited commercially during the European war, Paraguay suffered little but disappointment. The once-primary meat trade, in support of which three large freezing-works were established with the aid of American capital, has almost collapsed, while the cattle trade itself, which had reached an important development stage in 1918, has suffered serious eclipse. British interests are largely concerned in this and other industries, while among

Paraguayan imports the United Kingdom, in favourable times, supplied between 28 and 29 per cent., as, for instance, in 1913. Latterly, however, our exports to this South American State have fallen to under 18 per cent. At one time Paraguay imported more from the United Kingdom than from any foreign country with the exception of Argentina, and even there a large proportion of the goods shipped were of British origin.

It is understood that in order to mitigate the financial stringency from which the whole Republic is suffering, the Government had contemplated the creation of a new State bank by amalgamating the operations of the National Treasury Exchange Bureau, the Banco Agrícola, and the Inland Revenue Office, the design of the new institution being to rediscount business, grant loans to agriculture and industry, and acquire the approaching tobacco and cotton crops. The capital of the new State bank was tentatively placed at 100,000,000 paper pesos; but inasmuch as the latest quotation of the Paraguayan peso is but a little over two cents, it is clear that slight advantage would be derived by the nation from such an issue. In view of this situation, financiers and industrialists have solicited the Government for an extension of the moratorium, one even more stringent than that granted in 1921 to the banks, which were only permitted to defer payments for the larger amounts of their liabilities, but compelled to provide for prompt payments to small creditors. All monetary institutions alike were, and are, deeply involved in the various loans, some of considerable importance, made on cattle during the period of inflation.

GUATEMALA: Late advices from this State also indicate an absence of improvement in the financial situation. It suffered a serious setback as a consequence of the last revolution, which resulted in the fall of General Carlos Herrera (who assumed office under promising auspices as late as March, 1920). Although, no doubt, willing to carry out the elaborate programme of reform presented to the National Legislative Assembly in March last, his successor, General José María Orellana, has met with so much opposition in so many different and unexpected quarters that little progress has been possible. The usual drastic resorts for repression of political rivals appear to have been adopted, including imprisonment and executions; such procedure has, unfortunately, characterised Guatemalan politics for many decades past, especially under the prolonged and oppressive régime of Dr Manuel Estrada-Cabrera, now himself a carefully guarded prisoner. Notwithstanding the tyranny practised during the eleven years of his presidential régime, foreign bondholders received some consideration at his hands, particularly since 1913, when, thanks to the good offices of the late Sir Lionel E. G. Carden, then his B.M.'s representative in Central America, an agreement for the resumption of the operation of the arrangement of 1895 was effected, and, until the fall of Dr Estrada-Cabrera, was carried out in full. Something like consternation among bondholders was occasioned, following upon the election of General Orellana, when it was signalled that "Guatemala considered that it had no claim pending against it on the part of any foreign subject." In view of the fact that there was, and is, outstanding a claim on the part of the foreign holders of the External Debt amounting to £844,603, on account of arrears of interest, this statement appeared at the least to have been somewhat daring.

According to recent information, the Government is at present unable to meet the whole of its obligations either at home or abroad, while the position of some of the banks is considered to be anything but safe. Quite recently the Government was compelled to take over the Banco de Occidente upon the petition of shareholders, who have charged the institution's officials with maladministration. This bank is one of the most important in Guatemala, the Government itself having been accused to keep on deposit with it a large amount of funds. In the meantime, the Budget for the present fiscal year, from July 1, 1922, to June 30, 1923, has been presented, and this shows a total of 594,154 gold pesos and 243,515,675 paper pesos, 1,700,000 pesos among expenditures being allocated to "salaries to Deputies during the recess of the National Assembly."

Notes of the Week.

The Allies and the Near East.—After a week of diplomatic tension, the relations between the principal Allied Powers have outwardly improved. The British Delegation is to go to Lausanne; Lord Curzon is to have conversations with M. Poincaré on the way and after arrival; and Signor Mussolini's Government are taking a vigorous line in favour of united action. This eleventh-hour accord was to be expected, if West European diplomacy retained a vestige of common sense. Indeed, we may rather marvel at the open display of divergence up to the eve of the negotiations. At the same time, both the conflict and the reconciliation have a certain air of unreality. The real point at issue is whether one or all of the Powers are in certain contingencies prepared to fight, and, if they are, in what contingencies? The British official view that genuine Allied solidarity would in itself remove the danger of having to resort to force is somewhat hazardous. In their present mood the Turks are quite capable of calling even our combined bluff over some point like the Capitulations to which they attach fundamental importance; and if it came to this, it may be doubted whether the British Government could persuade this country to make war any more easily than M. Poincaré could perform the same feat in France. The most dangerous issues are now not those dealt with in the Armistice of Mudania. In regard to these, the Turks will doubtless continue to sail as near the wind as possible, but it is unlikely that they will go to the furthest extreme. The danger-points are rather those which the Armistice conditions eluded, especially the question of the Capitulations. In regard to this, an acute difference has arisen between the French commercial community in Turkey and the French Government. Rightly or wrongly, these French residents think—just like the British, Italian, and all other foreign residents—that they cannot carry on their business in Turkey without the Capitulations, under the shelter of which they have lived there, from one generation to another, for nearly 400 years. Indeed, the Capitulations mean more to the French than to any other foreign community—firstly, because the original establishment of them was substantially a French achievement, and secondly, because of her Turkish trade, possesses more institutions, capital enterprises, and other forms of immovable property, which cannot, like trade, be diverted to other markets if conditions in Turkey become impossible. But, alas for the French and British merchants in Turkey—their business, though it possesses the charm and romance of age, is at the present day only a small fraction of the foreign commerce of their respective countries. If it were France and England might not be sensibly affected, and certainly, from the purely business point of view, it would not pay to salvage it at the price of a new war. That is why the cry of the French and British business interests in the Near East has not been listened to during the past four years—though they have spoken with no soft or unattention at the Peace Conference. The most interesting rapprochement between ex-enemies in South-Eastern manlike—decision not to throw in her lot with Nationalist Turkey for a war of revenge against her European moderate claims in return for her support of the cause of South-Eastern European independence. M. Stam-evidently been a success, and, what is more significant, he has drawn in his wake M. Politis, the Greek Foreign Minister. If the present crisis brings both Bulgaria and Greece into the Little Entente, it will at least have had one beneficial result.

Fiscal Consequences of the Irish Treaty.—There appeared in the *Economist* a fortnight ago an article upon the "Fiscal Consequences of the Irish Treaty," in which it was pointed out that, under the Irish Treaty, Ireland had acquired fiscal and financial independence, and that N.E. Ulster, in exercising its option of "contracting out" or of staying within the Irish Free State, would be deciding whether she would in future be inside the Customs frontier of Great Britain or inside the Customs frontier of the Irish Free State. The article attracted some attention in Dublin and Belfast, and upon Saturday last it was made the subject of a special communication to the Press by Mr H. M. Pollock, Finance Minister in the Ulster Government, which appeared in several English newspapers. Mr Pollock affects to treat the article which was written by our Dublin correspondent as having been inspired by "those who are responsible for the finances of Southern Ireland" (i.e., of the Irish Free State), and as indicating that they are alarmed at the prospect. It is true that the Irish Free State authorities may, not improbably, dislike the prospect of a land frontier and Customs boundary round N.E. Ulster as much as every sane business man in Great Britain, and as much as, apparently, Mr Pollock himself, who describes the results as "at the best.....hindrance to progress, and at the worst commercial ruin." But it is not a fact that the article owed anything to any prompting, direct or indirect, from the Irish Free State authorities, of whose views, upon this subject, the author was, and still remains, entirely uninformed. Mr Pollock's conclusion is that "Ulster being more self-contained and enjoying the unrestricted market of 40,000,000 of people, can afford, although regretfully, to be deprived of close commercial association with 3,000,000 of the south." In other words, he adopts the time-honoured procedure of a certain type of negotiator, who opens proceedings by affirming his own position with great emphasis, and summoning his antagonist to surrender. Let the Irish Free State, says Mr Pollock, "frankly adopt the fiscal system of Great Britain, and all the lurid pictures of frontier terrors which appear to trouble the Dublin correspondent will be merely the phantasmagoria of a diseased brain." And, in veriest truth, if the land frontier and Customs barrier does come into being the responsibility will be traceable to diseased brains somewhere. Now the fiscal independence of the Irish Free State is part of the accepted policy of both Great Britain and Ireland: it was conceded after long claim and abundant discussion; it was embodied in the Treaty; and nobody, no public man of the front rank in Great Britain, is prepared to go back on it now. There are phrases in Mr Pollock's statement which are susceptible of the interpretation that Ireland would not require separate Customs houses unless she embarked upon a fiscal policy with tariff rates different from those of Great Britain. Such an interpretation would be erroneous. Great Britain having willingly renounced her right to collect taxation in the Irish Free State, will, in future, collect her own revenue within new boundaries. Hitherto she has enjoyed convenient and relatively inexpensive maritime boundaries. If Ireland passes, as a whole, from under the jurisdiction of her taxgatherer, then Great Britain can still enjoy maritime Customs and Excise boundaries. But if N.E. Ulster exercises her undoubted right to "contract out" of the Irish Free State, then Great Britain must have a land boundary or frontier of some 225 miles long for the purposes of her own fiscal administration. And so must the Irish Free State. A Free-trade agreement between the two would make no difference. Each fiscal unit must collect its own revenue, and each must have its own Customs and Excise boundaries within which to collect it. Now the people of Great Britain desire peace and economy. Their policy towards Ireland and N.E. Ulster is embodied in the Government of Ireland Act, 1920, and in the Treaty which was given the force of law by the Irish Free State Agreement Act, 1922. That policy, which will not be lightly changed, recognised the national independence of Ireland, and created elaborate rights and safeguards for N.E. Ulster. But it went further—for in both instruments it provided a specially devised machinery of negotiation between the two, and clearly indicated that the

ultimate unity of Ireland as the result of such negotiation was desirable. The people of Great Britain will expect negotiations to take place, sooner or later, and they will expect some *bonâ-fide* tentatives at mutual accommodation on both sides. They look to-day in no unfriendly or impatient spirit upon the slow development of Irish difficulties. But they do not want to be involved further in Irish quarrels nor to pay taxes for their furtherance. And they will tend to become definitely resentful if, either through a spirit of stiff-necked dominance in Dublin or of particularist aggressiveness in Belfast, they are to be saddled, directly or indirectly, with the cost of a highly expensive land Customs frontier, which would be outrageously injurious to the interests of everybody concerned.

Bulgarian Reparations.—Intimately connected with a final and really satisfactory solution of the Near Eastern crisis is the problem of the future of Bulgaria. The promise of an adequate commercial outlet to the Aegean has not yet been redeemed, but equally important from the point of view of most Bulgarians is the need for a final and definite solution of the Reparations tangle. The following statistics, obtained from a well-informed source, are not without interest:—

PAYMENTS MADE BY THE BULGARIAN GOVERNMENT.
(In Millions of Leva.)

Period.	Allied Army in Bulgaria.	Various Allied Commissions.
Armistice to August 9, 1920	285.6	22.0
August 9, 1920, to April 1, 1921	6.7	53.8
April 1, 1921, to August 31, 1922	14.0	111.8
Private reclamations from Armistice to August 31, 1922	108.1	..
Total	414.4	187.6

The total expenses incurred by the Bulgarian Government on behalf of Allied troops resident in the country (including the High Command), and the various commissions of control, but excluding that for the delimitation of the frontiers, would thus appear to be in the neighbourhood of 602 million levas. This total probably represents something like two millions sterling in foreign currency, though the sacrifice involved to the Bulgarians themselves is, of course, much greater than this equivalent in foreign currency would suggest. But what attracts public attention in the country most is the nature of some of these expenses. Thus a total of over 57 million levas has been spent between March 1, 1921, and July 31, 1922, on behalf of the Interallied Commission ("Reparations") alone, made up of the following items:—

(In Millions of Leva.)	
House rent and repairs	1.9
Furniture, &c.	7.2
Salaries, &c. (paid through the president of the Commission)	48.0
	57.1

Many Bulgarians have wondered why they should be obliged to buy furniture abroad, and pay salaries to the Commission's employees vastly in excess of those paid to Bulgarian officials. Of course, to the foreigner the whole affair seems rather petty, and the total sums involved almost insignificant. To view the matter in its proper perspective, one must remember that Bulgaria is an agricultural country of some 4½ million inhabitants; that the standard of living is very low when compared with Western Europe; and finally that there is a wide divergence between the internal and external purchasing power of the national currency. According to Art. 21 of the Treaty of Neuilly, Bulgaria contracted to pay 2,250 million gold francs; and, in addition, to make certain reparations in kind. By May 31st, the following had been handed over:—

VALUE (in Millions of Leva.)	
Railway material	250
Coal delivered to Serbia	195
Cattle to Serbia, Greece, and Roumania	162.5
	607.5

Now if we add to the 602 millions of levas spent on the Allied Army and the Commissions the further sum of approximately 120 million levas claimed on behalf of the

Military Mission of Control, we shall find that the expenses of the "bailiffs" have up to the present considerably exceeded the reparations payments proper. Of course, disarmament has been carried through, but how to make a country with an annual revenue of something like 4,200,000,000 levas pay reparations annually to the extent of 136,000,000 gold francs (approximately 3,720,000,000 levas at the present rate of exchange), is a problem which one expects the Inter-Allied Commission will find rather hard to solve. Of course, but for political complications, a moratorium would have been arranged, though the Commission—probably thinking rather of the possible reaction on the German reparations question than of Bulgaria itself—has endeavoured so far to insist on some payment being made each year, even though relatively small. A final settlement on an economic basis has now become indispensable.

The Earthquake in Chile.—The effects of the great earthquake at midnight on Friday of last week, November 10th, prove to have been less serious than was feared from the earlier reports. The shocks were felt along a thousand miles of coast from Antofagasta to Valdivia, and even in Buenos Ayres, and an earthquake wave was set up at Hawaii. But the destruction seems to have been practically limited to the region extending from a point somewhat below Antofagasta to the southern boundary of the province of Coquimbo, including the ports of Chañaral, Caldera (the seaward outlet of the town of Copiapo), and Coquimbo, which were swept by the wave following the earthquake, and the harbourless town of La Serena, on the Bay of Coquimbo, together with a strip extending some 60 or 80 miles inland, including the towns of Vallenar, about 30 miles from Huasco, Freirina, on the railway connecting these two places, Illapel, in Coquimbo province, and Copiapo. The destruction appears to have been greatest at Copiapo, Vallenar, and Illapel, which are reported to be in ruins, and at Coquimbo, which has lost its railway station and the whole of its business quarter. Happily, the loss of life, though very heavy, proves to have been much less than was reported—the dead are now estimated at 1,800, the injured at 2,000; and the material damage is very much less than was feared at first. The nitrate regions were untouched. Antofagasta, with its 45,000 inhabitants, appears to have escaped almost entirely, and the towns destroyed are comparatively small. Huasco has less than 1,000 inhabitants, Chañaral about 3,500, Caldera about 3,000, Illapel 3,500, Vallenar 5,000, Copiapo and Coquimbo about 12,000 each. The buildings destroyed are mostly of sun-dried brick, an inexpensive material; the piers and harbour works are small; freight is landed at them and shipped by lighters, so that no ocean-going vessels can have been alongside, and there are no reports of any damage to shipping. The ports serve a mining district rich in copper, manganese, gold, and silver, and there are, or were, large smelting works and metal refineries at Caldera, Copiapo, and Antofagasta. But the railways and mines, we are informed from authoritative sources, are intact; the mines appear to be chiefly owned in Chile and the United States, and the railways belong mainly either to the mining interests or to the Chilean Government. British interests, therefore, seem not to be seriously affected by the disaster. But at the ruined towns the suffering is terrible, and the Chilean Government and the neighbouring Republics are doing their best for its relief.

Iron and Steel and Coal Output.—The monthly statistics published by the National Federation of Iron and Steel Manufacturers show that the October production of both pig-iron and steel was easily the highest monthly total this year. Pig-iron output was 481,500 tons, the highest figure since the coal stoppage, which compares with 430,300 tons in September, 235,500 tons in October, 1921. It is, however, only 56 per cent. of the average monthly production of 1913. Steel production was 565,200 tons, as against 555,900 tons in September, 405,400 tons in October, 1921, and a monthly average in 1913 of 638,600 tons. The output of coal from the mines of Great Britain in October steadily increased week by week, the total for the week ended November 4th having reached 5,423,400 tons, a

figure well up to the pre-war average, which compares with 4,182,400 tons in the corresponding week of last year.

Employment Abroad.—Few of the other great countries of the world are suffering from unemployment to anything like the extent that we are. The International Labour office of the League of Nations, in one of the very useful circulars which it publishes from time to time, reports that the general employment situation is, for many countries, better than a year ago. This is the case in both France and Germany, where unemployment is almost negligible; and both in Switzerland and in Italy there is distinct improvement; while in Belgium the figure (end of July) is the lowest recorded for nearly two years. In the United States, where the statistics are often a useful forecast of European conditions, improvement is taking place. For example, the figures published by the United States Department of Labour show that the number of persons employed by about 1,500 representative firms increased considerably in September; and this in spite of a depression in the labour market due to the strikes on railways and in mines. In Canada also the percentage of unemployment fell to 3.6 per cent. in August, a figure equal to the Massachusetts the latest figure of unemployment has fallen by half compared with six months ago.

Japanese Budget Estimates.—The estimate for the Budget of 1923-24 arrived at by the Japanese Cabinet on November 9th is simply an outline, and is subject to alteration in the further course of compilation. The total revenue is 1,350 million yen, composed of 1,236 million yen for the ordinary revenue, and of 114 million yen for the extraordinary revenue, of which 54 million yen is the year. Compared with the current year the ordinary revenue is to be decreased by 9 million yen, and the extraordinary revenue by 122 million yen. The ordinary revenue is to be decreased as a result of the revision of the Business Tax Act and the Stamp Duty Act, while it is to be increased owing to the revision of the Income-tax Law. The total expenditure amounts to 1,350 million yen, which is composed of 987 million yen for the ordinary expenditure, and of 363 million yen for the extraordinary expenditure. Comparing the above figures with those of the previous year, the ordinary expenditure is to be increased by 45 million yen and the extraordinary expenditure is to be decreased by 177 million yen, so that the net decrease in the total expenditure is to be 132 million yen. Reduction of armaments readjustments a saving and carrying over of 65 million yen. On the other hand, the expenditure is to be increased by 42 million yen to admit of the resumption of transfers to the National Debt Consolidation Fund, by 11 million yen for the Embankment Works, by 30 million Elementary Education, and by two million yen for the annual instalment which is to be defrayed for 12 years on account of the completion, establishment, and expansion of colleges.

Burma Corporation.—Our mining correspondent writes—At one time, both in 1919 and 1920, the £1 shares of the then existing company of this name were dealt in at around £14. The location of the undertaking was transferred to Rangoon, and for every £1 share 14 shares of 10 rupees each were given. These shares have since been below 5s, and even now stand no higher than 6s 6d. The decline was started by selling on behalf of people who found they could very well spare some of their miscalculations had been made in regard to the programme of expansion mapped out. The question of whether sufficient labour would be available seems to have been overlooked by the expert whose services had been engaged; and before the end of 1920 the directors found it necessary to raise funds by an issue of £1,000,000 debentures, bearing 8 per cent. interest, and repayable also on somewhat onerous

terms. The additional resources thus provided being, it was realised, insufficient, even when supplemented by the profits of several years, to carry out the plans in full, a drastic cut was decided upon. The report for 1921, now in the hands of the shareholders on this side, is the first to reflect the change of policy decided upon some 12 months ago. It shows that increased output, combined with the compensating effect of the conversion of metal values into rupees, so effectively countered the result of the decline in metal prices as to bring out the working profit at the slightly enhanced total of £497,800. On the present occasion, however, a larger allowance is made for depreciation, interest naturally calls for much more than before, and the directors set aside £67,000 towards a reserve. Thus the net surplus figures at £167,400, in place of £246,800. Cash resources to the amount of half a million are indicated in the balance-sheet. With this sum, and the profits of another year or so, the directors consider that the output can be brought up—not merely to the minimum of 700 tons per day counted upon, but to 1,000 tons—provided adequate transport facilities and labour are available. To this end, strong representations have been made in favour of the extension of the Burma Railways line to Namtu, where is situated the company's smelter; while a fair degree of success has attended the measures taken both to induce native workmen to settle at the mine and to secure recruits from fresh fields. Much has been accomplished in the extension and improvement of the treatment plant; much yet remains to be done. In the prevailing circumstances, the directors have quite justifiably allowed development to slacken off. Hence the ore reserves, at about 4½ million tons—"proved and probable"—show a small decline. The total, however, represents many years' work for a largely expanded installation. During the remainder of the transition period the shares can only be regarded as a speculative lock-up, but the debentures are not without interest. At the current price of about 107, the yield is 7½ per cent., while the principal is repayable at 110 between the beginning of 1926 and the end of 1930. Before the first-named date the bonds can be converted into shares on certain terms.

The Ottoman Railway.—Amid the many demonstrations of the hostility felt by the Turkish Nationalists for foreign merchants and investors, there is one single exception. On November 6th, according to Wednesday's *Times*, the Ottoman Railway from Smyrna to Aidin, with its extensions and branches, was restored to its British manager by the Nationalist Government. It had been requisitioned by the Turks after the occupation of Smyrna in violation of the terms of the armistice of 1918, and the manager had been sent to Constantinople. The restitution, of course, costs the Turks nothing, for they have now no use for the line. It is not needed for the conveyance of troops, and can for the present have little or no traffic. Still, the company's staff may be able to estimate the damage done, and one of the differences between the Allies and the Turkish Government is removed.

Bleaching Prices Reduced.—Our Manchester correspondent writes:—With reference to my note of a fortnight ago relating to the cost of finishing cotton goods, it is of interest to state that the Bleaching Trade Advisory Board has this week sent a circular to customers announcing a reduction in prices. The prevailing surcharge upon the list of prices for all classes of bleached and scoured goods, finished prints, &c., has been reduced from 15 per cent. to 7½ per cent. The reduction will apply to all goods delivered white from the beginning of this week. Although the concession made will not make a big difference in the cost of putting goods down in distributing centres abroad the reduction is very welcome. The fall in charges will mean that shippers will be able to offer 40-yard shirtings to customers at a reduction of 2½d a piece.

George Clare and Co., Limited.—In the *London Gazette* for November 14th the following notice appears:—"George Clare and Co., Limited. Special Resolution, passed October 24, 1922. Confirmed November 8, 1922. At an extraordinary general meeting of George Clare and

Co., Limited, duly convened, and held on October 24, 1922, the following resolution was passed in manner required for passing an extraordinary resolution; and at a further extraordinary general meeting of the company, duly convened, and held on November 8, 1922, the said resolution was confirmed as a special resolution:—Resolution: "That the company be wound up voluntarily, and that Mr Henry Charles Merrett, of 41 Finsbury Square, E.C.2, be appointed liquidator for the purpose of such winding-up." According to the *Bankers' Almanac*, George Clare and Co., Limited, has a subscribed capital of "£50,000 in preferred ordinary, and £10,000 in ordinary shares of 1s, and paid up." For the year to January 31, 1920, 15 per cent. was paid on the preferred ordinary, and 3s per share on the ordinary shares, less income-tax. In the *Directory of Directors* for 1922, Mr George Clare is given as chairman of George Clare and Co., Limited, while Sir Joseph John Jarvis, Bart., appears as managing director. The latter gentleman is also mentioned as being on the board of the *Financial News*, Limited. Messrs Jordan and Sons inform us that a private company was registered on the 9th inst., under the title of G. Clare and Co. (Limited), to carry on the business of a bank of deposit and a bank of issue, and every description of banking and mercantile business and financial operations. The nominal capital is £1,000 in shares of £1 each, and the first directors are to be appointed by subscribers, qualification for directors being one share. Remuneration is to be voted by the company. The registered office is given as 9 Old Broad street, E.C., which is also one of the addresses of George Clare and Co., Limited.

Transvaal Output in October.—The latest figures of gold production issued by the Chamber of Mines show that the output figures are satisfactory. The October output amounted to 778,159 ounces of fine gold, which compares with 747,089 ounces in September and 707,825 ounces in the month of October last year. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	787,467	782,634	714,182	676,069	670,503	651,593	
February	753,594	781,321	659,759	636,728	625,330	558,137	639,728
March	796,689	787,094	696,281	712,379	707,036	671,123	
April	754,672	742,718	717,000	694,944	686,979	681,382	511,338
May	777,681	779,385	701,317	724,995	699,041	687,776	629,786
June	761,704	759,724	727,696	702,379	715,957	678,490	675,697

September	771,587	738,231	708,206	698,558	682,173	691,026	747,089
October	792,339	751,290	679,764	725,722	682,472	707,825	778,159
November	783,066	722,339	658,701	677,970	633,737	704,236	..
December	774,462	722,419	641,245	650,191	632,215	681,847	..
Totals	9,296,618	9,018,084	8,418,292	8,330,001	8,161,606	8,114,616	8,464,923

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	March, 1922.	April, 1922.	May, 1922.	June, 1922.	July, 1922.	Aug., 1922.	Sept., 1922.	Oct., 1922.
Gold mines	124,169	1,8,277	155,425	170,464	172,896	175,54	174,565	175,129
Coal mines	11,55	11,385	11,525	12,117	12,371	12,271	12,070	11,495
Diamond	1,204	1,232	1,219	1,211	1,211	1,219	1,234	1,218
Total	136,928	150,894	168,169	183,792	186,466	188,533	187,799	187,842

It will be noted that the number of natives employed at the gold mines shows an increase on the preceding month.

Simmer and Jack.—The report for the past financial year of this Rand old-stager indicates that the recent rise in the shares was, to say the least, premature. The working profit figures at only £38,800, in place of £119,300 for 1920-21, and but for the gold premium there would have been a loss of £61,100. Of course, allowance has to be made for the effects of the labour trouble of the second half of the period. After deducting the expenditure incurred under this heading, there is a net loss of £3,300. Capital expenditure to the amount of £19,300 also falling to be met, the carry forward becomes reduced to £52,400. At 1,224,000 tons, value 5.4 dwts, the ore reserves display a moderate increase in quantity—the total represents about two years' supply for the mill—with a shrinkage of about ½ dwt per ton in value. Working costs for last month were only 16s 9d, as against 23s 4d in respect of the year ended June 30th, but even this does

not give any substantial margin of profit on ore yielding well under 20s per ton. A low expense ratio would enable the life of the concern to be extended by the extraction of ore from the bottom levels of neighbouring mines which have suspended operations. There are possibilities in this direction.

THE Committee of the Corporation of Insurance Brokers announce that Mr Walter Banks' lecture on "Legal Aspects of the Insurance Business: III.—Life Assurance," will be given on Monday next at 59A London Wall, London, E.C. 2.

THE first ordinary general meeting of the Session 1922-1923 of the Institute of Actuaries will be held on Monday next, at 5 p.m., at the Hall of the Royal Society of Arts, John street, Adelphi, W.C. 2. The President, Mr W. P. Phelps, M.A., will deliver an Inaugural Address.

THE London Chamber of Commerce (Incorporated), 97 Cannon street, E.C. 4, announces an address by Mr Edgar Crammond, F.S.S., in the Council Room of the Chamber, on "The International Financial Situation," on Monday next, at 2.30 p.m. Chairman, Sir Owen Philipps, G.C.M.G. (president).

A COURSE of three lectures on "Economic and Administrative Problems of the British Tropics" will be given at the London School of Economics by Sir Frederick Lugard, P.C., G.C.M.G., on Thursdays, November 23rd and 30th, and December 7th, at 6 p.m. The chair at the first lecture will be taken by the Right Hon. L. S. Amery (Parliamentary and Financial Secretary to the Admiralty). Admission will be free, without ticket.

BRITISH INDUSTRY AND CANADIAN TRADE.—The Federation of British Industries has decided to inaugurate a British section at the next Canadian National Exhibition to be held at Toronto next year. Founded in 1879, the Exhibition has been held annually ever since. It now attracts during its fortnight's run an average of about 100,000 visitors per day, while its grounds cover 264 acres. It is held for a fortnight at the latter end of August. A block of space in one of the principal buildings is being held at the Federation's option by the Exhibition authorities, and on this block it is proposed to erect a group of stalls to be placed at the disposal of British firms. An expert staff from the Federation's head office will go to Canada some time before the commencement of the Fair to undertake this work, and will erect the stalls, receive, unpack, and arrange exhibitors' samples, and arrange also, where desired, for expert representation of any firm during the run of the Exhibition. Further details may be obtained by applying to Federation of British Industries, 39, St. James's street, London, S.W. 1.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION'S QUARTERLY REPORT—SEPTEMBER RAILROAD EARNINGS—MIXED CLAIMS COMMISSION.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 6.

THE report of the United States Steel Corporation for the quarter ended September 30th made a less favourable showing than had generally been expected in view of the revival in the industry during that period. The corporation's net earnings, amounting to \$27,468,339, were only \$181,394 larger than the total for the preceding quarter, although some \$8,500,000 greater than for the third quarter of last year. As has been the case in every quarter since the first three months of 1921, the corporation again failed to earn the full quarterly dividend on the common stock. After payment of the preferred dividend and after all deductions, the balance available for the dividend on the

\$508,302,000 common stock outstanding amounted to \$5,014,179, equivalent to 98 cents a share, as against the quarterly dividend of \$1.25 a share, which required an outlay of \$6,353,781. The report, therefore, showed a deficit of \$1,339,602, after allowing for the usual disbursement to common stockholders. In the preceding quarter, after all charges and dividends, the deficit was \$1,462,345, and in the third quarter of last year \$6,965,504. One of the most interesting features of the report was the exhibit of net earnings by months. In July they totalled \$9,833,664; in August they increased to \$10,615,085, the largest for any month since January, 1921, with the exception of last June. For September, however, net earnings dropped to \$7,019,590, the smallest total for any month since last February. The marked decrease in earnings during September as compared with August was due to a number of factors. Perhaps the most important was the 20 per cent. increase in the pay of common labour, with wages in other branches adjusted to the higher basis, which became effective on September 1st. That, of course, added considerably to production costs at a time when there were no offsetting advances in steel prices; the increase of \$3 a ton on standard rails did not take effect until October 1st. Another factor was the congestion on the railroads, due to the shopmen's strike. In that connection, the Interstate Commerce Commission's ruling giving priority in shipments to coal, foodstuffs, and certain other necessities, probably hindered the movement of finished steel products from the mills. That is believed to account for some of the decrease in September earnings, since the Steel Corporation, it is understood, does not credit output on its books until products have actually been shipped from its mills. Furthermore, the low rate of production during August, owing to inadequate fuel supplies on account of the coal strike, also helps to explain the small September earnings, because the greater part of the August output did not leave the mills until September. For the first nine months of this year net earnings aggregated \$74,095,269, as against \$73,096,796 in the corresponding period of 1921. Allowances for depreciation, sinking fund, and other purposes amounted to \$30,602,666, as compared with \$28,439,686. The balance available for dividends was \$28,424,685, equal to \$1.87 a share on the common stock, after paying the preferred dividends. That compares with a balance of \$29,255,833, or \$2.03 a share on the common in the like period of last year. After all deductions and dividends, the corporation showed a deficit—according to results as compiled from the quarterly statements—of \$9,551,415 for the nine months' operations, as compared with a deficit of \$8,720,267 for the same period of 1921. With the coal situation much improved, and with the steel industry now operating at about 75 per cent. of capacity, which may increase before the end of the year, it is confidently expected that the corporation's report for the current quarter will make a better showing.

Reports filed with the Interstate Commerce Commission indicate that the first-class railroads of the United States had a net operating income in September of \$58,428,000, representing an annual return on their tentative property valuation at the rate of only 2.88 per cent. In September, 1921, the same income was \$87,534,000, or an annual return of 4.32 per cent. In September of this year the carriers failed by \$58,000,000 of realising a return of 5½ per cent., which the Commerce Commission has decided is a reasonable rate. Gross earnings in September, totalling \$499,879,000, were two-fifths of 1 per cent. larger than in the like month of last year; operating expenses of \$408,315,500, however, showed an increase of 8.2 per cent. The net earnings were apparently reduced somewhat by expenditures made in repairing freight cars and locomotives. An analysis of the reports shows that the railroads during September paid out \$120,000,000 for maintenance of equipment, or an increase of nearly 16 per cent. over the same month a year ago. The number of freight cars in need of repairs was reduced by 30,000, and of locomotives by 114. For the first nine months of this year the railroads' net operating income amounted to \$529,413,000, or at an annual rate of return of 3.96 per cent., as against \$393,793,000, or 2.95 per cent., in the corresponding period of 1921. Not only have the carriers been failing to earn the full quarterly dividend on the common stock, but they have also been making every effort to increase their

November 18, 1922.]

facilities in order to handle the big volume of traffic now being offered. This is indicated by their extensive purchases of new cars and locomotives since the beginning of the year. Up to October 15th about 123,000 new freight cars were ordered, according to statistics compiled by the *Railway Age*. In only three of the past ten years, namely, in 1912, 1913, and 1916, have orders exceeded the number thus far placed in 1922. New locomotives bought from January 1st to October 15th totalled 1,800 approximately, which compares with an average of 1,483 for the last five years. The new rolling stock bought will not result, however, in an equivalent increase in the amount of equipment in service, for the reason that, owing to the inability of the railroads in recent years to purchase a normal amount of new equipment, the number of cars and locomotives which should now be retired is said to be unusually large. Additional orders are still being placed, and will doubtless continue to be until the end of the year. It is quite possible that the total will provide a normal year's net increase in equipment, but, as the authority mentioned remarks, it will hardly make up for any of the large deficiency in equipment which has accrued in recent years.

In a decision rendered a few days ago, the Railroad Labour Board granted to maintenance of way men an increase in wages amounting to 2 cents an hour, and established a minimum wage for such employees ranging from 25 to 27 cents an hour. It is estimated that the increase will add some \$20,000,000 to the railroads' annual payroll.

A preliminary meeting of the American-German Mixed Claims Commission was held in Washington on November 1st. Justice William R. Day, who is about to retire from the United States Supreme Court, presided as umpire of the Commission. The American and German members attended, as well as the agents of the respective Governments and the joint secretaries. The Commission was created under the treaty negotiated at Berlin last August. The claims to be dealt with fall within three categories. First, those of American citizens arising since July 31, 1914, out of damage to or seizure of their property rights and interests, including any companies or associations in which they were interested within German territory as it existed on August 1, 1914. Second, other claims for loss or damage to which the United States or its nationals have been subjected with respect to injuries to persons or to property rights and interests as a consequence of the war; and, third, debts owing to American citizens by the German Government or any of its nationals. It is understood that more than 1,200 claims, aggregating upward of \$300,000,000, have already been filed for consideration by the Commission. Many of the claims, however, have only been presented by correspondence. The Commission has ruled, therefore, that all claims must be presented in petitionary or memorial form, and circulars are now being sent to persons who have written regarding their claims informing them that the latter must be submitted in the desired form by January 1st next. The "Lusitania" and other cases resulting from damage caused by Germany's submarine war attacks will be considered by the Commission.

FRANCE.—TAXATION AND BUDGET PROSPECTS—THE FRANC AND FOREIGN GOODS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, November 15.

THE general discussion of the Budget Bill has again been occupying a good deal of the time of the Chamber this week, but has, of course, been largely overshadowed by the public mind by the Anglo-French difficulty over the preliminaries for the approaching Lausanne peace conference. In the Senate, the Finance Minister, M. de Lasteyrie, has taken the advantage of his opportunity, in the course of a statement before the Finance Commission of the Upper House, to reply to some of the criticisms of his proposals that have been put forward by M. Henry Bérenger and others. He insisted that he intends to make an increasingly strict and very real application of the progressive principle as applied to the

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus \$25,000,000
Undivided Profits over \$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

income-tax and succession duties, and that he has every hope, in spite of a good deal of dissimulation that is known to be occurring, to increase progressively the yield from the tax on turnover. The Minister was able to announce with satisfaction that, for the first time for very many months, the actual yield from taxation during October was greater than the amount included in the Budget estimates. The total yield for last month was 1,502,662,000f, or 59,658,801f more than had been expected, and 197,551,000f more than the yield for October, 1921. This was principally due to a heavy increase in stamp duties and registrations, &c., of various kinds, which produced 556,943,000f during the month, or nearly 18 per cent. above the Budget estimate (and 14 per cent. more than in October, 1921). The yield from taxation for the first ten months of the year, although 833,679,000f below what had been estimated for, has been 1,614,449,500f more than for the corresponding period of last year. The Finance Minister said that by the end of the year he anticipated that the total yield would be at least 2,000,000,000f in excess of that for 1921, which he characterised as a magnificent result, and all to the honour of the country, when the unsettled period through which it is passing is taken into consideration.

Referring to M. Henry Bérenger's statement that the country will this year have to borrow at least 31,000,000,000f, and next year 35,000,000,000f, M. de Lasteyrie insisted that not more than 22 milliards would be required in either year. The figure that had been given for the total cost of pensions and the restoration of the devastated regions the Minister also regarded as much too high. M. Bérenger placed this at 132,000,000,000f, but the real figure, the Minister said, should be 91,000,000,000f, which was that accepted by M. Bokanowski, the Budget *rapporteur* in the Chamber. The much discussed tax on turnover, which has been the weak spot in the country's fiscal machinery since its introduction, was still nearly 45,500,000f below the estimate during October, but is now showing a steady and progressive increase. It yielded last month 12,000,000f more

than the best figure recorded in any one month since the beginning of 1921. The average monthly yield from this tax during the present year has been 186,000,000f, as compared with an average of 155,000,000f for the corresponding period of last year. A Bill that has already passed the Chamber with a view to strengthening the provisions applicable to this tax is now before the Senate. The principle emphasised by the new Bill is that, as the tax on turnover is one affecting articles of consumption, it must be applied to all sales and all purchases in such a manner that no consumer and no intermediary shall be favoured to the detriment of another. The new Bill extends this tax to all co-operative societies ("every time they perform an act of commerce of any kind, and particularly in connection with the constitution of stocks"), to transactions in furnished or unfurnished property, and to transactions effected in France by foreigners resident elsewhere. It exempts from the tax all sales of raw materials made by the importer himself to his customers, all transactions in regard to goods intended for export, and all transactions in colonial agricultural produce, when the goods are sold direct to the consumers. It also institutes a system of fixed annual payments in discharge of this tax, especially for small traders, artisans, and manufacturers in rural communes of less than 5,000 inhabitants.

The continued unfavourable position of the franc, which has varied this week between 68 and 72 to the pound, has led to a renewed outcry throughout France for the restriction of imports, and focussed attention keenly on the possibility of rendering the country self-supporting and independent of foreign supplies. M. Chéron, the Minister of Agriculture, emphasised this strongly on Sunday in a speech made at the opening of a new station on the Paris-Cherbourg line, in his own constituency. Many of the newspapers are voicing the same idea day after day, and urging that every effort shall be made to "throw off the yoke of the foreigner." One newspaper appeals bluntly to the public: "Don't buy foreign products. Don't ask for English mustard and jam or American boots; excellent brands of all these goods are made in France. Don't buy English cloth or clothing; there are admirable tailors in Paris, and excellent cloth is made at Roubaix and Lyons. Don't waste bread; we shall have to buy wheat from abroad this year, and for that we must pay in sterling and dollars. Pin your faith to the franc, and let the exchange speculators go bankrupt if they will." The same newspaper adds the following shrewd remark, which may perhaps be taken as a hint by those who have read certain paragraphs that have appeared in these columns recently: "Don't attach too much importance to speeches and reports by *rapporteurs de budget*; don't forget that the *rapporteur* of a budget is a candidate for Ministerial rank, and that a candidate for a portfolio is always pessimistic, and becomes optimistic only when he secures one."

It must be confessed that at present there is a strange undercurrent of optimism pervading this country. In place of a tendency that prevailed some two years ago to rail at England and America as responsible for the fall of the franc, there is now a plain recognition of the facts and a determination to remedy the evil (as proved by what I have set forth above). Instead of wasting their energies in vain complaints, the whole people are now making a courageous effort to meet their difficulties. The energy and enterprise that has been applied to the restoration of the devastated regions, in spite of an exasperating lack of ready money and of the high price of materials, has been extended to the rest of the country, under many forms. The great scheme for the electrification of the French railways has already reached the commencement of the stage of realisation. The same may be said of the nation-wide scheme for the utilisation of hydraulic power for the development of electricity to replace steam. Ceaseless efforts are being made to produce a substitute for petrol, derived from benzol, &c., as a motive power for motor cars, aircraft, and shipping. Increasing attention is being paid to the possibility (with British success in Egypt as an incentive) of obtaining cotton from Cilicia or from the French colonies, wool from Algeria and elsewhere, nitrates from Germany, under the system of payments in kind.

The French, further, are realising that the drop in the

value of the franc is by no means an unmixed evil, and that, providing it is not allowed to go too far, it is acting much more effectively as a protective machine than any high Customs tariff could do, while at the same time it gives no reason to justify the retaliatory measures that would probably attend the adoption of a high tariff. The injury that British (as well as American and French) speculators in exchange may at present be doing to the trade of their own country may be seen from the following rough list of the commodities, with their value, which France is at present compelled to import:—

	Francs.
Petroleum and motor spirit	700,000,000
Cotton	1,300,000,000
Wool	2,000,000,000
Coal	3,000,000,000
Wheat and other foodstuffs.....	5,000,000,000
Metals	800,000,000
Machinery	4,500,000,000
Chemicals and manures	800,000,000
Timber and paper	800,000,000
Oleaginous seeds	1,100,000,000
Skins, hides, and furs	500,000,000
Stone and similar materials	500,000,000

The following table, which I extract from "La Situation Economique et Financière," shows in a fresh form the French foreign trade returns for the first nine months of 1913, 1921, and 1922 respectively:—

	(In Millions of Francs.)				(1,000's of Tons.)
	Food-stuffs.	Raw Mater'ls.	Manu-factured Goods.	Total Value.	Total Weight.
IMPORTS.					
9 months of 1913.....	1,272	3,629	1,221	6,122	32,772
9 do 1921.....	3,940	7,897	3,788	15,615	27,201
9 do 1922.....	4,048	9,476	2,960	16,520	37,317
EXPORTS.					
9 months of 1913.....	587	1,352	3,079	5,018	15,655
9 do 1921.....	1,572	3,104	10,151	14,827	11,752
9 do 1922.....	1,280	3,227	9,712	14,219	16,118

The increase in the value of the raw materials imported and of the manufactured goods exported, and the decrease in the value of manufactured goods imported, is remarkable. The increase in the French adverse trade balance, as "La Situation" points out, "is due solely to the country's increased purchases of raw materials, which constitutes, at the same time, an excellent indication of our economic recovery." Further, when it is noted that the adverse trade balance, which was 1,104 million francs, on a total volume of trade of 11,141 millions in 1913 (or as nearly as possible 10 per cent.), is now only 2,301 millions on a total volume of 30,739 millions (or only 7½ per cent.), it is obvious that, so far as the balance of trade is concerned, there is no justification for the franc, which stood at 25 in 1913, to have fallen to anything like 70.

GERMANY.—BRITISH AND ALLY CITIZENS—SPECIAL FOREIGNER TAXES—RIGHT OF MOVEMENT—PROPERTY RIGHTS.

(FROM OUR CORRESPONDENT.)

BERLIN, November 13.

ACCORDING to Press statements, the Ambassadors' Conference is about to make protests to the German Government directed against Ally citizens visiting or residing in Germany. It is to be hoped that these protests will not precipitate a new international crisis; but it is not to be denied that the attitude of the German police, municipal and State authorities towards foreigners leaves much to be desired, and is rapidly getting worse. The main in-German foreign trade policy, and in particular, the prohibition of export to Ally countries, in so far as these are high-prices are charged than are charged to low-exchange countries. Another question is passports in their frontier questions; but they are increasingly concerned in these questions, mainly in the right of free movement and settle-

ment, freedom from the new "foreigner taxes," and better protection of their property. In all these matters Ally citizens, including British subjects, have very serious grievances; and the increasing complaints in the English and American Press are no accident. The measures complained of are the outcome of a very strong anti-foreign agitation, from which the friendly Federal Government keeps aloof, but which is encouraged by State and municipal officials, and is translated into unfriendly and anti-Treaty measures by both, and also by the police.

The compulsion on Ally citizens to carry passports for internal use is one grievance. *Passzwang*—the obligation of foreigners to carry passports—was abolished in Germany in 1867. After that mere registration and identification by any reasonable means sufficed. It is now again in full force. No Ally citizen can stay in any German centre without being required to produce a passport; and in many States and cities right of entry and residence depends upon registration of the passport and payment of considerable, in some places of very heavy, fees. The fees sometimes take the shape of "visitors' taxes," based on the visitor's currency's exchange; and sometimes of open "foreigner taxes," always based on the exchange. Germans are not obliged to carry passports; and therefore do not pay such taxes (except in pleasure and health centres, where they pay the normal "visitor's tax," while foreigners pay a much higher tax). As a result of this system, an Ally citizen engaging in internal German trade or visiting Germany for purposes of export or import trade is very severely bled. The practice is a violation of Art. 276 of the Peace Treaty. It also violates international morals, for it revives, in more respectable outward form, the feudal jurisdiction of the mediæval barons, who made travellers pay for permission to enter, pass through, and sojourn. Every German State and city now claims, or actually exercises, the right of levying special dues on Ally travellers (and other foreigners); and if the traveller refuses, he is either refused entry or expelled. No one can regard without concern the possibility of all Europe returning to these mediæval conditions; and at a time when most States recognise the need for restoring the pre-war free intercourse, it is intolerable that petty States and single towns should, without any control, impose what entry and sojourn taxes they choose, and create in one Republic alone more frontiers and Customs barriers than existed in the whole world before the war. Such, however, is the system.

It is characteristic of most of the levies and restrictions upon foreigners that they are championed by extreme Socialists, who profess Internationalism. That is the case with Thuringia, with the new foreigner tax of Berlin municipality, and with the unpleasantly famous Housing Office of Schöneberg, Berlin, whose attacks upon the property of foreigners have just caused a most violent crisis and sharp diplomatic protest.

All these taxes and restrictions upon freedom of movement are, in so far as Ally citizens are concerned, a breach of the Peace Treaty. This every foreigner knows; but probably few foreigners know that the taxes are nearly always also violations of the German Constitution and law. The foreigner and visitors' taxes are nearly always based on the taxed person's country's exchange—that is, upon his assumed ability to pay extra owing to his increased mark currency wealth. Such taxes are forbidden to States and to cities. Article 9 of the Local Taxation Law and (Landessteuergesetz) of 1920, under which the income and property taxes were appropriated to the Republic, forbids the local governments to impose any tax which "takes into account the personal paying ability (*Leistungsfähigkeit*)" of the taxed person. Although the same law requires every local government to report its new taxes to the Federal Government, in order that their legality may be tested, the Federal Government has not rescinded one of these taxes.

The same is true of the refusal of, or restriction of, right of free movement. Free movement for Germans and foreigners (*Freizügigkeit*) was established in Prussia in 1867 (when passports were abolished), and was adopted almost immediately by the South German States. As stated, it no longer exists for foreigners, but it does exist for Germans. That is a breach of Art. 276 of the Peace Treaty, which declares that no new restrictions, not im-

posed on Germans, shall be imposed on Ally citizens. In business an Ally citizen cannot possibly compete with a German; if a race began between a German and an Ally citizen in order to complete a deal in some distant district, the German, needing no permit to travel, would usually win.

In the matter of protection of Ally property there are also serious abuses. Here one finds the universal feature: violation of the Peace Treaty combined with violation of German law. From the latter fact it follows that a resolute foreigner could, even if his Government gave him no support on a Treaty basis, fight the offending authorities successfully in a German court. One form of discrimination against foreigners is through the creation of State and even of city Customs frontiers. Last summer Saxony, or Dresden city, or both, seized large quantities of goods which foreigners had lawfully bought and desired to remove. (This was reported at the time in the German Press and in the *Times* of September 20th.) Germans who had bought under the same conditions were allowed to remove their goods. Officials confiscated the boots and other personal property of foreigners. This, apart from being anti-Treaty, is anti-legal. It was done under pretext of a local Customs frontier. The first local Customs frontier was set up by Bavaria three years ago, and it led to a violent conflict with the Federal Government. Article 82 of the Federal Constitution provides that "Germany constitutes a Customs and trade area, enclosed by a common Customs frontier," and Art. 6 declares that "The Republic has exclusive legislative competence in Customs, as well as in the unity of the Customs and trade area, and in the freedom to move wares." The Republic has never surrendered this exclusive right, or delegated any part of it, to the States. The States simply seized it, at first in order to prevent export across their frontiers by Germans and foreigners alike, of late in order to confiscate foreign-owned goods without paying compensation. Hesse lately prohibited export of potatoes. The measure was illegal; but even if the pretext (the famous Art. 48 of the Constitution) had been good in law, the Federal President is entitled, by the same article, to protest and to annul the State measure. The President did protest; but Hesse continues to defy him. This practice is a gross abuse; and that foreign goods about to be moved from one State to another are confiscated, while German goods are not confiscated, only makes things worse.

There are a great many other abuses: seizure of foreigners' dwellings under the Housing Laws, when German dwellings are not seized, and special so-called "kniff" (trick) laws against foreigners, by which the Peace Treaty is circumvented without being openly violated. As the well-meaning Federal Government has not so far done anything to check these abuses, it is to be feared that the abuses will continue and increase until violent conflicts with foreigners and a serious international crisis are the result.

JUGOSLAVIA.—FOREIGN EXCHANGES—THE AMERICAN LOAN.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 30.

THE dinar has been appreciating steadily for the last two months. While the sterling rate at the beginning of September was 420 dinars, it had fallen to 290 by the beginning of October, and now stands at 273. Other currencies have moved in a similar manner. The chief reason for this appreciation is to be found in the realisation of the Yugoslav loan in the United States. The contract with Messrs Blair and Co., of New York, was for a sum of 25 million dollars, issued at 86.75 per cent., and bearing interest at the rate of 8 per cent. per annum. The payment of the first 15 million dollars was effected at the end of August, and the remainder should be paid during the course of the month of November. These dollars are being exchanged gradually into dinars by the Government on the Belgrade Zagreb Bourses, for by the terms of the agreement \$11,100,000 have been earmarked for expenses in connection with railway construction and repairs, building and road-making, which have

to be paid almost entirely in dinars, \$2,600,000 will be used for the purchase abroad of railway material, including bridges, and the balance of \$1,300,000 on this first instalment of the loan is to be devoted to settling the debts contracted with the Standard Oil Co. and the Allied Foreign Trade Corporation. The final instalment of 10 million dollars is to be used for the construction of a railway between Belgrade and the Adriatic.

The Ministry of Finance is thus obliged to proceed with the conversion of dollars. This, together with the proceeds of foreign currencies received in payment for Jugoslav exports, might have been used to improve the dinar still more, but for the belief on the part of the Government that a further rapid appreciation in the exchange value of the national currency would be as dangerous and prejudicial as a downward movement would be.

It is realised that stability is now the main objective, and, from the declarations of one official representative of the Government, one gathers that attempts will be made to keep the dinar for some time to come at between 8 and 9 Swiss centimes.

SOVIET RUSSIA.—FOREIGN CAPITAL—INCREASED PRODUCTION—FOREIGN TRADE—INDEX NUMBERS.

(FROM A CORRESPONDENT.)

THE official organ of the Russian Supreme Economic Soviet publishes an article containing very interesting data relating to the investment of foreign capital. From 1856 to 1913 1,343.5 million gold roubles were invested in Russian joint stock companies. This total was distributed according to different nationalities as follows:—

(Million gold roubles.)			
	Foreign Companies Having Undertakings in Russia.	Russian Companies with Foreign Capital.	Total.
United Kingdom	154.4	72.1	226.5
Belgium	135.6	8.8	144.4
France	141.2	112.1	253.3
Combined Franco-Belgian Co.'s	..	224.3	224.3
Germany	91.0	287.1	378.1
United States	13.5	..	13.5
Switzerland	12.2	..	12.2
Sweden	7.4	..	7.4
Holland	1.4	..	1.4
Austria	1.3	..	1.3
Italy	0.8	..	0.8
Other countries	0.3	80.0	80.3
Total	559.1	784.4	1,343.5

Franco-Belgian capital, with 622.0 millions (46.3 per cent. of total), ranks first; Germany, with 378.1 millions, second (27.4 per cent.); and English capital, with 226.5 millions (16.8 per cent.), third. This capital has been invested in undertakings which were situated in the former Russian Empire. The figures given above include also companies which are now under the jurisdiction of Poland, Latvia, Lithuania, and Estonia. The number of companies which have been severed from the Russian Empire is comparatively small, as shown by the figures below:—

Companies Created with the Aid of Foreign Capital in Russia Before the War.		
	Number.	Million Roubles.
Soviet Russia	263	1,167.9
Poland	51	126.9
Latvia	9	45.4
Lithuania	1	0.5
Estonia	2	2.5
Unknown	1	0.3
Total	327	1,343.5

Out of the 1,343.5 million roubles invested in Russia 1,167.9 millions remain under the control of the Soviets. Only 175.6 millions have been saved from nationalisation by the formation of the new border states.

In this respect Germany has been, of all countries, most fortunate, because out of the total of 378 millions 28 per cent. (106 millions) have escaped confiscation, being beyond the frontier of Soviet Russia. For France the respective

percentage is 23 (58 out of 253 millions). England's total investment remains unfortunately in the hands of the Soviets.

According to the different groups of industry the foreign capital was distributed as follows:—

	Million Roubles.
Mining and metal industries	989.8
Electric industries	152.3
Chemical industries	57.0
Other industries	144.4
Total	1,343.5

England, Belgium, and France have given their capital, in the first instance, for the development of mining and metal industries. The bulk of the capital invested in the electric trade belonged to German shareholders (129.7 out of 152.3 millions). France had a strong interest in the textile industry.

The statistics of the Economic Soviet contain equally interesting data, which illustrate the historical process of the investment of foreign capital. The first foreign undertaking which obtained a licence for the formation of a Russian branch was the German Continental Gaz Company in Dessau, which started its operations in 1855. One of the oldest undertakings in Russia is the Asoff Coal Company, which was financed by English capital. The subscribed capital of foreign companies which were registered in Russia is distributed according to the different periods as follows (million gold roubles):—

	United Kingdom.	Belgium.	Germany.	France.	Other.	Total.
1856-1887	11.8	10.7	13.8	35.4	..	71.7
1888-1894	0.5	6.4	39.8	14.7	1.8	62.9
1895-1902	59.3	100.1	26.3	52.8	14.5	253.0
1903-1905	3.4	0.4	1.2	4.2	0.3	9.5
1906-1913	83.0	19.8	11.1	33.1	21.6	168.6
Total	158.0	137.4	92.2	139.9	38.2	565.7

The figures of industrial production published for the first half-year reveal an increase of output in all branches of industry. The coal production amounted to (million poods):—

	1921.	1922.
First quarter	141	187
Second quarter	115	134

During the first quarter the output increased in comparison with last year by 46, in the second quarter by 19 million poods.

We observe the same tendency in the iron industry, as shown below:—

	(Million Poods.)			
	Pig-Iron.	Hartens Steel.	1921.	1922.
First quarter	2.2	2.8	3.6	5.7
Second quarter	1.4	2.6	2.4	5.3

During the second quarter the production of pig-iron and of steel has declined under the influence of the industrial crisis from which the country is suffering. Nevertheless, the production was during the whole half-year greater than in 1921.

The statistics of cotton goods production reveal a similar tendency:—

	COTTON GOODS.			
	Yarn.	Cloth.	1921.	1922.
	Thousand Poods.	Milln. Arshins.	1921.	1922.
First quarter	414	924	85	114
Second quarter	175	751	34	118

The foreign trade returns can be equally adduced as a proof of the slow economic recovery of the country. Imports, as well as exports, are increasing since 1920, as may be seen from the following figures:—

SOVIET RUSSIA'S FOREIGN TRADE.			
	1920.	1921.	1922 (First Half-year).
Imports (000's poods)	5,371	55,304	98,194
Exports	676	12,963	14,763
Imports (000's roubles, according to 1913 prices)	37,202	248,675	279,219
Exports	1,085	21,420	24,848

While the total imports amounted in 1921 to 248.6 million roubles, during the first six months of this year goods having according to pre-war prices a value of 279.2 million roubles were imported. For the exports the respective figures were 21.2 and 24.8 millions.

The official price index, which is published by the Commissariat of Finances, amounted in May to 365,573,261. Recent movements are traced below:—

RUSSIAN INDEX OF PRICES
(Average for the whole country, including Moscow and Petrograd.)

	1913 = 100.		
September 1, 1921	6,285,305	February 1, 1922	44,804,306
October 1, "	6,412,091	March 1, "	89,414,312
November 1, "	8,142,092	April 1, "	194,951,113
December 1, "	10,277,122	May 1, "	365,573,261

The latest figure represents an increase of prices in comparison with the pre-war level of more than 3½ million times.

Letters to the Editor.

THE LABOUR PROGRAMME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Labour correspondent in last week's issue is a far cleverer man than I can pretend to be, and I do not doubt his sincerity any more than his skill in putting his case, but will you allow me, as a plain business man, to make a few comments on his article. He says, "A capital levy is one of the worst possible subjects for political controversy at a General Election. The Labour Party has shown more courage than discretion in raising the issue, and thereby giving their opponents abundant scope for misrepresentation and abuse."

Then he goes on to say that a capital levy would be in the interests of the wage-earning masses, and probably best for the majority of middle-class taxpayers. It seems to me that this is the very reason why the Labour Party has raised the question of a capital levy, couched in attractive terms, to the enormous number of electors who are not called upon to pay it, in the hopes of securing their votes before its fallacy could be effectively disproved. Unfortunately the workers have not "caught on" to any great extent, and that is the reason for the present change of front on the part of the Labour leaders.

I am writing this before the result of the General Election is known, but your Labour correspondent already seems to discount the result of the voting by saying that "the Labour Party have shown more courage than discretion in raising the issue." The fact is the average voter "does not generally argue with much regard for economic science," and in that the average voter is right. The average voter simply does not believe that a capital levy would bring about a fall in the price of commodities and an increase in wages and employment, and so far as I can see, your correspondent is unable to advance a single argument that it would do so. Indeed, he quotes Mr Lloyd George as having said, nearly 20 years ago, that houses for the working-classes would never be obtainable until "land values" were taxed, whereas, as everybody knows, the taxation of land values, now abolished, and acknowledged by Mr Lloyd George himself to be a financial failure, actually put an effective stop to all private building of working-class houses from the day the Act was passed. Now—when it is too late—Mr Clynes, a clever and sincere exponent of Labour policy, describes the capital levy as "only a suggestion."

The latest statistics in my possession show that in 1919 there were only 59,000 people in the United Kingdom having an income of over £2,500 a year, and so far as voting power at this election is concerned, they are a negligible quantity. Their position as capitalists is entirely at the mercy of the workers—men and women—who have votes. It is not a question of a capital levy at all. If capital is a bad thing, why not confiscate it altogether? There is no reason to suppose that Lenin and Trotsky were not as sincere in their belief that the confiscation of capital in Russia five years ago would prove a blessing to the mass of the people, as the Labour Party here believe that a less drastic policy would be a benefit to everybody, except to a small number of very wealthy people, oblivious of the fact that the disastrous

failure of this policy in Russia is now only too well known to every sensible person in the United Kingdom.

Mr Clynes says unless we have a capital levy we must put up with a 5s in the £ income-tax for the next 25 years. I agree. The obvious answer to this is that every wise man would cheerfully surrender half his fortune if by doing so the other half would be made secure. It is only the knowledge that the capital levy is an unworkable and impossible proposition which prevents it from being adopted by every political party now striving for power. It is not the case that it is condemned because the Labour Party supports it.

Four years ago, on my return to civil life after the war, I advocated in your columns a reduction in interest on every security created since the war began. I do not and never did believe in five per cent. patriots, but you, Sir, although printing my letter, turned my suggestion down as impracticable. Perhaps it was, and is, but I venture respectfully to suggest to Mr Clynes and Mr Henderson that the heavy income-tax we have to endure for years to come is in effect a tax on capital, although it presses far too heavily upon capital created before the war. This heavy income-tax does bring in the revenue required to carry on the business of the country and Empire, and it seems to me that any attempt to "kill the goose which lays the golden eggs" would only recoil with disastrous effect upon the very people Mr Clynes and his friends are sincerely desirous of serving.—Yours, G. S. PAWLE.

A LEVY ON CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 11th a Labour correspondent discusses not unsympathetically the levy on capital recommended by the Labour Party. There might be a good deal to be said in favour of such a levy if, as some of its advocates maintain, it was to be imposed in lieu of the income-tax and other direct taxes, if it were an arrangement whereby people could pay in a lump sum an amount which at present is spread over a number of years. However, that is by no means the idea of the Labour Party. The assertion contained in its election manifesto that a levy was proposed for "lifting from the trade and industry of the country the dead weight burden of the national debt" is sheer humbug, for from the same document we learn that in addition to the levy, which should yield £4,000,000,000, Labour proposes an increase of the death duties and of the super-tax and the taxation of land values. Far from easing the pressure of taxation, the Labour Party proposals would approximately double the tax burden, which already is unbearably heavy.

It is true that the Labour Party proposes that the tax pressure bearing on the masses should be lightened by "freeing trade and industry from all burdens and imposts, whether customs, excise, or stamp duties." However, the party demands enormous additional expenditure for carrying through "a large programme of necessary and useful public works," for pensions for widowed mothers, &c., and demands vast and costly measures for "increasing the happiness and prosperity of the poor by better housing, better schooling, better living, better health," &c., &c. The true purpose of the proposed levy and the rearrangement of taxation is contained in the noteworthy phrase: "Labour means to bring about a more equitable distribution of the wealth produced by the common effort of the workers by hand and brain."

If the various promises and proposals contained in the election manifesto were honestly made, they would prove the abysmal ignorance of the leaders of organised labour. They have apparently not the faintest knowledge of economic realities. They live in a world of theory and

of dreams. In their opinion money is wealth, and the wealth of the nation can easily be distributed, and the poor can be made prosperous by distributing money, by taking it away from one section of the community and sharing it out among the needy. It is as foolish to endeavour to make the poor prosperous by redistributing the money, as it would be to heat a cold room by breathing on the thermometer. Money, although an indispensable medium of interchange, is not wealth. Wealth consists solely in necessary and useful goods, and nothing else. The wealth of the wealthy consists in tangible values, for practically all the paper values existing are merely simulacra of tangible property.

It is obviously quite immaterial whether a working man receives £3 per week or £300 per week. The only thing which he really cares for is that he has an abundance, or at least a sufficiency, of food, clothes, house room, furniture, fuel, &c. Now all these cannot be secured by the redistribution of money, but only by increased production, for a redistribution of food, clothes, house room, furniture, fuel, &c., will have as little effect upon the conditions of labour as pouring a small can of hot water into a cold bath. The rich and well-to-do, from whom general prosperity is to be obtained, enjoy only a tiny fraction of the food, clothes, house room, furniture, fuel, &c., available. Even if the rich and well-to-do were starved and driven out of their houses, labour conditions would not noticeably be improved.

The condition of the masses can be raised only by increasing the quantity of consumable goods, by their increased production, and by nothing else. Now, the Labour Party not only promises to improve the conditions of the workers by juggling with money, whereby the available stock of goods will in no wise be increased, but it demands, at the same time, "more leisure, more freedom, more opportunities for enjoying the good things of this life." In other words, it demands and promises that the workers shall have a greater supply of food, clothes, house room, furniture, fuel, &c., while producing greatly diminished quantities of all these. Possibly the Labour leaders wish to take advantage of the short-sightedness of individuals who imagine that they will be able to get plenty of consumable articles if their income should be increased, or their taxes lowered. However, a levy on capital and other taxation tricks, far from causing the goods available for general use to increase, will cause them to diminish in the most disastrous fashion.

The illusion of greater wealth caused by taxation jugglery and by increased wages would cause the workers to increase their consumption, while reducing their production. That is the inevitable result of inflation. We discovered this during the post-war boom. The proposals of the Labour Party would, therefore, create an abundance of money, but a disastrous scarcity of goods, and they might lead not merely to want and unemployment, but to starvation and famine.

I do not wish in this letter to deal in detail with the foolish and mischievous levy on capital, which undoubtedly would prove ruinous to trade and industry. The fact that it is practically unanimously condemned by business men suffices to show the folly of the proposal. After all, business men are good judges of their own interest. But I would like to point out that no nation can become wealthy by endeavouring to distribute what is not there. There is no distributable surplus. There is not even a surplus of honest money that can be distributed. Taxation is already diminishing, or at least preventing the adequate expansion of, the national capital. In other words, it is preventing the necessary renewal and extension of the machinery of production and of civilisation. If the Labour people wish to increase the prosperity of the masses, let them urge their followers to produce more. Ca'canny is a far heavier burden upon British trade and industry than the entire Budget. One American produces as much as three Englishmen. By abandoning ca'canny production and consumption could be trebled, and the burden of the war debt would automatically shrink to one-third.—I am, &c.,

LABOUR POLICY—FALSE AND TRUE.*

SIR LYNDEN MACASSEY has performed a singular public service in the production of this work. He possesses experience and natural qualifications for the task which must be unrivalled, and a judicial temper throughout which is often absent from the exposition of experts in political and social questions. A man who has taken part in the rough and tumble of over 3,000 industrial conferences can well claim to have an insight into the real mind of Labour, which enables him to sympathise with its outlook and distinguish, as he so often does, between the outlook of the rank and file and the polemics of its leaders. The first part of the work is literally a handbook, a compendium, of the programmes of Labour leaders, and the progressive development of the thought of the party. Its documentation is most valuable for purposes of reference, and probably the most ardent Labour supporter could not allege that it is unfair, either by omissions or undue balance given to particular aspects. While in this collection of data the author has aimed at scrupulous fairness, there is also something almost relentless about the resultant effect, and a good part of the work of criticism is done automatically, without pointed comment. Nevertheless, Sir Lynden's summary criticism adds point and effectiveness, particularly upon the impracticability of the "right to work" principle. Probably with all his fairness and first-hand knowledge, he will be deemed a partisan of capitalism, despite many shrewd knocks at our existing system, and if he is truly such, Socialism has had no more trenchant adversary. He is the more effective because of the absence of diatribe and railing against "agitators," and because he leaves the so-called philosophy of Socialism alone, and deals everywhere with practical points—literally down to "hard tacks." We prefer not to regard him as a partisan, and find no difficulty in the process, as the air of the expert expositor with no axe to grind is convincing. The second part of the work is a brief history of governmental action towards Labour in recent times. It is in the final portion that Sir Lynden gives what he conceives to be the "true Labour policy," the fruit of his own ideas and experience, ranging over a wide field. "Democracy will fail, if it fails at all, from a lack of understanding of economics and finance." There is a profound faith in the innate "decentness" of the working man, provided always that ignorance and wrongheadedness can be combated. The problem of insurance against unemployment, self-contained industry by industry, lies, in Sir Lynden's judgment, at the root of the social problem. It is too large a project for a reviewer's criticism, but if this book is not absolutely convincing upon it, the treatment is at least persuasive and instructive.

* By Sir Lynden Macasey, K.B.E., LL.D., D.Sc. Thornton, Butterworth, Limited. 7s 6d net.

FINANCE AND HISTORY.*

THIS is a very learned and ingenious work, packed with figures, facts, and economic heresies, and leading up to the conclusion, also emphasised in the preface, that France should solve her financial problems by currency inflation rather than by loans. From internal evidence, the author appears to be a Christian Socialist, bitterly hostile to the doctrines of "liberal" or "orthodox" economics and with a strong predilection for the financial practices of the mediæval Kings of France. "Inflation," of which he claims to have written the first complete history, covers not only paper currency, but the increase (and debasement) of metallic money, and the issue of bank credits, bills, and State loans: and his aim is to show that currency inflation is legitimate and beneficial, while State loans are pernicious. By the fluctuations of metallic changes of ancient Greece and Rome: he defends the currency manipulations practised by the French Kings as tending to a fair division of wealth among their people,

* "L'Inflation dans l'Histoire." Par Albert Despaux. Préface de Léon Chavenon. Paris: Librairie de l'Information, 1922. (Pp. 511, small 8vo, 7f 50c.)

and insists that their economic policy was directed to supplying the urban workers with necessities at a just price: he praises the assignats of the French Revolution and Law's Mississippi scheme, which latter he interprets as an effort towards rallying "Celtism" and Latinism against Germanism; he traces its defeat to the influence of England, and that of Napoleon to the "defeatism" of his subjects in resenting the cost of his wars: he denounces the greed of plutocrats and the pettiness of small investors in requiring Budgets to balance and investments to be safe: and he deplores the modern French "hypertrophy of saving," which facilitates State loans, and thereby tends to withdraw capital from production and to increase the number of the idle rich. He regards the adoption of the gold standard as a servile imitation of England: he deplores the growth of peasant proprietorship as tending to decrease the production of food: and in proof of his contention he points to Bolshevik Russia. He maintains that France ought to have paid for the War by labour conscription and taxes on War profits: he strongly opposes "deflation," and takes the gloomiest view of the prospects of French labour, and of its intellectual section most of all. A full review of the book would fill a large volume; but students of history and economics will obtain a certain stimulus from its perusal, and will find in it a vast mass of curious information on many periods of economic history.

BOHEMIA.*

To understand the complicated tangle of Central European affairs to-day it is necessary to go back to the dim and distant past. The age-long struggle between Czech and German in Bohemia, for example, is lived anew in its entirety by each successive generation in this unfortunate country. The martyrdom of John Hus is fêted each year as though it were an affair of yesterday, and fortunate indeed is the traveller who succeeds in finding a Bohemian, be he Czech or German, who will discuss current affairs without reference to the Battle of the White Mountain (referred to as the White "Hill" by our author), and the religious and political events of an age long since passed. In this book we are guided through the dull complications of mediæval affairs, and the chronicle-like nature of much of the volume is due less to the guide than to the arid tracts through which he leads us. Of a total of 565 pages, 482 are devoted to the period prior to 1620, and one cannot help fancying that the rest has been tacked on for the sake of completeness. The author has managed, however, to treat of the struggles of the nineteenth century with an impartiality which is too often lacking in books written about this part of the world. The chief fault of his treatment of this period is that the economic aspect of the case is completely ignored, and this despite the immense change in the character of the national struggles which was brought about by the industrial revolution in Bohemia. We are amazed to read that the deputation of Prague citizens in 1848 was covered with flowers and ribbons at the railway station as the train moved off. This is the first reference to the new methods of transport, the political importance of which seems to have escaped our author. Again we meet workmen on strike, without being prepared by even the most summary reference to the main trend of industrial development. Yet these questions went far to determine the course of political and nationalist activities in this latest phase of Bohemian history.

The chief need of the modern student of these questions, and also of the general reader anxious to understand contemporary events, is for a book on the main historical factors that have finally led to the establishment of an independent Czechoslovak Republic, and have determined its present social and political basis. Mr Maurice's book, we fear, despite many excellent pages, is not planned to meet this need.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. November 29. ACCOUNT. November 30.

Fog, physical as well as political and foreign, has been the prevailing element in the Stock Exchange markets this week. The settlement proved to be a much lighter one than its predecessor, and was arranged without any difficulty. Apparently the bull account in certain parts of the House, e.g., Home Railway stocks, Kassirs, and a few other popular markets, has been reduced, which reduction left the way open to a feeling of greater cheerfulness upon the smart rally in the value of the franc towards the middle of the week.

Sanguine anticipations of a substantial Conservative majority being secured at the Election served to brace up the prices of gilt-edged issues, the War Loan advancing to 99½, though as a feature, the Conversion Loan was the more prominent with substantial gain. Various other British Government stocks improved, there being evidence of purchases on behalf of Continental capitalists said to have been alarmed by the prospect of Capital Levy in Switzerland. The Swiss buying of War Loan is reported to have been on fairly heavy lines. Gilt-edged stocks all round are firmer, and the three British Government-guaranteed Underground issues recovered to their "par" prices, while the discount on the India 4½ per cent stock also diminished.

French Government bonds moved wildly, in accordance with the gyrations of the franc. The Fours at one time dropped to 20, to recover several points as the exchange rallied from 72 to 67. There is a fair amount of gambling going on in the bonds. French Railway issues, however, have not changed to any great extent. Rio Tintos, another Paris favourite, recovered after a severe drop. Brazilians have gone back; so have Chileans. Russians are a little harder. Germans have been scarcely mentioned. Interest in the foreign market has been centred almost exclusively upon French bonds.

Home Railway stocks went up materially, on a little demand coming into a market bare of stock. The contango rate on North Easterns, to take one example, opened at 5s, but soon ran off altogether; similar conditions prevailed with some of the others. Practically all the groups have participated in the advance, and the bulls quoted in their aid the forthcoming dividend distributions as a reason for optimism in regard to the outlook. Argentine Railways have been booming, for the same reasons as those set out here during the past two or three weeks, good traffics and dividend prospects being the principal pegs upon which the advance is climbing. Foreign railways, generally, are hard in sympathy with Argentines. In Mexicans there is nothing doing. Grand Trunk Pacific Debenture regained several of the points which it lost last week.

Rubber shares are steady, without, however, showing much alteration, except in the cases of the shares in companies which combine tea with rubber growing. These have been noticeably strong. In tea shares proper, however, the remarkable rise of the past three weeks induced a certain amount of selling, which had its effect upon prices. The Oil market is a little better, on professional repurchases of the active shares. Trinidad mostly improved, in consequence of a 10 per cent. dividend on Trinidad Apex shares. Debentures and preference shares of all kinds of industrial issues show a firmer front. The Banking market is better, in consequence of the rise in gilt-edged stocks. Shipping descriptions of the pre-ordinary type are mostly higher. In the Insurance market there is nothing doing. Amongst textiles, British Cellulose spurted appreciably, and Courtaulds enjoyed another sharp rise, on vague expectations that, if the United States passes a law for taxing reserves, this may induce the Courtauld Company to distribute some of its Viscose holding. Tobacco shares are better. In the wireless group, dealing started in Marconi 6½ per cent. debentures, issued at 99, on the basis of 2½ premium. Eastern Cable stocks remain heavy, the dullness being ascribed to the cutting of one of the cables by the Turks. Siemens gave way, on the expectation that the 10 per cent. free-of-tax dividend would be reduced. Iron, coal and steel shares are generally a little harder. Armaments keeping them company, and a few rises occurred amongst brewery stocks and shares. Nitrates are somewhat heavy, in consequence of the Liverpool Company having passed its dividend. Sudan Plantations gave way a little from the best, on sales by people anxious to put themselves in funds in order to take up the new shares when these come out. Several new issues have made their appearance for the first time in market dealings, the majority at prices either about par, or at a small premium.

Firmness in the Kaffir market is associated with the inherent strength of the market, because it is generally acknowledged that business both at home and abroad is extremely quiet. De Beers have alternated between brightness and dullness, according to the state of the Paris exchange. Rhodesians maintain their prices, though Chartered are still inclined to be heavy, because of the disappointment felt with the Referendum result. Broken Hill shares are better, thanks to Colonial support. Russians have moved but little. A few of the tin shares hardened as the price of the metal advanced, and the Indian group is slightly firmer. The House, as a whole, is very pleased with the result of the General Election, and members maintain that there is still time for business to improve before the advent of Christmas and the New Year make their restraining influence felt.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

COMPANY MEETINGS, &c.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.

RESULTS HIGHLY SATISFACTORY.

MR ANDREW WILLIAMSON'S REVIEW OF CONDITIONS IN AUSTRALIA.

INCREASED WOOL PRICES—SUGGESTED NOTE ISSUE.

AUSTRALIA'S IMPROVED POSITION AND PROSPECTS.

The thirtieth ordinary general meeting of the English, Scottish, and Australian Bank, Limited, was held, on the 16th instant, at the head office of the bank, 5 Gracechurch street, London, Mr Andrew Williamson (the chairman) presiding.

The London manager and secretary (Mr E. M. Janion) having read the notice and the auditor's report,

The Chairman said: The annual report and statement of accounts having been in the hands of shareholders for some days, I have no doubt they have already been carefully perused, and I assume that you will wish them to be taken as read. (Agreed.)

When addressing you last year, I drew your attention to the abnormal position of imports into Australia during the course of the year ended June 30, 1921. Whereas the exports for the year to June 30, 1920, had exceeded the imports by £51,000,000, in the year to June 30, 1921, the imports had exceeded the exports by £31,000,000. This remarkable change in the balance of trade not only very seriously affected the exchange between this country and Australia, but also resulted in a greatly overstocked market in goods of all kinds on the other side, causing importers to lean much more heavily than usual on the banks. The high prices and prosperous times of the preceding years had, fortunately, put traders generally in a strong financial position, which enabled them to face the situation, and to write down their congested stocks to meet the heavy fall in prices.

HEALTHY RECOVERY IN AUSTRALIA.

The good yield last year of Australian primary products, wool, wheat, and butter, and the prices they commanded, increased the buying power of Australia, and enabled importers to proceed with realisations of their stocks, and the outcome of the year's trading generally has been much better than at the beginning of the period seemed probable. There has been a gradual return to more normal conditions, and stocks are now not much beyond the limits of ordinary trading requirements, and prices indicate a hardening tendency. In a word, there has been a healthy recovery from the commercial position as it was at this time last year. The prosperity of the banks is bound up with the prosperity of the whole community, and the more favourable trading conditions of the past year are reflected in our accounts.

LARGE INCREASE IN EXPORTS.

The official statistics of the Commonwealth show for the year to June 30, 1922, imports to the value of £101,063,661, and exports to the value of £127,949,455, or an excess of exports over imports of approximately £27,000,000. In addition to the increment from this source, Australian funds in London were increased during the year by the payment through the banks here of £10,000,000 distributed by the British Australasian Wool Realisation Association in redemption of their Priority Certificates. From these two sources the depletion of the London funds of the Australian Trading Banks, which was caused by the previous adverse balance of trade for the year to June 30, 1921, and which caused so much inconvenience in the latter part of 1920 and during 1921, has been more than made good, to the great advantage of shippers from here to Australia.

HIGH WOOL PRICES AND THEIR EFFECT.

The pendulum, however, has now swung round to the other extreme, and to-day, instead of having, as was the case before, too little money in London and too much in Australia, there is too much in London and too little in Australia. As against the large exports of wool and other products that are coming forward, it had been anticipated up till quite recently that the exports from this side would have been in sufficient volume to effect the transfer of funds from London to Australia adequate to deal with all the requirements of exporters from there. While exports from this side are increasing, they are not doing so sufficiently to balance those from Australia. The situation in this respect has been very much accentuated through the rise in the price of wool, Australia's principal export. Since I addressed you at this time last year, the price of Australian wool has risen by quite 50 per cent., and when you bear in mind that the total export last year amounted to over £48,000,000, or £15,000,000 over the previous year, such a rise

increases the demand on the other side for the financial assistance of the banks to a very unusual degree. The shipment of gold is not permitted, so that some other alternative is required to relieve the situation.

A SUGGESTION.

In such circumstances the alternative which presents the most natural and sound method to relieve a situation which is most prejudicial to the best interests of Australia seems to be for the Commonwealth Notes Board (the issuing authority) to issue notes to the banks in Australia against deposit by them in London of cash or its equivalent. There would be no inflation in this, as such issue of notes would be secured by cash, £ for £, on this side. This would greatly assist the free flow of the export trade of Australia, and could be made profitable to the Commonwealth. A somewhat similar method of providing the necessary currency for financing the export of the cotton crop and other produce from Egypt has, I understand, been in operation between the banks and the Government of Egypt for some time, with most satisfactory results to all concerned.

Negotiations have been in progress between the Commonwealth Notes Board and the Australian trading banks with a view to providing some satisfactory means of rectifying the present anomalous situation, and the negotiations have resulted in an arrangement by which facilities will be granted to the banks, but on somewhat different lines from those I have indicated, and which I personally consider the most satisfactory as a recognised channel of relief at any time in similar circumstances.

THE ACCOUNTS.

I will now ask you to turn to the accounts as I briefly review the figures. When I addressed you last year the accounts then before us for the year to June 30, 1921, covered a broken and transition period. The London Bank of Australia had only been with us for six months, and the Commercial Bank of Tasmania for four months. The accounts now submitted for your approval cover the first complete year of the working as one of all three banks. This has to be borne in mind when making the usual comparison of the figures of this and of the previous year.

SUBDIVISION OF SHARES—A NEW ISSUE.

The authorised capital is unchanged at £3,000,000 in 120,000 shares of £25 each. The paid-up capital of £1,319,887 10s in 105,591 shares paid up to £12 10s is also unchanged. As you have seen from the report, the board consider that the time has come when the denomination of the shares might with advantage to the shareholders be altered. There has been a general movement among banks within recent years to reduce the denomination to a much smaller figure than £25. After the fullest consideration the board have decided to recommend that the shares be altered to the denomination of £5 by dividing each £25 share into five shares of £5 each. A resolution to this effect, notice of which you have received, will be submitted to you to-day at the extraordinary general meeting that will follow this meeting. Should that resolution be carried, and be subsequently confirmed, then after the alteration has been effected, the unissued balance of the authorised share capital will be issued early in the New Year to the then existing shareholders in shares of £5 each, of which £2 10s will be called up and be payable by two instalments. In this issue shareholders will be entitled to an allotment of one new share for every eight shares held, no fraction of eight being recognised. As this unissued balance is small, the issue in this instance will be made at par. The issue of the shares will not be made before January

AUTHORITY TO INCREASE CAPITAL.

In view of the steadily expanding business of our bank, it will probably be desirable ere long to make a further issue of capital, and the board have decided to recommend you to authorise them to increase the authorised capital from time to time from the present amount of £3,000,000 to an amount not exceeding £5,000,000 as occasion may render this expedient. If this authority is given now while we are dealing with the other matter already explained, it will obviate the necessity of specially calling you together on some future occasion for that purpose, and at the extraordinary meeting to-day a resolution will be proposed to give effect to this, notice of which has been sent to you.

RESERVE FUND.

To return to the balance-sheet, the next item is the reserve fund, which stood in last year's balance-sheet at £1,232,162, but was increased to £1,300,000 by the allocation made at our last annual meeting, and by the further sum of £15,000 out of the profits of last year, as required by our articles of association, and appears in the present balance-sheet at £1,315,000. Out of the profits of last year we recommend that the further sum of £135,000 be added, bringing up the total to £1,450,000. I am sure that to a body of shareholders such as I am addressing I need not stress the vital importance of steadily building up a strong reserve fund. As I said last year, the stability that it ensures, and the public confidence which it induces, are of incalculable value, and beyond question in the best interests of the shareholders.

DEPOSITS, CURRENT ACCOUNTS, &c.

The only change in our perpetual stocks is a decrease of £50,000 in our deferred inscribed deposit stock, as explained in our report. Our deposits at interest show a gratifying increase of £1,578,584, and stand at £12,621,395. On the other hand, our current accounts, at £11,152,025, show a decrease of £378,889, which is accounted for by ordinary business fluctuations, and calls for no special comment.

Bills payable, rebate on bills, and other liabilities amounted to £1,736,144, or a decrease of £1,218,200. This figure last year, you will remember, was abnormally high owing to the special conditions caused by the state of the Australian exchanges on account of which commercial remittances had during that year mostly been made by usance drafts instead of by telegraphic transfer or demand drafts. Under the more normal conditions of the year embraced in the present accounts, the usual form of remittance has prevailed, hence the diminution in this item.

ASSETS—CASH POSITION.

Turning now to the assets side of the balance-sheet, you will observe that our

Cash and bullion stand at	£4,710,801
Cash at bankers and at short notice at	1,400,500

Or together £6,111,301 showing a slight diminution of £96,000, but again exhibiting a strong cash position, being well over 50 per cent. of our current accounts.

Our investments, consisting of British and Colonial Government securities, at or below market value on June 30, 1922, stand at £1,230,824, or an increase of some £352,000.

Bills receivable, and remittances in transit, amount to £3,799,507, which, while showing a small decrease of some £52,000, yet represent a gratifying increase in mercantile bills, due to the natural expansion of our business.

Advances and other assets, after making provision for bad and doubtful debts and contingencies, show a decrease of £118,614 at £18,950,420. This item represents a twofold movement in the past year; first, a healthy reduction in the accounts of those constituents who in the previous year of excessive imports had to lean more heavily than usual on their bankers; and, second, a very gratifying increase through the acquisition of a large number of new and desirable accounts.

The last item, bank premises and furniture, shows an increase over last year of £32,000, and stands at £807,652. This figure is arrived at after, on the one side, crediting the amount of deferred inscribed deposit stock purchased with the appropriation from the profits of the previous year and the proceeds of premises sold during the past year, and, on the other side, debiting the cost of premises purchased, including the price of the Stock Exchange building in Melbourne, referred to at the last annual meeting.

PROFIT AND LOSS ACCOUNT.

Taking now the profit and loss account, I will ask you kindly to turn to the first page of the report, so that you may follow my remarks more readily.

The profits of the year, after making provision for bad and doubtful debts and contingencies, amount to £1,094,685. Deduct-

ing expenses of management in London and Australia, including directors' and auditors' fees, &c., £566,326, and income and other taxes, £182,885, together £749,211, the net profits amount to £345,474. Regarding the expenses of management, salaries and wages account for £411,500 of this.

In addition to our head office in London, we have 332 branches in Australia, extending over all the States of the Commonwealth. While every care is exercised to prevent any needless expenditure, the board very fully recognise the vital importance to the best interests of the bank of a highly efficient, loyal, and devoted staff, and that can only be maintained by fair and even generous treatment. Like all other businesses at the present time, both here and in Australia, we are very severely handicapped by a tremendous burden of taxation.

APPROPRIATION OF NET PROFITS.

Coming now to the appropriation of the net profits of £345,474, an interim dividend was paid in May last of 5 per cent., free of income-tax, absorbing £65,994. There has been added to reserve, as required by our articles, £15,000, leaving for further appropriation £264,480. Of this we now propose to carry to reserve fund £135,000, making for the year £150,000, and bringing this fund up to £1,450,000; to the English, Scottish, and Australian Bank Officers' Guarantee and Provident Fund, £15,000; to the payment of a final dividend of 5 per cent., free of income-tax, £65,994, making for the year 10 per cent., free of income-tax, or £131,988; and, finally, to the purchase and cancellation of deferred inscribed deposit stock, as required by our articles, £43,996, leaving an unappropriated balance for the year of £4,489, which, with the accumulated balance brought forward from last year, leaves at credit of profit and loss account at June 30, 1922, an accumulated balance of £107,094 to be carried forward.

I think you will all agree that the result of the operations of the combined banks for the past year has been highly satisfactory, the more so in view of the special difficulties of the period, to which I have already referred.

WISDOM OF AMALGAMATION.

A full year's operations of the amalgamated institution has only confirmed the wisdom of the amalgamation. Our business and connection is steadily expanding along sound lines. The staffs of the three banks are now combined into one thoroughly harmonious whole, all working loyally together for the good of the bank. The spirit of co-operation and admirable team work throughout constitute an outstanding characteristic. I think we are singularly fortunate not only in our staff as a whole in this respect, but also in our principal officers, between whom there is the most complete and cordial co-operation in Australia under our greatly esteemed general manager there, Mr Wren, and in London under our greatly valued manager, Mr Janion; and similarly between Mr Wren and his principal officers and the head office here—a condition the importance of which to the welfare of the bank it is hardly possible to exaggerate.

TRADE AND INDUSTRY IN AUSTRALIA.

I will now say a few words on the general position of the trade and industries of Australia, touching only on those aspects in which we as a bank are more particularly concerned.

At the last annual general meeting I gave you the estimated total of the 1921-22 clip of wool at 1,850,000 bales. The actual figures were somewhat over 1,900,000. When we last met, though a great improvement had taken place in wool prices since the previous April, yet a set-back was experienced in the London sales then proceeding; but I said that, while there was some difference of opinion as to the improvement lasting, my own view was that a genuine trade revival was behind it, and that with possibly occasional temporary reactions, it was likely to be maintained, if not for the year to June 30, 1922, would exceed the figure of £33,700,000 to June 30, 1921. The course of events since then has fully justified that forecast.

IMPROVEMENT IN WOOL PRICES.

The value of the wool shipped (including £1,200,000 of tops) amounted to nearly £48,000,000, and with certain occasional temporary halts and one reaction, prices have not only been maintained, but actually show an advance on this time last year of quite 50 per cent. on the great bulk of Australian wools. When we look back some 18 months and remember the huge surplus of wool weighing on the market and then view the position as it is to-day, the improvement is remarkable. To-day there is practically no surplus of merino wool (with which Australia is mainly concerned), and if the demand is maintained there will probably soon be an actual scarcity. The fashion, I might almost term it the passion, for fine smooth cloths has created an altogether disproportionate demand for merino as contrasted with crossbred wool, and in consequence the surplus of available crossbred wool is still large. The present relatively high prices for merino, however, are causing

increased inquiry and rising prices for the finer counts of crossbred wool, and, indeed, this demand has already begun to widen out to the medium and, to some extent, to the lower qualities.

WOOL STOCKS AND CONSUMPTION.

At the present time the only surplus of crossbred wool is (1) that in the hands, or under the control, of B.A.W.R.A.—being the unsold balance of the carried-over wool under the Imperial Purchase Scheme—and (2) the balance of the free crossbred wool of Australia and New Zealand, the old clips of the Argentine having been disposed of as well as those of South Africa. The total of these unsold stocks of crossbred wool at October 31st last amounted to some 1,100,000 bales. The quantity of Australian and New Zealand wool that has passed the hammer during the last 12 months, about 3,700,000 bales, is astonishing, and of this enormous quantity probably 75 per cent. has actually gone into consumption, so that the warehouses of Bradford users have but moderate stocks, as also have those of the French and German buyers.

The clip for the current 1922-23 season is estimated at about 1,900,000 bales, and in view of the steady rise in prices and the growing demand the value of the wool exports in 1922-23 will probably exceed the £48,000,000—the value of last year's shipments—which will be very advantageous to Australia.

STEADY MARKET DESIRED.

Gratifying as it cannot but be to growers to get such satisfactory prices for their product as those now ruling for the finer wools, it is not in the best permanent interest of the industry for prices to go so high as to get out of reasonable proportion to the price obtainable for the manufactured article, as that tends to reaction and instability in prices, which is the worst thing possible for the trade. A steady market at reasonable prices is better than violent movements up and down. To banks issuing credits and making advances on shipments, very high prices have obviously their disadvantages. While that is an incontrovertibly sound business statement, it does not necessarily mean that present prices are too high. On the contrary, having regard to the statistical position I consider that present prices for merino are reasonable, and for crossbred low. Having regard to world stocks of wool it will be found that a shortage of merino is in sight, and that it will not be so very long, in all probability, before those who want merino may have to pay a good deal higher price for it than rules to-day.

While the 1,100,000 bales of surplus Australian and New Zealand crossbred wool, equalling, say, 370,000,000 lbs, look formidable when contrasted only with the whole annual output of Australia and New Zealand wool of, say, 2,400,000 bales, equalling some 800,000,000 lbs, it is less than a seventh—just over 13 per cent.—of the total annual wool production of the world, estimated at 2,800,000,000 lbs. The surplus of Australian, New Zealand, and River Plate wool a year ago was certainly not less than three times as great as the existing surplus above stated.

GROWING CONFIDENCE IN WOOL TEXTILE TRADE.

The recovery of the wool textile trade has been most striking, and there has of late been a growing feeling of confidence in the soundness of the revival, and, with the vanishing surplus of merino, users will have to take crossbred or go without wool altogether, for obviously there is not enough merino left to go round.

In the face of this world position I do not see what can hinder this crossbred surplus of 13 per cent. of one year's clip of all the world wool going into consumption and disappearing in a reasonable time, and in a much shorter time than is likely to elapse before the exchanges of Central Europe are stabilised and their markets opened. When this crossbred surplus has gone the way of the merino surplus the statistical position of wool will become still stronger. While the world demand for wool is increasing, the annual production shows no signs of corresponding expansion; indeed, the indications are in the opposite direction. The conclusion to which the facts of the world position of wool constrain one is, as I said before, that the present prices for merino are reasonable and for crossbred low.

I have dealt somewhat fully with the wool position, as it very much concerns all Australian banks, constituting, as it does, one of the chief, if not the chief, primary industry of Australia, and its most important export.

WHEAT AND FLOUR.

The export of wheat and flour from Australia during the last three years has, in quantity and value, been, in round figures:—

	Bushels.	Value.
To June 30, 1920	99,700,000	31,400,000
" 1921	84,500,000	39,400,000
" 1922	112,000,000	34,100,000

For these years the average price of wheat alone was respectively 5s 3½d, 8s 11½d, and 5s 8½d per bushel. The preliminary estimate for the Australian wheat crop for the current year is less than last year, being only about 100,000,000 bushels; this, however, should provide a substantial exportable surplus, and even if the price should be somewhat lower than last year, this would still mean substantial receipts for the growers in Australia, and tend to the stimulation of internal trade.

BUTTER EXPORTS.

The amount of butter exported last year was nearly 40 per cent. greater than in the year to June 30, 1921, but the price realised was so much less that the value was nearly 30 per cent. less, as the following figures show:—

	Lbs.	Value.
To June 30, 1921	92,421,000	11,067,104
" 1922	127,579,797	7,987,558

The average price obtained in the previous year was about 2s 4½d, as against only about 1s 3d last year; the previous year, however, it must be remembered, benefited by a very profitable war contract.

RAINFALL.

The season over all the States since the beginning of 1922 has caused some anxiety, as during the first six months the rainfall has been below the average, and patchy; during the last three to four months, however, rains have fallen in Victoria, South Australia, and Western Australia, and in large areas in both New South Wales and Queensland, though in both the last-named States important districts are still badly in need of rain.

Taking Australia as a whole, the outlook for the current year for wool, wheat, and dairy produce is favourable, and the prospects of the internal trade are promising.

FROZEN MEAT INDUSTRY.

The important frozen meat industry, especially that of frozen beef, is still in a deplorable condition, and the present position of cattle growers in Australia is very serious. As you are no doubt aware, Australia produces cattle far in excess of the local requirements, and the industry depends on the markets of the world, but chiefly on this country. At December 31, 1921, the number of cattle in Australia was 13,323,044. The exportable surplus is thus very large, and has to compete with shipments from U.S.A. and the Argentine. Between the shippers from these other sources of supply a titanic struggle has been in progress during the past year, and prices were cut down to an extremely low level. In the face of this competition, and of the large carried-over surplus stock that the British Government bought during the war, you can readily understand that prices fell below the cost of production.

The old carried-over war balance has been disposed of. Even American beef trusts get tired of losses running into millions. While the present extreme depression may last for some time, I am confident that the Australian frozen meat trade has yet a great future before it. For its full restoration it seems to me that several things are needed, such as decrease in the cost of production; payment to the cattle growers on the basis of quality as well as of weight; greater care in the handling of the carcasses in the transport for shipment, and in the ultimate marketing; lower freights, both rail and sea, and the rehabilitation of the countries of Central Europe, and the reopening of these markets.

METAL INDUSTRY.

The only other important established Australian industry on which I would say a word is the metal industry. Australia, as you know, has immense metal resources, including nearly every kind of mineral, and, as I heard a very competent authority state recently, in the science of metallurgy Australia is ahead of any other part of the world. In pre-war days and during the war her mining industry constituted one of the chief sources of the wealth of Australia, but since the war the maintenance of high costs of production in the face of the fall in market values of the metals has severely crippled the industry. While the position is somewhat better than when we met here last year, it still presents a very disheartening appearance. Of the seven mines at Broken Hill, only at four, I understand, are mining operations being carried on, and at most of these in a restricted capacity. All the mines in Australia that are working are doing so under grave disabilities owing to the excessive cost of production, cost of labour, onerous conditions, and greatly shortened hours of working. While the whole industry of Australia is handicapped by the pressure of this vital factor of costs, the mining and the metal manufacturing industries are probably the greatest sufferers.

COPPER AND LEAD.

The output of copper has fallen from 40,000 tons to about 12,000 per annum, with only two mines actually working.

Lead, of which there is a world scarcity at the present time, offers a special opportunity, of which Australia is unable to take anything like full advantage, owing to high production costs. Possessing mines and smelting and refining equipment adequate to an annual production of 200,000 tons, the actual output at present does not exceed half that amount. Those Broken Hill companies that are paying any dividend at present are enabled to do so from the revenue derived from the sale of their zinc concentrates under a favourable contract with the British Government made during the war, and not from profit on their lead. Australia to-day produces zinc more cheaply than any other country in the world, and this is because the production is not dependent on labour. Thanks to the practical wisdom of the Tasmanian Government, abundant natural water power has been utilised so as to provide cheap hydro-electric power, and this makes available the electrolytic process for zinc recovery in place of the distillation method employed in most other countries. The Electrolytic Zinc Company of Australia, whose works are situated at Risdon in Tasmania, and who are valued clients of our bank, are thus in the fortunate position of being able to work with a fraction of the number of men ordinarily required to operate a zinc plant. The Government of Tasmania deserve all credit for their enterprise in this matter, and when further hydro-electric power is available, as it will be next year, it is reasonable to anticipate the establishment of further industries in Tasmania. The Government of Victoria are moving in a similar direction, and hope to supply cheap power by the installation of a large electrical plant at the Morwell brown coal deposits in that State.

TIN AND OTHER MINERALS.

With regard to tin, the output is limited to a few rich mines on the Kangaroo Hills fields in Queensland, as the onerous working conditions do not permit of the metal being profitably produced at the present market price.

Other minerals which Australia possesses, such as tungsten, molybdenum, antimony, bismuth, &c., are not flourishing at present. One exception is cobalt, of which there is a deposit in Queensland which promises to displace Canada as the main source of supply to the world producers of metallic cobalt and its compounds.

Gold production in Australia is declining, not only on account of the high production costs, but also owing to the exhaustion of some of the mines. No new discoveries have been made during the past year, but Australia possesses such vast tracts of unexplored land that there is the quite reasonable possibility that the future may witness the discovery of new goldfields equal in importance to Ballarat, Bendigo, and Kalgoorlie.

METAL INDUSTRY AND WAGE POSITION.

One of the main factors in production costs in the whole metal industry is the price of coal, and here again the chief difficulty is the high cost of labour and shortened hours.

While labour conditions are gradually improving, reduction in wages is being strongly resisted, notwithstanding that the products of the mines have to be sold in the markets of the world, and can only realise world market prices, no matter what Australian costs may be. The following figures, for which I am indebted to Mr A. J. M. Sharpe, are illuminating, showing the present rate of wages for unskilled labour per hour of labour in the following countries of the world employing white labour, reduced to English sterling currency, on the 14th inst.:—Austria, 4½d; Poland, 5d; Germany, 5½d; Czechoslovakia, 5½d; Italy, 6½d; but these countries, being in a wholly abnormal position, I leave them out of account for purposes of comparison; and even Belgium, 9d, and France, 9½d, I also leave out in view of the disorganised state of their exchange. The U.S.A., 1s. 11½d, is in a category by itself, being self-contained with an immense home market and a formidable tariff. We are left, however, with a fair basis for comparison if we take Holland, 11½d; Spain, 1s; Switzerland, 1s 0½d; Britain (the United Kingdom), 1s. 1½d; and Australia, 1s 9½d; the basic wage in Australia is thus seen to be about 90 per cent. above Holland, about 80 per cent. above Spain and Switzerland, and about 60 per cent. higher than in Britain, and when to this you add the disability of the 44-hour week imposed on most of the industries in Australia, you will realise how serious is the handicap.

The mining industry in Australia cannot get into its full stride and back to prosperity till wages are placed on an economic basis. In the United Kingdom substantial progress has been made in re-establishing British industries through agreements come to between the workmen and the employers, based on the cost of living—the rate of wages fluctuating every quarter up and down with the index cost of living. This simple and elastic method might be adopted in Australia with great advantage to all concerned.

POTENTIALITIES OF COTTON IN AUSTRALIA.

Another industry which, however, cannot yet be described as established, but which gives promise of great things in the future, is that of cotton growing. You are all no doubt aware that the world production of cotton has been declining, notably the Ameri-

can crop, through the ravages of the boll weevil, but in Egypt also there is the danger of decline, both in quantity and quality, and the maintenance of the cotton supply is a serious world problem. It has already, I think, been fully demonstrated that there are large areas in Australia where cotton of a superior quality can be grown, and a considerable acreage has already been put under cultivation. A delegation from the cotton-using districts of this country has been sent out to Australia to investigate the matter, and to render what assistance they can. The Commonwealth Government, and also certain of the States Governments, have appreciated the immense potential importance of this development, and are going into the matter with enthusiasm.

The Prime Minister, Mr Hughes, is reported to have said at a meeting of the Cotton Growers' Association in Melbourne that it was not a case of an experimental industry, and that it was no exaggeration to say that within a few years Australia would be producing £50,000,000 worth of cotton annually. This view may be too optimistic, but there are obviously great possibilities before this new departure. The great difficulty will be the vital question of cost of production, but if the comparatively high cost of Australian labour can be proved to be neutralised by a proportionately higher efficiency and greater output, that difficulty may be overcome. The addition of another great primary industry, producing a staple of world-wide demand, if successful, will add largely to the wealth of Australia as a whole, and the present development will be watched by us all with the greatest interest.

IMMIGRATION.

The Commonwealth and most of the States, in co-operation with the British Government, are addressing themselves to the important question of immigration into Australia in a more hopeful, scientific, and determined fashion than has yet been the case. If the work is conscientiously carried out by those entrusted with the detail (and some of the Australian representatives here are doing yeoman service in that direction), and the right settlers are sent to suitable districts, great good should result, and the efforts of the Commonwealth Government, and the States' Governments, and of their representatives in London, have the best wishes of all friends of Australia.

I will now move the following resolution, which I will ask Mr Paterson, the deputy-chairman, to second:—

"That the report and statement of accounts now submitted be and are hereby adopted; and that the amount available for distribution be applied as therein recommended."

Mr John Paterson (deputy-chairman) seconded the motion.

A Shareholder asked whether, when the new shares are issued, one new share of £5 would be allotted for every holding of eight shares of £5.

The Chairman said that was so.

The resolution was carried unanimously.

The usual formal business having been transacted, and a vote of thanks to the staff unanimously accorded,

Mr P. C. Hanna then proposed a hearty vote of thanks to the chairman for his conduct of the meeting. In doing so, he said he would like to refer to the figures in the balance-sheet. In the first place, it would be noted that between the deposits and the advances there was a substantial margin in favour of deposits, and that cash or its equivalent represented over 50 per cent. of the ordinary public liabilities. It seemed to him that the bank was in a position to meet any and every emergency.

The motion was seconded by Mr Andrew Cunningham, who said: I have very great pleasure in seconding this motion. I think I may say I am Mr Williamson's oldest friend in this room, for I have known him since he was quite a small boy, and I have watched his very successful career with great interest and satisfaction.

The Chairman having briefly acknowledged the compliment, the meeting terminated.

SUBDIVISION OF SHARES.

An extraordinary general meeting was then held to consider resolutions providing for the subdivision of the shares and an increase in the capital of the bank.

Mr Andrew Williamson, who again presided, moved: "That each of the shares in the present authorised capital of the bank of £25 each be subdivided into five shares of £5 each, and that the sum of £2 10s per share shall be credited as paid up on each share of £5 resulting from the subdivision of existing issued shares of £25 each on which £12 10s has been paid up."

Mr John Paterson seconded the motion, which was carried unanimously.

The Chairman next moved: "That in Article 96 of the Articles of Association the words 'fifty shares' be deleted, and that the words 'two hundred and fifty shares' be substituted therefor."

The motion was seconded by Mr. Paterson, and was carried unanimously.

The Chairman moved: "That the directors be and they are hereby authorised to increase the capital of the bank from time to

time to an amount not exceeding £5,000,000 by the creation of new shares in such denominations and to issue the same on such terms and conditions as the directors may prescribe."

Mr Paterson seconded the resolution.

Mr Stirling suggested that the board, when they were considering the denomination of the shares, should endeavour, if possible, not to increase the liabilities of the shareholders. In other words, he would suggest that they should make some of the shares fully paid up, or to follow the scheme which had been carried out by the National Discount, which had divided their old shares into two classes—one preference fully paid and another ordinary shares with a liability.

The Chairman said that the suggestion made by Mr. Stirling would certainly receive the careful consideration of the board. He might add that the whole ground had already been surveyed by the board, but further consideration would be given to the matter.

The resolution was carried unanimously, and the proceedings terminated.

SOUTH-EASTERN RAILWAY COMPANY.
AMALGAMATION SCHEME APPROVED.

A special general meeting of the proprietors and debenture stockholders of the South-Eastern Railway Company was held, on the 16th instant, at Cannon street Hotel, London, for the purpose of considering a resolution approving the scheme of amalgamation in the Southern Group under the Railways Act, 1921. Mr H. Cosmo O. Bonsor presided.

The Chairman, in proposing the resolutions, said that the Railways Act of 1921 compelled the five constituent companies—the South-Western Railway, London Brighton and South Coast, South-Eastern, London Chatham and Dover and their managing committee—to amalgamate. They had to obey the Act of Parliament, and their respective boards had agreed to the scheme which was now submitted. It was necessary for the purposes of negotiation to amalgamate the South-Eastern and Chatham Companies and get rid of the managing committee, and that being completed there were only three companies to be dealt with. It was obvious that the only way to secure an equitable result was to arrive at what was the net revenue of those three companies—to find the proportion of income due to each and capitalise that income so as not to disturb the priority of stocks. A valuation of assets was impossible, knowing they had to rely on the published accounts as audited by their auditors and adopted by the stockholders. Each

company had reserves, and each company had overdrawn capital accounts which had to be taken into consideration. The accountants and auditors, in arriving at an adjusted net income of the three companies, were unanimous in fixing it at a sum approaching some £6,000,000, and of that the proportions worked out as follows:—37.45 to the South-Western Railway, 25.19 to the London Brighton, and 37.36 to the South-Eastern and Chatham. The South-Eastern and Chatham had an income practically the same as the South-Western. The accountants and auditors were also unanimous that the fusion of stock as set out in the scheme showed no advantage or disadvantage to stockholders in either of the four companies. The stockholders of the South-Eastern Railway had been most reasonable, and he took the opportunity of thanking them.

READING ANNUITANTS AND DEFERRED SHARES.

The great majority had expressed themselves satisfied, but criticism had reached the board from two quarters. Under an Act of Parliament in 1852 the South-Eastern Company bought the Reading branch, and paid for it by an issue of annuities, such annuities taking precedence of debentures, but the holders had no voting power. Some of the holders of those annuities now asked that their prior rights should not be interfered with. He (the chairman) made no complaint in regard to their attitude, but rather sympathised with them, and he had put in a special plea that they should not be interfered with. He had been assured that the annuitants, by accepting debenture stock, would have their compensation in being placed in a stock which was amply secured, and would, owing to its size, have a free market and command a higher value than the existing small stock, in which there were few dealings. The other quarter from which criticism had come was from some of their deferred shareholders, who had written to say that they had not been fairly treated, and that, in their opinion, South-Western deferred stockholders had got the best of the bargain. He could only say that they were mistaken, and, as a matter of mathematical computation, they had nothing to complain of. Their grievance was that the Railways Act—not the accountants of the company—had destroyed their prospects and placed the future earning power on the same lines as those of their future partners. They could grumble, but they had no power to improve the position. The deferred stockholders might call the position monstrous, and he agreed with them as to that; but they could not get away from it. The scheme the board recommended the proprietors to adopt had taken several months of real hard

work to prepare, and those who had been negotiating from the beginning were satisfied that it was the only fair settlement of a very difficult problem. They might say what they had to say about the matter in the strongest and most abusive language, but he appealed to them not to vote against it.

Sir A. Smithers seconded the resolution.

PROTEST ON BEHALF OF ANNUITANTS.

Mr Arthur Morley, on behalf of the Reading annuitants, lodged a protest against the way in which their prior rights were being swept away under the scheme, without any adequate compensation being made for them.

The Chairman, in reply, said that, as far as that meeting was concerned, all that the Reading annuitants could do was to lodge their protest, as they had no voting powers. The Act of Parliament had laid down certain provisions in regard to the amalgamation scheme, and any objections the Reading annuitants might have must go before the Tribunal, but he would advise them that should their objection to the scheme be put before the Tribunal they would receive opposition from other quarters. Replying to further questions, the Chairman said that in regard to the deferred stockholders, their stock had been valued on a purely mathematical income basis, and, in his opinion, they had been treated fairly.

The resolution was carried unanimously, and a vote of thanks to the chairman terminated the proceedings.

LONDON, CHATHAM, AND DOVER RAILWAY COMPANY. SCHEME UNANIMOUSLY APPROVED.

A special meeting of the proprietors and debenture stockholders of the London, Chatham, and Dover Railway Company was held, on the 16th instant, at the Cannon street Hotel, London, in accordance with the requirements of the Railways Act, 1921, held to approve of the amalgamation scheme.

Sir W. Hart Dyke, Bart., who presided, said that as a working basis, a conservative estimate had been framed of the aggregate revenue of the constituent companies which were to form the Southern Group. When that estimated aggregate revenue was applied to the payment of interest and dividends upon the loan and share capital of the amalgamated company, the yield would be equal to that produced in the year 1921 by the existing stocks. At the same time, the dividend on the stocks which would in future represent the arbitration and second debenture stocks would, it was anticipated, be not less than that paid by this company in the same year. If the proposed scheme was accepted it would at once supersede the scheme of August last. The 5 per cent. guaranteed preference stock would be a cumulative stock, but the 5 per cent. preference stock would be non-cumulative. After payment of the interest on the stocks of the new amalgamated company there would be an estimated balance of £2,290,000, as against £877,000, the total annual revenue of the Chatham Company in 1921—an increase of security which must be highly satisfactory to holders and attractive to investors. As regarded the securities to be substituted for the arbitration preference stock and the second preference stock, the 5 per cent. preference and the 5 per cent. preferred ordinary would be limited, of course, to 5 per cent. The directors had given long and anxious consideration to the position and prospects of the ordinary stockholders. They had now reason to think that the revenue of the amalgamated company should permit a dividend on the new deferred stock in excess of 3½ per cent. If that were so, and was continued, then it would mean that for the first time the ordinary stockholders would stand to receive some dividend. The preference stocks will be assured of at least their full dividend, whilst the new ordinary "B" stock, to be given mainly to our arbitration ordinary stockholders, is, we believe, given normal conditions, actually in sight of a dividend.

The Chairman concluded by moving the adoption of the scheme, which, after a short discussion, was unanimously agreed to.

DORADO EXTENSION RAILWAY, LIMITED. RECORD YEAR'S INCOME.

Presiding at the seventeenth ordinary general meeting of the above company, held at the offices, Moorgate Hall, London, on the 13th instant, Mr Nathaniel G. Burch, the chairman, said that the income for 1921 was about £35,000 above that of the previous year, of which some £24,000 had been derived from increased traffics, and it was of interest to note that the income of 1921 exceeded that of any previous year. The financial result was that they were left with a balance of £86,957, as against £59,160 in the previous year. They proposed to pay a dividend of 5 per cent., to carry £24,000 to reserve—making that account £86,000—and to set aside £18,000 to cover the expenses of the issue of the new second mortgage debenture stock incurred in 1922. With regard to that issue of debentures, when the pro-

spectus was issued the directors had stated that the available revenue, after deducting first mortgage debenture interest, income-tax, and corporation profits tax, would be not less than £80,000. He had no doubt shareholders would be pleased to note that the accounts showed an excess over their estimate of nearly £7,000—a very gratifying condition of affairs.

The receipts for the current year showed a decrease, arising mainly from difficulties experienced by the coffee growers, but they had every reason to expect that the result of the year's working would be satisfactory. The expenses were being steadily reduced, and the upkeep of the undertaking improved. It was satisfactory that the ropeway branch was now completed, and was bringing in a considerable amount of traffic. They had appointed Mr J. A. Goudge, C.B.E., to the board. He was well known in the South American railway world, and was calculated to prove of great service to their counsels in the future direction of their undertaking.

Mr J. A. Goudge, C.B.E., in seconding the resolution, said that he did not think he need add much to the lucid statement of the chairman, but he would like to draw attention to the fact that the revenue for last year was subject to very unusual charges, and the board had set aside no less than £60,000 out of the revenue of that year for reserves and for special expenditure. The only other item which might be of interest, and which the chairman did not mention, was that the directors had sent out within the last few weeks a new manager, who had had a great deal of experience in South American railways. The board had every hope that in his hands the undertaking would be well administered, and that every effort would be made to ensure that the traffic would be more so, and at an economical rate.

The resolution was unanimously agreed to.

COLOMBIAN CORPORATION, LIMITED. GENERAL MANAGER'S CONFIDENCE IN THE PROPERTY.

The second ordinary general meeting of shareholders of the Colombian Corporation, Limited, was held, on the 15th instant, at River Plate House, Finsbury circus, London, Mr Frederick W. Baker, the chairman of the company, presiding.

The Chairman said: I have no special comment to make on the items in the balance-sheet, other than to point out that a comparison of the same items in last year's accounts with the balance-sheet under review discloses an increased expenditure of £89,350 16s 3d. These further increases represent expenditures on buildings, plant, equipment, roads, stores and overhead charges and administration expenses. As this balance-sheet does not represent the true position of the company at this date, the directors have again followed the course which was pursued in last year's report of setting out the present financial position of the company, giving you a summary of the assets, liabilities and capital position as at the dates referred to in the report. From these figures you will see that our cash position stood as at October 23 of this year at £47,109 7s 3d, as against £37,535 11s 3d at December 31, 1921.

Our liabilities stood at October 23 of this year at £110,210 8s 11d, as against £154,346 18s 3d at December 31, 1921. The amounts due in respect of uncalled capital stood at October 23rd of this year at £95,625, as against £191,250 at the end of last year. After deducting the balance of liabilities there remained capital resources

at October 23rd of this year £32,532 18s 4d, as against £74,438 13s 0d at the end of last year.

As reported to you at the last annual meeting held in January, 1922, the funds necessary for the development at the Constancia Mine, and for the purchase of equipment, was provided by loans secured from the Nchi Company as against the security of the uncalled capital. As indicated at that meeting, the directors have since that time, and during this year, made calls amounting to 7s 6d per share, and have received in respect of those calls a sum of £90,309 1s 0d, £40,276 18s 5d of which has been applied in reducing the loan account from the Nchi Company, which now stands at £106,270 6s 3d, as against £146,547 4s 10d at December 31, 1921. There will be due in respect of calls unpaid and calls still to be made a further sum of £100,640 10s 5d.

Referring to an interview with the general manager, he continued:—He said: "Mr Baker, I have such confidence in the Constancia property that I am to-day a very large shareholder in Oroville Company, most of my savings having been invested in the purchase of these shares."

The report and accounts were adopted unanimously.

BRITISH NORTH BORNEO COMPANY. DEVELOPMENT WORK IN NORTH BORNEO.

The adjourned 79th half-yearly meeting of the British North Borneo (Chartered) Company was held, on the 16th instant, at River Plate House, Finsbury circus, London. The Right Hon. Sir West Ridgeway, G.C.B., G.C.M.G., K.C.S.I. (the president), in the chair.

The secretary (Mr Harington G. Forbes) having read the notice convening the meeting,

The Chairman, in the course of his speech, said that, in spite of the difficulties with which the management had been faced, they had made progress with the development of the country.

With regard to the financial position, he desired to remind shareholders of the warning he had expressed a year ago. The report and accounts fully bore out the fears he had then expressed, for whereas in 1920 there was a net profit of £226,800, for 1921 it had fallen to £147,466. That decrease was accounted for by a reduction of about £57,000 in the revenue and an increase of about £21,000 in the expenditure chargeable against revenue. Excise and Customs were mainly responsible for the reduction in the revenue. There had been a world-wide slump in trade, and British North Borneo had not escaped. The revenue from other sources had been fairly well maintained, and in some instances increased. The total revenue of the territory amounted to over £372,000, as compared with £425,000 in 1920.

Advances to companies for guaranteed dividends had been reduced from £89,117 to £66,160. In view of the great depression in the rubber market, they could not expect any further reduction in the item for some time to come. The capital raised by the subsidiary companies for their various enterprises was no less than 5½ millions sterling. If they had not raised that capital the Chartered Company itself would either have been obliged to do so or else abandon development altogether. Those companies were essential to the development of the country, and in the interests of the company it was essential to assist them. In his opinion, the only way was to curtail drastically their development programme, or to raise money for development purposes. To enable them to carry out a limited programme, in the early part of the present year they borrowed £300,000 by the sale of three-year notes carrying interest at 7½ per cent. In the last ten years they had expended on development no less than £1,033,000, and in those years the revenue had increased from £150,000 to £372,000. If there had been no development, the shareholders would not have enjoyed any dividends, and the company could not have fulfilled the duties of administration.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in three months' Treasury Bills dated from Monday to Saturday, November 20-November 25, were opened on November 17, 1922, and the total amount applied for was £62,245,000. Tenders for Monday to Friday bills at £99 7s 8d received about 27 per cent and above in full; Saturday bills £99 7s 10d and above in full. The average rate of discount for Treasury bills was £2 8s 6½d. The amounts allotted were as follows:—In bonds, £4,650,000; in bills at 3 months, £35,000,000.

† Additional to those offered by tender in the preceding week.

Comparison with the previous weeks:—

Tenders for Rs.1,00,00,000 three months' bills and for Rs.50,00,000 six months' bills were opened on November 10th. The total amount tendered for three months' bills was Rs.3,72,10,000. Tenders at Rs.99 1a received about 39 per cent. and above in full. The average accepted rate was Rs.99 1a 3p, equivalent to a discount rate of 3.7218 per cent. per annum. The total amount tendered for six months' bills was Rs.1,34,05,000. Tenders at Rs.97 12a, equivalent to a discount of 4.6036 per cent. per annum, were accepted, and received about 60 per cent. Intermediate bills for six months only will be offered for sale in India during this week at Rs.97 13a per cent. Tenders were received on Friday, November 17th, for Rs.1,00,00,000 three months' bills, and for Rs.50,00,000 six months' bills for issue during the week beginning November 20th.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended November 15, 1922, the stock of coin and bullion shows an increase of £3,305 compared with the previous return.

SIDNEY TURNER, Accountant-General,
India Office, November 13, 1922.

Messrs Samuel Montagu and Co. write on November 16th as follows :—

GOLD.

A fair amount of gold came on offer, but only a small portion was taken on Indian account. Gold valued at \$5,408,000 has arrived in New York—\$5,070,000 from London, \$200,000 from Alexandria, and \$138,000 from France; and \$1,000,000 in gold has been despatched to Canada from New York. The following were the United Kingdom imports and exports of gold during the month of October, 1922 :—Imports, £3,396,368; exports, £6,643,031.

SILVER.

The market has again shown a weak tendency. A slight rally, provoked by belated demand for prompt shipment by the steamer leaving this week for India, proved but short lived. China, America, and India at once began to vie with each other in offering silver for forward delivery, and naturally, while this is the case, bears are disposed to hang back from covering. Notwithstanding the considerable fall that has taken place during the last week or so, there is a lack of confidence in the future. Trade is considered to be the only effective brake that will control the sliding prices. The reduction of the silver contents of subsidiary coin has now commenced in the South American continent. A recent law passed by the Peruvian Congress authorises the emission of 23,000,000 soles of a low standard. Hitherto the quality has been 900 parts in the 1,000 fine. The object is to replace the 15,954,068 soles in circulation, and also to redeem 7,045,932 soles of currency outstanding in cheques and certificates. The reduction of the quality from

.900 to .600 would have more than sufficient profit for the purpose.

INDIAN CURRENCY RETURNS.

The silver coinage during the week ending 7th inst. amounted to 2 lacs of rupees. The stock in Shanghai on the 11th inst. consisted of about 41,900,000 ounces in sycee, 35,000,000 dollars and 1,540 silver bars, as compared with 41,100,000 ounces in sycee, 36,500,000 dollars, and 1,460 silver bars on the 4th inst. The Shanghai exchange is quoted at 3s. 2d. the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows :—

NOTICES.

Lloyds Bank, Limited, announce that the sub-branch of the bank at Mumbles is now converted into a full branch in new premises at No. 6 The Duns, Mumbles, under the management of Mr T. M. Bellingham.

The Canadian Bank of Commerce, 2 Lombard street, E.C., have received advice by cable from their head office that Mr Gordon C. Edwards, of Ottawa, has been elected a director of the bank.

The American Express Company, Incorporated, 62A Lombard street, London, E.C. 3, announces that Messrs A. J. Chapman and A. Clermont have been appointed assistant managers.

Barclays Bank, Limited, announce that new branches have been opened at Masonic Hall Buildings, Sutton Coldfield, under the management of Mr E. L. Greenfield; at 127 High street, Tonbridge, under the management of Mr P. Aldrich; and at Castle street, Llangollen, under the management of Mr J. Thomas.

MINING OUTPUT STATISTICS FOR OCTOBER, 1922.

BRITISH BROKEN HILL.—Returns for fortnight ended Nov. 4th :—7,201 tons crude ore produced 1,200 tons lead concentrates, containing 749 tons lead and 3,960 oz. silver; also 1,000 tons zinc concentrates, assaying 8.6 per cent. lead, 10 ozs silver per ton, and 45 per cent. zinc; 200 tons carbonates raised. One day's stoppage. Steel works, Newcastle: With the exception of the steel foundry which produced 74 tons of castings, the whole of the company's plant at Newcastle is shut down four weeks. Ore dressing mills: The ore dressing mills were carried on during the tailings, producing 513 tons of lead concentrate, and 4,732 tons of siliceous material was delivered to the zinc flotation plant for treatment. Zinc separation plant (Bradford) produced 1,740 tons of lead concentrate, 1,740 tons of zinc concentrates, assaying 50.23 per cent. zinc, 3.18 per cent. lead, and 12.31 ozs silver. Sulphuric acid plant: This plant produced 464 tons of strong sulphuric acid.

BROKEN HILL SOUTH.—For the four weeks ended Nov. 4th, 16,780 tons of crude ores, assaying 66 per cent. lead and 28 ozs silver per ton.

BURMA CORPORATION.—Oct., 17,130 tons of ore were milled in the treatment plant, producing 9,981 tons of lead concentrate; 10,303 tons of lead-bearing material in the refinery. Refinery products, producing 3,235 tons head lead for silver. Owing to seasonal shortage of underground labour, 5,500 tons of ore from stock pile are included in the tonnage milled.

BURMA CORPORATION.—Cable:—No. 7 level: West cross-cut 927 ft south—From 70 ft to 95 ft, 15 ozs silver 28 per cent. lead, 0.5 per cent. zinc; from 95 ft to 99 ft, 44 ozs silver, 60 per cent. lead, 10.8 per cent. zinc. Sediment encountered at 99 ft.

ELECTROLYTIC ZINC.—Production during four-weekly period ended Oct. 18th, 2,014 tons zinc; silver lead product for shipment to Port Pirie for realisation containing 194 tons lead, 42,962 ozs silver.

CANADIAN COLLIERIES (DUNSMUIR), LIMITED.—Production and sales of coal for the quarter ended Sept. 30, 1922 :—Tipples tons, 197,524; increase over corresponding period last year, 15,556 tons; commercial tons, 167,912; increase, 17,588 tons; sales tons, 164,346; increase, 18,294 tons.

NORTH BROKEN HILL.—Production Oct., 2,950 tons lead concentrates, averaging 63 per cent. lead, 30 ozs silver per ton, and 8 per cent. zinc; also 2,580 tons zinc concentrates, averaging 47 per cent. zinc, 6 per cent. lead, and 7 ozs of silver per ton.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Outside farm work is being actively conducted under seasonable weather conditions, and there is every probability of a large area being seeded, though the low prices ruling affords no encouragement to farmers to increase the wheat acreage. Market conditions were somewhat irregular, prices commencing with an easier tone, but subsequently improved in response to higher forward offers, while a fair trade was in force. English wheat is rather easier on the week, and best milling samples range from 45s to 47s, inferior 42s to 44s per 504 lbs free on rail. Imported steady, and supplies continue in moderate compass. No. 1 Northern Manitoba arrived 54s, ditto ex ship 53s 6d, Rosafé 63½ lbs 54s, and No. 2 Durum 50s ex ship to arrive per 496 lbs. On c.i.f. terms a fair business transpired in cargoes at generally steady rates. Steamers of No. 1 Northern Manitoba December sold 50s 3d, early January 50s 3d, No. 2 ditto December 50s, white Pacific arrived 51s, Victorian December 52s 4½d, choice white Karachi December 15s 5s, Rosafé 63½ lbs expected loading 51s 3d, and Baril 62½ lbs afloat 51s 6d per 480 lbs. Crop prospects in the chief exporting countries are maintained; United Kingdom stocks show a decrease, but visible supplies in North America are on a larger scale. Flour easier for home milled, with a fair trade passing at the decline. London standard straight run quoted 42s 6d, patents 44s 6d to 45s 6d, town households 40s 6d per sack delivered in London area. All English country straight 34s to 35s 6d sack delivered. Imported firmly held. Manitoba export patents 40s to 43s as to quality, top patents 42s 6d to 44s 6d, and Australian 41s per 280 lbs ex store. Maize improved after commencing easier. Plate ex ship 36s 6d, ditto landed 38s, American mixed ex ship 36s 6d, and ditto landed 38s per 480 lbs. Cargo market rule quiet, but firm. Steamers of La Plata loading sold 35s 6d, afloat 35s 4½d, December-January 35s 3d

to 35s 4½d, and January-February 35s 1½d per 480 lbs. Barley in quiet request, and rates tended easier for imported descriptions. English steady at 35s. to 62s per 448 lbs free on rail according to sample. Of imported, Californian 39s to 44s, Australian Chevalier 40s to 53s per 448 lbs ex store. American malting 48 lbs ex ship 39s 6d, ditto landed 31s 6d, Danubian 31s 6d, and Persian 29s all per 400 lbs ex ship to arrive. Oats barely steady on spot regarding imported descriptions, and trade remains without improvement. English ranges from 26s to 32s 6d per 336 lbs free on rail. Of imported, Plate f.a.q. quoted 27s 3d ex ship, and 28s 6d landed. No. 2 Canadian Western 34s, No. 1 Canadian feed 32s, No. 1 white clipped American 36 lbs 27s 9d all landed per 320 lbs. Oat meal in good demand at generally steady rates. Home milled, at cuts quoted £19 15s, rolled oats £19 15s, flaked ditto £22 15s, ordinary Scottish oatmeal £19 10s to £20 10s, and American oats £18 10s to £18 15s per ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

IRON, STEEL, AND COAL.

Our Sheffield correspondent writes:—The trend of business has taken a decided turn for the better so far as steel is concerned, and not only has the outlook undergone improvement, but substantial orders have been booked. Private builders of railway rolling stock have a good deal of new construction on hand, which will bring much-needed relief to the makers of tyres and axles and springs in Sheffield, and when the British railways come into the market, as must occur very soon, the plants concerned will be actively employed again. Increased business is being done in the better qualities of steel, and although the improvement is slight at present, the upward movement is believed to be on a permanent basis. Makers of several classes of tools are putting on additional hands, or extending their working week. The Board of Trade returns for October record a substantial increase upon the previous month in the export of pig-iron and steel of many descriptions. Prices are, however, still being cut, and production is not yet on a remunerative basis, but this trouble will disappear with an increased demand. Pig-iron in this district is a poor market, and makers are said to be working at a heavy loss. The Active business is reported in cutlery and electro-plate, and the sales of spoons and forks are the highest on record. In the home market the coal position is rather more encouraging, as both steam and house coal are moving away on an increased scale, although sales of the latter are not equal to the average at this time of year. Slacks continue to be the weak spot in the situation. Foundry and furnace coke are in good demand at current quotations. Quotations at pits are:—Best hand-picked branch, 32s. 6d. to 33s.; Silkestone, 28s.; best steams, 20s. to 21s.; slacks, 8s. 9d. to 10s. 6d.; nutty slacks, 7s. 6d. to 8s. 6d.

Our Middlesbrough correspondent's report, dated November 16th, is as follows:—Pig-iron: Business in pig-iron is improving, both

hematite and Cleveland foundry iron having been sold into the first quarter of next year. Prices are, therefore, maintained at 92s 6d per ton for No. 3 Cleveland G.M.B. and 93s 6d per ton for mixed numbers E.C. hematite. Manufactured iron and steel: There is a considerable amount of inquiry, with some business. Orders for steel are, however, not yet at all plentiful. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £10 10s; steel rails, £9 10s. Iron ore: Freight from Bilbao have stiffened, but the price of best Rubio still remains low at about 22s 6d. Business has been done in Mediterranean ores into the first quarter of next year.

Our Cardiff correspondent writes:—The position on the Cardiff coal market has eased appreciably this week. The more immediate cause of the change has been the disorganisation of traffic arrangement consequent upon the congestion of the docks. The measures taken by the Great Western Railway Company have apparently defeated the purpose they were intended to serve, for instead of accelerating and co-ordinating shipment, they have had the effect of impeding it. One of the results of the railway group system in South Wales is to place one authority in absolute control of the transport arrangements from pit to port, and that an authority which has still to learn the work which was so efficiently performed in pre-war days by four or five competitive railways owned and managed largely by colliery owners and shipowners. The Great Western Railway Company has been refusing to release coal from the collieries until the ships stemmed for such coals are in berth, but while this method of regulation has secured in some cases promptitude in loading and avoided congestion on the sidings, it has in other cases involved unforeseen delays in the despatch of coal from the collieries and the detention of tonnage at increasing demurrage cost. In these conditions, collieries have not been able to dispose of their output promptly enough to secure a plentiful supply of wagons, with the result that prices for spot shipment have shown weakness, and several colliery stoppages reported. Representations have been made to Mr Felix Pole, the general manager, on the subject, and

they are now receiving his attention. Last week there was a heavy decrease in the quantity of coal exported from the South Wales ports, and it is feared that the returns for this week will show a further decrease. Exchange difficulties are still reacting unfavourably on business, and several more orders from France are stated to have been cancelled during the current week.

The following are the current market prices:—Best Admiralties, 27s 6d to 28s 3d; second Admiralties, 26s to 27s; best dries, 28s to 28s 6d; best black veins, 25s 6d to 26s 6d; Western Valleys, 25s to 26s; Eastern Valleys, 24s 6d to 25s 6d; best bunker smalls, 16s to 17s; ordinary cargo smalls, 12s to 15s; anthracite big vein, 50s to 52s 6d; anthracite machine-made cabbles, 65s to 67s 6d; anthracite French nuts, 70s to 72s 6d; stove nuts, 70s to 71s; rubbly culm, 14s to 14s 6d; coke for export, 37s 6d to 42s 6d; inland blast furnace coke at ovens, 25s to 26s; patent fuel, 28s 6d to 30s; pitwood ex ship, 33s 3d to 34s.

The improvement in the tin plate trade is maintained. The minimum price has been increased to 10s 6d per basis box, and the minimum schedule extended to other grades of plates.

THE COTTON TRADE.

MANCHESTER, November 16.

There has been very little activity in the market during the week. To some extent business has been disorganised by the general election and political work. Most cloth buyers are of opinion that prices at the moment are on too high a level, and merchants state that if goods are bought at current rates, much difficulty would be experienced in effecting satisfactory clearances in distributing centres abroad. Stock lots of piece goods have been sold for India, chiefly for Calcutta. In Bombay, English goods are meeting with severe competition from Japanese manufactures. Operations for China have been restricted, but something has been done for Singapore. A fairly encouraging demand has been experienced for Egypt, and moderate contracts have been arranged. Irregular buying has occurred in home trade fabrics. American yarns have been slow of sale, and prices remain very unsatisfactory. The undercurrent of demand in Egyptian spinnings continues healthier, and quotations remain firmer.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—First cabled reports from Christchurch, New Zealand, where the new wool selling season opened to-day, indicate that the offering met with animated competition. This is in keeping with the sales in the primary markets in Australia, for although a little easing has been noted recently in some centres, the raw material generally remains strong and in good demand. In this centre, however, users are operating with a good deal of caution, evidently in the hope that if they hold off as long as possible merino values will show some reduction from the current level. As a matter of fact, it is generally understood that the present high price of merino is checking business. Manufacturers and merchants assert that they cannot sell cloth at anything like the price that is necessary on to-day's basis of tops and yarns, and in recent weeks there has been almost organised opposition to values. This has resulted in a fair amount of demand being turned on to fine crossbreds, and this, combined with buying on American account, has considerably improved the position of all crossbred wool and tops, while yarns have also benefited. To-day topmakers' quotations are nominally unchanged, though a keen buyer could doubtless obtain some slight concessions here and there. Average 64's tops are still quoted about 5s per lb, and in most qualities there is just a moderate turnover. Spinners complain of rather quieter time to come, and practically all firms are well booked for some time. Yarn quotations show very little change, but there is a hardening tendency in mohair yarns on account of heavy bookings and with no marked feature. The piece trade remains steady, especially in the woollen section.

The Quest

The true artist, with infinite pains and untiring devotion to his ideal, strives to find hidden harmonies of sound, or form, or colour, and to express them so that all the world may joy in them.

The artist-craftsmen of industry are often not less devoted and earnest.

It is not profit-seeking alone that has gone to the making of The Chatwood Safe and Strong Room. Seventy years ago Samuel Chatwood began to make safes with pride of craftsmanship, not of pocket, as his moving impulse.

His ideals still inspire the present-day operations of the firm, from the directors to their fellow-craftsmen in the workshops.

THE CHATWOOD SAFE

Since 1853.

The New Chatwood Safe Book will convey to you something of the aims as well as achievements of the firm. A post-card brings a copy gratis.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The news received this week from Australia is very interesting, and is not without its significance. The Sydney advices report an easier market for fleeces, which was not altogether unexpected, and although an advance in Adelaide was reported last Friday compared with the previous sale, the private cables received in London and Bradford stated that good combing wools could be bought on a clean scoured basis of 46d, ex warehouse, which practically means 5s for the top. We think it is correct to say that wool could be bought on that basis, although, perhaps, not so freely as some would have desired. At the same time, the tendency is in buyers' favour at all the selling centres in Australia, and between now and the end of December is going to be a real testing time, both in London and the Colonies. We very much doubt whether importers and sellers have any adequate conception of the strong opposition shown by fabric buyers against the last rise in merinos. One of the biggest buying brokers remarked this week that in all their history his firm had never seen such strong opposition raised against wool values as is being shown to-day. Some have deliberately refused to buy, notwithstanding they have need to do so, and some spinners are using a lower quality of top, manufacturers who have hitherto made all solid botany cloths now using fine crossbred yarns to produce a cheaper material. The present state of the world's markets does not justify to-day's standard of fine wool values. The last rise in merinos has certainly helped to strengthen the impression that medium and fine crossbreds are worthy of support. There is still ample scope for further development in this direction, for 46's carded crossbred tops at 16 1/2d are ridiculously cheap compared with 64's at, say, 5s. However, a good deal will depend on the outcome of the forthcoming London sales as to what prices are established for merinos, and while we are not expecting any marked depreciation, nobody need be surprised if there is a slight ease before the finish.

Continental exchanges will play an important part in determining the course of values at the sales. There has been an improvement in the German currency, and at this writing the franc in Paris and Brussels is certainly better. So far as one can judge, more will depend upon Continental exchanges than anything else, for French firms can still find a good outlet for their tops and yarns to other Continental countries if the rates of exchange improve.

Trade generally must be regarded as fairly good, though there seems to be quite a unanimous opinion among manufacturers that orders for piece goods have dropped off considerably during the past month. Taking everything into consideration, the exports of woollen and worsted piece goods are quite as good as can be reasonably expected. Our exports of tops during the first ten months of this year amounted to 33,530,800 lb, this being an increase of 4,532,800 lb compared with the corresponding period of last year. There is, however, a deficiency of 3,455,100 lb compared with the same period of 1913. The present increase may be regarded as fairly encouraging, whilst the decline compared with before the war is entirely due to Germany's curtailed buying. There is evidence of an increasing home consumption, and the combining industry of this country is in a unique position.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The spot market has shown a decided firmness in all descriptions of soft woods, prices gradually rising in sympathy with the increasing demands of Swedish and Finnish exporters, who have done a much larger business this year than was generally expected here, and who have been able to clear almost all their stocks at rising rates. These higher prices have assisted more in raising values on the spot than has the consumptive demand, and though the large Russian supplies have had a steadying influence, they have not been able to keep f.o.b. and c.i.f. values down. There is, however, much keen competition amongst merchants in securing the moderate orders that come on the market, and this is likely to become accentuated during the close season, unless the demand shows further improvement. As regards the market for next year, shippers are asking rates on a basis of £20 to £21 for Swedish 7-in. unsorted red, which is another move up, and is not meeting with any encouragement from importers. Some of the latter have made speculative purchases from Finland at what are now considered very favourable rates, carried through on a part cash down basis, but these operations are not of any magnitude, and have no great bearing on the market.

Spruce timber has been arriving from Canada much more freely this year than the disappointing year of 1921, and the market shows improvement. Deliveries into consumption in Liverpool and in district have been fairly satisfactory, and values are firmer. In United States pitch pine timber there is also an improvement here in the demand, and from the shippers for higher rates.

The imports of mahogany and other furniture woods have shown decided increases compared with a year ago. For good to moderate quality and size mahogany the market is firm. Prices for American furniture and decorative woods are also steady to firm, and shippers in the hardwood-producing States of the U.S.A. are increasing their quotations.

The situation, in brief, is that foreign shippers have been forcing up values, which are being reflected on spot stocks, which latter are fairly large generally for present rates of consumption. The next two or three months will show whether this market is strong enough to stand the strain of higher values which have arisen, in the case of building woods,

not so much on account of the demands from this market as of active operation on the Continent.

VEGETABLE OILS AND OILSEEDS.

Trade in linseed has been on narrow lines. Seed on spot is very scarce, and needy crushers have had to pay high figures to cover immediate wants. Shipments (chiefly Indian) continue to improve, and this should ease the pressure, though only 29,800 tons is on passage to the United Kingdom, against 54,300 tons to the Continent. Old crop Plate is nearly done, and £18 10s has been paid for seed about to be shipped, while small dealings in new crop have been done at £15 10s December-January and £15 to £15 5s 2d January-February. Calcutta afloat to London has com. manded up to £19 5s. A good trade has been done in Egyptian cottonseed £9 18s 9d and £10 1s 3d for Sakellaridis for shipment. More interest has been evinced in soya beans, £10 10s having been paid for a cargo to Hull, November-December loading, and £10 10s to Scandinavia.

Raw linseed oil continues to be firmly held for prompt delivery round £38, supplies being short and sellers few. For November, December the value is about £37, according to date, while for January-April there has been some degree of interest, and the ex-mill price has advanced to £32. Cotton oils have been dull, and more or less inactive, but values have been advanced to £35 10s for new crude Egyptian and £37 for soap makers' grade of refined. Rape oil on spot is very scarce, and in good demand at £42 ex mill.

A cable correction reduces the official estimate of the new crop of Argentine linseed from 1,774,000 tons to 1,531,000 tons. The mistake appears to have arisen from reckoning the Pampa Central yield as 270,000 tons, when it should have been only 27,000 tons. Nevertheless, the reduced figure is very substantial, and compares with 820,000 tons, the present season's crop, and an average of 900,000 tons in the five-year period 1918-22. The quantity available for export will be about 1,350,000 tons, against a probable shipment of 900,000 tons in the current season. The estimated yield of the American linseed crop is 302,000 tons, against 203,000 tons in the past season, but whether this will be ample to supply the States' domestic needs in oil without the necessity for importing linseed from Argentina or Canada seems doubtful.

The U.K. imports of oilseeds, nuts and kernels in October at 105,002 tons are below recent average, and compare with 146,168 tons in October last year, the falling off being due in the main to lesser arrivals of linseed, soya beans, and palm kernels. The gross imports for January-October are 1,136,809 tons, comparing with 1,163,162 tons a year ago, a former favourable balance now being transformed into a decrease of 26,353 tons. Cottonseed, at 372,875 tons, is up over 54,000 tons, but linseed, at 321,317 tons, compares with 423,205 tons, and is thus over 100,000 tons, or round 25 per cent., down. Oilnuts and kernels, at 299,700 tons, are down over 40,000 tons. Exports of unrefined oils in October were only 4,165 tons, against 18,123 tons in October last year, linseed oil standing at 2,065 tons, against 8,387 tons a year ago, when the big American demand was making itself felt. At the same time we imported from Holland 814 tons of linseed oil, bringing the total for the ten months up to 1,580 tons, against 66 tons a year ago.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is a shade weaker, and most classes of best and second ox were withdrawn at Thursday's Bermondsey auctions, the one class of lights which did sell dropping 3/4d. Cows also fell 1/4d, and kips 1/4d to 3/4d. Calf were also weaker, best making from 8d to 13d, and showing declines of 1/4d to 1 1/2d per lb. Wools were a shade firmer, selling from 5s 2d to 9s 6d, the hogg class making from 5s to 11s 6d per skin. The demand for wool skins is keen, and as they are none too plentiful, fellmongers compete freely for them. The imported hide position is quieter, but frigorifics have been sold at origin at \$58 1/2 for Anglo and Armour hides, a figure well in advance of British tanners' ideas. Dry hides are still well in demand as the demand is good from tanners making a cheap firm, and as the demand is good from tanners making a cheap firm, and as the demand is good from tanners making a cheap firm, the bend, any decline in this direction will probably be slow. The Chicago packer hide market is a shade weaker, with best heavies making 22 1/2 cents. Packer sheepskins are cabled as selling at 270 to 275 cents.

ALEXANDERS DISCOUNT Co., Ltd.,

Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount/Call	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	2½

The Bank return showed a decrease of £495,000 in the note circulation, an increase of £4,000 in the stock of gold, and an increase of £499,000 in the Reserve. Government securities declined by £103,000, while Other advanced by £698,000. In the deposits, a decline of two million in Other helped to produce an increase of three millions in Public. Currency notes outstanding were reduced this week by £634,300 to £287,209,200, which includes £1,535,700 for notes called in, but not yet cancelled. The fiduciary issue is £237,523,500, or £72,464,900 below the maximum.

THE STOCK MARKETS.

The cheerful tone in the Stock Exchange which immediately followed the General Election has been replaced by dulness and inactivity in all but a few markets. Gilt-edged stocks have maintained their prices, but that is all, and rumours of a new Local Loans issue did not improve matters. The foreign bond market has been quiet, and there has been a lack of public interest in Home Rails, Districts being the only feature. Argentine and Brazilian rails have been exceptionally strong on speculative investment made in the hope of higher dividends next year. Rubber shares continue to attract a certain amount of attention, but the oil market is heavy. Banking issues are inclined to rise, and shipping stocks are mostly higher, but Kaffirs tended to sag, and dulness has been the keynote of the mining market as a whole.

THE COMMODITY MARKETS.

In the Manchester cotton trade a lack of confidence in current prices is reported, it being difficult to attract buyers. Business with India is confined to occasional transactions, but there is some prospect of improved demand for China. The position in the wool trade is remarkably interesting. At the Colonial Wool Sales in London this week fine and medium crossbreds advanced in price all round. Our Bradford correspondent refers to American competition at these sales as a hardening factor. The merino position was not tested, but users are doing their utmost to avoid buying in the hope that the value will ease. Meanwhile, some expert Australian opinion is inclined to the view that prices will go yet higher. Values in the pig-iron market are slightly easier, American demand having fallen off, and local consumers not being disposed to carry stocks over the year. There is a good demand for finished steel, mainly owing to the placing of more shipbuilding orders. Our Cardiff correspondent reports prices in the South Wales coal trade as irregular, and slightly lower than those prevailing a week ago. Rather more interest is being shown in linseed by crushers, although prices are inclined to be lower, and a further decline in hide values is reported at the Bermondsey auctions. Further particulars of markets will be found in later pages from our trade correspondents.

FOREIGN EXCHANGES.

In the foreign exchange market the week has been a relatively quiet one, apart from some rather wide movements, especially in the Paris rate on Tuesday and Thursday. The two main features have been the strength of sterling in New York and a somewhat uncertain recovery in the franc. After a relapse to \$4.47½ on

Saturday last sterling improved to \$4.49½ on Monday, and has been moving since between \$4.49 and \$4.50, on Friday morning opening at \$4.49, with a rising tendency. No features other than those previously dealt with here have arisen to account for this satisfactory strength. Forward rates are about one cent per month above spot. The Paris rate, after a recovery on the 17th to 63.50, rose again on Saturday, but on Monday had recovered sharply to 61.35. On Tuesday there were some wild movements, but the rate, after being below 60, ended the day at 62.65. During the next two days the rate was also unsteady, and yesterday morning, after opening at 62.90, went in a short time above 63. Apart from possible intervention to stem the recent collapse, no new factors have appeared to justify the recovery, and the assertions in the French Press that the recent movement was due to foreign speculative operations is unconvincing, and would suggest a reaction from the recent healthier attitude in France of facing the difficulties of its position, which does not augur well for the future. Quotations for forward francs in Paris are 10 centimes per month above spot. In Brussels the rate has, as usual, moved in sympathy with Paris, but shows a slight tendency to narrow the spread between the two rates, the quotation yesterday morning being 67.80. Forward rates are 2 centimes per month below spot. The movement in the lira has been irregular, and yesterday morning the rate, at 96½, was ¼ lira higher than the week before. With the exception of Switzerland, where a recovery from the fears of the threatened capital levy has reacted in favour of the Swiss franc, most neutral currencies have moved in our favour in sympathy with the appreciation in sterling in New York, few special factors of local importance having intervened. Berlin, after being down to 27,500, has moved up again to about 29,000, very much the same as a week ago, but the international market would appear to be taking a rapidly decreasing interest in the mark. Vienna remains pretty steady at about 320,000, with a slight tendency towards improvement, while Warsaw, also at 70,000, would appear to be reacting a little from recent high rates. Prague, at 143, is one or two points higher, but industrial depression consequent on the high value of Czechoslovak currency remains. Athens, at 290, is slightly better, and there has also been an improvement in Constantinople to about 830. Business, however, in this city still remains practically dead. In the East the rupee at 1s 3½d has reacted a little from the previous week's quotation of 1s 4 1/32d, while the Yokohama rate is also slightly lower at 2s 1½d. The silver market has remained depressed, with little movement, and there are no signs yet from India or China that the bottom has been really touched. Hong Kong at 2s 4½d, and Shanghai at 3s 1½d are just slightly dearer than the previous week. In South America, Rio at 6½d is ¾d dearer, Buenos Ayres at 44½d is ¾d dearer, Montevideo at 43½d is ½d dearer than a week ago, while Valparaiso has depreciated from 35.80 to 36.90 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 18th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,055	Interest on Debt	146
Amount borrowed	2,804	Supply Services	53
Taken from Exchequer balances	010	Sundries	9
	20,869		208

Expenditure amounted to £20,869,400, as compared with £10,439,400 in the corresponding period of last year. This is mainly accounted for by the big rise in interest on war debt, which item alone absorbed £14,343,300. This large increase is a result, no doubt, of the interest payment on American debt. Revenue, as usual at this time of the year, is heavier, amounting to £18,055,400, as against £12,964,000 a week ago, but maintained its periodical increase when compared with the figure of £18,140,000 for last year. The increase due to Excise, which amounted to £9,934,000, as against £1,719,000 last week. Receipts from Property and Income-tax fell from £4,331,000 to £3,025,000, and from Customs from £2,564,000 to £1,410,000. Miscellaneous receipts remain steady at round about a million. T.

week's operations increased the National Debt by £2,804,172, and caused the following changes:—

	Min. £	National War Bonds paid off	Min. £
National Savings Certificates	+ 350	Telegraph Money	- 103
4½% Treasury Bonds	- 248	Treasury Bills	- 315
Public Debt Advances	+ 7,200	Funding Loan, &c.	- 50
5% Treasury Bonds	+ 111	Other Debt	- 650
	+ 7,909		- 5105

The floating debt was increased by £4,040,000 to £918,213,500.

FINANCIAL YEAR, 1922-23 (April 1 to November 18, 1922).

TARIFFS IN THE NEW HOUSE.

The Prime Minister has been granted, by the vagaries of our electoral methods, a larger majority than he had any cause to expect. A considerable proportion of his following consists of hard-shell Protectionists, yet we have Mr Bonar Law's definite assurance—given before the day of polling—that he would not employ a Conservative majority to make any fundamental change in the fiscal system of this country. An assurance of this kind from modern politicians of the baser sort would be worth little, but from Mr Bonar Law we accept it without apprehension at its face value. Both the Prime Minister and his Chancellor of the Exchequer are, happily, men of the highest personal character, who may be trusted to keep their word in the spirit and in the letter. The country is, therefore, free for the duration of the present Government from the perils and disturbances of any further Protectionist legislation. We cannot hope that a Government of the Conservative colour will relieve us from the Safeguarding of Industries Act, or from those other vestiges of protection which have come down to us from their predecessors; these ills we have, and shall probably continue to bear, but against further attempts to impose tariffs upon us we have the security of the Prime Minister's indubitable word.

There are four Customs tariffs at present in force, other than those imposed (with a corresponding excise) for purely revenue purposes. There is the import duty

of one-third on pleasure motor-cars, musical instruments, cinema films, and one or two other miscellanies put on originally by Mr McKenna to check imports of luxuries during the war; they were kept on chiefly for protective reasons by Mr Chamberlain and Sir Robert Horne. We can scarcely expect Mr Baldwin to take them off; the duties produce a substantial revenue and Conservatives (late Tariff Reformers) cherish them with a passionate affection. Then we have the system of Imperial preference inaugurated by Mr Chamberlain, under which products of the Empire pay a lower rate of Customs duty than do foreign products. Thirdly there is Part I. of the Safeguarding of Industries Act, which imposes a duty of one-third on imports which compete with some 7,000 products of so-called "key industries." This Part I. tariff will, unless repealed, continue until August 19, 1926. Finally, we have upon our overburdened backs Part II. of the Act, with its provisions against "dumping" and the effects of collapsed exchanges. One might have added the Dyestuffs Act, with its definite licensing system of foreign dyes for ten years, but as this Act works by prohibition and not by tariffs, we are not discussing it at the moment. We are concerned with those existing measures of tariff protection which gave such deep satisfaction to the Tariff Reform League that it gratefully committed hari-kari to the slow music of Nunc Dimittis.

Opportunities to challenge in the House the retention of the McKenna motor-car, &c., duties and the policy of Imperial preference may not occur until Mr Baldwin introduces his first Budget, but we shall certainly get one debate, and probably two, on the Safeguarding of Industries Act before the House adjourns for Christmas. The Liberals are expected to move an amendment to the Address, which will raise the subject, and the Government will—whether or not a debate takes place on the Address—be obliged to bring up for ratification their Order No. 2, imposing a duty of one-third on Gas Mantles from Germany, which was issued in October. This Order, unless confirmed by resolution of the House of Commons, will expire before Christmas. We are certain then to have a Parliamentary fight over this Order, and probably also to have the Act as a whole challenged on the Address next week.

Memories are short, and we may perhaps remind our readers what the position is as regards the Safeguarding of Industries Act. Part I. (Key Industries) imposes a duty of one-third on a great quantity of imported commodities, and has nearly four years still to run. Part II. consists of provisions against the results of collapsed exchanges and of "dumping." The collapsed exchanges provisions expire on August 19, 1924, those against dumping are permanent. Up to the present Part II. has not been put into force except against imports from Germany (collapsed exchanges). There were committees of inquiry set up in two complaints of alleged "dumping"—glass bottles from Holland and vulcanised fibre from America—but in both instances the complainants are understood to have failed to establish their case. Order No. 1 (fabric gloves, &c.), putting Part II. of the Act into force against Germany, was ratified by the House after a struggle with Lancashire, which nearly split the late Government. Mr Baldwin, who was then President of the Board of Trade, insisted upon ratification, and carried a majority of the Cabinet with him.

Order No. 2 (Gas Mantles) is at present awaiting confirmation. No committees of inquiry are now sitting, and except for this Gas Mantles Order, Part II. of the Act is in a state of suspended animation. It will be for the House to set it going for its period of two years more on the dreary round of complaints, inquiries, and reports, of which we have had experience during the past year, or definitely to discourage further attempts to breathe life into what is really an unloved corpse. The debate on the Gas Mantles Order will be the deciding event.

There is something mildly humorous about the story of the Act in relation to incandescent gas mantles. When the original Bill was before the House of Commons an attempt was made to add gas mantles to the list of "key industries" under Part I. This was defeated by the Government itself on the grounds, first, because gas mantle-making was not a key industry, and, secondly, because a duty on them would be a burden on the poorer classes whose houses were not wired for electric light. Even the Protectionists grasped that a duty from which the well-to-do classes were relieved by domestic circumstances would fail to achieve popularity. Then the gas mantle manufacturers, opposed by the Board of Trade and the gas companies, applied to the Referee set up under Part I. to include gas mantles because they contained the fine chemicals, salts of thorium and cerium, which were themselves specifically included. After long discussions and consultations with the High Court and the Customs, the Referee held that though gas mantles *per se* were not included, yet that the chemical salts with which they were impregnated were included. The effect was to impose a duty of some 5 or 6 per cent. on the imported value of the mantles, representing a duty of 33½ per cent. on the thorium and cerium contained in them. Unwearied in well-doing, the gas mantle makers, having secured general protection to the extent of 5 per cent. or so under Part I., applied for 33½ per cent. in particular against Germany under the collapsed exchanges clauses of Part II. A committee of inquiry was set up, and reported, not very enthusiastically, that the case against German mantles had been made out. Hence followed the Gas Mantle Order of October last, which now has to come before the House for confirmation. All this sounds rather complicated, but that is the Act's fault, not ours.

If then the Gas Mantle Order is confirmed in the course of the coming month, the British makers will get, as against their German competitors, a 33½ per cent. duty under Part II. and 5 to 6 per cent. under Part I.—say, 39 per cent. altogether *ad valorem*. The advance in price in this country, the direct result of the duty unless the Germans are still able to compete, will fall on those people who use gas for lighting in their houses. Gas lighting belongs to the past, it is being superseded by electricity, except in the houses of the poorer classes, and the whole gas mantle industry must gradually die out. In the meantime it is putting up a fight for plunder before death overtakes it. The Committee of Inquiry held that the industry was over-capitalised and burdened with unnecessary costs; nevertheless, they reported that it could not be ruled out on this account as inefficient. The debate on the Gas Mantle Order will be of great interest, for it will reveal how a dying industry—which Parliament refused in the first instance to protect—has by persistence and legal manipulation of the provisions of the Safeguarding of Industries Act contrived to wriggle into shelter under both Parts I. and II., and to get for itself a greater measure of protection than any other industry has so far achieved.

A LESSON OF THE ELECTIONS.

WE drew attention last week to the fact that the large Government majority in the House of Commons has been elected by a minority of the electorate. That is the most disquieting aspect of the General Election. But it may turn out to be a blessing in disguise, if it serves to impress upon the minds of all lovers of constitutional government the urgent necessity for an amendment of electoral law. Happily this lesson of the elections has already attracted

widespread attention, and "the new danger to constitutional Government" has been discussed this week by public men of mental orientation so various as that of Mr Lloyd George, Mr Clynes, Sir Donald Maclean, and Professor Pollard. So far no word of comment has come from the Conservative camp. This time the anomalies of the present system have favoured the Conservative party. Next time, as Mr Lloyd George points out in Wednesday's *Daily Chronicle*, "the luck of the electoral table" may favour the Labour party. Perhaps that consideration may help to remove the distaste with which Conservative organisers have hitherto regarded all proposals for electoral reform. But of a surer the question is one of such supreme national importance, that the attitude of no section of the community towards it should be determined or even influenced by considerations of party tactics or party advantage. It is a constitutional question of the first order. Anyone who admits that our system of Parliamentary government rests upon the principle of democratic representation must also admit that the present electoral method, as illustrated by the recent polling results, is unsatisfactory and dangerous; and, having admitted that, must join in the search for remedy.

The General Election statistics as given in Wednesday's *Morning Post* show that the Conservatives polled 5,554,648 votes, Labour 4,202,516, Liberals 2,663,390, National Liberals 1,467,263, and other parties 466,664. In the House the Conservatives have 346 seats, or 56 per cent. of the total; allowing them 450,000 votes for unopposed returns, they polled only 41 per cent. of the votes. Labour polled 28 per cent., and have 142 seats, or 23 per cent. of the total. Liberals polled 18 per cent. of the total votes, and have 65 seats, or 11 per cent. National Liberals polled 10 per cent., and have 50 seats, or 8 per cent. of the House of Commons membership. Admittedly, a considerably proportion of Liberal, National Liberal, and "other party" voters would, in constituencies where their own candidates were defeated, have given their second preference to Conservative rather than Labour candidates. It is even arguable that these numerous second preferences would have been sufficiently numerous to produce a Conservative majority, and that the country would have expressed its preference for a Conservative majority in the House of Commons to any of the available alternatives. To argue for or against such a contention is a waste of time. There are two points on which attention should be concentrated. One is that the present system does not lend itself to a clear and unequivocal expression of national opinion; the other that, on the face of it, the present majority in the House of Commons was elected by a minority vote. Whenever trouble and controversy arises the aggregate voting figures will be quoted to prove that the Government has no mandate from the electorate; and the figures will be constantly and effectively used by those who wish to discredit Parliamentary institutions. Those considerations can hardly fail to be disturbing to the minds of all good citizens.

When we come to consider possibilities of remedy we are faced at once by two main alternatives. One is the institution of the transferable vote; the other the introduction of what is known as Proportional Representation. Neither of these systems can quite claim the sweet simplicity of the present system, but neither is too complicated for the electorate to grasp with ease, and both are free from the impracticability attaching to the second the present at best admits of grave danger of minority rule; that the transferable vote assures majority rule, but does not assure adequate representation of minorities; while P.R. would, if properly applied, produce a House of Commons that is an approximately accurate photograph of the majority and minority wishes of the electorate. Let us take the figures of last week's voting, and see how the various systems would work in relation to them. Under the existing system 40 per cent. of the electorate elects a majority of over 70. If the system of the transferable vote had been in force there would have been either a small Conservative

majority, or else a Labour-Liberal majority, according to the way in which supporters of candidates at the bottom of the poll expressed their second preferences. Under this system it would at least have been clear whether or no the country definitely preferred a Conservative Government to that of any other individual party. Under P.R. the composition of the House of Commons would have been, roughly, as follows:—Conservatives 253, Labour 172, Liberals 111, National Liberals 61, other parties 18. The result would inevitably have meant a Labour-Liberal coalition; and, indeed, one of the strongest popular prejudices against P.R. arises from the recognition that it would usually produce a Coalition Government, except in the case of a great party sweep such as that performed by the Liberals in 1906. At the present moment this objection may loom very large in the eyes of a country that has just buried a coalition with universal rejoicing. But it is thoroughly illogical to suppose that, because the lately deceased coalition was bad, all coalitions must be bad. The Government that has ruled us for the last four years was bad because the coalition between Conservatives and Liberals was based on no clearly defined principle, on no agreed programme. It was formed vaguely to make a peace—a subject on which national and party views had in 1918 had no time to develop—and in some undefined manner to restore prosperity. A coalition formed by two parties who had just been to the polls on definite concrete programmes would be an entirely different matter. Such a coalition would be formed to carry out the points on which the two programmes agreed—and there are to-day many points on which, for instance, the Liberal and Labour programmes coincide—and on the definite understanding that conflicting points in the two programmes should be put on one side. The result might not be ideal. But the ideal is seldom attainable; and, while on the one hand we should in this way have the immeasurable benefit of a majority and a minority in the House of Commons both clearly representative, on the other hand there would be no reason to fear a repetition of the chief shortcomings exhibited by the unprincipled Coalition of 1918 to 1922.

Opponents of proportional representation rely for the main strength of their arguments upon the experience of Italy and some other countries where the system has been tried. In Italy, it is true, its introduction has led to a multiplicity of political groups, has conduced to ineffective government, and has not taken the country any nearer to the desired goal of democratic representation. That may be admitted. But Italy's unfortunate experiences of P.R. result from wholly unsuitable methods of application. Italian politics have always been confused by the existence of a large number of groups, and the evils of the group system have been intensified by the superimposition of P.R. upon a division of the country into a few immense constituencies, some of them returning as many as 30 or 40 members. The system of huge many-seated constituencies lends itself inevitably to the creation of a large number of personal or sectional minority groups. For in a 30-seat constituency, where the system of P.R. is in force, anyone who can obtain one-thirtieth of the total votes cast obtains election, and the prospect of possibly securing so small a quota will obviously attract the faddist, and the freak candidate, and the candidate who has a personal grievance, a personal ambition, or a monomania. There should be no danger of this country falling into this fatal mistake in the method of applying the system. Expert inquiry would probably lead to the conclusion that five-member constituencies would be the most suitable arrangement under which P.R. could be applied to this country. But, be that as it may, and whatever the comparative merits or demerits of P.R. and the alternative vote may be, it is of high national importance that the whole question of electoral reform should be made the subject of official inquiry without delay. Last week's election has revealed in the clearest fashion that the present system is both obsolete and dangerous. To busy itself with the problem of reform is one of the most urgent duties of what we hope is the last House of Commons to be elected under that system.

THE OPENING OF THE LAUSANNE CONFERENCE.

THE root of the difficulty with the Turk is that nobody will treat him as a human being. He is legislated upon and operated upon by foreigners as though he possessed neither a will nor the means of giving effect to it. Sometimes he is compelled by *force majeure* to put up with this for years together, and his taskmasters point to his involuntary acquiescence as a sign that this was the *régime* for which he was created. Being really human, however, he fiercely resents being kept in such a position, and shakes himself free as soon as he gets the chance. The moment this happens, he finds himself treated, to his stupefaction, in the diametrically opposite way, as a super-human power wielding occult forces, and more than a match for the united strength of Western Europe. The same foreign Governments, and often the same individual statesmen and publicists, swing, without warning, from one pole to the other—and then they expect the Turk not to turn giddy and lose his head! Turcophiles are perpetually surprised and pained, Turcophobes perpetually fortified and outraged, to find that the Turk is not behaving like a reasonable being, and do not suspect that their own erratic movements of attraction and repulsion may be the cause.

An admirable example of this old story is the treatment of Turkey since the Armistice by the Allied Powers. First we drafted a settlement that could only be imposed by force, and took no trouble to consider the Turkish point of view on small things or great, arguing (circularly) that anyway nothing but force would induce the Turk to submit to our conditions. Then, when the Turk had taken our cue that force was to be the order of the day, and, being a man and not a stock or a stone, had organised some force on his own side to withstand us, it occurred to us that there was nothing for us to do but to give ground as far as the Turk might be inclined to press us. The British Government played one tune, the French and Italian Governments the other. We hammered it all out in the hearing of the Turk himself, as if he were a child or a dog, who would not be aware that he was the subject of discussion, and the Turk marked and understood our behaviour as he has done for generations. Thus he arrived at his old conclusion, that we were either unbalanced or insincere, and that it was therefore no use treating us as if we were ordinary people—precisely the assumption on which we, on our side, were acting towards him. Can any more unpromising state of mind be conceived for embarking upon a peace conference?

There is little, then, to wonder at in the mood displayed by the leaders of the Turkish National Movement since the Armistice of Mudania, though there is the best reason for deploring it and viewing it with alarm. The problem is to conjure it into something better, and here the initiative lies with us, because in spite of ourselves, we possess, and the Turk knows that we possess, the ascendancy. He cannot set us an example, but if we set one to him he is almost certain to respond.

Treating your neighbour as human has two implications. On the one hand, it means that you must consider his point of view all the time, and accommodate yourself to it as far as you are able; and in the second place you must assume him capable of understanding your own standpoint, and of realising that you, too, have an irreducible minimum for which, at the back of your mind, you are prepared to put up a fight. When once you have recognised that he has a case, you can afford to insist on the existence of yours.

These considerations apply to the question of Western Thrace, which the Conference, with unwonted and encouraging boldness, has taken first on its agenda. The Turkish case in Western Thrace is partly geographical and partly based on the principle of self-determination. It is natural that Turkey should desire the enclave on the west bank of the Maritsa, opposite Adrianople, for a foreign Power confirmed in possession of this territory would command Adrianople with its guns, and would possess a section of the railway connecting that city with Constantinople (this last section of railway, and Adrianople station, lie on the west bank of the river). As for the remainder of Western Thrace, there is, or was, a Muslim (that is, a combined Turkish and Bulgarian Muslim)

majority, and the Allied Powers have taken plebiscites in several such cases, when they contemplated detaching provinces with mixed populations from European enemy Powers. If there was a plebiscite in Schleswig and Klagenfurt and Silesia, why not at Gumuljina or Dedeagach? The Turk at once suspects, with innumerable precedents to confirm him, that he is up against another case of unfavourable discrimination, and that a plebiscite would have been granted without cavil if Western Thrace had been inhabited not by Muslims and non-Muslims, but by Germans and Poles. In insisting, he feels that he is standing out for the principle of equality of treatment, by which, as a sound instinct tells him, he is destined to stand or fall. Moreover, the plebiscite for Western Thrace was one of the conditions of the National Pact, and a Covenant always becomes something of a fetish to covenanters who have fought for it long and in the end successfully.

The Allies ought thoroughly to weigh these Turkish considerations before they balance their own against them, all the more so because they have if anything a stronger case on the other side. To begin with, the restoration of Turkish sovereignty over any section of the railway along the western bank of the Maritsa would breed future trouble for the States of South-Eastern Europe, and therefore ultimately for their neighbour Turkey herself. Wherever we are to draw the theoretical boundary between Asia and Europe, it is a practical fact that the Maritsa Railway belongs to the latter continent, since it is an essential line of economic communications for a South-East European State, Bulgaria, and may become scarcely less important for Rumania if the freedom of the Straits proves precarious. In some form or other, Bulgaria's outlet to the Aegean, which was assured to her not only in the Treaty of Neuilly, but in a separate convention with the Principal Allied Powers, must now be made a reality. There are several alternatives: a Bulgarian corridor, an autonomous buffer state, or genuine facilities under Greek sovereignty (the latter solution is being advocated by M. Venizelos, and will not be impracticable if Bulgaria and Greece are both now admitted into the Little Entente). We have a strong obligation to Greece, who bowed accommodatingly to the inevitable on the point of Eastern Thrace, not to mulct her of further territory if that can be avoided. The one solution that is hardly compatible with a Bulgarian outlet is a further westward extension of Turkey, and the line of the Maritsa, which was Turkey's minimum gain at the Armistice, turns out in effect to be our maximum limit at the Peace Conference. Besides, Turkey lost the whole of Western Thrace in 1913, before the European War, except for the enclave opposite Adrianople; and she voluntarily ceded this enclave, too, to Bulgaria in 1915, when the latter country became a belligerent. West of the Maritsa, the title lies between Greece and Bulgaria, and on the point of sovereignty Turkey is out of court.

But all this, while a reason for denying Western Thrace to Turkey, is not a reason for ruling that province out of the discussion. If Turkey is not to own the strip of railway between Adrianople station and the Maritsa bridge, we must either secure her running rights over it and neutralise the enclave, or else we must assist her financially to construct a loop line east of the river. Nor does the case for a plebiscite fall to the ground simply because one possible outcome of it may be precluded by higher considerations of policy. The population of Western Thrace may still be allowed to decide whether it will have Greek or Bulgarian sovereignty, or an autonomy of its own, and Turkey's reasonable jealousy on behalf of Muslim claims to self-determination may thus receive a large measure of satisfaction.

If the Allies will argue with the Turkish delegates instead of dictating to them or letting themselves be dictated to by them, they have every prospect of getting them into a more tractable frame of mind. The best news yet from the Conference is that Lord Curzon has paid a personal call upon Ismet Pasha.

One other feature of the opening of the Lausanne Conference calls for urgent notice, and that is the question of secrecy in regard to the negotiations. We recognise to the full that good results can never be achieved if every phase of negotiation between the leaders and all the detailed

discussions of commissions and sub-commissions are carried on before the full and searching gaze of Press and public. But, on the other hand, the matters that are being discussed at Lausanne are of such vital interest to this country, and to Europe, that we cannot afford to be left in the dark as to the trend of the negotiations. We cannot afford to wait until, as the result of secret discussions, we are presented with an agreement as a *fait accompli*. The country rightly demands to know, in outline at all events, what is going on. The demand is irresistibly suggested by the experience of conference failures in the past few years. Moreover, secrecy may in itself militate in the long run against sane agreement, for it gives unbridled scope for the mischievous activities of rumour and intrigue. We do not ask for an excess of publicity. But we do hold the view, and hold it strongly, that by means of Press *communiqués*, as clear and as informative as circumstances permit, the public of this and of the other countries concerned should be kept closely in touch with the trend of discussions in which their interests are most intimately involved.

THE NEW GOVERNMENT AND REPARATIONS.

MR LLOYD GEORGE recently indicated that he expected to get some pardonable satisfaction in watching the men who wrecked his Cabinet wrestling with some of the gravest problems with which European statesmen have ever been faced. If Mr Lloyd George really expects to find such a spectacle amusing, he will have many diversions of this kind in the near future. Not only is the diplomacy of Great Britain, France, and Italy about to be tested to the utmost at Lausanne, but also within a few weeks, or even days, we shall be at grips once more with the still more fundamental problem of a Reparation settlement. We have frequently expressed the opinion in the *Economist* that any new Prime Minister would have a better prospect of reaching a settlement in Europe than Mr Lloyd George. It is true that the new Government is, in fact, very largely the old one under a new name; but Mr Lloyd George has so dominated foreign policy for the last four years that the Continent of Europe is quite evidently prepared to look upon Mr Bonar Law and his colleagues as an entirely new firm. This being the case, it is of the very utmost importance that the Government should not let slip an opportunity which may not recur for years by making a false step at the outset. The French are pressing for a Reparations discussion in Brussels on December 15th, and some decision must be come to soon, since the present moratorium expires at the end of the year. The issues for this country are, however, of such overwhelming importance that the Government may reasonably play for time rather than commit itself to decisions from which it may be very difficult to retreat.

Some delay, indeed, seems almost imperative in view of the nebulous ideas which Mr Bonar Law has expressed on the financial situation in his election speeches. His fear that opinion is perhaps tending to sway too violently towards underestimating Germany's ability to pay is a cause of her present currency situation, is not without foundation, and it is quite clear that it would be of little use for Mr Bonar Law to enter the discussion with a programme such as that set out by Mr Edgar Crammond who suggested this week, in an address to the London Chamber of Commerce, that we should fix the capital amount of outstanding reparations at £1,100 millions, of which we should take 22 per cent. in return for the cancellation of French and Italian debt, the settlement to be accompanied by the withdrawal of the Allied armies from France any agreement on so drastic a writing down till we are more clear as to America's position, and, in any case, as France can hardly be content with £572 millions, she would clearly have to be given a larger proportion of the total.

At the same time, we agree with Mr Crammond, and with the Bankers' Committee, which reported in June, that no headway can be made until an amount well within Germany's capacity to pay is determined—not necessarily in final figures, but at least on some clear and definitely determined index. The Government has first to decide whether it is going to stand for a new and definite figure, or whether it has some plan of reassessment, either by some expert financial authority, by reference to the League of Nations, or by a new reference on revised instructions to the Reparations Commission. The view that some palliatives are possible without a definite settlement seems to us unsound, and we dissent in particular from what appears to have been the view of the Wirth Government that some foreign credit might be raised at once. An advance could certainly be raised against the Reichsbank's gold, but as to any further credit, we remain entirely sceptical. In this connection, we may add that the German Government does not make co-operation easier by such incidents as occurred in the recent Berlin Conference, when the Finance Minister obtained, as a matter of private information, the opinion of three bankers on the state of various money markets, and then published them, and used them in discussion with the Reparations Commission. The fact that the official statement explains that the opinions were "of a purely private nature" is a very inadequate compensation.

The second and equally important question on which the Government must decide its attitude is that of the inter-Ally debts. We can imagine no more fatal step than for Mr Bonar Law to commit himself to the policy of the Balfour Note, which would be a certain method of finally blocking the way to any hope of agreement. We can at least hope that for the moment the Prime Minister will refrain from endorsing that unfortunate document.

These two problems, namely, the amount to be demanded from Germany and our policy upon debts, remain the two great factors in the question. At the same time, immediate discussion is for the moment rather concerned with the possibility of stabilising the German exchange, and with the length and character of the moratorium which must be granted to Germany. On the first of these two points the technical difficulties in stabilising the mark exchange are, as the experts in Berlin pointed out, by no means insoluble. The German Government itself recognises that, if it were freed from reparation payments, the balancing of its Budget could certainly be accomplished once it were able to assess taxes in a stable standard, while the very fact that the depreciation of the mark has outrun the increase in the paper circulation has made the gold reserve very large in relation to the total value of the money in the country. Certain questions in connection with stabilisation which are attracting attention here are dealt with in a subsequent column (page 977); but for the moment the more important consideration is that the stabilisation idea is up against a very difficult dilemma. On the one hand, it is impossible for a scheme of stabilising the mark to be successful if there may be demanded at any time reparation payments which will upset the equilibrium of the Budget, and no foreign stabilisation credits, except such as could be obtained against gold, would be forthcoming so long as there was any possibility of such demands. On the other hand, the grant of a moratorium for a definite period encounters very real and serious objections. Some of these were set out by Mr Goodenough in his paper on Monday to the Norwich Chamber of Commerce. He pointed out in particular that unless the Allies were placed in administrative control of German finance, the only security that any agreed reforms would be carried out would be the right to renew the demand for reparation payments, or in default to impose the sanctions contemplated in the Treaty of Versailles. There are many persons in France who think that the only way to grapple with the question is for the Allies definitely to take over the administration of Germany as a bankrupt estate. But Sir John Bradbury has pointed out recently to the Reparations Commission that it is not a practicable plan for foreign administrators to extract revenue effectively from an unwilling country. The League of Nations is about to undertake a very considerable administrative

control of Austria, and one of the reasons for not rushing too fast at this moment is that the experience of the League of Nations Controller in Vienna may perhaps throw considerable light on the difficulties that are likely to be encountered in an experiment which would be similar in character, but on a different scale.

The way is therefore full of difficulties. Complete control seems impracticable; yet without complete control there is obviously great risk to the main creditor countries in giving a long and definite moratorium, for there would be every inducement for Germany to go slowly in producing a Budget surplus. But without a moratorium stabilisation is practically impossible, while even with a moratorium for a definite period, no one will lend Germany any money or take any risks unless they know what Germany is going to be called upon to pay at the end of the period. We come back, therefore, to our starting-point—namely, that though discussion at the moment is turning upon ways and means of meeting immediate difficulties, there is no prospect whatever of clearing the air until we grapple again with the problem of definitely fixing the amount of reparations and of the Allied debts.

THE DIRECTION OF OVERSEAS TRADE.

SOME prominence was given to foreign trade statistics by the quotation on the part of the Prime Minister in an election speech of a series of figures in a manner which we ventured to characterise as misleading. Briefly, Mr Bonar Law endeavoured to prove that not only in the last pre-war year, but also in 1920, our export trade with the Empire was 2½ times as great as that with "all the demoralised countries of Europe," and that in 1920 it was four and a-half times as great. We do not know what European countries Mr Bonar Law regards as undemoralised, but in our issue of November 11th (p. 884) we produced figures for several countries whose trade has unquestionably been demoralised by the war and the peace, which gave a very different aspect to the question. From the tables given below, which we have prepared from the quarterly statistics given in the October trade returns, the relative importance of our trade with Europe, and with the Dominions in the first nine months of a number of years past can be clearly traced; but before proceeding to a detailed examination of these tables we give the net result of our analysis, which subdivides Great Britain's adverse visible trade balance in the first nine months of each of the past four years, and of 1914, into four groups, and shows to which groups of countries we are debtors, and of which creditors:—

JANUARY TO SEPTEMBER.
(Million £'s.)

	1914.	1919.	1920.	1921.	1922.
	Excess of Imports	Excess of Imports/Exports	Excess of Imports/Exports	Excess of Imports	Excess of Imports/Exports
Europe	47.7	201.9	137.3	26.1	24.0
U.S.A.	44.0	375.9	327.5	166.3	103.5
Other Foreign Countries ..	1.6	79.0	66.8	17.4	22.9
British Dominions	1.4	276.0	56.5	21.6	13.5
	94.7	527.0	313.5	231.4	115.9

In a comparison of the 1922 figures with those of 1919 and 1920 the decline in prices has to be borne in mind, but in comparison with 1921 this factor is considerably less important. It no doubt plays some part in the reduction of 50 per cent. in the total adverse balance, but this decrease is almost entirely due to the facts that the Continent has returned to the position of our debtor on merchandise account, and that we have substantially reduced the total value of our net imports from the United States. As regards our trade with the latter, it will be seen from later tables that not only have imports from America been reduced, but exports thither have expanded, and this is especially the case in the third quarter of the year—a result, no doubt, of the American coal strike, and of heavy imports into the United States in the period preceding the

imposition of the new tariff. In the full year 1913 our adverse balance in trade with the United States was £83 millions, and if price changes are taken into consideration an explanation of the firmness of the New York exchange is not far to seek. In trade with other foreign countries the surplus of imports has been slightly increased; this, however, has been more than offset by a decline in the case of the British Dominions.

We may now turn to the detailed tables. The first shows imports from European countries:—

From	1914.	1917.	1918.	1919.	1920.	1921.	1922.
France	32,999	21,224	29,531	35,865	65,413	44,735	38,697
Italy	6,005	7,871	13,361	1,638	14,622	6,632	8,014
Switzerland	7,539	7,976	11,264	8,641	29,442	14,662	16,304
Spain	11,065	16,550	21,673	28,702	32,023	19,441	16,518
Portugal	2,805	4,010	3,043	11,217	8,528	4,464	4,538
Belgium	15,085	3,063	1,287	3,718	35,714	26,317	17,358
Germany	47,238	47	7	119	20,647	467	1,129
Austria	4,393	..	..	65	2,007	41	221
Hungary	1,200	653	1,577	6,779	3,678	1,899	1,979
Greece	3,134	..	..	19	554	2,576	1,004
Roumania	912	22	19	1,908	2,692	475	901
Turkey (European)	22,947	12,204	3,351	9,250	26,553	421	3,191
Russia	9,143	9,227	16,974	24,128	42,490	15,810	12,813
Finland	5,524	14,076	18,980	12,722	19,118	7,889	8,050
Sweden	18,557	15,447	2,796	5,316	22,589	31,718	29,214
Denmark	21,287	28,506	15,644	29,622	49,393	38,778	32,202
Netherlands	209,833	140,876	144,909	188,691	374,863	236,773	218,214

The decline in the total as compared with 1921 is largely accounted for by the lower value of imports taken from France, Belgium, Spain, and Holland. Noticeable increases are shown for Germany, Russia, and Finland. The total, it will be observed, is very little larger than that recorded for the first nine months of 1914, but the next table shows that imports from extra-European countries (including the United States) in the first nine months of this year were valued at 75 per cent. more than in the corresponding period of 1914:—

From	1914.	1917.	1918.	1919.	1920.	1921.	1922.
United States	95,789	206,751	379,437	410,323	438,966	214,449	158,849
Cuba	3,744	15,351	17,692	12,149	45,445	5,248	9,951
Mexico	1,422	3,820	5,141	9,874	7,923	7,185	7,185
Argentina	25,895	38,105	44,337	57,623	104,335	55,250	44,188
Brazil	6,230	7,866	7,142	8,702	10,767	4,355	6,028
Chile	4,370	8,643	15,452	5,376	10,238	4,961	3,641
Peru	2,141	2,455	5,299	5,498	11,705	3,642	4,516
Uruguay	2,170	3,807	5,014	7,695	5,761	5,525	3,654
Japan	3,172	11,813	18,156	18,120	19,703	6,508	6,363
China	3,581	6,890	7,432	14,497	20,127	4,314	6,867
Turkey (Asiatic)	2,171	357	609	3,527	4,956	251	801
Other countries	7,718	7,377	7,243	13,548	17,993	22,096	23,847
Total	158,403	364,697	511,603	562,099	679,871	438,522	275,290

The bulk of the decline of £63 millions, as compared with 1921, is accounted for by the drop in imports from the United States and Argentina. Of the three individual increases shown, the most conspicuous is that for Cuba; in the case of Brazil and Peru the increase is small. The next table gives imports from the Dominions:—

From	1914.	1917.	1918.	1919.	1920.	1921.	1922.
Canada	20,844	54,641	82,372	84,565	66,457	44,079	36,606
Australia	28,945	54,240	37,962	85,506	91,459	55,187	51,970
New Zealand	20,252	23,395	21,118	38,828	36,445	42,321	40,750
India and Ceylon	36,715	56,204	73,104	83,551	91,763	39,850	39,914
South Africa	8,869	9,095	9,882	18,512	15,929	13,368	12,518
Egypt	13,472	26,390	43,431	37,185	57,904	17,022	20,455
West Africa	4,811	11,191	13,631	18,589	24,903	8,101	7,672
Mauritius	376	232	3,066	5,231	5,049	4,915	1,997
Straits Settlements	10,099	12,740	7,549	14,502	14,482	5,717	5,334
Malay States	1,493	6,420	1,799	4,678	5,773	2,317	1,971
West Indies	1,880	4,883	4,787	8,932	13,704	5,167	3,672
Other Possessions	6,106	11,650	13,988	15,613	22,599	14,339	11,841
Total	154,282	271,129	312,689	415,817	446,457	252,383	235,039

With the exception of Egypt, from whom our imports expanded a little after a very sharp set-back in 1921, and India and Ceylon, where the figure is practically stationary, the decline is general and most pronounced in the case of Canada. In a comparison with 1914 the figures for India and Ceylon, and for the Straits Settlements are worthy of notice.

On the export side there has been a substantial increase in comparison with 1921 in the value of goods sent from this country to the Continent:—

To	1914.	1917.	1918.	1919.	1920.	1921.	1922.
France	20,330	87,853	101,501	117,299	115,608	35,610	42,287
Italy	0,103	20,485	23,515	18,487	31,068	12,370	15,298
Switzerland	2,586	4,989	5,792	10,558	9,729	5,574	7,446
Spain	6,292	4,038	3,258	8,788	16,287	12,174	10,988
Portugal	3,888	3,752	3,764	6,579	14,111	5,302	5,706
Belgium	8,171	1,326	1,074	34,779	40,757	14,300	18,870
Germany	24,456	..	..	9,105	15,303	12,268	24,384
Austria	2,668	..	..	722	2,609	1,407	830
Hungary	2,404	66	760	3,812	10,285	4,247	2,392
Roumania	1,937	395	428	2,252	4,346	4,713	1,990
Turkey (European)	2,186	145	..	6,112	9,629	3,552	3,087
Russia	11,843	32,788	157	7,950	7,786	802	2,756
Finland	5,538	2,605	1,635	16,070	32,908	6,582	8,738
Sweden	4,962	7,374	3,440	20,075	25,624	10,287	9,047
Norway	4,189	6,132	2,060	24,854	25,746	6,683	8,848
Denmark	10,525	21,254	16,163	27,960	52,499	30,553	31,813
Netherlands	122,078	193,206	163,547	315,702	414,295	166,877	197,181

The most striking figures here as compared with last year are the substantial increases in our exports to Germany, Belgium, France, Switzerland, Italy, and Russia. Spain and Norway provide the only decreases of note. Exports to other foreign countries show a slight decline in the total in comparison with last year:—

To	1914.	1917.	1918.	1919.	1920.	1921.	1922.
United States	27,253	27,786	19,175	21,028	62,922	33,236	40,735
Cuba	1,281	1,490	1,429	1,339	4,571	1,761	969
Mexico	484	578	778	963	2,846	3,874	1,544
Argentina	12,322	9,886	12,567	15,154	30,871	21,506	16,425
Brazil	5,281	5,262	6,518	7,229	16,608	8,169	7,572
Peru	3,385	3,725	5,065	3,737	6,046	4,314	4,052
Chile	921	1,175	1,166	1,241	3,147	1,883	1,185
Uruguay	1,439	1,671	2,164	2,361	4,327	2,479	1,971
Japan	7,066	4,022	4,152	8,163	21,358	14,349	18,411
China	11,237	7,435	9,711	13,022	31,810	19,581	18,818
Turkey (Asiatic)	3,620	599	893	5,418	14,626	102	176
Other countries	11,261	7,767	10,455	11,466	24,065	19,384	15,678
Total	85,550	71,196	74,077	91,055	223,197	130,641	127,536

Apart from the increase in exports to the United States referred to above, the only expansion is in the figures for Japan. Exports to all South American countries declined in value, the most prominent figure in this respect being that for Argentina. Exports to the Dominions have also fallen:—

To	1914.	1917.	1918.	1919.	1920.	1921.	1922.
Canada	13,981	12,964	10,212	9,854	33,792	14,440	18,276
Australia	26,252	16,249	19,162	19,318	43,423	33,694	46,051
New Zealand	7,332	5,376	5,668	7,000	18,078	11,102	11,116
India and Ceylon	52,933	47,349	40,063	45,941	138,458	83,903	69,199
South Africa	14,684	14,098	18,044	14,342	35,016	23,702	18,924
Egypt	5,458	10,680	17,495	11,503	35,983	12,479	11,492
West Africa	4,458	5,377	6,489	7,941	1,528	1,084	906
Straits Settlements	3,691	3,428	4,339	3,974	18,168	8,801	8,611
Malay States	1,765	1,570	1,246	1,239	12,334	6,564	5,050
Other British Possessions	10,477	12,536	13,804	13,475	32,475	23,580	19,830
British exports to Possessions	143,121	129,627	136,528	134,587	369,786	221,144	210,007

There is a substantial increase in exports to Canada, but the outstanding feature of the table is the increase in exports to Australia to the highest figure ever recorded for the first nine months of the year. Exports to New Zealand show practically no change, but there is a further heavy decline in the figure for India and Ceylon.

The final table shows re-exports to some of the principal countries:—

To	1914.	1917.	1918.	1919.	1920.	1921.	1922.
France	7,859	12,414	10,715	23,489	34,261	8,050	13,728
Italy	704	2,592	3,022	3,578	4,696	1,095	1,296
Belgium	4,888	82	10	9,927	15,713	6,832	8,352
Germany	13,347	..	..	4,135	20,174	17,352	13,643
Russia	5,419	2,929	9	2,488	3,782	821	625
Sweden	631	214	61	3,646	1,528	572	534
Norway	408	893	120	1,449	3,951	1,341	1,158
Denmark	474	791	90	4,916	3,389	1,084	906
Netherlands	3,831	3,620	353	17,408	10,411	6,676	4,744
United States	24,525	24,876	3,119	15,382	48,501	14,919	14,650
Japan	146	219	770	1,147	1,491	569	225
Other countries	4,864	3,429	552	5,435	12,370	8,731	6,477
Total for foreign countries	67,006	52,461	18,821	93,000	160,267	68,042	66,336
British Possessions	9,700	6,066	3,986	5,253	20,192	9,598	11,538
Total	76,796	58,527	22,807	98,253	180,459	77,640	77,874

There has been an expansion in our entrepôt trade with France, Italy, and Belgium, but a decline for the second time in succession with Germany. Re-exports to British Possessions include £676,000 to the Channel Islands, a million to India, £4 millions to Australia, and £2 millions to Canada.

THE BANKS AND THE STOCK EXCHANGE.

(BY A STOCK EXCHANGE CORRESPONDENT.)

ATTENTION was drawn last week in the *Economist* (page 927) to the letter from the honorary secretary of the Bankers' Association, addressed to Sir Wilfrid Atlay, chairman of the London Stock Exchange, in which the writer said definitely that the clearing banks had not changed their attitude with regard to the position they have always taken up in respect to sharing of commission between the banks and the Stock Exchange. This attitude is that the banks expect to receive half the gross commission on business introduced to the Stock Exchange by themselves. There was a deputation sent from the Stock Exchange Committee to the Bankers' Association in 1917, and at the meeting the Stock Exchange case was laid frankly before the banks, with a view to getting the latter to reconsider their decision. The Stock Exchange argument is, of course, that, as a broker's business is run roughly at a proportion of at least 50 per cent. expenses of his gross revenue, to return the other 50 per cent. of gross commission to any agent is simply to execute the business for nothing, and as the broker does the greater part of the work involved, this division of profits is unreasonable. The banks took up the attitude now reiterated by the Bankers' Association, and the latest development is that in the bye-election occasioned through the retirement of a member of the Stock Exchange Committee, the same member has been returned, pledged to bring forward a fresh resolution before the Committee for re-arrangement of the proceeds of such brokerage as arises through business introduced by agents, bankers, or others. The unfortunate part of it, from the Stock Exchange point of view, is that the Committee are extremely reticent on this matter, as they are on most official questions that come before them. The Stock Exchange Committee sit in private; no other members are allowed to attend the meetings, and the result of the deliberations is not published to the House at large, except on such occasions as those when new rules, resolutions, or rulings are officially formulated. The consequence is that the average member of the Stock Exchange does not know the views of the majority of the Committee-men for whom he votes at the election every March, and that this ignorance frequently results in brokers and jobbers being under misapprehensions in regard to the precise position which prevails *vis-à-vis* the Stock Exchange and outside institutions. Freer ventilation of disputable points might be a good thing for the House and for its clients.

There are probably very few men in the Stock Exchange aware of the fact that the banks, while not actually saying so in as many words, have plainly hinted at the possibility of their establishment of a clearing house for Government stocks if the Stock Exchange cares to initiate such legislation as would involve a breach with the banks. That this would be feasible, Stock Exchange men will recognise at once. Whether it would be fair or not is another matter. The prices at which bargains would be done between the banks, for instance, would have to be on the basis of quotations which are "made," in the first case, by Stock Exchange jobbers who stand all day long in the market place, ready to buy and ready to sell at whatever risk of profit or loss there may be to themselves. They "run the racket," as the saying is. They make the prices, and for an outside body to deal on the result of the Stock Exchange jobbers' willingness to take all business risks, scarcely commends itself as equitable or just. That it could be done, however, no doubt exists, and this slight illumination reveals that the question is not one which confines itself simply to brokers and their clients. Jobbers are, in point of fact, equally interested. This being so, the House is not a little stirred by the result of the recent Committee election, and if some practical way out of the present fog is not

found before next March, when the ordinary Stock Exchange Committee election takes place, the House will be at sixes and sevens in the spring. The banks claim that the interests of both bodies, banks and the Stock Exchange, are so closely interwoven that for a breach to be made in the cordial relations, established more especially during the war, would be a deplorable mistake. There should be, however, some method whereby the admitted inequity of the present arrangement of commission-sharing could be more fairly dealt with, and another round-table conference between members of the Stock Exchange and the Bankers' Association should have no great difficulty in arriving at a fair and a perfectly amicable agreement. Nobody in the Stock Exchange would charge the banks with a deliberate desire to profit in unfair proportion from the business that they initiate, and a practice of a century's standing is not to be lightly abandoned by those who benefit from it. Where manifest inequity exists, however, neither tradition nor other cause need be quoted to justify its perpetuation.

THE BELGIAN EXCHANGE.

THE movements of the Belgian franc since the Armistice have caused much mystification first by reason of their general correspondence with the course of the French exchange and secondly owing to the change in the relative positions of the two currencies during 1922. The financial life of Belgium is, of course, very closely connected with that of France, and the two countries have many interests in common. The reparations question, for example, is of vital importance to both. In fact, in spite of many differences in their finances and general economic activities, there seems to be a fairly widespread opinion in business circles that the political and economic future of Belgium is closely bound up with that of its more powerful neighbour. On the other hand, the fact that the market for Belgian francs is much more limited than that for French currency must always be borne in mind when considering the disparity between the two. At the beginning of 1919 the Belgian franc was at a slight premium as compared with French francs, but the burden of the conversion of marks circulating in Belgium, a heritage from the period of German occupation which necessitated a loan of 9,500,000,000 from the National Bank, had turned this into a slight discount by the middle of January. This was maintained down to September, 1919, but at that date the wonderful recovery of Belgian industry coincided with a boom period which enabled Belgian production to show itself to considerable advantage. From the middle of September, 1919, to the middle of May, 1921, that is to say practically throughout the period of post-war "prosperity," Brussels enjoyed a premium over Paris. That this disparity was not greater, despite the unfavourable balance of French trade in 1920, was no doubt due principally to foreign speculative holdings of French currency. By the middle of 1921, however, the two currencies met once again, and from June of that year to the time of writing, the Belgian franc has been quoted at a discount in Paris. During the present year, Brussels has tended to move further away from Paris. Throughout the post-war period the note circulation of the National Bank has been increasing, though the total of notes

Belgian circulation shows a slight tendency to increase. Much more important, however, are the trade figures for the two countries, for while the French trade balance has improved considerably this year, the Belgian position is less satisfactory; and this factor is relatively much more important in a country which depends very largely on its industry and transit trade. It is, however, somewhat dangerous to place too much reliance on trade statistics in the case of Belgium as her invisible exports are difficult to determine with any degree of accuracy. On the other hand, the present financial position of the country compares very favourably with that of France. The ordinary Budget very nearly balances, and the Government seems to be making serious efforts to bring order into the national finances. With a general improvement in world trade, the future of Belgium seems comparatively bright. At the present moment, however, while both countries are affected by the collapse of the mark, the importance of Paris as a financial centre and foreign support for the French franc together tend to place the Belgian franc at a discount. On the whole, we are disposed to sum up tentatively a very obscure situation by saying that while the Belgian franc has been governed in the main by the fundamental factors of internal circulation and the resulting price level in relation to world prices tempered by a moderate psychological pull tending to prevent the Belgian franc from moving far from the French exchange, the latter has been much more influenced in its larger market by speculative investment and some conscious efforts to hold in check any tendency to wide variations.

THE STATE OF RUSSIAN INDUSTRY.

(BY A CORRESPONDENT.)

WHATEVER may be said of the prospects of Russian agriculture, the existing state of Russian industry is worse. Estimates of this year's harvests vary from 50 to 75 per cent. of the pre-war production for the whole of Soviet Russia, whereas, on the average, industrial production is not expected at the most to be more than 25 per cent. of pre-war output. The best that can be said is that in most industries production has been slowly improving during the last three years.

According to a recent review published in *Izvestia*, the production of coal was in 1920 27 per cent. of the pre-war level, in 1921 it was 31 per cent., and in 1922 it rose to 37 per cent. In the oil industry production at the present time stands at 52 per cent. of the pre-war output, compared with 40 per cent. in 1920. The production of the cotton industry has risen from only 5 per cent. in 1920 to 17 per cent. in 1922; and in the chemical industry the output has increased from 10 per cent. of the pre-war level to about 20 per cent. at the present time. But in other branches of industry an actual decrease of production is recorded. The leather and paper industries, and the production of wine and spirits, have suffered a severe curtailment owing to the recent economic crisis. The position is specially serious in the iron and steel industry. It is reported that while the state of affairs in the Urals is fairly satisfactory owing to a sufficiency of fuel, in the Don basin works are closing down owing to the shortage of coal. The production of agricultural machinery has been severely handicapped by financial stringency. The peasants cannot afford to buy the ploughs and other implements of which they stand in need, and the efforts of the Soviet Government to check further inflation have prevented the industry from selling any large amount of goods on credit. In the heavy industries nearly the whole production is taken by the Commissariat of Ways and Communications, the Commissariat for War, and other public bodies, including State Trusts; but these institutions have themselves been handicapped by lack of finance, and have been unable to embark on any large schemes of reconstruction or development. Broadly speaking, the low level of production in industry appears to be due not so much to difficulties with labour or to inefficient management, as to the impossibility of finding a market. Among the masses of the population past savings have been eaten up or have vanished altogether through depreciation, and after the failure of last year's crops the peasants have

hardly any purchasing power to satisfy even their most urgent requirements.

As an index of what the peasants set most store by, it is interesting to note that production and sales have shown most progress in the case of cotton goods, rubber goloshes, and tobacco. In 1920 the total production of goloshes reached only 10,000; in 1921 it reached 500,000, and in 1922 the output is estimated to reach 4,000,000 pairs. But rubber goods and tobacco are not of any great importance in comparison with the textile industry.

The textile industry was for many years before the war Russia's most important branch of industrial activity. In 1909 it employed 31 per cent. of the total number of industrial workers in Russia. The imports of cotton (mainly raw cotton and yarn) in 1912 were valued at 42,000,000 gold roubles, and the exports of cotton products at 32,000,000 gold roubles; 75 per cent. of Russia's raw cotton requirements were supplied from Turkestan and the Caucasus, the remaining 25 per cent., mostly the finer grades, being imported from America and Egypt. After the revolution and the separation of the Border States, the number of factories remaining in Russia was 592, compared with 840 before the war. The following table gives particulars of the change:—

	Remaining in Soviet Russia.	Percentage of Pre-War Figure.
Factories	592	70.7
Workers employed	429,659	84.5
Total spindles	6,757,769	77.3
Total looms	190,610	83.4
Total horse-power	309,117	80.5

According to Russian figures, the production of raw cotton in Turkestan has fallen to about 10 per cent. of the pre-war level. The following table shows the area sown and the yield of raw cotton from 1916 to 1921:—

Year.	Area Sown. Acres.	Yield. Million Lbs. (English).
1916	1,936,000	1,743
1917	1,957,000	920
1918	216,000	191
1919	243,000	162
1920	294,000	115
1921	297,000	180

The 1922 harvest is estimated by the Soviet authorities to be more than double last year's, but there is reason to suppose that this forecast is far too sanguine.

Cotton manufacture began to decline in 1915. In 1918, when output reached its lowest ebb, the whole industry was nationalised, and in 1920 214 of the most important mills, together with 32 smaller works, were under the control of the Chief Textile Board (Glartestit). At that time only 7.6 per cent. of the spindles and 11.3 per cent. of the looms in these mills were working. In the course of 1921 the new economic policy, which consisted in the leasing of smaller enterprises and the concentration of the larger factories in State Trusts, was applied to the cotton industry. In November, 1921, Glartestit was abolished, and about 14 semi-independent State Trusts were created. Each of the Trusts includes spinning, weaving, and all the processes of manufacture independently of outside sources. Many of the Trusts did not start functioning till October of last year. In July, 1921, there were only six spinning mills at work with 60,000 spindles. By the end of the year 42 mills with 2,000,000 spindles were in operation. In March, 1922, there were 92 factories actually working, with 73,000 looms and 2,371,182 spindles. In this month production reached the highest point yet touched since the Revolution, the output of yarn being over 13,000,000 lbs. and of piece goods, finished and in the grey, about 75,000,000 yards.

This rate of production represents about 75 per cent. of the figure put forward by the Russian delegation at The Hague as the minimum production which would enable the cotton industry to satisfy the most urgent needs of the population. This relatively high figure, however, has not been maintained, owing to the financial crisis in the middle of the year. Like other industries, the cotton industry has found difficulty in disposing of its output, chiefly owing to the absence of an efficient marketing system, but with the re-establishment of the co-operative movement and the improvement in this year's harvest the

sale of cotton textiles is recovering quicker than that of most other industrial products.

Russia's textile industries are of special importance to the outside world, owing to the large amount of foreign capital invested in them before the war. It has been estimated that the total foreign capital invested in the different branches of the textile industry was about £20,000,000, of which nearly one-third was British, the rest being for the most part French and German. The largest single enterprise was Messrs Coats' cotton thread business. It is doubtful whether any large number of the more efficient factories will be handed back to their former owners. The existing State Trusts are not likely to surrender their powers without a struggle, and even if the Central Government should decide that for political or other reasons it was advisable to restore as many of the mills as possible to their former owners, either on a freehold or leasehold basis, there is certain to be strong opposition whenever the negotiations come down to particular cases. It is significant that, according to a report published in *Russian Information and Review* on October 28th, a conference of directors and managers of textile enterprises in the Ukraine declared that since the industry was making satisfactory progress and had recently increased its output on the average 25 per cent. compared with last year, there was no need to invite the participation of foreign capital, or to take the mills out of their present hands and hand them over to mixed companies.

It is sometimes held that the longer the recognition of the Russian Government is postponed, the more favourable will be the terms eventually offered to former foreign owners; in other words, that the price of recognition is bound to rise as Russia's need for foreign assistance becomes greater. But there is this to be borne in mind on the other side: that the semi-independent State Trusts, which have been created as a result of the new economic policy, are becoming more deeply entrenched as time goes on, and that so long as they can show a fairly satisfactory record of improvement over previous years (which should not be difficult), it will become increasingly hard for the Soviet Government to justify their abolition, or to compel them to surrender their most profitable factories for the sake of attracting foreign capital or carrying out a policy of restitution. According to this view, the time for foreign capitalists to get the most favourable terms was last year, when industry was at an even lower ebb than it is now, and before the State Trusts had got firmly established. One effect of the new economic policy appears to have been to create powerful new vested interests in Russia and to weaken the power of the Soviet Government to dispose of Russia's economic resources in accordance with a general programme of reconciliation with foreign interests.

Notes of the Week.

A Short Session.—The King opened the new Parliament on Thursday, and his Speech heralds a session that will be short, but of great historical importance. Its supreme task is, of course, to pass the Irish Bill. Herein lies a stern test for the sagacity of the new House of Commons. To pass that test with credit it must eschew the large temptation of attempting to tinker and patch the Irish Free State Constitution, and must realise that, whatever its imperfections, it must go straight through. As we have shown on previous occasions, the Constitution of the new Irish Free State is not ideal. It is too freely sprinkled with theoretical excrescences, which reveal, here and there, the influence of the De Valera school. It is, in parts, culpably academic, and may reasonably shock the more practical of our Parliamentarians. But, perfect or imperfect, it must go through as it stands, and go through before December 6, unless the whole terrible chapter of Anglo-Irish strife is to be reopened. Those who realise its imperfections the most clearly must be content to leave the task of improvement to experience and statesmanship. For the British Parliament to attempt the task is to play with fire, that

would inevitably burn, and burn disastrously. Unemployment occupies the place of second prominence in the Speech from the Throne. The references to it do not carry us very far. They could not have been left out, nor would the Labour Party have been exercising their proper function had they failed to raise the subject in the debate on the Address. But it is not a matter for legislation, at any rate in this session. Unemployment will doubtless be the dominant subject in the next session, as Ireland is in this; and in the meanwhile the Government have done all that could possibly be expected of them in promising reconsideration and expansion of the ameliorative plans devised by the late Administration. We notice that an evening contemporary takes the composer of the King's Speech to task for mentioning in one and the same sentence the unemployment problem and the League of Nations plan for Austria. This close juxtaposition is, on the contrary, to be commended; for it may be taken, we hope, as evidence of the Cabinet's realisation that the real cure for unemployment lies abroad in the rehabilitation of Central Europe. We welcome on other grounds the prominent mention of the Austrian scheme in the Speech from the Throne. In determining to obtain authorisation in this short session of the British share in the League's plan, the Government are resisting the temptation of a procrastination that might have had unfortunate results. For one stumbling-block in the way of the League plan's success is the delay that may be caused by the necessity of passing legislation in the Parliaments of all the guarantor countries. Apparently, Westminster, at all events, will not provide a delaying factor. Apart from this fear of delay, it is not all plain sailing with the League's Austrian scheme. After a great struggle, the obstacles to Austrian acceptance will probably be surmounted. But outside Austria there are difficulties. For instance, the composite nature of the guarantee is causing worry to those who may be concerned in floating the loan. In view of all the difficulties, it is all the more satisfactory that the British Government appear determined to play their own part expeditiously.

The Premier and the Unemployed.—In referring the unemployed "marchers," who wished to interview him, to the Minister whose department is primarily concerned with Labour questions, Mr Bonar Law has made a stand for departmental responsibility which was very badly needed. For one of the principal faults of the Coalition administration was the readiness of Mr Lloyd George to take upon his own shoulders problems which properly belonged to one or other of the principal departmental Ministers. It may, of course, be argued that in choosing this particular case for his initial vindication of the departmental principle Mr Bonar Law was unfortunate. This week's unemployed demonstration was, we believe, planned long ago, at a time when the Prime Minister of the day was known to be accessible to all and sundry. This being so, a direct audience at 10 Downing street was quite naturally made the chief objective of the demonstration; and its refusal by Mr Lloyd George's less ubiquitous successor caused natural disappointment and resentment. There are those who think that Mr Bonar Law would have avoided trouble and bitterness, without sacrificing sound principle, if he had, in company with his Minister of Labour, received the unemployed deputation, stating clearly that he did so merely because it was planned in the accessible Georgian days, and that in future all deputa-

tions would be received by the departmental Minister to whom the problem in hand was appropriate. On that aspect of the question opinions may differ, and it is admittedly unfortunate that so vital a matter as unemployment should turn up as a test case so soon after the elections. But on the main point, namely, his striking insistence at the outset of his Premiership on the doctrine of departmental responsibility, the Premier's decision will be welcome to all who appreciated the shortcomings of the late régime. Mr Bonar Law's obstinate maintenance of the position he took up from the first is the sure and only way to restore not only administrative efficiency in the departments, but also the even more important condition of joint Cabinet responsibility. Most unfortunately, however, in our opinion, the Premier, while refusing to receive the deputation of unemployed, has agreed to receive a deputation of miners. To make a special exception in the case of the miners is far more dangerous than to make it in the case of the unemployed. If he receives the miners he can scarcely refuse to see the railwaymen. If he receives the railwaymen other unions will lay specific claim to a special audience. In recent years the miners and railwaymen have come to claim, almost as a right, the opportunity of interviewing the Prime Minister. The claim to such a special privilege is dangerous and undesirable, and we trust Mr Bonar Law will make it abundantly clear that his reception of the miners' deputation is a very special departure from the general rule which he intends to observe.

A Critical Issue for Ireland.—Our Dublin correspondent writes:—Ireland is passing through the most crucial testing time of her whole national existence. Her agony began when the definite cleavage took place in the ranks of successful Sinn Féin with honoured and trusted leaders on either side. It waxed more poignant as divided councils and the disputed application of agreed principles gave place to definite dissension, personal recrimination, and hostile action, and developed finally into an activist minority in armed revolt against the majority and against the Motherland whose welfare was voluntarily entrusted to the guidance of that majority. Englishmen will find it wellnigh impossible without the exercise of an imaginative sympathy to understand how hard it was for Irish Nationalists to apply legal pains and penalties to other Irish Nationalists who masked a parricidal and anti-national violence by frantic appeals to the ideals, the shibboleths and the precedents of Irish Nationalism in its long contest against British control. All the traditional sympathy of the populace was for the outlaw on the "hillsides," for the accused with his patriotic "speech from the dock," for the convict whose disinterested pursuit of an inherited idealism had led to his lonely occupation of the "felon's cell." Hence came the long-drawn-out negotiations, the Collins-de Valera pact, the forbearance and further negotiations after the election, the slow, reluctant drawing of the executive sword. And all the time the rebel irregulars and the de Valera and Childers faction put themselves further and further in the wrong with public opinion. Their dialectic has been positively repugnant to sincerity and common sense, their chosen aim the bullying of the majority of the nation into subservience to their own small minority, their methods of secret war upon the community, upon individuals, upon wealth, upon the means of production, and upon the facilities for transport, communications, and distribution; faithfully following the Bolshevik model, they created a situation in which all who had lawless or criminal proclivities could follow their bent and, willingly or not, became their coadjutors and auxiliaries. Slowly, but with decision, the Provisional Government decided that the time had come to grasp the nettle firmly—that de Valera and his friends had finally goaded and driven the public into a stern resentment beyond all possibility of a sentimental reaction against severity. With equal deliberation and an identical recognition of the appropriate moment, the Catholic Hierarchy threw the whole weight of its spiritual authority and powerful organisation into the scale. Again there was a pause, an offer of amnesty on surrender, a further pause, the military courts were set up and severe penalties proclaimed. Irregular activity paused, and thereafter re-

doubled, and then last week four prisoners taken with arms were executed after military trial in Dublin. In debate in the Dail the Government was sustained, and Mr Johnstone, the Labour leader, after many questions, professed himself satisfied on the ground that the prisoners had been taken when obviously about to take part in an ambush. Rumour spread that the death penalty was about to be visited on many others, including Erskine Childers, who had recently been captured. A midnight application for leave to institute *habeas corpus* proceedings was successfully made to the Master of the Rolls, and long arguments have ensued, in which Counsel has sought the protection of the King's Courts for Erskine Childers, as a British citizen unlawfully held captive and in danger of execution by the Free State Provisional Government and its armed agents, whose legal authority and competence were directly challenged. To-day, the writ of *habeas corpus* was refused. The Master of the Rolls pointed out that it was the action of Childers and his friends that had created the state of war which virtually ousted his jurisdiction to deal with the case: the Treaty was the law of the land, and, whatever the exact forms and phrases, the Provisional Government, as the Government charged with the responsibility of dealing with the transitional period, had inherent power and authority to do all things necessary for the establishment and maintenance of order. Readers of the *Economist* will probably know the sequel by the time this article is in print. Erskine Childers is the distinguished son of an English father and an Irish mother, a thinker, student, man of letters, the author of "The Riddle of the Sands" and of valuable works on constitutional law and history in the British Empire; he served in the British forces in the Boer War, and with distinction in the Naval Air Service in the recent war. In private life his friends and acquaintances have known him for a disinterested, high-minded, and cultivated gentleman. He rendered invaluable service to Sinn Féin of recent years, and has been the protagonist of the de Valera faction in the polemics raging round the Treaty and its effects and the constitutional position of the Irish Free State. More recently still, according to the newspapers, he has been bearing arms in active operations against the Free State Army in the South and West. Thus the agony of Ireland has reached its crucial climax, where the blood of the bearers of honoured names is like to flow—not in the heat of armed conflict, but by the deliberate act of executive severity. And through all the tragedy and personal grief, the faithful student of national biology and national pathology can descry the turning-point in a malady that has threatened Ireland's life. The crisis will be safely passed, the febrile symptoms will subside later, and Ireland will win through to convalescence and to tread the paths of ordered progress towards full national well-being and the possible realisation of all her hopes. There can be no doubt but that the huge bulk of the population supports the Provisional Government—and will in an ever-increasing degree continue to support it—in applying in this, the last, resort the most drastic measures of executive severity so long as they are even-handed, systematic, and persisted in long enough for success. But there may be, of course, before the present crisis is over, past, certain violent reactions, for which it is well to be prepared. But the end is sure. Ireland will now assert her national will, and the re-establishment of order and peace within a few short months is certain. All that is needed externally to this end—and the omens are propitious—is the maintenance of the Treaty and of the policy and spirit underlying it by Great Britain.

Employment in October.—Certain movements in the weekly average balance-sheet figures of the London Clearing Banks for October were taken to indicate improved trade activity. But these favourable deductions find little, if any, support in the official figures of unemployment in October, as presented by the *Ministry of Labour Gazette*. During last month, it is true, a slight reduction from 14.6 per cent. to 14.1 per cent. took place in the trade union unemployment returns; but of the whole mass of workers coming under the Unemployment Insurance Act 12.0 per cent. remained out of work at October 23rd—the same percentage as at September 25th.

Monthly movements in the trade union percentage and the record for the last pre-war year are tabulated below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.									
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.

* Excluding coal miners.

Employment in October continued bad, and a further decline in the demand for labour took place in the cotton trades. On the other hand, conditions improved in coal and iron mining, the pig-iron industry, the woollen and worsted industries, and the pottery trades. The total number of registered unemployed in Great Britain and Northern Ireland rose from 1,368,000 at the end of September to approximately 1,385,000 at October 30th. Obviously the new Government inherits an unemployment problem that shows no present signs of losing its acuteness.

Cost of Living.—It will be remembered that the *Economist* index number of wholesale commodity prices took a turn upwards in October. Official figures now show that retail prices moved in a similar direction. According to the *Ministry of Labour Gazette*, the cost of living on November 1st was 80 per cent. above the pre-war level, or 2 per cent. higher than at October 1st. Monthly movements of this percentage are set out below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st ..	85-90	120	125	165	92
February ..	90	120	130	151	88
March ..	90	115	130	141	86
April ..	90-95	110	132	133	82
May ..	95-100	105	141	128	81
June ..	100	105	150	119	80
July ..	100-105	105-110	152	119	84
August ..	110	115	155	122	81
September ..	110	115	161	120	79
October ..	115-120	120	164	110	78
November ..	120-125	125	176	103	80
December ..	120	125	169	99	..

At November 1st the average increase over July, 1914, in the cost of the pre-war working-class dietary was about 76 per cent., as compared with 72 per cent. at September 30th. Our official contemporary attributes the advance in the percentage to seasonal increases in the prices of milk and eggs, and also to advances in cheese, frozen mutton, and tea. Some cheapening in bacon, fish, potatoes and British meat were insufficient to compensate for the increase in the prices of the foods named. For imported beef, flour, bread, sugar, butter and margarine October produced, on the average, no appreciable price change.

Stabilising the Mark.—In connection with the scheme recently submitted by economic experts to the German Government for stabilising the mark, a correspondent has submitted to us the following questions:—(1) Is there to be a free market for the export of gold? (2) Does the success of the scheme depend upon hitting the right ratio between marks and dollars? (3) What will happen if the foreign exchanges do not adjust themselves to the new official ratio? Will the gold disappear to foreign countries? (4) Would a Moratorium be a sufficient inducement to mark speculators to retain their holdings, or would the uncertainty as to what would happen at the end of the period induce them to convert their holdings into gold? The scheme does not enter into very great detail on these points, but, as we understand it, the answer to the first of these questions is that there is no intention of displacing paper circulation in Germany by a gold cur-

rency, and any tendency to convert for internal purposes could readily be checked by limiting the right to exchange for gold to very large sums or even only exchanging gold in the form of bars. Indeed, it is not necessary to the scheme that there should be any right of conversion at all. The problem is to hold the foreign exchange market, and for this purpose the experts suggest that a certain sum in gold, which is put in one of the reports at 25 millions sterling, should be set aside as security for a credit in various foreign currencies. There might be difficulty in raising this credit unless the gold were deposited either in Amsterdam or in some other country or, at all events, in the occupied areas; and in the sense that the banks which give the credit must in the last resort have the right to claim the gold, is a condition of the scheme. But the plan does not involve the free buying and selling of gold. It does involve the buying and selling of marks out of a foreign currency credit secured by a 100 per cent. gold reserve. The experts also contemplate supplementing the 25 millions gold credit by a further credit based upon assets such as the export tax, the figure of a further 25 millions being mentioned by the report of Messrs. Vissering, Dubois, and Kamenka. The success of the scheme depends upon whether the total credits made available are sufficiently large in relation to the amount of marks the Exchange Board might have to buy. In similar pre-war exchange schemes the controlling authority has usually had enormous credits available, and a comparatively small margin of currency which it has had to buy or sell, and it is impossible to say what will happen in such abnormal circumstances as those of Germany to-day. But the success of the scheme obviously depends to a large extent on selecting the right ratio. If the mark is overvalued, imports would be immensely stimulated and exports checked, with the result that the Exchange Board's credit would steadily disappear, the gold would be taken over to liquidate the debt, and the scheme would come to an end. Clearly, therefore, the ratio must be one which, taking into account the present level of German prices and wages, will, as far as possible, maintain and increase German exports. The suggestion that the foreign exchanges will not fall into line is groundless, for so long as dealings are being transacted on an immense scale at a fixed rate, the market must conform. Indeed, it is to be presumed that if the preliminary arrangements for the scheme were going satisfactorily, and it became known what rate had been decided upon, the market would tend to steady itself round about this ratio in anticipation. On our correspondent's last question we are inclined to think that under any circumstances many foreign holders of marks would endeavour to unload as soon as they realised that there was any prospect of stability, and no scheme would be inaugurated without sufficient foreign credits to cope with the early rush of tired speculators. The more difficult test of the scheme and one less possible to calculate is whether the reserve would stand up against the drain that might be caused by a long-continued adverse trade balance. The prospect of a settlement might restore private investment by foreigners in Germany, and no doubt the experts count upon assistance from this source; but, as we have said, one of the most vital factors is the selection of the right ratio.

The Improvement in Shipping.—The outward coal markets have been considerably disturbed by the wide fluctuations in the Continental exchanges, but a very good business has been done to some destinations, Alexandria, Gibraltar, Port Said, and the River Plate all figuring prominently in the fixtures made from the Welsh ports. In the homeward markets the tone has been very healthy, with a good steady advance in rates for all the active sections. The River Plate this week has been conspicuously brisk, with numerous steamers taken to load maize from the various ports, the freight money paid showing about 2s 6d to 5s per ton increase on last month's figures. Steamers of useful size to load November-December from not above San Lorenzo were freely taken at 27s 6d to 28s 9d, and December-January was closed at 29s 6d, while January secured as much as 30s per ton. In four working days something like 150,000 tons of carrying space was taken up by shippers, and this has been very encouraging to shipowners after the long period of depression. The

Nitrate ports are also showing more activity, with steamers closed for the United States at \$5½ per ton, while from the Northern Range ports the rate for heavy grain has risen to 14 to 15 cents per 100 lbs to the Antwerp-Rotterdam-Hamburg range, this comparing with 10 to 11 cents taken a few weeks back. Steamers to load next month for the Mediterranean have been able to secure cargoes at 4s 1½d per qr, which is the best recorded this year. The Greek Government wants about 45,000 tons of steamer space for next month and early January, and notwithstanding the fact that the Canadian season is over, the supply of early tonnage from the American Northern Range and Gulf ports is very small. Another market of considerable promise is the North Pacific, where suitable steamers have been taken up for December-January at 38s per ton. Shippers working in the Cuban sugar market are now showing a lot of interest in vessels able to load the new crop, and there has been a sharp advance in values, with orders quoting freely to the United Kingdom, France, and also Japan. This is a market likely to see a lot of animation before the close of the year. In India the tone is much better, and the outlook for grain, seeds, and produce is very favourable. Steamers have been taken up from Bombay at 27s 6d per ton on the dead weight, and large bookings have been made for rice per liners working from Burmah at 30s per ton, Germany again figuring prominently in the business done. Beans from Dalny/Vladivostok have been actively enquired for, and there are orders quoting to the United Kingdom, Denmark, and the German Baltic ports. Saigon is another taker of tonnage, with business done at 32s 6d per ton to the Continent. In the Australian market chartering so far has been limited, but shipowners are looking for a big increase in business very shortly. The exportable surplus of Australian wheat is expected to be very full, and charterers are interested in steamers for January-March loading at 47s 6d to 50s per ton. Ore receivers are also in the market again, and with tonnage on the short side, rates from the Mediterranean are moving upwards.

British Trade Prospects in India.—The Department of Overseas Trade has recently published a "Report on the Conditions and Prospects of British Trade in India," which has been revised down to September, 1922. The Report itself makes most interesting reading, and its value is considerably enhanced by the fact that the information has been brought so well up to date. It is gratifying to learn that the huge stocks of uncleared piece-goods are being gradually reduced, and, better still, that goods are moving into consumption. The monsoon results have been, on the whole, quite good, as far as may be judged from available reports, and there seems thus to be some reason for hoping that the old stocks will be cleared during the cold weather. The political atmosphere, too, has been cleared during the past few months, and the boycott movement is steadily losing ground. It is true that India's credit has been greatly damaged by the action of unprincipled traders in repudiating their obligations, and that congestion of business in the Indian Courts has made it exceedingly difficult for creditors to obtain redress. Something, however, seems to have been done to improve matters in this connection, though the difficult legal question of determining the rate of exchange on past due bills still awaits satisfactory solution. A general idea of the trade position is given by the following table of private imports and exports of merchandise:—

(IN LAKHS OF RUPEES.)

	Average of 5 Pre-War Years Ending 1913-14.	1919-20.	1920-21.	1921-22.
Exports	2,19.50	3,09.01	2,38.30	2,29.55
Re-exports	4.62	17.78	18.04	14.06
Imports	1,45.85	2,00.80	3,35.60	2,66.43
Balance of trade in merchandise	78.27	+ 1,25.99	— 79.26	— 22.82
Total visible balance of trade (including treasure and Government remittances)	— 42	+ 95.32	— 50.14	— 33.73

The reduction in the adverse balance of trade in merchandise (private) for the year 1921-22 is a welcome sign of a return to more normal conditions, though much leeway has still to be made up if the pre-war average is to be re-established. Great Britain's share in Indian trade has been, on the whole, maintained, for most of our com-

petitors seem to have suffered even more than we have from the effects of the recent depression. The following table of percentage shares in the various totals for the United Kingdom and its four principal foreign competitors for the Indian market will make this point clear. (Periods: (a) for 1913-14, (b) for 1919-20, (c) for 1920-21, and (d) for 1921-22):—

	IMPORTS.				EXPORTS.			
	(Share per Cent.)				Including Re-exports.			
	(a)	(b)	(c)	(d)	(a)	(b)	(c)	(d)
U. Kingdom..	64.1	50.5	61.0	56.7	23.7	29.6	21.9	20.1
British Possessions....	5.9	10.5	5.0	10.3	14.3	14.4	21.1	20.9
Germany	6.9	..	1.4	2.7	10.6	..	3.4	6.7
United States..	2.6	12.1	10.5	8.1	8.9	14.9	14.8	10.4
Japan	2.6	9.2	7.9	5.1	9.2	14.3	9.5	15.5
Belgium	2.3	3	1.6	2.0	4.9	3.1	5.0	3.3

The most noticeable features of the last year have been the re-entry of German goods into the Indian market, and continued competition from Belgium. Dyeing and tanning substances, iron and steel, hardware and machinery are the principal goods imported from Germany, while 64 per cent. of the imports from Belgium consist of iron and steel. Imports from Japan contracted by nearly one-half to 13½ crores of rupees, the main items being cotton piece-goods (28 per cent.), cotton yarns, and matches. Indian exports to Germany, while very brisk in the summer of 1921, have been very adversely affected by the collapse of the mark. The future of Indian imports naturally depends on the future of the export trade, and this, in turn, hinges on the prospects for increased shipments of produce to Central Europe, Russia, Japan, and the United States. Conditions in the two last-named countries are improving, and the United Kingdom may perhaps be expected to take greater quantities of Indian produce than last year. Although the fiscal policy of the Indian Government will claim the closest attention of shippers, there seem reasons for hoping that the Indian trade position will improve in the forthcoming year.

National Savings Certificates.—On November 1st, the number of Savings Certificates sold since their inception reached 600 millions, representing a cash investment of £465,614,148, of which approximately £119,727,000, or 25 per cent., has been withdrawn, leaving a balance invested of approximately £345,887,148. These and other facts relating to the national savings movement have been published this week by the National Savings Committee, which is to be sincerely congratulated upon the result of their labours during the past six years. The Committee states that the main reason for the continued steady sale of Savings Certificates, apart from their attractiveness as an investment, is the steady habits of thrift and saving that are being inculcated by the valuable work of the voluntary Savings Association throughout the country. These influence sales not only directly by making it possible for their members to buy certificates on the instalment plan, but also indirectly because every member is a propagandist for the Savings Certificate in the community in which he lives. In England and Wales there are at present some 20,000 Savings Associations at work—in schools, firms, offices, women's organisations, social and other clubs, &c. New associations have throughout the present year been formed at an average rate of 150 per month.

An Insurance Charge.—Mr Leonard Aldridge, against whom a serious charge has been brought at Bow Street in connection with re-insurance premiums, has had a rapid rise in the insurance world, and until last week was managing director of the United General Commercial and another company, the City Life, whose affairs are familiar to readers of the *Economist*. Originally an official of an insurance company, Mr Aldridge started some years ago as a broker, and in 1919 he had the chief part in floating the United General, which took over the business and assets of an old company called the United Sickness and Accident. The authorised capital of the United General is £1,000,000, but the paid-up capital

is just over £266,000, the uncalled liability being about £216,000. The largest shareholder appears to be the City Life, which has 50,000 shares, and this holding, which stands at an obviously too high price in the City Life balance-sheet, is one of the things that has given rise to anxiety about the Life company's strength. The United General's own balance-sheet is made up as at June 30th, and should be issued shortly. Mr Aldridge has had associated with him in the management of the United General two former directors of the Aircraft Manufacturing Company, with which Mr Aldridge was believed to have business connections in the days of its prosperity. The forthcoming report of the United General will be examined with some interest.

Cotton Trade Short Time.—Cotton spinners and manufacturers in Lancashire during the last few weeks have lost ground, and there is a tendency for more machinery to stand idle for want of work, writes our Manchester correspondent. At the end of last week the state of trade was again considered by the general committee of the Master Spinners' Association, and after a long discussion it was decided to continue the present short-time arrangement until the end of December. This decision means that the mills using American cotton will continue to run only 35 hours a week instead of the usual 48. In the opinion of some members of the committee restriction of output should be on a larger scale, and it was decided to take a ballot of the members on the question of working only 24 hours a week. The voting is now taking place, and the result will be announced at the end of next week. To put this increased short-time movement in operation it will be necessary for the owners of 80 per cent. of the spindles using American cotton to vote in favour of the scheme. There is some doubt in trade circles as to whether the necessary majority will be obtained. In the manufacturing section no organised curtailment of production is taking place, but more weaving employers are stopping looms and numerous sheds are working only during daylight in order to save the expense of lighting. As things stand at present the outlook for the operatives this winter is rather gloomy, but it may be mentioned that employment is distinctly better than last January.

American Cotton Crop.—Our Manchester correspondent writes:—Lancashire traders at the present time are taking more than usual interest in the official statistics relating to American cotton supplies, as there is a fear in some quarters of a distinct shortage next summer. This week the United States Government has stated that up to the 14th inst. the number of bales ginned so far this season was 8,870,000 bales, against 8,140,000 bales a fortnight earlier, 7,274,000 bales on November 14, 1921, and 8,915,000 bales at the same time in 1920. The report when published on Tuesday last resulted in rather wide fluctuations in prices, but, on the whole, the figures were about equal to expectations. If the receipts during the remainder of the season are the same as a year ago the crop will be about 10,000,000 bales, against 8,500,000 bales in 1921-22. As there is a possibility of the consumption during the current twelve months being about 12,500,000 bales, it is pretty certain that stocks at the end of next July will show an important reduction.

The Paper Industry.—Gratifying evidences, statistical and otherwise, of a substantial revival in the paper-making industry of the United Kingdom are forthcoming. The acute depression of 12 months ago, probably the worst experienced in its modern history, has been succeeded by a period of increasing activity and a steady expansion of both the home and export trades. Imports of raw material (wood-pulp and vegetable fibres), upon which the industry has to rely so largely, have improved more than 60 per cent., and exports by over 50 per cent.—that is, taking the full period of the first nine months. Even more significant has been the steady improvement in the latter month by month. Every month since February, when the quantity of paper exported was only 119,201 cwts, has shown a marked advance upon its predecessor, till in September the month's total reached 266,643 cwts. The average for the

first six months was 149,160 cwts, and for the next three 229,212 cwts. The total bulk of exports for the nine months exceeded a million and a-half cwts (half-a-million cwts better than a year ago), and were approximately at the level of 1920, as will be seen from the following:—

	January-September, 1922.		
	1920.	1921.	1922.
	Cwts.	Cwts.	Cwts.
Newsprint	679,841	565,323	947,137
Writing (in large sheets)	161,193	101,514	115,860
Packing and wrapping	279,498	98,309	189,248
Tissue paper	9,628	8,314	8,288
Coated papers	111,794	32,881	47,570
Other sorts	25,833	18,395	20,752
Stationery	156,510	119,297	119,986
Cardboard, &c.	155,976	125,407	133,754
Total (incl. other sorts) ..	1,590,281	1,069,440	1,582,595
Value, f.o.b.	£ 8,144,254	£ 6,124,444	£ 4,722,853

For approximately the same quantity the value in 1922 was only 58 per cent. of that in 1920, or little more than half. Should the recent rate of export continue to the end of the year the total will reach only about two-thirds of the 1913 figure, when it was 3,498,914 cwts. Nevertheless, it will be readily conceded that, thanks to the energy and enterprise of our paper-makers, a very big stride forward has been made towards the recovery of markets abroad. Prices appear to have got down to an economic level, and to have become steady. In January the average value per cwt exported was 80s, in August it was 50s, and in September it had dropped to 48s 6d. Of course, competitive prices have only been made possible by the reduced cost of materials, labour, &c., though rail rates, and to a larger extent sea freights, are still very heavy, and constitute a serious handicap. The fall in the costs of raw materials is remarkable. Chemical dry wood-pulp imported in January had an average value of £28 18s per ton; in September it had fallen to £13 4s. In September last year it was £33 10s. Mechanical wet wood-pulp in January averaged £6 3s per ton imported; in September it had dropped to £4 15s. In September a year ago the average was £11 18s. In the nine months January-September we imported 753,736 tons of paper-making materials (including wood-pulp 623,468 tons and esparto grass and other vegetable fibres 120,833 tons), against 466,423 tons and 981,334 tons in the same period of 1921 and 1920 respectively. We also imported large quantities of paper, the nine months' total being 7,894,458 cwts, of which 34 per cent. was newsprint and writing paper, 25.5 per cent. packing and wrapping paper, and 35 per cent. strawboard and millboard.

The Honduras Loans.—The invitation announced in Tuesday's *Times* from the Honduras Government to the Bondholders' Committee to propose terms of settlement reopens, we trust to conclude finally, a curious and discreditable chapter of financial history. In 1867 Honduras owed its foreign creditors £121,450, of which over £90,000 was due to bondholders, for the principal and 40 years' unpaid interest of its share in the earliest of Central American loans. Its annual revenue was about £50,000, but an American explorer had suggested "development" by a trans-continental railway line. The national credit was restored, as a preliminary, by the issue of a modest 5 per cent. loan of £90,000, arranged by one Don Carlos Gutierrez, its Minister in London, and secured on the Customs of Amapala. The creditors were paid off; Señor Gutierrez was helped by a French financier and racehorse owner, M. Charles Lefevre, who, as was afterwards learnt, had been convicted and sentenced "in default" for breach of trust in Paris; and the two, in conjunction with leading British and French financial houses, brought out, between 1867 and 1870, three loans in both capitals, nominally totalling nearly £6,000,000. The interest was respectively 10, 6½, and 10 per cent.; they were issued at large discounts, and "secured" on the Customs, the receipts of the proposed railway, and the produce of the State forests and domains. The promoters took large commissions, extra drawings were sanctioned, the interest and the bonds drawn were paid out of the capital; and M. Lefevre bought largely, and so manipulated the market that the bonds were kept at what the *Economist* afterwards called "a

mala fide price," which attracted guileless investors. After October, 1870, the railway contractors were unpaid; and in 1872 a daring attempt was made to place a loan of £15,000,000 for transforming the line into a ship railway to carry fully-loaded steamers from the Caribbean Sea to the Pacific. But the Council of Foreign Bondholders pointed out that the prospectus mentioned no bankers or contractors, and the *Economist* that the statistics adduced multiplied the British tonnage going round Cape Horn more than ninefold. The plan was dropped; the loans went into default; M. Lefevre had meanwhile unloaded his stock on the public, and the price dropped rapidly from 72 to 44, and ultimately to 6. In 1875 the circumstances were investigated by a famous Parliamentary Committee, but the chief personages concerned escaped examination. Honduras, meanwhile, had a capital debt of nearly £5,400,000, and 53 miles of railway which had cost £689,000. From 1867 to 1892 various attempts were made at a settlement by reduction and conversion of the capital; they failed chiefly through the collapse of the American intermediary syndicates, and direct proposals made in 1903 through a special envoy were rejected by the bondholders as inadequate. In 1909 a settlement was prevented by the insistence of the Washington Government on certain American claims; the joint Anglo-American scheme substituted was frustrated by a revolution in Honduras and by Honduran resentment of American financial influence. But Honduras to-day is relatively prosperous, largely through American enterprise, and a settlement is desirable in view of the coming Washington Conference, with the possibility of Central American Federation and of aid from American financiers. The nominal debt, with 49 years' arrears of interest, now exceeds £28,500,000. But reasonable terms of settlement are possible, and would be the best preparation for the desired American loan.

Consolidated Gold Fields.—In view of the improved conditions which have prevailed in the Kaffir market during the past six months, writes our mining correspondent, the hope was entertained in some quarters that the report for the year ended June 30 last would contain the announcement of an interim dividend on account of the current financial period. The company having been under the necessity of postponing dividend payments on its two issues of preference shares, it was a foregone conclusion that there would be no dividend on the ordinary shares for the past year. In the event the above-mentioned hope was disappointed. Actually, however, the company proves to have fared much better than might have been expected. Despite the reduction in dividends and the disturbed market conditions due to the Rand labour trouble in the early part of the current calendar year, the receipts and profits of the operating company (the New Consolidated Gold Fields) fell only £62,000 short of those for 1920-21. The sum available was, however, so heavily cut into by the debit balance arising from the very heavy amortisations of the preceding year, that only a small surplus remained after providing for a dividend of 1½ per cent. Appended is a summary of the accounts of the "New" company from its inception to date:—

	Year Ended June 30.	1920.	1921.	1922.
Receipts and profits	£	523,920	429,980	379,380
Depreciation	£	165,410	492,390	147,010
Taxes, &c.	£	32,230	10,910	3,640
Net profit	£	290,530	*131,740	185,850
Dividends	£	270,000	..	67,500
Brought forward	£	..	20,530	*111,210
Carried forward	£	20,530	*111,210	7,140
Investments	£	4,030,100	3,680,230	3,841,380
Loans at short call	£	269,700	260,470	90,000
Sundry debtors and dividends	£	343,540	117,780	210,270
Cash advances and mortgages	£	210,350	295,300	272,730
Real estate and buildings	£	56,360	51,520	47,790
Cash	£	198,710	239,510	246,200
Creditors	£	572,560	259,910	137,650
		* Deficit.		

Payment by the holding company of the interest on its prior capital absorbed the £67,500 received from the operating company, plus a substantial incursion upon the carry forward. The operating company has now declared

an interim distribution of 2 per cent., which will practically cover the preference requirements of the holding company for the current year. Hence, there appears every prospect of a substantial dividend on the ordinary for 1922-23. A comparison of the schedule of investments with that of 1921 discloses some interesting changes. Thus the company has largely increased its interest in the New Modder, National Mining, and Sub Nigel undertakings; it has also acquired blocks of shares in the Shell Transport and the South American Copper. Some of the Rand old-stager holdings, especially Simmer and Jack, have been appreciably reduced.

Mount Lyell.—Throughout the labour troubles of the past few years this Australasian copper-gold-silver proposition has managed to keep the flag flying, although the high ratio of expense and the low price of the red metal have entailed the suspension of dividends from June, 1920, until now. The cabled summary of the report for the year ended September 30th last indicates a net profit of £127,500, or more than double that of 1920-21—when, however, the depreciation allowance was on a more liberal scale. This substantial improvement in earnings, notwithstanding a shrinkage of nearly £10 in the average price of copper, is attributable to the measures taken by the directors to meet the abnormal conditions prevailing. For example, a change in smelting procedure enabled the copper output to be slightly increased concurrently with a material reduction in the staff; and it is announced that certain additions to the plant, due to be completed by the end of February, will permit the production to be maintained on a considerably lower grade of ore than that mined last year—6.87 per cent. From this the conclusion may be drawn that the value of the material treated was above the average of the reserves—a process which, of course, if persisted in, looks ominous. This inference is confirmed by the remark that "unless the price improves, operations cannot be expected to yield satisfactory profits on average grade ore, even when plant alterations are completed, unless there are further reductions in the cost of labour and supplies." At 993,800 tons the reserves of ore in the North Lyell show a small reduction, albeit representing about 10 years' supply; the lower grade Mount Lyell mine has been shut down for some time past. The company's chemical business is making good progress, assisted by Federal duties on imported sulphur. At £652,700 the surplus cash assets are £182,200 up on the year. The dividend of 1s per share, payable in December, will only call for about half the past year's profits.

India Rubber, Gutta Percha's Results.—Yet another year of adverse trading has been experienced by India Rubber, Gutta Percha, and Telegraph Works Company, Limited. In its latest accounts for the year ended August 31, 1922, a loss of £94,406 was sustained. The directors state that the two main causes of this loss are foreign competition. To cover the loss on the year's trading £75,000 was drawn from reserves, and that fund is now reduced to £140,722, as against an accumulation of reserves amounting to £565,726 in 1920. The following table shows the progress of the company since 1913:—

	September 30.	1913.	1914.	1915.	1918.	1919.	1920.	1921.*	1922.*

* To August 31.

We expressed the hope a year ago that this old-established concern would speedily return to its well-deserved pre-war prosperity. As far as the present balance-sheet goes it brings us a little nearer to more normal conditions. Creditors, including bankers, amount to £553,391, as against £573,485 for 1920-21, while debtors are £276,605 as against £244,614. Total assets are down from £2,224,806 to £2,097,784. Other details in the balance-sheet will be found analysed in our usual column. Although not a pleasant trading record, these accounts at least are frank and informative.

Joshua Hoyle.—In presenting the report and accounts of Joshua Hoyle and Sons, Limited, for the year ended September 30, 1922, the directors take occasion to refer to the "period of great difficulty in the cotton trade." They state that "the company has incurred heavy losses in writing down goods not taken up by customers to whom they had been sold. Lack of demand has also made it difficult to keep the mills running, and goods have been largely made for stock." It will be noticed, the directors add, "that the stock on hand, although taken at or below the market price, is in the aggregate considerably in excess of the stock 12 months ago," and that "as soon as there is a reasonable demand there will be no difficulty in disposing of the whole of this stock." The net result of the year's working is a profit of £58,166, as against £108,837 for the previous year, but when it is considered that the paid-up share capital is £1,800,000, and that total assets amount to £4,338,522, this can hardly be looked upon with any considerable degree of satisfaction. Of course, the heavy drop in profits is mainly accounted for by charges on the £1,500,000 of debentures issued last year. These alone absorbed £58,166. The subsidiary companies have now been liquidated; in consequence, a comparison of assets with those given in the previous accounts is of little value. The exceptions are stock-in-trade, which has increased from £1,053,600 to £1,463,712, and accounts owing and cash in hand, which have fallen from £831,525 to £802,696. We can see no useful purpose served by including debts due to the company, together with cash in hand, as one item. Here is surely a case where a little more information might be offered to shareholders. A dividend of 2½ per cent. has already been paid on the ordinary shares, and the report is silent as to any intention to pay a further dividend.

Japanese Trade and Finance.—Cabled advices from Tokyo relating to financial and trade conditions in Japan during the first half of November record an easier tendency in the money market towards the close of that period. This increased ease is attributed to two facts—firstly, that the bank's preparations for end of the year accommodation are well in hand, and, secondly, to anticipation that the favourable movement in the foreign trade balance, due to all round dearthness in imports, and increases in silk exports, will be maintained. Day-to-day money was quoted at 4½ per cent., while loans running over the end of the year were done at about 8½ per cent. The commodity markets and stock markets show little change, on the whole, but Government bonds have been in good demand, owing to the curtailment of expenditure, and the re-establishment of the sinking fund, which is provided for in the budget. The second estimate of the rice crop is 2 million koku lower than the first at 60 million koku, but the rice market for future delivery remained inactive, a further decline in quotations being generally expected. It is reported that a general meeting of the shareholders of the Imperial Silk Company will be held on December 1st to discuss liquidation of the company, and the disposal of its profits. On November 15th the note issue of the Bank of Japan was 1,063 million yen, as compared with 1,112 million yen at the corresponding date in 1921, while discounts and advances at 189 million yen compare with 78 million yen a year ago. Japanese imports in October were 105 million yen, and exports 161 million yen, compared with 130 million yen for imports and 111 million yen for exports in October, 1921. The Bank of Japan's index number of wholesale prices in Tokyo in October was 252, as against 289 a year ago.

Obersea Correspondence.

UNITED STATES.—SERIOUS CAR SHORTAGE—ELECTION RESULTS—TRADE OUTLOOK—SHARP RISE IN COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 13.

SEVERAL weeks ago fears were expressed that a very serious car shortage would develop later in the season. What was then considered a possibility is now a reality. At present this country is experiencing the worst car shortage ever known. The latest report issued by the car service division of the American Railway Association shows that on October 30 there was a total shortage of 179,239 cars, a new high record in American railroad history. That figure represents an increase of 12,890 over the preceding week, and compares with 146,070, the previous high record reached in September of 1920. The shortage is being felt particularly in the North-West; the situation there is said to be most acute, and railway officials declare that unless immediate action is taken to expedite the return from eastern carriers of box and refrigerator cars, there will be actual suffering in that region. Railroad offices in that section are being flooded with requests from farmers for cars to move their grain, potatoes, fruits, and other crops, and instances are cited where farmers have driven long distances to the nearest station or elevator, only to find it filled, and many loaded wagons and trucks ahead of them, awaiting shipment. An order recently given to eastern lines to observe the interchange rules, and to return freight cars to the North-West promptly, has not afforded much relief. A request has now been made to have a daily apportionment of cars sent to that region, regardless of their ownership. The carriers in the North-West are evidently powerless to supply their freight car needs, and cold weather is adding to the gravity of the situation. The car shortage in other sections of the country is also rapidly increasing. Much concern is felt over this development, because if the shortage continues it is bound to cause a material slowing down in trade and industry generally.

The result of last Tuesday's election has had no immediate effect upon financial markets, or upon business generally. Everyone was quite prepared to see some political reaction from the Republican landslide of two years ago. The only surprise felt over the actual outcome of the voting was the extent of that reaction. What the ultimate effect of the Democratic victory may be is another matter. Some observers believe that it foreshadows attempts to put through new legislation of a more or less radical nature, which may have an unsettling effect upon trade and finance. There is already talk that efforts will be renewed to secure the enactment of a soldiers' bonus Bill, which was passed at the last session of Congress, but vetoed by President Harding. Another Bill would doubtless meet the same fate, but with the Republican majorities in Congress greatly reduced, it is not at all certain that such a measure would not be passed over the President's veto. In some quarters the outcome of the election is taken as an indication that another and downward revision of the tariff may be attempted. That, however, is regarded by conservative interests as a remote possibility. There is widespread dissatisfaction over the extremely high tariff recently enacted, and it apparently found expression at the polls last Tuesday. But there seems little, if any, likelihood that the whole tariff question will be reopened during the life of the present administration. According to Washington advices, several important tax revision Bills will probably be introduced in Congress, and will stand a much better chance of passage than heretofore because of the heavy reduction in the Republican majorities in both the House and Senate. The measures now being talked about include an impost on the undistributed surpluses of corporations, re-enactment of the excess profits tax in modified form, increased inheritance taxes on a graduated scale, and a tax on gifts in order to reach wealthy interests who may seek to avoid payment of high surtaxes by making gifts of money to relatives or friends. In so far as the election may have

reflected popular protest against high prices, merchants generally would not be surprised to see stronger resistance than heretofore on the part of buyers to the upward trend of values, especially in textiles, which have been advancing sharply in recent weeks, owing to the steadily rising tendency of such raw materials as cotton, wool, and silk. Manufacturers of all kinds of textiles have been compelled to raise their prices greatly on all goods offered for later delivery. The advances have not yet reached ultimate consumers, and probably will not for some time; but in manufacturing and jobbing circles considerable anxiety is beginning to be felt as to what the public's response will be to the higher prices which retailers must ask. That applies particularly to dry goods, but much the same situation exists in other lines of trade where prices have been advanced considerably in the past few months.

During October commodity prices made another surge upward. *Bradstreet's* index number at November 1st is \$13,3482, and shows a gain of 6.7 per cent. over October 1st, of 17.5 per cent. over November 1st a year ago, and of 25.7 per cent. over June 1, 1921, when the lowest point in recent years was touched. As compared with February 1, 1920, the present index number is 36 per cent. lower, but it is 53.2 per cent. above that of August 1, 1914. The percentage of advance last month was the heaviest since prices began to rise in the early summer of last year. Only one group, coal and coke, did not share in the upward trend, and exceptional strength was shown in textiles, provisions, hides and leather, and chemicals.

FRANCE. — BUDGET DEBATE—INCOME-TAX DIFFICULTIES—LAUSANNE AND EUROPEAN PROBLEMS—PRICES—THE FRANC FALL.

(FROM OUR CORRESPONDENT.)

PARIS, November 22.

The general discussion of the Budget was brought to a conclusion during the first half of last week by a vote of 429 against 164, and the Chamber has since been busily engaged in disposing of the various departmental estimates. At the time of writing the Budgets for the departments of Justice, Commerce, Pensions, Agriculture, and Public Works are among those that have been dealt with, and there now seems a good prospect that the Bill will be voted by both Houses before the year is actually out. The only real rock in the Finance Minister's road to this happy consummation is the menacing one that faces his proposals for reducing the enormous deficit disclosed by his original estimates. M. de Lasteyrie appeared before the Finance Commission of the Chamber on Monday to reply to inquiries as to the manner in which he proposes to meet the present difficult situation, and it must be confessed that his latest proposals do not promise to prove any more acceptable to the country than did his previous ones. It has long been notorious that an appreciable portion of the national wealth which is invested in bonds and other transferable securities escapes its proper share of taxation owing to the impossibility of tracing the holders. This is rendered all the more easy owing to the fact that practically the whole of the investment securities in this country take the form of bearer bonds and similar instruments, which, unlike the registered stocks and shares that are general in Great Britain, do not require inscription in the name of their owners and are not subject to transfer fees and formalities.

The French Treasury authorities have long cast covetous eyes on this possible source of additional revenue, but have been unable, so far, to formulate acceptable proposals to enable them to lay hands on it. Some time ago M. de Lasteyrie brought forward proposals for the compulsory declaration of their securities by all holders of stocks, bonds, and other similar interest-bearing instruments, and for the disclosure by banks, notaries, and others in a trustee capacity of the names of the owners of all securities deposited with them for safe custody and other purposes. It is not surprising, in view of the intense hatred in this country of all inquisitorial methods on the part of the revenue authorities, that the proposals were received with such a clamour of protest

that they were hastily dropped. M. de Lasteyrie on Monday, however, returned to the charge with a statement to the effect that he is considering fresh proposals with a view to instituting "a régime of nominative securities" (designed, to put it briefly, to bring about the replacement of bearer bonds by securities that will require registration in the names of their holders), and that he also intends to formulate proposals for the institution of what is known as the "carnet de coupons" (which appears to be a device that would enable the revenue authorities to trace the owners of all interest-bearing securities from information obtained when dividends are paid). Other proposals to be put forward shortly by the Finance Minister concern the method by which he proposes to control income-tax declarations in future by taking into account the "external signs" of his income that are disclosed by the assessable person. It is notorious that, in this country, where wealth is better distributed than in any other, many persons under-declare their incomes, while many others make no declarations at all, and thereby escape the payment of this impost. Colourable evidence of these facts was given in this column some months ago, when it was shown that the number of owners of touring motor-cars in France is greater than the total number of persons assessed for income-tax. Apparently the Finance Minister's intention is to adopt a policy under which possession of a motor-car, for instance, will be regarded as an "external sign" that its owner is at least in a position to pay income-tax, as well as the annual duty imposed in respect of the car.

Unofficial estimates indicate that the Finance Minister's new proposals, as foreshadowed above, may be expected (if adopted) to produce additional revenue to the amount of some 1,200,000,000 of a year. Already, however, it is evident that considerable opposition will be offered to some of them. Thus the *Temps*, commenting on the proposed "carnet de coupons," asks whether the Minister suggests that "French and foreign securities shall no longer give a direct right to the payment of the coupons attached to them," and whether such instruments are in future to be burdened with "a kind of legal mortgage, if we may so call it, for the benefit of the revenue authorities." The *Temps* warns M. de Lasteyrie "not to make the mistake of thinking he will thus obtain new resources for the Budget, for he will be erecting, in fact, *une fiscalité de ruine*." New resources must be found, however, and there is no doubt the Minister's latest proposals will receive very careful consideration by the nation's elect.

The outstanding feature of the unexpectedly complete agreement that has been reached between the British, French, and Italian Foreign Ministers as a preliminary to the opening of the Lausanne Peace Conference is the favourable effect this renewed co-operation of the three Powers will in all likelihood have on the pending inter-allied financial and economic conference at Brussels. Signor Mussolini's frank and business-like declarations to his British and French colleagues and to the newspaper men at Lausanne as to the attitude which the new Italian Cabinet takes in regard to Germany have had the happiest effect here, and there is at present perhaps greater hope than ever before that practical results, with a view to the economic restoration of Europe, will emerge from the Brussels Conference. M. Loucheur's striking speech in the Chamber, to which I referred recently, has attracted a large amount of attention in this country, and particularly that part of it in which he insisted that "France must take the initiative in a general programme for the reconstitution of Europe." Expressing regret that the reconstruction of Europe first, the reconcheered in the Chamber, M. Loucheur said: "That is a mistake! I am convinced that France and Europe are bound up the one with the other, that the problem must be solved as a whole, and that, if we try to solve it only from the point of view of the relations between France and Germany, we shall fail." "What I ask the French Government," he said, "is to go to Brussels with a broad programme, not only so far as concerns France and Germany—and I insist on that—but a general programme for the reconstruction of Europe, with a plan of appeal to all the nations to supply the funds necessary. Do not let us hesitate to do this; and if France does it, I believe she will be heard!" The manner in which M.

Loucheur's remarks were received was eloquently indicative of the changed attitude which is being taken by French opinion in regard both to the Reparations problem and to the question of European reconstruction. M. Poincaré hastened to seize the opportunity given him by M. Loucheur to insist that it was for the very reason given by the latter that he had asked expressly, during his visit to London, that the Brussels Conference should not be called together unless Poland and all the other States who are debtors to France were included in the invitations.

In this connection it is interesting to note that the suggestion that credit should be extended to Germany by her former enemies and other nations is receiving growing approval here. "One of the highest financial authorities in France," in an article in the *Matin*, that has attracted a good deal of attention, emphasises the facts that "credit alone will restore the world," as "gold is now only a standard without value." He insists that, although France, Germany, Italy, Belgium, and other "low change" countries have no available gold, they are nevertheless enormously wealthy, and he urges that Germany should be authorised to issue a gold loan of 75 milliard marks at 5 per cent., guaranteed by all the States of the world, America taking 20 per cent., France and England 15 per cent each, and the other nations the balance. If Germany devoted 65 milliards of this loan as a first payment on account of her reparation debt, and used the balance to buy raw materials, the writer insists she could restore her trade, and the whole world would be placed on its feet again.

The Statistique Générale de la France has now published the index figures for wholesale prices during October, as compared with those of the previous month, which are as follows:—

	September. (Cor- rected.)	October. (Pro- visional.)
General index figure for 45 categories of commodities (base: 100 in 1901-1910)	380.7	390.0
Foodstuffs—		
General index figure for 20 categories	367.9	362.5
Vegetable foodstuffs (8 categories)	334.8	339.3
Animal foods (8 categories)	408.2	402.1
Sugar, coffee, cocoa	353.4	329.9
Raw materials—		
General index figures for 25 categories	391.0	412.0
Minerals and metals (7 categories)	334.4	370.7
Textiles (6 categories)	489.6	521.4
Various (12 categories)	374.8	381.4

The index figure for the retail price of thirteen categories of foodstuffs in Paris is returned as 3120 for October (or 190 per cent. increase on 1914), as compared with 3131 (or 191 per cent. increase on 1914) for the previous month.

These figures are likely to show considerable modification in an upward direction for November, in view of the startling fall in the exchange value of the franc that has been registered during the past fortnight. Banking experts here were unanimous in the opinion that this sharp fall in the franc was in no way due to any aggravation in the general situation, but was the result of deliberately organised speculative operations directed, it is openly stated, from London by certain banking interests, not of the highest standing, which had been able to open large credits in some of the banks on this side of the Channel. This has brought about a loss to this country, it is estimated, of over 1,000,000,000, which has fallen primarily on importers of raw materials and foodstuffs, but which will have, of course, to be made good by the French consumer in the form of higher commodity prices. The markets in sugar and coffee, which are largely controlled from London, and in which quotations are made mostly in sterling, have been the most seriously affected. There are loud calls from the newspapers for prosecutions to be instituted against the parties responsible for these speculative operations, but it is difficult to see what can be done in this direction, as the operators in question are alleged to be foreigners carrying on business outside the jurisdiction of the French courts. Inquiries are being made, however, into the affairs of some twenty firms, under the law of 1918, which is still in force, prohibiting the purchase of foreign currency or the export of cash to the amount of over 1,000,000, except by special permit, which must be recorded in the

books of the banker. The banker being personally liable in the event of any irregularity in his books in this connection, it is believed that the investigation now going on will throw much interesting light on the recent successful attack on the franc.

GERMANY. — CABINET—STABILISATION—FINANCES—EXCHANGE AND BOURSE—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 21.

At time of writing the Cuno Cabinet has not been fully formed. Great difficulties have been met with both from the attitude of parties and in the search for suitable ministers. The choice of Herr Cuno as Chancellor has been very well taken, and since the choice was made the exchanges have moved according to the prospects of his success, and are to-day, with the chances of a Cabinet formation good, lower than for some weeks. The dollar at 6,190 marks is only a little more than half its highest quotation. As always, the heaviest mark fall has been followed by a considerable recovery. The plan of a purely "business," "expert," or "non-party" Cabinet has been abandoned, and with good reason, because the difficulties of earlier Cabinets lay not in the party allegiances of Ministers, but in the attitudes and policies of the parties themselves; and under a Parliamentary system these attitudes and policies must cause at least as much trouble for a non-party as for a party Cabinet.

The Cabinet—Herr Cuno's or anyone else's—will not have an easy time. Although the normal obstructiveness of Parliamentarianism is fully experienced in the new Germany, the compensating principle of submission to majority rule, which in old Parliamentary countries ensures a certain smoothness, has not yet taken root, and the greatest threats to Cabinets lie not in the Reichstag, where a Chancellor either has a majority or goes, but in the street, which considers itself entitled to enforce or prevent certain policies even against the will of a Reichstag majority. To this extent a semi-revolutionary condition still prevails. It is proclaimed, and is generally accepted, that Germany cannot be ruled against the Socialists, although the Socialists have always been in a minority; and this party boast more or less represents facts. It is equally hard to govern Germany against the Volkspartei, which is smaller than the Socialist parties; and the Wirth Cabinet fell (apart from its recent blunders) because of its failure in this. Reparations and currency reform were, as they still are, the chief problems, and both are unsolvable without the Volkspartei's co-operation. Apart from considerations of real power, the party has the good argument that the rival labour interest has so far come very well out of the economic struggle caused by the war and Reparations burdens. Labour—if merely because a minimum existence class cannot be pushed below the minimum—has suffered little or nothing from the currency depreciation; whereas industry has been transformed from a profit-earning and producing machine into a mere producing machine, an organisation for the maintenance of manual workers, which pays its way, but does little

more. As a result of this, the former capitalistic industrial leaders have no longer any great interest other than their natural creative instincts in the running of the industrial machine. Capitalism can, therefore, without losing badly, indulge in a tacit strike or in passive resistance, and it is therefore more or less in a position to dictate. Through losing profits it has gained power.

The late Cabinet's plan for stabilising the currency, and the recommendations of the experts, are well taken. The main point—that the Budget can be balanced if only Reparations are postponed—has long been clear, because, even when Reparations were being paid, and when currency depreciation with the resulting price-rises brought ever fresh difficulties, the proportion of expenditure covered by revenue rapidly rose, and had not the new and worst exchange drop taken place, it is more than likely that a Budget balance would have been achieved in the present financial year. Once the currency is stabilised, the price-rise would cease, and the oft-begun, but always interrupted recuperative process of a catching-up of revenue and expenditure would be resumed, and this time continued until equilibrium was reached. The Republic would not only be temporarily rid of Reparations; it would be rid of the greater part of its pre-war military and naval expenditure, and would further be rid of nearly the whole of the war and post-war debt, against the latter State relief being (owing to the expropriation of foreign bondholders, and to the enforced conversion of capitalists into producers) a considerably lighter burden of national impoverishment. By industry, however, stabilisation at around 3,000 marks to the dollar would be opposed. This rate would certainly involve a price fall, because although 3,000 or even lower probably represents the mark's home buying power, stabilisation on that basis would bring down heavily the prices of imported materials which, experience shows, dominate the whole price level, and would produce at least a temporary general price-fall, injuring the home selling market. In general, industry stands for stabilisation at about the level of the time of stabilisation, without regard to the mark's buying power at home. If the stabilisation rate was lower than the buying power, a gradual price rise would restore equilibrium.

Although the drop in the mark has for the moment ceased, the price level conditioned by the earlier drop has not yet been reached; prices are still rapidly upward, and as a result, the inflation involved by the whole process is far from being completed. The Reichsbank statement for the 15th showed the greatest recorded increase in circulation, 65,068 millions to 582,105 millions, against the mere 95,186 millions in circulation in the same week of last year. Commercial bills rose by 49,006 millions to 174,883 millions, and Treasury bills by 67,444 millions to 578,939 millions. In the first ten days of November the Floating Debt of discounted Treasury bills increased by 60,268 millions to 663,901 millions. Of the increase 22,644 millions were for fulfilment of the Peace Treaty, the cost of this item since the beginning of the financial year (April 1st) being 109,033 millions, as against 172,922 millions taxation received. With 391,966 millions realised by Floating Debt operations and 2,749 millions from the Forced Loan, revenue totalled 567,638 millions, balancing expenditure of the same amount, of which 457,525 millions were general administration, 3,954 millions service of Funded Debt, 19,817 millions for Floating Debt, and 86,342 millions for Posts and Telegraphs. That service of debt, as calculation shows, accounted for only 1-24th of all expenditure, and shows how the State finances have been relieved by the currency depreciation. Railway freight rates on the first of this month averaged 672-fold those of peace time. They are, therefore, in gold, very low, and are well below the commodities price level, which on the same date was 945-fold up. Since November, 1921, when the last preceding heavy mark fall terminated, the railway department has professed to stand for automatic raising of freight rates in accord with the price rise, but it has not carried this out, and the railway accounts for the second half of 1922 will, unlike those of the first half, show a heavy deficit. Passenger fares are still ludicrously low; a first-class

railway ticket from Berlin to Dresden, distance 180 kilometres, costs the same price as two sandwiches at a London railway station. The annual income limit for social insurance has been raised to 840,000 marks. The law against unauthorised export of capital is being amended. The new Bill enacts that permission to export may be withdrawn from firms which are caught leaving the proceeds abroad with intent to keep it out of Germany.

Stocks last week had a moderate rise, the *Frankfurter Zeitung's* index for industrials showing 302,901 against 287,326, but the high point of November 3rd has not been again reached. The Bourse was closed to-day. Yesterday War Loan was 80.80, having lately risen above the fixed minimum quotation of 77.50, at which it was held for years, Federal Fours 350, 3½ 250, Threes 850, Colonial Fours 670, Savings and Premium Loan 155. The State loans are now mostly well above the levels of the last years, but have not risen as much as Federals, Prussian Threes being highest at 280, Bavarian Fours 175, Hamburg State Rente 170, Prussian Four Consols 150.50. Municipal bonds, in which foreigners, especially Americans, speculated heavily in 1920, have not shared in the rise at all, so that the holders have felt the full weight of the mark exchange depreciation, and since May, 1920, have lost all but 1-200th of their investments. The stock market heard with interest that the important Otto Wolff concern, which embraces also the Phoenix Company and the Vander Zypen Company, has formed an alliance with the Allgemeine Elektrizitäts Ges. (Rathenau Company), which in turn is allied with Krupps, with the Gutehoffnung Iron Company, and with the Deutsche Werft shipbuilding concern. Herr Wolff has been taken on to the control board of the A.E.G. The Wolff concern now rivals in magnitude the Stinnes Electro-Metal concern, and has the same scope of interests.

Ruhr coal production in October was 8,277,126 met. tons, the best figure since March, while the per diem output was the best since February, 1921, when the extra shift system was abandoned. Imports of English coal in September were 1,060,086 tons, in January-September 6,182,086 tons, of value 115,480,293 gold marks, or, as estimated, 18,811,000,000 paper marks. There are further slight signs of declining industrial activity, but of the heavy iron and steel industry Privy Councillor Kloeckner, head of the Kloeckner concern, gives a good account, stating that his company has orders until the spring.

CANADA.—BUSINESS CONDITIONS—MOVEMENT OF THE WESTERN CROP—TRAFFIC CONGESTION—SETTLEMENT OF THE CATTLE EMBARGO ANNOUNCED—FEDERAL REVENUES SATISFACTORY—THE PROJECTED IMPERIAL ECONOMIC CONFERENCE.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 6.

CANADA has been favoured with a remarkably fine autumn, and the mild and open weather now prevailing contains no threat of the immediate advent of winter. Not only has the harvest been garnered with comparative ease, but farmers have been enabled to work steadily on the land at their pre-mildness of the weather. On the other hand, the because the public usually postpones its purchases of winter clothing and other seasonal requirements till the west and from Toronto and other Ontario points, agree not so good as was hoped for a month ago. In Montreal, retailers report improved business in all directions, and in the maritime provinces business is reasonably good. The ports of Halifax and St John are preparing for the transference of ocean-going traffic from Montreal to themselves, and the Cape Breton industrial area is beginning to recover from the recent industrial disturbances.

The western wheat crop is grading very well, for up till October 28th 63 per cent. of the total receipts of wheat had been graded at No. 1 Northern or better, and there is a further high percentage of No. 2 Northern. On that

date the C.P.R. had moved eastward from Winnipeg 64,655,500 bushels, and the Canadian National system 62,475,000 bushels. But just as the time when the crop movement is at its peak a most disconcerting traffic congestion has developed on the Great Lakes. Normally more than half of Western Canada's wheat export reaches the seaboard at American ports *via* Buffalo, while large quantities of American grain go out *via* Montreal, but this year, owing to the railway and coal strikes in the United States, there had been piled up at American depots a vast accumulation of traffic which had a claim for priority in movement. An acute shortage developed not only in freight cars, but in shipping space on the inland waterways. Canadian exporters of grain complain that Canadian shipowners have been shamelessly cancelling charters out of Fort William at low rates in order to take advantage of the enormously high rates available at American ports. They have demanded a suspension of the Canadian coasting laws, which reserve traffic between the inland ports of Canada for vessels of Canadian registry, but the Minister of Trade and Commerce, after threatening to do this, has left for Australia without taking any action, and it is charged that the influence of Montreal shipping interests has proved too powerful at Ottawa. But, strangely enough, while the Canadian exporters are complaining that their ships are being diverted to American ports, the American Farm Bureau Federation has applied to the Inter-State Commerce Commission for an embargo on Canadian wheat, which is claimed to be monopolising lake boats and eastern elevators and railways. Not only at Buffalo, the pivotal point, but at Baltimore and Philadelphia, the elevators are jammed with grain. Almost half the grain in the Buffalo elevators to-day is of Canadian origin, and Winnipeg exporters, who have arranged for further large export shipments *via* the same route, declare that an embargo by the American Government would paralyse the grain trade for the time being and cause a steep depression in prices. Even as things are, the *Financial Post* calculates that increased lake freight rates have on 55 million bushels of wheat moved to the seaboard from Western Canada up to date cost the farmers over 3 million dollars, and will soon wipe out all the 8 million dollars of savings which was to come to them from the decrease in railway freight rates. Under almost parallel conditions the Borden Government suspended the coasting laws in 1912 and 1913, and if the King Government continues to allow the shipping rings to appropriate calmly all that the western farmer hoped to save from the maw of the railways, it may expect little co-operation from the Progressive party at the forthcoming session. But the whole situation demonstrates the interdependence in transport and other matters of Canada and the United States, and sooner or later there will have to be reached between them a new and comprehensive agreement covering their economic and transport relations. The present traffic congestion has given an enormous impetus to the demand for the construction of the St Lawrence deep waterway, and propaganda in support of it is making steady headway in Western Canada.

Mr Motherwell, the Minister of Agriculture, has now announced the settlement arrived at with the British authorities in regard to the cattle embargo. Canadian store cattle are to be admitted admitted under the following conditions: Shipments be from Canadian ports only, and direct to Britain. For three days immediately before shipment and during the ocean voyage, these store cattle shall be kept separate from other animals, and periodically examined by Canadian veterinary officers, who will certify their freedom from certain diseases. The animals shall be landed at specified ports, and be examined by British veterinary officers, and other regulations about their movement from the ports are laid down. But apparently the British authorities have insisted upon a *quid pro quo*, which it may be very difficult for the Canadian Government to carry out, and there is a suspicion that the embargo controversy may not yet be at an end.

The Federal revenues continue to make a very satisfactory showing. The Customs revenues are increasing, and at the end of September the returns from income and kindred direct taxes were already in excess of the esti-

mates for the whole financial year, which has still five months to run. The sales tax is producing a lot of revenue, but its effect in maintaining prices in many lines of goods cannot be denied, and it is still objected to as a most unfair tax upon the consumer. Mr Fielding is busy in Paris with his negotiations for a new commercial treaty with France. The prevalence of prohibition in seven Canadian provinces, however, reduces the value of any special concessions to French wines, and, on the other hand, the agricultural Protectionists of France are not willing to allow liberal rights of ingress to Canada's agricultural products.

Mr Bonar Law's plans for an Imperial Economic Conference have not aroused any enthusiastic response in Canada, and it is hard to discern what could be achieved by it under the existing circumstances. The Dominion representatives would doubtless produce for the enlightenment of their British brethren impressive data about the natural resources and trade possibilities of their respective countries. But it is doubtful if they could add much to the vast volume of such data already available in the reports of the Dominions Royal Commission, which was set up in 1911 on the instigation of Sir Wilfrid Laurier, and held sittings right on into the war years in every quarter of the Commonwealth. The facts of the situation are reasonably well known, and what Mr Law obviously means is an investigation of the possibilities of closer trade co-operation, though he wisely refrains from any mention of the words "Imperial Preference." But just as he himself is not in a position to champion an extension of food taxes, which alone could offer a possibility for further preferences of any real value to the self-governing Dominions, likewise few of the Dominion Governments are in a position to make further concessions to British goods. Certainly, the King Government here would meet with fierce opposition from its strongly Protectionist wing in Quebec. In this province industrialism has taken a firm foothold, and its manufacturers being near tide-water are exposed to and dread British competition more than American. Proposals might be made for some central Imperial Board, which would supervise and assist the development of the natural resources of the overseas Commonwealth. But it will be remembered that plans laid before the League of Nations for a system of pooling the supplies of raw material held by its members met with resolute opposition from the delegates of our Dominions, and there is no likelihood that a parallel suggestion from London would be any more popular. Such problems as shipping facilities and rates, an Imperial wireless chain, and immigration might be profitably discussed by this economic Conference, but the impression prevails that Mr Law is beginning at the wrong end.

SWEDEN.—SVENSKA HANDELSBANKEN—THE MATCH ISSUE—LABOUR CONDITIONS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 21.

A THOROUGH consolidation in the banking world has taken place here in regard to the A. B. Svenska Handelsbanken. This bank ranks amongst the three or four largest in the country, and particularly in regard to foreign transactions, occupies a leading position. At the same time, it has, undoubtedly, during recent years, greatly developed its internal organisation. But it is not surprising to learn that a bank, with such extensive ramifications as the Svenska Handelsbanken, has sustained heavy losses during the present crisis, losses which it has proved impossible to overcome without drastic measures. About half of the losses are due to financing company promotions, and the other half has been lost on industrial undertakings. A trade and holding concern, the Emissionsbolaget, which was closely attached to the bank, was severely hit by the general depression, and has caused the bank heavy losses. The board announces that it is necessary in the first hand to write off 95 million crowns, and then to put aside 20 million crowns to a del credere fund. The capital, however, remains untouched, besides which 20 million

crowns are left for a reserve fund. In order to get a more even proportion between capital and deposits, fresh capital of 40 million crowns will be subscribed by the shareholders in the form of bonds, which will be paid back after 15 years at par, or, if earlier, at a premium. The annual dividend on these bonds will be 7 per cent. They can be mortgaged at par in some of the leading banks, and they have been in very great demand. For this year no further dividend besides the 5 per cent. already obtained will be given, but the board expects that with 1923 the bank will be able to pay dividends regularly. The net profit for this year is estimated to not less than 25 million crowns, but this money will be used for the consolidation business. Criticism has been heard to the effect that the board has carried out the consolidation business too severely, but the board has considered it better to make a thorough clearance of all losses made and of uncertain engagements, but it is, however, expected that some of the money now counted upon as lost, and included in the depreciations, might be returned. Naturally, the shares have been quoted at low prices on the Exchange, the lowest being 83 crowns, but it has since recovered to 106 crowns.

An interesting event is the Swedish Matchmaking concern's new issue of shares, amounting to 45 million crowns, the company thus doubling their stock capital, which will amount to 90 million crowns. The present reserve fund is 63 million crowns. The new shares will be issued at 120 per cent., i.e., 120 crowns, of which 20 per cent. will be transferred to the reserve fund, which will then amount to 72 million crowns. The most interesting feature for the English public is that 40 per cent. of the new issue, or 180,000 shares, this being the limit of shares, which, owing to the statutes of the company, can be acquired by foreigners, will be sold in England through the intermediary of Messrs Higginson and Co. Negotiations have been carried on in order to get the shares introduced on the Stock Exchange in London. The Swedish matchmaking industry is one of the foremost industries in Sweden, and Swedish matches are known all over the world. During the war it was difficult to keep the market in some parts of the world, especially in the East, where Japan proved a severe competitor. Now, however, the old markets have been regained, as indicated by the figures of exports during the past year; for the third quarter of this year exports of matches were 2 per cent. greater than in the corresponding period of 1913.

The lock-out warning from the ironworks, mentioned in my last letter, has been withdrawn, as the strikes going on at some of the works were settled. In general, the labour market is peaceful. There is some trouble among the timber cutters, which has blockaded the timber cutting in certain districts in the North, but what practical consequences this might prove to have is difficult to assess yet. The number of unemployed, which for September 30th were estimated at 35,100, is now increasing day by day, which, of course, is due to the season. In the building trade, however, there is great activity, and in this special trade skilled labour is difficult to obtain. Owing to the activity in the building line, some scarcity of bricks has been found, and the brick factories immediately seized the chance to raise prices to what is said to be a quite unreasonable extent. Now, however, they have been greatly offended by purchases which have been made from Germany for some official building purposes, owing to the more favourable prices thus obtained. The weather has been unusually mild for the season, except for a short period in the beginning of November, when there was some cold weather in the North, which seemed threatening for shipping.

The preliminary figures for our foreign trade during September show an export surplus of 13.7 million crowns, the total import for this month being 108.90 million crowns, and the export 122.63 million crowns. For the first nine months of this year the total value of the imports is 824.20 million crowns, and of exports 782.71, thus showing an import surplus of only 41.49 million crowns, compared with an imports surplus for the same period last year of 171.40 million crowns, the import then being 958.22 million crowns, and the export 786.82 million crowns.

DENMARK. — COMMODITY PRICES — BANKING — DEVIATION AND BALANCE OF TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 15.

THE question of the level of prices still commands much public attention. Lately the wholesale prices have apparently had an upward tendency. The price index number of the *Finanstidende* shows the figure of 180 at the end of October against 176 at the end of the previous month, and 178 at the end of 1921. There is, however, hardly any inclination to count upon a permanent rise of the level of prices. A certain settling down is more probable, although it should not be overlooked that the unfavourable rates of exchange, which have prevailed lately, may leave their mark in the shape of somewhat higher wholesale prices. It is, however, not believed that the rise in the Foreign Exchange quotations will be of any long duration. In the course of the autumn months, foreign countries have withdrawn some credit balances, but the principal reason for the rise in the rates of exchange is presumably the normal seasonal purchase of overseas produce, particularly of commodities for agricultural use.

It is difficult to express any definite opinion with regard to the retail prices. There are certain indications of an increase in the purchasing power in several parts of the country, but on the other hand, the demand is attended by the absolute insistence upon low prices. The consumers are very categorical in this respect, and their demand for the reduction of profits is supported by the Government. Lately the Home Secretary stated his intention of introducing a Bill to counteract existing price agreements. The commercial organisations, however, are apparently making rather considerable efforts to prevail upon their members to maintain the policy of reasonable prices, and accordingly a number of reductions have taken place.

With regard to the banking world, the public is now completely reassured. The confidence in the financial institutions of the country may be said to be re-established and the co-operation between the banks and the public is again normal. The period of unrest, which attended the reconstruction of the Landmandsbank, and which was then unavoidable, has had no lasting effects on economic life. On the contrary, there is perhaps more confidence in the banks now than there was before, as it is understood that a strengthening has taken place during the reconstruction.

Some of the banks are now inconvenienced by very considerable new deposits. This is, for instance, the case with Handelsbanken, who for this reason have reduced the rate of interest for deposits on one to three months' notice of withdrawal from 4 to 3½ per cent. per annum as from the 15th inst. On October 31st the bank had cash in hand amounting to Kr.87,000,000, and the reduction of the deposit interest is due to the difficulty of investing balances to good advantage under the present conditions.

The note circulation of the National Bank again increased at the beginning of November, but has subsequently declined, the circulation on November 11th amounting to Kr.439,700,000. At the same time, the bullion reserve amounted to 53 per cent. of the note circulation, while present the bullion reserve consists of Kr.228,300,000, other small change. One of the managers of the National Bank, Mr Marcus Rubin, has handed in his resignation as from April 1, 1923, owing to illness. Mr Rubin has been a manager of the National Bank since 1913. The appointment of a new manager will presumably take place in December.

The Statistical Department has now published a review of Denmark's foreign trade in 1921, as distributed between

various countries. I append the following figures for imports:—

	(In Million Kroners.)			
	1913.	1920.	1921.	
From England	135	888	302	
" Germany	328	532	461	
" U.S.A.	87	754	343	
Total imports from all countries	855	3,234	1,692	

As will appear from this summary, Germany was again in 1921 the country from which the greatest part of our imports originated, although the predominance is less pronounced than before the war. In 1919 and 1920 the value of the imports from England, as well as those from the United States, considerably exceeded the value of the imports from Germany. The relative increase in the imports from Germany is partly due to the exchange conditions, which in 1921 stimulated the import from Germany of a number of manufactured articles, and partly to the fact that the pre-war practice of purchasing overseas commodities in Hamburg and other places was partially resumed in 1921. The following are the figures for exports of Danish goods:—

	(In Million Kroners.)			
	1913.	1920.	1921.	
To England.....	398	654	819	
" Germany	159	261	185	
" Sweden	15	200	88	
Total exports to all countries	637	1,591	1,408	

After the war England had already in 1920 become once more the principal buyer of our agricultural produce, and during 1921 she increased her share in our exports to nearly three-fifths of the total value, or very nearly the same proportion as before the war. On the other hand, Germany's share was reduced to one-eighth only as against one-fourth before the war, this being due to the continually decreasing purchasing power in Germany. The commercial statistics for the present year have been completed up to the end of September. Although the balance of trade is still against Denmark, the difference between the imports and exports was rather insignificant in September, and there is some hope that the export improvement, which has taken place, may not be a mere phase. The favourable changes in the balance of trade are due to an increase of the exports from Kr.90,000,000 to Kr.121,000,000, the imports in the said month having been reduced only from Kr.135,000,000 to Kr.134,000,000. For the entire period January 1st to October 1st the total imports were Kr.1,086,000,000, while the exports amounted to Kr.889,000,000, of which Kr.40,000,000 represents re-exports of foreign goods.

NORWAY.—THE BANKING POSITION—TRADE—MUNICIPAL ELECTIONS—PRICES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 4.

A NUMBER of the minor banks found themselves in difficulties more than a year ago, and they were either absorbed by bigger banks or able to secure fresh capital, or somehow managed to get over their difficulties, while a few were liquidated or had to be compulsorily wound up. It was thought, however, that the ample means of the bigger banks would secure them against difficulties. This has, however, not proved to be the case. It will be remembered that early this year the Centralbanken for Norge—doing, perhaps, the most extensive business of them all—found itself short of liquid capital. By seasonable aid from the Bank of Norway and other banks fresh capital was secured, and the Centralbanken has been able to go quietly on, some alterations having also been made in the staff of managers. A few weeks ago, the shares of another of our biggest banks—Andresens Bank and Bergens Kreditbank, of this city and Bergen—began to fall ominously, rumours having got abroad that the bank had sustained heavy losses. This went on so rapidly and to such an extent that the shares, the face value of which is 250 kr, which were on October 1st quoted at 222 kr, were

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

by the middle of the month sold at 90 kr. Under these circumstances, the bank applied to the Bank of Norway and to the Government. Prompt action followed; the Bank of Norway, the Finance Minister, and four of the biggest banks investigated the affairs of the bank, and thereupon supplied it with 50 million kroner, and the Minister published a reassuring communiqué. According to the present arrangement, the share capital will be written down from 70 millions to 28 millions. Altogether 84 millions will be written off. Some change will also be made in the board of management. Of the 50 millions 34 millions are advanced by the Government and 16 millions by the Bank of Norway and the four private banks. The amount is rendered as a loan at 6 per cent., uncalled for the first 10 years, after which 5 millions are to be paid off annually.

As is natural, these events have caused a good deal of nervousness, and there is a general and quite sensible fall in almost all banking shares. Mr Chr. Michelsen, formerly Prime Minister of Norway, and considered as a business man of the highest capacity, has accepted the supreme leadership of the Bergen branch of the above-mentioned bank; this, no doubt, will create a feeling of safety and help recovery.

The turnover at the Christiania Stock Exchange for October was just over 6 million kroner, which is one of the best monthly figures of the year. During September Norway exported goods for a total of about 56 million kroner. Paper, in various forms, ranks first with about 18 million kroner. Next come products of the fisheries, about 12½ millions; then wood, about 5½ millions, &c.

The municipal elections for the greater part of the country have just taken place. Generally, the so-called Communists have made progress, even in the remotest mountain communities. These "Communists" cannot, however, be considered as in any way resembling the ordinarily recognised type of Communist. They are really, for the most part, very peaceful people, who would not think of acting violently; but their main aim probably may be said to try to divert much of taxes and public burdens from their own shoulders to those of their wealthier neighbours. This was the first election since the suffrage was extended to young men and women down to 23 years, which certainly to some extent accounts for the movement to the left.

Unfortunately, the number of unemployed is increasing. On October 10th it was 21,400, and before the end of the month about 23,700. In these figures are not included about 13,000 persons that have "emergency work."

The wholesale price level, according to *Farmand*, during October has fallen from 212.7 to 211.6 (1913 = 100). While some articles, as fuel, have risen, victuals have fallen quite considerably. The cost of living—as far as victuals are concerned—according to the same authority, is now practically just twice what it was before the war.

There has been some improvement in the Norwegian krone, which is partly due to the contraction in America of a Norwegian Government loan for \$17 millions, of which \$5 millions will be used for conversion purposes, the remainder being available for railway building, &c. Further, the Arbitration Court at The Hague, in the dispute between the U.S.A. and Norway, awarded the Norwegian shipowners \$12 millions, which has, of course, helped to strengthen the exchange.

POLAND.—PARLIAMENTARY ELECTIONS—CROPS—COAL PRODUCTION—NEW CAPITAL—COMMERCIAL TREATIES.

(FROM OUR CORRESPONDENT.)

WARSAW, November 17.

THE elections to the Diet were held on Sunday, 5th, and those to the Senate on the 12th of this month. The results which are now known show that neither the Right nor the Left will have a majority in both Houses. The elected members grouped according to parties are distributed as follows:—

	Diet.	Senate.
Christian National Union	163	49
Catholic Popular Party	6	..
Peasant Party of Vitos	70	17
" " Stapiński	2	..
" " Wyzwolenie	49	8
Polish Socialist Party	41	7
National Labour Party	18	2
Communists	2	..
National Minorities (Jews, Germans, Russians)	83	26
Other parties	10	2
Total	444	111

The Christian National Union is a coalition of the principal parties of the Right, among which the National Democrats play the principal rôle. This Union is represented in the Diet by 163 members, which is not a sufficient number for forming a Parliamentary Government. Even with the support of the Catholic Party and the National Labour Party which are leaning towards this Union, the Right cannot command a majority in the Diet. The combined votes of these parties amounted to 187, while for obtaining a majority 223 votes are necessary.

The Peasant and Labour parties are in a similar position. Without the National Labour Party they have 152, and with this party 170 members. In order to form a purely Polish Parliamentary Government it would be necessary to resort to a coalition of the Right and the Left. Judging from the experience in the last Diet, it will be hardly possible to arrive at such an understanding. Probably the Left will resort to the support of the National Minorities, whose influence in the Diet and in the Senate is very strong. The small number of Communists which has been elected is a proof that the Polish working-class, taken as a whole, is adverse to all revolutionary experiments.

The crop statistics which are now being published show very favourable results, as may be seen from the figures set out below:—

CROPS in 1922.	Tons.	Increase in, Comparison with 1921.
Wheat	1,150,000	12.6
Rye	5,133,000	17.6
Barley	1,297,000	4.1
Oats	2,656,000	19.3
Potatoes	33,955,000	96.5
Sugar-beet	2,671,000	136.6

All crops have increased in a marked degree. The quantity of potatoes this year is 96.5 per cent. larger, and of sugar-beet 136.6 per cent. larger than in 1921. This will enable Poland to export a considerable part of its agricultural production. The result of this year's sugar campaign is estimated at 330,000 tons. As the home consumption amounts to 180,000 tons, about 150,000 tons will be available for export.

The statistics of coal production for the first six months of this year show that Poland's industrial production is also rapidly progressing. The output of the Polish mines (without Upper Silesia) amounted during the first half-year to 4,542,000 tons. This is an increase of 912,000 tons, as compared with the same period in 1921. This favourable result was obtained by a settlement of all Labour disputes, by employment of new capital, and by the progress which has been made in the working of the railways. Actually, the Polish coal production has nearly reached the pre-war level. The output in the Dombrova district in the first six months of 1922 was 3,374,600 metric tons, compared with 3,423,800 metric tons in the corresponding period of 1913.

The statistics of new capital issues reveal an interruption in the creation of new undertakings. While during the third quarter of last year 91 new undertakings, with a capital of 4,276 millions, were created, the corresponding figures in 1922 were only 50 and 2,795 millions. The bulk of the new capital issues was used for strengthening existing undertakings. The total of the new capital created was by 1.7 milliards greater this year than in 1921. If we take into consideration the depreciation of the currency which occurred during this period, we arrive at the conclusion that in reality a decrease has taken place.

Poland has up to now concluded commercial treaties with the following countries:—France, Roumania, Switzerland, Italy, Czechoslovakia, and Memel. Now negotiations for the signature of a commercial agreement with Hungary have been opened in Warsaw, and similar negotiations are in progress between Poland and Japan. It is expected that Upper Silesian industry will find in the Far East a market for its products. Negotiations with Russia are making no progress. The Polish delegation which intended to discuss in Moscow the principal points of a commercial treaty has postponed its journey, because of the recall of the Russian *chargé d'affaires* from Warsaw. This step has been taken by the Soviets for reasons of diplomatic etiquette. The Russian representative has been hitherto accredited not to Marshall Pilsudski, but to the Minister of Foreign Affairs. The Bolsheviks sent an ultimatum to the Polish Government asking that their representative should be treated on equal footing with other Ambassadors. As they did not obtain an answer during the stipulated three days Mr Obelenski left Warsaw. The incident will certainly be settled in a short time. The attitude of the Soviet Government is interesting, because it shows what importance the present rulers of Russia attach to bourgeois forms of court etiquette.

ESTHONIA.—EXCHANGE REGULATIONS—COMMERCIAL TREATIES—OIL.

(FROM OUR CORRESPONDENT.)

REVAL, November 17.

SINCE October 1st the Stock Exchange here has opened every day, and the Reval Exchange Committee have decided to hold daily meetings with a view to controlling the foreign exchanges. It is hoped here that in this manner the considerable differences and fluctuations which have seriously affected trade will be avoided. This result has certainly been obtained in many cases, but unfortunately not in all.

The Esthonian-Latvian Trade Agreement has been presented to the Latvian Government for examination. The lists of goods to be imported from and exported into Latvia have been drawn up to the satisfaction of both countries, and Mr Wesman, late Latvian Minister at Moscow, will come to Reval with the Director of the Latvian Credit Department in order to complete the formalities concerning this agreement. A Commercial Treaty has also been concluded with Hungary on the basis of the most-favoured nation clause.

Much interest has been shown lately by the Belgians with regard to the oilshale deposits in Esthonia. In addition to their former three concessions, they have been granted a new concession to make experiments over an area of 2,000 acres by the Minister of Trade and Industry. A group of Belgians, with the local Consul at their head, has obtained this concession, and another large consortium of capitalists headed by Mr Fates has also been granted a concession to exploit the Esthonian oilshale fields. This last company has carried on experiments for the last few years, and has now presented its plans to the Government, but the area of the concessions granted is not yet published. The oil distillery erected at the Kohtel oilshale deposits has now been completed, as far as the buildings are concerned, but great anxiety is caused by the delay in the delivery of the machinery, which has been ordered in Germany, and which has not yet reached Reval.

The lack of warehouse space in Reval Harbour becomes more and more noticeable as the shipping season runs on,

and it is evident that unless new warehouses are put up very soon, a considerable portion of the goods arriving will have to be discharged at Baltic Port. All warehouses near the harbour are filled up, and immense quantities of goods are lying on the wharves. There has been a remarkable increase in the export of precious metals during the month of October, as the following table shows:—

	October.	First Nine Months, 1922.
	Marks.	Marks.
Platinum	27,900,900	215,946,523
Gold	15,579,061	65,458,090
Silver	7,498,211	68,379,710
Precious stones	1,493,700	1,178,600
Valuables	483,100	6,081,079
Esthonian currency	..	2,058,192
	52,954,972	359,102,194

A trade agreement with Sweden has been proposed, and the Government here are endeavouring to gather all obtainable information respecting Sweden's treaties with other countries. A sum of 3,000,000 marks has been granted by the Government here to "Aeronaut, Limited," and likewise a subvention of 50 marks per kilom. flown. In return, the company undertakes to carry mails, and to make all extra flights required by the Government. This company possesses six aeroplanes, which will carry 50 passengers each, three of which have been built here and three in Germany. Reval contains at present 125,962 inhabitants, according to the latest estimate, of which 60,826 are men and 65,136 women. Of these, 106,285 are Esthonians, 9,962 Germans, 4,671 Russians, 2,279 Jews, 1,749 Letts, 384 Poles, 87 Tartars, 136 Finns, 68 English, 41 French, 17 Danes, 22 Italians, 15 Americans, and the rest is made up of various nationalities.

Letters to the Editor.

THE ECONOMIC ASPECT OF EUROPE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—To deliver Germany over to chaos means condemning sixty million souls to despair. Is there any man capable of forecasting the consequences? The most vital question at the present moment is whether Germany can still be helped, can the threatening chaos be avoided? This question can, in my opinion, be answered in the affirmative, if the situation is tackled with energy. The depreciation of the currency in Germany is, however, assuming such proportions that a total collapse is to be feared at any moment. In this connection it is remarkable that the stock of gold at the Reichsbank is even now at almost the same level as it was on July 31, 1914, in spite of the facts that Germany has lost considerable tracts of territory, its international trade has greatly decreased, and the population has had to learn by bitter experience to live in many respects at a lower standard. If we further take into account that, before 1914, Germany required enormous sums for its army and navy, which are now reduced to a minimum—the standing army has been reduced from 750,000 to 100,000 and the reserves abolished, while the navy has been cut down to a mere nothing—the question necessarily arises as to whether it is not possible to restore the country to the economic condition it occupied before 1913? The currency to-day is practically worthless, and if the present situation continues, it will be absolutely without value even in Germany. Is it not, therefore, better to intervene immediately with radical measures, rather than allow the disease to continue its ravages? Is it not much better to put the paper mark in Germany on a gold basis, and to frame a budget absolutely based on the 1913 figures under severe international control, if needs be, by dismissing some tens of thousands of superfluous civil servants, rather than drive sixty millions to despair? Naturally, since it is more than probable that the value of the paper mark will depreciate still further, the change to a gold basis will have to be effected substantially below the present level. In my opinion, not more than one-fifth of the gold held by the Reichsbank—i.e., 200,000,000 gold marks—should be allocated to the

present obligations of the Reichsbank—viz., all the outstanding paper and deposits. There will thus be 800,000,000 gold marks available for fresh economic life. However drastic this measure may be, it would have the great advantage that the Germans would, at any rate, know how they stand, and feel that they were being given a chance of again taking their place in the economic life of the nations. If the entire German circulation were transvalued in the manner indicated, which would mean under present circumstances that 5,000 paper marks would have to be made equivalent to one gold mark, naturally, from the very nature of the case grave difficulties would arise in various quarters and injustice ensue. There is, however, in my opinion, a way of alleviating this, viz., by forcing those persons who are not affected by this measure, or affected only to a smaller degree, to pay a considerable contribution into the Exchequer.

And now we come to the obligations of Germany due under the Treaty of Versailles. Any reorganisation of Germany's finances on a sound basis, without at the same time liberating the country from the obligations laid on it by the Treaty, is an utter impossibility, as these obligations are so crushing that it would be impossible for Germany, with the best will in the world, to effect the payments involved by the Treaty. As has recently been so correctly expounded by Mr McKenna, a country can only pay the foreigner the balance of its balance of payment. Even a Budget which balances would, consequently, not place the country in a position to pay the enormous obligations to the foreigner under the Treaty. The German State would, in that case, have to continue to purchase foreign bills and currency, so that the exchange rates in Germany itself would continue with an upward tendency. However solvent the purchaser of any article may be, a continuous demand without any offers will always cause a rise. This applies not only to goods, but also to foreign bills and money. Only a credit balance of the German balance of payment would enable her to pay any considerable annual sums to her creditors, but, in view of the fact that Germany has lost a large part of her finest provinces, while even before the war her balance of payment was only just in equilibrium, it is to be feared that, whatever reorganisation may be adopted by Germany, the balance of payment will not, within any reasonable period of time, produce any considerable credit balance.

If I am asked what is to happen in regard to the obligations to France, and whether the latter, which is absolutely dependent on the German indemnity, must be ruined, while a helping hand is extended to Germany, I should reply, "No; measures must be taken to prevent France from suffering this fate." It goes without saying that France, which had enormous tracts wilfully devastated during the war, has a right to as much, if not more, assistance than Germany. There is here a common goal for the whole civilised world. A distinction must be made between the amounts that Germany can pay and those that France needs in order to avoid following the fate of Germany. This is not only of importance to France and her Allies, but it is of supreme importance to the entire world that conditions befitting civilised humanity should again obtain in Europe. Every nation and every individual is suffering from the present position, some to a greater and some to a lesser extent, and it is the duty of all to find a solution. We have not to ask how the position arose, we have only to consider the fact that it exists. We must accept it as a decree of fate, and consult together to see how improvement can be achieved, irrespective of the fact that we are ex-belligerents or ex-neutrals. This, in my opinion, is a task for the League of Nations. It is not for me to go into the question as to whether the existing League is based on right principles. It is, however, the duty of all nations to amend the League in such a way that every obstacle to joining it shall be removed. We must educate the next generation to perceive that just as each individual is a citizen of his own country, all are citizens of the League of Nations. Just as we all have to bear taxation on behalf of our own country, we shall have to learn to bear the burdens of the whole world. And the League of Nations, of which all States should be members, will have to examine the question as to what Germany can pay, and apart from that, what France needs. Once the amount is fixed and the instalments by which it is to be repaid, it will be the

duty of the League to issue a loan in all countries that are members of the League. The loan would, therefore, as a matter of course, be covered by all the nations of the world, and would form an investment security of the first rank. It would be the most international security imaginable, and offer the best guarantee that can possibly be asked for any investment. I quite see that in practically all, if not all, countries radical alterations would have to be made even in the most essential laws before this measure can be adopted. The payments of the debtor States would, naturally, have to be made to the League, so that no difficulties would arise between States regarding settlement of their reciprocal financial obligations. It would be the task of the League to come to an arrangement, whether uniform or not, in order to earmark certain sources for the purpose of covering interest and redemption of its loans. Restrictive regulations would, of course, also have to be framed in regard to the circumstances and conditions on which the League would conclude the loans, and also as regards the means which it would have at its disposal in the case of one or more of the contracting States proving recalcitrant in fulfilling obligations. As concerns the settlement of inter-Allied debts, the present difficulties attached thereto are, in my opinion, also a consequence of endeavours to force theoretical solutions. A practical settlement is a necessity. It appears to me that there should be no doubt to any man of common-sense in England or the United States that neither France, Italy, nor Belgium is in a position to pay their inter-Allied debts. Yet every thinking man knows at the same time that England is in a position to do so *vis-à-vis* the United States. It is incomprehensible that in a country like England, where people are accustomed to look at things from a level-headed point of view, and where they see that public opinion finally triumphs, they cannot, or will not, see that they must renounce their claims on the Allies, whereas they cannot shake off their debt to the United States. In this case, the *beau geste* must come from America, which country does not require collection of its claim on England for its own economic existence, while the payment of interest and redemption will in the long run form an uncertain basis for the rates of exchange between the two countries, and it should consist of the United States relinquishing their claim in favour of the League of Nations in order to help the distressed countries of Europe. Let them, on the other side of the Atlantic, show themselves ready to act. Let everybody who understands the position in Europe now act!

Yours faithfully,
D. BIRNBAUM.

Amsterdam, November 6th, 1922.

Books and Publications.

A PLEA FOR GREATER OUTPUT.*

THIS book is a collection of articles, mostly on financial subjects, which have already been published at various dates from 1912 to 1922. The first four deal with depreciation of investments subsequent to 1896, and are reprinted from the *Economic Journal*. They contain some useful statistics, but might with advantage have been condensed and brought up to date. The remaining articles have appeared in the *Birmingham Post*, and seem to us scarcely to warrant reproduction. Their common note is to emphasise the danger to Great Britain arising from long-continued restriction of output per man. The author repeatedly refers to a statement, made, he says, by the Director of the Census of Production, to the effect that output per head of those employed in the United States was before the war roughly double that of this country, and leaves us to suppose that the difference is due to pure laziness on the part of the British workman. Surely the main reason is the relative plentifulness of natural resources in America, and the relative scarcity of labour which causes the employment of a smaller proportion of labour to natural resources and capital in production there than in this country. Other factors are the less up-to-

* "Britain's Decline. Her Economic Disorder and its only Remedy." By John W. Lea. (Birmingham) Cornish Brothers, Limited. 1s net.

date methods of production in this country (for which the workman is not principally responsible), and the superior workmanship of many classes of British goods, as compared with the corresponding American products. The reasons for increasing national productivity are so strong that it is a pity to have the case unconvincingly argued.

THE RESOURCES OF FINLAND.*

IN 1919 a Finnish Trade Commission visited the United States, England, and other Western countries, and came back convinced that the foreign trade of the new republic would be best promoted by spreading information concerning its resources, products, and needs. The result is this sumptuous quarto volume, issued for distribution through the Consulates, attractively illustrated, and dealing with the geography, history, banking, finance, and exports and imports of the country, its water-power, its currency, its attractions for holiday visitors, its chief industries, and their more prominent captains. Three times the size of Denmark, Holland, and Belgium put together, and slightly larger than the United Kingdom, Finland has a territory of which one-third is marshland—largely, however, reclaimable—and nearly one-eighth is taken up by lakes, which, with their connecting waterways, facilitate internal traffic and the exploitation of the timber which is its chief product, and is the material of its cellulose, paper-pulp, and paper, while numerous rapids provide water power of which little more than one sixty-sixth part is now turned to account. It contains much valuable stone, and probably large deposits of iron-ore; it is increasing its stock of cattle and its trade in dairy products. The State debt of 1,739 million marks is covered by State lands, the railways, and shares in industrial undertakings; its industries are recovering from the blockade and the civil war, and the check to its trade with Russia has led it to seek new markets in Western Europe. It has long been visited by tourists—chiefly Russian—in summer; and it provides winter sports. We cannot guarantee the editor's statistical accuracy; an unfortunate misprint represents the forest lands as exceeding the whole area of the Republic. But the book and its illustrations should attract Western tourists to a new playground, and enable British traders to apprehend the capacities and needs of the country, and to judge of the position of its leading industrial undertakings.

* "Trade and Industry of Finland." (Helsingfors) J. Simelius's Heirs Printing Company, Limited. Large 4to, pp. 746. Illustrated.

THE INTEREST OF THE CONSUMER.*

THE main objects of this book are to emphasise the necessity for studying economics from the point of view of consumption, and to urge consumers to co-operate in protection of their own interests. The author (who is a young Roumanian studying at the University of Paris) criticises the Physiocrats and the English classical economists for laying undue stress upon production, while even some modern economists, he says, refuse to recognise a theory of consumption as a special branch of economics. In an historical section he shows how during the Middle Ages the interest of the consumer received special attention, being safeguarded, for example, by prohibition of forestalling and regrating, and by regulations as to just prices and the quality of goods sold. It was the Industrial Revolution, with the new technical discoveries that accompanied it, which caused attention to time, while rightly emphasising the necessity for sweeping away antiquated restrictions on production, failed to realise the necessity for safeguarding the consumer. The revulsion against this over-stressing of production was led by J. B. Say, Sismondi, and more particularly Fourier; and the author considers that the study of consumption is a special contribution of the French school to the science of economics. Among living French economists M. Charles Gide is the most prominent exponent of the consumer's interest, and it is under his banner that the author of this book has enrolled himself.

* "Le Rôle du Consommateur dans l'Economie Moderne." Georges Z. Strat. (Paris) Editions de la Vie Universitaire. 1922.

At the back of this interest in the consumer is a passionate desire to increase the power of the consumer as against the producer, and more especially against the middleman. The author's particular bugbear seems to be the retail shopkeeper, whom he hopes to see swept away by the growth of distributive co-operative societies. He advocates also other forms of association, such as consumers' leagues for enforcing reasonable conditions of labour, and he urges the need for increased economic education of the consumer by the collection and publication of statistics of prices, stocks, &c. By acting in association consumers are to play an active part rather than a passive part, but the author expressly disclaims any desire to exchange the tyranny of the producer or middleman for that of the consumer. He wishes to secure harmony of interests by collaboration of producer and consumer.

While we feel much sympathy with efforts to increase the bargaining power of the consumer, we doubt whether co-operative distribution can oust the individual shopkeeper, and we think that the author under-estimates the value of the service rendered by the middleman. His book is one of considerable interest.

THE WORLD'S GOVERNMENT AND MUNICIPAL LOANS.*

MOODY'S Rating Books are probably the most reliable of all American publications on public loan issues. The sections dealing with industrial, railway, and other public utility undertakings were published earlier in the year. The present volume relates to Government and municipal investments, and certainly a big step in the direction of acquainting American investors with the details of foreign Government finances and securities has been taken by the publication of the 1922 edition of this work. The almost complete revision of this work is shown in the exhaustive amount of information on the foreign and American field, derived in all cases, it is stated, from official sources. In all, no less than 622 nations are completely covered, while over 10,200 British, colonial and foreign bond issues are described and classified. The book includes some 64 maps, a five-year price range of leading issues quoted in London, Paris, New York, and on the Swiss Stock Exchanges, and a ten-year range of foreign exchange quotations. The latest issue is unquestionably far better than any of its predecessors, not only with respect to size, but quality as well. This volume should certainly receive a cordial reception from the general banking and investing public. We know of no publication in this country which covers such a wide field.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 29.

ACCOUNT.
November 30.

The reaction of cheerfulness which was expected to set in after the General Election has failed to materialise in the Stock Exchange markets. It can hardly be said that the political developments abroad have militated against a revival of activity, seeing that the franc has hardened substantially and that there is no new war on hand. The only section of the House to show anything like animation is the market for Argentine and Brazilian Railway stocks, where speculative investment continues to absorb the issues in the hope of increased dividends next year.

Notwithstanding the fact that the War Loan interest will be distributed next Friday, the market for the stock is so quiet as to warrant the description of dull applied to it by most of the dealers. The Funding Loan and Victory Bonds maintain their rises, and there has been a little investment in the new India 4½ per cent. stock on the basis of 84½. Rumours of another Local Loans issue did not help matters in this department. Colonial and Home Railway prior-charge securities hold their prices. The decision of the North British directors in regard to the payment of the postponed dividends has had no effect upon the stocks concerned. Auckland is in the market with a new loan.

French Government bonds are better, but the French railway stocks, after an improvement, tended to ease off again. Germans braced up a trifle; Brazilians were good at the beginning of the week, in consequence of a rally in the milreis, but the improvement did not last. Peruvian Corporations came on offer from people who had given for the call of the stock some time ago, and the Asiatic bonds are so quiet as to be almost dormant. Greeks and Spanish have hardened.

Districts are the outstanding feature of strength amongst Home Railways, a sharp rise in Metropolitan causing sales of that stock in order that the money might be diverted into the former. The Heavy Home Railway group advanced to some extent, but lack of public interest caused prices to sag from the best, although this is the period when dividend anticipations are counted upon to provide the market with a seasonable degree of strength. In Grand Trunks and Mexican Railways there is nothing doing. Argentine Rails, however, continue to give an exceedingly good account of themselves. The big improvements brought in a certain amount of stock, which encountered a good deal of support ready to take whatever supply came along, and reaction has amounted to little. San Paulo Railway ordinary has risen some dozen points this week; and Leopoldinas advanced in quieter fashion, in consequence, of course, of the better Brazilian exchange. United of Havana came to the front with a sharp rise; most of the debenture and preference stocks in this department have risen almost daily.

Rubber shares continue to attract a good deal of interest, and the public continue eager for information, but orders are far less plentiful than inquiries. Tea shares have further improved upon their previous advances. The oil market is heavy, each day bringing along further supplies of shares from people who have got tired of the long-continued decline in the market. Iron and steel shares move within narrow and irregular limits. The passing of the final dividend on Dorman, Longs was not unexpected. Smithfield and Argentine Meat shares, after a sudden spurt on ill-founded hopes roused by the British and Argentine deal, collapsed upon the publication of the report of the shareholders' committee appointed to look into affairs. The report shows that the Smithfield and Argentine Company lost £860,000 in the years 1920 and 1921.

Manchester continues to buy its textile favourites, and there has been a little inquiry for nitrate shares from Liverpool, where the better prospects for the nitrate industry appear to be recognised. The firmness of tobacco shares testifies to the hope of increased dividends. Dunlops went better, on purchases by those who expect that the forthcoming report will throw a favourable light upon the company's position. Banking shares

continue to creep up, and there has been a further recovery in the Far-Eastern issues. Amongst insurance shares the changes are few, though rumour busies itself with talk of two or three of the smaller companies being absorbed by bigger brethren. Shipping stocks are mostly higher. Knowledge of the extraordinarily good year which the electric lighting companies are having is responsible for the strength of the shares of companies engaged in the industry. Siemens gave way on the passing of the dividend. Cable stocks remain dull, the Western Telegraph report showing a heavy diminution in the profits for last year; the dividend of 10 per cent., free of tax, is maintained. Marconi debentures are steady about 3 premium, but the various wireless shares are uninteresting. Sudan Plantations are maintained by reason of the knowledge that the allotments of the new shares will be out early in December. British Columbia Electric Railway stock have again gone ahead, and several of the Mexican utility issues are better.

Kafir shares are languid, and in the circumstances the sagging of prices is natural enough. The declines are small, but had their effect upon Rhodesians and other South Africans. De Beers have hung upon Paris for the inspiration in their movements, and Rio Tinto, after a bout of buying from the French capital, gave way when this support was withdrawn. A good many options in the Mining markets fell due for declaration this account, and operations in connection with the closing of these accounts contributed to the dullness which overcast the Mining market as a whole. In default of anything better to do, rumour arranged an Entente amongst the smaller European States, but even this failed to arouse any serious attention.

Svenska Tandsticks Aktiebolaget (The Swedish Match Company).—Incorporated under the laws of Sweden. Authorised capital 90,000,000 crowns in ordinary shares of 100 Swedish crowns each. There are two bond issues outstanding for 33,940,000 crowns. This is an offer for sale in this country of 179,500 shares at £6 15s per share. The shares included in this offer form part of 450,000 shares of 100 crowns each, which are now being offered to existing shareholders in Sweden for subscription at 120 Swedish crowns per share, and they will, as from December 31, 1922, rank *pari passu* in all respects with the 450,000 shares already issued, except that they will not entitle the holders to any dividend that may be declared in respect of the year 1922. Interest will be paid at the rate of 6 per cent. per annum from three days after the date upon which leave to deal in them is granted by the London Stock Exchange, to December 31, 1922. According to a letter from the managing director, given in the prospectus, the company controls the whole of the match industry of Sweden, and owns auxiliary industries such as paper-making, chemical plants, &c. A balance-sheet is published in this offer for sale, and there is also given an informative statement of past profits and dividends. It is confidently estimated that the new shares will receive a dividend of 12 per cent., and on this estimate and the further contingency that the value of Swedish crowns is maintained at 16/65 to the £, the public are informed that the yield should be £10 13s 6d per cent. With a share capital of

45,000,000 crowns, profits on ordinary capital were 19.29 per cent., and the dividend was 12 per cent. To expect to double capital and yet to pay the same dividend, especially with net profits falling from 1919, sounds a trifle optimistic. The shares, however, were quickly absorbed by the investing public.

George Lunt, Sons, and Co., Limited.—Authorised share capital £200,000 of which £130,000 has been issued and fully paid. This is an issue of £100,000 6 per cent. first mortgage debenture stock at 97½, £20,000 of which has already been applied for. The company was formed in 1893 to acquire an old-established business in Liverpool of bakers and confectioners, and the whole of the ordinary share capital is held by directors and friends. The document itself is an admirable example of what can be accomplished in the way of issuing a lucid prospectus. These debentures are well secured by a first specific charge upon properties and plant, independently valued at £146,538. Other assets are also included under a floating charge, and a well-known bank is appointed as trustee for debenture-holders. Redemption will take place by means of a sinking fund within 27 years, either by purchase or drawings at par. The company, however, reserves the right to redeem at par on or after December 1, 1938, on giving six months' notice. Surplus assets, including the net proceeds of the present issue, will amount to £217,305. Against this there will be an issued capital of £230,000. In arriving at these figures, however, no credit has been taken for goodwill, which stands at £15,000. Profits are given from 1912, and these show that the necessary amount for debenture services can be easily met, even if profits fell back to the figures for 1912. Although the issue is comparatively small, and dealings will be confined mainly within Liverpool circles, it will no doubt make a strong appeal to local investors.

Reeves and Sons, Limited.—Authorised capital £300,000, divided into 75,000 cumulative 5 per cent. first preference, 112,500 cumulative 6 per cent. second preference, and 112,500 ordinary shares of £1 each. The whole of the first preference, 75,000 of the second preference, and 72,875 of the ordinary are already issued. There are no debentures or debenture stock. This is an issue at par of 37,500 cumulative 6 per cent. second preference shares of £1 each, and an equal number of ordinary shares of £1 each. Applications may be made for the former shares by themselves, but an application for ordinary shares will be entertained only if accompanied by an application for second preference shares on the basis of one preference for one ordinary share. The business was originally founded in 1766, carries on the manufacture of artists' colours, &c., and the company now owns a freehold factory at Dalston, North London, and a second freehold factory at Enfield. Dividends are shown from 1902, and these are evidence that the company has enjoyed a career of unusual prosperity. It is a pity perhaps that actual profits were not stated. A balance-sheet and profit and loss account covering the year ended April 30, 1922, is appended. All classes of shareholders have equal voting powers. If assets are valued in the balance-sheet at reasonable figures, and providing reserves are sufficient for depreciation in property and investments, present and future, the shares would be a fairly good security.

The Romford Gas and Coke Company, Limited.—Authorised share capital £220,000, of which £78,651 has been issued. The authorised loan capital amounts to £110,000, and the minimum price of issue being par, of 9,000 £5 6 per cent. preference shares, to be redeemed at par on January 1, 1933. At that the prospectus had shed a little further light on the position prior preference share issues. The document does not state voting rights attached to the present issue. The net revenue £9,100, and interest on loan capital amounts to £1,058. This but £2,700, there is a substantial margin of income for security. This appears to be an efficient public utility undertaking, and hope to enjoy a steady but narrow market, the offer is not without merit, providing the shares are obtained at par.

Canadian Gold Mines Corporation.—Incorporated under the laws of Delaware. Authorised capital, \$6,000,000, divided into shares of \$1 each. The entire capital stock was issued to a gentleman in New York in return for the whole of the capital stock of three Canadian Corporations. These corporations turn over mining claims in the Porcupine mining district, Ontario, Canada. According to advertised particulars, the New York gentleman "handed back to the corporation to be placed providing funds. Other interesting internal transactions are detailed. A report on the mining properties by the company's consulting engineer is given. The investing public in this country is mainly interested in this undertaking because it is stated that 1,000,000 of the shares of the corporation

have been sold to the British Porcupine Development Company, Limited. In connection with this venture, certain particulars have been published in the Press to comply with regulations of the London Stock Exchange. An application has been made for leave to deal in the shares, and it is owing to this application that we are enabled to glean these few particulars. We should require, however, much more information before we could classify the proposition as a promising venture.

The Mortgage Company of Jamaica, Limited.—We are officially informed that the debentures of the three Jamaican companies mentioned in this recent prospectus are secured by registered specific mortgages, and, according to the trust deeds, any further mortgages which either of the companies may grant can only be subject to the debentures already issued. Messrs Arbuthnot, Latham and Co. point out that the formation of a separate small company instead of making the issue direct was evidence of their desire to stand between debenture-holders and any possible loss up to £50,000.

ACTIVE SECURITIES.

TRIBUTE TO MR TATLOW.

The negotiations leading up to the agreements we have arrived at have been effected by Mr Tatlow and myself—in some cases entirely by Mr Tatlow with the invaluable assistance of Mr Quirey's expert knowledge of accounts; and I think that I ought to say that, in my opinion, by no means the least of the services which Mr Tatlow has rendered to the Midland Railway Company have been in connection with these negotiations, where he has shown a knowledge, patience and address which have made it possible to come to an agreement which, I hope you will agree with me, is satisfactory.

CAPITAL OF NEW COMPANY.

The capital of the new company formed by the preliminary amalgamation will be £332,402,986, made up as follows:—Deben-
ture, 4 per cent., £81,933,736; guaranteed 4 per cent., £31,406,555; preference, 4 per cent., £100,277,489; redeemable preference, 4½ per cent. (to be redeemed at par June 30, 1925), £1,500,000; redeemable preference, 5 per cent. (to be redeemed at par June 30, 1926), £700,000; preference (1923), 4 per cent., £29,715,314; and ordinary, £86,869,892; total, £332,402,986.

CAPITAL POSITION SIMPLIFIED.

One of the results of the proposed amalgamation will be a greater simplicity in the capital position than exists to-day. Taking all the constituent companies embraced in the scheme now before you, I find that the number of denominations of stock amount to 44. Under our scheme these denominations would be reduced to seven, which in turn will be further reduced to five in June, 1926, when the small amount of redeemable preference stocks will have been redeemed.

The name of the company will be the London, Midland and Scottish Railway Company, and the new board will consist of twenty-three members, of which eight will be nominated by the Midland Company.

CALEDONIAN AND NORTH STAFFORDSHIRE POSITION.

This, as I stated in my opening remarks, is a preliminary scheme, and it does not include our friends of the Caledonian and North Staffordshire Railway Companies. That is due to the fact that we have not yet been able to come to a satisfactory agreement with those companies, but I certainly hope that we may shortly be able to do so; but, whether we do or not, it is the law that these companies have to be included in our amalgamation, and if we cannot come to terms between ourselves, it becomes under the Act the duty of the Tribunal to settle the terms between us. Speaking for myself, I can only say that it will seem to me that it will be a reflection upon us if we have to go to the Tribunal and admit that we have not been able to settle our own affairs without outside assistance.

In concluding this portion of my remarks, I cannot forbear expressing to you my sorrow—in which I know you all share—at the disappearance of the name of "Midland Railway," and that sorrow is increased, so far as I am concerned, by the fact that on the first occasion on which I have had the honour to speak to you as chairman of the Midland, I should have to ask you to acquiesce in a scheme which is to do away with the separate existence of the company.

But, ladies and gentlemen, though the change is not one for which we are responsible, there are certain considerations which I suggest should reconcile us to what is to take place. The history of the Midland Railway Company is the history of railway progress, but it is a history founded on amalgamations, and I venture to ask you to look on the decisions we are asking you to take to-day, not as signing the death warrant of the company, but as the authorising of another step forward in its accustomed path.

GROWTH OF THE COMPANY.

The company was born in 1844. Its incorporation was effected by the amalgamation of three companies, namely, the North Midland, the Midland Counties, and the Birmingham and Derby Junction Railways.

The distance we have travelled since that date can be gauged by a few comparative figures.

In 1844 the capital of the line was £5,000,000, and the miles of railway operated were 18½.

To-day the capital of the Midland Railway is £204,000,000, and the total running line mileage, including Irish and joint lines, is 2,171 miles, with a total track mileage of 6,031 miles.

As I have said, we have travelled far, and we have succeeded in building up an organisation which, in my opinion, stands second to none for efficiency in the whole world. In addition, I believe that the Midland has won a singular place in the affection of the travelling public and the trading community.

It has built up its position owing to wise direction and management, and, above all, to a working staff which has never spared itself in its efforts for the efficient working of the line. But throughout the history of the company the policy of amalgamation has

always been in view. And now that we are losing our "individual" identity by the largest amalgamation in our history, I believe that the London, Midland, and Scottish Railway will be guided with the same wisdom and worked with the same loyalty and efficiency which has built up the Midland Railway.

YORKSHIRE DALES RAILWAY.

Now, ladies and gentlemen, before I put the resolutions I will say a word about the scheme for the absorption of the Yorkshire Dales Railway.

This is a short line, 8½ miles long, commencing by a junction with our line at Embsay, near Skipton, and terminating at Grassington.

Its capital is £73,300 made up as follows:—Loans, £18,000 (all held by the Midland Railway); preference 4½ per cent. shares, £10,300; ordinary shares, £45,000.

The line is worked in perpetuity by the Midland Company under an agreement dated July 5, 1897, for 60 per cent. of the gross receipts, with a provision that if the amount receivable by the Yorkshire Dales is not sufficient to pay 4 per cent. on the share capital the Midland are to make a sufficient allowance out of their own receipts in respect of through traffic arising on or terminating on the line to make up the dividend to 4 per cent.

The settlement come to is:—(1) Loans (£18,000) held by the Midland Company to be cancelled, (2) preference (£10,300 4½ per cent.) to be exchanged for £18,540 of Midland Railway 2½ per cent. preferred converted ordinary, being at the rate of £180 Midland stock for each £100 of Yorkshire Dales shares, (3) ordinary shares (£45,000). £5,000 held by Midland Company to be cancelled. Balance (£40,000) to be exchanged for £64,000 Midland Railway 2½ per cent. preferred ordinary stock at the rate of £160 of Midland stock for £100 of Yorkshire Dales shares.

The date of vesting is January 1, 1922.

THE RESOLUTION.

Now, ladies and gentlemen, I beg to move:—

(1) That the preliminary amalgamation scheme now submitted, intitled "The North-Western, Midland and West Scottish Group Amalgamation Scheme, 1922," be and the same is hereby approved subject to such modifications as may be determined by the directors and approved by the Railways Amalgamation Tribunal.

(2) That the preliminary absorption scheme now submitted, intitled "The Midland Railway Company Preliminary Absorption Scheme, 1922," be and the same is hereby approved subject to such modifications as may be determined by the directors and approved by the Railways Amalgamation Tribunal.

The schemes were unanimously approved, and the proceedings terminated with a cordial vote of thanks to the chairman and directors.

NORTH BRITISH RAILWAY.

PAYMENT OF POSTPONED DIVIDENDS.

The adjourned annual meeting of the shareholders was held, on the 17th instant, at Edinburgh. Mr Wm. Whitelaw, the Chairman of the company, who presided, said the settlement of the long-standing dispute with the Ministry of Transport was a matter of great satisfaction. The dispute, commencing in January, 1921, covered refusal of the Ministry to pay £1,120,000 claimed by the company in respect of the years 1920 and 1921, and a claim somewhat indefinite by the Ministry to repayment of one million alleged to have been overpaid to the company in previous years.

So far as the dispute was placed before the Railway and Canal Commission by evidence and argument, it had been settled wholly in favour of the company, and they were, therefore, now in a position to pay the postponed dividends of 1920, and to recommend to the Ministry's claim for one million, the Chairman said during the last few months a somewhat obscure rule, affecting the calculation of compensation regarded for seven years by both parties as not affecting the question, was unearthed from the confused mass of agreements entered into by the old executive committee and the Board of Trade.

The Ministry now founded their claim for repayment on the North British being what they called a provision company; this was an entirely new point, and not free from difficulty. The Railway Companies' Accountants' Committee formed the opinion that they were a provision company. The General Managers' Committee confirmed that opinion, and the Government Auditor, on new information submitted, took the same view. After full consideration, they decided to accept the position of being a provision company.

The Ministry reduced the claim to half a million, and ultimately £405,000 was agreed upon, all questions of interest being waived. This sum, therefore, had been paid out of the money received from the Ministry in error during the years of control previous to 1920. This matter was not lost sight of in discussing the amalgamation terms with their partners in the Eastern Group. They would take

into the amalgamated company assets reduced by £405,000 from those appearing in the balance-sheet of the last annual report.

DIVIDEND PROPOSALS.

Declared and postponed dividends, the Chairman explained, would be paid in full. The Chairman moved that they declare dividends for the year 1921 on the preference stocks after the convertible preference stock, 1884, and on the preferred ordinary stock at the full rates, and on the deferred ordinary stock at the rate of 1 per cent. for the year, carrying forward £56,716. The date proposed for payment was December 18, 1922, but that date could be made applicable to all.

Owing to the long delay in payment of the dividend, there had been a very large number of transactions in the stocks since the register was sealed, and the directors had been much pressed, particularly by the stock exchanges, to decide that in those cases where the stocks have changed hands since the opening of the books after the meeting on February 24th, they should not pay the dividends to the shareholders in the sealed register unless such shareholders establish their right to the dividend in question, with the shareholders on the register at this date. The Chairman said they proposed to pay the dividends on and after December 18, 1922, to those registered holders on February 23, 1922, that is, who are also the registered holders thereof on this date. There are, of course, a very large majority of the total shareholders interested. With regard to cases where the registered holders to-day were not the registered holders on February 23rd, they would communicate with holders as registered in February, and ask their consent to the payment of the dividends to the holders of the stocks as registered to-day.

The Duke of Buccleuch seconded the resolution, and the recommendations were unanimously adopted.

SCHEME OF AMALGAMATION.

A special meeting was then held in connection with the amalgamation scheme.

The Chairman moved the adoption of the scheme of amalgamation of the six companies forming the group under the Railway Act of 1921. The Chairman said they had got rid of the claims by the English companies that they were exceptionally hit by the standard of wages and the eight-hours day, and they had got their superannuation fund accepted by the new company without any special consideration. The whole financial scheme had been received with overwhelming approval, and every stock had risen. Such a solution of an intricate financial puzzle reflected the greatest credit on all concerned.

The Duke of Buccleuch seconded, and Sir William Russel, representing the Scottish Railway Shareholders' Association, congratulated the directors on having obtained so highly satisfactory terms.

The resolution was unanimously adopted.

At an extraordinary meeting the Chairman proposed the election of the following four directors to serve on the board of the amalgamated company:—The Chairman, Mr A. R. Gray, Mr A. K. McCosk, and Lieut.-Colonel A. C. Murray; and that £13,000 be voted as compensation to the other directors not elected.

Sir William Russel seconded the resolution, which was carried.

DALGETY AND COMPANY, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

AUSTRALIAN AND NEW ZEALAND PROSPECTS.

The thirty-eighth annual general meeting of Dalgety and Co., Limited, was held, on the 21st instant, at the company's new premises, 65-68 Leadenhall street, London, the Hon. Edmund W. Parker presiding.

The Chairman, in moving the adoption of the report and accounts, said: When I addressed you a year ago the world had passed through one of the most severe commercial crises of recent times, but definite symptoms of recovery had begun to manifest themselves. This tendency, I am glad to say, continued—but with occasional halts—and though only slightly perceptible in some places, the improvement in other directions has been satisfactory. Our company, with its widespread interests, while participating in the good fortune of the year, has also had to bear its share of adverse conditions. Recognising, therefore, that circumstances have been far from ideal, the results achieved will, I venture to have been far from ideal, the results achieved will, I venture to hope, prove satisfactory to you. I must, however, draw attention here to the fact that, while it is true that ordinary profits show a satisfactory improvement, our year's income has been substantially added to by the amount recovered on account of our past payments for excess profits duty. Its total has been largely reduced by income-tax, but the balance is sufficient to provide a welcome addition to our revenue.

WORLD-WIDE DEMAND FOR WOOL.

In view of the fact that during our past financial year Dalgety and Co. have sold at their various centres 510,664 bales of wool, of a value of over £8,250,000 sterling, it is natural that a reference to this staple product should occupy an early place in my remarks. I am glad to be able to say that, despite a good many fluctuations, a substantial rise in the value of merino and fine crossbred wools can be reported, these descriptions standing to-day at fully 75 to 80 per cent. above the level they occupied at the close of the 1920-21 season, while medium and coarse crossbreds have recovered about 40 to 45 per cent. from the almost unprecedented depth to which they had fallen during that period. These latter grades—so important to the New Zealand sheep farmer—have still a long way to go before they reach a level reasonably remunerative to growers. However, this can be only a question of time, for it seems evident that the world's demand for wool to-day is appreciably in excess of the present production, and though the fashion at the moment runs upon fine qualities, consumers will sooner or later have to turn to the coarser grades to satisfy their requirements; indeed, there are already distinct signs of a movement in that direction. There is a cable to hand this morning from New Zealand saying that the prices for crossbreds have gone up 1d or 2d.

This long-awaited development will be hastened by the steadily progressing liquidation of the old stocks of Australian and New Zealand wool held by the British-Australian Wool Realisation Association.

WHEAT, DAIRY PRODUCE, FROZEN MEAT, &c.

Passing on to the other leading products in which we are interested, the last wheat harvest in Australia was hardly up to its predecessor so far as quantity was concerned, but exports were still very important, reaching a total of nearly 2,500,000 tons and a value of not less than £25,000,000. The average price obtained, though less than in 1919-20, was still a satisfactory one.

The dairying industry now plays an increasingly important part in the fortunes of Australia and New Zealand, and the 1921-22 season in both countries witnessed a substantial growth in the production. Prices were subject to some severe fluctuations, and were much lower, on the average, than during the period of Government purchase. Consequently, the net results were rather disappointing, as costs of production and transport have been on a high level.

As regards frozen meat, prices of mutton and lamb—the latter especially—have made a welcome recovery from the low level of last year. On the other hand, the market for frozen beef has been most disappointing, and the position of this branch of the meat industry gives rise to considerable anxiety. Notwithstanding the relief afforded by a Commonwealth Government subsidy of ½d per pound on exports of beef, and a welcome reduction in handling charges and freights, the net return to the Australian and New Zealand cattle breeder has been sometimes less than, and generally speaking little more than, the cost of production. The result is a growing tendency, in suitable localities, to replace cattle with sheep and to cut losses on cattle properties by checking breeding. Many schemes have been suggested for improving the position of beef trade, and strong efforts are being made by all interested in bringing this about, but it is evident that the recovery must be protracted one.

I referred a year ago to the inconvenient position which existed in Australian and New Zealand banking circles, as the

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

(e) Including Treasury Bonds.
Tenders will be received on Friday, December 1, 1922, for Treasury Bonds and Treasury Bills to be issued to the maximum amount of \$5,000,000. The amount of Treasury Bonds issued will not exceed \$5,000,000, but subject to that limit the total amount issued will be divided between Bills and Bonds in such proportions as The Lord Commissioners of His Majesty's Treasury may determine.

Tenders for Rs.1,00,00,000 three months' bills and for Rs.50,00,000 six months' bills were opened on November 17th.

The total amount tendered for three months' bills was Rs.2,41,00,000. Tenders at Rs.99 1a received about 60 per cent. and above in full. The average accepted rate was Rs.99 1a 1p, equivalent to a discount rate of 3.7642 per cent per annum. The total amount tendered for six months' bills was Rs.1,27,00,000. Tenders at Rs.97 10a received about 87 per cent. and above in full. The average accepted rate was Rs.97 12a, equivalent to a discount of 4.6036 per cent. per annum. Intermediate bills for six months only will be offered for sale in India during this week at Rs.97 13a per cent. Tenders were received on Friday, November 24th, for Rs.50,00,000 three months' bills, and for Rs.50,00,000 six months' bills for issue during the week beginning November 27th.

BULLION.

The gold movements to or from the Bank of England are n longer announced. For the week ended November 22, 1922, the stock of coin and bullion shows an increase of £4,245 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.	Gold Exported from the United Kingdom.
Countries from which Consigned.	Countries to which Exported.
Belgian Congo	£ 22,926
British South Africa	816,421
Latvia	4,464
U.S.A.	3,348
Other Countries	1,950
Total value of imports of gold	849,109
	Total declared value of exports registered in the week
	141,177

Messrs Samuel Montagu and Co. write on November 23rd as follows:—

GOLD.

A fair amount of gold came on offer, the largest portion of which was taken for New York. India figured on a small scale. Gold valued at \$980,000 has been received in New York from London. The value of the net imports of precious metals (expressed in lacs of rupees) into India during the 12 months ending Sep. 30th last was as follows:—Gold, 27.66; silver, 14.71.

SILVER.

On the whole, the market has presented a rather tired appearance after the somewhat severe fall of the last few weeks. There have been a few symptoms both from India and China of attempts to sound whether the bottom of the setback has been reached for the present, but the way in which the parity of prices in India and China keep below those ruling here, and the fact that the Indian bazaars have from time to time resold purchases previously made, do not yet give much hope of any real solid ground. The Continent is not active, but America is ripe for selling at any considerable advance. We hear that the coinage of Mexico for September last was 36,000 gold pieces of 50 pesos each, 4,600,000 silver pieces of 1 peso each, and 100,000 copper pieces of 1 centavo each.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Oct. 31, 1922.	Nov. 7, 1922.	Nov. 15, 1922.
Notes in circulation	17,963	17,920	17,820
Silver coin and bullion in India	9,110	9,067	9,062
Silver coin and bullion out of India			
Gold coin and bullion in India	2,432	2,432	2,432
Securities (Indian Government)	5,837	5,837	5,742
Securities (British Government)	584	584	584

No silver coinage was reported during the week ending 15th instant. The stock in Shanghai on the 18th instant consisted of about 40,000,000 ounces in sycee, 34,000,000 dollars, and 1,160 silver bars, as compared with about 41,900,000 ounces in sycee, 35,000,000 dollars, and 1,540 silver bars on Nov. 11th.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

1922.	Gold.	Silver.	1921.	Silver.
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.	Cash, Per Ounce.
Nov. 18.	91 11	32 1/16	32 1/16	35 1/2
20.	91 11	32 1/16	32 1/16	42 1/2

23.	91 8	32 1/16	32 1/16	48 1/2
24.	91 9	32 1/16	32 1/16	37 1/2

NOTICES.

Barclays Bank, Limited, announce that they have opened a new sub-branch at Benfleet, under the control of Mr E. C. Howell, manager Leigh-on-Sea branch.

The Bank of Montreal have received advice from their head office in Montreal that a branch of the bank has been opened at Vera Cruz, Mexico.

A branch of the London County Westminster and Parr's Bank, Limited, is now open at 422 Streatham High road, Streatham Common, S.W. 16, under the management of Mr S. V. Newton.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch in High street, Bromyard, near Worcester, under the management of Mr C. N. Foster.

We are informed that the laying of the corner-stone of the new Mellon National Bank building, Fifth avenue and Smithfield street, Pittsburgh, took place on October 30th. This building will occupy the entire frontage on Smithfield street between Fifth street and Oliver avenues, and will be, it is stated, one of the largest and finest edifices in America devoted exclusively to banking purposes.

MISCELLANEOUS

STRAND HOTEL, LIMITED.—The report and accounts for the year ended September 30, 1922, show a profit of £106,299, to which is added £20,390 brought forward from preceding year, making £126,689. Debenture stock interest absorbed £10,056. Interest on stock cancelled amounted to £1,304. Dividend on preference shares absorbed £37,000. The dividend of 11 per cent. on the participating preferred ordinary shares for the year absorbed £25,300. The deferred ordinary dividend also absorbed £25,300. The sum of £20,000 is transferred to reserve, while £7,729 is carried forward. The directors record, with deep regret, the death, on October 7th last, of Mr Montague Gluckstein, their esteemed chairman. Mr Gluckstein was associated with the company from its inception. The business at the Royal Palace Hotel, Kensington, which is under the control of the company, continues to be satisfactory.

WESTERN TELEGRAPH COMPANY, LIMITED.—The revenue for the year ended June 30, 1922, amounted to £1,680,049, and the working expenses to £839,044. After providing £32,747 for debenture stock interest and £260,708 for income-tax, corporation profits tax, and final adjustment of excess profits duty, there remains a balance of £547,548; to this is added the sum of £128,739, brought forward from June 30, 1921, making a total of £676,287. The directors have transferred £250,000 to the general reserve fund. Four dividends of 2½ per cent. each have been paid, amounting to £311,895, making a distribution of 10 per cent., free of income-tax, for the year ended June 30, 1922, thus leaving a balance of £114,392 to be carried forward to the next account. The company's cable steamer "Cormorant" struck some submerged wreckage and foundered off Rio Grande do Sul on January 24, fortunately without loss of life. The Eastern Telegraph Company's C.S. "Sentinel" has been chartered to replace temporarily the lost ship.

RUBBER.

KUALA LUMPUR RUBBER.—The loss for the year ended June 30, 1922, after crediting a sum of £932 realised from sale of investments in excess of their book value, and after charging £5,006 for depreciation, amounts to £5,514. Deducting this from the balance of £15,958 brought forward from the previous year, there remains at credit of profit and loss the sum of £10,444, which the directors recommend should be carried forward. The yield of rubber during the year was 1,030,922 lbs, being 319,463 lbs less than in the previous year and 130,922 lbs in excess of the estimate. Of this crop, 29,260 lbs were shipped to Europe and realised an average gross price of 8.25d per lb, while 1,001,663 lbs were sold in Singapore at the equivalent of 8.08d per lb. The combined average price for the whole crop is thus 8.09d per lb. The comparative "all in" costs for the years 1920-21 and 1921-22 have been as follows:—

	1920-21.	1921-22.
	Lbs	Lbs
Crop	1,350,385	1,030,922
	s d	d
F.O.B cost	1 1.51	9.26
Freight, insurance, and selling charges	0 1.70	.26
Expenses in Europe, directors' fees, and exchange	0 .28	.79
	1 3.49	10.31

There is thus a reduction of 5.18d per lb, notwithstanding the great decrease in the crop.

Commercial Reports.

THE CORN TRADE

Mark Lane, Friday Evening.

Ploughing and sowing is being actively proceeded with under very favourable weather conditions, and farmers are hoping for a continuation of fine weather during the next few weeks in order to ensure proper germination and give the young plant a good start. Lifting of root crops is not yet completed, but there is every confirmation of a heavy yield. Grass lands are still providing plenty of feed for cattle. Steady conditions prevailed at market during the week, and while prices were maintained with regard to feeders, breadstuffs displayed a weaker tendency. Native wheat continues in fair request, and suitable milling qualities sell at 44s 6d to 46s, with inferior at 41s to 42s per 504 lbs, free on rail. Imported descriptions tend easier, though spot and near at hand parcels somewhat sparingly offered. No. 1 Northern Manitoba quoted 53s 6d to 54s, No. 2 mixed Durum 50s 6d, and Rosafe 63½ lbs nominally 54s, all ex ship to arrive per 496 lbs. The cargo section ruled quiet, but after a firm opening values gave way slightly on freer offers and lower American advices. Steamers of Rosafe 62½ lbs January sold 48s 7½d, 63 lbs ditto guaranteed November shipment 51s 3d, 62½ lbs January-February 48s 3d, Baril 62 lbs afloat 50s, Barusso 62½ lbs January-February 7s 3d, No. 1 Northern Manitoba December 51s 3d to 50s 9d, and ditto November shipment from Vancouver to Germany at equal 50s 9d U.K. terms, all per 480 lbs. Crop reports are generally favourable, and while Australia indicates a lighter yield than last year, on the other hand official estimates from the Argentine point to an increase of about four million quarters. Flour market fully steady, and London standard straight run quoted 42s 6d, town households 40s 6d, patents 44s 6d to 45s 6d, and all English country straights 34s to 36s per sack delivered. Imported firm and sparingly offered. Manitoba export patents quoted 40s to 3s, top patents 43s to 45s, and Australian in limited supply at

415 to 415 6d per 280 lbs ex store. Maize quietly steady. La Plata ex ship quoted 36s 9d, ditto landed 38s 3d, American mixed ex ship 36s 6d, and ditto landed 38s per 480 lbs. The cargo section remained quiet, and tendency of prices in buyers' favour. A Plate steamer afloat sold at 35s 6d to Antwerp. Parcels in fair request at fairly steady rates. Barley continues slow of sale. English ranges from 29s to 60s per 448 lbs, free on rail. Of imported, Californian 39s to 43s, Australian Chevalier 49s to 53s, per 448 lbs ex store. American malting, 48 lbs, 30s 6d ex ship, 31s 6d landed, Plate 31s 6d, Persian 28s 6d, both ex ship, and Danubian 31s 6d to 32s landed, all per 400 lbs. Oats, English, quietly steady, while ranging from 25s to 32s 6d per 336 lbs, free on rail, as to sample. Imported firmly held. Plate, f.a.q., 27s 6d ex ship and 28s 9d to be landed, No. 2 Canadian Western 33s 6d, No. 1 Canadian feed 32s, No. 2 ditto 29s 3d, No. 2 white clipped a fair trade passing. London made, all cuts, quoted £18 15s, rolled oats £18 15s, flaked oats £21 15s, ordinary Scottish oatmeal £19 10s to £20, and American, all cuts, £18 10s to £18 15s per ton. Millers' offals continue in request at fully steady rates.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20.

	1922-1923.	1921-1922.	1920-1921.	1919-1920
Estimated sales of home-grown wheat—				
1 week to November 18	Cwts. 461,658	Cwts. 303,137	Cwts. 353,635	Cwts. 387,543
11 weeks to November 18	4,812,158	4,036,137	4,933,581	2,563,393
Average price of English wheat per				
quarter.....	s d	s d	s d	s d

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—Producers of steel are busier than they have been for a period, and are netting £5 7s 6d f.o.t. at the works for hematite. Heavy plates for railway and other bridges are in moderate request, with, it is added, good prospects in sight. There is also more doing in pig-iron and a substantial addition to blast furnaces is projected. The most notable is the relighting of four by the Glasgow Iron and Steel Company at Wishaw—after a couple of years' stoppage. A slight shrinkage in the shipment of Scotch pig-iron to the United States has been experienced (owing to the non-arrival of carriers, which, it is expected, will be immediately overcome). Last week's exports reached to only 1,321 tons, contrasting with 320 tons a year ago. It appears that the engagements with Canada and the States still cover a heavy total. Home inquiry for Scotch foundry iron continues disappointingly small, yet is well spread, representing that consumers are acting on very narrow buying lines. No. 1 foundry iron is cabled £5 a ton and No. 3 £4 15s (both f.o.t. makers' works). It is suggested that if there is not a speedy change for the better in the home trade a closing down of certain blast furnaces is probable. Black sheets are meeting with a ready market in Japan and Australia—under $\frac{7}{8}$ to $\frac{1}{2}$ —at £10 10s (Glasgow stations), and manufacturers are hopeful as to the future. Galvanised corrugated 24 b.g. (Glasgow) are bringing £17 10s per ton. A more active business is doing in tubes, bolts, nuts, rivets, and an increased outlet is spoken of in crown and common bars, angles, hoops, and rails. Electrical, machine, and speciality engineers have had what promises to be a bit of good luck. It is understood that Glasgow electricity firms have secured part of a Natal order for £4,000,000 of electrical plant and furnishing; that locomotive builders have booked a contract which will take five to six months to execute; that Singer's Sewing Machine Company are entering on the construction of a very large line of work, and that important expansions are projected in Diesel engines' building. These departures have imported a hopeful tone. Demand for Scotch coal for shipment to the Continent continues very active. Germany, France, Italy, and Denmark are keen buyers, and merchants have to wait for supplies.

Our Middlesbro' correspondent's report, dated November 23rd, is as follows:—Pig-iron: Business in pig-iron is quiet. The American demand has eased off and local consumers are not disposed to carry stocks towards the end of the year. No. 3 Cleveland G.M.B. is still quoted 92s 6d, but it is possible to buy at a little below this figure. Hematite prices are also easier, and mixed numbers East Coast hematite is now quoted at 93s per ton. Manufactured iron and steel: There is a good demand for finished steel, due largely to more shipbuilding orders being placed. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £10 10s; steel rails, £9 10s. Iron ore: Business in imported ore is quiet. Freight from Bilbao are higher, but best Rubio is still about 22s 6d. Mediterranean ores can be bought cheaper.

Our Sheffield correspondent writes :—The steady expansion of the steel trade is reflected in a tendency for firmer prices for some kinds of material. Undercutting is still rife, and a great proportion of the work in hand has been booked at unremunerative figures, but makers are wanting rather more money for new contracts. The worst of the present undue competition may be regarded as over, unless something untoward occurs to check the upward movement in trade. Labour is quiet for the moment, although wages in some branches of steelmaking are down almost below the living point. The output of basic steel continues to increase, and for soft quality an additional half-crown per ton is being asked. Interest in the more expensive acid steel is now reviving, and several of the crucible steelmakers are obtaining orders. The axle, tyre and spring plants, although still short of work, are better employed than they have been. Steel foundries and forges have little to do owing to the quietude of the shipbuilding and engineering branches. These latter, however, report signs of recovery. So far as Sheffield as a whole is concerned, the new year should see the volume of trade nearly equal to what it was before the war, excepting, of course, the departments concerned with armaments. The development of the new stainless iron and steel proceeds steadily, and every week sees some new application of the material as a substitute for metals liable to corrosion. Owing to its dearness, however, its use outside of cutlery is for small articles for the most part. The market for alloys of steel is in a depressed state, and owing to the poverty of the demand and the large output facilities in France, Scandinavia, and Great Britain several of the materials can be bought at lower figures than before the war. Business in edge tools and files is brisking up, and there is full work on hand in table-knives, spoons and forks, and electro-plate. The local demand for foundry pig-iron is meagre in the extreme, and the demand for foundry gas is in better request at enhanced prices. Sales of steam coal have again improved, and there is a healthy demand for export and for home consumption. Cobbles and smalls are also moving off more freely. The house coal market is unusually quiet, as November should be the busiest month of the year. Nevertheless, best qualities are scarce, and fetch very high prices, while secondary sorts can be bought at cheap rates. Furnace and foundry coke continue in good demand, with a large overseas demand for the latter. Quotations per ton at pits are :—

Best hand-picked branch, 32s; best Silkstone, 28s; South Yorkshire steam, 21s; rough slacks, 8s 6d to 10s 6d; smalls, 3s to 5s.

Our Cardiff correspondent writes:—The provision of increased shipment facilities has once again become a sore problem at the South Wales ports. During the past two or three weeks the docks have been glutted with tonnage, and berthing turns have involved from at least three to six days' detentions either in dock or in the roads. The congestion has reacted seriously on the working of the coaling berths, and many stoppages of work at the pits have been reported to the Coalowners' Association. The Great Western Railway Company is severely criticised on the alleged failure of the regulations which it has enforced to secure the expeditious shipment of coal; the Great Western Railway Company, on the other hand, is attributing the difficulties of the position to the refusal of the coal trimmers and coal tipplers to work an extra shift; while the tipplers and trimmers are alleging that they are not kept fully employed even under the present continuous two-shift system, and have arbitrarily refused to wait for more than two hours for coal for shipment. The Cardiff Chamber of Commerce is collecting information in regard to the length of the delays in loading turns, and to the character of the other complaints of coal shippers, and until the facts of the case have been sifted and authenticated it is impossible to say how far the congestion and its evils are due to inefficient traffic administration or to labour restrictions. The market has suffered from these evils; business has been less active than it was a fortnight ago, although towards the end of the week there were signs of improvement. The recovery of the franc has been followed by a revival in French business, and many orders cancelled or suspended recently have now been replaced. The latest returns of output show no diminution in productive activities; on the contrary, the output is increasing, and for the week ending November 11th it amounted to 1,073,600 tons, compared with a 1913 average weekly output of 1,130,000 tons. Prices have been irregular, and on balance they are slightly lower than they were a week ago, but the decrease is very slight, and the collieries are extremely well stemmed over the next few weeks.

The following are the current market prices:—Best Admiralties, 27s 6d to 28s 3d; second Admiralties, 26s 6d to 27s 6d; best drys, 28s to 28s 6d; best black veins, 25s 6d to 26s; Western Valleys, 25s 6d to 26s; Eastern Valleys, 24s 6d to 25s 6d; best bunker snalls, 16s to 16s 6d; ordinary cargo snalls, 12s to 15s; anthracite big vein, 47s 6d to 50s; anthracite machine-made cobbles, 65s to 67s 7d; anthracite French snalls, 70s to 72s 6d; stove snalls, 70s to 71s; rubble culm, 13s 9d to 14s; coke for export, 37s 6d to 42s 6d; iriland blast furnace coke at ovens, 25s to 26s; patent fuel, 28s 6d to 30s; pitwood ex-ship, 33s 6d to 34s 6d.

In the tinplate trade the position continues to improve, and the minimum price of 19s 6d per basis box has been easily obtained. Ruling quotations are from 19s 6d to 20s, and at these prices there is a profit.

THE LONDON MONEY MARKET.

PARKER STREET, KINGSWAY, LONDON, W.C.2.

maturity have now been officially or semi-officially secured, to prevent the War Loan interest payment being long a cause of extreme ease, while for the long view, the prevalent hopes of trade revival, if realised, do not make for cheap and abundant money. These hopes are supported by more general reports from the discount houses of a freer supply of commercial bills. The discount market, which had shown an easier tendency in the earlier part of the week, was weakened still further yesterday by extensive buying of December Treasury bills by one of the clearing banks at $1\frac{1}{2}$ per cent. discount. The rate for three months' commercial bills was weak at about $2\frac{3}{4}$ per cent.

	Dec. 1, 1922.	Nov. 24, 1922.	Nov. 17, 1922.	Nov. 10, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$ (Jly. 13, '22)

The Bank return shows an increase, due to the usual demands at the end of a month, of £1,477,000 in the note circulation, and decreases of £5,000 in the stock of gold, and £1,482,000 in the Reserve. Borrowings by the market added a million to the other securities, but Government securities were a million and a-half lower. As the Public deposits had, nevertheless, risen by a million, other were curtailed by nearly three millions by these various drains. Currency notes outstanding were increased this week by £701,500 to £287,910,700, which includes £1,533,700 for notes called in, but not yet cancelled. The fiduciary issue is £238,227,000, or £71,761,400 below the maximum.

THE STOCK MARKETS.

Business has remained quiet, but there was a slight hardening tendency in the Consol market towards the end of the week on the expectation that some of the War Loan interest distributed on Friday would find its way back to the market. In the foreign market French bonds have given way, but Germans and Brazilians have rallied. Home Rails have been good and fairly animated, and Argentine and Brazilian Railway stocks are higher. Rubber shares, though firm, have not been much affected by a further rise in the price of the raw material, and oil shares have been flat as a result of fresh liquidation. The shipping market has been strong, and banking and insurance shares fairly good, but iron and steel issues have been inclined to sag. Mines are stagnant. A feature of the week has been the activity in the new capital issue market, several new offers being rapidly subscribed. Further activity is anticipated.

THE COMMODITY MARKETS.

The unmistakable signs of an improved demand in many British industries has not yet had a marked effect on commodity markets. Moreover, as the end of the year draws nearer markets are likely to show increased signs of dullness. In the Manchester cotton trade lower values are anticipated. Demand for India continues indifferent, and though a few more orders have been booked for China, there is no expectation of buying of importance with the exchange so unfavourable. Our Bradford correspondent reports some ease in merino wool values, but that there is a general impression that the position of fine combing wool is too strong to permit of any marked fall in prices. Less demand has been experienced for pig-iron, but business in steel is improving, and the demand is better. At Cardiff, prices of most classes of steam coals rose slightly, but there is still congestion at the docks, which interferes with the free movement of trade. The improvement in the Welsh tin-plate trade is maintained. Our Bermondsey correspondent states that the hide market is steadily weakening, and that tanners apparently welcome the movement. Meanwhile the shoe trade is steadily improving. Further details of markets and prices will be found on later pages.

FOREIGN EXCHANGES.

The market has had a quieter week than for some time past, the chief features being the strength of sterling in

New York, and a renewed upward movement in the Paris rate. From \$4.49½ on the 24th, the dollar rose steadily until just under \$4.53 on the 28th, well above the highest point reached since the unpegging of the dollar rate in the spring of 1919. On Wednesday there was a slight reaction, and on Thursday, with a general holiday in America, there was a further fall. Yesterday morning, however, at \$4.51, there were signs of increased strength. For the present, there is no reason to fear any sharp reaction, although the recent rise has been perhaps too rapid to continue without small relapses. It should, however, be remembered that a tendency towards inflation, which it would be difficult to avoid should the various unemployment schemes at present under consideration be carried into effect, may go some way towards counteracting the favourable effect on rates of the similar inflationist movement in the United States. Forward quotations remain unchanged at 1 per cent. per month over spot. The Paris rate moved up rather sharply from 62.90 on the 24th to about 65.40 on the 29th, since when it has recovered again to about 64.10 yesterday morning. There has been no change in underlying conditions, and the main reason for the last improvement is a somewhat over-optimistic expectation of the results of the conference of Allied premiers in London announced for next week-end. The Brussels rate again shows a slightly wider spread above Paris. Forward rates in Paris have narrowed a little to about seven centimes a month above spot, while in Brussels they have widened one centime to three centimes per month below. The German mark has been nervous and irregular, rising up to nearly 40,000 on Tuesday on fears of French action in the Rhineland. Yesterday morning, however, it had recovered to about 32,000, very little above the previous week's quotation. The Italian rate shows on the week an improvement of one lira to 94½. Among the neutral exchanges Holland, after going strongly in our favour, has relapsed again, and at 11.41 is not much above the previous week's quotation. Madrid, at 29.41, has again depreciated some nine points. Switzerland moved much in the same way as Holland. Christiania and Copenhagen show little variation on the week, while Stockholm has gone somewhat in our favour to 16.76½. In Central Europe Vienna, at about 320,000, is much the same, and apart from certain minor difficulties, preparations for the League of Nations loan are proceeding satisfactorily. In Warsaw, however, where taxation difficulties are still unsolved, there has been a sharp upward movement from 68,000 to 85,000. Prague has remained steady at 143; Belgrade and Bucharest show a renewed tendency to depreciate. Athens, as was to be expected after recent events there, has moved up again to 315, while Constantinople has maintained last week's recovery. In the East the rupee is about the same at rs 3 31-32d; Yokohama is ¾d cheaper at 2s 1½d. The downward tendency in silver continued till a quotation of 31½d was reached on the 28th. After this some Indian buying brought rates up a little, but the outlook is still unsatisfactory. Shanghai is 1½d down at 3s 1d, and Hong Kong is also lower. In South America Buenos Ayres is ½d dearer at 44½d, Montevideo shows a slightly firmer tendency at 44d, Valparaiso, after a sharp depreciation, is back again at 36.90 pesos, the same as the previous week, while Rio, on the other hand, is ¾d cheaper at 6½d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 25th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	10,465	Interest on Debt	1,57
		Supply Services	4,70
		Sundries	55
		Reduction of Debt	3,28
		Added to Exchequer balances ..	35
	10,465		10,46

The total revenue of £10,465,136 for the week ended November 25, 1922, compares with £15,098,917 for the corresponding period a year ago. Customs produced £3,668,000, as against £3,769,000, while Property and Income-tax yielded £2,062,000, as compared with £795,000. Excise brought in £1,839,000, while

Estate Duties at £1,010,000 compare with £1,731,000. The week's operations reduced the National Debt by £3,289,580, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates	+ 300	National War Bonds paid off ..	- 150
4½% Treasury Bonds	+ 4,613	Treasury Bills	- 6,806
Public Debt Advances	+ 950	War Loan, &c.	- 1,119
Cunard Loan	+ 130	Other Debt	- 838
	+ 5,093		

The floating debt was reduced by £6,755,000 to £911,458,500.

FINANCIAL YEAR, 1922-23 (April 1 to November 25, 1922).

	£		£
Total spent	475,275,828	Raised by revenue ..	522,800,483
Dec. in balances	7,668,092	Net repayments	55,192,747

THE NEW HOUSE AT WORK.

THE new House of Commons has been presented with a broader opportunity of showing its qualities than most new Houses have found in the first ten days of their life. Although the debate on the Address has been for several days interrupted by more serious business, we have already seen enough from the preliminary skirmishes to realise that the Government is faced with a powerful, active, and critical opposition; while the Irish Bills, whose urgency has interrupted the debate on the Address, have put the House to the immediate test of showing whether, in matters of high national importance such as this, it can eschew pettiness and meet an historic duty in the proper spirit. From this test the new House emerges with credit. The supreme task of the present session was to pass before December 6th the legislation necessary to approve the Constitution of the Irish Free State, and to translate into action the pledges given on behalf of the nation in the Treaty of December last. Political exigencies decreed that the time for considering the necessary legislation was very short indeed. It had to be passed quickly; and as regards the more important part, it had to be swallowed whole without alteration by a House to some of whose members many of its provisions were traditionally distasteful. Moreover, several of its provisions would in other circumstances have been greatly improved by wise amendment. It is, therefore, to the

credit of all sections of the House that the speedy passage, intact, of the "Bill to provide for the Constitution of the Irish Free State" was achieved without any attempt at obstruction or acrimony in any quarter.

A high tone was set for the discussion of this—the first of the two Irish Bills—by the Prime Minister and Mr Ramsay Macdonald. The former laid down that the House was limited to a single consideration: "Does the Constitution comply with the Treaty?" and he quoted the highest legal testimony in the affirmative. The speech of the latter opened with three terse sentences: "The less said about this Bill the better. Criticism is useless. Sympathy is dangerous," and concluded with an eloquent prayer for the success of the new régime in Ireland. The note thus struck was well maintained; and, although a new Labour member, who would be obscure if it were not for his unpronounceable name, attempted discord by moving the Bill's rejection, his effort passed so unheeded as to enhance the impression of general harmony. Harmony is sometimes monotonous; but the harmony of the debate on this Bill was enlivened by incisive examination of detail by legal luminaries. There was, for instance, an interesting discussion on citizenship of the new State, on the position of a British citizen resident in the new State, and on the question whether, technically, there is such a thing as a "Canadian," as distinct from a "British" citizenship. On this subject, and on the broad comparison between the Constitution of the Irish Free State and the Constitution of the Dominions, Sir John Simon, Sir John Butcher, and Mr Hogg made contributions that may come to be regarded as classical references by future students of constitutional history. In the main, however, Mr Hogg, making an effective first appearance as Attorney-General, was able to satisfy all reasonable doubts on the main point, namely, that the Constitution complies with the Treaty. In fact, the House was very much in the humour to accept his dictum: "We ought not to be so astute as to try to pick some technical flaw in the exact wording of some particular clause, and out of that spell some disagreement which would give us what they (i.e., the Irish) would regard as a dishonest excuse for getting out of our obligations."

The second Irish Bill, with which equally good progress has been made, is an omnibus Bill containing a jumble of provisions, financial and otherwise, "consequential on or incidental to the establishment of the Irish Free State." Here criticism had a broader scope, for in some clauses, at any rate, some amendment might be possible without breach of pledge. Much discussion ranged on such various topics as the salary of the Governor of Northern Ireland, land purchase, the grant of land for ex-soldiers, compensation for damage, the registration of war stock in Dublin, and the possible erection of a customs barrier between the Free State and Northern Ireland. On the last of these subjects many of the points recently brought out in the *Economist* were made by various speakers. The fact, however, obviously remains that powers to create such a customs barrier must be provided for. We can only hope that economic and political wisdom will save Great Britain, Ulster, and the new Irish Free State from the costly and irritating burden of a land customs frontier extending over hundreds of miles. But all such matters of detail, however important, are dwarfed by the fact that nothing can now prevent the faithful consummation of the Treaty. Within the next few days Southern Ireland will stand formally and legally upon the same basis as the overseas Dominions, facing a future fraught with great immediate complications, but with still greater future possibilities. We cannot do better than re-echo the hopes expressed in the House of Commons this week that within measurable time Ireland will have achieved not only peace within both of her present geographical divisions, but unity between the two.

Tranquillity has thus marked the Irish Bill's progress. But the "first week of term" has already produced abundant signs that the Government will not be allowed to rest in ease. Mr Ramsay Macdonald has given the House a glimpse of his high Parliamentary gifts, which, backed by a phalanx of 140 members, many of whom are able lieutenants, will ensure that Labour as an effective critical force will be incalculably more formidable than

in the late Parliament. It will be all the more formidable if Mr Macdonald can discipline the boisterous effervescence of some of his "new boys." The growth in strength of the Liberal opposition will quickly prove itself equally striking. In Mr Lloyd George and Mr Asquith the Premier has to face the two greatest Parliamentary figures of the day, each with plenty of skilled and energetic supporters. The delicate task of Liberal reunion is already achieved in most of the constituencies, and at Westminster, where the adage "more haste, less speed" might well be borne in mind, it is being pushed with almost embarrassing rapidity. When it is really achieved, the Liberal party will provide the House with a second cohesive opposition group not less to be respected than the first. In addition, independent thought is unusually well represented in various quarters of the Chamber. Contemplation of these new features at Westminster has already produced a visible effect in the country. It has revived public interest in Parliament; it is restoring, and will restore more clearly as time goes on the prestige of the House of Commons. For the last four years the country has had much excuse for regarding the proceedings of the House of Commons as unreal and ineffective. With such a feeling abroad, the new House had to win its spurs; and it is winning them. Whatever mistakes both Government and Opposition may make—and both will make plenty—the important fact will remain that we have got once more a Government that recognises its responsibility to Parliament, and a Parliament fully capable of performing its functions of criticism and control. The centre of gravity has once more shifted from Downing Street and Whitehall to Westminster, and for that fact alone all lovers of Constitutional Government may be devoutly thankful.

THE AGRICULTURAL COLLAPSE OF RUSSIA.

THE whole world has been deeply stirred by the tragedy of the Russian famine of 1921-22, which is the worst, both as regards numbers affected and as regards mortality from starvation and disease, which has occurred in Europe in modern times. Indeed, the story of the sufferings which it has entailed called forth from Western Europe, and still more from the United States of America, what is, perhaps, one of the greatest charitable efforts known to history. In July of this year no less than ten million persons (six million adults and four million children) were being fed by the American Relief Administration, and nearly 1½ million more persons were being fed by the various European organisations under the auspices of Dr. Nansen's International Relief Organisation. This immense relief effort, carried on in the recesses of the Russian Continent, to which communication could only be obtained by an inadequate and disorganised railway system, is one which has required from its agents not only the greatest self-sacrifice and devotion, but also remarkable efficiency and perseverance under difficulties. But great though the effort was, it came too late to meet the first and most furious onslaught of famine, which reached its height in the winter and early spring of 1921-22. Moreover, the numbers of people in need of food numbered from 20 to 24 million, and of these there perished from starvation a number which it is difficult to estimate, but is officially put by the International Russian Relief Commission at two million, and by Dr. Nansen himself at three million.

The fact that this appalling tragedy can occur in a modern world in a country which boasts a considerable, if inadequate, railway system, is sufficiently disquieting, and it is of the utmost importance to endeavour to understand whether and to what extent it is to be regarded as an act of God, and to what extent an act of man. At the July meeting of the Council of the League

of Nations in London, the League secretariat was instructed to present a report on the Russian situation, and the result of its inquiry, which has been published this week in London, provides some material for answering this question.* Its conclusions, though not summarised quite in this form, quite clearly indicate that far the most important cause of the trouble was the economic condition of the country caused by the revolution following upon the disorganisation of the European and civil wars, and that the actual drought which struck the famine provinces in 1921 was only the last of a disastrous series of blows which had killed the economic life of the country. The outstanding fact which the report brings out is that before the famine year nearly half the arable land of the country had already gone out of cultivation, and that on the land which was still under cultivation, the average yield had enormously fallen, not merely through lack of agricultural implements, fertilisers, draught cattle, deterioration in the seed corn, and inability to fight insect pests—all of which had a powerful influence—but, above all, because that section of the land which had gradually been brought under more modern large-scale farming methods, slipped back through the redistribution of land into the old primitive peasant culture methods. Hence the harvest of 1920 was only 43 per cent. of the average pre-war harvest. In pre-war days one-sixth of Russia's cereal crops was exported, and Russia's own population has been reduced by about 8 per cent. through war, immigration, and recurrent epidemics, and to this extent she could have afforded to reduce her former production without distress. But so disastrous a fall in production obviously shows that by 1920 the Russian people were living on a very much lower standard of consumption. The report of the League contains a discussion of all the varied influences which brought about this result, but the most interesting and significant are the revolution in land tenure, the economic breach between the town and country, and the effect of the Soviet requisitions and food taxes. The last of these causes was perhaps the most powerful influence, and it illustrates the effect of interfering with the normal motives of economic activity. In 1918 the Soviet Government made a decree leaving to the peasant an amount of his production sufficient only for himself and his household on a fixed ration, and the whole of the rest was declared to be the property of the State. This system may perhaps have only been enforced in those localities where the Red Army could make its power felt, or where the associations of poor peasants were effective; but wherever it was enforced it stopped production, for the peasant cultivator quite naturally ceased to produce as soon as he realised that he could not use his production for his own benefit. This interference with economic motives cut at the root of economic life. But there was another cause tending in the same direction. When the Soviet system was introduced into industry, manufacturing production, already curtailed during the European War, rapidly dwindled away. The peasant could not obtain anything he wanted in exchange for his produce, and he was not willing to take and store paper roubles, which had begun their downward course. He therefore limited his output to his own requirements. An economic disease of so serious a kind cannot, however, be checked at will, and as one influence after another crushed agricultural production, the country eventually arrived at the paradoxical situation in which its output of manufactured goods, though reduced to ridiculously small dimensions (coal, 25 per cent. of normal; pig-iron, 3 per cent. of normal; cotton, 5 per cent. of normal; when the right of free exchange was restored in March, 1921. The reason for this was that in a country like Russia against the whole output of agriculture, but against the agricultural surplus; and for the reasons indicated, emphasised in the autumn of 1921 by the effect of the drought, localities. Hence the cost of industrial production in terms of an almost non-existent food supply proved prohibitive, and the phenomena associated in the Western world with periods of over-production emerged and output fell almost to nothing.

The impression left by the report, and particularly by

the discussion of the peasant system of farming, leaves the impression that a large part of Russia has slipped back half a century to the condition obtaining at the time of the emancipation of the serfs; and though a nation can no doubt trace the path of development more rapidly a second time than the first, Russia has clearly to build up again almost from rock bottom a new economic system under which, with security of tenure, the right to exchange the produce of labour and an adequate transport and credit system the agriculturalist may be induced once more to grow for market and not merely for his own immediate physical needs.

The harvest in the current year is undoubtedly better than last year, and after a discussion of many varying estimates the League's report ultimately lends the weight of its authority to an estimate of about 2,000,000,000 poods of grain, which compares with other harvests as follows (the figures are for the area of the present Soviet Russia, excluding Caucasus and Turkestan, and relate to all cereal crops):—

	Sown Area (in Million Desyatins).	Harvest (in Million Poods).	Yield (in Poods per Desyatina)
1909-13 (average)	81.2	4079	50.0
1916	82.5	3955	48.0
1920	56.8	1738	30.6
1921	49.1	1617	32.6
1922	45.0	2019	45.0

It is significant that, taking Russia as a whole, the average yield was actually more in the famine year (1921) than in the preceding year, but the harvest was less owing to the reduced area sown. The reduction in the crop was not very great, but whereas there was an actual increase in the North, it was almost a complete failure in the South-East. The disorganisation of transport and the complete disappearance of stocks as a result of a series of years of inadequate harvests must therefore be included among the causes of the actual famine and mortality. The harvest of 1922 is big in comparison with the extreme poverty of Russia during recent years, but it is pitifully small compared to the needs of the country, and its inadequacy together with the continued difficulty of getting supplies to the famine area are responsible for the fact that Dr Nansen's representative in Moscow reports that charitable effort will still have to deal not merely with the care of orphans and with medical needs, which are the universal aftermath of famine, but also once more with the actual starvation after the turn of the year. In the Ukraine the Russian representatives of the famine-stricken areas report that, as a result of the drought in June, a large part of this year's crops perished; that the famine of 1921-22 had exhausted all supplies of seed in the hands of the population, and that the consequent diminution of the net harvest of winter crops in order to make good this loss threatened a continuance of famine in those districts which had suffered in 1921-22. "In regard, therefore, to these areas, owing to the exhaustion of the population physically, of all resources for trade at their disposal and of the increasing abandonment of work on peasant farms, the Conference came to the conclusion that famine during 1922-23, although less acute, would have far more serious results than that of last year." We have no space to summarise at all fully the report on the conditions of the last few months, but the difficulty of distribution is proved more eloquently than by any written statement by the fact that the Government has been forced to commence collecting food taxes for relief purposes even in districts which are themselves short of crops.

Reference is made in the report to the great psychological effect that has been produced in the towns of Russia by the new economic policy which permits the renewing of private exchange; but the net effect of the investigation is a very pessimistic one, for it shows even pre-war Russia as a country which was economically in a very primitive condition, and that its development was very vulnerable and easily destroyed. One may question whether conditions in a continent so vast as Russia are really capable of being summarised in a few general statements in a comparatively short report, but the document now issued at all events makes an attempt to probe for the underlying influences which are affecting the life of 120 millions of Europeans at the present day.

OUR INDEX NUMBER.

ANOTHER slight increase in wholesale prices of commodities as reflected in our Index Number occurred in November, the actual change being 23 points, which follows an increase of 71 points in October. This brings the total to 4283, which compares with 4357 at the end of 1921 and 2565 at the outbreak of war. As will be seen from the table below, last month's increase is more than accounted for by a sharp rise in the textile group; changes in other groups have on balance been downward:—

Date.	Cereals and Meat.	Other Food Pro- ducts (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tim- ber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	579	352	618½	464½	553	2565	116.6
" Dec., 1915....	897	446	731	711½	848½	3634	165.1
" Dec., 1917....	1286½	686	1684½	839½	1348½	5845	263.2
" Nov., 1918....	1289	782½	1848	903	1389½	6212	282.6
" Dec., 1918....	1303	782½	1805½	866	1337	6094	277.0
" Dec., 1919....	1441½	881½	2442½	1145	1453½	7364	334.7

* Corrected figure.

The only group apart from textiles to show a material change is primary foodstuffs, in which declines in foreign wheat, in barley and in meat were the principal factors. Among subsidiary foodstuffs a further small rise in tea was the only change of importance. In the textile group nearly every quotation moved upwards in varying degree, the largest rise being shown by jute. Cotton quotations have registered another increase, and it may be mentioned that the group went up in October by 34 points. In the minerals section there was a slight weakening in the minor metals. In this connection the remarks of a correspondent are of interest.

"If the big relief schemes calling for the expenditure of many millions of pounds are carried out," he writes, "various non-ferrous metals such as zinc, lead and copper are bound to benefit. The electrification of several railways, the new battleships and merchant vessels to be constructed, the tramway extensions, the new tubes, and so on, will call for metals in large quantities, and, having regard to the absurdly small stocks in the United Kingdom at the present time, it is rather a puzzle to see where supplies are coming from. Copper stocks in the United States will be cut down to 150,000 tons by the close of the year; there are now about 20,000 tons in the United Kingdom and 4,000 tons in France. Lead stocks here have been reduced to a few hundred tons, while the supplies of zinc are not more than 4,000 tons. The United Kingdom would have to look to the United States for fresh copper supplies and also for its zinc, while Spain and Australia, and possibly Mexico, would doubtless be called upon to send over lead. The price of spelter last week dropped very sharply on talk of big American purchases for early shipment, but this week, on the publication of the Government schemes, there was a very quick change of sentiment, and most of the loss was recovered. Before the war the United Kingdom could use about 11,000 to 12,000 tons of zinc per month, and any revival in the brass-making trade would mean competition for the available supplies. The exports of galvanised sheets this year will run into fully 500,000 tons; thus, allowing 100,000 tons for home use, this trade alone should easily absorb spelter at the rate of 80,000 tons per annum. Lead is likely to be in short supply for some time to come, and, generally speaking, all the non-ferrous metals are bound to come in for more attention as soon as the work is in full swing."

* "Report on Economic Conditions in Russia, with Special Reference to the Famine of 1921-22 and the State of Agriculture." To be obtained from Messrs Constable. 2s 6d.

acres) (a) prior to the war, (b) during the war, and (c) after the war :—

	(a)	(b)	(c)
United States	46.5	60.5	62.5
Canada	8.0	17.0	23.0
Australia	6.4	12.5	9.5

This welcome increase in Canadian acreage is rendered even more significant by the fact that Canada is considerably in advance of other countries in respect of yield per acre. The harvest in both Canada and the United States has been quite good, the estimates for spring-sown wheat being particularly satisfactory. The fact that a greater part of the crops has already been secured greatly enhances the reliability of these figures. In percentages of the 1921 crop, the outputs for Canada and the United States have been estimated at approximately 129 per cent. and 102 per cent. respectively. The wheat figures for British India are still better, and have been estimated, on the same basis, at 148 per cent. The International Institute of Agriculture estimates that the good returns of India, Canada, and the United States have provided 42,800,000 metric tons of wheat this season, a total of 17 per cent. above that of 1921. There seems good ground for believing that the European deficiency, together with the even more unsatisfactory results in North Africa, will be more than made good.

Our Buenos Aires correspondent reports that wheat is weak in the stalk and unduly advanced; but that this is by no means universal, and opinion inclines to the belief that, barring accidents, the yield should be fully normal, and may even be on a larger scale.

The world's supply of wheat seems well assured, if we take all exporting countries together. The output of the Western European countries, however, is clearly below that of 1921. The outlook for Germany has been prejudiced by the weather experienced in July, and an average yield is the most that can be expected. In France this year's harvest is considerably below the excellent results obtained last year, when what was practically a pre-war total was reached, in spite of the smaller acreage sown. In fact, the wheat crop is distinctly below the average, and importation is necessary to make up the deficiency. In Great Britain the crop is considered fairly good, though about 15 per cent. less than last year.

The following table illustrates the position in the four principal exporting countries of the world :—

WHEAT PRODUCTION (in Millions of Bushels).

	Average, 1909-13.	Average, 1919-21.	Crop, 1921.	Estimated Crop, 1922.
United States	686	865	794	810
Canada	198	252	300	388
Australia	85	88	144	..
Argentina	157	185	170	..

The average world crop of wheat is approximately 3,631 millions of bushels, of which only some 615 millions, or rather less than 17 per cent., enters into international trade. The four countries for which figures are given above account, on the average, for 564 millions of the total wheat exports. Accordingly, for this post-war period, with Russia no longer a factor of any importance at all, the figures for the United States, Canada, Australia, and Argentina together afford a reliable index of international supplies.

Thanks mainly to the favourable situation in the New World, the price ruling to-day is within measurable distance of the pre-war level. The following table is not without interest :—

WHEAT PRICES (per quarter).

	End of Oct., 1913.	End of June, 1914.	End of Oct., 1920.	End of Oct., 1922.
British wheat.....	30/4	34/1	90/6	41/6
Foreign wheat (No. 1 North Manitoba)	35/-	37/-	116/6	55/-

This season's maize supply is not so satisfactory. The United States, which is responsible for over two-thirds of the world's production, has a crop slightly smaller than that of last year (about 97 per cent.), but the area devoted to this cereal is also smaller. In South-Eastern Europe, however, where maize constitutes the principal food of the peasantry, hominy largely taking the place of meat as

chief article of diet, the crop is, on the whole, very inferior, thanks to the extremely dry weather experienced in August and September. Crop forecasts earlier in the year were extremely favourable, though the actual figures of the Roumanian maize harvest will almost certainly prove to be less than half the earlier estimates. The recent changes in land tenure have led to an increase in the relative importance of maize as compared with wheat, and the failure of the former will still further reduce the amount of the latter available for export.

The acreage devoted to rye has increased considerably in Poland, Canada, and the United States, and the crop in those three countries shows a very considerable improvement over that of last year. The figures for oats are also good in most countries, the United States actually having a crop of 118 per cent. in terms of the 1921 output on a considerably reduced acreage. Barley, on the other hand, does not appear to have been as successful in most countries in 1922 as in 1921.

On the whole, the world's production of cereals has been fairly satisfactory this year, thanks to the position in America. Signs of a recovery in Eastern Europe seem at hand, though obscured this year by the failure of the maize crop. The acreage under cultivation in the Danube lands has increased somewhat, though the uncertainties of the political and financial situation, combined with rapid social change, must needs make recovery very slow. In 1922, however, the New World has once again redressed the balance of the Old.

ARGENTINE LAND COMPANIES.

BEFORE examining the annual accounts of the little group of British companies developing land in Argentina a clearer insight into conditions may be obtained if a brief survey is taken of recent agricultural progress in that country. As is generally known, the staple agricultural products are cereals, livestock, and wool, the second of these providing the raw material for the great chilled and frozen meat industries, together with the important hide trade. The livestock industry has passed through a period of acute depression, mainly owing to the fact that conditions have been fairly favourable for cattle rearing, with a consequent excess of supply over demand. In consequence prices fell heavily, and many companies made severe losses in this section of their activities. In cereals conditions have been fairly good, prices rising owing to troubles in the Near East, and probably to the effect of adverse climatic conditions upon crops.

Fortunately, not only was the year ended September 30th last a record one, as far as wool exports were concerned, but the world demand for wool provided an outlet at good prices for stocks on hand, including those accumulated in past seasons. The following interesting table, which we take from Messrs Ernesto Tornquist and Co.'s report, shows exports of wool from Argentina from October 1st to September 30th for the past four years :—

Destination.	1918-19. Tons.	1919-20. Tons.	1920-21. Tons.	1921-22. Tons.
Germany	..	11,250	43,480	65,520
France	28,120	32,360	16,820	45,660
Great Britain	9,970	18,600	19,430	35,180
United States	55,800	30,410	38,030	18,270
Italy	7,070	8,070	1,800	10,000
Holland	5,080	5,390	..	260
Belgium	4,060	17,660	410	20,900
Spain	1,420	320	130	730
Other countries.....	7,370	2,790	2,620	3,170
Total	118,890	126,850	132,260	199,690

It will be observed that Germany is by far Argentina's best customer for wool, with France second and Great Britain third. The heavy fall in exports to the United States is a notable feature of the table. The substantial increase in the total from 132,260 to 199,690 tons is reflected in the revenue accounts of most Argentine agricultural companies, and profits from wool sales have

proved of valuable assistance in making up for losses in other directions.

From the accounts of seven representative British companies which we have selected, we make the following comparative statement of gross and net revenue :—

	Year Ended	1919-20.		1920-21.		1921-22.	
		Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.
Argentine Land and Investment.....	June 30	£ 135,594	£ 98,844	£ 94,030	£ 65,772	£ 125,004	£ 88,277
Argentine Southern Land	June 30	224,087	94,134	172,500	35,463	112,970	9,267
Cordova Land	Sept. 30	214,565	125,887	131,558	40,458	60,862	5,511
Forestal Land, Timber, and Railways	Dec. 31	1,433,351	992,381	754,335	560,261	544,257	Dr.
Leach's Argentine Estates	Mar. 31	282,870	171,959	176,245	81,727	2,630	Dr.
Rio Negro	June 30	182,772	88,692	82,103	18,713	67,611	12,122
Tecka	June 30	130,614	57,703	77,951	20,731	46,258	1,234

As will be seen, Argentine land companies have, on the whole, experienced an adverse year. The Argentine Land and Investment has, however, proved an exception, with net profits improving from £65,772 to £88,277, revenue from land sales and rents showing striking increases. As has already been observed, the market for cattle passed through a period of extreme depression. A falling off in demand, due to the general economic condition of Europe, was followed by heavy offerings of cattle by breeders unable to carry existing stocks. This mainly accounts for the heavy decrease in profits of the Cordova Company, these falling from £40,458 to £5,511; the actual sales of live stock by this company amounted to only £50,915, as against £123,854 for the previous year. Although the figures of the Forestal Land, Timber, and Railways Company are included in our tables, it being obvious that any picture of Argentine land companies would be incomplete without them, the latest accounts are only down to the end of 1921; reserves were drawn upon to a total extent of £670,000, expenses and depreciation charges absorbed £544,257, leaving £126,314, which, added to the balance brought forward, provided the directors with £239,617, and, after payment of dividend on the preference shares, £127,666 was carried forward. Altogether it has proved an unpleasant year for the company, but, in spite of the setback, the directors continue to extend the sphere of the company's activities by acquiring interests in useful allied industries. Again the cause of the losses sustained is owing to unfavourable cattle sales. Leach's debit of £2,630 was helped by recoveries of overpaid Excess Profits Duty, amounting to £85,358. Of this sum, however, £36,458 was applied to "Depreciation" and £40,574 for payment of debenture interest. Sales of livestock by the Rio Negro at £16,679 were less than half of those recorded for 1920-21, but profits from wool, &c., rose from £34,158 to £43,839. The Tecka Company was rather less fortunate. In the previous year the revenue was £77,951, of which £30,508 was brought in from "Taxation Adjustment Account." This year the company has no such windfall. Livestock sales are down from £16,642 to £8,961, but earnings from wool and other sources improved from £23,973 to £32,703. Net profits of £1,234 are, however, disappointing.

In our next table we analyse the more important assets and liabilities for the past two years :—

Name.	Year.	Capital, Res'v's, Deben- and Un- tures, & divided Loans.	Cred- itors.	Land & Prop- erty.	Stocks, Invest- ments, & Cash in Hand.	Total Assets.
Argentine L. & I.	1920-21	£ 488,075	£ 68,000	£ 246,990	£ 16,063	£ 819,128
	1921-22	488,075	220,929	93,975	235,746	938,725
Argentine Sthn.	1920-21	500,000	149,364	34,793	504,001	1,188,158
	1921-22	500,000	129,746	37,363	516,076	1,183,185
Cordova Land.	1920-21	1,494,872	116,808	62,357	1,560,377	3,234,414
	1921-22	1,494,872	70,604	47,762	1,560,377	3,173,615
Forestal	1920 ..	5,165,312	2,788,226	1,666,738	4,036,506	13,656,882
	1921 ..	5,574,689	2,562,476	1,809,126	3,997,631	13,943,922
Leach's	1920-21	1,829,440	486,413	292,003	1,994,663	4,608,519
	1921-22	1,790,700	425,785	280,769	2,078,742	4,575,996
Rio Negro	1920-21	300,000	75,438	18,538	246,598	660,574
	1921-22	200,000	87,603	25,962	213,103	526,668
Tecka	1920-21	200,000	71,025	18,286	214,834	504,145
	1921-22	200,000	71,025	18,286	214,834	504,145

The directors of the Argentine Southern Land have taken steps to increase their share capital by a further issue of 100,000 £1 shares. This is in connection with the contract recently entered into by this company to purchase from the Argentine Land and Investment certain property for £90,000 payable over a period of ten years by means of the issue of shares. In the accounts of the Cordova Company stocks, produce and stores are included in one item under land and property. The Forestal Land and Timber shows a slightly increased capital; although reserves were drawn upon for £500,000, the proceeds of realisation of sundry assets account being allocated to this purpose, they are maintained within £220,000 of the previous year's figures, in spite of the substantial decrease in undivided profits. Investments have undergone a change, War Loan and Bonds to the value of £596,437 disappearing, while holdings and loans in associated companies increased from £978,417 to £2,200,000. Leach's Argentine Estates, although a bad year's trading was experienced, appears to maintain its financial position fairly well. This company, mainly producing sugar, suffered even to a greater extent than in the previous year on account of the sugar-growing zone of Argentina being again visited by severe frosts; its cane fields produced but 11,616 tons of sugar, as against 13,132 tons in 1920-21 and 21,000 tons in 1919-20. Goodwill is still retained in assets at £132,700, as pointed out in these columns a year ago, but the reserve at £420,000 remains unchanged.

Incidentally the redemption of its debenture issue proceeds smoothly, and even in the lean year just experienced by the company £40,400 was allocated for this purpose. The total debenture issue was originally for £1,000,000. This has now been reduced to £697,300. According to the terms of issue, these are repayable at par in 1934; at present they are quoted at round about 87, with a yield, including profit of redemption, of approximately 7 2s per cent. Creditors of the Rio Negro are down from £33,111 to £15,838, while debtors have advanced from £5,321 to £15,091, and cash and investments are down by over £15,000; undivided profits, however, show an increase. Reserves are slightly higher. Tecka follows a slightly different course: a reduction of creditors is accompanied by a slight decrease of debtors, reserves and undivided profits displaying a shrinkage.

In the table given below we show dividends over a period of four years, together with prices in 1921 and 1922, as compared with those in 1914. Present yields based on recent dividends are added :—

Name and Amount of Share.	Dividends.				Prices.			Pre-ent Yield.
	1918-19.	1919-20.	1920-21.	1921-22.	July 27, 1914.	Dec. 12, 1921.	Nov. 28, 1922.

* Free of income-tax.

This is a very interesting record. At a glance it reveals the speculative nature of undertakings engaged in agricultural industries, and it also reminds us how very necessary it is for such companies to build up ample reserves as provision against adverse seasons.

The future is uncertain. Owing to the decrease in flocks the next wool clip is expected to be smaller than in previous year, while prospects of wider markets for meat exports are not encouraging, Germany and other European countries not responding to Argentina's advances. Prices of cereals have been well maintained during the past few months, but even if exportable surpluses are of a substantial amount the trend of future prices has to be considered. However, as observed before in dealing with agricultural undertakings, we are steering through uncharted seas where lessened production may yield increased revenue and increased production less revenue.

SOUTH AFRICAN COAL RESOURCES.

(BY OUR JOHANNESBURG CORRESPONDENT.)

THE S.A. Union Geological Survey has just issued an important memoir (No. 19) on the Coal Resources of the Union, by Mr W. Wybergh, Government Mining Engineer under the Milner régime. Volume 1 comprises the coal-fields of Witbank, Springs and Heidelberg and of the Orange Free State. The area in the Witbank district containing proved coal on the No. 1 seam is given at 25,435 acres, giving 259 million tons; the area of estimated coal is given at 45,550 acres, yielding 521 million tons. The calorific value is put at 12 and 11.4 respectively in both cases over five feet of coal, the calculated yield being 10,200 tons per acre. In addition, there are 14,500 acres probably containing the seam, and representing 134 million tons. The lower portion of No. 2 seam is the only part that has been worked, and furnishes the greater portion of coal obtained from the Witbank coalfield. The proved area is taken at 47,000 acres, with an average width of nearly eight feet, 11.8 calorific value, and yielding a tonnage of 751 millions; the "estimated" area is taken at 55,560 acres, giving a total tonnage of 868 millions. The undetermined quantity is put at 500 million tons of low-grade, i.e., from 10 to 11 calorific. Although the greater proportion of the high-grade coal proved has been in the neighbourhood of Witbank, it is probable that more high-grade coal exists elsewhere. No. 3 seam is a very bright coal, probably of high-grade, but too thin to be worked. No. 4 seam is in two portions, but has been worked practically nowhere. The proved area contains 930 million tons, with a rather greater quantity in the estimated area. The average calorific value would be about 10½. Seam No. 5 is the uppermost of the series, and consequently the one most subjected to denudation; it is at present only worked at Oogies, where it is of good grade and thickness. The tonnage is estimated at 637 millions.

Mr Wybergh gives the total tonnage of proved and estimated coal in the Witbank district at 6,456 million tons, averaging 11.2 calorific. Of this about 41 per cent. is below 11 calorific, some 52 per cent. between that and 12½ calorific, while only 6 per cent., or less than 400 million tons, is above 12½, which is the standard taken by the Transvaal Coal Owners' Association for export coal. From 12 to 12.5 calorific there are 958 million tons, this grade representing 15 per cent. of the total.

The Springs area, though by no means the first to become known in the Transvaal, was the first to be opened up and worked on a considerable scale. It at one time furnished the bulk of the coal supply. But the calorific value throughout the whole field is extremely low, and the ash contents high. The only coal with a calorific value of over 10 comes from a limited area at Springs, where the lower part of the bottom seam, and a relatively thin upper seam, give good values. Of 112 million tons estimated, as in the proved areas, half has a value of less than 8.5 calorific, while less than 6 per cent is over 11 calorific. It is roughly estimated that the approved area contains three times as much coal. Of the Nigel area, the gross coal contents is put at 65 million tons, with a calorific value probably not over 9; of the Vishkuil-Delmas area 218 million tons proved, with six times such quantity estimated. Between Heidelberg and the Vaal River are at least one large and three smaller areas, one of which (Vereeniging) furnishes large quantities of coal. The South Rand coalfield, about 25 miles due south of Heidelberg, is by far the most important; it is estimated to contain 8,064 million tons of coal, ranging from 9 to 11.3 calorific. For the Vereeniging district, the Transvaal side of the river, the aggregate is given at 835 million tons. On the O.F.S. side, the total of proved and unproved coal is estimated at 11,458 million tons, of which 80 per cent. has a value of 10 calorific, or less. For the whole of the Orange Free State, the coal remaining is estimated at about nine times that quantity, but there are no data as to grade to go upon outside the known coalfields. There is a speculative possibility of an extension of the Natal coalfield beneath a portion of the Eastern Orange Free State. Both in the Transvaal

and Natal there is a woeful tendency to produce high-grade coal, and abandon much useful coal, thus wasting the Union's assets in most prodigal fashion. It is greatly to be desired that the poorer grade of coal should be utilised, by methods recently scientifically developed, so as to conserve what General Smuts recently styled "South Africa's greatest asset."

THE RELIEF OF UNEMPLOYMENT.

(BY OUR LABOUR CORRESPONDENT.)

THE unemployment problem played an important part in the recent General Election, and as a result of activity on the Labour benches has so far been the most prominent question before the new House of Commons, not even excluding the Irish Bills, which called Parliament into being for the present session. In many ways the situation is worse than it was a year ago, notwithstanding a slight diminution in the number of people unemployed. The trade union unemployment percentage at the end of October was 14.1, as compared with 15.6 at the end of October last year. The number of workpeople on the live register of the employment exchanges at the end of October was about 1,385,000, but this figure does not give the full truth, nor do we know exactly how many people are but partially employed.

The shrinkage in the volume of unemployment has been relatively small. On the other hand, it has become increasingly difficult to bear the burden. Wages have been substantially reduced, with the result that the contributions of employed workers to the insurance fund and to the unemployed workers' dependents fund are relatively heavier than they used to be. Trade unions, which have been accustomed to pay out-of-work benefit to their members, have had to cease helping their unemployed members through lack of funds. It is probably an understatement to say that the trade unions have since the onset of the trade depression distributed £12,000,000 as out-of-work pay. To-day the funds of most unions are exhausted, and this form of benefit has been suspended, with the result that State unemployment insurance benefit must be supplemented by out-relief, in the aggregate, to the extent to which in the past two years unions have assisted their unemployed members.

But local authorities and boards of guardians are now pretty well at the end of their tethers, and unable to meet new burdens or continue to carry the old ones. Local rates have already borne the greater part of the expenditure of maintaining the unemployed. Three months ago Dr Macnamara stated that not less than £90,000,000 had been dispensed by the State, since the depression began, in benefit under the Unemployment Insurance Acts. Three-quarters of this amount, however, has been provided, or will be provided, by the contributions of insured workpeople and their employers. Consequently, the actual expenditure of the State on maintenance has been only £22½ million, whilst during the same period Poor Law guardians have contributed no less than £60,000,000 for the maintenance of the unemployed. As local rates fall more heavily upon the poor than do taxes, it will be seen that the shares of the cost of maintaining those who are out of work, borne locally and nationally respectively, have been so divided as to relieve the well-to-do at the expense of the relatively poorer sections of the community.

Where public works have been undertaken by local authorities under schemes in which State aid is granted, the main charge has, as a rule, fallen on local bodies. In the case of works approved by the Unemployment Grants Committee, for example, 29 per cent. of the cost has been borne by the central Government, the remainder falling upon the local authorities concerned. Where local authorities incur loans for non-revenue producing works, the State is prepared to pay 65 per cent. of the annual interest and loan repayment charges for half the period of the loan, but in no case for more than 15 years. As regards revenue-producing works, the grants are 50 per cent. of the annual interest for a period of five years. Up to the present local authorities have incurred under these proposals capital expenditure amounting to £17,238,000, the contribution of the State being, of course, comparatively negligible.

In view of the heavy share of the burden hitherto shouldered by the local authorities, the depression of wages, and the magnitude of the obligations already undertaken by them, it is clear that the State must accept a greater responsibility for the treatment of the unemployment problem than in the past. It is true that in the case of the export credits and trade facilities schemes large sums of money are involved, but the actual expenditure of the State cannot be large. Unless the Government is prepared to relieve the local authorities by itself assuming the necessary expenditure for the maintenance of unemployment, and then to set about a courageous policy of providing useful work, the winter will be a very black period.

There is a good deal of apprehension in the country as regards immediate prospects. The march of the unemployed to London is a symptom of a common feeling that a more vigorous policy is needed. The Prime Minister was responsible for the scare headlines and alarmist paragraphs in certain London newspapers, because of the information he supplied to particular papers concerning the records of some of the men taking part in the march. To endeavour to implicate the marchers in a "Red plot" is absurd. Unemployed marches were known before the days of Communism, and will continue so long as unemployment is handled half-heartedly. The Prime Minister, mistakenly as the Labour movement thinks, has refused to meet the representatives of the marchers now in London, but the real question is whether his Government will produce a policy commensurate with the need.

At the time of writing, Mr Bonar Law's policy has not been announced. It appears, however, that he contemplates railway developments, re-equipment, and extensions. This is all to the good. The Labour party in the House of Commons has tabled an amendment to the King's Speech on unemployment, and the Labour view will be expounded by new and enthusiastic members. In reply, the Government will state its own proposals. They will need to be more comprehensive and far-reaching than those of the late Government if they are to do anything more than mark time.

Notes of the Week.

The Reparation Negotiations.—The prospects of satisfactory progress in the forthcoming discussions on Reparation and the condition of Germany have been greatly improved by Mr Bonar Law's statement in the House that the new Government does not consider itself bound by the policy of the Balfour Note and by the calling of a meeting in London of the Allied Prime Ministers. The British Government has the best opportunity it has had since 1918 to put itself right with Europe on this vital question. It is possible that France may even yet not be prepared to respond to a generous offer from Great Britain by sitting down with us to work out a more realistic and statesmanlike policy, for the Paris Press still persists in propounding schemes which in British opinion are up in the clouds, and we may also find that, even with goodwill, the disease has got so strong a hold as to baffle the skill of the most expert physicians. But, at all events, it is to be hoped that on this occasion the British representatives will adopt a policy which will make it clear to the world that the attitude of this country, at all events on the question of the Allied debts, is no longer a barrier in the way of a settlement.

Railways and Unemployment.—The King's Speech promised that the Cabinet would examine and expand the plans which the late Government had in contemplation for alleviating unemployment, in so far as it can be alleviated by domestic action. The Prime Minister has lost no time in attempting to set things moving. On Tuesday he met in conference the representatives of the railways, and at the close of the meeting the following statement was issued:—"The Prime Minister invited the co-operation of the railway companies in anticipating the construction and replacement of capital works and placing

of orders with a view to relieving the serious unemployment situation. The representatives of the railway companies explained the steps which they had already taken, and all expressed their desire to assist in every way possible. They also promised to furnish the Government with further information as to the work which they had already specially undertaken and the additional schemes which they thought might be put in hand at an early date." No doubt the discussion centred principally on the extensive electrification schemes which some of the leading railways have for a long time had under consideration. These schemes have been hanging fire. The main reason for their postponement may be found in the general uncertainty of the railway position and the confusion arising out of the transition stage of amalgamation and absorption. But it may, we think, be fairly stated that other influences have been at work to cause delay. There have, for instance, in some cases been sharp technical disputes between expert advocates of rival schemes. There have been also the rival representations of different interests connected with the provision of different kinds of plant. There was, too, a reluctance in some railway quarters to share with other interests big new power stations. It may be that strong Government pressure will be successful in removing some of the obstacles to progress. But at best the absorption of a large number of men on these schemes is probably not an immediate hope, and presumably the hastening of arrears of general railway work is receiving the joint consideration of the Government and the railway boards. On the Government's side the intention is to bring in a new Trade Facilities Bill making a further £50 millions available for guaranteeing schemes of productive work which will employ workless labour. It will be remembered that the Trade Facilities Act passed a year ago provided for guaranteeing works up to £25 millions; but most of that sum has now been hypothecated. Cabinet plans are said to include an enlargement of the Export Credits scheme, while projects of local utility are to be encouraged with grants under the supervision of Lord St David's Committee. In all these measures and intentions the Government is working on the lines prepared by its predecessor. Such efforts are necessary; but it has to be realised that they can do little more than touch the fringe of the unemployment problem. The only cure for unemployment is the revival of trade, which can only arise from the economic and financial healing of Europe. If Mr Bonar Law can by a bold initiative lead the Allies to a sound Reparations agreement, then we shall at last have begun to tackle the unemployment problem at the right end.

Cost of Unemployment Insurance.—Some illuminating figures of the cost of unemployment relief under the State Insurance scheme were given in an answer this week in the House of Commons by the Minister of Labour. For the week ending November 17th the expenditure was £1,008,000, made up of £888,000 paid in unemployment benefit, £99,000 for administration (i.e., 11 per cent. of the average weekly income), and £21,000 as interest on the debt which the fund owes to the Treasury. Against this expenditure the fund received £625,000 in contributions from employers and employed, and £222,500 as the contribution of the State, leaving a deficit of £161,000. The accumulated deficit to date is £14,550,000, a figure which may be expected to increase to £17,000,000, or possibly £18,000,000 by the end of March if there is no improvement in employment during the winter. The figures, however, are by no means unsatisfactory from the point of view of the solvency of the fund, for it is evident that as soon as trade begins to improve and causes a reduction in the benefit expenditure and an increase in receipts, the deficit will rapidly disappear. Moreover, a fund which, when trade is normal, is likely to have an income of £50,000,000 a year, with substantially smaller outgoings, is not unduly crippled by an overdraft in respect of a most abnormal period of unemployment which is less than £20,000,000. If, therefore, it were certain that this would be the last winter of acute depression, the finance of National Unemployment Insurance would not give grounds for concern. The future is, however, not quite so clear as to justify a confident prediction. Payment under the Unemployment Insurance Act forms only a part, though

by far the largest part, of what is commonly known as the dole. The payment of the balance by Boards of Guardians is already a very serious matter financially for many localities. Moreover, trade union benefits and private savings, which have hitherto helped very considerably to enable the country to meet the effects of after-war depression, now appear to be exhausted, and if we have to face another year of unemployment of the dimensions we have recently experienced, it will be impossible to resist the demand for fuller support from the State Unemployment Insurance scheme. If this is the case, the finance of that scheme may require to be overhauled, and it is by no means certain that it would be possible to maintain the present plan, by which the greater part of the income of the fund is drawn from direct contributions of employers and employed.

Ireland and the Treaty.—Our Dublin correspondent writes:—There is no ground for suggesting that the fate of Erskine Childers has caused, or may yet cause, any popular reaction in favour of Republicanism. Sincere regret for the man—for the tragedy of his life and of his death—there has been. But of cavilling at the rough justice of his sentence there has been little or none. People were rudely jolted out of a rut, and were set to consider afresh the objective values of the facts of the trouble in Ireland; they are still in a reflective mood, and the seriousness with which they face the immediate future has taken on a deeper gravity. The practical men and the idealists are for once firmly knit together with a common yearning for the restoration of order. The Constitution of the Irish Free State is in process of being finally agreed on, and there is little, if anything, to quarrel with in the provisions of the Irish Free State (Consequential Provisions) Bill. Great Britain gives no grudging recognition of the national independence of Ireland—an independence as free and unconstrained as that of the great overseas Dominions. Great Britain has also created rights and privileges to safeguard the destiny and desires of North-East Ulster, but in doing so in the Bill now under discussion she once more indicates that negotiations between Ireland and N.E. Ulster with a view to closer co-operation leading to ultimate reunion is desirable. There are provisions in the Bill for setting up the necessary Customs Houses on the frontier of N.E. Ulster in the event of the latter "contracting out" of the Irish Free State; but, of course, a temporary and provisional continuance of the existing system might, as we pointed out recently, serve to enable N.E. Ulster, after exercising her option, to reconsider the whole question in the light of other factors before anything irreparable shall have occurred. Over the Boundary Commission, if N.E. Ulster contracts out, there must be negotiation and a spirit of mutual accommodation if a chronic condition of smouldering hostility in all the border regions is to be avoided. The sweeping victory in the Tyrone-Fermanagh constituency of the Nationalist and Sinn Féin candidates renders this inevitable in view of the explicit interpretation put upon the Treaty by the British Premier and his colleagues at the time of its execution. Again, there is the question of the powers of the Council of Ireland established by the Act of 1920, and expressly kept in being by the Treaty; its powers, limited as they were to full powers over railways, regulations regarding diseases of animals, and a few other matters, were to remain exercisable in N.E. Ulster alone by the Council, which represented, nevertheless, the Irish Free State and N.E. Ulster in equal proportions. The present Bill provides that the Council's powers shall remain *in statu quo*, and not be transferred to it for a period of five years unless the Free State Parliament and the N.E. Ulster Parliament (which is given powers for the purpose) shall in the meantime pass identical Acts providing otherwise for their exercise. A strong hint, indeed, that there should be negotiations with a view to an accommodation. Again, the financial relations of Great Britain and Ireland as to existing public debt have to be adjusted under the Treaty, and for this adjustment Ireland primarily is a unit. But N.E. Ulster is assessed to pay at present nearly £8,000,000 annually to Great Britain, though in 1920 her financiers declared that Ireland, the unit, could pay no more than £5,000,000. Her hopes of fining down her £8,000,000 tribute are possibly centred in the Joint Exchequer Board, while the Irish Free State will box its corner on the larger issue with Great Britain direct, and,

failing agreement, before an arbitrator. By pooling their controversial resources they can probably do much better for themselves with a Great Britain sick of acrimony and contention, and eager to get back to business, than by fighting separate and probably inconsistent, if not positively mutually destructive, battles. Still brighter would their chance be of a beneficial financial settlement if their accord on the financial issue was shown to be a necessary part of a larger settlement embracing all the outstanding issues between them around which controversy has been raging from 1920 onwards. That Great Britain is in no ungenerous mood is clear from Mr Ormsby Gore's announcement that the British Government is prepared to support the credit of the Irish Free State for the purpose of providing the necessary moneys—a large sum—for the payment of compensation and for the completion of land purchase. For the sake of peace in Ireland and peace with Ireland, Great Britain would not improbably deal in a large-handed way with her cherished but hotly controverted financial claims if by so doing she could induce the Irish controversialists to make a similar sacrifice on the altar of economic wisdom.

Lord Furness on an Iron and Steel Trade Trust.—At the meeting of the South Durham Steel and Iron Company on Wednesday, Lord Furness advocated in public the idea of a great iron and steel trade amalgamation, which, in one form or another, has been under constant discussion in the trade itself ever since the war. At the outset the conception was, perhaps, inspired by the object-lesson of the economies achieved during the war by the allocation of orders which, among other advantages, enables the various mills to enjoy long runs on single products. But in ordinary times this is less easy than it seems, for the orders that come from all over the world to the British steel trade are, by comparison, a much more retail business than the demand for shell steel during the war, or than American orders in peace time. The movement has, however, been inspired in the last two years by very different motives. On the one hand, the shrinkage of the world's demands, as contrasted with the increased producing capacity brought into existence all over the world by the war, has produced an unexampled disproportion between plant and output; while in Great Britain it has become apparent that the war extensions themselves are unbalanced for peace time production—blast furnace capacity being too small for the steel smelting capacity, and mill capacity for rolling ships' plates being much too big for any probable demand. The associations in the trade for regulating the prices of particular products, such as plates, in England as elsewhere have been quite powerless to cope with this situation, and the fear is entertained that even if the present improvement in demand continues it is unlikely to absorb the whole of the enlarged world's capacity for some time to come, and that, in any case, there is certain to be acute internal competition in particular branches of the industry. But the sentiment in favour of co-operation, whether by an amalgamation of all, or even some, of the iron and steel concerns of the country by means of a joint sales organisation, has hitherto failed to overcome two difficulties. The first is a personal one arising out of the strong individualism of the British employer, and the second is the strong tendency since the war for the largest firms to amalgamate, not with the iron and steel competitors, but with large firms which consume their products. The leading half-dozen iron and steel firms to-day have more or less close connections with shipbuilding, engineering, and allied undertakings which carry their connections through a very large field of British industry; this makes the task a much more complicated affair than a simple iron and steel merger. Lord Furness compares the position with that in America before the Steel Corporation was formed in 1900. But that organisation, though coming after a temporary period of undue plant expansion, was nevertheless created at a comparatively early stage in America's great steel development, the output in 1900 being 10 million ingot tons (the previous maximum being 10.6 millions in 1890), compared with 31 million ingot tons in 1913 and 45 millions in 1917. Great Britain, with a maximum of

9½ million tons in 1918, cannot expect any such expansion. Her steel trade has its own special problems to face, and must work out its own appropriate solutions without attempting to imitate the remedies which have been applied in quite other conditions.

New Turkey and Its Bondholders.—The Angora Government, we believe, still continues to acknowledge its liabilities to the bondholders, by giving receipts to the agents of the Debt Commission for the Anatolian assigned revenues which it intercepts; but in other ways its action seems to portend an interruption of the service of the foreign debt. Three weeks ago it intercepted the share of the Customs revenue payable into the Ottoman Bank to the credit of the Debt Council, and intimated that it would demand complete financial independence; and this week Ismet Pasha has declared at the Lausanne Conference that it does not regard itself as the successor of the Turkish Empire, which may mean that it proposes to repudiate full liability for the obligations entered into by previous Governments, and will therefore demand a revision of the contracts assigning certain revenues to the service of the foreign loans. About a dozen of these loans are "secured" partly on the Customs, and the more important also on the inland revenues of Asia Minor and the profits of the Tobacco Régie. But under international law it cannot repudiate its liability, and its financial bondage is the result of repeated compositions with Turkey's foreign creditors. Moreover, probably 90 per cent. of the Unified Debt, and a very large proportion of the other loans, is held in France, largely by small investors, who have already lost heavily in Russian and Mexican securities, and who have votes. French financial interests are believed to have prompted the Franco-Turkish Convention; but the interests of the small investors must exercise a stronger influence on the policy of France. The "new Turk" may, of course, prove to be a Bolshevik; but the recent movements of the Turkish Unified Loan do not indicate that he is expected to be so. On October 31st it stood at about 28, on November 9th it had fallen below 23, but it has since risen to about 26. Its holders, therefore, do not appear to be seriously alarmed.

The Mesopotamian Oil Question.—A correspondent writes:—The preparations for satisfying the American demand for oil rights in Mesopotamia have incidentally shed new light on the history of the rival claims. The American demand, based on the doctrine of the "open door" for the subjects of all civilised Powers, is historically connected with negotiations conducted from about 1900 to 1911 by Admiral Chester of the U.S. Navy, of which particulars were given in the *Temps* last Monday, obviously from an American source. In 1899 he was sent by his Government to Constantinople in command of the U.S. battleship "Kentucky," to demand compensation for the American missionaries' property destroyed during the Armenian massacres of 1896. On his return he suggested to certain American financiers that as the United States had not, like certain European Powers, the habit of supporting the economic claims of its subjects by diplomatic pressure, they might obtain extensive concessions from the Porte. He returned as their agent, and was promised extensive railway and mining privileges in Asia Minor, and the right to prospect for oil in Armenia and Mesopotamia; but the negotiations, as is usual in Turkey, were prolonged, and were eventually interrupted in 1909 by the fall of Abdul Hamid, who had appropriated for his own benefit the whole of the oil resources of the Turkish Empire. Admiral Chester concluded a revised convention with the Young Turk Government, which was submitted in 1911 to the Turkish Parliament for ratification, but it was held up through the successive outbreaks of the Italian, the Balkan, and European wars. Meanwhile, according to an account given in the *Times* last Monday, the Germans had discovered oil in paying quantities near Mosul, and reported the discovery to Berlin, but concealed it from the Porte. The deception was discovered, and their hopes of a concession destroyed. Subsequently, however, German and British groups, supported by their Governments, began

fresh negotiations, and in 1913 secured for the Turkish Petroleum Company exclusive oil rights in the vilayets of Mosul and Baghdad. Half the shares were taken by the Anglo-Persian Oil Company, one-fourth by the Germans, and one-fourth by the Shell and Royal Dutch. (There is reason to believe that the Porte, during the war, cancelled this concession, and made fresh offers to the American oil interests, but that the British Government was prepared to contest the legitimacy of the transfer, which was eventually precluded by American participation in the war.) At the San Remo Conference in 1921, the German shares were assigned to the French Government; whether it has held them or disposed of them to French financiers is unknown. The Chester claims, however, though again pressed recently on the Angora Government, have little practical value, and the rights in question had been offered, we believe, to other possible purchasers. The United States, therefore, based its demand on the principle of the "open door," but in the Mosul and Baghdad vilayets the door had been closed before the war by the Porte itself. The solution proposed consists in the surrender of 20 per cent. of the shares in the Turkish Petroleum Company to American holders. The Anglo-Persian is to give up 10 per cent., the French holders and the Shell-Royal Dutch combination 5 per cent. each; so that the two latter groups and the Americans will each hold 20 per cent., and the Anglo-Persian 40 per cent. of the total. The first two groups have patriotically consented; the Shell and Royal Dutch have not done so as yet. These particulars, given by Mr Sydney Brooks in Wednesday's *Evening Standard*, are, we believe, correct.

Freights and Ocean Fares.—A correspondent writes:—The increased attention now being paid to shipping shares with quite substantial rises in some of the better-class issues is based on the better outlook for the industry. The United States merchant marine is no longer a formidable competitor; French ambitions have not been realised; while the progress of the German shipping companies is not swift enough as yet to worry United Kingdom owners. Thus the importance of the British merchant marine would at once become intensified on any world revival in trade. Homeward markets have continued well engaged, with good business done from Australia both for steamers and sailers. In the Atlantic passenger trade fares are to be lowered a little, but there is no intention to reduce the rates to South America, South Africa, and the East, although, of course, on any further adjustment in seamen's wages, which is bound to come sooner or later, there would have to be a change. In the North Atlantic trade passenger business has been handicapped this year by the drastic emigration regulation in the United States, but in other directions bookings have been up to the average.

The Cotton Trade and the Cost of "Finishing."—Our Manchester correspondent writes:—Another agitation is being started in Lancashire in favour of bringing pressure to bear upon calico printers, bleachers and dyers to reduce their prices. The high charges were referred to at the annual dinner of the Manchester Cotton Association, held in Manchester this week, and Mr Jesse Thorpe, the vice-president, and a well-known spinner, gave particulars of cases where it was found cheaper to send goods to Germany for finishing processes, and bring them back to this country, than have the goods finished in Lancashire. It is understood that arrangements are now being made for a joint conference to take place at an early date between representatives of spinners and manufacturers, and calico printers, bleachers and dyers, at which producers of yarn and cloth would point out how trade is being lost to this country as a result of the big prices compared with pre-war times required for printing, bleaching and dyeing. It may be pointed out that these allied trades are very largely in the hands of combines, and, despite the trade depression in spinning and manufacturing, the firms engaged in printing, bleaching and dyeing are making good profits, although many of the works are not running full time. It is being urged in some quarters that failing a satisfactory arrangement by mutual discussion, representations should be made to the Board of Trade.

Development Commission.—The twelfth report of the Development Commissioners for the year ended March 31, 1922, has now been issued. The grants in loans made during this year amount altogether to £368,450. The major proportion—namely, £229,259—is devoted to agriculture and rural industries, and the balance as follows:—

Reclamation and drainage of land	£ 9,778
Harbours.....	58,195
Fisheries	71,218

The Development Commission (constituted in 1909) is, of course, primarily devoted to the economic development of agriculture, and this fact has secured for the Commission this year, in addition to their normal resources, a windfall in the shape of a sum of £850,000, which has been placed at its disposal through the Corn Production Acts (Repeal) Act, 1921. One of the chief points of interest in connection with the work of the Development Commission is the assumption on which they are proceeding—namely, that the development of agriculture is bound up with the revival of rural industries, since this would help to solve the difficulty of seasonal labour, and so retain in the country districts the necessary skilled population to meet the needs of agriculture. Last year's Budget, therefore, included loans and grants of about £15,000 to assist this resuscitation of minor industries in villages, and in previous years very considerable amounts have been devoted to this same end. The bulk of the work is necessarily propaganda, and as such one cannot expect much in the way of immediate concrete results. But the great difficulty with which the revival of rural industries has to contend, and of which the Commissioners are keenly aware, is that of co-ordinating production and finding a market, and, of course, regulating production to suit such market. The problem with which the Commissioners are faced, therefore, is, if they succeed in their project of re-establishing various handicrafts and village industries such as flourishing, say, a century or so ago, how such a primitive and unorganised part of industry can be worked in with the modern highly co-ordinated system. The Commissioners in their report confess that the results they desire can "only be obtained in a highly industrialised country if such industries are able to find a place for themselves in a complex economic and commercial system, in which their position is largely affected by national and world conditions which continually shift and develop." To do something towards this end, they have established a Rural Industries Intelligence Bureau, with a grant of £2,500 to carry it on for one year. This will work in co-operation with an experimental central trading agency, started on voluntary capital under the title of "The Country Industries Co-operative Society, Limited." The Development Commission are, of course, debarred from giving financial assistance to any associations working for profit. The reports of the 12 years' work at present done by the Development Commissioners in connection with rural industries, although showing most commendable efforts, seem, in point of fact, to have done little more than prove the almost insuperable economic difficulties in reviving industrial community life in villages. Possibly, however, the same end might be attained by another method—namely, that of decentralising existing industries. The great difficulty which has prevented this hitherto has been the question of obtaining power and transport facilities in country districts. With the present reorganisation of the railway system (and especially the extension of electrification), together with the various comprehensive schemes now being formulated by the Electricity Commissioners for electrical distribution throughout the country, both of these drawbacks will in time be eliminated. In such case there would be every inducement for factories to be transferred to extra-urban districts and to the various small towns or villages throughout the country. In fact, such exodus has already begun in a small way where the power and transport facilities already obtain. Such a method would attain something of the same end as the revival of minor village industries.

Securities and Unemployment.—A Stock Exchange correspondent writes:—Work on the large scale contemplated by the Government for alleviation of the unemployment distress can hardly be undertaken without its influence being felt in the money and stock markets. In-

vestment already asks whether new loans will be necessitated. Home Railway ordinary stocks draw renewed strength from the hope that the Government proposals may enable the companies to finance new extensions and other works at a moderate interest-charge. It is understood, of course, that the railways will utilise their forthcoming Government grants and other monies for prosecuting their schemes, but the credits are not in hard cash such as will be required for payment of wages, &c., and to provide the money some form of borrowing may have to be instituted. A fresh issue of local loans stock has been rumoured as on the way. The 4½ to 5 per cent. level of yield at which good prior-charge Home Railway securities are standing is but a few shillings per cent. higher than the return available from investment, at to-day's prices, in Conversion stock, Funding loan, and Victory bonds. The 4½ per cent. British Government guaranteed debenture stocks of the Central London, City and South London, and London Electric Railways are priced in the market at 93, giving an income of £4 16s 9d per cent. This will furnish a rough guide to the standard of yield which will have to be offered to the investor if it should be necessary to seek his co-operation in the work of assisting the most pressing of the day's domestic problems. December is not an auspicious month in which to make new issues on the grand scale. The average man and woman entertain an invincible predilection for window-dressing at the banks over the turn of any year. But if the occasion demanded the money, subscriptions to such work as this could be relied upon, for every week demonstrates the public capacity to absorb good stock if it be offered at tempting prices. In the Consol and the Home Railway prior-charge markets there are no qualms, therefore, at the prospect of new capital being required. Amongst industrial shares, inquiry endeavours to see, in advance, what companies may be expected to benefit from such orders as would follow the decision to start new railway work of important character. Iron and steel undertakings, railway carriage manufacturers, and a number of subsidiary interests could hardly fail to derive advantage from the setting-up of railway work, while the other methods of transport upon which unemployed workers could be usefully engaged are all dependent, to a greater or less degree, upon companies that can supply them with materials for carrying out their operations. Apart, therefore, from the humanitarian and economic aspects of the efforts that are to be made for the relief of those workless who are willing to work, the various schemes for giving effect to the efforts are likely to exercise a direct influence over a fairly wide circle of Stock Exchange securities, both of the gilt-edged and the more speculative descriptions.

Bolckow, Vaughan.—The directors of Bolckow, Vaughan and Co. are at last able to report that all questions affecting excess profits duty and coal award have been agreed, and that the amounts received in accordance with these settlements have been included in the company's accounts for the year ended June 30th last. Results, however, are not very pleasant. After crediting these sums, and providing for depreciation, a net loss of £85,369 is recorded. A comparison of results for a number of years is given below:—

	Gross Profit.	Depreciation and Extension, &c.	Debt. Int. and Pref. Div.	Balance.	Written Off Cap. Expenditure.	Ordinary Div.	Rate.
1906-7	£ 683,010	£ 135,734	£ 45,545	£ 501,731	£ 150,000	£ 274,630	10

* After allowing for War taxation.

As there was a balance of £203,508 left over from 1921 accounts, it has been possible to pay debenture interest and preference dividend out of this, and after writing

off the debit, £14,535 is carried forward to the next accounts. But for the first time in the history of the company no dividend is paid on the ordinary shares. Shareholders who may feel disappointed with these results, before passing hasty judgment upon the accounts, should, however, wait until they hear further details, which no doubt the directors will give at the annual meeting at Manchester on Wednesday, December 20th, next. There is a reserve fund of a million in the balance-sheet, though during the year expenditure of £355,113 has been added to asset items. A curious aspect of the balance-sheet is a list of amounts owing to various persons and the small sum of cash in hand. Perhaps the money will be forthcoming from deliveries of stocks on hand and debtors. On another page the balance-sheet will be found fully analysed.

Aerated Bread Company.—In spite of a sharp fall in the gross profit, the report of the A.B.C., Limited, for the year ended September 30th shows a slight increase in net profits, there having been a saving of nearly £100,000 in working expenses. It is stated that the policy of making the earliest possible reductions in prices charged to the public has been maintained, and that "taking these price reductions into account, notwithstanding the continued depression in trade, the total volume of business for the year shows a steady increase over that of the previous year." The table below summarises the annual results since 1907:—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward.
1907-8	£ 276,252	£ 220,366	£ 55,886	£ 5,000	£ 50,409	27½	£ 17,376
1908-9	276,101	224,822	51,279	5,000	50,167	27½	15,458
1909-10	281,852	233,348	48,504	5,000	45,425	25	13,567
1910-11	283,695	236,203	47,492	5,000	40,883	22½	14,176
1911-12	284,319	227,801	56,518	8,239	45,424	25	17,031
1912-13	308,114	234,091	74,023	8,000	54,791	27½	31,253
1913-14	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15	286,919	253,146	33,773	8,000	29,948	17½	26,598
1915-16	299,434	282,354	17,080	11,764	7,959	5	25,955
1916-17	289,199	303,882	Dr. 14,683	8,000	..	..	1,271
1917-18	419,112	322,566	96,546	59,000	28,135	15	10,682
1918-19	587,416	435,506	151,950	62,000	80,500	30	20,132
1919-20	685,831	520,274	165,557	67,882	115,060	25	14,757
1920-21	728,376	582,381	145,995	40,000	102,657	15	14,150
1921-22	637,811	488,936	148,875	48,184	87,975	12½	14,639

* Includes special bonus to employees.

Although net profits last year were slightly higher than in 1920-21, the directors reduce the dividend on the ordinary shares from 15 to 12½ per cent., special allocations requiring over £8,000 more. The latter include provision for taxation, £34,394, cost of preference share issue written off, £10,365, and additions to staff funds, £3,425. The preference share issue referred to was one of 500,000 6½ per cent. cumulative preference shares of £1 each, made in July, and at the date of the balance-sheet only 5s per share had been paid up. These shares will rank for dividend in the accounts for the current year, but the policy of expansion and development of the business has been continued, the property account showing additions of £198,200 during the year. Other changes in the balance-sheet are an increase in investments from £73,600 to £159,700, and the disappearance of £135,400 which appeared last year under the head of Wilton Road Properties as an asset, representing a loan to that company which had been obtained on loan from bankers, the contra item on the debit side having also been wiped off. Cash and cash assets have been reduced by £110,600 to £60,600, Treasury bills for £75,000 having apparently been allowed to run off.

Slaters Report.—The directors of Slaters, Limited, in their report for the year ended September 30th last, state that "the continued depreciation of values during the past year, rather than contraction in volume of business, has been the chief difficulty with which caterers and provision merchants in general have had to contend, and has not been without its effect on the trading results of the company; the outlook, however, is improving, and the prospects for the present year are encouraging." This last remark, perhaps, accounts for the fact that, in spite of a fall in gross profits, a small increase in expenses, and a drop of nearly 50 per cent. in net profits, the ordinary

dividend is maintained at 5 per cent. A summary of the results since 1906 reads as follows:—

Sept. 30.	Trading Profit.	Interest and Divs.	Exp'ses and Inter-Ch'ges.	Net Profit.	Prof. Div.	Ord. Div.	Rate.	Balance.
1906	£ 52,021	£ 4,513	£ 19,508	£ 37,023	£ 5,650	£ 30,281	12½	£ 1,222
1907	52,660	4,680	20,443	37,046	5,650	30,281	12½	1,066
1908	48,302	4,718	20,756	32,385	5,650	30,281	12½	2,460
1909	41,630	4,839	21,416	25,193	5,650	19,295	8	223
1910	41,068	3,097	21,834	22,443	5,650	19,200	8	Dr. 2,417
1911	39,045	2,355	21,261	20,238	5,650	16,808	7	1,771
1912	42,890	5,119	21,881	24,229	5,650	16,808	7	1,215
1913	44,065	2,169	22,648	23,673	5,550	16,808	7	860
1914	42,506	2,133	23,822	20,881	5,640	14,180	6	Dr. 1,201
1915	12,786	1,556	20,988	Dr. 6,603	3,997	..	..	Dr. 45,178
1916	14,261	1,427	22,474	Dr. 6,786	..	..	..	Dr. 61,955
1917	19,006	2,554	27,337	Dr. 6,777	..	..	..	Dr. 63,262
1918	33,148	3,315	27,769	Dr. 3,066	..	..	..	Dr. 11,315
1919	68,612	3,193	29,858	41,947	..	..	..	7,976
1920	81,306	4,435	37,260	48,481	22,050	7,140	4	8,508
1921	60,871	4,993	48,107	17,768	4,900	9,244	5	3,791
1922	47,095	12,412	50,531	8,756	5,250	..	..	..

It will be seen that the company's history has been somewhat chequered, but after passing the preference dividend for four years in succession, the corner was turned in 1920, when arrears were paid off and net profits reached the respectable total of £48,500. The balance-sheet shows an addition during the year of £11,800 to the property item, but investments have been reduced by £8,500 and plant by £4,400. Goodwill remains unchanged at £124,500.

Anglo-Russian Trade.—It is now possible to gain some idea of the extent of the revival of Anglo-Russian trade. In the first nine months of the year there has been a gratifying increase in the value of both imports from Russia and exports of British and foreign and Colonial goods. The details, as furnished by our Board of Trade, are as under:—

	Imports From	U.K. Exports To	Foreign & Colonial via U.K.
Jan.-Sept.,	£	£	£
1921	420,702	802,304	820,928
1922	3,189,898	2,756,022	622,894
1921	2,197,007	4,234,536	596,970
1922	3,341,244	1,681,244	389,863
1921	4,862,641	1,571,858	729,854
1922	7,336,210	1,939,416	514,719

The falling off in the United Kingdom exports to the independent Baltic States—Estonia, Latvia, and Lithuania—as compared with a year ago, is probably due in a large measure to traffic for Russia, which last year went through these states, now going direct to Petrograd. Finland, of course, stands almost by itself. Therefore, to

get a fair index to Anglo-Russian trade, Soviet Russia and the independent Baltic States should be taken together, and Finland excluded, in which case the comparison reads as follows:—

	Imports from Russia. £	U.K. Exports to Russia. £	Foreign & Colonial Exports via U.K. £
Jan.-Sept. 1921.....	2,617,709	4,496,840	1,417,898
1922.....	6,531,230	4,437,276	1,012,757

It will thus be seen that, on the whole, there has been a marked advance in imports to the United Kingdom from this quarter, while the value of British, foreign, and Colonial exports has stood still. The imports from Russia consist of substantial quantities of sawn wood, flax, hemp, and other Russian produce. The exports are of a more miscellaneous character, and include coal, oil, and small quantities of machinery and manufactures. The trade with Soviet Russia has been done through the All-Russian Co-operative Society ("Arcos"), whose officials state their purchases in the United Kingdom in the past nine months amount to £3,830,988, and Russian produce sold in the United Kingdom, £2,969,194. It is anticipated that the fourth quarter of the year will see a considerable addition to these totals. Compared with pre-war times the volume of Anglo-Russian trade may appear small, but the great point is that it is gathering strength, and that there is every promise that next year will see a further substantial advance. The particulars of trade with the different states were not set out separately before 1921, Finland and the others all being shown together and included under the comprehensive head of Russia. The aggregate for the nine months' period in this and some previous years, including the pre-war year 1913, are:—

	Imports from Russia £	U.K. Exports to Russia £	Foreign & Colonial Exports via U.K. £
Jan.-Sept. 1913.....	28,591,676	12,941,701	7,231,444
1920.....	26,552,741	7,886,036	3,782,440
1921.....	7,480,350	6,068,698	2,147,752
1922.....	13,897,440	6,376,692	1,527,476

The value of United Kingdom imports and exports are thus roughly half of what they were in 1913, and imports alone half of those of 1920. Wholesale prices to-day are, however, approximately only half of the abnormally high level of 1920, though they are still 50 per cent. in excess of those ruling in 1913, facts which have to be taken into account in any calculation of the bulk or weight of the trade done.

The Problem of Bessarabia.—In view of the attempt recently made by Roumania to enter once more into normal relations with Russia and Tchitcherine's answering note, the Bessarabian question is once more brought into public notice. The attitude of the Soviet Government is based on a complete refusal to recognise the river Dniestr (Nistr) as the frontier, and an insistence on the re-establishment of the River Pruth as the boundary between the two States. There are, however, but few of the territorial changes effected since the war which are so easily defended as is the incorporation of Bessarabia in the new Roumania. On ethnic grounds, Russian statistics, which do not normally incline to favour non-Russian peoples, support the Roumanian claim in no uncertain manner. According to the census of 1912, the total population of the province was 2,583,000, of whom 1,710,000 were Roumans. But the relative importance of this 66 per cent. of the population is greatly increased when an analysis is made of the statistics of non-Roumans. The most important minority is that of the Ruthenes, with 285,000, or over 11 per cent. Next come the Jews, who predominate in the towns, with 242,000, or approximately 9 per cent. Russians and Poles together only total 138,000, and even this small proportion was made up in 1912 mainly of officials and landowners. The rest of the population comprises a few thousand German and French colonists—almost the only exponents of scientific agriculture, and a welcome element of social stability—some Bulgars, "Gagaouzes" (Turkish speaking Christians), and others. Satisfactory Roumanian statistics are not yet to hand, but the Russian census certainly provides an impartial testimony to the Roumanian character of the country. On historical grounds the case is even stronger,

for down to 1812 Bessarabia formed part of the old Principality of Moldavia, then under Turkish rule. In 1856 the southern part of the province was restored to Moldavia, but it was re-incorporated in Russia in 1878—perhaps as a slight sign of recognition for Roumanian co-operation in the war against Turkey. Since that date the people have been subjected to a process of Russification—which will probably now be turned into one of re-Roumanisation. From an economic point of view this region was much neglected under the old régime. Roads are practically non-existent, their place being taken by the merest tracks, and the railway system very small and inadequate. The grain exports of the province—which is one of the richest corn-growing lands in Europe—were directed towards Odessa rather than to their natural outlet on the Danube. Bessarabia is sadly deficient in timber, only 5.6 per cent. of the total area (of 44,000 sq kms) being forest land, while the adjoining Roumanian Province of Bukovina is particularly well-endowed in this respect. Of the total of 2,313,431 ha devoted to cereals, wheat claims the largest share (784,588 ha), maize coming next with 703,966 ha. This is about the proportion between these crops in the rest of Moldavia, though barley (533,272 ha), and rye (211,150 ha) are more strongly represented in Bessarabia than elsewhere in the new kingdom. The first land reform project, adopted by the Government of the Moldavian Republic of Bessarabia—a transition State which declared its re-union with Roumania in 1918—was of a most revolutionary character. No land was to be left to the former owners, and no compensation was to be paid. The Roumanian Government succeeded in amending this so as to allot 100 ha to the resident landlords—who, be it added, were largely Russians or Russified Moldavians—with some measure of compensation, even though wholly inadequate, for the expropriated lands. The new administration certainly leaves much to be desired, and the country has been under martial law until quite recently. The proximity of Russia and Bolshevik propaganda in Bessarabia itself explain this step, though it seems probable that the term "Bolshevik" was so interpreted as to include many quite peaceful citizens, whose only desire was for liberal reform. To speak of a reign of terror is, however, to indulge in somewhat flighty rhetoric. An improved administration is certainly greatly to be desired in Bessarabia, as in other parts of Roumania, though the Russian precedent of pre-war days can hardly be cited as a model. More attention should be paid to the just claims of the racial and linguistic minorities, on condition that these minorities themselves fulfil their legal obligations. But re-incorporation in Russia—indefensible on ethnic and historical grounds—is hardly likely to improve the economic position, or to secure equal treatment for all the peoples that inhabit the country.

Gold Mines Investment.—Our mining correspondent writes:—Some 18 months ago the directors of this Kaffir finance undertaking presented a drastic reorganisation scheme for the purpose of clearing off depreciation in the company's holdings, the par value of the shares being cut down from £1 to 10s. After a lapse of five years the old company had paid dividends totalling 12½ per cent. in respect of the 12 months ended October 31, 1918, and for the following year 5 per cent., both tax free. Practically the whole of the balance shown by the 1920 accounts, as well as the reserve fund, was applied towards writing down the investments. An interim dividend of 6d per share (less tax) was declared by the present company in February last. This was recently followed up by the declaration of a final dividend of like amount, supplemented by a bonus of 6d per share. The favourable impression produced by the announcement just mentioned is enhanced by a study of the report now in the hands of the shareholders; the net profit of £77,000 is 6d per share, the period covered being some 15 months. As against the issued capital of £242,600 there are quoted investments to the amount of £278,700, plus £61,250 net cash and unquoted investments estimated to be worth £110,300. The company, like others of the group—the Gold Fields—has taken participations in various American enterprises.

Pahang Consolidated.—This British-Malayan tin producing differs from the others by reason of the fact that it secures the bulk of its yield by milling, instead of obtaining the whole by dredging. As a result its working expenses are relatively high, and for the past two years the company has only been able to meet the fixed dividend—7 per cent.—on its participating preference shares. In respect of 1919-20 the preference received their maximum total of 15 per cent., while the ordinary got 20 per cent. A reduction in costs was effected during the past year, but proved insufficient to meet the decline in the price of the metal. Accordingly, operations were concentrated upon the more central and higher-grade properties, development being curtailed. Nevertheless, last year's output scored an increase in all respects over that of 1920-21. A windfall in the shape of the probable recovery of the whole of the excess profits duty paid or payable enables a substantial sum to be written off to depreciation without figuring in the profit and loss account. Results for the current year should benefit from the improvement in the price of tin. The company's assets include 1,400,000 2s shares in its subsidiary, the Kuala Reman Rubber Estates, which has now practically repaid the advances made to it.

African Colliery Results.—Very different stories are told by the reports of the Wankie (Rhodesia) and the Witbank (Transvaal) Collieries, in both of which British capital is mainly concerned. Thanks to a marked reduction in expenditure, the first-named, despite some falling off in the sales, earned the increased profit of £75,200, and pays a further dividend of 5 per cent., making 15 per cent. for the year, a record on the present share capital. The proved coal reserves are now estimated at 6,888,000 tons, or over 20 years' supply at the current rate of output. A shaft has been sunk with a view to opening up a new colliery, in accordance with the requests of consumers, but at the meeting held last Tuesday the chairman emphasised the point that there never was any need for a new colliery, the shortage of fuel experienced being due to an inadequate supply of trucks and labour. The Witbank Colliery, on the other hand, secured a working surplus of no more than £63,900, as against £155,950, and the dividend was accordingly reduced from 3½ per cent. to 20 per cent. Payment even of this rate entailed drawing upon the carry-forward to some extent. Operations last year were adversely affected as regards internal trade by the labour trouble, and as regards external trade by British competition. The latter is not likely to decrease during the current year, but further strikes on the Rand are scarcely to be apprehended.

Ex-Enemy Debt Clearing Office.—The first report of the Controller of the Clearing Office (Germany) was issued 12 months ago, and since that time there has not been a very great addition to the claims notified by either side. Considerable interest, however, attaches to the Second Annual Report* in that it shows what progress has been made in clearing the obligations between the British Empire and Germany under the economic clauses of the Treaty of Versailles. Up to the end of September last the department had disbursed to British creditors and claimants £56½ millions, of which £39½ millions was for debts owing, and £17½ millions for proceeds of sale of property in German territory liquidated during the war by the German Government, under exceptional war measures. Total claims for debts have been £63½ millions, an addition of £8 millions during the past 12 months, of which £39½ millions, as already mentioned, has been paid by the British Clearing Office (including £6½ millions for interest), £9½ millions has been objected to by the German Clearing Office, and withdrawn by the British Clearing Office, and £21½ millions is still under consideration, the greater part of which has been contested. Claims for proceeds of liquidation and for compensation total £64½ millions, of which £10½ millions has been abandoned, and £33½ millions is still under consideration. German claims for debts notified to the British Clearing Office total £53½ millions (an increase of £9 millions since last year), of

which £16 millions has been admitted by the British Clearing Office, £4½ millions has been objected to, and withdrawn by the German Office, and £36 millions is still under consideration, the greater part of which has been contested. The difficulties of the department in providing the necessary funds to meet the various classes of claims for payment of which it is responsible will, it is stated, be greatly accentuated by the default on the part of the German Government to meet its obligations to the Clearing Office on the monthly accounts. "This will throw the liability, which should be met in cash by the German Government, upon the proceeds of liquidation of German property, to the prejudice of the ultimate chargees." The default on the part of the German Clearing Office is attributed to "the relief voluntarily accorded by Germany to her debtor nationals at the expense of her budget." Commissions earned by the Clearing Office (Germany) down to the end of March last amounted to £967,504, total receipts, including interest, reaching £982,057. The net expenses of administration in relation to German debts was £570,739, leaving a balance of £411,318, which can presumably be used to meet loss arising from failure to collect debts owing by British nationals whose solvency is guaranteed under the Peace Treaty.

The Belgian Exchange.—In a leading article on the Belgian Exchange, which appeared in last week's *Economist* (November 25th), the statistics of notes in circulation were published, through a clerical error, in the wrong order. The table should have read:—

	Dec., 1919.	Oct., 1922.
Notes in circulation	4,695,708	6,543,145
Notes and commitments at sight combined	7,200,000	7,320,000

The words "In thousands of francs" were unfortunately omitted through an oversight.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on December 5, 1922, at 8.30 p.m., at which a paper on "A Glimpse of the Union of South Africa" (with lantern illustrations) will be read by Dirk Boshoff, Esq. The Right Hon. Earl Buxton, G.C.M.G., will preside.

Oversea Correspondence.

UNITED STATES.—NEW RAILROAD LEGISLATION PROPOSED—LARGE PACKING-HOUSE MERGER.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 20.

It is now practically certain that new, and perhaps radical, railroad legislation will be attempted in the forthcoming session of Congress. In fact, party leaders, according to Washington advices, have included a revision of the Transportation Act among the principal matters to be considered by the national Legislature. Just what amendments will be proposed cannot at present be stated, and will not be known until the bills are actually introduced; suggestions already made in various quarters, however, give some idea of what may be undertaken. There is talk, for instance, of conferring broader powers upon the Railroad Labour Board, and making the latter an adjunct of the Interstate Commerce Commission. Among the other changes mentioned as likely to be attempted are the inactment of an anti-strike provision, with penalties imposed on both labour and railroads for failure to abide by the Labour Board's decisions; a clause recognising the principle of the "living wage"; an amendment to make compulsory railroad consolidations that are now merely voluntary; and the pooling of rolling stock under the control of one central corporation. An effort may also be made to repeal that section of the transportation law which authorised the Commerce Commission to fix rates which would enable the carriers to earn an annual return on their tentative property valuation at the rate of 5½ or 6 per cent. It is suggested that the commission be empowered to prescribe "just and

* H.M. Stationery Office. 1s net.

reasonable" rates. Some of the more radical members of Congress have advocated a repeal of the Transportation Act entirely. It is quite generally agreed that the present law should be amended in some respects. Its practical operation has revealed a number of weak spots. Developments of the past year have clearly indicated, for instance, that the Railroad Labour Board should be clothed with broader powers, and should work in closer co-operation with the Interstate Commerce Commission, because wages must necessarily be considered in connection with, or in relation to, rates. The agitation for a repeal of the section providing for rates that will yield the railroads a certain return is apparently based on a misunderstanding or misinterpretation of that clause. The latter remained in force two years from the time the Transportation Act became operative, and expired by limitation last March. It was intended to serve only as a temporary guide to the Commerce Commission in determining what rates should be established. It contained no guarantee of income to the carriers, either expressed or implied. As a matter of fact, the railroads have been unable to earn anything like the rate of return contemplated in that section. Pressure to amend the law, with respect to the rate-making powers conferred upon the Commerce Commission, comes principally from agricultural communities. Farmers, through their spokesmen in Congress, are evidently seeking low transportation rates for their products, regardless of whether or not the railroads earn anything. It is quite possible that an amendment will be urged recognising the principle of the "living wage," but it is inconceivable that any serious effort will be made to determine or fix such a wage, to be applied generally to all classes of railroad employees. The Labour Board has always taken into consideration the cost of living in its efforts to establish just and reasonable wages, but in its recent decision it pointed out the fallacy and danger of adopting a uniform living wage. As to the suggested amendments for compulsory consolidations and pooling of rolling stock, doubts are entertained in many quarters whether such provisions would be constitutional, for they would virtually involve seizure of private property. It is generally conceded that the Transportation Act has some defects which could and should be corrected, but conservative, financial, railroad, and business interests would regard any wholesale tinkering with the law as most unfortunate at this time, because it would create another period of doubt and uncertainty over matters that vitally affect not only the railroads, but all lines of trade and industry. Competent authorities believe it would be the wiser policy to bring about a better administration of the present statute than to experiment with a new law.

Much interest is being taken in the proposed consolidation of Armour and Co. and Morris and Co., two of the "Big Five" Chicago meat-packing houses. It is known that Armour and Co. have negotiations under way for the acquisition of the business and properties of at least one of the other large packers, and while no official statement has been made, it is generally believed that control of the Morris concern is being sought. Whether or not such a merger is consummated will depend largely, if not entirely, upon the Government's attitude. The plan has been submitted to Administration authorities in Washington, including the Federal Trade Commission, and their approval or acquiescence is necessary before it can be carried out. Should a merger of the two companies mentioned be effected, it would give Armour and Co. a pre-eminent position in the meat-packing industry. The consolidated companies would have total assets of about \$570,000,000, capital of some \$190,000,000, funded debt of approximately \$148,000,000, and a surplus of about \$64,000,000, according to the latest annual reports of those two concerns. Armour and Co. have packing plants in this country, South America, and Australia, while Morris and Co. have a number of packing establishments in the United States, and distributing stations in many important points in Europe and Cuba. An immediate result of such a combine would be a general consolidation of the facilities of the two companies, particularly distributing agencies and rolling stock. It is claimed that the merger would effect a saving of about

\$10,000,000 a year in overhead expenses, as a result of economic operation. To what extent, if any, the proposed consolidation might benefit livestock growers, as well as ultimate consumers of packing-house products, is a matter that will probably be given careful consideration by Government officials. It is by no means certain that the latter will sanction the deal. For a number of years the Federal Trade Commission has been waging war on the packers for alleged violations of the anti-trust law; it was largely instrumental in separating the meat-packing industry from the wholesale grocery business and allied trades, and in securing legislation providing for Government supervision of packing-houses and stock-yards.

FRANCE.—BETTER BUDGET PROSPECTS—BEARER BONDS—INCOME-TAX—PAYMENTS IN KIND—NEW BOND ISSUES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 29.

THE strenuous efforts that are being made by the Finance Commission of the Chamber to reduce to considerably less serious proportions the enormous deficit foreshadowed by M. de Lasteyrie, in his Budget Estimates for 1923, now appear likely to be crowned with a substantial measure of success. The detailed proposals of the Finance Minister (referred to here last week) have now been published, and show that there has been such a distinct revival in business since his original estimates for 1923 were drawn up in March last, and that he is now justified in anticipating a much larger yield from taxation, under several headings, than he dared hope for eight months ago. He has accordingly revised several of his estimates in an upward direction, and by reason of improved trade alone, he now feels justified in anticipating extra revenue of no less than 1,120,000,000fr. He proposes to take an additional sum of 700,000,000fr during 1923 from the special tax on war profits (which he now estimates will yield a grand total of 15,700,000,000fr, instead of the 13 milliards he expected when he drew up his original estimates). The yield from customs duties on imports has been so much greater than he anticipated during the first ten months of the current year that he feels justified in estimating to draw an extra 150,000,000fr from this source during 1923. The consumption of petrol has so largely increased during the current year that the tax on it has already yielded 58,000,000fr more than during the corresponding period of 1921, and leads the Minister to anticipate that he will receive during 1923 an additional 70,000,000fr from this source over and above the amount he estimated for in March last. The yield from stamp duties, transfer fees, and income-tax on securities during the present year has already so largely exceeded Budget Estimates that the Minister has now increased his estimate of revenue from these sources during 1923 by another 200,000,000fr. He further proposes modifications in the incidence of the duties on nominative and bearer bonds that will produce an increased revenue of 65,000,000fr, and he anticipates securing another 100,000,000fr from the income-tax by controlling much more strictly the returns sent in by persons liable to this impost. From these various sources the Minister anticipates being able to secure an additional total sum of 1,285,000,000fr.

A Socialist proposal, with the object of suppressing the present popular system of bearer bonds, by transforming these instruments into nominative securities, met with scant favour from the Finance Minister, on his being asked by the Commission to state his views on the question. Nor is this to be wondered at, seeing that the author of the proposal suggests that holders of bearer bonds, in required to endorse them to dispose of them, shall be and to give several days' notice to the Finance Department by registered letter, before a sale can be completed. One bearer bond—one or more of which is undoubtedly owned by practically every working man and working woman in

the country—is that they can be bought or sold at any bank at a moment's notice, merely on presentation, and at a cost of 1fr 50c or thereabouts (which is retained by the banker as his commission). Any serious modification of the present system, such as is suggested by the proposal in question, is universally regarded here as likely to prove destructive of the whole mechanism of the French instinct to save. The Finance Minister also pronounced definitely against the adoption of M. Bokanowski's proposal for the creation of a *carnet de coupons*.

The agitation among the working-classes against the imposition of an income-tax on wage-earners continues. On Sunday last a procession of 150 working men, headed by a red flag, and carrying an effigy of the Minister of Finance suspended from a pole, marched to a house in one of the suburbs of Paris, where furniture was to be sold by auction, under distraint for non-payment of income-tax, and effectively prevented the sale from taking place. Another similar sale was also rendered impossible in another part of the city. Dozens of cases of the kind have occurred all over France. A week or two ago the whole of the men employed at one of the Paris gasworks ceased work in protest against the deduction from the pay of three or four of their number of small sums of about 35fr each for unpaid income-tax. In view of the widespread objections that have been manifested by wage-earners, the Finance Commission of the Chamber recommends that the bases of exemption from income-tax shall be substantially raised. Incomes from wages and salaries, it is suggested, shall be exempt up to 5,000, 6,000, and 7,000fr per annum (according to the population of the locality in which the assessable person resides), instead of the present bases of 4,000, 5,000, and 6,000fr. It is further proposed that exemption shall be allowed to the extent of 1,000fr in respect of each child under 16, the benefit of this reduction being given to both father and mother, when both are in receipt of wages. Incomes derived from non-commercial professions, it is recommended, shall be exempt up to 4,000, 5,000, or 6,000fr (according to population), without further rebate in respect to family charges. So far as the general income-tax is concerned, it is recommended that persons in receipt of less than 7,000fr a year shall be exempt, but that those in receipt of more than 7,000fr shall be exempt only for the first 6,000fr.

With the exception of a bare list of the value of the orders received, which is published periodically by the Ministry for the Liberated Regions, it is extremely difficult to obtain from official or other sources any reliable data showing exactly to what extent the possibilities of the Franco-German agreements for payments in kind (generally referred to as the Wiesbaden agreements) are being made use of. The paucity of the details available has given rise to a fear that the method, although it has now been in operation since the end of July, is not proving as successful as had been hoped. On September 6th the total amount of the orders placed by *sinistrés* under these agreements amounted to 2,800,000fr; on October 23rd the total exceeded 7,000,000fr, while by November 23rd it was returned as "something like 12,000,000fr" (or less than £200,000, at present exchange). The principal categories of industrial materials included in this total are reported to be as follows:—

	Fr.
Electrical plant	900,000
Textile machinery	1,180,000
Material for public works	1,100,000
Metallic construction, lifting material, &c.	2,050,000
Material for food and brewing industries	320,000
Ironmongery and sundries	170,000
Machine tools	2,200,000
Steam engines, coppersmiths' material	1,260,000

Information gathered from non-official sources, however, shows that even the figures given present far too rosy a view of the situation, as they represent merely the value of the orders given, and not the goods delivered. The of the orders given, and not the goods delivered. The actual deliveries under the Wiesbaden agreements during the four months they have been in operation are asserted to amount to a total value of rather over 1,000,000fr. So far as machinery is concerned, deliveries are asserted to have been fairly rapid, and have been made within from six weeks to two months of the placing of the orders. For small wares, however, the system is alleged to have

broken down completely, and the Reparation Commission will probably no longer be set in motion—as has been the case in the past—to enable a *sinistré* to obtain a lock or a door fastening from Germany through the medium of the Wiesbaden agreements.

It is announced by the Ministry of Finance that the recent issue of three and five-year 6 per cent. Treasury bonds resulted in a total subscription of 8,232,124,000fr in nominal capital, and of 8,190,963,345fr in net cash (subject to probable slight modifications when the final returns from the provincial centres have been received). The Crédit Foncier will offer for subscription on December 4th an issue of 600,000,000fr 6 per cent. Communal Bonds of 500fr each. These 1,200,000 bonds will be redeemable in 70 years at the latest, by quarterly drawings, in which 416 bonds will be reimbursed every year by 3,000,000fr in premiums (including one of 1,000,000fr, one of 500,000fr, two of 250,000fr, and four of 100,000fr). Subscribers who prefer the chance of securing smaller but more numerous premiums may participate in drawings in which 400 prizes of 1,000fr each are offered every year, plus others of 50,000fr and 25,000fr each. The issue price is 490fr, payable, if desired, in eight quarterly instalments, and it is probable the offer, as usual, will be largely over-subscribed.

Owing to a combination of causes, the situation on the Bourse this week has been depressed. The violent fluctuation of the exchange has created a feeling of uneasiness, and this uneasiness has been further accentuated by the uncertainty regarding the outcome of the Lausanne Conference. There is also a feeling that the proposed further taxation on securities may place an unduly heavy burden on investors. In French Rentes there has been no marked change, except in the case of the Three per Cents., that fell from 59.65 to 58.45. Banks generally have declined, though the drop has not been considerable. In railways there has been a fairly sharp decline, Midi dropping from 825 to 806, while Orleans is stationary at 920. Shipping has shown a similar tendency, and metallurgical undertakings and petrol have also fallen back.

GERMANY.—CABINET—FINANCES—BUSINESS—EXCHANGE AND BOURSE—TRADE—WAGES—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, November 28.

THE Cuno Cabinet has been at last formed. The composition has been in general well received, although the Cabinet is a coalition party Cabinet, and not, as was expected, a non-party or business Cabinet. The Socialists, who refused to co-operate with the industrial German People's Party, remain outside; and in the debate on Herr Cuno's first speech they refused even benevolent neutrality, and forced Herr Cuno to throw overboard, on a charge of Francophile acts in the Rhineland, his Food Minister, Dr Karl Mueller. The political prospects are not too good, but the Cabinet's future will depend mainly upon Brussels, if Brussels is to bring any reparations solution. On this point the last reports are not too favourable, and it is feared that history may be repeated, history being that under the first impression of a heavy mark exchange fall there is a general resolution to do something, but that when the mark fall ceases without having caused any visible damage to the general economic structure the good resolutions are forgotten until the next mark fall. All Reichstag parties, including the irreconcilable German Nationals, stand for the moment on the basis of the Note of November 13th.

The havoc wrought on the State finances by the price rise which followed the last mark exchange fall is described in an official statement to the Reichsrat. The total deficit, including expenditure on fulfilment of the Peace Treaty, was last estimated at 233,300 million marks. It is now estimated at 890,100 million marks, of which 45,800 million marks will be covered by that part of the Forced Loan receivable this year. The railway receipts, contrary to expectation, still cover expenditure, whereas Posts, owing to the very low charges—about 1-13th of a penny for home letters, 3d for foreign—will need a subsidy of 47.9 milliards. The Cabinet promises the much-needed reduction in officialdom. The Finance Ministry's statement for November 20th shows the Floating Debt at 958,026 millions, which, with 64,423 millions Funded Debt, makes a total debt of 1,022,449 millions, the billion being therewith passed. In fact, the Funded Debt—estimated at about 55 millions—has fallen, but the figure given is that in the last report for June 30th. The whole expenditure between April 1st (beginning of the financial year) and November 20th was 616,399 millions, of which only 3,932,981,000 marks was for interest on Funded, and 25,743,300,000 marks interest on Floating Debt. Interest on the War Debt was, therefore, under £100,000 gold at the lowest recent mark exchange. Railway expenditure is now at the rate of about a billion marks a year. Passenger fares will be increased on January 1st to between 4 marks a kilometre for fourth class and 24 marks for first-class, which will be from four to sixfold the present. The present fourth-class kilometre fare is 1-160th, first-class 1-40th, of an English penny. The much higher freight rates account for the tolerable railway finances. State railway receipts in September were 25,332 millions; in the first six months of the financial year, 92,850 millions; receipts from Posts, Telegraphs, and Telephones in September 3,663 millions, which is 170 per cent. more than in April. The Customs gold surcharge for the week November 29th to December 5th has been raised to 166,900 per cent., or 1,670-fold the nominal. As a result of this high surcharge the prices of imported necessities are unreasonably dear, the price rise far exceeding the average rise in earnings.

The foreign exchanges to-day nearly regained their highest quotations of early November, apparently owing to stories of French action in the West. Prices still move upward. An exception is pig-iron, which, being fixed at short intervals on the basis of the dollar exchange, was slightly reduced on the 24th; hematite from 143,365 marks per metric ton to 130,829 marks, and other sorts correspondingly. This is the first reduction since early 1921;

and it will not be maintained on the basis of the latest dollar rise. The Steel Syndicate refused to reduce its rates for steel and rolling mill products. Privy Councillor Voegler, head of one of the largest coal and iron concerns, has spoken pessimistically about industrial prospects, this not on the ground of the currency depreciation, but on the ground mainly of Peace Treaty changes. Ruhr coal output in October was 8,827,126 tons, which is the largest since March, while the daily output was the largest since February, 1921, when the extra shifts were abandoned. Great progress, reports the *Vossische Zeitung*, has been made in native flax-culture. Native annual production in the last pre-war years was 4,000 tons; to-day it is about 25,000 tons, supplying more than half the home need. This improvement is largely the result of encouragement given during the war; but also since the war production has continued to increase.

Stocks last week rose. The *Frankfurter Zeitung's* index for dividend-payers shows on the 23rd, 335,236, the highest figure reached, against 287,326 on the 17th. The reason was apparently the prospects of a Cabinet settlement; and the paradox continues that (1) stocks, as in normal times, are sent up by good political news, and that also (2) stocks are sent up by mark-exchange declines which are often directly caused by bad political news. To-day the Bourse is closed; but in unofficial dealings stocks were in great demand on the basis of an unfavourable exchange, of unfavourable reports from France, and of better views of the home political and industrial situation.

Wages are rising rapidly. The last detailed figures, which are for mid-October, show an average 213-fold increase since 1914; but there was a great difference—375-fold in one trade and 120 in another. On January 1, 1920, wages had risen 6.3-fold, January, 1921, 11.9-fold, January, 1922, 23.6-fold, May 42.3-fold, August 93-fold. The average monthly wage of a skilled manual employee in State undertakings, which in 1913 was 150 marks, was (for married men) 28,704 marks at the beginning of this month, while for unskilled workers, who earned only 103 marks before the war, the wage has risen to 27,040 marks. The skilled worker's wage increased 162-fold, the unskilled 263-fold. At present exchange, the skilled worker's gold wage is less than one-tenth of that of 1913. The same tendency of the payment for rough work to increase faster than that of fine work is shown in official salaries. Whereas the salary of the highest class of married officials has risen 95-fold, that of the lowest class has risen 224-fold.

ITALY.—ABSOLUTE GOVERNMENT IN ITALY—TAXES TO BE SIMPLIFIED—WORKING OF THE SUCCESSION TAX—A NEW EXCISE?

(FROM OUR CORRESPONDENT.)

TURIN, November 27.

THE first financial acts of the Fascist Government are promising. They have abolished useless train services in the State railways, and declared their intention to drop many Royal decrees instituting port authorities in minor ports, which would simply have expanded into a new bureaucracy, additional to the State, municipal, and other authorities governing the port administration. But the most important act of the new Cabinet has been its revenue (*esercizio provvisorio*) till June 30, 1923. The Chamber has readily assented, and the Senate will do likewise. The Government is thus empowered to act as Parliament. Moreover, the Chamber has passed the so-called Bill of full-powers. The Senate will certainly concur.

This Bill authorises the Government until December 31, 1923, to reform the civil and military services; to suppress this or that public service; to transfer railways and the other industrial State concerns to private hands; to reduce, simplify, or increase existing taxes, and to introduce new ones; to act as they will in the domain of public administration and finance. Never was such absolute power entrusted by a Parliament to the Executive. Even in time of war

there were limits to the free action of the Government. This time the only limit set to the absolutism of the Government is the duty to report before March 31, 1924—a vague and ineffectual limit, as Parliament will not be called to give a vote on such a report.

The renunciation by Parliament of all its powers for so long a period was received with general cheers by the public. Italians were sick of talkers and of weak executives. The general feeling is one of profound distrust towards Parliament. Men would accept a Czar for the sake of getting out of chaos. In finance this revulsion against political talk, abuses, tricks, and so on ought to have been a revulsion against bureaucracy. The excessive taxation, the system of piling tax upon tax, the demagogic persecution of savings and capital by taxes up to 100 per cent. of income or capital—all this was characteristic of the war and post-war period, when the Chamber was never asked to vote on financial bills, but decree followed decree on the initiative of the Government. But people who are sick of a given state of things frequently seek remedies at the source of the evils of which they complain. Oppressed by the absolute rule of an old, ineffectual, compromising, sceptic set of politicians, they hope for redress from another set of politicians, young, energetic, full of vigour and of patriotism. True, there was little to hope for from the dying Chamber. Moreover, most of the new Ministers are capable men, truly desirous of doing well. Signor De Stefani, Minister of Finance, has not announced a big programme, as did several of his predecessors, who went out of office with nothing done. He is professor of political economy at the Venice High School of Commerce, and has declared his intention of simplifying and consolidating taxes, increasing their yield not by putting rates up, but by prosecuting defaulters. If new taxes must be imposed, for every penny of new taxes a corresponding saving ought to be made in the public expenditure. His only definite disclosure was that the succession tax is to be reduced. It was high time that from the Government bench a voice should be raised against the frenzied finance of the Bolshevik after-armistice period. A few examples will suffice to give an idea of what this system meant:—

Inheritance of Each Heir or Legatee.	Property Passing From									
	Fathers and Mothers to Sons.	Grandfathers to Grandchildren and Children in Direct Line.	Husband to Wife.	Brothers to Sisters.	Uncles to Nephews.	First Cousins.	Other Relatives and Strangers.			
Lire.	Pound Sterling at the Rate of 100 Lire to £1.									
5,000	50	1-80	1-80	5-40	9-60	12	14-40	22-80	28-80	32-80
100,000	1,000	4-80	6	12	18	25-80	32-80	39-60	46-80	54
500,000	5,000	10-80	12	19-20	25-80	32-80	39-60	46-80	54	62-40
1,000,000	10,000	16-80	18	26-40	32-80	39-60	46-80	54	62-40	70-80
5,000,000	50,000	21-60	25-20	32-40	39-60	46-80	54	62-40	70-80	78
10,000,000	100,000	25-20	28-80	36	43-20	50-40	57-60	64-80	72	80
20,000,000	200,000	28-80	32-40	39-60	46-80	54	62-40	70-80	78	86-40
more than 200,000,000	more than 2,000,000	32-80	36	43-20	50-40	57-60	64-80	72	80	88

On top of this there was (a) a tax of 0.75 per cent. on the land and houses included in the inheritance. (b) A tax of 6 per cent., 9.60 per cent., and 12 per cent. of the heritage, when it falls to an heir or legatee, not the son, husband, or wife of the deceased, who receives more than 200,000 lire, and is possessed in his own right of an estate of more than 200,000, 400,000, and 600,000 lire respectively. When the maximum rate of 90 per cent. is due from a second cousin, and the rules under (a) and (b) are working at their maximum, the inheritance is subject to a rate of 102.75 per cent., which is manifestly unthinkable. Moreover (c) if the estate is subject to a life interest, the remainderman is bound to pay the succession tax at once on the half of the full value if the usufructuary is under 50 years of age, and on three-fourths if over 50. If, as frequently happens, a husband without sons makes his wife a life-usufructuary, and leaves the estate to a nephew or a cousin, the tax to be paid at once swallows up, with the accrued interests on the tax, the whole value of the succession. Therefore, latterly many heirs have been compelled to refuse to take advantage of wills in their favour. (d) There is added to the estate 7.10 per cent. of the gross sum—before deduction of the debts—for jewels and furniture; (e) funeral and other expenses are deducted at the rate of 1 per cent. on an estate from

French American Banking Corporation 67 William Street NEW YORK CITY

10,000 to 100,000 lire, and of 0.50 per cent. from 100,000 lire upward; (f) debts are deducted only when bearing a certain publicly registered date. Most debts are therefore not recognised as such, and the heirs have to pay the tax on them. Such was the old system. The announcement made by Signor De Stefani that the Government intends to reduce rates all round was greeted with relief by many families, menaced with ruin.

On new taxes Signor De Stefani spoke cautiously. He seemed to be favourable to a new excise capable of bringing into the tax-gatherers' net the great masses of agricultural and industrial workers, who are not subject to any direct tax on income. Except for the higher classes of workers, whose wages are over 25 lire per day, direct taxation is practically impossible; the only substitute is an excise. Wine is already taxed at the rate of 20 lire the hectolitre. As the internal price is over 200 lire, a higher rate would not be unbearable. There is much talk of the re-establishment of the flour tax, but the old flour tax (macinato) has left so bad a record that it is doubtful if even a strong Government dare reimpose it.

CZECHOSLOVAKIA.—THE BUDGET—INDUSTRIAL CRISIS.

(FROM OUR CORRESPONDENT.)

PRAGUE, November 20.

IT is now nearly a month since the Finance Minister first introduced his Budget for the year 1923, which, though coming in for some severe criticism, chiefly from members of his own party, has been finally accepted. The circumstances at present are such as the young Republic has never had to face before during its three years of existence, and the bold financial policy of the present Minister naturally has come in for a large amount of censure in all quarters. At the same time, it has been defended with perhaps more zeal than discretion by some of his ardent supporters among a rather Chauvinistic school.

The Budget showed a deficit of 540 million crowns, or some 4,000,000 at the present rate of exchange, and contemplated expenditure to the amount of some 19 milliards of crowns. The heaviest items of expenditure are those concerning the upkeep of the Army and the interest charges, including amortisation, on the public debt of some two hundred millions in sterling. The former involves a sum of over 2,700,000,000 Kc, and the latter a slightly larger amount. The former figures have come in for a good deal of criticism. The army consists of some 150,000 in all, rank and file numbering 127,000, officers 10,000, non-commissioned officers 11,000, and over 100 generals. Certainly the number of officers appears disproportionate, and the total cost of more than 10 per cent. of the total expenditure is very high for a small country. In reply, it was argued that Czechoslovakia must have a strong army to defend itself, situated as it is among doubtful friends, and not always sure of the absence of enemies nearer home.

The Minister has also been criticised for his want of encouragement of industry in not reducing taxation, and especially for keeping on the coal tax. Dr Stránský, in a speech in the Senate, instanced the case of a firm in Central Bohemia, which employed 18,000 workmen and 1,500 clerks. Gross proceeds at the end of the year 1921 reached 1,000 million crowns. Out of this 126 million Kc

went in taxes and other calls. Taxes included fees, compulsory flour loan, capital levy, coal tax, and turnover tax, of which he gave full particulars. In other words, about 12 per cent. of the total receipts went in this manner. The inference is that, had taxation been less, the profits would have been more, the shareholders would have been benefited to the prejudice of the State. When the same critic attacked the railway charges he was on safer ground, stating that the freight for 10 tons was in Czechoslovakia 205 Kc, as compared with 92 Kc in Germany, 76 Kc in France, 60 Kc in Yugoslavia, and 57 Kc in Belgium. Large reductions of expenditure on the railways have, however, been promised by the Finance Minister. He has definitely refused, however, to abolish the coal tax, saying that it would simply mean that in that case he would have to look elsewhere to make good the milliard yielded by this tax. In this same speech he was less optimistic than is his wont, but said that hard work and economy could alone help in the present crisis. He made a curious reference to the condition of affairs in Italy, saying that the rise of the lire was due to the appearance on the scene of Mussolini, and that it was individuals, not masses, who counted in times of crisis.

Considering the large amount of interest payable on the public debt, the suggestion to raise another long-term loan causes some surprise. What is called the "Investments Budget" provides for the expenditure of over three milliards of crowns on various public works, for which no funds are available. For this purpose the Minister was to be, and now is, authorised to raise a loan. Three milliards of crowns represent some twenty million sterling, which, at 7½ per cent., would entail another 200 million Kc interest. Now Dr Rasin talks of a loan of four millions sterling only on 560 million crowns, which seems to betray a certain amount of anxiety as to the industrial situation. Already a supplementary budget has been voted for another 100 million crowns for the unemployed, and, unless prices go down still lower, the promised reductions in expenditure will prove exceedingly difficult to carry out.

It is to be noticed that State expenses, in spite of an addition of over 700 millions in connection with the Public Debt, are less than the figures for 1920 by 435 millions, and this is creditable to the Ministers' desire for economy. The exact figures are 19.37 milliards, against 19.8 milliards for 1922.

The various manufacturing industries are in no better case than they have been for the last few months, but in some, as, for instance, the leather trade, the worst seems to have been past. It is not expected that more boot and shoe factories will close their doors, at least not permanently, and a moderate revival of the home trade is looked for during the winter. The export trade, upon which it exists, can only improve if manufacturers adapt themselves to altered circumstances, or else in the unlikely event of a fall in the crown. At present the output amounts to some 35 or 40 per cent. of the total capacity of the industry, and the position in other industries is probably not very different.

CANADA.—CROPS AND PRICES—SHIPMENTS OF AMERICAN GOLD—FEDERAL REVENUES AND EXPENDITURE—PROSPERITY OF QUEBEC—COMMERCIAL TREATY WITH FRANCE—CRITICISM OF MERCHANTS' BANK TRIAL—IMMIGRATION POLICY.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 20.

With a large portion of what by general admission has been a most abundant crop now marketed, Canada is beginning to realise that mere abundance of agricultural products does not always spell general prosperity, and that a restoration of normal business activity cannot be expected before 1923 or 1924. One of the leading agricultural authorities in Canada recently gave his public opinion that to-day the cost of raising a bushel of wheat in Western Canada averaged 82 cents, and his estimate has been confirmed from other sources. There has been a welcome filip in grain prices during the past week, but the average farmer in Alberta and Saskatchewan is still

only getting between 80 and 90 cents per bushel for his wheat crop, and naturally they are deeply disgruntled over the existing state of affairs. It had been hoped both by producers and the business community that this year's almost record crop would put Western Canada on its feet once more, but while the situation has not in any way been worsened, the prices for farm crops have remained too low to permit any marked revival of trade. Farmers who gave their coarser grains to cattle and some who had special favours of fortune have been able to make money, but there are thousands who will just extract a bare living for their year's labours. The best judges of the problem now believe that the ultimate prosperity of Western Canada is dependent on a drastic alteration of existing methods of farming, and lament the unwillingness of many farmers to adjust themselves to new conditions. An able Western politician, who is also a practical farmer, told the writer recently that any further increase in wheat production in Canada would be a calamity, and efforts will probably be made to induce the Western farmers to devote more acreage to other crops. Canada has staked her whole future on the prosperous development of the West, and the problem must be resolutely faced. However, there is no reason for despair or even pessimism. The crop is setting a lot of money in circulation, and both merchants and manufacturers can report fair business. Unemployment is beginning to show its head in a few places, but not on a serious scale. Development and expansion, however, are going on in many directions, especially in the mining industry, and there seems no great difficulty in securing capital for Canadian enterprises. In the past month there have been a series of large shipments of gold from the United States to Canada, and the explanation offered is that, Canadian funds being at a premium, it is cheaper for the time being to send gold to Canada than to buy Canadian exchange. Prominent financial authorities think that the present premium on Canadian funds in New York is purely artificial, being caused by the sale of large quantities of Canadian securities in the United States, and that by the spring Canadian funds will again have receded to a substantial discount.

The Finance Department finds great satisfaction in the Federal revenues for October, which show an increase of \$7½ millions, as compared with October, 1921, while expenditure is \$1½ millions lower. For the seven months' period, however, which ended on October 31st, the comparison is not so good, for revenue, which is placed at \$236,835,650, only shows an increase of \$769,308 over last year's parallel figures. Expenditure, on the other hand, at \$156,820,717 shows a decline of roughly \$6 millions. On the surface there seems a promising gap between revenue and expenditure, but in the expenditure the railway burden and a variety of inescapable capital charges are not included. Better Customs receipts, which for October show an increment of roughly \$1,700,000, and higher postal returns may be taken as good indications of a trade revival. It is also satisfactory to find substantial abatements in the charges for Soldiers' Land Settlement and Soldiers' Civil Re-establishment. During the month of October there was an actual reduction in the national debt of \$14,271,817, but no jubilation over this is justifiable, for the net debt, standing on October 31st at \$2,369,759,026, was actually \$40,496,124 above the figures for October 31, 1921, which were given as \$2,329,262,902.

Most of the provincial Governments are labouring in heavy financial seas; the new Finance Minister of Manitoba recently confessed that the first nine months of his financial year had piled up a deficit of a million dollars. But the Province of Quebec is a happy exception to this state of affairs. Thanks largely to the liberality of its liquor laws, the provincial Treasurer claims for the financial year ending June 30, 1922, a surplus of \$5,033,419, and had been able not only to refrain from issuing new bonds, but also to retire \$249,687 of an old issue.

Messrs Fielding and Lapointe, the two Ministers who have been negotiating with the French Government for a new commercial Treaty between the two countries, are reported to have found Canadian proclivities for liquor prohibition an obstacle to the concessions which they desire. Into only two out of the nine provinces of

Canada is it permissible to import French wines for ordinary consumption, and the French vine growing interests apparently insist that no great favours be given to the mad Prohibitionist countries of North America. Prohibition as it exists in Ontario has a decidedly Protectionist aspect. The vine-growers of the Niagara district are still allowed to sell their product freely, and as many of their brands are of high alcoholic content, they find a ready market; under the shelter of Prohibition a very profitable domestic wine trade has been built up, and the French discern in this fact another instance of British hypocrisy.

The trial of Sir Montagu Allan, the president of the defunct Merchants' Bank, has, like that of the general manager, resulted in his triumphant acquittal; but very stern comment, especially as the judge saw fit to commend Sir Montagu's actions, has been let loose in the Press. The great Tory paper of Montreal, the *Star*, and the *Financial Post*, of Toronto, join with the Progressive *Manitoba Free Press* in condemning the farcical nature of the trial proceedings, and insisting that what constitutes one of the worst scandals in the financial history of Canada ought not to be allowed to slip into oblivion without some further investigation. The Bank Act will come up for revision next session, and the Merchants' Bank case will afford a splendid text for financial critics and reformers. The farmers' associations are freely discussing the idea of a National State Bank on the lines of the Commonwealth Bank of Australia, and the Progressive members will be instructed to press for radical changes. Meanwhile, the *Financial Post* warns the Bankers' Association that public confidence in the Bank Act as it stands is at a very low ebb, and the Merchants' Bank fiasco provides a deplorable example of its utter failure to protect adequately the shareholders, the creditors, and even the depositors from heavy losses.

It is understood that the Government have reached some definite conclusions about an immigration policy, and its announcement is expected in the near future. Public opinion is seriously perturbed at the disclosure by the last census of the awkward fact that Canada, despite a very large flow of immigrants, failed to retain even all her natural growth of population. Lord Shaughnessy in a recent address in Montreal lent his high authority to this statement. He estimated that if Canada between 1911 and 1921 had received not a single immigrant her population by natural increase should have reached nine millions, but it was officially placed at 8,769,000, and apparently the 1,975,000 immigrants who had come in had disappeared. It is expected that the Government will restore a separate department for immigration, and will introduce legislation.

ARGENTINA.—THE NEW PRESIDENT—THE NATIONAL MORTGAGE BANK—RAILWAY PROBLEMS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 25.

On October 12th Dr Marcelo T. de Alvear was formally inducted as President of the Argentine Republic in the room of Dr Irigoyen. Both men were given a full meed of popular applause, and there can be no doubt in the mind of any unbiassed observer as to the popular feeling towards the distinguished citizen who has resigned his magistracy, after filling the full term of six years, only to resume his former position as head of the Radical Party. This is scarce the place to summarise either his merits or his demerits. Suffice it to say that no previous President of Argentina has ever held office during such troublous times in world politics, or been subjected to such constant and powerful pressure designed to one end. History, one makes no doubt, will do him greater justice than his contemporaries are like to do, but what concerns this country more nearly to-day is the fact that his successor has already given abundant proof of more liberal views and a more modern conception of what Argentina's place among the nations implies. At the outset, Presi-

dent Alvear gave general satisfaction by reverting to the custom of delivering a brief official address immediately after taking the oath of fealty to the Constitution. Its tone was of necessity general, yet it struck a dignified note. Intelligent aid to industrial evolution, care for the public health, united action throughout the Republic for the common weal; these, said Dr. Alvear, were the ideals he sought, and, with the help of Congress and his fellow citizens, he believed them to be attainable. His Ministers are all men who command respect, and are credited with ability. Their political colour is naturally that of the Party in power; nevertheless, the feeling is general that as Cabinet Ministers they will not be so extreme in their insistence on the Radical dogma as their predecessors were. That business interests are most concerned with the persons who fill the Ministries of Finance and Agriculture at the present time is obvious. Both Dr Herrera Vegas and Dr Le Breton may be considered practical men of affairs, and it is reasonably certain that collaboration between the departments will be frequent. Although much has appeared in the public Press of forthcoming loans and possible revenues to be derived from oil royalties, it is unlikely that anything definite can be said until Congress meets. That it will be convened to extraordinary sessions in November has been officially stated. It has been also declared that no foreign loan will be sought until the necessary legal authority from Congress to borrow has first been obtained. This, one may unhesitatingly say, is a great step in the right direction. For under the previous Government *ad referendum* agreements were fast becoming synonymous with no agreement at all.

That an important Internal Loan will be sought seems, however, reasonably sure, and for practical purposes one may take the Cédulas of the National Mortgage Bank as giving the mean of the terms upon which such an operation would be conducted, or, say, 6 per cent. at 95. The local market, as has been mentioned in previous correspondence, is better able to handle such an operation to-day than it has ever been. Indeed, one might argue that the frequent shifts put to in connection with the short-date transactions of the Government during the last five years, and the absence of all European intervention in Argentine finance in that time, have between them prepared the local financial interests to stand alone. Reference is made to the Cédula as a base for comparison simply because this is at present the one genuinely popular investment bond in Argentina, the one form of Stock Exchange security generally understood and dealt in by all classes. The Fifteenth Series of these bonds is about to be issued, and the Ministry of Foreign Affairs is endeavouring to have the Cédulas of the National Mortgage Bank quoted in the official lists of the exchanges of London, New York, and Paris, Berlin, Hamburg, and Amsterdam. As the operations of the bank are extending considerably, and its terms are favourable to borrowers, the demand for mortgage accommodation on the basis of 6 per cent. interest and 1 per cent. per annum amortisation, is such as to make it of the first importance to secure as wide a market as possible for the bonds. It may nevertheless be remarked that some criticism has been raised concerning the danger of unduly rapid expansion, shown by the fact that the bank's present total of bonds in circulation—prior to the 15th Series—is \$747,000,000, Argentine paper, face value, as contrasted with \$540,000,000 on May 31, 1914.

Interest has also been aroused in financial circles by the announcement that the Public Credit Office was authorised to issue and inscribe bonds to a total face value of \$60,000,000 Argentine paper, to be known as the 1922 Issue Argentine Internal Credit. They carry 6 per cent. interest and 1 per cent. amortisation, are in bonds of \$5,000, \$1,000, \$500, and \$100 coupons, payable quarterly, beginning from January 1st in each year. It is understood that the Government will have no difficulty in placing these bonds, various financial interests having expressed their willingness to handle them for such creditors of the Government as might otherwise not be disposed to accept this form of payment. This may, indeed, be considered one of the first measures taken by the National Government with a view to putting administrative matters on a more up-to-date footing. Satisfaction has also been caused by the statement that statistical information is to be published promptly, beginning from the month of September of the current year. The quarterly statements covering import and export trade will be resumed, thus doing away with the inordinate delay which has led to the complete figures for 1920, appearing scarce a couple of months ago. Export statistics for 1921 have only been obtainable this month, figures for imports being still to seek. The various Ministries have also been called on to bring their accounts into order without further ado, and although time is too short to enable any exhaustive inquiry into new proposals for increasing revenue, it is understood that workable Budget Estimates designed to cover the needs of the administration during 1923 are already in preparation, and will be brought forward in a manner calculated to cause as little delay as possible when the sanction of Congress is sought by the executive power.

With regard to the railway position, it is as yet too soon to write with any assumption of finality. Both in the province of Buenos Aires and on the various extensions planned in connection with the State lines there appears to be a firm determination to carry out the vast programmes that have already been made public. How far the straight speaking of the various chairmen of the Anglo-Argentine lines will carry is hard to say. That their arguments are unassailable, viewed from the standpoint of the home investor in Argentine rails, even the Argentines themselves admit. Yet at the same time the expressed inability of the Anglo-Argentine companies to undertake extension work involving fresh capital outlay is brought forward again and again as being an unanswerable argument for going ahead with the official lines. Moreover, there seems reason to believe that control of expenditure in connection with the latter, both for work on the permanent way and for purchase of material and rolling stock, is far more severe and economical than has ever been known before in the history of Argentina's State systems. Moreover, their utility to the districts through which they will run is unquestionable, however true it may be that many a year must pass ere traffics are satisfactory. Thus general opinion may be said to incline to the official view, and the somewhat favourable forecast of the future indulged in by some speakers has already been taken up by a section of the Argentine Press as fair proof of the excessive haste with which the late president sanctioned the recent increases of tariffs. If the foregoing remarks appear contradictory, it should be remembered that all one seeks is to give in some sort a conspectus of the railway position as it is viewed in Argentina by those who use the lines, and to emphasise the fact that the whole situation is still delicate, calling for the utmost tact and diplomacy if further friction is to be avoided.

NEW ZEALAND.—PUBLIC RETRENCHMENT— REDUCED TAXATION—RETURN TOWARDS NOR- MAL—BRIGHTER TRADE OUTLOOK.

(FROM OUR CORRESPONDENT.)

AUCKLAND, N.Z., October 16.

MR MASSEY'S prediction that before the end of the year public expenditure would be well within income is already approaching fulfilment. Various favourable causes have helped towards this result; the enhanced

prices for New Zealand produce, good seasons, and the absence of industrial strife, are among the principal. But even then, only a policy of vigorous retrenchment could have insured success. The main opposition to retrenchment has come from the Labour party. The same party has opposed the reduction of taxation as far as it affects the banker, the business and professional man, and the large companies, but as Mr Massey pointed out, such taxation is eventually passed on to the public, and is eventually paid by the consumer; consequently, the worker would benefit indirectly by the relieved taxation.

The crushing burden of income tax will be reduced to a simple scale running from 1s up to 7s 4d in the £ on incomes of £10,000 or over. The graduation scale is rather a complicated one, but the principal rebates are on incomes under £10,000. Thus, on an income of £400 the tax for 1923 will be £5, against £6 5s in 1921, and the rebate will be general except in the case of incomes between £800 and £1,000, which show a slight increase in the rate, but even these are reduced compared with the taxation of 1922. Up to 1921, incomes were taxed with ordinary and war taxes, and in respect of the latter, the exemption of £300 applied to all incomes. Last year the Government brought in a single scale, and one result was that by graduating the exemption of £300 on incomes above £600, so that it disappears at £900, the taxation on all incomes above about £650 was substantially increased. On the land tax to be collected in November, 1922, there is a reduction on all grades as compared with 1921, but as compared with the taxation for 1920 the reduction only applies to taxable balances under £50,000. Other concessions are: In regard to income tax, it is provided that after this year, losses incurred in business may be set off against profits earned within the three following years, provided that any relief under this section shall be given so far as possible from the first assessment within the period of three years; and as far as it cannot then be given, from the next assessment, and so on. Also, losses incurred by a taxpayer in one business may be set off against profits earned in another business; an overdue concession is also made to coal-owners in regard to depreciation of assets. Mr Massey calculates the relief under all his proposals at £939,000. There is no doubt that the last increases in taxation were necessary only because the Government allowed expenditure to get beyond control, with the result that taxation was levied beyond the capacity of the country; retrenchment is already bearing fruit. The taxation on large industrial and commercial enterprises, the effect of which spreads over the whole community, has been reduced from about 8s 9d to 7s 4d; next year, it is hoped, that it will be further reduced to not more than 6s, and in the following year to 5s. The elections are approaching and public finance will be one of the important issues.

The return to normal conditions is becoming more accentuated. At the end of this year it is announced that the Rent Restrictions Act will be abrogated, and at the end of next year (unless previously renewed, which is improbable) also the moratorium on mortgages. Both of these emergency measures have acted very adversely on the trade and development of the country. The excess of imports over exports, which amounted to £1,986,713 during the first eight months of 1921, increased to £11,927,753 for the corresponding period of the present year. The cost of living is falling, almost every item except rent being lower, and this also will probably soon be reduced. A further reduction of 3s a week in wages has been decreed and accepted by the workers. On the other hand, the severe depression felt by the farmer last year still bears fruit, resulting in many bankruptcies, but future prospects are good. The Stock Exchange, which had been depressed during the recent war scare, is again recovering.

Letters to the Editor.

"FISCAL CONSEQUENCES OF THE IRISH TREATY."

TO THE EDITOR OF THE ECONOMIST.

SIR,—The writer of the article under the above title in the "Notes of the Week" column of your number dated November 18th appears to think that the British taxpayer will have to bear the cost of collecting the Customs at a land frontier in Northern Ireland, if, as seems probable, such a frontier is established.

But is it not rather the case that the whole of the additional cost involved is legally chargeable to the Exchequer of Northern Ireland?

Under Section 22 (5) of the Government of Ireland Act, 1920, the imposition and collection of Customs and Excise duties is a "reserved service," that is, it remains in the hands of the Imperial Government. As I read it, Customs and Excise are "reserved taxes," and flow, in the first instance, straight to the Consolidated Fund of the United Kingdom.

Section 24 (1) lays down that there shall be paid each year to the Exchequer of Northern Ireland a sum equal to the (Northern) Irish share of reserved taxes, after deducting:—

(a) The amount of the (Northern) Irish contribution towards Imperial liabilities and expenditure, and

(b) The net cost to the Exchequer of the United Kingdom during the year of the services remaining reserved services.

The natural conclusion is surely that this covers any additional cost of collecting Customs and Excise revenue in Northern Ireland that would be the result of a land Customs-frontier separating the Free State from Great Britain and Northern Ireland.

And consequently the British taxpayer, unless he resides within the jurisdiction of the Northern Irish Parliament, need not be greatly concerned about it.—Yours, &c.,

DOMINICK SPRING RICE.

55, Victoria road, Kensington.

THE ST. LAWRENCE WATERWAY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Ottawa correspondent, referring to the very serious congestion which has arisen in the transportation of the Canadian grain crop from West to East, says that this grave situation has given "an enormous impetus to the demand for the construction of the St. Lawrence Deep Waterway."

May I point out a fact, of which even some Canadians seem to be unaware, namely, that Canada possesses another alternative waterway from Montreal to the Great Lakes, shorter by 300 miles in distance and quicker by 36 hours in time than the St. Lawrence route? The Montreal, Ottawa and Georgian Bay Canal, to which I refer, has the additional advantage that it passes entirely through Canadian territory. The United States would have nothing whatever to do with the control of its trade or the regulation of its tariffs. It has distributed along its route water powers of great magnitude, admirably situated for supplying the cities of Montreal, and the whole of the Ottawa Valley, as well as the vast undeveloped territories to the north, with cheap and abundant electric power. The Canadian Parliament has already granted a Charter for its construction. The whole route was completely surveyed by Canadian Government engineers in 1904 to 1908. This survey cost the Canadian Government over \$750,000. The estimated cost of the Georgian Bay Canal was then estimated at one hundred million dollars, which is less than half the estimated cost of the St. Lawrence project.

Sir Wilfrid Laurier was an enthusiastic advocate of this waterway. In this respect he followed in the footsteps of Sir George Cartier, Alexander Mackenzie, Sir John Macdonald, and Sir William van Horne. At the Imperial Conference in London in July, 1907, Sir Wilfrid Laurier said, "Canada's chief item of expenditure is in creating routes for her commerce. She has to complete her railway system, and build the Georgian Bay

EASTERN AND GENERAL MERCHANTS.

Agents and Secretaries of Rubber, Tea and Produce Companies.

1-4, Great Tower Street, London E.C.3.

Canal." Speaking in the following year, Sir Wilfrid Laurier anticipated the very difficulties which have now arisen, and cannot fail to be accentuated, as new lands are brought under cultivation and the grain crops of the West increase. The wheat of the West," he then said, "needs the shortest and cheapest route to the sea, and that route is the Georgian Bay Canal."

The policy of the Laurier Government at this time, as he and his Ministers have since publicly stated, was to have built simultaneously, and immediately finance permitted, both the enlarged Welland Canal and the Georgian Bay Canal. The defeat of the Laurier Government in 1911 prevented this being done. There is no doubt whatever that had Sir W. Laurier remained in power in 1911, his Government would have commenced the construction of the canal. One of the advantages of this waterway is that the necessary statutory powers for building it are in existence, and that the plans and surveys are in readiness, so that the works could be started at very short notice.

Opinion in Canada, as well as the United States, is greatly divided as to the St. Lawrence Waterway. While the construction of the Ottawa Waterway will manifestly increase enormously the trade of the cities of Montreal and Ottawa, the effect of the building of the St. Lawrence Waterway on the trade and commerce of the cities of Quebec and Montreal must, to say the least, be very doubtful, indeed, and may be disastrous. The international aspect of the proposals is a grave one. Senator Lodge, dealing with this question in the United States Senate in February, 1919, said:—

"We ought to think long before we join with another country to make a waterway which we cannot control. The people who control the mouth of a river control the river. If a waterway can be found through our own country, I think the canal should be built through that way. The route should be through American territory, which would give cheapness of transport to the products of the agricultural west, and yet at the same time keep it within our own boundaries. As long as a waterway is in our territory there is no danger of any international discussion. One way of making our good relations with Canada as close as possible is to avoid subjects of disputes. We are taking some risk when we put control of a large portion of our most important commerce in the hands of another country."

In commerce, and in politics, it is dangerous, as in other walks of life, to hand the key of one's front door to one's neighbour.—I am, &c., R. W. PERKS.

London, November 28th, 1922.

A LEVY ON CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There are two letters on this subject in your issue of November 18th which invite comment.

Mr Pawle implies that the Labour leaders were dishonest in their proposal, hoping to secure votes "before its fallacy could be effectively disproved"; and he adds that the workers have not "caught on....." The first suggestion is unworthy; and, as regards the second, it may be enough here to say that the question of the Capital Levy awakened great interest in Labour meetings, and secured their very hearty support.

Mr Ellis Barker admonishes the Labour party for its ignorance. He thinks that, "in their opinion, money is wealth....." Whether this is said in ignorance or deliberately, it is such a childish travesty of the facts that it is waste of time to discuss a letter written in that spirit.

It is useless to attempt to deal with all the complexities of the question in the course of a brief letter to the Press. There are certain simple propositions, however, which are involved in the full proposal, which could with

advantage be considered. I would suggest, for example, that your readers should clarify their minds on this point: assuming a certain revenue has to be raised, which is the better course in the interests of the business man?—to raise that revenue by a tax measured by the income of the individual taxpayer, or by a tax measured by his wealth. I am quite aware that there are many other elements in the special "Capital Levy" proposed; but a clear answer to the above proposition would be a step towards the full appreciation of the larger question.—I am, &c.,
A. HOOK.
Shepperton, November 24th, 1922.

CURRENCY AND GOLD VALUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—What will the States whose currency has depreciated have to do in order to place it again on a firm foundation? The remedy nearest at hand would be to impose again the obligation on the central bank to exchange on request its notes against gold, and thus restore the convertibility of bankers' credits into gold. This, however, is not quite so easily done, since the notes only possess part of their former gold value. This, of course, the State would have to take into account: it should fix the gold value of the currency, and should provide that on request the bank should change it into gold at this rate. In connection therewith all claims and liabilities within the country would have to be reduced at the gold rate of the depreciated money to be determined by law. Let us take Germany as an example. At present the internal buying power of the mark represents only about 1-750th of its former gold value. According to its last statement, the Reichsbank had issued notes to an amount of nearly 450 milliards of marks, representing a value of about 0.6 milliard of gold marks. Since the currency is again to be placed on a gold basis, the notes must be exchanged against new ones at a fixed rate of exchange, and the bank would thereafter be bound to exchange the new notes on request against gold. The consequence would be that the note circulation would be reduced from 450 milliards to about 0.6 milliard of marks. In like manner, the other banking credits represented by the deposits and the current account balances, not only of the note-issuing banks, but also of all the other banks, would be reduced, since the interested parties also would be credited in full gold marks only 1-750th of their present depreciated values. By this means the money within the country would be reduced to 1-750th of the present money supply.

Not only the claims and liabilities of the banks, but also those of all other persons and corporate bodies, including the State itself, are reduced in a like manner by converting the depreciated money into its gold value. Thus the depreciation of the public debt would be reduced to 1-750th of its German value, and the commercial, industrial, and transport figures, as well as the capital of the same rate, port companies would be like the State, to pay their debts in gold marks.

Looking at this measure from a superficial point of view, it appears as if it would lead to a revolution of the mutual financial obligations of men, and nobody profits or changes in the present condition; the only change suffered financially by this measure is that a basis is obtained for the gradual reconstruction of the economic and social life of the people. By the measure here discussed, the way for reconstruction would be paved much more energetically, and would be better secured, than by the gradual deflation or a provisional stabilisation of the currency.

Whilst, therefore, this measure would considerably reduce the money circulation inside the country and fix prices again on a gold level, the fact that this restoration of the gold basis can take place immediately and without disturbing economic life cannot be too highly praised.

I need hardly mention that in making these observations I have taken it for granted, and have assumed it as a condition *sine qua non* for the accuracy of my statements, that the currency, once restored to the gold parity, is kept on such level in the future.

It should not be said that this is more than the banks

may be able to do. On the contrary, the banks, by a sound policy of credit-granting which carefully avoids all excessive issues of credits, have got it in their power to prevent a depreciation of the currency. But the Government also must not again release the banks from their obligation, on request to convert their credits into gold. This obligation more than any other is suited to remind the banks of their duties, and to cause them to keep their granting of credits within certain limits.—Yours, &c.,
Dr M. A. G. HARTHOORN.

Berlin, November 10th, 1922.

Books and Publications.

AD HOC BODIES.*

THIS is the third and last of the volumes on "English Local Government" which Mr and Mrs Sidney Webb, assisted by many zealous investigators, have been writing for several years past. They found "in the entirely unstudied archives of the hundreds of bodies of Commissioners for Paving, Cleaning, Watching, and Lighting and Improving the streets of the various English towns—and not in the unreformed Municipal Corporations—the beginnings of the most important functions of our nineteenth century municipalities." Mr Webb's earlier volumes covered the period 1689 to 1835, and described the Parish and the County, which covered all England, and the Manor and Borough, which were "islands of franchises, immunities or exceptions." In the present volume he deals with the special bodies set up by Act of Parliament to perform particular services, which we now call "ad hoc" bodies. Altogether there were about 1,800 of these separate local governing bodies, whose rule extended over a much larger area and a considerably greater population than all the municipal corporations.

Unlike the other bodies, the new authorities were created by a special local Act "to discharge one designated function for one prescribed locality"; the Acts were passed very carelessly until after 1832, when all such Bills went to a private Bill Committee, which was charged to act as a judicial tribunal, whereas hitherto decisions had been given by the M.P.s chiefly interested in the Bill. Carelessly as they were passed, this long succession of Local Acts really opened the way to our modern municipal government, and first developed the essentially English system of administration by committees representing the ratepayers who directed and controlled the staff of professional officers.

First of all Mr Webb describes the Courts of Sewers, i.e., the persons, or bodies, who looked after the Fens, marshes, and other low-lying ground which required some kind of authority to see that different people maintained their sections of wall and dyke or kept their water-courses clear. Commissioners of Sewers were very much like the Justices of the Peace who governed rural England for so many centuries, "they combined in themselves judicial, executive, and even legislative powers, all exercised under the forms of a Court of justice"; they were assisted, like other Courts, by juries, who assessed the amounts to be paid by persons benefiting from the Commissioners' works. The famous "Lords of the Level of Romsey Marsh," who have existed since the thirteenth century, were not a Court of Sewers, and had never been elected, but they remain to this day "An ancient relic of pre-statutory local government." In the Somersetshire marshes affairs were also managed without statutory authority, but (probably by immemorial custom) right up

* "English Local Government: Statutory Authorities for Special Purposes." By Sidney and Beatrice Webb. (25s net. Longmans and Co.)

to the early nineteenth century by standing juries. In Westminster the jury almost disappears, and the Commissioners become a kind of self-electing vestry, which degenerated early in the nineteenth century into a small junta of estate agents and builders.

After the dissolution of the monasteries something had to be done for the poor, and as the parochial authorities (established by 43 Elizabeth) proved inadequate Acts of Parliament in the seventeenth century set up new authorities in particular places called "Trustees, Governors, or Directors of the Poor." These bodies made many experiments, and finally proved that the Elizabethan theory of "setting the poor to work" was impracticable. At Bristol an Act created a new authority, which was a genuinely elected body for the whole city, the main idea being to set up a central workhouse. Accidentally the Bristol Guardians discovered "the workhouse test," thereby reducing the number of paupers, and their experiences with that of other bodies proved that a union of parishes was useful both for providing a central workhouse and for avoiding the difficulties and expense of "settlement."

One difficulty with the Guardians was that members would not attend meetings, but left everything to officials, who were ill-paid, uncontrolled, and correspondingly inefficient and dishonest. At first the new Houses of Industry were an improvement, although the labouring classes disliked them; indeed, in 1765 a little rebellion in Suffolk demolished these "prisons" like a Paris mob destroying the Bastille. Undoubtedly the houses were demoralising to the younger inmates.

Next Mr and Mrs Webb deal with the Turnpike Trusts, which became very numerous early in the eighteenth century, at one time numbering over 1,100 and controlling 23,000 miles of road. Before their time England had practically no roads in our sense of the word, only tracks or "rights of passage" from one place to another; with the growth of wheeled traffic these became inadequate, and in time the Trusts effected a vast improvement, which was more than worth the money wasted as well as that which had been wisely spent. Turnpike Trustees, like the Guardians, would not attend meetings, and all kinds of incompetence, corruption, and embezzlement prevailed; no one, not even the Postmaster-General, could call a Turnpike Trust to account. They could tax all vehicles or animals using their roads, but, unlike other *ad hoc* bodies, they could not levy a rate or even claim a share of the Highway Rates.

The last set of bodies to be considered are the Improvement Commissioners, which were set up to the number of three hundred in order to do the work which ought to have been done by the unreformed Municipal Corporations—where they existed—or in newer towns, which had no urban status. All towns were in a shockingly insanitary state, with no sewers or any kind of street cleaning. Great cities, like Manchester or Birmingham, were governed by Commissioners, and thus hardly felt the need of municipal status. The Manchester Police Commissioners were at first co-opted, then drawn from a limited class, and then they became "a body of elected representatives," among whom we find serving Potters, Garnetts, Taylors, and even Richard Cobden. As early as 1817, and without statutory authority, they set up their own gasworks, and were thus the pioneers in "municipal trading."

Street cleaning is a very modern thing, and did not become general till people began to realise the value of ashes and animal refuse for manure; in 1796 Marylebone drew £1,050 a year from its scavenging contractors, and gradually raised this sum to £2,350 in 1803, but after this date the sums fell off. With the passing of the Municipal Corporations Act in 1835 the Improvement Commissioners saw their functions gradually being handed over to the new bodies, which were their heirs in reality rather than those of the unreformed Corporations. Even to this day one or two sets of Commissioners remain, like that more picturesque body the Corporation of the City of London, to remind us of the bad old times. A great deal of this interesting volume is entirely new, for Mr Webb's investigators dug out their facts from the unprinted records and minutes of long-forgotten authorities.

A VOLUME OF MUNICIPAL FINANCE.*

THOSE who venture to tackle the now vast abstracts of accounts issued annually by our great municipal corporations must be possessed of an insatiable appetite for figures, and of a good digestion for such fare. The abstract of accounts of the Manchester Corporation for the year ended March 31, 1922, has just been published, and the City Treasurer (Mr John E. Bray) is to be congratulated upon the completion of this onerous task.

The loan debt at March 31, 1922, amounted to £30,163,330, which, with a population of 744,000 (1921), is equal to about £40 10s per head, against £28 per head two years ago, and £34 per head one year ago. During the year fresh mortgages at 5½ per cent. and 6 per cent., amounting to nearly £7 millions, were granted, while, on the other hand, mortgages which bore lower rates of interest to the extent of nearly £3 millions, were paid off. The higher interest rates infallibly indicate the coming financial weather, and should not go unheeded, especially in view of the fact that in the current and following years loans, amounting to about 8½ millions, fall due to be repaid.

The increase of four millions in the loan debt during the year is accounted for under such heads as town planning, electricity, gas, tramways, water works, and housing (assisted scheme). To take the tramways; the length of track operated increased during the year from 200 miles to 212 miles. The capital outlay increased by 10 per cent., and amounted at the end of the year to £2,838,254. On the liabilities side of the tramways balance-sheet there is a sinking fund of about a million pounds, representing the amount of tramway loans paid off since the beginning. Presumably this amount is available to reduce the capital outlay of £2,838,254, appearing on the assets side, in which case the net capital outlay on tramways amounts to about £1,800,000. How does this amount compare with the going concern value of the actually existing tramway plant and equipment? It would probably be difficult to answer this question.

It is very desirable that suitable accounting records should be kept of capital outlay on all such tramway plant and machinery. The capital outlay which has expired during the year can then be measured, and regularly written off. A reasoned statement would thus be available showing the capital outlay under the various classes of tramway plant still in use, based on the engineers' estimates of the remaining useful life of each class.

STOCK EXCHANGE NEWS.

TICKET.
December 13.

ACCOUNT.
December 14.

Settlement of the end-November account this week showed that there was some increase in the bull position amongst Argentine railway stocks, two or three Home railways, and rubber shares. This caused a stiffening of money rates in the markets affected, but, from the general point of view, capital continues to show willingness to take what new stock is offered, provided it be good and reasonably priced. On Monday, for instance, the subscription lists of the Auckland City, Tambora Rubber, and Becker Notes were all closed shortly after they opened. Dealings have begun in new Auckland debentures at a 10s premium. This success of new issues has encouraged the advent of several others promised in the near future, Bergen being one of the latest borrowers.

Business amongst existing securities is quiet, but markets continue to maintain a firm front, little disturbed by the latest political crisis in Greece, fresh weakness in the franc, and the approach of Christmas.

The War Loan hardened up, on the expectation that some of the interest cheques distributed yesterday will find their way back to the market. This had a sympathetically favourable effect upon other securities in the Consol market, though prices show comparatively little change as a whole. French Government bonds have given way, French railway issues are lower, Germans have rallied, and Brazilians, after showing hesitation, strengthened in several cases. Dollar stocks are mainly lower on the week.

Home Railways gave a good account of themselves. The feature is the way in which North-Easterns have gone ahead under the persistent buying from the North. At a more modest rate, North-Westerns, Midlands, and Great Westerns followed the same upward direction. Metropolitan and Districts stand out as examples of strength amongst Undergrounds. The lower-priced railway stocks are better, and the market shows a fair amount of animation. Its rises have not affected the partiality which continues to be shown for Argentine rails, where the traffics and the crop outlook combine to induce optimism on the part of the large body of speculative investors now following this market. Brazilian rails further improved upon their last week's advances. In other railway stocks there is nothing of interest to report. The nitrate share market has been heavy.

Rubber has risen to 1s 2½d per lb, without having much effect upon the share market, except that it has served to keep prices firm, with a hardening tendency. Oil shares have been flat, in consequence of fresh liquidation. A further reason for weakness developed in the apparently inaccurate impression which got abroad that the British Government may dispose of its Anglo-Persian oil shares. With the public doing little but selling, oil shares fell into a weak condition. The shipping market is one of the strongest round the House, and, with tobacco shares, has commanded substantial support during the week. One reason for the popularity of shipping can be found in last week's references in the *Economist* (p. 977) to the improving condition of the industry.

Banking and insurance shares are good as a while, the forthcoming dividend announcements serving to keep prices hard. Courtaulds enjoyed another bout of strength, while other textiles remain rather in the shade. Iron and steel shares showed a dwindling tendency on the passing of the dividend on Bolckow Vaughans for the first time in 60 years, but the dulness was counteracted by the hope that the Government's proposals for setting up unemployment works may indirectly advantage many undertakings of this class. The brewery market is steady. Cable stocks have further declined, owing to the disappointing report of the Western Telegraph Company, and in the wireless group business has been so quiet as to lead to no changes of note. Forestal Lands recovered sharply, Hudsons Bays, on a little profit-taking, gave way from the best.

Business in the Kaffir market is so stagnant that the usual tendency of sagging prices again set in. Shares in the producing and the deep-level companies gave way a little, and this had its effect upon Rhodesians, where Chartered went down to 11s before they recovered a few halfpence. The diamond market is very quiet. Mexico Mines of El Oro went ahead on the declaration of a good dividend. Broken Hills are distinctly better, thanks to further support from the Colony, and, amongst New Zealand shares, Waihis again advanced by reason of the unexpectedly good developments lately reported. Activity in Akims gave a spark of animation to West Africans. The tin group, however, West African, Cornish, and Middle East, is dormant. Rio Tintos moved irregularly and in accordance with the variations in the French exchange.

Mr Bonar Law has had to decline, on the ground of urgent Parliamentary duties, the invitation to dine with the Stock Exchange Committee in the House this month. The dinner-table will be dignified by six remarkably handsome pieces of

plate which have just been presented to the Stock Exchange by the Committee, the managers, and a private member.

We are officially informed that Mr Eric Richard Allen, trading as Eric R. Allen and Co., has ceased to be a member of the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded ..	556,557,324	..	..	..
4½% Treasury Bonds (by Tender November 25, 1922), £1,300,000, at £99 3s 0½d % ..	1,288,975	..	..	..

Auckland City Council.—Part of a total loan of £1,250,000 authorised and issued for tramway purchases. This is an offer for sale of £423,400 5½ per cent. debentures to bearer at 97½ per cent. and £392,800 in 5 per cent. debentures of £1,250,000 referred to above consisted of £857,200 in 5½ per cents. and £392,800 in 5 per cents. These were issued, with the exception of £22,800 retained for development purposes, for the purchase of the electric tramways in the city and suburbs of Auckland. Of the £834,400 5½ Tramways Company, Limited, debentures to the nominal value of £127,200 have been delivered to the debenture stockholders of the company in exchange for debenture nominal value of £283,800 have been sold in New Zealand, which, with the whole of the 5 per cent. debentures of the Auckland Electric Tramways Company, Limited, are now offered for sale. The principal and interest is payable in London or New Zealand at the investor's option, and the loan is repayable at par in 1940. These are attractive debentures, and deserved the good reception accorded to them.

Shipley Collieries, Limited.—Authorised share capital £500,000, in ordinary shares of £1 each, of which 460,000 have been issued. A first mortgage debenture has been issued. This is an offer for sale of £425,000, of which £400,000 cent. first mortgage debenture stock at 97 per cent., and 374,000 ordinary shares at par. The company has been formed to acquire the Shipley Collieries, Derbyshire. Although the collieries are valued at £1,010,000, the purchase price is by no means clearly set out. Profits arising from working the collieries are given from 1908. The trust deed provides that during the year ending December 31, 1923, and each succeeding year, a sum calculated to be sufficient to redeem at 104 the whole of the debenture stock before December 31, 1952, shall be set aside as a sinking fund. The

company reserves the right to redeem at the same price the whole or any part of the stock outstanding at any time after December 31, 1933, on six months' notice. This offer for sale contains a mass of information, but it leads one to suppose that the plant could be more modern. It is a pity, perhaps, that the promoters did not proceed by way of issuing a full prospectus instead of an "offer for sale."

Becker and Co., Limited.—Authorised capital £500,000, divided into ordinary shares of £1 each. A first debenture stock is authorised for £200,000, of which £98,000 is outstanding. This is an offer for sale of £300,000 7 per cent. five-year secured notes at 99 per £100. The "offer for sale" states that the notes are "redeemable" at £105 in five annual instalments of £60,000 each, plus premium, the last payment ending on January 1, 1928. They are secured by a trust deed, and constitute a first charge upon \$1,473,600, part of an issue of £3,200,000 7 per cent. collateral bonds of Saguenay Pulp and Power Company. The notes are further covered by a floating charge upon assets of Becker and Co., Limited. The Saguenay Pulp and Power Company is incorporated in Quebec, and an accountant's report shows this undertaking to possess timber lands to a considerable amount. Becker and Co., Limited, was incorporated in 1908. Profits are shown from 1916. The most curious statement in this offer for sale is that setting out assets and liabilities. In heavy black type we are informed that the cover for the present issue is £2,243,993, which is stated to be "more than seven times" the amount of the issue. Under this, however, is a note to the effect that sundry creditors, including taxation reserves, were £1,326,737. It would be interesting to know precisely why these figures are shown in this manner. Is it contended that while sundry debtors, &c., at £848,890, are subject to the floating charge, sundry creditors, &c., at £1,326,737 are not entitled to consideration? It is stated that the average yield upon these notes is over 9 per cent. per annum. This high yield on a specifically secured note conveys to the public the measure of risk involved in participating in this investment. The issue, however, we understand, was quickly over-subscribed.

Moor Park, Limited.—Authorised share capital £300,000, divided into 100,000 6 per cent. cumulative preference and 200,000 ordinary shares of £1 each. This is an issue of 300 5 per cent. debentures of £100 each at 97½, free of income-tax up to 5s in the £. Power is reserved to redeem all or any of the debentures at par after October 1, 1927, and any outstanding will be paid off at par in 1942. The company has been formed to develop an estate, which has an area of 2,935 acres or thereabouts, and lies between Northwood and Rickmansworth, on the Great Central and Metropolitan Railway. The vendor, Viscount Leverhulme, is the present proprietor from whom the company has agreed to purchase the estate for £516,000, which is to be satisfied by the allotment of 99,293 preference shares, the whole of the ordinary shares, and £216,707 in cash, leaving £75,793 available for working capital. The vendor has agreed that no payment by way of dividend or otherwise shall be made on the ordinary shares until the debenture issue has been discharged, and he will also transfer to the trustees for the debenture-holders 75,000 20 per cent. fully-paid cumulative "B" preferred ordinary shares of £1 each in Lever Brothers upon trust as additional security. Debentures will be accepted in payment of any land bought from the company at the rate of £120 per £100 debenture. The property is valued at £587,000, and the venture may develop on profitable lines, although the proposition contains some novel features as far as this country is concerned.

Spicers, Limited.—Amalgamated Spicer Brothers, Limited, and James Spicer and Sons, Limited. Share capital authorised and paid up, £1,150,000. There is loan capital outstanding of £104,020 4½ per cent. debenture stock, part of an authorised issue of £150,000, and £250,000 8 per cent. notes called in for payment on June 1, 1923. This is an offer for sale of £250,000 5½ per cent. 20-year notes due December 1, 1942, at 98 per cent. The proceeds will be used to provide funds for the redemption of the existing 8 per cent. notes. Surplus assets amount to £1,302,879, after £280,000 has been deducted on account of the 8 per cent. notes outstanding, and excluding the proceeds of the 8 per cent. notes. Profits are given from 1913, and these show present offer. Profits are sufficient to pay debenture interest, services an earning capacity sufficient to provide a good margin of cover, on the note issue, and yet to provide a good margin of cover, although, on the present basis of profits, there is not much left over for distribution amongst shareholders.

Star Tea Company, Limited.—Trading as the Star Supply Stores. Authorised capital £925,000, consisting of 500,000 7 per cent. cumulative preference shares of £1 each, 500,000 10 per cent. cumulative preferred ordinary shares of £1, and 500,000 deferred ordinary shares of 1s each. This is an "offer for sale" of 460,447 7 per cent. cumulative preference shares at par, and is made in connection with a financial scheme for developing two undertakings, the Star Tea Company and Ridgways. Both companies have been closely associated for many years, Ridgways having held the whole of the ordinary shares of the Star Tea. Now, for some reason which the promoters do not make clear, the position is to be re-

versed, and the Star Tea will control Ridgways. Ridgway ordinary £1 shares to the number of 149,910 are to be acquired for £4 each. Surplus assets of the Star Tea Company are given as £380,540, while combined profits of Ridgways and the Star Tea Company are shown from 1917. But the document is somewhat reticent over Ridgways' assets. The position would have been less obscure had a full prospectus been issued instead of this "offer for sale."

The Tambora Rubber Estates, Limited.—Authorised capital £75,000, divided into shares of £1 each. Issue of 50,000 shares at 21s per share. The company has been formed to acquire "agricultural concessions" for certain estates in Sumatra. The company will acquire these concessions, together with buildings, plant, machinery, coolie contracts, outstanding advances to coolies, and rights belonging to the vendor company for the sum of £33,000, payable in cash. The vendor company has agreed to apply for 10,000 shares of the present issue. The prospectus states that, "Allowing £8,000 for the buildings and machinery, and placing no value upon the area unplanted or in course of planting, the purchase price of the cultivated area of 1,825 acres planted with rubber, practically all in bearing, works out at less than £14 per acre." Although taxation matters should not be overlooked, there may be advantages in taking an interest in Sumatra companies at the present time, and this particular undertaking looks like a promising venture.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ACTIVE SECURITIES.

COMPANY NEWS.

DIVIDEND ANNOUNCEMENTS.

DICKSON AND MANN announce that they are passing the preference dividends due for payment on Dec. 1st.

SHAWINIGAN PORTLAND CEMENT MANUFACTURERS, LIMITED.—It is resolved to postpone the payment of the dividend on cumulative participating preference shares, which is due on December 1, 1922.

THE MANILA ELECTRIC CORPORATION has authorised a distribution of 20 per cent. of common stock on Dec. 28th to shareholders of record on Dec. 20, 1922. The one million dollars of stock held in trust for the corporation is to be used for this distribution. Advise Stock Exchange and take necessary steps regarding listing the additional million dollars of common stock. The board of directors has also decided to call a special meeting forthwith to increase authorised capital from six to ten million dollars, and if this is approved it is planned that one million dollars of common stock will be distributed at an early date. It is expected that 8 per cent. dividend rate will be maintained on all stock.

THE OILCOIL COMPANY, which in July last sold to the Phoenix Oil and Transport Company 5,555 shares at £18 per share, has published its annual report for the year ended June 30, 1922. A dividend of 60 per cent. is being paid.

THE STANDARD OIL COMPANY, it is stated, is to increase its capital from \$140,000,000 to \$250,000,000, and to declare a 100 per cent. stock dividend.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Comm. production for the week ending Wednesday, November 22, amounted to 840 tons.

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

SATISFACTOR / RESULTS OF YEAR'S TRADE.

INCREASED PROFIT AND DIVIDEND.

"POSITION OF EXCEPTIONAL STRENGTH."

The annual general court of proprietors was held at Edinburgh on the 29th ultimo, his Grace the Duke of Buccleuch, K.T., the governor, presiding.

In moving the adoption of the report, his Grace said:

I presume it will be your pleasure that the annual report and balance-sheet, with the auditors' report, which has now been in your hands for some days, shall be taken as read. In submitting this report of the results of the bank's operations during a year of peculiar difficulty as regards the trade of the country, your directors have special satisfaction in recording continued progress in the position of the bank.

DEPOSITS.

It is true that the deposits for the first time for a considerable period of years show a moderate diminution upon the previous year's figures. But in this respect we are by no means singular, and the percentage of reduction shown in our case is below the experience of some of the larger institutions as appearing in the published returns. We are fortunate in possessing valuable connections, both at home and abroad, through which, from time to time, we obtain large sums in the form of deposit money, and for a considerable period during the year under review our figures exceeded by over a couple of millions the sum appearing in the balance-sheet. The closest observers of banking statistics have been surprised that the continuous increase in banking deposits should have lasted so long, and the question has been asked for the last year or two, when the process of deflation, of which numerous signs were not wanting, should inevitably begin to tell upon the deposits of the banks? In this connection, it is interesting to note that the deposits of this bank at October, 1913, were £16,654,000, as compared with £40,265,000 in the report now submitted. The remarkable increase, however, whilst no doubt in considerable measure due to influences arising out of the war, must also be ascribed to a substantial extent to a *bona-fide* augmentation of the business of the bank.

LIQUID RESOURCES.

Turning now to our assets—and dealing first with the most liquid items—the cash on hand and with the Bank of England, and our other London bankers, and the money in London at call and short notice, are, together, slightly more than at the previous balance, and, as was to be expected, owing to the changed money conditions now prevailing, our holding of British Treasury bills at £4,030,000 shows a substantial reduction, although still representing what we regard as an ample resource of this character. As a set-off to this decrease, mention may be made of the increase of over three million pounds in our holdings of British Government securities—a large proportion of which are in the shape of short-dated bonds, forming, as has more than once been observed from this chair, an ideal banking investment.

ADVANCES.

The commercial bills and bank bills in our portfolio are just about the same figures as last year, and these, owing to the state of trade, are still somewhat difficult to obtain in any volume. It is gratifying to note a moderate increase in the bank's advances on cash credit and current accounts, which, notwithstanding prevailing conditions, stood at the date of the balance at £12,612,000. This, in addition, constitutes the staple of our banking business, and along with our discounts (apart from Treasury Bills) represents in the main the extent to which we have been able to assist in carrying on the trading operations of the country.

STATE OF TRADE.

Although there are not absent indications of an improvement in trade, these are still somewhat restricted in their area and scope, and it is impossible to look for a general revival on the scale which we would all desire until a distinct movement is seen towards the resumption of activity in our shipbuilding yards and our other constructional works, with its consequent effect upon the great steel and iron industries. Even on the Clyde, however, where the unemployment is so serious, it is understood that a limited number of contracts have been placed, or are under negotiation, and these may at least help to keep down permanent oncost charges. But it is difficult to forecast real activity until there is a definite demand

for tramp tonnage, which is, after all, the stand-by of the industry, and in the meantime this is scarcely warranted by existing conditions in the freight market. It may be hoped that the improvement which is now looked for may materialise in the course of next year, and meanwhile, it is satisfactory to find that a limited number of blast furnaces have been relit during recent months.

The perplexities of the Reparations problem, and the disorganisation of the exchanges still continue to dominate the European situation, and the highest statesmanship is called for in the efforts which are being put forth towards rectifying the economic relations of Continental countries, with a view to re-establishing the foreign trade of this country, upon which so much depends. In the meantime, this bank, with its liquid resources and large invested and readily realisable funds, is in a favourable position for dealing with proposals for accommodation on sound and safe lines, as trading enterprise broadens out, and I think it may fairly be claimed on behalf of the management of the bank that the utmost consideration has been shown to our numerous borrowing customers during the difficult period through which they have been passing. When it is reflected that the rate charged in Scotland at present for advances on cash credit accounts—in other words, on secured advances—is only 4 1/2 per cent., it will be realised that every encouragement is being offered for legitimate trading operations.

INVESTMENTS.

As regards our investments, we have on this occasion to report a highly satisfactory position, because, as is well known, there has been a marked appreciation during the past year in the values of gilt-edged securities, and as these had been written down in former years to the low prices then current, we are in the happy position of having a handsome surplus in the market value of these stocks.

PROFITS.

Passing now to the profit and loss account, our net profits, as appearing in the report, show an increase of fully £24,000 over the previous year. It is proper to emphasise, however, that before arriving at the gross profits, as appearing in the profit and loss account, full provision has, as usual, been made for all bad and doubtful debts, and, in addition, in view of the difficulties of the times, the directors have taken the opportunity arising from another profitable year to strengthen very substantially the provision against contingencies.

APPROPRIATION.—INCREASED DIVIDEND.

As regards the appropriation of our net profits, the usual provisions have been made for bank buildings and heritable property—it being explained that it has been found necessary during the year to make several purchases for the accommodation of our branches. The customary allocation has been made to the pension reserve fund, and your directors have also had pleasure in recommending an addition equal to 1 per cent. per annum to the dividend, whilst continuing the bonus of 2 per cent., the total distribution for the year being 13 per cent. as against 12 per cent. last year and 11 per cent. the year before.

ADDITION TO REST.

Further, it will, I am sure, be a great satisfaction to all concerned that we are able to add to the rest as large a sum as £161,958, bringing it up to £1,403,735. This sum with our fully-paid-up capital of £2,000,000 places the bank in a position of exceptional strength.

During the year eight new branches have been opened, and, whilst your directors have no desire to add unnecessarily to the competition which already exists, they feel that it is essential in the interests of their customers generally that the bank should be represented at all important points throughout Scotland.

The foreign business of the bank is continuing to receive special attention, and operations in this department have again yielded very satisfactory results, whilst our connections abroad are always increasing. In conclusion, the directors desire to record their indebtedness to their loyal and willing staff all over the organisation.

With these remarks, I beg to propose that the report now submitted, containing a statement of the accounts and balance-sheet of the bank, be approved, and that out of the profits of the year a divi-

lend at the rate of 12 per cent. per annum for the half-year, and a bonus of 2 per cent., both under deduction of income-tax, be now declared in conformity therewith.

The motion was seconded by Mr Carlow, chairman of directors, and carried unanimously.

The governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected, and auditors were appointed for the ensuing year.

On the motion of Sir William Robertson, Lord Lieutenant of the County of Fife, a hearty vote of thanks was passed to the chairman.

ANGLO-EGYPTIAN BANK, LIMITED. SITUATION IN EGYPT AND PALESTINE. IMPROVED PROSPECTS FOR COTTON.

The thirty-sixth ordinary general meeting of the shareholders of this company was held at the Bank, 37 to 39 King William street, London, on the 28th ultimo, Mr Raoul Hector Poà (the chairman) presiding.

The secretary (Mr H. H. Mallet) having read the notice convening the meeting and the report of the auditors,

The Chairman said: It gives my colleagues and me much pleasure to receive you in our new premises. The Anglo-Egyptian Bank had occupied its offices at 27 Clement's lane, since the year 1865, and the housing accommodation there, which was ample at that time, when we had only two branches, became totally inadequate in 1914. During the war we were, of course, unable to obtain new quarters, and in 1918, when I had the honour of becoming your chairman, the first thing I did was to give up the then boardroom to the correspondence, and your board met in a room belonging to some neighbours of ours, who were kind enough to lend it to us when we needed it. We now have twenty branches working, and before long we shall have more and all these offices bring more work here.

Since our removal to these premises I have noticed a distinct improvement in the health of our staff, which now works in rooms where there is plenty of light and air, and I feel sure that the quality of the work yielded must be benefited by the better conditions under which it is done.

VISITS TO BRANCHES.

Since I last had the pleasure of meeting you, Sir Marshall Reid has spent three months in visiting our branches and clients in Egypt, the Sudan and Palestine. It has been the policy of your board to keep as closely in touch with the countries with which we deal as possible, and Sir Marshall's visit was fraught with marked benefit to the bank. Early in January I am going out myself, and shall take advantage of the opportunity of visiting every branch of the bank in Egypt, the Sudan, Palestine and Trans-Jordan.

You may have noticed in the Press the announcement that the erection of a new dam on the Blue Nile has been entrusted to Messrs. S. Pearson and Sons, and in order to facilitate their work, which will employ many thousands of workmen, we propose to establish branches at Makwar, where the dam will be built, as well as at Wad Medani, not very far off, and which is the capital of the province of Dar Sennar.

There is no doubt that the money to be spent upon the dam will perform a very useful function in the Sudan, besides bringing an area of about 300,000 acres of land into cultivation by irrigation, the cotton fields of Tokar and Kassala in the Sudan being dependent entirely upon direct rainfall, which is, of course, a far less reliable way of watering than irrigation, which, within reasonable limits, can be regulated as desired.

COTTON SITUATION.

In Egypt there has been comparative quiet for some time, and I trust that the political emancipation of that country will proceed along normal lines and without friction or riot of any kind. We have to-day received an interesting telegram from Egypt as follows:—"Local politics untroubled in spite of unrest in adjoining countries and the unfortunate Cairo incident." You will admit that this is eminently satisfactory as far as it goes.

The cotton crop in Egypt is announced as being 4,002,000 cantars (99 lbs avoirdupois), but, according to private advices, we think that this figure will be exceeded and thus be somewhat larger than last year's. There is also a better demand for the article, especially in America, and all this is to the advantage of Egypt. The crops of barley, wheat and beans from which the fellah usually pays all working expenses, have not been sufficient this year to see him through, and he has had to resort to extensive borrowing, and is consequently rushing his cotton on to the market for sale.

POSITION IN PALESTINE.

The troublous times in the Near East have had their repercus-

sion in Palestine, but now that the Mandate has been granted, the Government of that country is finding less opposition to its functioning than was previously the case. Our report from Jerusalem of to-day is also of great interest; it is not absolutely clear, but our interpretation of the code is as follows:—"Considerable local anxiety as to the attitude of the Home Government regarding Palestine, and nothing will benefit this country more at the present time than definite decision to stand by Mandate."

It is to be hoped that Palestine will continue to progress satisfactorily. We are constantly being asked to advance money for building and development in that country, but, with very few exceptions, have not been able to comply. I am hopeful, however, that an agricultural and mortgage bank may in due course be established, as there is no doubt that it could be most useful, and probably a paying, proposition.

In Malta and Gibraltar trade has been very lifeless, and it would seem as if both those places will play a less important part than they did during the war.

Since our last meeting we have opened only one new branch, that at Amman, in Trans-Jordan, at the request of the Colonial Office. This is intended to facilitate the payment of the subsidy to Emir Abdullah. Amman is only about six hours by road from Jerusalem, and we have made it dependent upon our agency in that town, which is a very active and important one. Trans-Jordan will, of course, take a very considerable time to develop, but we already find some of the natives of that country alive to the advantages of banking, and trust that the knowledge of this will spread. On October 31 the ruler of Trans-Jordan, the Emir Abdullah, together with his Prime Minister, Ali Riza Pashaer, paid us a visit here, and was much interested in what banking was shown him, and in the explanations of the rudiments of Arabic by the British Resident at Amman, Mr Philby.

THE ACCOUNTS.

With regard to the accounts, the gross profits are rather less than those of the previous year, and so are the expenses; therefore the balance to be divided is much the same. The only difference we are making is that we are not proposing to pay a bonus this year, for we have before us a very considerable expenditure in that rather than to swell the distribution of profits by paying a bonus. That, after all, has only been done three times in the history of the bank, and that during exceptional times. The total of the balance-sheet this year amounts to £12,760,000, as against £14,000,000 last year—no great difference. There is a slight shrinkage in the deposits and other accounts, which have gone down from £11,800,000 to £10,600,000. That, I think, is the general experience of banks, and is owing to the very general deflation which has gone on throughout the world.

Sir Marshall F. Reid, C.I.E., seconded the resolution, which was carried unanimously, and a dividend of 10s per share, free of income-tax, making 15 per cent. for the year, was declared.

The retiring directors and the auditors were reappointed, and a vote of thanks to the chairman, directors and staff concluded the proceedings.

WESTERN TELEGRAPH COMPANY, LIMITED. EFFICIENT SERVICE—ADDITIONAL CABLES.

The eighty-ninth ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 29th ultimo, at Electra House, Moorgate, London. Sir John Denison-Pender, G.B.E., K.C.M.G. (chairman of the company), presided.

The secretary (Mr E. Steer Hodson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The accounts for the year ended June 30th last do not show such a large surplus as for the previous year, but I think you will be satisfied with the result, taking into consideration all the circumstances with which trade and commerce have to contend in these times, for although the gross revenue was less by nearly £400,000, the net revenue was decreased by only £200,000, brought about very largely by reduced working expenses and to a small extent by some relief from income-tax, corporation profits tax, and excess profits duty, and this in spite of the fact that an additional amount of over £30,000 was required for dividends on the new shares when they became fully paid in 1921. The net result is that after payment of dividends to the shareholders at the same rate as for the past few years, viz., 10 per cent., and now on the place £250,000 to reserve, against £450,000 for the previous year, but, on the other hand, you will have observed that the general reserve fund has also been debited with nearly £380,000, being the cost of renewal of old and failing cables. Capital expenditure has been increased by over £400,000 for new cables, land, and buildings.

This amount includes the cost of additional cables between Pernambuco and Maranhão, Pernambuco and Maceio, and Rio de Janeiro and Santos. The city of Victoria, also on the Brazilian coast, has been connected to our system by duplicate cables to Bahia and to Rio de Janeiro.

A GRIEVANCE REMOVED.

It is with sensations of relief that I am able to inform you that the grievance under which we laboured for two years has at last been removed. I refer to the refusal of the United States to permit the operating at Miami, Florida, of the new direct cables between South America and North America, *via* the Island of Barbados, laid in September, 1920. The shareholders will probably remember that in August last the telegraphic cables between the South of Ireland and the United States were rendered unworkable, and consequently communication between Europe and North America was very seriously hampered. With the object of relieving the situation, the United States Government issued a temporary licence permitting the operation of the Miami cables for thirty days, to enable telegrams to be carried in both directions *via* South America between the United States and Europe only, thus excluding South American traffic. As these cables were laid expressly with the object of improving communication between Brazil and other South American countries on the one hand and North America on the other, I can only imagine that the wording of this licence was left to some irresponsible subordinate in the United States department. We at once, in the interests of Brazil, on whose territory one of the cables in question lands, refused to open communication under this permit. Such a slap in the face given by one friendly State to another could not pass unnoticed. I presume, therefore, that the matter was at once taken up by the Secretary of State at Washington, for within a few days the objectionable licence was replaced by one under which we were able to open the cable, and have since been working in the interests of the public as well as of our company. We are very glad that within the last month or two signs of improved trade in South America are apparent, and I hope this may continue, as the interests of our company are so greatly dependent on the prosperity of that great continent.

THE CHILEAN EARTHQUAKE.

The recent deplorable earthquake on the coast of Chile totally interrupted our cables and those of our competitors north of Valparaíso. Telegraphic communication by land lines and wireless was also broken. Our ship was on the work of repairs to our

cables within six days of the catastrophe, and we hope to have the many breaks in the cables repaired shortly. Some of these have already been effected.

It was with much regret the directors had to report the loss of our cable steamer "Cormorant," which foundered on January 24th last off the South Coast of Brazil, whilst on the way to Rio Grande do Sul. In the meantime, we have chartered the cable steamer "Sentinel" to carry on the repairing work, and a new vessel to permanently replace the "Cormorant" is now being built by Messrs A. and J. Inglis, Limited, of Glasgow.

The cable steamer "Norseman," which we purchased in 1904 from our friends the Eastern Telegraph Company, is now nearly forty years old, and to maintain her efficiency for our very special work would require extensive renewals at great cost on her next overhaul. It has consequently been decided to replace her also (the "Norseman" is 1,545 tons), and a somewhat larger vessel—namely, of 1,800 tons—is in course of construction by Messrs John Brown and Co., of Clyde Bank. Both new vessels should be completed about the autumn of next year.

The Right Hon. Earl of Middleton, K.P., seconded the motion, which was carried unanimously.

CARGO FLEET IRON COMPANY, LIMITED. COAL CHARGES—CRIPPLING BURDEN OF TAXATION.

The adjourned annual ordinary general meeting for 1921 of the Cargo Fleet Iron Company, Limited, was held at Middlesbrough, on the 29th ultimo, the Right Hon. Lord Furness (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: It has been decided to present the accounts for 1921 as far as we are able to do so rather than wait until a final adjustment has been arrived at with the Inland Revenue authorities. The profit and loss account, after providing for estimated liabilities to the Government, shows a gross trading and manufacturing profit for the year of £138,562 4s, as against £227,306 9s 7d in the previous year—a result which your directors consider very satisfactory. During the period covered by the accounts. After adding the amount £180,634 14s 11d brought forward from the previous year's accounts, and appropriating £25,000 for depreciation, and also providing £41,351 12s 6d for debenture interest, there is a disposable balance of £202,845 6s 5d. Allowing for the dividend of

5 per cent. (less income-tax) paid on December 31, 1921—which you are now asked to confirm—there remains a sum of £152,845 6s 5d, which it is proposed to carry forward to the accounts for 1922.

PRICE OF COAL.

I should now like to refer to certain matters of extreme importance to our industry, and which most seriously affect our cost of output and competitive capacity. There are three vital factors—viz., the price of coal, the present high railway rates, and the excessive taxation, both national and local. You will appreciate the vital importance of cheap coal when I tell you that our works, when in full operation, consume no less than 8,500 tons weekly. The price of coal to-day, however, is altogether incompatible with the prices we are obtaining for our finished steel. The average price of the coal bought for our gas producers during the 12 months ended September 30, 1913, was 13s per ton, whereas the average price for the corresponding period in 1922 was 23s per ton, representing an increase of 77 per cent. In 1913 the selling price of finished steel was £7 10s per ton delivered, as against £8 10s per ton at the present time. That is to say, as against an increase of 77.39 per cent. on coal—which is one of the largest items of cost in the manufacture of steel—we only receive 13½ per cent. more for our finished products. Then, again, there is the question of railway rates. Since I last addressed you certain small concessions have been made, and, very welcome as they are, these reductions are totally inadequate to meet the urgent requirements of the iron and steel industry.

BURDEN OF TAXATION.

It will interest you to know that since March, 1917, this company has paid no less than £1,255,000 to the Government in excess profits duty, income-tax, and corporation profits tax, and there are still large sums claimed by the authorities. Our burden as a company is undoubtedly much heavier than that of other iron and steel works, owing to the inequitable incidence of the war taxation on new concerns. Such taxation is another almost insupportable burden, and the existence of British industry is dependent upon the new Government enforcing rigid economy and reducing the load under which we are now struggling. I must also draw attention to the question of local rating, towards which your works have recently been called upon to contribute for one year no less than £21,858 8s 10d, which is nearly four times more than the pre-war assessment. These charges are crippling to industry and accentuate the difficulty of securing business. If we are to remedy this state of affairs, those responsible for local taxation must practise strict economy. The outlook at the present time is far from good. We have enormous difficulties to overcome. Progress is bound to be slow, and the iron and steel industry of this country has a long and stern struggle ahead. It will only be possible for it to regain its former prosperity provided we all pull together as a nation and have the benefit of a wise administration in matters of both national and local importance.

The report and accounts were unanimously adopted.

The annual meeting (for 1922) was held after the conclusion of the adjourned annual ordinary general meeting for 1921. The Chairman (the Right Hon. Lord Furness), after explaining the impossibility of presenting the figures owing to the company's liability for taxation not having yet been settled, reviewed the difficulties of the past year.

He continued: Under these circumstances, therefore, your directors, after carefully reviewing the preliminary figures, have reluctantly come to the conclusion that they would not be justified in declaring a dividend on the ordinary share capital for the year ended September 30, 1922. As soon as these unfortunate taxation questions are finally settled the report and accounts for the year will be presented with the least possible delay.

The retiring directors and auditors were re-elected, and the meeting was adjourned.

SOUTH DURHAM STEEL AND IRON COMPANY, LIMITED. ADVANTAGE OF AMALGAMATION.

The adjourned twenty-third annual ordinary (1921) general meeting of the South Durham Steel and Iron Company, Limited, was held at Middlesbrough, on the 29th ultimo, the Right Hon. Lord Furness presiding.

The Chairman said: A year ago we adjourned our annual meeting for the preparation of the accounts, which are now before you. You will note from the balance-sheet that the profit for the year is £88,565 10s 6d, after including an estimated recovery in respect of stock values, for which we expect to receive credit when making our final settlement with the authorities for excess profits duty. It has been decided to adopt this course rather than transfer an amount from the £270,783 4s 2d which we placed to reserve in our 1919 accounts, and to which I referred at our annual meeting in 1920.

The Chairman then dealt with the various items in the balance-

sheet, and concluded by moving the adoption of the report and accounts.

The report and accounts were unanimously adopted.

TWENTY-FOURTH ANNUAL MEETING.

The twenty-fourth annual ordinary general meeting was held at the conclusion of the adjourned twenty-third annual ordinary general meeting. The Chairman (the Right Hon. Lord Furness) said:—

Although it has not been possible to arrive at a settlement of the various amounts in dispute arising out of the excess profits duty, I am glad to say we are within measurable distance of doing so, and, having made due provision for our estimated liabilities for taxation, your directors have decided to issue the balance-sheet for the year ended September 30, 1922, in order that the shareholders may know the position up to that date. It will be seen from the balance-sheet that the profit for the year is £99,650 14s 3d, and bearing in mind the general depression prevailing over the period under review we must consider ourselves fortunate in being able to record such a satisfactory result of the year's working. After providing for interest on debenture stock, dividend on preference shares, and writing off £30,000 depreciation, the same as of 10 per cent., less tax, on the ordinary share capital, which I shall later have the pleasure of moving, and to carry forward to next year the sum of £114,911 10s 8d. You will observe that the reserves stand at the same figure as in the two previous years, namely, £144,578 4s 2d. The amounts of debts due by and to the company are again both lower, and this is explained by the causes to which I alluded just now when dealing with the previous year's accounts.

PROSPECTS.

With regard to a general revival in our trade, I think the prospects for steel-plate orders are very uncertain for some time to come, because the present productive capacity of existing steel works in this country, both actual and potential, is far too great demand is necessary for the consumption of its possible output. For this reason it appears to me that the iron and steel trade of this country is in a somewhat similar predicament to that of the United States of America shortly before the formation of the United States Steel Corporation in 1900.

At that time many new works had been built, which gave a very much greater capacity, without any immediate increase in the cases, unprofitable prices. The so-called "gentlemen's agreements" were cancelled and cut-throat competition was the result.

This created a desire for physical amalgamation, and, through the genius and foresight of the late Mr Pierpont Morgan, about 50 per cent. of the important steel makers in the United States were brought together under one control, with the result that prices in that country were stabilised at reasonable figures, thus giving fair prices to consumers, and under normal conditions yielding a not exorbitant profit to the manufacturers.

A SUGGESTION.

In other words, the creation of the United States Steel Corporation had the effect of maintaining a happy medium and safeguarded extreme fluctuations in prices, and it would, I consider, certainly be very beneficial for all concerned if something on these lines could be accomplished in this country. I am convinced that, assuming it were possible for the prominent manufacturers representing this country to combine and conduct their business on a similar basis to the United States Steel Corporation, this would prove a great advantage both to the makers and consumers.

The report and accounts were unanimously adopted.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED. IMPROVED POSITION—PREFERENCE ARREARS CLEARED OFF.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 30th ultimo, at Cannon street Hotel, London, Lord Harris (chairman of the company) presiding.

Mr H. G. Sidgreaves (one of the joint secretaries) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and the balance-sheet of New Consolidated Gold Fields for comparative purposes, the accounts of the old company being formal. The cost of management was this year £37,000 odd, as compared with £51,000 odd. They got by dividends, profits &c., £379,000 odd, as compared with last year £429,000 odd. The profit on sales of investments had increased by about £13,000 odd, but the receipts from dividends decreased on the whole by £39,000 odd. The de-

crease in the South African mining dividends, mainly due to the strike, amounted to £43,000 odd, and there was a small decrease from interest. Last year there were some special profits which had not recurred. These were almost set off by the non-recurrence of certain losses which they had to charge themselves with last year. The big item in South Africa was the non-receipt of any dividend from Robinson Deep "A" shares. That gave them to carry down £336,000 odd, as compared with £371,000, and there having been a debit balance last year, they had nothing to add to that, but had to deduct from it that balance of £111,213 odd, and in addition they had written off £147,103 odd for depreciation, that amount being considerably less than last year's, when they had to write down £492,000 odd. French Government duty and stamps was less this year—£3,440 odd, compared with £10,700 odd last year—so that they carried down to the balance-sheet, after making these deductions, £74,644 odd. The capital authorised and issued was unaltered. Sundry creditors were £137,000 odd this year, as compared with £259,000 odd last year, a reduction of £122,000, due to the withdrawal of moneys temporarily deposited with them. As regarded the contingent liabilities, there was an increase from £794,000 odd last year to £1,026,000 odd this year, £400,000 of which was accounted for by the uncalled capital of Goldfields American, and there were certain bankers' loan guarantees, also American, and there were certain new business entered into. On the amounts that might be called on new business entered into, stood other side, investments, shares in companies at or under cost, £3,571,178 odd, as compared with £3,416,908 odd. Purchases of investments, including £250,000 War Loan, exceeded sales by £301,282. An amount of £147,000 odd had been written off to reduce certain investments to current market price or valuation, leaving a net increase of £154,269. Properties and ventures stood at practically the same figure as last year.

REDUCTION IN LOANS AT SHORT CALL.

Loans at short call amounted to only £90,000 this year, as compared with £260,000 odd last, £250,000 having been invested in War Loan. Sundry debtors and dividends declared amount to £210,267, as compared with £117,777 last year, £116,000 odd being the amount due from the receiver of Simmer Deep on the prior lien bonds and first debentures. Cash advances and mortgages amounted to £272,000 odd this year, as compared with £295,000 odd last year. As regarded the cash position, this amounted to £632,000 odd this year (in addition to which they had £250,000 War Loan not included in this figure, and which, of course, was practically equivalent to cash), as compared with £709,000 odd last year.

As regarded the accounts of the old company, the Consolidated Goldfields, shareholders would see that the dividend brought New Consolidated Goldfields plus the balance brought forward and a small item of interest gave them £125,000 odd, out of which had been provided the first and second preference dividends for the year, enabling a balance to be carried to the balance-sheet of £18,496. On the credit side of the balance-sheet they showed the dividend from New Goldfields, and then there was an insignificant item of £29 7s 4d pre-war Stock Exchange Loans. He mentioned it because it was interesting and change Loans. He mentioned it because it was interesting and change Loans. He mentioned it because it was interesting and change Loans. He mentioned it because it was interesting and change Loans.

They had cleared off the preference dividends which were in arrear, and, as would be seen from the report, the interim dividend which had been declared by the new company provided for all preference dividends which would fall due up to July 1 next year. Therefore they had cleared off all preference liabilities, and they had six months of revenue to come in without any incumbrance on it, but, of course, still subject to any depreciation that might occur in the interval. He hoped the shareholders would consider that a not unsatisfactory result of the year's working. It was due to several causes, and seeing that a large proportion of their revenue accrued to them from South Africa, he thought he ought to put first of all that it was largely due to the courage, resolution, and resource of the managers and their officials, with such other employees as stood staunch during the strikes and the subsequent revolution, and thereby enabled the mines to be operated in full swing at a much earlier date than would otherwise have occurred, and enabled the companies to take advantage of the second factor, namely, the reduction in working costs, due mainly to the reduction in wages. Then there had been a third and most important factor, the weeding out of white miners who were not doing the amount of work which one was entitled to expect of them, having regard to the high scale of pay.

POSITION OF NEW COMPANY.

One or two inquiries had been received as to the meetings held by the new company and the dividends they had declared. The directors realised that if they were to employ advantageously the capital at their disposal, they were bound to look for investments

elsewhere than in gold mining, and they obtained the shareholders' consent to the formation of a new company, which should be the operating company, of which the old company held all the shares. Any profits, therefore, made by the new company when declared in the shape of dividends were paid to the old. The old company had this year received a dividend on the year 1921-22 of 1½ per cent., and subsequently had also received an interim dividend for the year 1922-23 of 2 per cent., and with those moneys thus provided they had satisfied the dividends on the preference shares, and had enough in hand to satisfy them up till the end of next June. Now the factors to which he had referred, namely, the conditions, and those improved conditions combined had had a most striking effect on some mines, but particularly Robinson Deep. The improvement in the market value of its shares since last year was very great. The change in the position of the mine was such that the board was now proposing to make a debenture issue, and consequently the company would be in a position to pay off all its indebtedness, and, therefore, the date on which it would be able to commence paying the dividends overdue would be so much nearer. The improved conditions had not affected the Simmer and Jack Mine so promptly as they had the Robinson Deep, but the board believed that they were bound to have a very good effect.

PROSPECTS OF INDUSTRIALS.

He wished he could say that the company's prospects in industries in South Africa were as encouraging as their mining prospects were, but South Africa had not escaped that depression which the war had brought to so many countries, and he feared they must wait for a general world recovery.

The Rhodesian Development Company held its meeting a fortnight ago, and the shareholders were, on the whole, satisfied that the board had done their best in a very difficult year. A hopeful report in regard to the American Trona had been issued by the New York Advisory Committee. Dealing with other of the company's interest, he said that the South American Gold and Platinum Company was, he believed, the largest single producer of platinum in the world.

Lord Brabourne seconded the resolution, which was unanimously adopted.

JOSHUA HOYLE AND SONS, LIMITED. COTTON TRADE OUTLOOK.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held at the registered offices of the company, India Mill, Bacup, on the 30th ultimo, Lieutenant-Colonel J. Craven Hoyle, T.D., D.L., presiding.

The Chairman, in moving the adoption of the report and accounts, pointed out that the liquidation of the subsidiary businesses had been carried out, and this had had the effect of increasing the item of properties on the assets side of the balance-sheet and reducing the amount of the investments.

At previous meetings he had stated what had been the policy of the board regarding the extension of the company. The experiences of the last twelve months had proved the soundness of that policy, and not only had the allied concerns been of mutual assistance to each other, but a foundation had been laid for increasing the varieties of goods produced.

Dealing with the increase in the value of the stock, they all knew, he said, the anxieties through which the trade had passed, and the directors in meeting such a state of affairs were bound

to take a view, and there were three points that had to be considered—the first, that not only the directors but the shareholders had their responsibility and duty to the employees of the company. All employers of labour had been asked during the present difficult times to do everything possible to find employment and assist the nation.

The second point was in regard to running short time. Would the loss through the overhead charges be greater than a loss incurred through the price at which goods might be sold?

The third point was what quantity and quality should be made for stock, and was there a reasonable chance of their ultimate disposal at a reasonable price?

The directors had taken all these points into consideration, and decided that up to a certain point the machinery should be kept employed.

Considering the state of the trade in the period under review, the result of the twelve months' working had come out better than they could have anticipated. As to the future, there were signs that the cloud was lifting in the iron trade, and shipping, and other staple trades, though the immediate outlook was not very promising.

Though he (the Chairman) did not think that the price of cotton for many years could approach what was considered the normal pre-war price, the situation, he thought, could be much relieved. Over-riding charges could and must be reduced, and that could only be brought about through the strictest economy in the State and local affairs, and in business methods.

Sir Wm. E. Berry, Bart., seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS.

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

A marked improvement has taken place in the sale of crossbreds, and the difference between these and merinos is now less than it has been for the past two years. There is a particularly strong demand for 48-50's, these qualities often being 15 per cent. above last series, and both the home and American trades are keen to buy. Although medium and fine crossbreds seem dear compared with twelve months ago, these wools are still relatively cheap, and New Zealand is offering an excellent supply of most useful raw material. Good 56's halfbred wool is selling on a clean basis of 30d to 31d, inferior descriptions going at as low as 25d; 50's wool is selling on a clean basis of 21d to 24d, according to style and character. Expressed in pence per lb, the increase in the value of 46-50's is about 3d per lb, clean scoured, compared with the October 1914, and compared with July, 1914, the advance is 5d per lb; sales, at 17d, are 2d dearer than in October, and are now back at the pre-war level. Lower qualities are about 1d dearer than in October, and another 3d per lb is wanted to make the price equal to pre-war.

THE COTTON TRADE.

MANCHESTER, November 30.

A rather better feeling prevailed in the market at the beginning of the week, chiefly owing to a larger inquiry in certain sections, but the hopes then entertained have not been realised, and a very limited amount of business has been done. Traders continue to anticipate lower values, and sentiment is undoubtedly very bearish. A few more orders have been booked for China in shirtings and sheetings, and the turnover has been rather larger in fancies, but with exchange being so unfavourable, there is no expectation of buying of importance just at present for the Far East. Demand for India has been of an indifferent nature. Sorting up lots have been put through at very poor prices. Owing to the absence of remittances from the Near East, deliveries are being stopped. Irregular buying has taken place in home-trade fabrics. Manufacturers continue to lose ground. American yarns for home use have been flat. The position of spinners is going from bad to worse. Egyptian spinnings have been steady in quotation, with a restricted turnover. Only occasional transactions have been put through in shipping yarns.

VEGETABLE OILS AND OILSEEDS.

The principal feature this week has been the firmness in Plate linseed, the market being agitated by reports of heavy rains delaying harvesting operations of the new crop, and the cabled statement of the Government of the province estimating the Santa Fé yield at only 374,000 tons, as compared with the Argentine Ministry's estimate of 660,000 tons issued three weeks or so ago. A difference of nearly 300,000 tons is sensational in its significance, and were it to be justified by actual events, the estimated gross yield of 1,531,000 tons would be reduced to about a million and a quarter tons. Argentine estimates, however, are proverbially a quarter tons. The market has been done this week, London paying £18 15s for old Plate on passage and Hull up to £18 for December shipment. New crop has also advanced, with £16 5s paid for December-January, and £15 15s January-February. Antwerp appears to have been a fair buyer of seed on spot, and of new for shipment. Business has been done in Calcutta linseed to London at £19 15s and upwards, November and early December loading. Egyptian cottonseed has maintained a firm tone, and a good trade Sakellariadis now shipping, and £10 12s 6d for early December. English demand for Soya beans is quiet, but Hamburg has paid £11 for a parcel of 500 tons, December loading. Raw linseed oil has shared the firmness of seed, and in London, on Wednesday, advanced sharply to £39 on spot. At Hull, crushers £36 spot and £34 10s December delivery, later advancing to £36 5s spot and £36 December. Forward positions hardened considerably, £33 10s being asked for January-February, and current value of crude Egyptian being £36 10s, and soap makers' palm kernel oil to America. The new tariff does not apply to this is in better supply, and quoted round £4 1/2 for crude, ex-mill. The trade in oilcakes is very disappointing, and prices are tending lower.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is steadily weakening, and tanners seem glad of the relief, although it has had the effect of making leather buyers especially cautious in placing contracts. Best ox and heifer, selling at 7 1/2d to 9d, showed declines of 1/2d to 3/4d per lb., seconds also dropped as much as 3/4d per lb. Cows were a shade weaker, whilst kips dropped from 7 1/2d to 12 1/2d, and showing a drop of 3/4d to 1/2d. Wools were the hogg class. In wet salted hides there is a moderate business, our tanners' ideas of value. As America is still paying prices above stocks low, and tanners are only buying for immediate wants market as very weak, with most classes now of nominal value. A grades of dry hides are weaker, with no sales reported in the 10 tanners have dropped the idea of raising prices, for the simple

reason they find it difficult to sell at the recent level. Stocks are reported to be heavy, and the news that a large parcel of cheap bends has been sold on Russian account has not affected the position the slightest. Sellers have made the most of this sale, however, but as there seems plenty of sole leather about, buyers have not been frightened at the export of several thousand bends.

The upper leather section is a shade better, and inquiries are frequent. Glacé kid tanners are now busy, and as old stocks are cleared, they look forward to better times, especially as imported kid is dear and none too plentiful.

The shoe trade seems steadily improving, although it is far from normal. Leicester reports fair-sized orders from multiple from the shop people, suitable for the winter's trade, whilst business in the sports and canvas trade has much improved. An item of news which has caused some interest is that the War Office has issued tenders for 21,000 pairs of canvas shoes, with soles of crepe rubber, as against leather, as formerly.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 1.

SUGAR.—A very steady tone governed this market during the week, and a fair demand was experienced for refined descriptions, particularly British. Messrs Tate and Lyle's cubes quoted 55s 9d to 56s 9d; granulated, 50s 7 1/2d to 51s 1 1/2d; stoved, 51s 7 1/2d; ditto 56s 9d; January delivery, 51s. Yellow crystals, spot, 44s 7 1/2d; pieces, and June-August, 51s 9d. West India crystallised steady, with moderate spot, London, 50s 9d. American granulated, spot, 43s 9d to 45s 6d. American granulated, spot, 43s 9d to 45s 6d; fine grainy, sold, 50s; white Java medium qualities, 48s 3d to 48s 6d; fine grainy, 48s 9d to 49s; medium, May-June, done 21s 1 1/2d, c.f. and i. terms. London. White Mauritius, spot, 47s 6d; W.S.R. granulated, prompt, 23s 6d; H.U.M., 23s 4 1/2d; J., 22s 6d; C.B.S., 22s 3d, f.o.b. Amsterdam and Rotterdam. Czech granulated, November-December, sold, 22s 4 1/2d, f.o.b. Hamburg. Brazilian basis 96 per cent., December-January, quoted 18s 3d; and basis 80 per cent. ditto, 10s 6d, c.f. and i. U.K. Terminal market slightly unsettled, but dealer on balance, and a fair trade resulted. White, December, sold, 22s to 21s 6d; May, 22s 7 1/2d to 22s 10 1/2d, 22s 3d. Cuban stocks total 80,000 tons, against 997,500 at corresponding period last year.

COFFEE.—There was a moderate inquiry from the home trade, and where sales resulted steady prices were obtained. Of East India, bold greenish sold, 10s 6d; Colombian, good bold, 86s 6d to 88s 6d. Future delivery market steady, but trade slow.

COCOA was dealt in quietly regarding spot parcels, but sellers required recent prices. Good to fine Grenada, 51s to 53s; good fermented Jamaica, sold, 50s; Accra, F.F. quality, November-January, quoted 36s 6d, f.o.b. terms.

TEA.—Indian auctions embraced some 49,000 packages, and with brisk biddings for all medium and lower qualities, prices were firm to risk dealer. Good to fine teas sold well at fully previous quotations. Ceylon sales amounted to 12,800

29th as follows:—The tallow market was steady during the week, and prices are partly 6d. dearer to-day. It is on good medium sorts that the advance is most apparent, the demand for inferior kinds showing less activity. At auction to-day 1,056 casks tallow were offered, and 449 were sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 3d to 40s; dull to dark, 38s to 36s; hard, 43s. Australian beef: Fine, 44s 6d; good to fair, 41s 6d to 39s; dull to dark, 37s 3d to 35s; sweet, 45s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 39s; and mixed, 43s. c.i.f., London, 37s 6d. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 25s 6d per cwt. Quotations are:—Town, 35s 6d net cash, naked, ex works. Country: Frail casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 32s 6d; melted stuff, 31s 6d, f.o.b.

The TRANSFER BOOKS will be CLOSED from the 4th to the 11th December, 1922, inclusive. Dated this 1st day of December, 1922.

By order of the Board,

very sceptical concerning the continuance of ease, knowing from recent experience that—quite apart from the usual squeeze at the end of the year—as soon as the Government has sold enough Treasury bills to pay off the Bank, the margin between the market and poverty is likely to be slender; and that if this has been so during the late and still prevalent depression, any revival of trade can only make it more so. And so discount rates gave way very little. The high rate at which the Treasury bills were allotted yesterday caused general surprise, and made the rate for three months' commercial bills firm, but very nominal at $2\frac{1}{2}$ to $2\frac{3}{8}$ per cent.

Market rate (3 months' bills)	$2\frac{1}{2}$ to $2\frac{3}{8}$	$2\frac{1}{2}$ to $2\frac{3}{8}$	$2\frac{1}{2}$ to $2\frac{3}{8}$	$2\frac{1}{2}$ to $2\frac{3}{8}$	..

The Bank return showed increases of £180,000 in the Note circulation and £7,000 in the stock of gold, and a consequent decrease of £173,000 in the Reserve. Government securities rose by $1\frac{1}{2}$ millions, presumably on Ways and Means advances, while repayments by the market had reduced Other securities by two millions. Public deposits having declined by nearly six millions, there was a total addition of 22 millions to the Other deposits. Currency notes outstanding were increased by £2,667,300 to £290,578,000, which includes £1,531,800 for Notes called in but not yet cancelled. The fiduciary issue is £240,896,300, or £69,092,100 below the maximum.

THE STOCK MARKETS.

The disbursement of Government dividends at the end of last week has failed to expand the volume of Stock Exchange business. Markets are overshadowed by uncertainty as to the outcome of the meeting of Premiers this week-end, and by the expected issues of large amounts of new stock in connection with the Government plans for alleviating unemployment. The gilt-edged list, as a whole, is lower on the week, but in the foreign section there has been some slight recovery in Brazilian, Chilean, and Chinese bonds. Home Rails are quiet, and Argentine Rails are much more subdued than in preceding weeks. Rubber shares have shown some strength, and oils rallied, the principal feature in the latter section being the rise in Roumanian Consolidated on the chairman's statement that Government compensation for the destruction of the company's property before the German advance is likely to be larger than was expected. Courtaulds and Imperial Tobaccos have been the features of the industrial section, though iron and steel shares have hardened a little. Mines have been uninteresting, though the Kafir dividends are beginning to appear.

THE COMMODITY MARKETS.

Our Manchester correspondent this week sends an unfavourable report on the state of the cotton trade, in the course of which he mentions that "curtailment of production is increasing, and more unemployment is showing itself," adding that "traders have not confidence in current values, there being a definite belief in lower prices." Both in London and Australia wool continues in demand, and sells at prices which the present state of trade in the manufacturing centres would hardly seem to justify. The pig-iron market is quiet, but the steel trade is better and the outlook more encouraging. Our Sheffield correspondent states that "the local unemployed roll has been reduced 2,000 during the last month," and that though "it still approaches 30,000.....a regular decline henceforward is likely to take place." The South Wales coal market continues to gather strength from day to day, and the general position is sound. A good business has been done in linseed, buyers competing freely, and the demand for the oil product has been in sympathy with the improved position of the seed. Lower prices have been recorded for hides and skins, and the demand for sole leather is easier, but the shoe trade is moderately well employed.

FOREIGN EXCHANGES.

The outstanding feature on a quiet market has again been the strength of sterling in New York. From 4.52 on December 1st the rate has moved up, quietly at first, and then, apart from a temporary check in the middle of the week, more rapidly, to a level of 4.57 yesterday morning. Quotations for forward dollars are unchanged at one cent per month above spot. No outstanding factor has appeared to explain this strong movement, which would seem to a large extent to be due at the moment to a rapid growth of confidence in America in English conditions and prospects, coupled with a scarcity of sterling bills. At the same time, although both the normal movement at this period of the year and the general increase in prices in the States would lead one to have expected a rise in quotation, the present jump upwards would seem to be too rapid to justify confidence that it will continue without interruption. The strength of sterling was reflected during the earlier part of the week in a renewed rise in the Paris quotation from 64.25 on the 1st to 65.30 on the 6th. Since then the confidence, however slight the grounds for it may be, which invariably accompanies a new Conference has brought some recovery, so that yesterday morning the Paris rate was down again at 64.05. Brussels has again widened somewhat on the Paris rate from 69.45 on the 1st to 69.50 yesterday morning. Future quotations are rather wider than last week, both in Paris and Brussels. In Italy continued confidence in the Mussolini régime has brought the lira rate down from 93 $\frac{3}{4}$ a week ago to 91 $\frac{3}{4}$ yesterday morning. Switzerland, on the news of the rejection of the proposed capital levy, recovered sharply at the beginning of the week, but this has been more than lost again, the rate standing at 24.22 $\frac{3}{4}$, as compared with 24.14 $\frac{1}{2}$ a week ago. Madrid has again depreciated slightly to 29.44, while Lisbon is a little better. Amsterdam, after being steady for most of the week, has moved up sharply in our favour to 11.45, as compared with 11.41 $\frac{1}{2}$. The German mark is as little dealt in as before, but the rate, after moving upwards a little, has been favourably affected by the approaching Conference and the report of a fresh German Reparation proposal, and now stands at about 1,000 points better at 34.500. In Central Europe, the Viennese rate shows signs of some improvement now that the new financial measures have been finally passed and the prospectus issued of the new National Bank. Warsaw, after some recovery, is back again at 80,000. Prague is fairly steady, but at 144 shows a slight tendency to move upwards. Belgrade shows some appreciation, but both the Bucharest and Sofia rates are slightly higher. The Athens quotation which is more or less nominal, has now moved up to 475. In the East, the rupee at 1s 3 $\frac{1}{4}$ d is a shade cheaper, and the yen at 2s 1 $\frac{1}{2}$ d is also $\frac{1}{2}$ d lower. The silver market recovered a little after last week's low prices, but there is no indication of any lasting improvement. Hong Kong at 2s 4 $\frac{1}{2}$ d and Shanghai at 3s 1d both show a drop from last week's prices. In South America, Buenos Ayres at 44 $\frac{1}{2}$ is unchanged, as also is Valparaiso at 36.90, after being higher. Monte Video at 44 $\frac{1}{2}$ d is $\frac{1}{2}$ d dearer, Rio ver. slightly cheaper at just below 6 $\frac{1}{2}$ d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 2nd:—

RECEIPTS.		EXPENDITURE.	
From Revenue	Mln. £	Interest on Debt	Mln. £
Amount borrowed	11-391	Supply Services	37-6
Taken from Exchequer balances	37-364	Burdies	10 $\frac{1}{2}$
	49-257		49-2
Revenue amounted to £11,391,000, to which Custom contributed £2,781,000 and Excise £1,568,000. Property and Income-tax brought in £3,071,000, Post Office yielded £1,000,000, and £1,005,000 came into the accounts under Miscellaneous. Expenditure, £49,257,400, was mainly comprised of interest on war debt, which amounted to £37,591,100.			
The week's operations increased the National Debt by £37,363,830, and caused the following changes:—			
National Savings Certificates	+ 300	National War Bonds paid off	- 1289
44% Treasury Bonds	+ 1-289	Unemployment Insurance	- 21-950
Public Debt Advances	+ 21-950	Funding Loan, &c.	- 10-750
Bank of England Advances	+ 10-750	Other Debt	- 3-988
Treasury Bills	+ 3-988	Burdies	- 013
Land Settlement	+ 013		
	+ 38-290		

The floating debt was increased by £36,695,000 to £948,153,500.

FINANCIAL YEAR, 1922-23 (April 1 to December 2, 1922).

A CRITICAL CONFERENCE.

By the time these lines are in print the Allied Prime Ministers will have arrived for the Conference in London. For some time past the feeling has been current in Great Britain, and now appears to have extended to Paris, that unless and until the Prime Ministers of France and Great Britain come to a joint understanding about their Reparations policy, it would be extremely unwise to summon the Germans to a Conference at Brussels for the sake of watching the futile manoeuvres of the Allied Powers. On both sides the situation calls for very great tact and statesmanship, and the penalties of failure will be very heavy indeed. In the case of Great Britain, a pessimistic answer would have to be given to the question which Mr Lloyd George asked in the House the other night—namely, whether the present spell of unemployment is a more than usually acute fluctuation in trade, or whether we must assume that Great Britain is over-industrialised, and can never hope to re-absorb our present unemployed into industry? The suggestion that the Empire may provide an outlet so large as to absorb our pre-war output is illusory, and certainly could only be achieved after many years and much dislocation in the forms of production. But a complete failure on the Reparations question means that we shall be driven back on this policy, for there is that really imminent danger that Europe may be cut out of the commercial map of the world for a decade. For France, a failure to reach a settlement within the next few months almost certainly means a complete collapse of her whole Reparations claim, and this in its turn means, as Mr Keynes clearly shows in the

current section of the *Manchester Guardian Reconstruction Numbers*, that France will be driven down the same road of monetary inflation as her debtors, and by the disguised taxation which inflation involves would pay for her own reconstruction at the expense of her investors and her middle classes. We need hardly add that if the Reparation question ends in the dissolution into chaos of the financial structure of Europe, it would be a profound disaster, not only for Europe, but for civilisation.

We have said that the situation calls for statesmanship on both sides, and we have frequently pointed out the plain and straight path for British Ministers. It is as true to-day as it was when the Bankers' Committee reported in June that no progress can be made towards a solution unless concessions are made on the inter-Allied debts. Even the Federation of British Industries, who are perhaps the best watchdogs of the British income-taxpayer, are prepared to offer a prolonged moratorium of the debts, and at, say, 20 years this is nearly equivalent to writing them down to zero. But without any desire to assume a critical attitude toward France, and recognising to the full the special difficulties of our late Ally, we venture to think that the most severe test is that which now awaits M. Poincaré and his colleagues. A recent despatch from the Paris correspondent of the *Times* suggests that M. Poincaré is meditating plans which involve the cutting down of Reparations to 40 milliards of gold marks, compared with 50 milliards, plus a contingent liability many years hence, which was supposed to be his plan in July of this year. France, like every other nation, has indeed learnt much from the logic of events, and has from time to time modified her first exalted hopes. But hitherto the reduction of these hopes has been made too late, and she has been following, but never catching up with, the rapidly deteriorating economic situation on the part of her debtor. M. Poincaré's hesitating tactics at the August Conference have been sharply criticised on both sides of the Channel. It is most important that he should not make the same mistake again.

The true situation in Germany, political, psychological, and economic, is going from bad to worse. This is very clearly shown by Dr Walter Leaf in the address given last night to the Manchester Chamber of Commerce, in which the chairman of the London County Westminster and Parr's Bank points out the essentially rotten foundations of the full employment which has been current in Germany until lately, and calls attention to the highly significant fact that unless all German trade statistics are profoundly wrong—and there is some possibility that they may be far wide of the mark—Germany, in spite of the difficulty of her depreciated exchange, has been buying more than she has sold to the outside world, and has probably been producing at less than 75 per cent. of her capacity. The German nation is to-day faced with an extreme difficulty in purchasing either food or raw materials from abroad—though 20 millions of her people have to be supported on imported food, and is faced with the most serious food problem in the coming winter. Finally, the holdings of bank balances by Germans in foreign countries have been dwindling, possibly to pay for the imports which she has been receiving in the last few months. Moreover, Dr Leaf is greatly impressed

with the psychological deterioration. "Germany seems to me to have lost the grit for which she was once famous, and is drifting towards ruin with the vacant stare of the opium victim. And the drug which has taken her into bondage is none other than the fatal opiate of a degraded currency—so pleasant at first, so horribly cumulative in its working, so hard to shake off."

It is considerations such as these that led the experts recently to seek for even a temporary means of preventing exchange depreciation without waiting for final settlement of the Reparations scheme. We gave, however, our reasons a fortnight ago for the view that it is practically impossible to expect any improvement until the Reparations scheme is settled on a possible and acceptable basis. This is the first task of the present Conference. We entirely agree with Dr. Leaf that at the moment practically nothing can be got from Germany, and that as the Associated Chambers of Commerce have stated in their manifesto, any arrangement made must relieve Germany from the necessity of paying anything in the immediate future. At the same time, it is important to remember that the physical measurement of production and a comparison of the present with the pre-war situation makes it in some degree possible to ignore values in depreciated marks, and it should not be beyond the wit of man to devise a basis of a new assessment. The effect of depreciation makes the estimate more difficult by bringing in far-reaching influences. It would, for example, be next to impossible to guess what Russia could pay ten years hence, but Germany's industrial plant and labour is not yet dissipated, and we believe the task could still be accomplished. But if France is to accept a settlement, and still more, if anyone is to be persuaded to lend money on the strength of it, there must be sound security that it will, in fact, be honoured by Germany. In the original Ter Meulen scheme and in the present Austrian settlement there is provision for pledging definite assets hypothecated as security for whatever loans are raised. France has her eyes upon German mines and forests, and it is commonly supposed here that the French plan is to take over and run these assets. But the important point is the attitude behind this claim rather than its precise form. We think there should be no difficulty in agreeing with France that if a moratorium is to be granted, something in the nature of guarantees that a banker would accept is needed, and it should not be beyond the bounds of possibility to work some practical form of security. We ought to stand by France in requiring Germany to offer something tangible in return for a moratorium. Britain, however, will not stand for a policy by which France can intervene and exploit German resources on oppressive terms, which would sooner or later provoke a renewal of war.

A fundamental difficulty from the French standpoint is to convert a claim, in respect of which no immediate payment can be expected, into cash for the relief of her own financial situation; for while Germany is in extreme difficulties economically and financially, France is faced with the task of paying interest on a debt which is constantly being swollen by expenditure on restoration, and the annual charge on which will soon absorb her whole Budget receipts. France's minimum demand is to secure at once the means of covering interest on the restoration expenditure already incurred and new expenditure which she must incur in the near future—though with a bankrupt debtor it is a regrettable necessity that the investing of new resources in the devastated areas must for the moment be limited by the financial situation. The ultimate goal which must constantly be borne in mind is to convert the Reparation debt into securities bought and sold on the money markets of the world; for it is only when this is accomplished that the political complications of the Reparation question can be disposed of. At the moment, only a very little money could be raised on the Reparation claim, and that only on condition that the total debt is fixed on a practical basis. But it has to be remembered that a loan operation might, under certain conditions, be facilitated by the fact that a great deal of reconstruction capital has in fact already been put up by the French investor, and that, if a conversion could be effected in France itself, which would transfer some of this debt to German account, the amount of new money

needed to carry on the restoration is much less overwhelming than the figures that have sometimes been bandied about.

But at the back of the problem lies the need to enlist the active interest of Germany in its solution, and in this connection the only lever that we can see is that the Allies should offer to Germany not the immediate evacuation of the Rhineland, but its progressive release as rapidly as the revised Reparation total can be converted into ordinary German securities. Unless some provision of this kind is embodied, there is little prospect of a really effective conclusion.

It is, however, desirable to remember that undue haste in the Downing Street discussions this week-end may defeat its object. At the present moment Great Britain and France are engaged in delicate and complicated negotiations at Lausanne. The upshot of these negotiations should be known within a few weeks. If the two countries can emerge from that conference in complete agreement on the grave matters of foreign policy under discussion, the way to co-operation and agreement on the Reparations problem should be rendered less difficult.

LAUSANNE AND THE FREEDOM OF THE STRAITS.

THIS week the Lausanne Conference has broached the crucial question of the Straits, and if the parties show little sign of coming to an agreement, at least they have not yet agreed to differ, but are finding it worth while to set forth their respective points of view in statement and counter-statement. The most interesting features in the debate are the reticence of the Turkish Delegation, and the active participation of the American observer. The Turks have confined themselves, so far, to expressing a preference for the Russian programme, as against any of the others that have been placed before the Conference. The Russians are the only non-Turkish party that are willing to leave the Straits under Turkish naval and military control, and their scheme would be all that Turkey could desire, but for the one serious drawback that its execution depends on the permanent backing of Turkey by Russia, or, to put it the other way round, on the permanent attraction of Turkey into Russia's orbit. Of course, the Turks realise this, and do not like it. Their aim is real as well as nominal independence; but the small countries of the Middle East, like those of S.E. Europe, can only attain to independence of this kind through solidarity with one another, and both groups have a long way still to travel before they reach this goal.

Among the S.E. European States there was a marked *rapprochement* at the beginning of the Conference. Rumania (and in a secondary degree, the other members of the Little Entente) was anxious to prevent Bulgaria from entering a Turco-Russian combination, and realised that the only means of preventing this was to reconcile Bulgaria with Greece by securing for her the already promised economic outlet to the Aegean. In the question pointed out, Rumania and Bulgaria have fundamentally the same interests, identical with those of the other Danubian countries, and divergent from that of Turkey, the potential mistress of the Straits, and Russia, the potentially predominant naval Power in the Black Sea; and if the commercial thoroughfare through the Straits becomes precarious, the railway route to the open port but to Rumania too. These welcome symptoms of solidarity have, however, been checked by the natural, though impolitic objection of M. Venizelos to the cession of further Thracian territories in order to make a Bulgarian corridor. The arrangements proposed by the Conference have left Bulgaria dissatisfied, and the subsequent *coup d'état* by the Macedonian refugees at Kustendil, whatever its outcome, is a warning that the breach between Bulgaria and Yugoslavia will not be closed so easily as that between Bulgaria and Rumania, whose acquisitions of rightfully Bulgarian territory and population have been comparatively modest.

In the Middle Eastern area, solidarity is the vision of an even more distant future. It is true that Islam is more of a bond than orthodox, but the nationality disputes between Turkey, the Arab States, and Persia are latent rather than non-existent. Turkey will not easily re-

linquish her claim to Alexandretta, now included in Arab Syria, nor Iraq acquiesce in the Turkish claim to Mosul. The Baghdad Railway between Aleppo and Nisibia will be a fruitful source of contention, for it is equally essential as a line of communication between Turkey and her North-Eastern vilayets, and as a link between the two Arab states of Iraq and Syria. Oil and Kurds, which spring from the same soil, will set Turkey, Persia, and Iraq by the ears, and will doubtless produce many more or less violent changes of frontier; and then there is the Turkish-speaking minority in Persia, which is already an object of Turkish irredentism. Thus a Middle Eastern Entente (first projected during the European War by Germany) is still far to seek. Turkey and Afghanistan may have no obstacle to friendship in the shape of hobnob, having no common frontier, but it will be more difficult to extend a common good understanding to Persia, Iraq, Syria, and Egypt, and, before that is achieved, the last word about the Black Sea and the Straits (and *à fortiori* about the Red Sea and the Suez Canal) will not be spoken by the local riverains, but by Powers outside the Near and Middle Eastern area.

What has happened this week shows that this fundamental factor in the Eastern Question, which dominated it all through the last century, has not been altered. In spite of the long strides towards independence which Turkey has made during the last four years, she is not yet able to carry through a policy of her own in regard to the Straits, but has merely the choice of identifying herself with the Russian policy or with the Western one formulated by the three Principal Allied Powers, but evidently supported by America also. This is the old familiar situation. Turkey and the other Middle Eastern countries, with stronger Powers on either side of them, must lean on one group or the other, and the direction in which they lean is almost automatically determined by the relative strength, at any given moment, of these external forces. When Russia is aggressive, Turkey will incline towards France, Great Britain, or Germany. That was the situation down to 1917. When Russia is on the defensive, Turkey will incline towards her, and that is the situation now. Lord Curzon pointed out that the respective traditional policies of Western Europe and Russia have been reversed, and M. Chicherin, in reply, gave a not unfair diagnosis of the reason. Britain had passed to the offensive, and therefore the maintenance of a zone of buffer states had now become the interest of Russia.

In other words, we are still reaping the fruits of Mr Churchill's policy. The Russians will not easily forget that, since 1917, Allied troops have on various occasions been in occupation of Odessa, Batum and Baku, and that when Denikin was on the point of collapse he was revived and almost rendered victorious by the despatch of French and British munitions through the Straits, which had just been brought under Western naval and military control by the Armistice of Mudros. M. Chicherin's declaration that the present Allied proposals will force Russia to arm is not false rhetoric, but a legitimate moral from recent experience as regarded from the Russian point of view. The present menace to Russia in the Black Sea is as genuine as that to British sea communications in the Mediterranean would have been if Russia, before 1917, had obtained the right of naval egress through the Straits into the Aegean. Lord Curzon's contention that the Russian proposals are based on an accidental and ephemeral grouping of the Powers is not unconvincing, but he begs the question when he assumes that the new Western proposals are by contrast stable and durable. Our present desire that the passage of the Straits shall be open to warships as well as to merchantmen is surely based on our temporary, though fast vanishing, military and naval superiority in this area, just as much as is the present desire of Russia to return to the *status quo* of the nineteenth century, which we at that time supported, while she opposed it. Lord Curzon and Mr Chicherin both dismiss very lightly their sudden reversal of the century-old tradition of their respective countries. Yet are they both well advised to base their policy on the facts of the last few years rather than on those of the preceding century? Is it not at least as likely that the recent facts are exceptional and the nineteenth-century situation a more normal state of affairs, to which things are likely to return?

The declaration made on behalf of the United States by Mr Child in favour of freedom of passage for warships is probably inspired partly by the immediate urgency of protecting the American relief organisations in their heroic efforts to save the minorities that are being evicted from Anatolia, and partly by the special tenacity of the American national temperament in maintaining existing American rights abroad (a characteristic which will also have an important influence on the question of the Capitulations). Yet, from a broader point of view, it is regrettable that this question of passage for warships should be thrust into the foreground. The real world-interest in regard to the Straits is that in peace or in war whether local or general, the free passage of merchant ships of all flags should be impeded as little as possible. The test of this question of warships, as of all the other subsidiary issues, is simply this: is freedom of passage for warships likely to help or to hinder the cause of freedom for merchantmen? Surely it will do the latter, as is indicated by the career of the "Goeben" and the "Breslau." Once inside the Straits, a warship is made as formidable by the geographical conditions as it is made impotent so long as it is excluded from the Narrows; and if warships may pass through, both the international authority responsible for the freedom of the waterway, and the Turkish authority responsible for the security of Constantinople, will have to treble and quadruple their precautions. If warships are to have free passage, the international authority and the Turkish authority will both insist on having mines, submarines, howitzers, and divisions in order to deal with such warships in case at any time they are tempted, as they well may be, to misconduct themselves, and when once both parties are driven to insist on powerful naval and military guarantees they are bound to come to a deadlock, since a double military and naval control of the Straits is impossible. The Turkish and the international interests in the matter can only be reconciled by demilitarisation, and the supporters of passage for warships have, therefore, first to show how demilitarisation is compatible with their demand.

A DYING ACT.

As one reads the two debates in the House this week on the Safeguarding of Industries Act, and examines the results of the divisions, one derives satisfaction from the fact that the Protectionists have received no encouragement to press on the administration of the measure. The official majority of the Government is put at 71. On Monday, when the amendment to the Address calling for the repeal of the Act was defeated, the Government majority fell to 62, although 35 National Liberals abstained from voting. Had these Liberals carried their reluctance to support the Act to the length of voting against it, the majority would have been no more than 27. As a matter of fact, twenty National Liberals and four Unionists did vote against it. On Wednesday, when the gas-mantle Order imposing a duty of one-third on mantles imported from Germany came up for confirmation, the Government could not whip up a larger majority than 51. Six Unionists and some twenty National Liberals voted against the Order, among whom were Sir Alfred Mond, Mr Fisher, Commander Hilton Young, and other ex-Ministers who had shared in the responsibility last year of placing the Act upon the Statute Book. Some National Liberals again abstained, and it is clear, so far as this Act is concerned, that the Liberals who were supporters of the late Coalition are moving definitely towards Opposition. What is also clear is that the Act, which was passed only last year as a compromise between the two wings of the Coalition, would have no chance at all of acceptance by the present House of Commons had it to begin again as a Bill. It is a legacy from the Coalition, a *damnosa hereditas*, which is in secret damned almost as much by Unionists as by National Liberals.

Let us for a moment pause and take stock of how the country now stands in regard to this Safeguarding of Industries Act. Under Part I. the so-called Key Industries get general protection for nearly four more years, that is to say, for approximately the life of the present House of Commons. Under Part II. there have been passed two Orders which will expire in August, 1924. These Orders

give protection against imports from Germany to fabric gloves and glove fabric, domestic glassware unmounted, some kinds of illuminating glassware, domestic hollowware enamelled or made of aluminium, and incandescent gas-mantles. It has taken more than a year to get these few small industries on the protected list under Part II., and time is running on. No industries have yet succeeded in getting themselves sheltered under the "dumping" clauses, which are the only permanent portion of the whole Act. And industries, which in the course of next year succeed in wriggling through the barbed wire of the collapsed exchanges clauses, cannot under the Act get protection beyond August, 1924. Every month which passes henceforward will make the protection of the collapsed exchange provisions less attractive to complainant industries—because the period of protection will be so short—and will cause the Cabinet and the Board of Trade less and less eager to put forth Orders which are here to-day and gone, as it were, to-morrow. It would seem highly improbable that the active period of complaints, inquiries, and upon rare occasions Orders, will continue for more than about six months. After that time has elapsed the collapsed exchange provisions will be so near death as to be quite moribund. The "dumping" clauses will still remain, it is true, but the results of attempts to get anti-dumping Orders made have so far not been encouraging to applicants. None have succeeded.

There is this to be said for Part II. of the Act. The protection which it holds out with one hand is very firmly withheld by the other. Scores of complaining industries have found that the Board of Trade is not to be bluffed. There is the Act, and the Board administers it faithfully and judiciously, but from the first no laxity has been permitted in the interpretation of its provisions. First the Board has to be satisfied that complainants have made out a *prima facie* case. It is not easily satisfied, and comparatively few complaints get through this first line of defence. Then comes the reference to Committees, and here again there is no readiness to accept complaints at their face value. Finally, the Board has to judge, after receiving the reports of Committees, whether the case for an Order has really been made out; even the consent of the Cabinet to an Order must be obtained. We see the result. The path to an Order is so strait and well guarded that no more than six industries out of more than a hundred which have tried to march upon it have succeeded in getting through.

It might be concluded from this survey of the Act in practice, and from the brief statutory duration of most of its provisions, that there was little to worry about. But in our view this decision would be a great mistake. The Act itself may be a matter for derision—it is styled by some the Safeguarding of Interests Act, and by others the Stopping of Industries Act—but its passage last year has done an immense disservice to the freedom of trade throughout the world. Last year there was a spate of tariff legislation almost everywhere, in Europe, in America, in the Dominions. The Protectionists in all countries were in the ascendant, and those who desired to give to the shattered world a chance of recovery were profoundly discouraged by Great Britain's lapse into protection. It was as if we in this great Free-trade country had sold the pass. It was no longer possible to quote England's belief in Free-trade if England, by passing the Safeguarding of Industries Act, had revealed her disbelief. The effects of our action were, and remain, deplorable. Here we have Austria and the Succession States ringed about with tariff walls which almost prohibit that natural flow of trade which would lead to economic recovery. We and our Allies are making a guaranteed loan to Austria, yet because of our lapse into protection we cannot insist that the tariff walls be thrown down. Satan reproving sin always fails to bring sinners to repentance. There is now some reaction against the tariff madness of last year, and that reaction might have been furthered could Great Britain, by repealing the Safeguarding of Industries Act, have demonstrated to all the world that it believed in repentance. The Act is unloved, undesired, except by those few industries which get protection under it, yet it remains as a stumbling-block, a cause of offence, in a world which is beginning to see that freedom of production and of trade exchange can alone restore the waste of war.

ANGLO-PERSIAN OIL.

We review below the annual report of the Anglo-Persian Oil Company, which has been issued this week. At the present moment, however, oil politics are perhaps attracting more attention than oil finance. While the oil share market in Throgmorton Street is weak and neglected, oil is occupying a prominent place on the stage at Lausanne, and the contrast of these two facts shows that politicians are at the moment taking more interest in oil than investors. We mentioned last week the offer made to American interests of shares in the Turkish Petroleum Company, based on America's demand for "the open door." We referred also to the Chester concessions. Since then the *Times'* New York correspondent has reported that much interest is being taken in the United States in the departure for Lausanne of Mr Untermeyer, whose mission is "to urge upon the Lausanne Conference the claims of 22 Turkish princes and princesses to oil-fields estimated to be worth over £200,000,000 sterling." These were, apparently, formerly the property of Abdul Hamid. According to the *Times'* cable, an informant of the *New York Times* stated "that the British Government has now abandoned its contention that it had an option from Abdul Hamid on his lands, and that the Standard Oil Company, after making repeated efforts to effect an arrangement with the Turkish heirs, induced the State Department to urge the open door in Iraq for all nations, and thus help it in the campaign to wrest the oil property from the rightful Turkish heirs." The cable then goes on to say that the Standard Oil Company has issued an official denial of these charges, and announces that "it stands for the open door for all American interests in Mesopotamia, and is not attempting to appropriate there or elsewhere any rights legally owned by other interests." The curiosity of the public is whetted by such scraps of information as this; and in the absence of full knowledge of what is really going on, suspicion is naturally engendered that the influence of oil interests, British, American, or otherwise, is working vigorously behind the political scenes, and may be exerting an effect upon international negotiations which is far from beneficial or desirable. There is, in our opinion, need for a clear official statement from Lausanne on the politics of oil; and we hope also that the chairman of the Anglo-Persian at the annual meeting on Monday will see fit to enlighten the public as far as possible.

Registered in April, 1909, to acquire a concession granted by the Shah of Persia, the Anglo-Persian Oil Company had anything but an auspicious infancy, and it was not until the year 1914-15 that sufficient profits were made to meet the payment of preference dividend. In consequence, the Burmah Oil Company, which in 1914 held nearly one million ordinary shares, received in payment for its share in the original concession, had to advance nearly £150,000 to pay the preference dividend. Since 1915 the company has been exceedingly prosperous. Up till that time depredations of Persian tribesmen upon the company's property and pipe lines were a source of continual trouble, but the growth of the company's operations in succeeding years has been very rapid. To what extent this is due to the contract to supply the British Admiralty with oil fuel made early in 1914, when Mr Winston Churchill was First Lord of the Admiralty, which was followed in May of the same year by an agreement by the British Government to subscribe for two million ordinary and 1,000 preference shares, it is impossible to say. Had it not been for the war whether the deal was to his advantage. Mr Churchill, in June, 1914, argued that hitherto the Government had been obliged to pay excessive prices for oil, and that by making the contract with the Anglo-Persian Company "what we lose in prices we gain in profits."

During the war the company's profits rose steadily, but in the post-war boom there was an enormous expansion, and the company has become one of the largest English joint-stock concerns. In 1910 the paid-up capital was £1,150,172, and there was £600,000 5 per cent. debenture stock. To-day the paid-up capital is £17,112,800, and the 5 per cent. debenture stock out-

standing £4,750,000. Financial results for the past five years and for 1913-14 are compared below:—

March 31.	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.

* E.P.D. 1919-20, £854,665, deducted.

There was a sharp drop in profits in the year ended June 30th last, but thanks firstly to a drop in the amount of income-tax debited from £500,600 to £181,900, and to large amounts brought forward from the previous accounts, the balance available for distribution is £830,000 larger than it was a year ago. The royalty payable to the Persian Government is fixed at 16 per cent. of the annual net profits of all companies that may be formed to work the concession, and last year this cost the company over £40,000 less than in 1920-21. The ordinary dividend is maintained at 20 per cent., and the balance carried forward still further increased. Reserve allocations, it will be seen, total £1,000,000, as compared with £685,000 a year ago. As will be seen from the table below, which compares the latest with the preceding balance-sheet, reserves now total £4,591,757, besides which there is the provident fund of over half a million:—

LIABILITIES.		March 31, 1922.		ASSETS.		March 31, 1922.	
Amount.	£	Compared with Mar. 31, 1921.	£	Amount.	£	Compared with Mar. 31, 1921.	£

Employees' pension fund acct.	559,666	.. + 240,457					
Reserves	4,591,757	.. + 1,905,756					
Profit and loss	3,421,673	.. + 301,880					
Total	34,543,650	.. + 5,159,781		Total	34,543,650	.. + 5,159,781	

The authorised capital was increased in 1914 from £2 to £4 millions, and since then to £5 millions in 1917 and £20 millions in 1919. The last issue of capital was in January of this year, when two million 8 per cent. preference shares and 600,000 ordinary shares were issued at premiums of 1s and 4s respectively. In the prospectus of that issue it was stated that the Government held five million ordinary shares, of which one million were paid up to the extent of 1s per share. The Finance Accounts for 1921-22 show the Government holding "at cost" at £4,250,000. This consisted of £4,050,000 in ordinary shares, £1,000 in preference shares, and £199,000 debenture stock. The Anglo-Persian report states that since the close of the financial year a call of 19s has been made and paid on the 1,500,000 ordinary shares issued in December, 1919, and on which 1s had been paid-up. The Government, it may be mentioned in passing, has the right to appoint two directors with "a power of veto over all acts of the board and committees of the company, and its subsidiaries." At present the two directors so appointed are Lord Inchcape and Sir Edward Packe.

The increase of nearly two millions in reserves is largely accounted for by the premiums on issues of shares, which are responsible for the credit side is an amalgamation of two items, item on the credit side is an amalgamation of two items, advances to associated companies having hitherto been shown separately. A year ago they figured at £4,342,400. Investments in gilt-edged stocks have been heavily reduced, and there was a big decline in sundry debtors, but refineries, tank installations, pipe lines, &c., have been increased by £1,523,300. The report states that extensions to refineries, including that in Wales, have been delayed by strikes and other causes, but that they will be

ready to work to their fullest capacity by June next, "when a large increase in the quantity of marketable products will be obtained." Further, "rapid progress has been made with the development of existing and new distributing facilities in the United Kingdom, on the Continent, and elsewhere." At the annual meeting, on Monday, a resolution will be submitted empowering the company to borrow to the extent of one-half the nominal amount of the issued share capital, plus one-half of the amount received by way of premium.

THE IRISH FREE STATE.

(BY OUR DUBLIN CORRESPONDENT.)

THE Irish Free State is in being. The British Parliament, with businesslike promptitude, disposed of the two Bills submitted to it for confirmation of the Irish Constitution and for making provision for consequential matters. By Royal Proclamation the Constitution has been brought into operation. The Governor-General has been sworn in; the Dail, or Lower House of the Oireachtas, or Parliament, is in session, and the Seanad (Senate), or Upper House, is in process of being nominated or elected. An Irish Cabinet, or Executive Council, under the Presidency of Mr Cosgrave, is in charge of an Irish Free State fully dowered at last with the national independence which Ireland has for so long hungered, with legislative independence, with executive independence, with fiscal and financial independence—as free as Canada, or Australia, or South Africa. The choice of Mr T. M. Healy, K.C., as Governor-General signalled the rupture of a great tradition. It was evidently designed as a two-fold guarantee that the King's representative would not be an instrument of British policy in Ireland, utilised for British ends by a British Cabinet or Colonial Office, and that he should not serve British purposes as the centre of a brilliant social circle by aristocratic prestige or suave drawing-room intrigues. How far Mr Healy's temperament will permit of his fulfilling his intended functions of non-interference in public affairs it is difficult to foresee—or how far he can concentrate his energies on creating precedents binding his successors to the rôle of august and passive figurehead of a free self-governing State. Mr Cosgrave's list of nominations to the Seanad, including the Dowager Countess of Desart and the senior Marquis in the peerage of Ireland, shows an earnest desire to bring back into the life of the nation those elements of social and other distinction which well-recognised causes have so long incarcerated in a politically impotent minority. The restoration of peace and order will be aided by the great events of the last few days. The pride of the country has been awakened, and the lingering suspicions of British good faith cherished by not a few have been removed. There had been a lull, indeed, where no lull was expected in the larger overt acts of republican disorder—though minor acts remained numerous. But this afternoon two members of the Dail were shot—one killed, and one, the Deputy-Chairman, wounded. A painful incident, but robbed of much of its sensational effect at such a moment by the obviousness of the perpetrator's desire that it should produce a sensational effect. Rather will it accelerate the cold hardening of the popular will, the silent determination that these things cannot be tolerated in the Irish Free State. While these words are being written the Parliament of N.E. Ulster is considering the matter of "contracting out" of the Irish Free State. Everyone, however, knows in advance that the "contracting out" will become a *fait accompli* at the earliest possible moment. That demonstration of independence and individuality had got to be. But later there must ensue negotiations. There must be conference and difference, agreement and adaptation,

almost continual daily touch between Ministers or their agents and officials with the corresponding personages on the other side of the, so far, non-existent fence separating N.E. Ulster from the Irish Free State. Innumerable administrative matters require, and will continue to require, treatment during the transition period. A recent number of the *Economist* indicated briefly some main heads on which negotiation must take place. But if the Irish Free State is to scale its full weight in the balance it will need to be able to point to order restored and peace reigning within its boundaries. Mr Cosgrave, in his opening speech as President of the Executive Council, yesterday addressed N.E. Ulster in the accents of statesmanship, which lacked neither the spirit of conciliation nor the dignity of self-confidence, and enumerated some of the many advantages which might be gained by N.E. Ulster, if while retaining everything, every acre, every right, every protection, every privilege conferred by the Act of 1920, including its Parliament and Lieutenant-Governor, it threw in its lot with the the Irish Free State. Sir James Craig, on the other hand, referred last Saturday to the Boundary Commission and his efforts to arrive at a settlement with the Free State leaders. "He, for one, would not be a party to the setting up of a Commission which would involve such grave consequences for their loyal people." Now this does not go so far as some of his adherents and their Press, who frankly avow their determination to refuse to recognise the Boundary Commission if it is set up, and equally frankly to repudiate the Treaty between Great Britain and the Irish Free State, so far as they may find any of its provisions to be not to their liking. It may mean that he prefers to substitute direct negotiation for a trial before the Commission. He hinted at "some fair give and take arrangement," and "he had told the Southern Government that the boundaries were as nothing compared with the establishment of confidence and co-operation between the North and South—confidence for trade relations, confidence between the citizens, citizens of all creeds and classes, between the people as a whole, so that whether a man was on one side of the boundary or the other, he might be able to move freely and pass the time of day to his neighbour, without having to consider which side of the boundary he was on. He believed that in time that would be brought about." Herein may be described the elements of wisdom. N.E. Ulster wants to "contract out" and yet have no Boundary Commission, which is the necessary sequel to "contracting out" provided by the Treaty. But if Mr Cosgrave will hold his hand as to the Boundary Commission for a short while, just as the *Economist* recently suggested that the setting up of the new Customs frontier might with advantage be postponed for a short while, and if the other negotiations as to the Council of Ireland and as to financial indebtedness to Great Britain are allowed to ripen, he will probably find his patience abundantly rewarded. A composite agreement embracing all these diverse issues, and releasing the British Parliament from all preoccupations with outstanding Irish controversies and economic perplexities, might in truth result in an untying of knots and an unravelling of tangles which would be surprisingly profitable to Ireland, both South and North, without being otherwise than beneficial to Great Britain.

PERUVIAN CORPORATION.

THE report for the year ended June 30th last of the Peruvian Corporation shows that, while the net receipts from railways and steamers, in Peruvian currency, amounted to 5,080,707 Peruvian soles, as compared with 3,615,480 soles in the previous year, net receipts in sterling were £444,562, as against £418,040, the average rate of exchange of 21d, as against 27½d in 1920-21, being the lowest average at which net receipts have ever had to be converted into sterling. Net income from the railways and steamers was £387,293, as against £379,341, and other receipts were also higher, so that total net income was £68,000. The following table shows financial results for the past five years:—

	Year to June 30.				
	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Railway net revenue ..	£ 458,641	£ 386,364	£ 426,391	£ 379,341	£ 387,293
Government annuity ..	110,000	95,000	115,000	46,667	80,000
Guano account	..	..	..	36,026	49,798

Total income	597,979	513,005	599,804	492,927	545,056
Administration	23,389	31,892	30,894	45,816	29,926
Balance of revenue	574,590	481,113	568,910	447,111	515,130
Deb. int. (4%)	216,000	216,000	216,000	216,000	216,000
Sums written off, &c. ..	72,271	48,317	92,956	37,050	127,583
Deb. amortisation	54,000	54,000	54,000	54,000	54,000
Available balance	232,319	162,796	205,954	140,061	117,547
Additional deb. int. (2%)	108,000	108,000	108,000	108,000	108,000
Preference dividend....	111,861	74,576	93,225	37,294	74,592
	(1½%)	(1%)	(1½%)	(½%)	(1%)
Year's balance	12,458	Dr 19,780	4,729	Dr 5,233	Dr 65,045
Brought forward	149,521	161,978	142,198	146,927	149,986
Carried forward	161,979	142,198	146,927	141,694	84,941

There was a substantial reduction in working expenses of the railways and steamers, the ratio to gross revenue dropping from 75 to 67 per cent. The full Government annuity for twelve months was received, but there still remains a balance due of five months' instalments to that date, making a total of £38,499. Guano receipts, it will be seen, show a considerable increase. The report states that the proposal of the Peruvian Government to purchase the guano rights of the corporation having lapsed, a working arrangement has been entered into, under which eight cargoes, representing 23,800 tons, have been shipped during 1922. Of the eight cargoes, two only were shipped before June 30th; six shipments, therefore, equal to 73 per cent. of the total, do not appear in the revenue for the year under review. The substantial drop in the balance available after payment of debenture interest is due to exceptionally heavy debits on income-tax and exchange account, the former being £88,044, as against £33,050, and the latter £35,539, as against nothing a year ago. The additional 2 per cent. interest to which the 4 per cent. debenture bonds are entitled when a dividend in excess of ½ per cent. is paid on the preference stock requires £108,000, and a dividend of 1 per cent. is paid on the 4 per cent. preference stock by drawing on the balance forward to the extent of £65,045. The arrears of preference dividend accrued to the date of balance-sheet have now reached £100 12s 6d per cent.

In the following table we give a comparative summary of the main items of the balance-sheet:—

June 30.	Liabilities.			Assets.		
	Debentures.	Creditors and Bills.	Sinking Fund, Reserve, Insurance and Net Revenue.	Concessions, &c.	Railways.	Investments, Bills, and Cash.
1912	£ 5,236,750	£ 67,228	£ 1,159,121	£ 12,772,305	£ 9,682,939	£ 259,155
1913	5,176,000	71,769	1,253,291	12,772,305	9,700,667	258,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001

1921	4,556,300	306,257	1,929,906	12,772,305	9,509,988	289,157
1922	4,456,650	302,463	2,022,666	12,772,305	9,509,988	295,213

There are no very significant changes. A further £99,650 of debenture bonds have been amortized at 105 per cent. Five per cent. War Loan has been increased by £100,636. books a year ago at £42,375, has been sold, cash has fallen from £45,854 to £19,070, and bills receivable have risen from £54,703 to £129,715. Apart from the eight cargoes shipped in 1922, there remain 729,300 tons of guano due to the corporation under the contract of January, 1890. No success has at present attended the experimental borings for oil. The land account shows a net

credit of £2,507, as against a debit balance in the previous year of £8,759. In addition to the improved outlook for the cultivation of coffee, the possibilities as regards fruit preservation, pig breeding, &c., are said to be favourable. The directors report good progress towards the completion of the new motor road in the direction of the colony. The total paid-up capital of the corporation is £16½ millions, of which £7½ millions is preference stock, and £9 millions ordinary stock. A study of the accounts shows that prospects of payment of a reasonable dividend on this enormous capital are as far off as ever. No dividend has ever been paid on the ordinary stock, and the preference dividend is over 25 years in arrears. The corporation was incorporated in 1890, it may be recalled, to effect the settlement of the Peruvian external debt, the bonds of the loans of 1870 and 1872 being exchanged for shares of the corporation.

SOUTH AFRICA AND PROTECTION.

(BY OUR JOHANNESBURG CORRESPONDENT.)

THE Transvaal Chamber of Mines has just submitted a statement to the Board of Trade and Industries on the subject of Customs Tariffs. It may be explained that there has been a very marked tendency recently on the part of South African manufacturers to push their claims for substantial tariffs, so that they may retain as much of the trade as possible, which they were able to secure owing to the exigencies of the war. Unfortunately, South Africa is very backward in industrial development outside mining, which stands in a different category, since it is a wasting asset, as distinct from a developing and expanding industry, which can profitably dispose of all it can manufacture.

The Pretoria Cement Company, which produces an excellent article, proved by engineering tests to be equal to that of European manufacture, has lately complained of the severity of British and German competition, it being alleged that the shipping companies, in this trade as in many others, short of freight, are charging as little as 12s 6d per ton from England to South Africa, while it is freely alleged that "dumping" is taking place. There is machinery in the Union providing for a dumping tariff, but it takes time to move it. General Smuts only a month ago eulogised the product of the recently-established condensed milk factory in Natal. One now hears that it is likely to close down, as the farmers have refused to supply at less than the contracted price of 9d per gallon, little enough, one would think, as the lowest retail price in Johannesburg is 4d per pint. The management complained that they could only obtain enough milk to make 25 cases a day; "if they could make 100, the financial position of the factory would be vastly improved." About a year ago a paper factory was established at Klip River, near Johannesburg, and £70,000 capital was expended. Only after it started was it found that the local raw material was unsuitable, and this had to be imported. Now it is having to fight competition from Canada, in which case also dumping is alleged.

Our local markets are so small, and the cost of freight so relatively small a proportion of the selling price, that it is difficult for local factories, with insufficiently-trained employees, to compete with highly-organised and long-established manufacturers in older and more highly-developed countries. One reads that turbines are being made in Shanghai, and wonders when South Africa will make its first motor-car. A few months ago a company was formed to assemble motor-car parts, but one does not know how it fared.

The Chamber of Mines takes the very reasonable ground that it is entirely sympathetic to the movement in favour of developing promising industries, but feels that the artificial promotion by the Government of that the secondary industries, at the expense and to the detriment of the primary industries, farming and mining, is more likely to retard than to advance the progress of the European population. It is urged that interference with trade through embargoes, dumping clauses, high Customs duties, and differential railway rates, on which Mr Martin, the President of the Johannesburg Chamber of Commerce, has recently made vigorous attack, should be considered

not merely from the point of view of producers directly concerned, importers of similar articles, and consumers, but also from that of other producers who may be injured by such action. The advocates of local industries, and the protection which that involves, are more persistent and vocal, gaining the ear of Parliament, while inadequate consideration has been given to the harm done in other directions by the adoption of such measures. "In a number of ways the progress of the primary industries is impeded through artificial measures and expedients imposed in the interest of secondary industries. When considered in terms of products instead of in terms of money, it becomes obvious that effective protection of any one producer can only be given at the expense of other producers, who have to carry additional burdens created by artificial expedients so as to lighten the loads which would otherwise be carried by certain other classes of producers benefiting from protective measures, or to create trade which would not exist. Protection cannot be given to some industries without imposing disability on other industries. Producers of goods which cannot be protected have to give more of their products for protected articles, producers of the latter having been placed by Parliament in a privileged position as compared with the producers of exportable farm products."

The Chamber's evidence exposes the fallacy of the view that the Union should be self-contained, manufacture all its requirements, and be independent of imports. "The success of such a policy would mean disaster for all producers of goods in excess of local needs, such as diamonds, gold, ostrich feathers, wool, skins and hides, meat, maize, &c. Exports are paid for by imports, and if there are no imports there can be no exports unless exporters are willing to leave their money abroad, or give their products away." Furniture and leather goods are amongst the most highly protected industries in South Africa; they are chiefly, because more economically, carried on at the coast, largely by Kaffir labour. But as natives require little or none of these manufactures, the burden of such protection is carried almost entirely by the Europeans.

The tariff proposals of the S.A. Federated Chamber of Industries would, if carried out, have a very serious and detrimental effect on the cost of supplies for the mining industry. The general rate on these is a nominal 3 per cent., for Government since the days of the S.A. Republic has realised the importance of a low tariff as a factor in the development of the mines. The proposed new rate is 25 per cent.; doubtless the Industrialists are following Lord Milner's precept of "putting their ideals high." A similar rate is suggested in respect of agricultural machinery. Assay litharge is to be let off with 20 per cent., but inasmuch as fireclay crucibles can be made in the country, the rate suggested is the excessive one of 45 per cent.

The Chamber points out that with great efforts and at great expense the industry has succeeded in reducing cost of production considerably. The existing premium on gold is about 3s per ton milled, but is temporary, and its disappearance would again place a considerable section of the industry in difficulties. This could be met by a reduction in cost of supplies, now approximately 3s per ton higher than in 1914. In many instances, the tariff proposals would prevent the essential fall in price of supplies, as on a rough estimate they represent £500,000 a year.

It is not only in the case of mining supplies, but as regards articles consumed by mine employees that increases in tariff are proposed. This would involve higher cost of living, necessitating higher wages and increasing cost of production. The primary industries, agriculture and mining, are unable to derive any permanent benefit from protective tariffs. The farmer, having to pay more for his goods, must increase where he can the price of his products in the home market, which increases the cost of living of mine employees. But the prosperity of the miner depends on export, and higher expenses handicap him in competing in world's markets.

In 1898 the Customs duty on a variety of goods of general consumption was 7½ per cent. After the Boer

War, and with the advent of the Milner Administration, the rate was advanced to 10 per cent. By 1906 another leap forward had taken place to 15 per cent., and to as much as 25 per cent. in regard to carts and wagons and leather goods. War expenditure and the excessive cost of administration, with the necessity of providing more and more revenue, brought the general range to 20 per cent. by 1922. But when it is being acknowledged by the Minister of Finance, as well as the Minister of Railways, that the Union cannot stand £19½ millions a year in taxation (of which Customs form a considerable part) in normal times, the Federated Chamber of Industries proposes that the range be increased to 25 per cent., with 30 per cent. on wagons and clothing, and no less than 2d per lb on salt.

While protection increases costs, neither farmers or miners are able to advance the prices of their products, which are governed by world conditions, especially in respect of export trade. Protection of the farmers' internal market would mean still further increasing the cost of production on the other primary producer, the mining industry. The Chamber refers the board to its statement submitted to the Mining Industry Board indicating the enormous effect of low working costs on the profitable ore-contents of the Rand. Where a competent and impartial examination of a potential industry shows that some form of assistance is necessary, the Chamber of Mines suggests a system of diminishing bounties. Such a system would enable the community to estimate the cost of the assistance given, which is impossible under a system of import duties.

Mr S. Evans, managing director of the Crown Mines, and a keen student of economics, points out that the white population of South Africa has increased only 36 per cent. in 17 years, whereas in the same period the population of Brazil has increased 76 per cent., and that of the Argentine 61 per cent. The latter have no minerals, an important factor in the development capacity of new countries, and particularly so in the case of South Africa. He points out that the primary producer, the farmer, is the crux of the position, and expresses the opinion that the Government has not done sufficient for him. The crowd of taxes in the Union handicapped development and industry. As far as he knew, neither the Argentine nor Brazil had an income-tax. Most people would, however, think that the farmer is unduly favoured in the matter of taxation.

Notes of the Week.

The Needs of British Agriculture.—The agricultural amendment to the Address, with which the House of Commons was engaged on Tuesday, was the occasion of a debate that was mainly remarkable for two things. It produced the first speech by Mr Lloyd George in the present Parliament, and it produced from the Government the statement that in considering remedies for agricultural troubles protection and subsidies were barred. Towards the end of his speech Mr Lloyd George quoted Lord Bledisloe to the effect that "German agriculture flourished in pre-war days not in consequence of but in spite of its protectionist policy." The Prime Minister, who followed, said: "We are up against this position, that, however much we may improve our agriculture, the conditions are such that there is a very definite limit to the increase which can take place without a change in our system, either in the direction of protection, or of subsidies, both of which are barred." Later on, Mr Pretymann struck the same note by declaring: "I am not in favour of protection, or of going outside the ordinary economic law. Far from it." So at last we are able to hail the abandonment by the Conservative Party of food tax projects, and with it, in consequence, the idea of establishing any system of the general preference that will be a reality to the great Dominions. Had the debate done nothing but produce this renunciation it would have more than justified its absorption of Parliamentary time. But it did more than that. It produced from Mr Lloyd George and Mr Bonar

Law a discussion on the permanence or evanescence of large-scale unemployment, and from the former a long review of agricultural conditions, which certainly require most careful consideration. During the war, and for a couple of years afterwards, farmers were in clover; they are now faced with a serious struggle, and it must always be remembered that there are many who have recently taken to the land who are facing the struggle without the assistance of the resources provided by previous years of prosperity. The Government have already appointed a committee to inquire into the question of the system of marketing agricultural produce. Mr Lloyd George called for a far wider and more general inquiry. He looks to the land to absorb labour which industry cannot employ. In this country, he stated, only 9.2 per cent. of the employed population was engaged on the land; in France, 42.7 per cent.; in Germany and Belgium (two industrial countries), 35.8 per cent. and 22.7 per cent. respectively. "There is no country in Europe," said the ex-Premier, "except Russia, where the proportion of labour to the land is as low as ours." Having illustrated this point with statistics, Mr Lloyd George described the rural revival in Germany. In the 'eighties, he said (quoting the conclusions of Sir Thomas Middleton) German produce was on an inferior scale to ours. Twenty-five years later it has exceeded ours by 50 or 60 per cent. for the same number of acres. "That is a very remarkable testimony," he concluded, "to what can be accomplished by a great, earnest, serious patriotic effort to lift an industry from a condition of depression to a condition of productivity, where it enriches its own land, and where it provides profitable employment for a large population." Mr Bonar Law, while considering sympathetically the request for a far broader agricultural inquiry than that originally intended, applied a cold douche to his pre- rather surprising grasp of the foundations of the case against Protection; for his speech implies a recognition of costs are high, when the country can obtain more cheaply from abroad, in exchange for exports of manufactured goods, the commodity which that industry produces. In a useful contribution to the debate Mrs Winttingham emphasised the need for credit facilities, while other speakers mentioned the rating system, the cost of transport, and security promised, will be examined before next session, and he hopes to be able to make definite proposals next session. An inquiry into all these matters affecting agriculture may be useful, and we are glad that the Government are not unwilling to undertake it. But the chief feeling which a reading of the debate leaves with us is relief that the Government are alive to the restricted scope for action and are aware of the impossibility of continuing, during peace, the agricultural policy followed during the war.

The Trade Facilities Bill.—The debates in the House of Commons this week on the Trade Facilities Bill suffered after midnight—an unsatisfactory time for the discussion of important economic problems. But the second handi- responsible, because it had chosen to group in this one Bill such diverse matters as trade facility guarantees proper, the guarantee of the loan to Austria, and the In reality, the guarantee of a Sudan irrigation loan. League of Nations scheme is in an entirely different category to the ordinary trade facility loan guarantees. On Facilities Committee, and on the work of the Trade sidising " certain industries and firms with State credit, the whole, the Austrian guarantee met with widespread approval. One or two members, it is true, misreading the proposal as one merely for helping Austria, objected to undertaking financial responsibility for that country in the interests of Europe and the world in general of setting Austria on her legs once more—found a more general acceptance. The second reading debate was notable for a statesmanlike pronouncement by Mr Ramsay

Macdonald, and for a speech by Lord Robert Cecil, in which he explained the difficulties of the Austrian position, and made an eloquent appeal to the Government to make the League of Nations the pivot of their foreign policy. Mr Macdonald, who quoted the fears of some sections in Austria that the scheme would contravene Austrian sovereignty, and expressed the hope that the conditions would be tactfully and wisely administered by the League's Commissioner, closed with an expression of faith in the League:—"The League of Nations has got a magnificent opportunity.....to show that it has not only the impartiality, but also the heart, the knowledge, and the will to enter right into the kernel of the Central European problem, and to take Austria by the hand, proving not only to Austria, but proving to every country with a grievance in Europe to-day, that the League of Nations stands for something above mere nationalism, stands for something great in the moral and reconstructive life of Europe." Lord Robert Cecil claimed that "we shall get ample return if we can actually show the world that a country like Austria can, by the united efforts of members of the League of Nations, be set upon its legs. It will be a great ray of hope in the very dismal outlook before us." But Lord Robert did not overlook the great struggle which lies before Austria if she is to tread the path of economic salvation. The magnitude of the task that the Austrian people are facing has been described at some length in the *Economist*. Lord Robert Cecil sums it up concisely in a passage which deserves quotation:—"The moment we get Austria on the road to financial stability we shall have greater difficulty and greater unemployment in Austria probably than she has had for a long time. I do not believe that it can be avoided. As long as a country is content to go on increasing its inflation and diminishing the value of its currency it lives well, because it is living on its capital. The moment it puts an end to that process it lives less well, because it is forced to live on its income, and I am afraid that there is bound to be a period of great difficulty and doubt which can only be solved by the experience as to whether there is sufficient grit in the Austrian people to go through that period for the sake of recovering the solvency of their country." Like Lord Robert, we trust that this is "only a first step on the new way of dealing with European affairs."

The Bevan Case.—So far as Mr Bevan is personally concerned, his case ends with his conviction and sentence. But for a great many other unfortunate people troubles have little more than begun. The shareholders in the City Equitable group of insolvent companies will be required to meet heavy calls, the civil liabilities of directors and others—especially of the manager—will be explored, and there will be many bankruptcies. The extraordinary feature of the whole affair—that which distinguishes it from the Jabez Balfour and Whitaker Wright prosecutions—is that nobody seems to have got anything for himself out of the irregularities which have sent Mr Bevan into penal servitude. Mr Bevan contrived in the course of a year or two, by mismanagement quite incredible in its fatuity, to destroy a re-insurance company which was in fairly good repute, and to bring to bankruptcy one of the oldest firms on the Stock Exchange. Why he did it is a mystery. It was not for personal gain, seeing that he was himself destroyed in the general ruin, and fled the country practically penniless. A common rogue would have bolted with a sackful of plunder. We have pointed out more than once, and now repeat, that the City Equitable failure had nothing to do with insurance. The company and its associates failed because the assets had been muddled away. Yet it cannot be denied that the repute of insurance has suffered. Here was a London re-insurance company issuing fraudulent balance-sheets and prospectuses, and so little suspected of wrong-doing that many of the big offices had accounts with it, and went on doing business with it until just before the crash came. If the experts could be deceived in this fashion, of what avail, the public

may ask, are accounts and balance-sheets and auditors' certificates? The reply must be that against fraud there is no sure remedy and no sure protection. Sooner or later detection comes, and with it punishment, but no external precautions or deterrents can wholly restrain those who are not restrained by their own consciences. The City Equitable case stands fortunately by itself as a warning that even in so reputable a market as that for insurance there may for a while exist unsuspected fraudulent chairmen and what Mr Justice Avory bluntly calls "dishonest" managers.

An Empire Currency Scheme.—In an address delivered last Monday before the Manchester Association of Importers and Exporters, Mr J. F. Darling elaborated the scheme for currency co-operation in the British Empire by means of an issue of £1,000 millions of Empire Currency Bills, which he outlined in the *Economist* some weeks ago. Beginning with the austere text, "Bear ye one another's burdens," he proceeded to develop his scheme for a great and elastic edifice of currency based on Imperial and Dominions' debts. Currency based on debt is no new thing in our financial machinery, as the weekly returns of the Bank of England's issue department and of the currency notes account bear witness; but the scale to which Mr Darling's creation is capable of expanding is new in its extensiveness. Mr Darling's objective is a laudable one. He desires to create a credit instrument which will be a balancing factor in trade between the various parts of the Empire, without involving a variation from the normal in the relative value of their currencies. His instrument is also designed to take the place of gold as a link between these currencies. In normal times, the first of these objects is achieved by the rate of interest and the ordinary banking machinery. This new scheme would, as we understand it, postpone any automatic correction of an adverse balance, and delay the operation of a varying rate of interest. Mr Darling began by saying that, among the many things that the British Commonwealth has in common, war debt is now the most prominent, and that "a portion of it could be so handled as to convert it into an instrument for actually aiding the development and trade of the Empire." He proposes to take a portion of the debt of each country, and convert it into Empire Currency Bills. Part of the issue would be in three months' bills, the rest in the form of certificates, subject to three months' notice of repayment to be given by either side. This being done, each country should agree not to issue currency unless against gold or Empire Currency Bills; and "there should be free convertibility as between Empire Currency Bills and the currencies of the participating countries." This seems to mean that holders of the bills could at any time convert them into legal tender cash; but on a later page it is stated that "Empire Currency Bills would be payable at maturity in any of the currencies," &c. Does this mean that they are payable only at maturity? This point is obscure, but important; but Mr Darling apparently means that the bills are convertible at any time into cash, because his whole argument seems to depend on this. For he urges, if we understand him aright, that if his scheme were carried out, and owing to one-sided trade the Australian banks, for example, were full of cash in London and poor in Australia, they could buy currency bills in London, and get currency against them in Australia, and so one-sided trade would continue, instead of being checked and corrected, as now, by the consequent movement in exchange. But, we must ask, in all deference, is it desirable that one-sided trade should be thus encouraged to continue? And even if so, is it desirable, in order to meet a temporary need caused by after-war dislocation, to adopt a scheme which is rich in inflationary possibilities, as Mr Darling in effect admits when he contends that it is "not necessarily inflationary"?

The Swiss Capital Levy.—At the time when the Swiss Socialists' demand for a Referendum on their plan for a capital levy was first put forward, our Geneva correspon-

dent pointed out a vital difference between this proposal and the capital levy advocated by the Labour Party in this country. The object of the Swiss levy (heavier in its incidence than any British scheme) was not the general redemption of Federal War Debts, but the creation of a fund for social assistance. "This latter aim," he wrote, "will probably be the tombstone of the proposal, for the peasant voter is not willing to supply further money to support lazy town folk." So, in fact, it has proved. After an animated discussion, in the course of which something like a panic was created in the minds of the numerous foreigners who had put money into Swiss banks to escape the "inquisitorial" methods of their native countries, the levy has been rejected, on an 86 per cent. poll, by every canton. Votes to the number of 730,534 were cast against it: only 109,434 for. It is worth noting that under the scheme as rejected all limited companies were to be taxed, not according to their reserves, but according to their nominal share capital. Companies possessing more than 3 million francs would hand over to the State 60 per cent. of their shares. Even citizens themselves exempt disliked the idea of giving the State 60 per cent. of the votes in all limited companies. In this respect, as in the steepness of the tax-graduation, and in the object to which the sums received were to be devoted, the plan rejected by the Swiss differs markedly from that put forward in this country.

Coal Resources of Europe.—The third volume of the Report of the Mineral Resources Bureau on the world's coal, coke, and by-products during the war contains an interesting statement of the change which has taken place in the ownership of Europe's coal reserves as a result of the changes made by the Peace Treaties. The figures relate to actual and probable reserves of coal and lignite in seams of one foot thick and upwards within a depth of 4,000 feet, and are based upon the estimates of the International Geological Congress of 1913. No attempt has been made to bring up to date this estimate of reserves, and the amount of coal raised during the war has, of course, been ignored, forming, as it does, a very small part of the total resources. The change in ownership is shown in the following table:—

	Pre-War Resources.		Post-War Resources.	
	M. Tons.	% of Total.	M. Tons.	% of Total.
Germany	207,930	40.2	148,248	28.7
United Kingdom	165,387	32.0	165,387	32.0
Russia	60,170	11.6	1,588	0.4
Austria-Hungary	43,095	8.3	998	0.2
Belgium	11,000	2.1	11,000	2.1
France	8,808	1.7	18,577	3.6
Norway (inc. Spitzbergen)	8,750	1.7	8,750	1.7
Spain	5,537	1.1	5,537	1.1
Other countries	7,735	1.3	7,748	1.4
Czechoslovakia	..	..	24,493	4.7
Poland	..	..	68,829	13.3
Ukraine	..	..	55,657	10.8
	517,212	100	517,212	100

Thus Germany has fallen from first to second place, while Poland now comes next to Germany in importance. French resources have been doubled, but her reserves still remain a comparatively small portion of the whole. The Report of the Bureau is a valuable summary of the world's situation, and is published at what is in these days of expensive Blue-Books, a comparatively low figure. We cannot, however, congratulate the Bureau on the sketch maps enclosed with the Report. There is great need of an adequate series of maps showing the mineral deposits of various countries of the world, and it would greatly have enhanced the value of the work of the Bureau if they could have taken the opportunity to supply this want.

Retrenchment in Brazil.—Judging by the brief and obscure summaries of his first Message which have reached London, Senhor Arturo Bernardes has made a good beginning of his Presidential term by calling attention to the gravity of the position of the Federal finances, and proposing drastic reductions in expenditure, together with an improved control of it, and a more rapid and effective collection of revenue. Comment on his figures must be deferred till the full text is before us, but the estimated deficit apparently exceeds that of the previous

Budget, which was the largest on record, and there has also been a great and recent increase in the total Federal Debt. The over-issue of paper currency characteristic of Brazilian finance has continued, and the amount in circulation, which at the end of 1920 was 1,709,113 contos, is 2,226,000 contos at the present time. The President's proposals include a much more stringent collection of the taxes and control of expenditure, the reduction of all the Budget estimates, the total abolition of supplementary credits, and the suspension for the next two years, as far as possible, of all public works. He further proposes to provide for the service of the External Debt by the establishment of a Commission and a special fund, from which remittances are to be made to London bankers monthly. He has also removed the restrictions on exchange transactions which consisted in their supervision by special Government inspectors attached to the banks. In spite of alarming reports of disorder and impending revolution, the country, save for a few purely local disturbances, is quiet, and the Congress is believed to be disposed to support his plans. The Message also holds out hopes of a new banking system, so devised as to develop all the forms of the national production. Such a system was outlined by an eminent Brazilian economist, Senhor Ramalho Ortigão, in a book reviewed two years ago in our columns, partly as a means of virtual deflation by so increasing the product as to enable it to overtake the monetary circulation. If the system can be established and kept clear of political influence, it should go far to develop the latent resources of the country and ensure the service of the public Debt.

Shareholders' Rights in New Issues.—A Stock Exchange correspondent writes:—The recent issue of new shares by the Malayalam Rubber Company at 20s per share, made at a time when the price was standing at about 24s in the market, gave rise to a good deal of complaint on the part of shareholders that they had not been invited to take part in underwriting what was a probable success from the start. Less might have been thought of the matter had it not been for the fact that the Malayalam Company, in sending out notices, did not provide shareholders with forms of application for any excess shares which might be left over in respect of rights not having been taken up by some of the proprietors. As everyone knows, there are always some people who throw away a company's circulars into the wastepaper basket without looking at them at all, and this is one of the most usual ways whereby shareholders lose advantages offered them through the issue of new capital. There are other reasons as well which cause people to refrain from applying for new shares, one being, of course, the fact that they may not want to put more money into a company, and they fail to realise that a sale of the existing shares is frequently advisable in order that the latter may be replaced by the cheaper new issue. Therefore, it is considered, as a rule, only fair when a new issue is made at a low price, to include amongst the other forms sent to the shareholder one paper giving him the right to apply for shares over and above those to which he is strictly entitled according to his proper proportion. The Malayalam Company, however, did not do this, and the omission has been the subject of a good deal of comment amongst shareholders. We believe, however, that private explanations were advanced to the effect that the Malayalam new issue had all been settled some time before the activity in the price of the 24s, and that, when the details were being arranged, there seemed to be little chance of shareholders wanting to take more than their proper proportion of shares. The instance shows how essential it is for directors to exercise care in the making of new issues. So far as underwriting is concerned, it is quite possible that the offer of these to a large body of proprietors would be a matter of practical impossibility. Underwriting is done in fairly large blocks; holders, as well as large, however, would insist upon a participation if underwritings were to be offered to shareholders, and to effect this would be to render an expeditious issue extremely difficult to make. We must say, however, that there is every reason why shareholders should consider themselves entitled to the right to apply

for more shares than their strict proportion if there are any of such shares left over. As a matter of fact, directors nowadays treat their fellow-shareholders with greater consideration than used to be the case in the past, but a matter like this of the Malayalam issue is a reminder that directors need to exercise extreme care in the way they go to work over a new issue, particularly when shares are offered at a price materially below that ruling in the market at the time the new shares come out. What overplus of shares there may be in such a case is the property of the proprietors as a whole. So general is the recognition of this essential fairness that the ordinary practice is for shareholders to be invited to apply for such shares, and of its justice there can be no room for argument.

Dorman, Long.—Again a heavy fall in profits are recorded in the accounts for the year ended September 30th last of Dorman, Long and Co., Limited, and the directors find that they are unable to recommend payment of a dividend on £5,999,592 of ordinary capital. The usual 8 per cent. distribution on the £1,500,000 preferred ordinary shares has, however, been made, and £40,000 placed to reserve, although the auditors point out that "no depreciation has been written off the capital expenditure in respect of the year to September 30, 1922." In the table given below profits for the last three years are set out, together with details showing how these have been distributed:—

	1919-20.	1920-21.	1921-22.
Profit	£ 716,013	£ 397,711	£ 157,369
Brought forward	205,852	248,540	239,488
Debt interest	921,865	646,251	396,857
Redemption of 5% debentures ..	37,371	36,286	35,684
Reserve	20,954	10,477	..
Preferred ordinary dividend	200,000	120,000	120,000
Ordinary dividend	120,000	240,000	(nil)
	295,000	240,000	(5 %)
	(10 %)	(5 %)	(5 %)
Carried forward	248,540	239,488	201,173

The balance-sheet shows no striking changes. The balance of suspense account has now been transferred to capital of expenditure account, owing to a settlement with the Government of some outstanding points. Investments, which are given in detail, have grown from £4,656,511 to £5,022,307. Stocks, however, are down from £1,650,504 to £1,080,833. The secured loan at £918,475 is slightly lower by a few thousands, and creditors at £445,685 compare favourably with £975,710 a year ago. The balance-sheet will be found fully analysed on another page. In their report the directors mention that during the last few months there has been an improvement in the demand for coal and pig-iron, and additional blast furnaces have been put into operation. Recently there has been more activity in steel, and substantial orders have been booked for constructional work and shipbuilding material.

Orient Steam Navigation.—A gratifying recovery in profits is shown in the report of the Orient Steam Navigation Company for the year ended June 30th last, the total of £282,600 being easily the highest recorded since 1913-14. The directors' report, like other shipping companies' reports, is not a very communicative document, and gives no indication as to the reasons for the sudden recovery in profits beyond mentioning that the service under the mail contract with the Government of Australia came into operation in September, 1921, and has been regularly maintained. The fluctuations of profits in the past three years may be seen from the comparative table below:—

June 30.	1913-14	1917-18	1918-19	1919-20	1920-21	1921-22
Profit	£ 227,454	£ 166,271	£ 162,062	£ 218,699	£ 164,656	£ 282,578
Brought forward	56,717	112,359	115,073	63,912	118,678	50,167
Deb. int. and fees	284,171	278,630	277,135	282,611	283,334	332,745
Reserve	23,383	22,895	22,561	21,265	18,014	15,123
Repairs and renewals	75,000	50,000	150,000	100,000	70,440	100,000
Pref. div.	25,000	50,000	14,603	14,603	14,603	14,603
Def. div.	10,176	14,603	26,059	78,065	130,110	130,110
	63,701	26,059	26,059	15 %	12 %	12 %
	(55 %)	(15 %)	(15 %)	(15 %)	(12 %)	(12 %)
Carried forward	86,911	115,073	63,912	68,678	50,167	72,909

The dividend on the deferred shares is paid, free of income tax, but is maintained at last year's rate of 12½ per cent. the additional amount available for distribution being used in increasing the reserve appropriation and expanding the balance carried forward. Two years ago £520,440 of the general reserve fund was capitalised, and this account for the increased amount required for deferred dividend at the lower rate in the past two years. This balance sheet, which is analysed in detail in another column, shows no changes of great consequence.

J. and P. Coats.—The report of J. and P. Coats Limited, for year ended June 30th last adds little to the preliminary announcement of profits already published. There was a pronounced recovery in net profits, namely from £2,072,400 to £3,270,900, but the latter is still well below the level of the two bumper years 1918-19 and 1919-20. The profit figure is struck after allowing for depreciation, which last year required £44,300, as against £36,400 a year ago. The balance brought forward from last year's account was £314,200. Profits and appropriations since 1906 have been as follows:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
1906	£ 2,974,088	£ 36,642	£ 1,972,821	£ 294,629	£ 450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000
1909	2,917,667	19,399	2,427,402	32,522	500,000
1910	3,171,464	19,278	2,448,908	25,000	675,000
1911	3,102,952	19,096	2,453,808	42,500	525,000
1912	2,794,072	..	2,449,183	26,440	500,000
1913	2,903,239	..	2,449,183	..	500,000
1914	2,634,388	..	2,225,803	..	30,000
1915	2,598,966	..	2,208,347	..	100,000
1916	3,387,395	..	2,210,016	..	2,000,000
1917	3,360,950	..	2,294,131	..	..
1918	3,171,796	..	2,289,732	100,000	..
1919	3,995,149	..	2,850,638	400,000	750,000
1920	4,164,894	..	3,161,214	150,000	450,000
1921	2,072,449	..	2,911,263	..	Dr 250,000
1922	3,270,913	..	2,911,250	..	250,000

The ordinary dividend is maintained at 17½ per cent., the £250,000 withdrawn from the dividend reserve fund a year ago is replaced, and the balance forward is increased by £109,700 to £423,900. As usual, the report makes no mention of trading conditions in the past year, or of the outlook for the current year. The balance-sheet shows a reduction of £639,300 in creditors, and of £104,500 in depreciation of investments account. On the assets side, advances to subsidiary companies have declined by £300,500 to £7,539,400, while stocks are £151,100 lower at £5,948,200. The "war contingencies fund" remains at £3,000,000, but, as pointed out by the auditors, this is kept against probable loss on certain assets which, although largely affected in value by the war and subsequent conditions, remain at book value.

British Overseas Bank.—The third annual report and accounts of the British Overseas Bank for the year ended October 31st last reveal a slight decrease in earnings. Profits for the year amount to £75,287, as against £102,326 a year ago. The usual dividend of 6 per cent. is paid on the "A" ordinary share capital. This absorbs £60,000, while £15,000 is allocated to reserves, leaving £57,814 to be carried forward. A comparison of the

balance-sheet with that of last year reveals several interesting changes. Deposits are down from £1,793,941 to £1,511,511, while the acceptance business has expanded from £449,117 to £932,421. Cash in hand at £314,185 is £254,641 down on the year, and money at call and short notice at £1,019,431 is £375,569 lower. Balances with bankers abroad is £523,779 lower at £574,965. Advances are higher at £905,075, as against £385,505 a year ago. Other changes will be found in a full analysis of the balance-sheet given on another page.

Castner-Kellner Alkali.—A very substantial recovery in profits is shown in the report for the year ended September 30th last of the Castner-Kellner Alkali Company. The report vouchsafes no information as to the year's trading, or as to the reason for the improvement, but from the table below it will be seen that in the past few years there have been considerable fluctuations in earnings:—

	Profit.	Debiture Interest, &c.	Renewal and Depreciation.	Reserve and Carry Forward.	Dividend.	%
	£	£	£	£	£	
1905	52,358	10,153	23,205	1,000	18,000	4
1909	134,154	9,313	35,000	26,841	63,000	14
1910	164,554	8,986	32,500	44,318	78,750	17½
1911	178,853	8,789	32,500	47,564	90,000	20
1912	177,063	8,682	32,500	45,880	90,000	20
1913	172,348	8,372	32,500	29,382	106,094	22
1914	174,150	8,275	32,500	21,917	116,458	15½
1915	260,805	8,056	50,000	52,749	150,000	20
1916	262,208	7,706	50,000	23,252	181,250	22
1917	263,322	7,648	50,000	45,078	200,000	20
1918	261,339	7,598	50,000	48,819	200,000	20
1919	190,655	7,598	50,000	51,876	130,000	13
1920	283,854	7,598	60,000	48,132	220,000	22
1921	153,086	7,512	50,000	13,706	130,000	13
1922	249,225	7,436	nil	55,494	200,000	20

No addition is made to depreciation reserve account, which stands at £737,500, a figure which the directors consider ample at the present time, but the ordinary dividend is raised from 13 to 20 per cent., and the balance forward increased by nearly £42,000. The balance-sheet shows that a loan from bankers for £65,000 has been paid off, that the property item has been increased by £107,500 to £2,055,400, and that investments have been reduced by £98,000. The position does not appear so liquid as might be wished. Creditors stand at £589,600, while debtors figure at £106,000, stocks at £185,000, and cash and bills at £29,900. The final dividend requires £120,000. A detailed analysis of the balance-sheet is printed in another column.

Ind. Coope's Year.—A year ago Ind. Coope and Co. paid a dividend of 15 per cent. on its ordinary capital of £600,000, and distributed a bonus of £105,000. This year the dividend of 15 per cent. is maintained, but the bonus set aside is but £21,750. But perhaps in view of industrial conditions and general unemployment these results are surprisingly good. The following table shows how the company has fared from 1914:—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve, &c.	Carried Forw'd.
	£	£	£	£	£	£
1914..	110,821	58,332	28,516	..	..	14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,484
1917..	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345
1922..	349,982	55,986	48,879	137,000	60,000	104,482

Gross profits are steadily declining, while the sums set aside for depreciation, it will be observed, have been higher in the past four years than in the preceding period. The directors have wisely added £50,000 to the general reserve, bringing that item up to £400,000, while the usual allocation of £10,000 has been made to debentures redemption fund, bringing total reserves up to £510,000. An interesting change is noticeable in the balance-sheet. The first item on the assets side, "purchase of business,"

at £1,814,717, disappears, and is replaced by "freehold and leasehold breweries, &c.," at £1,497,915. At the bottom of the balance-sheet goodwill is shown for the first time at £375,000. Other details in the balance-sheet will be found analysed in our usual column. It is announced that the remodelling of the company's big brewing plant is almost completed.

The Salvador Railway Report.—The Salvador Railway is at last recovering from the adversity which it has experienced since the outbreak of the European war. During the year ending June 30th last it had fresh difficulties in the shape of interruptions to traffic through "wash-outs" and landslides, which reduced the gross receipts to £177,747, against £199,501 in 1920-21; but the working expenses were reduced in a greater proportion, and were £142,404 against £174,936, so that the profit rose to £35,343 against £24,565. Passenger traffic receipts decreased by £7,399, owing to the above-mentioned interruptions, goods receipts by £17,699, though there was an increase both in the tonnage and the receipts of the export traffic, owing to the exceptionally abundant coffee crop, but the increase here was more than counterbalanced by a decrease in local and especially in import traffic. The railway, moreover, had to face increased competition by road traffic between Sonsonate and Santa Aña, and still more between the neighbourhood of the capital and the port of La Libertad, which the Government are doing their best to develop. This competition was met last April by a readjustment of export rates, which, on the whole, was attended with success. But for the current year the outlook is much more hopeful. The traffic receipts from July 1st to November 25th were £54,405, an increase of £7,841, or nearly 17 per cent. over those for the corresponding period of last year; the coffee crop is promising, though it may not reach last year's total; and, when the pending negotiations with American financiers for the settlement of the State Debt are completed and the new American loan issued, the company will obtain payment of its overdue subsidy of £44,000, with more than four years' accrued interest. The mortgage debentures at the end of last year were at 25½, the prior lien at 64½; they now stand respectively at 42½ and 72½.

Van Ryn—Robinson Deep.—Our mining correspondent writes:—Developments in connection with these two undertakings strikingly reflect the amelioration which has been effected in operating conditions on the Witwatersrand. Not so very long ago the Van Ryn Gold Mines Estate—which has already paid 37 yearly or half-yearly dividends—might have been classed among the "dying mines" of the Rand. The recent reduction in working costs brings back into the ore reserve estimate eliminated as unpayable, the total being now placed at 1,234,100 tons. This in itself would be sufficient to keep past the company has treated increasing quantities of what is termed reclamation ore—that is, material previously left behind for one reason or another—together with any fresh discoveries which may be made incidentally. The procedure of replacing this ore with old tailings enables it to be extracted without risk of the workings caving in. Of the 400,000 tons taken out of the mine during the twelve months ended June 30th last, 38 per cent. consisted of reclamation material. Under the prospective "life" of ten years, and future dividends are expected to be at a higher rate than those of recent periods. As regards the Robinson Deep, it may be recalled that at the time of issue of the last annual report the prospects appeared anything but hopeful. The company had a debt of £300,000, and there were arrears of as much as 23s 6d. The market quotation of these shares represented less than the sum of the unpaid dividends, while the "B" or ordinary were classed in the "rubbish" category. During the current half-year, however, the monthly profits have expanded to over £35,000. The change in the position has encouraged the formulation of a scheme of financing under which £250,000 of debentures are to be issued. Concurrently, a payment of 4s per share on the preference is announced. Dividends on the ordinary are expected to commence in about a couple of years' time.

tures are to be issued. Concurrently, a payment of 4s per share on the preference is announced. Dividends on the ordinary are expected to commence in about a couple of years' time.

The Luxembourg Iron Industry.—A correspondent writes:—Cooped in as she is between the great iron-producing area of Lorraine and the important Belgian industries, Luxembourg has a difficult task in disposing of her iron and steel output. She has proved herself the equal to France as to price and general sales conditions, but she is always handicapped for exports in comparison with Belgium. And without exports the iron industry of Luxembourg would die. A certain tonnage still finds its way to Germany, but, like France and Belgium, Luxembourg cannot expect to have big dealings with the Reich so long as exchange difficulties exist. Under these conditions it is satisfactory, from the country's point of view, that an optimistic attitude can be taken by the *Acieries Réunies* of Burbach Eich Dudelange Arbed, the chief associate in the *Echo de l'Industrie*, of Columeta selling group, and that the *Echo de l'Industrie*, of Luxembourg, can write that if only the question of coke supplies were solved, the national industry would never have to look back. But the paper has complaints; the coke shortage, it writes, not only threatens present output, but jeopardises the future in causing furnaces to be extinguished. It is more to be deplored because several big rail contracts are in view, and Luxembourg stands a chance of receiving her share of the orders. Certainly, present prices are not high, but that is not the paramount question at present. Iron masters want to have a sufficiently big business to enable them to place the smallest proportion of overhead costs against each ton of produce. The chairman of the Arbed company, after stating that results for the financial year 1921-1922 have been as a whole slightly worse than those of the previous year, adds that an improvement has set in during the latter months. It has permitted the making of 15,432,000 of profit and the allotment of 120f to each founder's share. The present situation, without being styled as brilliant, can nevertheless be classed as relatively satisfactory. Fuel difficulties of the company have not been of a special nature, owing partly, no doubt, to the possession of coal mines. Output for the year has been as follows:—Mines, 1,748,000 tons; coke at Burbach, 297,000 tons; pig-iron, 730,000 tons; basic and open-hearth steels, 735,000 tons; iron and brass castings, 16,617 tons; steel castings, 2,753 tons; and work in construction shops, 6,621 tons. The sub-company, Eschweiler Bergwerksverein, at the same time produced 1,869,000 tons of coal, 78,000 tons of patent fuel, 516,000 tons of coke, 44,000 tons of chilled pig-iron, 7,000 tons of puddled iron, and 56,000 tons of rolled and finished steel products. The associated concerns which have done satisfactorily are the *Sé. Métallurgique des Terres Rouges* (not so well as last year); the *Sé. Felten et Guillaume*; the *Sé. Talleres Metalurgicos* (not yet quite as it should be); the *Clouterie et Tréfilerie des Flandres* (success im- paired by a three-month strike); the *Sé. Charbonnière* paired by a three-month strike); the *Sé. d'Helchteren et Zolder*. In the latter concern's property new shafts are being bored. In a few months the full plant of the Brazilian associate, the *Companhia Siderurgica Belgo-Mineira* will be in running order.

Life Assurance Liquidations.—A correspondent writes:—The compulsory liquidation of a life assurance company is a very rare occurrence in this country. The last, until quite recently, was that of the Briton, Medical and General, which took place in the year 1893, when the policies and assets were ultimately turned over on an agreed basis to the Sun Life Assurance Company of London. There is, therefore, some excuse if the officials at present concerned in the liquidation of a company are not familiar with the procedure. Probably that is why the liquidation of the National Benefit Assurance Co., Limited, which is now in progress, appears to have been so far, conducted on somewhat irregular lines. Up to the present the liquidation has followed the directions of the Companies (Consolidation) Act, 1908, whereas, as the law

stands to-day, Section 15 of the Assurance Companies Act, 1909, lays down the full procedure for winding-up assurance companies, and limits the intervention of the Act of 1908 to the provision of the machinery to be used in a liquidation under the Act of 1909. A meeting of the creditors of the National Benefit Assurance Co., Limited, was held on October 31st last. Forms of proof and for giving general and special proxies were enclosed with the notice convening the meeting. Now the Assurance Companies Act, 1909, makes it clear that in the liquidation of an assurance company the policy-holders have to be treated on a special basis. They are not ordinary creditors. The Act of 1909 provides that, where an assurance company transacts various classes of business, the funds of each class must be kept separate; so that it would be apparent, at a glance, if any of the funds had been misappropriated or used for paying claims of any other class of business or for any other purpose. It is quite certain that to invite life or other policy-holders to fill in an ordinary form of proof designed for creditors in an ordinary bankruptcy is entirely wrong. It is not even possible for a policy-holder to fill in the exact amount of his claim under his policy without carrying out the provisions of Section 17 (1) of the Act of 1909, which orders that where an assurance company is being wound up by the Court, or subject to the supervision of the Court, or voluntarily, the value of a policy of any class, or of a liability under such a policy, requiring to be valued in such winding-up, not, be it noted, for any one purpose, but for all purposes, shall be estimated in a manner applicable to policies and liabilities of that class, as provided by the sixth Schedule to the Act. If, then, we turn to the sixth Schedule, we find separate rules for valuing policies in each of five distinct classes. Class "A" deals with life policies and annuities, and Class "E" with bonds or certificates, which, of course, includes bond investment policies. How is an individual policy-holder to obtain the value of the liability of the company to him under his policy without putting himself to great expense by consulting an actuary who, in his turn, would have to obtain directions through the liquidator from the Court as to the method he has to employ in making his valuation? In sending out notice of meeting to every policy-holder, the Senior Official Receiver sent, as we have said, forms of proof; but the seventh Schedule of the Assurance Companies Act, 1909, makes it clear that the value of the liability of a company in liquidation (except voluntary) to each policy-holder must be calculated by the liquidator, and, of course, by actuaries employed by him, acting under the directions of the Court. This raises the question of whether the meeting was not so irregular as to be invalid, but it is not suggested that it should be impugned; because, in fact, the resolutions adopted were, in themselves, quite reasonable and proper. It must not, however, be accepted as a precedent. Liquidation of a life office, without a satisfactory arrangement for the transfer of the business, is an exceedingly serious and disastrous measure, and causes acute distress amongst policy-holders who have attained old age, and, indeed, amongst all policy-holders whose policies have a duration of more than a very few years. It should be contemplated, even in a bad case only, after the utmost consideration for the policy-holders' interests, and in the certainty that in no other way can anything be saved for them.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that the weather during November was exceptionally mild and dry, and very favourable for all outdoor work, the land working freely. Cultivation and sowing was possible throughout the country all through the month, and great progress was made. This work is in most places now well forward, the fine weather having permitted the arrears due to the protracted harvest to be largely overtaken. The open weather allowed stock to remain out practically to the month-end, an appreciable saving of winter keep being thereby effected. The lifting of potatoes was completed under favourable conditions. The tubers generally are large and of good quality. The yield per acre over the whole country is estimated at 7.1 tons, or 1½ tons per acre more than last year, and rather more than 1 ton

per acre above the average of the ten years 1912-21. This year's yield is the highest recorded since these returns first collected in 1885, the previous best being 6.9 tons per acre in 1908. The total production on agricultural holdings in England and Wales is estimated at 3,986,000 tons, or more than a million tons greater than in 1921 and 50 per cent. above the pre-war average. Both cattle and sheep have been well suited by the mild, dry conditions which prevailed during the month. The open weather permitted stock to remain in the fields, and in consequence the supplies of winter keep have been greatly conserved, the prospects now being quite satisfactory although hay, and to a lesser extent straw, is still in short supply in many places. On the whole, sheep are in rather better condition than cattle, which in some places are rather below average condition owing to the poor quality of the grass. Lambing is now in full swing among Dorset Horn flocks, and the fall of lambs is considered to be satisfactory. There is an adequate supply of labour for all requirements. Although farmers have not been discharging men to any extent the arrears of autumn work are being overtaken, and there are, on the whole, rather more casual labourers out of employment than a month ago.

The Rouble Exchange.—At the meeting of the Communist International in Moscow on November 14th, Lenin delivered an address in which he declared that the rouble had been stabilised. Next day (November 15th) the *Izvestiya* announced the issue of a new currency in 1923; the rouble of the new issue being equal to 100 of the 1922 roubles—which itself was 10,000 of the old roubles. This measure is declared to be merely "technico-practical." The following table of official quotations issued by the Exchange Rates Commission may be read with these facts in mind:—

		Value in 1922 Roubles of		
		£ Sterling.	U. S. \$.	10 Gold Roubles.
September	18.....	3,100	710	3,450
"	19.....	3,000	690	3,375
"	25.....	3,200	722	3,500
"	28.....	3,275	730	3,600
October	2.....	3,425	775	4,000
"	4.....	3,526	795	4,100
"	6.....	3,870	873	4,500
"	12.....	4,125	931	4,800
"	13.....	4,300	970	5,000
"	19.....	4,730	1,057	5,500
"	21.....	5,160	1,164	6,000
"	23.....	6,800	1,500	8,000
"	26.....	6,510	1,450	8,000
"	28.....	6,900	1,600	8,400
November	1.....	7,310	1,650	8,500
"	8.....	7,310	1,650	8,700

In pre-war currency the official rate of exchange on November 8th was thus 73,100,000 to the £. No wonder the Russian beggar now asks for a "little million."

Debt Conversion.—In a statement issued by the Chancellor of the Exchequer it is stated that the total conversions of Exchequer Bonds, National War Bonds, and Treasury Bonds effected since March 31, 1922, under the various options amounted to the nominal sum of £27,970,419, bearing an interest of £2,464,391. These were exchanged into Conversion Loan, Treasury Bonds, and War Loan aggregating £562,194,268, with interest charges of £21,622,955. Exchequer Bonds for £14,476,628 have been exchanged for £19,688,214 of Conversion Loan. National War Bonds to the total of £199,036,335 have been affected, £70,509,029 going into Conversion Loan and £14,233,521 into 4½ per cent. Treasury Bonds. The 5½ per cent. Treasury Bonds lose £214,457,456, having been converted into £313,107,885 of Conversion Loan. Although interest charges are lower, it will be noticed in examining our National Debt table, given on another page, that our national liabilities have increased by over £134 millions.

Cotton Trade 'Short Time.—Our Manchester correspondent writes:—Although the depression in the Lancashire cotton trade is still very acute, the proposal to extend the organised short-time movement in the mills using American cotton has not been carried. Since the end of September the spindles engaged on American cotton have

run only 35 hours a week instead of the usual 48. Three weeks ago it was suggested that the curtailment of output should be increased by working the mills only 24 hours a week. The ballot on the proposal, however, showed only 69 per cent. in favour of the scheme, whereas, according to the rules of the Master Spinners' Federation no short-time proposal can be put into operation without the consent of the owners of 80 per cent. of the spindles. This result does not indicate that trade is any better, but numerous companies want to be allowed to make their own arrangements as to restricting yarn output. Financial difficulties have increased during the last two or three months, and to some extent prices of yarn and cloth are being weakened by the unloading of bankrupt stocks. It is understood that the employers' associations are in negotiation with the leading banks in order to ascertain if some arrangement can be made to prevent forced selling of goods.

Japanese Trade and Finance.—Cabled advices from Tokyo state that stringency developed in the short loan market towards the end of the month, due partly to an outflow of money to Osaka, and partly to the fact that some banks had been a little too liberal in lending money for a long period. On the last day of the month the rate for short loans rose to 11 per cent., but fell suddenly to 9 per cent. on December 1st, owing to large interest disbursements and loan repayments by the Government. On November 29th the Nippon Sekigen Bank, a small bank in Kyoto, with a paid-up capital of 1,850,000 yen, suspended payment. This failure is said to have arisen through the financing of rice speculations. The event, however, has had and will have no effect on the money market. Stock markets continued to be dull during the latter half of November, and the silk market, after a period of activity, relapsed into quiet. In view of the continued inactivity of the cotton yarn market, cotton spinning companies have undertaken a voluntary restriction of production. At November 30th the note issue of the Bank of Japan was 1,241,000,000 yen, and discounts and advances 324,000,000 yen, as compared with 1,283,000,000 yen and 227,000,000 yen respectively a year ago.

UNITED STATES.—BETHLEHEM — MIDVALE STEEL
MERGER—STOCK DIVIDENDS—COTTON GINNING.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 27.

NEW YORK, November 27.—THE Bethlehem Steel Corporation's recent acquisition of the Lachawanna Steel Company proves to have been the first step—as many authorities surmised at the time—towards a much larger combine of “independent” steel interests. The Bethlehem now intends to purchase most of the properties of the Midvale Steel and Ordnance Company, and of the latter's subsidiary, the Cambria Steel Company. The respective boards of directors have authorised the merger, and the proposal will in due course be submitted to the stockholders for approval. Assuming that the deal will be consummated, the consolidated companies will have a total capitalisation in stocks and bonds of approximately \$456,000,000, thus ranking second only in that respect to the United States Steel Corporation. According to present plans, all of the Midvale properties are to be taken over with the exception of the ordnance plant at Nicetown. The latter is to be operated by a new and separate company, whose stock will be distributed *pro rata* among the present Midvale shareholders. In payment for the properties to be acquired, the Bethlehem Steel Corporation, it is officially stated, will issue about \$97,650,000, par value, of Bethlehem common stock, of which \$95,000,000, par value, will go to the Midvale company for distribution, on dissolution, to the latter's stockholders, and the balance to the holders of Cambria stock not owned by the Midvale company. Midvale stockholders are to receive \$95, par value, of Bethlehem common stock for each two shares of \$50, par value, of the Midvale

company stock, together with a *pro rata* share of the stock of the new company to which the Nicetown plant and the assets appurtenant thereto are to be transferred. The Bethlehem Corporation will assume the bonds and other indebtedness of the Midvale and Cambria companies. Through the acquisition of the properties mentioned, it will secure plants at Coatesville and Johnstown, Pa., and Wilmington, Del., besides important developed iron ore properties in Michigan and Minnesota, and coal properties in Pennsylvania. The merger is expected to result in a material reduction in operating costs, and will enable the Bethlehem corporation to produce important lines which it does not now manufacture, such as wire and wire products, steel freight and mine cars, steel wheels, boiler tubes, agricultural implement parts, and, in fact, all the so-called commercial steel products, with the exception of pipe and seamless tubes; the corporation is planning to build a plant at one of its existing properties to manufacture both of the last-named products. It is evident, therefore, that if this deal is put through, as seems likely, the Bethlehem will become a much more formidable competitor of the United States Steel Corporation than heretofore. Bethlehem's present annual ingot capacity of 4,800,000 tons will be increased to 7,600,000 tons by the Midvale-Cambria purchase, while the combined investment in property and plant, less depreciation and depletion, is figured at about \$465,500,000, and the aggregate net quick assets at approximately \$133,700,000.

During recent weeks stock and cash dividends have been declared on a scale never before known to Wall Street. A reliable compilation, covering the past month, shows that more than 40 corporations, engaged in many different lines of trade and industry, have made such distributions to stockholders, totalling about \$1,119,000,000. By far the greater part of that amount was furnished by oil concerns, particularly various Standard Oil companies. The Standard Oil group alone has distributed to stockholders this year to date the vast sum of \$882,000,000 approximately, in the shape of cash dividends, rights and stock dividends, according to trustworthy statistics which also show that in the 10 years from 1912 to 1921, inclusive, the same group of companies distributed a total of \$1,507,632,568 in the forms indicated, making an aggregate of nearly \$2,390,000,000 since the dissolution of the old Standard Oil Company of New Jersey in 1911; the cash dividends declared this year have amounted to \$128,800,000, in round numbers, the largest total for any years since the different units of the former Standard Oil Company began to operate as independent concerns while their stock dividends have likewise established a new high record.

The widespread stock dividend movement has aroused a great deal of curiosity. Explanations given are numerous and varied. Officials of the companies concerned have invariably stated that the stock dividends, ranging all the way from 10 to 400 per cent., were declared in order to make the shares more popular with the investing public. In the case of nearly all corporations which have announced such dividends, their stocks were selling at high levels; by dividing the shares into smaller units, prices of the latter have been brought down to levels within the reach of the average investor. Practically all of these companies made huge profits during the war. Under the old excess profits tax law corporations were permitted to make a normal return of 8 per cent. on their invested capital, the latter term being construed to include surplus and undivided profits. To escape the heavy excess profits tax, corporations piled up surpluses. The repeal of that law as of last January 1st, however, removed the danger of onerous taxation, and, together with the United States Supreme Court's subsequent decision that stock dividends are not taxable, left corporations in a position to distribute undivided profits without fear of taxation. Still another reason is said to be found in the provision in this year's tax law, which makes it possible for large stockholders to liquidate their holdings under what is commonly known as the capital investment tax. That section allows holders of securities which have been owned for two years or more to dispose of them, and to pay a straight tax of 12½ per cent. on the profit from the sale of such securities, instead of the regular and heavier sur-

taxes. Notwithstanding all these explanations, the belief is quite general that the stock dividend movement has been prompted, primarily, by the outlook for burdensome tax legislation which corporations fear will be attempted eventually by the more radical elements in Congress.

There is a remarkably long list of companies which in the past fortnight have announced increases in or resumption of regular dividends, together with extra cash distributions to shareholders in several cases. That development clearly reflects the marked improvement in trade and industry since the beginning of this year, and would seem to forecast exceptionally favourable annual reports for 1922.

An interesting fact disclosed by the Census Bureau's cotton ginning report is that this year's yield of the staple has been ginned very rapidly. Up to November 14th the total quantity amounted to 8,869,857 bales, exceeding that of last year to the same date by 1,595,656 bales, or about 22 per cent. The Department of Agriculture has estimated this year's cotton crop at 10,139,000 bales, or 25 per cent. larger than last year's. The total ginned to November 14th is only 45,000 bales below that ginned from the 1920 crop, which proved to be 2,000,000 bales larger than the estimated yield this year. In most quarters, however, the latest ginning figures are regarded as further evidence that the present crop will not greatly exceed, if, in fact, it actually reaches 10,000,000 bales.

**FRANCE. -- THE PREMIERS' MEETING--PAYMENTS
IN KIND AND PRICES--BAKERS AND MILLERS
--BOURSE.**

(FROM OUR CORRESPONDENT.)

PARIS, December 6.

THERE is now little hope that the Budget Bill will reach the Senate in time for it to be passed by both Houses before the end of the year. There is, therefore, a strong probability that the old objectionable system of *douzièmes provisoires*, or votes on account (which was avoided last year only by the device of putting back the hands of the clock, in order ostensibly to get the Bill through its last stages before midnight on December 31st), may again have to be resorted to. Meanwhile, high hopes are being placed on M. Poincaré's forthcoming visit to London to meet Mr Bonar Law and Signor Mussolini, with whom it is sincerely desired he will be able to come to an agreement that will enable the Allies to utilise the Brussels Conference as a means of restoring economic peace to Europe. M. Poincaré, it is known, is going to London with a well-considered and coherent plan for submission to the forthcoming international gathering in the Belgian capital. The details of this plan have been held carefully secret, and it may be taken for granted that many of the statements that have appeared in the French Press as to the nature of the proposals that will be supported by the French delegates at Brussels—particularly as to suggestive coercive measures against Germany—are entirely unauthorised, and in many cases unfounded. Whether this plan will be submitted to the Allied Premiers in detail remains to be seen. What is more probable is that M. Poincaré will merely

submit a series of principles for the consideration of his colleagues, and leave the details to follow as a matter of course. One thing is confidently expected here—that the London meeting will confirm the belief, so strongly suggested by the recent note of the Allies imposing fines on guilty German cities, that a new spirit broods over Downing Street since the fall of Mr Lloyd George, and that there is much more likelihood of a really united Allied front being shown at Brussels than was the case at Spa, Cannes, or Genoa.

Genoa.

Every week brings further confirmation of the belief that the German Government is now deliberately setting itself to render nugatory the plans for securing reparation payments in kind, under the Wiesbaden agreements, as it has nullified the clauses for cash payments under the Peace Treaty itself. A copy of a confidential circular issued by the German Government to manufacturers and others has been published here showing that these traders have been directed to multiply by a co-efficient of 12 their prices for merchandise to be supplied to buyers in this country under the Wiesbaden system for payment of reparations in kind. Statements published by traders doing business with the devastated regions indicate that the quotations now issued by German firms, in response to inquiries for consignments of bricks, tiles, slates, &c., under the Wiesbaden agreements, are so high that it is impossible to take advantage of the mechanism agreed upon by the two Governments. Since November 10th, for example, the price of German bricks for export to France on reparations account has been fixed at 75f (French) per 1,000, taken at the kiln (notwithstanding that the German price is only 50f), which means that the price when delivered at, say St Quentin, carriage included, would be 150f per 1,000, whereas the price of French-made bricks (carriage, &c., included) is only 125f. The obvious inference of the French observer is that the German Government, which is responsible for fixing these prices, is deliberately attempting to *saboter* the Wiesbaden agreements. The latter, it will be remembered, expressly stipulate that German merchandise offered under them shall not be quoted at a price higher than that of similar goods on the French open market.

The city of Paris and its surrounding suburbs, together with one or two provincial centres, underwent the curious experience on Sunday of witnessing the revolutionary principle of "direct action" undergoing application at the hands of practically the whole body of the master bakers of the capital. As is probably generally known the price at which bread can be sold in this country is fixed by the Prefect in each department, in consultation with a local commission of experts, and it has stood for some time at 1f 5c the kilogramme. For some weeks past the master bakers have been agitating for an increase in this price, ostensibly on the ground of the rise in the price of flour, and have been making strenuous efforts to secure the introduction of a sliding scale, dependent on the rise and fall in the price of flour. They insisted, finally, that unless they were allowed to charge an extra 10c a kilogramme, they would have to close their shops, as it was impossible to carry on except at a loss. The Prefect, after studying the question for several days, finally refused to concede the principle of the sliding scale (on the ground, as it has been openly stated, of the possibilities for collusion between the wheat trade, the milling industry and the bakers), but consented to the price of bread being raised by 5c. The bakers retorted by promptly closing their shops at noon on Saturday, intimating that they placed their plant at the disposal of the authorities, if they (the latter) wished to undertake the responsibility of victualling the city, but that they would not continue trading at the price as fixed. The movement was so general that, according to the official figures, out of 2,159 bakers' shops in Paris, 1,071 remained closed.

The authorities promptly accepted the challenge. Notices were issued stating that from the following morning bread would be supplied from the army bakeries, and distributed from the 20 town halls of the city, as well as through the various co-operative societies and other organisations, and before noon on Sunday the bakers formally capitulated and undertook to re-open their shops on the following morning.

The causes of the incident are apparently twofold. On

the one hand, there has been an almost incredible amount of speculation in bread businesses during the past three or four years, owing to the high profits which bakers, like most other traders, have been obtaining. On the other hand, the price of flour, owing to the high profits taken by middlemen, is undoubtedly artificially high. Wheat growers in this country mostly sold their entire crops in bulk in September last, at 84s per quintal, payable on delivery, at the order of the buyer. This system has become general in France during the past three years, and is obviously greatly to the advantage of the milling industry, who are the principal purchasers. The miller is able to save the cost of warehousing, as he takes delivery only when it suits him, and he avoids locking up his capital unproductively, for the time being, as he pays for his wheat only on delivery. Further, by leaving his wheat to dry on the premises of the grower, the miller secures the benefit of a loss of 15 per cent. to 20 per cent. in the weight to be paid for when the grain is delivered.

Flour made from wheat, bought at 84f in September, is already quoted at 108f, and is expected to go still higher—largely owing to the fact, both growers and bakers complain that whereas the selling price of bread is fixed by the public authorities, the price of flour depends on the fluctuations of the Bourse de Commerce, and is always at the mercy of market manipulations. It is not surprising that wheat growers assert that the profits of the French milling industry, which varied between 7 per cent. and 10 per cent. before the war, are now between 18 per cent. and 25 per cent. As matters stand, the recent decree of the Minister of Agriculture which was signed, for the purpose of economising the amount of flour available for bread-making, and which was expected to result in a reduction of 20 per cent. in the price of the product, has apparently had no beneficial effect on the consumer.

The Bourse this week has reacted strongly against the marked depression that was characteristic of last week, and values generally have tended to rise, partly owing to the abundance of money and partly owing to the fact that no further large capital issues are expected during December. French Rentés were irregular, but the Three per Cents. rose sharply from 58.45 to 59.50. Banks generally hardened by a few points, but there were no sensational changes. Railways retained their prices, and Midi was conspicuous in advancing from 806 to 816. Navigation followed the example of London and Amsterdam, Chargeurs Réunis advancing from 482 to 580, and Messageries Maritimes from 210 to 215. Metallurgical undertakings nearly all showed an improvement, though of no very marked character. Tintos moved briskly from 1,742 to 1,800, Boléo from 586 to 602, and Utah from 895 to 939. Royal Dutch, at 22,950, was 300 points up, but Shell remained unchanged, while Steaua Romana declined from 452 to 448.

GERMANY. — CABINET PROSPECTS — FINANCES —
EXCHANGE AND BOURSE — TRADE — PRICES —
CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, December 5.

BERLIN, December 5.—The prospects of Dr Cuno's Cabinet are regarded as good, but the accomplishment of the big programme contained in the Note of November 13th depends mainly upon the outcome of the Brussels Conference, and unless the programme, or some alternative, can be accomplished the Cabinet may have no better fate than its predecessors. In his first speech outside the Reichstag to the Berlin Press Herr Cuno gave no indications of his further plans, and proclaimed somewhat generally for a policy aimed at reviving confidence. The Note of the Ambassadors' Conference about the attacks upon Ally officers will not help the Cabinet. The Note is sharp and humiliating. The Berlin Government has very little authority over what occurs within the States' competence; it is limited in theory by the Constitution, and more limited in practice through the disrespect for the Constitution shown by State Governments, municipalities, and other local self-

December 9, 1922.]

THE ECONOMIST.

1079

government bodies. The grievances of foreign visitors and residents which appeared so prominently in the London Press last week are all due to the belief of the States that they can not only violate the Peace Treaty—that, they hold, being a matter that concerns Wilhelmstrasse, not themselves—but can also, by seizing powers that do not belong to them, violate Federal law. The Federal Cabinet may be guilty of doing too little, but if it attempts to do enough, the States would make worse trouble than the trouble needing remedy.

The Cabinet is reconsidering Dr Wirth's foreign exchanges decree. The decree is evaded and violated. Home sales against foreign currency continue, and anyone can buy foreign exchange in the unrecognised exchange bourses which meet in cafés and private houses. A Bill adapting the Forced Loan to the currency depreciation has been prepared. The possibility of this loan's yielding any considerable sum disappeared when Dr Wirth consented to fix a maximum paper mark yield instead of, as was originally proposed, a maximum gold mark yield collectable in paper marks at the exchange rate of the subscription date. To-day the 70 milliard marks mean nothing. When the law was passed they meant 600,000,000 gold marks, which, though less than the planned milliard, was a considerable sum. New issues of capital in November were 15,223 millions, against 7,187 millions in October. Capitalisation increases accounted for 11,058 millions, new foundations for 1,182.9 millions, and bonds for 2,982 millions. Capitalisation increases in the first eleven months of the year were 34,352 millions, against 16,539 millions in the same months of 1921, but the value of the money was very much less than in 1921.

The Reichsbank's statement for November 23rd sets new records, and the statement for the 30th will probably do the same, because, though the mark has not fallen quite back to its level of early November, the supply of credit and cash to the public has not yet caught up with prices. The November 23rd statement shows this. For the first time on record the increase in Treasury bill discounts (13,795 millions) fell behind the increase in commercial bills (33,851 millions), while the Bank's holding of loan (Darlehns) notes, which represent borrowings on bonds, stocks, and wares, increased by 30,113 millions against Commercial discounts reached 208,735 millions against 1,109 millions a year before, and the loan notes holding 81,226 millions against 5,014 millions. Early in 1921, when money was easy, the loans of the *Darlehnskassen* were being paid off so rapidly that the early disappearance of these emergency credit institutions was expected. Note circulation in the week increased by 61,644 millions to 643,749 millions, and will probably be within sight of a billion by the end of the year.

The Bourse last week was firm, and yesterday it boomed. The *Frankfurter Zeitung's* index for dividend-payers for December 1st shows 400,046 against 335,236 a week before, under the influence of the Cabinet formation, the new firmness of the foreign exchanges, and various industrial commercial developments. English capital, it is reported, is interested in the deal of the Essen Krupps with the Soviet Government, a feature of which is the concession to Krupps of 25,000 desiatines of South Russian agricultural land, which will be turned into a modern farm mechanically worked. The Prussian Trade Ministry's report for November describes slackness in some industries, caused by the public feeling of uncertainty and by shortage of working capital, and the new labour report shows 1.4 per cent. of unemployed, against a minimum of 0.6 per cent. in August. The pre-war figure in winter months was usually between 3.5 and 4.5. The heavy iron industry is suffering from coke and coal shortage. Bourse circles yesterday declared themselves doubtful about the boom, but the public is determined to buy. On December 1st the boom chiefly affected the speculative *Deutsche Erdoel* and *Deutsche Waffen* companies, both of which rose 19,000 points in a few hours. Bonds are firm, the chief feature being yesterday's rise of Colonial Fours, now the dearest of all home bonds, from 1,100 to 2,200. War Loan remains at 80.75. Fours were yesterday 385, 3½ per cents. 260, Threes 951, Prussian Threes 390, and Berlin Fours 110. To-day the Bourse is closed.

Foreign trade statistics are now issued in gold marks.

Figures (in millions of gold marks) for the first 10 months of the year, the earlier months being reckoned back for a gold mark valuation (and probably being unreliable), are :—

	Imports.	Exports.
January	330.4	324.6
February	359.6	297.9
March	563.2	324.1
April	508.0	328.8
May	565.2	391.6
June	564.6	416.6
July	684.8	320.8
August	545.1	242.0
September	421.8	280.4
October	531.7	289.9

The general tendency shown by these figures is towards a slight decline in export values, and towards stability in import values, after a sudden rise in March. In weight, the import figures continue to show large increases, even if coal, which in October increased over September by 330,000 metric tons, is allowed for. All exports in October were 1,540,000 tons, all imports 5,550,000 tons, as against 1,580,000 tons and 4,829,000 tons in September, 1,406,700 tons and 4,676,100 tons in August, and 1,807,800 tons and 4,089,100 tons in June, the last month of a relatively stable mark. It has been shown from here before that there is no reason why currency depreciation should reduce Germany's ability to import, and as the currency depreciation of 1922 had time to exert influence long before October, the above figures confirm this view. It is equally true, and here also the figures confirm it, that the depreciation does not necessarily foster export, the reason being that the home price-level has been permanently far below the foreign, so that competition up to the limit allowed by the limited surplus of goods over the home demand has been as easy after periods of relative mark exchange stability as after heavy falls.

The price rise in November was not quite as rapid as in October, but prices nearly doubled. The *Frankfurter Zeitung's* index for December 1st shows 166,495. The movement and its distribution among classes of goods is:—

	Food.	Textiles, Leather.	Minerals.	Miscel- laneous.	Manufac- tured Goods.	All 98 Commodities.
July, 1914.	100	100	100	100	100	100
Jan. 1, 1920.	1,972	2,611	2,749	1,101	1,465	1,965
" " 1921.	2,019	2,325	2,780	1,776	1,704	2,130
" " 1922.	3,840	5,769	5,178	3,169	3,397	4,751
June 1, 1922.	9,657	9,626	10,141	6,413	6,341	8,317
Nov. 1, 1922.	88,980	153,896	128,982	72,038	57,683	94,492
Dec. 1, 1922.	144,753	266,322	219,395	134,177	118,385	166,495

If the mark's gold exchange depreciation is taken as 1-2,000th, the average gold price is much lower than in 1914; in the five groups it is higher only for textiles, leather, and minerals (but here is below the world-market gold price, which has risen more), and for manufactured goods is little more than half the pre-war price. In the first 11 months of this year prices have risen nearly forty-fold; the dollar exchange index (4.20 marks parity = 100) rose in the same time from 4,476 to 177,677, so that prices have closely followed the mark's external depreciation. They started in January, however, behind world-market gold prices, and remain behind. Stabilisation at the proposed rate of 3,000 marks to the dollar would not now be practicable, except at the cost of a decline of exports. Manufacturers and exporters, who, having successfully adapted themselves to chronic currency depreciation, are not very impatient for stabilisation, will certainly oppose any plan to stabilise at a level which would check foreign sales, and, by bringing the certainty of a price decline, would temporarily frighten off home buyers.

The *Frankfurter Zeitung* publishes further figures to show the increase in the efficiency of labour. In 1913 the output of raw potash salts per man per shift was 24.7 double centers (of 1-10th metric ton); in 1919 output sank to 16.86 double centers, rose to 18.2 double centers in 1920, to 20.53 double centers in 1921, and to 26.77 double centers in the first half of 1922. The pre-war shift was one hour longer than the present. The provisional crops report for Prussia is unfavourable. Bread crops are estimated at 4,947,825 tons, against 6,805,720 tons in 1921, and all grain crops, peas, and beans at 9,117,277 tons, against 11,051,818 tons. An American expert who has

examined the matter states that the reports of this year's decline, and of the general decline since 1914, are very suspicious. Officials declare, and farmers in confidence admit, that individual producers' statistics are often below the truth, the aim being evasion of the *Umlage* requisition. This seems all the more likely because the great declines are recorded in the requisitioned products. The Prussian potato crop is reported at 27,148,900 tons, against 18,558,448 tons in 1921, sugar beet at 8,257,918 tons against 5,641,585 tons, and fodder root plants at 13,532,644 tons against 9,342,424 tons.

HOLLAND.—GERMAN INSURANCE POLICIES—BANK SHARES—FOREIGNERS ON STOCK EXCHANGE—NAVIGATION.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 30.

LIFE insurance policyholders in German companies are experiencing the some disillusion as Swiss and other non-German policyholders in Europe. When a policy for say 18,000 fl falls due, the German company will pay the amount of marks equal to 18,000 fl in 1914, i.e., 30,000 m. At the current rate this is about 11,50 fl. There are about 6,000 of this fortunate class of policyholders, of whom 2,600 insured with the "Germania." The total amount insured may be estimated at 35,000,000 fl, the discounted present value 12,000,000 fl. There have been negotiations in order to arrive at some sort of settlement with aid of the Government, but there is little likelihood that anything like a satisfactory arrangement will be reached.

The shares of our larger banking institutions have declined quite considerably during the last 18 months. The stock exchange value of shares of the Amsterdamsche Bank (outstanding capital 55,000,000 fl) has decreased 27,500,000 fl, of the Bank Associatie (capital 17,000,000 fl) 13,000,000 fl, of the Incasso Bank (capital 25,000,000 fl) 3,750,000 fl, of Marx and Co.'s Bank, in liquidation (capital 12,000,000 fl) 12,800,000 fl, of the Rotterdamsche Bankvereeniging (capital 35,500,000 fl) 16,500,000 fl. Together, the fall in market value of the shares of these banking institutions amounts to 73,550,000 fl. The Amsterdamsche Bank has still the largest reserves in proportion to the stock capital, i.e., 79 per cent. Then the Rotterdamsche Bankvereeniging follows with 53 per cent., De Twentsche Bank with 36 per cent., and the Incasso Bank with 21 per cent. Leaving the Nederlandsche Handel Maatschappij and the two other colonial banks (Nederlandsch Indische Escompto Maatschappij and Nederlandsch Indische Handelsbank) apart, the Rotterdamsche Bankvereeniging holds the lead in respect of the total capital and reserves, with 111,000,000 fl, the figure for the Amsterdamsche Bank being 98,000,000 fl, and for the De Twentsche Bank 54,400,000 fl, and the Incasso Bank 30,000,000 fl.

The question of admitting foreign elements in our national system of banking and stock exchange is one which is gradually acquiring more than theoretical interest. The stock exchange committee drafted a scheme indicating the conditions under which foreigners might be admitted to the exchange, and invited the members to submit this proposal to the committee, a rather curious way of bringing the question on the agenda of the meeting of the members of the exchange. Up till now membership can only be acquired by brokers and bankers engaged in the trade of dealing in securities in Amsterdam and residing there, and being of Dutch nationality. If naturalised, they ought to have resided for the last ten years in this country. The new proposal provided that foreigners could also be admitted if they paid a guarantee of 12,000 fl (which is higher than for Dutch members), and furthermore gave an account of their career, beginning with their coming of age, and accompanied by the necessary documents. Foreigners, it was proposed, should not be entitled to fulfil functions as members of the board. In the case of naturalisation, it was proposed that two years' residence should be substituted for ten. The feeling was very much against the admittance of foreigners (Germans), and the proposal has been rejected by an enormous majority.

The number of vessels lying up in this harbour is steadily decreasing. The total tonnage lying up is 87,500, whilst the aggregate in all Dutch ports is 200,000, being 1.7th of the total Dutch tonnage. Of the Stoomvaart-Maatschappij "Nederland," 13 vessels are not yet in navigation, but of the other steamship companies in this city most of the vessels have found employment again.

ROUMANIA.—TIMBER TRADE SITUATION—SCARCITY OF CURRENCY—EXTERNAL FLOATING DEBTS—LOSSES ON MARK DEPRECIATION.

(FROM OUR CORRESPONDENT.)

BRASOV, November 20.

In spite of the aggravation of the Near East situation, the Roumanian exchange has remained fairly steady this month. Even the recent depreciation of the French franc, which usually provoked a corresponding decline of the lei, was unable this time to affect the Bucharest rate. On the other hand, the sharp appreciation of the lei in Paris affected unfavourably Roumanian timber exports to France, so that the present improving tendency of the French franc signifies a great relief to the Roumanian timber trade. Quite recently important quantities have been sold for French enterprises engaged in the reconstruction of the devastated area, as these enterprises have lost their patience in waiting for the practical carrying out of the Stinnes-Lubersack agreement and prefer to cover their most urgent needs on the Roumanian market, either direct or with the intermediary of Czechoslovak and Hungarian houses. During the last few weeks British timber importers have also made important purchases in Roumania. Part of the timber exported to France and England is being carried over Hungarian, Austrian, and German railways, the depreciation of the exchanges making the transport expenses lower than shipping freights. Moreover, the obstacles and risks brought about by the Near East situation have also contributed to direct Roumanian exports to Continental railways instead of using the natural waterways. However, Roumanian transports consistently avoid Czechoslovak territory, because the tariffs of that country are substantially higher than those of the neighbouring countries.

Although there has been a slow but steady increase in the note circulation since August last, there is still a shortage in the money market. This is quite natural, considering that average prices are about 25 times the pre-war price level, while the note circulation is only about 12 times that of 1914 (including, of course, the amount of roubles and kronen that circulated in the new provinces before the war). Thus, in order to satisfy natural needs, the doubling of the note circulation would be necessary; yet the Government is not disposed to adopt such a monetary policy.

A special financial committee, under the leadership of Mr E. Antonesco, one of the well-known financial experts of the country, is carrying on negotiations in Washington with Mr Mellon concerning the consolidation of Roumanian debts to the U.S.A., amounting to about \$41,000,000. According to newspaper reports, the Government has received a note from the British Government in which the latter points out that, considering the friendly attitude of British financial circles in the matter of the consolidation of the Roumanian floating debts in England, Roumania is under a moral obligation to place her orders for railway materials in England. In its reply, the Roumanian Government is said to have declared that, though at present the Roumanian State Railways cannot afford to make substantial capital investments, still, as far as possible, they will cover their needs from England. The negotiations that took place recently between Sir Basil Zaharoff and the Finance Minister, in Bucharest, gave rise to most fantastic Press comments concerning the lease of oilfields and of the State Railways against an important sterling loan, but, according to official declarations, these rumours have no foundation.

The Government intended to change the fiscal year so as to make it correspond with the calendar year, in substitution of the present system, which is similar to the English system. However, as the Budget for 1923 has not been submitted to Parliament up to the present, it is

probable that the next fiscal year will only begin as usual on April 1, 1923, instead of January 1, 1923. The Budget of the State Railways will be separated from the General Budget.

The establishment of factories is being largely encouraged by the Government; the State Railways allow a reduction of 45 per cent. for merchandise sent by a factory, and it is intended to exempt from taxation those factories which have been founded after the Armistice. Losses on German marks have been very substantial in this country. The population purchased mark notes on a very large scale, because they considered it a good investment, and, moreover, the German national minorities of Transylvania, Banat, and Bukovina have purchased marks in consequence of their political sympathies with Germany. The total losses of Roumanian citizens in consequence of the depreciation of the mark are estimated by the *Rumänische Lloyd* at three to four billions lei.

LATIN-AMERICAN NOTES.

(FROM OUR CORRESPONDENT.)

COLOMBIA.—The present year closes with considerably brighter economic prospects for Colombia, whose trading and financial position has materially ameliorated. The national Budget fixed the estimates of revenues at 28,211,822.37 pesos, but, so far as the year has gone, the revenues have exceeded the anticipated total, while the expenditures have been kept down to a little over 25,000,000 pesos. The special Budget of public credit for the same period was fixed at 7,001,190.96 pesos, to be used for the admission and conversion of the various securities of the public debt, the outstanding amount of foreign indebtedness being little more than £4,000,000 (almost the whole of which is held by British investors), or 15s *per capita* of the population. The service of the debt has been discharged with commendable regularity even during the long-continued depression from which the country had been suffering, and the emptiness of the national Treasury. It may come as some surprise to readers to learn that Colombia has not, even yet, received from the United States the indemnity sum of \$25,000,000 (gold) forming part of the award under the treaty of April 6, 1914. The cash indemnity was to have been paid in instalments of \$5,000,000 each, the first to be remitted "in six months after the exchange of ratifications," which, upon the part of the United States, has not yet taken place. Colombia stands much in need of this money for the prosecution of various projects, including the construction of roads, railways, and the clearing of waterways as a means of improving transportation problems.

Month by month exports have advanced over imports during the past year, and merchants, who hitherto have been compelled to restrict their buying abroad, are once more commencing to place their orders there. Great hopes are based upon the coffee crop, which, it is thought, may reach a value of \$40,000,000. The 1920 crop had an approximate value of \$50,000,000.

A helpful factor in the economic situation of this Republic has been the establishment of a Bank of Issue (drafts, deposits, and discount), with a capital of 10,000,000 pesos, one-half of which has been subscribed by the Government and one-half by the various banks. Known under the name of the Bank of the Republic, and domiciled at the capital, Bogotá, with branches in the Department-capitals and other important cities, the institution hopes to do a growing amount of business, including agency work for the execution of fiscal operations and collaboration in the development of national industries. For its solvency the Government is solely responsible.

ECUADOR.—Something like five years' political tranquility having passed in Ecuador, it was hoped that the economic progress of that country might be permitted to continue without interruption. Unfortunately, disquiet has attended these aspirations, for, once appointment has been in the throes of revolution, and consequent upon the attempts of the brothers Alfredo and Enrique Baquerizo y Moreno to regain political power.

But President José Luiz Tamayo, whose advent to the executive chair took place in August, 1920, has proved strong enough to put down the rebellion; he has banished the two conspirators—one of whom, Don Alfredo, was formerly President. Now they have adopted the neighbouring State of Peru as a centre, whence to conduct plots against the established Government. Those who hold, or who may have held, Ecuadorian securities, will recall the many other disturbances which have seriously interfered with the economic advancement of the State in which they had invested their money—such as the revolution of 1912, when the ex-President Alfaro and his candidates were barbarously lynched.

When, in 1914, the Governments of Great Britain and France complained, through Washington, of the Ecuadorian President's (General Plaza) constant breaches of neutrality, the fault was clearly traceable to German influence; it is believed to be the same now. Immediately General Plaza's term of office was over (1916), Ecuador severed diplomatic relations with Germany, the new President, Dr Alfredo Baquerizo y Moreno, refusing to receive the Emperor's Minister at Quito. But German influence has never dwindled, and is still reflected in all branches of politics, finance, commerce, and industry throughout the State. The great handicap to British trade, and consequently to British influence, has been, and is, the high sterling rate of exchange, round about \$21.10 (before the latest upheaval), while Germany's exchange position has enabled exports from that country to be received at very low figures.

The Ecuadorian Government has for long been financially embarrassed, and unable to find funds sufficient to meet bureaucratic demands. This fact may also have had something to do with, or have assisted, the recent revolutionary outbreak; but over-trading, inflation of credit, falling prices, and general business stagnation have played their part. The country's foreign debt at the end of 1920 stood at 35,834,701 sucres,* the internal debt at 25,647,345 sucres, or a total indebtedness of 61,482,046 sucres. In 1921 this was increased by the addition of 1,353,306 sucres to the foreign debt, and 4,651,066 to the internal debt. The former was due to the interest and amortisation of the previous debt cancelled in 1921, part of the internal indebtedness being due to the same cause. Payments in 1921 on the foreign debt amounted to no more than 474,725 sucres, and on the internal debt to 1,766,838, making the total payments 2,251,563, and leaving a total indebtedness on December 31, 1921, of 65,244,855 sucres.

Letters to the Editor.

CURRENCY AND GOLD VALUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Most people will agree that a State with a currency which has depreciated to the extent that the German currency has depreciated will have to get back to the gold standard by heroic methods instead of by a process of gradual deflation. In your current issue Dr Harthorn suggests that in the case of Germany the existing paper currency should be exchanged against gold at a rate corresponding with the present internal buying power of the mark, and this is said to represent about 1.750th of its former gold value.

In recommending the scheme Dr Harthorn says:—"Looking at this measure from a superficial point of view, it appears as if it would lead to a revolution of the mutual financial obligations of men. But actually nothing is changed in the present conditions, and nobody profits or suffers financially by this measure.....The fact that this restoration of the gold basis can take place immediately and without disturbing economic life cannot be too highly praised."

This is rather too optimistic a view. It would certainly not be held by those whose property is represented by pre-war debts, such as mortgages and other obligations, including pre-war State debts.

* 1 Sucre = nominally 2s. or 50c. U.S.A. (gold).

In the case, for instance, of A, whose estate of 300 acres—or whose factory—is subject to a pre-war mortgage of 750,000 gold marks in favour of B, it is clear that a reorganisation of the currency under which B finds the amount of his mortgage reduced to 1-750th, namely to 1,000 gold marks, will be more likely to be praised by A than by B.

Although during the last two or three years the purchasing power of the interest received in marks by B has been reduced to a negligible amount by the fall in the mark, B has no doubt been hoping for the coming of better times; but he will now be faced with ruin. There is probably no remedy available for this appalling injustice, but the inevitable adoption of some such measure must unfortunately perpetuate the financial ruin of a vast number of individuals, while others will—quite undeservedly—benefit to an equal extent.—Yours, &c.,

London, December 5th, 1922.

P. D. LEAKE.

A LEVY ON CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your last issue Mr. A. Hook, criticising a letter of mine dealing with the capital levy, writes that my statement, according to which the Labour Party and Socialists in general very frequently confuse money with wealth, is "childish travesty of the facts." The entire literature of Socialism shows that those who advocate making the masses prosperous at the cost of the few, labour under the extraordinary misconception that prosperity can be made general by distributing bits of paper. Prosperity means nothing but an abundance of the things men need, such as houses, clothes, food, fuel, &c. That abundance cannot be created, as the Socialists and the Labour Party people maintain, by taking money from one set of people and handing it over to another set of people. It can be created only by having more houses, more food, more clothing, more fuel, &c., by increasing production, and in no other way.

I am afraid your correspondent himself confuses money with wealth. That may be seen not only by his supporting a levy on capital, but by his asking whether it is better to base revenue on income or on capital. Capital is nothing but the machinery of civilisation and production. Capital consists in the main of factories, railways, ships, agricultural lands, &c. A revenue based on capital without regard to revenue may, and probably will, reduce the capital of the nation, will limit the expansion of production, will create scarcity of the consumable articles which people need. The question whether revenue should be based on income or on capital might be countered with the question whether the owner of an orchard should sell his fruit or sell his trees for timber. No juggling with money can create plenty out of scarcity. Plenty is the fruit of industry, not of financial trickery.—I am, &c.,

J. ELLIS BARKER.

East Finchley, N. 2, December 5th, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Labour party seem rather to have lost sight of the fact that those who are called upon to pay high income-tax and super-tax for many years to come are the very ones most likely to be hit by a levy on capital; those who pay the piper should call the tune. Mr Ellis Barker rightly points out that the worker cannot, as it were, breakfast on "Bradburies," and that he cannot get more of the good things of life unless he produces them.

The worker naturally replies that he has no objection to doing so, provided he can be assured of a fair share of that extra production; how, therefore, can this be brought about?

Surely the answer is that "payment by results" should be encouraged as much as possible; that employers should encourage staff training, and so teach workers how to produce more and earn more at the same time.

The Government can play its part by making propaganda to disabuse the worker of some of the fallacies he at present cherishes; as an example: "A piece-worker who achieves a high output is not an enemy to his fellows doing them out of a job, rather he is a friend because

if his output is high his wage will be high, and he will be able to buy more goods of all descriptions, and thus create work for others."

Everybody is agreed that greater output is wanted; the question we now have to hammer out is "how to get it."—Yours faithfully,

Jersey, December 4th, 1922.

W. BRUCE DOUGLAS.

UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your articles on unemployment, and in various speeches made by all parties during the election—so far as I have seen them reported—I have looked in vain for any considerable hope of permanent improvement.

There have been references to the collapse of Europe and hopes of better trade when the exchanges are stabilised, while the palliatives, such as road-making and Tube extensions, are welcomed for what they are worth.

But I notice that the Chancellor of the Exchequer—a business man who is in a position to observe the facts at close quarters—suggested in one of his speeches, and I think rightly, that Great Britain is over-industrialised.

The leaders and theorists of the industrial revolution appear to have set before themselves the aim of making Great Britain truly the workshop of the world. And the world as it was viewed by the great political economists of that time was peopled by a race which they characterised as "The Economic Man." It will be remembered by those who have studied political economy that this economic man was always prompted by motives of self-interest—that is, of what our economists thought he would consider his self-interest. And his self-interest consisted in following the pursuit of wealth—wealth meaning, in a general sense, all the good things provided by our latter-day civilisation.

But it did not occur to the economists that, for instance, the inhabitants of Mexico would forgo the blessings of railways and electric light, and sink back into tribal warfare—forgetting even to finish paying for the railways and electricity with which we had provided them on credit. It would have surprised Ricardo and his friends to know that Russia, having tasted the sweets of civilisation, would, at the bidding of a few strong men, forswear progress and relapse into barbarism—also neglecting to make provision for her debts.

It would further have been a source of astonishment to our political economists if they had realised that, far from welcoming the products of Great Britain with effusion, the countries of the world have in many cases been at considerable pains to repel such products from their frontiers by means of tariff walls—walls raised gradually higher even since the war. Because most nations, as civilisation progresses, wish to develop themselves industrially, and inspired by this desire are willing to forgo the advantage of purchasing British goods which would undersell the produce of their own nascent industries.

Is it not time, then, to face the facts? The old theory no longer fits them, and our industrial system is out of joint in consequence.

We have continued to develop our factories and workshops and encourage our population to be trained industrially in the expectation that customers will always be forthcoming for our goods. Now it appears that our old customers either cannot or will not buy. The countries of Central Europe are impoverished, and handicapped as regards purchases from the foreigner by the collapse of their exchanges; but it must not be overlooked that these very exchange difficulties serve as protection to the impoverished country and help it to make itself independent industrially.

It is calculated that if Russia could devise means of payment, her wants would provide employment for large numbers of factories, not only here, but on the Continent. But her people, having eschewed the capitalist system, cannot make use of the device of credit to obtain goods, and this state of things seems very far from coming to an end.

Then there is China, with her vast possibilities for absorption of British goods, but she is torn by internal dissensions, and the impracticability of obtaining credit bars the way to any considerable expansion. It is true that some day we may experience an effective demand

from these countries; on the other hand, things may drag on as they are.

In the writer's opinion we must make up our minds boldly to alter our theory, and instead of encouraging our young men to hope for full employment at home in an uncertain future, we must aid them to emigrate to those lands under the British Flag where they may expect greater scope, prosperity, and happiness in the development of the Empire. I notice that Mr Baldwin, at the meeting above referred to, indicated emigration as a partial solution of the problem. His statement was received with cries of dissent.

One realises that, after all we have heard about heroes for heroes in their native land, it will not be a popular cry to proclaim that a great mistake has been made, and that Great Britain is no longer able to support in active employment her large and increasing population. But the sooner we make a start with emigration on a large scale, the earlier will some perceptible alleviation of the burden become apparent. I know the difficulties in the way of this policy—the great expenditure necessary in training men for their new career, and starting them on their way, and the suspicion with which the ingress of immigrants in considerable numbers would be regarded in the minds of organised labour in our Dominions. But what are we spending now in the maintenance of hundreds of thousands of workers in enforced idleness, and consequently in a state of decreasing efficiency as industrialists, and progressive heartiness as human beings! In regard to the other point, the obvious truism could be more insistently preached to our fellow-countrymen overseas, that a larger population in their case not only means greater prosperity economically, but also, as the late Lord Northcliffe pointed out to the Australians, a greater measure of safety politically.—I am, Sir, yours, &c.

Berkhamsted, November 27th, 1922.

Books and Publications.

EUROPE'S PAPER MONEYS.*

"No more severe reflection could be passed on the moral and political capacity of the human species than this—Five thousand years after the invention of writing, three thousand after the invention of money, and (nearly) five hundred since the invention of printing, Governments all over the world are employing the third invention for the purpose of debasing the second." So Mr Hirst opens a bright little brochure on the exceedingly depressing subject of the riotous activity of the currency printing presses of Europe. Primarily intended, apparently, for the American reader, this little volume will wile away a pleasant half-hour even for those who have seen at closer quarters the chaos of Continental currencies. It is well-packed with historical illusions. Here is one "I remember reading in the Roman historian Sallust of a financial crisis which was ended by debts contracted in silver being paid off in copper—*argentum aere solutum est*." And again: "A few years before Adam Smith wrote his chapter on money, Frederick the Great, during the Seven Years' War, resorted to the Jew, Ephraim, who coined tin silver:—

Outside noble, inside slim;
Outside Frederick, inside Ephraim.

But Frederick, wiser and more honest than our European belligerents, made it his first care after the peace to restore an honest silver coinage." An appendix contains an article by Mr Hirst, reprinted from the *Saturday Evening Post*, reviewing the Brussels Conference recommendations on the reform of currency and public finance. Mr Hirst writes cogently and pleasantly on the need for what we may, perhaps, call the "de-Ephraimisation" of European currencies.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000

Paid Up Capital ... 1,050,000

Reserve Fund and Undivided Profits ... 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

SOCIALISM REVISED AND REJECTED.*

"EXPLOITATION of the workers," as M. Aftalion points out, is the leading and sometimes the sole idea behind the current Socialist creed, and it is effective because, while in reality every member of society is frequently "exploited," it is used to bind the workers together as a single class. But as he shows its source is the Marxian theory of values, and, now that this is superseded by the derivation of value from utility, he suggests that Socialists may revert to the older position that the existing social order is based on "spoliation." Labour does not produce by itself; it works in conjunction with land, capital, and skilled management, and in the first part of this book he argues elaborately that each of these elements contributory to the product is entitled to a share in its value. If the workers received these shares, they would go where the shares are largest—to the best land, or the most highly capitalised undertakings; and production would fall off. As things are, they probably get all that labour contributes to the product. But in Part 4 he suggests that Socialists may contend that the other shares go to the wrong people, through the institution of private property; for property has for the most part been originally got by violence. Certain elements in it have been legitimately acquired—the rewards, for instance, of skilled management or of invention; but they are now inseparable from the tainted elements, and the taint is not removed by centuries of prescription, or by repeated changes, themselves legitimate, in possession. Besides, much property results, not from individual action, but from the social order, and the mass of knowledge bequeathed by past generations; it constitutes a "social surplus" which Society may justly claim. And anyhow, the owners even of legitimately acquired property cannot justly claim that they or their descendants should enjoy it in perpetuity; the State may fairly buy them out by terminable and gradually diminishing annuities, lasting for three generations, or five at most. Having presented Socialists with this revised theory, M. Aftalion proceeds to contest it in Part III. on the ground that private property makes, after all, for the maximum of social well-being. It helps to secure skilled direction of industry, and to promote saving, both of which operations would present immense difficulties to a Socialist State. Present-day Socialists dispense with the stage which Marx postulated preparatory to the social revolution; they hold that mankind can make the revolution at will. But just now it would be supremely disastrous, as interrupting the recovery from the devastation of the war. The "social surplus," however, may be legitimately reached by luxury taxes or otherwise, and devoted to social reform; and certain industries may be nationalised, though M. Aftalion deprecates their management by the State.

This is a bald summary of a very able exposition, so thorough as to be sometimes redundant, and often throwing fresh light on purely economic matters, as in its analyses of interest and profit, and in the supplementary objections brought forward against Marxism. M. Aftalion is a Professor of Law at the University of Lille, and has made a reputation as an economist. Some of his economic references, however, are not sufficiently explicit, except perhaps for experts: it is not always clear whether he is stating actual Socialist theories, or con-

* "Les Fondements du Socialisme." Etude Critique. Par Albert Aftalion. (Paris). Marcel Rivière. pp. 310. 12 fr.

Fareham Tanneries, Limited.— Authorised capital £63,000, divided into 60,000 10 per cent. cumulative preference shares of £1 each, and 60,000 ordinary shares of 1s each. This is an issue of 42,000 10 per cent. cumulative preference shares at par. Subscribers for preference shares are also offered an allocation of ordinary shares. The company has been formed to take over a tannery, which, we are told, has produced leather for over a century, yet it is somewhat curious that past profits are omitted. The purchase consideration is £30,000 for two tanneries, of which £12,000 is payable in cash, but it is only fair to say that the properties have been independently valued at £30,875. A patent tanning process is also being obtained for £2,580, payable in 1s. ordinary shares. The directors appear to be practical men, but it is doubtful if the issue will appeal to many people outside the immediate circle of their friends.

directors came to the conclusion that they were justified in recommending to you the payment of a dividend of 10 per cent., and I anticipate that you will endorse their recommendation by your vote to-day.

NEW BOOK ON USES OF RUBBER.

I understand that during the next few days the Propaganda Department of the Rubber Growers' Association is issuing a compendium entitled "Rubber," telling where it comes from, what it is, how it is procured, brief story of its discovery and development, its unique qualities and its thousand-and-one scientific, industrial, and domestic purposes. I will read the Rubber Growers' Association's message to rubber shareholders contained therein:—

"Use this book yourself, and use your influence to get others to use it, because it is useful. It performs two functions. It helps to extend the use of rubber articles, it also enhances the value of your rubber investments. Remember, the more rubber articles that are brought into general use the greater the demand for the raw plantation product."

I sincerely trust that shareholders in this company will do their part, and so assist in maintaining the better outlook with which we are faced to-day.

We can congratulate ourselves on possessing a valuable property in Castlefield, the condition of which leaves nothing to be desired; the opinion of our visiting agent, Mr James Murray, is contained in the concluding paragraph of his last report, which I will read:—

"In spite of the general depression of the industry, the estate has been well maintained on first-class lines. It is conscientiously managed and in thorough good order, and I question if there is a better property in the country."

I will take this opportunity of expressing the board's appreciation of the excellent work accomplished by our manager, Mr Gardner, his assistants, Messrs Cumberbatch and Company, the local agents, and all concerned with the property, during this most trying and anxious period.

Mr Harold C. Rendle seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with a vote of thanks to the chairman and directors and to the staff in the East and in London.

MOZAMBIQUE OIL AND MINERAL CONCESSIONS, LIMITED.

FAVOURABLE PROSPECTS—CAPITAL TO BE INCREASED.

The ordinary general meeting of Mozambique Oil and Mineral Concessions, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad street, London, Lieut.-Gen. Sir A. T. Sloggett, K.C.B., K.C.M.G., K.C.V.O. (the chairman), presiding.

The Chairman said: You will be interested to observe that the purchase prices of the concession was satisfied by the allotment of fully-paid shares only, no cash consideration having been paid, thus justifying the vendors' belief in the immense potentialities of your company.

I have no hesitation in saying that if our expectations are fulfilled—and I am sanguine that they will be—the future of this company is assured, and we have good reason to look forward to the greatest prosperity and success. In fact, I am bold enough to say that this company is making Anglo-Portuguese history.

As regards the future finances of your company, you will have observed from the directors' report that arrangements are in progress to meet these, and at a later stage of this meeting I will move a resolution as to increasing the capital of your company. As you are aware, when this company was formed it was capitalised on a most moderate basis, seeing that we have a concession cover-

ing an area of about 29,300 square miles, and to visualise what this area means I should mention that our concession embraces an area just about the size of Scotland.

Captain Lionel Cohen, D.S.O., M.C. (managing director), said: I should like to congratulate the shareholders on the initial success achieved by the company in the short time it has been in existence. If we can follow up the good work already done, with the same energetic consideration for the interests of the shareholders, there can be no doubt as to the very brilliant future that lies before the company.

Perhaps you will also allow me to preface what I have to say in detail, in regard to the work already accomplished, by the statement of a fact of which you are all aware—namely, that this is an Anglo-Portuguese enterprise. Our Portuguese friends are very largely interested, and I would certainly like to state that during the year and a half I have been in Mozambique I have received on your behalf every evidence of goodwill and assistance from the Portuguese Government authorities.

RESULTS OF PROSPECTING.

In order to make our prospecting work as thorough as possible, I engaged seven suitable men as prospectors, purchased tools and necessary equipment, and proceeded to Angoche in the middle of June, 1921.

It was necessary to decide where we should make our headquarters. The company's concession is a very large one, covering over 29,000 square miles. It is situated in the province of Mozambique, opposite the island of Madagascar. It extends from the port of Mozambique to the mouth of the Licungo River, a little north of the town of Quilimane.

Owing to its central coastal position I selected the port of Angoche for our headquarters. The port is about 90 miles south-west of that of Mozambique, and about 700 miles north-east of Lorenzo Marques.

A considerable amount of general prospecting work was done, and various mineral deposits, including graphite, copper and gold, were located. There is also good reason to believe that coal exists within about 50 miles of Angoche, and it is proposed to prospect this particular area by diamond drilling.

Towards the end of last year it became evident that the gold discoveries along the Nahavarra River in the district of Muguvollas and along the Namirru River in the Quilimane district were so important as to warrant the work of our expedition being solely concentrated on them.

FINANCES OF THE COMPANY.

Now, as to the finances of our company, I am pleased to be able to announce that our good friend, Mr Mansfield (of the Trade and General Trust), accompanied me on a visit to Lisbon since my return from Mozambique. Our Portuguese friends there undertook to co-operate with us in finding the additional capital required to finance the purchase and erection of the first dredger, and to field for his success in enlisting the financial, as well as the political, aid of our Portuguese friends and shareholders, as also for his company's own enterprise by increasing their existing large holding in subscribing for 50,000 of the new shares. In regard to this your chairman has given you some information.

I cannot allow this opportunity to pass without paying a well-deserved tribute to the valuable help I have received from our prospectors, including, among others, Mr Valentine, Mr Kent (the discoverer of the Namirru alluvial field), and Mr Green. I am sure that you, ladies and gentlemen, appreciate the arduous and even dangerous character of prospecting work in an unexplored tropical country like that of your concession.

I have always received the most loyal support from these gentlemen, and they are as enthusiastic as I am in regard to the brilliant prospects before this company.

The report and accounts were unanimously adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

REDUCED WORKING COSTS.

DEVELOPMENT OF LOWER LEVELS.

The twenty-fifth ordinary general meeting of the New Modderfontein Gold Mining Company, Limited, was held in Johannesburg on November 7, 1922.

The Chairman (Sir Evelyn Wallers, K.B.E.) said: Gentlemen,—The reports and accounts contain full details of operations during the year ended June 30th last. You will, I am sure, agree that the position reflected is most satisfactory, especially when due regard is paid to the unexpected difficulties caused by the protracted strike of January-March last, and the subsequent revolt, with all its potentialities of disaster. The working profit for the year was £1,167,265, a decrease of £531,787 below last year's record of £1,700,000. This shortfall was partly due to a drop of 136,000 tons in the tonnage milled, consequent on the stoppage of operations in the tonnage milled, but was mainly due to the heavy fall in the price of gold. The average price obtained during the year was £4 19s 11d per fine ounce, as compared with £5 12s 7d for 1920-1921, the revenue accruing from the enhanced price of gold above £4 19s 11d per fine ounce, as against £751,427 for the pre-standard value being £359,583, as against £751,427 for the previous year. A total of 947,000 tons of ore were milled, yielding 9.499 dwts per ton, a decrease in grade of rather less than a quarter of a dwt. This, for the reasons stated in my last year's speech, is a desirable feature. The metallurgical practice at the mine continues to be most excellent, 449,768 fine ounces being recovered during the year, with an average total extraction of 98.6 per cent. Certain small additions were sanctioned at the eastern reduction works, which will further improve the efficiency of the ore treatment plant.

WORKING COST REDUCED.

Heavy and unavoidable expenditure was necessarily incurred during the strike, but, in spite of this, the average working costs for the year show a decrease of 7d per ton milled. This is almost entirely due to the reorganisation effected after the strike, in consequence of which working costs for June last were reduced to 18s 6d per ton milled, as compared with the average of 23s 5d sequence of which working costs for June last were reduced to 18s 6d per ton milled. The total profit for the year was £1,167,265. The balance to the credit of appropriation account at the commencement of the period was £306,848, which, with the foregoing profit and £950 in respect of forfeited dividends, gave a total of £1,492,327 for disposal. This sum has been distributed as follows:—Dividends Nos. 31 and 32, £980,000; Government taxes, £158,907; net capital expenditure, after allowing for Bewaarplaats receipts, £18,824; expenditure in connection with the purchase of ex-enemy shares, £89,057, and balance unappropriated and carried forward, £245,538.

DEVELOPMENT WORK AND ORE RESERVES.

Development operations were pushed ahead vigorously during the first half of the year, an average monthly footage of 2,339 feet being accomplished, but were practically at a standstill during the strike and the subsequent period of reorganisation. As a result more than four months' development was lost, with, of course, a corresponding decrease in the tonnage of payable ore developed, which totalled 975,700 tons, of an average value of 10.7 dwts. The total footage accomplished during the year was 17,677 feet, of which approximately 11,200 feet developed ore, the remaining footage being necessary dead work in connection with the handling of ore. The outstanding feature of the year's work is that, broadly speaking, good values were encountered uniformly throughout the property all along the stretch of two miles from the is that, broadly speaking, good values were encountered uniformly throughout the property all along the stretch of two miles from the eastern to the western boundary. The ore reserves, as recalculated at June 30th last, stand at 8,577,600 tons, of a value of 8.6 dwts over 66 inches, including 393,600 tons of 6.6 dwts value in the form of shaft pillars, which are temporarily unavailable. The increase of .2 dwt in the value is due to a reduction of 2 inches in the estimated stoping width, which reduction is also the chief cause of the decrease of 307,000 tons in the tonnage. Owing to the restricted development to which I have already referred, we were unable to make good this decrease in tonnage during the period under review, but there should be a considerable improvement in this regard during the current year. The mine has now got back into its normal stride, and a substantial improvement is noticeable in the efficiency of our white labour force. The native labour contingent was seriously depleted during the strike, but your mine is a popular one with the natives, who

returned rapidly; in consequence, the position in this connection soon resumed normal. We are continuing to explore every possible avenue of further economy and efficiency in our mining and metallurgical methods, and in the consumption of stores and materials.

MARKED PROGRESS.

During the four months which have elapsed since the close of the last financial year, marked progress has been made, and the monthly tonnage milled has been steady at the excellent level of about 110,000 tons. Working costs have shown a most encouraging continued decrease, the figures for the respective months being:—July, 17s 9.6d; August, 17s 4d; September, 16s 11.7d; and October, 16s 9.6d per ton milled, as compared with last year's average of 22s 10d. The working profits have, as a result, shown gratifying increases, being:—July, £127,913; August, £140,603; September, £144,917; October, £149,671. Development work has been carried out at the rate of over 2,000 ft. per month, the reef disclosures being excellent. The two headings which are being driven from the southern boundary (by the courtesy of the Modder Deep Company), immediately to the south of the proposed new shaft, to which I shall refer in a moment, are also proving good values.

SCHEME FOR LOWER LEVEL ORE.

A comprehensive scheme has been adopted for the exploitation of the ore in the lower levels of the mine, i.e., below the 14th level. For this purpose it is proposed to sink a circular shaft in the south-western portion of the property, at a point marked on the plan accompanying the report in your possession. This shaft will cut the reef at an estimated depth of about 2,700 ft. At the same time, two inclines will be sunk on the reef from the 14th level, the eastern starting from the bottom of the present circular shaft, and the western in the line of section of No. 2 incline, furnishing an early connection with the new shaft. This lay-out, when completed, will provide favourable means of speedily and economically exploring the remaining undeveloped area of the mine. Ore hoisted through the new shaft will be sent to the existing mills by surface haulages. The estimated cost of the work contemplated is approximately £300,000, which expenditure will be spread over a period of five years. Your board is satisfied that, in this way, we shall be able to maintain the mine in its present advantageous position as regards ore reserves, and, when the upper levels are exhausted, treat the ore in the lower levels of the mine with the maximum efficiency and economy. In view of the present satisfactory condition of the mine as regards development and reserves, there is no need to commence shaft-sinking operations until about June next. In the meantime, preliminary work is being carried out to enable the actual sinking, when it is started, to be completed as cheaply and as rapidly as possible.

EX-ENEMY SHARES.

I am glad to be able to report that the matter of ex-enemy shares, to which reference has been made on previous occasions, has been finally settled on a satisfactory basis.

In view of the magnitude and responsibility of the financial arrangements involved the completion of this long-outstanding and very important matter will commend itself to you as having been effected in a very satisfactory way.

From my remarks you will have realised that your mine is in an exceedingly sound position, and that its future prospects are very favourable. This is in no small measure due to the excellent work done during a most trying year by the consulting engineer, Mr. Stuart Martin, the manager, Mr Miles Sharp, and the staff at the mine. Your board wishes to record its appreciation of these gentlemen's services.

In conclusion, he moved the adoption of the directors' report, balance-sheet and accounts for the year ended June 30, 1922.

Mr S. C. Black seconded, and the motion was carried unanimously.

STRAND HOTEL, LIMITED.

COMPANY'S PROSPERITY MAINTAINED.

The fifteenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 4th inst., at the Trocadero Restaurant, London.

Major Montague Gluckstein (the chairman) said that the accounts for the year ending September 30th disclosed a continuance of the prosperity which the company had enjoyed since it commenced trading 13 years ago. During the year under review they had been able materially to reduce their charges to the public in respect of both food and apartments. As to the latter, their present inclusive charge was for a single room 9s 6d, and for a double room 16s 6d. The reductions had been made in spite of the fact that the demand

BLANVON COMPANY.—The directors announce that a dividend on the preference shares for the half-year ending 31st inst. will not be paid.

RICHARD HILL and Co.—The directors recommend a dividend on preference shares at 6 per cent. per annum, less tax, for half-year to Sept. 30th, but regret that, for first time in history of company, they are unable to recommend dividend on ordinary shares.

TRINIDAD LEASEHOLDS, LIMITED.—The directors regret they are unable to recommend the payment of a dividend. Profit for the year ended June 30, 1922 (after providing for depreciation £13,872), £54,244; balance brought forward, £171,897; less amount written off material and stores on hand, £182,461; less provision for income-tax, £25,000; balance carried forward, £18,680.

31s 6d to 32s, both landed. Plate 31s 3d and Persian 28s 6d, both ex ship, all per 400 lbs. Maize more or less neglected, with tendency of prices in buyers' favour. Plate ex ship 35s, ditto landed 36s 9d, American mixed ex ship 35s 9d, ditto landed 37s 3d per 480 lbs. Cargoes generally inactive and values easier owing to recent heavy shipments from the Argentine. Steamers of La Plata, January shipment, sold 35s 6d, and ditto on passage 35s to 34s 6d per 480 lbs. Oats slow and native varieties easier at 24s to 32s per 336 lbs free on rail according to sample. Foreign also tends downwards in view of forward weakness. La Plata f.a.q. ex ship 27s, ditto landed 28s, No. 2 Canada Western 31s 6d, No. 2 Canadian feed 27s 6d, No. 2 white clipped American 36 lbs 27s 3d, all landed per 320 lbs. Oatmeal in quiet request, and prices 10s to 20s per ton lower for home milled. London made, all cuts, quoted £17 15s, rolled oats £17 5s, whole groats £17 15s, flaked oats £20 15s ex mill. Ordinary Scottish oatmeal £19 to £20, and American, all cuts, £18 10s, all per ton.

Our Sheffield correspondent writes :—Business in crude and semi-manufactured steel continues to progress, and the output of the open-hearth furnaces in this district exceeds the pre-war average; but, owing to the greatly increased capacity since the war, a good deal of the plant is still idle. The demand is chiefly for basic steel, but sales of acid steel have improved considerably of late, and the position of hematite pig-iron is better than it has been for nearly two years. More furnaces are working, and prices are 5s. or more per ton better. Foundry and forge iron are still in a condition of depression owing to the circumstance that the general improvement in trade has not yet reached the iron foundries. For this reason producers of foundry iron are unable to obtain a price which covers the cost of production. More orders for railway steel are coming in, and the outlook for shipbuilding steel and tools

Our Glasgow correspondent writes:—In usually well-informed quarters it is credited that the shipbuilding outlook is hopeful, and that it is safe for those concerned to calculate that the Clyde will be secure at least one of the war vessels for which the Admiralty have invited tenders, and that two to three first-class large liners are to be, or have been, booked for the river. There are also some tramps spoken of as likely to come North between now and the beginning of another year, when, it is believed, a state of sustained activity will obtain. As to the new boats that have taken them at cost, which should, it is vinned that builders have taken them at cost, which should, it is stated, work out at about pre-war level, or thereabout. The recent drop of 10s a ton, to £12, in boiler plates has given a slight fillip to home inquiry, and the new boat-building fixed has led to more quotations being steady at near—angles, £9 for home, £8 for ship-plates, £9 5s for home, £8 5s for export; steel hoops, ment; channels, £9 5s for home, £8 5s for export; steel hoops, £10 15s home, £11 2s 6d export. Ten days ago Germany was offering some descriptions of steel here, but the movement has made no progress. The pig-iron position in the United States, and 2,342 tons were shipped from Glasgow to the United States, and there are some fair contract lots yet to go West; but, notwithstanding, the make is ahead of consumption, and at a few works production is accumulating. Practically, home inquiry is at a stand, and dealers say prospects are as poor as they have well-nigh ever been. On Wednesday sellers of Scotch No. 3 were asking 99s, f.o.b. Glasgow, while Middlesbrough No. 3 was 92s, f.o.b. Middlesbrough. Mixed numbers East Coast hematite were named at 94s. Throughout the week Scotch coals have been in strong request; but coal masters and merchants have been slow sellers, as they are filled up with contracts for all outputs down to the end of the year. Several collieries are fully booked on to the finish of March. This applies to Lanarkshire, Fife, and Lothian pits.

Our Middlesbro' correspondents' report, dated December 7th, is as follows:—Pig-iron: The demand for pig-iron is generally quiet before the turn of the year, as consumers do not want to carry stocks. This is the case at present. The output of Cleveland Foundry pig-iron is still very limited, but it suffices for the limited demand. Prices are as follows:—No. 3 Cleveland G.M.B. 9rs 6d to 9rs per ton; East Coast mixed numbers hematite, 9rs 6d per ton. Manufactured iron and steel: The steel trade is 9rs 6d per ton. The outlook is more encouraging. Steel ship plates, 9s to 9s 10s; steel ship angles, £8 15s to £9; iron bars, 9s 10s; steel rails, £9. Iron ore is a very quiet market, and prices are a shade lower, in spite of firmer freights. Best Bilbao prices are 9s 6d per ton, c.i.f., Tees.

Our Cardiff correspondent writes :—The South Wales coal market goes on gathering strength from day to day. There may have been one or two weeks during the pressure of the recent American demand when market conditions were more active, but there has been no period during the past two and a-half years when the general position has been sounder. The collieries are producing almost pre-war outputs. The latest official returns show a production of 94 per cent. that of the record output year of 1913; the supply of tonnage is abundant, and is not so unwieldy as it was during the severe congestion of a week or two ago; the collieries are exceptionally well stemmed up to the end of the year; and prices are slowly but steadily advancing. The demand is general, and is greatest in the most important of the normal markets. The fears that the spurt was only of a temporary character have been dispelled, and contracts as well as current prices are being favourably affected. The leading collieries are not to-day prepared to sell for 1923 deliveries at the prices they actually accepted a month ago. Under forward contracts placed then the second Admiralties were bought for delivery over the first half of next year on the basis of 25s and 25s 6d per ton, and some of the leading first-class Admiralties between 26s and 26s 6d. These coals are now quoted at 26s 6d and between 28s 6d and 29s 6d respectively. The chief stimulus is an expanding foreign demand, but colliery salesmen are also influenced by the contingency of higher labour cost arising from an increase in wages, while exporters have been placing a certain amount of speculative business to meet the possibility of a recurrence of trouble in the United States, when the wages and other questions left unsettled in the recent coal strike come up for final adjustment. The only weakness of the market is for anthracite, anthracitic dry steam coals, and through steam coals of inferior quality. Foreign buyers are everywhere giving preference to the cleaner classes of coal, but with the demand overtaking the supply it is probable that the improvement will very quickly reach down to the inferior steam throughs. There have been slight fluctuations in coke, patent fuel, and pitwood prices, and contracts for pitwood have been placed for next year's

supply on the basis of 30s, ex-ship. The following are the current market prices:—Best Admiralties, 28s 6d to 30s; second Admiralties, 28s to 28s 6d; best drys, 27s 6d to 28s; best black veins, 28s to 28s 6d; Western Valleys, 27s 6d to 28s. 6d; Eastern Valleys, 26s 6d to 27s; best bunker smalls, 17s to 17s 6d; ordinary cargo smalls, 16s to 17s; anthracite big vein, 38s to 40s; antracite machine-made cobbles, 55s to 57s 6d; anthracite French nuts, 67s 6d to 70s; stove nuts, 67s 6d to 70s; rubbly culm, 14s 6d to 15s; coke for export, 37s 6d to 42s 6d; inland blast furnace coke, 25s 6d to 26s 6d; patent fuel, 28s 6d to 30s; pitwood, ex-ship, 33s 6d to 34s. There is a steady improvement also in the iron and steel trades. There is a better demand from abroad, and increases in the minimum prices both of steel bars and of tinplates are regarded as imminent. Since the minimum schedule was introduced a few weeks ago the price per basis box of tinplates has been increased from 19s 3d to 19s 6d, and it is considered likely that the price will be further increased before the end of the year to 20s. It is reported that an arrangement has been arrived at with the merchants to allow them 1 per cent. commission on sales at these prices.

Our Bradford correspondent, writing on Thursday, says:—The feature of the trade continues to be found in the raw material markets. Both in London and in Australasia, wool continues to meet a good demand, and is selling at prices which the present state of trade in the consuming centres would hardly seem to justify. As a matter of fact, many descriptions are relatively dearer than tops, and this is an anomaly that will have to be rectified before progress can be made. As things are, users appear to be determined to hold out to the last possible moment against current prices of tops and yarns, yet unless topmakers can buy at lower prices than those now current in the primary markets of the world, it is difficult to see how cheaper tops are to be produced. Of course, spinners cannot afford to hold off indefinitely, and at present it is merely a question of which end of the trade will capitulate. There has been a slightly easier tendency in merino values, but there is no quotable change in topmakers' quotations. In crossbreds, quotations remain very firm, with, if anything, a hardening tendency in medium sorts. Spinners are not booking much bulk business, neither on home nor export account. They have sufficient work in hand to keep machinery fully employed for the next two months or so, but it would be a relief to most firms to see more buying on forward account. The piece trade presents no new feature. Business is slack, and although rather more interest is being shown in men's wear and in certain crossbred fabrics, the position as a whole is by no means encouraging. It is feared that the last has not yet been seen of the financial difficulties which have been so prominent during the last two years, and, taken all round, there is lack of confidence in the future which is in marked contrast to the active demand for raw wool.

(FROM A CORRESPONDENT.)

The little weakness that developed last week at the London sales is still in evidence, though the auctions are still going well. The catalogues are being cleared every day in good style. It is now correct to say that merinos have declined 5 to 10 per cent., the fall being most in evidence in short-stapled wools, such as are usually taken by the Continent. At the same time, we think that scoureds have also slightly depreciated. Even when the utmost allowance

One Shilling. Post Free from GUARDIAN BUILDINGS,
MANCHESTER.

has been made for any decline in both greasy and scoured new clip wools, the prices which are now being paid cannot but be regarded as very satisfactory. The second-hand lots offered do not always come up to the owners' ideas of prices, and these are being withdrawn in the expectation that they will realise more money if they are offered again in the new year. Home trade buyers are taking the larger part of the offerings, some very good wools being acquired for top-making purposes. In spite of the ease, however, prices have not come down to the level desired by Bradford top-makers. It is understood that there has been some rather cheap selling of average 64's for next year's delivery, prices accepted for that date being under 5s. This quality of tops cannot be made at that price out of wool bought in London or Australia to-day, and the sellers of the tops are obviously speculating on wool becoming cheaper. Whatever happens in the future, there is nothing wrong at present with London values, and the fall which has taken place only brings them down to the level of the last Liverpool auction. No doubt Continental buyers are considerably hampered by the depreciation of their currencies, and were it not for the fact that the mark is almost valueless, Germany would be buying a considerably larger quantity. American firms are picking up a few merinos, but are certainly taking no more than other sections.

Some large weights of New Zealand and Australian crossbreds are being catalogued, and although these are scarcely making the extreme prices current during the first week, everything is being cleared, holders meeting the market very freely. A wonderfully large amount of crossbred wool coming forward, and it is all being readily absorbed. Of course, Bradford top-makers have found substantial relief by the large purchases of matchings by America during the interval between the present and the previous London auctions, and this is encouraging them to buy with greater freedom. Fine crossbreds have gone back to the level of last series, but medium crossbreds are still 15 to 20 per cent. dearer, and coarse crossbreds are fully 5 per cent. dearer. Slipe crossbreds are selling exceptionally well, notwithstanding the big weight catalogued almost daily. America is a free buyer of slipe half-bred lambs; in fact, anything around 56's quality is being taken readily for shipment across the Atlantic. These wools are practically all being taken for the woollen trade, and will answer their purpose very well indeed. Scoured crossbreds are also moving very freely, these being bought principally for the home trade.

The decision of the United States Treasury Department that carbonised wool shall bear the same import duty as tops—33 cents per lb and 20 per cent. *ad valorem*—is resented in London and Bradford. It is regarded as an entirely selfish action, but one which will react to the disadvantage of the American public.

THE COTTON TRADE.

MANCHESTER, December 7.

Trade in the market this week has not shown any improvement. Owing to the absence of fresh contracts, further ground has been lost by spinners and manufacturers. Curtailment of production is increasing, and more unemployment is showing itself. Traders have not confidence in current value, there being a definite belief in lower prices. Only occasional sales have occurred in piece goods for India and China. Manufacturers have met with no support worth mentioning from the minor outlets East and West and the home trade. The yarn market has been flat. Very poor prices have had to be taken for American qualities, and rates in Egyptian cents have favoured buyers.

(I.) Comparative Statement of the Cotton Trade.

VEGETABLE OILS AND OILSEED.

Quite a good business has been done in linseed, crushers entering the market and buying freely both of new crop Plate and of Calcutta. Hull paid £16 10s and up to £16 15s for Plate, December-January, and £16 to £16 5s for January-February shipment, with London a good buyer of Calcutta at £20 2s 6d to £20 5s for first week of December loading, and £19 5s later December. Immediate requirements having been met, the market has been quieter, but quotations remain at about the higher level. Linseed is very scarce on spot, and commands a high premium, as also does December shipment of old Plate crop. There is, however, a fair quantity on passage, viz., 28,000 tons to the U.K. and 50,300 tons to the Continent.

The demand for the oil products is fair, with forward delivery fully firm in sympathy with the improved position of seed, owing to the reports of rains in Argentina and dealers short of oil covering their commitments. Spot offers round £36 per ton, naked, ex Hull mill, and December at the same figure, while for January-April £33 10s is about the value. Egyptian cottonseed has been active, crushers having to meet £10 17s 6 for Sakellariadis, holders now quoting £11 for afloat and £10 18s 9d December loading. A good business has also been done in Bombay cottonseed. Cotton oils have continued a steady market, with a very good trade reported in refined. Crude

ASSETS EXCEED £20,000,000

is still scarce and difficult to buy, current value for Egyptian being £36 10s ex Hull mill, and for ordinary refined (soapmakers' grade) £37.

A cargo of Manchurian soya beans, December-January shipment, has been secured by Scandinavia at £10 17s 6d. Coromandal ground nuts for shipment have been done at £19 15s to Hull and £20 5s to London. Some business has been done in Toria rapeseed, Rotterdam paying £16 5s and £16 7s 6d for shipment early in the new year.

A good trade is reported in palm kernel oil, but ground nut oil is scarce. Rape, soya, and castor oils are all steady, and values about unchanged. Demand for linseed cakes is still disappointing, but cotton cakes are in slightly better request, and prices of the same are inclined to harden.

Shipments of Plate linseed from January 1st to November 30th are returned:—To U.K., 197,300 tons; Continent, 410,000 tons; and to North America, 277,000 tons—total, 884,300 tons; and of Indian, to U.K., 162,675 tons; Continent, 123,050 tons—total, 285,725 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

A further easing in the prices for market hides and skins was recorded at the Bermondsey auctions held on Thursday, ox and heifers making from 7½d to 1½d per lb less money. Cows and bulls were steady at the previous week's figures, but, on the other hand, all classes of kips showed further reductions of ½d per lb. Calfskins depreciated in value to the extent of from 7½d to 7d per lb, the first class of these goods now fetching from 7½d to 12d per lb, with seconds realising from 6½d to 10d. Sheepskins were a trifle firmer, in view of the continued shortage of this material.

The foreign hide section also reports prices as easier, although values are still too high to permit of much business on account of the home trade, except in regard to immediate requirements. At origin, however, the United States is still interested, and small parcels of Frigorifics have changed hands at recent figures. Dry and dyesalted descriptions have come in for attention where the price has been right, but the business passing is very limited, and in the main confined to immediate needs. Latest cable advices from America are to the effect that the hide market there continues weak, and that all quotations are merely nominal.

The demand for sole leather is falling flat, both Northern tanners and Bermondsey merchants agreeing in this respect. The fine weather is a contributory reason, as boot repairs have not been in the market for bends of late. Tanners are already showing signs of weakness, and sales have been made this week at ½d per lb reduction on those of a week or two ago. Offal shares with bends the prevailing depression, and the fluctuation of the French exchange has affected export of rough leather to France. Much is expected of the improvement in the American exchange, and merchants confidently anticipate large sales of sole leather when the position is ripe. If it happens, the leather will come on a heavily stocked and depressed market, and will not improve the outlook.

Business in upper leathers is slow, orders being for very small parcels at low figures. Holders of chrome calf and glacé kid are, however, taking a strong stand, as comparatively little is arriving from America.

The shoe trade is moderately well employed, makers of women's footwear and sporting goods receiving the best part of the trade. There is a slight spurt in fancy leather goods for the Christmas trade, but so far this has not come up to expectations. Makers of travelling goods are very slack indeed, the public apparently having little money to spend in this direction.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 8.

SUGAR.—General steadiness characterised this market, and a moderate demand was experienced, chiefly for British descriptions of refined closing easier. A large and varied assortment of Java whites remains available on spot, London. Messrs Tate and Lyle's cubes quoted 55s 3d to 56s 3d; granulated, 50s 1½d to 50s 7½d; yellow crystals, 44s 1½d; pieces, 37s 6d to 40s 6d for yellow, and 45s 1½d for fine white. Granulated, January delivery, 51s; February-March, 51s 3d; April-May, 51s 6d. Glebe K and standard granulated, spot, London, 50s. Crystallised West India in steady support, and good qualities sold, 44s to 46s. American granulated, spot, 50s. White Java, spot, 48s to 49s 6d; good to fine grainy grocery, 48s 9d to 49s; ditto, June-July, new crop, sold, 21s. c.f. and i. London. W.S.R. and H.U.M. granulated, ready shipment, quoted 23s; J, 22s 6d; C.B.S., 22s, f.o.b., Amsterdam. Czecho-Slovakian granulated, December, 22s 3d; April-August, 23s 6d, f.o.b., Hamburg. Belgian granulated, F.W., December, 21s 9d; and ordinary, 21s 6d, f.o.b., Antwerp. White Mauritius, spot, 46s 6d to 47s. Cuban

basis 96 per cent., February-March, sellers, 17s 3d; Brazilian, ditto, December-January, 17s 9d; ditto, basis 80 per cent., December-January, 10s 9d, c.f. and i. terms, U.K. Cuban stocks, 49,500 tons, against 967,500 at corresponding period last year. Terminal market rather unsettled. White, December, sold, 21s 6d to 21s 9d; March, 22s to 22s 4½d and 22s 3d; May, 22s 4½d to 22s 6d. Liquid glucose, spot, 28s 6d.

COFFEE.—Market quite steady, with moderate support accorded from home-trade buyers, but business with exporters is still carried on slowly. Of East India, fine bold Mysore sold, 127s; fair bold Costa Rica, 102s 6d to 103s. Futures remain slow but steady.

COCOA.—Actual business was confined to a narrow limit, but no appreciable alteration occurred in prices. Accra, F/F quality, December-February, quoted 36s 6d, f.o.b. terms.

TEA.—Indian tea auctions embraced some 44,500 packages, and with fair and well distributed competition a steady tone resulted, quotations being on a par with previous level. Ceylon sales totalled 13,100 packages, which cleared to a good demand at firm rates. Java in fair support at full prices.

RICE.—Old crop firm, and sparingly offered. Two stars, spot, 15s 9d to 16s; December, 13s 9d; new crop, February, steamer, 13s 6d, c.f. and i. Broken kinds steady, quiet. Rangoon beans, spot, 7s 10½d paid. Japanese peas, afloat, sold, 27s 6d; December-January, 25s 6d.

SPICE.—Pepper met with moderate attention, and steadiness governed the market. Fair black Singapore, spot, sold, 4d; ditto, January-March, 3½d; Aleppy, spot, quoted, 4d; Tellicherry, 4½d. White Singapore, spot, 5½d; Muntok, ditto, 6½d, as to quality; fair January-March, done, 6½d. Zanzibar cloves, spot, sold, 9½d to 10d; October-December, 6½d to 7½d, c.f. and i. Pimento, spot, 2½d. Flake tapioca, fair quality, on spot, quoted, 3½d per lb; ditto, December-February, buyers, to London, 28s 6d; Havre, sold, 29s 6d to 30s 3d, c.f. and i. terms. Fair Penang seed pearl, spot, 24s; sago flour, November-December, sold, 12s 3d; January-March, 12s 3d. Desiccated coconut, spot, fine cut, sold, 36s 6d; medium, 37s; January-March, 36s.

FRUIT.—The market for currants ruled quiet, on former terms. Pyrgos, 56s; Vostizza, 70s to 80s. Valencia raisins quietly steady. Halves quoted, 42s to 44s; quarters, 60s to 65s. Sultanias moved off slowly. Smyrna, 95s to 110s; fine to choice, 120s to 135s. Dates: Hallowee, spot, 24s.

JUTE.—Presented irregular features, under reserved offers and fair disposition shown to purchase. First grade, November-December, usual Continental ports, sold, £36 10s to £36; December-January, £36 10s to £37 5s and £36 10s; January-February, £37 15s to £38 and £37 5s; February-March, £38. Lightning grade, December-January, £35 5s to £34 15s; January-February, £35 15s to £35 5s. Hessians, 10 oz, spot, 36s 6d; due steamer, sold, 37s 6d; 8 oz, spot, 27s 6d; A twills, spot, 86s; B, 70s 6d.

H&M.P.—Manila qualities received fair support and a firm tone ensued. J grade, December-February, sold, £33 to £34; K, £32 to £32 10s; L, £31 10s to £32 5s; M, £30 10s to £31 5s. New Zealand slow, but steady and fair quality, on spot, held for £31 10s. Italian P.C., spot, £59. Indian hemp firm, with moderate inquiries. **SHELLAC.**—Market quietly steady, and T.N., spot, quoted 345s; December, 330s; March, sold, 290s to 295s and 290s.

COPRA.—Market after opening the week firmly assumed a quieter tone. F.M.S. Straits, November-December and December-February, Rotterdam, sold, £25 to £25 1s 3d, and £24 18s 9d; Ceylon, ditto, quoted £26 12s 6d; Java, £25 5s; Dutch East Indies, £25; Cebu, £24 15s; mixed, £24; South Sea Islands, £24 5s. Palm kernels, December-February, Liverpool, sold, £17 6s 3d to £17 5s.

RUBBER.—Market slightly unsettled, and a moderate business was effected. Standard crepe and sheet plantation, spot, also December, sold, 1s 2½d to 1s 1½d; January-March, 1s 2½d to 1s 2½d; April-June, 1s 3½d to 1s 2½d; July-September, 1s 3½d to 1s 3½d. To New York, standard sheet, January-February, sold, 1s 2½d to 1s 2½d. Fine hard Para, spot, 1s 1½d; soft fine, 11½d; Caucho ball, 11½d.

EGG PRODUCTS.—Hen liquid yolk, China, 1½ per cent. boracic, spot, prime quality, 107s 6d; for shipment, 1½ per cent. boracic, November-January, 105s c.f. and i. Dried whole native, on the spot, 8½d; and spray, 9d; dried yolk, spot, 9½d. Hen albumen, on the spot, 3s; for shipment, November-January, 2s 11d, c.f. and i.

MENTHOL.—Spot quoted 42s 6d; forward, 39s. Japanese pepper-mint oil, spot, 8s 6d; shipment, 8s 3d; aniseed, spot, 2s 3d; refined camphor, spot, 3s 10½d; crude, 3s 6d per lb. Japanese wax, spot, 75s cwt.

OILSEEDS.—Market opened firmer, but irregular since. Bold Bombay, afloat, £20 15s. Small Bombay, November-December, sellers, £19 15s. Calcutta, afloat, £20 5s; November-December, sold, £19 15s to £19 17s 6d; Plate, afloat, £19 2s 6d; November-December, sellers, £18 12s 6d; December-January, sold, £16 15s to £17 2s 6d; January-February, new crop, sold, £16 5s. Rapeseed quiet. Toria, afloat, £18 17s 6d; January-February, £16 12s 6d; real bold Ferozepore, November-December, £17 7s 6d. Cottonseed firm. Egyptian black, December, £11 5s, and white, sold, £10 13s 9d to £10 15s to £10 18s 9d. Bombay, December-January, £3 15s paid. Gingly quiet. Chinese, new, December-January, quoted £21 2s 6d. Continent: large Bombay, December-January, £21 15s. Castor, Bombay, November-December, £17 5s, sellers, to Hull; February-March, £15 10s. Ground nuts steady. Coromandel, machine dried, November-December, £20 10s; ordinary, £19 10s; East African, November-December, £20; Nigerian, £20; bold Bombay, December-January, £19 15s. Chinese, December-January, £19 15s. Soya beans, Manchurian: new crop, December-January, £11 12s 6d; January-February, £11 10s per ton.

OILS.—Linseed market irregular but firmer. Spot, net, naked, 38s 6d; December, 36s 6d; January-April, 34s; May-August, 31s 3d. Rape dull. Crude, spot, 42s; refined, 45s. Cotton steady. Crude Egyptian, spot, 36s; common edible, 43s; deodorised (in barrels), 46s. China-wad quiet. Hankow, spot (barrels), 70s; shipment, 65s. Coconut firmer. Ceylon, spot, 40s; d; December-January, 39s 6d; Cochin, ditto, quoted 44s. Soya steady. Oriental, barrels, November-December, 36s. Japan fish firm. November-December, cases, 25s 9d. Cod inactive. English, spot, 29s 6d. Ground nuts firm. English crushed, naked, spot, 45s; deodorised, barrels, 54s. Turpentine easier but irregular. American, spot, 104s; December, 104s; January-April, 105s 3d. Rosin easier. American, grade B, 15s; F, 15s; G, 15s; H to I, 15s; WG, 19s; WW, 20s. French, F/G, 14s; WW, 16s 6d per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

METALS.—Tin: Opening movements showed a downward tendency in prices, due to selling pressure with a moderate turnover, including standard, cash, at £174 15s to £174 10s; January, £175 10s; and three months, £176 to £175 7s 6d. Eastern cables reported sales on the basis of £178, c.i.f. The market subsequently improved under the influence of good buying orders, especially for distant position, and values registered a sharp advance. By the middle of the week cash sold up to £179 5s, January £180 15s, and three months at £180 10s. On Thursday rates were again firmer, with a large business. Standard, cash, sold, at £180 5s, and three months £181 to £181 5s to £181 2s 6d to £181 5s. A firmer tone again prevailed at the final session, and a fairly good business transpired. Cash sold at £181 10s to £181 5s; three months, £181 15s to £182 15s to £182. English ingots, £180 5s to £180 10s.

Copper commenced the week with a steady tone, and fair dealings occurred in cash at £62 5s, and three months at £63 3s 9d. Later transactions displayed slight irregularity, though values on balance were little altered. On Wednesday cash stood at £62 10s, and three months, £63 3s 9d. On the following day the tendency was barely steady, with moderate trading. Cash sold at £62 10s to £62 8s 9d; and three months, £63 7s 6d to £63 3s 9d. No material variation occurred in prices at the final session, and a good business was effected, including cash, at £62 11s 3d to £62 10s, and three months £63 7s 6d to £63 5s. Electro, £69 10s to £70; best selected, £65 10s to £67 10s; strong sheets, £96; wire bars, £70. Antimony, ordinary, £27 to £29 10s. Aluminium, home delivery, £100 to £102 10s. Lead dearer, at £26 to £25 5s, as to position. Spelter dearer, at £38 5s to £35 5s, according to position.

TALLOW.—Messrs Colchesters and Woolner's report dated December 6th is as follows:—The tallow market was quieter during the week, and prices are unchanged to-day. The demand, though falling off, is still fairly good for the time of year. The stock in London on November 30, as returned by the wharves, amounted to 9,609 packages, showing a decrease during the month of 4,995 packages. At auction to-day 1,310 casks tallow were offered, and 611 were sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 3d to 40s; dull to dark, 38s to 36s; hard, 43s. Australian beef: Fine, 44s; good to fair, 42s to 39s; dull to dark, 37s 3d to 35s; sweet, 44s 5d. Present shipment from Australasia: Mutton, fair coloured, 44s degs, 39s; and mixed, 43s, c.i.f. London, 37s 6d. The market letter is unchanged for tallow, stuff is dearer. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 14d; melted stuff, 26s 6d per cwt. Quotations are:—Town, 35s 6d net cash, naked, ex works. Country: Frait casks, 35s; home melted, shipping casks, net, f.o.b., good coloured, —; fair to dull, 36s 6d to 35s 6d. Bone fat: White, none; pale, none; benzine, 32s 6d; melted stuff, 32s 6d, f.o.b.

end of last week from the result of the Treasury bill tenders. Three months' bills were taken at $2\frac{1}{2}$ per cent., but higher quotations are given and made effective. Yesterday money remained extremely abundant, with some extensive purchases of January Treasury bills by one of the banks. Loans up to the last day of the year were to be had freely at $1\frac{1}{2}$ per cent.

	Dec. 15, 1922.	Dec. 8, 1922.	Dec. 1, 1922.	Nov. 24, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	..

The Bank return showed a minute increase in circulation and a corresponding decrease in the Reserve, there being no change in the stock of gold. Redemption of Ways and Means advances reduced the Government securities by nearly thirteen millions, and the deposits consequently declined, Public by one million and Other by nearly twelve. There was an increase of £1,890,300 to £292,468,300 in currency notes outstanding this week, which includes £1,529,300 for notes called in, but not yet cancelled. The fiduciary issue is £242,789,000, or £67,199,400 below the maximum.

The principal features of the statement of average weekly balances of the London Clearing Banks for November, which is printed in detail on a later page, is the increase shown for the second month in succession in both acceptances and loans and advances. The comparative table below gives the aggregate figures for the nine English banks:—

	Dec., 1921.	March, 1922.	June, 1922.	Sept., 1922.	Oct., 1922.	Nov., 1922.
Capital and reserves	115.9	115.9	115.9	115.9	115.9	115.9
Acceptances	65.3	57.1	55.2	49.9	56.9	64.8
Deposits (incl. undiv. profits, &c.) ..	1,818.6	1,746.9	1,755.2	1,660.6	1,686.2	1,667.4
Total liabilities	1,999.8	1,919.9	1,926.3	1,826.4	1,859.0	1,848.1
Coin, notes, balance at bank, and cheques in course of collection ..	273.5	245.8	251.3	233.2	244.3	239.2
Money at call	105.7	102.5	113.0	104.4	104.7	97.5
Investments	343.3	322.7	412.0	405.8	394.4	389.9
Discounts	424.3	350.5	346.2	295.9	309.1	298.3
Loans and advances	762.3	746.2	723.3	711.3	723.7	732.3
Cover for accept., premises, &c. ..	90.7	82.2	80.5	75.8	82.8	90.9
Total assets	1,999.8	1,919.9	1,926.3	1,826.4	1,859.0	1,848.1

Deposits have fallen, but the total is still well above the average for September. There is also a drop in investments, which may have been responsible, to some small extent, for the recent dulness in the gilt-edged market.

THE STOCK MARKETS.

The Stock Exchange settlement this week passed off very easily, and the week in Throgmorton Street has, on the whole, been featureless. Business is slack, but there is no general weakness, and the tendency is to look for improved business in the New Year. War Loan, after early weakness, made a recovery, in which Conversion Loan shared, the heavy recent liquidation in this latter security having apparently ceased. In the foreign market the features were the strength of Chinese issues and fluctuations in Brazilians. Scarcity of stock caused some rises in the Home Railway section, though demand was not very active. Argentine Rails weakened on profit-taking. Rubber shares retained their firmness, but oil shares, in spite of some recovery on the Shell dividend announcement, are a poor market. Kaffirs, as well as dollar securities, were affected by the strong movement in sterling exchange. In the industrial sections, iron, coal, steel, and armament shares were prominent for strength, the placing of orders for two new battleships adding to the confidence of the market.

THE COMMODITY MARKETS.

The healthy tone in the South Wales coal market continues to be maintained. Coal prices have further advanced, America having again come into the market, while further inquiries are being received from foreign countries. Business in pig-iron has been quiet, and our Middlesbrough correspondent reports that it "will continue so until January," adding that "makers are not inclined to cut prices, expecting a better demand later"; the price of hematite is easier on account of foreign competition. Iron and steel manufacturers are inclined to look forward to the future

with considerable confidence, and business is expected to improve early in the new year. Our Glasgow correspondent states that "in the last few weeks.....fully 60,000 tons of building" have been placed with local shipyards; while our Sheffield representative mentions that the placing of contracts of the two capital ships of the British Navy will soon improve the position and outlook. Quotations in American and Egyptian yarn have been steadier, but buyers in the Manchester cotton trade continue to confine themselves to immediate requirements. An increased number of inquiries has, however, been received for India trade. In the wool trade prices are steady, but there is no activity to record. Conditions in the boot trade are slightly better.

FOREIGN EXCHANGES.

All other movements during the week on the foreign exchange market have been overshadowed by the appreciation of sterling in New York, which has proceeded even more rapidly than a week ago. From \$4.56 $\frac{1}{2}$ on the 8th the rate jumped on Monday to \$4.59, on Tuesday to \$4.63. During Wednesday the rate at one time reached \$4.70, but a reaction followed from this figure, and the rate closed for the day at \$4.66. On Thursday there was a further reaction, but the rate closed above the worst at \$4.64 $\frac{3}{8}$, and by yesterday morning had again recovered to \$4.65 $\frac{1}{2}$. Much natural excitement has been caused by this rise in value, and there have been many attempts to explain it. The more fundamental causes have been dealt with here repeatedly. There has been the upward movement of prices in the United States, the improvement in British export trade, and the growing conviction in America of the stability of the British financial position. More immediate has been the lightness of cotton purchases by Great Britain, which has gone some way towards counteracting the normal movement at this time of the year. In addition, it is reported that there has been recently a return of large balances from New York to London, a movement which, if it sets in on any large scale, may well continue for a considerable time. In particular it has been suggested that a number of large American operators, calculating on an unfavourable issue to the Lausanne Conference, have been caught short, and have had to cover hurriedly. On the whole, the feeling that the rise has been too rapid is probably correct, and the reaction in the middle of the week was a natural one. Nevertheless, unless the very real and serious threat of further reparation difficulties should again disturb Europe, there would seem enough justification to expect the rate to remain at least about its present level, if, indeed, it does not continue to appreciate quietly. Forward quotations have widened a little to about $1\frac{1}{2}$ cents per month above spot. Paris, from 64.47 $\frac{1}{2}$ on the 8th jumped to 65.07 $\frac{1}{2}$ on Monday and 65.50 on Tuesday as the result of the break-up of the Premiers' Conference, but fortunately somewhat steadier views would seem to be taking shape in France, and one may hope that the fall in the rate on Thursday and yesterday morning to 63.70 may reflect a better attitude. At the same time, it would be interesting in this connection to know the reason for the reduction this week of 33,600,000 in the gold balances abroad of the Banque de France. The Brussels rate is again somewhat wider, and a clear explanation of this movement is still lacking. Whether police intervention, which took place this week in the activities of certain exchange dealers, will help to clear up the matter is still uncertain. Forward rates in Paris are about 9 centimes per month above spot, in Brussels about 8 centimes below. Italy on the week is about one lira higher at 92 $\frac{1}{2}$. The Berlin rate, which jumped last Saturday to 37.250, was little affected by the rejection of the new German note, and since then has actually recovered to about 35.500. Dealings in marks, however, remain very restricted, and the rate may at any moment again move very rapidly. Among neutral currencies the most remarkable movement has been the jump in the guilders from 11.45 $\frac{1}{2}$ a week ago to 11.60 $\frac{1}{2}$, after being 11.62 $\frac{1}{2}$ on Wednesday, while Switzerland has followed much the same movement from 24.23 to 24.46 $\frac{1}{2}$, and the Scandinavian currencies have also gone markedly in our favour, Helsingfors following more slowly from 180 $\frac{1}{2}$ to 185. In Central Europe Vienna remains steady at 320,000, while Poland at 81,000 also shows little change. Prague, on the other hand, has moved up from 144 to 151 $\frac{1}{2}$.

CLEARING THE AIR.

THE adjournment of the discussion between the Allied Prime Ministers is the best that could be expected from last week's Reparation conference, and though the official communique indicated quite clearly that agreement on matters of principle had not yet been reached, we are disposed to regard the omens as by no means unfavourable. The atmosphere of the Conference seems to have been more friendly than of late, and three weeks for deliberation give the opportunity that was required for bringing about a closer harmony of view. A step of very great importance was taken by the British Government in expressing its readiness to modify the policy of the Balfour Note in return for a settlement which may have a great probability, if not absolute certainty, of being final. Mr Bonar Law has not made this offer the occasion for a dramatic gesture, but it is very important that France should not imagine this to be a matter of very small moment to Great Britain. There is sometimes an inclination in Europe to regard Great Britain as the rich uncle, upon whom all inconvenient debts can be unloaded, but the simple fact is that Great Britain, the most heavily taxed country in the world, is deliberately shouldering this immense burden for the sake of restoring peace, confidence, and prosperity—not from quixotic motives, but for the sake of self-preservation and of civilisation. Thinking Frenchmen know that in the event of a breach in the Entente Great Britain could strike a fatal blow at French credit. Such a breach would be a profound disaster for the world, and no effort must be spared to avoid it. But it should be clearly understood in Paris that the Prime Minister's offer on the war debt question is strictly conditional on a final agreement.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 9th:—

	Receipts.	Min. £	Expenditure.	Min. £
From Revenue	11,565	350	Interest on Debt	1,001
Amount borrowed	4,500	4,500	Supply Services	5,714
			Sundries	190
			Added to Exchequer balances ..	150
	16,065			16,065

Revenue keeps fairly steady at £11,565,000, although the corresponding figures a year ago were £15,610,200, but this latter total included £4 $\frac{1}{2}$ millions under Miscellaneous receipts, as against one million last week. Customs brought in £2,922,000, and Excise contributed £1,746,000. Property and Income-tax yielded £1,847,000, while £1,254,145 came into the accounts from interest on Sundry Loans. Expenditure, at £15,915,000, was mainly represented by interest on War Debt, absorbing £9,851,000.

The week's operations increased the National Debt by £4,500,315, and caused the following changes:—

	Min. £	Public Debt.	Min. £
National Savings Certificates ..	350	Advances	210
4 $\frac{1}{2}$ % Treasury Bonds	4,953	Treasury Bills	1,778
Bank of England Advances	1,500	Unemployment Insurance ..	180
		Sundries	145
	+ 6,813		- 2,313

The floating debt was reduced by £500,000 to £947,653,500.

FINANCIAL YEAR, 1922-23 (April 1 to December 9, 1922).

	£		£
Total spent	540,448,183	Raised by revenue ..	545,756,733
Dec. in balances	8,020,052	Net repayments.....	13,328,602

Total

ESTIMATES FOR YEAR 1922-23.

	£		£
Ordinary Expenditure	823,846,000	Ordinary Receipts ..	820,775,000
Special Expenditure...	61,223,000	Special Receipts ..	90,000,000
Contingencies	25,000,000		
Total	910,069,000	Total	910,775,000
		Surplus	706,000

If France has had any doubt about the position of Great Britain it should be set at rest by Thursday's debate in the House of Commons, the most striking feature of which was the very large measure of agreement on all sides of the House. The underlying feelings were clear. First and foremost was the very pronounced sympathy with France, and the desire to do her full and ample justice. But a second sentiment was equally clear, namely, a disbelief in the policy of occupying the Ruhr—on the grounds first that it would be likely to cause prolonged disturbance to the peace of Europe, and make a final and satisfactory settlement impossible; and in the second place because it would certainly be a most ineffective means of securing Reparations, and would send the franc tumbling down into the same morass as the mark, whereas wiser counsels might succeed in retrieving the present desperate state of German currency. We may add that the House reflected the opinion of the country on the further point that Great Britain is not disposed to make an unconditional pact to guarantee France's security. Before such a pact can be contemplated there must be a uniformity of policy in general, and outstanding questions—including naval disarmament—must be cleared up. In any case a pact of security must be one which is open to other nations of Europe, and is under the ægis of the League of Nations. On these conditions, and on no others, this country is wholeheartedly in favour of a pact which will relieve France's natural anxieties.

If on these terms France can put fear behind her, and will eliminate from her Reparation policy the incompatible motive of desiring to crush Germany, there ought to be no difficulty in coming to agreement with Great Britain. The features of the programme are clear. (1) There must be a new investigation of Germany's ability to pay, and agreement on a definite figure. We are not among those who think that depreciation has made this an impossible task. It has made it more difficult, but the figure decided upon must be well within the theoretical maximum, for otherwise we should be taking away any incentive to increase production. An expert inquiry could, in our opinion, give what has never hitherto been available—a reasoned estimate of what could be paid by Germany without crippling production. (2) The method of payment must be such as to give Germany every incentive to pay off as much as possible at an early date, and to change a debt payable to the Allied Governments into a debt owed to individuals. This means that ample

time should be given for payment, but a high rate of discount be allowed if the annual amounts are anticipated and paid off in large sums; and, further, that the occupation should cease as payments are made. Whatever views may be held of the prospects of floating a German loan to-day, there is no doubt that if the bill is to be paid at all it will ultimately be settled by large borrowings by Germany. It is important that Germany should be told now that such payments will relieve her from the Rhineland occupation. (3) The stabilisation of the mark is, of course, the essential preliminary of any scheme of payment. (4) Control of Germany's finances in the sense of the right of following and examining the operations of her financial machinery is already in force, and is sufficiently effective to enable the Allies to know at once whether Germany is or is not carrying out her programme.

There remains, however, the difficult question of whether anything further in the way of a pledge is to be asked from Germany in return for the essential moratorium. In Great Britain it is usually assumed that the desire to restore her world credit and to recover the Rhineland will be sufficient inducement to cause Germany to carry out the Allied programme. At any rate, it is almost universally believed that forcible occupation of the Ruhr or indeed any further attempt to drive Germany to make the effort which no one can make for her is bound to fail. We are, however, disposed to think that it may not be wise to give Germany an unconditional moratorium qualified only by the fact that statistics are being collected by finance inspectors in Berlin. Great Britain might reasonably agree with France in principle that some additional security should be put up, and that the first question the Germans should be asked is what security they propose to offer for a long moratorium. Our Treasury could not be more profitably employed than in considering alternative plans in the event of the German spokesman failing to make a satisfactory offer.

Mr Bonar Law devoted a part of his speech in the House of Commons on Thursday to those who, like ourselves, have urged that we should be prepared to forgo both our share of Reparations and our claims from France, Italy, &c., in return for a settlement, while continuing to pay America. The Prime Minister argued, quite truly, that it is not going to be easy for us to pay America, and, indeed, the plan—which is undoubtedly the most probable issue—really means that the only annual external debt charges which will remain as the result of the war will be £100 millions or so due from Germany to the European Allies, and, say, £60 millions from Great Britain to the U.S.A. Mr Law argues that this would be a harder burden for Great Britain than for Germany, because the latter has wiped out her internal debt by inflation, whereas we have to find a large sum in interest on a very heavy National Debt. This argument, which has been making its appearance frequently of late, is not very convincing, and fails to appreciate the economic differences between internal and external debt. The paying of interest on internal debt, it is true, is not a mere transfer of purchasing power from A to B, but has an effect on production by limiting the rewards of economic enterprise. But so long as our tax system is not unfair in discrimination these disturbances are not very far-reaching, and, looking at the matter over a long period of years, a sinking fund of £50 millions would wipe out far the greater part of the National Debt in a generation.

But there is another side to the picture. Inflation may reduce internal debt to negligible proportions; but we are not ready to assume that when stabilisation on some new low level is attained its evil effects entirely cease. Germany's middle-class has been destroyed, habits of saving and economy undermined, morale weakened, and foreign credit so shaken that even with a stabilised mark she would not rank on equal terms with countries with more normal currencies. A patient cannot go through the most violent fevers without having to face a prolonged period of convalescence.

These considerations are not without interest for France, who is coquetting with the idea of inflation as a means primarily of relieving the pressure of her internal war debt and expenditure on the restoration of the devastated areas, &c. French opinion seems unwilling as yet to admit that her taxpayers should be called upon to

shoulder any of her war charges. But that in the long run is the only alternative to inflation. Great Britain must bear some of the responsibility for encouraging France to believe that she could get a large indemnity out of Germany; but we have never ourselves acted on that assumption. Our Budget to-day approximately balances; but it includes a very considerable sum for the relief of unemployment in our industrial districts, which Lord Derby once described in Paris as our "devastated areas," and nearly £100 millions a year for pensions, which France is charging to her "recoverable" expenditure. In these and in many other ways we are paying, and must continue to pay, for the war; and the first step towards understanding with France will be taken when she realises that, whatever action may be taken in regard to Germany, she will never get sufficient reparation to enable her to escape from this necessity. If, however, she resorts to inflation, she will be striking a serious blow at the thrifty habits of her people.

A very satisfactory feature of Thursday's debate was the action of Mr Lloyd George. No action of his has ever been more diplomatic than his resisting the temptation to take part in the debate and confining his intervention to the comparatively harmless issue of what he did or did not say in his election speeches in 1918. To have spoken either in support or in criticism of Mr Bonar Law or of M. Poincaré could not have helped, and would almost certainly have made the task of conciliation more difficult.

BALANCE-SHEETS AND WINDOW DRESSING.

In the course of his summing up in the Bevan case the judge made some scathing observations on the subject of the window dressing with which the defendant was charged, and which had been contended by his counsel to be a quite ordinary transaction in the City. "I have," said his lordship, "heard with astonishment that any man who had been connected with the Stock Exchange or with finance in the City of London during the last twenty years should be putting forward as a valid excuse the entry in a balance-sheet of matters which were only put there, to use the defendant's own expression, 'for purposes of window dressing.' Suppose a shopkeeper put into his window attractive goods, with attractive prices marked on them, and when a customer handed over the money the shopkeeper said: 'I am sorry; I have got your money, but I cannot deliver the goods because they are all covered by a bill,' or 'because I have only borrowed them,' what would they think of the shopkeeper, then? So with an insurance company or any other company. If they put into their balance-sheets as assets things which, in fact, they did not possess, then said: 'But this is only window dressing,' it was no answer, even though it were true; and I hope it is not true that that kind of window dressing is an everyday transaction in the City."

Mr Justice Avory may rest assured that the kind of window dressing that he describes is "not done" in the City, except when, as in the Bevan case, somebody either deliberately fraudulent, or forced, as he thinks, by desperate straits with desperate measures, manages somehow to secure, by the determination of a dominant personality, the collusion of the considerable number of people whose consent is necessary to the publication of a false balance-sheet. The suggestion that these things happen every day was a, perhaps, legitimate effort on the part of defendant's counsel, but the City knows them to be dishonest, and the City is, on the whole, a very honest place, partly, perhaps, because it could not attempt to carry through its immense volume of business unless it was able to assume that in the vast majority of cases its spoken word, or even its nod, is as good as a bond, signed, witnessed, and engrossed.

Nevertheless, everybody knows that window dressing, of a kind, does happen and is happening with especial intensity in these present weeks. Hamlet tells us that on the approach of Christmas "the bird of dawning singeth all night long"—in other words, the cock crows all night—"so hallow'd and so gracious is the time"; it is still truer that at this season everyone who has an

annual balance-sheet to prepare for the inspection of the public and of his bankers and other creditors, is devising ways and means for making it look as pretty as possible. Recent weakness in gilt-edged securities has been suspected to have been due to sales by artists who are aiming at a strong foreground effect to be produced by a holding of cash which is not thought necessary at times when the picture is not being exhibited. It is not a pretty practice, but the mere fact that this old evil is now once more, thanks to Mr Justice Avory, a matter of comment and criticism, shows at least that we are slowly struggling back to the level of honesty, or dishonesty, at which we stood before the war, and are getting away from the camouflage and eyewash which the need for putting a brave front on our financial and political position, at a time when our existence as a nation was threatened, went far to justify—if it really deceived anybody who was worth hoodwinking. Before the war, as some of us remember, there used to be periodical discussions concerning the practice of bankers who called in loans from the bill brokers in preparation for their half-yearly balance-sheets and monthly statements, and forced the bill brokers to borrow from the Bank of England "cash," which made its appearance at the head of the assets of the banks. It was argued that if the banks thought it necessary to make this window dressing effort at a time when their position was published, it might be inferred that they were guilty of a certain amount of overtrading at times when their figures were not exposed to the daylight. Since it was the bankers themselves who chiefly criticised their weaker brethren on this point, we may be fairly sure that the evil was not very serious, but it certainly existed, though some of the bankers did not indulge in it at all, and others, while denying that they ever called in a loan in order to increase their parade of cash, admitted that they sometimes allowed their bill case to empty itself partially, by omitting to replace their maturities. Which seemed to come to very much the same thing. It was in order to put an end to this evil practice that, when the banks resumed publication of monthly statements, it was agreed that the statements should be based on weekly averages instead of on the position on any one day. And bill brokers now say that the only result is that window dressing withdrawals happen once a week instead of once a month, and are made all the more inconvenient by this greater frequency, and also by the amalgamation process, which has made the little fingers of the Big Five thicker than their fathers' loins.

But the banks, as need hardly be said, are by no means the only window dressers, and quite apart from deliberate efforts to make the assets side of a balance-sheet look nice by a moderate amount of temporary manipulation, which is a very different matter from the fraud that was so properly scourged by Mr Justice Avory, there is necessarily an elusive and sometimes almost mystical quality of the entries on the credit side of a balance-sheet. Who can say what they are really meant to imply? In Chapter XI. of Pixley's "Duties of Auditors," this authority says that "it was explained in the previous chapter that the debit side of the Balance-sheet was frequently erroneously called the Liabilities Side, and instances were given of items which appear on that side of the account which are not really liabilities. Still, strong reasons exist for not calling the credit side of the Balance-sheet the Assets Side, as has also been for some time the usual practice. Professional accountants, who themselves used the term for many years, have lately been impressed at the meaning endeavoured to be put upon it, it never having previously occurred to them that anyone could truthfully assert that they believed that the amounts opposite the items on the credit side of a balance-sheet were their actual realisable value." And yet, unless this is the meaning, or something like the meaning, of the sums put down against the greater number of items on the credit side, what is the significance of a balance-sheet? Mr Pixley admits that in the balance-sheets of banks, discount companies, trust and investment companies, &c., the credit side is a statement of assets; moreover, he quoted a legal opinion to the effect that "a full and fair balance-sheet must be

such as to convey a truthful statement as to the company's position," which surely points to some connection between realisable value and sums set down on the credit side. Moreover, the practice that he recommends of writing down goodwill to nothing, or reducing its amount in the balance-sheet to its "saleable value," seems to show that he himself strives to make the items on the credit side mean what they are believed—so wrongly according to his first quoted statement—by the unenlightened layman. Goodwill, which austere finance will not permit to be shown in a balance-sheet at all, is often the most valuable of the assets owned by the proprietors. Who shall say what is the real value of the goodwill of the Bank of England, or of Arthur Guinness, Son and Co.? And here we see how the best balance-sheets are often the most deceptive, since they are allowed by auditors to sin, because they sin only on the side of the angels. The banks not only show no goodwill, but their premises are often written down absurdly below their true value—the Bank of England's are not shown at all, unless they are wrapped up, with so many other things, in "Other Securities"—and in good times lumps of money are safely tucked away in hidden reserves by making quite unnecessary provision for "bad and doubtful debts." If the Bank of England chose to put its goodwill at ten years' purchase of its real annual earnings on the assets side of its account, what sort of a stock dividend could it declare?

OVERSEAS TRADE IN NOVEMBER.

At first glance the November trade returns make a rather mixed showing. On the one hand the visible import excess is about £3½ millions larger than in October, or than in November, 1921, and the increase in exports in November was to a negligible extent due to heavier takings of raw materials. On the other hand, the value of the exports of British produce and manufactures was £6 millions higher than in October, and £3½ millions better than a year ago, when prices were higher. One point to remember in reading the November returns is that the comparison with a year ago is no longer vitiated by the coal stoppage; indeed, the latest export figures compare with the figures for a period a year ago when, to some extent, arrears accumulated during the coal stoppage were being worked off. It is only in comparing the eleven months' figures that the labour troubles of 1921 have to be constantly remembered. As regards the value figures, the fact that prices in many instances have been severely cut since this time last year must be borne in mind. A summary of the value figures for November and the first eleven months of 1921 and 1922, is given below:—

MONTH OF NOVEMBER.

	1921.	1922.	Increase or Decrease in November, 1922.	
	£	£	£	%
Imports	89,253,780	95,600,143	+ 6,346,363	+ 7.1
British exports	62,894,842	66,490,784	+ 3,595,942	+ 5.7
Re-exports	9,823,199	9,148,128	- 675,071	- 6.9
Total exports	72,718,041	75,638,912	+ 2,920,871	+ 4.0
Excess of imports over total exports	16,535,739	19,961,231	+ 3,425,492	+ 20.6

ELEVEN MONTHS Ended NOVEMBER 30.

	1921.	1922.	Increase or Decrease in 1922.	
	£	£	£	%
Imports	1,001,422,825	1,009,031,435	+ 7,608,610	+ 0.8
British exports	643,821,532	661,613,394	+ 17,791,862	+ 2.8
Re-exports	97,848,481	95,298,805	- 2,549,676	- 2.6
Total exports	741,670,013	756,912,199	+ 15,242,186	+ 2.0
Excess of imports over total exports	259,752,812	252,119,236	- 7,633,576	- 3.0

From the financial point of view the most important fact revealed by these value figures is that on the eleven months the visible import excess has been reduced by over £100 millions, and has been brought within reasonable distance of the visible excess of pre-war days. The average monthly visible balance in 1922 so far is £13,829,021. In 1913 this monthly average was

£11,164,534. The substantial improvement in the visible trade balance must be counted among the factors that are contributing to the favourable movement of sterling exchange.

Turning to the import accounts, we find that, although on the whole prices have fallen, November imports of food, drink, and tobacco were £4½ millions higher than a year ago. For the eleven months, however, there is a decline of nearly £98 millions under this head. An increase like that of last month is probably accidental. Among imports of raw materials raw cotton is prominent with a drop, compared with November, 1921, of £1,772,847, the quantity imported having dropped from 1,950,263 cents to 1,829,627 cents. But on the eleven months raw cotton imports are over 2½ million cents higher than last year. Of sheep and lambs' wool we took in November rather less than a year ago, at a rather higher value, but for the eleven months the figures are striking, the quantity imported having risen slightly from 3,303,217 cents to 3,467,075 cents, and the value largely from £37,810,788 to £54,439,550.

It is, however, the export side of the returns which calls for more special notice. Here, once again, coal is a remarkable feature, the November value of coal exports being over £2½ millions higher than a year ago. It is also significant that, in spite of the severe cuts that have been made in prices, the value of exports of iron and steel manufactures in November is higher than a year ago. Iron and steel exports have been climbing recently, and, with the coal figures, are the most encouraging of recent foreign trade features. The average monthly exports of coal in 1913 were 6,033,343 tons. Last month we exported 6,570,758 tons, or half a million tons more than the pre-war monthly average. The monthly average coal exports for 1920 were 2,077,654 tons, for 1921 2,055,041 tons, and for the first 11 months of 1922, 5,294,885 tons. The average monthly export this year of manufactures of iron and steel has been 278,108 tons, as compared with corresponding figures of 141,701 tons in 1921, 270,935 tons in 1920, and 414,102 tons in 1913. The following table shows exports of iron and steel manufactures and coal month by month during 1920, 1921, and 1922:—

MONTHLY EXPORTS OF COAL AND IRON AND STEEL.

	Coal. (In Thousands of Tons.)			Iron and Steel. (In Tons.)		
	1920.	19 21.	1922.	1920.	1921.	1922.
January	3,359	1,700	4,021	257,158	232,380	253,354
February	2,601	1,729	4,014	226,387	166,869	223,616
March	2,406	1,968	5,201	290,039	148,852	295,820
April	1,996	607	4,097	269,499	160,133	258,413
May	2,139	14	5,057	326,177	99,014	272,437
June	1,931	8	4,794	283,428	64,701	236,298
July	2,097	816	5,064	368,481	64,001	251,743
August	1,847	3,103	6,146	276,083	76,461	269,983
September	1,476	3,407	7,083	253,510	133,324	279,168
October	1,417	3,406	6,196	274,399	155,848	347,128
November	1,361	3,594	6,570	237,672	193,550	372,332
December	2,302	4,309	..	190,392	205,274	..

The steady climb of iron and steel exports has brought the figure for November to a point higher than has been reached in any month since the war. These figures illustrate the great benefit to the export trade of the country that has followed the great sacrifices in wage rates that workers in these great industries have accepted. In the painful process of getting back to an economic basis, these two industries have led the way. They are now beginning to reap the benefit. It is a pity that many other industries have been so slow to follow their example.

Cotton yarn exports in November were 15 million cents, against 20½ millions a year ago, but the 11 months' figures, at 189½ millions, are 60 millions better than those of last year, and approximate to pre-war results. Cotton piece goods exports for November and the 11 months were 398½ million and 3,820 million square yards, as compared with 343 million and 4,188 square yards in 1920, and 363½ million and 2,572 million square yards respectively last year. In themselves these figures are not suggestive of the difficult times that Lancashire is facing. The statistics of shipping engaged in foreign

trade show signs of greater movement, the tonnage clearing with cargoes during the past 11 months being 54½ millions, as compared with 32 millions and 33 millions respectively in the corresponding periods of 1921 and 1920. The bullion and specie figures for the 11 months are as follows:—Imports this year, £40½ millions, last year £57 millions; exports this year £50½ millions, last year £66½ millions.

In the trade report section at the end of this issue will be found details of the November returns. If we can find in them little to support the idea that a boom is approaching, we can at least take courage from certain favourable signs, especially those to which we have drawn particular attention. Those who are allowing optimism with regard to the trade outlook to run away with them would do well to read the valedictory address of Colonel Armstrong, the retiring President of the Federation of British Industries. Colonel Armstrong, having mentioned the signs of betterment in the trade outlook, struck a note of considered caution, which is illustrated by the following extract from his address:—"We can accept that there is a slight betterment in the position as compared with 1921, both in actual values and, what is more important, in the wider spread of the improvement over our various industries. It might be possible to find comfort in these statements if we were in the happy position we held in 1913 and had under consideration a cyclical period of severe trade depression. Unfortunately, our present position is far more serious. The industries of the country have in greater part to provide the means for the service of an immense internal debt, the payment of interest and sinking fund on an external debt, and to provide funds for charges undreamt of in 1913, in part due to the war or to altered conditions which have arisen in consequence of the war and the general change in standards which has taken place."

THE COAL INDUSTRY.

CONSIDERABLE attention has been paid recently to the situation in the coal industry, and Labour members in the House of Commons have pressed for an inquiry into the matter. This, however, has been refused by the Prime Minister, primarily on the ground that "none of the proposals which have been put forward to help the position are practicable, and an inquiry at the moment is more likely to do harm than good."

A correspondent calls attention to the great changes that have, in fact, taken place, and suggests means to improve the situation still further:—

"Something like a silent revolution is going on in the coal mining industry," he writes. "We are getting a much improved output per man-hour worked, in spite of restricted hours, limited shifts, and a faulty wage system. Coal export prices are once more at competitive levels, and industrial fuel costs have been reduced low enough to enable iron and steel manufacturers to quote competitive prices for nearly all their products in nearly every neutral market. We are exporting more iron and steel than any other country, and the position is improving week by week. But when there is sufficient trade available to employ all our furnaces and ships we shall find the coal output insufficient unless certain reforms are effected in the mining industry. Before the war we obtained more than 5,500,000 tons of coal per week the year round, and we had none too much. Now, with our increased steel and other manufacturing capacities—steel plants alone having been increased by 50 per cent. since 1914—we shall require, as a bedrock minimum 6,000,000 tons of coal per week if all our works and workers are to be fully employed."

"Remarkably enough, the working miners, who laid themselves open to charges of slacking for several years, are showing us the way to full production on an economic basis. While the average weekly output in 1913 was 5,520,000 tons, this figure had fallen to 4,307,000 tons in the first 13 weeks of 1921 (i.e., the last quarter before the big stoppage). In this connection, it is worth recalling that in the middle of the war no less a person than Mr. Stephen Walsh, writing in the *Manchester Guardian*, admitted that 'unjustifiable absenteeism was losing the country 26,000,000 tons of coal per year.' In the early weeks of 1921, when the output was still worse, nearly all

the other miners' leaders asserted that, under private enterprise, production would never improve, but might get even worse. It is important to remember that, when it was taking 1,200,000 mine workers to get only 4,250,000 tons a week, it was insisted by the leaders that there could be no improvement without nationalisation.

"Turning to the present day, however, we find that with only 1,114,695 mine workers we are obtaining an extra 1,100,000 tons per week. After the big stoppage, without an extra tub or tool, with no revision of hours or shifts, and actually with fewer men at work, the output immediately began to improve, until we have reached these remarkable figures:—

Week Ending.	Weekly Output (in Tons.)	Week Ending.	Weekly Output (in Tons.)
October 14.....	5,254,900	November 11.....	5,440,500
" 21.....	5,355,000	" 18.....	5,376,000
" 28.....	5,388,300	" 25.....	5,471,800
November 4.....	5,423,400	December 2.....	5,573,300

In the first quarter of 1921, with wages at the pinnacle, we only obtained 3½ tons of coal per man per week. We are now getting nearly 5 tons. This improvement is good in the circumstances, but it is not enough to give the miners good wages and industry cheap coal at the same time, nor will it prove enough to set all our furnaces and ships going. We have drifted into an absurd position of recent years. Forty years ago we obtained 6 tons of coal a week for every man employed at the mines. In the last five years, with much better appliances, we have scarcely had 4 tons per man-week. In spite of the present efforts of the miners, the output is not up to 5 tons per man-week. Of this small output per unit of labour, with an increased investment of capital per ton raised annually, and with other costs and charges per ton increased, we cannot pay the miners well and have reasonably cheap coal for industry at the same time. Obviously the only way to succeed in this task is by increasing the output per unit of labour and capital, and this can best be accomplished by a re-arrangement of working shifts, and a full restoration of the piece-work system of wages.

"When the Eight Hours Bill was going through Parliament we were promised the three-shift system, an improved output, and a reduction of standing charges per ton. Nevertheless, only a few collieries are now operated more than two seven-hour shifts per day, while many work only one shift. Not only is this the case, but various guaranteed minimum rates, allowances, and subsistence wages have almost completely done away with the system of payment by results. Men can sometimes get nearly as much money for easy work as for hard work. Such a revision of working shifts and wage-paying methods is needed as will yield a very much bigger output per unit of labour and capital. That is the only way to obtain a production sufficient for our increased industrial capacity, sufficient for our foreign coal trade, and sufficient also to afford good wages for miners and reasonably cheap coal at one and the same time."

The increase in production this year, to which our correspondent refers, has been disposed of in the manner indicated in the following table, to which we add the figures for 1912 and 1913 for purposes of comparison:—

(In tons.)

Monthly Average.	Production.	Exports.		Home Consumption.
		Foreign.	Bunker.	
1912	21,701,000	5,370,400	1,524,300	14,806,300
1913	23,951,000	6,117,000	1,752,000	16,082,000
1922.				
First quarter	20,734,000	4,412,100	1,467,700	14,854,200
Second quarter	19,184,000	4,649,100	1,475,800	13,059,100
Third quarter	21,112,000	6,097,500	1,578,500	13,436,000
October	23,114,300	6,196,400	1,621,900	15,296,000
November	23,678,300	6,570,800	1,617,600	15,489,900

It will be observed that the output figures for November of this year are well above the average for 1912. Exports have been increasing steadily throughout the year, while the increase in bunker coals is a welcome indication of increased shipping activity. The recent rise in the figures of home consumption is in part due to seasonal movements (especially for domestic consumption), but is

also in some measure due to an increased demand for industrial purposes.

The discussions in the House of Commons, however, have turned mainly on the question of wages. The average weekly wage for all classes of persons employed in collieries may be summarised as follows:—

Year.	Average Rate of Weekly Wage	
	s	d
Average, January, 1904, to July, 1914.....	29	9½
1912.....	29	7
1913.....	32	6½
1914 (to July)	31	7½
October, 1922.....	50	0

The figures are taken from the "Industrial Year Book (compiled from official sources), save those for October 1922, which are estimated by the Mining Association. Working on the basis of this October figure, the average weekly wage in the industry in that month was approximately 68 per cent. above the ten-years' average 1904-1, and approximately 58 per cent. above the average of the first seven months of 1914. The *Ministry of Labour Gazette* gives the cost of living figure for October 1922, as 78 per cent., and for November 1st last as 80 per cent. above that for July, 1914. It is clear, therefore, that the present rate of real wages in the coal-mining industry is considerably below that of 1914; and it must not be forgotten that the average rate gives no adequate description of the conditions prevailing in low-wage districts, where the wages compare very unfavourably indeed with the pre-war situation. At the same time, wages have been lower, and seem at present to be moving slightly upwards. If this improvement continues, the position in the industry may be expected to improve and become at least as favourable as that in other trades. A permanent improvement is only to be looked for with further development in the general revival of trade on the one hand, and, as our correspondent suggests, a still further increase in the output per unit of labour and capital on the other. It should not be forgotten, however, that this depends almost as much on an increase in technical efficiency as it does on the attitude of the workers themselves.

THE COPPER POSITION AND OUTLOOK.

THE rather firmer advices from the United States, coupled with a report that the Anaconda Company has started negotiations for control of the Chile Copper Company, reawakened interest in the copper position at the opening of the present month, and the outlook for the metal is now regarded as distinctly more promising. When dealing with copper it is as well to bear in mind the important fact that the leading producing countries were left by the war much better equipped for general progress than the consuming countries have turned out to be; thus the huge surplus which accumulated during the long period of forced production at inflated prices has taken longer to disperse than producers anticipated; and even now the principal European users of the metal are not able to secure anything like their normal needs, owing, for the most part, to the chaotic state of the exchanges. Had the requirements of Great Britain, France, Germany, and other manufacturing countries for virgin copper kept pace with the American consumptive demand during the past year or two, production by now would have been nearly overtaken, and the unsold stocks in the hands of the Copper Export Association would have completely vanished.

Standard copper at the end of November was £62 2s 6d cash, and £62 17s 6d for the forward position, against £67 2s 6d and £68 2s 6d respectively on November 30, 1921. On the twelve months there has thus been a loss of £5 to £5 5s per ton, and electrolytic during the same period has declined from £75 10s to £69 15s, thus falsifying the very optimistic forecasts that were made in the latter half of last year. Movements all through the year

have been comparatively small, and at times copper producers and their agents have had a very hard task to hold the market up. At the opening of the year cash figured at £65 17s 6d on the London market, with three months £66 17s 6d, and throughout the first month movements were unimportant. February, however, saw a much weaker feeling develop, and at the close cash copper was down to £58 15s, with forward 20s more, and electrolytic copper £64 10s. Further recessions followed, but in the second quarter the market began to pick up a little, although a good deal of fluctuation was witnessed from July to September, cash finishing the last-named month at £64, with three months £64 10s, and electrolytic £72. During October the market showed more activity, which was continued into last month, but this had little or no permanent effect on values, although at the beginning of December there was a firmer feeling in evidence, with more inclination to make purchases, and sentiment seemed to have changed again for the better. This was due to the announcement of the big constructional schemes to provide employment for thousands of workless men during the next few years, these embracing railway and tramway extensions, bridge building, the electrification of several suburban railways, while with the spurt in merchant shipbuilding and the laying down of two new battleships would undoubtedly call for large supplies of manufactured copper and also brass. The spurt in buying that came along some time ago was merely speculative business, with nothing much in the shape of a demand from genuine trade consumers to back it up, but the movement this time is based on a genuine prospective expansion in the demand from users, and in view of the small stocks held in the country, the current level of prices cannot be regarded as anything else than cheap.

If all the plans recently under discussion, the cost of which will run into millions of pounds, are carried out, copper metal will be wanted in much larger quantities throughout the coming year, and the era of living from hand to mouth adopted by metal users for a long time past will come to an end. The United Kingdom imports of copper are now at the rate of 53,000 tons per annum, but there would certainly have to be an increase of 30,000 to 40,000 tons at the very least if the consumptive demand for industrial purposes assumed anything like normal proportions. The shipbuilding yards in the United Kingdom have been very slack during the last year or two, and large quantities of copper go in ordinary times to the making of ships; thus the loss of this important outlet and the absence of the Naval demand for brass-making purposes has made itself felt very severely. Any renewal of this important outlet for new copper would have a very good effect on the general position of the metal, and do much to offset the comparatively poor demand in other directions. The copper and brass tube makers here have had a very lean time of it this year, and there has been very little doing for Indian account in copper sheets and yellow metal, there being a certain amount of competition in various lines from German makers who can secure a lower freight from Hamburg to the Indian ports. The present stocks of sheets in Bombay are several hundred tons more than they were at the opening of the year, but with any revival in the Eastern trade further supplies would be called for, and the rather brisker demand now coming along for yellow sheets will certainly lead to the replenishment of the depleted stocks at present held, early in 1923. The export of wheat and coal in addition to the usual produce should do much to revive trade in India, and the circulation of more money would soon start a revival in the demand for copper and other metals. Copper sulphate just now is in fairly active demand for foreign account, but this trade would go ahead much faster if the European exchanges were on a better footing.

A close examination of the statistical position of copper reveals the fact that this is perfectly sound; in short, it is better than it has been for several years. The available supplies in the United Kingdom may be taken as 24,500 tons, of which a large proportion is rough copper. In the States the stocks of refined copper are reduced to about 125,000 tons; based on actual figures, up to the end of last month, the refinery output in the United States for all 1922 should approximate 700,000 tons. Adding the

stocks of 250,000 tons brought forward from 1921 the American supplies will come to about 950,000 tons, out of which the domestic consumption will absorb 500,000 tons and the export trade 325,000 tons, leaving the tonnage to be carried forward 125,000 tons, or practically half what they were at the end of December last year. The world's output of copper for 1921 is estimated by one authority as 547,000 metric tons and consumption figures at 600,600 tons, but these tonnages have been surpassed this year, and next year should be even better. Germany this year has been the largest foreign buyer of American copper despite the exchange position, and that country will obviously make every effort to increase its purchases in 1923. The pre-war consumption of copper in Germany averaged over 200,000 tons per annum, and the present tonnage absorbed is a little more than half this quantity. Refined copper in Hamburg is quoted at about 225,000 marks per 100 kilos., and naturally buyers have been seriously disturbed by the exchange movements. German copper consumers, however, seem to be able to adjust themselves to the ever-changing conditions, but it is perfectly certain that any movement towards stability in the mark would work in their favour. Germany has of late been finding a good outlet for manufactured copper in India and also in other directions, and there does not seem to be any reason why the consumption should not be worked up to 150,000 tons in the coming year. Germany could not obtain anything like the copper wanted during the war years, and is still very short of actual stock. The steady work on merchant shipping and the industrial undertakings planned should assist the German copper trade.

Stocks in France are small, and while fresh buying has of late been delayed owing to the fall in the franc, it is certain that the demand will increase next year. France has also important electrification schemes under consideration; the reconstruction work will be pushed forward; great strides are being made with merchant shipbuilding, and additions are being made to telephones and telegraphs. There has been some talk of further large supplies of scrap metal being available, but virgin copper will be wanted on a much larger scale in 1923, and the same remark applies to Italy and Switzerland. Japan and China are also becoming more interested in the metal. America will no doubt continue to receive increased supplies of copper from South America. The Chile Copper Company, for instance, in a few months' time will be turning out copper at the rate of 100,000 tons per annum and the Cerro de Pasco half that amount, but in the States the copper mining industry is very seriously handicapped by the shortage of labour, and the refinery output is not likely to go over 70,000 tons per month for some time yet. The American consumption is increasing, and the exports this year will exceed the totals for the three previous years, and be fully equal to 1918. Production should expand in other directions, but there is no reason to anticipate anything of an unwieldy character even if the developments in South America, South Africa, and Australia, &c., come up to expectations. The industrial world is still unsettled, but it is heading steadily in the direction of a general trade revival, and certainly the United Kingdom and most of the principal European countries will want copper on a much larger scale in the coming year. There has been a lot of false optimism since the Armistice, but the outlook now is decidedly better for all non-ferrous metals, and copper is bound to receive its full share of the business that may be going. If production increases it should find a good demand running side by side; thus there does not seem to be any reason to anticipate any spectacular lift in rates. South American copper can undoubtedly be produced very cheaply, but taking the present cost of wages, fuel, &c., into account in the trade generally current rates cannot be regarded as excessive. Producers anticipate better prices, but they would be well advised not to try to force the pace too much and frighten buyers away, as there are now several metals which can be used as substitutes for copper. The expansion in the demand may be rather slow at first, but every indication points to an improving call for the metal in 1923. This week, despite the improvement in the exchange, both standard and refined copper have moved steadily upwards.

DUNLOP RESULTS.

It is little more than ten months ago since the financial world was staggered by the enormous deficit disclosed in the accounts of the Dunlop Rubber Company. The report for the year ended August 31st, published early in February, stated that in the years 1919-20 the company made arrangements to provide for very largely increased production, and entered into forward contracts for rubber and cotton on a scale commensurate with the programme of expansion laid down. When the slump in trade and prices occurred in the autumn of 1920, the company "found itself over-bought to a large extent at most unfavourable prices." The effects were felt not only in the main company, but throughout all the subsidiary and associated companies, and the sum required to reduce the cost price of stocks to market prices at the date of the balance-sheet was £8,262,300, to which was added £616,200, representing non-trading debits of an abnormal or non-recurring character and losses on exchange. After payment of debenture interest, and transferring the bulk of the amount brought into the accounts to reserve, a debit balance of £8,320,000 was carried forward. At the annual meeting, held on February 10th, the accounts were passed on the condition that an investigation should be made into the circumstances under which the loss on trading had been incurred. In March it was announced that Sir Arthur Whinney had been appointed to conduct the investigation, with the assistance of a committee composed of Mr J. M. Thomson, Sir Josiah Stamp, and Mr F. Sobey. This committee of inquiry has not yet completed its investigations, but it is expected that its report will be available early in the coming year.

In the meantime, the directors have produced another report, in which they state that in connection with the financing of the American subsidiary it has been found necessary to close the accounts on June 30, 1922; this report, therefore, covers a period of ten months only. According to this document there was a profit for the period of £1,054,700, but this figure is given "after charging to the Reserve account losses on Forward Contracts over market prices arising during the period." A reference to the balance-sheet shows that the reserve account has been reduced by no less than £1,860,100, so that in reality there has been a loss for the ten months of £805,400, to which must be added the losses of two of the subsidiaries, namely, £44,100, being the net trading loss of Dunlop Plantations, Limited, for the calendar year 1921, and £115,300, the net trading loss of the Improved Steel Company, closed down in April, 1922. These items and debenture interest, amounting to £307,000, increase the debit balance to £1,271,800. As already mentioned, however, the reserve fund is drawn upon to the extent of £1,860,100, so that a credit at profit and loss account of £588,300 is shown. This reduces the debit balance brought forward of £8,320,000 to £7,731,700, which is carried forward. In the comparative table below, we give the figures for the ten months ended June 30th last in the form presented in the accounts:—

August 31.	1914.	1919.	1920.	1921.	1922.*
Net profit	£ 381,919	£ 1,368,432	£ 2,163,896	£ 8,320,007	£ 588,268

* Ten months to June 30th.

The directors mention that sales in the home market were adversely affected by the prolonged dispute in the engineering trade, which resulted in a serious curtailment of output from a number of the most important chassis manufacturing customers of the company during the best selling period of the season. "Foreign competition, facilitated in the case of European countries by depre-

ciated currencies, has been especially keen, while large quantities of surplus stocks from various foreign markets have been imported and sold at cut prices." The decline in the exchanges and generally disturbed economic conditions have adversely affected the company's overseas trade, "but on balance the company has succeeded in avoiding loss on its external trade." The loss sustained by Dunlop Plantations, Limited, already mentioned, is said to be due entirely to the low price of rubber. Balance-sheet changes are set out below:—

June 30, 1922.		June 30, 1921.	
LIABILITIES.	Amount.	LIABILITIES.	Amount.
Prof. shares	5,000,000 ..	Land and plant ..	2,486,814 ..
Ord. shares	14,881,484 ..	Debtors	2,473,436 ..
8 % deb. stock ..	3,000,000 ..	Stock	2,362,735 ..
Income stock ..	103,359 ..	Investments at ..	11,344,377 ..
Reserve	907,520 ..	or under cost ..	2,174,936 ..
Forfeited share ..	4,375 ..	Cash and bills ..	351,417 ..
account	1,293,153 ..	Goodwill, &c. ..	241,855 ..
Creditors	2,019,978 ..	Ex's of new cap. ..	7,731,739 ..
Bank loans	..	Profit and loss...	..
Total	27,209,869 ..	Total	27,209,869 ..

The outstanding alteration on the debit side is the reduction in the reserve to what appears to be a hopelessly inadequate figure. In the previous report it was stated that the reserve fund was sufficient to provide for losses on the balance of forward contracts. At the same time, it cannot be assumed that the bulk of the £907,500 now standing at reserve will not be required for this purpose. The bank overdraft, which is secured on a deposit of £3 millions of 8 per cent. debenture stock, the unissued balance, has increased by £652,300. Investments in subsidiary companies have increased by £1,171,800, and the interest in the American company by £741,100, while debtors, which include amounts due by associated companies, have been reduced by £1,854,700. With reference to the American company the report says that after prolonged negotiations the necessary capital has now been found, and that the financing will take the form of a joint issue of capital in America and London. This should mean some lightening of the main company's burden, but a study of the balance-sheet shows that the position is very unsatisfactory. The directors speak of a report to be presented in due course to shareholders, dealing with the rearrangement of the capital. This, it would appear, will have to be of a very drastic nature if a stronger balance-sheet is to be presented at the end of the current year. The shareholders are to be asked at the meeting or Monday to vote an additional £10,000 to Sir Eric Geddes for his special services during the year ending September 30, 1923.

THE STOCK EXCHANGE LISTS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

ONE of the Temporary Regulations insisted upon by the Treasury as precedent to the re-opening of the Stock Exchange in January, 1915, was that every transaction which took place in the markets should be officially recorded in the Stock Exchange lists. Particulars had to be given, at that time, of the distinctive numbers of bonds and other bearer securities that were sold, and the name of the seller had to be supplied in the case of registered stock. The intention was, of course, to prevent stocks and shares, in the possession of enemy holders, from being sold in the Stock Exchange markets. Before long, the practice fell largely into desuetude, and, after some time, the Stock Exchange Committee, with the acquiescence of the Treasury, abolished the necessity of providing the names of the sellers, or the distinctive numbers of bonds that were sold. Another and a later modification permitted members a discretion in the matter of marking bargains in any deals which involved less than £100 in money. Jobbers, too, were not required to mark bargains done with one another. The obligation to see that bargains are recorded is generally assumed to rest upon the seller. A venerable Stock Exchange cynic declared that the record of "business done" in the Stock Exchange, as reflected in the Official List, was a catalogue of such bargains as those which had been

Notes of the Week.

executed badly; that is to say, at prices which the broker felt to be unsatisfactory. There was something in the gibe, but when marking of bargains was made compulsory, and everybody had to record each separate deal, the matter became one of serious rather than of jocular interest. As usual, there were clever people who quickly grasped the opportunities which this marking of bargains gave them for creating whatever impression they wished to communicate to the mind of the public. An atmosphere of activity could be given to any particular shares which a "bucket-shop" desired to popularise, by the simple method of sending in numbers of orders in small amounts, and having each bargain marked in the Official Lists. Steps were taken by the Stock Exchange Committee to stop this method of using official publications as a vehicle of publicity afforded to undesirable issues, but for a long time past there has been great dissatisfaction felt amongst members of the Stock Exchange at the way in which the lists are used for the reproduction of bargains at prices which, it is contended, frequently give the public a wrong idea of a price. To the man reasonably conversant with Stock Exchange dealings, the quotation of half-a-dozen prices in the "business done" column of the newspapers affords him a very fair idea of the price which he may have to pay, or that at which he can sell. He knows that he is not likely to buy at the bottom, or to sell at the top, nor does he expect to be able to deal, both ways, at the middle figure. He is aware that the provision of a special mark against a particular price infers that it relates to some bargain out of the ordinary. A low price would be regarded by him as evidence that somebody wanted to sell five shares; a high price, that a purchaser had given what appeared a fancy figure in order to round off a holding of stock. He knows that the jobber neither wants to buy five shares nor to sell an oddment, since both bargains would, in all probability, be unprofitable to the jobber, since he would have to pay for the former, or to deliver the latter, losing stamps and fees thereby. Where the trouble arises, however, is with clients who fail to appreciate the method of Stock Exchange marking, and who think that, if a bargain is specially marked at 22s 9d in shares which stand nominally at 25s, they, the buyers, should certainly be able to get them at 23s or 23s 3d. It is surprising how considerable is the dissatisfaction arising from what would appear to be a very slight ground for misapprehension, but so many have been the complaints of late that the Stock Exchange Committee are about to institute another form which members of the House shall use in the marking of bargains. The new form provides a space for the record of bargains in small amounts in such cases as those where the seller, instead of the buyer, pays the stamp and fee; and a second column, in which bargains of £100 or under in value can be placed. The rule has already been passed, but comes up for confirmation on Monday, and there is some talk of its being opposed in its present form. No further obligation is laid upon members as to what bargains they must and those which they need not record, but where transactions are concerned with small amounts, these will be specifically indicated in the Stock Exchange Official Lists and the newspapers. Reverting to the case of the man who sells five shares at 22s 9d when the market price is more like 25s, it will be readily seen that an unauthorised clerk, hurriedly marking 20 or 30 bargains at a time, may include this particular deal in the ordinary column which refers to bargains "at current prices." Scores of mistakes do indeed happen in this way, but the mere fact of having renewed attention drawn to the necessity for correct marking of bargains will have a good deal of effect in securing that this really important branch of the Stock Exchange business—important, because it is so keenly watched by thousands of the public—shall be carried out with a greater degree of care than is bestowed upon it at the present time. Some Stock Exchange members would do away altogether with any compulsion in the way of marking bargains. Such a reversal of the policy of publicity would be a matter for lively regret to those who appreciate how useful to the public these markings—in spite of misunderstandings to which they give rise—undoubtedly are.

Lord Curzon and the Near East.—This week's news from Lausanne is of happy augury. Before the admirable persistence of Lord Curzon, loyally supported by the French and Italian representatives, the Turks have withdrawn from an impossible position, and have accepted propositions which mark a turning point in the whole intricate business of straightening out the muddle in the Near East. The most important concession made by Ismet Pasha lies in his announcement of Turkish willingness to join the League of Nations—a step that may provide the key to the problem of the Straits. Turkey also accepts the principle of protection of minority populations as laid down in the treaties recently concluded by the Allies. So, although there may be serious obstacles yet to be surmounted before a satisfactory peace is definitely signed, two weeks' news marks very significant progress in the right direction. The kudos which Lord Curzon derives from this success will go far to stifle the controversy over the Curzon-Gounaris letters of last February and March. These letters are undoubtedly useful to those who want a new stick with which to beat the deceased Coalition Government. For a comparison of Lord Curzon's letters with other declarations of Coalition policy in the Near East provides a fresh illustration of that vacillation of which we have so frequently complained. But, as regards the features of the incident which are attracting most attention, we fail to share the excitement apparently felt in some quarters. It is surely unreasonable to blame Lord Curzon for advising the Greeks, on the eve of an inter-Allied Conference, not to precipitate any violent change in the military situation. Nor is there anything particularly surprising in the fact that Lord Curzon's reply has passed from the memory of the Ministers to whom it was circulated. If read by a Minister his letter would at that date appear to be the obvious and proper answer, and for that reason would scarcely claim more than passing attention. Political circumstances at home were at that particular date unusually absorbing. The same fortnight (February 25th to March 9th) which covered the Curzon-Gounaris correspondence and its circulation by the Foreign Office, saw also the battle between Mr Lloyd George and Sir George Younger over a proposal for a General Election, and the dismissal of Mr Montagu for the fault, curiously enough, of not circulating an important letter to the members of the Cabinet. Under such circumstances, more important papers than that which contained Lord Curzon's reply to the late M. Gounaris might well have escaped notice. Such things, of course, should not happen. Cabinet Ministers should be infallible in memory, and superhumanly persistent in attention to detail, even amid the most disturbing circumstances. Moreover, it is very easy now, in the light of subsequent events which have cost M. Gounaris his life, to go back to Lord Curzon's letter of March 9th and to say that it should have received the more careful consideration of his colleagues. But for our part we cannot regard the incident as damaging to Lord Curzon, nor do we include it as a fresh count in the indictment against the Coalition Government. It is easy enough to make out a formidable case against the Coalition Government's Near Eastern policy, without making very dubious capital out of this correspondence.

The Collapse of Russian Agriculture.—Under this heading we discussed recently the League of Nations' Report on the Russian situation. In the current issue of the *Yale Review* we find an article by an eye witness, which, in the main, supports and illustrates the conclusions there reached. The author of the article, Madame Emma Ponafigine, gives an interesting account of what happened on her own estate in Russia under the Bolshevik régime. We make the following extract:—"The best estates, as is well known, were at first turned into 'state farms' that were intended to serve as models to the peasants while furnishing the markets with their surplus products. The state farms were generally managed by

men who took absolutely no interest in the work except in so far as they made fortunes for themselves by turning the inventory and crops to their own profit. Such managers as did try to make a success of the farms were hampered by the eight-hour work day, and by 'workmen's committees' that permitted no discipline or individual direction that could have led to good results. As might have been expected, the state farms ran down from day to day. The number of cattle and horses decreased, farm implements disappeared, buildings were not repaired, and a good part of the fields remained uncultivated, and the hay uncut. Our former estate may serve as an example. While it was in our hands, we supplied food to a considerable staff of workmen, many of them with families, and a large house filled with our family and guests. Besides feeding all these, we put on the market annually a considerable quantity of flax, rye, vegetables, cattle, horses of our own raising, and dairy products. When, early in the spring of 1919, our estate, together with several others around us, was turned into a state farm, horses and cows from the other estates were added to our stock, all in good condition. The new manager found in our barns and granaries fodder for cattle and grain for all his workmen, which had been confiscated from us. During the first summer of Bolshevik management this herd of cows supplied dairy products to all living on the farm, and to a children's colony of about 60 persons. Several families of Red Army men in the villages that did not own cows were also furnished with milk at fixed prices, in addition to a considerable quantity that was taken to the city daily for the agricultural department. As we were still allowed to live in a cottage on our estate, we witnessed what happened the next summer, after the cows had spent the winter under communist care, and the fields had been tilled according to Bolshevik theories. Two of the cows succumbed to the new régime. And that summer there was not milk enough for the children's colony; none was given to the villagers, or taken to the city, and after July it became necessary to buy butter for the farm hands. I remember that in July 12 cows gave at a milking only 28 pounds, though most of them had recently calved. Anyone who had observed how the cows had been cared for during the long Russian winter, and how the herdsman treated them in the summer, would have understood the decrease in the milk. The soil was no better managed than the livestock. Not all the fields had been ploughed. There was no flax, and only sufficient rye, oats, and potatoes to feed the farm hands until Christmas. Much of the hay was not cut, and it is needless to say there was absolutely nothing for sale—no dairy products, grain, vegetables, cattle, or horses—and yet in the autumn, at a meeting of the State Agricultural Department, glowing accounts were sent from our former estate of the success of the farm under the new system." Madame Ponafigine adds that "most of the communist managers succeeded no better than that." The article also describes the work of the Bolshevik "Committees of the Poor," which effectively "nipped in the bud...all signs of thrift and prosperity as soon as they were seen in the villages."

More Agricultural Inquiries.—For long it has been a favourite device of Governments, when uncomfortably pressed, to appoint a committee, or at need a Commission to "inquire and report." No pledges have more signally failed to materialise than those which, in the glow of 1918, Mr Lloyd George and Mr Bonar Law promised a "happy and contented countryside." By way of soothing discontent, two more agricultural inquiry committees have been added to the Departmental Committee, presided over by Lord Linlithgow, which is looking into methods of selling and distributing agricultural, horticultural, and dairy produce, and, in particular, the differences between producers' and consumers' prices. First, the Ministry of Agriculture has collected a body of representatives of different interests and groups to advise it about allotments. Over this Lord Ancaster, Parliamentary Secretary to the Ministry, presides, supported by Lord Stanhope, Sir Kingsley Wood, Mr F. D. Acland, Mr George Nicholls, and others. Then there is to be a Commission

of Investigation—three economists to be selected after consultation with Mr Lloyd George—into what is vaguely called "agricultural prosperity"—that is to say, presumably, why there is none in Great Britain at present. But neither the landowner, the farmer, nor the agricultural worker can afford to wait while their case is inspected. They want what the *Times* calls "speedy release from the threat of impending ruin." The *Agricultural Gazette* puts it even more plainly. The facts, they say, are acknowledged. What remains is "for the Government to recognise its responsibility and act... The time has gone by for these procrastinating inquiries."

Tax Evasion in Europe.—In the last Reconstruction Supplement of the "Manchester Guardian," attention is called by two contributors to an interesting minor effect of the Capital Levy in Czechoslovakia and the proposal to impose one in Switzerland. In the former case the assessment was calculated, amongst other things, on the difference between the money value of capital holdings on March 1, 1919, and on January 1, 1914. It was therefore to everyone's interest to declare his pre-war property as high as possible, with the consequence, we are told, "that there appeared a huge number of supplementary income-tax declarations, which brought in to the State very considerable arrears of tax." In Switzerland similar considerations played a great part in the rejection of the proposed levy. Writing before the poll, the correspondent of the *Manchester Guardian* observes that, "the compulsory disclosure by the banks of their clients' accounts, it is now realised, would affect innumerable persons who have not made complete income-tax returns, and they would therefore find the proposed measure extremely inconvenient," although not themselves owning sufficient property to be liable to the capital levy itself. These two statements open up a line of thought not wholly devoid of interest and piquancy.

Manchester and Safeguarding of Industries.—Our Manchester correspondent writes:—The present position of the Safeguarding of Industries and Dyestuffs Acts is causing considerable interest amongst the members of the Manchester Chamber of Commerce, and, as can easily be imagined, there is some difference of opinion on the board of directors as to what action should be taken. The situation was discussed at a board meeting held last Monday, when the president stated that the question had been talked over by the executive committee a few days earlier, and that Sir Edwin Stockton, M.P., had made a proposal, which, if agreed to, would settle the matter. The president pointed out that in 1921, when the Safeguarding of Industries Act was before Parliament the board had passed, by a very narrow majority, a resolution asserting that the Bill was likely to prove injurious to the trade and commerce of the country, although they agreed that it might be necessary for some time to protect certain key industries. Sir Edwin Stockton, M.P., then explained that his proposal was to take a referendum of the members on the two questions: (1) Are you in favour of the repeal of the Safeguarding of Industries Act? and (2) Are you in favour of the repeal of the Dyestuffs Act? The resolution was seconded, and, after discussion, carried. Voting papers are to be sent out immediately, and the result should be of considerable interest to traders throughout the country.

Iron and Steel Output.—The statistics published by the National Federation of Iron and Steel Manufacturers show that the production of pig-iron and steel continues to improve, the production of pig-iron in November amounting to 493,900 tons, and of steel ingots and castings to 600,300 tons. In the case of pig-iron, this is the highest monthly total since January, 1921, and in the case of steel since December, 1920. Pig-iron production is, however, still only 57 per cent. of the average monthly production in 1913, and although steel production amounted to 94 per cent. of the 1913 monthly average it is much below the steel producing capacity of the country, which was increased by at least 50 per cent. during the war. The exports of iron and steel in November amounted to 372,300

tons, exceeding the previous post-war record (July, 1920) by 3,800 tons. These are referred to in greater detail in an article on a previous page on the November Trade Returns. Exports of pig-iron accounted for 117,700 tons, and it is interesting to note the complete reversal of the position compared with the corresponding period last year as set out in the following table:—

	Pig-Iron.		1922	
	Imports.	Exports.	Imports.	Exports.
September	121,700	6,900	12,400	87,700
October.....	94,300	9,500	17,900	130,000
November	99,900	10,900	12,800	117,700

Last year, as a consequence of the coal stoppage, we were importing pig-iron on a large scale from the Continent, while the big exports this year are due largely to exports to America owing to the recent coal strike in that country.

Customs and Excise Duties.—The annual report of the Commissioners of Customs and Excise for the year ended March 31, 1922, elaborates in detail the figures already given in the Finance Accounts. As regards Ireland, the Government of Ireland Act, 1920, was put into operation in respect of Northern Ireland as from November 22, 1921. The result was the transfer to the Government of Northern Ireland as from that date of Northern Irish Old Age Pensions, Entertainment Duty, and a number of Excise Licence Duties. Under an arrangement made under Section 63 of the Act, the Customs and Excise Department is at present continuing to carry out its previous functions as agent for the Northern Irish departments concerned, in relation to practically the whole of the transferred services. Receipts from the Key Industry Duty, levied from October 1, 1921, amounted in the financial year to £140,300, on goods imported to the value of £421,700, the principal contributor being optical glass and instruments, which produced a duty of over £33,000 in the six months, while scientific glassware, &c., produced £19,900. Under the heading of "new import duties," receipts totalled £1,698,100, against £5,480,900 in the previous year, the difference being mainly accounted for by motor cars, the post-war demand for which had been largely satisfied. The receipts from clocks and watches and musical instruments also fell considerably, but those from films were larger.

The Mexican Railway.—The report of the Mexican Railway Company for the half-year ended June 30th last shows receipts of \$7,274,585 and expenses of \$5,752,679, as compared with \$6,769,255 and \$5,750,426 respectively in the corresponding period of 1921. Net revenue is thus \$503,077 higher at \$1,521,905. This improvement is due to the company's property and rolling stock, which have permitted the working to be carried out in a more efficient manner, and partly to a decrease in operating costs compared with the strike period in the first half of 1921. At the standard rate of 24d the net revenue is equivalent to £152,190. To this is added £14,267 for differences in exchange and £5,296 for interest and transfer fees, making a total credit to net revenue account of £171,753. The debit balance at the end of 1921 was £581,546, and after payment of interest on debentures and deferred interest certificates and transferring £10,000 to reserve for taxation there is a deficit of £508,156 to be carried forward. On January 1st next the company will distribute a further sum of £62,697 in anticipation of profits payable to the trustees of the registered "A" stock, making with the previous redemption on July 1st a total redemption of 20 per cent. of the amount of stock issued. It has now been decided to work the mountain section of the line by electric traction, and a contract has been entered into for a supply of electric locomotives, under which the terms of payment are spread over a period. The cost of equipment and track work will amount to about £500,000. An increase of rates was sanctioned on May 30th, but did not come into force until December 1st, so that the effect is not yet seen on the returns. Net revenue for July to October of this year, indeed, at \$870,800 is \$320,200 lower than in the corresponding period of last year.

Base Metal Companies' Results.—By a coincidence, writes our mining correspondent, the bulk of the reports just lately to hand are those of companies producing one or more of the principal non-ferrous metals. As to the copper undertakings, the Arizona, which once figured prominently, is now merely a holding concern, its property having been sold for shares in the Phelps Dodge Corporation, of the U.S.A.; as part of the bargain the last-named concern undertook to provide the interest on the preference issues. The accounts show that last year's results are less favourable than might have been inferred from the declaration of a dividend of 1s per share, tax free. This distribution called for £76,000, whereas the net revenue amounted to only £47,000; the difference was made up by the transfer of £50,000 from reserve, leaving £20,400 to be carried forward. The Inland Revenue authorities have admitted the company's claim for return of the whole of the excess profits duty charged—£361,200—and have actually handed over £300,000; per contra, they make substantial demands in respect of income-tax. A report by the company's representative on the board of the Phelps Dodge Corporation gives an interesting account of the position at the different properties and works. The boards of the Tanganyika and Zambesia companies intimate that the next accounts will be made up to December 31st, and submitted in July; meantime they give particulars concerning the progress of the Union Minière du Haut Katanga, in which large interests are held. It appears that as a result of the decision to keep the plant in full activity this concern in 1921 headed the world's list of producers; receipts and expenses balanced. At 46,348,000 tons ore, containing 2,812,800 tons copper, the ore reserve estimate scores a large expansion over that of 1920. As mentioned in our columns some time ago, a large programme of expansion is being carried out. The Tanganyika Company, it may be recalled, made an issue of 10 per cent. preference shares last June. Some subscribers are displeased to learn that there will be no interim distribution, the full year's dividend being payable next July. Thanks to the conduct of operations throughout the year without interruption, that important mining and ore treatment undertaking, the Sulphide Corporation, in 1921-22 made a net profit of £82,800, as against £30,000 for 1920-21. The last-named sum provided 5 per cent. on the preference. For the past year the preference get a total of 15 per cent., and the ordinary 5 per cent. The ore reserves stand at 1,343,200 tons, representing over ten years' supply. Covering a period of reduced production and low market prices the annual statements of the Nigerian companies naturally make a poor showing. In the case of the Bisichi, however, there are the points that extensive areas have been proved, and that improvements to the equipment enable comparatively low grade ground to be treated at a profit. Of the moderate surplus earned by the Northern Nigeria (Bauchi) practically the whole was absorbed by allowances for depreciation and the like. Much depends upon what financial arrangements can be made to permit the completion of the company's hydro-electric power installation. The Geovor (Cornwall) is scoring fair progress, and can report the existence of relatively substantial ore reserves. The Chenderiang (Malay) last year made a small loss. The Malayan Tin Dredging Company, which for several of the war years paid dividends totalling 25 per cent., and for 1920-21 disbursed 10 per cent., last year made only £3,000; this, with excess profits duty refunded, is added to the carry-forward. Prospects for the current year have been improved by the advance in the price of the metal. The balance-sheet of the Southern Perak Dredging indicates that to bring the company to the producing stage a bank overdraft was required. Fair profits have been earned during the first two months of operations; after December the preliminary washing should have been completed, and profits of £3,000 to £4,000 per month are looked for.

British Glass Industries.—The third annual report of British Glass Industries, Limited, will not give much material assistance to shareholders desirous of learning the true position of the company. For the year ended March 31, 1921, £91,136 was shown at the credit of profit and loss account, although it was fairly obvious that more

than that amount was needed to write assets down to a value more in keeping with current values. In the accounts and balance-sheet for March 31, 1922, the same policy is followed. A loss for the year of £58,321 is shown, which is deducted from the above-mentioned credit of £91,136, and a balance is brought down of £32,815. To enable these results to be shown, assets are valued at £4,448,713. These comprise investments in allied companies taken at cost amounting to £3,339,742, less a reserve of £457,752. The auditors, however, call attention to this item, and the directors, in their report, remark that this "is the cost price of such investments after reserving against such figure certain capital profits, and, as stated by the chairman at the last meeting, the value of such investments is not represented by equivalent assets." The auditors also draw attention to the value placed upon loans at £88,400, and current accounts of subsidiary companies at £91,470. Preliminary expenses under assets at £161,860 is also an item which calls for comment. The company's bankers hold a first charge upon the whole of the assets against a loan which, including interest, amounts to £405,364. Even a second charge is recorded for £12,219. It is, perhaps, extraordinary to find that in the year no dividends were declared by any of the controlled companies. The Canning Town factory, however, made a profit of £20,720. The directors, it is stated, are considering proposals for the reorganisation of the company. We would suggest that the sooner this is done the better it will be for all parties interested. In another column we analyse the balance-sheet.

Camp Bird Group.—The annual statement of these British-American mining enterprises have a disappointing story to tell. The Santa Gertrudis, whose properties are situated in Mexico, received a small dividend from its operating subsidiary. Practically the whole sum was absorbed by interest on and expenses in connection with the issue of £300,000 8 per cent. notes by means of which the company was financed a couple of years ago. That the ore reserves in the company's own property should show a further decline is not surprising, as it was known to be approaching exhaustion; but it is a little disappointing to find the same condition of affairs in the El Bordo Group, operated by the company in consideration of 40 per cent. of the profits. Much interest attaches just now to the outcome of work at the deepest level of the Malinche Mine (one of the said group); so far the reef has not been cut. The Mexican Corporation, whose position was referred to in our columns a few weeks ago, is making good progress in the expansion of its output from the surface ore deposits and in the unwatering of the deep mine at Fresnillo. Some shareholders have been disappointed at the period which will elapse before the revenue from the former source is supplemented by crushings from the latter; but at the meeting held on Tuesday last the chairman gave so encouraging an account of the prospects as to bring about a recovery in the price of the shares. The interests of the Camp Bird now consist mainly of holdings in the two undertakings whose affairs have just been dealt with. Receiving no dividends from either, it naturally has to report an excess of expenditure over income. The balance-sheet shows a loan of £106,200, secured by deposit and investments; the preference dividend is in arrears since June, 1920. Unfortunately for people interested in these enterprises, there has lately been a fall in the price of silver as well as gold.

Garden City Finance.—One of the most interesting social experiments in England is the First Garden City, Limited, at Letchworth—an experiment since followed elsewhere. After an existence of 18 years, the company is in a financial position strong enough to warrant the raising of the dividend from 2½ per cent. to 4 per cent. Interest on the prior charges has always been paid, but the ordinary shareholders received no dividend until 1913, when 1 per cent. was paid. During the war the directors found so much difficulty in raising the extra capital so constantly required by a company which does not sell parcels of land as they are developed (the usual practice of land com-

panies) that they suspended the payment of dividends until the end of 1918, when 2½ per cent. was paid. The net profit is now £5,008 more than it was a year ago, and so the dividend is raised to within 1 per cent. of its maximum. Altogether the interest on a capital expenditure of rather over half-a-million will work out at a little less than £24,000; thus philanthropy gets very nearly its proverbial 5 per cent.

Transvaal Output in November.—The statistics of gold output in the Transvaal for November are below those for October, but an improvement on the total output for the preceding months. The November output amounted to 764,476 ounces of fine gold, compares with 778,159 ounces in October and 704,236 ounces in the month of November last year. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January..	787,467	782,634	714,182	676,059	670,503	651,593	639,728
February..	753,594	781,321	659,759	636,728	625,330	558,137	
March ..	736,689	787,094	696,881	712,379	707,036	671,123	511,338
April	754,672	745,778	717,000	694,944	686,979	681,382	
May	777,681	779,385	741,317	724,995	699,041	687,776	629,786

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	April, 1922.	May, 1922.	June, 1922.	July, 1922.	Aug., 1922.	Sept., 1922.	Oct., 1922.	Nov., 1922.
Gold mines....	138,277	155,425	170,464	172,886	175,054	174,565	175,129	173,173
Coal mines....	11,385	11,525	12,117	12,371	12,270	12,000	11,495	11,089
Diamond	1,232	1,219	1,211	1,211	1,219	1,234	1,218	1,237
Total	150,894	168,169	183,792	186,466	188,543	187,799	187,842	185,499

It will be noted that the number of natives employed at the gold mines shows a decline on the preceding month.

THE Board of Trade announces that, consequent upon the death of Mr W. P. Bowyer, Senior Official Receiver, attached to the High Court in Bankruptcy, the President of the Board of Trade has appointed the Hon. Walter John Harry Boyle to be the Senior Official Receiver as from October 23, 1922.

IRISH FREE STATE.—OPENING OF PARLIAMENT—IMPORTED CATTLE.

(FROM OUR CORRESPONDENT.)

DUBLIN, December 14.
The Oireachtas, or Parliament, has been completed by the election of the remainder of the Seanad in accordance with the Constitution, and has been formally opened by the Governor-General. His speech, beginning with a personal message of congratulation and good wishes from His Majesty, continued with a general pronouncement of the Government's general programme for the terms and phrasing of which the new Ministers were responsible in accordance with well understood constitutional precedents. The Seanad, after a short discussion and without a division, appointed Lord Glenavy to be its chairman and Mr. James Douglas to be vice-chairman. The former, recently Lord Chancellor of Ireland, is an Irish Protestant, who has always been prominent in the Synod of the Church of Ireland. Mr Douglas, a Dublin merchant, came into general public knowledge principally as the active organising spirit of the Irish White Cross, which disbursed something like £1,500,000 in relief during the last two years. He is known to be a man of character and ability and a Quaker.

British Government departments are not always at their best in dealing with Irish affairs—probably from lack of direct touch with them. Some little time before the year 1800 and the Act of Union a register for British Government securities was

established in the Bank of Ireland in Dublin, and nowhere else outside London could transfers of such securities be registered. Not long after the Treaty of December, 1921, it occurred, or was suggested, to some doubtless excellent official in London that this register ought to be removed from Dublin to Belfast. The reasoning was obscure, as the date of its establishment shows that convenience and not political considerations were at the root of the arrangement. Preliminary and other protests were unavailing, and the matter was coming to a head recently, when the Dublin stockbrokers took the matter up with the aid of Mr Healy, K.C., rendered professionally prior to his appointment as Governor-General. The matter when carried to higher quarters was soon disposed of—especially when the fact was brought out that of some £111,000,000 Government securities registered in the Bank of Ireland in the names of Irish owners, £105,000,000 are held in the Irish Free State and only £5,000,000 in N.E. Ulster. This is a small matter, perhaps, but one by no means devoid of significance. One of much wider importance, however, arises in connection with the Importation of Animals Bill now before Parliament at Westminster. It relates to the raising of the embargo upon the importation of Canadian cattle, and it cannot be satisfactorily discussed in detail while its ultimate provisions are not yet finally fixed. The removal of the embargo was advocated, pressed, and carried to the point of adoption on the grounds that it would cheapen the supply of meat to the British consumer, and that there should be no "protection" for British and Irish cattle, and that there ought therefore to be no restriction on the free import of Canadian cattle except in so far as regulations for the prevention of the introduction and dissemination of disease might so operate. It now appears that the effect of the Bill will be to impose statutorily stereotyped restrictions upon Irish cattle, which are notoriously free from disease, because such restrictions are to be imposed on the Canadian cattle, and that this is the purport and result of a hitherto undisclosed bargain between the Colonial Office and Canada—a bargain, if it, in fact, amounts to a bargain, whose existence was maladroitly betrayed in Committee. It is hard to resist the conclusion—and other features in the debate confirm it—that protection for British cattle breeders supplies the principal colouring matter for the Bill in disregard of the British farmer who fattens cattle, and the British public who buy them for food. The Irish Free State cannot complain if Great Britain adopts protection avowedly, but it may protest at undisclosed bargains and at protection camouflaged as health regulations. But why should N.E. Ulster be wounded in the house of its friends? Why, if it insists upon bargaining within the fiscal boundaries of Great Britain, should British trade and agricultural policy discriminate against it?

UNITED STATES.—SHIP SUBSIDY LEGISLATION— TRADE AND INDUSTRY—STOCKS AND BONDS— RAILROAD MERGER.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 4.

The Ship Subsidy Bill, strongly advocated by President Harding, was passed by the House of Representatives last week, but only after it had been so emasculated by amendments that it bore little resemblance to the original administration measure. Even in its revised form the Bill caused a wide split in the ranks of the dominant party. The final vote showed a majority of only 24 in its favour, the record being 208 to 184; 69 Republicans voted against it, while four Democrats supported it. Among the principal changes in the measure as it passed the House are the following:—Vessels owned by industrial corporations, when engaged in transporting their own products, would not receive subsidies, although the latter would be granted to them on commercial business. The provision giving shippers who use American vessels a rebate from their income-taxes equivalent to 5 per cent. of the amounts paid in freights was eliminated, as was also the section giving the Shipping Board control over rates and practices in the intercoastal trade. The clause

authorising the Shipping Board to sell ships without advertisement or competitive bids was likewise struck out. The minimum interest rate to be charged on loans made under the proposed construction loan fund was increased from 2 to 4½ per cent., while the interest rate on unpaid balances for ships purchased from the board was raised to a minimum of 4½ per cent., instead of 4 per cent. One of the most vital and important amendments stipulates that no expenditure shall be made from the Merchant Marine Fund except under appropriations made annually by Congress. The Administration Bill provided for the creation of a so-called revolving fund of \$125,000,000, from which subsidies were to be paid, without the necessity of obtaining the consent of Congress. If that amendment is finally adopted many authorities, including even advocates of a shipping subsidy, claim that the legislation will be of little practical value, for the reason that shipping interests could not count with any degree of certainty upon getting a subsidy should the making of such an appropriation be left each year entirely to the discretion of Congress. The measure, as approved by the House, will be presented to the Senate for consideration. What action the latter body will take is problematical; it is also uncertain whether or not such changes as the Senate might make would be accepted by the House of Representatives.

Negotiations are said to be nearing completion whereby the New York, Chicago, and St Louis, the Toledo, St Louis, and Western, and the Lake Erie and Western railroads will be merged and operated as one system. The consolidation, if effected as now seems likely, will be the largest combination of railways brought about in recent years; it involves approximately 1,725 miles of track. Details have not been announced, but it is understood that the financing will include the issue of new stock of the New York, Chicago, and St Louis Railroad. It is expected that the merger will meet with the approval of the Inter-State Commerce Commission, since the three roads were placed, with others, in the same group by the Commerce Commission in its tentative plan for railroad consolidations.

A further slackening of activity is noted in most primary lines, especially textiles, but the quieting down is considered seasonal. The volume of business in primary markets, generally, seems to have reached its peak in October. Both jobbing and retail trade, however, were better in November, and the present month is expected to be the best of the year for retailers. Records for the past two months show that wholesale and jobbing trade this autumn was the best since 1920. Most industries continue as active as heretofore. Iron and steel production is said to be fully 80 per cent. of normal, and is limited only by car or fuel shortage. Coal production has been increased lately, as shown by car loading reports, but this country faces a shortage of 15,000,000 tons of anthracite coal before the end of winter, according to an estimate made by the New York State Fuel Administration. Railway material still figures most prominently in the buying of iron and steel, more than 10,000 freight cars having been purchased at Chicago last week, while heavy sales of fabricated steel and plates for oil tanks are reported. Demand for hides and leather has fallen off somewhat, with the former displaying an easier tendency. Western shoe factories are enjoying good business, but Eastern manufacturers report a decrease in the volume of new orders. All building materials continue unusually active for this season of the year, owing in large measure to the remarkably open weather still being experienced in many parts of the country; orders, production, and shipments of lumber still reach big totals. Delayed coal shipments, however, have caused some curtailment of production of brick, lime, and cement. Most of the plants at the leading automobile centres are reported running at capacity, with a further increase in employment. Furniture manufacturers generally are also operating at full capacity, while the leading carpet and rug mills have been swamped with orders from all sections of the country, and their entire available production is now sold ahead for several months. The marked activity in the furniture and floor covering industries reflects the building boom during the past year. Glassware manufacturers seem to be deriving some benefit from the strike in the crockery industry. Jewelry trade—usually one of the first to feel business

depression and about the last to recover—is reported as very satisfactory, especially in the East; manufacturers, wholesalers, and retailers are quite agreed that business in jewelry and silverware this autumn has been much better than a year ago. Although there has been a material decrease in the amount of new business done lately in primary textile markets, particularly cotton cloths and cotton goods, the textile industry in New England has booked a heavy volume of orders for future delivery, and is operating at a rate above the normal average. That applies also to mills producing woollen and worsted fabrics. The last chapter in the prolonged strike of textile operatives in New England was closed a few days ago when the Amoskeag Manufacturing Company, the largest manufacturer of gingham in this country, if not in the world, resumed operations, the local unions in New Hampshire where the plant is located having voted to return to work, although still protesting against the 54-hour week, which the company had insisted upon after restoring the 20 per cent. wage reduction announced last February. Cotton goods mills in the South are likewise heavily sold ahead and running at a high percentage of capacity. Cotton yarn spinners in that section report much the same condition, and many are behind on contract deliveries. Prices of all textiles, finished and unfinished, are firmly held at the higher levels recently established, owing to the continued strength of raw materials.

As a result largely of aggressive attacks by bearish operators, both railroad and industrial shares on the Stock Exchange declined recently by successive stages to the lowest levels reached since last summer. At the bottom prices, stocks, especially the more speculative issues which had led the previous upturn, showed losses ranging all the way from 10 to nearly 70 points, as compared with this year's highest levels. Numerous speculative accounts, weakened by the declines, were eliminated, and there was considerable liquidation to register losses for income-tax purposes. With no adverse developments sufficient in themselves to account for the sharp breaks, the decline was generally regarded as a natural reaction after the prolonged bull movement which some observers think was overdone. Within the past few days the stock market has rallied well from the lowest points under covering by shorts and steady accumulation of standard shares by substantial interests. The bond market, after declining more or less in sympathy with stocks, has lately shown some improvement. Investment demand has been anything but vigorous in recent weeks. In many cases new bond offerings have sold slowly, and large blocks have often been left in distributors' hands. The market has apparently been suffering an attack of indigestion. Bankers have many new offerings, but they are withholding them until those already put out are absorbed. The total of new issues last week was only about \$19,500,000, and much smaller in the preceding week. Not much increase in the investment demand is expected this month, but bond dealers are counting on the usual reinvestment of funds during January, and prices of bonds on the Stock Exchange may soon show further advances in anticipation of more active buying after the turn of the year.

FRANCE.—THE EXCHANGE MARKET—PRICES— SHIPPING SLUMP—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 13.

The report drawn up by M. Jacques Duboin on the steps to be taken to reorganise the exchange market in this country and on the modifications to be made in the so-called "Law of 1918 Prohibiting the Export of Capital," which has just been adopted by the Parliamentary Commission for the Repression of Speculation, begins with the common-sense statement that "it would be ignoring economic realities to suppose that speculation in exchange can be suppressed." The report recognises that the exchange market is now a world market, that it is false to regard Paris as its principal seat, and that foreigners in all countries can no more be prevented from selling French francs than they can be forbidden to buy whatever they desire in any market they choose. The

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up	\$25,000,000
Surplus	\$25,000,000
Undivided Profits over	\$10,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world bringing them in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
Gresham House, Old Broad Street,
London, E. C. 2

only question to be considered by the Commission, therefore, was whether, since the law of April 3, 1918, prohibits the export of capital, the transactions in foreign exchange on the Paris market are really legitimate in themselves and properly supervised. At present, the report shows, admission to the exchange room at the Paris Bourse is strictly limited to authorised persons, the details of whose transactions are carefully recorded, and from which the official rates of exchange are established. The report shows that, as a matter of fact, the official exchange market at the Bourse does not open until 1.30, and closes at 2.30 (unlike that of New York, which is open all day). Barely 10 per cent. of the exchange transactions, however, are effected on the official market. "All the big transactions take place in the morning, outside the Bourse, between banks or bankers, who are put in touch with each other by experts who specialise in this kind of business." It is easy to see, therefore, that the official rate of exchange, which represents merely the average rate of the trifling number of transactions effected during the hour the official market is open, in no way corresponds with the rates at which the bulk of the business is done.

After commenting on the extraordinary development of arbitrage operations since the war, the Commission insists that the law forbidding the export of capital is observed only to a trifling extent, and that the supervision stipulated for scarcely exists. In proof of this, the fact is cited that hundreds of millions of francs have been sent out of France in payment for Royal Dutch, Shell, and other descriptions popular here, in spite of the law. The enormous losses suffered by small French purchasers of German and Polish marks is cited as another instance of wholesale infringements of the same law. The Commission expresses its astonishment that the judicial authorities, notwithstanding the law that exists, declare that no prosecution has ever been brought for illicit speculation in exchange, and that they have no official knowledge of the enormous purchases of foreign shares that have taken place, or of the huge speculative purchases of German

and Polish marks, Roumanian leis, &c. The system of paying stamp duties on all kinds of foreign shares offered on the French market, which was compulsory before the war, "has now been almost completely abandoned, precisely because of the variations in exchange rates."

The Commission recommend that three distinct measures should be taken to remedy the existing state of affairs. Firstly, they urge that the official exchange market in Paris shall be open throughout the morning, when the bulk of the business is done; that, instead of publishing one "average" rate every day, the authority in control of the exchange market shall make public the rates at which the various transactions are effected, so that givers of orders can check the terms on which business is done; and that the number of inspectors whose duty it is to examine the records of transactions shall be increased, in order to ascertain if the various operations are really legitimate. Secondly, the Commission proposes that a market shall be created at the Paris Bourse that would enable a trader to buy exchange for future delivery. Such a market would not only act as a regulator of the ordinary exchange market, the Commission suggests, but would enable manufacturers, who need raw materials for which payment has to be made at fixed dates, to secure the necessary foreign currency from the moment they agreed to accept delivery. The creation of such mechanism, it is pointed out, was the object of one of the resolutions passed at the Genoa Conference. Such a market already exists at Antwerp, and has already proved of immense service to small traders. Finally, the Commission recommends that the law prohibiting the export of capital should be strictly applied, and that the penalties for infringement should be increased. In view of the fact that the position of the franc is largely due to heavy purchases of dollars and sterling on German account, the Commission urge that the German Government should be called upon to requisition, for the purpose of being used to make Reparation payments, the foreign currency held by its nationals, in order to put an end to speculation in exchange by the latter.

The French official index figure for wholesale prices for November shows, as was expected would be the case, an appreciable increase in the cost of both foodstuffs and raw materials, the reason, doubtless, being the serious fall in the value of the franc, owing to speculative operations during last month. The detailed figures, as compared with those for October, are as follows (on the basis of 100 for the period 1901-1910):—

	End of October (corrected).	End of November (provisional).
General index figure (45 categories)	390.0	407.0
Foodstuffs—		
General figure for 20 categories	362.5	383.8
Vegetable foods only (8 categories)	339.3	346.2
Animal foods only (8 categories)	402.1	430.3
Sugar, coffee, cocoa (4 categories)	329.9	366.1
Raw materials—		
General figure for 25 categories	412.0	425.5
Minerals and metals (7 categories)	370.7	365.7
Textiles (6 categories)	521.4	548.0
Various (12 categories)	381.4	399.2

The index figure for the retail prices of 13 categories of foodstuffs in Paris for November is returned as 3,191, or 197 per cent. increase on that of 1914, as compared with 3,120 (or 190 per cent. increase on 1914) for October.

The French shipping industry remains in a very unsatisfactory position. This is alleged to be due not merely to the falling off in foreign trade that is common to all nations, but largely to the deplorable effects that have resulted from the application of the Eight Hours Law to the French mercantile marine, which has undoubtedly compelled French shipowners to incur much heavier working costs, and placed them under an unfavourable handicap as compared with their British competitors. The latest figures available show that at the end of October there were 694 French merchant ships, with a total gross tonnage of 1,433,052 tons, lying up in the country's ports. These vessels included 45 passenger steamers, with a total tonnage of 263,803 tons, 307 "mixed" and tramp steamers, totalling 879,486 tons, and 167 sailing vessels, amounting to 238,333 tons. In addition, five French ships, with a combined tonnage of 13,250 tons, were lying up in foreign ports, and 29 foreign vessels, totalling 81,777 tons, in

French ports. The recent serious strike of seamen in several of the French ports, it will be remembered, was directed against the new decree modifying the Eight Hours Law as applied to shipping, with a view to adapting the principle to the period actually worked by the seaman. The Chamber has devoted two entire sittings to the question, with the result that the action of the Government in authorising the signature of the decree in question was approved by 368 votes to 182.

Last week's tendency of firmness on the Bourse has been well maintained, among the contributing factors being the improved position in the Near East and the belief that effective measures will before long be taken in connection with the problem of Reparations. In French Funds there have been no material changes, while both Russian and Turkish stock have improved, though only slightly. Banks are notably stronger, *Crédit Lyonnais* rising from 1,460 to 1,495, *Banque de Paris* from 1,350 to 1,360, and *Union Parisienne* from 740 to 755. Railways have well maintained their position, and in certain instances show an advance on last week, but shipping is weaker, *Chargeurs Réunis* having declined from 520 to 500, and *Transatlantique* from 220 to 211. Metallurgical undertakings with some exceptions are lower, but mines are markedly stronger, *Tintos* moving from 1,880 to 1,905, and *Boléo* from 600 to 640, while *Utah*, after being firm in the early part of the week, closed 610, dropping back from 640.

GERMANY.—REPARATIONS—FINANCES—EXCHANGE AND BOURSE—TRADE METHODS.

(FROM OUR CORRESPONDENT.)

BERLIN, December 12.

THE suspension of the London negotiations has had, so far, no effect on the exchanges. The rejection by the Allies of the plans submitted by Herr Bergmann seems, judging by the newspapers, to have been welcomed by an influential part of industry, although industry a year ago pledged itself to Dr Wirth to guarantee an international loan. The organ of Herr Stinnes now complains that industry was not consulted in advance about the rejected offer, and condemns the offer as unwise. The settlement, if it is a settlement, of the Ally claims for the attacks on Ally officers in Passau and Ingolstadt is not satisfactory, and sets a bad precedent. The Federal Government, not the towns, had offered to pay the fine of 1,000,000 gold marks. This sum, which is 2,000,000,000 paper marks at present exchange, could not possibly be borne, as the Allies demanded, by two little towns, and it means a serious new burden to the already passive foreign payment balance. It is further undesirable that in a time of peace Governments should levy administrative fines under threat upon foreign Governments or cities. There is no recognised international machinery whatever for such fines, and they are exacted on the bad foundation that Germany is helpless.

The Reichswirtschaftsrat has declared against the amendment of the Forced Loan law. From the amended loan the Government expects 140 milliards (double the original estimate), but the Reichswirtschaftsrat finds that in view of the currency depreciation this increase has little value, and demands an entirely new measure which will really compensate for the depreciation. The Government is not bound by this advisory body's recommendations. The Reichstag has amended the income-tax for 1922 to 10 per cent. for the first 300,000 marks, 15 per cent. for the next 300,000, and so on in increasing stages to 60 per cent. on income exceeding 7,500,000; and for 1923 to 10 per cent. on the first 1,000,000 marks, 15 per cent. on the next 1,000,000 marks, and so on up to 60 per cent. on income exceeding 18,000,000 marks. It is not likely that these rates can be borne. In 1923 an income of 6,000,000 marks, which is only £150, or in buying power perhaps £350, pays 30 per cent. on the last 2,000,000 marks. Experience shows that such heavy direct taxes are evaded, and evasion is facilitated by the changes almost every week in salaries, wages, and rates of profits. A more effective reform is the proposed compulsion to pay on a whole year's assessment in advance, instead of, as now, quarterly in advance. The present system is unfair between classes, as the workman's 10 per cent. is deducted

from his wages at once, while the multi-millionaire's 60 per cent. is paid very long after it is received or earned in money which has a mere fraction of the original value. The Customs gold surcharge will be raised on the 13th inst. to 178,900 per cent., or 1,790 fold the nominal. Revenue is still rapidly increasing, and as the price rise has now about caught up with the mark exchange's depreciation, a new period of state financial recovery—of course, with the declining real deficits expressed in much higher nominal figures than before—must begin if there is no new mark exchange fall.

The Reichsbank's statement for November 30th brought the expected record. Note circulation increased by 110 milliards, against a past record (November 15th) of 65 milliards, Treasury bills by 79½ milliards (former record 71 milliards on October 31st), and commercial bills by 38 milliards, which is behind the record of 49 milliards on November 15th. Note circulation is now 754,086,109,000 marks, Treasury bill discounts 672,222,197,000 marks, commercial bills 246,948,596,000 marks. The outstanding advances of the *Darlehenskassen* have declined slightly to 91,700,000,000 marks. The Reichsbank clearings in November totalled 1,463,765 millions, against 140,492 millions in November, 1921, and 5,582 millions in November, 1913. Figures published by the *Vossische Zeitung* show that the Reichsbank holds about half of all the private bills in circulation, and four-fifths of all discounted Treasury bills. Creditors are taking measures to guarantee themselves against loss caused by belated payment in ever worse money. The Association of Paper Merchants has decreed that its members shall sell only on condition that tardy debtors pay the banks' usual interest and other charges, plus a supplement representing the fallen value of the mark. This measure must be classed with the Court of Appeal's decisions as a blow against the legally enacted validity of the paper mark.

The Bourse last week was firm. The *Frankfurter Zeitung's* index for dividend-payers shows on the 8th 456,480 against 400,046 a week before, while home loans have risen from 2,264 to 2,550. The latter rise is probably due to the inclusion of Colonial Fours, which, again on reported buying, rose to 5,000, while Federal Threes, which long led, are only 1,025, Fours 422, 3½ per cent. 260, and Savings and Premium 130. The Dresden Bank has decided to double its capital, which is at present 550,000,000 marks. Krupp's report for 1921-22 shows gross profits of 906,163,973 marks against 272,088,344 marks in 1920-21, net profits 147,783,214 marks against 93,690,316 marks, dividends 8 and 10 per cent. against 4 and 6 per cent. The company reports remarkable progress in the new kinds of production enforced by the cessation of arms manufacture. As compared with the preceding business year the output of motor-cars increased 4½-fold, reaping machines, &c., 2½-fold, textiles machines 4-fold, and small machines of various kinds 2½-fold. The company is now producing 50-ton railway tank trucks and 50-ton freight trucks. Christmas business is dull, and there are reports of working shortened hours from the textiles branches. The reason given, as a rule, is shortage of working capital, but public buying is also at present declining. The iron and steel industrial branches are, with certain exceptions, still booming. The trade journal, *Stahl und Eisen*, states that "Happily the price rises on the home market have not had the injurious influence which was feared. Part of the home market showed, in consequence of the money shortage, a certain reserve, but the demand for some products, i.e., half-finished iron and steel and railway permanent way material, was so great that it could not be satisfied." The Elberfeld Iron and Steel Association reports that business activity in Solingen was good without exception, but in other centres of production of small metal goods there are signs of stagnation. In general, it is now safe to declare that the heavy mark collapse of the summer and autumn will not, any more than did past mark collapses, cause serious injury to industry. The prices obtainable have more or less adapted themselves to the production cost, and the necessary working capital has been supplied by inflation credit. The Reichsrat has approved of a law raising the minimum capital of limited liability companies to 300,000 marks.

The Reichswirtschaftsrat has passed a resolution concerning foreign trade methods. While declaring that the present system of compulsory invoicing to high-exchange countries in these countries' currencies cannot be permanently maintained, it declares that for the present the Foreign Trade Boards (*Aussenhandelsstellen*) should grant export licences only on condition of invoicing, according to the exporter's will, either in the currency of the buyer's country, or in any other high currency. As high currency countries, the resolution proceeds, are counted England, Denmark, Sweden, Norway, Holland, Switzerland, France, Luxembourg, Belgium, Spain, Italy, Finland, Czechoslovakia, Turkey, the United States, Canada, South and Central America, Japan, China, Persia, Egypt, and their colonies and protectorates. To low-exchange countries, that is, all countries not in the above list, invoicing and payment for exports should be in marks, or in the currency of the buyer's country, but a high-exchange currency may be used at home as basis for calculation of prices to low-exchange countries. This matter has importance, because the Ambassadors' Conference has drafted a protest to Germany, demanding abandonment of the compulsory system of demanding "world-market" prices from high-exchange Ally countries, while lower prices are charged to low-exchange countries. As export licences are granted only on condition that this distinction is made, the practice is considered to be a breach of Article 266 of the Peace Treaty. In fact, in addition to the discriminatory limitation against most Ally countries, there is a further taxation discrimination, owing to the fact that the export duties are assessed on the price, and are thus much heavier on exports to high-exchange than to low-exchange countries. The system is very injurious to British export trade. Firstly, because the large profits (difference between home prices and world-market prices) gained from sales to high-exchange countries make it possible to sell with no profit at all to low-exchange countries; and the import figures of most of these countries, and also of Finland, which now counts as high-exchange, show that Germany has captured these markets almost entirely, in so far as finished goods are concerned. Secondly, the goods delivered at specially low prices to low-exchange countries, ostensibly for their own consumption, are re-exported to high-exchange countries, and compete with these countries' own production or in their own export markets. This abuse was first complained of by German exporters themselves (e.g., the case of Danzig), because it involved the pocketing by the middlemen countries of a price difference which might have gone to Germans. Discussing the impending Ally protest, some Germans say that the remedy will be to charge all countries the same price, which would be something between the high world-market price and the present low-exchange countries' price. This would make it possible for Germany to undersell high-exchange competitors in both classes of markets.

AUSTRIA.—POLITICS AND RECONSTRUCTION—INFLATION CHECKED—FINANCIAL REFORM—BALANCE OF TRADE.

(FROM OUR CORRESPONDENT.)

VIENNA, December 1.

THE political situation has taken a turn for the better. The fear that the Social Democrats and the Communists might usurp power and cause further heavy losses to private property owners in the near future is steadily subsiding. For the most part this lies to the credit of the Chancellor, Dr Seipel, and the policy inaugurated by him. During the last fortnight the struggle in Parliament for the passing of the Reconstruction programme has been particularly fierce. The Bourgeois parties used their entire strength for the purpose of passing the Bill, whilst the Social Democratic Party invented ever new technical difficulties in order to delay the carrying through of the Bill. Although there is still doubt as to the result of the League of Nations reconstruction scheme, it is a matter of fact that all attempts on the part of the Social Democrats to mobilise the proletariat for opposing the scheme have failed. The party

itself feels that it would suffer heavy losses if a new General Election should be held, as has been threatened by the Chancellor several times. They have not the courage, however, to reject it unconditionally, but concentrated their opposition against the stipulations of foreign control, from which they fear a great limitation of their power. Whilst they were not able to prevent the passing of the Bill in the National Assembly (Lower House), they succeeded in hindering it in the Federal Council (Upper House), and so forced the Government to submit the entire Bill to the National Assembly again. (The Austrian Constitution provides in the case of a Bill passed by the National Assembly not being sanctioned by the Federal Council, it has to go back to the National Assembly; when it is passed there by regular procedure a second time, it becomes law without the sanction of the Upper House.) Although this procedure will only cause a delay of a few days, the Social Democrats were able to prove by it that they decline taking the responsibility for the Reconstruction programme.

The development of the political situation in Italy, the difficult industrial crises in Czecho-Slovakia, the strong competition of Germany, and public sentiment in Austria as well, have all caused the population to be no longer afraid of the Social Democrat leaders' threats of an upheaval. This is indeed great progress in comparison with the state of affairs which prevailed in Austria up to a short time ago. Another very important reason for the slight improvement is the fact that the contempt for the krone and the fear of holding it a day longer than absolutely necessary have disappeared. Though the krone has not yet recovered abroad, and foreign exchanges, excepting the mark, show no downward tendency in Vienna, the depreciation of the krone in Austria has not gone any further. Also savings accounts with the banks have been growing steadily during the last few weeks; cash on hand is no longer being converted into goods or securities immediately, but is being held. During the first fortnight of November very high rates of interest were being offered for money, i.e., 2-2½ per cent. per week (100-130 per cent. per annum).

German competition is, however, making itself increasingly felt in Austria's trade and industries. Despite the advances in the prices of German goods, most of them are still 40 to 50 per cent. cheaper than in Austria. Numerous Austrian firms have, therefore, made considerable purchases in Germany, in spite of the Germans' restrictions to check the influx of Austrian buyers; these firms are now underbidding prices here with these imported goods. The slump in the prices of textiles, shoes, and other articles, which took place here during the last two months, was for the greater part due to this fact. Shoes which cost 375,000 kr at the end of September are now to be had for 180,000. In the prices of textiles a fall of about 50 per cent. took place during the same period. The stagnation has also affected the iron and steel works and the engineering industry most seriously. Most of the big works are on half-time, and have had to dismiss half of their workers. Austria is therefore finding herself in the midst of a serious industrial crisis, which is accentuated by the reluctance of consumers to buy. The number of unemployed has increased to 82,784, a relatively high figure if one considers that in Imperial Austria, which had four times the population of the present Republic, only 94,399 unemployed were registered in December, 1913. On the Stock Exchange a heavy fall in all securities has been experienced during the past fortnight, so that the prices, especially for industrial securities, compared with those in August, show a fall of 40 to 50 per cent.

The figures relating to Austria's balance of trade for the first three months of the second half of 1922 have just been issued. During this period the imports amounted to 384 million gold kronen and the exports to 291 million gold kronen, so that the exports amounted to 73 per cent. of the imports. This shows a remarkable improvement in comparison with the first half of 1922, when exports represented only 62 per cent. of the imports.

Two important financial transactions will be carried through in the near future; the first will be the issue of 50 millions of gold kronen in Treasury bills (not 65

millions, as stated in my last letter), of which 30 millions will be taken up by the banks and 20 millions offered for public subscription within Austria. The remaining 80 millions of Treasury bills from the 130 million gold kronen loan will be placed abroad, and the delegates of the League of Nations here have promised to give all possible assistance to the Government in obtaining foreign subscriptions. The second transaction will be the issue of shares of the new note-issuing bank up to the amount of 15 million gold kronen. The statutes of this bank were passed in Parliament yesterday. The greater part of these issues will probably have to be taken up by the banks. As the public has had such terrible experiences with all Government securities since the War Loan, it is very reluctant to acquire any Government paper. Besides this, the present stringency of money is so great that people are able to get much more interest by lending money privately than by investing it in Treasury bills, which will bear only 8 per cent. Only the hope of improving the present money situation, and the promise of a reduction in taxes for the subscribers, might induce the public to take up these Treasury bills.

The chief item of financial interest during the last fortnight was the decision of the Government to stop the note-printing press on November 18th. The State will thus cease to draw bank-notes against uncovered Treasury bonds, and will endeavour to carry on for the next two years with the returns of the Internal Loan, the tax returns, and the expected credits from the League of Nations. In fact, the return of the Austro-Hungarian Bank on November 23rd showed for the first time a decrease of 28 milliards of kronen in the bank-note circulation. The note circulation on this date amounted to 3,133 milliards of kronen, of which 2,560 milliards represented the requirements of the Treasury. It remains to be seen if the Treasury will really be able to continue this moderation, and not apply to the Issue Bank in the near future. Certainly, the statute of the new Issue Bank forbids granting credits to the State without ample security, but if one considers that the State Railways, in spite of their almost prohibitive tariffs, have a deficit of 1,507 milliards of kronen, one is able to conceive how difficult it will be for the Government to save and to carry on with the limited means at its disposal.

Owing to the great number of sales on the Stock Exchange and on the different merchandise exchanges, the stringency of money, from which the market has been suffering so long, has suddenly ceased. Credit was plentiful last week, and rates of interest dropped from 2-2½ per cent. to ½-1 per cent. per week. The Government hopes that this comparative ease in the money market will facilitate the placing of the 20 million gold kronen in Treasury bills. The subscription of these bills will begin on December 4th. The commodity price index figure, which showed a decrease of 8 per cent. last month, shows a further one of 6.2 per cent. for the period October 15th to November 15th. This decrease is a result of the reduction in the prices of fat, sugar, meat, potatoes, and some textile products. On the other hand, the prices of flour and bread advanced slightly and house rents considerably during the same period.

AUSTRALIA.—BAWRA—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, November 6.

STEPS are being taken to continue the existence of the British Australian Wool Realisation Association, Limited ("Bawra"), with a permanent organisation. The company was formed for the purpose of realising the carry-over wool resulting from the British Government war purchases, one-half of the profit on resales of which was to go to the Australian growers. That those in charge of the company had further intentions was hinted at in the statement made on July 27, 1921, by the chairman, Sir John Higgins, in which he used the expression "whether it will become necessary to continue in some form or other as a medium in connection with the disposal

of future Australian clips." The present proposal, however, is of a different character, as no reason of a "necessary" character is now put forward while the scope of the proposals includes "the protection, the stabilisation, and the development of the Australian pastoral and agricultural industries." Although wheat, butter, tallow, hides, and so forth are not specifically mentioned, they are plainly included in such terms as pastoral and agricultural products, and the scheme, therefore, amounts to a general control over marketing arrangements for the greater part of Australian exports. To carry out the scheme would mean that £6,000,000 of capital, representing the final balance of the woolgrowers' half-share in profits on wool, would be retained by the company instead of being distributed, and the chairman states that it should be possible over a cycle of years to average not less than, say, 8 per cent. dividend. This would require the transaction of an active business by the company, in addition to its proposed functions of regulating and advising, and when compared with the profits and dividends of companies already connected with wool and similar classes of business, having regard to their reserve funds and to their debenture stocks at somewhat low interest rates, the estimate of 8 per cent. dividend for Bawra, which implies a higher rate of profit to allow an ordinary margin, is regarded as a sanguine one.

The great objections to the scheme are that it means diverting the company from the one object for which it was established, namely, the distribution of the proceeds of the carry-over wool, and that it means withholding from the woolgrowers £6,000,000 of capital which they are entitled to receive in cash, and which they could apply to productive uses individually instead of leaving it in the company. Some of the ideas of the chairman with regard to the conduct of the business are regarded as decidedly speculative, as although regulation of production is in no way suggested, he considers it possible to raise prices by means of control of selling arrangements. As to the object of organising growers into one big concern, it is pointed out by critics of the scheme that various associations are already in existence which act efficiently in dealing with their interests. The scheme is being actively opposed, and the wool-selling brokers are unanimously urging woolgrowers throughout Australia to delay signing proxy forms for the meeting called for December 6* to consider the resolution authorising the directors to conduct the company as a central organisation.

After the reduction in imports which took place during the 1921-22 financial year, there has been a tendency to increase during recent months. The Australian trade figures for the three months ended September 30 compare with those for the corresponding period of the previous financial year as follows:—

	1921-22.	1922-23.	
Imports—	£	£	£
Merchandise	21,020,552 ..	31,228,924 ..	+ 10,208,372
Gold	10,026 ..	22,529 ..	+ 12,503
Total imports	21,030,578 ..	31,251,453 ..	+ 20,220,875
Exports—			
Merchandise	25,061,166 ..	21,265,854 ..	— 3,805,312
Gold	654,231 ..	932,484 ..	+ 278,253
Total exports	25,715,397 ..	22,198,338 ..	— 3,527,059

The decrease in exports since July 1st is principally in wheat and flour, little of which remained available for export after that date. The prospect for the new harvest is at best only moderately favourable, and the quantity of wheat and flour available for shipment during 1923 will be much smaller than during the past two years. The butter export season is at present shaping favourably in Victoria, but less favourably in other States, and the total quantity for the season will depend largely on the weather after Christmas. With a diminution in exports and an increase in imports, the tendency will be for the

* Cables from Melbourne state that at this meeting an amendment was carried by a large majority to the effect that the wool and other assets of the association should be realised and the proceeds distributed among the shareholders as soon as possible, and the company wound up and dissolved. The directors were requested to give effect to the resolution without delay.—Ed., *Economist*.

1922-23 season to result in a reaction from the large Australian balances held in London last June, leaving out of account any possibility of a renewal of Government borrowings on a heavy scale.

Letters to the Editor.

EMPIRE CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to your note on the Empire currency scheme, may I express regret that in my address it was not made clear that Empire currency bills would be payable only at maturity. At first it may appear that the scheme is "rich in inflationary possibilities," but this is really not so if the total amount of the issue is kept within reasonable limits. What this amount should be is a matter for consideration by the participating countries. I merely suggested that £1,000 millions for the whole Empire is probably not excessive. In arriving at this figure I had to bear in mind that the credit system of Britain absorbs over £700 millions of Treasury bills, which would be exchanged for the currency bills. In view of the great increase in the liabilities of Empire banks, it is doubtful if the amount of Treasury bills outstanding could be reduced much further without interfering with the banks' ability to assist trade and industry. Under the scheme a measure of elasticity similar to that enjoyed by the British banks would be afforded to the banks in the Dominions, which at present they do not possess. This in addition to providing what you aptly describe as "a balancing factor in trade between the various parts of the Empire."—Yours faithfully,

J. F. DARLING.

FISCAL CONSEQUENCES OF THE IRISH TREATY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter of Mr Dominic Spring Rice raises an interesting point which I deliberately avoided in the article to which he refers. I was anxious to avoid entering into details which might blur the broad outlines of my main proposition, or give rise to controversies detaching attention from major issues. That the land Customs frontier would be extraordinarily expensive was one proposition of fact: that its administrative cost would involve a substantial burden on the British taxpayer was another—but I did not say that the whole administrative cost would be borne by the British taxpayer. My general conclusion was that both N.E. Ulster and the British taxpayer who were economically and pecuniarily interested in avoiding the creation of a Customs barrier, did not require a precise apportionment of the exact amounts of cost and inconvenience to be borne by each severally.

Primâ facie—in the light of White Paper methods—the apportionment would proceed thus. Total Customs revenue collected in the whole area of Great Britain and N.E. Ulster would be apportioned by ascertainment of consumption of dutiable articles in the respective areas, and failing definite ascertainment by reasoned conjecture and application of population ratio, wealth ratio, and similar factors, total cost of collection (including cost of Customs barrier) would be apportioned either to represent the result of a fraction of the whole represented by the apportioned revenue, or it would be fixed by reference to corresponding and variable factors.

In Dail Eireann yesterday, Mr Cosgrave, President of the Executive Council, referring to this subject said:—"The administrative expenses of a land Customs board (for which the North-Eastern Government would be liable to a share as apportioned by the Joint Exchequer Board....."

In any event, the contribution of N.E. Ulster to Imperial funds is to be periodically re-assessed by the Joint Exchequer Board in the light of its relative taxable capacity. The more it pays of the cost of the Customs boundary the less it can pay towards Imperial funds. Consequently the British taxpayer will have to pay, sooner or later, directly or indirectly, certain not inconsiderable sums in respect of an economic absurdity for which he has neither desire nor respect on any grounds whatsoever.—I am, yours faithfully,

YOUR DUBLIN CORRESPONDENT.

December 7th, 1922.

ARGENTINE MEAT EXPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the concluding paragraph of the interesting article published in your issue of the 2nd inst., page 1021, "Argentine Land Companies," it is stated, "meat exports are not encouraging, Germany and other European countries not responding to Argentina's advances."

This statement is not wholly correct. Note should be taken of the fact that a provisional agreement has been concluded between the Argentine and German Governments by which the former is to deliver 100,000 tons of live cattle and 100,000 tons of frozen meat, to be carried in German vessels. Furthermore, two co-operative syndicates—one Argentine-German and the other Argentine-French—have been formed to export meat to Germany and France, 55 retail shops having been opened in the former and 30 in the latter country. In fact, owing to the unusual amount of cattle offering, Argentine meat-exports have at no time been more encouraging than during the latter months of the current year.

While it is true that a meat-combine has been formed in the United Kingdom to restrict the quantity of meat reaching this country from the Argentine and South America generally, and that the price of the commodity will hereafter be controlled, the supplies arranged for should be sufficiently large to bring abiding prosperity to the South American meat export trade.—Yours faithfully,

PERCY F. MARTIN.

Milan, Italy, December 5th, 1922.

INDIA'S AGRICULTURAL POPULATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of October 21st it is stated that 72 per cent. of the population of India depend for their livelihood upon pasture and agriculture with less than 1 per cent. of industrial workers. Will you kindly let me know from what sources this information has been taken? Many of us here would place the estimate of the population depending upon pasture and agriculture as being nearer 92 than 72 per cent.; also, if your figures be correct, it will be interesting to know exactly how your informant places the other 27 per cent. of the population of this country.—Yours faithfully,

W. J. LLOYD.

5 Lyon's range, Calcutta, November 20th, 1922.

[The figures given in our article are from the Report of the Indian Fiscal Commission (page 16). The Indian Census gives a total population of 319 millions in 1921, and 315 millions in 1911. An agricultural and pastoral population of 224 millions would be about 70 per cent. There is in India a very large town population engaged in small trades and in home industries. Then there are many millions engaged in transport services, domestic and Government services, forestry, and so on. There would, of course, be a larger proportion than 70-72 per cent. depending indirectly, as well as directly, upon agriculture and pasture.—Ed. Econ.]

THE CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of December 9th Mr J. Ellis Barker recurs to this subject. He reiterates the statement that "the Socialists and the Labour party maintain that abundance can be created by taking money from one set of people and handing it over to another set of people," or, in the words of his previous letter, that money and wealth are identical. Perhaps he will give the names of some of the recognised leaders of those parties

that support this crudely nonsensical statement. I am acquainted with many of those leaders, and have no hesitation in saying that Mr Barker's allegation is pure folly.

Mr Barker proceeds from absurdity to absurdity when he suggests that I confuse money with wealth, because I support a levy on capital. What a curious exhibition of logic. I wonder if this singular argument applies also to Professor Pigou and the many other prominent men who support the levy?

Not contented with that piece of futility, Mr Barker proceeds to refer to the proposition whether it is to the advantage of the business man that his taxation should be measured by wealth rather than by income. What he understands by this is shown by his "counter" question, "whether the owner of an orchard should sell his fruit or sell his trees for timber." Apparently, in his view, to measure taxation by wealth rather than by income means paying the tax by a sale of the permanent assets of a business instead of out of its liquid profits. The country was flooded with this sort of thing during the late election, but the readers of the *Economist* are entitled to something better than the journalistic polemics served out to an ignorant electorate. The proposition suggested above is merely this: A certain sum having to be raised by direct taxation, will the business community pay a larger or less proportion of this certain sum if their contributions are measured by wealth instead of income? It is a question which I think the business community will find little difficulty in answering.

The second greatest party in the State (with many outside its ranks) is profoundly convinced that a wholesale redemption of the National Debt by means of an assessment based on aggregate wealth is a vital necessity to the whole community, and not less to industry. The Conservative party (and doubtless others) is equally convinced that the proposal is ruinous folly. Whatever one may think of it, it is at least a live issue of the very first importance. It should, therefore, be treated as a serious proposition. The arguments for and against it should be set out dispassionately, with a single desire to reach the truth. Mr Barker, with his wide knowledge and experience, could do useful work if he would approach the question in this spirit, and if he would cease to confuse the issue by enlarging upon the real or imaginary ignorance of the other side.—I am, &c.,

A. HOOK.

Shepperton, December 14th, 1922.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

THE distinguishing mark of recent economic and semi-economic publications is the high proportion among them of works of a more or less statistical character—descriptive rather than analytic or critical. The process on which one sees the economists of the world as engaged is still under—the mass of evidence of disorganisation, chaos, collapse, they are mainly not so much struggling to organise their impressions as endeavouring to record what they are, and this record may be of great value to future students.

This is certainly the case with the carefully collated *Exchange Tables of the World*, of which the first volume, covering the period from January 1, 1914, to December 31, 1921, has just been published from Christiania (Okonomist Literatur, Klingenbergsgateng), mainly in English. M. Emil Diesen, the author, has here collected daily exchange rates for London, Paris, Berlin, Amsterdam, and the other Continental centres.

M. Buffet's study of *Le Cours de la Rente Française et son Soutien par l'Etat* (Paris: Librairie Générale de Droit et de Jurisprudence) belongs essentially to the same category; and so, with a difference, does W. H. Stenier's *Mechanism of Commercial Credit* (Appleton's, 12s 6d), although it is a book intended to be read, and the others are strictly works of reference. In the case of invaluable and well-appreciated publications as the *Insurance Guide* (two vols., 15s each; Charles and Edwin Layton)

and *Lloyd's Calendar* for 1923, one need only note appearance in an up-to-date form. A model descriptive work of its kind is the very careful and thorough *Rapport sur le Commerce et l'Industrie de la Suisse en 1921* (Zurich); this contains both statistical matter and surveys, industry by industry, of the various departments of Swiss economic life in the year under review. There is more of propaganda purpose in the *Report on Economic Conditions in Russia, with Special Reference to the Famine of 1921-2 and the State of Agriculture*, originally published by one of the departments of the Soviet Commissariat (its name is much too long to set out), and now issued in this country by Constable at 2s 6d. On this disastrous collapse of agricultural productivity, consequent on the war, the revolution, and the grain requisition policy, the report is very frank. It further contains some useful and interesting discussions on the utilisation of electrical power, and the way in which it can be generated, not only from water and peat, but from the air. For the student of the war period the new volume in the Carnegie Endowment's Series: *Bibliographical Survey of Contemporary Sources for the Economic and Social History of the War*, by Mr G. Bultuley (Clarendon Press, 10s 6d) will be indispensable. The reader depressed by all these documentary volumes may turn with relief to Mr F. W. Hirst's witty little *Paper Moneys of Europe* (Boston, Houghton Mifflin, 75c), which will instruct him almost without his noticing it. Another admirable pamphlet is Dr Arthur Shadwell's discussion of *The Engineering Industry and the Crisis of 1922* (Murray, 1s 6d).

M. Aftalion's *Les Fondements du Socialisme* (Paris, Rivière, 12 francs) is a thoroughgoing attack on any and every sort of Socialism; though, as so often, the author fails to discriminate between his own definition of the views attacked and that accepted by their supporters, his argument is, in substance, anything but superficial. Mr Pell's *Riddle of Unemployment* (Cecil Palmer, 7s 6d) is one more of the innumerable "solutions" by way of banking and currency manipulation. Mr Peel is not a Douglasite, but his basis is hardly more substantial. Mr Silverman's *Substance of Economics* (Pitman, 6s) is, on the other hand, a clear and workmanlike exposition on thoroughly orthodox lines, intended for the general reader and the student interested rather in practical applications than in theoretic points.

THE A B C OF BUSINESS.*

This book is like a great many others, except that its style is more readable and its content more extreme. Mr McKee writes of American business organisation, of money and banking, of wages and wealth, of speculators and markets. And his purpose is plain. It is to disillusion all who have foolish fancies about mending (or ending) our economic system.

Frankly we do not believe that Mr McKee will bring a single wanderer back to the fold. People do not invent foolish economic projects for the sake of so doing, but because they see certain perfectly obvious economic evils which they believe that those projects will cure. If we wish to persuade them to abandon their folly it is necessary to show either that these evils are beyond human control altogether, or that the methods proposed for dealing with them are not the right ones. But Mr McKee does neither of these things. He devotes himself to showing that all things work together for good so wonderfully that we must, in flat defiance of all our senses, conclude that there are no evils worth mentioning. His monograph is just a homily on the theme, "all's right with the world," which, after all, it is not.

The book ends with a chapter on internationalism and a chapter on education. In the former we learn that "the world is divided for the sake of convenience into certain business areas"—truly the most remarkable description of our world of inconvenient, squabbling nationalist States that we have yet encountered. In the chapter on education we are cautioned not to allow ourselves to read a book before we have ascertained that the

* "The A B C's of Business." By Henry McKee. (New York) The Macmillan Company. 1922. 91.

author is "a really respectable authority on the subject." Mr McKee's views on economics might provoke us to criticism, but this pronouncement in the name of education leaves us simply speechless.

THE BANKERS' HAND-BOOK.

It is almost unnecessary to say that "The Bankers' Almanack,"* in addition to being an international reference book and directory of the world's banks and allied institutions, contains also much other useful information compiled for the assistance of merchants and traders generally. In its pages we find the London and Provincial Clearing House returns over a long series of years; annual averages since 1844 and weekly returns for twelve months of the Bank of England; fluctuations in Bank rate, bullion returns and brokers' discount rates since 1884, changes in the minimum discount rates of the Banks of England, France, Germany and Holland, since 1844, and Belgium since 1851. There are also statistics showing the positions of the banks of the United Kingdom at the outbreak of the War, at the Armistice, and annually since; highest and lowest prices of Consols annually since 1822; average prices of gold and silver monthly in recent years, and fluctuations in bar silver since 1833. It would be difficult, we should imagine, to find a banker who was not armed with a copy of this volume.

* "The Bankers' Almanack and Year-Book." 1922-1923. London: Thomas Skinner and Co. 42s net.

THE MONEY MARKET.*

MR. SPALDING'S "practical guide" to the money market is a very useful addition to the select list of books on what is, it must be admitted, a highly technical subject. But he has succeeded in making his book a very readable one, and he is, moreover, at a great advantage in being no mere theorist, but a practical man who knows his subject from A. to Z. The greater part of the volume is devoted to a historical review from the pre-goldsmith times of the various component parts of the complicated financial machine of the present day. We must confess that our own attention was particularly attracted by the chapter on "The Money Market Article of the Newspapers—Its Origin and Development," but whether City editors as a class deserve his eulogistic descriptions of their efforts is perhaps open to question. "That terse, nervous English which is so marked a feature of the City articles of our time," might be taken in more ways than one; but it is gratifying to know that a hundred years or so ago, when there was a joint-stock company craze, the City pages of the Press were "in no small measure the means of purifying the atmosphere of City life." The author expresses astonishment at "the ease, the skill, and the erudition displayed by the City editors" during the war period, and tells us that "they treated the world to a perfect feast of literature, ranging from the dry-as-dust dissertations on economics to the exhilarating joys of higher finance." We think he is on safer ground when he suggests that "the men and women of to-day who wish to be something more than mere nonentities can no longer afford to ignore the City news; they are expected to be able to discuss it with the men of affairs; consequently the City article has not only progressed, it has also advanced in favour." Those who wish to be able to read the City columns of the newspaper with a greater understanding cannot do better than study Mr Spalding's book on the money market.

* "The London Money Market." By William F. Spalding. (London) Sir Isaac Pitman. 10s 6d.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
December 28. December 29.

The last Stock Exchange settlement before Christmas ran through on oiled wheels this week. The only change in the speculative position, so far as the contango rates reflected it, was a larger bear account in some of the oil shares, and, curiously enough, in certain home railway stocks. The markets are not bad as a whole. The tendency is to look for improved business in the New Year, which to the Stock Exchange ear means an accession of buying in the various markets. In advance of this, therefore, a good many prices are better, although the rise in the value of the pound in relation to the dollar has caused depression in Kafirs, owing to the corresponding fall in gold, and to a general fall in what the Stock Exchange calls dollar stocks, i.e., American railroad issues, a few Canadian municipal loans, certain American industrials, Japanese and Cuban dollar bonds, and others in which the value of interest and principal fluctuates according to the New York rate.

The War Loan has been weak, but at 99½ attracted a good deal of support, with the result that the price recovered without much difficulty. Evidently, too, the tap has been turned off in the Conversion Loan. All the big sellers have disappeared for the time being, and the price, released from liquidation, followed the rally in the War Loan. A good deal of selling of Colonials had little effect upon quotations. Home Railway prior-charge stocks are quiescent, dealers in the market averring, with jocular melancholy, that they will have to leave off jobbing for a week or two in the New Year, in order to get their books straightened out and the new stocks appropriately labelled. In seriousness, however, there ought to be a substantial volume of trade in this department as soon as the New Year starts. The market continues to look for new issues, bearing British Government guarantees, in order that the work of electrification and railway extensions for unemployment alleviation may be taken in hand.

Amongst foreigners, one feature is the strength of Chinese bonds, more especially those of the two 8 per cent. series, owing to a statement by the Chinese Legation that it is hoped shortly to raise a loan that shall cover arrears of interest on these issues. The new Peruvian 7½ per cent. Guano Loan was promptly subscribed. Various Scandinavians, Government, and municipal issues alike are lower. Brazilians have fluctuated somewhat erratically, but within narrow limits, and in the French Government stocks trading has been on a small scale.

The Home Railway market went better, the carry-over disclosing a shortage of stock in certain cases. The Scottish varieties have been prominent with good rises. Undergrounds are dull. The heavies hold their prices fairly well, but the public is not doing very much here. Mexican Railway stocks do not move, although the report was regarded as satisfactory. Argentines gave way on a slight pressure to take profits. Leopoldinas took a jump, on the company's success in its appeal, though the rise brought in a little selling.

Rubber rather disappoints its supporters by not rising to its 3d-1s 6d straight away, but the steadiness of the weekly advance causes the market to remain hard; at the same time, it fails to stimulate public business to any extent. The oil market is above the worst, but it remains out of favour; the cut of 5 per cent. in the Royal Dutch dividend was counteracted by the maintenance of the Shell's usual 2s per share interim dividend. Mexican Eagles are dullish on dividend expectations. Latest developments in connection with the Roumanian Consolidated and Phoenix merger have excited more interest than orders.

By far the most active section of the industrial market is that for iron, coal, steel, and armament shares. The placing by the Government of orders for two new capital ships from Cammell, Laird, and Co., and Armstrongs gave a fresh fillip to the optimism engendered earlier by the revival of trade in shipbuilding circles. Prices are substantially better on the week, and there has been a wide circle of attention attracted to this department. Shipping shares are quiet. There is little doing in the banking group. Insurance issues hang fire. Amongst textiles, Courtaulds stand out as the principal feature of strength. Tobacco shares remain a hard and a very lively market. Lyons are better. Maypoles gave way on the passing of the final dividend, but the price recovered, because purchasers argued that the company should now have weathered the worst of its troubles. Cook, Son and Co. ordinary and preference jumped up sharply, on the announcement that Sir Herbert Cook desired to write down his shares in a manner which will place the company's capital in a more favourable position for dividend earning. Electricity supply shares are more easy to sell than they are to buy, the market being strengthened by the announcement that an important scheme is in progress for arranging a general agreement of interest. In the wireless group, Marconis are better, while cable stocks have recovered from most of their recent heaviness. Newspaper shares keep firm. The tea market holds its prices with noticeable hardness, in spite of the remarkable rises which have occurred during the past month or so. Land shares are somewhat neglected. Kafirs are depressed by the fall in the price of gold, due to the rise in American exchange. The Cape has been doing little, and Paris practically nothing, in gold-producing shares. The French are, however, buying diamonds, and there has also been mild activity in a few of the leading copper descriptions, though the markets for tin shares are stagnant. Russian mining shares show lower levels. Mexicans are none too bright. The Indian mining market has been cheered by a rise in Balaghat.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Peruvian Government 7½ per Cent. (Guano) Loan of 1922.—This is an offer at 95 per cent. of £1,250,000 sterling bonds to bearer, the proceeds being required for the repayment of "certain" outstanding European liabilities, and for other purposes. Principal and interest are payable in London in sterling, free from all Peruvian taxes. The loan will be repaid at par on or before June 1, 1948, by means of a cumulative sinking fund of 1½ per cent. per annum, to be applied yearly in purchasing bonds when the price is at or below par, or in drawing bonds at par when the price is above par. The redemption of the bonds by means of the sinking fund will begin on June 1, 1924. The Government reserves the right to redeem the outstanding portion of the loan on or after June 1, 1933, at 105 per cent., on giving six months' notice. Payment of principal and interest is the direct obligation of the Republic of Peru. The loan is further secured by (a) a first charge on the revenue derived from the tax which is levied on all guano sold for consumption in Peru, and (b) the deposit with the bankers' agents of more than 50 per cent. of the shares of the Compania Administradora del Guano. This company is the only channel through which the Government sells guano in Peru. The yield from the now existing tax (at the present exchange of 18s 4d per £P) was £154,273 for 1919-20, £181,188 for 1920-21, and £184,646 for 1921-22. The tax may be increased proportionately to any depreciation in the Peruvian exchange, as the amount required for the annual service of the loan is but £112,500. The bankers concerned have apparently taken every possible precaution to protect bondholders' interests, but it is obvious that the measure of risk involved is reflected in the substantial yield offered. We understand that the issue was oversubscribed. The Peruvian 5½ per cent. (salt loan) has fluctuated between 80½ and 95 this year, while City of Lima 5 per cent. first mortgage bonds have been as low as 57½, and as high as 74.

The Union-Castle Mail Steamship Company, Limited.

—Authorised share capital £8,240,000, of which £3,980,000 has been issued. There is also outstanding £896,209 4 per cent., and £2,000,000 6 per cent. debenture stock. This is an offer of 1,500,000 cumulative preference shares of £1 each at 20s 6d per share. A novel feature of the issue is the terms of the rate of interest offered. Up to January 1, 1933, the shares are entitled to 6½ per cent. dividends; after this date the rate will be 6 per cent. This issue will rank equally with the existing issue of £1,000,000 "A" cumulative preference shares, and immediately after the issue of £240,000 4½ per cent. cumulative preference shares. The object of the issue is mainly to provide for redemption of the 4 per cent. debenture issue, which falls due for repayment on January 1, 1923, and the present holders of this stock are offered preferential treatment. The voting powers of preference shareholders are limited. This is an excellent opportunity to obtain a good shipping preference share, but whether debenture holders could be advised to take up preference shares in lieu of their present holdings is another matter. It would have been better, perhaps, if more information had been published in the prospectus, as an example to other concerns not so well placed.

W. and A. McArthur, Limited.—Authorised share capital, £350,000, divided into 250,000 7 per cent. cumulative preference and 100,000 ordinary shares of £1 each. The present issue consists of 139,300 7 per cent. cumulative preference shares of £1 each at par. The company was reconstituted in 1908 to take over the Australian warehouse business in Sydney of a company of the same name, which was formed in 1898 to carry on a business established in 1841. The proceeds of the present issue will be used for the repayment of the outstanding balance of the debenture stocks, amounting to £160,000, the company, out of its own resources, providing for the purpose an additional sum of £20,700. When the repayment of the balance of the original £200,000 debenture stocks has been completed, there will be no mortgage upon the freehold or leasehold properties or other assets of the company ranking in priority to the preference shares, except a mortgage of £30,000. Properties appear to stand in the books at conservative figures, and surplus assets, at £255,269, compare favourably with an issued capital of £198,200. The net profits are given from 1913 in the prospectus, and from the information given it appears that the company has progressed along sane lines, so that the issue is a fair industrial risk.

S. Instone and Co., Limited.—Authorised share capital £1,000,000, divided into 500,000 participating cumulative pre-

ference and 500,000 ordinary shares of £1 each. The undertaking was formed in 1910, as a private company, to acquire the business of coal exporters, shipowners, bunkering contractors, &c., founded by Sir Samuel Instone and his brothers in 1904. The whole of the 7 per cent. participating cumulative preference shares are now being offered for public subscription at par. In addition to the fixed dividend, the shares have the right, in any year when a dividend at the rate of 7 per cent. is paid on the ordinary shares, to a further dividend at a rate not exceeding 3 per cent. Of the ordinary shares, 300,000 are issued and fully paid, the whole being held by the directors. Profits are given from 1916 to 1921, and a fairly informative statement of assets and liabilities appears. This shows the net surplus of assets to be £1,167,387. It should be noticed that the prospectus states that "the values placed upon the shares in the Bedwas and Askern Collieries are based upon the colliery valuations set forth" in a report of a colliery expert. Moreover, it is admitted that, "in common with other companies carrying on business of a similar nature," profits are expected to show a reduction for the year ended October 31st last. A statement as to the company's powers of charging assets in priority to the rights of preference shareholders would have been welcome. Even if it is assumed that the coal industry is once again on the road to prosperity, this preference issue was not of outstanding merit.

The Anglo-Continental Guano Works, Limited.

—Authorised share capital, £700,000, divided into 300,000 7½ per cent. cumulative preference shares of £1 each, and 400,000 ordinary shares of 2s each, all of which has been issued. This is an issue of £150,000 7 per cent. debenture stock at 99 per cent., being part of a total authorised issue of £225,000. It is repayable at 102½ on January 1, 1954, if not redeemed before this date by the operation of a sinking fund. The company, however, reserves the right to redeem debenture stock before 1934 at 105, and any time after at 102½. The company was formed in December, 1916, and acquired from the Public Trustee a German-owned business, which was engaged in importing Peruvian guano and manufacturing fertilisers, &c. Profits are given from 1916, and surplus assets are shown to be worth £709,877. The debenture stock will be secured by a trust deed, which constitutes a specific first mortgage "on the freehold and leasehold premises of the company, as within mentioned." Among assets, property and plant are valued at £189,829, and it is to be presumed that all properties of the company are included in the trust deed. The stock is a fairly good industrial investment.

The British Oil Securities, Limited.

—Authorised capital, £300,000, in ordinary shares of £1 each. This is an issue of the whole number at par, but 100,000 shares have already been applied for. The company will acquire 1,000,000 shares, or such number as the directors may decide, in the Canadian U.S. Oil and Refining Corporation. These shares, it is stated, are being dealt in at \$1.50 in Canada, and will be acquired at \$1.25. It is not clear, however, why the vendors offer the shares so cheap. The Canadian U.S. Corporation, the prospectus states, was registered in February of last year, and has paid quarterly cash dividends at the rate of 12 per cent. per annum, and "a stock bonus" at a similar rate has also been distributed on the issued shares ranking for dividends. A balance-sheet of the Canadian company is given, but details of profit and loss account are lacking. Investors should satisfy themselves as to the actual money received on account of oil, also the actual quantities of oil produced. The property consists of more than 11,600 acres, on which 54 wells are now stated to be operating. In addition, control was obtained in October last of the Mid-West Oil and Paint Company of Independence. The corporation has no debentures or mortgages outstanding, and no bank overdraft. The proceeds of the present sale are for the purpose of further development. Past experience has taught most of us to tread warily when examining the merits of an oil proposition.

British Orion Oil Company, Limited.—Authorised capital, £400,000, divided into 395,000 shares of £1 each and 100,000 shares of 1s. each. Of this, all the 1s shares and 110,502 £1 shares have been issued. Five per cent. of available profits will go to holders of 1s shares, the remainder being distributed amongst holders of the £1 shares. Voting rights are rather unusual. Every member of the company has one vote, but it is provided "for the time being" that holders of the 1s shares "collectively" shall have "as many votes as the holders of all the other shares." The company was formed in July, 1922, to acquire shares in a Roumanian company known as "Orion Societate Anonima de Petrol." Much information is given about this latter undertaking, but a balance-sheet and profit and loss account are significant omissions. The above details have been taken from an advertised statement made to comply with Stock Exchange regulations. Until further information is vouchsafed, shrewd outside investors could not very well be expected to come into the proposition.

ACTIVE SECURITIES.

CHICAGO BREWERIES, LIMITED.—It is decided not to recommend a dividend for the year ended Nov. 30, 1922.

LANGLAND BRIDGE AND ENGINEERING COMPANY.—Directors recommend dividend of 7½ per cent., free of tax, on ordinary shares numbered 1 to 225,000, making 10 per cent., tax free, for the year ending January 31, 1923, and 4s per cent. per annum, free of tax, on amount of calls paid in advance.

EAST INDIAN RAILWAY COMPANY.—The board recommend the payment of a dividend from the surplus profits account of 16s per cent. on the deferred annuity capital and the deferred annuity capital class "D," in addition to the guaranteed dividend of 4½ per cent. for the half-year ending January 31, 1923, and 4s per cent. compensation paid by the Secretary of State for India on account of income-tax as per Clause 4 of the Contract with him of December 17, 1919.

LIQUID ASSETS INCREASE.

Liquid assets had increased by £260,000, and they bore a satisfactory ratio to the bank's liabilities to the public. The increase was mostly in cash and public securities, the latter being composed chiefly of short-dated Imperial Treasury bills. The small reduction in bank premises resulted from the sale (at a profit) of a portion of the bank's properties not required for its own purposes.

DORMAN, LONG AND CO., LIMITED.

RESULTS OF A DIFFICULT YEAR.

REVIEW OF COMPANY'S INVESTMENTS.

PRESENT CONDITIONS AND FUTURE PROSPECTS.

The thirty-third ordinary general meeting of the shareholders of Messrs Dorman, Long and Co., Limited, was held at the registered offices, Zetland road, Middlesbrough, on the 13th instant, Sir Arthur J. Dorman, K.B.E., in the chair.

The notice convening the meeting and the auditor's report having been read, the Chairman said: 'Turning to the directors' report, you will see that the profit and loss account for the year, after the stocks have been written down to their present value, shows a profit of £160,368 13s 11d, which, together with the balance of profit brought from last year of £239,487 16s 11d, makes a total of £399,856 10s 10d, which your directors propose to deal with in the following manner: £35,684 is applied to the payment of interest on debentures, £120,000 for the dividend on the 8 per cent. preferred ordinary shares for the year, £3,000 directors' fees, £40,000 to general reserve account, leaving a balance to be carried forward to next year's account of £201,172, omitting shillings and pence, which I will continue to do throughout.

I now go through the balance-sheet in the usual way.

On the liability side you will see that the paid-up share capital has been increased during the year to £7,499,592, due to the payment of the final call of 4s per share on the issue of £3,000,000 ordinary shares. There is a small account of £408 due in respect of unpaid calls.

The company's holding in the 4 per cent. first mortgage perpetual debenture stock has been increased during the year by £3,500, bringing the total of their holding in this stock to £58,620.

MORTGAGES REDUCED.

The 5 per cent. sinking fund mortgage debentures have been further reduced by the amounts required to be paid off and cancelled under the terms of the trust deed. The outstanding 5 per cent. debentures with interest accrued to date now amounts to £398,540, against £405,060 last year.

The amount of the secured loan has been reduced by £20,000, and now stands at £918,475.

The debts due by the company, which last year stood at £975,709, now amount to £445,685 only. The amount has been very considerably reduced by the settlement of a portion of the claims arising in connection with taxation, and also by curtailment in trading, which has unfortunately existed throughout the year.

The reserve accounts, which in the 1921 balance-sheet stood at £745,342, now amount to the sum of £595,990. This reduction is due to the appropriation of £159,828 to meet the loss on the year's working at the North-Eastern Steel Company, Limited. I will refer again to this matter after I have taken you through the balance-sheet. I have already dealt with the figures in the profit and loss account.

VALUABLE ASSETS.

On the assets side of the balance-sheet the amount of capital expenditure now stands at £3,377,110, including the sum of £253,095 net expenditure during the year, but excluding expenditure on the items dealt with in the suspense account. The balance of the suspense account, which appeared in the 1921 balance-sheet, and which at September 30, 1922, amounted to £1,894,727, has been carried to the capital expenditure account. This reduction in the suspense account as compared with last year arises mainly through the settlement of the company's claims in respect of the special expenditure on plant at Redcar, and also from the transfer of a portion of the Dormanstown property to Dormanstown Tenants, Limited, a public utility society formed for the purpose of building houses for our own men employed at the Redcar works.

The investments, which now amount to £5,022,306, as against £4,656,510 in last year's balance-sheet, have been mainly increased by advances to Bell Brothers, Limited, of £300,000, and to the North-Eastern Steel Company, Limited, of a net sum of £75,172, after writing off £159,828, the amount of that company's loss on the year's working. The advances have been made to enable those companies to carry out their programme of developments.

The amount of stocks in hand in the 1922 balance-sheet is

Bills discounted and other advances had continued to diminish in ordinary course, as forecast at the last meeting, the reduction being about £250,000. Profits were about the same as last half-year, and he thought they must be regarded as satisfactory in view of the keen competition in London exchange, from which an important portion of the profits was derived. The small increase in charges was represented chiefly by greater taxation.

£1,080,833, as against £1,650,503 in 1921. This decrease again reflects the comparative smallness of the company's trading during the year, and the further depreciation in values which has taken place.

The amount of the debts due to the company at the end of 1922 amounts to £819,677, a decrease of £182,187.

This year the amount of cash at the bankers and in hand amounts to £260,528, as against £231,844 last year.

DORMAN'S INVESTMENTS.

It will be seen that the total of our investments forms a very large proportion of the company's assets, and while the balance-sheet gives particulars of the assets included in the capital expenditure account, the particulars of the investments are dealt with in more general terms. I think it right that the shareholders should have more information with regard to the company's investments than it is possible to give in the balance-sheet. I will therefore refer to our investments in more detail.

As the balance-sheet tells you, the sum of £4,548,885 is invested in shares in our allied companies; of this sum £1,400,000 is represented by our holding of the whole of the share capital of Sir B. Samuelson and Co., Limited, which was acquired by us in 1918. That company is the owner of Sherburn and Hedley Hope Collieries, with an output of 650,000 tons of coal per annum; Spawood Mine, near Gisborough, with an output of 300,000 tons of ironstone per annum, with blast furnaces producing, when in operation, 280,000 tons of pig-iron per annum. They also own two modern batteries of coke ovens, which supply the town of Middlesbrough with gas, also by-product plants and a slag grinding plant for the manufacture of road metal. The works are situated in close proximity to our Britannia Works, so that molten metal can be carried direct from the blast-furnaces to our steel furnaces at Britannia, thereby enabling Britannia to effect very considerable economy in producing their steel. The works also have a considerable river frontage, with a good wharf.

This property is uncharged with any debenture issue, and the price paid for the shares included, of course, not only the plant and machinery, but also the investments, stores, stocks, and cash to the total of £500,000.

BELL BROTHERS.

£620,000 of our investments is represented by our holding of the whole of the ordinary share capital of Messrs. Bell Brothers, Limited, which company has £361,386 outstanding debentures and £500,000 preference shares. In addition to our holding the ordinary shares we have advanced to Messrs Bell Brothers, Limited, £300,000 for further developing their mineral properties.

Messrs Bell Brothers are the owners of the following collieries:—Browney, Tursdale, Bowburn, and South Brancepeth, with a total output of 650,000 tons of coal per annum. They are also the owners of the following ironstone mines:—Park Pit, Skelton, and Dumpsey in Cleveland, and Burley in Northamptonshire, with a total annual output of 825,000 tons of ironstone. In addition, they are the owners of the Clarence Iron and Steelworks and Rolling Mills, with a large area of land and good river frontage and wharf. Their output capacity is 400,000 tons of pig-iron and 250,000 tons of steel per annum.

Messrs Bell Brothers are at present engaged in considerable development work in their collieries, which will have the effect of largely increasing their output of coal, and are building a new battery of coke ovens. Their by-product plant is a modern one, and in addition they have a rectifying plant in which all the crude products produced by the various plants of the allied companies are refined.

BENZOL OUTPUT.

Their output of rectified benzol will shortly exceed 2,000,000 gallons per annum, with 50,000 gallons of tar acids and 100,000 tons of various other oils and by-products, including sulphate of ammonia. Messrs. Bell Bros. not only supply their own requirements in coal, but are able to provide us with large quantities for use in our own works and for export. Included in their assets is a

holding of 168,000 ordinary shares and 30,000 debentures in the Horden Collieries, Limited.

In 1919 we purchased the whole of the preference shares and the whole of the ordinary shares, with the exception of 21 shares in the Carlton Iron Company, Limited. The company has no debenture issue, and the price paid for the shares included, in addition to the fixed plant, stocks, stores, and investments to the value of £420,000. They are the owners of the Mainsforth Colliery, with an output of 500,000 tons of coal per annum, and also of the Last-furnaces and coke-ovens at Carlton. This investment stands in our books at £1,023,328. We largely use the Mainsforth coal in our own works, that colliery being nearer in point of distance to our works than any other colliery in Durham—a saving in carriage is thereby effected.

The blast-furnaces are engaged in the manufacture of ferro-manganese, of which we, Bell Bros., and North-Eastern Steel Company, Limited, require a considerable tonnage for use in the steel furnaces. The company is also able to sell ferro-manganese and coal for home use and export.

NORTH-EASTERN STEELWORKS.

I now come to the last of our allied companies—i.e., the North Eastern Steel Company, Limited. We are the holders of the whole of the share capital, which stands in our books at £260,384. The company have two debenture issues, of which £250,000 and £50,000 are respectively outstanding.

The works of the North-Eastern Steel Company, Limited, adjoin our Britannia works, on the opposite side to those of Sir B. Samuelson and Co., Limited. Here, again, the supply of molten metal to Britannia for steel-making, after providing for their own requirements, has proved an advantage to Britannia. In addition to our holding the share capital of this company, we have advanced to them sums amounting to £945,171 to pay for the extensive alterations to their plant which have been carried out, and to provide them with necessary working capital.

As you already know, that company has converted their steel plant from a Bessemer plant to an open-hearth basic plant, comprising a mixer, tilting furnaces, a new battery of coke-ovens, together with a modern by-product plant. The utilisation of surplus waste blast-furnace gas has been effected by the erection of gas engines for the generation of electricity.

They have also completed new works for grinding basic slag for fertilising purposes, and a new ore-handling gantry. In addition, they have made considerable alterations to their rolling mills, and have rebuilt their four blast-furnaces, two of which are now working. Each of these furnaces is giving a weekly output of 2,000 tons of basic pig-iron, which, I believe, compares favourably with any blast-furnaces in this country to-day similarly employed.

LOSS WRITTEN OFF.

The alterations have taken a good deal longer to carry out than was expected, and you will readily understand that during the progress of the alterations the working conditions were not conducive to economical production. Owing to the dislocation of work during the alterations, the result of the year has been unsatisfactory, and a loss of £159,828 has been incurred, but as this was due to temporary conditions, it cannot be taken as affecting the real value of the works.

As you will see from the balance-sheet, we have written off this loss from our reserves. All the companies are possessed of very valuable assets, and in normal times are each capable of earning a profit showing a good return on their capital.

This year, however, owing to the extraordinary depression in trade generally, and in the iron and steel trade in particular, they have failed to contribute their proper proportion to our funds, in fact, they have been fortunate in avoiding making a loss. With the exception of the North-Eastern Steel Company, Limited, they have managed to make both ends meet, and to contribute to our revenue for the year.

The remaining £473,000 is invested in our Kent undertaking, and in several other companies which are in one way or another closely connected with our trading interests, mainly in the direction of absorbing our output.

THE KENT COALFIELD.

With regard to Kent, you will be interested to hear that in the spring of this year we entered into negotiation with Lord Cowdray with a view to securing his co-operation in our undertaking. I am pleased to say these negotiations have been successfully concluded, and a company has been formed under the title of Pearson and Dorman Long, Limited, which has acquired from us the whole of our interests in that county.

The shares in the new company are held equally by ourselves and Whitehall Securities Corporation, Limited, one of Lord Cowdray's companies, but as the transaction was not completed during our financial year, the investment amounting to £245,417, still appears in our balance-sheet under the heading of Channell Steel Shares. Further coal areas are now being acquired under

an agreement we have signed with Kent Coal Concessions, Limited, and their Allied companies; if and when the negotiations which are now in progress with the landowners under the terms of that agreement are completed, the new company will have under its control a compact district of some 30,000 acres which, according to our mining experts, contains the best coal bearing properties in Kent.

An immediate start is being made on the sinking of the first two coal pits at Betteshanger, near Deal, and by the time we meet again I hope to be able to report that satisfactory progress has been made both there and in other directions. I cannot offer you a better assurance of the hopeful nature of this enterprise than the fact that we have secured Lord Cowdray and his associates as our partners.

LINKS OVERSEAS.

£60,000 is invested in shares in Braithwaite and Co., Limited, thus associating with ourselves a company having engineering work in West Bromwich and Newport (Mon.), and a valuable connection in India as general contractors and constructional engineers. Messrs. Braithwaite and Co. take from us steel required by them in their many undertakings, helping to find an outlet for our products. In our holding in this company we are shareholders in a profitable business, and we may reasonably expect a good return by way of dividends on our investment.

In South Africa we are associated with the constructional engineering firm of Messrs Wade and Dorman, Limited, in which company we hold half the capital, amounting to 25,000 shares at £1 each fully paid, and 25,000 shares at £1 each, 10s paid. This company also purchase from us steel required in their business, and have established a valuable connection for us in South Africa.

We hold 40,600 ordinary shares of £1 each fully paid in the Bowesfield Steel Company, Limited, a profitable undertaking, which purchase from us annually a large tonnage of steel bars required by them for the manufacture of corrugated sheets.

We are interested in the British Magnesite Calcining Company, Limited, a company with which many of the large steel manufacturers of this country are also associated. The company is not yet operating, but the works are now nearing completion, and it is hoped that British steelmakers will shortly receive the benefit of their production, and thereby escape from complete dependence upon Austria for their supply of calcined magnesite. Our holding amounts to £18,000 in ordinary shares and debentures.

We hold £58,620 of our own first mortgage debenture stock and £4,400 of our sinking fund debentures which have not yet been cancelled. We also hold £23,060 4s per cent. first mortgage debenture stock of the North-Eastern Steel Company, Limited, and £100 6 per cent. second mortgage debentures of the same company.

PRODUCTIVE CAPACITY.

The remainder of our investments consists of a number of small holdings in various concerns which supply one or other of our requirements, such as the Steeley Lime Company, Limited, Messrs Casebourne and Co., Limited, cement makers, of Haverton Hill, and in agency associations which act as our selling agents in China, the Near East, and Egypt.

This finishes the list of our investments, and I think you will agree that I have put before you particulars of a vast undertaking. It will convey even more to you when I tell you that we have to-day 16,000 shareholders, and that we employ in normal times over 20,000 hands. We can produce annually 1,340,000 tons of ironstone, 1,800,000 tons of coal, 900,000 tons of coke, with a corresponding output of by-products, and 1,200,000 tons of pig-iron, all contributing towards the supply of the raw materials we require for the manufacture of 1,000,000 tons of steel per annum, which is the capacity we possess to-day.

If the capital sum invested in the undertaking seems large, I think we are justified in claiming that it is small when these productive capacities are taken into consideration.

With such a capacity of output of minerals and pig-iron you will understand how badly we have been hit by the depression, and how readily we should respond to any improvement in trade, however slight. For example, at one time we had only three furnaces in blast out of 32. To-day we have 11.

HOW TO GET BEST RESULTS.

Taking the industry as a whole, I think I am safe in saying that over a period of time the best results are obtained by those who possess the larger control of the elements of production.

The disposal of this large output is not an easy matter, and it will interest you to know that our own constructional departments and our wire and sheet works are actually absorbing our steel to-day at the rate of 190,000 tons per annum. A further 80,000 tons per annum are taken by the companies in which our funds are invested, making up the very satisfactory total of 270,000 tons.

You will see, therefore, that the policy of your board in recent years has been, on the one hand, to increase our control of the sources of supply of raw material, and on the other to add to the

outlets for disposing of our productive capacity of 1,000,000 tons of steel per annum. To what length the principles of this policy should be carried is a matter which has continually engaged our attention.

If we had been wise in gathering under our control the interests which I have just enumerated, might it not be wise to continue the process still further? Is the unit of 1,000,000 tons of steel per annum at which we have aimed large enough?

Would a larger unit prove more economical in manufacture, or would it prove unwieldy and difficult to handle. These are questions which we have always before us, and you may be assured that your directors will not lose sight of any opportunity which offers itself whereby the value of the undertaking can be added to.

At the moment we are of the opinion that it is not to our advantage to increase our steel capacity, and that our proper policy is to continue on the lines we have followed in recent years—namely, to increase the outlets for the disposal of our products.

IMPROVING DEMAND.

In the directors' report, which you have before you, we have referred to the improvement in demand which has taken place recently, and to increased activity in shipbuilding and construction business. There are signs that this may continue, and there is strong evidence that India, the Colonies, and the other customers abroad are about to enter upon programmes of development which have been too long deferred.

Nevertheless, we are still a long way off the stability in prices which seemed to be approaching when I last addressed you. During the last year lack of demand for steel, combined with the collapse of Continental exchanges, which has enabled our Continental competitors to quote very low prices, has brought about a scramble for orders at almost any price. To-day we are selling heavy steel rails, joists, sections, and shipbuilding material at a price which is not 25 per cent. above pre-war price.

When I compare this with railway rates, which are 60 per cent.; coal, which is 80 per cent.; bricks, engineering plant, and other stores used in iron and steel-making, which vary between 50 per cent. and 200 per cent. over pre-war prices, I venture to say that the bulk of heavy steel manufactured to-day in this country from pig-iron is being produced at a loss.

In our own case we should have been hard put to it to make a profit had it not been for the provision I have said we made for the disposing of our output. It is difficult to see where further reduction in cost is possible while factors outside our control remain so high, and I should be wrong if I failed to warn you that until conditions alter which will enable us to reduce the cost of production or to raise the price of steel, the prospects of our industry are not very encouraging.

SIGNS OF RELIEF.

Fortunately, as I have said, there are to-day signs of relief. We must remember, too, that the iron trade changes very rapidly, and it is by no means impossible that by the time we meet again the improvement which seems to have set in may have so altered conditions as to have put our steel-making departments once more on a profit-earning basis.

During the year we have been free from labour trouble. The men in all departments have worked well, and they and their leaders have stood loyally by all their agreements with their employers.

Our managers and staff from top to bottom have rendered us excellent service, and have helped us in every way possible to bring down cost. Since we last met we have instituted a pension fund on a contributory basis for their benefit and for those of the staffs of our allied companies.

A dividend on the preferred ordinary shares at the rate of 8 per cent. per annum, less income-tax, was declared, the retiring directors and auditors were re-elected, and a vote of thanks to the chairman terminated the proceedings.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

"ANOTHER VERY SATISFACTORY REPORT."

NEW CAPITAL ISSUE SHORTLY.

ADVANTAGES TO PERSIA OF COMPANY'S WORK.

The 13th ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held, on the 11th instant, at Winchester House, London, Sir Charles Greenway, Bart. (the chairman), presiding.

The secretary (Mr John Clark) having read the notice convening the meeting and the auditors' report,

The Chairman said: It is with very great pleasure that we have been able to submit to you for the past financial year what I am sure you will all regard as another very satisfactory report and balance-sheet.

When addressing you at the last annual meeting I indicated that there would be some falling off in profits for the year now under review, owing to the lower prices of products, but that this

would be partly compensated for by increased throughput, and that in any case the amount available for dividends would be larger than in the previous year, as we should no longer be liable for excess profits duty. If you will turn to the profit and loss account, you will see that this forecast has been amply verified, since the reduction in net profits is very much less than the sum which was set aside in the previous year to meet E.P.D. and corporation profits tax.

The figure of £3,130,380 16s 2d carried to the appropriation account is, I should explain, the net profit for the year arrived at after allocating in this company and in the various subsidiary companies constituting our group, including the net increase in the carry-forwards of these companies, a total of about £2,500,000 to depreciation and reserves. In the appropriation account we have, as you will see, allocated a further £1,000,000 to depreciation and reserves, making a total of no less than about £3,500,000, which in one form and another has been reserved by our own and our subsidiary companies out of the year's profits. This may at first glance strike you as an unduly heavy writing off, but I am sure you will agree with me that we are acting wisely in following a conservative policy in the matter of our writings off for depreciation and in the appropriations to our reserve accounts, and in not recommending any increase of dividend.

CURRENT YEAR'S PROSPECTS.

As regards prospects for the current year, I am not yet able to make any definite forecast. As you will have seen from the report, the completion of the extensions to our refineries has been delayed by strikes and other unavoidable causes, and it has not yet been practicable to estimate the extent to which our output at the Abadan Refinery will be affected by the recent fire. The actual amount of material damage done was small—not more than about £50,000—and it is covered by insurance, but as it destroyed some of the finishing plant, our output of refined products from this refinery will be temporarily curtailed. Part of the damaged plant can be, and is being, replaced immediately out of plant sent out for extensions, but this, in turn, will cause further delay in the completion of the extensions at this refinery, as fresh plant will require to be sent out to replace the material appropriated to remedy the fire damage. The recent further fall in the price of products will also unfavourably affect the present year's results. On the other hand, the bringing into operation of further units of our refinery at Llandarcy has enabled us to considerably increase our production of crude oil, and the fall in prices will to some extent be offset by the termination this month of our old contracts for benzine and kerosene. But, taking all these circumstances into consideration, I do not think we can, consistently with the carrying out of our policy of conserving our resources as much as possible, look for any increase in dividend on our ordinary shares for the current year. In the following year, however, our programme of extensions will be nearer completion, and as we shall then be in a position to deal with a much larger volume of oil, our profits should, provided present prices are maintained, show a substantial increase.

PETROLEUM PRICES.

As regards the future course of the markets for petroleum products, it is, of course, impossible to prophesy with any accuracy, but there are indications that prices have now passed the low-water mark. The price of crude oil in Mexico has, owing to the falling off in production in that country, advanced appreciably, and this has been reflected in some of the other producing countries. The price of fuel oil, which had fallen to a point at which it could not in many cases be produced at a profit, shows signs of improvement—in fact, a very large contract has recently been placed in America at a price which shows an advance of about 10s per ton on the price at which the same contract was placed a year previously. The prices of kerosene also have advanced materially in America during the past few months, partly owing to the large amount of that product which is now being converted by cracking into the more remunerative form of benzine. Benzine (or petrol) is the only main product which does not at the moment show any indications of improvement, there being large accumulations in the United States of stocks of this commodity, but I do not anticipate that this position will continue for long, since the consumption of benzine is increasing by leaps and bounds, and the price of kerosene has now about reached a point at which many refiners will not find it remunerative to convert it into benzine.

On the other hand, the falling off in production in Mexico is more than offset by increased production in other countries, but I am of opinion that the largely increasing demands of the world for petroleum products, which will become accentuated as economic conditions in Europe improve, will more than counterbalance any increased production, and that the tendency within the next few years must be in the direction of higher prices.

BALANCE-SHEET ITEMS.

I will now call your attention to the balance-sheet, and to such items as need explanations. On the debit side of the account the amount of paid-up capital was, you will see, £17,112,838 5s 7d, representing an increase of £4,408,354 8s 9d on the amount shown 12 months previously. This mainly consisted of the balance of the calls on the 9 per cent. preference shares and the proceeds of the further issue of £2,000,000 8 per cent. preference shares, but it also included £549,458 5s paid up in respect of the 600,000 ordinary shares issued in March last. The outstanding calls have since been paid, and the 10s remaining unpaid on the 1,500,000 shares previously issued to the original shareholders has also since been called up and paid.

The amount of debenture stock outstanding has been reduced by £125,000, this being the amount falling due for redemption during the year.

The employees' provident pension and insurance fund account amounts now to £559,666 3s, being an increase for the year of £240,456 14s 8d. The rapid growth of this fund is extremely pleasing to the board, and I am sure it will be equally so to the shareholders and to the members of the staff, as it carries out in a very substantial manner the profit-sharing principle which has now been accepted as an essential for the success of industrial and trading institutions.

The next item calling for comment is "reserves." In our previous accounts we have shown the amounts realised for share premiums under a separate heading, but as they are in effect reserves we have now included them under the general heading of "Reserves," which now, including the further allocations from the year's profits, show a total of £4,591,756 14s 5d, as against £2,500,000 in the previous year. As I have previously indicated, these reserves are quite distinct from the large amounts which we have written off for depreciation, and they are augmented by the net increase of the carry forwards in the profit and loss accounts of our various companies.

DIVIDEND.

The balance at the credit of profit and loss account, after paying dividends on the preference shares for the half-year ended September 30th was £3,421,672 18s 2d. Since the close of the year a further £437,500 has been paid out in respect of preference dividends for the half-year ended March 31, 1922, and out of the balance remaining we now recommend the payment of a dividend on the ordinary shares at the rate of 20 per cent. per annum, absorbing £1,245,000. This will leave a balance to carry forward, subject to E.P.D., if any, for the year 1920-21 and corporation tax for the years 1920-21 and 1921-22 of £1,739,172 18s 2d. No settlement has yet been arrived at with the Inland Revenue authorities in respect of E.P.D., but the carry forward is more than ample to cover any possible claims on this or any other taxation accounts.

Coming to the credit side of the account, you will see that we have now included "advances to associated companies" in the first heading. The word "associated," so far as it refers to advances, should, I may mention, be subsidiary, inasmuch as all the advances in question were made to companies in which we own all the shares. Our reason for making this change is that these advances have been made in lieu of issuing fresh capital for our subsidiary companies, and therefore that they, in effect, stand in the same category as our shareholdings in these companies. For example, in the case of the "National Oil Refineries, Limited," our issued share capital was only £200,000, whilst the capital outlay of this company was in the neighbourhood of £3,000,000. By not issuing capital to the full extent of our subsidiary companies' capital outlay we not only save double stamp duty—i.e., on the subsidiary companies' as well as on the Anglo-Persian Company's—issues—but we are in a better position for writing down rapidly, as we hope at an early date to do, a large portion of our capital outlay in these concerns. The amount of advances to these companies included in the total of £22,022,759 3s 11d shown under this heading is £7,399,938 14s 5d, representing principally advances to the National Oil Refineries, Limited, and the British Tanker Company. The next item on this side—viz., refineries, tank installations, pipe lines, &c.—shows an increase for the year, after writing off amply for depreciation, of £1,523,334 5s 2d—this, of course, representing the expenditure for the year consequent upon the large developments in our operations. Perhaps I should also explain that the contingent liability for uncalled capital in other companies shown in parenthesis under the first heading, is chiefly in respect of our participations in the various foreign producing and distributing companies in which we have taken an interest and pursuant of our policy of extending our sources of supply and of creating direct outlets without the intervention of "middlemen" for the whole of our products. But as these companies are entirely under our own control, the liability cannot be incurred without our consent.

NEW ISSUE SHORTLY.

As regards our future financial programme, it is, I think, needless for me to point out that we have not yet got to the end of the vast capital outlay which is required to carry out all the steps necessary to enable the company satisfactorily to meet all competition and to dispose of the whole of its products to the best advantage. As you will have gathered from the large sums which we have carried to depreciation and reserves in this and previous years, we are meeting this capital outlay to a large extent out of profits. But in addition to this further funds are required, and to provide these it is intended to make a further issue of 850,000 ordinary shares, being the balance still available for issue without disturbing the Government's majority interest. The proceeds of this issue, together with our withdrawals from profits for depreciation and reserves, will, we anticipate, suffice to meet all the capital requirements necessary for carrying out our present programme of extensions, including our expenditure in connection with the testing of new territories in other parts of the world.

The issue will be made at the earliest favourable opportunity, and it is intended, as on previous occasions, to give existing shareholders in this company and in the Burmah Oil Company special consideration in allotment.

Whilst on this subject, I would like to say that the board were extremely disappointed at the very small proportion of the applications which they were able to allot to applicants for the last issue of ordinary shares. The issue was made at an attractive price in order to give existing shareholders and the public an opportunity of participating in the great prosperity of the company, but it was not anticipated that this would lead to such an enormous oversubscription.

QUOTATION CANARD.

In this connection there is another matter to which I ought to refer, and that is the absolutely unfounded *canard* to which currency was given recently, to the effect that the Government and/or the Burmah Oil Company were desirous of placing their shares on the market. This *canard* was apparently based upon the fact that the company had applied for an official quotation for the whole of the 8,100,000 ordinary shares which have been issued. This application, however, was not made on the initiative of the company or of either of the two shareholders in question. What happened was this. Acting solely in the interests of the public who took up the 600,000 ordinary shares issued early this year, we applied in the ordinary course to the Stock Exchange Committees both in London and Glasgow for an official quotation for these shares only. The application was granted by the Glasgow Committee without question, but was refused by the London Committee on the ground that they could not give a quotation for these shares unless the 7,500,000 shares previously issued were included in the application. We protested against this ruling on the ground that there was no intention or desire on the part of the original shareholders to obtain a quotation, but without avail, and we therefore had no alternative, short of allowing the 600,000 shares issued to the public to remain unquoted, but to put in an application for the whole number. It will be seen, therefore, that the application for an official quotation for the shares held by the Government and by the Burmah Oil Company was due entirely to the ruling of the London Stock Exchange Committee.

REFINERIES.

Having dealt with our financial matters, I will now give you a few explanations in regard to the progress of our working operations. Beginning with refineries, you will have seen from the report that, although our refineries at Abadan and Llandarcy have shown a steady increase of throughput, the work on their extensions has been impeded by strikes and other causes.

The most serious of these interruptions occurred a few months ago at Abadan, where, owing to a strike among the Indian skilled labourers, engineered by seditious agents from India, we had to summarily dismiss over 2,000 of the Indian artisans employed by us. Before this strike occurred we had been gradually training Persians to take the place of the imported Indian labour, and though the process of training was slow, the results on the whole were satisfactory. On the occurrence of the strike we decided to substitute the deported Indians by local labour. On the whole, we have no reason to regret the change, as the Persian, when trained, is at least as good an artisan as the Indian. Moreover, a workman employed in his own country and accustomed to the local conditions of life is more contented, and is therefore a more satisfactory employee than a foreigner.

The completion of our extension work, both at Abadan and Llandarcy was further impeded by the strike which occurred in the engineering trade in this country last spring, which caused serious delay in the deliveries of plant.

Both of these refineries will, however, it is hoped, be in operation to the full extent of the additions which have been budgeted for by the middle of next year, and we shall then be in a position materially to increase our takings of crude from our producing

companies and to place on the market a correspondingly increased quantity of refined products.

The refinery, which is being erected in France by one of the companies with which we are associated, will, it is hoped, be completed within the next two or three months, and this also will admit of a further increase in our production of crude and sale of refined products. The new refinery which is being erected at Grangemouth by Scottish Oils, Limited, for the purpose of dealing with Persian crude, and the similar one which is being erected by our associated Australian company—the Commonwealth Oil Refineries, Limited—will probably be completed by the end of next year, and these will afford a still further means of increasing our production of crude, and of providing profitable outlets for the products to be derived therefrom.

SHALE INDUSTRY.

The shale mining operations of Scottish Oils, Limited, have proceeded steadily since the interruption caused by the unfortunate coalmining strike, and the refinery works are now again in full operation. The wages at present being paid to our shale miners are higher than the current rates for coalminers, and we hope that this satisfactory state of affairs may continue, but should there be any further decline in the values of our products the position will need to be reconsidered—much as we should regret this—because at present prices we are only working to a bare margin of profit.

DISTRIBUTING ORGANISATIONS.

As regards our distributing organisations, both at home and abroad, considerable progress has been made during the past year. In the United Kingdom the British Petroleum Company and Scottish Oils, Limited, have largely extended their facilities, with the result that a considerable increase is shown in their sales. Some of this increased demand for our products is no doubt also due to the fact that as time goes on the public are becoming more and more convinced of the superior quality of the B.P. petrol and other products which are being produced by us at our Llandarcy and Scottish refineries. I may mention that with these refineries immediately under the eyes, not only of our scientific staff but also of the men who have to sell the products, absolute excellence and regularity of quality are ensured.

As mentioned in the report, the distributing organisations which have been created by our associated companies in France, Belgium, Denmark, and Norway have all now begun operations, and are proving valuable auxiliaries to our distributing concerns in this country. Negotiations are still proceeding for creating similar organisations in other European countries, but we are delaying final arrangements until we are ready to supply the quantity of our own products necessary to maintain these additional outlets.

During the year we and our associated companies have completed a number of additional fuel oil bunkering installations at important ports of call in the United Kingdom, the Mediterranean, India, Ceylon, Africa, and Australia, and these are now carrying on an active trade.

PRODUCTION.

Although it is rather putting the horse behind the cart, I will now, to maintain the same sequence as I have followed before, give a few explanations regarding what is after all by far the most important part of our business—viz., production—since upon this is based the whole of our future prosperity.

Well, on this point I am glad to be able to give you the most confident assurances. As mentioned in the report, the older wells of our producing companies in Persia continue to maintain their wonderful rate of production, the oft-quoted well No. F7 still continuing to produce its 12,000 barrels daily, while other wells brought in are even beating this famous well. I have not hitherto quoted the production figures of our producing companies, but now that the public are interested in the Anglo-Persian Company as ordinary shareholders, I think the time has come when this reticence should be abandoned in order that you may be better able to judge for yourselves as to the future prospects of the company.

These figures for the past few years have been as follows:—

	Tons.
For 1918-19	1,106,415
For 1919-20	1,385,301
For 1920-21	1,743,557
For 1921-22	2,327,221

whilst the production for the current year is estimated at 2,900,000 tons. As I have often pointed out, the only limits to the ability of our producing companies to supply us with crude are, so far as we can judge, (1) the capacity of our pipe lines and (2) the extent of our refineries. The programme that we have been working to for several years past has been to bring these two facilities up to a total capacity of 5,000,000 tons per annum. Our pipe lines and pumping stations have now been increased to permit of pumping this quantity of oil to the seaboard, but our refinery capacity has not yet, owing to the delays to which I have referred,

reached this figure. Our refinery capacity to-day is approximately 3,100,000 tons; by June next it should be 4,100,000 tons, and by the end of next year we expect it to reach 4,500,000 tons, at which figure we shall probably rest for the time being until we are in a better position to judge where further refineries can be erected to the best advantage.

As to the ability of our Persian producing companies to produce this quantity of oil, and to maintain production at that rate, there can, I think, be very little doubt. During the year additional test wells which have been put out as "feelers" beyond the proved areas of the fields which we are now operating have considerably extended the area of the proved territory, and all of these give evidence of being of the same high producing character as those from which we are now obtaining our production. We have been carrying on, and will continue to do so, an intensive drilling programme, so that we may be able to maintain production in the event of the wells which we are now operating showing any falling off. Such of the wells as have been carried down to the oil sands and are not required for production have been capped so that they may be immediately ready for production whenever required. The others only require a few feet of drilling to bring them into production. Those remarks only refer to the operations of our subsidiary companies operating in the Bakhtiari country.

OTHER DRILLING OPERATIONS.

In order that we may not be dependent entirely upon Persia for our supplies, we have, as you are aware, acquired concessions in various other parts of the world, and are now, either directly or in conjunction with associated companies, conducting drilling operations in four different parts of the Argentine Republic—viz., at Comodoro Rivadavia, Neuquen, Santa Cruz, and Bahía del Fondo, in New Brunswick, Hungary, Jugo Slavia, and in Venezuela. No very definite results have yet been obtained in these countries. In the Argentine we have struck some wells of moderate capacity in the Comodoro Rivadavia field, but we are not yet satisfied that the production is sufficiently large or reliable, or the quality of the oil sufficiently good, to justify commercial exploitation, particularly under the difficult conditions and unfavourable laws and regulations at present obtaining in that country. We also hold concessions or options on concessions in various other parts of the world on which our geological staff are carrying on investigations before we decide as to the advisability or otherwise of expending money in testing operations. In British New Guinea (Papua) we are carrying on geological investigations and drilling operations on behalf of the Commonwealth Government. These, so far, have given no conclusive result, but are hopeful.

RELATIONS WITH THE PERSIAN GOVERNMENT.

As regards our relations with the Persian Government, I regret to say that during the past year a very active anti-British propaganda, emanating, it is believed, largely from Bolshevik sources, has been carried on in Northern Persia. This was chiefly based upon the Anglo-Persian Agreement, which has been the subject of so much comment, but it has also been directed to a considerable extent against the Anglo-Persian Oil Company and other British institutions. I cannot believe that this propaganda has had the support of any responsible or well-informed Persians, because I am sure that they all fully recognise that the British support which they have received since the beginning of the war, and before the war, is the only thing that has preserved the independence of the country, and that has saved it from being overrun by the anarchy and ruin that now prevail in Russia. So far as concerns the part played by the Anglo-Persian Company in the economic and financial situation of the country, I think we can claim that the large sums we have been paying to the Persian Government during the past few years in respect of royalties, and the vast sums of money we have been spending in the country, have been the chief assets of the country during all these troublous times, and that the advances which we have from time to time made against the former have on more than one occasion saved it from what might have proved a disastrous "coup d'Etat." It has been represented that the Persian Government do not receive a proper proportion of the profits made by the Anglo-Persian Company, that the company by exploiting these oilfields is dissipating the wealth of the country, &c.

BENEFITS TO PERSIA.

But what is the truth of these statements? The royalty paid by us to the Persian Government is a varying amount dependent upon our profits, but in the financial year under review the amount of royalty paid by the Anglo-Persian and its subsidiary companies, apart from large subsidies paid to the local chiefs, was £553,795 8s 4d. In the principal oil-producing British Colony the amount of royalty paid on the same quantity of oil would have been £177,000. In Mexico the amount payable would have been £417,000. Even in the United States, where the fields are situated in the midst of vast consuming markets, and where the oil is consequently much more valuable than in Persia, the amount receivable by the State would have been less than £500,000. In

the countries where the royalties take the form of a percentage (usually 10 per cent.) of the crude oil produced, the amount payable would on the average not have worked out to more than from £100,000 to £400,000, according to the market price of the crude for the time being. So that in the matter of royalty the Persian Government would appear to be doing at least as well as the Government of any other oil-producing country in the world.

Apart from this direct gain to her revenue which Persia is deriving from our enterprise, she is, however, gaining numerous indirect advantages. For example, we are spending in Persia itself no less than about £1,500,000 per annum in payment for Persian labour, supplies of local material, foodstuffs, &c. Of this Persian labour, supplies of local material, foodstuffs, &c. Of this sum about £1,100,000 per annum is spent in payment for labour alone, this expenditure now giving hitherto unknown employment to as many as 20,000 Persians. No such colossal revenue-producing or labour-employing industry has ever before been known in the country, and I have no hesitation in saying that if the exploitation of the oilfields of Southern Persia had been placed in other hands, or had been distributed among a number of individuals or companies, the development of these fields would have been much slower and the income derived therefrom by Persia would have been nothing like so great. Abundant proof of the correctness of this statement can be found by comparing the progress which has been made by us in Persia with the progress which has been made in other countries, such as Trinidad, Venezuela, and Roumania, where the exploitation has been in a number of different hands.

What does not appear to be understood in Persia is that a large proportion of the profit earned by the Anglo-Persian Company is not in any way inherent to Persia or to our concession, but is due to the profits made on the refining, transport, and distributing branches of our business which have been established outside of Persia and on which fully three-fourths of our capital has been expended. Were the Persian fields to shut down tomorrow these branches of our business would still earn their profits because they could be employed in dealing with crude

and/or products from other countries. In nearly all other countries the company which owns a concession is only a producing company, its profits are limited to the profits on the crude oil, and the royalties paid by it—if any—are, as I have already explained, paid in the form of a percentage on the crude, or at a rate per ton calculated on the estimated value of the crude.

LABOUR PROBLEM.

Another complaint raised against us is our inadequate employment of Persians. Needless to say, as it is manifestly to our advantage to employ Persians to the greatest extent possible, this is a problem that has always been engaging our attention. From the very commencement of our operations in Persia we have been training local labour to the utmost possible extent, and we have now to a large extent substituted this locally trained labour for the Indian artisans whom we had at first to import in large numbers, notwithstanding that this substitution has entailed considerable loss owing to the delay in carrying out our operations consequent upon the lesser efficiency of the local labour whilst in process of training.

Desire has been expressed that Persians should be employed in the higher technical works of the company, such as geology, surveying, draughtsmanship, chemistry, engineering, &c. This is a desire which, of course, has our fullest sympathy and support. Our management in Persia have, in fact, for some time past been engaged in trying to formulate a scheme for the establishment of a technical school or schools of a suitable character at one or more of the principal centres—such as Teheran or Isfahan—and have already practically concluded arrangements for establishing such a school at the latter place. But these schools cannot be a success without the whole-hearted good will and encouragement of the Persian Government and of Persians themselves, and I trust that these two important factors in the carrying out of our scheme for technical instruction in Persia will be forthcoming.

The Chairman having paid a tribute to the good work of the staff and replied to questions, the resolutions were carried unanimously, and a hearty vote of thanks to the chairman terminated the proceedings.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

REASONS FOR REDUCTION IN COAL SALES. DISTURBANCES DISORGANISE RAILWAY. PRESENT POSITION AND PROSPECTS.

ALLOCATIONS.

The profit and loss account shows the disposal of the balance at June 30, 1921, in accordance with the resolutions of the last general meeting. I need not recapitulate the items. The balance brought forward from that year was £19,987, which makes a total credit to the account at June 30, 1922, of £374,674. Of this income-tax absorbs £155,243 and corporation profits tax is estimated at £21,300; the interim dividend of 10 per cent., free of tax, paid on May 15th last, amounted to £140,000, which leaves an available balance carried to the balance-sheet of £58,130. It is proposed to write off the balance of the cost of share warrants to bearer, &c., in connection with the increase of capital, which took place two years ago—namely, £1,351. The further remuneration to which the directors are entitled amounts to £1,819. The balance dividend of 3½ per cent., free of tax, which we propose to declare to-day, amounts to £49,000, which will leave a balance to be carried forward to the current year of £5,959.

BALANCE-SHEET ITEMS.

As regards the balance-sheet, there is no new feature of interest. The creditors—£95,733—consisting mainly of income-tax, unpaid dividends and debenture interest, show a reduction of about £30,000 compared with the preceding year. The reserve account for redemption of debentures has been increased by the annual drawing of £24,000, making a total of £228,000. The cash stood at £350,000. The debtors consist chiefly of the Kailan Mining Administration current accounts, including the balance of our share of profits to June 30th last. The other items on the credit side of the balance-sheet do not require any comment.

You will notice that the auditors in their report state that they have received all the information and explanations that they have required, subject to the production of the usual inventories of stocks of the Kailan Mining Administration at June 30, 1922, which were in transit. These inventories have been prepared in the usual course, but apparently by some oversight were not despatched as promptly as they should have been. They have now arrived, and are found to be in order.

RESULTS OF THE KAILAN MINING ADMINISTRATION.

The net profit of the Kailan Mining Administration, after providing for interest on the 6 per cent. Kailan bonds, redemption of bonds for the year, reserve for depreciation, and the proportion to the board. It arises from circumstances beyond the control of those who have the management of our affairs in China, as I will explain later. The net result is that we are able to pay a balance dividend of 3½ per cent., making 13½ per cent. for the year, free of income-tax, which is equal to 18 per cent., less tax, a substantial result when considered by itself and apart from our achievements in previous years.

Our share of the profit amounts to \$2,528,683, against \$3,850,013 in the preceding year. The credit to our profit and loss account, including interest in China and after making certain adjustments, is £352,295, the average rate of exchange for our remittances for the year being 25 5¼d per dollar. Interest in Europe amounts to £45,734, against £72,221 in the preceding year, the reduction being caused by the fact that the funds in hand were considerably less, and the rates of interest obtainable for money on deposit having been almost nominal. There is a profit of £10,804 on the sale of 5 per cent. National War bonds. The agency fee and the other receipts amount to £6,333. The total to the credit of the profit and loss account is therefore £395,168. The expenses in Europe show a slight increase, and the debit on the exchange account also shows an increase. The net balance carried down is £354,686.

COAL SALES

The report states that the sales of coal for the year amounted to 3,536,000 tons, a reduction of 249,000 tons compared with those of the preceding year. You may recollect that an increase, not a decrease, of sales was expected for the year with which we are dealing. It is therefore interesting to follow the course of the sales throughout the year. The expected increase began in the first week of the year and continued week after week almost without a check until it reached its maximum in the week ended February 4, 1922, the increase up to that date being over 300,000 tons. The profits up to that time were quite satisfactory. The sales then began to decline steadily until, in the middle of May, the increase over the preceding year had disappeared, the lowest point being reached in the week ended May 20th, when the sales recorded were only 18,000 tons. The sales varied from that time from about 25,000 to 35,000 tons per week up to the end of the year, the consequence being that instead of the large increase which was shown in the middle of February, there was a deficit, as already stated, of 249,000 tons. The reduction in sales and the reduction in the profits of the Kailan Mining Administration, compared with those of the preceding year, is stated in the directors' report to be due chiefly to the disturbed political conditions in Northern China, which culminated in military operations during the months of March and April last in the Province of Chihli, where the Kailan mines are situated. It is not due to any falling off in the demand for our coal.

The first sign of trouble, so far as the business of the Kailan Mining Administration is concerned, seems to have been in the month of January last, when a large part of the rolling stock of the Pekin-Moukden Railway, on which line the Kaiping mines, the Port of Chinwangtao, and the great depot of Tientsin are situated, was held up at Moukden (the capital of Manchuria, which lies to the north of the Province of Chihli) in readiness for future eventualities. From that time onwards the business suffered from the restriction of the facilities for the transport of the coal from the mines, and the deliveries of coal began to decline.

RAILWAY COMPLETELY BLOCKED.

I will try to state in the briefest terms what happened. During the month of April the Manchurian or Northern Forces were moved southwards along the Pekin-Moukden Railway into the Province of Chihli with the object of attacking the Southern Forces, which were disposed approximately on a line south-west and south of Pekin and Tientsin respectively. The Northern troops were defeated in a general engagement, and a retreat began along the railway line towards Shanhaikwan on the way to Moukden. This necessarily meant that large bodies of the defeated soldiery passed through our Kaiping mines area and the Port of Chinwangtao, which is the outlet for our overseas trade. The railway became completely blocked, work at Chinwangtao was suspended, there was general confusion, and, as I have already mentioned, the sales fell to an almost negligible figure. Emergency measures had to be taken for the protection of the mines by such small forces as could be obtained from elsewhere or organised on the spot. Negotiations were opened up with the chiefs of the rival forces with satisfactory results. The Northern Forces withdrew to Shanhaikwan, the first station beyond our point of shipment at Chinwangtao, and the situation began slowly to return towards the normal.

TRIBUTE TO ADMINISTRATION'S EMPLOYEES.

The reduction in the sales is only one element in the losses, direct and indirect, arising from these disturbances. How serious they have been is indicated in the statement of accounts before us, but it is quite possible to exaggerate the significance of them. This is the first time in a period of 20 years that our operations have met with serious interference. It is to be remembered that during these troubled months, except for a fortnight in the month of May, the output was maintained at a high figure. The acting general manager wrote afterwards that neither he nor the engineer-in-chief at any stage considered that there was danger of any serious loss or damage (that is, physical loss or damage) in the mines area provided that panic among the employees could be prevented. You must remember that we have something like 20,000 labourers at these mines. That was done, and I ought to say here that the engineer-in-chief displayed great energy, ability, and initiative in dealing successfully, as he did, with the difficult situation. The general behaviour of the administration's employees in the mines area throughout the crisis is reported to have been admirable. None of the employees or the members of their families appear to have suffered in any way except through unavoidable anxiety or inconvenience, and there does not appear to have been any loss of, or damage to, property of any kind.

Unfortunately, the Northern Forces in their retreat took with them all the railway rolling stock on which they could lay their hands, and the negotiations which have been undertaken by the Chinese Government for the return of it seem to have been without result. The position has, however, been greatly eased for the Pekin-Moukden Railway by the use of cars from other lines.

PRESENT CONDITIONS.

The general situation, although greatly improved, is not yet normal. It has been rendered more difficult, and the sales have been diminished by a strike which broke out at certain of the mines in the last week of October. The trouble seems to have originated in the workshops of the Pekin-Moukden Railway at Tongshan and Shanhaikwan, demands being made in regard to wages and leave, some of which appear to have been of a preposterous nature. The strike was settled by apparently large concessions being made on the part of the railway. Similar demands were thereupon made by our workmen at Chinwangtao and at some of the mines. The management, recognising that there had been an increase in the cost of living, made an offer of increased wages in order to meet what they regarded as a reasonable grievance. Though the offer appeared to have been acceptable to the majority of workers, owing to the action of the extremists the strike continued, and a serious situation developed. A considerable force of Chinese police was obtained from Tientsin to deal with the strikers, and a party of British troops was sent for the protection of the European staff and their families. Ultimately order was restored and the strike ended after lasting about four weeks by the acceptance of the terms which had been offered by the management to the men at the outset.

Most of this information has reached us within the last few days, and it must be read in conjunction with the statement in the directors' report relating to the results likely to be obtained for the current year.

PROSPECTS.

I have dealt concisely but frankly with these two troubled periods, the one in the financial year to June 30th last, the other in the year now current, because my colleagues and I feel that it is our duty to give you as accurate a view as we can of the course of affairs. Let us turn for a moment, in conclusion, to the other side of the picture.

I have already said that we are behind with our sales for the current year, but we still have over six months to run. We have a very large stock of coal ready at the mines and depots. The mines are developed for the production of about 4,500,000 tons per annum, which can be increased to double that quantity if need be. The coal in sight amounted at June 30th last, in round figures, to 24,000,000 tons. The demand for our coal continues, and, given normal conditions, it should increase year by year. The doubling of the railway from the mines to the Port of Chinwangtao, to which I referred last year, has, of course, been delayed by the disturbances of last spring, but the work is going on, and is expected to be completed by the end of next year. This will greatly facilitate the delivery of coal from the mines. All that is required, therefore, is an adequate supply of rolling stock on the part of the railway to enable us to keep pace with the increasing demand for our coal and to ensure the future prosperity of our enterprise, in which our confidence is unabated.

I now move, "That the directors' report and accounts to June 30, 1922, be and they are hereby received and adopted, and that a final dividend be declared of 3½ per cent., free of income-tax, making 13½ per cent. for the year, free of income-tax, payable on December 12, 1922."

Mr F. Cattier seconded the resolution, and after the Chairman had replied to one or two questions, it was unanimously adopted.

The Chairman then proposed the re-election of the retiring directors, Mr Edmund Davis, Mr Lambert Jadot, and the Chevalier E. de Wouters.

Colonel H. A. Micklem, C.B., C.M.G., D.S.O., seconded the motion, and it was unanimously agreed to.

On the motion of Mr Sledge, seconded by Mr Howard, Messrs Annan, Dexter and Co. were reappointed auditors, and the proceedings then terminated.

SOUTH-EASTERN RAILWAY COMPANY.

DIRECTORS FOR THE NEW BOARD.

A special general meeting of the proprietors and debenture stockholders of the South-Eastern Railway Company was held, on the 13th instant, at the Cannon Street Hotel, London, to consider a resolution confirming the scheme for absorbing the London and Greenwich Railway Company, the Victoria Station and Pimlico Railway Company, and the Mid-Kent Railway (Bromley to St. Mary Cray) Company, under the provisions of the South-Eastern Railway (Southern Group) Preliminary Absorption Scheme of 1922.

The secretary (Mr Charles Davis) read the notice convening the meeting.

Mr H. Cosmo O. Bonsor, the chairman of the company, presided, and in moving the resolution said that, as those present were probably aware, the Act of Parliament passed in 1921 amalgamating the railways insisted upon one of the constituent companies in

each group absorbing a certain number of subsidiary companies. Compulsion did not necessarily lead to very agreeable negotiations—generally the reverse. Not one of the three railway companies he had mentioned had had the slightest wish to cease to exist; they were all perfectly satisfied with the punctually paid rent charges from either the South-Eastern Railway or the London, Chatham, and Dover Railway, and the stocks of all those three companies were trustee stocks. Considerable difficulty had been experienced in persuading the stockholders of those companies that their position would certainly be the same, and might possibly be improved by converting the annual income they received in the shape of a rent charge into interest on debenture stock, but after considerable time and trouble the position had been accepted. He added that the preliminary scheme for absorption into the Southern Group was now in form, and had only to go to the tribunal for its consent.

Sir A. W. Smithers seconded the resolution, which was carried unanimously.

MR SHEATH ELECTED A DIRECTOR.

The Chairman, in moving a resolution confirming the appointment of Mr Charles Sheath as a director of the company, said that Mr Sheath had made up his mind to retire from the secretaryship of the South-Eastern Railway Company, and not to place himself in competition with others for the secretaryship of the Southern Group. The board had accepted the resignation, and had at once placed Mr Sheath on the board as a director, and by doing so had made him eligible to serve as a director on the new Southern Railways Group. The record of Mr Sheath in the history of the railway industry was probably unique. As a lad of fourteen, over half a century ago he was engaged in the secretary's office of the South-Eastern Railway Company, and, following the advice given him by the late Mr Samuel Smiles, then the secretary of the company, that "a rolling stone gathers no moss," he had never from that day rolled out of the secretary's office. In that time Mr Sheath had earned not only the respect and the affection of all the directors, but he was beloved by the staff and, he believed, also by the stockholders of the South-Eastern Railway Company.

Sir A. W. Smithers seconded the motion, remarking that he was quite sure the new group would gain a great advantage in having one of Mr Sheath's ability and experience among them.

Sir Robert Perks, as an old stockholder, and Mr Rodocanachi, as the chairman of the audit committee, both desired to associate themselves with what had been said as to the value of Mr Sheath's services.

The resolution was unanimously approved.

DIRECTORS FOR SOUTHERN RAILWAYS GROUP.

A resolution appointing Brigadier-General the Hon. Everard Baring, C.V.O., Mr. Edward William Mellor, Mr. William Newburn, Sir David Lionel Salomons, Bart., and Mr Charles Sheath as representative directors on the board of the Southern Railways Group was unanimously approved, and the sum of £16,420 was voted to the four directors not elected to the new board by way of compensation for loss of office.

The Chairman explained that that represented four years' purchase of the fees, and would be paid out of the compensation granted by the Government. He also stated that a meeting would be held in February next for the purpose of declaring a dividend, and in reply to a question as to the progress of the electrification scheme, explained that the construction company had been formed; it had sent out specifications to get tenders, and they hoped very shortly to be able to commence work, and thus to give a large amount of employment to people in their own particular districts. A contract for the supply of electricity had been arranged with the London Electric Corporation.

A vote of thanks to the chairman closed the proceedings.

LONDON, CHATHAM, AND DOVER RAILWAY COMPANY.
NEW DIRECTORS—COMPENSATION TO RETIRED DIRECTORS.

An extraordinary general meeting of the proprietors of the London Chatham and Dover Railway Company was held, on the 13th instant, at the Cannon Street Hotel, London, for the purpose of electing three directors of the company to serve on the board of the company incorporated by the Railways (Southern Group) Amalgamation Scheme, 1922, and for the purpose of assenting, if thought fit, to the payment out of the assets of the company of compensation to the directors, not so elected, who suffered loss by abolition of office.

The Right Hon. Sir William Hart Dyke, Bart. (the chairman of the company), presided, and said: The names submitted for approval to the meeting were Sir George Younger, Bart., Sir Vincent Caillard, and Sir Francis Dent. The names and abilities of those gentlemen were too well known to need eulogy. The name of Sir George Younger had been a household word in the Press from the political point of view, and there were other reasons also

why a gentleman of his ability should be appointed. Among them was the fact that the stock of the company was largely held in Scotland, and it was fortunate to be able to have him as representing the interests of Scotland on the new board. Sir Vincent Caillard was a gentleman who had devoted the whole of his life to most important financial business, and there were few living Englishmen who had been appointed to more missions abroad by different Governments. As to Sir Francis Dent, they would all remember the severe test to which their railway system had been put during the war, and how splendidly it had come through that trial. Sir Francis Dent for some years had been the manager of that company, and on those grounds alone he was quite certain the stockholders would elect Sir Francis Dent. As to the compensation for the directors who were not elected to the new board and lost office, the amount was placed at £17,562, a figure which represented four years' purchase of the fees paid to the directors concerned. He believed that in every other case compensation had been granted by the proprietors of railways on the same basis.

The resolutions were carried.

ORIENT STEAM NAVIGATION COMPANY.
IMPROVED RESULTS.

The twenty-third ordinary general meeting of the Orient Steam Navigation Company, Limited, was held on the 12th instant, at the company's offices, 3 and 5 Fenchurch Avenue, London, Sir Kenneth S. Anderson, K.C.M.G. (the chairman of the company) presiding.

The secretary (Mr R. T. Garrett) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profit on the year's working was £275,015, and the balance of the revenue account was £317,621. After paying the preferred dividend they recommended that a dividend at the same rate as last year be paid, and that £100,000 be transferred to general reserve, leaving £72,908 to be carried forward. If the net result shown was better than last year, it was due not to an increase in voyage earnings, which, in fact, showed a shrinkage, but to a very considerable and most welcome drop in the cost of running. The most notable economies had been in coal, provisions, stores and repairs. Wages, however, were slow in reverting towards the pre-war standard. As regarded passenger earnings, their steamers' average had been less both outward and homeward, the latter markedly so. It could be little better than guesswork to forecast what they were going to be.

SUBSTANTIAL REDUCTION IN RATES.

There had been a substantial all-round reduction in their rates, which had come into force on the 1st of the current month. He wished they could have taken the step sooner, for there was good reason to fear that the high level of rates was strangling traffic, especially saloon traffic. Costs, however, had hitherto forbidden such a step, and even now the reductions more than discounted the realised economies. It was impossible to say how far reduced rates would act as a stimulus to traffic, and their experience up to date this year was that intermediate steamers, though dispatched in the height of the season, displayed a deplorably thin list. On the other hand, reports as to the prospects of the next homeward passenger season foreshadowed an improvement, and the reduction in rates should help.

As regarded third-class traffic, the company had had a very fair share during the past year, but its volume next year would depend primarily upon the extent to which the Imperial Government and the Commonwealth were able to get their emigration scheme into active being. Their average homeward freight earnings had been lower, due to reduced rates, which they could ill afford. The average outward freights, however, had been better, but that was due to the greater carrying power of the steamers employed this year as compared with last.

The percentage of the aggregate trade carried by the mail steamers was small, and although during the 12 months in question there was a slow but steady improvement in the volume of shipments, which was still maintained, the steamers on the United Kingdom outward berth, as a whole, fared badly; in fact, the percentage of cargo relatively to space offering was worse than in 1920-21.

The growth in Australia's exports justified an expectation that there would shortly be a corresponding growth in her imports, and, indeed, there were already some supporting signs of this, but the tendency for the volume of Australian imports and exports, and from the United Kingdom, to become increasingly ill-balanced had been a normal feature for many years, and at best, therefore, they must expect a continuance of dearth of cargo outwards. In a lesser degree even the homeward trade was at present in the same plight, the berth being swamped with tonnage, while weather conditions had unfortunately affected the prospects of export in wool, wheat, and dairy produce.

SAILINGS.

At the previous meeting he said that, except for some phenomenal change in the conditions, they would not be justified in reviving fortnightly sailings, and although he had been criticised with regard to that statement, he was to-day of precisely the same mind. The existing services had again proved adequate, and more than adequate, to deal with all the trade offering. So far from there being any lack of accommodation, the supplementary steamers supplied had shown very poor results. It was perfectly clear, therefore, that, failing an equally sudden and utterly improbable expansion in the traffic, to double suddenly the sailings throughout the year would result in no commensurate increase of revenue, and that the greater part of the additional cost would be thrown either upon the passenger fares or upon subsidy. In his opinion, it was better, in the first instance, to meet the gradual increase in traffic by an increase in the size of the steamers. The two new steamers recently ordered conformed to this policy. They would be faster and larger than any of their predecessors, so much larger as, in the opinion of the managers, fully to anticipate future developments, and while avoiding any endeavour to be the last word in ostentatious luxury, their design would lay emphasis on all the essential features of comfort.

Sir Duncan Carmichael seconded the motion, which was carried unanimously, and a cordial vote of thanks to the chairman, managers, and staff terminated the proceedings.

JOHN I. THORNYCROFT AND CO., LIMITED. "BOTTOM OF THE SLUMP REACHED."

The twenty-first annual general meeting of John I. Thornycroft and Co., Limited, was held, on the 14th instant, at Winchester House, Old Broad Street, London.

Sir John E. Thornycroft, K.B.E., M.Inst.N.A. (managing director), presided, and, in moving the adoption of the report and accounts, said that the accounts showed a profit of £49,140 due to the conservative view taken in previous years as regarded the distribution of dividend. In coming to the decision to pay no dividend on the ordinary shares, they had given the matter their most careful consideration, and he hoped that shareholders would accept the view that their action was in the best interests of the company. Their reserves and carry-forward amounted to over £310,000, against an ordinary share capital of £300,000.

The past year had been a period of exceptional depression, which continued at the present time, although there were signs of improvement in some directions. The completion and delivery of vessels on hand, a substantial amount of ship repair work, and the sale of motor spare parts had served to help them over what he trusted would prove the worst period, but it was impossible to speak with certainty of the course of trade during the current year. Inquiries received would seem to indicate that the bottom of the slump had been reached, but the prices at which some firms had accepted orders were so low that they could not even cover a portion of their working charges, so that he was afraid the impression would be given of some revival, which was as yet only artificial. While they could not expect in the immediate future orders for destroyers, their knowledge and experience in the construction of special types of craft should put them in a better position than firms whose business had been almost entirely confined to the construction of cargo vessels.

The turnover on ship repair work had been considerable, and promised to continue. Southampton had been rapidly developing in importance as a terminal port for the Atlantic services, and the company had during the year increased their facilities there. They had on hand a number of orders for motor-boat and marine motors. The motor-vehicle business continued to be adversely affected by the disposal of surplus war vehicles and the dumping of vehicles from countries the currency of which was depreciated. They had continued their policy of development abroad. Their balance-sheet indicated a very healthy position, and, in the event of reasonable success in the current year, there was nothing in the way of the benefit accruing to the ordinary shareholders.

The report and accounts were unanimously adopted.

AMALGAMATED COTTON MILLS TRUST, LIMITED. IMPROVED TRADE PROSPECTS.

The fourth annual general meeting of the Amalgamated Cotton Mills Trust, Limited, was held, on the 14th inst., at Yard Works, Preston, the Right Hon. Lord Fairfax presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said: The year has been one of acute post-war reactions throughout the world. Conditions generally have been the very antithesis of those under which trade can flourish—one has only to consider for a moment the vagaries of the mark and other European currencies which have depreciated even to a greater degree, to realise how thoroughly the world of commerce and finance is out of

joint. When it is borne in mind that the majority of our productions are specially manufactured for consumption abroad, you will realise how seriously the unsettled state of foreign markets has affected us during the past year.

The only really stable elements in the trading position have been the trading burdens—crushing taxation, chaotic exchanges, coupled with political and social unrest. There is an ever-growing conviction amongst business men that the Government must now make determined efforts to relieve the trade of the country from excessive taxation, which at the present moment is strangling industry. The corporation profits tax is, in my opinion, most inequitable, especially as it does not permit a company to set off the loss of one accounting period against the profits of another. Without wishing to introduce politics into a speech of this nature, let us hope that the new Government will make the reduction of taxation its first duty. None the less signs are not entirely wanting of a more hopeful outlook. There is undoubtedly a break in the settled gloom which has so long prevailed. When we look back over the year that has gone and compare the position now with what it was twelve months ago we realise that the corner has been turned, and that the great jig-saw puzzle is being slowly pieced together out of what seemed to be a hopeless welter of incongruous pieces.

The relations of all our companies with their operatives have been thoroughly satisfactory, and certain necessary reductions in wages have been agreed to in good spirit. The directors intend, when trade improves, to increase the assistance they have extended in the past to various welfare schemes which have been inaugurated for the benefit of the operatives.

With regard to the results of the subsidiary companies for the period under review, I am glad to say that the aggregate result, which is arrived at after deducting the losses made by certain of the companies from the profits made by others, may under the adverse trading conditions referred to previously be considered very satisfactory, and I am able to assure you that the preference dividends of the parent company have more than been earned. As you are aware, each of our subsidiary companies is a separate legal entity, and separate balance-sheets are prepared in each case. The balance-sheets of the subsidiary companies are made up to September 30th, one month earlier than those of the parent company. These balance-sheets are collated and summarised so that your directors can follow the progress of each company separately, and the position of the amalgamation as a whole. The directors, with a view to enabling the shareholders to form an opinion of the value of their investments in this company, have had a consolidated balance-sheet prepared, and I am glad to be able to state that, after allowing for the combined liquid assets of the companies, less all liabilities, and after, of course, cancelling all inter-company loans, our share capital represents a price per spindle less than the value at which mills have changed hands recently, which price is again very considerably less than present-day replacement value.

Col. Seddon Brown (managing director), in seconding, said: During the year under review trade has again been abnormally bad. Short time has been almost universal in the Lancashire mills, and a considerable amount of machinery has been stopped. Some of our mills have run at practically full capacity, but others which cater for markets that have been more disturbed have run very broken time, and the figure of 75 per cent. is the approximate average of all the plants in the amalgamation. However, having regard to the times we are going through I consider that the results achieved by the amalgamation are not unsatisfactory in the aggregate.

With regard to the various plants in the amalgamation, I am

KANSALLIS-OSAKE-PANKKI

pleased to be able to inform you that every one of them have been kept up to concert pitch. We have not allowed the depression of trade to influence us when expenditure was necessary for keeping the plant, machinery, and buildings in the highest state of efficiency.

Referring to trade prospects, I believe we are through the worst. I think that I am on common ground with most other people who have to give opinions on this subject when I say that the depression has been longer than any of us anticipated, and the recovery will be slower. However, during the past few months there have been signs all round us of some recovery in trade in general, but when this will expand to such an extent as to enable us to run all the looms and spindles in Lancashire at full capacity, I dare not prophesy. I am really glad to inform you that in spite of everything, I personally have unbounded confidence in the future of the Amalgamated Cotton Mills Trust, Limited. I shall never rest satisfied until I can address a meeting of shareholders which has once again upon the agenda the sanctioning of a dividend on the ordinary shares of the company, but I submit in times such as we have gone through it is no small achievement to have earned more than the preference dividends on our capital.

The report and balance-sheet was unanimously adopted.

BISCHI TIN COMPANY (NIGERIA), LIMITED. DIFFICULT YEAR FOR THE INDUSTRY.

The eleventh annual general meeting was held on the 11th instant at the Cannon Street Hotel, London, Mr James Gardiner (chairman of the company) presiding.

The Chairman said that the tin-mining industry had passed through a year of adversity even more severe than the previous one. The price of the metal continued to fall, and the average price realised by the concentrates produced during the year was only £111, as against £153 in the previous year, a difference of no less than £42 per ton, or over £17,000 on the year's production. A still further depreciation, which took place at the commencement of the present year, forced the directors to seriously consider the advisability of a suspension of operations (a step decided on by several Nigerian companies) until the return of better times. The question of the deterioration in all buildings, surface works, and stores which followed a stoppage of work in a climate such as that of Nigeria, to say nothing of the dispersal of the labour force, was so serious a one that he felt sure they would not only approve of the decision to continue work on the restricted lines as defined last year, but agree that the small loss, really only a paper one, was far from unsatisfactory when everything was taken into consideration.

Although it was true they were working low-grade ground to-day, he wished particularly to emphasise the fact that they were heading for the richest portions of the deposit on this, the original Bischi property, and that largely increased returns might be expected as work progressed. The directors were not unmindful of the rich ground which they had, and would not hesitate to take advantage of this when the price of tin justified such action. Their property was one of the most economically managed in Nigeria, and, seeing that costs had been so reduced as to permit of such low-grade ground being worked at a profit under the very adverse conditions ruling last year, he did not think they need fear results when they were treating their richer ground, with the improved price of the metal which might be reasonably anticipated. Both actually and potentially they held a very valuable property. During the past few weeks there had been an appreciable rise in the price of the metal, the figure at the close on Friday being £180, as against £157, the average price which their concentrates realised last year, and, with the political situation clearer and the European outlook, he trusted, brighter than it had been, it was only reasonable to expect that the improvement would shortly be reflected in the economic position generally, and that when he next had the pleasure of addressing them the price of tin would be such as to be entirely satisfactory to all concerned.

The report was unanimously adopted.

VAN RYN GOLD MINES ESTATE, LIMITED. RESULTS OF THE STRIKE—IMPROVED PROSPECTS.

The twenty-seventh ordinary general meeting of the Van Ryn Gold Mines Estate, Limited, was held, on the 13th instant, at Winchester House, Old Broad Street, London.

Mr L. B. Burns presided, and, in moving the adoption of the report and accounts, said that the outstanding feature of the financial year under review had been the strike of white employees, involving the whole mining industry on the Rand. In the case of their own mine, the strike cost them some £30,000, and resulted in a loss on operations for the first quarter of 1922 of £19,514. It in a loss on operations for the first quarter of 1922 of £19,514. It explained entirely the reductions in tonnage crushed and gold produced, and in a large measure the decrease in the net profit

earned from £90,393 to £54,183, which necessitated a reduction in the dividends paid from 15 per cent. for the year 1920-21 to 10 per cent. for 1921-22. Since the end of June they had the following increased profits to record:—July, £9,069; August, £9,220; September, £10,117; October, £10,422; and November, £11,005.

This satisfactory improvement was accounted for by the fact that costs had now dropped to below 20s per ton, as compared with over 25s ruling at this time last year. If it had not been for a decrease within the same period of about 11s per ounce in the price at which the company's gold was realised, and the gradually rising exchange, which now represented 2s 6d per ounce on the production of the mines, the effect of the lower working costs would naturally have been still more marked.

Cable advice had just been received from Johannesburg stating that the South reef section of No. 4 mine had been completely unwatered, and that 100,000 tons of payable ore not included in the ore reserves would therefore be rendered available for stoping. While it was impossible to give precise figures, they had every reason to assume a considerably longer life for the mine than they would have been justified in assuming two years, or even a year, ago. The improvement in the profits earned by the company during the current half-year justified an increased distribution to the shareholders. The directors had therefore great pleasure in announcing the declaration of an interim dividend of 7½ per cent., free of income-tax, as compared with 5 per cent. distributed in respect of the half-year ended June 30th last.

Mr L. Albu seconded the motion, and after referring to the lessons taught by the strike, remarked that there seemed every probability that there would be industrial peace on the Rand for some years to come, and he could see in front of the mining industry a period of prosperity.

The report and accounts were unanimously adopted.

British Government Securities since purchased (cost price)	26,491,708
Total	40,090,864

India Office, December 11, 1922.

SIDNEY TURNER, Accountant-General.

Messrs Samuel Montagu and Co. write on December 13th as follows:—

GOLD.

The Bank of England gold reserve against its note issue was £125,619,160 on the 6th inst., as compared with £125,617,935 on the previous Wednesday. To-day's price for exportable gold—88s 5d—is a further low record since a quotation per fine ounce has been fixed for such gold. The bulk of the available supplies have been taken for the United States of America. Gold valued at \$6,472,000 has arrived in New York, \$5,622,000 from London, and \$850,000 from France. The following were the United Kingdom imports and exports of gold during the month of November, 1922:—Imports, £4,185,199; exports, £2,336,713. The value of the net imports of precious metals into India (expressed in lacs of rupees) for ten months of 1922 was as follows:—Gold, 25.65; silver, 13.26.

SILVER.

The price of cash silver, sustained by purchases for the Indian bazaars for shipment by this week's settlement steamer, and assisted by a measure of bear covering, remained fairly steady. When, however, the Indian prompt demand was practically completed, and forward selling still came from that quarter, the weak tendency of the market reasserted itself, and a sharp fall ensued on the 12th inst. of 3/4d for cash and 7/8d for two months' delivery. The strong appreciation of sterling in terms of the U.S. dollar conduced to this result by making American sales more enticing. Absence of buyers to-day carried the price to 30 1/2d for cash and 30 1/4d for two months, the lowest quotations since March 5, 1921. Referring to our paragraph last week about Dutch coinage, we have been informed that the alloy of the florin, 1/2 florin, and the 2 1/2 florins (under the regulations of the bill of November 27, 1919) has been reduced to 720/1,000, of both for circulation in the Netherlands and in the Dutch East Indies. Of the above coins, all the 1/2 guilder pieces and more than 2,000,000 florins have been sent to the Dutch East Indies, and 3,000,000 guilders have been deposited with the Netherlands Bank for circulation in Holland itself. Shipments of silver from New York during November were quite large. The amount has been cabled as 5,190,000 ounces.

INDIAN CURRENCY RETURNS.

	Nov. 22, 1922.	Nov. 30, 1922.	Dec. 7, 1922.
Notes in circulation	17,761	17,730	17,647
Silver coin and bullion in India	9,002	8,972	8,889
Silver coin and bullion out of India	2,432	2,432	2,432
Gold coin and bullion in India	5,742	5,742	5,742
Securities (Indian Government)	585	584	584
Securities (British Government)	585	584	584

No silver coinage was reported during the week ending 7th inst. The stock in Shanghai on the 9th inst. consisted of about 34,000,000 ounces in sycee, 36,000,

† Free of tax.

(t) 10 months.

6½ lbs December-January sold to Germany at about 47s per 480 lbs. Crop prospects in the principal exporting countries are fairly favourable, though it is reported that harvest operations have been hampered by rains in Australia and Argentina. Visible stocks in the United States show a small increase, while the movement of Canadian grain is retarded by cold weather. Floating supplies are on a lighter scale, but weekly shipments are rather larger. Flour remains quiet, and home-milled 6d per sack cheaper on the week. London standard straight run quoted at 41s., patents 43s to 44s, town households 39s per sack delivered in London area. Of imported, Manitoba patents range from 40s to 43s, Minneapolis good patents 42s to 42s 6d, and Australian 41s per 280 lbs ex store. Maize quiet and a shade easier. Yellow La Plata ex ship quoted 34s 9d, ditto landed 36s 3d, American mixed, ex ship, 35s 9d, and ditto landed 37s per 480 lbs. The cargo section ruled dull, and prices largely nominal in absence of demand, though slight concessions would have to be made in order to trade. Trading in English barleys is almost at a standstill, and values weak, except for choice malting descriptions. Quotations range from 27s to 55s per 48 lbs, free on rail, according to sample. Imported kinds also in slow support at easier rates. Californian quoted at 39s to 42s 6d, Australian Chevalier 49s to 52s 6d per 48 lbs, ex ship, to arrive. Plate 30s 9d, Persian 28s 6d, both ex ship; American malting, 48 lbs, 30s 6d; and Danubian 30s 6d, both landed all per 400 lbs. Oats continue in quiet request, and values barely steady. English varieties range from 24s to 31s per 336 lbs, free on rail as to sample. Of imported, Plate f.a.q. 26s 6d, ditto landed 27s 6d; No. 2 Canadian Western 31s, No. 3 ditto 29s 9d;

No. 2 white clipped American, 27s, all landed per 320 lbs. Oatmeal quietly steady at the recent decline. London made, all cuts, £17 15s; rolled oats, £17 5s; whole groats, £17 15s; flaked oats, £20 15s, ex mill. Ordinary Scottish oatmeal £19 to £20, and American all cuts £18 10s ton.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated December 14th, is as follows:—Pig-iron: Business in pig-iron is quiet, and will continue so until January. Makers are not inclined to cut prices, expecting a better demand later. Hematite is easy, and prices are rather lower by reason of foreign competition. No. 3 Cleveland G.M.B. is now 91s per ton, and E.C. hematite mixed numbers 93s per ton. Manufactured iron and steel: Steel works look upon the future with much more confidence, and business certainly promises to improve with the New Year. Enquiry is better all round. Steel ship plates, £9 to £9 10s; steel ship angles, £8 15s to £9; iron bars, £10 10s; steel rails, £9. Iron Ore: Business has been done over the first quarter of next year, and best Bilbao Rubio is a shade firmer at 22s per ton c.i.f.

Our Sheffield correspondent writes:—The placing of the contracts for two capital ships for the British Navy will soon improve the position and outlook for local industry. Sheffield will produce

two-thirds of the armour, a goodly share of the guns and shells, while a considerable number of firms will be called upon to supply tools, castings, forgings, and a variety of other steel material. The work should early in the new year absorb a couple of thousand of the unemployed workmen. The output of heavy steel in this district increases day by day, and the improvement is now extending to the better qualities of steel, such as railway material, forgings, castings, &c. Prices of crude mild steel have gone up 10s per ton all round, while the appreciation in scrap is even more pronounced. As the cost of production has gone makers are no longer off as regards earnings. Price cutting is still rampant, and most of the work will not earn its cost. The South American railways are coming to the British market again for rolling stock. Much of their requirements for two years have been met by Belgium and Germany, but the experiment has either proved unsatisfactory or the Continental makers are no longer able to give prompt delivery. The export returns for November are very favourable as regards iron and steel material, as the improvement upon all recent months was large, and increases have now been continuous since midsummer. A substantial share of last month's increase was represented by the shipment of 80,000 tons of pig-iron to the United States. Exports of special steels, railway material, and agricultural and general engineering did not show much improvement, nor do they indicate any expansion of the motor industry. None of the Continental markets are able to buy Sheffield products on any considerable scale. A forward movement is apparent in the coal trade. Home consumers are taking increased tonnages of steam coals, and the export demand continues good. The mild weather, however, tends to keep sales of house coal to a low level. Foundry and furnace coke are in good demand, with prospects of increased business in the new year. South Yorkshire steams are still being quoted at 20s and 21s at pits, with best Tyne steams 25s.

Our Glasgow correspondent writes:—The improvement noticeable in the trade and industrial positions over the past two weeks still holds good. Disappointment is experienced at the appointment of the share which the Clyde has gained in the appointment of the Admiralty new building programme. It is understood that the new tonnage which will come North will constitute a substantial monetary consideration, exceeding that in some cases involved

in the constitution of hulls. In the last few weeks, say from the beginning of the month, fully 60,000 tons of building have been placed with yards on the upper and lower reaches of the river, and in addition several respectable contracts have been earmarked for the dismantling of obsolete vessels, all of which goes a good way towards the easing of the unemployment situation. It is reported this week that a lot of repair work has come to hand here, and that some 25 boats are now in the docks for fitting-out and reconditioning, one of the most profitable branches that enters into the ship construction industry. There is said to be more doing in general engineering and iron and steel connections. There are favourable reports in circulation as to various works extensions being in contemplation, and one important line has just been given out—by Stewart and Lloyds to Messrs Braby, Limited, for a new melting shop at Mossend, the cost of which is put at over £30,000. Steelmakers are benefiting from the increased operations (indicated above) in force on some sections of the Clyde, and are more easily than of late commanding full list prices—boiler plates £12; ship plates, £8 15s; and sections, £8 7s 6d. Iron and steel bar rollers are meeting with an increased outlet, round £10 10s. Pig-iron makers continue dependent mostly on inquiries from the States, but customers there are operating on very moderate lines. About 1,600 tons were shipped to New York last week. The current price is practically 10s for No. 1, and 9s for No. 3 f.o.t. makers' works. Founders are rather better employed, and the same can be stated of tube-makers, bolt and rivet makers, and specially classed engine builders. Inquiries for coal from the Continent are lighter, the rate of exchange having rather gone against buyers. Home sales poor, especially of rounds and very small descriptions.

Our Cardiff correspondent writes:—There has been on abatement this week in the strength of the South Wales coal market. The docks have continued abundantly supplied with tonnage, and, notwithstanding the difficulties of congestion, the Great Western Railway Company has been able to secure such expeditiousness in the administration of dock traffic and the use of the shipping appliances as to reduce complaints of colliery stoppages to a minimum. The production of coal, therefore, has been maintained at a high level,

REPORT OF THE BOARD OF DIRECTORS.

GENTLEMEN.—We have the honour to present to you our Report and to submit for your approval the Balance-Sheet and the Profit and Loss Account of our Bank for the Eleventh Financial Year ended 30th June, 1922.

The business stagnation emanating from the world crisis, of which mention was made in our last report, has resulted in a reduction in the transactions of our branches. Adopting an extremely prudent course, justified by the instability of the political and economical world, we have chosen to confine ourselves to transactions which form the normal activity of a commercial bank, and to grant to our regular clients the financial support they are accustomed to receive from us.

During the year under review the drop in the price of raw materials and of the South American export goods has caused a diminution in the volume of business. This diminution, which is reflected in certain items of the Balance-Sheet, puts in evidence the ease with which our clientèle have reduced of their own accord, naturally and logically, the importance of their commitments.

In Brazil the import trade, almost relieved of its old stocks, has begun cautiously to renew its supplies. The purchases abroad, however, have not yet assumed the importance to be desired; it should be noted in this respect that the drop in the Brazilian exchange is an unfavourable factor for the importer—a factor which the export of coffee and other goods is not able to correct.

In Argentina and Uruguay, two countries exporting practically similar goods, we have seen a marked improvement in the price of wool, hides and wheat, and a resumption of the export of these products. On the other hand, cattle-breeding is passing through an acute crisis. The export of meat has been reduced in considerable proportions and the prices obtained by the breeders and by the frozen meat industry offer hardly any remuneration. The crisis in this industry, which is an important element in the national wealth of the Argentine, has resulted in a general uneasiness in the economic condition of the country. This position, however, does not affect us directly, as we limit our business to commercial transactions on the Buenos Aires and Rosario markets. The import trade has regained some of its importance in the Argentine, but in Uruguay there is still almost complete stagnation.

In Chili, the nitrate industry—principal source of the country's vitality—has been through a long period of depression, out of which it appears to be emerging. The exchange has considerably improved.

The above exposition of the situation will give you some idea of the difficult period through which the South American countries where we are established have been passing as a consequence of the world crisis. The activities of the banks in general have suffered the effect of such conditions and money has commanded lower rates of interest. As usual, true to our policy of caution, we have maintained a strong cash position in all our Branches, and this, as may be inferred, has entailed some sacrifice of interest.

Our Agencies in Paris and London have given, as in the past, to our Overseas Branches such services as have justified their establishment.

In Belgium we have continued to grant to the manufacturers and to the export trade the necessary assistance for the financing of their exports. The latter, however, in consequence of the crisis and the exchange factor, and despite the combined efforts of interested parties, i.e., banker and exporter, do not yet develop as much as might be desired. Wherever we possibly can help the exporter, we do not hesitate to second him; sometimes even without expecting an immediate profit, and considering only the future. When, however, it is a question of granting long term credits, of insuring exchange for several years, and of taking large risks, you will esteem no doubt, as we do, that apart from a reasonable assistance involving clearly defined risks and amounts in harmony with our resources and with the general needs of our clientèle, it would be imprudent and illogical to entirely substitute ourselves for the manufacturer or for the trader, who must themselves appreciate up to what limit they can assume these risks.

In Italy the industrial and commercial activities of the country have shown a notable improvement, which has resulted in a resumption of trade with South America. One can reasonably hope that this movement will continue to develop in the future. Our Bank has, as in the past, facilitated the transactions between Italy and South America, thanks to the valuable and efficacious collaboration of its friends, the Credito Italiano, who have continued their efforts towards the extension of business with Latin America.

BALANCE SHEET, at 30th June, 1922.

street (Room 1,709).

THE MONEY MARKET.

AFTER being surprisingly plentiful, money suddenly
tightened on Wednesday, when a considerable amount was
borrowed from the Bank of England at 3½ per cent. On
Thursday conditions were more comfortable, but there was
evidently very little margin. Discount rates remained firm,
three months' bills being taken readily at 2½ per cent. and
occasionally at 2¼ per cent. For January delivery business
was reported at a shade over 2¼ per cent., but the demand
on these terms was not at all keen.

	Dec. 21, 1922.	Dec. 15, 1922.	Dec. 8, 1922.	Dec. 1, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount (Call)	1	1	1	1	1 (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2½	2½	2½	2½	2½

The Bank return showed a seasonal increase of £1,729,100 in the circulation, and with a slight decrease in the stock of gold the Reserve fell by £1,731,300. Repayment of Ways and Means advances was reflected in a decline of £2,905,000 in Government securities and market borrowings in an advance of £2,674,300 in Other Securities. Deposits were thus £1,489,700 lower, £8,390,800 coming off Other, while Public rose by £6,901,100. Currency notes outstanding were increased this week by £6,161,300 to £298,629,600, which includes £1,526,900 for notes called in but not yet cancelled. The fiduciary issue is £248,952,700, or £61,035,700 below the maximum.

We are informed that the Treasury Commissioners have promoted Mr G. B. Niemeyer, C.B., Deputy-Controller of Finance in the Treasury, to be Controller of Finance in succession to Sir B. F. Blackett, who has been appointed Finance Member of the Executive Council of the Governor-General of India. Mr Niemeyer has graduated from the most difficult times in British financial history, and his close association with Sir Basil Blackett in the last few years may be regarded as an assurance of continuity of policy among the Chancellor's principal advisers.

THE STOCK MARKETS.

As is customary in the week before Christmas, business in the stock markets has been of small volume. Chief attention has centred on the heaviness of Conversion Loan, together with some selling of War Loan and other gilt-edged issues, and on the support accorded to industrial shares of some classes. In the foreign market French and German bonds have hardened, Peruvians have spurred upwards, while Rio Tintos have had a very substantial rise, chiefly on buying orders from France. Home Railway stocks are being supported on divided hopes, and on the idea that trade improvement will benefit the railways first of all. In the industrial sections, Courtaulds and Bradford Dyers have been conspicuous for strength. Electricity supply shares and the Wireless group also hardened. In the oil market the Mexican Eagle dividend failed to revive activity. The rubber share market is steady, but quiet. South African mining dividends declared this week accord roughly with expectation, and the market was not affected by them.

THE COMMODITY MARKETS.

The commodity markets are fairly quiet all round on account of the coming holidays, but a feeling of optimism is noticeable as to better business in the New Year. In the South Wales coal trade the position would be rather favourable if it were not for the serious traffic congestion at ports. During the week the British Admiralty, the United States, and French State railways have placed contracts. Incidentally our Cardiff correspondent points out that at relative current prices South Wales steam coals are cheaper at Boston (Mass.) than the best grade United States steam coals. The tendency in the pig-iron market is towards better prices for the first quarter of next year, but makers maintain that their present prices are still below cost. The steel trade shows continued improvement, a fair number of orders having been booked. Our Glasgow and Sheffield correspondents both write in optimistic vein. Conditions are good in the wool trade, many Bradford manufacturers being inclined to the view that prices are not going to fall. The Manchester cotton market is quiet, but firm, a description which also applies to the hide and linseed markets. Our timber trade correspondent points out that prices of building timber may possibly be higher in 1923.

FOREIGN EXCHANGES.

In the foreign exchange market the outstanding feature has been the sharp movements occasioned on Saturday last by the sensational rumours in the American Press of the imminence of an American loan to Germany. The immediate result was a sharp fall in the quotation of the mark down to about 26,500, but during the day the rate rose again to rather under 30,000. It is interesting, however, to see that, in spite of the definite *dementi* given to these rumours, the mark has since then remained steady between 30,000 and 31,000, a distinctly lower level than for some time past, the reflection, it would seem, of a feeling that America will be forced in the end to take a share in the Reparation settlement. The Paris rate, as was to be expected, shared in the improvement of the mark, and though quotations have been rather more irregular, they have been kept on a lower level than in the preceding week. Yesterday morning, however, the rate had risen again somewhat to 62.35, and showed, if anything, a rising tendency. At the same time, the Brussels rate was 67.85, a slight narrowing in the spread between the two quotations. In Paris the forward rate narrowed to 4 centimes per month above spot and in Brussels to 5 centimes per month below. As was expected, the New York quotation for sterling has shown some hesitation after last week's rapid upward movement, and from \$4.63½ on the 15th has been down to as low as \$4.61½ on the 20th. Yesterday morning, however, there was again some improvement to \$4.62½, and the rate shows a tendency to remain firm. Forward quotations have again widened a little to 1½ cent per month above spot. At 91 lire, the Italian rate is rather less than 1 lira down on the week, but the tendency would again seem slightly upwards. Among neutral exchanges Switzerland and Spain have moved against us in sympathy with New York; Amsterdam, on the other hand, at 11.62, has moved more than 1 cent. in our favour. In Scandinavia, Stockholm at 17.16½ has moved rather sharply against us, Copenhagen at 22.43½ has moved even more sharply in our favour, while Christiania has also depreciated slightly. Helsingfors, on the other hand, where the exchange position is being carefully regulated, shows little change at 185. In Central Europe, Vienna remains the same at 320,000; Warsaw, however, has again depreciated to 83,000. Prague, after rising rapidly, and so far without explanation, to 165, has recovered to 153½, but at this level is still somewhat above last week's quotation. Belgrade during the week depreciated rapidly to well over 400, and now at about 400 is well above recent quotations. Bucharest, after going up to 800, is back again at 760, while Athens is about the same at 375, and Constantinople at 800. In the East the rupee has appreciated very slightly to 1s 4d, while the yen is slightly cheaper at 2s 1½d (last week 2s 1½d). Silver fell sharply at the end of last week on offerings from China and India, but since then there has been a slight recovery. Hong-kong at 2s 3d is ½d cheaper, and Shanghai 1d cheaper at 3s 0½d. In South America, as compared with December 15th, Buenos Ayres at 44½d is fractionally dearer, Monte Video has risen ½d to 44½d, Rio is about ½d cheaper at 6½d, while Valparaiso has recovered in value from 37.20 to 36.20 pesos.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 16th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	9,987	Interest on Debt	1,416
Taken from Exchequer balances	978	Supply Services	7,960
		Sundries	363
		Reduction of Debt	306
	10,965		10,085

Revenue amounted to £9,986,800, and compares with £24,315,000 for the corresponding week last year. But then special receipts yielded £8,400,000, as against only £41,832 for the period under review. Excise a year ago totalled £9,805,000, but last week the yield was only £2,790,000. Property and Income-tax brought in £2,359,000, as against £918,000, and total expenditure at £9,758,940 compares with £10,988,125. The week's

operations reduced the National Debt by £306,409, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates	+ 350	Bank of England Advances	- 8,900
Public Debt Advances	+ 9,650	Treasury Bills	- 1,139
		Unemployment Insurance	- 190
		Telegraph Money	- 600
		Funding Loan, &c.	- 250
		National War Bonds Repaid	- 100
		Old Sinking Fund	- 10,306
	+ 10,000		

The floating debt was increased by £525,000 to £948,178,500.

THROUGH CHRISTMAS SPECTACLES.

The last day of the year is the time for sombre retrospect; the first day of a new year the time for stern resolutions. To face those tasks we need a tonic, and this, mercifully, is provided just in time, by the brief respite of Christmas-tide, when, for a short while, men try to look only on the bright side, and to make the most of it. This year, when no humane citizen can altogether banish from his mind the picture of unemployment, poverty, and struggle, a brief surrender to the Christmas spirit is perhaps more needed than ever. And so, with sincerity, we once more wish our readers the old traditional wish of "A happy Christmas and a prosperous New Year," without looking too closely to see whether there is a star shining in the East that calls us to witness the birth of better times, or whether the good ship Prosperity has really set sail for our shores. Let us all for the moment play Mark Tapley. Time enough in the next 51 weeks to ape Mrs Gummidge. If doubts assail, let us borrow Mr Micawber's assurance that "something will turn up"—remembering that in his case something did "turn up" in the end. Times such as those through which we are passing are apt to turn many of us into cynics and doubting Thomases; so that to indulge in a brief period of

light-hearted cheerfulness may do no harm, and may even in the long run restore the balance of perspective and judgment. In the stress of daily life it is often forgotten that clouds have silver linings. For once in a way, let us see the silver lining and forget the cloud.

Among the strange articles that emerge from the maw of the Christmas cracker is sometimes to be found a pair of rose-tinted spectacles. Put them on, and the scene changes from sombre to bright. All through the autumn you have been saying that the great rise in the American exchange is largely a sign of bad trade, and small British purchases of raw materials in America. You will see it now as a great Christmas present to a nation that has to buy dollars to pay for purchases and to meet interest on a huge debt. You will see that British exports are rising; that coal production and exports are up to pre-war level, and iron and steel exports higher than at any time since the war; that employment, despite the showing of the Labour Ministry's percentages, is better in many vital industries. Even without the aid of the magic spectacles you will see that the income-tax demand (which has a way of arriving on Christmas morning, in order to show, presumably, that our Government officials are not above a grim joke at this season) asks you to pay only 5s instead of 6s in the pound. The list of things you would see through these cracker spectacles could be greatly lengthened—we will add to it in a moment—but we prefer to break the recital here with a reminder that light-hearted cheerfulness is not the only ingredient of the Christmas atmosphere. It may be the most obvious and instinctive. But the more essential ingredients of the Christmas atmosphere are peace and goodwill. "Peace and goodwill!" the cynic will exclaim, "the words are mockery to-day." Last week, next week, the cynic may convince us; but not to-day. This being Christmas, let us remember that, though her footsteps lag, and sometimes seem to slide backwards, Peace has made some progress. First and foremost, the League of Nations, that great instrument of world peace, is growing slowly but surely in prestige and power. From Lausanne, Allied solidarity and Lord Curzon may yet send us, if not a Christmas, at least a New Year gift of peace in the Near East. Nor at this season can we stifle the hope that Mr Bonar Law, having abandoned the baneful policy of the Balfour Note, may bring us into warmer friendship with the United States, and into closer harmony with France over the great problems that hold back Europe from real peace and well-being.

"What of Ireland," the cynic will ask, "is there peace there?" Between Irishmen and Irishmen, alas, there is bitter internecine strife. But this is the first Christmas for centuries that has seen between the English Government and the representatives of Southern Ireland a full, ratified, legalised peace, and between Englishmen and the majority of the men of Southern Ireland a real understanding and goodwill. The removal of the last British troops from Ireland surely marks an event in the history of peace, and we can only pray that the peace that has fallen between Irishmen and Englishmen will, long before next Christmas, have fallen also between Irishmen and Irishmen. Of politics, too, it may be said by some devoted coalitionist, that we have exchanged the peaceful collaboration of parties for the strife and clash of party

battle. In our undaunted determination to look on the cheerful side, we prefer to say that we have exchanged the dishonesty of insincere and makeshift compromise for straightforward party Government, and a dictatorship for Cabinet responsibility. Even yet the cynic may not be convinced; but when we come to consider British industry, we shall hear of him no more. For in British industry Christmas marks the close of a year in which peace has been the great outstanding feature. Only one great dispute has marred that peace in 1922. It is a peace that has, admittedly, entailed the resignation of millions of workers to sacrifice and privation. Nevertheless, it is a peace that will contribute in the long run, more than anything else, to the prosperity of the industries upon which those workers depend for their well-being. It is a peace that has been, to some extent, forced by economic circumstances. But that, in the realm of industry, a closer co-operation between employers and employed has been, and is, developing, cannot be doubted; and therein lies a good augury for the future.

Year in and year out, the business world is wrestling with difficulties and facing grave problems. At Christmas-tide, we suggest, it is a useful exercise to count up, rather, such reasons as there are for cheerfulness and confidence. Last Christmas we recorded our belief that we had then reached the bottom of the long depression—the "darkest hour before the dawn." The dawn is slow—to the all-night watcher, perhaps almost imperceptible. But the dawn, in our belief, has begun, and no one can intelligently study the course of events since last Christmas without detecting signs that the light is gaining on the darkness—painfully, laboriously, perhaps, but yet gaining.

REPARATIONS: OLD PROBLEMS AND NEW HOPES.

DURING the last week or so the Reparations discussions have to a considerable extent been diverted from Europe to New York and Washington, and the Press has been full of the part which America might take in assisting a European settlement, either by modifying her attitude on the war debts or even actually by a loan. But at last the inevitable retorts have come. Mr Lamont, of Messrs Morgan and Co., has declared that under present conditions there is no prospect of a loan; while from Washington we are told that there is no change of policy on the war debts, and that in the opinion of the American administration the first step for Europe to take is to settle the amount which Germany can pay. This, after all, is the point which Mr Morgan and his colleagues on the Bankers Committee put to France last June, and the difficulty which then arose still stands—namely, that France cannot surrender her claims unless she has some assurance that the claims against her will also be reconsidered. We have never been able to accept the American view that the Reparations question could be dealt with apart from the inter-Allied war debts; but we may venture to hope that, as Great Britain has already indicated her willingness to modify debts due to her in return for a reassessment of the German obligation, France may be willing to discuss a fresh estimate of the German total without waiting for America to declare her policy on the debt which France owes to that country.

We hold, however, as we have always held, that in any case it is imperative to endeavour to arrive now at a figure of what Germany can pay, and in recent weeks we have ventured to approach certain leading economists in France, Germany and other countries with a view to ascertain whether agreement is possible, not upon the total which Germany should be asked to pay, but upon the principles to be adopted in estimating what she can pay. We have not printed any of the replies received in the *Economist*, because, in the first instance, economists of various nations naturally look on the question from different standpoints, and we are endeavouring to discover if it is possible to lay down a series of propositions which would be accepted by experts of the different countries. We hope to be able to state shortly the result of this endeavour, and if it succeeds it should serve as a guide to the sort of conclusions which could be reached if the Allies decide formally to set up an international committee

of experts to consider the matter or to refer it to the Finance and Economic Committee of the League of Nations.

It may be said that the assessing of Germany's capacity to pay is the business of the Reparations Commission. This is not the case, for the Commission is only responsible for remitting German payments at a particular time if it considers them beyond her immediate capacity. It is probable that the staff of the Commission has made researches into the ultimate theoretical capacity of Germany; but if so, it has not published them, nor has the Commission as an official body proceeded so far as to make any pronouncement on the question. At the same time, the general impression among economists is that the pre-war statistics of Germany, together with current physical as distinct from financial data, relating to production and trade do afford the basis upon which an expert inquiry could be founded. The extent and duration of the effects of currency depreciation are more difficult to estimate, and in any case non-economic considerations will make the figure that is ultimately selected a matter of judgment, compromise and bargains. It is, for example, evident that the amount which the German Government can levy from its people for reparation purposes is very different from the amount which could be taken for an object which the nation was wholeheartedly anxious to pursue; and this consideration means that it is of the utmost importance to frame the final scheme in such a way that there is a strong inducement to Germany to pay off its obligations. It is thus evident that an inquiry by experts would be limited to examining and naming two maximum figures—(a) the amount that could be levied by the Government from the German people without affecting production, and (b) the extent to which her exports are capable of being expanded in excess of her necessary imports. In other words, the inquiry would furnish certain of the essential data on which the politicians would reach their decision. Even if the investigation confirmed merely some of the more generally current estimates, it would be of great value in resolving some of the more widely differing views which are at present held on these questions.

In the meantime, Mr Stanley Baldwin has gone to Washington to discuss the funding of the British Debt to America, and his departure has been made the occasion in some quarters for discussing the sort of concessions which the British taxpayer would like America to make. Such controversy seems to us untimely. The important thing which Mr Baldwin has to say to America is to explain what has transpired at the London Conference, and to satisfy the American Government that we have a genuine policy for dealing with the European tangle; that we hope soon to see America collaborating in her own way to assist in this difficult task, and that as between ourselves we rely on her to make the terms of payment of our own debt as easy as possible. The one important point which we think the Chancellor is in duty bound to stress is that our debt must be paid in goods, and that America is herself making the burden of repayment unendurable if she continues to impose increasing barriers in the way of our trade with the United States.

On the whole, the discussions now proceeding are taking place in an atmosphere much less strained than has recently been the case, and in particular we note with pleasure the modified tone in Paris, where the enthusiasts for the forcible seizing of the Ruhr or the German mines and forests are less vocal, and more moderate counsels are making themselves heard. At the same time, it is quite evident that the world is not ready to assume that if Germany accepted a final settlement, she would be prepared to carry it through simply in order to re-establish her credit and prestige. If, as is clearly necessary, a moratorium is granted in January during which a stabilisation scheme may be put into effect, Germany must offer some sort of additional security until payments can commence. It is possible that passing certain German resources, such as Customs receipts, through the hands of an Allied controller, who would pass them on to the German Government for the period of the moratorium, would meet the case; but there are a hundred similar devices which might be suggested, and it is for the German Government itself, as the party which is applying for a moratorium, to make its own proposition. The economic

situation in Germany is serious, but it would be a mistake for us to press our former Allies to accept a settlement made under the influence of panic. Mr. Bonar Law has chosen his ground on this question very well, and we have great hopes that the improved atmosphere among all the parties concerned, which is indeed much better than could have been hoped a few months ago, may lead to a settlement in 1923.

PROGRESS AT LAUSANNE.

OUR conviction (which we have entertained from the date of the Mudania Armistice) that the Lausanne Conference would not break down has been justified once more, though last Tuesday—when Lord Curzon delivered something like a twenty-four hours' ultimatum on the question of the Straits—a rupture seemed more imminent than at any previous moment. However, the Turks have conceded the essential points in the Allied Governments' programme. There are to be genuinely demilitarised zones; a representative international authority which will inspect the demilitarisation besides conserving the waterway; and a right of thoroughfare for warships as well as for merchantmen. Lord Curzon and Ismet Pasha are to be congratulated on the achievement of an agreed programme for the regulation of the Straits problem. If only this wisdom had not had to be bought by four years of post-war destruction, but had entered into the Treaties of Versailles and Sévres! Such an agreement is invaluable in itself, for in view of what had happened to the first Turkish treaty, Lord Curzon's threat to insert his programme into the new instrument, whether the Turks assented or not, was not of happy augury, while the Turks, on their side, would have found the reconstruction of their national life as impossible now as it has been since the Armistice of Mudros, if they had failed again to come to an understanding with the Allies. At the same time, the details of the agreement are not beyond criticism. It may be observed that in regard to the free passage of merchantmen of all flags in peace time, and of those belonging to countries not at war with Turkey in war-time, there has been agreement all along. To our mind this is the vital point, and the rupture (happily averted) has been risked over much more dubious questions. The passage of warships is in contradiction with the traditional British policy; it is unwelcome to the Turks; it is fiercely opposed by the Russians. In insisting upon it, Lord Curzon therefore has not necessarily furthered the cause of stability; but time alone will judge between his policy and that of Palmerston and Stratford de Redcliffe. The Americans, too, appear to consider treaty stipulations sufficient, and to deprecate the

creation of an international organisation for carrying them out; but this is a difference of secondary importance.

Meanwhile, there is a deadlock in regard to the Capitulations and to the Ecumenical Patriarchate. On the latter point the Turks have a very strong case. The Patriarchate, as organised by Mehmed the Conqueror before the rise of nationalism in its modern form, was an organisation for giving cultural, and to a large extent juridical, autonomy to one element in the multinational Ottoman Empire. In its essence it is a political institution, and was therefore doomed from the moment that an independent national Greek State came into existence, since from that moment there were two incompatible claims on its loyalty. The events of the last ten years have made the majority of the former *ressortissants* of the Patriarchate (e.g., the Macedonians, Kretans, Khiois, Mitylenæans, and the present refugees from Anatolia) into subjects of the Greek Kingdom, and have thereby reduced the position of the Patriarchate *ad absurdum*. Had Greece fulfilled her dream, and eventually annexed the seat of the Patriarchate to her territories, she would undoubtedly have stripped His Beatitude of all but his "spiritual" functions, precisely as the Turks have done with their Caliph. Neither Patriarchate nor Caliphate, in their traditional form, are compatible with the sovereign national State, and it is as unreasonable to ask Turkey to leave the Patriarch his "non-spiritual" powers as it would be to demand of Greece that she should allow the Turkish Caliph temporal power over her Muslim citizens in Macedonia. The perpetuation of such anachronisms is not a safeguard, but a provocation. However, this is a much less serious problem than the Capitulations, which involve the whole status of foreign residents in Turkey, and to the abolition of which the Turks attach capital importance. Fortunately, the mutual concessions already made over the Straits are a good augury for similar adjustments in this other field—where, indeed, compromise ought not to be difficult, since it is a question of innumerable details which do not stand or fall together, but can each be treated on its merits.

STATE CONTROL IN PEACE AND WAR.

For many years there has been, and there probably will be for many years to come, a section of the community which advocates the nationalisation of production and distribution. The arguments for and against private enterprise are familiar to our readers. But whereas pre-war discussions of the question were largely academic, the events of the great war will be brought forward and used by both sides in their own support. Sir Arthur Goldfinch, Director-General of Raw Materials during the war, in a recent lecture to the Bradford Textile Society, made an interesting contribution to this discussion. As head for four years of the Raw Materials Department, which sold

nearly £500 millions worth of materials, Sir Arthur is in a unique position to assess the benefits and disadvantages of State control.

Soon after the outbreak of war it became apparent that unregulated private enterprise could not cope with the situation, and the State found itself in the position of having to conduct or control and regulate a large portion of the industry of the country if chaos was to be avoided. Looking back upon the war and post-war period of State control of industry, now that it is receding into a truer perspective, the unbiased observer will feel inclined to say that on the whole the system, haphazard though it of necessity was, worked better than was expected by those who, like ourselves, are very conscious of the drawbacks of bureaucracy. At the same time it cannot be claimed that the system of State control was an efficient or economical one. Of that our war experience was no criterion since the ordinary financial tests were entirely lacking. Hence it is not possible to argue from our war-time experience that State control or management in time of peace is a feasible alternative to the competitive system.

State control of industry in normal times has usually taken the shape of bureaucratic regulation. But the system adopted in the war was not bureaucratic control in the ordinary sense of the term. In the abnormal conditions prevailing, and under the stimulus of patriotic motives, the State was able to command the services, in a large number of cases voluntary, of the best brains trained under the competitive system. It is true that towards the end of the war the business men working in the various State departments showed signs of becoming infected with the bureaucratic germ, and by long and close contact with "red tape" in all its forms of having become tainted with the worst vices of bureaucracy, the essential weakness of which is that it shifts responsibility from the individual on to the machine. In fact, however, the system adopted during the war owed what success it achieved, on the one hand, to the fact that patriotic motives to a large extent supplanted those of private gain, and on the other, to an almost universal standardisation of demand, which would be entirely impracticable in time of peace. For example, all available steel was allocated among some score or so of users—shells, tanks, guns, aeroplanes, and so on—all of which were under control, whereas in normal times there is an immense diversified demand spread over innumerable industries at home and abroad. The direction of the resources of the country from Whitehall would be impossible except under the most rigid system of dictatorship to the public as to its tastes in food, drink, clothing, and what not, to which it would certainly not submit except in a time of national crisis. There is also the further point that in war time it was possible for the various departments of control to dictate to the foreigner what he should buy from us. In peace time foreign countries have a choice of markets which no amount of State regulation in one particular country can control.

The conclusions reached by Sir Arthur Goldfinch, after a very fair balance of the arguments, is that the success of State control in war time "offers no encouragement whatever to the renewal of such ventures in peace time." In regard to wool, the principal commodity under Sir Arthur's control, he says:—"When, however, I ask myself what justification the great work of the control period offers for believing that State control of the wool trade, or any like trade, would be beneficial in peace times, I answer, without a shadow of hesitation, that no such justification could be discovered by the careful examination of the facts by any competent observer, however conscious he might be of the imperfections which attach to private enterprises, and however anxious to find a road to a more ideal state of things." He does, however, assert that "it can be demonstrated, without a shadow of doubt, that the influence of British Government departments throughout the war was, with almost unvarying consistency, exerted in the direction of arresting and correcting the inflation of prices which always accompanies great wars. No competent critic who compares the course of prices within the British Empire with the course of prices in the United States and in neutral countries can doubt that market inflation during the war would have been incomparably greater in this country if Government departments had not exercised their powers to check the boom in prices,

or can fail to note that the boom did not reach a really dangerous point in any of our important markets until Government control began to be relaxed."

The late Director of Raw Materials is righteously indignant with some of the unreasonable criticisms levelled against certain Government departments for losses incurred in Government trading. "It is true that the Auditor-General in the discharge of his duties records certain discrepancies which have not been satisfactorily explained to him by the departments, and some of which no doubt indicate gross blunders involving regrettable loss to the State. The total of these losses, excluding for the moment the losses attributable to falls in market prices, are on the highest possible computation considerably below £1,000,000, and in many cases the department concerned has made out a very plausible defence. The total amounts handled by the departments in question, according to the accounts published in the same Blue Book, exceeded £2,400,000,000 sterling, so that on the very worst showing the losses attributable to office blunders were less than one-twenty-fourth per cent. If we condemn some of the Government trading departments because they did not sufficiently guard themselves against the fall in prices which was to follow the boom, what shall we say of that monument of optimism run mad—the last balance-sheet* of the Dunlop Rubber Company? What of the sensational collapse of such creatures of the boom period as the Western Counties Shipping Company? The losses inflicted on the public by the ventures I have mentioned bear a much higher proportion to the total volume of private trading in the period affected than the blunders of the Government departments bear to their colossal turnover during the war period."

Sir Arthur Goldfinch is a business man, and therefore holds no brief for the Civil Service, but he pays a striking tribute to the Civil Servant. "It is to the permanent Civil Service that we owe in a great measure that in the spending of ten thousand million pounds sterling of public money in all sorts of novel and improvised fashions, which to a great extent over-rode all established checks, all hint or suspicion of corruption has been so remarkably absent."

But, as we have said, our experience of State control from 1915 onwards affords no criterion of what would happen under a bureaucratic system in time of peace, nor can any test be brought forward to prove that the saving which the abolition of a competitive system might effect would be sufficient to pay the cost of bureaucratic direction.

THE WOOL TRADE.

(FROM OUR BRADFORD CORRESPONDENT.)

DURING the last three months the raw material markets have continued to be the chief centre of interest in the wool textile industry. In all the principal markets of the world buyers have been active, and values have been consistently high, and, as in the first three quarters of the year, there has been no apparent connection between the demand for wool and the demand for the finished article. In pre-war days an active wool market was a sure indication of activity in the consuming centres, but for many months past there has been a missing link. Wool has been keenly competed for, sorters and combers have been exceptionally busy, spinners have had sufficient work in hand to necessitate a considerable amount of overtime, but manufacturers, although better employed than for a very long time, have not experienced that rush of orders which the demand for wool would seem to imply. Moreover, much of the business that has been taken by manufacturers has been at unremunerative prices, and so one feels that in the activity which has characterised some sections of the industry, the weaving department has not had its full share.

This apparent anomaly can be explained in two ways. In the first place, the purchasing power of the public at home and abroad is still much restricted, and both manufacturers and merchants have been liquidating old stock; secondly, the increasing number of looms in other countries makes for a larger demand for raw material,

tops, and yarns, and a corresponding decline in the demand for fabrics woven in the United Kingdom. Indeed, there is a strong feeling in some quarters that the export trade in wool textiles will tend more and more to develop in semi-manufactures—that is, tops and yarns—and that the outlet for cloth will be gradually restricted as other countries increase their weaving plants.

A notable example of the way in which the export demand varies is found in the case of Italy. At one time that country was a splendid market for Bradford piece goods; then the Italians developed their weaving industry, and looked to Yorkshire for yarns instead of fabrics; next came the Italian spinning mills, which meant a demand for tops instead of yarns; and now there are in Italy several large combing establishments from which spinners can obtain nearly sufficient tops to supply their spindles. Much the same sort of thing is taking place in Japan, and although it naturally takes years to complete the evolution, yet the tendency is ever present, and must be taken into account. It suggests, among other things, that the export houses in this country must always be on the alert and ready to open up and develop new markets to take the place of the old ones.

To return for a moment to the raw material position, a feature of the trade during the past few months has been the re-entry of America into the world's wool markets. The settlement of the tariff question paved the way for a big buying movement in this country and in the colonies, and American influence has made itself felt throughout the industry. United States buyers were extremely active in London during the October series of auctions, and about the same time they turned their attention to Bradford, taking, in the course of a few weeks, practically the entire stock of crossbred matchings held by topmakers. In Australia and New Zealand they were active competitors, and to their operations more than to anything else is due the marked recovery in crossbred values. This demand for crossbreds, especially fine and medium qualities, came at a time when users were getting seriously alarmed about the steady rise in merinos. Tops were being sold at prices which spinners found were almost prohibitive, inasmuch as with every advance in merino tops they experienced the greatest difficulty in making anything like a corresponding price for their yarns, and it is not too much to say that by the end of October there was something almost approaching organised opposition to current values. Spinners refrained from buying anything but what was needed to cover their most pressing engagements, and it was not surprising, therefore, when at the Liverpool auctions merino wool showed a slight ease.

This easier tendency has again been noticeable in London during the current series of sales, but it must be admitted that merinos have not declined to anything like the extent that users expected. It is generally thought that a big buying movement would result if 64's tops could be bought at about 4s 9d to 4s 10d, but even allowing for the recent ease in wool, raw material cannot be bought in any market to-day to bring in average 64's tops at less than 5s; indeed, wool bought in Australia during the last few weeks will mean at least 5s 1d in the top. The real fact is that merinos are in an exceedingly strong position. The supply is limited, and as B.A.W.R.A. surplus stocks of superior combing wool are practically exhausted, users will have to depend on the current clips in Australia and South Africa. It has to be remembered that in the ten months ended last October B.A.W.R.A. disposed of 228,536 bales of combing merinos in addition to the privately-owned wool that was offered by auction, so that if consumption continues on anything like the scale of recent months, all the available merino wool will be wanted.

Basing their opinions on the statistical position, some members of the trade do not hesitate to predict that 64's tops will be selling at 5s 6d by the end of next April, and even if that proves to be an unduly optimistic forecast, there is little or nothing in the present situation to encourage the hope that values will fall much below the current level. An easier tendency may be seen until the turn of the year, after which, unless the unexpected happens, there is likely to be a recovery.

The course of values at the London sales is shown in the following table, the pre-war prices being given for comparison:—

Description.	COLONIAL WOOL in LONDON. First Cost, Clean, Without Oil.			
	July, 1914.	Oct. 26, 1922.	Nov. 24, 1922.	Dec. 8, 1922.
	Per lb.	Per lb.	Per lb.	Per lb.
70's superior fleeces	32 ..	66 ..	63 ..	61 ..
64's good pieces.....	28 ..	60 ..	56 ..	55 ..
56's fine crossbred fleeces	26 ..	36 ..	37 ..	37 ..
46's crossbred fleeces	17 ..	15 ..	17 ..	17 ..

The most significant feature of these prices is that for the first time since the great slump in trade 46's wool is up to the pre-war level. The improvement in the demand for crossbreds, as already mentioned, is mainly due to American buying, but no doubt a contributing factor has been the high value of merino, which has tended to force some of the demand on to the cheaper qualities.

In the following table the fluctuations in the prices of tops are shown, a comparison being made between pre-war, boom, slump, and current values:—

Description.	COLONIAL TOPS in OIL.			
	July, 1914.	April, 1920.	April, 1921.	December, 1922.
	Per lb.	Per lb.	Per lb.	Per lb.
70's warp	33½ ..	178 ..	42 ..	65 ..
64's average	31½ ..	166 ..	32 ..	60 ..
60's super	30½ ..	156 ..	33 ..	54 ..
56's average	24 ..	100 ..	24 ..	35½ ..
48's carded.....	18 ..	56 ..	16 ..	19½ ..
46's carded.....	16½ ..	46 ..	14½ ..	17 ..
40's carded.....	15½ ..	37 ..	13 ..	15 ..
46's prepared.....	18 ..	48 ..	15 ..	17 ..
40's prepared.....	16 ..	38 ..	13 ..	15 ..
36's	15½ ..	36 ..	13 ..	14½ ..

As already indicated, spinners have been well employed for several months past, and at the present time they have enough work in hand to keep machinery running full time for at least two months. Recently, however, there has been a lull in new business both on home and export account, owing to the unwillingness of manufacturers to enter into forward contracts on current quotations. The advance in crossbred wool and tops has been followed by a general hardening in quotations for crossbred yarns, and it is evident that manufacturers are making a wider use of these qualities in order to lessen the cost of production. In the Botany section the bulk of the business is being done in the finer counts, such as 2-56's to 2-70's, and during the last week or two some big orders are reported to have been put through in 2-60's. Consumption in the hosiery section is also being well maintained, though users are inclined to operate with caution and avoid committing themselves too far ahead. There is an active demand for hand-knitting yarns for the retail trade—a branch of the industry which offers considerable scope for enterprise. A very noticeable improvement has also to be recorded in the mohair section, both single and twofold yarns being wanted, and most firms are booked up for two or three months ahead. Incidentally, it may be mentioned that raw mohair has made a wonderful recovery, and the big surplus stocks in South Africa, which were a legacy of the war, have been practically cleared.

With regard to the future, one could write with a good deal more optimism if conditions were more settled on the Continent and if financial affairs in the piece goods trade were less disturbing. It is a matter for regret that many of the merchanting houses are still hampered by lack of means, and while this state of affairs continues it is useless to look for any material improvement in general conditions. The failures which are reported from time to time are an indication of the troubled waters through which the trade is passing, but they by no means reveal the whole story. Private arrangements are still being made, and the piece trade as a whole is having an anxious time. Yet the general impression is that even in this section of the industry the worst has been seen, and that those who have managed to weather the storm will ultimately come through and make good. But recovery in the piece trade will not be rapid. So much depends on the general state of employment in this country and a return to more settled conditions abroad, and, above all, a material appreciation in the currencies

* Published in February last.

of the nations which were formerly our best customers for pieces. On the other hand, the outlook at the other end of the trade is distinctly encouraging. The demand for wool may be expected to continue, and although no one wants to see the very high prices which have ruled throughout the greater part of this year for merinos, there is every reason to expect a steady demand for all classes of raw material at prices which will encourage the grower and yet be on a basis to lead to increased consumption.

CABLE COMPANIES' SHARES AND RESULTS.

THE business of cable companies is of such a nature that it very quickly reflects any increase or decline in trade activity. It was obvious, therefore, that shareholders in cable companies had to expect the 1921 accounts to show a formidable decline in gross revenue. This, as will be seen from the statistical tables which we present below, actually took place. But at the same time most of the companies found that falling prices and reduced taxation brought down their expenses very substantially, and an increase in net receipts was the rule rather than the exception. The six companies whose figures we examine below show, in their latest accounts, an aggregate fall of £1,349,968 in gross receipts, but aggregate working expenses (including taxation) were £1,610,504 lower, leaving aggregate net receipts higher by £260,636. These results, and the contribution of each of the six companies towards them are shown in the first table:—

	Gross Receipts.		Working Expenses.		Net Receipts.	
	1920.	1921.	1920.	1921.	1920.	1921.

It should be noted that while the other companies' accounts refer to the calendar year 1921, the Western's latest accounts are for the year ended on June 30th last. The past year's large aggregate fall in working expenses contrasts with a rise, for the same six companies, of nearly £1,000,000 in the previous 12 months. The Eastern Extension company stands out with the largest individual increase in net profits. This is due largely, as the chairman pointed out at the annual meeting, to a reduction in the taxation item by over £480,000, caused in the main by the abolition of the excess profits duty. The crescendo and diminuendo of the demands of the tax collector have played so important a part in the accounts of cable concerns in recent times that it is perhaps worth while to set out separately for the past two years working expenses proper and taxation, which we do in the following table:—

	Working Expenses Proper.		Excess Profits Duty, Income-Tax, &c.	
	1920.	1921.	1920.	1921.

Western ..	1,024,425	871,793	306,536	260,708

* Reserved for extraordinary taxes.

The Eastern, which a year ago showed the largest rise in working expenses proper, this year shows the largest reduction. As usual, the various boards of directors have made prudent use of the year's available profits. The Great Northern distribution is raised by 2 per cent., but the other five companies maintain the rates of the pre-

vious year. The Eastern places £500,000 to reserve, against £600,000 a year ago, but raises the carry forward by over £250,000; Eastern Extension reserves £500,000, against £450,000, and increases the carry forward by £227,000. How the various companies distributed their profits is shown below:—

Company.	Prior Charges, Pref. Div., &c.	Ordinary Dividend.		Rate Paid for 1920.	Placed to Reserve, &c.	Inc. or Dec. in Carry Forward.
		Rate.	Am't

† Free of income-tax.

A large part of the property of cable companies is of necessity in the nature of quickly wasting assets, and therefore the accumulation of large resources is peculiarly essential in their case. The following table shows the enormous reserve funds built up by the larger concerns:—

Company.	Total Capital.	Reserves (After Latest Additions).	Book Value of Cable, &c.	Cash and Investments.
Cuba Submarine ..	£ 220,000	£ 124,529	£ 232,876	£ 142,049
Direct Spanish ..	94,655	166,643	90,925	158,882
Eastern ..	9,000,000	3,069,636	11,080,159	1,737,955
Eastern Extension ..	4,752,400	3,754,018	5,053,466	3,516,176
Great Northern ..	1,500,000	4,198,854	2,019,572	5,125,890
Western ..	3,937,625	3,097,297	4,364,325	2,408,097

The reports, as a rule, observe the excellent practice of including a list of reserve fund investments, and these lists represent for the most part high-class and readily marketable investment securities. The policy of accumulating these huge liquid resources is standing the companies in particularly good stead just now, when arrears of repairs, replacements, and extensions, left over from the war period, have to be caught up.

In a final table we show how the quotations of the companies' securities have moved recently, and how they compare with the quotations current just before the war:—

† Free of income-tax.

In 1921, a year of widespread depreciation, cable stocks distinguished themselves by small gains. This year their quotations have participated to a substantial extent in the appreciation which has marked the year in so many sections of the Stock Exchange. As regards the immediate prospects, the position is not very easy to sum up. Cable companies, like other concerns, depend upon active trade to swell their earnings. But they have shown that, on the other hand, they, like other people, benefit from a fall in the level of commodity prices. In any case, the stockholder in cable companies has this reason for confidence, that many shareholders in industrial concerns have not got, namely, that the companies have in the past built up such formidable resources that they can face with equanimity a succession of lean years. It may, perhaps, be difficult for some investors to get the bogey of wireless competition out of their minds. But there is no indication as yet that the future does not hold plenty of opportunity for cables, as well as wireless, to prosper.

THE INFLUENCE OF A FALLING EXCHANGE ON THE WEALTH OF A COUNTRY.—I.

(BY A GERMAN ECONOMIST.)

THE present state of German finances and German economics and its connection with the capacity of Germany to make Reparation payments has given unique importance to the question of how far a depreciation of the currency does bring about a real diminution in the wealth of a country.

To begin with, a serious depreciation of the currency is bound to bring about a far-reaching redistribution of wealth. The debtor is relieved, the creditor is *pro tanto* impoverished. The chief debtors, the State and the corporations, are greatly favoured. Taxpayers in general, whether national or municipal, can throw their burdens on to the shoulders of those taxpayers who have been unwise enough to lend gold, and who are being paid in paper. As far as appearances go, this is a mere shifting of wealth. The *ownership of material wealth* is greatly affected by it, though the *material wealth* itself, so it seems, is hardly changed at all. State-owned railways and municipal trams get rid of their liabilities, but their physical substance is not eaten up by this mere legal transfer. A farm does not necessarily deteriorate if the mortgage on it evaporates, and if the mortgagee is broken. Nor do the physical qualities of an industrial plant depreciate, even though the debenture holders are defrauded and ruined, whilst an increased dividend accrues to the shareholders.

This argument is fairly sound when the depreciation of the currency is moderate in amount, and when it does not affect a very broad class of the inhabitants of the country. When depreciation is very violent, however, and when the class affected is very numerous, the result is a social upheaval. The purchasing power of the creditor class—to which must be added those wage-earners whose wages do not increase as fast as the value of money decreases—is, so to speak, wiped out, at least as far as it is derived from income. It is supplemented for the time being by the transformation of capital into income; old savings are eaten up; household goods, jewellery, carpets, family treasures and the like, are sold, and their proceeds diverted to the supply of daily wants. Owing to this diversion of capital, the consumption of commodities is for the time being greater than the *income* of the nation; it is enhanced by the fear that, later on, prices are sure to rise. So goods which are not actually needed are bought on a large scale. Feverish buying of this kind cannot, however, do away with the fact that the annually recurring income of a large stratum of society has dwindled to vanishing point, even though this difference may have accrued to other classes.

This means, in practice, a loss of markets for agriculture and industry, for even if we assume that the peasant, the millowner, and the nondescript profiteer have practically annexed all the wealth which was formerly owned by the cultured middle class, and that the working class has not lost anything, the new rich may have got the *income* of the old, but they have not got their *wants*. They do not subscribe, for example, to the journals which those classes formerly took in, and which they have been forced to give up on account of their inability to pay the increased prices. The circulation begins to dwindle, until, as is happening just now in Germany, one paper after another is discontinued. In many lines of production sales diminish, and diminish to such a degree that overhead expenses and general costs of production increase greatly. This being so, the same physical plant is turning out a much smaller output at ever-increasing costs per unit. And naturally this must result financially in considerably diminished returns. Financial weakness of this kind is apt to lead to a physical deterioration of the plant, as repairs, reserves, and depreciation charges are reduced. This is clearly visible, for example, in the case of municipal tramways. The public are unable to pay the increased fares, though they are not really high when compared with the general level of prices. As a result, there is a permanent deficit, and the rolling stock and the permanent way deteriorate visibly. The situation is very much like that of the crisis which follows a violent change in commercial policy. The erection of a

high tariff wall would exclude certain industries from their accustomed markets. They might find new markets amongst the beneficiaries of the tariff itself, it is true, but these latter often neither desire the old goods nor do they consume them in sufficient quantities. A change in the direction of production would, no doubt, be possible in many cases, though not in all. Where it is not possible, the plant which formerly produced goods for the lost market will lose value as a going concern, though physically it may still remain intact. Other concerns may adapt themselves to the change, but both time and capital are needed to bring this about.

The chief result of a long-sustained depreciation of money in an old industrial country is the disappearance of working capital. The savings of the middle-class are frittered away, while farms and plant get cleared of their mortgages. This huge expropriation, which we may call "inverted socialism," may, no doubt, lead to an increase in the value of fixed capital, but it does not increase working capital. The £40 interest which a farmer may save on a mortgage by paying back £1,000 in valueless money does not provide him with the new working capital. The dividend-earning capacity of an industrial concern may be increased by the wiping out of liabilities, but while wise managers will put back most of these earnings into plant before paying any dividends, thus safeguarding themselves against depreciation and physical deterioration, others will pay dividends which, converted into gold, are very small, but which impress shareholders with a false glamour of prosperity, and induce them to riotous spending. In any case, the working capital is not increased. At the best such working capital as is taken from the investor is transformed into fixed capital, while the investing public eats up its depreciated funds in order to live. Bank deposits and savings-bank accounts shrivel up when converted into stable currency, and even the people whose incomes are fairly large are no longer able to save. They have learned by experience that spending money in the purchase of commodities is the only way of avoiding an almost complete loss. Even if 10-20 per cent. were paid for long-term deposits, investors would be losers, for 100,000 marks, returned after a year with 20 per cent. increment, are worth but 30,000 marks if the pound has gone up in the same time from 9,000 marks to 36,000 marks.

The shortage of capital is increased by investments in foreign currencies, where alone the public is safe from the effects of automatic depreciation. Some of this exported capital may facilitate the working of home industries by financing imports. A large part of it, however, is really a loan to foreign countries, the interest thereon being re-invested, as and when it falls due, while some of it, such as pound notes and dollar notes, or foreign exchange, is merely hoarded. The public are sometimes so reluctant to part with these hoards that they borrow money on them as collateral, whenever they are short of cash, paying over 20 per cent. interest a month!

This shortage of capital would be ever so much greater were it not for the reluctance to indulge in new investments. In agriculture, for example, there is a tendency to quit intensive farming, as the amount of cash needed for importing feeding stuffs, or for buying fertilisers, is so huge when reckoned in depreciated money that farmers are afraid to run the risk. They prefer to hoard notes or to buy useless commodities, while consuming a much greater part of their produce than they ever did before. The results are extensive farming, high prices, and the need of importing from abroad food which was formerly raised at home. This, of course, leads to an adverse change in the balance of trade.

Manufacturing concerns are affected in a similar way. Mills cannot finance the importation of raw materials if they do not export most of their finished produce, but have to sell instead against home currency. This reduces their production, and also, in the long run, the value of the undertaking as a going concern.

The best concerns have used their earnings for the upkeep and even for the extension of the plant, but in many cases the capital needed has been so great that the stock has had to be watered, and frequently it has been impossible to find the money for greatly needed ex-

tensions. Notwithstanding a very great shortage of coal in Germany, very few mines have been enterprising enough to open up new shafts. The risk of having to import from England coal which has to be paid for in gold is considered to be much less than that of spending vast sums of money on such improvements. This is also one of the reasons why building cannot go on. So production is greatly reduced all round.

Notes of the Week.

Employment in November.—In view of the improvement in the November trade returns and the more cheerful reports that come from some industrial centres, the official figures of unemployment in November are at first sight disappointing, for both the trade union percentage and the percentage for all workers covered by the Unemployment Insurance Act increased slightly last month. The end of October figure for unemployment reported by trade unions was given last month by the *Ministry of Labour Gazette* as 14.1 per cent. This figure is now corrected to 14.0 per cent., and the end of November figure is given as 14.2 per cent. Recent movements of this percentage are traced below:—

* Excluding coal miners.

† Corrected figure.

The percentage unemployed among workpeople insured under the Unemployment Insurance Act rose from 12.0 at October 23rd to 12.4 at November 20th. The chief industries where a decline in the demand for labour was reported were the building trades and the cotton industry. On the other hand, conditions improved in the coal mining and pig-iron industries, in tinplate and steel sheet manufactures, and in some sections of the metal trades. In the coal-mining industry the unemployment percentage fell from 5.6 on October 23rd to 4.9 on November 20th. At the other end of the scale one finds an unemployment percentage of 37.6 in shipbuilding. The total of registered unemployed in Great Britain and Northern Ireland at November 27th was 1,437,000; whereas at the end of October the number on the live register was 1,385,000. Put in this way, the figures appear to tell a dismal story. The returns for this month are, however, not to be interpreted at their face value, and illustrate the danger of drawing conclusions from small variations or regarding them as more significant than their statistical value justifies. Thus, the trade union percentage is stated to show a rise from 14.0 per cent. to 14.2 per cent. But examination of the details shows that in the more important trades from which returns are received, unemployment has fallen. How, then, can the situation be worse? The explanation of the mystery is that in the current return a larger number of engineering unions are included than in last month's figures, and as these trades have over 27 per cent. of their members out of work, the inclusion of this larger proportion makes the average higher, though in the engineering trade unions themselves the percentage of unemployment has fallen from 27.6 to 27.3 per cent. We have recalculated the current figures in respect of the same number of trade unionists for each trade as figured in last month's returns, and we find that instead of having risen, the percentage has fallen a shade, from 14.0 to 13.9 per cent. When we come to the insurance figures the position is more doubtful. The number of unemployed books lodged is greater than a month ago; but, even in this case, the figures published a month ago relate to October 27th, a date when it is believed that an abnormally large proportion of workpeople were completing the

"special period" or "gap," but by November 20th, to which the current figures relate, they had come back on to the insurance fund for a new benefit period. To the extent that this is the case, the increased unemployment is a statistical illusion. Indeed, whereas the chart of the Minister of Labour gives the impression that the improvement in employment has come to an end and the trend is beginning to move in the wrong direction, the detailed trade reports themselves indicate that this is not the case. Only in building, cotton, some branches of the clothing trade, and in pottery is there any set-back. In all other trades conditions are stationary or improving—the latter condition being reported, in particular, in mining, iron and steel, and engineering, in addition to many minor trades. The points we have criticised are not of great intrinsic importance, but in view of the importance of the unemployment problem it should be possible for the Ministry of Labour to portray more accurately the trend of current movements.

Cost of Living.—The cost of living for an average working-class family, as calculated by the Ministry of Labour, remained stationary in November, and on December 1st was 80 per cent. above the level of July, 1914. The following table shows monthly movements of this percentage figure over a period of five years:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st	85.90	120	125	165	92
February ..	90	120	130	151	88
March ..	90	115	130	141	86
April ..	90.95	110	132	133	82
May ..	95.100	105	141	128	81
June ..	100	105	150	119	80
July ..	100.105	105.110	152	119	84
August ..	110	115	155	122	81
September ..	110	115	161	120	79
October ..	115.120	120	164	110	78
November ..	120.125	125	176	103	80
December ..	120	125	169	99	80

Retail food prices at December 1st showed an increase of 78 per cent. over the pre-war level, as compared with an increase of 76 per cent. recorded at the beginning of November. The slight advance shown last month was due to small increases in the average prices of eggs, cheese, tea, milk, fish, and frozen mutton. On the other hand, British meat, bacon, and butter were slightly cheaper. Among articles outside the food group which became cheaper last month were candles and men's clothing.

The Government and Industry.—The Federation of British Industries has sent to the Prime Minister a manifesto urging the Government "to devote their efforts to the removal of the many difficulties and impediments which are at present delaying revival of trade." This document gives pride of place to economy and reduction of taxation. "Some substantial relief of taxation is an essential preliminary to any trade revival," and the maximum relief to industry would be afforded, says the manifesto, by (a) the abolition of the Corporation Profits Tax and (b) a substantial reduction in the rate of income-tax, and concurrently with such a reduction some remission of indirect taxation. The Federation disavows the responsibility of suggesting the line which economies should take, but expresses regret that the Geddes Committee recommendations were not more fully carried out. Since Sir Eric Geddes has just become president of the Federation, we may perhaps expect to hear more from this quarter on the economy question before long. Having recently issued a memorandum on inter-Allied debts and exchange stabilisation, the present manifesto does not touch those subjects. It does refer, however, to the important question of the high tariffs set up in so many countries since the war, and makes the following point:—"It is most important that energetic action should be taken by His Majesty's Government before these tariffs have had time to crystallise and before vested interests dependent upon high rates of protection have been created. The general course of action to be taken by His Majesty's Government

is obvious. They should endeavour to secure satisfactory Commercial Treaties with as many countries as possible." The suggestion is made that the personnel of the Government departments concerned is insufficient for the expeditious negotiation of such treaties, and that voluntary assistance from the business community might be utilised. The proposal is also put forward that a small expert Commission might be appointed "to go into the whole question of the commercial relations with foreign countries." On the subject of industrial legislation the Federation emphatically protests against "a regrettable tendency," noticeable in recent years, "to bring forward legislation regulating or restricting the operation and development of industry without laying down the principles upon which such regulation or restriction is to be exercised. Instead of defining the principles, wide powers have been entrusted to administrative officials on the assumption that these powers will be reasonably and equitably exercised." Other questions discussed are the rating of machinery, postal charges, and possible economies in educational administration. We suggest that the Chancellor of the Exchequer might do worse than study this manifesto during his voyage across the Atlantic.

The Stock Exchange and Christmas.—A Stock Exchange correspondent writes:—"Seasonable gaiety has usurped the place of business seriousness in a good many of the markets of the Stock Exchange during the past few days. When toy balloons are flying about all over the House, from one market to another, it is exceedingly difficult to concentrate upon the strict attention to business that, in ordinary times, occupies the chief notice of Stock Exchange members. The mechanical difficulties of collecting prices, &c., are greatly increased, and clients who may find unexpected quotations appearing in their newspapers can sometimes put this down to the result of Christmas festivities. In the House itself, on Wednesday, the committee and managers gave their annual Christmas dinner, to which a number of prominent guests accepted invitations. From the point of view of prices, the week before Christmas is invariably associated with quiet selling on behalf of people who want to pile up cash balances with their bankers at the end of the year. Such realisations are generally done some ten days in advance, in order that the money may be forthcoming in time to allow it to be paid in before New Year's eve. This year the predilection for window-dressing has pursued its common course. In addition to such particular reason for selling stock, a surprising number of people go over their lists of securities before the year closes, and throw out all such oddments as they have accumulated during the twelve months, and which they do not intend to keep into a new year. Consequently, scores of bargains are done every day in such small amounts of stocks and shares as threaten to break the hearts of the brokers and jobbers concerned—not to mention the amount of extra work thrown upon clerical staffs who are thinking more about Christmas presents, and the spending thereof, than they are of making out transfers and delivering stock. There is, however, one aspect of business which is not generally recognised at the present time. Without its being advertised in any way, a large volume of Stock Exchange trade is taking place, not only in one market, but in several others, through the medium of really substantial lines of stocks and shares that are being placed with banks, insurance companies, South African houses, and other large buyers. These deals take place without the market being disturbed to the extent of a sixteenth in the prices of the stocks concerned. Such business goes, of course, into the hands of the big firms, as a rule, and the smaller man, and the public alike, hear nothing about it. The Home Railway market is not one of those to which this specialised class of business applies as a rule, although some of its gilt-edged stocks are sold and bought in blocks during the last few days of the year. The ordinary stocks, however, are maintained in price by reason of the expectation that, when the market re-assembles in 1923, and the new stocks become familiarised to the ordinary investor, there is likely to be a considerable impetus given to business. With dividend declarations coming along directly afterwards, it is expected that the public interest will be quickened, and that the process of rounding-off amounts, selling some and buying others, is likely to give

rise to a really active market in Home Railway stocks. Discounting such probable activity, a number of prices have been advancing during the past few days, because it is assumed that people will be more willing to buy stock, in order to make up level amounts, than they will be anxious to sell at a time when the railway industry emerges finally from its Governmental bonds and becomes firmly established on its own feet once more. So far as the industrial markets are concerned, the speech of Mr Bonar Law at the end of last week was sufficiently hopeful to lead to a much more cheerful feeling pervading the market for oil, shipbuilding, textile, and other shares in such companies as are likely to benefit in the New Year by the increased trade which the Prime Minister foresees. Therefore, with all the handicaps to which Stock Exchange business is subject during the few days before the Christmas holiday, it is worth noticing by those who follow the markets that a decidedly firm tone prevails, in spite of the mild dulness exhibited by the Consol market, and which may be attributed to the window-dressing proclivities already mentioned. Next week will see the closing days of the old year, when business is never brisk in Stock Exchange circles, but, for all that, the settlement with which 1922 winds up may quite well prove to be a profitable and a fairly large one when it comes to be adjusted on Friday.

Austrian Government 8 per Cent. Gold Loan.—Subscriptions are now being invited for an issue of Austrian Treasury Bonds of the nominal amount of \$6,000,000 U.S.A., the subscription price being par, less interest at 8 per cent. per annum, calculated from the date of subscription to June 1, 1923. The loan is repayable on that date, either in dollars or in Austrian currency at the fixed rate of 70,000 crowns per dollar, at the option of the holder. The bonds are to be redeemed by the Austrian Government out of the proceeds of the loan which it is proposed to issue next year under the auspices of the League of Nations, in accordance with the Geneva Convention. The present issue—which is an interim arrangement for meeting immediate needs—is specially secured on the Customs Duties and the proceeds of the Tobacco Monopoly in Austria. It is intended that next year's loan shall be backed by guarantee of Great Britain, France, Italy, Czechoslovakia, Belgium and Switzerland, but up to the present no way appears to have been found for combining into a form acceptable to investors the guarantees of countries whose own credit standing is so varied as those of the countries mentioned. It is greatly to be hoped that a solution will be found to this awkward problem, as it is one of the fundamental difficulties to be overcome if international action of this kind is to succeed. Applications for the issue of bonds referred to above can be forwarded through the Anglo-Austrian Bank in London. The financial position of Austria has improved considerably of late in anticipation of this scheme, which will, it is hoped, set the country definitely on its feet again. At present, however, the industrial world is faced with falling prices and other unpleasant economic features of a return to financial sanity. The ultimate fate of this remnant of the Habsburg Monarchy must depend, however, on the success of next year's loan. The recent compromise between the Government of Dr Seipel and the Socialists may prove, however, to be an important step towards the settlement of Austria's administrative problems: though Dr Zimmermann, the League's Commis-

sioner for Austria, has preferred to take his appointment "on approval" for a short period in order to see how the compromise will actually work in practice. On the one hand, a considerable measure of freedom of action must be allowed to the Commissioner in order that the League plan may have a fair chance, but, on the other hand, it is reasonably certain that no scheme could succeed in face of the opposition, both inside and outside Parliament, of the Socialist parties. The subscription list for the new loan—which we hope will prove attractive to the Austrian investor—closes on December 30th, and upon its successful flotation will depend in large measure the economic and financial reconstruction of the country.

Outward Coal and Freights.—A correspondent writes:—Considerable interest is being shown in the outward coal position, and while at the moment the markets are under the influence of the holidays, everything points to very active conditions early in 1923. The coal position in the United States is still unsettled. No serious attempt has been made to recover the export trade, and in some quarters another strike is considered probable if the coal-mine owners attempt to reduce wages, as they will practically be forced to do in order to compete with British coal. If the miners go on strike in April the Canadian markets would feel the effects, and in the circumstances it is not at all surprising to find that already there are orders coming over for fairly large quantities of Welsh coal for shipment to Montreal next April. In addition to this, there are orders for American account, among them being one for New York for 50,000 tons of Admiralty coals for delivery during the first quarter of 1923, and inquiries are also to hand for shipment during the second quarter. The Chile State Railways will call for tenders for 250,000 tons of coal in February, and, generally speaking, the outward coal market looks very healthy, with steamers booked this week from Wales to Genoa, Port Said, River Plate, and Bombay. In the homeward markets there is a seasonal lull, but the inquiry from the Argentine has again been fairly brisk, with steamers booked up for January and February loading. The freight money paid has been 25s 9d from down-river and 26s 6d to 28s 9d from such places as San Lorenzo and Bahia Blanca, the bulk of the steamers being for the Antwerp-Hamburg range of discharging ports. North American business has been slow, owing to the exchange position, but there is some inquiry about for the Mediterranean and a big contract pending for Greece. All the Eastern markets have continued very firm, with more interest shown in steamers from Bombay/Karachi, while rice from Burmah has been shipped for Germany. The demand for steamers to load ore from the Mediterranean and Bay ports is becoming more active on the better outlook in the iron and steel trades, and a large number of orders is circulating, including Hornillo/Middlesbrough at 7s, Melilla/Manchester at 7s 6d, and Santander/Glasgow at 8s.

Export Credits.—A Board of Trade statement shows that the total advances, credits and guarantees sanctioned up to October 2nd last, under the Overseas Trade (Credits and Insurance) Act of 1920, totalled £21,319,123. Of £3,120,711 advances sanctioned, £1,742,142 had been taken at that date, the countries affected being Austria, Finland, Bulgaria, Baltic Provinces, Poland, Jugo-Slavia, Roumania, and Czecho-Slovakia. General and specific credits taken amounted to £1,643,548, and guarantees to £4,557, making a grand total of advances, credits, and guarantees taken of £3,390,247.

The Economic Condition of Venezuela.—Judging from the report of the British Minister at Caracas just issued by the Overseas Trade Department, the prospects of Venezuelan recovery from the post-war depression of trade are good. Favourable signs are the possession of a sound currency, which stimulates purchasing power by its appreciation above sterling, and even the American dollar, and is never tampered with by the Government; the passing of a new Petroleum Law which should attract more foreign capital, the prospect of political quiet through the unanimous re-election of General Gomez to the Presidency till 1929, and the competence, unusual in

Spanish America, of the financial administration, which can apparently be trusted not to abuse the facilities for supplementary expenditure given to it by the legal limitation of the duration of the Congressional Session. The leading exports, however, are still low in price, and cocoa, the second in importance, has risen considerably since the end of last year; but coffee, which is 60 per cent. of the total, has fallen slightly. The export of hides and skins is only about 29 per cent. of its pre-war average, the frozen meat industry, established during the war, is suspended, the British cattle company which supplies it is concentrating on the improvement of the breed, and has been robbed of stock by "semi-revolutionary" bands from Columbia; and balata hardly pays for collection. But the Caribbean Petroleum Company, a subsidiary of the Shell, has begun to earn profits, and other undertakings, notably British Controlled Oilfields, Limited, seem on the way to do so. Among minor exports, that of egret feathers has fallen in value over 50 per cent. since 1919—a decline which calls for no regret. The export of gold—two-thirds of it "placer," presumably got by individual diggers—has increased, and the briquettes from the State coal mines seem to have a future as marine fuel. Only one copper-mining company is now in operation, with an export of 6,422 tons in 1921. In the last two years there have been heavy Budget deficits, met, however, by Treasury reserves accumulated during the war and the year of prosperity following it; they are ascribed mainly to the fall in Customs revenue, and to expenditure for special and non-recurrent purposes and on public works. The total public debt is about £5,000,000; the foreign debt is being duly redeemed, and the floating debt is small. In foreign trade the United States leads both in imports and exports; in shipping, Holland has lately taken the first place, followed by France and the United States, Great Britain being fourth. But the improvement in exchange should give opportunities of developing British trade on British ships. The report is full of statistical detail, and presents an unexpectedly favourable account of a country which has not been noted in the past for good government or stability.

Retail Trade and Co-operative Results.—The returns of the distributive co-operative societies operating mainly among the industrial classes are a useful index to the prospects of retail trade generally. Reviewing the balance-sheets for the last few months of some of the societies, a correspondent finds a hopefulness that is supported by figures indicative that the worst has been reached, and that the probability of a revival early in 1923 is assured. At Halifax the committee is "satisfied that the trade slump has now reached its worst, and there will be better trade in the future." At Hull the sales to the 33,455 members during the last three months were £463,128, a decrease of £105,397 on the corresponding period of 1921. This decrease was 18½ per cent., while the cost of living fell 29 per cent. that quarter, so that the business done was fairly satisfactory in amount, although the dividend on purchases was reduced to 6d in the £, and £5,000 has had to be taken from the reserve fund. At Keighley the trade has fallen off by 10 per cent.; at Nottingham by 18 per cent.; at Stockport 6 per cent.; at Enfield 14 per cent., and at Birkenhead 23 per cent., but here, as at Hull, the committee call attention to the decrease in the cost of living being more than the lessened total of trade. Lower prices as well as unemployment have had much to do with the decreased turnovers of the co-operative societies, hence the optimistic outlook universally taken in the movement. At Liverpool, where the co-operative membership is 61,544, the trading returns for April to July showed a smaller decrease by £90,000 than for January to April, and since July many of the departments of the stores have shown increases over the sales of the latter half of 1921. But when allowance has been made for lower prices and short-time in many industries, notably in Lancashire, the fact stands forth that thousands of members continue to trade with the multiple shops and the private traders of their towns. The average weekly purchases per member are often absurdly low, in view of the claim put forward that the four million members of co-operative societies represent

the purchasing power of sixteen to twenty millions of the population. During the rationing period of the War the highest registration with co-operative societies was for sugar, and ten million was the total of the population so registered, but the tea figures were never more than three millions, and in other commodities even less. Last quarter the average weekly purchases were only 8s 7d at Liverpool, as compared with 11s 11d a week last year; at Failsworth (Manchester) they were 14s 11d as against 18s 10d. During 1921 the average weekly purchases of co-operators for the whole of the country were 18s 7d, which amount was greatly helped by the Scottish purchases—in many cases over 24s per week. In 1921 the average purchases of the Woolwich members were only 14s 3d, whereas they were 17s 10d the previous year. These figures—which should have been maintained, because the opening of hundreds of new departments and branches should counteract the decreased values—compare with 8s 8½d in 1913, and it may be regarded as generally true that the trade per member has not doubled, although prices are so much higher than they were in the year before the War. The difficulties of co-operative societies are due in great degree to the increased overhead charges, and to the wages having been liberally advanced during 1920. Committees have found it harder to secure reductions than do some of their competitors, and these expenses for 1922 are nearly as high as in 1921, when the wages paid to distributive employees exceeded by two millions those paid in the previous year. Moreover, these advances took place in a year when the total trade of the British societies fell to £221,000,000 from the £246,000,000 of 1921. Stocks generally have been considerably reduced, many committees having instructed their buyers to make as few purchases as possible; in some cases large sums have been allowed for depreciation in order to bring values to current market prices.

Scotch Whisky Trade.—The new Highland distilling season is now well under way, writes an Edinburgh correspondent, and, all things considered, the distillers have done fairly well in the way of booking filling orders. The North of Scotland Malt Distillers' Association has reduced its official flat filling price by 6d to 5s 6d per proof gallon. Always cautious, the Association deferred calling the usual meeting until a number of distillers, growing impatient, announced their own prices without waiting for the Association. The majority of the members may be loyally endeavouring to adhere to the Association's prices, but a substantial proportion of the season's make will undoubtedly be sold at round 5s per proof gallon. The proprietors of a few favoured distilleries have fixed their price as high as 6s 3d per proof gallon, and while a number of their more important customers are said to have carried their protest to the length of withholding the usual bonding orders, it is generally anticipated that the distillers in question will eventually dispose of the whole of their output. Prospects on the whole are favourable for the season. Home-grown barley is not of the uniform high-class quality which could have been desired, but the price for the better qualities has been fairly steady at round 45s per quarter. Quite a lot of Danish and other foreign barley is being landed at North of Scotland ports for distillers, but it is feared that, taken all over, the extract of whisky will not be up to that of last year, the universal lack of sunshine having affected the saccharine qualities of the grain. Most of the Highland distilleries are expected to work up to top-notch capacity, as, while the output of the last two seasons has been substantial, the shortage of matured whiskies brought about by the prohibition of distilling during the last years of the war, and the imposition of the three years' age limit is proving quite as serious as was feared, despite the shrinkage that has taken place in the consumption at home and abroad. The best opinion seems to be to the effect that yet another bumper season's output of malt whisky is necessary to bring the stocks up to the level necessitated by the changed conditions. The total stocks of home-made spirits have increased from 129,381,000 proof gallons on October 31, 1920, to 138,942,000 proof gallons on October 31, 1921, and to 145,312,000 proof gallons on October 31, 1922. The Revenue officials, unfortunately, do not discriminate

between the different classes of spirit in bonded warehouses, so that it is impossible to say what proportion of those totals constitutes malt whisky of the various categories and what grain whisky. The consumption continues to languish as a result of the high spirit duty. For the 12 months to September 30th—which is the period which permits of the fairest comparison to show the effects of the last increase in the spirit duty—the combined consumption of home-made and imported spirits amounted to 17,732,855 proof gallons, showing a decline of 1,272,750 proof gallons as compared with the preceding year. This follows upon a decline of 4,886,021 proof gallons in the 12 months ending September 30, 1921. Of the last year's decline, no less than 991,296 proof gallons were attributable to imported spirits, but nevertheless the slump in the consumption of home-made spirits as a result of the increase in the spirit duty by 22s 6d to 72s 6d per proof gallon in April, 1920, has now assumed serious proportions. Assuming that the consumption had remained as it was in 1920, when the duty was raised from 50s, the yield now at 72s 6d is practically £3,000,000 per annum less than it would have been at the old rate of duty. The export trade has also suffered severely from Customs duties and other restrictions imposed in overseas markets, those being generally held in the trade as being the result of the British Government's mistaken policy at home. For the current year the total shipments will work out at, approximately, 5,500,000 proof gallons, which compares very poorly with the figure of over 10,000,000 gallons which obtained in 1913.

"Importing Wheat as Flour."—A powerful agricultural group in the new House of Commons has accepted as a "plank" in its platform for the new Parliament a resolution against "importing wheat as flour." As this phrase, familiar as it may be to grain importers, will not be equally known to all, it may be useful, however briefly, to define what exactly is meant by the resolution. With respect to its economic bearings, nothing need be said for the moment as even a convinced Cabinet could not interfere with the many contracts already existing for December, January, and February shipments of flour to British ports. The Victorian Britain had witnessed population gaining not on the home production of wheat alone, but on the milling machinery for grinding wheat. Thus an annual importation of about a million sacks of flour into London, and three millions into all other ports, had come to be accepted as customary, and it would be difficult to find in any journal of the last century any protest against the form in which material for the loaf was put on British quays. With the new century, however, there came a great and notable revival in British milling as a great industrial art. By the year 1911 Britain could not only produce any flour that any foreign mill could turn out, but had incidentally acquired the machinery to grind the entire forty million sacks required annually by the consumer. These great advantages soon began to tell, and by 1914 the British mills were not only giving complete satisfaction to bakers, but were gaining ground on the foreign ones from which less and less flour was required. The war not only checked, but absolutely reversed this process. The Government took over the home mills, and reduced the percentage of quality in the grists. Before the war an extraction of 25 to 28 per cent. of the coarser and outer portions of the wheat berry left nothing but fine flour even for the poorest consumer, while farmers obtained fully 25 per cent. of middlings, sharps, and bran for their pigs and other live stock. War flour was, however, an extraction first of 80 and then of 90 per cent. The public were compelled to eat what hitherto had gone to the trough and the manger. There was, however, one avenue left open to the wealthy and the wary. The Government could not forbid the importation of Canadian flour without doing an injury to a Dominion, or shut out American without hurting an ally. "Milling Orders" succeeded one another in rapid succession, but control of fine quality flour was never adequate, or, as regards hotels and clubs, very serious. By 1918 the *cognoscenti* had been taught to identify imported flour with fine quality flour, and although the war ended officially in June, 1920, it was not till March 31, 1921, that the bureaucracy re-

leased its hold on the British mills. Allowing six months for adjustment, the bread made by our own mills has now for over a year been of pre-war excellence, but unfortunately the shippers of flour have learned to regard the captured British markets as a valuable asset. London this year has received nearly two million sacks of overseas flour, and not only do such imports throw milling operatives out of employment, and cause the loss of interest on capital sunk in machinery, but they also deprive the farmer of the by-products, the middlings, and so forth, which he particularly needs for building up his fattening animals and for keeping his fowls laying. There is even springing up a new type of miller who buys English wheat in small quantity to flavour Argentine for general utility, and who incorporates these grists with American and Canadian strong wheat imported as flour. In this way a miller with very moderate machinery (in output per day), and with very few skilled operatives to pay, can yet do a really large business with the baker. The Agricultural Committee contends that the importation of wheat as wheat, and not as flour, could not affect the price of the loaf. On this assertion issue will almost certainly be joined. There is only one way in which the British miller can prove his point, and that is by proving as he did before the war that he can, in open competition, capture and hold the market by his efficiency.

Samuel Allsopp and Sons.—A further decline in earnings is recorded in the report of Samuel Allsopp and Sons for the year ended September 30th last, although even the present trading profit of £239,927 is nearly double pre-war figures, as a perusal of the following table shows:—

	1914-15.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Trading profit	£120,717	£307,268	£355,434	£346,918	£251,125	£239,927
Debiture interest, &c.	71,201	97,915	100,058	102,365	101,160	104,355
Red. of Certs. of Rights	42,796	42,796	42,796	42,796	42,796	42,796
Depreciation and repairs	45,917	82,246	104,964	114,916	92,140	77,780
Net profit	3,599	84,311	150,414	129,637	57,825	57,792
Brought forward	13,048	20,930	19,324	19,324	19,324	19,324
Reserve	16,647	105,241	169,738	148,961	77,149	77,116
Preference dividend	..	50,000	72,061	51,871	47,107	47,107
Ordinary dividend	..	33,917	58,413	58,413	10,030	10,030
Carried forward	16,647	21,324	21,116	19,661	20,013	19,979

The participating preference shares receive, in addition to their 5 per cent., a further $\frac{1}{4}$ per cent., as last year, while a 3 per cent. distribution is again made on ordinary capital, as against $5\frac{1}{2}$ per cent. for the two years 1918-20. The most favourable feature about the accounts is, perhaps, the saving which has been effected over repairs and amounts required for maintenance. Repairs and maintenance of premises and plant take this year £44,283, as against £62,942 a year ago, but depreciation of plant, casks, &c., absorbs £29,563, as compared with £25,396. On turning to the balance-sheet several interesting changes are noticeable. Stocks at £346,039 are down by £118,281, holdings of barley malt, hops, ale, &c., falling from £380,657 to £255,042. Cash figures at £354,568, as against £339,972, and an item, we assume consisting mainly of trade investments, is up from £275,672 to £288,963. Goodwill is still retained in the accounts at £700,000, while reserves of £200,000 remain unchanged. The directors have no doubt given much attention to the last-mentioned two items, and perhaps the chairman may refer to them at the general meeting, which is to be held on December 29th. An analysis of the balance-sheet will be found in the usual column.

De Beers Diamond.—Within the past three years, writes our mining correspondent, the shareholders in this South African consolidation have tasted the extremes of wealth and poverty. In respect of the year ended June 30th, 1920, holders of the deferred capital received £3 per £2 10s share, the distributions in all calling for nearly $3\frac{3}{4}$ millions. For 1920-21 the rate on the deferred dropped to 10s, and the preference dividend has since been in arrears. Due partly to financial conditions, and partly to the flooding of the market with stones stolen by the Bolsheviks, the demand for freshly-cut diamonds became so small that the leading South African companies suspended production entirely or to a great extent; such inquiry as existed could

easily be met out of the stocks on hand. Hence "diamond account" in the De Beers statement to June 30th last figures for little more than £400,000—a mere ghost of preceding totals; and to enable the company to cover its expenditure, over half-a-million was taken from the general fund and the "stabiliment" reserve. These two now figure at slightly over £1,000,000. Investments in other diamond mining companies stand at £2,905,100; blue ground on floors, £1,719,200. Debtors, special investments, and cash amounted to £749,300; current liabilities to £480,700. Appended is an analysis of the accounts for each of the past three years:—

	1919-20.	1920-21.	1921-22.
Diamond account	£6,761,840	£2,300,851	£401,816
Interest, &c.	236,060	639,448	324,675
Brought in	889,029	1,602,307	1,022,189
Totals	7,886,929	4,542,337	1,748,680
Mining expenditure	1,991,258	1,976,053	798,553
Other expenditure & charges	741,976	735,454	530,477
Totals	2,733,234	2,711,507	1,329,030
Net profit and balance	5,153,695	1,830,830	419,650
Taxation	439,550	6,593	86,507
To reserves	382,070	119,505	..
Dividends	3,740,000	1,240,000	..
Carried forward	592,075	464,732	333,143

* Including £1,010,232 from general fund.
† Including £557,457 from reserves.

The De Beers directors confirm the statements recently current as to an improvement in the diamond trade, but add that "the total recovery will necessarily depend upon the return to normal of trade conditions generally throughout the world." The change for the better is reflected in the announcement that one-half the preference dividend due to the end of 1922 is to be paid. This, representing 15s per share, will absorb the substantial amount of £600,000. No light is thrown in the report upon two important questions—the rumoured resumption of mining in January and the purpose to which the new creation of deferred shares is to be devoted. Probably some information will be vouchsafed at the meeting which is to be held on the 29th inst.

Taquah and Abosso.—These two West African gold propositions continue their struggle against the difficulties attendant upon shortage of labour. Various remedial measures have been projected, but up to the present little success can be boasted. Last year Taquah made the slightly increased profit of £9,000; this, however, provided less than half the sum required to cover the dividend of 5 per cent. declared in January, the balance coming out of the carry forward. Not unnaturally in the above-mentioned circumstances the ore reserves show a reduction; still, the present total is sufficient to keep the mill going for more than three years at the 1921-22 rate of extraction. Working costs show a moderate reduction. The Taquah Central property—which this company sponsored some two or three years ago—has proved a disappointment, and work is suspended. The Abosso's profit of £5,700 compares with a loss of approximately equivalent amount in 1920-21; the cash position does not permit even a small distribution. There is the satisfactory point that a reduction of over 7s per ton was effected in the cost ratio. At 292,100 tons the ore reserves indicate a small falling off; the value has, however, been maintained at 34s 6d per ton. The quantity represents over four years' work.

Bank Failures in Japan.—We are informed that since the Nippon Sekizen Bank closed its doors on November 29th, several other banks have suspended their payment. They are all, however, very small, some being almost unknown to the general public, and consequently no serious results are anticipated. Nevertheless, the principal bankers, at the suggestion of the Bank of Japan, held conferences on December 15th at Tokio and Osaka, at which it was agreed that they will assist each other to prevent any disturbances which may be caused by various current rumours. As the result of those conferences, the public tension is gradually being relieved.

The Ministry of Finance in Tokio has also issued a statement, in which it states that the Bank of Japan is endeavouring to give the utmost assistance to banks in order to allay uneasiness. "At the same time, the Finance Ministry is urging the banks to protect the interests of the depositors, and is prepared, if necessary, to take all appropriate means in order that the situation be not aggravated."

**UNITED STATES.—GOVERNMENT'S FINANCING—
FEDERAL BUDGET—TAXATION PROPOSALS—
COMMODITY PRICES—OCTOBER RAILROAD EARN-
INGS—STEEL CORPORATION'S STATEMENT.**

(FROM OUR CORRESPONDENT).

NEW YORK, December 12.

To meet obligations maturing on December 15th, the United States Treasury has offered new certificates of indebtedness and notes, totalling approximately \$700,000,000. The offering, which is one of the largest financial operations undertaken by the Government since the war, includes two series of certificates, aggregating about \$400,000,000, one bearing $3\frac{1}{2}$ per cent. interest and maturing in three months, while the other carries 4 per cent. interest and will mature in one year. The other part of the offering consists of some \$300,000,000 $4\frac{1}{2}$ per cent. two and a-half year Treasury notes; the right is reserved to allot additional notes to the extent that $4\frac{1}{2}$ per cent. Victory notes may be tendered in payment. In his letter to banking institutions, Secretary of the Treasury Mellon explains that the December maturities are being financed on a short-term basis in the belief that prospects for the next year or two point to the probability of substantial retirements of early maturing debt out of current receipts. There will become payable the middle of this month about \$700,000,000 of $4\frac{1}{2}$ per cent. Victory notes, also approximately \$200,000,000 of Treasury certificates of indebtedness and some \$100,000,000 in interest on the public debt, or a total of about \$1,000,000,000. Against these payments the Treasury is said to have available balances amounting to about \$275,000,000, and expects to receive in the neighbourhood of \$275,000,000 in income and profits taxes this month. The new notes and certificates just offered are expected to provide for the remainder of the December 15th maturities, and leave a margin to cover the Treasury's immediate cash requirements, and such balance of the 1918 war savings certificates as may have to be redeemed in cash in the New Year. With the completion of this month's financing, the Treasury will have taken care of most of the short-dated debt maturing this fiscal year.

Last week President Harding transmitted to Congress the Federal Budget covering the year ending June 30, 1924. The following table, from the President's message, summarises the estimated receipts and expenditures for the next and the current fiscal year, and compares them with the actual figures for the fiscal year ended June 30th last:—

BUDGET SUMMARY.

(Exclusive of Postal Revenues and Postal Expenditures paid from Postal Revenues.)

	Estimated.		Actual, 1922.
	1924.	1923.	
Total receipts	\$3,361,812,359	\$3,429,882,959	\$4,109,104,150.94
Total expenditures (including reduction of the public debt required by law to be made from ordinary receipts)	3,180,843,234	3,703,801,671	3,795,302,499.84
Excess of expenditures Excess of receipts	180,969,125	273,938,712	313,801,651.10

Whereas for the last fiscal year receipts were \$313,801,651 larger than expenditure, the current fiscal year is expected to show an excess of

expenditure to the amount of \$273,938,712, while for the fiscal year ending June 30, 1924, a surplus of \$180,969,125 is indicated. Estimated receipts for the current fiscal year show a decrease of more than \$670,000,000 as compared with those for the fiscal year 1922, while the decline in receipts for the 1924 fiscal year, as compared with those for the present year, is estimated at approximately \$68,000,000. Expenditures for the coming fiscal year, however, are expected to show a decrease of nearly \$523,000,000 from those for the current fiscal year, which are only about \$91,500,000 below those for the fiscal year 1922. The deficit now figured for the year ending June 30, 1923, is much less than that forecast last July, when it was estimated at \$697,000,000, as against the \$273,900,000, approximately, now estimated. The more favourable outlook, the President explains, is due mainly to a substantial increase in receipts during the past five months, resulting from better collection of ordinary revenues, a gain in Customs receipts, continued enforcement of economies, and a revision of the expenditure programme based on five months of actual operation. In the list of appropriations for the fiscal year 1924, the largest single decrease is that of \$50,000,000 for the Shipping Board and the Emergency Fleet Corporation. The Army appropriation shows a reduction of more than \$20,300,000, while the allowance for the Treasury Department is cut by about \$11,700,000, for the Department of the Interior by almost an equal amount, and for the Navy Department by not quite \$1,400,000. The Department of Agriculture gets an increase of approximately \$18,800,000, the United States Veterans' Bureau about \$18,200,000, and the State Department appropriation is nearly \$4,000,000 larger, while that for the Tariff Commission is doubled. President Harding points out that the greater part of the Government's expenditure is in the nature of fixed charges, and that only about one billion dollars are subject to administrative control and economy. He expresses deep concern over the increasing indebtedness of States, counties, and municipalities.

The most noteworthy features in Secretary of the Treasury Mellon's annual report, submitted to Congress last week, were his remarks and recommendations on taxation. He renewed his plea for a reduction of high surtax rates, which, he declared, operate to reduce rather than increase the Government's revenue. High rates, he said, "sound productive, but the fact remains that they are becoming increasingly ineffective and are yielding less and less revenue every year." He gave convincing figures showing that high rates have caused the gradual disappearance of the taxable incomes to which they were intended to apply. The principal method adopted to escape the burdensome surtax, he said, was to invest in tax-exempt securities, the volume of which now amounts to about \$11,000,000,000. Such securities, he estimated, are reaching the market at the rate of \$1,000,000,000 annually. Mr Mellon asserted that investors who normally would put their surplus funds into productive enterprises "are automatically driven, under the pressure of high surtax rates, into investment in tax-exempt securities, with the result that the Federal Government loses the revenue, business and industry lose the capital, and funds badly needed for productive purposes are diverted into un-

productive and frequently wasteful public expenditure." He therefore strongly urged the prompt enactment of the proposed constitutional amendment prohibiting the further issuance of tax-exempt securities. He expressed the belief, however, that the change most necessary was the lowering of the surtax rates themselves, and recommended a reduction from the present 50 per cent. maximum to 25 per cent., which, with the normal tax rate added, would mean a cut from 58 to 33 per cent.

Commodity prices continued to rise in November, but less vigorously than in October. *Bradstreet's* index number of December 1st was \$13,7835, showing a gain of 3.3 per cent. over November 1st, of 21.9 per cent. over December 1st a year ago, and of 30 per cent. over the low level touched on June 1st of last year. From the peak point on February 1, 1920, the present index number shows a decrease of 33.9 per cent., but indicates an increase of 58.2 per cent. as compared with August 1, 1914. During November more commodities and groups showed declines than was the case in the preceding month. Food products and textiles were outstanding features of strength, while some weakness was displayed by fruits, fuel, metals, and naval stores. As indicating the marked strength in prices this year, as compared with last, it is not without interest to note that 70 commodities are higher, 24 are lower, and 12 remain unchanged.

Net operating income of 189 of the first-class railroads in this country amounted to \$85,234,000 for October, representing a return at the annual rate of 4.05 per cent. on their tentative property valuation. This compares with \$105,425,600 for October, 1921, which was at the annual rate of return of 5.01 per cent.; in September of this year the carriers reported net operating income of only \$58,457,000, equivalent to an annual return of 2.88 per cent. on property valuation. Gross revenues for October, \$549,284,800, were 2½ per cent. larger than in October of last year, while operating expenses, totalling \$428,265,000, were 7.8 per cent. greater. Unusually heavy expenditures were made for maintenance of equipment, the total reaching \$130,212,000, or an increase of 16.2 per cent. over October, 1921. Although there was a gain of 7½ per cent. in the volume of freight traffic carried in October, as compared with the corresponding month of last year, operating revenues showed an increase of only 2½ per cent., owing to the reduction in freight rates that became effective during the past year.

The United States Steel Corporation for the first time since last February reports a decrease in unfilled tonnage at the end of November. The total is given as 6,840,242 tons, representing a decrease on the month of 62,045 tons. Although unexpected, the reduction is not regarded as of much significance.

FRANCE.—TARIFF AGREEMENT WITH CANADA— BREAD PRICES AND PROFITEERING—THE CO- OPERATIVE MOVEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, December 20.

THE new Franco-Canadian commercial agreement, which was signed last Friday by M. Poincaré and the Minister of Commerce on behalf of the French Government, and by Lord Hardinge and the Canadian Ministers of Finance and Marine for the British Empire and Canada, is welcomed here as a marked advance on the old convention, which was negotiated by the same Canadian Ministers, Messrs Fielding and Lapointe, fourteen years ago. Canada receives forthwith—that is, as soon as the new agreement has been ratified—the benefit of the French minimum tariff in respect of about 120 categories of her exports, and of the intermediate rate (between the French general and minimum tariffs) for about 400 others. It is further stipulated that the duties on these 400 categories will be brought down automatically to any still more favourable rates that may subsequently be granted to the United States. An outstanding principle of the whole agreement, in fact, is to give Canadian imports into France at least equally favourable terms to any that may be enjoyed by American goods. Canada will enjoy, further, for all categories not included in the two lists referred to above, the rates imposed by the general tariff

of 1919 (which were considerably lower than those established by the Decree of March 28, 1921), so long as this tariff is applicable to American products; and if the United States ceases to come under this régime, a reduction of 25 per cent. of the difference between the French general and minimum tariffs will then be allowed to Canada. French exports to Canada will receive the general treatment of the most favoured nation; that is to say, they will be admitted at intermediary Canadian tariff rates, or any others that may be more favourable (Imperial preference rates, reserved to Great Britain and the Dominions, being alone excluded from this arrangement). Further, in the case of 90 categories of French goods, a reduction of 10 per cent. on the intermediary rate is accorded, and a reduction of 15 per cent. is given in the case of three categories of piece goods made in Alsace and Lorraine. French motor-cars, locomotives, preserved fruits, fish, &c., silks, rubber goods, gloves, feathers, films, wines, fruit trees, lace, embroideries, table ware and table and essential oils are among the articles that benefit from the new tariff agreement.

The revelations arising from the recent "strike" of the Paris master bakers, in regard to the excessive profits made by millers, flour dealers and others interested in the manufacture of bread, have been rapidly followed by Parliamentary action for the purpose of fixing the price of flour. The proposals took the form of a Bill introduced by the Minister of Agriculture, M. Chéron, the discussion of which has occupied several sittings of the Chamber, and has resulted in a number of very exciting passages of arms. The fixing of the maximum price at which bread may be sold has been for some time past in the hands of the prefects of the various departments, whose power to vary the price, after taking the advice of certain consultative committees of experts, is conferred by statute. A good deal of trouble has arisen in various parts of the country, however, from the fact that, although the bakers have been limited as to the price they could charge for their product, they have been largely at the mercy of speculators in regard to the price they were called on to pay for flour, which has been steadily rising for some months past. The object of the Bill referred to was to confer on the prefects discretionary powers, in regard to fixing the price of flour, similar to those they now hold in regard to the price of bread.

The discussion naturally extended to the whole question of the high cost of living and the wave of profiteering from which the country at large is now suffering. Of what use would it be to fix the price of bread, asked one of the members for Paris, if beefsteak is still to remain at 16f the kilogramme? M. Chéron agreed, and pointed out that, once the bread question is settled, that of the price of meat would have to be dealt with. Several members insisted that the prices of foodstuffs at present prevailing were higher than had ever been reached during the war. The fear was also expressed that, on the principle that empty stomachs have no ears, there is a danger of social disorder, unless steps are taken to limit the profiteering that now exists in all departments of commerce. Complaints were numerous in regard to the fact that the law against illicit speculation in foodstuffs and other commodities has been allowed to come to an end by effluxion of time, with the result that thousands of pending prosecutions have been necessarily dropped; and urgent appeals were made that this law should be renewed as from October last, when it automatically ceased to be operative.

The debate showed that there was a general sentiment in favour of freedom of trade, but that this principle has been largely vitiated in France owing to the absence of anything like real competition, because of the existence, in trades connected with the food supply, of protective "rings" and other forms of associations for both defensive and aggressive action in common. So far as flour is concerned, the opinion of the Minister of Agriculture appeared to be that the heart of the trouble lies in the fact that at present there is not one but three distinct sets of market quotations—the so-called official prices, the ordinary consumption prices, and the middlemen's prices—which state of things, he said, must be put an end to. The only really dear wheat, he asserted, was foreign-

grown wheat. In the result the Chamber, by a show of hands, authorised the prefects to fix for both flours and bran, not a general price limit, but a price limit by departments, in accordance with local circumstances. Another article adopted sets forth the elements of valuation (average price of home-grown wheat, cost of milling, transport, degree of pure flour, &c.). A Socialist amendment forbidding deputies or senators to act as directors of any financial company, and particularly of flour-milling concerns, was carried by 480 votes to 80. Penalties were also fixed for speculation in flour.

The régime of high prices that has prevailed in this country since the war has had a remarkably stimulating effect on the co-operative movement, which has developed enormously during the past four or five years. Exact figures as to the present strength of the movement are unobtainable, but some idea may be gathered from the following details, which are extracted from the recently published "Annuaire de la Coopération pour 1922," and show the comparative statistics for 1913 and 1920:—

	1913.	1920.
Number of co-operative societies	2,980 ..	4,043
Membership by families	864,922 ..	2,498,449
Do do per society ..	297 ..	628
Turnover	317,572,890 ..	1,839,538,723
Average turnover per society	120,197 ..	477,813

With the fall in prices in 1920 there was an appreciable falling off in the strength of the societies, but since last spring, when commodity prices again took an upward trend, these losses have been more than recouped, it is asserted. The greatest progress has undoubtedly been made by the district societies, each controlling several branch shops, which have vigorously and successfully combated profiteering prices, particularly in the devastated regions. The following comparative figures for 1919 and 1921 set forth their growth:—

	1919.	1921.
Number of branches	1,837 ..	2,010
Membership in families	266,420 ..	449,445
Paid-up capital	13,721,054 ..	30,759,581
Turnover	228,30,008 ..	390,564,437

The fact that these societies are exempt from the tax on turnover has recently provoked condemnatory resolutions from many associations of traders, and the argument has lately frequently been heard that only organisations that sell exclusively to their members should be allowed to call themselves co-operative societies. From the private trader's point of view, however, these are both matters that require careful handling. It will be recalled that in 1905, when the co-operative societies of France were compelled to assimilate themselves to their private competitors by having to incur the cost of *patentes*, or trading licences, most of them retorted by transforming themselves into limited companies and selling to all comers. It is announced that if the imposition of the tax on turnover is insisted upon, those societies that still sell only to their own members will take a similar course, and thereby offer still stronger competition against the private trader.

On the Bourse this week there was considerable animation, the early days being characterised by marked weakness, which was, however, followed by a no less striking recovery. The dominating element was the fear of a possible rupture of the Entente, and when this was eliminated the relief found expression in a general strengthening all round. French funds were generally weaker, the Three per cents. being typical in declining from 59.45 to 59.30. Banks generally declined, but railways maintained their position. Metals, apart from Pontgibaud, which moved briskly from 1,185 to 1,265, were dull, and mines generally were weaker than last week.

GERMANY.—LOCAL FINANCES—REICHSBANK— EXCHANGE AND BOURSE—FOREIGN TRADE— SHIPPING PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, December 18.

MARKETS towards the end of last week were dominated by the expected American intervention, and further influenced by the British opposition to occupation of the Ruhr and by French utterances on the same subject. The recovery of the mark in New York to around 5,000 to the dollar may, if maintained, even bring a slight price-

The Bank buys and sells Bills of Exchange; Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

fall, because the unofficial indexes show that last week the price-rise for commodities almost ceased, and stocks rose very little. The enormous inflation reported for the first week of December was on the basis of the past price-rise, and such inflation is likely to continue. Not much hope is felt that American action will bring any speedy Reparations settlement, and the prospects of an American loan are considered small.

The Finance Ministry's report for December 1st to 10th shows an increase of the Floating Debt from 1,166,046 to 1,289,165 millions, and of the total debt from 1,230,469 to 1,353,588 millions, or 275-fold the pre-war figure. Revenue received in the ten days was 19,306 millions, expenditure 142,425 millions, only about one-seventh of expenditure having been covered. The Customs gold surcharge has been raised from December 20th to 1,899 per cent., or 1900-fold the nominal, and for the first time exceeds the mark exchange's gold depreciation. The Reichsbank's price for gold coin purchases is 1,000-fold the nominal. Official salaries and allowances for December have been raised, as compared with November, by 44 per cent. An official memorandum puts the past annual average cost to Germany of the army of occupation at 1,660 million gold marks and 4,200 million paper marks, at which rate the cost for 15 years would be 16.6 milliard gold marks and 47.2 milliard paper marks, or at current exchange 37 billion paper marks.

Prussia's Budget for 1923 shows estimated revenue of 149,360 millions, recurring expenditure 150,300 millions, and non-recurring expenditure 11,050 millions, the deficit being 11,986 millions. The question of the financial needs of the municipalities has been again before the Reichstag. The Erzberger Financial Reform took from the municipalities, as from the States, the right of levying income and property taxes (other than land tax), and left the local Governments largely dependent upon subsidies out of the yield of these taxes, also of the sales tax, and some other taxes. The Erzberger Law (*Landessteuergesetz*) is now being amended; but the new Bill does not, although the local Governments demanded it, restore the right of levying income and property taxes. The amended Bill increases the percentages payable to the municipalities by an estimated total of 8,400 million marks, which is considered inadequate. When, as is proposed, the Sales Tax is increased from 2 to 2½ per cent., the share of the municipalities in the yield will be increased from 10 to 20 per cent., while the whole yield of the Land Purchase Tax, instead of only half as heretofore, will be allotted to the States, which will give half to the municipalities. In general, the local Governments' revenue from payments by the Republic will be increased by 40 per cent. In addition, the Republic's payments will be accelerated, so that the local Governments will in future lose less from the currency depreciation. The States and municipalities will be further given increased rights to levy certain minor taxes. State finance has not been improved by the sale of the railways to the Republic. The States, it is true, delivered themselves from the railway deficits, were compensated according to their invested capital, and were cleared entirely of debt; but the Republic paid not the capital, but only interest thereon, and the burden of this interest on the Republic, as well as its value to the States, has dwindled rapidly, so that ultimately the Republic gets, practically free of real debt, a present of the whole railway system, which even in present bad conditions is paying its way, and has all its old potential profit-making power.

The Reichsbank's return for December 7th shows the

new large increase of 92,808 millions in circulation, 54,464 millions in discounted Treasury bills, 34,251 millions in private Bills, and 61,511 millions in the Darlehns note-holding. The last increase is much the biggest recorded. The bank's holding of these notes is now 139,298 millions, the circulation 13,800 millions, and the total of the outstanding loans 153,200 millions. The Commerz und Privat Bank has decided to raise its capital by 450 million marks to 800 millions, 350 million new ordinary shares being taken over by a syndicate at a price of 685 per cent., and part thereof being offered to the present shareholders at 750 per cent. There will also be issued 100 millions 8 per cent. cumulative preference shares with five-fold voting power, the aim being to guard against foreign control. The Chemnitz Bankverein, Hessische Bankverein, Thüringian Landbank, and three other provincial banks will be absorbed. Money is still dear. Recent municipal loans bear from 6 per cent. to 9 per cent. (Darmstadt) interest, and are issued at between 95 per cent. and par.

Stocks last week rose slightly, the improved mark being counteracted by the new hope on the United States. In many stocks there were heavy realisations, due in part to the need of cash for the holidays. The *Frankfurter Zeitung's* dividend-payers' index figure for the 15th shows 469,593, against 456,480 a week earlier. Buying of Colonial Fours continued, the quotation on the 13th being 5,400, but in after-Bourse dealings 9,000 is stated to have been reached. Concerning this loan, in which English interest has been shown, a semi-official statement says that the loans amalgamated in Colonial Fours were raised for productive aims, mainly railways, and the cost of interest and amortisation was a local liability, the Empire merely guaranteeing. According to general international principle, proceeds the statement, the local primary liability is not affected by the change of sovereignty; and the position is the same as with the local debts of Alsace-Lorraine, for which Alsace-Lorraine remains liable. The Federal Government is negotiating in order to have the same principle recognised in regard to the Colonial debts. Bond quotations on the 15th were:—War Loan, 80.75; Federal Fours, 430; Three and a-half per cent., 258; Threes, 1,050; Savings and Premium, 150; Prussian Four per cent. Consols, 185; Three per cent., 363; Bavarian Fours, 195; Hamburg Staats-Rente, 175; Berlin Four per cent., 105.

Details of trade in October, of which the totals have already been given, were (in metric tons):—

	Imports.	Exports.
Food and forestry products	1,124,196	141,327
Minerals and mineral oils	3,968,652	646,646
Chemicals	81,019	206,541
Textiles, feathers, &c.	18,306	20,410
Leather	1,117	5,200
Paper and cardboard	9,320	47,686
Stone wares	1,158	57,147
Pottery	18,396	50,377
Glass	1,367	11,568
Iron and iron alloys	296,301	246,074
Copper and copper alloys	14,691	7,446
Wares of base metals	28	1,964
Machines	909	42,448
Electrical wares	242	8,250
Vehicles	1,514	11,172

Hamburg's shipping in November was:—Arrivals, 877 vessels of 1,045,557 net tons; departures, 1,044 vessels of 1,081,315 tons. Shipping in the first eleven months of 1922, and in the same months of preceding years, was (net tons):—

	Arrivals.	Departures.
1922	11,964,003	12,249,288
1921	8,556,129	8,566,404
1920	3,845,641	3,780,850
1919	1,303,629	1,271,941
1913	13,006,426	13,321,269

In two months of 1922, Hamburg's shipping exceeded that of the same months of 1913. The price of pig-iron has been raised from the 16th to:—Hematite, 182,243 marks per metric ton; foundry iron No. 1, 160,328 marks; ditto No. 3, 160,258; Siegerland steel-iron, 180,575; Spiegeleisen, 189,535. Scrap iron now fetches 145,000 marks, as against 1,900 marks in December, 1922. The Steel Syndicate's prices were not raised this week, but manufacturing consumers are protesting against present prices as much too high. The dollar exchange, which is now usually taken as the basis of calculation, has not

reached again its highest point of November 8th, but, in the meantime, the price of bar-iron has been put up, in many stages, from 154,000 marks to 293,200 marks, and other Syndicate products correspondingly. The Syndicate retorts that it receives payment only on the 15th of the month following delivery, and that payment is therefore made in much worse money than that of the delivery date. Retail prices of necessities have risen since January (Frankfurt-on-Main) as follows (marks per metric pound):—

	January 7.	December 16.
Rice	6	300
Butter	42	1,700
Lard	26	1,380
Margarine	19.50	1,130
Santos coffee	44	3,200
Eggs (each)	4.30	95
Potatoes	1.25	9
Bread (1,500 grm.)	6.25	220
Wheatmeal	5	265
Matches (10 boxes)	4	180
Petroleum (litre)	9.50	400
Boots	320-480	16,000-23,000

Business continues dull. There are further reports, mainly from the textiles branches, of cutting down of production, and Christmas shopping is badly hit by the fact that earnings have not yet caught up on prices, the price-rise this time having been much more rapid than during the earlier mark collapses.

RUSSIA.—STATE BANK—HARVEST—IMPORTS AND EXPORTS—INDUSTRIAL SITUATION.

(FROM OUR CORRESPONDENT.)

Moscow, December 6.

THE State Bank, which celebrated on October 7th its first anniversary, has now at its head the following persons, four of whom were known in financial circles in Russia before the revolution—A. L. Scheinman, President; N. N. Koutler, formerly assistant to the Minister of Agriculture and Finance; Z. S. Katzenbaum, formerly employee of the Russo-Asiatic Bank; P. A. Sadyrine; A. G. Khrouchev, formerly Assistant Minister of Finance; A. D. Schelezinger, formerly a director of the Merchants' Bank in Moscow; A. I. Schevtzof. The bank has opened numerous branches in Russia and the federated Republics, and has constituted a fund in *valuta* and merchandise to serve as a basis for future work. In conformity with a decree of October 11th, the State Bank has been authorised to issue its own bank notes for 10, 20, 30, 50, 100, 250, and 500 gold roubles. These notes are guaranteed up to 25 per cent. in precious metals, and the balance in stable foreign values, in merchandise easily realisable, and short-term obligations. The issue department of the Bank announced on November 28th that banknotes for two million gold roubles had been issued, the summary of the gold reserve of the State Bank (quite separate from the gold reserve of the State, according to special decree) reading as follows:—

Dr.	Gold Roubles.	Cr.	Gold Roubles.
Russian gold pieces	2,000,000	Banknotes	2,000,000
Gold in bars	1,835,917	Balance available for issue	3,146,530
Foreign gold pieces	229,393		
£ sterling 125,000.. =	1,081,250		
	5,146,530		5,146,530

The banknotes were put into circulation on November 27th and on November 29th 114 million paper roubles were paid for a 10-rouble gold note—the official rate for 10 roubles gold that day being 117 millions. The Russian Government now propose to issue gold pieces under the name of "tchervonetz," containing 1 zolotnik 78.24 doli gold. The unofficial rate of exchange for the paper rouble during the last few months has been the following:—August 1st, 18 millions to the £ sterling; September 1st, 21 millions; October 1st, 38 millions; November 1st, 75 millions; December 1st, 105 millions. Lenin, in commenting on these astronomical figures in his speech at the fourth Congress of the Communist International on November 14th said, "This fall is not important seeing that we can cancel the noughts, and we are quite clever in this art." In fact, the rouble named

"1922" has had four noughts cancelled, and in accordance with the decree of October 24, 1922, the Council of People's Commissaries has decided with "a view to simplifying calculations and accounts" to put into circulation on January 1, 1923, paper money (model 1923), when the rouble will be equal to the former one million roubles or to 100 roubles model 1922.

The State Bank plays the principal rôle in furnishing credit to commercial undertakings; recently these undertakings have been assisted by the Co-operative Bank and by various credit organisations. The following figures have recently been published:—

To October 31st, from Date of Institution of New Economic Policy.	Gold Roubles.	%	Bank for South-West (Rostov).	Gold Roubles.	%
State Bank	6,319,005	77.5	Four credit societies ..	133,267	1.6
Supreme Economic Council (Economic section)	410,559	5.0		88,916	1.3
Co-operative Bank	939,390	11.5			
Ukraine Bank	255,767	3.1			
			Total	8,146,904	100

The Industrial Bank was opened on October 19th by Krasnotchekof, President of the Supreme Economic Council, who stated that 90 per cent. of the shares in the bank were subscribed by State institutions (State Bank, textile, leather, sugar, salt, and naphtha syndicates).

Without funds to cover the State deficit and to permit a revival of industry, and having lost hope for the moment of obtaining Governmental loans, the Russian Government have proceeded to a policy of heavy internal taxation. In his letter to the 5th Congress of the Pan-Russian Professional Unions on September 19th, Lenin wrote, "No one wishes to lend us money; we must, therefore, pursue the very painful and difficult road of saving little by little, of increasing taxes to re-establish gradually the dilapidated railways, machines, houses, &c." Acting on this policy the Government have recently by decree established a tax on property and income to be devoted to the reconstruction of agriculture. The Customs dues have been increased, Excise duties placed on salt, sugar, tea, coffee, wine, beer, tobacco, cigarettes, cigars, alcohol, candles, benzine, kerosene, saccharine, &c. In addition the railway tariff was increased on November 1st by 50 per cent. for travellers and 25 per cent. for luggage and goods, and on December 1st a further increase of 50 per cent. was put on travellers by first and second-class, and 33½ per cent. on travellers by third-class, and 300 per cent. for goods traffic. The institution of first and second-class carriages (named "soft seats") and third-class ("hard seats") is of interest.

The 1922 harvests of cereals for human and animal consumption, and potatoes are now stated to amount to 2,800 million poods—i.e., 70 per cent. of the pre-war production.* The relief organisations are inclined to consider these figures exaggerated, in view of the reports that famine will reign in the South Ukraine within a short time and shortage will occur generally in the Volga areas. With reported good harvest prospects, the Government in September last issued a State loan in wheat as follows: the bonds were sold at the current price of a pood of wheat—i.e., 3,800,000 roubles—with the Government's obligation to repay on December 1st either a pood of wheat or the equivalent in roubles at the current exchange. The value of the bonds rose in November to more than 10 million roubles. The results of the loan are not yet known. The tax in kind from this year's crop in Russia, excluding the Ukraine, amounted on November 15, 1922, to 244,931,000 poods of different products, of which 213,114,000 poods consist of cereals and forage; on November 15, 1921, the tax amounted to 78,302,000 poods. The question of the export of wheat during the current cereal year has been largely discussed, the Central Statistical Department estimating the exportable surplus from 100 to 150 million poods, but up to the present time no export has taken place. At Novorossisk there are about 5 million poods of grain in the silos and warehouses, but these are destined for export to Transcaucasia and Black Sea ports during the winter months. One of the trust companies, "Khlebo-product," is reported as having sent a representative to Germany to ascertain the possibilities of grain export. From the date of the revolution to 1920 exports and imports were suspended, but with the application of the

* For League of Nations' estimate see the *Economist*, December 2nd, p. 1017.

new economic policy imports and exports have developed. For 1921 and the first six months of 1922 the following are the figures:—

	Poods.	Value. Gold Roubles.
Imports 1921	11,157,000	125,798,000 (12 months)
1922	66,484,000	152,788,000 (6 months)
Exports 1921	2,603,000	2,997,000 (12 months)
1922	14,763,000	24,848,000 (6 months)

Imports consist chiefly of food (21.5 per cent.), manufactured articles (2.6 per cent.), paper, cloth and clothing, chemical products, metals. The following figures have been published as representing the value of exports made by certain trading institutions since the introduction of the new economic policy to October 20, 1922:—

	Value (Million Gld. Rbls.)		Value (Million Gld. Rbls.)
Naphtba export	14.0	Metal Trust	1.7
Centro Soyonz	14.0	Various Petrograd organi- sations	4.0
Branches of Centro Soyonz	2.7		
Agricultural Union	2.1		
Leather Trust	1.0		
Forest Trust	16.0	Total	55.5

The following figures represent the value of the fuel, mineral, metallurgic, textile, electro-technic, chemical, rubber, and leather production for the year ending October 1st, as compared with the figures of 1913 and the past two years:—

	Gold Roubles.
1913	2,554,075,000 (100 %)
1920	288,038,000 (11 %)
1921	407,370,000 (15.9 %)
1922	500,597,000 (19.6 %)

The revival in industry shown by these figures coincides with the development of the new economic policy. The above figures represent the large industries, in which owing to lack of capital the greatest difficulties in the way of revival are found; taking the small industries into account, it may be stated that the total industrial production is not more than 25 per cent. pre-war. The fuel industry—coal (34 per cent. of pre-war production) and naphtha (49 per cent.)—and the electro-technical, rubber, and leather industries are stated to be in a favourable condition, the textile and chemical industries fair, the metallurgic and mineral production particularly difficult. A few published examples of investment of foreign capital are the following:—Peronne oxygen factory at Petrograd (French group); Norwegian company at Petrograd, the Trading Shipping Company, for import and export trade; Russian private bank, founded by a Swede, Olaf Achberg, capital stated as 10 million gold roubles. In the capital of this bank the State Bank will participate as to 10 per cent., and will have a representative on the board. A German-Russian company was given a concession on October 19th to establish a consortium of German factories in Russia, under the direction of Otto Wulf, and which will also engage in the import of metal goods and the export of raw materials.

NORWAY.—A TAXPAYERS' UNION—LABOUR TROUBLE—EXCHANGES, MONEY, AND STOCKS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, December 9.

WHILE, a year or two ago, our Danish and Swedish neighbours formed their "Taxpayers' Union," which has acquired a considerable influence and strength, such an organisation has not till quite recently been formed in our country. It is meant to be entirely non-political, and is, of course, without any legal authority. As a representative of the sorely-tried taxpayers, its object will be to criticise the ever-growing carelessness of those who have the power of the purse, to follow closely the way in which they handle the public money and to expose reckless waste, thereby preparing the public mind for the election, in due course, of men who will study economy. Some energetic men are at the head of the union, and as all classes feel the pressure of taxes, and are convinced that if it continues it will "break the camel's back," there is no doubt the union will get many supporters. The union, as one of its first actions, has produced some statistics which show that from 1914 to 1921 incomes have generally trebled, or somewhat more, while the taxes have multiplied about ten times.

When, last spring, the wage agreements between employers and employees expired, it was found necessary to revise wages downwards. Negotiations between the parties interested having failed, the case had to be referred to a court of arbitration. Among the stipulations of the award of that court, an important one was that, in October next, the wages were to be reduced or increased in proportion to the then cost of living, as shown by the official figures of the Statistical Central Bureau. In October the figures showed a fall, justifying a reduction of wages of 4.7 per cent. Although the Labour leaders, both those that were members of the Arbitration Court and those outside that court, were understood to acquiesce in that stipulation, they subsequently protested against it, and the protest has resulted in a strife the result of which, to begin with, is that some of the workmen have struck without legal notice. The Government is considering the situation.

For the week ended December 7th there was some contraction in the note circulation of the Bank of Norway. On November 30th it was Kr.371,650,000, but had, on the 7th inst., gone down to Kr.368,024,000. The reserve went up from Kr.50,641,000 to Kr.54,267,000, and the sum owing by foreign banks rose from Kr.36,303,000 to Kr.39,883,000. The official discount rate remains at 5 per cent., and there is money enough for general purposes.

The exchanges have been somewhat irregular. Today sterling went down to the lowest point touched for a very long time—viz., Kr.23.95 to the pound. The rate is likely to harden again, however. All other exchanges were also weak. French francs are very low, Kr.37.25 to roof, which is not much above 50 per cent. of the normal pre-war rate (Kr.72 to the roof). Marks have kept steady at about 0.07 krone for 100 marks. The stock market is rather inactive, with a somewhat firmer tone for banking shares. Government bonds have been somewhat weaker. Rumour has it that a very drastic reduction in the Government Budget is to be attempted next year. If this turns out true, and can be carried out, it will give a very welcome impetus to trade and industry.

CANADA.—THE IMPERIAL ECONOMIC CONFERENCE—NEGOTIATIONS WITH FRANCE AND AUSTRIA—BUSINESS SITUATION—RAILWAY DIFFICULTIES—YIELD OF CROPS—THE FEDERAL REVENUES—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 4.

MR BONAR LAW's plan for an Imperial Economic Conference, for which invitations are reported to have been issued, has provoked considerable discussion in Canada, but has excited no marked enthusiasm. In some quarters it is welcomed as likely to turn in the direction of Canada a steady and fruitful stream of immigrants and capital, but in others it is suspect as a probable source of serious discord and controversy. Until the question of Dominion status and the constitutional relations of the different units of the Commonwealth is bravely faced, the prospects of success for schemes of economic co-operation between them are poor.

Meanwhile, word has come from Paris that Messrs Fielding and Lapointe, the two Canadian Ministers, have agreed upon the broad principles of a new commercial treaty between the two countries. Many of the details have still to be worked out, but the expectation is that the new arrangement will remove the discrimination now existing in favour of many American products which are grown as cheaply in Canada and will give a much-needed stimulus to the trade between the two countries. Mr Robb, the Minister of Trade and Commerce, is in Australia upon a similar mission, but he has landed in the midst of a general election, and (as a result) has been unable to make much progress.

The general business and industrial situation, while it falls short of the hopes raised by the crop estimates of August, is regarded as distinctly better than at the corresponding date last year. Grain prices, however, after a welcome rise, have now had a set-back, and there is general agreement that this year's abundant crop has not yielded its producers—at least, in Western Canada—a reasonable margin of profit. Miss E. Cora Hind, the

commercial editor of the *Manitoba Free Press*, whose authority on crop problems stands very high, expresses the view that with wheat averaging a dollar per bushel at the head of the Lakes, there is little or no net profit for the Western farmer after deducting costs of production and transportation charges unless he had managed to grow at least 20 bushels per acre, which is 2½ bushels more than the average yield this year. Reports from Winnipeg and other Western points indicate that, despite the heavy movement outward of grain, the amount of money available for new buying in the West is disappointingly small. There is general complaint that the banks are laying hands on most of the proceeds of many farmers' crops, but the bankers claim to be exercising leniency, and only collecting a fraction of their debts.

In many districts in Eastern Canada there is a marked revival of demand for goods, especially warmer clothing, and wholesalers and manufacturers find it reflected in their order books. The plants of the great basic industries—like lumbering, pulp and paper milling—are working at full capacity, while there is no abatement of activity in the Ontario mining camps. Unemployment is beginning to raise its head in the cities, but no one who will face physical labour need be idle. In the province of Quebec alone it is calculated that 40,000 men will be required in the woods this winter to keep pace with the demands of the pulp and lumber mills. The asbestos industry in the same province is also reviving, and shipments in October were 4,500 tons greater than in October, 1921. In the maritime provinces the lumber mills are busy, with prices advancing, and export orders are plentiful. The fish trade, however, is dull, and centres dependent upon it are not prosperous. In Central Canada the coal situation is still causing some trouble, and economies have to be practised; but the West no longer depends upon American supplies, the consumption of Alberta coal being now general. In British Columbia the export lumber business has improved, but there is a serious car shortage.

Sir Henry Thornton, the new president of the Canadian National Railways, has now arrived in Canada and assumed his onerous duties. For the moment he has established his headquarters in Ottawa, but their permanent location in the capital is impossible. Montreal was the headquarters of the old Grand Trunk system, and Toronto of the C.N.R., and there is proceeding a bitter controversy as to which city has the better claim for the headquarters of the consolidated system. There are also disturbing signs that the pledge about eliminating all political influence from the management of the State railways will frequently be honoured in the breach. At a recent by-election in Ontario the electors were exhorted to vote for the Liberal candidate on the ground that if he were returned the Government railways would at once place large orders for a new brand of train coupling which is manufactured in the chief town, and thereby provide fresh employment. Sir H. Thornton will have to show great determination if this incident is to be solitary.

The Dominion Bureau of Statistics have now issued these final estimates of the total yields (in bushels) of the principal field crops (the 1921 final estimates are included in brackets):—Wheat, 391,425,000 (300,858,100); oats, 513,033,000 (426,232,900); barley, 73,237,400 (59,709,100); rye, 35,730,000 (21,455,260); peas, 3,674,600 (2,769,981); beans, 1,454,700 (1,089,900); buckwheat, 10,424,000 (8,230,100); flax seed, 5,685,200 (4,111,800); mixed grains, 27,513,900 (22,271,500); corn for husking, 17,382,000 (14,904,000); potatoes, 99,675,000 (107,346,000); turnips, &c., 88,088,000 (79,150,300); tons: hay and clover, 14,547,400 (11,366,100); alfalfa, 728,400 (662,200); fodder corn, 7,382,100 (6,361,600); sugar beets, 173,000 (268,000).

The average yield per acre of the chief crops, with the parallel figures for 1921 (within brackets) are as follows:—Wheat, 17½ (13); oats, 35½ (25½); barley, 28½ (21½); rye, 17 (11½); peas, 19½ (14½); beans, 18½ (17½); buckwheat, 19 (22½); flax seed 10 (7½); mixed grains, 35½ (25½); corn for husking, 54½ (50½); potatoes, 145½ (152½). The total production of wheat is the highest on record with the exception of 1915, and the average yield is also higher than for any but that same year, when it reached 26 bushels per acre. The oat yield has only been exceeded in 1920.

The November returns show a gratifying increase in

the Federal revenues, which are no less than \$6,741,733 greater than for November, 1921. For the eight-month period ending November 30th they have reached a total of \$183,050,179.40 as compared with \$154,253,302 for the parallel period of 1921. In November customs brought in two million dollars more, but the main increase came from the excise duties, which produced an extra 3½ million dollars; the additional sales tax is now bearing fruit. But its imposition has checked the decline in the cost of living, and prices in several lines have actually risen. The Finance Department on December 1st paid off the unconverted portion of its 1922 bond issue, and thereby disbursed some 80 million dollars of principal, in addition to 10 million dollars of interest.

Trade returns for October were also encouraging. Exports were up \$22,735,665 and imports \$7,356,953. The bountiful Western crop is largely responsible for the increase in exports. The proportion of imports which are taken from Britain is slowly rising; in the twelve-month period ending October 31, 1921, it was 15 per cent. of the total, and in the parallel period lately ended it has risen to 18 per cent.

ARGENTINA.—GOVERNMENT FINANCE PLANS—PROVINCIAL BORROWINGS—BRIGHTER TRADE OUTLOOK.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 22.

PENDING the reopening of Congress for extraordinary sessions, which will take place in December, there is little concrete information obtainable concerning details of the Government's future financial policy. What is known is that active preparations for drawing up Budget estimates and ascertaining precisely how the nation stands financially, are in hand, while the Minister of Finance has asked for, and obtained, a detailed statement of the national floating debt. Detailed returns supplied by the Accountant-General's Department put the exact sum known to be outstanding at \$809,574,211.35 Argentine paper, but to this must be added the obligations contracted in divers forms by the State railways, the difference of exchange due to the British Government in connection with the cancellation of the last loan, and sundry commitments of the Ministry of Public Works. In round numbers this is represented by \$300,000,000 Argentine paper, and, conjointly with the Budget proposals for 1923, the question of how this total floating debt may best be consolidated is one of the most important questions with which Congress must deal. That it can be dealt with as a whole is out of the question, if only owing to the fact that although nominally the whole sum comes under the head of short-dated loans, there is external debt involved bearing clauses providing for regular renewals at pre-arranged rates, together with sundry amounts due on definite dates any time between now and 1927. In round numbers there are \$400,000,000 held abroad and \$630,000,000 in Argentina. The latter amount is largely held—in fact, if not in name—by the Banco de la Nación, which has discounted, for the direct lenders, Government Treasury bills. To all intents and purposes the lenders are the Argentine banks, who have thus employed a large proportion of their deposits, otherwise idle, at a profit of round about 1 per cent., but it is obvious that this makeshift financing must sooner or later end. How this can be brought about expeditiously, cheaply, and, above all, without unduly raising popular anxiety, is the crux of the whole problem. For while a foreign loan of 30 or 40 million sterling—or its equivalent in dollars U.S.—can be successfully launched once Congress has given its sanction, no machinery at present exists in Argentina whereby the 600 odd million in paper dollars can be permanently taken off the market. Private investors, in the sense understood in Europe, do not exist. The banks, although overflowing with superfluous deposits, cannot, under local business conditions, and in view of the local commercial psychology, work below a very safe percentage of cash in hand to sight liabilities. No day-to-day loans, no easily realisable bills purchasable, are to be met with in Buenos Aires, and the banker must therefore be very careful to adjust the granting of his big advances in accordance with the dates on which his big deposit accounts fall due. They may be

renewed, but, also, they may not; and, working under such conditions, the six months Treasury bills of the Government have, in practice, almost become, in the case of the Argentine banks, akin to big Treasury reserves, whence the till may be refilled by the simple process of re-discounting. To be brief, so frequent and so regular have the renewals of this class of Government obligation become during the last two years, that Treasury bills may be considered as having been absorbed into the currency mechanism of the country. Any abrupt attempt to withdraw this 600 millions would therefore be, in all likelihood, as prejudicial in its effects as would be the case were 30 per cent. of the republic's circulating medium to be impounded.

It is therefore in the highest degree probable that a plan will be outlined under which the temporary holding of Government bills by the Argentine banks will be converted, in as unostentatious a manner as is possible, into a permanent investment in Government bonds, convertible into current money only under certain contingencies—that is, as far as the Government, as debtor, is concerned. According to official figures published recently, every bank working in Argentina held its share of internal obligations of the floating debt, as well as other commercial entities, such as insurance and mortgage companies. There is small likelihood of any change having occurred in the meantime, and it would need little more than a series of book entries to "consolidate" in each institution this floating debt as a permanent holding—call it guarantee, reserve fund, or what you will, it matters not—only encashable in the event of liquidation, and having no market save between bank and bank at other times.

Given the immediate trade perspective, anything tending to restriction of banking facilities and commercial credit in general must be shunned. Linseed and wheat, oats and barley, the new maize, the Mendoza vineyards—in short, all agricultural and horticultural produce promises an exceptional yield. Prices may be lower—in the case of linseed, February futures are decidedly lower—but the volume of mercantile transactions involved in the collection, transport, and overseas shipment of Argentina's harvest for 1922-23 will be very great. Admitting that cattle prices are low, and likely to remain so for some months, at any rate, the addition of the amount represented by the meat trade will make the balance-sheet for the period named show highly satisfactory results to this republic as a whole. Unfortunately, the optimistic temperament of the Argentine leads to this favourable prospect being discounted in advance, and that on a cash basis. For the recent loan proposals of the provinces of Buenos Aires, Santa Fé, and Tucuman would have been better postponed until the admitted difficulties attendant on consolidation of the national finances were surmounted. As things stand, Buenos Aires province is authorised by its legislature to borrow \$35,000,000 gold, Tucuman has already negotiated a 30 million dollars paper loan, of which a third liquidates floating indebtedness, while the balance goes to construct public works, which may or may not be necessary, but which certainly do not appeal to one as revenue-producing items; and Santa Fé can also find use for more or less the same amount of money. In the case of Tucuman, the business is being carried out by a firm of Dutch bankers, who will also be interested in controlling the contracts for such construction as is undertaken, the basis of the loan being 6 per cent. at 90, which, all things considered, has every appearance of being a profitable undertaking—for the lenders. Buenos Aires province has, in a manner of speaking, forestalled the national plan. Its loan is sanctioned on the basis of local borrowing for the purpose of redeeming floating debt and the pledging of provincial credit abroad for such money as is to be applied to public works. For the internal portion of the loan the limit has been set at \$45,000,000 paper, which is about half the amount of the gold total, and its price fixed at the minimum of 85, with interest at 6 per cent. per annum and 1 per cent. amortisation.

While local rates for money are still nominally 5 to 7 per cent. for advances and discounts, there is an undercurrent of uneasiness shown by would-be borrowers as to the intentions of the Government, and this may very well mean a firm market in the course of the next month. An Argentine daily has, indeed, gone so far as to say that

the Government has made its plans for the issue of 3-3½ per cent. bonds to the banks on lines such as are traced in the preliminary paragraphs of this letter, and it is needless to emphasise the tonic effect that such action would have, judged from the banker's standpoint.

Export business, and consequently the offer of exchange, is increasing daily. In the cereal markets the certainty of big crops and cheap freights, together with some doubt as to the European demand due to heavy harvests in Canada, keeps prices down. Spot wheat in Buenos Aires, export type, is a bare \$11.50 Argentine paper per 100 kilos, while in linseed, though spot seed is quoted at \$19.10 Argentine paper per 100 kilos, February/March deliveries are but \$15.50, the tendency of the market being decidedly weak. Wool prices are firm, and some exceptional lots of fine staple Rivers wool have brought as much as \$31 Argentine paper per 10 kilos, while \$18 to \$20 is the current price for fine Rambouillet, medium cross ranging from \$12 to \$15. The clip being one of the smallest known for the last 20 years, and exchange very favourable to the French and Belgian buyers, who have always shown most interest in the Argentine staple, prospects for those having wool are exceedingly bright. Indeed, the same may be said of all Argentine business of a productive nature at the present time, whence it naturally follows that subsidiary services also stand to make a better showing during the next twelve months than they have done for some time past. In short, 1923 should open well, and close better, if no unforeseen difficulties of exceptional magnitude occur.

Letters to the Editor.

CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Hook, in replying to Mr J. Ellis Barker, states that Professor Pigou and "many other prominent men" support the proposal, but, unfortunately, he does not quote any argument put forward by them, much less one that can be considered unanswerable. Professor Pigou is most certainly entitled to his own opinions—opinions of considerable weight—but surely no standard of infallibility is claimed for him? I venture to submit that the overwhelming majority of eminent economists are of the opinion that the proposal is not a sound one.

There is one point to which I would like to call Mr Hook's attention. It has been stated definitely by the Labour party that the levy would only affect one quarter of a million people, and would only be imposed where over £5,000 worth of capital was in individual hands. It would not affect companies, corporations, or co-operative societies. Does Mr Hook seriously believe that? Almost all individuals owning more than £5,000 worth of capital are holders of shares in joint-stock companies, and it would be impossible to manipulate the levy without inflicting injury upon such companies.

If this is not the case, the levy could only operate upon small business men. This would mean restricting competition in the interests of larger business concerns, and I submit that this cannot possibly be regarded as in the workers' interests.

Mr J. Ellis Barker puts the matter in a nutshell when he writes:—"No juggling with money can create plenty out of scarcity. Plenty is the fruit of industry, not financial trickery."

If the nation has increased liabilities, let us be straightforward and increase taxation. Taxes are only imposed in order to create a fund to meet the expenses incurred in the government of the nation, and they should therefore be taken out of the income of the nation. Any attempt to introduce any other methods should be discouraged and discountenanced.—I am, &c. JACK W. CHERRY.

20 Upper Parliament street, Liverpool,
December 19th, 1922.

UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 9th inst. a correspondent, "C.," suggests that "we must make up our minds boldly to alter our theory," and this alteration consists in exporting our young men instead of vainly seeking to keep them usefully employed.

"C." shares the illusion that only an increase in exports can cure unemployment, yet it is obvious, to anyone who thinks, that foreign trade which results in the import of commodities producible at home has no effect on the amount of employment, although it increases the amount of our exports. Compared to our total production, our exports, which pay for the import of goods we cannot produce—excluding what we re-export—are relatively small. And we cannot increase their quantity.

We can, however, enormously increase the amount we produce for ourselves. Couldn't we treble our present food supply, replant our woods, rebuild our filthy towns, and make for ourselves a long list of commodities which we are importing from America, Switzerland, Belgium, France, not to speak of Germany? Of course we could.

And which is best? To produce for our own market, which is ascertainable and stable, or for the foreign market, which is speculative, and therefore unstable? If our foreign market suddenly fails, our men are thrown out of work. They cannot suddenly fit themselves for a different trade, particularly in an industrial country; nor would the necessary plant be available if they could do so. Change of production is the cause of unemployment. But what is the cause of this change, of inconstant production, which exists even in our own market? The answer is: "Undirected subdivision of labour."

The farmer who grew all his own food, whose wife spun the cloth, &c., knew what to produce year by year. So did a village community; but millions of people, living hundreds of miles apart, sending their goods hundreds of miles by rail, have lost touch with, although all dependent on, one another. They now produce on the off-chance of their output being sold. If it isn't, their labour is wasted. Our farmers to-day can't sell their potatoes. They would better have been unemployed. Next year they try to be wiser, when there may actually result a shortage of potatoes. And so the game goes on. In industry, over-production of some things; under-production of others. Men thrown out of work. Unemployment. What Mr Baldwin terms over-industrialism is, in reality, insane industrialism. But what does Mr Baldwin know of production?

The orthodox economists tell us that "demand" will regulate supply. "That the quantity of commodities brought to market naturally suits the effectual demand." (Adam Smith, "Wealth of Nations," chapter 7.) Brought to market, indeed! They have to be produced long before they are brought to market. Demand does not, and never will, deliver the goods. A shortage cannot generally be made good immediately. And when it is remedied there may, perchance, result a surplus and a different shortage, under our present economic system.

Subdivision of labour necessitates the industrial organisation of a whole country. How equity and contentment are to be secured is too large a subject for this letter, but the policy of *laissez-faire*, or muddle-through, will never bring them about. The facts to which old economic theories fitted are slums, universal strife, and unemployment. These theories were always false. The application of a right theory never leads to wrong practice.

Mr Bruce Douglas, in his letter on a "Levy on Capital," says rightly that a greater output is wanted. If he desires to know how this may be realised, and what the output is to consist of, I would refer him to "The Real Wealth of Nations" (Harrap).—Yours faithfully,

J. S. HECHT,

Fellow of the Royal Economic Society.

7 Frognal, N.W. 3, December 13th, 1922.

THE COMMON SENSE OF ECONOMIC SCIENCE.*

Mr Dane has shown some audacity in the choice of a title, but his little book bears out the claim to common sense. He writes for the million rather than for the classroom, avoiding the technical terms which used to make economics so obscure; instead of beginning in the usual way with definitions and abstract propositions, he prefers to start from facts. His main theory is that the economic system depends upon free contract: "Where free contract and its enforcement are recognised there is welfare; where free contract and its enforcement are abolished, there is penury." One common fallacy is to suppose that improvement in production merely saves and displaces labour: "What it has done, in fact, and does, is to translate labour from unskilled to skilled." By abolishing merely human drudgery and by lowering the cost and adding to the variety of products, "improvement creates new wants and desires which it requires as much labour as before to satisfy." It is clear that the chief gain from the use of machinery has been secured by the working classes, because their labour has become more effective.

On several points Mr Dane rejects the commonly received theory; thus he maintains that Labour, "in the full and proper sense of the word, is invariably the employer and Capital the employed." Similarly, he denies that the rent of land is based on "surplus," pointing out that the rent paid for buildings is "exactly on all fours with the return on any other active capital"; he denies, too, the usual axiom that land is limited, pointing out that "every improvement and intensification of agriculture is equivalent to an increase in the area of land," and that improvements in transport have a similar effect. Further, he points out that land, as we understand it, is not the gift of Nature, "the gift of Nature is swamp, and prairie and wilderness." He objects to the land theories usually associated with the name of George, and maintains that neither nationalisation nor municipalisation can save us from land monopoly.

Mr Dane, of course, is a Free Trader, and his exposition of foreign trade is good: he demonstrates that a protective tariff, either for agriculture or manufacture, must cause loss; he goes so far as to predict that free exchange will some day win. His views on the relation of demand and supply lead to the cheerful conclusion that trusts and monopolies will generally break down through changes in demand, unless they improve the processes of supply.

One new theory—that wages ought to correspond with changes in the cost of living, and not with the value of the services rendered—gets short shrift from Mr Dane; he is no less hostile to another new doctrine—that taxation may be imposed to "correct" the distribution of wealth; indeed, his last chapter is a clever dissection of economic fallacies connected with taxation.

AN OPTIMIST ON POPULATION.*

This little book is a collection of articles contributed by a Professor at the University of Pavia during the past eleven years to the *Corriere della Sera*, of Milan. Some, of course, are slight and only of passing interest, but much of the matter is of permanent value. Prof. Coletti is a recognised authority on Italian emigration, and on population a thorough optimist. Malthus, he thinks, would have written differently had he been alive to-day. The Italians in 1510 numbered some 11 millions; in 1800 some 18 millions; in 1861 25 millions; in 1921—owing, it is true, partly to the suspension of emigration—40 millions, in spite of war losses and the ravages of influenza. Births decrease as civilisation increases, in Italy as everywhere else; the increase of population is due to the greater length of lives. An Italian baby in 1912 had an expectation of life longer by 12 years than if it had been born in 1877.

* *Studi sulla Popolazione Italiana in Pace e in Guerra*. Da Francesco Coletti. Bari: Gius. Laterza e Figli, 1923.

The quality of the population is improving also, and the Italian people are becoming more and more unified. The book is full of interesting sidelights on Italian life. Piedmont, we learn, has copied from France the growing habit of birth restriction; and there has been a large and unexpected increase of population since 1911 in Venetia—even in the invaded province of Belluno. As in other countries, there is a marked drain to the towns. Pellagra, once the curse of the maize-eating agricultural districts of southern Lombardy, has now almost disappeared—so much so that the characteristic eruption as shown on the feet and legs of a patient has been modelled in wax for historical purposes—and survives only in a few communes near Pavia. It has been extinguished by higher wages and better housing and food. There is an interesting account of the effect of Italian emigration (written in 1911) on the well-being of the backward Southern provinces through the remittances (some 500 million lire yearly) from the emigrants, with a concurrent decrease in mortality and in crimes of violence, an increase in average stature (a sure index of progress) in peasant independence, and peasant proprietorship, a leading factor in social stability. We have said enough to show that the book deserves attention from all students of contemporary Italian society.

PROPERTY INSURANCE.*

IN Great Britain the valuable contributions to insurance literature are almost all the work of officials in daily practice. They read papers before insurance institutes, and contribute to a publication such as the Insurance Guide and Hand-book referred to above. But in the United States, in which every State and territory has a Government Department concerned with the direct supervision of insurance, there is so wide an interest in the subject that Universities have professorial chairs of insurance, and concern themselves directly in its theoretical and practical teaching. Dr Huebner is one of these professors in the University of Pennsylvania, and his book on Property Insurance is a standard work. The new edition is revised and greatly enlarged. Insurance falls naturally into two main divisions: Personal and property. Personal insurance is that which covers human beings (life and accident); property insurance is that which secures indemnity against losses on property. In this second category, which is the one treated in this book, come fire, marine, motor car, fidelity guarantee, credit, and miscellaneous branches of insurance protection. The range is wide. Dr Huebner concerns himself mainly with practice in the United States, but his book is useful in this country. British offices transact a vast amount of property insurance on the other side of the Atlantic, and no British official can consider his education complete unless he learns at least as much about American practice as he does about that in his own island.

A SPANISH YEAR-BOOK.*

THIS valuable work, which has now reached its seventh successive year of publication, gives in its first part statistics of the area, population, production, communications, and public finance of the Spanish kingdom; the second part is a Directory of Spanish joint-stock companies, compiled under great difficulties owing to the secretiveness of their boards. However, the editor enumerates 3,795 in all, of which 170 are foreign—banking, insurance, and mining, almost all the latter being Belgian, French, or British. Of the native companies the paid-up capital exceeded 7,296 million pesetas, gas and electric power companies (the latter mostly) coming first in numbers, and only a little below the railways in paid-up capital. Some are large, many only small; both serve to indicate the wide use in Spain of electric power, of which the output has increased 51 per cent. since 1917, and will be further increased by some 220 per cent. through the works now projected or in progress. Many other interesting and some curious items of information

* *Anuario Financiero y de Sociedades Anónimas de España, 1922*. Director: D. Daniel, Ria y Periquet. (Madrid) Price to non-subscribers, 50 pesetas.

The week has seen the declaration of a good many dividends from South African mining companies, and the results are much about the same as had been expected in advance. Consequently, the Kaffir market is but little influenced by these announcements. Diamonds, however, have been good, though not holding their best levels. De Beers were somewhat ousted from their usually prominent position by the rapid rise in Rio Tintos. Mexican and Russian mining shares have leaned to the lower side, and the various tin sections scarcely moved at all. The liveliest mining shares of the week were Cam and Motor and London and Rhodesia. This pair provided an unusual amount of excitement, and, after the prices of both had spurted in remarkable manner, the end of the week found them slightly subsiding under the weight of a wave of profit-taking.

The Amblamana Tea Estates, Limited.—Authorised share capital £50,000, divided into shares of 2s each, of which 392,500 shares are now offered for subscription at par, and 107,500 shares have been issued to the vendor in part payment of purchase price. The company has been formed mainly to acquire two tea estates in Ceylon. The approximate area is 722 acres, and the properties have been independently valued at £43,333. The purchase price is £43,000, of which £32,250 is payable in cash. Crop yields are given from 1919, and no sum is payable for goodwill, but it is noticeable that past profits are omitted. The capitalisation price per acre looks rather high in our opinion.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

"QUIET AND STEADY PROGRESS."

CABLE REPORT FROM MEXICO.

ELECTRIFICATION OF MOUNTAIN SECTION.

The hundred and fifteenth ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 20th instant, at River Plate House, Finsbury circus, London, Mr Vincent W. Yorke, chairman of the company, presiding.

The secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the half-year to June 30 last had been one of quiet and steady but not very rapid progress. Their business in Mexico had proceeded without interruption, and much good work had been done in the rehabilitation of the property. The gross takings of the railway are about half a million pesos more than in the corresponding half-year, and about \$1,300,000 less than the preceding half-year. The results of the latter were abnormal, however, as they reflected the very heavy traffics involved in the clearing up of the enormous congestion of freight at Vera Cruz. The gross revenue for the half-year might, therefore, be regarded as thoroughly satisfactory.

INCREASE IN PASSENGER TRAFFIC.

Passenger traffic had been excellent, and the figures showed an increase over the corresponding period of 19 per cent., and constituted a record. They had given better facilities and offer greater comfort to the travelling public, and there had been plenty of money in the pockets of the working classes. The introduction of buffet cars had given great satisfaction, and the institution of excursion trains to the Pyramids on Sundays had proved popular. Ordinary goods traffic had increased by about 1,100,000 pesos, off-set by a decrease of over half a million in fuel oil traffic. This oil traffic, with which he was comparing, was due to very exceptional circumstances, and they did not expect it to be so big again. The net increase of over 600,000 pesos was, therefore, quite satisfactory.

The percentage of expenses to receipts showed a reduction from 85 to 79 per cent., due not so much to economies as to the fact that in the corresponding period very serious strikes added enormously to the cost of operation.

On balance net revenue showed an increase of 503,000 pesos, and the debit balance to net revenue account, which stood at £804,000 in June, 1920, had been reduced to £508,000. This is rather slow progress, but it is in the right direction.

RENEWALS AND IMPROVEMENTS.

A great deal of further work had been done to the permanent way, stations, and rolling stock during the half-year, and the effects of the large sums spent during the last two years on renewals and improvements were beginning to show themselves. The general manager believed the property to be in better order than at any time in its history. The relaying of a portion of the upper section with heavy rails was now approaching completion, and the greater part of the work on the stations had been done, with the result that they would be far better and more permanent structures than ever before. The rolling stock, in good repair, was now more than was required for the traffic offering, and though there was still a certain shortage in passenger cars, it was not seriously hindering successful operation. It seemed reasonable to hope, therefore, that the high ratio of expenses would soon show a decreasing tendency, as the cost of upkeep, now that arrears had been overtaken, ought henceforward to be very much less.

ELECTRIFICATION OF MOUNTAIN SECTION.

At the last meeting he mentioned the electrification of a portion of the mountain section. The board had now ordered electric locomotives, and arranged for the other necessary work to be put in hand. This action had really been forced upon them. Their locomotives were mostly old before the revolution, and went through a very rough time during the revolution, and their condition was such that many were becoming inordinately expensive to keep going, and were rapidly wearing out. They were advised that within the next two years they would have to spend a very large sum on new locomotives, mainly on those working the mountain section. It seemed to them that, as the expenditure had to be faced, they had better investigate the latest methods of mountain

traction. Expert advice was very definitely in favour of electrification, at any rate of the steepest part of the mountain, and the economies held out were such that, even if they were realised only to the extent of 50 per cent., the spending of the half million sterling contemplated should prove a very satisfactory investment. The first locomotives were due for delivery in October, 1923, and he did not suppose the new system would be in operation until early in 1924. Payment for the locomotives was to be extended over a period on very reasonable and satisfactory terms.

PACHUCA AND TAMPICO RAILWAY.

As to the new Pachuca and Tampico Railway, as the concession called for the early completion of a certain amount of line, instructions had been given for construction work as soon as convenient to Zimapan, about 50 kilometres from the present terminus. They were advised that the work up to this point would be comparatively inexpensive, as the country presented no natural difficulties, and they had a sufficient quantity of old rails for this length of line. Further development must await the raising of the funds necessary for construction, and though he had very great confidence in the future of the undertaking, the board would be very reluctant to ask for new money, at any rate in this country, while the present relations, or want of relations, between H.M. Government and the Republic of Mexico continued.

CURRENT HALF-YEAR.

In conclusion, he said: Turning to the working of the current half-year, it is satisfactory to be able to point out to you that, although gross traffics have fallen off very materially, we have been able to reduce expenses almost to the same extent, and the ratio of expenses to receipts is only 80 per cent. for the four months to October 31st, as compared with 79 per cent. for the same period of 1921. Unfortunately for the current half-year, the coming into force of the increase of rates, which I gave you to understand would be in July, was delayed until the first of this month, and the increase will not be fully in force until the New Year. Business conditions in Mexico, as in the rest of the world, have been unsatisfactory for the last few months, and, on the whole, we may congratulate ourselves on having earned as much money as we have. We have urged our general manager to cut down expenses in every direction possible, and he is quite alive to the importance of the matter.

LATEST REPORTS.

A cablegram just received was as follows:—"Owing to financial depression and recent bank failure, business prospects for next six months are poor, and will be reflected in our earnings from import traffic; local traffic is keeping up well and improving every day. Crop prospects on our line were never better, all available land is under plough. Political conditions are slowly improving, and nothing but small parties of bandits causing some trouble. Labour is somewhat unsettled, but not unreasonable."

They were doing all they could to get rid of debt to the debenture-holders in respect of overdue interest, and on January 1st would have paid off 20 per cent. of what was owing to the holders of registered stock issue "A" within 12 months. There were many directions in which the business could be developed, but fresh money would be needed for such development, and the sooner, therefore, their credit was re-established the better.

CORDIAL RELATIONS WITH GOVERNMENT.

I am glad to be able to say that the Government of General Obregon has not, in my judgment, in any way weakened during the last six months; in fact, if anything, it appears to me to have improved its position. The disorders in the country, which are occasionally reported, are both trifling and insignificant, and our own business has worked without unpleasant incidents of any kind. As regards their attitude towards the Mexican Railway, I think it only just to say that since they came into power two and a-half years ago they have treated us with studied fairness and courtesy, and this in spite of the fact that we are running in competition with their own business, the National Railways.

Mr Henry Goschen seconded the motion, which was unanimously adopted, and the proceedings concluded with a vote of thanks to the chairman and directors, the general manager, and the staff.

LONDON AND RIVER PLATE BANK, LIMITED.

RESULTS OF DIFFICULT YEAR'S TRADE.

TRADE CONDITIONS IN BRAZIL, CHILE, AND ARGENTINE.

The sixtieth ordinary meeting of the London and River Plate Bank, Limited, was held, on the 19th instant, at 7 Princes street, London, Mr J. W. Beaumont Pease (the chairman) presiding.

The secretary (Mr George E. Smith) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that since the last meeting the banking world had lost a very distinguished banker by the death of their esteemed colleague, Sir Richard Vassar-Smith.

TRIBUTE TO SIR RICHARD VASSAR-SMITH.

It was impossible to speak in adequate terms of the position which Sir Richard had won for himself, not only in the respectful judgment, but also in the hearts, of all those with whom he came into contact. He had a wide and long experience of men and affairs, and to all banking and other councils he brought the ripe wisdom resulting therefrom, combined with the invariably sympathetic outlook inherent in his personal character. In every sense and from every aspect his influence was always for good. Of his departure from their midst they could say not only that they had lost a very great banker, but that, in the words spoken of another whose lines were laid in the more venturesome places of the ice-bound territory far south of South America, "There went out a very great gentleman." He was largely responsible for the negotiations which led up to the acquisition of this bank by Lloyds Bank, and their most fitting tribute to his memory would be to see that this great banking machinery was not allowed to rust by not being fully employed. The close association between Lloyds and the London and River Plate Bank had been emphasised this year by the fact that they now shared a common chairman, and the utility of this intimacy was recently shown in the way they successfully made an issue of £1,000,000 of debentures for some of their South American friends with the co-operation and assistance of Lloyds Bank.

BALANCE-SHEET ITEMS.

Dealing with the items appearing in the balance-sheet, the Chairman said that the depreciation in the capital employed abroad was more than covered by the carry forward and other funds of the bank. Current accounts and deposits standing at £26,950,351 showed an apparent decrease of £3,051,417. As a matter of fact, the total of the current accounts and deposits as expressed in foreign currencies was almost identical with that of the previous year, but owing to the fall in the rates of exchange of the different countries the amount of sterling into which, for the purpose of the balance-sheet, they were converted appeared less. If they had been converted at the same rates as were applied in the balance-sheet of 1921 their sterling equivalent would have been £29,913,001, a decrease of only £88,000 odd. Profit and loss account standing at £302,592 showed a decrease of £297,332. He did not know whether any of the shareholders were disappointed at this reduction. Those who had followed the trend of business in South America during last year, and had seen the reports of other banks operating in these countries, must have been prepared to see considerably lower figures. If they had been so minded, the directors might legitimately have shown a larger total of profits, but they preferred to err on the safe side, and in a year of bad trade and many failures they had provided liberally for any possible losses. Cash on hand at bankers and branches showed an apparent decrease of £2,769,089, but as a large proportion of this total was in foreign currencies, converted into sterling at lower rates than last year's figure, the comparison was misleading. This year's total of cash, if converted at last year's rates, would appear as £12,620,000, a decrease of a little over £1,000,000.

CONDITIONS IN BRAZIL.

The Chairman then referred briefly to the conditions ruling in the principal countries in which the bank operates. In Brazil, he said, the adverse balance of trade reported on August 31st last year as £10,343,000 had this year been converted into a surplus of exports over imports amounting at August 31st last to £11,935,000—a difference in favour of the country of no less than £22,278,000 in eight months. Despite this circumstance, exchange continued on its downward track, and at one time fell below 6d. Some slight recovery had recently taken place, and to-day the rate was quoted at 6½d. It was not easy to say to what this improvement was actually due, but there was no doubt that the frank *exposé* by the recently-elected President of the Republic of Brazil's financial position, the publication of the programme of economy which he had

set himself to carry out, and the removal of vexatious and unproductive fiscal measures had all contributed to this. Brazil's external debt was now very heavy, and the amount of the fiduciary circulation equally so, the latter amounting to no less than 2,226 contos, as against 621 contos in 1910. This enormous increase was not felt during the war, due to the fact that the cheque system was not generally in vogue in Brazil, and that paper money being, therefore, the main circulating medium, in a country larger than Europe, it was found that heavy and constant shipments of actual currency were required in order to finance successfully the export trade of the country at prices infinitely higher than those ever known in its history. But, with the reapse in the value of her exports and curtailed demand, an adverse balance of trade came about, and the inflation of the fiduciary issue had its inevitable effect upon exchange. The measures now advocated by the President of the Republic, namely, the suspension of public works for a period of two years, the cessation of supplementary credits, the establishment of a special fund in London, and the general practice of rigid economy would, when carried into effect, no doubt relieve the Brazilian Government in the heavy burden which they had to bear—at great sacrifice, through the depreciation of the milreis—in effecting the remittances necessary for the services of their foreign debt. A stable financial position would induce the import of foreign capital for permanent investment in agriculture and mining, and would promote further immigration, which was greatly needed.

POSITION IN ARGENTINE.

As regards the Argentine, the President's message emphasised the fact that Argentina's chief needs to-day were peace, both at home and abroad, and rational development of local industries, with a view to improving the balance of trade. The floating debt of the Republic stood at July 31st at \$628,800,000, which would probably be increased at the end of this year, since the Budget would show a deficit. From a telegram received on December 16th, it was estimated, on a very conservative basis, that the surplus available for export of wheat would amount to 3,000,000 tons, of linseed 1,200,000 tons, and of oats 650,000 tons, which compared very favourably with last year's figures; and while it was too early to say that a bumper harvest was assured, the outlook would be hard to improve upon. The prospects for maize and sugar cane were also very good. The employment of funds in the Argentine throughout the year under review had been difficult, and the margin generally less remunerative than in previous years, which was, however, more or less the position in all countries, owing to trade depression and the reduced purchasing power of the respective currencies. It was satisfactory to be able to point to the steady recovery in exchange, which had now risen to 44½. Deposits in the banks, which at September 30, 1916, amounted to \$1,505,814,000, reached the sum of \$3,244,436,000 at the corresponding date this year, whilst cash held rose from \$645,423,000 to \$971,278,000. Paper money in circulation at the dates above mentioned amounted to \$1,013,000,000 and \$1,362,563,000 respectively, from which it would be seen that practically the whole of the increase in the currency circulation had remained in the coffers of the banks. Last year he referred at some length to the position of the Argentine railways, in which there was a vast amount of British capital invested. Negotiations between the railways and the Government were completed during the year, and, as a consequence, judging by the market quotations and information received, the capital to which he referred appeared to be reaching a more satisfactory basis. This, they felt, was very important, because they appreciated how closely the prosperity of the Argentine was wrapped up with its transport system, and they knew that further British capital in any volume for future developments could only be supplied through the good credit and stability of the existing Anglo-Argentine railway companies, which had been the fount of so much enterprise, energy, and capital in the past.

PROSPECTS IN BRAZIL.

Trade in Chile, though still unsatisfactory, had shown some signs of improvement. Business generally in imported goods had been on a reduced scale, but there would be more activity in that department were it not for the low rate of exchange, which militated so much against imports by increasing their currency costs. There was, nevertheless, an expansion in the volume of shipments to Chile during recent months, and its continuance would depend very much on the all-important nitrate trade, the influence of which was felt throughout the whole of the country.

NITRATE POSITION.

The uncertainties concerning nitrate prospects had been to some extent removed, chiefly owing to the fixing by the Nitrate Association of very moderate prices, and to the liquidation of the pool. Hopes were somewhat confidently expressed that the total shipments for the current nitrate year would exceed 1,500,000 tons. The United States of America had been a large buyer, and a fair demand had also been experienced from various other quarters. Sulphate of ammonia, the great competitor, was scarce and dear, and were it not for the unstable exchanges in some Continental countries, notably in Germany, this year's shipments and consumption of nitrate of soda would undoubtedly greatly exceed the above estimate. The problem lay in finding the price that would stimulate consumption, and at the same time leave a fair margin of profit to the producer. Proof that there was little margin in the present prices lay in the fact that only 49 oficinas were working out of a total of 149.

The bank's branch at Bogota, in Colombia, continued to make satisfactory progress, and good results were anticipated from the branches recently opened at Medellin and Manizales. The economic instability of Portugal was due in great measure to the want of political continuity. The frequent changes of Government greatly prejudiced the establishment and execution of a sound financial programme. Although he had shown some indications, perhaps, of improvement, the general situation was still full of difficulties, and no improvement could be complete without the recovery of some of the markets which had been partially lost since the war. He had referred already to one or two illustrations of the way in which Latin-American countries had been handicapped in this respect by being unable to export their goods to Germany and Austria. The extreme complications and difficulties of the situation were common knowledge. They could only hope that, as a result of the deliberations of the great Powers, with the help of the best brains available on the subject, some amelioration of the present difficulties might be discovered.

Mr Herman B. Sim seconded the resolution, which was carried unanimously.

A dividend of 4 per cent., less income-tax, was declared for the half-year ended September 30th last, payable on the 22nd inst., and the retiring directors and auditors were re-elected.

The best thanks of the meeting were given to the managers and staffs of the respective establishments for the zeal and ability displayed in conducting the bank's affairs.

THE NATIONAL BANK OF SCOTLAND, LIMITED.

The annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 20th inst., at the bank's head office in Edinburgh.

His Grace, the Duke of Montrose, K.T., governor of the bank, presided.

In moving the adoption of the report, as published, his Grace said: Your directors have had a difficult year, but I am pleased to be in the position to submit to you a satisfactory report, looking to the conditions that have existed. You will observe from the balance-sheet that the bank's paid-up capital, £1,100,000, remains the same as it was last year, but the position has been strengthened by the application from profits of £100,000 to the reserve fund, which now exceeds the capital to this extent.

Coming to the profit and loss account, there is a net profit of £291,063—an increase of £5,600 over the previous year. You will note there is a gross profit of £696,809, an increase of £15,355. Management charges, however, have again been heavy—the amount being £405,746, an increase of £10,000 during the year, and of £237,000 compared with 1914. A bonus included in this amount was paid to the staff in December last. Income-tax is a heavy charge, showing a large increase compared with the year 1912. While the profits show a slight increase, your directors did not feel warranted in making any increase on the dividend, and after providing for a dividend of 16 per cent., less income-tax, the same as in the past seven years, they were in a position to make appropriations to the property account, pension fund, and annuity fund, in addition to £100,000 placed to the credit of the bank's reserve fund. The bank's annuity fund, to which £15,000 has again been allocated, has had at all times the sympathetic consideration of the directors, and they are pleased to note that the committee of the fund, helped by the bank's contributions from profits, is now in a position to increase the annuity to widows from £60 to £100 per annum. The capital of the fund, inclusive of the aforementioned £15,000, stands at £244,000. The colonial and foreign department of the bank shows steady progress, and is found very serviceable to the customers, especially in these difficult times of fluctuating exchanges. As regards the work of the bank, the staff have again given every satisfaction, and the directors appreciate the special interest which so many of them take in their work and in the bank's affairs.

His Grace then moved that the report, as printed, be adopted, and this was seconded by Mr. Charles Ker, C.A., and agreed to. The dividend of 16 per cent. will be paid in equal parts on January 9th and July 10th next.

WESTERN AUSTRALIAN BANK.

The one hundred and sixty-second half-yearly meeting of shareholders of the Western Australian Bank was held on Wednesday, November 1st, at the Banking House, St George's terrace, Perth, W.A., Sir E. H. Wittenoom, chairman of directors, presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said that the directors were again able to declare the usual dividend, and in addition to carry forward the substantial sum of £21,099, an amount almost sufficient for a similar dividend. The net profits were £30,276, almost the same as September, 1921, and £1,793 less than in March last. The amount of £21,099 carried forward was £12,653 less than in September, 1921, and £5,277 more than March, 1922, but it had to be remembered that in March last an amount of £25,000 was transferred to the reserve fund. The deposits amounted to £3,146,346, being £36,703 more than in September, 1921, and £180,326 less than in March last, a reasonable fluctuation on such a large sum, and the figures indicated the continued popularity of the bank and confidence of the public. Advances totalled £3,233,741, showing an increase of £48,000 as compared with the previous September, and £70,147 on the figures for March. "Specie, bullion, and Australian notes on hand," at £563,031, was £54,847 less than for the previous September, and £254,619 less than March last. It was a disadvantage to have too large a sum lying idle. Taken altogether, the figures might be considered satisfactory.

The number of lambs would be much less than usual, and it was feared that some of the old sheep would be lost. Fortunately, a good clip of wool had been secured, and a large quantity had been sold last Monday at excellent prices. Indeed, it was a gratifying sight to see the splendid samples of some 20,000 bales exhibited by the agents at Fremantle. Unless rain fell in the early summer, fat meat must become scarce after February or March. Agriculturists had also suffered in the northern areas for want of rain, and from those parts the yield would be below the average.

The motion for the adoption of the report and balance-sheet was adopted.

SULPHIDE CORPORATION, LIMITED.

FINANCIAL POSITION OF EXCEPTIONAL STRENGTH.

The twenty-sixth annual ordinary general meeting of the Sulphide Corporation, Limited, was held, on the 21st instant, at Winchester House, Old Broad street, London, the Rt. Hon. the Earl of Kintore, G.C.M.G., presiding.

The secretary (Mr C. R. Fisher) having read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said, in the course of his speech: When we met here last year I ventured to predict that the financial year then current would prove more satisfactory to us than its predecessor had been, and to-day I am glad to be able to congratulate you upon the fact that this prediction has been verified. Circumstances have not allowed us to achieve any such brilliant result as we have sometimes done in the past, but a sufficient profit has been made to enable us to bring the dividend on our preference shares up to the full 10 per cent. to which they are preferentially entitled, and at the same time to resume the payment of dividend on our ordinary shares, although as yet only on the modest scale of 5 per cent. We have had a year's work at Broken Hill uninterrupted by strikes or other untoward happenings, and although the disabilities created by the Edmunds Award, of which I spoke at length last year, have continued, our output has been somewhat larger than at first seemed probable, while the average prices of lead and silver have been maintained at a level which has enabled us to make profits, at any rate, higher than those of the two previous years.

NECESSITY FOR MODIFICATION OF THE AWARD.

I mention these facts as a cure for undue pessimism, but what I said last year about the gravity of the position created by the Edmunds Award, and the dependence of the Broken Hill industry, while that award holds good, upon the maintenance of relatively high prices for lead and silver, still remains true.

Fortunately, during the past year the prices of these metals have been well maintained, but some modifications of the award, in order to meet the event of a fall in prices, and to place the industry upon a sounder basis, is so obviously desirable that I have good hopes that before long its terms will be reviewed, and a more elastic scale arrived at. This will require to be sufficiently favourable to the mine workers on the Broken Hill field to attract the full supply of efficient labour which is indispensable.

ORE PRODUCTION.

Our total production of crude ore from the Central Mine last year was 120,603 tons. This compares with a production of 62,419 tons during the seven working months of the preceding year, in which owing to the late strike the first five months were unproductive. Whether owing to the increased wages and reduced hours conceded by the Edmunds award or to a sort of strike weariness consequent on the orgy of strikes in which Broken Hill has indulged itself for several years past, it has been an outstanding feature of the past year that there have been no stoppages due to industrial disputes. To find a year similarly uninterrupted we have to go back as far as 1915, when our output of crude ore was slightly over 200,000 tons.

With regard to costs, I spoke at some length last year, pointing out how under the combined influence of reduced tonnage, higher wages, and dearer materials these had risen from about £7 a ton of lead concentrates in 1916 to £12 9s 5d in 1921. In the past year there has been a slight reduction, our lead concentrates having cost us £11 15s 10d.

TREATMENT PLANT.

As regards our treatment plant at the mine, the efforts of our technical staff have been continuously directed to further reducing the lead and silver in our zinc concentrates, where they are practically valueless, and transferring them to the lead concentrates, where they have their full value. I spoke last year of the progress that had been made in this direction, and I am glad to say that it has continued during the past year, and is still continuing, with considerable benefit to both classes of our concentrates. Finality, of course, is never reached in the improvement of methods of treatment, but so far as our present methods go, the work is now so good that I do not think we can expect much further advance in recovery or segregation, except as to the slime zinc concentrates, from which as the result of much experimental work more lead and silver is now being successfully transferred.

HEALTH CONDITIONS.

There are two other matters which I desire to mention. The first of these is that the Technical Commission of Inquiry into the health conditions of Broken Hill, which was appointed by the New South Wales Government, has now made its report, after personal investigation, of the condition of over 8,000 mine workers. All the recommendations of this commission have been complied with by the mining companies, and the conclusion the commission arrives at is that under these conditions "mining can be carried out without danger to mine workers." The completion of the work of the commission and the generally satisfactory report they have made on health conditions at Broken Hill is of much importance as disposing of the exaggerated statements made by the unions regarding the effect on health of work in the Broken Hill Mines, and it clears the ground for a review of the Edmunds Award at no distant date.

EXTENSION OF MINERAL LEASES.

The other matter on which I have to remark is the extension of our mineral leases for a further period of twenty years from the date of the expiry of the present leases. In our case, the principal lease expires in 1924, and although we have always been confident that renewal would be granted, it is certainly a cause of satisfaction to all the companies concerned that such a vital question should have been put beyond doubt and the actual renewals obtained well in advance of the conclusion of the existing leases, and the terms of renewal are, I think, reasonable.

COCKLE CREEK SMELTING WORKS—CEMENT.

With regard to our Cockle Creek smelting works, the past year has been one of great changes. In the past our smelting

works and the refinery connected with them have been of the utmost value to us. During the war they paid for themselves many times over, and we have nothing to regret with regard to our policy in having made them as complete and efficient as possible. Nor have we anything to complain of with regard to the way in which our operations have been conducted.

In our search for new industries that can be profitably established at Cockle Creek, it may be of interest to you to know that we are now closely investigating the possibility of cement making on a large scale for which the position of our works and the existence of shale upon our leases give advantages. I cannot at present say what decision will ultimately be arrived at as a result of these investigations, which are not yet fully completed, but I mention the matter to show you that we are fully alive to the importance of exploring all avenues for the profitable employment of our works and staff.

As regards our English zinc works at Seaton Carew, no work at all was possible during the first half of the past year owing to the coal strike, but in the second half-year we were able to run on a four furnace basis, which enabled us to produce about 1,000 tons of spelter from our distilling furnace. Naturally, therefore, the year was not a profitable one, although owing to a satisfactory sale of accumulated residues we were able to avoid loss and have something on the right side of the ledger. In the current year we have been gradually increasing our output, treating zinc concentrates sold to us on satisfactory terms by the Board of Trade, and I anticipate that with the assistance of the acid works, formerly the property of the Central Acid Company, which have now been merged in the zinc works, there is a prospect of our obtaining a satisfactory return.

FINANCIAL POSITION.

The Chairman then dealt in detail with various items in the balance-sheet, and proceeding, said:—Our general financial position, as disclosed by this balance-sheet, is, I am sure you will agree, one of which any company might be proud. Under the category of what we may call cash assets, we have in the items of "Cash," "Investments," and "Products in Transit," a total of £594,116 this year as compared with £370,941 last year, and if we add to this the items of "Products in Hand," "Purchased Ore," and "Stores in Hand," all of which may be classed as liquid, we have a total this year of £950,039. If from this total we deduct £231,955, being the excess of "Sundry Creditors" over "Sundry Debtors," there remains a sum of £718,084, representing our balance-sheet surplus of liquid assets over all our liabilities on June 30 last. To-day our position is even stronger, our investments having been increased since June 30 by £25,000, and our cash at bankers and on deposit by £161,000. Our position, therefore, it is clear, is now one of very exceptional strength.

WORKING ACCOUNT.

With regard to the working account, which follows the balance-sheet, there is no need for me to take up your time by going into details, but you will notice that the total profit shown in the account this year is £103,245, as compared with only £2,479 in the previous year. In that year the mine left a considerable loss, as we had only seven months' work, and the expenses during the strike months, added to the cost of restarting after eighteen months' suspension, exceeded the earnings. In the past year we have been more fortunate, and in the year now current we have good reason to hope that we shall be able to show a very material further increase over the figures of the present account. The balance of £103,245 from this account is carried down, as usual, to the credit of profit and loss account, and the various debits and credits which appear in that account reduce it to the £82,832 which we show as

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

our final net profit for the year. As to the prospects for the current year, it is perhaps rash for a chairman to leave the safe grounds of ascertained figures and to venture upon the perilous sphere of prophecy. We have, however, practically half of our current financial year already behind us, and we can confidently say that if the results of the second half-year are equally satisfactory we shall show next year considerably higher profits than we have been able to show this year, and you, I hope, will also receive substantially higher dividends. Of course, everything depends on the maintenance of satisfactory prices for lead and silver.

The report and accounts were adopted.

LONDON AND RHODESIAN MINING AND LAND COMPANY, LIMITED.

IMPROVED POSITION—FAVOURABLE PROSPECTS.

The ordinary general meeting of the London and Rhodesian Mining and Land Company, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Mr. Leonard E. B. Homan (chairman of the company) presiding.

The secretary (Mr. R. Roy Meldrum) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said the revenue showed a considerable improvement, being £24,285, as compared with £15,479. The mining revenue being an improvement, amounting to £526, as compared with £86. The total expenses amounted to £13,624, but he would take that opportunity of drawing attention to the fact that, as against an expenditure of this amount, they had brought into their coffers a revenue of £15,232. In other words, they were able, by their organisation, as now developed, not only to run the company without any expense to the shareholders, but to make a profit of very nearly £3,000 a year in doing so. This meant that every penny of profit resulting from dividends and interests received, share transactions, mining revenue, farms revenue, &c., was available as net profit. The result of the year's operations was that they made a profit of £9,251, as compared with a loss for the previous year of £7,933.

COMPANY'S SHARE INTERESTS.

Dealing with the company's share interests, the Chairman said that the meeting of Farm Lands of Rhodesia, Limited, was held on the 15th inst., and he would not reiterate the statements he then made, but he felt he must point out that this asset had potential values. In Town Properties of Bulawayo (South Africa), Limited, they held 74,608 shares, and they could look for dividends of 7½ per cent., and possibly 10 per cent.

In Cam and Motor Gold Mining Company they had over 150,000 shares, which they intended to hold for dividend. The Chairman, having read the cabled reports received, continued:

This brought the position up to December 15th, and it was extremely satisfactory. They must congratulate themselves on being interested in a property with such marvellous possibilities. The forecast of a dividend in July next, which he made at the Cam and Motor meeting, would be realised, and would be of the greatest importance to their current year's accounts, with great possibilities for the future.

Among other interests dealt with by the Chairman was the Sabiwa mine, which he said was the most attractive of their mining interests. They had now become sole owners of this mine, and were bringing it to a producing stage. It was being rapidly equipped with up-to-date machinery, and should start producing early in 1923.

They had a valuable tract of country known as the Glass Block ranch, which they acquired through the merger with Rhodesia, Limited. He inspected the property on his visit to Rhodesia, and formed a high opinion of its present value as also of its future prospects. The ranch consisted of 147,244 acres, and the Umsingwana River ran right through the estate.

Outside their ranching areas they had isolated farms which were suitable for settlers. To-day their advisers rated the value of Glass Block ranch even higher than the Transau-Clare estate, which was the most advanced ranching area of the Farm Lands of Rhodesia, Limited, in which they were so largely interested.

INTERESTS IN ALLIED COMPANIES.

In conclusion, the Chairman said that their shares in allied and other companies were valued at June 30th by a first-class firm of brokers at £235,000. This to-day represented the value of the Cam and Motor shares alone, and he must leave shareholders to put a value upon the rest, but it was interesting to note that at the previous night's closing prices their investments would stand at over £400,000, as compared with the £255,084 mentioned in the balance-sheet.

He would like to say a few words to the many shareholders who had come on their register through the merging of the Enterprise Gold Mining and Estates Company, Limited, the Giant Mines of

Rhodesia, Limited, and Rhodesia, Limited. He thought that whatever the latter thought they had lost had been fully made up to them by the acquisition of an interest in the Cam and Motor Company, and, further, their action in bringing about the mergers had been fully justified by a saving in the cost of management and the acquisition of a real live asset in the personnel of the staff. Without such action both the Giant and Enterprise companies would long ere this have been in liquidation, with a very small distribution to their shareholders. Unity had made for strength.

Their best thanks were due to Mr. Burnett, their general manager and consulting engineer in Rhodesia, to Mr. Meldrum, their indefatigable secretary on this side, and to every member of their staff in South Africa and at Palmerston House, who had all done their best to make a success of the company. The limits of their prosperity were by no means reached, and, having fairly turned the corner, they would show a greatly improved report and accounts for the current year.

The resolution was carried unanimously.

HARRODS (BUENOS AIRES), LIMITED. RESULTS OF DIFFICULT YEAR.

The ninth annual general meeting of Harrods (Buenos Aires), Limited, was held, on the 18th instant, at Harrods, Limited, Brompton Road, London, Sir Woodman Burbidge, Bart., C.B.E., chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that when addressing the shareholders last year he expressed the hope that they had seen the worst in Argentina. The past year, however, had proved an exceedingly difficult one, and had resulted very unsatisfactorily, inasmuch as for the first time in the history of the company the board had to record a substantial reduction in their sales for the year. Notwithstanding all the efforts which had been made to maintain trade, and the very close and unremitting attention that had been paid throughout the year to every branch of the company's affairs—though a trading profit of £44,000 was shown—the net result was a loss of £52,000. They would have paid their way but for the loss on exchange of £21,000 made on remittances home, and the very large sum of £40,000, which had to be provided for income-tax and corporation profits tax. Unhappily, Argentina had been suffering from a period of severe commercial depression, which had not yet passed, and which might be attributed to the heavy fall in prices of all its products, and to the disturbed trading conditions throughout Europe. Owing to reduced spending power there had been a shrinkage in demand, particularly for articles that might be classified as luxuries. The past year had seen the completion of their premises in Buenos Aires adjoining their main block of buildings, and these now comprised a total of about 9½ acres of floor space, in which there were fifty-eight departments in all. The work was all finished in April, but because of the prevailing conditions they had not as yet derived any direct benefit from these additional premises. Their stocks had been reduced during the year by the very substantial figure of over £330,000 sterling. They now represented about a minimum working level below which it might be impossible to go. In spite of the increased area of the premises to be maintained and the new departments opened, the total working expenses for the year had been reduced, as compared with the previous year, by £56,000, but, on the other hand, the extra cost of insurance, local taxation, water, and lighting represented an additional £13,000, thus showing a saving of about £43,000. The conditions under which they had been trading and the difficulties with which they had had to contend were not peculiar to themselves, but were more or less prevalent throughout South America.

SOUTH AMERICAN STORES AND CHILIAN STORES.

In regard to their associated companies, the South American Stores (Gath and Chaves), Limited, for the first time in their history showed a loss amounting to £123,000. Though the trading profit was £153,406, which under last year's conditions was a fair result, from that sum had to be deducted £171,200 for the services of the debentures, and £101,000 for income-tax. They were greatly handicapped by the heavy burden of taxation, which was hindering the progress of British industry. For the previous year a profit of £264,854 was shown, which, after payment of all charges, left a distributable balance of profit for the year amounting to £44,226. An examination of their departmental sales showed that the same causes had operated as with Harrods (Buenos Aires), resulting in a reduction in the number of their individual transactions and in the amount of their sales.

The Chilean Stores (Gath and Chaves), Limited, operated in Santiago, where they possessed fine modern premises in the centre of the city. The Chilean Stores showed diminished sales, which rendered nugatory the great reduction in expenses which they had made, and the year showed a loss of £86,000, compared with a

loss of £101,000 for the previous year. This was entirely attributable to the accentuation during the year of the commercial depression which developed in the previous financial year, and to the heavy fall in exchange which followed upon the stagnation of the nitrate industry. Their results were also affected by the competition of wholesalers and importers who threw their stocks on the market almost regardless of cost. Another long-established business in which they were interested, the high-class furnishing house of Thompson Meubles, Limited, whose premises adjoined their own in Florida, Buenos Aires, did not pay a dividend for the year 1921, and for the current year their prospects did not warrant them in anticipating a dividend. Their position was due entirely to the general state of Argentine trade.

THE FUTURE.

In conclusion, the Chairman said he would like to speak with the same degree of confidence concerning the immediate future, as he felt regarding the ultimate position of Harrods (Buenos Aires). Their sales had commenced to improve slightly in the current year, and they were serving more customers than last year, but they had not recovered the lost ground. Though they had made some recovery, their progress was slow, but they should experience a quicker rate of progress because of the new departments. He felt they must wait until they could see more distinct signs of improvement in the general trade of the country, and that was not expected until about June or July of next year. He felt confident, however, that Argentina would be among the first countries to show a real recovery from the crisis.

Sir H. K. Newton, Bart., seconded the resolution, which was carried after some discussion.

NESTLE AND ANGLO-SWISS CONDENSED MILK COMPANY, CHAM AND VEVEY.

REDUCTION OF ORDINARY CAPITAL. ADVANTAGES OF THE PROPOSAL.

At the extraordinary general meeting of shareholders of the above company, held at Cham, on December 16, 1922, the resolutions for the reduction of the ordinary capital from 160,000,000 of 80,000,000 of francs by reducing the nominal value of each ordinary share from 400f to 200f were duly passed, and the necessary alterations in the company's articles of association following thereon were agreed to.

The Chairman referred to the last ordinary general meeting and to the balance-sheet at December 31, 1921, which closed with a loss of 81,700,000f, made up as follows:—30,800,000f loss on exchange, and 50,900,000f debit balance of profit and loss account.

The Chairman then proceeded to point out that the directors had succeeded, since the commencement of the year, in reducing the stocks until they were down to a level which they considered sufficiently low, and that a decrease of stock from 100,800,000f to 69,700,000f, effected in the short space of nine months, represented a considerable effort, and could only be reached by means of certain sacrifices. The sale prices of condensed milk had followed a downward path, but though costs of manufacture have followed the same tendency, the effect had not been felt in full, as production had to be restrained in order not to interfere with the reduction of stock. The fact that the sales were comprised principally of products in stock prevented the company benefiting by the lower costs of fresh manufacture to the full extent, and this factor has unfavourably influenced the result for the year.

CURRENT YEAR.

While the board were not in a position to give any exact indication of the result expected for 1922, they were of opinion that the year will close with a small credit balance, and the sales figures, estimated at the commencement of the year, had been maintained, and though they showed a decrease of 22 per cent. on 1921, they were still 50 per cent. above the sales of the pre-war period.

After explaining the heavy reductions made in the amounts due to bankers and creditors, the Chairman referred to the fact that in all their undertakings the company had received from their Swiss and foreign bankers valuable support and evidence of their confidence.

The Chairman then referred to the steps taken in the direction of the internal reorganisation of the business and the economies which had been effected, and said that special attention had been devoted to the company's interests in Australia and North America, and that the American enterprise had been visited by Messrs. Dapples and Page with a view to carrying out reductions in expenses and reorganisation of production there.

ADVANTAGES OF THE REDUCTION.

The Chairman then referred to the proposals for the reduction of ordinary share capital from 160,000,000f to 80,000,000f as at the date of the opening balance-sheet for the year 1922 by the

reduction of the nominal value of the ordinary shares from 400f to 200f, and showed that by this sacrifice the company would be in a position to write off entirely the loss in exchange and to reduce the debit balance of profit and loss account to an amount of about 1,700,000f, which will fall to be disposed of in the year 1922. He pointed out that the preference shares would be in no way affected by this reorganisation, either as regards the nominal value or any of their rights, and that unpaid cumulative preference dividends constitute a charge against the profits.

The Chairman stated that from the results of 1923—when ascertained—there would, first, have to be set aside the amount of the preference dividends in arrear, before any distribution could be made to the ordinary shareholders, and after the declaration of these arrears of dividend the company would have to constitute afresh their reserves to a certain extent, and any balance would eventually become available for the ordinary shareholders as dividend.

COMPANY'S CREDITORS.

Reference was made to the position of the creditors of the company. It was stated that the bankers had agreed to the proposed method of procedure, and that the other creditors only consisted of a large number of small debts at short date, and that since the establishment of the balance-sheet of 1921 they had been reimbursed and replaced partly by others, and the company was paying each debt at its due date, and no difficulty was expected from this quarter. There remained then only the creditors by obligations, which figured at a total of 105,500,000f.

The Chairman dwelt on and explained the legal necessity for submitting the resolutions concerning the reduction of capital to a meeting of the company's obligation holders, which was, he said, to be held on December 18, 1922.

The Chairman, in conclusion, stated: I arrive at the conclusion of my report, in which I have to express the opinion of our council that the transitory period between the abnormal state of our business in consequence of the war on the one hand and a normal market for our undertaking on the other seems to be at an end. We shall commence the year 1923 with a moderate stock of manufactured goods, which will enable us to benefit by the normal profit from the production and sale of our products. We foresee considerable economies in interest, consequent upon the reduction of our bank loans, and in working expenses, which permit us to foresee for the year 1923 a satisfactory realisation of profit. For these reasons we are anxious to close the present year with a clear balance-sheet. We propose to you to substitute for paragraphs 1 and 2, Article 5, of the statutes the following:—"The issued capital of the company is 125,000,000f, viz. (a) 80 millions of francs, divided into 400,000 fully-paid ordinary shares of 200f to bearer"; and that in Article 16 of the statutes the words "of 400 francs" be deleted. We commend to you the adoption of this proposition in the interests of our company.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

REVIEW OF COMPANY'S INTERESTS.

GOLD MINES—REDUCTION IN WORKING COSTS.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The annual meeting of the Johannesburg Consolidated Investment Company, Limited, was held in Johannesburg on November 21st.

The Chairman (Mr. John Munro), in moving the adoption of the report and accounts, said: Owing to the prolonged strike which commenced in January of this year, your company suffered a severe loss in its revenue from the mining companies, but in spite of this your directors were gratified to find they were able to declare a dividend of 7½ per cent., free of tax, payable to shareholders registered in the books of the company on June 30th last, and to leave a substantial balance to be carried forward to next account. I would first direct your attention briefly to the satisfactory financial position disclosed in the balance-sheet. The book value of your assets at the close of the financial year was £5,872,293. The total liabilities to the public amounted to £1,213,891, leaving a surplus of assets over liabilities of £4,658,402, after provision had been made for the payment of the dividend of 7½ per cent., which amounted to £296,250. He then reviewed in detail the assets and liabilities of the company, and referring to the investments in stocks and shares, £3,930,960, said: The book value of these is £15,311 greater than a year ago. This does not represent the full cost of purchases during the year, which amounted to a considerably larger sum, but is the difference between the purchases and the amount received from sales during the financial year, plus depreciation of your holdings based on their market value at June 30th. As in previous years, no account whatever is

taken in your books of the large appreciation in those shareholdings of which the book value at June 30th is below their market price.

ENEMY SHARES.

In May last the shares held by the Custodian of Enemy Property in the various companies of this group were purchased by your company. Our shares were never largely held in foreign countries, and consequently the numbers purchased were much smaller than in the case of some of the other groups.

After giving particulars of other items—mining properties, including advances to mining companies, £282,388, loans to South African companies, £342,869, &c., the Chairman, referring to the company's real estate and buildings, £407,150, said: These comprise Johannesburg properties, £267,600; Johannesburg suburban estates, £32,270; and other properties in South Africa and London, £107,280. There is a decrease of £13,881 as compared with the previous year, representing the book value of ground sold, and of one town property disposed of, together with the annual redemption of ground rents.

The Municipal Council valuation of your Johannesburg properties and suburban estates is £466,480, reflecting a surplus of £166,610 over their book value.

Loans on mortgage and real estate, £158,864.—The decrease of £2,162 shown in your loans on mortgage and real estate represents the difference between loans paid off or reduced and new loans granted during the year, and calls for no comment.

YEAR'S PROFITS.

Turning to the profit and loss account, he said the realised profit for the year amounted to £305,781, which must be regarded as satisfactory in view of the fact that for a considerable portion of the financial year the business machinery of the community was practically out of commission. Our working expenses, amounting to £31,790, were somewhat less than the previous year, leaving a balance of £273,991 to be carried to the appropriation account. This, with the amount brought forward from last year, gives an available total of £458,402, out of which a distribution of 7½ per cent. was made to shareholders, the balance of £162,152 being carried forward to the current year.

GOLD MINES.

I propose dealing now with some of the more important interests of your company, and shall begin with the gold-mining companies under its control. As already mentioned, the gold mines suffered very severely owing to the strike, which, commencing on January 10th, developed into a revolution, which was not finally suppressed until March 17th.

Although operations were resumed immediately after that date, it naturally took some time to get the mines going on a normal scale.

The actual total loss sustained by the mines of the group for the first quarter of this year amounted to £242,316, but to arrive at the loss of revenue we must add the profit our companies would have made under normal conditions. The profit for the corresponding quarter of 1921 amounted to £710,689. While it is true that the profit is only deferred to the end of the life of each mine, yet, as far as the year under review is concerned, the companies were in a worse financial position, by an amount approaching a million pounds sterling, than they would have been had there been no strike.

WORKING COSTS REDUCED.

On the other hand, owing to the fall in the price of gold, it was quite evident that the time had arrived when there must be some reduction in wages, and reorganisation of work on the mines. The mines are now being worked under conditions which will certainly add to the lives of many of them, and in the end will justify the insistence of the mining industry that changes had to be made.

Contrasting September, 1922, with the same month in last year, the average working costs on the mines under our control have been reduced from 24s to 19s, while the working costs for the whole of the mines of the Witwatersrand for the same period have fallen from 25s 2d to 20s 5d.

In September, 1914, before the effects of the Great War began to be felt, the working costs for the Rand averaged 16s 9d per ton. It will be seen, therefore, that the average working costs are still 3s 8d per ton above the pre-war level. While there has been a reduction in the cost of labour per ton, due to decrease in wages and increased efficiency, the decrease in the cost of stores per ton is small, owing to the fact that while there have been reductions in prices, there has been practically no decrease in the railway rates.

HIGH RAILWAY RATES.

In the report of the Government Gold Mining Areas for the last year attention was drawn to the very heavy burden the mines have to bear owing to the high railway rates charged on material necessary for carrying on our undertakings. I regret to say that these high rates are still in operation, and although some slight

reductions have been made in the rates charged for South African products—which operate on a sliding scale based on mileage—and a small reduction has been made on cartage rates from certain centres, yet the relief given is of such an infinitesimal nature as to be scarcely appreciable, and I would again emphasise the fact that an important factor in keeping working costs at the high level at which they exist to-day is the very heavy charge which we have to pay to the railway administration for the carriage of all our material. There seems to be something very far wrong when the first cost of material has been so greatly reduced and ocean freights have been brought down to a comparatively low figure that the costs of transport on land should be maintained at practically the highest level that they touched during all the abnormal conditions which prevailed during the war and after.

MINING INVESTMENTS.

I shall now deal with the more important individual mines in which we are interested.

Consolidated Langlaagte Mines, Limited.—For the year ended December 31, 1921, this company made a profit of £163,671, as compared with £166,585 for the year 1920, and declared dividends of 5 per cent. and 7½ per cent. in June and December respectively.

The operations of the first quarter of 1922 resulted in a loss of £32,419, and the second quarter in a profit of £12,025. For the quarter ended September 30th a profit of £34,175 was made, and normal profits are anticipated for the future.

Government G.M. Areas (M.) Consolidated, Limited.—The profit made by this mine for the year ended December 31, 1921, amounted to £1,772,202. Of this amount the Government received £896,181, and the shareholders two dividends of 25 per cent. and 30 per cent., declared in June and December respectively, totalling £770,000. During the first three months of this year, in spite of the interruption of operations during the strike, a profit of £52,911 was made, and for the period April, May and June the profit amounted to £433,547, enabling the directors to declare a dividend of 20 per cent. to shareholders registered at June 30, 1922. For the quarter ended September 30th a profit of £483,600 was made, and there is every reason to anticipate good profits in the future.

The ore reserves are maintained at over 10,000,000 tons.

LANGLAAGTE PROPRIETARY MINE.

Langlaate Estate and G.M. Company, Limited.—For the calendar year 1921 a profit of £138,462 was made at this mine, and dividends of 5 per cent. and 7½ per cent. were declared in June and December respectively.

A loss of £41,741 was sustained during the first quarter of this year, while in the second and third quarters profits of £38,900 and £58,174, respectively, were made. Given adequate labour, the prospects for the future are most encouraging.

Langlaagte Proprietary Mine.—The sinking of a shaft to exploit our area was commenced in May, and at the end of October it had reached an incline depth of 254 ft.

Good progress is being made with the equipment of this section, and the area should prove a valuable asset and materially prolong the life of the mine.

New Primrose G.M. Company, Limited.—A profit of £33,694 was made at this mine in the calendar year 1921, and two dividends of 5 per cent. and 7½ per cent. were declared in June and December respectively. The operation for the first three months of this year—the period of the strike—resulted in a loss of £19,774, while for the second and third quarters profits of £2,612 and £7,382 were made. The losses incurred during the strike will be made good by the end of the year.

NEW STATE AREAS.

New State Areas, Limited.—Preliminary operations began at this mine early in 1918, and the sinking of the two shafts was completed by the end of February, 1921. Development has been pushed forward steadily from that time, and values in the south shaft are highly satisfactory, while in the north shaft a considerable amount of payable reef has been exposed, although not of so high an average grade as in the southern section. It was decided at the beginning of 1922 to proceed with the erection of the reduction plant. Excellent progress has been made with the construction work, and it is hoped that the plant will commence running next April or May. The prospects of this mine are excellent, and there is every reason to hope that when we meet again next year it will be earning satisfactory profits.

New Unified Main Reef G.M. Company, Limited.—This mine made a profit of £21,141 in 1921, and declared two dividends of 5 per cent. each in June and December. The operations for the first three months of 1922 resulted in a loss of £10,859, but in the second quarter a profit of £3,060 was made, and the profit for the third quarter amounted to £4,549. These amounts, together with the monthly profits for October, November, and December, should be sufficient to cover the losses sustained in the earlier part of the year. It is gratifying to know that this mine is now entering upon what there is every reason to believe will prove to be a long period of prosperity.

RANDFONTEIN ESTATES AND VAN RYN DEEP.

Randfontein Estates G.M. Company, Limited.—This company's interests are bound up with those of the central company, and now that the central company has begun to make better profits, the financial position of both companies is much more hopeful.

In connection with the case brought against Sir J. B. Robinson, a sum of £353,907 was received last year and a further sum is owing, the exact amount not having been yet determined by the Courts.

Van Ryn Deep, Limited.—A total profit of £778,677 was made at this mine during the last calendar year, and two dividends of 30 per cent. each were declared in June and December. The operations for the first three months of 1922 resulted in a profit of £1,019. This mine was one of the first to recover from the effects of the strike. The mine has always been popular with natives, and an ample supply of labour enabled the mine to make a profit of £159,553 for the second quarter of the year, and a dividend of 10 per cent. was declared in June last. The quarter ended September showed a further improvement, and the profit for this period amounted to £209,989.

Development is being pushed forward, and the results are highly satisfactory. The ore reserves stand at over 3,000,000 tons, and the company is in a strong financial position.

Witwatersrand G.M. Company, Limited.—A total profit of £102,014 was made at this mine during the last calendar year, and two dividends of 10 per cent. and 15 per cent. were declared in June and December respectively. A loss of £25,995 was sustained for the first quarter of the current year, but for the quarter ended June 30th a profit of £24,161 was made, and a dividend of 5 per cent. was declared to shareholders registered at that date. The profit for the third quarter amounted to £43,444, and it is expected that with a plentiful supply of labour normal monthly profits will be earned.

Glencairn Main Reef Gold Mining Company, Limited.—The liquidation of this company was completed during the year, and a final distribution of 1s 4d per share was paid, making a total distribution of 3s 4d per share.

DIAMONDS AND COAL INDUSTRIES.

It is gratifying to be able to report that a substantial improvement has occurred in the diamond industry. Sales commenced to improve early in the present calendar year, and have gone on steadily increasing.

The Premier mine never ceased working on a small scale, and it is now evident that it will not need to close down, which would have been necessary had the depression continued. Jagersfontein is again working, and the De Beers Company is making arrangements to recommence washing blue ground. It ought not to take long for these companies to re-establish their financial position and resume the payment of dividends.

There has been practically no improvement in the coal trade of this country. Our three Transvaal collieries are earning moderate profits, but the outputs are small. With a greater output reasonable profits could be earned by the companies. Negotiations are in progress to secure larger outputs for the collieries after June of next year, and this should make the position much more satisfactory.

Carlton Hotel.—The property has been purchased by the Johannesburg Consolidated Investment Company, on behalf of a new company, for £235,000, and there is no reason to doubt that under local supervision and control, and with efficient management, the future running of the hotel will yield a fair profit.

Polana Hotel, Lourenço Marques.—The local conditions in Lourenço Marques have been abnormal; but an improvement may be confidently looked for as normal conditions again prevail.

I have now dealt with the company's leading features, which, I am sure you will agree with me, are highly gratifying, and I need only add that I consider the company's future outlook excellent.

The reports and accounts were unanimously adopted.

CARRERAS, LIMITED.

PUBLIC'S APPRECIATION OF COMPANY'S PRODUCTS.

The nineteenth annual general meeting of Carreras, Limited, was held, on the 10th instant, at the registered offices of the company, 238 City Road, London. Mr Louis B. Baron (joint managing director) presided in the absence of the chairman.

The Chairman said the accounts, which we have met to consider, show that our business is in a very healthy state, and the balance-sheet one that could only be received with satisfaction by the shareholders.

I do not think you will consider it necessary for me to go into the details of the accounts, as the printed figures before you speak for themselves without any comments from me. I will content myself with reminding you that our profit for the year, including a refund of excess profits duty of £17,791, amounts to over

£113,000, and with the amount brought forward from the previous year our available balance is £148,000. We are putting a further £10,000 to reserve, making that fund £205,000, which now more than covers our goodwill, trade marks and patents, and after paying our preference share dividends and 15 per cent., free of tax, for the year on our ordinary shares, we are able to carry forward to next year the very substantial sum of £62,632.

You will observe that at October 31st we had loans from the banks of £70,248, but I am pleased to tell you that these loans have now been reduced to less than half that figure.

During the past year it became evident from month to month that our productions were steadily growing in popularity, and I may say that during the two months of the current financial year this steady growth has continued. We shall continue to do our utmost to merit the appreciation by the smoking public of our cigarettes and tobaccos, and I hope that the coming year's business will result as favourably as the one just closed.

As my father said at one of our meetings some years ago—our business has only begun to touch the fringe of its possibilities, and as the years go by we hope to be able to realise the large expectations expressed in the past. The whole world is our field, and our goods are all over the world to-day. In some parts we have only entered in a small way, but I feel confident that with the high standard of value and quality which we always try to maintain there will be a steady increase in all territories as well as in this country, where we are doing very well.

In our manufacturing we are using nothing but the "1919 crop" tobacco, which, as you will have seen from the newspapers, is the finest crop produced in Virginia for many years past, and I am glad to say we have sufficient stock of "1919 crop" tobacco for the next two or three years, so that the public can be fully assured of the quality of our goods being maintained at their present high standard.

The report was unanimously adopted.

SHOWELL'S BREWERY COMPANY, LIMITED.

INDUSTRY'S UNFAIR BURDEN OF TAXATION.

The annual meeting of Showell's Brewery Company was held at the Queen's Hotel, Birmingham, on the 19th instant, Mr James Davenport (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our particular industry is suffering, I think, more from taxation than any other industry in the world. The beer duty still remains at 13 times its pre-war level, and with falling wages and the impossibility of reducing the price of beer until the duty is reduced, we get what is inevitable, a steady diminution in the sales.

Now turning to our own affairs, our profits show a falling off of some £3,700, and I may say quite frankly that they come out better than at one time I had anticipated. Taking the assets side first, our properties amount to a total of £832,600, and show a reduction of some £7,000, principally accounted for by depreciation allowances.

Investments stand at just over £129,000, of which £105,000 is in Government stocks. The item of trade investments at £24,000 consists to a very large extent of the company's own debenture stock, which, as I informed you a year or two ago, we picked up as opportunity offered at heavy discounts. Sundry debtors at £36,000 compare with £32,000 a year ago, and this, as you will gather, also arises from the increase in the number of our houses under tenancy as distinct from management. The only other item on this side of the balance-sheet is cash, which at £29,000 compares with £24,500 a year ago.

On the other side of the account our capital remains unchanged, while the item of sundry creditors and reserves at £142,900 shows a reduction of approximately £40,000. A very large proportion of this figure consists of internal reserves. There has been a very considerable reduction in our current liabilities, which are now very small indeed. The reserve account is £45,000, against £40,000 a year ago, and if you approve our recommendations to-day it will appear next year at the round figure of £50,000.

The balance of revenue account for the year was £43,777, to which we have to add the balance brought in of £12,442, and which we have to add the balance brought in of £12,442, and deduct the debenture interest, which absorbed £19,345. This leaves us with a sum available for distribution of £36,874. We have already paid the half-year's interest on the preference stock, absorbing £6,900, and we propose the payment of the balance of this dividend, absorbing a like amount. We propose a dividend of 12½ per cent. on the ordinary shares, as against 15 per cent. a year ago, and we again transfer £5,000 to reserve account, bringing this up to £50,000. We shall then have to carry forward to next year a balance of £8,074.

The resolution was put and carried unanimously.

HOTEL CECIL, LIMITED.

CLAIM AGAINST GOVERNMENT—AMOUNT AWARDED.

The annual general meeting of the Hotel Cecil, Limited, was held, on the 19th instant, on the premises, Strand, London, Mr J. Douglas Broad (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, dealt first with the profit and loss accounts and balance-sheets for the years ending August 31, 1921, and August 31, 1922. The balance of profit and loss in the latter account was, he said, £75,105. Since the report and accounts had been issued the board had succeeded in arriving at a settlement of the company's claim for reinstatement and loss of goodwill. Recalling the course of the negotiations, the Chairman said that the Air Force had vacated the premises in the autumn of 1919, and the board had accepted the building for the purpose of redecoration on January 1, 1920. Although the hotel had not been completely reinstated at that time the banqueting portion of the company's business was restarted on October 4, 1920, but it was not until January 1, 1921, that it had been possible to reopen the hotel for the reception of guests. Even at that date the west block of the hotel had not been completed. During the period of reinstatement certain improvements had been carried out, which had enabled them to reopen to the best possible advantage with a view to the recovery of the goodwill of the hotel at the earliest possible moment. In October, 1921, after due consideration, the board had decided to open the Palm Court for dancing. The institution of dancing had been highly successful, and was quite an important part of the company's business. It was the policy of the board, as opportunity offered, to give its patrons the advantage of any further reduction compatible with a reduction in cost. He would not weary the meeting with a detailed history of the negotiations which had been carried on between H.M. Office of Works and the board during the past two years, but the board's opinion was that the taxpayers' pocket would have been much better served had H.M. Office of Works shown a reasonable attitude in dealing with the company's claim. Sir Henry Kimber, Bart. (vice-chairman), seconded the motion.

The Chairman, in reply to a question, explained that the final award in connection with the claim against the Government was made on December 13th last. The total amount awarded was £145,000, of which £32,000 was still owing.

The motion was carried unanimously, and the formal business of the meeting having been completed, a hearty vote of thanks to the chairman, directors, and staff concluded the proceedings.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1922-23. (See Note.)	Total Receipts into the Exchequer from April 1, 1922, to Dec. 16, 1922.	Receipts, Week Ended Dec. 16, 1922.	Receipts, Week Ended Dec. 17, 1922.

Total value of imports of gold	647,724	Total declared value of exports registered in the week	3,009,334

Messrs Samuel Montagu and Co. write on December 20th as follows:—

GOLD.

A fair amount of gold has been on offer, and with the exception of a few small purchases on Indian account, has been taken for New York. Gold valued at \$4,617,000 has arrived in New York, \$3,500,000 from London, and \$1,117,000 from Alexandria.

SILVER.

The market has continued to show a weak tendency, mainly on account of easier rates in China and the appreciation of sterling in the United States of America. The Indian bazaars have been buying for shipment, but to a large extent sales of silver have been made at the same time for two months' delivery. Bear covering has been carried out rather reluctantly, in view of the doubtful outlook ahead. The substantial discount at which the price for forward delivery stands indicates the little confidence which obtains as to the future. The tin has sold, and supplies are fairly free, notwithstanding the lower level of prices. The cash price quoted on the 15th inst.—30 1/2d—is the lowest fixed since July 29, 1916, whilst that inst.—30 1/2d—is the lowest since May 9, 1919; for forward delivery—30 1/2d—is the lowest since May 9, 1919; on that date quotations for two months' delivery were resumed for the first time since July 30, 1914. The coinage of silver for the first time since July 30, 1914. During the last three months the following numbers were coined:—September, 8,300,000; October, 11,660,000; November, 13,860,000—total, 33,820,000. It is probable that no subsidiary coins will be struck during the current year.

INDIAN CURRENCY RETURNS.

	(In Lacs of Rupees.)	Nov. 30, 1922.	Dec. 7, 1922.	Dec. 15, 1922.
Notes in circulation	17,730	17,647	17,557	17,557
Silver coin and bullion in India	8,972	8,889	8,799	8,799
Silver coin and bullion out of India	2,432	2,432	2,432	2,432
Gold coin and bullion in India	5,742	5,742	5,742	5,742
Gold coin and bullion out of India	584	584	584	584

No silver coinage was reported during the week ending 15th inst. The stock in Shanghai on the 16th inst. consisted of about 32,000,000 ounces in sycee, 35,000,000 dollars, and 370 silver bars, as compared with 34,000,000 ounces in sycee, 36,000,000 dollars, and 400 silver bars on the 9th inst.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

		Gold.	Silver.			Silver.
1922.		Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.	Date.	Cash, Per Ounce.
		s d	d	d		d
Dec.	16..	88 6	30 $\frac{7}{8}$	30 $\frac{1}{16}$	Dec. 29, 1916	36 $\frac{1}{2}$
	18..	88 6	30 $\frac{1}{8}$	30 $\frac{1}{16}$	28, 1917	43 $\frac{1}{2}$
	19..	88 9	30 $\frac{1}{8}$	30 $\frac{1}{16}$	28, 1918	48 $\frac{7}{16}$
	20..	89 4	30 $\frac{1}{8}$	30 $\frac{1}{16}$	26, 1919	..
	21..	89 1	30 $\frac{1}{8}$	30 $\frac{1}{16}$	24, 1920	..
	22..	..	..	..	23, 1921	..

Weather conditions generally have remained exceptionally mild for the time of year, consequently field work is well advanced, and has resulted in a larger acreage being laid under winter cereals than previously anticipated. Quiet trading was experienced during the week, the market being under holiday influences, but price ruled firm for both bread and feeding stuffs, with a hardening tendency. Native wheat is rather steadier at 41s. to 43s for suitable milling grades, and inferior 37s to 40s per 504 lbs free on rail. Imported descriptions more firmly held in sympathy with higher forward offers. No. 1 Northern Manitoba quoted 52s 6d. No. 2 mixed Durum 49s 6d, and Rosafe 62½ lbs 53s 6d, all per 496 lbs ex ship to arrive. The cargo section displayed moderate activity, and rates were firm to dearer in face of higher American and Argentine advices. Steamers of choice white Karachi expected to load early January sold at 51s 1½d, Rosafe 62½ lbs January-February 48s 1½d, Baril 62 lbs afloat 50s 6d to Continental ditto 62½ lbs afloat 49s 3d, and No. 1 Northern Manitoba December-January 50s 3d per 480 lbs. North American visible supplies show a substantial increase, but floating supplies are on a much lighter scale. Crop prospects remain mostly favourable in the chief exporting countries. Flour ruled firm in sympathy with the wheat position, and prices were advanced by 1s per sack for home milled. Demand, however, does not improve. London standard straight run now quoted at 42s, patents 44s to 45s, two households 40s per sack delivered in London area. English country straight run 33s to 35s per sack delivered. Imported quietly steady. Manitoba patents range from 40s to 43s Minneapolis good patents 42s to 42s 6d, Australian practically on of supply on spot and nominally 41s all per 280 lbs ex store. Maize in better demand and rates hardened, with spot parcels sparingly offered. Plate ex ship quoted at 35s 0d ditto landed 37s 3d, and American mixed in latter position 38s. The cargo section ruled firmer on better Continental inquiries though same only resulted in a moderate amount of business. Steamers of La Plata on passage changed hands at 35s and 35s 6d as to position, and January-February at 35s 6d and 35s 4½d per 480 lbs. Barley generally dull and without material alteration. English ranges from 30s to 58s as to sample per 448 lbs, free on rail. Of imported, Californian ex ship 39s to 42s 6d, Australian as to 42s 6d per 480 lbs. both ex ship to arrive. Plate 30s 6d

Our Cardiff correspondent writes:—In the South Wales coal trade this week current business has been practically restricted to the supply of parcels to complete cargoes for departure before the holidays. The docks have again been glutted with tonnage. Even at Barry, one of the most efficient coal exporting docks in the country, there has been a four days' stem, owing to the seriousness of the congestion. The shipments have been very heavy. For some weeks past they have approximated the record quantities of 1913-14, but the problem of coping satisfactorily with all the difficulties of the position has been too great for the Great Western Railway Company, and complaints of delays, detentions, demurrage charges, and loss of time at the collieries have been very general. It is inevitable that an enormous quantity of tonnage will be held over during the holidays. Contract business for deliveries over next year has been very active. During the week the British Admiralty has covered for its usual requirements, and other notable contractors have been the United States and the French State Railways. American importers are credited with having bought 100,000 tons of Admiralty large and small coals for shipment to Boston and other New England ports during the first three months of the year, and with another 50,000 tons for the following three months. Sir W. R. Smith and Sons, Cardiff, have contracted to supply shipping to carry 50,000 tons of the coal, to be delivered in the first three months at a freight rate of 7s. 6d. per ton, Cardiff to Boston. At relative current c.i.f. prices, South Wales steam coals are cheaper at Boston (Mass.) than the best grade United States steam coals, and in view of the possibilities of bulky homeward cargoes, business between Cardiff and the New England markets is likely to continue until American prices are brought down considerably below their present level, or the prices of South Wales coals and the rates of freight to the United States are raised considerably above their present level. For spot positions, colliery salesmen, but more especially middlemen holding floating supplies, have been ready to make concessions, in order to secure the release of wagons, but for after-holiday positions prices are firm at recent figures. The following are the current approximate quotations:—Best Admiralty large, 20s to 20s 6d; second Admiralty, 28s to 28s 6d; best drys, 28s to 28s 6d; Black Veins, 27s 6d to 28s; Western Valleys, 27s 6d to 28s; Eastern Valleys, 27s to 27s 6d; best bunker smalls, 18s to 19s 6d; ordinary cargo smalls, 16s to 18s; anthracite big vein, 37s 6d to 40s; anthracite machine-made cobbles, 40s to 47s 6d; anthracite French nuts, 60s to 67s 6d; stove nuts, 60s to 67s 6d; rubbly culm, 14s 6d to 15s; coke for export, 37s 6d to 45s; inland blast furnace coke at ovens, 37s 6d to 42s 6d; patent fuel, 20s to 30s; pitwood ex ship, 32s 6d to 33s.

The improvement in the tin plate and iron and steel trades is firmly maintained. Foreign demand is active, and the prospects are discussed of a further advance in the minimum prices of bars and tin plates in the immediate future.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

The Continent is a heavy buyer of Cumberland hematite pig-iron, and there are still sales, though on a somewhat restricted scale, to America. Scotland and South Wales have also considerable requirements to be satisfied, and altogether the production of the 17 furnaces in blast between Workington and Carnforth is in no way in excess of demand. It is true that small stocks lie in some of the works yards, but these were sold long ago, and are only awaiting delivery. The improvement in trade which began at the beginning of October is well maintained. That developments will continue to be satisfactory, in view of the fact that some of the work in connection with the construction of the new battleships will come to this district, is regarded as certain, and it is confidently believed that the output of iron will be normal again before June next year. It is significant that even at the close of the year, when business in an ordinary way diminishes, there is a good deal of forward buying being done, consumers exhibiting anxiety to make sure of their supplies until the end of March. Prices, it is needless to say, are firm, Bessemer mixed numbers being quoted at £5 10s per ton, delivered at Glasgow and Sheffield, and for export at the same figure. There is a better demand also for low phosphorus iron by users in the Midlands, but ferro-manganese is a duller trade at £15 10s per ton, f.o.t., American needs having shrunk, and spiegel is a weak market at £7 per ton. The condition of the steel trade is unchanged, and there is nothing more to be said of it than that makers anticipate hopefully that their steel works will be more than partially engaged next April. The order books are not well filled, and if there be any rolling of railway material before the spring, it will be only for a few days at a time. The iron ore industry is much better employed, and most of the mines are now working again. The demand is almost entirely local, but small parcels of selected ores command a sale in Yorkshire and Derbyshire. The coal trade, in which, by the way, the deficiency of £26,000 in November of 1921 has been increased to £226,000, is exceedingly brisk. All the collieries are working full time, and the whole of the output is being absorbed. There is not, in fact, sufficient coal to go round, and when the coking plant at Siddick resumes operations next week, it will be necessary to buy small coal from other districts. Ireland is taking the greater part of the production, North of Ireland needs being especially large, and there is an increase in the shipments to the South and West. Best house coal for shipments is 27s 6d per ton, f.o.b., and for local consumption is 38s 2d per ton at pit. Local land-sale and industrial requirements are larger. All the local coke is going into consumption at the furnaces on ordinary iron in Cumberland and North Lancashire, and in addition supplies to the extent of

8,000 tons per week are coming from the East Coast. By-products are an active trade, and the chemical industry is busier than has been the case before this year.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—The market shows an improvement compared with a week ago, and considering the time of the year, conditions are healthy and sound. Most spinners and manufacturers had been waiting for a sensible reduction in prices, but after persistently holding off in the hope of forcing values to a lower level, many are now beginning to feel that prices are not going to fall. The result is seen in considerable sales of tops during the week, both in merinos and crossbreds, and the holidays are approaching with the majority in the trade in a fairly optimistic mood. Users everywhere have been waiting patiently in the hope that the big weight of wool thrown upon the market in London, Australia, New Zealand, South Africa, and South America would break prices, but at the most the decline in merinos is no more than 10 per cent., while medium crossbreds have advanced 20 per cent. compared with two months ago. The entry of America has undoubtedly "queered the pitch" for users of medium and fine crossbreds, and Bradford topmakers have this week made some very good sales on home trade account, making the highest prices since the days of the slump. As a matter of fact, 48's carded tops have been sold this week at 19½d, 50's may be called 27½d at the least, some even wanting 1d more, while 56's tops are in the neighbourhood of 36d to 37d. There has also been a sharp run on coarse crossbreds, and these are the turn against the buyer. Spinners have purchased largely in anticipation of future requirements, and although the opposition to merino values is still keen and well sustained, yet the general impression prevails that these are safe. The chief source of complaint is at the piece end of the trade, and manufacturers report continued apathy on the part of wholesale fabric buyers for fine soft botany cloths, and a growing call for a lower quality. There is certainly an expanding demand for crossbred cloths in all markets.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The final sales of wool in London for the current year finished splendidly, and apparently everyone was well satisfied with the results. It is now possible to see the extent of the purchases of the different sections of the trade, not only during the past series, but throughout the whole year. The home trade purchased 124,000 bales last series, the Continent 64,000 bales, and America 20,000 bales, the quantity withdrawn and not offered being about 15,000 bales. It is significant that no less than 84,000 bales were taken for export, and as indicating the strength of the demand, no less than 98,500 bales catalogued were crossbreds. Considering that such a large quantity was offered, it is significant the way the market went. Even coarse crossbreds met a very good demand, prices improving fully 10 per cent., there being no mistaking the increased interest shown in this class of raw material.

The following figures, showing the sales in Coleman street during the past year, are most significant, the quantity actually sold being one of the largest during the past 25 years. Below are given details of each of the eight series, and the countries by which the offerings were taken:—

	Home.	Continent.	U.S.A.	Totals.
Bales.	Bales.	Bales.	Bales.	Bales.
First	111,000	70,000	2,000	183,000
Second	123,700	85,000	1,000	209,700
Third	102,100	50,000	3,000	155,100
Fourth	91,500	50,000	3,000	144,500
Fifth	70,000	62,000	1,000	133,000
Sixth	72,000	42,000	3,000	117,000
Seventh	76,000	50,000	8,000	134,000
Eighth	124,000	64,000	20,000	208,000
	770,300	473,000	41,000	1,284,300

Since last writing, the British Australian Wool Realisation Association have published their monthly statement, showing the stocks on hand at the end of last November, and the figures are most illuminating. When the year opened the association had on hand no less than 419,517 bales of merinos, and at the end of last November the stock had dwindled to 73,800 bales. Turning to crossbreds, the reduction in stocks is equally as satisfactory, the year opening with the stock of this description amounting to 1,390,219 bales, and the significant fact is that up to the end of last November they had fallen to 864,524 bales. At the same rate of absorption during 1923, the association's surplus stocks will be entirely wiped out by the end of that year. There is every reason to think that the trade can do this, although it has been evident during the past 12 months that stocks, which had been allowed to become greatly depleted during 1920-21, have been replenished. All users have been tempted by the reasonableness of wool values to put in further supplies, crossbreds being under pre-war prices. It is unmistakably evident that at the raw material end of the trade the year's record is an excellent one, and the final results of the closing series cannot be regarded otherwise than as very satisfactory.

MANCHESTER, December 20.

Although trading in the market during the week has been a restricted character, the rather improved feeling has been maintained. Buyers have not been prepared to place orders of weight, but rather more small lines have been put through. For India there has been a considerable inquiry in piece-goods, and a fair business has been done, chiefly in bleaching and printing descriptions. Operations for China have been very limited, and there are no indications of a revival of demand for the Far East just at present. Useful orders have been booked for Egypt, South America, and the Continent, but, as is usual at this time of the year, home trade buying has been of small dimensions. Some manufacturers of cloth have decided to extend the usual Christmas holidays. American yarns have been firmer, and there has been a slight improvement in the turnover. An irregular business has been done in export bundles for India and China. Egyptian counts have been slow of sale.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

Good supplies of timber for building construction work and for the furniture and cabinet trades have been imported during the past six weeks. In all classes of wood, hewn and sawn, hard and soft, the imports this year have been considerably larger than the receipts of 1921, and unless the demand increases largely (of which there is little promise just yet) there are ample supplies to tide over the close season. Stocks of building woods are fairly large in London and on the East Coast, holdings not being so substantial in proportion on the West Coast. The stocks consist of fair to medium quality wood, supplies of good-class joinery wood not being heavy, and though the market for the inferior quality deals is fair with prices steady to firm, for good material prices are firm with better promise of a rise in value.

The demand generally has declined lately, but the prospects of betterment after the turn of the year are apparent, as merchants anticipate an improvement in the staple industries of the country. With reference to the paragraphs appearing from time to time in the Press regarding cheaper timber for housebuilding, it cannot be too plainly stated that if foreign sellers' ideas prevail, timber for this class of work and of shipbuilding and construction work generally will be higher in 1923 than they have ruled this year. It was stated in these columns some months ago that consumers were getting their building woods at the expense of the shippers, particularly of the Swedish shippers, who made very severe losses last year and the early months of the present year, and that this policy could not go on indefinitely. The Scandinavian shippers, however, have got their costs down to a level that should give them a fair profit for their timber, but they appear anxious to regain some of their losses by keeping f.o.w. prices up to what are considered to be too high a level for importers here to operate.

It is satisfactory to note that the Canadian spruce market has improved considerably; the stocks are now lighter (the old Government holdings having been cleared into consumption), the demand is steady, and the general position much more healthy. The imports from the Dominion this year have been on a much larger scale than in 1921. Then imports of spruce were a drag on the market; this autumn they have arrived on a responsive market. If shippers will be content not to try for too high figures business should greatly improve next year. Teak, which has been in such poor demand of late, has shown recovery both in demand and value. Other shipbuilding timbers also show a firmer market.

As regards furniture and decorative woods, the position is very steady. As has been intimated in these notes on a previous occa-

sion, mahogany has been comparatively one of the cheapest woods on the market, and merchants have acquired good stocks of logs for conversion and storage. Prices are firm, and it is expected that mahogany values will rise. Good supplies of American and Canadian hardwood lumber have come to hand, as well as European oak and other hard woods.

VEGETABLE OILS AND OILSEED.

The linseed market, while remaining firm, and prices showing a tendency to advance, has been rather quiet. Crushers, having met their immediate requirements, are content to hold their hand for the present. Meanwhile, the scarcity of seed on spot and in near positions is very marked. The quantity of linseed to the United Kingdom having diminished to 10,500 tons, and to the Continent to 38,500 tons—against 58,000 tons against 78,000 tons a week ago. Considerable quantities of the new Plate crop should be moving off in January. Up to £16 10s has been paid for January-February shipment, but for December as much as 60s per ton premium has been paid, and is wanted. Reports of the Argentine crop continue to be variable, but generally shippers maintain a firm attitude. Some trade has been done in bold Bombay at £21 10s. December shipment to Hull. With regard to the oil product, the high value of seed has caused the market for raw linseed oil, on spot and for near delivery, to be very firm, about £30 being the ex-mill value of spot, and £37 10s January-February. Owing to speculators covering, forward positions have been firm, but are now somewhat easier, May-August quoting £32 5s ex Hull mill.

Egyptian cottonseed has again advanced about 10s per ton on the week, but crushers are not in the market at present figures. A fairly large quantity of this article is on passage, both to this country and to Germany. In sympathy with seed, oil prices have hardened, crude Egyptian quoting £37, and ordinary refined (soapmakers' grade) £37 for prompt delivery ex Hull mill.

Other vegetable oils maintain a steady tone. Supplies, however, are meagre. Crude soya bean oil has been a fair market, and rape oil, on scarcity on spot, is fully firm. Production of linseed cakes is small, but evidently more than sufficient to meet a modified demand, preference being given for cotton cakes and various meals.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market has again steadied itself, and the bulk of the sales made in the provinces have shown advances of 1d to 3d per lb. Supplies are not large enough to fill requirements, and instead of getting reductions, have to pay advances if they want them. Calf, kips, and horse hides are, however, a shade weaker, as the demand for upper leathers continues dull. Tanners are buying sparingly of South American hides, as prices have advanced again, sales being reported at 54¢ dollars at origin. The United States are still buyers, sales for the past week being cabled at 50,000. The American hide market is steady, with prices firmer.

Leather merchants seem rather dull this week; the dry weather affects the repairers' business, whilst the orders for new footwear are not abundant, so that shoe manufacturers are not ordering sole leather. Tanners who are holding fair-sized stocks are already offering concessions, although this does not seem to be the rule. Export of rough leather is quiet, although there seems a fair demand for cheap grain bellies and splits.

Sampling is going along freely in upper leathers, but no big contracts for chrome calf are reported. Complaints are frequent as to the low-priced German calf coming here, and there is still some talk of one of the trade federations seeking help under the Safeguarding of Industries Act. The shoe trade are, however, decidedly hostile to this, as they hold they have built up their export business on a free and open market for upper leathers.

Shoe manufacturers have been busy sending out small orders for the Christmas trade, but business has not come up to expectations. Optimism, however, is the keynote in the producing centres, as inquiries for spring goods are frequent both from home and overseas buyers.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Thursday, December 21.

Business in most articles of commerce proceeded quietly during the week, holiday influence making itself felt.

SUGAR.—Refined descriptions were kept at a steady level despite a quiet demand, as no weight of supplies is felt at the moment. Of British, Messrs Tate and Lyle's cubes, 55s 3d to 56s 3d; crushed, 52s 3d; nibs, 54s 9d; granulated, fine and coarse, 50s 7½d; No. 1, 50s 4½d; No. 2, also London, 50s 1½d; yellow crystals, 44s 1½d; granulated, February-March, 50s 6d; April-May, 50s 9d; June-August, 51s. West India crystallised, 44s 6d to 46s, as to sample. Home-produced granulated, ex factory Cantley, sold, 48s 10½d. American granulated, spot, sold, 49s 6d; white Java from 47s 6d to 48s 3d, as to quality; ditto May-June, steamer, held for 21s 1½d; July, 20s 10½d, c.f. and i. terms, London. Belgian granulated, ready quoted 21s 6d; crystals, 21s 3d, f.o.b., Antwerp; W.S.R. and H.U.M. granulated, prompt, 23s; C.B.S., 21s 10½d; Dinteloord, 22s 1½d, f.o.b., Amsterdam and Rotterdam. Czechoslovakian granulated, December, 22s 1½d, f.o.b., Hamburg. Cuban basis, 96 per cent., February, quoted 17s 1½d.

Brazilian basis, 96 per cent., December-January, 17s 9d; 500 tons Brazilian basis, 80 per cent., December-January, sold, 11s, c.f. and i. terms, U.K. Terminal market quiet. White, December, sold, 21s 6d; March, 22s 1½d; May, 22s 7½d to 22s 3d. Cuban stocks stand at 25,350 tons, against 940,500 last year. Liquid glucose, spot, 28s 6d. Mr Guma estimates coming Cuban crop at 4,193,500 tons.

COFFEE.—The market ruled generally slow, with demand almost entirely confined to the home trade. Nairobi, bold sizes, sold, 101s to 113s; peas 95s to 125s; Uganda, bold, 80s to 83s 6d; Colombian, fair bold, 84s 6d; ditto, Costa Rica, 109s. Future delivery remained lifeless.

COCOA.—Only a small business was effected in spot parcels at about late rates. Accra irregular forward. F/F quality, December-February, and also January-March, sold, 34s to 34s 6d, and then 33s 6d, f.o.b. terms.

TEA.—During the week 26,540 packages Indian were offered, and while good to fine qualities engaged attention at a full range of prices, common and medium were a shade easier in many instances. 14,000 packages Ceylon offered met with active competition at firm to occasionally dearer rates.

RICE.—Market steady, but, at the same time, slow. Two Stars, spot, 15s 6d to 16s; December, 13s 9d; and new crop, February-March, 13s 6d. Spanish, ready shipment, 20s 6d, c.f. and i. terms. Rangoon beans quiet, at 7s 10½d, on the spot. Japanese peas dull. Afloat, London, sold, 26s 9d; Liverpool, 26s; and December-January, London, 24s 9d.

SPICE.—A steady inquiry continued for pepper, and general firmness characterised the market. Fair black Singapore, spot, sold, 4½d; January-March, 4½d, sellers; Aleppo, spot, quoted, 4d to 4½d; Tellicherry, 4½d; white Singapore, spot, quoted 6d; Muntok, sold, 6½d; ditto, January-March, 6½d; February-April, 6½d; March-May, 6½d. Zanzibar cloves, spot, sold, 8½d; October-December steamer, 7½d to 7¾d; January-March, 7d. Flake tapioca, fair quality, spot, 3d per lb; ditto, December-February, London, 26s 6d; Havre, 27s 3d; fair Penang seed, spot, 23s 6d; sago flour, January-March, 12s 3d paid. Desiccated coconut, spot, fine, 36s 6d; and medium cut, 37s 3d, sellers. Ginger quiet, unaltered.

FRUIT.—Dried.—The market presented quiet features all round, the Christmas trade having been completed.

JUTE.—After showing a firmer tone, the market became irregular, but a fair business was effected on balance. First grade, December-January, Continent, sold, £36; January-February, £36 10s to £37 and £36 10s; February-March, £38 to £37 10s and £37 15s. Lightning grade, December-January, £34 10s; January-February, £35 5s to £35 10s; Hessians quiet of sale. 10-oz, spot, 36s 6d; 8-oz, 27s 6d; A twills, 87s 6d; B, 72s; sugars, 81s; flour, 87s 6d.

HEMP.—Demand this week fell away, and prices eased slightly. G grade, December-February, quoted, £35; H, £34 10s; J, £33; K, £32; L, £31 10s; and M, £30 10s. New Zealand nominally unaltered. H.P.F., spot, £34; fair, £32. Italian firm, quiet. P.C., spot, £38 10s.

SOUTH-NORWAY.

FREDRIKSSTAD

PRIVATBANK,

Fredriksstad.

Paid-up Capital
and Reserves:
Kr. 21,000,000.

Banking and Exchange
Business
of every description.

London Bankers:—Hambros Bank of Northern Commerce, Limited;
London County Westminster & Parr's Bank, Limited; London Joint
City & Midland Bank, Limited; Cox & Co.

SHELLAC.—Market dearer, on good buying orders and reserve of sellers. T.N., spot, 370s; December done 370s; March, 330s to 342s 6d; May, 320s to 332s 6d. T.N., December-January, steamer, sold, 325s to 332s 6d; January-February, 320s to 327s 6d, c.f. and i. terms.

COPRA firm, with sellers adopting a reserved attitude. F.M.S. Straits, December-February, Rotterdam, sold, £25 to £25 6s 3d; January-March, £25 5s to £25 10s. Ceylon quoted £26 15s; Java, £25 12s 6d; Dutch East Indies, £25 6s 3d; South Sea Islands, £24 7s 6d; Cebu, £25. Palm kernels firm, and December-February, Liverpool, sold, £17 6s 3d to £17 7s 6d.

RUBBER.—Market steady, but actual trading ruled quiet during the greater part of the week. Standard crepe and sheet, spot, also December delivery, sold, 1s 2d; January, 1s 2½d; January-March, 1s 2½d to 1s 3d; April-June, 1s 3d; July-September, 1s 3½d to 1s 3½d; and October-December, 1s 3½d. To New York, standard sheet, afloat, sold, 1s 2d; January-February, 1s 2½d, c.f. and i. terms. Fine hard Para, spot, quoted 1s 3½d; soft fine, 1½d; and Caucho ball, 1½d per lb.

EGG PRODUCTS.—Market quietly steady. Prime liquid yolk, spot, 105s; March-April, buyers, 85s; sellers, 90s; dried yolk, spot, 9½d; albumen, spot, 3s; March-April, buyers, 2s 8½d per lb.

OILSEEDS.—Market remains firm, but demand quieter. Bold Bombay, afloat, sold, £21 15s. Small Bombay, December, £20 10s. Calcutta, afloat, £20 12s 6d; December, £20 7s 6d; January-February, £19 7s 6d. Plate, afloat, £19 12s 6d; November-December, sellers, £19 10s; December-January, sold, £17 10s to £17 12s 6d; January-February, new crop, sold, £16 10s to £16 7s 6d. Chinese, shipping or shipped, sold, £18 2s 6d. Rapeseed firm. Toria, afloat, £18 10s; January-February, £16 17s 6d; real bold Ferozepore, December-January, £17 12s 6d. Cottonseed firm. Egyptian black, December, £11 15s, and white, £11 7s 6d. Bombay, December-January, £9 2s 6d. Gingly steady. Chinese, new, December-January, quoted £21 5s. Continent: large Bombay, December-January, £21 5s. Castor, Bombay, November-December, £18, sellers, to Hull; February-March, £16 15s. Ground nuts steady. Coromandel, machine-dried, December-January, £20 15s; ordinary, £19 15s; East African, November-December, £20 5s; Nigerian, £20 10s; bold Bombay, December-January, £20. Chinese, December-January, £20 10s. Soya beans, Manchurian: new crop, December-January, £11 15s; January-February, £11 15s per ton.

OILS.—Linseed market steady. Spot, net, naked, 39s 3d; December, 38s 6d; January-April, 35s 3d; May-August, 32s 3d. Rape firm. Crude, spot, 42s 6d; refined, 45s 6d. Cotton firm. Crude Egyptian, spot, 36s 6d; common edible, 44s; deodorised (in barrels), 46s. China-wood steady. Hankow, spot (barrels), 72s; shipment, 66s. Coconut quiet. Ceylon, spot, 41s; December-January, 40s; Cochin, ditto, quoted 45s. Soya firm. Oriental, barrels, December-January, 37s. Japan fish steady. November-December, cases, 25s 9d. Cod inactive. English, spot,

29s 6d to 30s. Ground nuts steady. English crushed, naked, spot, 45s; deodorised, barrels, 55s. Turpentine easier. American, spot, 34s 3d; January-April, 96s. Rosin easier. American, grade B, 14s 6d; F, 14s 6d; G, 14s 6d; H to I, 14s 6d; W, 14s 6d; WW, 14s 6d. French, F/G, 13s 6d; WW, 16s per cwt. Petroleum steady. American standard white, spot, 1s 1d; and water white, 1s 2d per gallon.

METALS.—Tin: The market opened with a firm tone, and prices moved in an upward direction in view of higher Eastern advices, combined with a good demand, especially for forward positions. A large business transpired, including cash at £180 5s; January, £191 5s; three months fluctuating between £182 5s to £181 10s. Sales in the East occurred on the basis of £181, c.i.f. Later values gave way on selling pressure, and by the middle of the week cash sold down to £178 15s, and three months £180 10s. At Thursday's session, with sellers showing some reserve, prices hardened. Cash sold at £180, and three months at £181, c.i.f. English ingots, £179 to £179 10s. Copper commenced firmly, due to a good demand for forward dates, together with stimulating advices from the United States. Prices showed an improvement of about 12s 6d from the final rates of last week. Sales were of liberal extent, including standard cash at £64 2s 6d, January £64 12s 6d, and three months £65 to £64 16s 3d. Subsequent movements ruled fully steady, with business on a large scale. At Wednesday's session cash sold at £64 5s, and three months at £65 5s to £65. At Thursday's session very little alteration in prices occurred on balance with business of fairly liberal dimensions. Cash sold at £64 3s 9d, and three months at £65 5s to £65 3s 9d. Electros, £71 12s 6d to £71 15s. Antimony, ordinary brands, £27 to £29 10s. Aluminium, home delivery, £100 to £92 10s. Lead firmer at £26 10s to £26 5s, as to position. Spelter steady, at £37 5s to £34 5s, according to position.

DE BEERS CONSOLIDATED MINES, LIMITED.

REPORT OF DIRECTORS

For the Twelve Months ended the 30th June, 1922.

To be submitted to Shareholders at the Thirty-Fourth Ordinary General Meeting to be held on the 29th December, 1922.

TO THE SHAREHOLDERS.—Gentlemen,—Your Directors beg to submit their Thirty-Fourth Annual Report, Balance-Sheet at 30th June, 1922, Profit and Loss Account for the year ended 30th June, 1922, and Appropriation Account, 30th June, 1922.

The balance undistributed at 30th June, 1921, was represented by:—
Suspense Profit Account:—Diamonds unsold at that date, £354,381 7s 2d; Balance unappropriated, £110,350 9s 9d ... £464,731 16 11
During the year the Diamond Account amounted to ... 401,816 6 5
Add to this the following:—Interest and Dividends on Investments £296,787 1s 4d; Revenue from other sources, £27,887 12s 6d ... 324,674 13 10
Amount transferred from General Fund ... 535,634 1 9
Amount released from Reserve for Stabiliment of the Diamond trade ... 21,823 4 2

Deduct Expenditure as follows:—Mining Expenditure, £798,552 12s 5d; Expenditure on Farms and Landed Property and Kimberley—Alexandersfontein Railway, £129,091 3s 4d; Donations, £41,395 12s 0d; Subsistence allowance to Employees, £24,657 18s 5d; Other Charges, £83,902 11s 6d; Interest on Debentures and on Capital of Leased Companies, £164,469 19s 7d; Sinking Fund towards Repayment of Debentures, £86,959 13s 0d ... 1,329,029 10 3

Leaving a Balance of ... £419,650 12 10
Out of which has been taken undercharges for Union of South Africa Income-Tax, in respect of the two years ended 30th June, 1921 ... 86,507 3 0

Leaving a Balance representing Suspense Profit Account—Diamonds unsold 30th June, 1922 ... £333,143 9 10

The stock of blue ground and lumps on the floors at 30th June, 1922, was as follows:—De Beers Mine, 48,395 loads; Wessels Mine, 2,683,871 loads; Bultfontein Mine, 3,022,659 loads; Dutoitspan Mine, 3,173,561 loads; 8,928,487 loads.
The General Reserve Fund now stands at £173,830 17s 5d. The Fund to redeem the De Beers Four and a Half per Cent. Exploration Debentures has been

increased to £833,984 15s 4d., both funds being represented by securities which have been taken into the Accounts at market prices on 30th June, 1922.

The Special Reserve Fund for the Stabiliment of the Diamond Trade has been reduced from £2,476,899 18s 3d to £2,455,076 14s 1d.

The severe depression in the Diamond market referred to in the last Annual Report continued through nearly the whole period under review. There has, however, been a distinct improvement during the last few months; business has broadened, and we feel confident that the worst is past, but the total recovery will necessarily depend upon the return to normal of trade conditions generally throughout the world.

Mining operations which were suspended during the previous year have not been resumed.

The Company has not paid any dividends to either Preference or Deferred Shareholders for the year ended 30th June, 1922.

Owing to the condition of the Diamond Trade, a conference of representatives of the four large Producers of diamonds and of the Diamond Syndicate was held in Cape Town in May last, when certain temporary modifications of the existing contracts between the Producers and the Syndicate were agreed upon.

The Cape Explosives Works, Limited, which is owned and controlled by your Company, has carried on its operations successfully during the year. The sales of explosives amounted to 279,215 cases, a decrease of 91,545 cases as compared with the sales of the previous year. This decrease is due largely to the unfortunate upheaval on the Witwatersrand early this year, which necessitated the complete suspension of mining operations on the gold mines for some months, in addition to the period under review.

A report by the General Manager will be submitted at the meeting.

In terms of clause 84 (Sub-section C) of the Company's Articles of Association, three Directors retire, namely:—Ludwig Breitmeyer, Percival Ross Frames, Solomon Barnato Joel, but, being eligible, offer themselves for re-election.

Resolutions for amending the Articles of Association of the Company and for increasing the Capital of the Company will be submitted to you at an Extraordinary General Meeting to take place immediately after the Ordinary General Meeting on 29th December, 1922.

G. W. COMPTON, R. PHILIPSON-STOW,
P. ROSS FRAMES, W. PICKERING,
F. HIR-CHORN, } Directors.
Kimberley, 26th September, 1922.

BALANCE SHEET, 30th June, 1922.

THE MONEY MARKET.

MONEY matters pursued the course normal at this season, involving a huge creation of credit, chiefly in order that a large number of firms and companies may display a becoming proportion of "cash in hand" in the balance-sheets showing their position as on the last working day of the year. The amount borrowed from the Bank of England, as shown in Thursday's return, was less than had been expected, but there was still time to complete the usual total. Pending the arrangement of the end-of-

the-year books, discount business was exceedingly quiet, but there was, perhaps, rather more demand for three months' bills at 2½ per cent. For delivery next week the rate for three months' bills was about 2½ per cent., and this quotation was roughly in accordance with the rate at which Treasury bills were allotted yesterday.

	Dec. 29, 1922.	Dec. 21, 1922.	Dec. 15, 1922.	Dec. 8, 1922.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1½ (Jly. 13, '22)
Discount (Call)	1	1	1	1	1½ (Jly. 13, '22)
Houses (Notice)	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	2¼	2½	2½	2½	2½

The Bank return showed a decrease of £12,000 in the note circulation, an increase of £1,000 in the stock of gold, and a consequent increase of £11,000 in the Reserve. Government securities had expanded by half-a-million and Other by 9½ millions, and with a decrease of 3½ millions in Public deposits, there was an aggregate increase of 13½ millions in Other deposits. Currency notes outstanding were increased by £2,797,100 to £301,336,700 this week, which includes £1,525,800 for notes called in, but not yet cancelled. The fiduciary issue is £251,660,900, or £58,327,500 below the maximum.

THE STOCK MARKETS.

In spite of the short week, broken by an account day, and such disturbing influences as the new hitch at Lausanne and the new Reparations development, the investment markets have shown strength, and War Loan rose to over 100. Political events caused falls in German, French, and Turkish bonds. The home railway market is good in tone, but Argentine rails eased off under selling orders. Rubber shares hold their ground, and the oil market is better, with a sensational rise in Venezuela Oil Concessions as the outstanding feature. Among industrials, Courtaulds have again risen smartly, and other textiles are steady. Shipbuilding, iron, coal, and steel shares have moved within very narrow limits. Brunner Monds have scored an advance, and tobacco shares are again harder on the continuance of public support. Mining markets, as a whole, are uninteresting.

THE COMMODITY MARKETS.

Trading in nearly all the commodity markets during the past week has been restricted, on account of the holidays. But a spirit of optimism appears to have taken possession of industry not unlike a modern faith-healing process. The better feeling in the Manchester trade noted in this column a week ago has been maintained, and considerable inquiry has been made in piece goods for India. Our Bradford correspondent reports that the year is closing with an exceptionally good tone throughout the wool trade; the demand for raw material is stated to be as strong as ever, and in some quarters higher values are confidently predicted. The iron and steel and coal trades have succumbed to holiday influence, a remark which also applies to most other industries. Further details of commodity markets from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

In the foreign exchange market the short Christmas week has been quiet with restricted business, the only excitement being that caused by the surprising action of the French Government in forcing an issue on the Reparation Commission with reference to Germany's default in deliveries of wood. As was to be expected, this clumsy piece of manoeuvring for position in view of next week's Conference had an immediate effect upon exchange rates, the Paris quotation moving up from 62.82 on the 23rd to 64.30 on the 27th. Since then there has been some recovery on the issue of assurances of rather more pacific intentions on the part of M. Poincaré; but the rate still stands at 63.90, and there is every expectation of a further rapid rise should the Allies fail next week to secure a united and reasonable plan of action. The Berlin rate, which was already showing signs of rising again before

Christmas, jumped on the 27th from 31,000 to 35,250, but has now recovered again to 32,500. The movements of the mark in the immediate future depend, of course, almost entirely upon the result of next week's Conference. The Brussels rate has moved in sympathy with Paris, but at 69.45 yesterday morning showed a still greater depreciation than before as compared with the French franc. Forward quotations remain unchanged at 4 centimes per month above spot for Paris, and 5 centimes per month below for Brussels. After rising to \$4.64½ on Saturday, the dollar rate has dropped quietly to \$4.63½ yesterday morning, and it is likely, too, that for the moment sterling will be affected by political conditions in Europe, although the movement in America towards co-operation in settling Europe's difficulties, which is progressing much more rapidly than was expected, may have favourable results on quotations. Forward quotations, while practically the same at 1½ cents per month above spot, show a slight tendency to widen. Among neutral exchanges, Amsterdam has moved steadily in our favour from 11.66 on the 22nd to 11.68½ yesterday. Madrid also has gone slightly in our favour, Switzerland at 24.50 very slightly against us. In Northern Europe there has been a sharp, and up to now unexplained, rise in Christiania from 24.38½ to 24.45½, while both Copenhagen and Stockholm are also rather higher at 22.46 and 17.24½ respectively. Helsingfors, for which there has been a good demand, is slightly lower at 185½. In Central Europe, Vienna remains unchanged at about 320,000, and confidence in Austrian currency appears to be increasing. Prague, after its recent rise, due largely to speculative manoeuvres, appears to be settling down again at about 148. Belgrade, however, in spite of attempts at a rational reform of existing exchange restrictions, is still higher than for some time past at 425, and Bucharest has also shown a sudden upward movement to about 815, a rise which, however, is only expected to be temporary. In the East the rupee has moved against us from 1s 4d to 1s 4½d, while the yen is some ½d cheaper at 2s 1½d. Prices for spot silver have been brought up slightly by a strongish demand from India, but the forward rates have actually fallen, so that the spread is greater than at any time during the year. Shanghai at 3s and Hong Kong at 2s 2½d are both ½d cheaper. In South America, Buenos Ayres has moved in our favour from 44½d on the 22nd to 44½d yesterday, while at 44½d Monte Video and Rio at 6 1-32d are unchanged. Valparaiso, on the other hand, has appreciated from 36.10 pesos to 35.20.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 23rd:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,396	Interest on Debt	1,762
		Supply Services	10,425
		Sundries	350
		Reduction of Debt	5,474
		Added to Exchequer balances ..	385
	18,396		18,396

Revenue at £18,396,200 compares favourably with £23,611,900 for the corresponding period a year ago, for then £7,250,300 came into the accounts under special receipts, as against £1,647,300 last week. Excise brought in £7,916,000, as against £4,700,000, and Estate Duties £1,730,000, as against £1,631,000. But Customs were lower at £3,267,000, as compared with £3,993,000, while Property and Income-tax yielded £1,396,000, as against £2,086,000. The week's operations reduced the National Debt by £5,474,354, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 300	Bank of England Advances ..	- 4,250
Public Debt Advances	+ 1,150	Unemployment Insurance ..	- 190
Treasury Bills	+ 815	Telegraph Money	- 650
		Funding Loan, &c.	- 500
		War Loan Surrenders	- 544
		Other Debt	- 1,605
	+ 2,265		- 7,739

The floating debt was reduced by £2,285,000 to £945,893,500.

FINANCIAL YEAR, 1922-23 (April 1 to December 23, 1922).

	£		£
Total spent	562,744,420	Raised by revenue ..	574,139,736

THE PROSPECTS OF A SETTLEMENT IN EUROPE.

THERE is no disguising the fact that the action of the Reparation Commission in declaring Germany in default in respect of its timber deliveries, though of no great importance in itself, is a bad omen, and that it has somewhat clouded the prospects of a successful issue to the Conference of Prime Ministers next week. It is clear that Germany has definitely defaulted in respect of these deliveries. The amount involved is quite trivial, and the fact that Germany has not troubled to be scrupulously correct in a matter which was well within her power is one of the reasons for the feeling of despondency which the incident has aroused. It is, however, of more importance that the action of the Reparation Commission should at this critical moment have thrown into relief the difference in the attitudes of Great Britain and France towards the situation, and have made it clear that the two nations have to fight their way to an understanding through every conceivable difficulty. Opinion in Great Britain would have understood, though it would not have sympathised with, the desire of France to manoeuvre for position before the Conference starts, and to put Germany into the position not merely of having to offer guarantees in return for the moratorium which she is about to request, but also of having incurred penalties through failure even to live up to the very greatly reduced requirements which the Allies have exacted in 1922. British opinion would not have sympathised with this attitude, because it regards such points as being of paltry significance compared with the inconceivably difficult task which the statesmen of Europe are about to tackle. This task is no less than the complete reconsideration, in the light of subsequent experience, of the settlement arrived at four years ago, having regard on the one hand to the just claims and financial necessities of the countries whose territory has been devastated, and on the other to the danger of complete political and financial collapse in Europe if a practicable settlement is not reached.

But, unfortunately, the incident does not end merely with the desire of France to put Germany into the position of a defaulting debtor. She also seems to have given some indication of her definite intentions in regard to this default. The Treaty of Versailles provides that in the

event of a default by Germany the Reparation Commission shall notify the default to the Powers with such recommendation for action as they may think necessary. Section 18, Annex 2, of the Reparation chapter then proceeds, "The measures which the Allied and Associated Powers shall have the right to take in case of voluntary default by Germany, and which Germany agrees not to regard as acts of war, may include economic and financial prohibitions and reprisals, and in general such other measures as the respective Governments may determine to be necessary in the circumstances." The French contention is, first, that this clause gives them a perfectly free hand to adopt any measure of constraint against Germany, as against the contention that the "other measures" contemplated are of the nature of economic and financial constraint; but the more important consideration is that France regards the clause as giving each Government the right to act as it sees fit. The actual wording is open to two interpretations, but it is evident that separate action would be contrary to the whole spirit of these chapters of the Treaty which provide throughout for co-operative action. The British view is that this is no time for arguing about small detailed points of rights and duties; but that we have to consider world-wide interests in the broadest way, and one of the principal of these interests is that Great Britain and France, if they can possibly contrive to do so, should act together. In a semi-official statement issued in Paris after the Reparation Commission had acted, it is observed that the French Government will fix the measures which it considers necessary in the circumstances. These will be communicated to the Conference next week, and the Allies invited to co-operate in enforcing them. "If this co-operation is not forthcoming, France will pursue them alone in virtue of the right conferred by paragraph 18 on the respective Governments." In other words, France has, in her view, put herself in the position of being entitled to take any measures she may think fit, and, secondly, has expressed her intention to do so, even if she acts alone.

We do not know what measures France may propose, but if they take the forms so much discussed recently in Paris—for example, a Customs barrier round the Rhineland, the control of production of the Ruhr mines by French officers, and other similar measures calculated, according to the British view, to reduce and not to increase the productivity of Germany, which is the foundation upon which any indemnity must be based—France will have destroyed any possibility of co-operation on the basis of the Versailles Treaty. We can readily conceive circumstances in which France might have to do this in her own interests; such, indeed, would have arisen if Great Britain had refused to support, or had thwarted, France, and had been the cause of her failure to get reparations. But to-day that complaint cannot possibly be levied against us, and Frenchmen realise that the British Government, supported by popular opinion, is prepared to go a very long way in sacrificing British claims upon Europe while paying British debt to America, for the sake of getting a settlement in Europe, in which France may gain the very utmost that economic conditions permit. We have endeavoured in and out of season to keep before our readers the case of France. But it is very difficult to maintain a good understanding so long as there is so serious a difference between the two countries as to the way in which to restore Germany's ability to pay. We can only say, and hope that it may be realised in France, that if the French Government takes separate action, and action which is regarded in this country as being calculated to drive Germany more deeply into the economic morass in which Russia is submerged, and from which we are trying to rescue Austria, there is no section of opinion in this country which would continue to support any remission of our claims against either Germany or France. We should, in that case, be driven, much against our will, into isolation, and to the adoption of a political policy which would have sole regard to the restoration of British trade.

Great Britain has no illusions as to the psychology of Germany, and the present Government is not in the least likely to err on the side of being unduly friendly to our late enemies or helping them to find a way out of meeting

their obligations. But they equally realise that a new military movement, or even economic penetration in the Ruhr, would be extremely dangerous politically, and would shatter Germany's remaining credit. If Paris is of opinion that the British Government is prepared to concur passively in French action, that misconception cannot be too rapidly dispelled. If France does take action, the Government will be faced with a most serious decision. But we are fairly confident that if they follow the balance of opinion at home, their reply would be to withdraw our remaining garrison in Cologne.

MONEY IN 1922.

DURING the year that is ending, for business purposes, to-day money came down in value during the first seven months, and then remained steady, with a slightly upward tendency, which was manifested in the last quarter by a stiffening in the rates at which the weekly parcels of Treasury bills were issued by tender. It was recorded in our article of July 1st on the preceding monetary half-year that Bank rate, which was 5 per cent. when the year opened, was lowered to 4½ per cent. on February 16th, 4 per cent. on April 13th, and 3½ per cent. on June 15th; on July 13th 3 per cent. became the official minimum, and has remained so from that date. It will be seen from the subjoined table that the course of history in the chief foreign centres has been harmonious with ours. Downward movements were recorded in the first three quarters of the year, and thereafter there was no change, except in India, Germany, and Finland. The Finnish rate marked a reduction in October, while Germany, where rises began at the end of July, continued them in August, September, and November, ending the year at 10 per cent.; and India also found advances necessary in the second half of the year. Our readers need hardly be reminded that comparative dearthness of money in the autumn was once a normal feature of financial history, when commercial demands were the chief influence on the market, which had not been complicated and confused, as it is to-day, by the activities of Governments in creating purchasing power for the covering of revenue deficits.

Returning to our own domestic affairs, the most important features of the money market's history during the past year have been the reductions in the deposits and securities held by the Bank of England, and in the volume of outstanding Treasury bills. The Bank return for the week ended December 20th last—before the figures began to be modified by the usual demands, chiefly for ornamental purposes and for credit at the end of the year—showed total deposits 123 millions, and total securities 120 millions, these figures being respectively 15 millions and 16 millions lower than at the corresponding period of 1921. On June 21st the figures were respectively 130 millions and 122 millions, so that the shrivelling of the two sides of the Bank's balance-sheet has been—apart from the bulges

usual at the ends of the half-years—a continuous process. Treasury bills were over 1,000 millions at the end of 1921, and had come down to 760 millions at the end of last June, while their latest available figure gives them as 734 millions on December 23rd last.

Both these movements—the diminutions in the Bank of England's deposits and in the outstanding Treasury bills—have had the effect of reducing the amount of purchasing power in the hands of the public, though in the case of each of them the deceptive half light thrown on monetary matters by banking and official figures makes it dangerous to draw very definite conclusions about the extent to which this reduction of purchasing power has proceeded. In the case of the Bank of England's deposits, on the date named a still larger decrease was shown in Other deposits, because it so happened that an unusually large amount had been transferred in the previous week to the Public deposits. Other deposits, as everyone knows, contain the balances at the Bank of the great outside banks, and so form part of the cash reserve that they hold against the current and deposit accounts of the general public. It has sometimes been suggested that, in the interest of light on the dark places of the money market, the bankers' balances should be stated separately from the other items that are included under Other deposits; but some years ago, when the question was discussed with some acerbity and the Bank of England was accused of being opposed to this separate publication, it intimated that it had no objection to giving it, if requested to do so by all the other banks and by an order from Parliament, but that if this were done, it might be necessary to withdraw or modify the facilities that it grants for the creation of emergency credit at the end of the half-years, and since then no more has been heard of the proposal. Thus we remain in the dark as to how far the reduction in Other deposits during the year has been carried out at the expense of the Bank of England's many private customers, and how far it has affected the cash holding of the other banks. All that we can say with certainty is that it is probable that a considerable part of the reduction has been taken off the "cash" of the other banks, and that in so far as this has happened, it has obliged the banks either to repair the gap, with legal tender cash held in their own hands, or to reduce considerably, by selling securities or calling in loans, the volume of their liabilities on deposit, or to carry on their business with a lower proportion of cash to liabilities. The monthly average figures of the London Clearing Banks for November, given in our issue of December 16th, showed, as compared with those of December, 1921, decreases of 150 millions in deposits (including undivided profits) and of 34 millions in cash.

As to the reduction in Treasury bills, the following table, showing the changes during the year in the items of the floating debt, is eloquent:—

FLOATING DEBT.			
	December 31, 1921.	June 30, 1922.	December 23, 1922.
Bank of England Advances..	£ 20,000,000	£ 40,000,000	£ ..
Public Department Advances	180,034,000	164,837,500	212,078,500
Treasury Bills	1,059,806,000	760,525,000	733,815,500
	1,259,840,000	965,362,500	945,893,500

The effect of this diminution by 326 millions of outstanding Treasury bills on the general monetary position is much more subtle and indirect than that of the shrivelling in Other deposits at the Bank of England. It was largely effected by sales of Treasury bonds, and in so far as this happened, its effect depended on the extent to which the Treasury bonds were subscribed for by the public, and the Treasury bills paid off were held by the banks; when this was so, the banks were paid off with money provided by their own depositors, and their deposits were to that extent reduced, and their investments or discounts—under whichever heading they put their Treasury bills—were diminished, while their cash was unaltered by the transaction. So the banks found themselves with a larger proportion of cash to deposits, and the general public had less money at its credit with its bankers, purchasing power having been transferred to the Government for the exchange of a

genuinely subscribed security for one that had been paid for with bank-made money. It might have been expected that the banks thus finding themselves with a larger proportion of cash to deposits would have made haste to correct the position by expanding their advances to industry, and so creating new deposits, but, in fact, bankers have complained throughout most of this year of the difficulty of finding new industrial borrowers, owing to the prevalent trade depression. Which seems to show that it is not as easy to expand or contract trade and prices merely by lowering and raising the price of money as is believed by some theorists, who look for a stabilised Paradise secured by control through Bank rates. The year has seen Bank rates brought down considerably, but in most countries expansion of trade is still largely an aspiration.

Appended are our usual tables of average money rates:—

DAILY AVERAGE OF MONEY RATES.

To the discount market the year has been fairly comfortable, for although the margin between it and poverty was narrow, it received a handsome bonus from the hands of the banks at the expense of their depositing customers, because when Bank rate came down to 3 the banks, nevertheless, still kept the wide margin of 2 per cent. between it and their published rate on deposits, which came down to 1 per cent., and consequently, according to the modern convention, made weekly advances to the bill brokers at 1½ per cent. often at times when they were paying the Bank of England ¾ per cent. for loans.

THE HITCH AT LAUSANNE.

THE situation at Lausanne has so many times been saved at the eleventh hour that we need not necessarily be alarmed at the present crisis. At the same time, it must be owned that a successful issue seems more remote than at any previous stage of the negotiations. The controversies that have been shelved have not been settled; the possibility of compromise over the territorial question of the Mosul Vilayet appears faint; and behind the conflict of interests and policies between the Allied Powers and Turkey lies the much more formidable conflict with Russia. The sudden recall of Husein Bey, reported by the correspondent of the *Manchester Guardian* at Lausanne, is also a disquieting symptom. Here was one Turkish delegate, at least, who knew that patriotism is not incompatible with moderation, and his country will suffer by the loss of his services. The general spirit of the Turkish delegation (whether spontaneous or prompted from Angora) is not

one of give and take, and on our side Lord Curzon's policy, while adroit and subtle in questions of detail, is marked by a rigid hostility to Russia. To drive a wedge between Russia and Turkey is a hazardous operation, and even if the *tour de force* were accomplished, it might prove a poor bargain for us. No doubt it was a serious drawback to the Russo-British Entente of 1907 that it lost us the friendship of the Muslim world. Wiser diplomacy at Constantinople during the crucial years following 1908 might have obviated the latter sacrifice. But it would be an even greater diplomatic failure to recover the goodwill of Islam at the price of renewing our old Asiatic rivalry with what, in this quarter, is still the Russian Empire. If the major conflict with Russia were removed it is hard to believe that the minor issues with Turkey would prove incapable of adjustment. Take the *non-possumus* attitude momentarily assumed by both parties in regard to the Vilayet of Mosul. There are several obvious lines along which an approximation of views might be sought for. If, as is suggested, the real motives on both sides are not connected with strategy or ethnology but with oil, why should not the question of the oil-fields be settled in advance of and apart from the territorial one? There would be much to be said for treating the oil as the property of all the countries included in the Ottoman Empire before the war—that is, the new Turkish National State and Syria and Palestine as well as Iraq—instead of assigning the oilfields, in exclusive possession, to the particular "succession State" within whose borders chance may place them. If the ownership were vested jointly in the "succession States" and the concessions for exploiting them were apportioned among the leading industrial countries of Europe, the territorial question could then be decided on its merits. In regard to these, the British plenipotentiaries are certainly on stronger ground than the Turkish. The disputed district can by no stretch of imagination be regarded as Turkish in nationality. Kirkuk is the only Turkish district, and this is a small and isolated enclave; Mosul is an Arab city, and most of the mountainous remainder is Kurdish.

In their present impolicy towards the Kurds the Turks show a remarkable inability to profit by the lessons of their own recent history. The Kurds—a Sunni Muslim nationality speaking an Iranian (i.e., Persian) language—used to be as loyal an outpost of the Ottoman Empire on its Eastern frontier as the Albanians were in Rumelia. The Committee of Union and Progress alienated the Albanians, and consequently lost Turkey in Europe; and now Angora is doing its best to alienate the Kurds, with the same inevitable consequences for Turkey in Asia. Having lost every other subject nationality through their mania for Ottomanisation, the Turks are evidently determined to try the same treatment upon the one non-Turkish people that now remains within their frontiers. Hence their eagerness to exclude "racial" minorities from the scope of any scheme for minorities' protection. The result is that the Kurds, who would undoubtedly have welcomed a partnership on fair terms with the Turks as an insurance against their other neighbours—the Armenians, Russians, and Arabs—will now be driven into the arms of one or other of Turkey's enemies. This, of course, is no concern of ours, except that it complicates the disposal of those parts of the Mosul and Baghdad Vilayets which cover Southern Kurdistan. There is no case for annexing Southern Kurdistan to the Iraq Arab State; but, on the other hand, we certainly cannot hand back this mandated area to Turkey so long as it remains her policy to denationalise its almost entirely non-Turkish inhabitants.

NEW CAPITAL ISSUES IN 1922.

THERE are several separate aspects from which the figures of new capital raised in the London market deserve careful study. They are some guide to the extent of the demand of British trade and industry for the financial means of expansion and enterprise. They illustrate Government financial policy. But they will be watched even more closely for evidence of the progress London is making in regaining its former position of lender to other countries. Our own statistics show that of the new capital raised in

London in 1913 over £160 millions was destined for foreign countries and British Possessions. During the war this stream of capital abroad was checked by the overwhelming need for concentrating the country's resources upon the financing of the war. But it is flowing again now, as will be seen from the following geographical classification of the destination of the new capital raised in 1912, 1913, 1920, 1921, and 1922 :—

DESTINATION OF NEW CAPITAL.

	Whole Year.				
	1912.	1913.	1920.	1921.	1922.
United Kingdom....	£ 45,335,300	£ 35,951,200	£ 328,021,400	£ 276,176,500	£ 443,518,300
British Possessions....	72,642,400	76,137,200	31,639,800	90,577,800	74,924,200
Foreign countries ..	92,872,300	84,448,600	7,888,400	22,223,900	55,253,100
Total	210,850,000	196,537,000	367,549,600	388,978,200	573,675,600

Judged by the criterion of purchasing power, London's lendings to the Empire and to foreign countries have a long way to go before they overtake pre-war figures; but their substantial increase is welcome and important. Our great stock of foreign investments stood us in very good stead during the war, in the course of which it was sadly depleted. The fact that the stock is now being steadily replaced is also welcome from the point of view of the trade balance, to which interest on holdings of foreign securities made in pre-war days a very substantial contribution.

The aggregate of London issues, quarter by quarter, for the past 13 years is shown below :—

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200
1922.....	286,207,100	162,567,100	61,920,200	62,981,200	573,675,600

It will be seen that in the past year the first quarter produced half the complete total, that the June quarter was also prolific, while the last six months of 1922 contributed only a little more than one-fifth of the year's aggregate. The gross total of new capital applications in 1922 exceeds that for 1921 by nearly £185 millions; but most of this increase is accounted for by heavier British Government borrowings. Temporary borrowings in the form of Treasury Bills and Ways and Means advances are not included in our figures. Apart from these, the borrowings of the British Government in 1921 and 1922 compare as follows :—

		£			£
		Millions.			Millions.
1921.			1922.		
½ Treasury Bonds ..	173.9		5½ Treasury Bonds ..	115.1	
Savings certificates ...	11.1		5 Treasury Bonds ...	110.1	
½ Local Loans stock ..	17.9		4½ Treasury Bonds ..	68.9	
			Savings certificates...	58.4	
			3% Local Loans stock ..	17.1	
		202.9			369.6

* Net sales, i.e., excess of sales over encashments.

Taking full advantage of Lombard street conditions and of the strong demand for gilt-edged securities, the Treasury has replaced a large slice of the floating debt by bonds of 10 years' currency. This process began in 1921. In 1922 the Treasury has sold £294 millions' worth of Treasury Bonds carrying declining rates of interest, and has reduced the floating debt by £314 millions. The comparatively large total for Savings Certificates is due to a great rush of purchases towards the end of the first quarter, when the announcement had been made that as from April 1st the price of the Certificate would be raised from 15s 6d to 16s. The following table shows the pur-

poses to which the remainder of the new capital was devoted :—

	Whole Year 1921.	Year 1922.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total for Whole Year 1922.
	£	£	£	£
British Government Loans.....	202,896,300	346,752,200	22,875,900	369,628,100
Colonial Government Loans	73,650,000	41,582,300	17,000,000	58,582,300
Foreign Government Loans	5,905,000	13,066,600	1,187,500	14,254,100
Colonial Corporations, &c.....	19,003,700	5,555,300	nil	5,555,300
Foreign Corporations.....	4,882,000	5,839,100	1,184,500	7,023,600
British Railways	nil	6,107,500	3,680,900	7,087,500
Foreign Railways	630,000	14,687,500	34,700	14,722,200
Australasian Mines	18,600	16,500	nil	16,500
Other mines	387,500	409,200	50,000	459,200
Exploration, Financial, &c.....	185,900	1,263,500	nil	1,263,500
Breweries	1,926,300	5,385,300	2,296,500	7,681,800
Merchants, Importers, &c.....	4,407,400	784,000	191,000	784,000
Stores and Trading	23,761,500	6,252,500	306,300	6,558,800
Estate and Land	3,800,000	170,500	900,000	1,070,500
Rubber	818,900	612,500	1,086,700	1,699,200
Oil	134,900	125,700	135,200	269,900
Iron, Coal, Steel, and Engineering	15,821,700	16,765,200	400,000	17,165,000
Elect. Light, Power & Telegraph	4,773,800	11,323,300	2,723,500	14,046,800
Tramway and Omnibus.....	5,677,800	3,566,800	1,485,000	4,851,800
Motor Traction & Manufacturing	774,000	577,000	11,300	588,300
Gas and Water	905,000	nil	nil	nil
Hotels, Theatres, and Entertainments	2,447,600	1,687,300	406,000	2,633,300
Patents and Proprietary Articles	2,529,400	1,628,900	nil	1,628,900
Docks, Harbours, and Shipping ..	131,500	nil	nil	nil
Banks and Insurance.....	5,183,200	14,109,700	1,537,500	15,647,200
Miscellaneous	3,579,000	2,920,700	48,000	2,968,700
	3,447,200	6,733,500	4,461,700	11,195,200
	388,978,200	510,694,400	62,981,200	573,675,600

In aggregate, the demands of Dominion and Colonial Governments have been about £15 millions less than in 1921. India has made a large contribution to the total, having floated in June a loan of £12,500,000 5½ per cent. stock at 96, and in October a further huge issue of £17,000,000 4½ per cent. stock at 85. The Commonwealth of Australia was also in the market twice, issuing loans of £5 millions each in January and April. Other borrowers among Governments within the Empire were South Australia, Victoria, Western Australia, New Zealand, New South Wales, Straits Settlements, and British Guiana. The five foreign Governments borrowing in London were those of Chile, Siam, Czechoslovakia, Brazil, and Peru. Local authorities at home borrowed much less than last year, only five entering the market, but foreign and colonial corporations were frequent visitors, notable issues in this class being made by the Associated Municipalities of Denmark, Prague, the Department of the Seine, Johannesburg, and Bergen.

The entry of over £6½ millions in the above table, under the heading of Home Rails, is entirely accounted for by London's underground railways. The great trunk lines, as in 1921, have made no demands on the capital market, though their amalgamations and capital rearrangements have, of course, been a feature of the past year in the investment world. On the other hand, foreign railways have borrowed in London to the tune of £14½ millions. Prominent in this group were the four French railways, the P.L.M., the Midi, the Orleans, and the Nord, who between them raised in March £15 millions (nominal) in 6 per cent. stock, at prices ranging from 86 to 90. The other notable borrower in this section was the Buenos Aires Western, which issued at the beginning of the year £2 millions 4 per cent. stock at 60.

Coming to industrial borrowers, we notice a big drop under the manufacturing class, where the year's outstanding feature was an issue in May of £4,000,000 5 per cent. debenture stock at 93½ by Lever Brothers. The shipping list, on the other hand, shows a large increase, eight large issues having been made by British shipping companies, including the P. and O., Royal Mail, Union Castle, and Lamport and Holt, and two by well-known French companies. Under the heading of Oil, the total is mainly composed by the following large flotations :—Shell Transport and Trading Company, 5,000,000 7 per cent. £1 7 per cent. £1 first preference shares at 20s 6d; and Anglo-Persian, 2,000,000 8 per cent. £1 first preference shares at 21s. Another feature among the industrial sections was the substantially larger demand for new capital by the iron, coal, steel and engineering group. Here there were fifteen prominent issues, among which may be noticed Powell Duffryn's issue of £1,500,000 7 per cent. debenture stock at par, that by Pease and Part-

ners of £1,000,000 5 per cent. debenture stock at 93, that by the Tata Iron and Steel Company of £2,000,000 7 per cent. debenture stock at 98, and that by Consett Iron of £1,500,000 6 per cent. debenture stock at 99; while Platt Brothers made a double issue in July of 534,000 ordinary £1 shares at 43s. Among other industrial issues of the year may be mentioned the following :—Marconi's Wireless Telegraph, £1,500,000 6½ per cent. debentures at 99; Crosses and Heaton's Associated Mills, £1,263,626 6 per cent. debenture stock at 98; and County of London Electric 500,000 £1 ordinary shares at £1 2s 6d and 500,000 6 per cent. preference shares at par.

Those whose business brings them into close touch with the new capital market will remember 1922 above all for the boom of the first five months, and the great campaign of tagging which took place in that period. For those five months underwriters had a very happy experience, and stags usually found that the public demand for any attractive new scrip was sufficient to allow them to unload at a good profit. But after the middle of the summer tagging died away, and underwriters (as in the case of the second Indian Loan) were frequently left with very large proportions of new stocks to take up. Another feature of the year, namely the fall in interest rates, we hope to discuss in a future issue.

LABOUR IN 1922.

(BY A LABOUR CORRESPONDENT.)

THE year 1922 will be regarded as one of the black periods in the annals of labour. Judged by the number of people receiving Poor Law relief, the situation to-day is worse than it has been for half-a-century. The proportion of the population in receipt of assistance from the Boards of Guardians has not been as high since 1873, and it is necessary to go back ten years earlier than this date, to the time of the great cotton famine, to find a period when as large a number of persons were "on the Guardians" as is the case at the present time.

It is true that the official statistics show, during the past year, a decline in the number of people on the live register of the Employment Exchanges, or the Unemployment Exchanges as the *Times* inadvertently, but accurately, described them a day or two ago. At the end of December, 1921, about 1,886,000 workpeople were registered as unemployed, and 315,000 registered as "working systematic short time in such a manner as to entitle them to benefit under the Unemployment Insurance Act." The latest figures, relating to December 18th, show that there were over 1,359,000 workers registered as totally unemployed, and 54,700 registered as working short time in the sense used above. There has, that is to say, been a reduction of the unemployed army during the year of about half a million workers, and an even greater reduction since the end of June, 1921, when the unemployment curve reached its highest point, and over two million workpeople were registered as totally unemployed.

There has, therefore, been a fall in the unemployment curve, but it is to be remembered that during the second quarter of 1921 unemployment rose rapidly, because of the long coal stoppage. The monthly average percentage amongst the members of trade unions making returns to the Ministry of Labour was about 15½ last year, including the phenomenally high rate of unemployment directly resulting from the coal stoppage, and the monthly average for the past year is almost exactly the same figure. Moreover, though it is undeniable that there are less people unemployed now than was the case when the year opened, the number is still very large. Unfortunately, we have no complete figures showing the volume of unemployment. The official statistics relate to persons registered as unemployed at the Employment Exchanges. Insured workers, for the most part, register, though if they fall out of benefit they often enough cease to register. But insured workers only count for 12,000,000, or about two-thirds of the employed persons. The Ministry of Labour has very incomplete records of the number of unemployed juveniles, and of unemployed workers in uninsured trades, such as agriculture. The short-time figures

are also inadequate, and take no account of the number of workpeople employed on short time in such a time as to render them ineligible to receive unemployment benefit.

It is impossible to say exactly how big the burden of unemployment is to-day, but the total number of unemployed and under-employed workers is probably a million and three-quarters at the least, and may approach two millions. Whilst it must be admitted that the unemployment has fallen somewhat during the year, the lot of the unemployed has become much harder. During the past year the trade unions have paid out relatively little in out-of-work pay, as their funds were exhausted during the first year of the trade depression. In the meantime, unemployment insurance administration, most particularly as regards "uncovenanted benefit," has become much less sympathetic, and Boards of Guardians have, of necessity, revised their scales of relief. The work provided by public authorities has not absorbed a tithe of the unemployed labour available. It is not surprising, therefore, that organised Labour should find little comfort in the improving course of unemployment during the past 12 months.

In 1921 there were drastic reductions in wages. The changes in wages reported to the Ministry of Labour during that year resulted in a net reduction of about £6,000,000 per week in the rates of wages of over 7,000,000 workpeople. During the present year, up to the end of November, there was a net reduction of nearly £4,200,000 in the weekly full-time wages of over 7,500,000 workers, against which may be set a net increase of nearly £11,500 in the weekly wages of about 74,000 workpeople. It will be seen, therefore, that the campaign of wages reductions has continued, though not with quite the same intensity. But from the Labour point of view the reductions which have taken place during the past year are more serious than those which were put into operation in 1921. According to the Ministry of Labour the average level of retail prices reached its maximum in November, 1920, when it stood at 176 per cent. above the pre-war level. At the end of 1920 it was 165 per cent., and at the end of 1921 it was 92 per cent. above the pre-war level. During 1921 there was therefore a substantial fall in the official index number of retail prices. At the present time the number appears to be stabilised at about 80 per cent. above the average of July, 1914. The fall during 1922 has been relatively small. Consequently, the fall in real wages has been much greater during 1922 than it was in the previous year. It is doubtful whether wages can be pushed much lower, and it is anticipated that during the forthcoming year the rate of decrease will slacken very considerably, until it reaches a temporary stabilisation point.

During 1919 there were considerable reductions in working hours. Before then the average weekly hours of labour in the chief organised industries varied from 48 to 60, but in 1919 the average working week established in industry was from 44 to 48 hours. The Ministry of Labour computed that 6,500,000 workers secured an average reduction of about six and a-half hours per week. In 1920 over half a million workpeople obtained an average reduction of about four hours per week. With the collapse of trade, however, there was a tendency towards lengthening hours of labour, though in neither 1921 nor 1922 has it proved to be very considerable. For example, during 1921, it is reported that 13,000 workers had their hours reduced by 34,000 per week, whilst 31,000 workers had their hours increased by 46,000 per week. During 1922, though there have been slight increases in working hours in some trades, there has not been the determined onslaught on the 48-hour week which was anticipated. No doubt the existence of a large mass of unemployment has saved the working week from extension, and it now appears likely that the only thing the workers will retain of the gains obtained during the post-war period will be the shorter working week.

The year 1922 has been marked by relatively few disputes. It will be remembered that during the year following the end of the war there were a large number of disputes. In 1920 there were even more. In 1921, however, the number declined very considerably, and there have been fewer still during the past year. In 1919 about 2,600,000 were involved in stoppages of work, which

amounted in the aggregate to over 34,000,000 working days. From the beginning of 1922 to the end of November trade disputes resulting in stoppages of work have involved about 550,000 workers, and the aggregate duration of the stoppages has been nearly 20,000,000 working days. During the two months, however, the number of disputes in progress has been the lowest for over five years. The number of working days lost during 1922 is swollen by the disputes in the engineering and shipbuilding industries. The engineering stoppage lasted fourteen weeks, and was fought on a question of principle—the undisputed right of employers to exercise “managerial functions.” The shipbuilding dispute was over a question of wage reductions. The only other dispute of importance during the year was that in the printing trades, which also arose on a request from the employers for a reduction in wages. During December the miners considered the present desperate circumstances in which they are now placed, and though a section wished to bring the existing agreement with the coal owners to an end, no action was taken, but the situation will be reviewed early in 1923.

Poor Law statistics indicate an increase in the volume of destitution during the past year. The total number of persons in receipt of Poor Law relief in England and Wales at the beginning of 1921 was about 829,000, and at the beginning of 1922 nearly a million and a half, or about 40 per 1,000 of the population. By the end of June over a million and three-quarter persons were receiving relief from the guardians. The latest figures show that in 31 selected areas in Great Britain there were on one day of November 572 per 10,000 of the population in receipt of poor relief, an increase of 50 per 10,000 on the figures a year ago. During the year the number of persons relieved has increased by between 9 and 10 per cent. How terribly some districts are suffering may be seen from the official figures, which show that in the Stockton and Tees district the number of persons receiving Poor Law relief was in November 1,319 per 10,000 of the estimated population, whilst in the Glasgow, Sheffield, Coatbridge and Airdrie, and West Ham districts the numbers were 1,288, 1,198, 1,050, and 991 respectively.

The past year will, as I have already suggested, be regarded as a black year for labour, and it closes with promises by the Prime Minister to take more adequate measures than he indicated during the recent Parliamentary session to deal with the unemployment situation. The Labour movement is not sanguine regarding the revival of trade in the absence of a drastic international financial and economic policy and a more wholehearted domestic policy.

DE BEERS CONSOLIDATED MINES, LIMITED.

(FROM A CORRESPONDENT.)

KIMBERLEY, December 5.

I WAS fortunate to arrive in Kimberley just when the production of diamonds at De Beers was restarted after having been stopped for 18 months. The stoppage was due to the diamond market having collapsed suddenly after a period of unusual activity. The market has now revived, and diamonds are saleable again. Hence the decision to restart production.

De Beers is a fascinating proposition. It is worth coming all the way from England to see and hear about, especially when one comes out to such a fine climate, and can make the journey so comfortably.

The selling price of diamonds varies very widely in different years. So in turn does the production of De Beers and the dividends on De Beers deferred shares. And again, in turn, so does the market value of the deferred shares. Some years diamonds have sold at four times the price of other years. Some years the production of De Beers has been very large—up to eight million loads—others, there has been no production at all. Some years the deferred shares have paid no dividend at all; in others they have distributed from 10s up to as much

as 60s per share. The preferred shares, which are cumulative, are already 20s in arrears, and will be 30s in arrears at the end of 1922 unless a dividend is declared. It is a foregone conclusion that such a dividend will be declared. The only topic of discussion is as to how much of the arrears will be wiped off on its declaration.

But in spite of the continuous variation in the output and value of the diamonds produced, and in the dividend paid on the deferred shares, it is clear that these shares have a certain real, as opposed to market, value. No one can say exactly what this actual real value may be, but I will endeavour to put forward some figures which may enable the reader to form an idea.

In the past 13 years, i.e., from 1909 to 1921 inclusive, 63 million loads of diamondiferous ground have been mined for a total expenditure of every kind, including all outgoings, of 30½ million pounds, and the sales of diamonds during the period have amounted to nearly 57 million pounds. During these 13 years the average dividend per year on the deferred shares has been 21s 6d. The total average dividend earned during the same period has been 25s 6d per year, but besides paying dividends the company has paid off during the period debentures to the tune of 1½ million pounds (the balance of the 4 millions created years earlier and paid off previous to 1909) and added considerably to the investments in its portfolio, besides writing off the entire value of its equipment or increasing its capital. In other words, these investments have been provided for, debentures paid, and equipment written off out of revenue which would otherwise have been available for dividends to the extent of an average of 4s per year on each deferred share.

But it must be borne in mind that the years 1920 and 1921 were boom years, in which diamonds fetched exceptionally high prices. Nevertheless, if the sales during these two years were divided by half, the company would still have earned a distributable profit of an average of 18s per year on each deferred share.

A share which can actually pay out £14 in 13 years and put by £2 10s per share as well for other purposes, must have a certain value if similar dividends can be continued; that is, if the stuff is there which ensures continuous production, and if the product can continue to be sold profitably. As regards the stuff being there, there are nine million loads lying above ground, the mining expenses of which have been already paid. This is nearly two years' average production. There are also “in sight” underground, that is, existing without doubt, 72 million loads, or over 14 years' average production at the rate of 5 million loads per year. In addition, there are not less than a further 200 million loads below the present workings, which, though not technically “in sight,” are considered certain to exist, and continue to be of more or less average value. There is probably no other mining organisation in the world in such a favourable position as regards its reserves, both actually “in sight” and

I anticipate that general conditions will be more favourable in the future. The expenditure at the mines, so long as the nine million loads above ground previously alluded to hold out, and mining is not resumed, should not be more than half the normal, since the mining and depositing expenses relative to these nine million loads have been already paid. The treatment of them should take nearly two years at the normal average rate of production. After that there will be a considerable reduction in total expenses, as compared with those of the period 1909-21, due to the change in the method of treatment which is to be used when actual mining restarts. There will be no more depositing “on the floors.” The ground will be crushed and diamonds recovered the same day. This will probably reduce the mining costs by as much as 15 per cent., and thus considerably increase the average

distributable profit. And the machinery for the new treatment will not involve any fresh expense. It is almost all paid for already. There are indications, too, that saving may be anticipated from the lessons of economy which have been learnt during the recent prolonged period of adversity. The De Beers Company has always been very generous in its dealings.

But the most favourable feature is the demand for diamonds that has now again commenced from America. This continent will probably be taking 80 per cent. of the world's production, and, as long as it continues on the feed, the reduced consumption of Europe does not matter so much. Owing to the United States' policy of restriction of immigration and high tariffs, wages and prices are rising out there. And this state of affairs will probably expand, as there is a vast accumulation of gold in the United States on which banking credits can be based and more currency issued. This means increased spending power for luxury goods like diamonds. And in America the masses buy diamonds as well as the classes.

There are, of course, unfavourable factors for De Beers, such as the continuous increase in the supply of diamonds from outside sources. But the population and wealth of the world are always increasing, too. There is also the gradual impoverishment and contraction of the diamond-bearing ground at depth to be considered. But this is so gradual that it hardly counts. On the whole, it seems that the favourable factors outbalance the unfavourable ones.

Viewing the situation as a whole, and taking into consideration the company's strong financial position, as disclosed by the balance-sheet, the economies to be effected in the future, to which I have already alluded, and the fact that De Beers possesses other unworked diamonds mines outside Kimberley, I should estimate that the deferred shares have an actual, as opposed to market, value of not less than £16 per share. This is below the average actual market price of the past 13 years, during which period the deferred shares have been down to 9 and up to over 32.

The preferred shares have varied in market value during the period 1909-21 between about nine and 18½. The average has been about 14½, and on this price they have given as good a return to the investor as the deferred. But it should be remembered that their yield is limited to 20s per year, whereas the deferred may pay a much higher average in the future than the 21s 6d paid up to date, and are unlikely to pay less.

There will be no difficulty whatever for De Beers to produce any quantity of diamonds which its clients will take for generations to come, and further, these diamonds can be produced at figures which are known. What is unknown is the amount which it will be possible to sell in the future and the future selling price. Everything, in fact, depends on capacity to sell. Capacity to produce will not be in question for years and years. At present the price of diamonds is low relatively. They are about 50 per cent. of the high prices of three years ago. But if De Beers could only sell enough of them they could earn very big profits even at their present price. As De Beers has the highest average value per load of any diamond mine, it is not in its interest to have too high a price for diamonds, since a high price encourages competition by the opening of mines which can only work at a profit when prices are high.

De Beers is about to issue 100,000 additional deferred shares. In pursuance of the policy of control, these will be issued for the purpose of acquiring all the deferred shares of the Premier mine which are not already in the De Beers portfolio. The possession of these shares will prolong by many years the already long life of De Beers. De Beers also works in sympathy with the Jagersfontein Mine. The principal competitors are the alluvial mines in the Congo and in what used to be German South-West Africa, though in the case of the latter their production is limited by agreement. The alluvial river diggings in British South Africa itself are also in free competition. But all alluvials give out in a limited period, whereas the deposits controlled by De Beers are of a more permanent nature.

THE INFLUENCE OF A FALLING EXCHANGE ON THE WEALTH OF A COUNTRY—II.

(BY A GERMAN CORRESPONDENT.)

THE efficiency of labour is affected in a similar way to the efficiency of capital. Owing to the strong organisation of labour, wages follow prices fairly quickly; but there is nevertheless a certain time lag which often causes considerable friction. A huge amount of energy and time is wasted by wage boards; but, in spite of all efforts to arrive at an amicable arrangement, strikes for a quicker and closer adjustment of wages to prices are frequent. The loss involved in this process is enormous, and victory does not bring contentment, inasmuch as the workmen always feel cheated whenever the purchasing power of wages is lagging behind. They have but little incentive to work overtime. Saving offers no attraction, and there is a premium on spending.

The springs of economic activity are paralysed everywhere, and there is a danger that they may become so permanently, for the social results of depreciation can scarcely be undone, even if the currency is ultimately stabilised. The existence of hundreds of thousands of families will have been destroyed beyond repair. A large part of the investing and professional classes will have been pauperised, and their sons and daughters will have to join the ranks of manual labour. The strata of society which were the foundation of the intellectual and scientific development of the nation will have been permanently reduced in numbers, with the result that future cultural progress may become seriously endangered. Moreover, the possibility of a permanent physical deterioration of a considerable part of the nation must not be lost sight of.

As a rule, the foreign assets of a country will have melted away before the downward course of its exchange sets in. What remains will increase in value (in terms of the depreciated currency), and as long as there is a big margin between prices abroad and prices at home, the owners of foreign securities will greatly benefit. That is the reason why the securing of investments having a constant money value is very profitable as long as depreciation continues, even though competition for them may drive up prices. When ultimately the exchange is stabilised heavy losses will result, unless stabilisation takes place at a point below the purchase price, as calculated in paper currency.

Foreign buyers of depreciated paper money, such as German marks, are like defrauded creditors. They gave goods for paper, when goods reckoned in paper were cheap, but they cannot buy the same amount of goods now that their paper holdings have depreciated in value. If stabilisation is not arranged at a level high enough to provide some compensation for them their losses may well be enormous, whilst the country which issued the paper will gain proportionately.

On the other hand, a country with a falling exchange can sell its goods cheaply abroad, for its manufacturers are easily deceived by receiving increased quantities of paper money without being obliged to pay out immediately proportionately increased sums in respect of wages and home-grown material. They can sell cheap in foreign currencies, and they often sell too cheap, for they do not allow enough for depreciation and replacement charges, which are, of course, greatly increased by these price changes. Foreign countries are the gainers by being allowed to buy below cost, though they may be hurt by the process of adapting their own industries to the new conditions. In a new country this premium on exports may act as a stimulus to production, and lead to an expansion of industry. In an old country like Germany, however, production does not increase, but a larger share of the national produce is sold abroad at a loss. The working of these forces is, however, transitory and easily readjusted.

The change of ownership which is brought about by foreign investment has permanent consequences. Foreign buyers of marks and Government and municipal investments may lose their money if they bought too early; but if they cling to their holdings they become the creditors

Notes of the Week.

of the country. While the goods they furnished have disappeared, the rent charge remains. The same applies even more in the case of purchasers of real estate and industrial securities. Investments of this kind can be bought extremely cheaply, in spite of the fact that the seller makes what he considers a good profit. The shares of the Deutsche Bank, for example, can now be obtained for £1 12s at present, Höchster Farbwerke for £3, and Deutsche Luxemburg for £5, while before the war their par value was £50. Of course, it must not be forgotten that dividends now amount to very little. Even if Deutsche Luxemburg were to increase its dividend from 20 per cent. to 50 per cent. this year, that would only mean a sum of 500 marks a share, or about $\frac{1}{4}$ per cent. on the present purchase price, or, in other words, 25 gold pfennig on an investment for which the original investor would have had to pay 1,000 marks gold. In many cases the dividend is unduly low, because a large part of the earnings are set aside for permanent improvements, but this does not explain the low quotation of the shares, which is justifiable only on the assumption that there is but little chance of improved dividends in the course of the next few years.

These low prices have already attracted many buyers from abroad, and are sure to attract many more when the process of stabilisation begins. This, however, will bring about serious industrial dislocations, for prices will fall, orders will stop, paper profits will evaporate, quotations will break, and the judicious buyer will have a splendid chance of picking up bargains. The final result will be, not that carpets, pictures, and other goods, which are not used for production, will change hands, but that there will be a permanent participation of foreigners in the material wealth of the country.

In the long run the capital taken from the middle class will not remain in the hands of the lucky industrialists, for they will be obliged to part with it as soon as the shortage of capital begins to weigh upon them, as is at present the case. Whenever that happens on a large scale, stocks and shares will change hands quickly, and the country will drift into the position of a nation paying rents to absentee landlords. When the capital which they furnished has been eaten up, the rent charge will still remain. The land, mines, and factories of the country may remain intact, while their output after stabilisation may even be bigger than it ever was before, but ownership of them will have changed hands.

In conclusion, we may sum up the results of the depreciation of money on the permanent wealth of a country in the following way:—

1. The liquid wealth in the hands of the investing public is destroyed.
2. The purchasing power of the home market is greatly diminished.
3. Output is reduced, and cost of production thereby increased, while competition both at home and abroad becomes more difficult.
4. In many cases a physical deterioration of machinery and plant will take place.
5. Owing to the scarcity of capital, production must be reduced, for the time being at any rate.
6. The country which suffers from a shortage of capital of this kind must become strongly indebted to foreign countries, who are buying up its permanent wealth.
7. An increasing share of its exports has to be set aside in future to meet the interest charges on these loans.
8. Though the share of the State may not be seriously diminished by sums thus paid to foreigners in respect of dividend and interest charges, it is none the less true that a much smaller share of the total national income will be at the disposal of the inhabitants of the country. The net output of industry available for dividends may be the same, whether one-third of the capital is held abroad or not, but the total income of the country itself will be reduced by $33\frac{1}{3}$ per cent., while both the taxable capacity of the inhabitants and their purchasing power will be diminished *pro tanto*. If foreign capital had not come in, the industrial mechanism might have gone to pieces; its restoration, however, is none the less a very expensive process.
9. Ultimately the country's taxable capacity as far as its co-nationals are concerned is greatly impaired, and so is its capacity for making remittances abroad, for the new capital which comes in does not open up new avenues of production, but merely closes the gaps which depreciation has made.

The Premier and Trade Revival.—In the course of an interview last Saturday with a Glasgow deputation the Prime Minister referred to trade prospects, and his use of the words "real revival" in this connection have been widely interpreted as being a mark of optimism, which means much in the mouth of a Statesman with a reputation for caution. It is, therefore, important that the stray qualifications used by Mr Bonar Law should be realised and remembered. According to Press reports of the interview the Prime Minister said:—"I am convinced myself that, bad as things are at the present time, we have reached the bottom, and unless there is very serious trouble in Europe, and I am very much afraid of it—the position is very serious—unless there is very serious trouble in Europe we are going to have a real revival of trade. I mean a real revival. I see signs of it everywhere. When I say that I see signs I mean that I get them from talking with people who are in businesses." It will be seen that Mr Bonar Law laid emphatic stress upon the European position, and we should not be surprised to hear that he underlined the qualification "unless there is serious trouble in Europe" more powerfully even than the printed word suggests. We have ourselves pointed out recent signs of trade improvement, and, at the same time, insisted in season and out of season on the vital bearing that a European settlement must have on British trade prospects. When a few words are detached and placed in a headline, they make Mr Bonar Law appear very optimistic, but when the whole passage is carefully read, the impression of over-optimism vanishes. We do not think it is fair to read into his words anything more than the common belief that trade is showing some signs of improvement, and that this improvement would develop strongly if only we could get settlement in Europe instead of continued drift towards chaos.

The Approach to Irish Peace.—Our Dublin correspondent writes:—During the Christmas season there has been peace talk *ad nauseam*—peace talk from Republican sympathisers, who post bills by night, "Why not a truce now?" in the hope of extricating their fighting friends from irreparable disaster by forcing a negotiation rather than negotiating a surrender. Peace talk, too, from popularity-hunters, and from men who once a peace resolution is proposed on a public board fear to incur, with the small militant minority, the potential odium of voting against it or even of failing to support it by speech and vote. Peace talk, again, from irresponsibles, busybodies, defeatists. Lastly, peace talk from well-intentioned and responsible people like members of the new Seanad—some of whom are merely expressing inchoate benevolence lacking somewhat in precision of aim and method, while others are definitely aiming at the only peace worth having—namely, a peace surely founded upon surrender of men, arms, and munitions, and a healing clemency towards all who have not sinned unforgivably against the laws of God and man. The opinion of experienced observers on the popular side is that the men—the leaders and fighters—have largely finished for one desisting from the torture and ruin of the country which they profess to love; and that the disorder which exists is largely due to the disintegration of their organisation into predatory gangs of adventurous spirits or seekers after private revenge. None custodians of the fortunes of the Irish Free State. If admitted in the eyes of all the world, their position is most deplorably weakened in regard to all negotiations as to deny that until the outstanding matters between Ireland and N.E. Ulster are settled upon a basis of mutual contentment there will be turmoil in Ireland—and that that longer the necessary negotiations are held up, the more

difficult probably the necessary adjustment. Readers of the *Economist* have been made familiar with the main factors of the negotiable problems, and with the way in which the accepted high policy of England, deliberately adopted and binding both in form and in honour under Statute and Treaty, urges forward both the problems and the parties to negotiation, compromise, re-union, and peace. Two points, however, warrant further mention and emphasis. The industrialism of N.E. Ulster is largely exotic; that is, it largely depends upon imported raw materials, imported machinery, and imported fuel. Its wealth, the product of earlier prosperity, has largely been turned into extended producing plant. If the cost of civil and quasi-military and police administration reaches and maintains a certain level, what are the advantages of N.E. Ulster over the industrialism of the Clyde, the Mersey, the Tyne, and a dozen other British centres? And how maintain its prosperity? The second point is for British statesmen. It is unquestionably the desire of Great Britain to stand by the Treaty between Ireland and Great Britain with punctilious and meticulous fidelity. The policy of Great Britain is fixed, embedded and crystallised, as has been said, in Statute and in Treaty. Let it remain so. Let British statesmen abstain from ambiguous statements which can be translated by sanguine politicians into "pledges" alleged to bind British statesmanship and British policy to views and courses inconsistent with and in derogation of plain obligations of law, treaty, and honour. Already the public in Ireland has been assured from the North that Mr Bonar Law has pledged himself to Sir James Craig—in a pledge the exact terms of which are not disclosed—to a position in regard to the Boundary Commission referred to in the Treaty which would be derogatory to the *prima facie* rights of the Irish Free State. The dangers likely to arise in this way to counsels of reconciliation are obvious. Suspicions and recriminations are the natural outcome.

Canadian Cattle.—Our Ottawa correspondent writes:—While the King Ministry is taking great credit for the treaty of peace over the cattle embargo question, and representatives of the farmers express gratification at the re-opening of the British market to Canadian store cattle, some shrewder authorities on the subject hazard the opinion that once the full implications of the new agreement are realised it will soon cease to command unanimous support from the farmers of Canada. In fact, they prophesy that it will meet with very stiff opposition when it comes before Parliament for ratification. A cardinal feature of the agreement is the provision for complete reciprocity between the contracting parties, which means that British cattle will enter Canada after the same brief quarantine which will confront Canadian cattle entering Britain. But at present there is in existence a very satisfactory arrangement between Canada and the United States whereby they maintain a common quarantine of 30 days against all foreign countries, but leave the long international boundary wide open without any restrictions. If any foreign country is infected with disease, they simultaneously impose a special quarantine against its cattle, which is maintained till 60 days have elapsed from the last report of disease. Owing to the outbreak of foot and mouth disease, such a quarantine is still in force against the British Isles. Now it seems altogether probable that if Canada proceeds to allow the entry of British cattle on a three-day quarantine, the American authorities will lose no time in denouncing the present arrangement, and setting up a 30-day quarantine all along the international boundary. Such a step would cause serious inconvenience, firstly to the numerous Eastern Canadian breeders of pedigree stock who find a good market in the United States, and secondly to western ranchers, who raise store cattle and send them southward to be finished in Iowa or Nebraska. The Fordney tariff has adversely affected this formerly profitable trade, but a 30-day quarantine would complete its ruin. Under such circumstances public opinion in Canada would probably demand a parallel measure of reprisal, and its inauguration would soon check the movement of American immigrants northward, because most of them want to bring in their own stock. Accordingly, there will be many Canadians who will dis-

cern adverse effects for their own interests from the new agreement, and see no prospects of adequate compensation from the restoration of the British market. At present, the possibilities of the situation have not been widely realised, but they will emerge when the agreement is discussed in Parliament, and critics of the Government will not be slow to say that they have been deluded by the British negotiators.

The Transit of Home Rails.—A Stock Exchange correspondent writes:—The compilers of the Stock Exchange Official List will be busy to-day in taking out the names of some 250 or more different stocks hitherto quoted in the Home Railway sections, which stocks will disappear automatically to-night through the operation of the grouping arrangements, and the absorption of the smaller companies into the larger. The Stock Exchange market is itself making fresh geographical arrangements. Hitherto there have been two distinct departments in which ordinary, including preferred and deferred stocks, have been negotiated; one part comprising the North-Western, Midland, South-Western, Great Western, and two or three other stocks; the other being termed the Brighton market, and including within its compass such stocks as North-Eastern, Caledonian, North British, Brighton, South-Eastern, Great Northern, Chatham, and a dozen others. The markets for Home Railway debenture, preference, rent-charge, and guaranteed stocks are separate altogether from that which is interested in the ordinary stocks, and the curious part about the Home Railway prior-charge market is that none of its jobbers stand within even arm's length. The firms engaged in this business are situated many yards away from one another; it is the only market in the House where dealers in the same stocks are not to be found cheek by jowl. These prior-charge Home Railway jobbers will find their ranks considerably augmented on Tuesday through the accession of a number of dealers, who hitherto have confined their energies to Home Railway ordinary; that is, preferred and deferred, as well as ordinary stocks, but who recognise that, as the grouping system curtails the number of the securities in which they can deal, it is as well to add the prior-charge securities to the few ordinary stocks that remain. How the public will take the new departure is something of a problem. There has been a certain amount of buying in advance, although the carry-over on Wednesday in this week demonstrated that, so far as North-Westerns are concerned, there is no bull account open. In fact, the probability is that, if tested, the market will be found short of stock. Nor did the contango rates give the impression that there is much of a bull account in other Home Rails, so that it may well be that, when dealing begins in the new groups on Tuesday morning, the prices will wear a sufficiently tempting appearance to cause a certain amount of speculative buying on the hope that this comparatively new market will attract public attention. January is, of course, about the best month which any market could choose for starting operations. Although the date comes about by mere accident, the greater readiness to embark upon financial adventures which invariably ushers in a New Year, should be borne in mind by holders of Home Railway stocks who know that they may have to sell, and who are looking out for an opportune moment in which to do so. Home Railway debenture stocks pay a trifle under 5 per cent. on the money, the preferences a little more, rent-charge and guaranteed stocks yield about $5\frac{1}{2}$ per cent. The market complains that the heavy stamp duty of 1 per cent. on transfer deeds is enough to kill public interest, but in point of fact, a good deal of trade is going on, in spite of the handicap which the stamp-duty involves; the investors who prefer not to buy War Loan on account of the possibility of its being paid off, in one way or another in 1929, are content to buy these Home Railway debentures at prices which give a return of a few shillings less than that to be derived from the War stock itself. The debenture, preference and other pre-ordinary stocks, are, of course, subject to money influences for their movements. The prices are controlled by the bank rate, and by the movements in the Consol market. They have little to do with politics or traffics, though it may be recalled that the capital levy talk, just before the last General Election, caused something of a tremor in the lists of these issues.

They can be regarded, however, as outside the scope of any speculative consideration. The ordinary, on the other hand, hold a good deal of speculative possibility. Conceivably, the new arrangement and the market operations that will result therefrom, may make a lively appeal to the imagination of the public investor and speculator alike. It might be dangerous to forecast anything like activity in the market, inasmuch as the investor cannot shake off the fear of labour troubles, and the chance of there being a Labour Parliament. Leaving these two factors out of account, however, there is something to be said in favour of Home Railway stocks, and the investor who does not mind a dash of speculation is beginning to realise the opportunity which the rearrangement of the market stocks, on Tuesday next, will afford him.

Security Values.—The current issue of the *Bankers' Magazine* contains the usual monthly valuation of Stock Exchange securities, which shows a decline in the market value of 387 representative securities in December of 0.7 per cent. A review is also given of the past year, and it is pointed out that "there have been few years when the rise in public securities has been so remarkable as in 1922." Since December, 1921, there has been a net improvement of no less than £712 millions, or 13.2 per cent., in the market value of the 387 securities, 94 fixed stocks increasing by £395 millions, or 11 per cent., and 293 variable dividend securities by £317 millions, or 17.6 per cent. During the first half of the year interest centred almost entirely in British Funds and kindred stocks, and in those departments end-of-the-year prices are mostly well below the best. In the case of variable dividend securities interest has been quickened, more especially during the latter half of the year, and prices at the end of December are not much below the best. The only exception to the net gain in fixed interest securities is in the case of United States gold bonds, where there has been a sagging tendency later in the year. British Funds retain a net increase of 12 per cent., and in home railway debentures and preferences there is a rise of 15 and 25 per cent. respectively. Home railway ordinary stocks are up by 55 per cent., while foreign rails show an increase of 59.5 per cent. on the year. Oil shares show a decrease of 19.4 per cent., and copper mining shares a decrease of 3.6 per cent., but all other sections record a net gain, including one of 34.3 per cent. in the group of 38 commercial industrial shares.

Spain and Morocco.—The new Spanish Liberal Ministry has made an excellent beginning by carrying out the change contemplated by its predecessor in the administration of the Protectorate of the Spanish zone in Morocco. A Civil Commissioner, Don Miguel Villanueva, takes the place of the Military Commissioner, General Burguete, who succeeded General Berenguer after the disastrous reverses of July, 1921; the regular army is gradually to be withdrawn and replaced by a special corps recruited by voluntary enlistment; and the expenditure on the Protectorate, which was the chief element in the increasing Budget deficits, is to be reduced by 75 per cent. The military operations had imposed an intolerable strain on the Spanish nation. The cost of "action in Morocco" in 1919-20 was estimated at 143 million pesetas—at par, £5,720,000; for 1920-21 at 173 millions; for 1921-22 at 185 millions; for 1922-23 at 250 millions for military purposes, and 175,000 pesetas for all civil needs; and apart from this there had been increased expenditure on the army, navy, and air force, which was really caused by the operations against the Moors. Moreover, the resentment caused by the drain on the manhood of the nation constituted one of several serious and growing dangers to the stability of Spain. The change had been generally demanded since the disasters of last year, and was pressed for three weeks ago by a remarkable demonstration in Madrid, participated in by all classes and all parties, from Carlists to Communists; but total withdrawal is impossible. However, now that most of the territory lost last year has been recovered, the time has come for conciliation and "peaceful penetration," and the air force, as in Mesopotamia, will probably be relied on as the chief preserver of internal peace.

Chinese Trade and Finance.—China is still the land of paradox, and in spite of floods, local famines, and widespread and complicated civil strife, which has reduced the Central Government to virtual impotence and practical bankruptcy, the Customs revenue and the ostensible value of foreign trade in 1921 were ahead of the record year of 1920. This is brought out in the report just issued by the Overseas Trade Department from the British Commercial Councillor at Peking. The Central Government can now rely only on the maritime Customs and the Salt Gabelle; both are pledged several times over, but are amply sufficient to ensure the service of the foreign loans specially secured on them, though about one-seventh of the latter was intercepted in 1921 by various provincial governors and generals. The debts of the Government railways for supplies, owing to reckless orders for material, suspensions of traffic receipts, and interceptions of cash surpluses, exceed \$40,000,000; the unsecured debts of the Republic amount to \$400,000,000. The Consortium cannot offer a loan till there is internal concord, but its existence operates as a check on further Government borrowing abroad. But a number of minor and unsecured foreign loans have been defaulted on, including the Vickers and Marconi loans held in England and several others raised in the United States and Japan. The internal loans, however, under the supervision of the Inspector-General of Customs, are gradually being paid off. The projected establishment of central and provincial mints to issue a new national silver coinage has been checked by difficulties in payment for the machinery (ordered in the United States) and by the absence of the foreign supervision needed to prevent debasement of the new currency; indeed, the debasement of the copper coinage now going on is causing a rise in the cost of living for the masses and industrial unrest. In 1923, however, the increased Customs tariff will be in operation, and progress will have been made towards the substitution for the likin duty of a Customs surtax, as provided by the Treaty of Washington, so that the financial strain may be somewhat eased. Trade prospects are clouded by the possibility of strikes—which, though to some extent stimulated by political agitators, are largely due to the rise in the cost of living and to the custom of payment through middlemen—by the interruptions in railway and steamer traffic, and by the failure to keep up such metalled roads as exist. Yet, but for the prevalent unrest and the native jealousy of foreign technical and administrative aid, and of official encouragement (where given), there are great possibilities for native manufacture. At Shanghai, Tsingtao, Tientsin, and to some extent at Hankow, there is considerable development in nearly thirty industries, notably in textiles, tobacco, vegetable oils, hair-nets (in Shantung), electric light and power, and shipbuilding, and efforts are being made to stimulate the production of cotton and tobacco; but the textile manufacture is not likely to decrease the import of the finer goods which Lancashire sends. Mining prospects have been exaggerated, as have those of petroleum production. The sterling value of imports and exports has been reduced by the rise in exchange; but export figures of 1919, owing partly to the currency conditions in Europe. China tea has been diverted through teas in Continental countries, while green tea is finding a new and expanding market in Morocco. The Germans, through their customary methodical study and application, are regaining their commercial position; but imports will be stimulated by the Europeanisation of the upper classes, and the British position is probably stronger than ever. The network of the old firms who established it is now supplemented by younger firms, by the large distributing companies, and by important engineering combines; and its future is secured by the high reputation of British goods for quality, and of British traders for fair dealing. Advice is given on trade methods, and the report affords a striking testimony to the vitality of the Chinese people.

The Rand December Dividends.—Our Mining correspondent writes:—For shareholders in Witwatersrand mining companies the year 1922 has been an eventful one. The labour troubles of the early part of the year, with their disastrous culmination of revolution and bloodshed, need only be referred to now as explanatory of the poor showing which the dividends for the whole of the year make as compared with the total in respect of 1921. Consequent upon the stoppage of production for a period of something like two months, with expenses to a large extent going on just the same, about one-half the companies were unable to declare any distributions on account of the first session; while others, although more fortunate, could only pay on a considerably reduced scale. After the passing of the trouble a new era set in. The mine managers found themselves once again, to a large extent, masters in their own houses; and not only were wages reduced, but a substantial increase in efficiency followed on the part both of the white and of the native workers. In addition, the companies began to feel the benefit of reduced charges for stores and materials. The improved profits resulting from these changed conditions, in conjunction with the anticipation of better things still to come, occasioned an outbreak of speculative activity in the share market. Securities of a sound dividend-paying character appreciated; even the shares of dormant mines—little better than gambling counters—were eagerly rushed after on the possibility that in the new circumstances it might be possible to raise fresh funds and thus resume work. As so frequently happens in Stock Exchange experience, however, the unexpected happened. Each year since the gold premium came into existence the maximum level has been attained towards the end of the year in connection with the trade balance between this country and the United States. On the present occasion the price of gold has progressively fallen. It now stands at about 89s per fine ounce, as against 92s 6d in June. Naturally, this partially offsets the reduction in working costs, although we are approaching the stage where the question of the exchange between this country and South Africa tends largely to neutralise any further decline in the currency price of gold. The net outcome of these various influences is that for the past six months the majority of the companies have been able either to maintain or to improve upon their declarations for the second half of 1921. Below is presented a tabulation showing the totals for the past two complete years, with the three last half-yearly declarations:—

Company.	Total, 1921.	Total, 1922.	Dec., 1921.	June, 1922.	Dec., 1922.

This table does not include declarations made at dates other than June and December.

Baldwins' Report.—The accounts of Baldwins, Limited, for the year ended June 30th last show that, while there was a further substantial drop in profits, the issue of £2,250,000 7½ per cent. debenture stock made in the preceding financial year, now ranks for full interest, total debenture interest requiring £157,800, as against but £24,200 in the previous year. The balance available, after payment of preference dividend, is thus reduced from £244,700 to £5,700. From the table below it will be seen that payment of an ordinary dividend from the balance brought forward would have been possible, but the directors take the wiser course of keeping this balance in hand:—

	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
	£	£	£	£	£
Trading profit	442,900	554,997	683,405	410,758	306,132
Net profit	359,043	471,139	567,023	325,167	86,993
Brought forward	156,969	255,139	285,799	291,325	303,479
	516,012	726,270	852,822	616,492	390,472
Reserve	75,000	75,000	75,000	25,000	..
Preference dividend....	13,750	13,750	45,667	80,476	81,394
Ordinary dividend.....	153,790	351,729	440,830	207,537	..
	(11½ %)	(12½ %)	(12½ %)	(5 %)	..
Carried forward.....	273,473	285,799	201,325	303,479	309,178

The net profit is shown after making an allowance of £50,000, the same as in the previous year, for depreciation, but the reserve fund receives no allocation. The balance-sheet, however, shows an improvement in the general position. From the detailed analysis, which appears on another page, it will be seen that both creditors and debtors have been substantially reduced, while cash and gilt-edged stocks have risen from £116,400 to £427,400. Shareholders will be asked, at the meeting on Thursday next, to re-elect the Rt. Hon. Sir Robert Horne, who has recently joined the board, and been appointed vice-chairman of the company.

British American Tobacco.—The report of the British American Tobacco Company for the year ended September 30th last shows a recovery in profits after last year's setback, and with the exception of the year 1919-20 the total of £4,400,800 is the highest on record. As will be seen from the comparative table below, the dividend is raised from 24 to 25 per cent., free of British income-tax, and that the payment requires considerably more than the 30 per cent. distributed for five consecutive years, when the ordinary capital was much smaller:—

	Sept. 30.	1914.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
	£	£	£	£	£	£	£	£	£
Profits, &c.....	2,177,022	2,733,361	3,105,002	3,140,174	3,776,508	4,879,177	4,323,481	4,400,784	4,400,784
Prof. div'nd.....	188,297	225,000	225,000	225,000	225,000	225,000	225,000	225,000	225,000
Ord. div'nd.....	1,532,308	1,913,354	1,876,296	1,876,296	2,155,774	3,745,492	3,842,483	4,010,709	4,010,709
	(24½ %)	(30 % & bs)	(30 %)	(30 %)	(30 %)	(30 %)	(24½ %)	(25 %)	(25 %)
To reserve.....	1,500,000	nil	257,228	nil	nil	nil	nil	Dr 122,200	..
Balance.....	Dr 104,358	595,007	746,478	1,038,878	1,394,734	908,685	255,788	1,387,075	1,387,075
B'ght for'd.....	1,973,902	1,148,157	1,780,222	1,966,700	3,005,578	727,778	1,634,200	1,889,877	1,889,877
Car'd for'd.....	930,319	1,743,164	2,526,700	3,005,578	4,400,312	1,636,463	1,890,188	3,276,952	3,276,952

The sum of £1,222,000 is withdrawn from the general reserve of £1,500,000 set up in 1914 to provide against possible losses arising from the war and not now required, the remaining £278,000 having been charged off. The directors do not disclose the reason for this transfer, and as will be seen the profits earned were more than sufficient to pay the dividend, and the carry forward is increased to the enormous total of £3,277,000. The balance-sheet shows a reduction of nearly a million in advances to associated companies, and stocks are down by over £2 millions, but cash has risen from £2½ to £4½ millions. A detailed analysis of the balance-sheet will be found in the usual column.

Cotton Trade Statistics.—Our Manchester correspondent writes:—For some time the employers in the spinning section of the Lancashire cotton industry have discussed the desirability of obtaining weekly statistics as to the production, sales and deliveries of yarn made from American cotton. The Federation of Master Cotton Spinners' Associations decided to take a ballot of the members on this question, and it is now announced that

the majority were willing to give the details required. Forms are being sent to the members, and each firm will be known by number instead of by name. It is anticipated that the data, when obtained, will be of assistance to the general committee on occasions when the state of trade has to be considered. Owing to the trade depression, the spinning mills in Lancashire using American cotton have worked only 35 hours a week instead of 48 since the end of September. It has been decided to continue this organised short time until the end of January. Before that time expires a ballot of the members will be taken to decide whether the organised curtailment of production should be continued.

Conditions in Japan.—According to recent cable advices from Japan, money has continued to flow to the Osaka market, while its return from the provinces was very slow where credits for purchasing rice were demanded. Meanwhile, the suspension of payment by several small banks has caused some uneasiness in the market. In these circumstances, the banks have naturally been very cautious in giving credit. Little business has been done in the short-loan market. Day-to-day money was quoted at 8½ per cent, and time credit over the end of the year was steady at about 9½ per cent, while the discount rate remained firm. The general tension of the market, however, has been quietened. Though the undertone of the stock market was inactive, there were signs of a rally. The cotton yarn market continues comfortable. The silk market was idle after much business had been done during the early part of the month. The price of rice fell as a result of increased arrivals in the market. Foreign trade has continued dull in the last two weeks, the great improvement in the rate of the sterling exchange having had no real influence.

The council of the Royal Statistical Society will in November, 1923, award the Frances Wood Memorial Prize, value £30. The prize will be awarded for the best investigation of any problem dealing with the economic or social conditions of the wage-earning classes, the subject to be chosen by the competitor and to be treated on statistical lines. Theses submitted or intended to be submitted as university exercises, and also published papers, are admissible. Essays (which must be either printed or typed, and accompanied by copies of all statistical tabulations), must be sent to the honorary secretaries of the Royal Statistical Society, 9 Adelphi terrace, W.C. 2, not later than July 1, 1923.

The executive committee of the National Reform Union have elected Mr Richard D. Holt, of Liverpool, to succeed the late Mr A. Gordon C. Harvey as president. Mr Holt has for many years been a vice-president of the Union.

Oversea Correspondence.

UNITED STATES.—FINAL COTTON CROP REPORT—INCREASED COTTON CONSUMPTION—ANOTHER RAILROAD MERGER PLAN.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 15.

THE Government's final cotton crop report, estimating this year's production at 9,964,000 bales, caused no commotion in the market for the staple or in cotton goods circles, because the figures were very close to expert expectations. If the Government's estimate, published this week, proves to be correct, the crop will be the smallest in 20 years, barring last season's exceptionally small yield. Its value, however, based on December 1st farm prices, is figured at more than \$1,134,000,000, making it the fourth most valuable cotton crop ever grown in this country. On the first of this month the farm price averaged 23.8 cents per lb, a level exceeded only in 1917, 1918, and 1919. Although the acreage planted to cotton this year was large, the boll weevil caused extensive damage, and drought in many

sections was an additional factor. South Carolina and Georgia suffered more than did other cotton-growing States, their production having been only about 40 per cent. of the average for the five years 1916 to 1920. This year's crop compares with 8,340,000 bales last year and 12,987,000 in 1920. Since the publication of the Government's report, prices of the staple advanced rather sharply for a while, and then reacted, leaving spot cotton about 1 cent a lb below the year's highest point—namely, 26.80 cents, which was reached early in November. In the cotton goods trade and industry, the consensus of opinion seemed to be that the final estimate removed whatever hopes may have been entertained of any sustained lower prices for raw cotton. Accordingly, demand for print cloths and grey goods has quickened considerably in the past few days, and the market for unfinished cloths has stiffened materially. It is calculated that the world's requirements of American cotton for the season ending with next July will amount to about 12,500,000 bales, or approximately 2,500,000 bales more than the yield now predicted by the Government. In this connection it may be noted that, according to the latest report of the Census Bureau, cotton consumption for November was larger than in any month since January, 1920, reflecting the heavy business transacted in cotton goods a few months ago. Most of the leading mills were operating close to capacity last month, and the greater consumption was due in a measure to the resumption of activity by New England mills, following the termination of the prolonged strike in that section. Cotton on hand at November 30th in public storage and at compresses totalled 4,198,095 bales of lint and 21,654 bales of linters, as compared with 4,329,902 of lint and 18,612 of linters on October 31st, and with 5,292,941 and 177,378 respectively on November 30th of last year. Active spindles in November numbered 34,664,630, as against 33,859,076 in October of this year and 34,428,339 in November of 1921. If consumption continues at the present rate, an actual scarcity of cotton seems likely to develop later on. Naturally, a great deal depends upon the extent to which high prices may check by spinners.

Following the completion of negotiations whereby the Toledo, St Louis and Western, the New York, Chicago and St. Louis, and the Lake Erie and Western are to be consolidated and operated as one system, comes the report that the same interests which control those railroads have secured an option on a majority of the Chesapeake and Ohio stock, with a view to adding the latter to the group mentioned. The acquisition of the Chesapeake and Ohio would mean that the interests referred to would control approximately 4,280 miles of railway, which would constitute one of the largest systems in the East, reaching tidewater at Fort Monroe, Vancouver, and rich coalfields in the East. The Chesapeake and Ohio operates more than 2,500 miles of track; it has outstanding \$12,558,500 6½ per cent. cumulative preferred stock and \$62,792,600 common stock. In its tentative plans for the consolidation of the railroads of the country into different groups the Interstate Commerce Commission placed the first three roads mentioned in the same group, but put the Chesapeake and Ohio in another way. Whether or not the proposed acquisition of the Chesapeake and Ohio will be sanctioned by the Commerce Commission is uncertain.

FRANCE.—GERMANY'S DEFAULT—BUDGET DEBATE—FOREIGN TRADE—THE PROPERTY OF FOREIGNERS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 27.

THE decision of the Reparation Commission, on Tuesday, formally to notify the Allied Governments that Germany has been guilty of "deliberate failure" to deliver to France the timber called for by the Commission on March 30th last, was the last formal step necessary before M. Poincaré could call on the other Allied Governments to bring into operation coercive measures against the common debtor. Juridically, if the French interpretation

of the Treaty of Versailles is correct, there is now nothing to prevent M. Poincaré, at the resumption of the Inter-Allied Conference on January 2nd, from demanding that the Four Powers shall take common coercive action against their debtor, and nothing, in the event of any of them refusing to co-operate, to prevent the French from occupying the Ruhr, or taking such other independent action as they may think fit. M. Poincaré has repeatedly, during the past few weeks, asserted that France intends to take action—"with her Allies, if possible, but if not with them, then alone." The Premier and his colleagues spent Christmas week in perfecting the programme that is to be adopted, and it is generally understood—although the details will be kept strictly secret until they are made known at next week's conference—that one of the principal means of pressure to be exercised will be the seizure of the mines and other economic assets in the Ruhr.

The real obstacle between France and her Reparation payments, it has long been realised, is the German industrial class, led by Herr Stinnes. The Ruhr is the nerve centre of German industrialism, and it is argued that, once the coal supply and the means of transport out of the Ruhr are under French control, it will not be long before Herr Stinnes and his colleagues will be ready to come to terms. At the worst, by seizing the coal mines, the railways, the Customs, &c., the French will assure themselves of ample coal for their metallurgical and other vital industries. The argument that British and American capital has been largely invested in the Ruhr since the armistice, and that this may lead to complications, is now completely disregarded here, or, if referred to at all, is regarded merely as one more reason why the Poincaré policy should be put into operation. Self-interest, it is felt, may induce Great Britain and America to try and induce Germany to carry out her obligations, although the moral and material claims of France have fallen on deaf ears. M. Clemenceau is reported to have said that he fears any kind of occupation of the Ruhr might lead to strikes, but it may be taken for granted that the French plans have not been laid without taking this possibility into consideration. It has been suggested that such a difficulty might be got over by arranging for the German miner to be paid in francs. This method has long been in force in the Saar area, with astonishingly good results, and probably accounts largely for the remarkably tranquil condition of that district.

The Chambers will adjourn at the end of this week for the customary New Year recess, which will last, as provided by the Constitution, until the second Tuesday in January. As was expected, it has been found impossible to complete the Budget discussion by the end of the year, even in the Chamber, and the universally condemned system of Votes on Account has again had to be resorted to. The Government decided to ask for two *douzièmes provisoires*, to provide money till the end of February, and these, amounting to over 4,000,000,000f, were to-day voted by the Chamber. So far as the Budget of Recoverable Expenditure is concerned, the Chamber decided that the Crédit National shall be authorised to issue a further 3,000,000,000f of bonds to meet the expenditure for the devastated regions for the next six months, and that the amount to be paid to *sinistrés* during January and February shall be limited to 1,000,000,000f, instead of to 600,000,000f as originally recommended.

The Finance Commission of the Chamber having decided that M. de Lasteyrie's proposals for the control of income-tax declarations "by external signs" (by which he estimated to secure an additional 550,000,000f during 1923) were unworkable, other means have had to be found for reducing the estimated deficit for 1923. The Finance Minister now proposes to reduce the amount which it was agreed in 1920 should be repaid annually to the Bank of France in respect of advances made by it to the State. These advances now stand at 23,400,000,000f, and it was agreed in 1920 that they should be reduced by two milliards at the end of each year, accompanied, of course, by a corresponding reduction in the note issue. Unfortunately, it has not yet been found possible to carry out this agreement. As M. Bokanowski explains in his report to the Finance Commission, the agreement was first made with the bank at a period when it was expected that

Germany, on May 1, 1921, would make a payment of 20,000,000,000 gold marks to the Allies, and when she was pledged to make complete reparation. As Germany did not pay, the amount repaid to the bank was last year reduced by one-half, and for the same reason the Commission recommends that a similar course should be taken this year. "Nothing could be more dangerous," M. Bokanowski insists, "than a policy of deflation under present conditions." That there was a sharp division of opinion in the Commission is evident from the fact that the Finance Minister's proposal was approved only by six members, the remaining nine abstaining, in spite of the fact that the recommendation sets forth that the reduction shall be regarded as "exceptional." The advocates of deflation in the Chamber are likely to offer strong opposition when the proposal finally comes up for decision, but it is difficult to see from what other source the money needed to reduce the estimated deficit to reasonable proportions is to be derived.

The French foreign trade returns are now growing increasingly unsatisfactory, and showing a greater excess of imports month by month. The comparative returns for the first 11 months of 1921 and 1922 are as follows:—

	IMPORTS.			
	(In Thousands of Francs.)			
	1921.	1922.	Inc. or Dec.	
Foodstuffs	5,071,000 ..	5,171,297 ..	+ 100,297	
Raw materials	9,977,899 ..	12,144,165 ..	+ 2,166,266	
Manufactured goods..	4,441,585 ..	3,661,843 ..	- 779,742	
Total	19,490,484 ..	20,977,305 ..	+ 1,486,821	
	EXPORTS.			
	1921.	1922.		
Foodstuffs	1,900,472 ..	1,671,720 ..	- 228,752	
Raw materials	3,808,213 ..	4,258,281 ..	+ 450,068	
Manufactured goods ..	11,296,603 ..	10,740,211 ..	- 556,392	
Postal parcels	1,073,109 ..	1,992,832 ..	+ 119,723	
Total	18,078,397 ..	17,863,044 ..	- 215,353	

During the last 11 months imports have exceeded exports by 3,114,216,000f, as compared with only 1,412,087,000f during the corresponding period of 1921. The adverse balance for November was 642,000,000f, as against 171,000,000f in October and 152,000,000f in September.

The whole status of foreign residents in France, so far as the ownership of real estate is concerned, is threatened with profound modification by a Bill which provides that foreigners and foreign companies who desire to acquire property in this country or to conclude leases of more than nine years' duration must first obtain Government authorisation. Applications for authorisation must be made within two months of the period when the applicant becomes entitled to the property or the lease, and it is laid down that decisions on each application shall be given, on the report of the Minister of the Interior, within two months after application. The most objectionable feature of the Bill, perhaps, is that it is retroactive, it being en-

acted that all foreign property owners, life tenants, or leaseholders who have more than nine years to run must comply with the new law within six months of its promulgation. Leases still having more than nine years' life are *ipso facto* reduced to this period. If authorisation is refused, notice will be given to the applicant to alienate his property forthwith. It may seem incredible, but this astonishing Bill was actually voted by the Chamber of Deputies, without discussion, on November 6th (although it has yet to come before the Senate), and it was not until the publication of the text recently, in the *Journal Officiel*, that attention was called to it. A storm of adverse criticism has arisen, both from French and foreign sources, against the narrow nationalism that has dictated such a measure, which, it is claimed, aims at placing foreigners in the position they occupied before the law of 1819, since when they have been entitled to acquire, hold, transmit and dispose of real estate without restriction. A good deal of mystery exists as to the means by which the measure passed unnoticed through the Chamber.

The Bourse last week was firm, though there have not been any sensational developments, and in the opinion of experts there is reason to look forward to a continuance of high prices owing in the main to the abundance of money, which will become a more marked factor within the next few weeks owing to the payment of dividends. French funds have risen, the 1914 Three and a-half per cents. moving from 77.05 to 78.75, and the other State securities showing a similar improvement. Banks have been in demand, the Banque de France hardening from 5,950 to 5,980, and the Banque de l'Union Parisienne from 744 to 750. Railways have registered a further sharp advance, Est rising from 802 to 844, Metropolitan from 461 to 488, Midi from 813 to 822, Nord from 1,245 to 1,314, and Orléans from 915 to 928. Shipping has moved similarly, Messageries moving from 212 to 220 and Chargeurs Français from 668 to 678. Chargeurs Réunis lost a point at 480.

GERMANY.—A REVIEW OF 1922.

(FROM OUR CORRESPONDENT.)

BERLIN, December 26.

THE year now closing brought to Germany very much worse currency depreciation, with all the inevitable inconveniences for the State and for large classes of citizens than any of the three preceding post-war years; and at the same time brought a distinct improvement in general economic conditions, in particular in industry and trade. Industry and trade, it is true, were also not spared inconveniences arising from the currency deterioration; but, in spite of the bad currency, in part (for certain interests) because of it, and sometimes independently of it, progress towards restoration of production and distribution continued. Although there is no clear proof that even worse currency depreciation must be accompanied by a general economic crisis, the particular fear of business is that a restoration of sound money, which is admittedly in the wider national and European interest, will cause at least a temporary set-back to the productive activity which has now continued without a break since the autumn of 1920. The noteworthy, but in no way surprising, fact at the end of 1922 is that the producing and trading classes, which would certainly be ruined by the general economic crash supposed to be involved by bad money, show, less than any other class, zeal for the restoration of good money, while the State, the middle classes, and the pure-capitalistic interest agree, somewhat helplessly, that good money, by which is meant a currency stabilised in gold value, at however low a rate, is an immediate, overwhelming need.

The mark exchange, which, after relative stability in 1920, fell badly in 1921, fell much worse in the past year. In both years (though this was a coincidence) the mark collapse began in the early summer and ended in early November. But whereas in all 1921 the dollar rose only from a low point of 55 to 310, in 1922 it rose from 182 to 9,172, or about eight times as much. The relative price-rise was still greater. In early 1921, gold prices in the

world markets fell, and the German price-rise in the whole year (*Frankfurter Zeitung's* Index), was from 2,130 to 4,217. On December 1, 1922, the index figure was 166,495; but as single commodities, and also unofficial weekly price indexes for December show price falls, the index figure for January 1 will probably show a moderate drop. As in the first 11 months, the dollar exchange rose 51-fold, and commodities nearly 40-fold, there is a fairly close correspondence; but prices, having begun the year behind world-market prices, ended the year behind, with the possible exception of textiles, certain kinds of heavy iron and steel, and, of course, imported goods. The greatest price-rise was in the textiles and leather groups, which, on December 1st, was 266,322, or 2,663-fold, pre-war rates, while manufactured articles rose only to 118,385, or 1,184-fold.

The currency inflation of 1922 was much the greatest recorded. It represented (1) the State demand for credit, due to the fact that the price-rise sent up expenditure much more rapidly than revenue (although revenue also rose rapidly), and this credit was obtained by discounting Treasury bills, most of which, owing to the money market stringency, remained on the Reichsbank's hands; and (2) the private demand for credit, due to the insufficiency of monetary resources of ever-smaller buying power, to finance production and trade, this being expressed mainly in a revival of the commercial bill, which almost disappeared during the war. While the Reichsbank's holding of discounted commercial bills increased up to December 15th about 350-fold, the holding of Treasury bills increased little over six-fold, but here also, measured by 1921, when this entry only doubled, the increase was very great. Further, there was a great increase in Darlehnskasse advances on bonds, stocks and goods, the total of outstanding advances on December 15th being over 191 milliards. The note circulation, by end of the year, will have considerably exceeded one billion, and will have increased more than ten-fold, as against an increase of five-fold in all three preceding post-war years. The bank's position (in millions of marks) was:—

	Circulation.	Deposits.	Commercial Bills.	Treasury Bills.
Average 1913	1,958	793	1,490	
End 1918	22,188	13,280	27,415	
" 1920	68,805	22,327	60,634	
" 1921	104,567	32,905	1,061	132,330
Dec. 15, 1922	970,202	334,981	351,887	828,742

The movement of Federal finances has been described weekly in these columns. Summarised, the finances may be said to have improved materially in the first months of the year, the determining factors being the stable mark, which until late in June stood higher than in November, 1921, the moderate price rise, with its moderating effect on current expenditure, and the rapid increase in revenue, due to the all-round rise in values in late 1921. The ratio of deficit to expenditure fell from month to month; railways actually showed a small surplus; and the view of the Finance Minister that 1922-23 would have produced a considerable surplus had only the mark remained stable and the resulting violent price-rise upset these calculations; and there is an estimated deficit of 844,300 million undertakings, and fulfilment of the Peace Treaty—in the whole financial year. No funded loan was raised; and as the current deficits, with the exception of a small yield from the forced loan, were covered entirely by floating debt operations, the total debt increased greatly:—

	(Millions of Marks.)	Funded.	Floating.	Total.
March 31, 1914	4,918	..	..	4,918
January 1, 1922	78,505	..	260,303	338,808
November 30, 1922 ..	64,423	..	1,166,046	1,230,469

How far this is a real debt depends upon the ultimate treatment of the currency. In gold, at present exchange, the whole capital liability is a mere fraction of the interest paid annually on debt by other great European countries; and if the example of Austria, which has decided to repay the whole war debt in paper crowns of present gold value, is taken, the German State will, at the cost of its home

and foreign loan and Treasury bill creditors, be easily freed from debt.

The condition of industry and trade has been good. The last three months have seen a certain set-back, which, if judged by employment figures, is less marked than the set-back of late 1921. The number of unemployed, which was 429,000 in March, 1921, fell in 1922 without a break to under 12,000; and in the late summer the percentage of unemployed in trade unions fell to 0.6, or a quarter of the pre-war average. The last report shows 1.4 per cent., which is about a third of the pre-war average of winter months. At present business is distinctly slackening. Former currency collapses stimulated home buying. The latest currency collapse at first had the same effect; but the money in the hands of the people increased so very much less rapidly than prices increased that inability to buy has been for some time observed; and the remedy, inflation, could not be applied fast enough. Whereas the buying power of the Reichsbank's note circulation on January 1, 1922, was equal to that of 2,500,000,000 gold marks before the war, the buying power of the circulation on December 1st was equal to only 580,000,000 gold marks. Here was experienced the same state of affairs as in Russia, where industry was lately pressing the Finance Commissariat to accelerate inflation. In October and November the supply of cash was hopelessly inadequate; and the banks had to ration their clients. Industry was further hampered by shortage of working capital; and the first reductions of output reported in the autumn were ascribed to this factor, and not to inability to sell. The buying power of new industrial capital in 1922 was very much less than that of 1921, although there was a large nominal increase. In 1921, existing companies raised 19,229 million marks and new companies 6,526 millions; in January-November, 1922, existing companies raised 34,352 millions and new companies 10,644 millions.

Other difficulties were labour and fuel. In the summer the heavy industries could have employed 50,000 more hands. Housing shortage and restrictions upon freedom of settlement imposed by this shortage prevented the movement of unemployed to districts short of labour. Although a great deal of industrial construction was done, particularly in the early part of the year, few dwelling houses, other than villas, are built; and the housing famine is acuter than ever. Against the fuel shortage were employed better technical methods, and inferior fuels are consumed with ever-greater success, but the factors of labour and housing, and also the difficulty of capitalising new mines, prevented any considerable increase in the coal output. The output of Ruhr coal, which in 1913 was 114,550,000 tons, 88,256,000 tons in 1920, and 94,115,000 tons in 1921, was 47,000,000 tons in the first six months of 1922. In later months the per diem output increased materially. Other industries report a very considerable increase in individual output, due to improving technical methods and plant and to better work, as a result, it seems, of the disappearance of the revolutionary ferment, of smoother working by the Factory Councils, of better social conditions, and of the progressive recovery of workers from the bad effects of war-life upon their technical skill. Many individual concerns report higher per capita output than before the war, but upon this point the data are fragmentary.

Money was increasingly tight during the year, with a slight relaxation in the last weeks. The Reichsbank's rate was raised, without effect, to 10 per cent. Both by commercial practice and by judicial decisions the paper mark lost its unqualified validity as currency; and was ever more replaced by more stable currencies in foreign and home trade; and although the home use was in the end prohibited the dollar exchange continues to determine home mark prices. Owing to stringency of money, stocks did not, as in former years, rise in proportion to the currency depreciation; and to-day's quotations average about 15 times as high as those of early January, although the gold value of the currency has fallen more than twice as much. The latest stock index shows 469,593, against 30,071 at the beginning of the year, and 5,424 on September 1, 1919. The chief stock rise took place late in the year. Federal, and in less measure State loans, which changed little in nominal quotation during the earlier years of currency depreciation, this year had

HARRISONS & CROSFIELD, LTD.

Agents and Secretaries of
TEA, RUBBER, AND OTHER PRODUCE ESTATES.

great rises; but municipal bonds did not participate. Movements of the year were:—

	Dec. 30, 1921.	Dec. 15, 1922.
War Loan	77.50	80.75
Federal 4 per Cents.	87.75	430
" 3½ per Cents.	72.75	258
" 3 per Cents.	103.25	1,050
Colonial 4 per Cents.	106	5,000
Savings and Premium	84	150
Prussian 3 per Cents.	56.50	363
Bavarian 4 per Cents.	64	195
Berlin 4 per Cents.	95	105

Prospects for 1923 are uncertain. Although temporary recoveries of the mark exchange may occur at any time, a lasting recovery, or relative stability, seems possible only in case of a settlement of the Reparations question; and if such a settlement comes, a formal mark stabilisation at around the lowest attained level seems practicable. This must be accompanied by the buying up of the large mark currency interests outside Germany; because as long as these interests remain, every event shaking confidence in Germany's future is likely to produce a new mark fall. Whether, if Reparations payments are postponed, a foreign payment can be established is a doubtful point. The present considerable excess of import values seems to have been made possible by the decrease in current gold liabilities abroad, which results from the fall in mark exchange; and in fact the mark exchange depreciation works as an encouragement of unnecessary imports. If no reform of the currency takes place, private business will probably continue to adapt itself to unstable values; and while it is not safe to predict that still more extreme currency depreciation than the present may not cause a general collapse, it seems, from past experience, unsafe to predict the contrary.

DENMARK.—PRICES—AGRICULTURAL EXPORTS—BANKING IMPROVEMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 15.

In this country opinions have varied with regard to the future movement of prices. At present the prices are comparatively firm, and the tendency is rather an upward than a downward one. The wholesale price index of the *Finanstidende* shows a rise during November from 180 to 182, and wholesale prices in Denmark are now 82 per cent. above the pre-war level, but 55 per cent. below the level in September, 1920, which was the highest point touched. The increase during November is distributed fairly evenly over the groups of commodities. Only a few articles—for instance, butter and superphosphates—show a decline.

The question of butter prices has been the subject of special interest lately, as depression in the English market is fairly well balanced by an increase in the demand from the U.S.A. *Andelsbladet* stated a few days ago that the immediate demand for Danish butter might apparently obviate a disastrous decline in price like the panic last year at the same time. The local exporters state that the American demand is due to a sudden shortage of the milk supply. In these circumstances, the greatly increased butter duty is no longer a hindrance to imports, and during the week ending December 2nd 170,000 kilos of butter were shipped from here to America.

In this connection it should be stated that the general export of agricultural produce is maintained at a fairly substantial total. The average weekly export of agricultural produce amounts to:—

	1920.	1921.	Nov., 1922.
Butter tons	1,454	1,725	1,906

The weekly exports during November, 1922, thus considerably exceeded the weekly average for 1920 and 1921 as far as the quantity is concerned. Otherwise the trade situation is still largely affected by world depression. As regards the shipping trade, however, it should be mentioned that laying-up of ships had practically ceased by the end of August, and, according to the statistics of the Steamship Owners' Association of November 15th, all steamers were then in use, while some sailing vessels were still without freight.

As far as the banks are concerned, a not inconsiderable improvement can be traced, and has, for instance, found expression on the Stock Exchange, the quotations for bank shares having recovered after the depression in September and October. The balance-sheet of the Landmandsbank at November 30th shows, for instance, that the call deposits are continually increasing, and that the decrease in the savings deposits has now ceased, which is rightly taken as a proof of greater confidence on the part of the public as regards the position of the bank. Generally speaking, it may be taken for granted that the bank has overcome the most serious of its difficulties, and that it is gradually settling down to sound and steady working conditions.

On November 25th the note circulation of the National bank had been reduced to the low figure of Kr.414,000,000, but afterwards an increase took place owing to the usual demand at the end of the month and the approaching interest settling day. On December 2nd the figure was Kr.465,000,000, in proportion to which the percentage of cover was 50, while, according to the charter, only one-third of the circulation is required to be covered by the bullion reserve.

The Minister of Finance has again put before the "Rigsdag" the Customs Bill, which was not finished at the last session. The Bill appeared in a practically unchanged form. As to the effects of the Bill, the Minister stated that an annual revenue of Kr.75,000,000 might be estimated on the basis of the imports for the first six months of 1922, while last year the estimated revenue was Kr.66,500,000. The Customs Act now in force has yielded Kr.50,000,000 annually, apart from the new luxury duty which is included in the above Customs Bill. As the imports during the first half of 1922 have been above the normal, the figure of Kr.75,000,000 can presumably hardly be maintained in the long run. The Minister, however, considered that in any case the revenue would not fall below Kr.66,500,000.

The last published returns of Denmark's foreign trade are those for October. During this month the value of imports was Kr.148,000,000, and of exports was Kr.112,000,000, of which Kr.7,000,000 represented the re-exports of foreign goods. During the first ten months of the year total imports amounted to Kr.1,234,000,000, and total exports to Kr.1,000,000,000, of which Kr.52,000,000 represented re-exports. The visible merchandise balance was accordingly Kr.234,000,000 against Denmark. It may be taken for granted, however, that part of this deficit has been covered by the invisible exports—for instance, the freight earnings of the shipping trade, which were somewhat sparse during the first half of the year, but have improved of late.

GREECE.—THE RISE IN FOREIGN EXCHANGES—EXCHANGE CONTROL MEASURES.

(FROM OUR CORRESPONDENT.)

ATHENS, December 15.

THE abolition of the Consortium in October last, followed by the partial removal of exchange restrictions, found the rate of exchange on London at around 170 drachmæ to the pound sterling, and the exchange on the other countries at corresponding levels. Since then the rates have, with but small intervals of reaction, steadily increased, that for the London exchange standing now around 400 drachmæ to the

pound sterling, after having touched 422 drachmæ. The continuous increase of the cost of living (calculated now at 1,000 per cent. of that of 1914), ascribed to the great depreciation of the drachmæ, has led the Government to take drastic restrictive measures regarding exchange operations, with the purpose of suppressing speculation, of diminishing imports from abroad, and of controlling the exchange imported in payment of Greek exports to foreign countries. To that effect, a decree has been just published, maintaining and increasing the restrictions already in force since the abolition of the Consortium (see the *Economist* of October 21st). According to the main provisions of that decree, permission to deal in foreign exchange is only accorded to (a) Greek banks which are limited companies; (b) foreign banks established in Greece; and (c) bankers obtaining special licence from the Ministry of National Economy. The exchange imported in payment for exports will be handed to the State, wholly in the case of agricultural products, and partly in the case of industrial and mineral products, through the National Bank of Greece, either directly or by the medium of the other authorised banks. However, for certain articles exported to bordering States payment in kind may be permitted. Moreover, to foster production and the advancement of domestic industry, the obligatory cession to the State of the exchange received in payment for certain exportable articles may be removed, wholly or in part. The exchange thus surrendered to the State will be paid as follows:—For certain articles, at a basic rate for each foreign currency (to be fixed from time to time by the Ministerial Council in consultation with an *ad hoc* Committee, and to remain in force for at least six months); for others, at the basic rates, plus a variable increase (according to the article) of so much per cent. of the difference between the basic rates and those of the free market. That part of exchange representing the value of exports, whose cession to the State is not obligatory, must be sold to the authorised banks within a period to be subsequently fixed, unless it be used for the purchase abroad of raw materials and coal for the needs of the exporter's business. The exchange surrendered to the State will be utilised for the service of the public debt, for other needs of the State, and for the purchase of some articles of prime necessity. The exchange bought by the authorised banks will be sold to the trade and to private individuals for their needs. Forward dealings in exchange are prohibited as a rule, except for such operations as are concluded through the authorised banks and are concerned with genuine commercial transactions. Advances on pledge of foreign currencies, the opening of credits in drachmæ with the guarantee of foreign banks, and the payment of foreign drawings in drachmæ, so far as the corresponding cover in exchange has not been previously received by the drawee, are prohibited. Bank deposits in foreign exchange effected after October 30th are repayable in foreign exchange. Those made before that date are repayable in drachmæ at the free market rates, and may be converted into foreign exchange and exported, only on justified grounds and after permission of the Minister of National Economy. It is further provided that, by decision of the Ministerial Council, the import of certain articles from abroad may be prohibited, wholly or in part. Also, the Ministry of Foodstuffs may undertake the sale of certain articles, either in the form of a monopoly or otherwise. Lastly, an Exchange Control Office is instituted at the Ministry of National Economy.

In connection with these measures, it must be observed that industrial and mineral products are treated favourably as compared with agricultural products, whereas, if any distinction between them was to be made, it should have been in favour of agriculture, which is the principal wealth-producing agent of the country. Also, that shipping earnings, which, with the emigrants' remittances, are in normal times the most important items of invisible exchange imports, are entirely ignored.

Letters to the Editor.

GERMAN REPARATIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is a universal demand from leaders of commerce all over the world for the final fixing of the amount of German Reparations and the manner of their payment, because these men recognise that until those are determined a return to normal international trading is impossible, and, should the prevailing unstable conditions continue, ruin is inevitable. The situation bristles with thorns, chief among them being the just claims of France for the restoration of devastated areas, destroyed factories, requisitioned machinery, &c. What France needs is francs, or the equivalent. Her claims for material damage should have priority.

Germany, if properly handled, without political agility, will be able to pay for the material damage done. The world-wide purchase of marks by speculators has already made it possible for her to restore and develop her industries, pay for foreign purchases, and invest capital abroad. The inflation of her currency has enabled her to cheat her creditors out of their just dues. In order to stop this inflation it will be necessary to give her a moratorium with a time-limit and credits which shall include a cash payment to France. Investors could only be induced to come forward with the necessary capital for these credits on the strength of German guarantees of good faith, such as receipts of a percentage of Customs Duties, to cover annual interest and sinking fund for these credits. This percentage would be distributed amongst the countries giving the credits. This would necessitate the acquiescence by Germany in a League of Nations receivership for the collection of this percentage from the Government, and for the supervision of the carrying out of the agreement. This percentage would be in addition to that required for the amount fixed for Reparations, and would rank *pari passu* with the charge for Reparations. The latter percentage would be handed back to the German Government during the moratorium. The Governments of creditor countries should offer an investment to their people for these credits in the form most suitable to the respective countries on the basis of internal reforms and "gages productifs." It is essential that this investment should be backed by the guarantee of each individual creditor Government for its own investors.

The common-sense of such a settlement would make a two-fold appeal which would coincide with two natural instincts of humanity, patriotism and self-interest. It would open up foreign markets, check speculations in currency, with their concomitant waste of legal tender money, and open wide the door for a business settlement of inter-Allied Government debts between the creditor and debtor countries concerned. The war has left America the greatest creditor nation in the world. She has emerged from her trade depression with prosperity revived and unemployment cured. But she very badly lacks markets abroad for the export of her raw materials. It is to her interest, therefore, to come in with her invaluable help to Europe, after a workable plan has been arrived at for the settlement of the Reparations question. England, with her tradition for investment of capital abroad, and for generous handling of debtor countries, will now (with this eminently sound Government) play a great part in the European reconstruction. And there is no doubt that America, with her young, clear vision and broad business ability will follow a luminous lead from the Mother Country.—Yours very truly,

D. DRUMMOND FRASER.

Grand Hotel, Eastbourne, December 24, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have talked with numbers of our publicists about the German reparations and the inter-Allied debts. They cannot be quoted, but with few exceptions they understand that these debts can be paid only in goods and services, and that such payment is precluded by the trade

barriers the nations, ourselves included, have set up. Yet few of them feel inclined to come out and say this baldly and boldly in public.

It would seem indeed true that a man takes his business life in his hands when in this land of the free he says anything that suggests commercial freedom, and few except those who feel they have nothing to lose attempt it.

The American people mean well. Their hearts are well disposed, but their heads are full of economic nonsense. I feel that were Britain, which seems to understand international trade better than we do, to boldly cancel the Allied debts due her it would wake us up. There would be a stormy session, but we really could not afford to see Britain more generous than ourselves in this matter. It would help, too, if in cancelling these debts Britain would plainly state that it was because of the utter uncollectibility of such vast debts, the mere existence of which were paralysing trade, that she took that course.

I have been hoping the United States would take the lead in this, for we alone of the belligerents have no huge external debts to hang over us, but the peculiar economic ideas of our dominant party—and the other one, too, for that matter—have quite discouraged me.

AN AMERICAN FREE TRADER.

New York, December 14th, 1922.

THE CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The whole matter at issue appears to be unnecessarily complicated by a mass of phraseology indulged in by both sides, which clears up no single point, and does not serve to enlighten an "ignorant electorate." The issue is nearly always discussed from the industrialist point of view, entirely ignoring the fact that agriculture employs more people than any one other industry in this country.

How is the farmer—in the event of the imposition of a capital levy—to transfer the necessary proportion of his wealth to the State? Usually he owns little capital other than his land (leased or freehold) and his stock and farm implements. There would be no market for these if forced for sale. There is little enough as it is. They cannot be handed over by transfer to the State and put away in safes at the banks, as can investment securities. Any reduction of whatever cash capital the average farmer has will make agriculture less able than ever to feed the present small proportion of the population of this country which it does now feed.

Nationalise the land and parcel it out to farm labourers rent free, to farm as immediate tenants of the State on some novel basis, and the State will be involved in an undertaking the difficulty of which will make the wartime Government control of industries appear as child's play.

The remission of £1 per acre rent will still fail to make corn growing unproductive at the present price of corn. Is it not possible for some of the text-book Socialists and professors ever to think of wealth otherwise than in the terms in which it is translated by the dweller in cities?—I am, &c.,

C. HEWITT.

ROADS AND WHEELS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Lord Montagu of Beaulieu in a recent issue of *The Times* suggests an expenditure of £50,000,000 now on road improvement. This sum could be so applied, even in our present straitened financial circumstances, as to prove a wise act of statesmanship, providing much-needed employment, if the chaotic conditions into which our roads have been permitted to sink from long neglect are at the same time soundly remedied. Increasingly futile road repairs have already reached the prohibitive cost of 4d per ton per mile, as recently disclosed by Sir William Acworth (other authorities have put it as high even as 6d per mile). Such costly experience has rendered it most obvious that if the dominant cause of road destruction is not first overcome, then the expendi-

ture of fresh capital must become as futile and disappointing in future as our efforts have been in the past. The root cause of this evil is reactionary road shock. As an example, the wheels and axles of the usual commercial lorry consists of one to two tons of unsprung rigid weight. Those wheels act as mechanically driven power hammers, with at usual velocity, when loaded, the equivalent of hundreds of tons of added weight pounding to destruction any road the wit of man has devised. The more solidly the road bed is built the greater the damage to roads and vehicles, simply because "action and reaction are equal and opposite."

When in pre-war times practically every public service motor company had literally and financially shaken itself to pieces, not less than a quarter of a million pounds sterling was expended before it was discovered that in the wheels themselves this reactionary shock could be simply diverted alike from vehicles and roads with "every satisfaction," and with most economical results. This fact was established by some three years' road experience on motor buses—the most crucial of tests. At that time, however, confidence in the future of the industry had sunk to zero. Experience had cost so much there was nothing left then for sound progress. It was alleged that Scotland Yard opposed. Scotland Yard denied the allegation, and offered every facility, but without reciprocal result.

The continued "irritatingly unjust treatment," however, of the ratepayers in causing them to pay for avoidable road damage was denounced in Parliament, and "the sanity of action" urged, until legislation for their protection was promised just before the declaration of war. As from some adequate, but for more inadequate, reasons procrastination was again resorted to, the well-known facts as above were brought under review of the High Court of Justice, and sifted there with clarity of judgment.

Expert evidence of protracted road tests by the old Road Board was confirmed by that from the London General Omnibus Company and by eminent scientific witnesses, also by practical road users on varied types of vehicles.

With the cordial consent of the Crown an unusually emphatic judgment was pronounced, especially because of the national advantage available as evidenced in reducing cost of road construction and road maintenance. As it is now realised that we cannot build roads to suit the vehicles, we advantageously can construct the wheels of the vehicles to suit the roads. As efficient and economic transport is a vital national necessity with a Parliament elected "to put the country right," we may reasonably hope for sound progress now.—Remaining at your service, I am, yours obediently,

Mains House, Beith, Scotland.

JOHN MUIR.

Books and Publications.

AN INSURANCE HAND-BOOK.

THIS well-known hand-book, now in its sixth edition and thoroughly revised, really does fulfil the requirements of that much-abused word indispensable. With these volumes by one's side, and with the current compilations of Messrs Stone and Cox and of the Insurance Publishing Company, no insurance official or student of insurance need fail to get from works of reference just what he happens to want. We have not in this country the prolific insurance literature which America pours out, but what we have is good and trustworthy. Volume I. of the Insurance Guide and Hand-book deals with life assurance, and is under the capable editorship of Mr Reginald Simmonds, Fellow and Tutor of the Institute of Actuaries. The various sections, which deal with technical aspects of life assurance practice, are all by official experts. Some of them dealing with the determination of premiums and the calculation of reserves are inevitably technical—they would be little use if they were not—but there are many sections which any intelligent person can fully understand.

* "The Insurance Guide and Hand-book." Sixth edition, in two volumes. 15s net. Charles and Edwin Layton.

Volume II., edited by Mr Joseph H. Matthews, Fellow of the Chartered Insurance Institute, cover fire, marine, accident, and miscellaneous insurance. As with Volume I., all the sections are treated by insurance men. Principles, practice, law, history are all described and explained. Although the volumes are not big and many subjects are dealt with, there is very little omitted. Space has been carefully studied, and regard paid to essentials. Insurance is so vast in its range that no man knows from his own experience more than a corner of it. The present writer thought that he knew a little about one or two branches, especially life and fire, but after reading these volumes he has become more modest. One fancies that most insurance men, however confident in their experience of individual specialities, will upon turning to these volumes also become oppressed by a sudden discovery of their ignorance. We specially recommend a study of these volumes to ambitious young insurance officials and to general managers—to the first in order that they may qualify by learning to become general managers, to the second in order that they may wonder how, if all this ought to have been known, they succeeded in reaching their present eminence.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. January 10. ACCOUNT. January 11.

THE Stock Exchange concluded the calendar year with a Pay-day, and, in spite of the incidence of the Christmas holiday, the settlement just finished has turned out to be fairly heavy. Moreover, markets returned from their festive celebrations with invigorated strength, several departments marking out upward lines of their own, which caused the House to close the year with an appearance of buoyancy, accepted as a good omen for better business in 1923. The War Loan rose to 100, and the fresh deadlock that seems likely to arise in connection with the Turkish pourparlers has failed to exercise any influence over purely investment stocks. The mission to America, which set sail on Wednesday, is expected to accomplish a good deal in the way of easing the situation in regard to the manner of repayment of the British debt due to the United States. If great things are not anticipated from the Paris Conference that begins next Tuesday, the optimism of the Prime Minister in

regard to the trade outlook is taken to be a bull point for industrialists of all kinds, and though Mr Bonar Law tempered his hopes with a warning about international politics, these latter are not affecting the markets as a whole.

German bonds have fallen, on the statement that Germany is already in default in connection with her timber deliveries. French issues are leaning to the lower side. Turkish bonds have dropped, in consequence of the truculent attitude adopted by the Turks. Chinese hold their steadiness, and in the South American group Argentine and Brazilian bonds keep hard.

The Home Railway market is good throughout. When the Stock Exchange reassembles next week, there will be a comparative handful of securities in which to deal, and it is thought that the public may be attracted to this market now that the grouping system is fairly in force. Grand Trunk Pacific debenture has gone back. Mexican Rails are motionless. Argentine railway stocks suffered a little from the usual end-of-the-year selling, but new-time purchases soon put a firmer face upon the market.

Rubber shares maintain their prices, and most of the changes are upward. Tamboras have spurred sharply. In the oil group, a sensational rise in Venezuelan Oil Concessions followed the announcement that the company had discovered two new gushers on the property. The oil market generally, however, looks harder, and although the report of the Mexican Eagle Company caused the shares to lag behind the rest in the improvement, Shells led an advance that was fairly well distributed over the list. Courtaulds enjoyed another pyrotechnical rise, by reason of the hope that there will be a substantial cash bonus in the near future. Other textiles are steady. Shipbuilding and allied shares—iron, coal, steel, engineering, and armament—have been moving narrowly, the changes day by day being mostly confined to a few pence one way or the other. Shipping stocks show a fair number of rises. The electricity supply market is good, while in gas there is not much doing, though lively interest awaits the next batch of dividends. Trust companies' stocks continue to forge ahead.

In the banking market, London and Brazilians have further recovered the ground lost some weeks ago. The London banking list is steady, and insurance shares show but little movement, though buyers readily take whatever comes on offer. Amongst the chemical shares, Brunner, Mond stand out with a rise, and in the stores group, although there is not much change on the week, the recent advances are well held. Dunlops are dullish, in company with motor shares, but the public demand for tobacco investments is as keen as ever, and prices are again harder on the week.

The South African market suffers for want of business; its prices are firm, and, with any public support to back the list, it is likely that Kaffirs will go ahead. At present, what little animation pervades the market is confined to specialities, of which Chartered and Cam and Motor, amongst Rhodesians, stand out as the principal examples. The diamond group is neglected again. Rio Tintos, after being decidedly strong, reacted from the top, by reason of the threatened international complications. Russian mining shares are easier for the same reason. Broken Hills show a fair number of rises, the Colony being once more the buyer. In Mexican and other miscellaneous mining shares, business has been reduced to a minimum. The Stock Exchange is closed to-day (Saturday), as usual. Members are speculating upon what may be the chances of the House reopening on Saturdays during the New Year.

We are informed that Mr Charles Wilton McShane has ceased to be a member of the Stock Exchange.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	573,573,650	..	..	..
4½% Treasury Bonds (by Tender December 22, 1922)	Nil	..	..	..
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED DECEMBER 23, 1922.				
April 1 to Dec. 23, 1922, £28,168,000	300,000	..	300,000	..
Total offered for subscription for whole year—				
1922	573,573,650			
1921	388,978,203			
1920	367,549,656			
1919	1,036,059,951			
1918	1,393,381,441			
1917	1,318,596,010			
1916	585,436,853			

Sylvanite Gold Mines, Limited.—Incorporated under the Ontario Companies Act. Nominal capital, \$3,000,000, in shares of \$1 each, of which 2,000,000 shares have been issued. The company was formed in June, 1913, to work five gold claims in Ontario. In order to comply with the requirements of the Committee of the Stock Exchange, a detailed account of the company's financial activities in connection with its share capital is advertised in the public Press, but nothing can be gleaned as to the progress made in developing the company's five claims since 1913, when the company was formed.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

BANK OF MONTREAL.

BANK'S STRONG FINANCIAL POSITION MAINTAINED.

CANADA'S IMPROVED FOREIGN TRADE.

PRESIDENT'S AND GENERAL MANAGER'S REVIEW OF THE YEAR.

The one-hundred and fifth annual general meeting of the shareholders of the Bank of Montreal was held, on December 4th, in the board room at the bank's headquarters, Montreal.

On the motion of Lord Shaughnessy, Sir Vincent Meredith, Bart., was requested to take the chair.

The Chairman then called upon the general manager (Sir Frederick Williams-Taylor) to read the annual report of the directors to the shareholders.

THE PRESIDENT'S ADDRESS.

Sir Vincent Meredith, in moving the adoption of the report, said:—

The recent death of our greatly-esteemed director, Mr R. B. Angus, must cast a shadow over our meeting to-day.

As a director of the bank for thirty-one years, and its president for three years, he rarely, if ever, was absent from a meeting of the board, except on occasions when he was abroad. His wise counsel and mature judgment were at all times at the bank's service.

He will be greatly missed, not only by his confrères in the bank and other large corporations with which he was closely identified, but by the public in general, by whom he was held in high esteem.

The banking year just closed has required constant vigilance, and I am glad to be in a position to inform you that, while our profits on the basis of capital employed have not been as large as those of the immediately preceding years, as was to be expected with lessened activity in business generally, coupled with increased taxation, we have been fortunate in escaping serious losses, and the liquid position and great strength of the bank remain unimpaired.

Since your last annual meeting the Merchants Bank has been absorbed by the Bank of Montreal. In my judgment, the prompt action of your directors, subsequently ratified by you, averted a situation that might otherwise have proved serious to the country at large, and secured the shareholders of that institution from losses greater than were suffered.

It will interest you to know that the work of co-ordinating the staffs with a view to economies is proceeding with all possible celerity, and that the acquisition of the Merchants Bank is reasonably realising the expectation of your board. Under our own organisation, and with the economies that have been effected, the future gives promise of increased earnings.

CANADA'S TRADE.

The foreign trade of Canada is again expanding, having reached a value of \$921,700,000 in the seven months ended October 31st, being an increase of \$67,748,000 over the corresponding period last year.

A satisfactory feature of the figures is the large export of agricultural produce, amounting in the seven months to \$270,084,000, an increase of \$27,000,000 over the seven months of last year—a substantial addition to the income of our farmers.

The balance of trade has turned in favour of Canada, having been the considerable sum of \$60,000,000 in the April-October period, as compared with an adverse balance of \$22,700,000 in 1921, and of \$140,600,000 in 1920. Within two years, therefore, there has been a betterment of no less than \$200,000,000 in our foreign trade, a factor contributing in a considerable degree towards the restoration of the Canadian dollar to par. Taken altogether, the foreign trade figures afford encouragement.

The net debt of Canada on October 31st amounted to \$2,369,000,000, an increase of \$40,000,000 during the year. The deficit of the National Railways during the same period will probably amount to upwards of \$50,000,000.

CONDITIONS IN THE UNITED STATES.

From what one can learn, fundamental conditions in the United States underlying the forward movement of business which began some months ago are sound, as evidenced by the prompt resumption of progress in various industries as soon as the retarding influences of the strike situation were removed.

The United States can for a time remain self-contained, but a year or two of business activity will doubtless convince the most sceptical that that country cannot remain aloof and live unto itself. For a time the home market can absorb a very large proportion of the country's production, but after the saturation point has been reached economic conditions demand that an outlet must be found for the surplus products, including both wheat and

cotton, failing which depression in business generally, with lower prices, will be the natural result. In the meantime the present business activity is expected to continue for a year or two longer.

The least satisfactory phase of the country's business is in the foreign trade field. With continued unsettlement of many of the foreign exchanges the volume of exports has shown restricted demand, monthly figures running uniformly below those of the previous year. The recent tariff enactment does not tend to stimulate imports, so that mutual foreign trade is just now at a low ebb.

The growing scarcity of labour shows unemployment has decreased 40 per cent. since October, 1921, and the new immigration laws, as is also the case in Canada, bar a remedy.

IMMIGRATION.

As you are aware, the tide of immigration into Canada has not flowed freely in recent years, and while reasons more or less convincing are given for the failure to attract larger population, the fact remains that the situation in this respect is unsatisfactory.

It seems to me there are two ways only to check and reduce the mounting debt with which this country is now burdened—one is by the creation of fresh wealth through having more people on the land, and the other by strict economies in Government expenditures.

It is gratifying, therefore, to learn that the Dominion Government, in co-operation with the Provincial Governments and private organisations, is to embark upon an energetic immigration policy, of which the first-fruits, we may hope, will appear next year.

FARMERS' BUSINESS.

Statements have been made in the public Press by uninformed people that debtors, especially in the West, are being subjected to undue pressure by the banks, loan companies, and other creditors. So far as this bank is concerned every consideration and great latitude have been given to debtors, who, through bad harvests or other mischance, have been unable to meet their obligations. This is and at all times has been the policy of this bank, and never has that policy been more forcibly impressed upon our managers than during recent critical years.

REVISION OF THE BANK ACT.

The Bank Charters expire on July 1, 1923, and unless the Government deems proper to extend them for another year, a revision of the Bank Act will occur at the approaching session of Parliament.

The subject is already engaging attention in the Press and elsewhere. Some suggested changes are so radical that alarm might well be caused but for the conviction that caution, the lessons of the past and the sound sense of Parliament will interpose against their acceptance.

The banking system of Canada is the product of long experience, and it has operated to the advantage of the people, despite an occasional failure, from which, however, no country and no plan has been free.

LABOUR AND COSTS.

The labour problem and its near relation, the cost of living, are still with us. Certain classes of labour have accepted a lower wage, but there has not been a pronounced general movement in this direction, nor has the tendency been wholly downward. It may be, indeed, that for a time diminished production cost will have to be sought in improved machinery and equipment, in efficiency and in a larger output per man and machine, rather than in cheaper labour.

CONDITIONS MORE SATISFACTORY.

The condition of business in Canada is, upon the whole, more satisfactory than a year ago. The opinion I then ventured to express, that trade would not yet enter a period of pronounced expansion, although a spurt might be made in some departments, has been borne out by events. Price recessions seem to have been checked somewhat generally, the cost of living indices compiled by many statisticians not having been materially reduced within the year, while some important commodities move more freely at higher prices.

For several months past the army of the unemployed has been

diminishing until it can almost be said that unemployment is not greatly in excess of the normal. On the other hand, farmers have had to contend with a further fall in prices, which have practically receded to pre-war figures.

Fortunately, farmers have reaped a bountiful harvest, more bountiful as a whole than in any year since the phenomenal crop of 1915, so that the excess in quantity will in some measure compensate for the drop in prices.

The live-stock trade has been hard hit by the high tariff of the United States, particularly in the case of cattle breeders in the West. Whether the removal of the British embargo will realise all the expectations of Canadian breeders may be a moot question, but it is very satisfactory to learn that this long-imposed embargo is at last to be lifted, and the hope may be indulged that an impetus to Canadian exports of cattle to Great Britain will be given thereby.

CONCLUDING REMARKS.

In conclusion, the crisis of 1920-21 has passed into history. The fact that the depression was world-wide makes it highly improbable that the return to normal will be other than slow.

We have experienced a more sudden and acute depression of trade than our generation has ever known, and though conditions, including the agricultural results, are undoubtedly more favourable, prudent business men will not build up an unduly speculative position after the lessons of 1920.

The outlook, as I see it, is for reasonably profitable operations in most lines of business, though there can be no great trade boom without a further important expansion of foreign commerce, and this, unfortunately, is not yet in sight.

GENERAL MANAGER'S ADDRESS.

Mr. Chairman and gentlemen,—The one hundred and fifth annual balance-sheet of the bank, which I have pleasure in presenting for your approval, shows many changes as compared with a year ago.

These changes are the result in part of incidental variations in what might be termed our natural position, and, in a larger measure, of the absorption of the Merchants' Bank of Canada, which, I am gratified to say, has been effected with scarcely a ripple on the surface of our affairs.

Speaking in general terms, the increase in our liabilities to our shareholders and depositors is balanced by a corresponding increase in our assets, while our liquid position remains as strong

as ever, and the status of the bank is enhanced through the acquisition of many branches, as well as in other ways, from all of which we shall presently derive the benefit in increased earning power.

It is trite, yet undeniable, to remark that in Canada, as elsewhere, trade generally has not been good. Bankers, more distinctly than others, perceive the detailed results of this condition, which in large measure is brought home to them through losses and diminished profits.

In the case of our own bank, if losses are moderate, as they have been, it must of necessity be the result of prudence in granting credits and of accurate perception of the inexorable working of economic laws, for there is little that can be ascribed to luck in such matters.

Before going into a detailed explanation of the various items in our balance-sheet and the factors that affect our well-being, it is customary for your general manager to touch upon the general trade and financial situation and outlook.

Canada's economic position is not satisfactory. How could it be satisfactory with the whole financial world out of joint? As everyone is aware, our troubles are partly the result of this universal condition; partly the result of the war. It is well, however, to bear in mind that our problems are largely of our own creation.

Readjustment will come in time, for this is a country of virility and manifold resources; yet one thing stands out signally, in my opinion—namely, that Canada cannot go ahead again as she should while taxation and the cost of living are higher in this country than they are in the United States of America.

To revert to our balance-sheet, you will note that our bank premises account has been nearly doubled, but I am able to inform you that important sales have already been made and further realisations are in prospect, so that we look forward to a steady reduction in this none too satisfactory form of asset.

As you know, an ample volume of deposits is essential to the prosperity of any bank, and I feel sure you share our gratification that this department of our business has been well maintained during the deflation period. Our total deposits are \$605,600,000, divided as follows:—

Current in Canada	\$189,000,000
Time deposits in Canada	276,700,000
Deposits outside	139,900,000

I should add that both in Canada and outside we had at

October 31st special large sums on temporary deposit, which have since been in part withdrawn.

Our total loans are now \$409,000,000. Of this amount \$244,000,000 represent commercial loans in Canada, which are less, after taking Merchants' Bank figures into account, by \$27,000,000 than a year ago, and therein, and in the lower rates of interest at our other reserve centres, London and New York, lies the explanation of our somewhat smaller percentage of earnings to capital.

Current loans in Canada for all the banks, including advances to provincial Governments, municipalities, &c., are \$130,000,000 less than a year ago, reflecting a period of deflation in trade and lessened demand upon the banks.

Our call and short loans in this country and elsewhere at nearly \$135,000,000, and balances due us by banks outside Canada at \$54,000,000, reflect to some degree the disposition of certain large temporary deposits to which I have already referred.

We now have \$41,550,000 notes in circulation, the highest point in our history. Notes of all the banks and of the Dominion Government in public circulation at October 31st totalled \$375,800,000.

The free movement of gold into this country enabled the bank to strengthen its metallic reserves in Canada, as indicated in our balance-sheet.

IMPERIAL BANK OF PERSIA.

SATISFACTORY RESULTS — INCREASED PROFITS.

IMPROVED POSITION IN PERSIA.

The thirty-third ordinary general meeting of the Imperial Bank of Persia was held, on the 28th instant, at the Cannon Street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (chairman of the company), presiding.

The manager and secretary (Mr Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, we have been able to present to you for the past financial year a report and balance-sheet which I think you will regard as very satisfactory. Though the improvement shown in the figures of the accounts is not very great, the report is in some respects the best we have been able to submit to you since the outbreak of the war, and you will no doubt agree that it is a matter for mutual congratulation that we have been able to see our way to give the shareholders a pleasant New Year gift in the shape of an additional shilling in the final dividend.

The history of Persia during the past twelve months has been comparatively uneventful, in great contrast to the exciting experiences which I have had to relate to you from time to time since 1915. You will remember that a few days before I addressed you a year ago the Ghavan us Sultaneh had been succeeded as Prime Minister by Mushir ud Dowleh. The latter's administration did not last very long; he resigned in June of this year, and the Ghavan us Sultaneh, to whose courage and ability as an administrator I ventured to pay a tribute last year, was again entrusted with the duty of forming a Government, and is still in power.

SITUATION IN PERSIA.

Throughout the year, even during the change of Prime Ministers, the Cossack leader, Reza Kfian, has continued to hold the post of War Minister, and it is impossible not to admire the determination and efficiency which this able officer has exhibited in the control of his department. He appears to have so reorganised the various armed units existing in the country that he has succeeded in providing Persia with quite a fairly strong and well-disciplined military force, and the success of his efforts is reflected in the increased tranquillity which has prevailed throughout the country. For example, to quote only our own experience, for the first time for seven years we are able to record that not one of our branches has been closed during the year on account of disturbances, and you will notice that for the second year since the war we are able to hold our annual meeting in December—a result of the general improvement of communications which has followed the establishment of better order and security in the provinces.

In the matter of trade the same cause has had its salutary effect, and for the year ended in March last we are told that the total imports amounted in value to £12,250,000, of which the British Empire supplied £9,200,000. The corresponding figures of imports for the previous year were 9½ and 7½ millions, so that there has been a decided improvement during the year under review. The balance of trade is still against Persia, and, as I pointed out last year, it is important that every effort should be made to increase the country's exports. With this object in view, I am inclined to think that Persia could embark on no more remunerative form of expenditure than the improvement of inland transport and the adequate protection of the roads leading to the ports.

It may be of interest at this point to state that Canada's debt abroad, according to a close analysis, is now about \$3,600,000,000, divisible as follows:—

Dominion Government	\$546,000,000
Provincial and Municipal Governments	720,000,000
Railways	1,600,000,000
Public utilities, industrials, &c., accounting for the balance.	
Canada's obligation in interest on this great sum is estimated at about \$500,000 per day.	

In conclusion, I think we can claim that the manner in which our banks generally have come through the agitating times since 1914 is evidence of the fundamental soundness of our Canadian banking system. We must be thankful that no great commercial breakdown has occurred.

The general manager then gave in detail the reports on the conditions of trade, &c., in the various provinces, as supplied by the superintendents.

The report having been adopted, votes of thanks to the president, vice-president, directors, and staff were passed.

The votes of thanks having been responded to by the President and General Manager, the ballot for the appointment of auditors and the election of directors was duly proceeded with, and the meeting terminated.

DESERT RAILWAY.

In this connection I may mention that there appears to have been a considerable expansion of the trade with India via the railway, which, in 1917 and 1918, was, you will remember, pushed across the desert from Nushki, in Baluchistan, to Duzdap, on the border of Seistan. I am informed that with each extension of this line, first to Dalbandin, in the middle of the desert, then to Mirjawa, and finally to Duzdap, the value of the trade with Persia has doubled, until it reached the total of 141 lakhs of rupees in 1920 and of 200 lakhs in 1921. There was an alarming rumour lately that the Government of India were thinking of dismantling this line, on the ground that it does not pay its expenses, but I sincerely hope it is not true that such a retrograde measure is in contemplation.

We recently opened a branch of the bank at Duzdap for the convenience of the merchants engaged in this trade, and as there is a motor road from Duzdap to Bam, it has been suggested to the latter place, because of the increased trade anticipated from the existence of the road and the railway. This shows the interest remembered that it is only by this route that India can hope to compete with Russian trade in Meshed and Khorassan. Russia for the present being out of the market, Indian trade is extending to these places, and will probably hold its own so long as the railway exists, but, if the railway goes, the trade will, of course, cease also, to the serious loss not only of India, but also of the Persian nation, whose prosperity depends largely on its customs revenue. In 1920 the Customs receipts in Seistan amounted to no less than 3,112,775 kranas.

In October last our manager at Duzdap reported that there had been a great rush of goods from India in September, and that such large consignments of wool had arrived from Meshed and for export that several special trains had to be run to carry it off, a thing which had not been known before in the history of the line. Also, owing to the railway, Seistan is able to export to Quetta and Baluchistan grain and other raw produce, for which it is difficult to find so accessible a market elsewhere. The tendency, therefore, will be to encourage the extension of cultivation in the Seistan Oasis. Of the strategic importance of the line it is not for me, perhaps, to speak, but obviously it was invaluable to us in assisting Persia during the war, and, in the event of trouble on this part of the border, it is likely to be equally useful again. For these reasons I think it may be safely concluded that, with a little patience, this railway will yet prove taking.

APPOINTMENT OF DR MILLSPAUGH.

Last year I alluded to the reported desire of the Persian Government to obtain once again the services of Mr Morgan Shuster as their financial adviser. Mr Shuster, I understand, was unable to return to Persia, but another American gentleman, Dr Millspaugh, was selected for this difficult post, and he arrived at Teheran with his staff a few weeks ago. This is an event of

good augury for the country if the Persian Government will invest him with the authority necessary for the successful exercise of strong financial control. Persia, like many other countries since the war, has found it difficult to balance its Budget, but she has an industrious and thrifty population, her currency is in no way depreciated, and both the former financial advisers, Mr Morgan Shuster and Mr Armitage-Smith, formed the opinion that if the system of taxation and the methods of collection were reformed and brought up to date Persia should have no difficulty in paying her way. Neither of these gentlemen was able to stay long enough to carry out their plans. We very sincerely hope that a more kindly fortune may attend the efforts of Dr Millspaugh to put the financial administration on a sound footing. We cordially welcome his appointment, and it will be the duty and the privilege of our officers in Persia to afford him all the assistance in their power.

BALANCE-SHEET ITEMS.

We now come to the figures of the balance-sheet, which need very little comment, and disclose, I think, quite a satisfactory state of affairs. They show even a more liquid condition of the bank's resources than was the case a year ago, upon which we may, I think, congratulate ourselves in these days of restricted credit and difficult trading.

Notes, you will see, are slightly higher at £815,822 in comparison with the figure of £733,327 of a year ago. Deposits show an increase to £3,996,064, as against £2,805,374 last year, while bills payable are lower at £1,431,079 compared with £2,616,712, but these items, you will understand, are always of a fluctuating character.

On the other side of the account our cash in hand, &c., is about a quarter of a million lower than last year, but the difference is more than covered by the larger amount shown under the head of investments, which, you will notice, stand in the balance-sheet at, or under, prices ruling on September 20th last. These investments, being almost exclusively gilt-edged, will, we hope, cause us little anxiety in the future, and the funds they represent can be made available at short notice for employment in our ordinary business when favourable opportunities occur.

If you turn to the profit and loss account you will see that the payments out of profit are much the same as in previous years. The sum due to the Persian Government on account of royalty is slightly larger, we are glad to say, the net profits having increased from £88,195 to £92,303. The interim dividend was the same as last year—3s—and we are able again to allocate £30,000 to the reserve fund, which now stands at £340,000, instead of £310,000. Bank premises are further written down by £10,000; we pay a final dividend of 6s a share, and we carry forward £33,720 16s 3d, as against £31,955 8s 1d last year.

The report and accounts were unanimously adopted.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED.

COMPANY INTERESTS—CAPITAL INCREASED.

The eighteenth ordinary general meeting of the African and European Investment Company, Limited, was held, on the 29th instant, at Cannon Street Hotel, London, Mr C. F. Rowsell presiding.

Mr A. D. Owen (manager and secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Coming to your assets, as I have always insisted in previous years, the most important one, and the one on which the future of this company is really to a large extent based, is its important holding of land—namely, an area equivalent to 1,460,966 acres. It is unnecessary for me to go into details as to the progress which is being made in South Africa; everyone who studies the newspaper must be fully aware of the immense developments which are taking place. I feel confident that under the progressive policy which is being adopted by the Government of South Africa, we shall see the country making immense strides during the next few years, and it is, of course, only by the development of South Africa generally that our land will reach the high values which it is, we believe, bound ultimately to attain.

In the meantime, however, our land department, under the direction of Mr Jooste, has been thoroughly examining its possibilities, and we are gradually laying the foundation of a new policy of development and of sales.

LAND SALES.

The last year or two, however, have not been favourable to the sale of land at satisfactory prices, because, in common with the rest of the world, South Africa has suffered from the tremendous fall in the price of agricultural products and the general depression of the world's markets. I think, however, we may be confident that this period is now coming to an end, and unless some

important dislocation of business is caused by European politics we may see a very definite improvement in trade conditions and in prices throughout the world. We are now ready to take advantage of this improvement, and it is part of our definite policy to do so.

While I think our land should be looked upon as one of the main factors, it has been the policy of your directors to interest this company in the industrial development of South Africa, and we have already very important interests in this direction. For instance, we have the Vereeniging Estates, which, although a land-owning company, is also an important industrial from the point of view of the production of coal; we have our large interests in the South African Breweries, and we have a very important interest in the Union Steel Corporation of South Africa, which, under the arrangements to which I am about to refer, has been very largely extended. We have also very considerable interest in the Vereeniging Milling Company, which handles on an important scale the maize products of South Africa.

INTERESTS ACQUIRED.

Now, gentlemen, I perhaps at this stage might inform you more in detail with reference to the new assets which we have acquired; they have been purchased from Lewis and Marks, Limited, a company which as you know has always been associated with this company. To a considerable extent they consist of assets of the same character as those which you already hold, but the purchase of these assets will largely extend our interests, especially in the direction of the industrial development of South Africa.

We acquire by this purchase first of all a very large shareholding in the Vereeniging Estates, Limited, the East Rand Mining Estates, Limited, the Union Steel Corporation of S.A., Limited, and by the acquisition of the whole of the share capital of the Schoongezicht Coal Mining Company we acquire an important and fully-equipped colliery in the Witbank coalfield.

The interest which we have in the Union Steel Corporation of South Africa, Limited, is a very valuable one; that company has been most successful in the past, having paid substantial dividends, and it has recently obtained important contracts which will keep its works fully employed.

I will now turn to the mining interests which this company holds and which will again be extended by the further assets which we have acquired. We have, as you know, a substantial interest in the East Rand Mining Estates—this will be greatly increased.

I am glad to say that all the evidence which the development of the surrounding properties has produced still goes to confirm the value of this interest.

In connection with the purchase of these assets it is proposed to create a debenture issue of one and a-half million, of which sum £500,000 to £600,000 will be issued for the purchase of the assets; the balance will remain at the disposal of the company. The increase of capital you will be asked to approve is to enable the debentures to be created, but it is not proposed to issue any further shares at the present time. In addition to the issue of debentures your company will take over certain liabilities, and will also release Lewis and Marks, Limited, from repayment of the amount which your company had on June 30th last on deposit with that company.

The report and accounts were unanimously adopted, the formal business was transacted, and at a subsequent special general meeting a resolution was passed increasing the capital to £2,000,000 by the creation of 725,000 new shares.

STOLL PICTURE THEATRE (KINGSWAY), LIMITED.**FOREIGN FILMS—EXTORTIONATE CHARGES.****PROFITS IN BRITISH FILMS.**

Presiding at the third ordinary general meeting of the Stoll Picture Theatre (Kingsway), Limited, held, on the 28th instant, at the Stoll Picture Theatre, Kingsway, London, Sir Oswald Stoll (chairman and managing director) said: For the majority of theatres the past year has been an extremely bad one. That fact enables us to plead for contentment with the results for the year obtained by this company, although they fall below the results of the two preceding years. We have not been able to proceed with the erection of the Bijou Theatre at the northern end of our premises because costs have not yet come down to the amount we propose to spend. Our limit is £60,000, but the lowest estimates have so far been £85,000, although in pre-war days the work could have been done for less than £40,000. For a similar reason we have not yet been able to make any progress with the property at Baker street. There has been only one criticism of the accounts. It is stated that we had written off no depreciation. The answer is that the amount of £5,000 set aside for the redemption of debentures is equivalent to depreciation. We are doing satisfactory business at the present time, and no doubt this will continue seeing that theatres in the centre of London are not as seriously affected by bad trade as theatres elsewhere. If a general boom in trade should come we shall nevertheless benefit considerably by it. Schemes of emergency expenditure for the temporary benefit of trade and unemployment which the Government are carrying out, or helping, will circulate funds and so improve the means to pay for a few hours of rest and recreation in a picture theatre. But if the Government is not to use the respite for more permanent schemes whereby the people will be enabled to keep themselves in funds, the relief from anxiety will be short-lived.

BRITISH FILM WEEK.

There is in contemplation a British film week. The British picture theatres are to show in prescribed districts during one week next year only British pictures. In so far as such exhibitions are practicable, it is to be hoped that they will take place. British pictures are more remunerative to the exhibitor than some of the exhibitors appear to believe. Exhibitors doing badly in bad times fare even worse through disbelief in British pictures. In the business of this company during the past year a comparison was made between the average weekly profit for the number of weeks in which British pictures were shown and the average profit for the whole year. The average profit for the weeks in which British pictures were shown was the higher of the two by a substantial amount. It would be folly, of course, as a fixed policy, to show only British pictures, even if the supply were adequate. During the weeks for which the average I have mentioned was taken other pictures besides British were shown. The public likes varied programmes, varied both in subjects, points of view and technique, and the wise exhibitor respects the public's wishes. Some exhibitors, however, deliberately pay for and shelve, rather than show, British pictures. These exhibitors are not considerate towards the public to whom they appeal, and they cannot succeed much better than a provincial theatrical manager would who insisted on his entertainments being given always in a foreign language.

FOREIGN FILMS.

The exhibition of good foreign films, of course, adds to the interest of the cinema, and spurs British producers in efforts to excel themselves. Who, however, now gets the good foreign films to exhibit? These films are not being permitted to reach the orthodox exhibitor except at extortionate prices. They are mostly being used in opposition to the orthodox exhibitor, who is absolutely unable to pay the prices being asked for them. The mediocre foreign films he is allowed to have at so-called reasonable prices, because the exploiters of them know that these films are not sufficiently worth exhibiting to justify the monetary risk of showing them in opposition to the general exhibitor. Most of these pictures are not worthy of being shown by the general exhibitor at any price. Nevertheless, the majority of the exhibitors book the films, and times being as bad as they are, suffer to an extent which, when times were good, they would have thought impossible. If foreign films are to be shown in this country the good films as well as the bad should be at the disposal of the general exhibitor at prices which will enable him to make a profit. If foreign producers and their financial backers do not recognise this they will kill the picture industry. John D. Rockefeller grew rich beyond his dreams by always selling oil at a low enough price to enable it to make good profits for hundreds of thousands of

other businesses. The vast economic power to which his riches largely gave rise is now being terribly misused. He himself, in active service, would have been far too wise to use it so, and the efforts to gain possession of those hundreds of thousands of businesses for themselves, which are being made by his successors, will pull down the whole wonderful edifice that he built. Numerous picture theatres must pay if a considerable picture industry is to live. That is the A B C of the picture business. For foreign film jobbers to be allowed to swallow up the profits of the good pictures and to leave the exhibitors to bear the losses of the bad pictures is picture theatre suicide. Exhibitors must be permitted to make profits when they book such films by getting the good American and Continental films at prices at which only inferior ones are now supplied.

HINT TO SCREEN STARS.

People who have made great fortunes in the industry, people like Mary Pickford, Charlie Chaplin, and Douglas Fairbanks, owe it to the industry that made them, and which they helped to make and cannot wish to destroy, to see that exhibitors get their films at the lowest reasonable price, not the highest possible price. Their help is needed by the industry in these hard times. The lowest profit on which exhibitors can live must be more than sufficient to compensate the occasional losses to which every exhibitor in hard times is exposed. These stars of the screen who draw the public have it in their power to ensure this profit by limiting the price that an exhibitor can be charged, and by insisting on the exhibition of their pictures at orthodox picture theatres only. If this were done, the jobbers in pictures who exploit them unfairly to the detriment of the whole industry would have to change their methods. It may seem to you that this company as an exhibitor has very little to complain of, and that, therefore, remarks about what is being done by others are superfluous. That is too narrow a view. An adequate supply of really good pictures for any particular theatre can never be maintained unless there exists a picture market composed of numerous successful theatres. I now beg to move: "That the directors' report, balance-sheet, and profit and loss account now submitted for the year ended November 3, 1922, be approved and adopted, and that the balance of £34,364 2s 10d at the credit of profit and loss account be dealt with as follows:—(1) That the sum of £5,000 be set aside for the redemption of debenture stock; (2) that a final dividend be paid on the ordinary shares for the second half of the year at the rate of 15 per cent. per annum (less income-tax), absorbing £8,433, which, with the interim dividend, makes 12½ per cent. for the year (less tax); and (3) that the balance of £20,931 2s 10d be carried forward to the next year, subject to excess profits duty, corporation profits tax and managing director's remuneration."

Sir James McCraith seconded the resolution, and paid a high tribute to the brilliant business ability of Sir Oswald Stoll.

The report and accounts were adopted, and on the proposition of the Chairman, seconded by Dr Broad, Mr H. J. Thomas was re-elected a director of the company, the auditors (Messrs Allan Charlesworth and Co.) being also re-elected.

STOLL FILM COMPANY, LIMITED.**AMERICAN METHODS IN FILM INDUSTRY.**

The fourth ordinary general meeting of the Stoll Film Company, Limited, was held, on the 28th instant, at the Stoll Picture Theatre, Kingsway, London, Sir Oswald Stoll (the chairman) presiding.

The Chairman said: The results are not so good as those shown in last year's accounts; they are nevertheless satisfactory. Generally speaking, business in the cinema industry has been bad, and no other company like ours has published better results. The state of our finances may be considered good. The assets accord with the nature of the business. We have a large cash balance. That helps us to acquire emergency films in accordance with the demands of the market. Our investments assist us in obtaining a regular supply of films in accordance with any regular demand. The other assets of moneys due and expended in advance represent incomings and outgoings in the stream of activities of which our business consists. In the course of that business we have a margin of incomings over and above the amount necessary to keep the stream well up to the level of safety. It is a tribute to the soundness of this company's methods that the percentage of bad debts incurred is remarkably small.

With one, or perhaps two, exceptions, no large amounts have ever been in doubt. In these doubtful cases the uncertainty of the by the debtors in regard to their business. They appear to disregard their own natural good sense and to succumb by fits and starts to the methods of a few astute American speculators whose

whole activities are, as it were, a huge gamble performed to a loud and continuous advertising scream. Such managements should note the effect of those American methods in America.

AMERICAN METHODS.

There is to be litigation between two large companies there, which will bring many interesting facts to light if it should not increase the misgivings of the American people with regard to the picture methods of those who carry on the trade in their midst. Although there are 14,000 theatres in the United States, it is stated with authority that only about one-third of those theatres are open continuously for six days in each week. It would be interesting to know if British exhibitors wish to reach the same predicament. This position is not due to excessive competition. Over 7,000 theatres have no opposition from any other theatre in close proximity to them. The cause is said to be that exhibitors are being deliberately deprived of the use of films that would enable them to keep their theatres open and that this is a part of a plot to close down all theatres outside the requirements of a limited producing ring.

Exhibitors in this country who are doped with stories of pictures that they do not get into booking pictures which have nothing in common with these masterpieces, and who consequently pour their money into American pockets, spending little of it on British features for their programmes, are inviting the safe fate as that which is rapidly overtaking two-thirds of the American exhibitors. The policy which is going to be challenged in the American Law Courts is rotten to the core. No producing ring can corner the general public. Pictures are not a necessary of life. They are one of the conveniences, and should be so recognised—a convenience for those who might otherwise be wandering about aimlessly as well as an agreeable form of amusement.

GENUINE MERIT ONLY SOUND POLICY.

The general public cannot be cornered into a few theatres by a comparatively few pictures which are the outcome of a very few sources of American production established by strategy into a monopoly. Genuine merit and legitimate value must alone dictate the supply, and exhibitors who cater for British people with British ideas and tastes must not be cajoled into purely American notions of merit and value. They must not encourage attempts to corner the British public by American manoeuvres. Otherwise they will wake up sooner or later to find the bulk of the picture industry destroyed. The policy of this country is to offer films which contain reasons why the British public will like them.

We offer pictures that are British and others that are not British, but always for the same reason—namely, because they contain reasons why the British public will like them. There may be foreigners or people with private axes to grind among the spectators who will criticise those pictures, but if an exhibitor in this country is catering only for that class, then he has a very small chance of success. The British industry has critics enough of its own. Among the difficulties of the industry there are signs of more and more interference by certain public authorities. There is a tendency to restrict audiences in respect of particular films. Different local authorities have different ideas, and the confusion tends to embarrass both renters and exhibitors. As these encroachments develop, the difficulties may become insurmountable.

FILM CENSORSHIP.

It is a pity that the question of the censorship of films is not left to the uniformity of the trade censorship, with offences against that censorship left to the police. It is certain that both public and semi-public offences in the exhibition of undesirable films are more a matter for summary action by the police than by licensing authorities.

Whatever action is taken if interference is necessary should be such as can be uniformly applied throughout the country. In that way only can the industry as a whole know where it stands. Different Acts of different authorities which affect the same industry in different ways at different places cannot be too strongly protested against. I beg formally to move: "That the directors' report, balance-sheet and profit and loss account for the year ended October 31, 1922, now submitted, be approved and adopted, and that the balance of £34,388 10s 7d at credit of profit and loss account be disposed of as follows:—(1) In increasing the reserve account to £51,000 by transferring £20,000 thereto; (2) in paying a dividend of 15 per cent. (less tax) on the ordinary shares for the past year and the proportion payable on the founders' shares, as provided in the articles of association of the company, together absorbing £4,435 19s 5d gross; and (3) in carrying forward to the current year's accounts the balance of £9,952 11s 2d." Mr Jeffrey Berner, our worthy managing director, will second the motion.

Mr Jeffrey Berner seconded the motion, which was carried unanimously.

Mr H. J. Thomas was re-elected a director, and the auditors (Messrs Allan Charlesworth and Co.) were reappointed.

ARGENTINE IRON AND STEEL COMPANY (PEDRO YASENA E HIJOS), LIMITED.**AMALGAMATION WITH ENGLISH FIRMS FORESHADOWED.**

The tenth ordinary general meeting of this company was held on the 29th instant, at Winchester House, London, Baron Emile B. d'Erlanger (the chairman) presiding.

The Chairman said that the balance-sheet showed a loss of £250,900, but, considering that this figure was arrived at after the absorption of £70,000 reserve, there was really a loss for the year of £320,900. This non-recurring loss was attributable to the heavy legacy of stock which the company had on hand when the world's crisis came. The London board had cautioned the local management time after time not to carry stocks in excess of more or less their immediate requirements—say, supplies for three or four months. The local management, however, placed large forward orders, which were not communicated to the board in London until long afterwards, by contracts which had had to be fulfilled subsequently, in spite of the heavy fall in prices. Coupled with the heavy fall in the world markets for iron and steel was the severe depression obtaining in Argentina, in common with all other countries, for the last two years, and the turnover of the company had fallen not only proportionately to the fall in prices, but also in actual tonnage.

The management was now in the hands of Mr Pierre Gregoire, who, according to all reports which had reached the directors from both inside and outside sources, had shown himself equal to his difficult task. The directors chosen to visit Argentina and instal Mr Gregoire were Mr Kerr and Mr Frederick.

At the end of 1921 it was evident that, with the heavy losses which had to be faced, and the weighty commitments which had been incurred with the banks and the suppliers, the financial situation of the company was one of great delicacy. It was no less evident that a reorganisation of the company's finance in some form or another, in order to wipe off losses and to procure fresh working capital, would have to be carried out. A scheme was prepared having for its basis an amalgamation of the company with the Talleres Metalurgicos, but the offer was eventually withdrawn. For several years past—and with the knowledge and assistance of the Board of Trade—the directors had endeavoured to interest one or more of the leading iron and steel firms of this country in the company, and to take charge of the technical management, and although their efforts so far had been in vain, he was glad to say that Mr Frederick had now succeeded in bringing this about. On his own initiative Mr Frederick approached Messrs Baldwins, Limited, and Sir Wm. Arrol and Co., Limited, probably the two largest steel groups in the United Kingdom. They had expressed themselves in principle as very desirous of acquiring a foothold in Argentina through this company, and had agreed to send out experts at their own expense to report upon the works, being prepared, subject to these reports being satisfactory, to find, on terms to be mutually agreed, all the necessary capital which the company might require. He was satisfied that no time would be lost by these firms in acquainting themselves with the position. An alliance with such British firms as Messrs Baldwins and Messrs Arrol, if it could be made, was one which would inspire the greatest confidence in the future welfare of this undertaking.

The report and accounts were unanimously adopted.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED. SATISFACTORY YEAR—INCREASED PROFITS.

The twelfth ordinary general meeting of the shareholders of the British Burmah Petroleum Company, Limited, was held on the 26th instant, at Cannon-street Hotel, London, the Hon. Lionel Holland, chairman of the company, presiding.

The Chairman said the accounts for the year to July 31st last recorded improvement in sales and trading profit. They were still up against abnormally high working costs, but substantial savings attached to new plant and electrification. The total profit was £228,826, or a few thousand pounds more than in 1920-21, and the proposed final dividend of 4½d per share would make a total for the year of a fraction over 7½ per cent., free of income-tax.

It was imperative that they should be guaranteed, for several years in advance, a sufficient crude oil output to keep the refinery continuously supplied. Hitherto the bulk of their crude supply had come from the two Yenangyang fields—Twingone and Benie, which for over twenty years had been vigorously drilled. About 1914, the upper sands became pumped out; and the crude return, even from the deepest known oil sands, had now fallen off until it almost ceased to compensate for the cost of drilling, but its future as a stand-by in coming years depended upon whether or not there existed a yet deeper oil sand of commercial value.

Further north was the recently discovered Singu oil territory, where the company owned a good tract of two square miles, always regarded as their first resource against a falling output at Yenangyang. Last year Singu supplied nearly half their total production—over 122,000 barrels more than in 1920-21. The lateral limits of their area of production at Singu was still undetermined, and there might be productive sands deeper than those they were now exploiting. At Yenangyat, the oldest producing oilfield in Burmah, they owned some eight square miles. No deep test had yet been made on their areas there, which formed a reserve of considerable speculative interest, and development would recommence at a suitable time. They owned also 1½ square miles of oil lands and other drilling rights in the Minbu district, where from a number of shallow wells a fair quantity of crude had been secured. They had drilled no well there for over 1,000 feet, and their geologists advised a test in due course for another oil sand at depth. Another district in Burmah which they regarded as of good promise was Ngahlandwin, where they held some three square miles—the pick of the probable oil lands. Serious development work had been commenced. Of their work outside the already proved areas this was the most encouraging. Beyond the fields of Yenangyang and Singu no oil territory of real commercial importance had yet been proved in Burmah.

The search for oil lands in India had had little positive result. Elsewhere exploratory work in Sinai had proved a complete disappointment. On the Comodoro Rivadavia field in the Argentine they had six blocks, each favourably placed, and this field was in active development.

The report and accounts were unanimously adopted.

SAMUEL ALLSOPP AND SONS, LIMITED. BEER TAXATION AND ITS EFFECT.

The thirty-fourth ordinary general meeting of Samuel Allsopp and Sons, Limited, was held, on the 20th instant, at Cannon street Hotel, London, Sir Wm. B. Peat, C.V.O., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the past year in the brewing trade had been, on the whole, a trying one. In September, 1921, stocks of hops and brewing materials had been of a very high value, and the company had, unfortunately, had what some critics might describe as an over-stock, consequent on their having budgeted for a consumption of beer approximating the normal demand of the public, which, on account of bad trade and excessive Government taxation of beer, had not been realised. Fortunately, however, they had realised that the high prices for those materials could not continue, and they had on their books a stock reserve more than adequate to bring their stocks and purchases down to present-day values. The present excessive taxation of beer had compelled brewers to charge for a glass of beer a much higher figure than their customers could afford to pay, with the net result that all over the kingdom the barrelage sold had diminished and there was a loss of taxation to the State of £18,047,505 in the 12 months to September 30, 1922.

Allsopps had a well-spread trade, mainly in manufacturing districts where unemployment reached its maximum proportions, and their experience was that the diminution in consumption had affected the company in equal measure to other brewers. In the current financial year there had been no improvement in their sales. He had often wondered why wage-earners had not agitated insistently and effectively for a reduction of the beer duty. He suggested that they should follow the example of the temperance reformers, who were ever active and persistent in publishing from

the housetops their demand and who would not object to kill the beer trade by taxing it out of existence. Any step in the direction of prohibition would, he thought, very speedily bring to the knowledge of our legislators the possible disasters which would follow.

They had an object lesson in what had happened in the United States of America, where liquor in an almost unrestricted stream was pouring across its frontiers, and illicit traders were accumulating wealth at the citizens' expense. Prohibition there was making for dishonesty, and was converting a law-abiding people into law-breakers. Adding to that, the loss of revenue to the State and the enormous cost of the attempt to enforce the law, to say nothing of the drug habit, which was gaining ground every day, especially among young men and women, and they had a picture which he believed no civilised country would care to imitate.

If he were asked whether he had any policy to suggest to improve the position of the trade, he answered that he would sweep away the hop control, the last relic of war-time Government interference, and he would strongly recommend that the beer duty be reduced substantially.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

COLOMBIAN OILFIELDS, LIMITED. CHAIRMAN OPTIMISTIC OF COMPANY'S PROPERTY.

The adjourned annual and second annual ordinary general meetings of Colombian Oilfields, Limited, were held, on the 29th instant, at Winchester House, Old Broad street, London.

Mr Shirley H. Jenks presided, and in moving the adoption of the report and accounts said that they did not disclose a too satisfactory position, and up to the present time the difficulties which they had been struggling against had not been overcome. The history of the company was, briefly, that in 1920 they took over a property fully staffed and equipped for successful development. It was considered one of the best of the Colombian properties. The experts considered it would prove the first large Colombian oil-exporting property, and there was still some chance of this being the case. Their hopes and estimates were upset by the illness of Mr J. W. Kelly, who was then in charge of the property and one of the greatest drilling experts. Had he retained his health they would some time ago have been in a position to report similar successes to those recently announced in Venezuela. For some time no success attended their efforts, but Mr Kelly had now regained his health, and they had every confidence that with the new staff and new plant they would be able to prove the value of the property. Active operations would be commenced next month, and actual drilling early in February.

If the shareholders decided to accept the directors' proposal they would be interested also in the Sinu district. They would be well advised to come into this combination, which would have ample cash resources and technical skill.

As to the Shell agreement, this was entered into when the oil boom was at its height, and during the time taken for checking the company's titles and geological information, the position was reversed, and apparently no European company wished to take on further commitments. If his reading of the present oil position was correct, and his strong belief in their property was justified, they would profit by being independent of the Shell agreement.

With regard to the financial position, they had in hand or at call approximately £40,000, and after a careful study of the position he thought they were quite safe in reckoning that they would have sufficient funds available to carry them through the next twelve months. He must point out, however, that while they thought they had taken every precaution to get over their drilling difficulties, getting a well drilled did not necessarily mean that they would be located in the right spot, and it was quite possible that they would have a dry hole, or even a series of dry holes, in which case they would not be in a happy position. For this, and the reasons previously mentioned, he thought they would do well to share their risks and spread their interests. The recent great Venezuelan successes confirmed the geologists' opinion of this part of the world, and there was every reason to anticipate from the evidences upon their own property, such as the great gas pressure, width of oil sands, and seepages, that their property would prove equally prolific.

The reports and accounts for the two years 1921 and 1922 ending June 30th were unanimously adopted.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, December 20, 1922 amounted to 833 tons.

SILVER.

The market has naturally suffered from the proximity of the holidays, though that can hardly be held responsible for the price for forward delivery creating a fresh low record for the year, namely, 29½d, on the 22nd inst. This quotation is the lowest since May 9, 1919. On that date quotations for two months' delivery were resumed for the first time since July 30, 1914. During the month of November exports of silver from San Francisco to China amounted to 4,154,096 ounces. In our bullion letter of October 26th last we referred to a statement by the American Mining Congress of a discovery of silver near Fitzgerald, Alberta. The Canadian authorities, however, inform us that this discovery is of small importance. No fresh Indian currency returns have come to hand. The stock in Shanghai on the 23rd inst. consisted of about 28,300,000 ounces in sycee, 26,000,000 dollars, and 10 silver bars, as compared with about 32,000,000 ounces in sycee, 35,000,000 dollars, and 370 silver bars on the 16th inst. The Shanghai exchange is quoted at 3s the tael.

NOTICES.

A branch of the British and North European Bank, Limited, will be opened in January, 1923, at No. 88 Aldgate High street, E. 1, under the management of Mr M. V. Salomon.

A branch of the Commercial Bank of Australia, Limited, has been opened at Loxton (South Australia). It is notified that Mr G. W. Wallace, who has been connected with the Commercial Bank of Australia, Limited, since it opened in London in 1882, is retiring from the position of manager of the London office on December 31st, and that Mr P. H. Gardner has been appointed acting manager.

CARTHAGEN AND HARRIS STEAM TRAMWAYS.—Directors regret they will not have sanctioned postponement of time for further period of three years.

HENRY ROSSSELL AND CO.—The directors have decided to postpone payment of half yearly dividend on the 5½ per cent. cumulative preference shares due December 31st.

OPHAM PRESS, LIMITED.—In the usual course, a half-year's dividend on the 8 per cent. cumulative preference shares of the company would be paid on the 31st inst. but the directors consider it prudent to postpone the payment of dividends until the audited accounts for the current year are available.

FERK BROS. AND WING.—Dividend on "A" preference shares for three half-years is being paid to date, and full year's dividend on "B" preference shares, leaving £1,625 to be carried forward.

PROVINCIAL CINEMATOGRAF THEATRES.—It is announced that the payment of ordinary shares has been postponed. No dividend has been paid on these shares since that for the first half of 1921.

ROBINSON GOLD MINING.—As the net profit earned for the year 1922 amounted to only 1½ per cent. of the company's issued capital, and as it is improbable that the further dividend declarations, but to distribute any accumulated profits and any money accruing from sale of assets as a liquidation dividend after it has been decided to place the company in voluntary liquidation.

Our Bradford correspondent, writing on Thursday, says:—The year is closing with an exceptionally good tone throughout the wool trade. Demand for raw material appears to be as strong as ever, and in some quarters higher values are confidently expected early next year. Topmakers and spinners are busy, and most firms have some very useful orders on their books to carry them well into the first quarter of 1923; indeed, spinners can probably run to the end of March without any difficulty. New business has been somewhat restricted during the week on account of the holiday break, but some fair weights have changed hands, and the prices are decidedly against the buyer. Most topmakers now want at least 5s 1d for average 64's tops, while, as regards cross-breeds, medium qualities are all quoted higher than they were a week ago. Average 56's have been advanced about ½d to 3s per lb.; 50's are up to 27d, and 48's, carded at 21d, show an advance of 1½d. The market generally has a healthy appearance, and it is expected that a considerable amount of new business will be brought out during the first few weeks of the New Year. Spinners and good orders have been booked both in botanies and cross-breeds. Yarn quotations are nominally unchanged on the week, but practically all counts and qualities are firm. Manufacturers and merchants are hoping for better times next year. During the last twelve months they have had to contend with serious diffi-

Write for particulars to the
National Provident Institution,
 48 GRACECHURCH STREET, LONDON, E.C.3.

The year end finds the wool trade in a very healthy and comfortable position. During the past week there has been a further accession of business in consequence of a considerable turnover in tops of practically all qualities. It appears as if the entire trade is at last recognising the strength of the raw material, and reasonable optimism is felt regarding the future. It may be that there is more doing at the raw material end of the trade than in the fully manufactured article, but this has ever been so, and unless spinners as well as manufacturers took practical steps to be ready when trade came, spindles and looms would be badly run to-day. Many firms say that they have always had to anticipate, and when there was a buy, being in the position to offer yarns and pieces at something under the last rise, has enabled them to do considerable business. Practically all users have been waiting to see merino wool come below a 5s basis for 64's in the top, but neither colonial auctions nor Coleman street have furnished wool to warrant anyone accepting under 5s 1d for an average 64's, and up to 5s 3d for warp 64's. We think it is largely the fact that the first half of the selling season is over in Australia without a break in prices that is the chief factor in inducing users to recognise the strength of merinos, and although there is plenty of crossbred wool available, far more than the trade can lift during 1923, still there certainly is an expanding consumption, and it will need little impetus to drive merinos to a still higher basis. We are not altogether satisfied that that would be a good thing in the interests of the entire industry, nor to the good of those buying the fully manufactured fabric. The impoverishment of the world's purchasing power makes it imperative that reasonable prices obtain for all classes of clothing, and not until the reparations question is finally settled, and the Continent of Europe put upon a sounder financial basis, are any higher prices justified for even merinos. All the same, business is very healthy and sound.

Quite a number of mills are standing all the week, although several have only stood Monday and Tuesday. It still remains a fact that the woollen end of the trade is far worse off for work than those engaged in spinning and weaving worsteds, and, unlike the United States, worsteds still hold sway. We can see no sound reason why woollens should be a more popular article across the Atlantic than here in England, except it be on the question of prices, and, although it seem impossible, many retailers are determined upon offering their customers a suit at prices current before the new duties became operative, which we think is compelling manufacturers to use a lower quality of raw material. Then the woollen trade of the West Riding cannot get on to its feet until trade is resumed in large volume with Central and Eastern Europe, and those Huddersfield firms who have combined with a view of opening business with Czechoslovakia have lost money. It almost looks as if Germany will have to be the first to attempt serious business with her nearest neighbours, for, after all, German methods appeal to the average eastern Continental firm better than those of exporters in this country, the long credit now demanded being a serious hindrance from the British traders' point of view. However, a very hopeful feeling obtains regarding the future, and everything indicates a developing business.

Markets are affected by holiday conditions, and little actual trading has been done this week. Small dealings in new Plate line-seed are reported round £16 7s 6d for January-February shipment, but as a rule crushers are still lookers-on and show no great disposition to cover more than their immediate prospective requirements. Meanwhile there is a pronounced scarcity of line-seed in hand and in near positions. Spot seed scarcely offers at all, and is at a very high premium, while £19 1s 3d has been paid for December, and £18 15s for 2,000 tons (to load before January 10th) to Hull, a price which has also been paid for 1,000 tons on passage to Hull. The quantity of line-seed (Plate and Indian) afloat is very small, that to the United Kingdom being 10,000 tons, and that to the Continent 20,100 tons. The new Plate seed appears to be moving off very slowly, and, unless the rate improves quickly, supplies on this side must continue short. With regard to the oil product, raw oil on spot is firmly held for £39 10s ex Hull mill, while £35 15s is quoted for January-April and £32 12s 6d for May-August. Quantities of line-seed oil crushed on the Continent are again offering.

The new crop of Egyptian cottonseed is shipping freely, and quite a number of cargoes are now on passage to the United Kingdom and to Germany, which, after some years, is again a buyer from Alexandria. Values, in the absence of demand, are slightly easier, Sakellaris quoting £11 10s spot. Some business has transpired in Bombay at £9 2s 6d, December-January. Oil quotations are maintained round £37 for crude Egyptian and soap-makers' grade of refined.

The Continent is the chief buyer of soya beans and rapeseed. Hamburg concluding purchases of the former at £11 10s and £11 12s 6d, November-December loading, and of Toria rapeseed at £16 12s 6d, February-March.

The final official figures of the United States line-seed crop show

This week has almost been a blank as far as business is concerned; few sales of hides and skins have been made either in London or the provinces, and values remain as last quoted. Bermondsey hide sales recommence on Thursday next. What few sales have been made appear to have shown a slight weakness, but tanners are hoping for much further declines in their raw material before they can turn out sole leather at a profit. Little has been done in imported hides, prices at source of origin still being above tanners' ideas. Cables from the U.S.A. report the Chicago position as steady, with no change in prices, best 60 lb. packers still being listed at 20 cents and native cows at 16 cents.

Very little sole leather has gone out either from tanneries or warehouses this week, as most of the shoe factories have been closed for the Christmas holidays. The spell of wet weather is, however, bound to help the demand for bends, as repairers are short of leather, and are already coming into the market. Stocks of sole leather are, however, ample for requirements, and tanners are not at all firm on prices if a big parcel of leather can be cleared.

The turnover in upper leather has been again small, and a disappointing feature is that there are still "bargain parcels" of stock being offered at a very low price—in one case box kip, full chrome, at 5 or so per foot. Several big parcels of chrome calf, kip and glaccé are also to be sold by auction during the forthcoming week. The talk of protecting calf leather tanners is still to be heard, but shoe trade buyers may little attention to it.

Most shoe factories have been closed for the week, and the few who have opened up found little in the way of orders after the holiday. Retailers do not appear to have done as well as they expected with the Christmas trade, as less money has been spent on boots and slippers than is usual at this season.

Mincing Lane, Friday, December 29.

Business proceeded quietly in most commodities while partaking of a holiday character.

SUGAR.—Prices for refined descriptions remained without material change, but actual dealings were quite retail in extent. Messrs Tate and Lyle's cubes, 55s 3d to 56s 3d; granulated, fine and coarse, 50s 7½d; No. 1, 50s 4½d; No. 2, also London quality, 50s 1½d; yellow crystals, 44s 1½d. Granulated, February-March, 50s 6d; April-May, 50s 9d; June-August, 51s. Crystallised West Indian steady, quiet at 44s 6d to 46s, as to quality. American granulated, spot, sold, 49s 4½d; white Java, 47s 6d to 48s 3d, as to sample; ditto, May-June, sellers, 21s 3d; June-July, 21s, c.f. and i. terms, London. White Mauritius, spot, 47s to 47s 9d; ditto Brazilian, 46s to 46s 3d. Belgian granulated, prompt, 21s 6d to 21s 9d, f.o.b., Antwerp, as to quality. Dutch and also Czecho-Slovakian sugars nominally unaltered for shipment. Cuban, basis 96 per cent., February, quoted 17s 1½d, and Brazilian, basis 80 per cent., January, 11s 3d, c.f. and i., U.K. Cuban stocks stand at 39,150 tons, against 925,200 at corresponding period last year. Liquid glucose, spot, 28s 6d.

COFFEE.—Spot market quiet in absence of auctions, with quotations unchanged. Future delivery market remains very quiet.

COCOA.—Only retail sales occurred in spot parcels on former terms. Accra, December-February shipment, quoted, 34s, f.o.b. terms.

TEA.—Private contract market unaltered, with business quite of a holiday nature.

RICE steady, but trade moved very slowly. Two stars, spot, 15s 6d to 16s; new crop, January-February, 13s 6d. Broken kinds quietly steady. Rangoon beans, spot, 8s. Japanese peas, afloat, 27s; December-January, 25s.

OFFICE. Fair inquiry ensued for pepper, and general stability governed the market. Fair black Singapore, spot, sold, 44d; January-March, 44d; Aleppo, spot, 4d; Tellicherry, 44d; white Singapore, spot, 44d; and 6d; Muntok, 53d; ditto January-March, 64d paid; February-April, 64d. Zanzibar cloves, spot, 84d; October-December, 78d; January-March, 7d. Flake tapioca, spot, fair quality, sold, 3d per lb.; fair Penang seed tapioca, spot, 23s 6d. Sago flour, January-March, 12s 24d; desiccated coconut, spot, halves, 37s cwt.

FRUIT (dried).—A quiet and rather featureless condition of affairs pervaded this market, with price changes not of much importance.
