Our Cardiff correspondent writes:—Business on the Cardiff coal market has not been very active this week. Buyers and sellers are marking time, and there has been no appreciable movement in prices, except for best household descriptions, which on Monday were increased by 5s per ton, from 30s to 35s, at the pit head. The following are the current approximate quotations:—Best Admiralties, 40s to 42s 6d; second Admiralties, 40s to 41s; best drys, 37s 6d to 40s; black veins, 40s to 41s; Western Valleys, 39s to 41s; Eastern Valleys, 37s 6d to 40s; best bunker smalls, 30s to 32s 6d; ordinary cargo smalls, 28s to 30s; anthracite big vein, 45s to 47s 6d; machine-made cobbles and French nuts, 50s; rubbly culm, 16s to 17s; coke for export, 75s to 80s; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 42s 6d to 47s 6d; pitwood, 30s to 31s. Compared with those ruling three months ago, the current quotations show an average increase of over 10s per ton, and so strong has been the effect of this rise in price, and of the activity in the export trade, that the market values of the ordinary share capital of 11 colliery undertakings have appreciated in the aggregate by over £1,762,000. In the iron and steel trades the volume of the export trade has reached unprecedented proportions, and prices, although unchanged, are firm at recent figures.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A moderate amount of business is being done in tops, though there are indications that most users are operating with caution. The tone of the market remains exceedingly good, and this is directly due to the pronounced strength of the wool position. For a whole month there have been no auctions in this country, but cables from the Colonies report a strong general demand for the raw material, and it is expected that when the sales are resumed in Coleman Street Wool Exchange next Tuesday values will show an upward tendency. The demand for wool, indeed, is the most striking feature of the industry at the moment, and users in this country will be forced by foreign competition to follow the market. Meanwhile, topmakers are adopting a policy of caution, and refusing to add to their already heavy commitments except at full quoted rates. Any advance in wool must, it is felt, be reflected in higher prices for tops, and it is a question whether the yarn trade will be able to meet a further advance. At present spinners complain of the

difficulty of making prices commensurate with the cost of production, and although spinning machinery is well employed on old orders there is no great volume of new business coming on to the books. Users assert that they cannot pay more money for yarns, and as both spinners and manufacturers are having to face keen competition from the Continent—imported yarns and dress goods being sold at prices greatly below those quoted by British makers—it is manifest that neither spinners nor manufacturers will welcome a further advance in wool. Their one hope is that with dearer raw material a certainty, wholesale fabric buyers might be induced to place large orders and do more forward buying.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The third series of London sales will commence next Tuesday, when the British Australian Wool Realisation Association will offer 62,000 bales of Australian and New Zealand produce, while the quantity to be brought forward on importers' account, this being commonly known as "free" wool, amounts to 125,000 bales. With such a total of offerings, the sales will last into the fourth week, though no one will be surprised if the last few days are knocked off. A good deal will depend upon how the sales go. Expectations are entertained that merinos will appreciate about 7½ per cent., and even a 10 per cent. advance is mentioned, but it is not likely that crossbreds will appreciate more than 5 to 7½ per cent., if as much. The outlook for the sales is certainly good, and an excellent demand for the raw material is anticipated, but the trade would much prefer to see a steady opening, with a good all-round demand for wool, than an extensive rise at the beginning, followed by a decline.

If the way Australian markets have gone during the past fortnight is any guide, merinos will make the higher advance named above, but whatever actually takes place will not be solely due to home competition, but to the combined buying of the Continent and America, for West Riding firms cannot afford to pay any more money. We think circumstances justify the statement that the home trade is now worse than since last October, there being anything but satisfactory manufacturing conditions in the worsted and woollen trades. As evidence of this it may be stated that only about thirty spinners asked permission recently of the Industrial Council to run overtime, compared with one hundred who made similar application six months ago. Woollen mills are far from being fully occupied, and the spring trade has been distinctly disappointing. At the same time, the fact must be recognised that in the aggregate a big consumption of raw material is proceeding, particularly across the Atlantic. For the first time in their history the American Woollen Company are running the whole of their machinery, and we understand that, generally speaking, Continental mills are running full time. There is also considerable activity in Japan, and the demand for the raw material gives every promise of being keen and well sustained. Bradford dress goods manufacturers have been hard hit by the large importations of Continental dress goods, these being bought at 20 to 25 per cent. less than the cost of production in England. This turning of the tables is making many ardent Free-traders begin to think seriously that there is something to be said in favour of Protection, and the keen competition of Continental manufacturing firms, which they enjoy, and by the low value of the currencies, is causing serious misgivings regarding the future. However, firm wool markets everywhere have inspired Bradford topmakers to demand higher prices, whilst the recent large purchases of merino and crossbred matchings in Bradford shows that a big trade is still being done in raw and partly-manufactured articles. Besides taking virgin wool, America has absorbed large quantities of noils and wastes, and though business in these appears to have fallen off somewhat, there has not yet been any great accumulation of stock. Following the advances already made in wool, topmakers are quoting 63d for good 64s combings, and are, in some cases, indifferent about selling at this price. The sale of such large quantities of wool to America is creating some misgivings about the possibility of keeping Bradford combing machinery fully occupied, but as more manufacturing machinery is being erected at home, the prospects are that with the opening out of Continental markets, which is the need of the hour, a general boom would follow.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed Y60,000,000
Capital Paid Up Y52,500,000
Reserve Y12,180,000

Head Office . . . TAIPEH, FORMOSA.

MANCHESTER, April 19.

Trade developments of any importance in the market are slow in taking place. A fair amount of inquiry has been dealt with during the week, but contracts of weight have been few and far between. In piece-goods fancy styles and specialties continue to move off more freely than common makes of coarse goods. A few more cloth bids have been received from India. In grey staples business has not been practicable, but scattered sales have occurred in printing and bleaching descriptions. Rather more activity continues to show itself in fancies for China. Cloths suitable for finishing have attracted a fair amount of attention for several minor outlets, and fine goods continue to be sold in moderate lots for the United States. Reports from the home trade are not very favourable, and the cold weather is checking developments. American yarns have been steady in quotation, with a comparatively poor turnover. Useful lines continue to be booked in Egyptian spinnings. Trade in export yarns at the moment is very disappointing.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The threatened stoppage in the building industry, now happily averted, has been a nightmare to dealers in wood. From all quarters the demand had been reduced to almost immediate requirements, buyers being apprehensive of lock-out or strike, possibly of long duration. With the undertaking between masters and men, there is now more confidence that the demand will increase, especially in view of the Government's new housing policy, and the fine open weather for outdoor work in front of the building trade. Prices of building woods on the spot are firm, and show a slight increase, but yet not up to replacement values. Stocks are fairly large, and in view of a possible brisk demand, consumers will appreciate the fact that we are within only a few weeks of the opening of the Baltic ports and what promises to be large supplies of first open water cargoes. Indeed, circumstances have proved most favourable for buyers of timber, for though there may be no fall in prices, the incoming cargoes arriving early will have the effect of keeping values from jumping should there be a sudden heavy call for building timber.

Stocks of building woods generally are of the lower grades, though the higher qualities, comparatively, are cheaper. The assurance given by the writer in the *Economist* last month that there were no "rings" or "combinations" in the foreign timber trade in this country was confirmed later in the Press by the Timber Trade Federation. There are too many operating in timber here to permit of such a proceeding. The exporters in the countries from which we draw the larger portions of our supplies, however, are well organised, and it remains to be seen whether they will be able to maintain their asking prices, or whether the cautious policy now being adopted by English importers, and restricted buying, will have the effect of reducing f.o.b. costs. The weight of the Continental demand this coming summer will also have an influence on f.o.b. prices for shipment to this country, which are now on a basis of about £27 10s for unsorted 3 x 9 Swedish red deals, and £19 10s for 7-inch battens, with Finnish from 30s to 50s cheaper. As regards the Canadian spruce market, stocks are on the light side, and spot prices have firmed up a little. Very little forward buying has yet been done this season, owing to shippers' advanced ideas, and until an improvement takes place in the consumption in the packing-case trade of Manchester and district, and in house-building work on the West Coast areas, importers are not inclined to operate. In American pitch pine timber the demand in the States has improved, and domestic consumers are ready to pay higher prices than we; hence there is no response to agents' inquiries for business here. The demand on the spot, however, has considerably improved in the northern shipbuilding centres.

For good grades of mahogany the market is very steady, and sound sizeable logs find a ready market. Inferior logs, however, are hard to place at the prices asked. For mahogany boards shipped from American ports, stocks are light, and prices have firmed up. The demand, however, for other American furniture woods is slow, stocks are large, so much so that little interest is being taken at present in shippers' quotations, which are very firm. Business in the native timber trade is showing considerable improvement, particularly in oak and ash. Prices have firmed up to show a little profit in this minor branch of the wood trade.

VEGETABLE OILS AND OILSEEDS.

per cent. more than the actual shipments of last year's crop. The shipments to date are 578,700 tons, so that the quantity remaining for export is round 625,300 tons, two-thirds of which, it is conjectured, will be needed to supply America's seed requirements over the remainder of the calendar year. Purchases of oil and other considerations may go to modify the American demand for seed. Meanwhile, there is plenty of evidence of the firmness of the market in America. Plate linseed, although it has fluctuated somewhat, is only slightly lower in value on the week, a fair trade to Hull having been done up to £20 15s; of seed shipping/shipped up to £20 10s for April-May. A good deal of Indian linseed has also changed hands, up to £22 being paid for Calcutta, April shipment to London, and £21 12s 6d April-May; and bold, Bombay to Hull, at £23, April-May.

Cottonseed has been an improved market, and higher prices have been conceded for both Egyptian and Bombay, while for Brazilian for shipment, Liverpool has paid £8 15s. The oil product, on a strong Continental demand, has substantially advanced, particularly Egyptian crude and soapmakers' grade of refined. Soyabean oil, on spot, is scarce and firm, and palm kernel oil is sparingly offered and dearer.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Although tanners complain of the high price of hides, they seem unable to refrain from bidding more money for them, as at Thursday's Bermondsey auctions 1d per lb advance was obtained on all the more important classes. Best ox hides sold from 8 1/2d to 9d, whilst seconds made from 6 1/2d to 7 1/2d. Best cows at 6 1/2d were also 1d up on last prices, as were seconds at 5 1/2d. Calf were also firmer, best selections making from 6d to 12 1/2d per lb, two classes showing 1/2d-1d advance. Wools were steady from 5s 6d to 12s 6d, hoggs from 6s to 14s 6d, and lambs from 2s 6d to 6s each.

The imported hide market continues quiet, but River Plate hides are a shade easier, freights having been bought on American account at \$2 less money. The Continent is reported to have bought Liebig hides of March kill at 10 1/2d. All classes of dry hides are held firmly, as the demand from the Continent is well maintained.

Trade in sole leather has improved, and there has been a fair turnover with merchants of late. The demand is still for low grade bends, but makers of better class boots and shoes, of course, take their usual deliveries of recognised better-class butts and bends. Tanners are quoting a shade less money for heavy weights of butts and bends, but, as a rule, values are very firm. Little American sole is arriving, but a fair amount of Continental sole leather is selling.

Upper leathers in the lighter grades are moving off better, and prices are firm. Carriers of E.I. kips, however, are still having a hard time, as rough kips are very dear and advances on finished leathers almost impossible to obtain. Nigger brown glacé is a good seller, followed closely by patent and suedes in greys. Box-calf and willow are quiet, and German competition still a bugbear.

The boot trade is good in the localities devoted to making women's footwear, and both Leicester and Norwich are very busy. The demand for men's boots is quieter, as mere man buys footwear from necessity and not at the dictates of fashion.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 20.

SUGAR.—As generally anticipated in market circles, no alteration was made in the duty, as it was recognised that the statistical position is so tight as to be unable to stand any increase in consumption and which cheapening of the retail selling price would have led to. Meanwhile, general stability is the salient feature, with steady clearances of grocery whites, chiefly of British makes, owing to marked scarcity of imported descriptions. All raw refining kinds are sparingly offered, and dearer on the week. Cuban stocks stand at 727,170 tons against 930,460 same time last year. A good demand continued for refined, and prices of British were advanced 1s 6d per cwt both with regard to spot and granulated forward. Messrs Tate and Lyle's cubes now 6s 6d to 7s 6d, as to quality; crushed, 6s; nibs, 6s 6d; granulated, fine and coarse, 6s 1/2d; No. 1, 6s 1/2d; No. 2, also London, 6s 1/2d; ditto, May-June delivery, 6s; July, 6s 3/4; August, 6s 9/4; September, 6s 9/4; November-December, 6s. Pulverised, on spot, 6s 6d; caster, 6s to 6s 1/2d; finest, 6s 7/4; yellow crystals, 5s 10d. Crystallised West India in but retail supply, and ranges from 5s 6d to 5s 9d for low to good yellow. American granulated, spot, sold, 6s 9d, now 6s 1/2d asked; May, steamer, quoted, 3s, c.f. and i. terms, London. White Java, spot, 6s to 6s 6d, as to sample; ditto, May-June, steamer, changed hands at 3s to 3s 1/2; June-July, 3s 9d to 3s; July-August, 2s 9d to 2s 6d, c.f. and i., London. Czechoslovakian granulated, spot, sold, 6s 6d to 6s 9d. Star, fine, held for 6s. First-hand offers of Dutch sugars are found wanting, but from second-hands, business done in H.U.M. granulated, May-July, at 3s 3d f.o.b., Rotterdam. Czechoslovakian parcels for shipment are quite nominal, in absence of offers. Belgian granulated, October-December, quoted, 2s 6d, f.o.b., Antwerp. White Mauritius, spot, 6s 6d to 6s. Cuban, basis 96 per

cent., May shipment, quoted, 3s; Brazilian, basis 80 per cent., May, 19s; Madras, cane, jaggery, May-June, 300 tons sold, 18s 9d, all c.f. and i. terms, U.K. Terminal market showed irregularity, with dealings on a liberal scale. August delivery, sold, 36s 10d to 34s 6d and 35s 6d; October, 30s 9d to 31s 1/2d and 30s; December, 27s 4 1/2d to 27s 6d, 26s 9d, and 27s 6d; October-December, 28s 4 1/2d to 28s 3d. Liquid glucose, spot, 29s 6d cwt.

COFFEE.—A generally quiet demand prevailed for the fair quantity offered in auction, and while some really fine attractive parcels sold at a full range, all other qualities marked a downward movement. Fine bold Costa Rica, sold, 13s to 13s 6d; peaberry, 16s 6d. Future delivery market remains idle.

COCOA.—Only a retail amount of business is doing, but quotations show no essential change. Accra, for shipment, 3s 6d, f.o.b. terms.

TEA.—Indian auctions this week totalled 47,100 packages, and with increased competition for most descriptions, a steadier tone characterised the market. Only really common and thin liquoring parcels formed a weak feature. Ceylon auctions of 21,600 packages received fair competition, and fine qualities sold well, but otherwise rates disclosed a tendency to favour the buyer. Java and Sumatra were barely steady, but sold more freely.

RICE.—There is only a small trade doing on about former terms. Two stars, old crop, spot, 14s; new, 14s 3d; April-May, 13s 7 1/2d. Broken kinds dull, unaltered. Rangoon beans, spot, 8s. Japanese peas, spot, held for 27s; April-May, sold, 25s per cwt. Rangoon bran reservedly offered, and firm. April-September shipment, quoted 6 1/2d per ton, ex ship, London.

SPICE.—Pepper market quiet and featureless. Fair black Singapore, spot, 4 1/2d; March-May, 4 1/2d, value; Aleppy, spot, 4 1/2d; Tellicherry, 4 1/2d; Ceylon, 4 1/2d; white Singapore, 6d; Muntok, 6 1/2d; ditto, April-June, 6 1/2d. Zanzibar cloves quiet. Fair quality, spot, 1s; March-May, quoted 1 1/4d; May-July, buyers, 1 1/4d. Tapioca quiet, but about steady. Fair flake, Singapore, spot, 3 1/2d, sellers; fine Bendorojo, 4 1/2d per lb. Singapore flake, April-May, Havre, buyers, 3s; fair Penang, seed pearl, spot, 3s 6d; April-May, London, 29s; small sago, spot, 24s 6d; medium, 26s 6d; sago flour, May-June, quoted, 13s 9d. American starch powder, spot, 16s. Dutch farina, August, 14s 7 1/2d, c.f. and i., London. Desiccated coconut quieter. Fine cut, spot, quoted 47s; medium, 47s 6d; halves, March-April, sellers, 45s 6d; April-May, sold, 44s 6d; May-June, 44s cwt. Ginger dull, unaltered.

JUTE.—With reserve again marked on the part of sellers, coupled with fair buying orders, prices hardened. First grade, old crop, for shipment, sold to usual continental ports at £29 5s to £29 15s; new crop, August, £30; August-September, £29 10s; September-October, £29 5s 10d. Market for Hessians and twills remained in a dull state at late rates.

HEMP.—Manila quietly steady. J grade, April-June, quoted £33; K and L, £32; M, £31; G, £35; H, £34. New Zealand dull. H.P.F., dock, quoted, £33 ton. African sisal and Italian unchanged.

SHELLAC.—Market firmer forward. Fair T.N., spot, quoted, 33s; May, 31s; August, sold, 28s 6d to 28s cwt.

COPRA.—Weaker on increased pressure shown to sell. F.M.S. Straits, February-April, Rotterdam, sellers, £30 12s 6d to £30 2s 6d; March-May, sold, £30 2s 6d to £29 16s 3d; April-June, quoted £32 5s; April-May, Hamburg, sold, £30 5s. Ceylon, April-May, quoted £32 5s; Java, March-May, £30 15s; April-June, £30; Dutch East Indies, March-May, £29 17s 6d; April-June, £29 10s; Cebu, April-May, £29; South Sea Islands, £29; F.M. Straits, April-May, Marseilles, £29; May-June, £29 17s 6d; mixed, £29. Palm kernels easier. May-July, done £29 2s 6d; mixed, £29. Palm kernels easier. May-July, done £29 2s 6d; mixed, £29.

Liverpool, sold, £21 11s 3d to £21 7s 6d ton.

RUBBER.—The market was disturbed this week by larger offerings from the East, and where operators for the upward move were not prepared to take up their tenders, and same being offered in the London centre, coupled with weakness cabled from America, imparted irregularity and weakness. Standard crepe and sheet, spot, also April delivery, sold down to 1s 3 1/2d; May, 1s 3 1/2d; June, 1s 3 1/2d; July-September, 1s 4 1/2d, then later 1s 4 1/2d; October-December, 1s 4 1/2d to 1s 5 1/2d and 1s 4 1/2d. To New York, standard sheet, May-June, sold, 1s 4 1/2d to 1s 4 1/2d; June-July, 1s 4 1/2d to 1s 4 1/2d. Wild negulected and nominal. Fine hard Para, spot, 1s 1/2d.

EGG PRODUCTS.—Only limited trading at about late rates. Prime liquid yolk, spot, 9s to 10s, as to quality, April-June, 8s 6d per lb. Dried yolk, spot, 9 1/2d; albumen, spot, 3s 3d per lb.

MENTHOL.—Spot, 32s. Japanese peppermint oil, spot, 6s; aniseed, 1s 10d; slab camphor, 2 1/2 lbs, spot, 3s 8d; crude, 3s 3d.

FRUIT.—There has been a fair trade doing in currants, and market disclosed firm features. Pyrgos, quarter-cases, quoted 54s; half-bags, 53s; Panariti, 55s to 58s; good Vostizza, 67s to 70s; Australian, 72s 6d. Business in sultanas fair with prices marking a hardening tendency. Good Smyrna, sold, 80s to 82s; fine to choice, 95s to 110s; Californian, 65s. Quite a liberal quantity of raisins disposed of as prices proved attractive. Valencia, quarter-boxes, 36s to 45s. Market slow for dates, and Hallowee, spot, quoted 19s to 20s; Siar, 15s. Evaporated fruits sold quietly on about former terms. Extra choice Californian apricots quoted 145s; fancy, 160s;

NATIONAL PROVIDENT INSTITUTION for Mutual Life Assurance.

At the current Division of Profits,
Bonuses have been allotted to all with Profit Policies
at the high rates paid prior to the War.

A full report will be sent on application to:—

48 Gracechurch Street, London, E.C.3.

Cape apricots, 110s; Australian ditto, 130s; Californian pears, 65s to 75s. Peaches of various growths, 57s 6d to 65s. Californian apple-rings, extra choice, 56s to 58s. Canadian, 53s. Bosnian plums, 34s to 38s per cwt.

OILS.—Linseed market irregular, and a fair business transpired. Spot, net, naked, 51s 6d; April, 49s; May-August, 46s; September-December, 42s 1/2d. Rape firmer. Crude, spot, 45s; refined, 48s. Cotton dearer. Crude Egyptian, spot, 42s 6d; common edible, 47s; deodorised (in barrels), 49s. China-wood dearer. Hankow, spot (barrels), 130s; May-June, 123s. Coconut firm. Ceylon, spot, 49s; March-April, 48s; Cochinchina, ditto, quoted 53s. Soyabean. Oriental barrels, March-April, 43s 6d. Japan fish steady. April-May, cases 28s. Cod firm. English, spot, 34s to 35s. Ground-nuts quiet. English, crushed, naked, spot, 46s; deodorised, barrels, 53s. Turpentine quiet and easier. American, spot, 110s 6d; April, 110s 6d; July-December, 88s 6d. Rosin quiet. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W.G., 17s 6d; W.W., 18s 9d. French, F/G, 13s 6d; W.W., 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firm. First pressure, spot, to August, quoted 54s; second pressure, 53s, and pharmaceutical, 59s per cwt.

OLSEEDS.—Linseed opened firmer, but irregular since. Bold Bombay, afloat, £22 15s; small Bombay, ditto, £22 5s; Calcutta, afloat, £22 2s 6d; April, sold, £22 to £21 10s, and April-May, £21 15s to £21 10s. Plate, afloat, £20; sold, £20 15s; loading, £20 15s; April-May, sold, £20 10s, £20, and £20 7s 6d. Rapeseed quiet and easier. Toria, May-June, £18 5s; real bold Ferozepore, April, sold, £17 2s 6d; Jamba, April-May, £14. Cottonseed steady. Egyptian black, May, £12 12s 6d; and white, sold, £11 12s 6d. Bombay, March-April, £9 17s 6d. Gingly-seed quiet. Large, Bombay, April-May, Continent, sellers, £24 15s. Chinese, ditto, £25 to Continent, and £26, Italy. Ground-nuts dull. Coromandel, machine dried, April-May, quoted £23 5s. Chinese decorticated, f.a.q., April-May, £23 10s. Nigerian, ditto, £24. Soyabean steady. Manchurian, April-May, £11 17s 6d. Castorseed dearer. Bombay, March-April, £21 15s ton.

METALS.—Tin at the opening market values declined on selling pressure and lower Eastern advices, while only a small business transpired. Standard cash sold down to £214 10s, and three months at the same figure. Sales were reported in the East on the basis of £220 10s, c.i.f. Prices further gave way, but at the lower level buyers showed more disposition to operate. By the middle of the week standard cash sold at £208 5s to £209 10s, and three months £208 10s to £209 15s. Eastern advices showed further depreciation at £216 10s, c.i.f. The tendency was again easier on the following day, standard cash being dealt in at £208 10s, £208 15s, and £208 10s, and three months at £210, £211 to £209 to £209 5s. Further weakness was apparent at the final meeting, and smaller sales resulted. Standard, cash, sold at

£207 15s; and three months at £208 to £208 5s, to £208 2s 6d. English ingots, £208 to £208 10s. Copper market commenced with a firm tone, and a good demand prevailed. Standard, cash, sold at £73 6s 3d; and three months, £74 2s 6d. Subsequently slight irregularity ensued, though values on balance were fully maintained, buyers being chiefly interested in forward positions. On Wednesday standard, cash, sold at £73 12s 6d, and three months, £74 5s to £74 8s 9d. No material alteration occurred on Thursday, and fairly liberal dealings transpired in cash at £73 12s 6d, and three months at £74 12s 6d to £74 7s 6d to £74 10s. At the final session the tendency was easier. Standard, cash, sold at £73 1s 3d; and three months, £74 5s to £73 17s 6d, to £74, while finally registered at £73 18s 9d. Electros, £81 to £81 10s; best selected £76 10s to £78; strong sheets, £106; and wire bars, £81 10s per ton. Lead easier at £26 5s to £26 10s. Spelter lower at £34 to £34 5s. Antimony, ordinary brands, £30 to £32. Aluminium: Home trade, £110; export, £115.

TALLOW.—Messrs Colchesters and Woolner write on April 18th as follows:—The tallow market was easier during the week, and prices are about 6d lower to-day. Good kinds appear to have advanced too rapidly, and some falling off in the demand has ensued. At auction to-day 1,442 casks tallow were offered and 820 were sold. Quotations are:—Australian mutton: Fine, 45s 6d; good to fair, 43s 6d to 42s 6d; dull to dark, 40s 9d to 39s 9d; hard, 45s. Australian beef: Fine, 45s 6d; good to fair, 43s 6d to 42s; dull to dark, 40s 6d to 39s 3d; sweet, 45s 6d. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., 44s; and mixed, 43 1/2, c.i.f., London, 47s. The market letter is unchanged. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 2 1/2d; melted stuff, 29s 6d per cwt. Quotations are:—Town: 38s 3d net cash, naked, ex works. Country: Fair casks, 38s; home melted, shipping casks, net, f.o.b., good coloured, 42s; fair to dull, 39s to 38s. Bone fat: White, none; pale, none; benzine, 36s; melted stuff, 36s 6d, f.o.b.

THE MONEY MARKET.

EXTREME plethora in the short loan market was slightly
diminished as the week went on, and withdrawals by
banks had some slight effect. Nevertheless, the supply
was still large enough to puzzle borrowers, and make them
wonder how long it will last. It must be remembered,
however, that a very large amount—seven or eight mil-
lions or more, according to current gossip—was obtained
early in April from what is called the "Hidden Hand,"
by the sale chiefly of early June treasuries. In effect, the

market thus practically borrowed this amount from the Bank of England without "going to the Bank" in the usual manner, and has the use of it until the maturity of the bills disposed of. If this explanation of the present case is correct, it should last, unless disturbed by other influences, for a few weeks yet. Discount rates drooped under the pressure of much money and few bills. Yesterday's allotment of Treasury bills reflected the tone of the market, indicating that the previous decline had been overdone. Commercial bills were quoted nominally at $\frac{1}{2}$ to 2 per cent.

	Apr. 27, 1923.	Apr. 20, 1923.	Apr. 13, 1923.	Apr. 6, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1 (Jly. 13, '22)
Discount/Call	1	1	1	1	1 (Jly. 13, '22)
Houses/Notice	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills)	$\frac{1}{2}$	2	2	$\frac{1}{2}$	2 8

The Bank return showed that last week's mysterious rise in the Government securities had been reversed with a decline of 3 millions, which had come off the Other deposits. A small increase in the note circulation left the Reserve £401,000 lower. Currency notes outstanding were reduced this week by £1,594,700 to £283,970,200, which includes £1,486,300 for notes called in but not yet cancelled. The fiduciary issue is £239,463,000, or £30,720,800 below the maximum.

THE STOCK MARKETS.

Business in investment stocks has continued to be very active, but there has been some contraction in the volume of transactions in speculative sections. Practically all British Government stocks have improved in quotation during the week, buying of Funding and Victory Bonds, Conversion Loan, and in the earlier part of the week of War Loan being on a heavy scale. Among Colonial, corporation, Indian railway, home railway prior charge stocks, and industrial debentures there has been a large number of advances, while the upward movement does not bring much stock to the market. Foreign bonds have been quiet, with French issues moving irregularly. Home railway ordinary stocks improved materially, while banking and insurance shares advanced each day. Bonus declarations sent up the prices of Guinness and Babcock and Wilcox, while Imperial Tobaccos were also a strong feature. The iron and steel and textile groups are firm, while in spite of substantial advances in price Trust companies' stocks are almost unobtainable. The mining markets as a whole are dull.

THE COMMODITY MARKETS.

Sugar has again been the feature in the commodity markets with an advance of 9d to 1s per cwt, supplies being limited, but in other directions there have been no special developments. Buyers of cotton manufactures are placing orders a little more freely, though prices continue too high for free operations. Our Manchester correspondent reports better demand from India for several varieties of fabrics, but the China market does not revive. American yarns sell slowly at irregular rates, but Egyptian are firm with steady demand. Jute moved sharply upward at one time, but a decline set in and sellers depressed values. Prices for raw wool have advanced at the Colonial sales, which began in London on Tuesday. Our Bradford correspondent says these increases are due to the keenness of foreign competition. The British wool industry finds it difficult to get orders either for yarns or pieces. Spinners' quotations show a tendency to harden, but manufacturers and merchants are buying cautiously. Wheat was in good demand, the market being under the influence of adverse weather reports from America.

At the Indian tea auction better competition was noticeable, and prices improved. Rubber kept fairly steady. Linseed and linseed oil experienced a sharp decline, owing to a revised estimate of the Argentine surplus. Conditions were good in the hide market, and many advances were recorded. There is very little coal available for market; business is rather inclined to be quiet in South Wales, but is brisk in South Yorkshire and good in Scotland. An easier demand for pig-iron has caused a reduction in the price of 2s 6d per ton; iron for immediate delivery, however, is as scarce as ever. The steel trade is quiet, but there are good orders on hand; our Sheffield correspondent, however, mentions "that the volume of orders booked has been steadily falling off since the end of March." Tin and copper experienced declines.

FOREIGN EXCHANGES.

In the foreign exchange market business has again been quiet, but there have been some decided movements in quotation. On the expectation of an offer from Germany consequent upon Lord Curzon's speech, the Paris rate has shown more signs of improvement than for some time past, the rate on Wednesday being for a time under 68. Since then, however, there has been a reaction to 68.50 yesterday morning as compared with 70.05 a week ago, the tendency at that time being rather up than downwards. Brussels, as usual, has moved in much the same way. Forward rates in Paris have gone back again to 4-5 centimes per month above spot; in Brussels they are unchanged at 2-3 $\frac{1}{2}$ centimes below spot. After a lower rate of 118,000 on the 20th German marks rose to 131,500 on Monday, and to just under 140,000 on the following day, and, after some fluctuations, stood yesterday morning at 137,000. As far as can be seen it would appear that the recent break was the result of no settled policy. It would seem to have been rather due to the Reichsbank suddenly losing heart on a particularly strong outburst of demand for foreign currency following on an increasing pressure for some ten days before. Negotiations between the Government and the Reichsbank would seem to have resulted in a determination to carry on the policy of stabilisation, but at a higher level, and the raising of the Bank rate to 18 per cent. shows the lengths to which the authorities are now prepared to go. Quotations for forward marks are rather wider at about 11,000-13,000 marks per month above spot. As the result of influences which have often been discussed here the dollar rate has continued to sag away, and yesterday morning the drop was rather sharper than usual down to \$4.62 $\frac{1}{2}$ as compared with \$4.65 $\frac{1}{2}$ a week ago. Forward rates are again a little narrower at $\frac{1}{2}$ - $\frac{3}{4}$ cents per month above spot. Among neutral currencies the main interest has been the rapid rise in the Norwegian kroner from 25.97 to 26.85, after being for a time at 27 or over. The cause of this movement is the uncertainty following upon fresh banking troubles, two important institutions having been forced to take advantage of the new banking legislation recently passed. It would seem doubtful also whether the position is yet clear. The reaction on the other Scandinavian countries has been slight, Copenhagen having moved on the week only from 24.65 to 24.67 $\frac{1}{2}$, while Stockholm has appreciated from 17.40 to 17.32 $\frac{1}{2}$, and Helsingfors is also $\frac{1}{2}$ points better at 167. Italy has moved up a little from 94 to 94 $\frac{1}{2}$. Amsterdam and Madrid have gone slightly against us, and Switzerland at 25.44 $\frac{1}{2}$ shows a recovery of about 20 centimes. In Central Europe Vienna at 327,000 shows a slight improvement, but Warsaw at 215,000 seems again inclined to move upwards. Prague, in spite of its recent banking troubles, remains firm at 156 $\frac{1}{2}$. Belgrade is inclined to improve, but the position in Budapest seems again worse, and the Bank rate has been raised from 8 per cent. to 12 per cent. Bucharest is about the same at 950 to 1010. In the East the rupee at 1s 4 5-32d is much the same as before; the yen has moved up $\frac{1}{4}$ d to 2s 1 $\frac{1}{4}$ d. A steady inquiry from China as the result of political fears rather than the trade position, coupled with a sudden Indian demand, has sent up the price, although the market seems again slightly less firm. At 3s 2d Shanghai is about the

same as last week, while Hong Kong is slightly lower at 2s 3 $\frac{1}{2}$ d. In South America Rio has dropped away again from the higher rates of earlier in the week, and at 5 15-32d is 3-32d below the quotation of the 20th. Buenos Ayres is 42 29-32d as compared with 42 $\frac{1}{2}$ d, and Montevideo 43 $\frac{1}{4}$ d as compared with 43 $\frac{1}{2}$ d. Valparaiso after being higher, is the same as last week at 37.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 21st:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Road Fund	398	From Revenue	20,813
Land Settlement	906		
Interest on War Debt, &c.	7,969		
Supply Services	6,000		
Increase in Balances	292		
Repayment of Debt	6,148		
	20,813		20,813

Revenue for the week at £20,813,200 compares with £16,718,700 for the corresponding period last year. Expenditure was £14,373,500, compared with £6,068,900. The increase was due to payments of interest on debt, which amounted last week to £7,969,000, against £1,065,600 twelve months ago. The Road Fund received £309,000 and Supply Services £1,100,000 more than in the same period of 1922. Income-tax and Super-tax brought in £3,914,000, which compares with £4,172,300. Customs produced £2,417,000 compared with £1,700,000, and Excise £8,908,000 as against £7,438,000. The week's operations reduced the National Debt by £6,148,000, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	750	Public Department Advances ..	720
Treasury Bills	15,235	4% Treasury Bonds ..	1,917
		National Savings Certificates ..	450
		Unemployment Insurance ..	220
	15,985		9,837

The floating debt was reduced by £8,035,000 to £798,445,500.

FINANCIAL YEAR, 1923-24 (April 1 to April 21, 1923).

THE RUHR, REPARATIONS, AND INTER-ALLIED DEBTS.

THE statement which Lord Curzon made in the House of Lords at the end of last week has been taken in some quarters as ground for a belief that a *dénouement* of the Ruhr *impasse* is approaching. Nine-tenths of his long speech affords no such ground, for the Foreign Secretary concerned himself mainly with an elaborate defence of Great Britain's neutral policy, to pointing out that the implacable determination of France was met by an unexpected degree of stubborn resistance in Germany, and to arguing that to turn the question over to the League of Nations would involve a perilous risk of placing upon it a burden that it could not bear. But at the close of the statement came the passage upon which optimistic prophets have seized. Here it is:—"I think I observe, on both sides, if not a drawing-together, at least a willingness to discuss terms. We shall continue to do our best to encourage and develop those symptoms, and I am hopeful that a time will arrive—it may arrive before long—when our influence and authority may be usefully directed to the bringing together of the main parties to the dispute and the evolution of a plan which aims, not at a present solution, but at a treatment of a problem which is both a world problem and a peace problem as a whole." The view here expressed is supported to some extent by the news of the present week. There are signs that French opinion is steadily growing more and more anxious about the position, and more and more desirous of seeing some daylight through the present clouds. On the other hand, as our Berlin correspondent says on a later page, it is believed that Germany is about to make a concrete, though in all probability an unsatisfactory, offer. "As soon as a move is made," said Lord Curzon, "our help will be forthcoming to both parties." But if that help is to be of any use at all, the British Government must be ready with a carefully-thought-out plan, and a definite decision as to the lines of policy which would commend themselves to this country. We are fully aware of all the arguments in favour of open diplomacy, which is, indeed, one of the great safeguards of democracy. But there are some occasions, and this appears to us to be one of them, on which the only initial way out of complete deadlock is by private negotiations. We believe it to be no more than the truth that the Governments of both France and Germany, certainly large bodies of public opinion in both countries, would heartily welcome a way out. But the present tension is such that neither party would agree either to intervention by any individual country, or to reference to the League of Nations, unless and until both parties are satisfied as to the general principles and outlines of a settlement. So far as the League of Nations at all events is concerned this hesitation is by no means confined to France, for the German Government is undoubtedly suspicious that a settlement which the Council of the League would put forward would be as pro-French as they conceive the Upper Silesian decision to have been. So far as Great Britain is concerned, there are, in fact, two questions—(1) What

are the outlines of the settlement which Germany and France would accept? and (2) Do these outlines furnish a scheme for which Great Britain could make itself responsible? Our chief reason for sharing Lord Curzon's optimism is that we believe there is now occurring a steady rapprochement between the underlying principles of the various parties concerned.

In the forefront is the question of security for France. There is to-day no political party in this country which would consider for a moment the giving of an unconditional military guarantee to France, but there is a large body of opinion which would favour a military undertaking by this country to assist in rendering effective a guarantee by the League of Nations. The idea of a demilitarised zone between France and Germany in regard to which the League would have the responsibility of seeing that the terms of demilitarisation were observed seems to us in principle acceptable. It is not perhaps entirely what M. Loucheur and opinion in France desires; but if, as we believe, the lesson of the Ruhr is making the policy of annexation or of going to fetch away reparations by force a little less attractive, France may be able to find in a suggestion along these lines sufficient guarantee to put her fears at rest.

Apart from this aspect of the question, we agree with Mr Goodenough, when he stated in a recent address to the American Bankers' Association, that the question of reparations in its economic aspect ought not to be insoluble. Our readers are familiar with the lines on which we believe such agreement could be reached. We need not elaborate them in detail. Briefly they are as follows:—

(1) The amount of reparations payable by Germany should be limited in accordance with her capacity to pay the figure, to be fixed once for all by an expert body.

(2) The division among the Allies of the receipts from Germany should be governed by the principle that they should be devoted in the first place to the restoration of the devastated areas, no claim to be made by Great Britain for the repayment of the Allied debts or for a share in reparations receipts, unless and until these receipts exceeded the cost of restoration.

(3) Great Britain should welcome, and, if desirable, should use her good offices to promote, a commercial agreement for bringing together on a business footing the fuel of Westphalia and the ore of Lorraine.

(4) Adequate provision should be made for the supervision of Germany's finances until the German debt can be mobilised and converted into a debt to private investors.

As far as British opinion is concerned, the second of these points is to-day perhaps the most difficult on which to get general agreement; but in our opinion it is a necessary corollary of the estimate which any neutral body would make under the first heading. We do not think that the vagaries of the mark exchange, the latest phases of which are dealt with in another column by our Berlin correspondent, have modified Germany's ultimate capacity to pay to the extent that is sometimes supposed. At the same time, it is improbable for other reasons that the amount Germany can pay would exceed the cost of restoring the devastated areas. It is significant that an important section of the Paris Press is now recognising this fact, and suggesting that the effective demand upon Germany should be limited to this amount, and that France would be willing to forgo all other claims, including pensions, if other nations would do the same. A large body of opinion in this country now accepts the argument that it was improper ever to have included this claim in our Reparations bill at all, and it would have been better for the future prospects of world peace if the claim had been deleted on grounds of equity. But it is a step forward if the claim is deleted even on practical considerations. A detailed statement of Germany's pre-war and present foreign trade balance has just been made by Dr Von Glassnapp, vice-president of the Reichsbank. In this document are repeated the familiar facts relating not only to Germany's visible, but also her invisible exports, the net result of which is to show that before the war Germany had an export surplus available for investment or other forms of payment amount of one milliard gold marks a

year, a surplus which, at present gold prices, would represent 1½ to 2 milliard gold marks. But these figures were achieved when Germany had a large and profitable mercantile marine, and before the mineral resources of Alsace-Lorraine, the Saar and Upper Silesia were lost, and at the moment this export surplus has been converted into an import surplus, which, including the payments made under the Peace Treaty in cash, but not in kind, amounted to 11 milliards of gold marks in three years. This statement shows what a very long road Germany has to travel before she can attain once more to any export surplus on her general trading account. As we have said, we do not regard the task as absolutely hopeless in the long run; but the results attained before the war and a careful consideration of the way in which a similar result might be achieved by Germany to-day with her limited resources is our main reason for discounting so heavily former ideas of Germany's possibility of payment.

If this view is sound, and confirmed, as we believe it is, by international opinion, we do not think that the people of Great Britain would attempt to enforce payment by France of her debts until the costs of restoration of the devastated areas had been made good. We are not so certain what view the United States would take, but we hesitate to think that America's attitude on the Inter-Allied debts would stand in the way of a final settlement of this European confusion.

AN AGRICULTURAL POLICY.

THE Government appear at last to have decided upon an agricultural policy. The decision has been reached by a somewhat circuitous route. The King's Speech referred only to two specific subjects for alleviating the difficulties of agriculturists—the provision of credit facilities and relief of local rates. A Departmental Committee on Prices was set up, and the fact that it was appointed by the Minister of Agriculture without reference either to the Board of Trade or the Ministry of Labour was an indication that the subject was to be investigated from the producers' point of view. During a debate in the House, the Prime Minister accepted a suggestion from Mr Lloyd George that an inquiry into the whole agricultural problem, at home and abroad, should be instigated. This appeared to indicate that the construction of a comprehensive agricultural policy was to be postponed for an indefinite period. The tribunal of economists, to which the responsible duty of inquiry was referred, suddenly produced an interim report consisting of a series of bold recommendations which they made no serious attempt to support or explain. As the Government were being strongly pressed to give the House of Commons an opportunity of discussing the position of agriculture, it was not surprising that the hurried production of this report was uncharitably attributed to a desire to meet the convenience of the Government—a political consideration from which even impartial economists may not be wholly immune. The success of this well-intentioned effort was, however, marred by the singular failure on two occasions of the plans of the Government for securing a day for the agricultural debate. The result has been that their intentions, instead of being announced as a whole, have dribbled out by instalments.

Fitting together the mosaic of piecemeal announcements, it is now possible to form an idea of the lines of a policy for agriculture to which the Government are committed. In the first place, we may summarise negatively those proposals of the Agricultural Tribunal which the Government have rejected. They are:—

1. The compulsory import of offals with flour.
2. An export duty on offals.
3. An import duty on hops.
4. The abolition of hop control.
5. The regulation of potato imports.
6. The establishment of wages boards.
7. A subsidy for the reduction of railway rates.

The recommendation of the tribunal in regard to the relief of local rates was also rejected by the Government, who have preferred to deal with the matter in a different way.

The proposals of the Tribunal which the Government have adopted are:—

1. A duty on imported barley, with a preference to the Dominions.
2. Loans for the erection of milk-collecting depots.
3. Exemption of home-grown sugar from Excise duty.
4. Provision of credit facilities.

The latter items have been, in effect, dealt with prior to, and independent of, the Tribunal report.

The most substantial and immediate relief to agriculture is that given by the reduction of railway rates as from May 1st. The credit for securing this reduction is claimed by the Agricultural Committee of the House of Commons, but it is fairly evident that in the interview which the representatives of that Committee had with the railway managers they were forcing an open door. The concession is welcome, but the recipients of the benefit display only a moderate amount of gratitude, holding, as they do, that the reductions are overdue, and insufficient. It may be worth pointing out that the Tribunal recommended a reduction of the existing rates by 25 per cent., and that the reduction from 75 per cent. to 50 per cent. above pre-war rates—which is the general effect as regards farm products and requisites—reduces actual rates by about 14 per cent.

The decision of the Government to reduce the assessment of agricultural land from one-half, as fixed by the Agricultural Rates Act, 1896, to one-fourth is, on the face of it, a substantial relief to farmers and landowners. The details are at present not very clear, but it has been authoritatively stated that, including a contribution from funds now in the hands of the Road Board, a sum of approximately £4,000,000 will be made available to local authorities to make up the deficiency caused by the reduction of farm assessments. A Bill must be introduced to amend, or supplement, the Agricultural Rates Act, and the scheme will then no doubt be explained in detail. At present, except for the amount coming from Road Board funds, it is not apparent how, and from whence, the money is to be provided. The Chancellor made no provision in the Budget, but, on interrogation, stated that the amount would be found out of "savings"—a somewhat precarious source of revenue.

The provision of credit facilities is the subject of a report by a special committee, upon which a scheme is now in preparation by the Government. The exemption from excise duty of sugar produced from home-grown sugar-beet has been for some time in force, and the responsibility of the present Government is limited, therefore, to the decision to maintain it. The principle on which it is justified is that of the protection of infant industries, but the whole story of the prolonged attempt to establish the sugar industry by the help of the State is a tangled one which cannot here be adequately considered.

In regard to milk production, the Tribunal recommended that fresh milk and cream should only be imported under licence where there is satisfactory evidence that the conditions of their production and transport are subject to a standard of hygienic regulation equal to that

required in this country. They further recommended that imported dried milk should be certified as free from adulteration, and that tins of imported preserved liquid milk should bear a statement of the analysis of the contents. These are reasonable proposals, and merely apply, in substance, to imported articles the regulations applicable to home produce. The recommendation, which the Government have adopted, to assist from State funds the erection of milk-collecting depots is open to criticism. Many such depots exist in milk-producing districts, and, indeed, they form an essential part of the commercial mechanism of milk distribution. Why should the State intervene when private enterprise has proved its efficacy?

As noted above, the Government have declined to adopt the recommendation of the Tribunal that six district wages boards, "having executive powers within their own areas, and uncontrolled by any Central Board," should be established. The Government have announced, however, that they will introduce legislation "to make compulsory the registration of agreements arrived at by Conciliation Committees." As the law now stands, a Conciliation Committee which has come to an agreement may apply to the Minister to have it registered, and thereupon it becomes legally enforceable to the extent that the rate of wages fixed by the agreement forms an implied term of the contract of employment of every farm worker in the district. In only two or three cases have agreements been registered in the past even when the Conciliation Committees were functioning, as they did for a time. There are nominally 63 Conciliation Committees in existence, but at the present time there are agreements in not more than a dozen districts.

What reason is there to suppose that the fact that agreements will be made compulsory will revivify a system which has palpably broken down? It seems more likely to extinguish it finally.

The most significant proposal of the Tribunal, which the Government have accepted, is the imposition of a duty of 10s per quarter on imported malting barley, with a preference of one-third on barley imported from the Dominions. The duty is to be collected at the brewery, distillery, or malthouse, and the Government announce that they have arranged with the brewing industry that it shall "not involve any rise in the price of beer." They do not appear to have made any similar arrangement with the distilling industry, nor is there any indication as to the period during which the brewers have pledged themselves not to pass on the tax to the consumer. The most convinced believer in the altruism of the brewing industry cannot altogether overlook the fact that there are other means of making the consumer pay without recourse to the crude method of raising the price. There are, for example, substitutes for barley-malt, the use of which is not unknown, and may be extended. Neither the Tribunal nor the Government have made any reference to the fact that a certain quantity of malt is imported, but it may be assumed that the projected legislation will provide against so easy an evasion of the duty by placing a corresponding duty on that article.

The ultimate effects of this protective duty may be—as not unfrequently happens—very different from those intended, but, for the sake of argument, let us assume that it will achieve the object in view and stimulate the production of barley in this country. It is practically certain that any increase in the acreage of barley will be gained at the expense of wheat, and it is a singular commentary on all that has been said about the vital importance of growing more wheat that the Government should select for artificial stimulus the one corn crop which is not used for human food. The reason is obvious. It is calculated that the first step towards the re-introduction of a system of protection for agriculture may be taken without unduly alarming the public, if it can be argued that the food of the people is not taxed and that the price of their beer, which seems to be menaced, will not be increased. It is not the first time that the intelligence of the people has been under-estimated. The British nation has sound and quick political instincts, and is not easily beguiled on broad issues. The attempt to bolster-up corn-growing by protective duties cannot be disguised by shallow artifices or extenuated by the familiar plea that it is "only a little one." It will be recognised, for what it undeniably is, as a return to the fiscal policy which was abandoned in 1846.

Meanwhile, it would be interesting to know what will happen when the Tribunal present the further report, with their "fully considered judgment," which they have promised to submit at some future time. Are the present proposals of the Government to be regarded as temporary, and will they be reviewed, and possibly altered, when the Tribunal have completed their investigations?

THE INVESTOR'S DILEMMA.

Is the monetary barometer "set fair," with a long spell of 3 per cent. Bank rate ahead of us, in which securities will continue to soar? Or are the many sceptics right who regard the present state of the Consols market as a long-standing temptation to Providence? These are the questions which have to be pondered by every careful investor who wants to place his funds to the best advantage, and wonders whether he should sell his long and perpetual stocks and change into short dated, so as to be under cover when the trouble comes, or whether he should put every penny that he can save or raise into Conversion Loan or other long securities, so as to take advantage of the spell of sunshine that may be expected if cheap money is here to stay.

The problem that is covered by these questions is so manifold that it is very hard to know at which corner to begin. It is possible to argue that the gilt-edged market is already at quite exaggerated and artificial height. The present yield on Conversion Loan, if allowance is made for income-tax, is less than a quarter per cent. above the yield on Consols before the war, and the consequent multiplication of the British debt by ten and the introduction of a novelty in our finance in the shape of a foreign debt. It may be unreasonable to allow for income-tax, but it is surprising to find how many people do so, especially in the City, and take the net yield on gilt-edged stocks to-day, weigh it in the balance and find it wanting. If the prevalence of a high income-tax makes it more attractive to spend than to save, then it has an undoubted effect on the demand for securities. On the other hand, we have to consider the question of what is done with the money that the taxpayer takes; if it goes into debt redemption, it helps to put prices up by decreasing the outstanding amount of gilt-edged securities.

In the main, however, most people will be ready to admit that the most important influences on security prices are the activity of trade, and the course of commodity prices, which make so much difference to the quantity of capital required for financing trade, and so to the amount that is available for investment. Economics is sometimes accused of not being a science, because its exponents are not able to make forecasts with the certitude and accuracy attained by astronomers; but

at least we can be fairly certain that securities with a fixed yield cannot continue indefinitely to rise in price if commodities also are advancing, and more money is being spent upon them. Experience and theory agree that the Index Number of goods tends to move in the opposite direction to the price of those securities which, being least affected by risks of default, or by date of maturity, are susceptible only to monetary influences. This certainty is confirmed by the present condition of the Consols market. Although in some of its details it is puzzling, and its long-continued strength and swallowing power especially have upset the calculations of experienced judges of its movements, yet in the main it is only repeating its old lesson. Trade depression and a heavy fall in the prices of commodities were the forerunners of the advance in securities, and there is good reason to expect—though the disturbed state of things in the economic world makes one hesitate about being dogmatic—that it will only be checked by trade revival, on a sufficient scale to cause a keen demand for money for trade purposes, or by a confident expectation of trade revival on this scale. We are confirmed in this conclusion if we consider the course of the recent movement and the causes which made it possible. At first sight it was in some ways most paradoxical. At a time when the country was crying out that it was staggering under an intolerable load of taxation, and our bankers were endorsing its contention and telling us that their customers were borrowing from them in order to meet the demands of the Inland Revenue department, and when at the same time the saving habit had certainly been weakened by currency depreciation, by the after-war reaction towards irresponsibility and extravagance, and, in the minds of some, by fears of revolution or of orderly spoliation through a capital levy or otherwise, there came a great multiplication of securities accompanied by a rapid rise in their prices, with an apparently insatiable demand for them on the part of a public with more money than it knew how to use. At one time the proceedings were almost farcical, when it was necessary to provide a force of police to check the impetuous rush for prospectuses of issues of distinctly questionable merit. All these things look like topsy-turvy chaos, but they become much simpler when we remember that the *Economist* Index Number divided itself by two between March, 1920, and September, 1922, and also that debt redemption has proceeded with very considerable rapidity ever since December, 1919, when our debt touched its zenith at 8,000 millions. Since then, owing to the process of conversion which has lightened the debt charge while increasing the nominal amount of the liability, it is difficult to be precise concerning the actual market value of securities cancelled by redemption; but judging from the amount of the realised surpluses it would seem that some 500 millions' worth of securities have been taken off the market. The actual reduction has mostly been in the form of floating debt, but as a large part of the floating debt at the end of the war was held by shipping or industrial companies and firms, its redemption drove these holders into the Consols market, to compete with others who were investing there because the fall in prices and the slackness of trade had set free part of their working capital for purposes of temporary investment. And at the same time, as the Stock Exchange assures inquirers, there have been considerable purchases of our Government securities by Continental and American buyers in the course of their flight from the franc and the mark and the dollar, on the theory that sterling, as an investment or a speculation, was for the time being more attractive.

These causes of the advance in security prices having been set down, can we see our way more clearly as to its continuance? It was lately observed by a speaker at the meeting of an insurance company, that caters especially for apostles of temperance, that a healthy breath of trade wind would blow away security profits like froth from the brim of a flagon. But one of the curious features of the recent rise is its persistence in spite of the definite improvement in trade that took place last year. It would seem that there is still a good deal of slack to be pulled in before the rising trade demand gives anything like a jerk to the Consols market; but it is fairly certain that intelligent anticipation will precede actuality, and that if trade

continues to improve—a matter which is largely in the hands of the politicians—many industrial holders of Government securities will think it wise to dispose of them before they actually want the money, because they know that by the time they want money plenty of others will be wanting it likewise. It is true that there may be a slowing up in debt redemption, for we have to remember that the big surpluses which have gone into debt redemption during the past three years have been achieved out of sales of assets which are nearly at an end. Mr Baldwin hopes to secure 40 to 50 millions of debt redemption in future, but this is far below the average of what has been done since the end of 1919. But against this, there is the possibility to be reckoned with of a hardening of money rates in America, with its probable reaction on the policy of the Bank of England Court. Our Treasury wants cheap money for its financing here, but, in view of its dollar liabilities, it can hardly want a serious setback in the value of sterling, which would tend to happen if British money rates fell too far behind American rates. A rise of money rates here, following America's lead, would unquestionably encourage British firms to finance their trading requirements by disposing of their temporary investments instead of relying on bank accommodation. Again, there is the cheering fact that, owing to the gradual recovery of some of our impoverished neighbours, demands for capital that have long been clamorous may become effective, as borrowers begin to be able to show signs of solvency. Austria, Czecho-Slovakia, and Rumania are examples, and if the Reparation question really were settled, and its financing became a practical problem, the creation of competitive securities might join hands with trade revival in ending the gilt-edged advance. But this advance, being due chiefly to the indirect results of political blunders and bad temper, seems to show an almost cynical confidence in its own staying power.

INCOME-TAX AND PRICES.

The Budget debates are raising, perhaps more than usual, a number of points which, though practical in their expression, require analysis by economic theory before their degree of real validity can be determined. Much popular discussion upon the incidence of taxation, especially where "incidence" is to be distinguished from "effects," is of this order. In such discussion one often hears it stated that an increased income-tax is simply passed on in the higher cost of goods, or that a lower income-tax will bring about a reduction in prices, the case being analogous to an alteration in a beer duty or Excise duty generally. Nothing, however, can be clearer in economic analysis than the teaching as to the incidence of any tax upon a "margin" such as profit, which is held to be totally distinct from the incidence of a tax upon a unit of produce. Roughly stated, according to the doctrine held almost universally by economists, any tax which is payable upon a product or article of consumption, regardless of whether or not the commercial or industrial operations involved in manufacture and sale end in a profit, enters into the cost of production; it is one of the costs, in fact, just as much as transport or wages, and must, therefore, enter into price, which cannot in the long run sink below such costs. In the case, however, of a tax which sinks to zero whenever the profits sink to zero, there is nothing which can enter really into the costs of production. To use economic jargon: at the margin there will always be a certain number of firms producing and only just making ends meet without profit; these people will be paying no income-tax, and nothing for income-tax will enter into their costs of production; it is the costs at this margin which are really identical with the price level. In a similar manner, businesses which, as a whole, are profitable, are normally regarded in economic theory as carrying production to the point where the costs of the "last unit" of production are just covered by the price of the unit. Profits, therefore, arise in the case of all firms which are more favourably situated or are better managed than the "marginal" concern. Their product is sold at the same price—i.e., without the inclusion of income-tax—and they take as profit all

their superiority in the matter of costs and expenses. Similarly, the profit-making business makes its profit on all units of production, down as far as the marginal unit. The doctrine is quite confident upon the point that a tax which is measured by this margin, and is only payable if the margin exists, must be paid out of the margin; that is, it cannot come out of costs. There are a number of refinements which act as limitations of this doctrine, but the main doctrine itself is clear, and sharply distinguishes income-tax from Excise and Customs duties.

It may be said that a minimum interest on the capital employed in the business must be regarded as a "cost," since no one will go on producing in the long run unless such interest is forthcoming, and that interest, therefore, does not strictly form a part of profits. If, then, income-tax falls on that interest, the net amount left after payment of income-tax will enter into costs. But income taxation is identical for interest from non-industrial sources, such as War Loan, municipal loans, &c., and if there is any kind of mobility between the two classes of capital, it is difficult to say how this effect upon costs can be worked out in practice.

What, indeed, may be regarded as happening in real life? Does the draper or the manufacturer in actual fact increase or lower his prices with the amount of income-tax that he has to pay? If a tax does enter into prices, what is that tax? Is it the small amount of tax paid by the little draper making £300 a year, or is it 8s or 9s in the £ paid by the larger draper? If each passes on his own tax, we should get such a disturbance of prices as would bring about a differential charge between the two for the same class of goods. This is *ex hypothesi* absurd, and, therefore, the only source from which the "large" draper's higher income-tax can come is his larger aggregated profit.

Those holding the opposite view do not escape the dilemma by assuming that an average flat rate is thrown into prices. If such were the case the small draper would make much larger profit owing to the average rate of tax being higher than his own, and the large draper would make a much smaller rate of profit; a differential income-tax would, therefore, tend to reverse their positions.

Those who hold that income-tax enters into prices ought to indicate clearly the kind of costing principle which can, in fact, give proper effect to it, having regard to these considerations. The incidence of a general income-tax on all classes of income is regarded in economic theory as being capable of only a very slight shifting or diffusion—that is to say, it actually falls where it appears to fall, and where it is intended to fall. The theory of a general diffusion by means of higher prices as a theory breaks down on analysis and, as an assertion of practical action, lacks evidence. Moreover, from a currency point of view it leads to an impasse. If everybody succeeds in passing on their income-tax in higher prices and higher remuneration to everyone else, then the

monetary result of a given mass of transactions and services would have to be expressed in a larger amount of currency, which is inflation. Does this in fact happen? What is the evidence for it? We are told that the way to avoid inflation is to transfer purchasing power from the individual to the State by taxation, instead of adopting money creating devices which leave the public with the same nominal purchasing power and yet put new purchasing power into the hands of the State. If, as we believe, this doctrine is true, how can the same operation of taxation both demand an increase of currency and not demand it? At which Socratic point we leave the matter.

When, however, we come to the effects of secondary magnitude—not regarded as the first effects which we call "incidence"—it is possible that a highly graduated income-tax may not fall exactly where it appears to fall, and may cause certain shifting among members of the community. Thus, if a given amount of potential saving power is taken away at the highest points, and a corresponding amount is not exercised at the lower points, it means that the redistribution of wealth brought about by the graduated tax would result in a lessened fund of savings. This, in turn, may react by reducing the flow of capital and improvements in industry below what they would otherwise have been, and thus unnecessarily keep up the prices of widely used commodities. In this manner there may be a reaction in the long run against the interests of the lower incomes, brought about by a device which was supposed to favour them. Always we must bear in mind the difference between the distribution of a given cake and the incentive to make new ones!

In the case of a large and powerful monopolist who has a considerable margin of productive advantages which he may, or may not, pass to the consumer in reduced prices, there can be little doubt that 8s 6d in the £ in income-tax and super-tax may be an important factor in retarding such reduction. When this tendency exists it may act subconsciously. But, as Dr Haig, of Columbia, said in effect in examining the excess profits duty in this country, "One has yet to meet a monopolist who refrains from charging all that the market will bear until a tax forces him to do so." On the whole, economic theory is well re-enforced by practice, and before the presumptions of a doctrine so well established can be disregarded the strongest practical evidence should be forthcoming. But no evidence beyond a blind assertion is usually available.

THE PROBLEM OF BULGARIAN REPARATIONS.

At long last there seem to be reasons for hoping that the question of Bulgarian reparations will be definitely settled in accordance with the country's ability to pay. The adoption of this principle in the case of Bulgaria is none the less interesting because the sums involved are relatively small and unimportant. The significant point is that now for the first time since the Armistice economic facts are being taken into consideration in fixing the amount due on reparations account by a former enemy State.

Article 121 of the Treaty of Neuilly stipulated that Bulgaria should pay the sum of 2,250,000,000 gold francs in thirty-seven annual instalments, the first of which was to be made on July 1, 1920. The first and second instalments were to include interest at the rate of 2 per cent., the remaining thirty-five interest at the rate of 5 per cent. per annum on the capital sum due. As this Article has never been carried out, and as it must have been apparent to any person acquainted with Bulgarian economic conditions (including the Inter-Allied Commission at Sofia) that its terms never could be carried out, it need not detain us further. We must, however, make a passing reference to the fact that considerable payments were made by Bulgaria for the upkeep of the Allied Army of Control and of various Allied Commissions, in addition to deliveries in kind to Serbia, Greece, and Roumania.*

Apart from finding suitable housing accommodation, the first important task of the Inter-Allied Commission (Re-

parations), which arrived at Sofia in March, 1921, was to devise some means of circumventing Article 121 of the Treaty without thereby establishing a sane precedent which might be applied also in the case of Germany. The long exchange of notes with the Bulgarian Government—which asked for a three years' moratorium as early as April, 1921—makes instructive rather than interesting reading. By March, 1922, however, negotiations became quite earnest. The normal annuity of 136 million gold francs on the capital sum provided for in the Treaty was to be shelved for two years, and ten million gold francs were to be paid in the Budget year 1922-23, and thirty millions in the following year. It will be remembered that talk of a moratorium for Germany was very much in evidence a year ago, and this was doubtless the reason why a complete suspension of payments was denied to Bulgaria. At the same time, the Inter-Allied Commission at Sofia demanded that Bulgaria should submit to certain measures of control in return for these concessions. Inflation of the currency was to cease, and the debt of the State towards the National Bank was to be limited. The Commission also proposed a new method for the repatriation of taxes, and asked the Government to obtain the approval of the Chamber in this matter as well as for the control over the output, management, and revenues of the mines and collieries. These latter revenues had to be affected to reparation payments, while the granting of monopolies and concessions had to meet with the previous approval of the Commission, which would have the exclusive right to dispose of the revenues arising therefrom. The exclusive control over the State Budget, its preparation and modifications, would belong also to the Commission, whose advice would have to be taken before a State foreign loan could be issued.

The Bulgarian Government accepted some of these proposals, including notably the limitation of inflation, and undertook to modify its budgetary system in accordance with the principles of sound finance. In addition, it made counter-propositions, which, however, did not accord to the Commission as full a measure of control as it had demanded, and a complete deadlock ensued. On July 21st the Inter-Allied Commission notified the Government that Article 121 of the Treaty must be strictly executed without delay, and the hopelessness of the outlook led to a downward plunge of the lev and a complete disorganisation of trade and finance.

After a period of uncertainty, which lasted down to the end of 1922, negotiations were resumed in January last. The Bulgarian Premier, M. Stambouliski, took the place of M. Daskaloff, the former negotiator; and Sir Elliot Colvin was now president of the Inter-Allied Commission in place of Prince Livio Borghese. This change of personnel seems to have had a welcome effect on the conduct of negotiations—which previously had often been far from friendly—and on March 21st last an agreement was signed by both parties. The total present value of Bulgaria's Reparation liabilities is fixed at 550 million gold francs. The payment of this sum is to be spread over sixty years, with annual instalments in accordance with the following table:—

Years.	Amount Due.
1923	2,500,000 gold francs.
1924	5,000,000 "
1925	6,000,000 "
1926	7,000,000 "
1927	8,000,000 "
1928-33	10,000,000 "
1934-83	43,230,000 "

These annuities are calculated on the basis of interest at 5 per cent. The amounts due as interest during the first ten years will, however, be compensated with the sums Bulgaria has already paid on Reparations account, and in 1933 the question of interest will be re-examined.

This settlement has been regarded as a favourable one from the Bulgarian point of view, and our Sofia correspondent informs us that a general feeling of relief and of hope is to be noticed throughout the whole country. This in turn has naturally had a marked effect on the value of the lev, which has risen at Zürich from 3 to 4.25 Swiss centimes. It must, however, be pointed out that the agreement still awaits the sanction of the Reparations Commission at Paris, as the Sofia Commission (constituted

by Article 130 of the Treaty of Neuilly) is merely a subsidiary body. It is to be hoped, however, that the question will not be allowed to remain much longer in suspense.

In considering the terms of this agreement, it must be borne in mind that Bulgaria is a country of small peasant proprietors, whose holdings are situated for the most part in the fastnesses of the Balkan mountains. Its annual coal output is under one million tons, while the production of other minerals is practically negligible. Its principal exports are cereals, tobacco, and attar of roses. The trade balance, which is almost invariably unfavourable, will probably show a slight excess of exports for 1922, thanks to the restriction of imports.* The country is overwhelmingly agricultural, and the typical Bulgarian village is practically self-sufficing.

In 1922 Government expenditure amounted to about five milliards of leva; while revenue yielded a little over four milliards, leaving a deficit of nearly 959 millions†, or about one and a-half millions sterling at present rates of exchange. It is, however, doubtful whether expenditure can be very much reduced, in view of the fact that Government officials receive salaries which barely suffice for the absolute necessities of existence. The total external debt works out at about £10 per head of the population; to which must now be added a further £4½ per head on Reparations account. The total would be very small in a country of Western Europe, but under Bulgarian conditions an annual charge of some 15s per head for the service of the external debt alone represents a heavy burden in view of the fact that revenue does not amount to much more than 35s per head (at present rates of exchange). Nevertheless, the graduated scale of annuities, combined with the general improvement in the trade situation in 1922, which should continue still further this year if the Reparations Commission see fit to ratify the Sofia agreement, will doubtless enable Bulgaria to meet her obligations under this agreement during the next ten years. Freed from the burden of armaments, which were so largely responsible for the accumulation of her pre-war debt, and with an able Prime Minister, whose overwhelming success at the recent general elections showed that his policy of loyally fulfilling the international obligations of his country is well supported by the nation he represents, the next few years should see Bulgaria well on the way to reconstruction and relative prosperity. Whether it is wise, in the interests of the principle of the sanctity of Treaties, to endeavour to bind a country for sixty years, is a question which is better left to the historian. For our part, however, we welcome the agreement, both as marking a considerable advance on the Treaty settlement and as being the first solution of a post-war reparations problem which takes into account the economic possibilities of the situation.

THE SUGAR POSITION.

THE sugar market during the past four or five weeks has followed very closely the course foreshadowed in an article dealing with the world position of the commodity which appeared in these columns on March 3rd last. It was then stated that there was ground for the apprehension of a shortage in the available supplies, and that values in this country would have to be based largely on the price of Cuban raw sugar. Since that time the estimates of the Cuban crop have undergone certain changes, and the latest figures issued by Mr Himely put the total output at 3,735,000 tons, against his first estimate of 4,102,857 tons, and an actual outturn for last season of 3,996,387 tons. Other estimates give the season's production up to the middle of the present month amounted to 3,126,000 tons, against 2,354,000 tons for the corresponding period of last year, it may now be said that the best and worst is known. The New York market has shown conspicuous strength, and notwithstanding the threat of Government action against operators on the New York Coffee and Sugar Exchange and the Clearing Associa-

* Cf. Report on the Economic and Financial Conditions in Bulgaria. Recently published by H.M. Stationery Office for a review of 1922.

† The Economist, February 24, 1923.

tion, and talk of an injunction to prevent speculation in sugar, all sugar for future delivery has moved sharply upwards. On this side the market has been very lively. Early this week the dealings in the Mincing Lane market were on a big scale at advancing rates; values on the Clyde rose sharply on Tuesday, and with heavy buying the general course of the market was upward, with retail prices to the public moving in the same direction.

The matter of the intervention of the United States Government, and talk of "sugar ramps," "sugar wars," and "gambling" may be dismissed without comment. Even if the American authorities stopped all dealings in futures they could not increase the visible supply of sugar by one single ton, and as things go now the prices that will rule from May until next October will be based largely on supply and demand. It is admitted that there has been both here and in the United States a considerable amount of speculative interest shown in sugar, but this is nothing out of the way, all commodities being subject more or less to influences of a certain character. Speculation, it may be said, resulted in values early last year falling to 10s 6d c.i.f. United Kingdom, and under 2 cents per lb cost and freight New York. The public reaped the benefit of this exceptional fall, which was due to over-confidence on the part of the American syndicate operating in Cuban sugar; thus while the mere talk of official action may warn off outsiders to some extent, no action short of Government control, such as was seen during the war years, could have the slightest effect. The world has to face a real shortage of the commodity, and while obviously the position lends itself to manipulation the whole future of the market turns on the matter of supplies. As far as the United Kingdom is concerned, the statistical situation may be regarded as fairly satisfactory. The stocks of raw sugar at the three principal ports, viz., London, Liverpool, and Greenock, are much about the same as they were a year ago at a little under 100,000 tons. The imports for the week ended April 21st amounted to 14,769 tons, against 21,989 tons in the previous week, and 34,645 tons in the corresponding week of 1922. The deliveries for the same period amounted to 18,769 tons, compared with 13,539 tons in the same week of last year. Thus there is plenty of raw sugar on hand, and no fear of an immediate shortage, but, of course, there will have to be further adjustments in prices as the third quarter of the year approaches, as home refiners must inevitably guard themselves against whatever parities are established in the American markets during the next six months. No blame whatever can be laid at the door of the British refiners. All along they have been compelled to advance their prices as a means of self-protection against the rising cost of raw sugar, and it may be stated that the action of the Chancellor of the Exchequer, who refused to meddle with the duty on the commodity, will benefit the public in the long run, as it will undoubtedly keep down the consumption. If there had been a change in the duty in favour of consumers there would have been a jump in the demand, and this would have forged another weapon for the American speculators, and the concession in the shape of duty would have gone on to the price.

From the Cuban crop and its possibilities it is interesting to turn to the other sources of supply, and examine them with a view to seeing whether any relief can be obtained. Next to the Java crop in point of view of adding to supplies, some rather hopeful forecasts have been made in connection with the sowings for the next beet crops in the United States and also in the various European countries. More sugar should be grown within the Empire. The Australian yield this season was just over 300,000 tons, which is more than domestic consumption can take care of. Queensland produced 288,000 tons of raw sugar, and both Australia and South Africa should do better with their sugar crops, although, of course, the melancholy history of sugar production in other countries within the Empire is not very encouraging. The high prices now ruling will assuredly prove a strong incentive to a material enlargement in the sowings under beet in the United States, and a considerable increase is expected on the Continent, although the latest advices suggest that there may be a setback instead of the reverse in the case of Germany, where economic con-

* With the Economist of November 18, 1922, p. 931.

ditions do not favour enterprise of that description. The season's European beet crops will probably yield something like 4,500,000 tons, as compared with a little under four million tons in the previous season. France should have an outturn of 510,000 tons, the official returns of actual production for the first seven months having been 466,000 tons, against 295,000 tons in the corresponding period of the previous season. The German production for this season was formerly estimated to yield 1½ million tons, but the actual output up to the close of February was 1,312,000 tons, against 1,254,000 tons in the previous season of 1921-22; thus it may be said that the bulk of the French and German crops have already been accounted for, and this remark may be applied to other European countries. France is seriously handicapped in the matter of importing supplies by reason of the depreciation of the franc, and reserves in that country are now very low.

The course of prices indicates that the world is short of sugar. Ample evidence of what was coming was furnished last February, when the run on Cuban sugar became so intense that the c.i.f. cost was lifted to about 26s 6d per cwt, after having dropped in the previous year to 10s 6d. Cuban raw sugar has now risen well over 30s per cwt, and British cubes early this week were put up to 71s 6d as compared with 66s two months back. American granulated sugar has been advanced from about 58s 6d to 65s for spot delivery, including duty. The wholesale cost to the grocer of the latter would be roughly 7d per pound; thus it is obvious that even at current selling prices to the public there is very little margin. The retail trade must, therefore, be prepared to face anxious times, as it is always a matter of great difficulty to explain the exact position to the buying public, and the scare headings in the lay Press do much to create unnecessary suspicion. The trouble with sugar just now is not so much the fears of an actual shortage over the remainder of the season, but the fact that the world's markets are chiefly dependent on Cuban resources to fill the gap in the absence of any great weight of supplies from other cane-growing countries, and this state of affairs cannot possibly be remedied for several months at the very least. The Java crop later on will ease the position to some extent, but in the meantime it is just as well for the trade to realise that it is up against the strong forces which will exercise control over the disposal of the very moderate Cuban surplus. Summing up the prospects of the world's crops, as based on the latest and most reliable information to hand, a total production of 18,800,000 tons may be looked for, and this would only be a little over half a million tons in excess of last season as represented by the improved Continental beet crops. The world's consumption of sugar during the past year showed an increase of well over two million tons, and may be placed at about 19,000,000 tons. Crops in all the producing countries have failed to come up to expectations, and if the consumptive demand does not undergo a considerable shrinkage owing to the high prices now asked there is bound to be a considerable shortage until the new crops come along. In any case, supply cannot overtake demand in the next six months, and with all supplies in firm hands it is difficult to see how further rises can be avoided. Should the next beet crops in the States and on the Continent come anything near the current optimistic forecasts there would be a very sudden change of sentiment towards the close of the present year, but for the time being only a very drastic check in the consumptive demand and the employment of sugar substitutes can hold back the rise. High prices should do this and also encourage production; thus the position will right itself in time, and equilibrium between supply and demand would be restored.

LONDON GAS COMPANIES.

THE change in the measurement of gas in the past two years has made our comparative statistics of the quantity of gas sold by London companies somewhat incomplete. This year we start anew, and the following table shows the total gas sold by five representative London gas companies during the year ended December 31st last, together with the comparative figures for 1921:—

	TOTAL AMOUNT OF GAS SOLD.		In. or Dec.
	1921.	1922.	
Gas Light and Coke	147,549,934	158,755,869	+ 7.6
South Metropolitan	147,551,114	158,755,869	+ 7.6
Commercial Gas	10,013,765	17,054,125	+ 70.2
South Suburban	13,356,922	13,845,888	+ 3.6
Wandsworth, Wimbledon, Epsom	13,541,936	13,375,519	- 1.2

The increase shown by the Commercial Gas Company is remarkable, although no reference is made to this in its report. The Wandsworth, Wimbledon, &c., on the other hand, experience a slight set-back. During the year all London gas undertakings were able to reduce prices and grant a certain amount of relief to consumers. At the end of 1921 the price of gas supplied by the Gas Light and Coke Company was 1s 2d per therm, at the beginning of this year it was 10d; the price per 1,000 cubic feet at the corresponding periods was 5s 6½d and 4s 2d respectively. This company increased the calorific value of its gas in June last from 475 British thermal units to 500 per cubic foot. The South Metropolitan reduced its price of gas in the year from 11½d to 10d per therm. During 1922 the Commercial Gas Company made three reductions in the price of gas—namely, 2d per therm in January, 1d per therm in April, and 2d per therm in July. They made a further reduction at the beginning of 1923, reducing the price to 9 3-5d per therm, or 3s 9 3-5d per 1,000 cubic feet. The South Suburban quotes the lowest price in its area of 11 4-5d per therm, which is equivalent to 4s 6½d per 1,000 cubic feet. This, it is pointed out, compares with 2s 3d per 1,000 feet, its lowest pre-war price. The Wandsworth, Wimbledon and Epsom Company mentions that its gas supplied was of a calorific value of 480.1 British thermal units, as against 470 declared by the company, and thus rightly claims that the company has exceeded its obligations to the public by an average margin of over 10 units. The price of its gas has been reduced by 4d per therm. The prices are 9d per therm in Wandsworth, 10d per therm in Wimbledon, and 11 1-5d per therm in Epsom.

Most companies publish statements comparing salaries and wages paid with previous years. This is certainly a step in the right direction, and we welcome the figures, which make interesting reading. We would suggest, however, that these figures should be further amplified.

In the table given below we analyse the revenue and expenditure of these five representative London gas undertakings for the past four years. The Act of 1920 provided for annual accounts and returns to be submitted to the Board of Trade. In consequence companies now publish accounts for the whole year in the place of the half-yearly accounts previously issued. The half-yearly accounts of the South Metropolitan and Wandsworth Companies for 1919 have been shown as annual returns in the undermentioned table for comparative purposes:—

Company.	Revenue.				Expenditure.			Balance Net Revenue.

Holders of gas stocks, as investors, belong to a class of their own. They are naturally of a conservative type.

Stocks usually only change hands on account of death, and in many cases transfers take place without the assistance of the Stock Exchange, except that the ruling quotation is taken into consideration.

New issues of investments of this industry offer an interesting field for survey. Even here old customs are retained, and many new issues are still offered for sale by tender. Recently the Wandsworth, Wimbledon and Epsom Company placed on the market by tender £250,000 new capital, comprising £50,000 4 per cent. irredeemable debenture stock, £100,000 5 per cent. preference stock, and £100,000 ordinary stock. The debenture stock was offered at a minimum price of £78 per £100, showing a yield of £5 2s 7d per cent., the preference stock, at £93 per £100, yielding £5 7s 6d per cent., and the ordinary stock at £95 per £100, at which figure, based on current dividend, the yield worked out at £6 9s per cent. The issue was largely oversubscribed, and tenders were from £81 down to the minimum of £78 for the 4 per cent. perpetual debenture stock, the lowest price to secure an allotment being £79 15s. For the 5 per cent. preference stock, the lowest price to secure an allotment was £94 5s 6d, and for the ordinary stock the lowest price to secure an allotment was £96 10s 6d.

We conclude with a table showing the pre-war price of London gas stocks, together with comparative dividends, prices, and yields during the past two years:—

Name of Company.	Price, July 27, 1914.	Dividends.		Price, Mar. 29, 1922.	Yield, April 25, 1923.	Yield.

† Without allowing for profit on redemption.

The movements recorded above show that fixed interest bearing gas stocks moved upward in value in company with most other fixed interest bearing securities as money became cheaper. The improved prices of the ordinary stocks are evidence that the industry is still favourably regarded by investors. Dr Charles Carpenter, presiding at the annual meeting of the South Metropolitan Gas Company in February, made some interesting remarks on dividends and profit sharing. He pointed out to stockholders that "just as your employees are entitled to their standard wages, so you are entitled to a standard interest on your investment, and this has been prescribed by Parliament at 5 per cent. A basic price for gas has been fixed at 11d per therm. If, from time to time, any profit is made over and above what is necessary to provide these obligations, three-fourths of such profit is deemed the consumer's share, and automatically goes to him by way of a reduction in the price of gas, and the remaining fourth is divided equally between you and your employees." Last year the scheme provided an additional dividend of ½ per cent. on the ordinary shares, and a similar aggregate amount was placed to the co-partnership fund.

FIRE INSURANCE IN THE UNITED STATES.

CONSIDERABLE interest is always taken in the results of the operations in America of the British fire offices. By means of their subsidiary American companies, of which the already large number is constantly receiving additions by purchase, the British offices transact much more fire business in America than in all the rest of the world put together. The average rate of premium in the United States, where fire risks are relatively high, is some five times the average rate charged in Great Britain. The

result is a very large premium income, a loss ratio which varies widely between good years and bad years, and—a feature which is becoming embarrassing in its influence—a larger percentage of expenses and commissions to premium income than is either necessary or wholesome. It is obvious that if a British fire office derives, say, two-thirds of its premium income from America, at an expense ratio of 45 per cent., economies laboriously enforced upon British and other business are liable to be swamped under a torrent of American costs. The problem of fire insurance expenses and commissions has become acute, the average, which twenty years ago was about 35 per cent. of the premiums, is getting dangerously near 45 per cent., and it is a problem of which the solution must chiefly be sought upon the other side of the Atlantic. Increased salaries to staffs in Great Britain and the growing burden of State taxes in all countries also contribute to the high level of costs, which is now not much below that of fire claims in a favourable year. An examination of the figures which we give for the United States fire business of the British offices during last year shows how difficult it now is, with an expenses ratio of 45 per cent. of the premiums, to make an underwriting profit at all. When fire losses rise above the average, then all prospects of a profit vanish in smoke.

The results which we publish in this article are as nearly correct as it is possible to make them. The figures of American subsidiaries are included wherever they are certainly known, and dollars have been converted into sterling at 4s 2d. The American figures of premiums, claims, expenses, and profit or loss are not strictly comparable with those of the companies' full accounts which are published in this country. Reinsurances in America are allowed only with "admitted" companies in the States of the Union, but in some instances reinsurances are placed outside America with British or foreign re-insuring companies. None but the officials of the individual companies have knowledge of these transactions, and only then in so far as their own company is affected. What we give is the result of operations in the United States, as shown by the official accounts deposited with the State Insurance Departments in America.

It will be seen that 1922 was not a favourable year, and yet not seriously unfavourable. Out of the fourteen companies or groups in our list, seven made a surplus and seven suffered a deficiency. None of the surpluses or deficiencies are large in proportion to the business done. Taken as a whole, the fourteen companies, after providing for the unexpired risks, have come out practically "all square." Let us take the surpluses which have been arrived at after allowing 40 per cent. of the total premiums as the necessary reserve for unexpired risks. This is the recognised percentage under the Assurance Companies' Act in this country, and one which has been proved by long experience to be adequate. In American accounts the whole of the unexpired portion of the premiums has to be reserved. The North British and Mercantile has done best with a surplus of £137,570, or 3.7 per cent. of the premiums. This compares with a surplus in 1921 of £191,451, or 5.8 per cent. Next comes the Phoenix group, with a surplus of £87,522 (4 per cent.), as against a deficiency in 1921 of £7,628. At the meeting on Wednesday Sir Gerald Ryan said that "in the United States the fire-waste for the year 1922 was in excess of that of any year since the great San Francisco conflagration," but the figures give no indication of this. The London and Lancashire has made a surplus of £71,987 (4.9 per cent.), against a surplus of £58,006 (3.9 per cent.), the London Assurance a surplus of £55,239 (7.7 per cent.), against a surplus of £36,688 (4.7 per cent.), and the Commercial Union a fractional surplus of £7,407, as compared with a deficiency of £128,691 (3 per cent.) in 1921. The Scottish Union did well with a surplus of £23,811 (3.1 per cent.), against a surplus for 1921 of £48,335 (6.4 per cent.).

The largest group of all, the Royal, including the Liverpool and London and Globe, has made the largest deficiency, though the percentage to premiums is small. Its amount is £171,424 (2.2 per cent.), as compared with a

deficiency of £115,609 (1.5 per cent.) in 1921. The Northern shows a loss of £35,941 (3 per cent.), against a loss in 1921 of £42,754 (3.7 per cent.). The deficiency of the Atlas was £50,144 (5.8 per cent.), as compared with a deficiency in 1921 of £77,071 (9.5 per cent.). The Royal Exchange has a small loss of £6,114 (1.1 per cent.), against a larger loss in 1921 of £18,668 (3.6 per cent.), and the Sun comes out nearly level with £2,535 on the wrong side. A year before the Sun achieved a surplus of £19,883 (2.2 per cent.).

BRITISH RESULTS DURING 1922.

An examination of the column of percentage of claims to premiums shows that the year 1922 cannot be regarded as unusually severe in fire losses. The highest percentage of claims was 57.6 per cent., and the lowest 46.7 per cent. The claims experience of two important companies, the North British and the London and Lancashire, was under 50 per cent. of the premiums. The rather poor results of the year were clearly not due to heavy fire losses. The profits which should have been earned ran down the open drain of expenses and commissions, which averaged about 44 to 45 per cent. of the premiums. Until measures are successfully taken to reduce substantially that high percentage of costs, there cannot, save in exceptionally favourable years, be much margin of profit in American fire insurance.

Notes of the Week.

The Housing Bill.—Mr Neville Chamberlain has good reason to be relieved at the nature of the reception accorded to his Housing Bill. Its rejection was moved on seven separate grounds by the Labour Party, but the Government majority rose to 200. Sir John Simon perhaps struck the most reasonable attitude towards the Government proposals by pointing out their shortcomings, but refusing to take the responsibility of obstructing even such an attempt as they make to stimulate the provision of decent housing accommodation for the working-classes. Mr Chamberlain himself was careful not to claim for his Bill that it was a complete solution of the housing problem. He called it a "foundation," and, on the whole, when the bristling difficulties of the question and its great urgency are recognised, we are more inclined to search for the good points in the new scheme than to concentrate upon its obvious limitations. The Bill has, at any rate, the good intention of stimulating private enterprise and facilitating house purchase. It limits—to £6 per annum for 20 years—the liability of the State, and by so doing throws upon the local authorities the onus of insisting upon reasonable costs of construction. It provides for a revision of the scheme as relating to future building in two years' time, when conditions may have changed. It concentrates on the class of house particularly needed. It contemplates making the revision of obstructive bye-laws easier, and has other minor merits. Against all this, let us put the chief objections of the Labour Party. The first is the general attack that it fails to deal adequately with the present housing shortage; the second, that it ignores the difficulty of land purchase and transfer; the third, that it fails to provide sufficient supplies of building material at reasonable prices; the fourth, that it throws an unreasonable burden on local authorities; the fifth, that it interferes unreasonably with their administrative powers; the sixth, that it fails to reduce the "burden of interest imposed upon dwelling-houses by the present financial system"; and the seventh,

that it provides only for an unreasonably small type of house. These objections do not seem to us to go to the root of the matter. Certainly the size of the proposed house is rather surprisingly small, but the task of combining reasonable size with reasonable cost is one with which perhaps some progress may be made in the Committee stage of the present Bill. Everybody wants a copious supply of good houses; nobody is prepared to pay by means of rates and taxes the full necessary price of such immediate supply. The real crux of the problem lies in the existence of two facts—the first, that there are 300,000 less men in the building industry to-day than before the war; the second, that the industry has 130,000 men unemployed. These two facts, at a time of acute housing shortage, show that no approach towards a real housing solution will be made until some degree of certainty and confidence as regards the future is re-established, and such re-establishment cannot begin until a definite scheme of gradual decontrol is devised and put into effect. Short of such re-establishment, housing progress must be slow. It will, we fear, be slow under the present proposals, which, however, within their limits and under existing circumstances, are on tolerably sound lines.

The Liberation of Egypt.—After twenty-four centuries of subjection to foreign Powers, Egypt has been endowed by the British Government with a democratic constitution, in spite of the strange alliance of the Palace and the Nationalists to retain some features of Oriental rule. Thus the aim repeatedly avowed by Great Britain for nearly 40 years has been at last achieved. The only provisions of the constitution which are not thoroughly democratic are the composition of the Senate, two-fifths of which is nominated by the Crown, and possibly the King's share in legislation; and it is not clear whether the power of amending the Budget rests only with the popular House. But the King's powers are to be exercised through his Ministers, and special provision is made against the imposition of new financial or military burdens without Parliamentary consent. Islam is declared to be the State religion, Arabic the official language, but the right of the Christian and non-Arab minorities are expressly protected, and there is no reason to apprehend attacks on them such as those initiated by the Young Turks from the former militarist monarchies of Central Europe. Democracy is to be made safer by universal compulsory education. The establishment of this Constitution is the indispensable preliminary to the more difficult task of settling the international relations of the Egyptian State. Forced by circumstances into the position of its protector, and unfortunately for a short time of its sovereign, Great Britain can only readjust her relations with it by negotiation with a stable Government, and stability can only be attained by broadening the basis of that Government. The Constitution specially protects the obligations of Egypt to her creditors and her foreign residents, but the exact safeguards of these have still to be defined. But the external loans are now largely held by Egyptians, and their service requires only about 74 per cent. of the revenues assigned. The Capitulations, as was recently pointed out in these columns, have had their edge taken off by the system of Mixed Courts, and their abolition can only be gradual. The difficulties of the coming negotiations will have to do with the military protection of the Canal zone, which in 1921 led to a temporary deadlock, and the question of Egyptian rights in the Sudan, where British commitments are large, and which no Egyptian Government could at present either administer or hold. But here we may fairly expect a common-sense solution. The negotiations may probably proceed more smoothly if martial law is abolished before the elections, and Zaghlul Pasha and his fellow-exiles are allowed to return.

Progress in Ireland.—Liberty and order are being re-established (writes our Dublin correspondent). Each day witnesses further disintegration of the broken forces of irregularism, and vindicates the wisdom of the Government in withstanding all the tentatives and intrigues of all who sought to break the fall and save the face of the extremists. The Government demands surrender, but with a leniency towards those who submit which

deprives the peace-mongers of all leverage. It insists upon the yielding up of all arms, but in lieu of inflicting penalties, merely requires that the vanquished should sign a pledge to abstain in future from unconstitutional violence. The birth pains of the Irish Free State have been agonising, but the paroxysms are passing. To-day the main lines of a new polity are being gradually shaped, and fiscal and financial policy, though still in an embryonic stage, are slowly being incubated towards hatching point. Liberal, progressive, and democratic as the new system promises to be, the Government is displaying a prudent conservatism in the difficult circumstances of a prolonged crisis, particularly in financial and fiscal matters. Its unarmed Civic Guard, designed to replace the disbanded semi-military Royal Irish Constabulary, is everywhere making good in popular esteem. Its personnel is of an admirable stamp, and its training has been painstaking. It is the executive force to support the District Justices, whose functions and jurisdiction lie somewhere between those of a county court judge and a resident magistrate of the old régime. The District Justices' Courts are everywhere functioning throughout the Free State. Regarding financial policy, the Government is marking time. It retains the level of taxation all round without abatement so far, and if it finds it difficult to curtail expenditure, it is avoiding new and expensive schemes. There has been talk behind the scenes of Government borrowing, but if anything definite has been arranged the secret has been remarkably well kept. Savings certificates are about to be issued at 15s 6d, repayable at 20s in five years. Compensation for losses occasioned by civil strife, too, is to be paid in part by new *ad hoc* Government securities, of which particulars are still lacking; and discussion is taking place in the Dail as to how far they should be accepted at face value in payment of death duties. It is doubtless prudent as well as practicable to postpone the main Government borrowing at least until the effects of the restoration of order are increasingly felt. In the meantime, if the Government becomes short of money, there is little doubt that a well-conceived issue of premium bonds to supplement the savings-certificates would be both popular and successful. As to the fiscal policy, the Irish Free State is also marking time. It is necessary to emphasise the fact—and Irish business men, in view of many misrepresentations and misunderstandings, wish it to be emphasised—that no policy of tariff barriers against Great Britain has been adopted. In assuming fiscal independence the Irish Free State simply adopted bodily *mutatis mutandis* the British schedules and rates, and applied them to the Irish Customs houses; and where, as a Dominion, it obtains preferential treatment, it reciprocates the arrangement.

The Chester Concession.—The Chester Concession has a doubtful history, an obvious moral, and possibly an oil future. Its history, as was told in the *Economist* of December 2nd, began about 1900. Promoters frequently wait long periods for the fruition of their schemes, and, indeed, can often afford to do so seeing that they invest hope rather than money. Admiral Chester and his friends have waited 23 years, for, until the conclusion this month of the Convention between the Turkish Ministry of Public Works and their concern—the Ottoman American Development Company—they had received, it appears, nothing but promises. And they would hardly have reached, even now, the success of something in Turkish writing if it had not seemed a good opportunity to the successors in diplomacy of Abdul Hamid of playing off the Great Powers against each other on the eve of the new Lausanne Conference. The Chester Concession is said to contain clauses, such as the rebuilding of Angora, which rather appeal to Turkish pride than call for serious fulfilment. But an important feature is the construction of certain railways and ports with the grant of exclusive mining rights within a margin of 20 kilometres on each side of the railway lines, the Turkish Government receiving, apart from dues and taxes, one-third of the profits of exploitation. The railways, aggregating 4,000 kilo-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

metres (2,500 miles) in length, are to comprise five routes—(1) Angora to Sivas, (2) Samsun, on the Black Sea, to Sivas Kharput, Bitlis and Van, (3) Kharput to Yumurtalik on the Mediterranean, (4) Sivas to Mosul, Kirkuk and Suleymanieh, (5) a point on the Samsun-Sivas line to Erzerum. The time-limit for construction of these lines is altogether sixteen years and seven months. It may be mentioned in passing that French interests are definitely hurt by this agreement. In 1914 the French obtained a concession, against a loan of 1,000,000, to construct the Samsun-Sivas railway of 250 miles. Twenty-two miles of track, together with the principal bridges and tunnels, have been completed. All these works have been thrown into the Chester Concession, and the proposals of the French for a modification of their 1914 concession summarily rejected, despite the Franco-Angora treaty. Perhaps this, from the point of view of the Turkish delegates meeting the "Allies" at Lausanne, is more than an incidental part of the business. But from the British point of view the main interest in the Chester Concession lies in its oil consequences. In the first place, the oil deposits of Northern Persia are believed to extend to the Vilayets of Van, Bitlis and Erzerum, which the Chester railways would traverse. No systematic exploration for oil in these districts has yet been attempted, but seepages of oil are fairly plentiful, and the oil prospects in the Vilayets of Van and Bitlis are considered commercially good. In the Vilayet of Erzerum the region near Terdjian is regarded as equally promising. There is, of course, no question of certainty where oil is concerned, but these districts have the advantage over the Mesopotamian fields in being nearer to the Mediterranean, and they were the only potential oil-fields of importance, in proximity to Europe, which were undisposed of. In the second place, the inclusion of the Sivas to Mosul, Kirkuk and Suleymanieh line encroaches upon British mandated territory, and threatens the Mosul oil rights of the British controlled Turkish Petroleum Company. In official quarters we understand that this threat is not regarded seriously. Certainly, there is no evidence that the Turkish Government intended to prejudice the discussion of the Turco-Iraq boundaries, for it has given no guarantees to the Chester concessionaires that they will have Mosul to exploit. But here lies the danger to British interests. The American Government has never recognised the rights of the Turkish Petroleum Company, and Mr Secretary Hughes now seems inclined, in view of the French protest and the Chester pressure, to make a stand for the reference of all such conflicting claims to some court for adjudication. In that event the concession of the Turkish Petroleum Company would again be in the melting pot. It may be argued that because Standard Oil was promised a share in the Turkish Petroleum Company, the Washington Government will take no such stand; but Standard Oil is quite capable of now making terms with Admiral Chester, who has no great financial backing, and still coming in for the spoils of the Turkish Petroleum Company. It will be interesting to see what attitude the American representatives at Lausanne adopt after their former professions of "the open door" and "no monopoly" (even in railways). The moral of it all is that as long as the Governments of the Great Powers continue to play with the concession-hunting schemes of their nationals, they cannot hope to impress lofty political principles upon the opportunist Turk with any marked degree of success at peace conferences.

Reparation Payments in 1922.—The Reparation Commission has issued a statement showing the amount of deliveries in kind demanded from Germany in 1922, and the allocation (after sundry adjustments) among the Allies. The following table shows approximately for each country, in the first column, the amounts which would have been credited to Germany for deliveries in kind within the period in question had all orders placed been punctually fulfilled, and, in the second column, the amounts credited to Germany:—

	Estimated Value of Orders Placed.	1922 Credits. Gold Marks.
France	273,900,000	209,064,100
British Empire	187,200,000	167,851,700
Italy	138,200,000	107,702,300
Belgium	84,700,000	65,636,700
Greece	4,600,000	4,519,500
Serbia	139,200,000	116,882,500
Roumania	14,600,000	14,582,700
Portugal	9,400,000	9,367,300
Totals	851,800,000	695,606,800

It is explained that "in certain instances, in which from the nature of the case no order was actually placed, the value of the credits passed is taken as representing the amount which was to be delivered. The proceeds of the British Reparation (Recovery) Act, which amounted to 127,094,700 gold marks, is the most noteworthy case of the kind.

A Quarter's Overseas Trade.—The full official Board of Trade Returns of overseas trade in March and the March quarter appeared only on Wednesday, nearly a fortnight's delay having been caused by a strike. In our issue of April 14th we gave some preliminary figures, which we now supplement with a few details. A summary of the value figures for the March quarter of 1923 and 1922 reads as follows:—

MARCH QUARTER.				
	1922.	1923.	Increase or Decrease in 1923.	
	£	£	£	%
Imports	233,723,559	273,577,246	+ 39,853,687	+ 17.1
British exports	186,062,852	185,369,502	- 693,350	- 0.4
Re-exports	28,786,638	28,706,926	- 79,712	- 0.3
Total exports	214,849,490	214,076,428	- 773,062	- 0.4
Excess of imports over total exports	18,874,069	59,500,818	+ 40,726,749	+ 215.5

Exports are in value practically the same as in the March quarter of 1922, and an increase in the merchandise balance of £40 millions is almost wholly due to a large rise in imports. How the merchandise trade balance has moved in recent quarters is shown below:—

MOVEMENTS OF MERCHANDISE TRADE BALANCE.				
	Excess of Imports in—			
	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.
	Milln. £.	Milln. £.	Milln. £.	Milln. £.
1921	53.2	100.6	78.4	45.5
1922	18.9	61.1	36.2	63.8
1923	59.5	...	...	...

Some of the more important items in the export list for the first quarter of each of the past three years are shown by quantity in the following table:—

IMPORTS.			
	Quantity.		
	Three Months Ended March 31.		
	1921.	1922.	1923.
Raw cotton	2,917,737	3,169,042	3,891,114
Sheep and lamb's wool	23,530	73,152	157,082
Flax, hemp, and jute	79,360	57,919	89,558
Rubber	622,245	365,698	431,240
Beef	3,152,492	2,799,987	3,391,468
Mutton and lamb	1,758,601	947,132	1,872,593
Wheat	11,984,100	21,348,100	24,057,500
Sugar	5,123,488	8,295,883	6,730,721
Butter	1,006,515	1,311,200	1,401,451
Tea	119,241,684	121,089,565	120,822,560
Tobacco	62,847,211	50,252,120	56,128,529

The increase in the last quarter in the takings of wheat, meat, and textile raw materials is considerable. March exports were only £2½ millions greater than those of February, whose working days, of course, were fewer. But the following figures of quantities of leading British products exported in the March quarters of 1921, 1922, and 1923 show the figures of the past quarter in a more favourable light:—

EXPORTS (000's omitted).			
	Quantity.		
	Three Months Ended March 31.		
	1921.	1922.	1923.
Coal	5,397	13,236	18,694
Pig-iron and ferro-alloys	42	118	272
Railway material	99	159	91
Total of iron and steel and manufactures thereof	548	772	1,039
Textile machinery	42	50	42
Total machinery	146	119	114
Cotton yarns	24,494	48,470	36,726
Cotton piece-goods	726,017	894,929	1,079,958
Wool tops	81	98	99
Woollen tissues	23,119	26,599	35,905
Worsted tissues	10,421	15,783	18,099
Linen piece-goods	6,332	23,133	21,946
Boots and shoes	106	95	151
Leather	34	54	66
Paper and cardboard	462	404	1,022
Locomotives	11	13	7

Coal and iron and steel show up best in this comparison, while the cotton piece goods and woollen tissues and boot and shoe figures also show a big increase. On the other hand, machinery and cotton yarn exports were substantially lower than a year ago. As regards bullion and specie, imports in the March quarter were £15,543,868, and exports £18,697,638, the corresponding figures for a year ago being imports £9,495,464, and exports £11,942,072. The amount of shipping engaged in the foreign trade was larger than in the first three months of last year, the figures of clearances from British ports being 16,310,693 tons and 12,618,906 tons respectively.

Cost of Living.—The gradual decline in the cost of living, which has been in progress with one slight break since last July, continued in March, the *Ministry of Labour Gazette* figure for March 31st being 74 per cent. above the level of July, 1914, as compared with an increase of 76 per cent. a month earlier. Movements of this cost of living index figure month by month since 1918 are tabulated below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914. (Food, Rent, Clothing, Fuel, and Light, &c.)							
	1918.	1919.	1920.	1921.	1922.	1923.	
January 1st..	85-90	120	125	165	92	78	
February ..	90	120	130	151	88	77	
March	90	115	130	141	86	76	
April	90-95	110	132	133	82	74	
May	95-100	105	141	128	81	...	
June	100	105	150	119	80	...	
July	100-105	105-110	152	119	84	...	
August	110	115	155	122	81	...	
September ..	110	115	161	120	79	...	
October	115-120	120	164	110	78	...	
November ..	120-125	125	176	103	80	...	
December ..	120	125	169	99	80	...	

Retail food prices at the end of March were 68 per cent. above the pre-war level, having fallen three points during the month. That is due mainly to a reduction in the price of eggs, but fish and bacon were also cheaper, whereas, on the other hand, sugar, tea, and cheese became decidedly dearer.

Employment in March.—The month of March saw a continuance of the gradual improvement in labour conditions which had been in evidence since the beginning of the year. At the end of March the trade union percentage of unemployment, according to the *Ministry of Labour Gazette*, was 12.3, as compared with 13.1 a month earlier and 14.0 at the close of 1922. Movements of the

trade union percentage over a number of years are shown in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1923.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	13.7
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	13.1
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	12.3
April	1.7	0.3	0.9	2.8	0.9	17.6*	17.0	...
May	1.9	0.4	0.9	2.1	1.1	22.2*	16.4	...
June	1.9	0.4	0.7	1.7	1.2	23.1*	15.7	...
July	1.9	0.4	0.6	2.0	1.4	16.7	14.6	...
August	2.0	0.5	0.5	2.2	1.6	16.3	14.4	...

November ..	2.0	1.1	0.5	2.9	3.7	15.9	14.2	...
December ..	2.6	1.4	1.2	3.2	6.0	16.5	14.0	...

* Excluding coal miners.

The percentage unemployed among workers insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland was 11.1 at March 26th, as compared with 11.8 at February 26th and 14.4 at the end of March, 1922. The total number of workers registered as unemployed at March 26th was 1,289,000, as compared with 1,376,000 at February 26th. We recently drew attention to the fact that not far short of a million unemployed have been absorbed into British industry in a period of 15 months. In the first quarter of the year the absorption amounted to about 142,000. As regards individual industries, the coal mining, tin-plate, and carpet industries showed up best in March, while improvement also took place in iron mining, pig-iron, engineering, shipbuilding, boot and shoe, building, wood-making, and pottery.

March Coal Exports.—The feature of the coal export returns of the United Kingdom in March was the increase in the shipments to Germany, France, and Italy. These are the three markets which have suffered most from the industrial disorganisation in the Ruhr and the suspension of German deliveries. The exports to Germany were 1,836,399 tons, compared with 467,718 tons in March, 1922; those to France 1,805,214 tons, compared with 1,237,815 tons; and those to Italy 788,205 tons, compared with 681,110 tons. In each case the shipments in March were greatly in excess of the pre-war figures. The Bristol Channel ports claimed the greater part of the increased trade with France and Italy, and the Humber, the North-East, and the Scottish ports nearly 90 per cent. of the increased trade with Germany. The total quantity exported as cargo has never been exceeded. It amounted to 7,180,102 tons, which is at the rate of over 86 million tons per annum, and the record export for any single whole year was that of 73,400,000 tons in 1913. Of the total trade last month the Bristol Channel ports claimed 38 per cent., the North-Eastern ports 31 per cent., the Scottish ports 16 per cent., the Humber ports 12 per cent., and other ports 3 per cent. The average price f.o.b. was 24s 7d, and the total revenue on the cargo and bunkers exported £10,593,112, which is the largest amount realised on the export of coal as cargo and bunkers since December, 1920, when the average f.o.b. price was 81s 2d, and the cargo and bunker trade only 3,504,173 tons. It may be of interest to point out that Germany received her supplies at an average f.o.b. price of 25s 6d, France at 23s 1d, and Italy at 26s 2d. These differences in price are attributable to the differences in the character and the quality of the coal exported. The conditions, however, were more unfavourable to Germany than to the Allied countries. In the case of the latter credits were given for payment over varying periods extending in some cases to months, but in the case of Germany sterling cash in London was insisted upon against documents, and in some cases exporters had to guarantee the payment of freight to shipowners before their vessels were allowed to sail. So far, however, the German importers have been able to finance their imports under these stringent payment conditions, and it is complained that while business with Germany is prompt and satisfactory that with France and Italy, on the other hand, is becoming increasingly irksome and costly owing to the difficulties raised by French

and Italian importers both in the arrangement of contracts and in the exactions imposed in the matter of delivery.

Grand Trunk Pacific Debentures.—We have received from the Stockholders' Committee of the Grand Trunk Pacific 4 per cent. debenture stock a letter of which the following are the main points:—(1) The Grand Trunk Pacific debenture holders remained passive while the proceedings for the acquisition of the Grand Trunk Company were going on, because repeated statements were made by the responsible Ministers, such as Dr Reid (then Minister for Railways), who said: 'When we take over the system (the Grand Trunk system) we shall assume the liabilities in connection with the Grand Trunk Pacific.' (2) The Government used before the arbitrators the liability of the Grand Trunk on its Grand Trunk Pacific debenture guarantee as an argument to prove that the Grand Trunk preference and ordinary stocks were worth nothing. Having succeeded in this contention, and having obtained £37,000,000 of these stocks for nothing, they would, if they refused also to pay interest on the Grand Trunk Pacific debentures, be 'having it both ways.' (3) The 'guaranteed' shareholders of the Grand Trunk covenanted to pay interest on the Grand Trunk Pacific debentures before they received any dividends themselves. The Government has entered into an agreement by which these 'guaranteed' shareholders are paid in full, while Grand Trunk Pacific debenture holders are left out in the cold. The injustice speaks for itself. (4) During the five months that the Canadian Government has been in possession of our representation they have been occupied in amalgamating the Grand Trunk and Grand Trunk Pacific undertakings, over which we have definite legal rights, with other large systems in their possession with which we are not concerned. This will not only make it impossible for outsiders to know what are the real earnings of the Grand Trunk system, but also make it possible, and in many cases commercially desirable, for the Government to divert traffic and, therefore, net revenue from the Grand Trunk to other portions of the amalgamated system." The letter also points out that representation was made to the Canadian Government five months ago, and that the committee has hitherto refrained, out of consideration for the Canadian Government, from circulating it to their supporters. "Up to this moment," it is stated, "the committee have not even received from Canada the courtesy of an acknowledgment, and they think that the time has come when they are bound to publish the facts." We dealt at some length with the position of holders of Grand Trunk Pacific debentures in our issue of September 25, 1920. At that time we expressed a hope that the Canadian Government would give this matter earnest consideration, and it would be to the interest of all parties concerned if the Canadian Government could issue an early reply to the representation made by the committee of stockholders, which includes prominent business men who are not likely to lend their names to assist in redressing a grievance unless there is strong *prima facie* evidence of a good case.

Another Bank Absorption.—The directors of the Westminster Bank, Limited, announce that they have acquired the business of Messrs Stilwell and Sons, the old-established firm of bankers and Navy agents, of 42 Pall Mall, S.W. The latter published for the first time a balance-sheet in November last, which reads as follows:—

MESSRS STILWELL AND SONS. BALANCE-SHEET—October 31, 1922.	
Current and other accounts	£ 117,779
Liability to customers for cash on deposit, per contra	6,841
Capital	40,000
Cash at Bank of England, with other bankers and on hand	42,792
Customers' cash on deposit at bankers	6,841
British Government securities & bank stock at market values (including £500 Console lodged for widows' fund account)	49,264
Advances to customers	45,733
Freehold premises	30,000
	164,620

It has been arranged to transfer the business at an early date to the Westminster Bank, Haymarket branch, 26 Haymarket, S.W. Mr W. C. Hodgson and Mr G. H. Stilwell have been appointed joint managers, and Mr W. B. Stilwell assistant manager.

Scottish Union and National Insurance.—In the fire department last year of this carefully-managed office the premiums were £1,091,095, against £1,088,785 for 1921. Claims amounted to 53.9 per cent. of the premiums, as against 58.2 per cent., and expenses were kept down to the comparatively low ratio of 38.1 per cent., against 38.7 per cent. After providing for unexpired risks upon the usual 40 per cent. scale (the company allows 50 per cent.), a surplus is shown of £85,733 (7.9 per cent.), against £123,325 (11.3 per cent.). The figures of the marine department have already been published in the accounts of the Maritime Insurance Company; there was a surplus of £30,000 carried to profit and loss. The profit and loss account takes credit for £343,440 on revaluation of assets, £20,000 provision for war debts not required, and £80,000 provision for excess profits duty not required. On the other side of the account £500,000 is withdrawn as a special fire insurance reserve. The available interest receipts were £92,950, and the dividend, less tax, will cost £88,500. An investigation of the life department was made without waiting for the expiry in 1924 of the usual five-year period. The total surplus shown was £1,142,278, of which £597,307 has been allocated to life policy-holders, £132,067 to profit and loss account, and £412,904 carried forward. Life bonuses are declared for each of the five years up to December 31st last. Policy-holders will remember that at the previous valuation as at December 31, 1919, no bonus distribution was made.

Royal Exchange Assurance.—This old insurance company, which dates from 1720, has had a successful year. In the fire account the premiums were £1,480,013, as against £1,533,103 in 1921. The proportion of claims to premiums was 46.1 per cent., against 54.9 per cent., and that of expenses to premiums 46.6 per cent., against 45 per cent. The result, after providing for unexpired risks, was an underwriting surplus of £129,706 (8.8 per cent.), as compared with £103,952 (6.7 per cent.). Settlement of war debts yielded £70,745. A further amount of £50,000 was added to the fire fund, making it £842,006, against £813,241. In the marine department the premiums were £369,008, against £248,364, and the claims in respect of 1922 and previous years £379,283, against £649,930. The marine fund amounted to £724,479, after the transfer of £75,000 to profit and loss. In the general accident department the premiums of £663,037 and interest of £12,608 allowed a transfer of £121,380 to profit and loss, from which £50,000 was taken to make the accident fund £494,754. After charging profit and loss with £157,653 for income-tax, corporation tax, and excess profits duty (on war debts), the credit balance was £1,015,403, as compared with £958,356 a year ago. The directors recommend a dividend of 18 per cent., less tax, for the year. This will cost £93,044, against receipts from interest of £118,521.

Babcock and Wilcox, Limited.—The year ended December 31, 1922, was the best that this company has known. Last year and in 1920 it was thought the company's prosperity was so marked that the figures of those years could not be very much exceeded. The report and balance-sheet to hand, however, show net profits of £787,601, compared with £490,181 in the preceding year, while the contribution to reserve has been increased from £150,000 to £200,000, and the grant to the staff pension fund from £10,000 to £20,000. Last year the balance-sheet contained the result of eight months' trading only of the Indian, Australian, Chinese, and Japanese branches, and no doubt the fact that the results of these branches for 13 months (to September 30, 1922) is included in the present accounts has considerably contributed to the increased profits. The following table, giving profits and appropriation since 1907, shows at a glance the succession of good years the company has experienced:—

	Manufacturing Profits (Less Depreciation)	Net Profits	To Reserve	Pension Funds	Divi- dends	Ord. Rate
1907	£ 318,261	£ 309,769	£ 125,000	£ ..	£ 172,000	20
1908	311,046	301,615	125,000	..	172,000	20
1909	365,733	360,004	125,000	10,000	205,200	24
1910	366,240	362,360	125,000	10,000	221,800	24
1911	387,029	379,224	130,000	10,000	238,400	28
1912	438,300	426,147	150,000	10,000	271,600	16
1913	452,004	446,073	150,000	10,000	276,252	16
1914	421,017	402,947	150,000	10,000	247,290	14
1915	434,246	396,551	150,000	10,000	263,918	15
1916	521,991	438,323	150,000	10,000	263,963	15
1917	518,664	444,513	150,000	10,000	263,963	15
1918	541,854	438,386	150,000	10,000	263,963	15
1919	570,671	455,089	150,000	10,000	263,963	15
1920	683,201	497,468	150,000	10,000	358,765	16
1921	693,514	490,181	150,000	10,000	358,765	16
1922	974,428	787,601	200,000	20,000	444,118	20

For the preceding ten years the reserve fund, it will be seen, regularly received £150,000, and the pensions fund £10,000. The dividend now recommended for the ordinary shares is the highest since 1911, being 17 per cent. for the year, and a bonus of 3 per cent., both free of tax. The amount carried forward is £194,125, which compares with £71,243 brought from the last accounts. In the balance-sheet investments, which are £1,958,172 compared with £1,891,595 at the end of the preceding year, are still taken "at cost." This probably means that the valuation is on a conservative basis, but it does not convey all the information that one would wish. One item of £1,350,680 embraces freehold land and leasehold property, plant, buildings, patents, and shares and debentures in subsidiary companies. A little more detailed information under these heads might be desirable. It is noteworthy that the debts owing to the company have been reduced from £1,596,507 at the end of 1921 to £744,447 at the end of the last financial year. As a whole the balance-sheet shows the company's affairs to be in a remarkably prosperous condition. In view of the growth of the business, the directors propose that the ordinary share capital be doubled, and propose that an amount equal to the paid-up ordinary share capital shall be taken from the reserve fund and the share premium account, and applied in paying up in full a corresponding number of unissued ordinary shares, and that these shall be issued to the ordinary shareholders at the rate of one new fully paid ordinary share for each ordinary share already held. They also propose an increase to £1,000 each per annum for the directors, the present remuneration for the board being £4,000 per annum; that a special payment of £2,000 shall be made to the directors forthwith; and that the company shall in future have the power to vote such sum by way of additional remuneration to the directors as it shall think proper. These proposals are to be placed before an extraordinary general meeting on May 1st.

General Mining Group.—The annual statements of the operating subsidiaries for 1922 are characterised by the segregation of the accounts, the results for the troubled first quarter being set out separately from those of the remaining nine months. This, of course, enables a better idea to be gained of the actual outcome of mining when conditions were more or less normal. The Aurora West shows a small net profit, but the cash assets still fell somewhat short of the liabilities. The distributions of the Meyer and Charlton—whose property is exceptionally rich—exceeded the earnings; hence after providing for taxation the carry forward became reduced by nearly £50,000 to £150,000. Of the ore milled last year 40 per cent. was obtained from reclamation. Nevertheless, the ore reserves show a decrease, no great amount of material remaining to be developed. At rather over one million tons, value 6½ dwts, the ore reserves of the West Rand Consolidated exhibit some decline in both quantity and value, although the present estimate is based on the standard price of gold. On December 31st the cash assets slightly exceeded the liabilities, irrespective of the debentures. The Roodepoort United did not actually close down until December, since which date a thorough clean up of the reduction works has been effected. It is intimated that the property and plant are being held intact, with a view to resuscitating the mine when some basis can be found. At the date of the balance-sheet the indebtedness amounted to £358,100, so that the outlook for the shareholders appears practically

hopeless. The New Goch made a small loss, but is in a comparatively good financial position. This undertaking, of course, is nearing the end of its career. The other four companies remain in a state of suspended animation, but the shares of one of them—the New Steyn Estate—have lately been in demand on the idea that a portion of the property held may be sold to the Durban Deep, which is acquiring an adjoining area.

Rand Mines.—The report for 1922 of this important Kallir finance house, writes our mining correspondent, makes a much better showing than might have been expected in view of the extent to which the operations of the subsidiary companies were affected by the labour trouble of the early part of the year. The explanation is that the directors took advantage of the autumn boomlet in the share market to effect realisations on a considerable scale. This does not necessarily imply any lack of confidence in the future of the concerns whose shares were realised: it is the business of a finance house to sell when markets are good and buy when they are dull. The appropriation account shows that the book value of the investments disposed of exceeded half a million. The purchases amounted to about £442,000, but this included the cost of some 70,000 ex-enemy Rand Mines shares acquired and now held by the company. Appended is a comparison of the results for each of the past three years:—

	1920.	1921.	1922.
Dividends on shareholdings.....	£ 785,548	£ 502,837	£ 391,924
Sundries	84,354	66,632	74,771
Investment realisation profits ..	32,333	36,919	386,854
Total income	902,235	606,388	853,549
Administration expenses	31,654	30,261	27,166
Taxation	..	18,878	12,149
Bad debt reserve	..	21,907	20,778
Prospecting	7,575	16,671	4,985
Net profit	863,006	518,671	788,471
Dividends	770,673	372,049	512,538
Rate per cent.	145	70	100
To reserve account	..	..	441,780
From reserve account	331,047	274,517	..
Brought forward*	886,480	627,766	300,003
Carried forward	627,765	499,424	842,136

* Including forfeited dividends.

It will be seen that the dividends on shareholdings indicate a further decrease; their total is closely approached by the investment realisation profits, which in each of the two preceding periods were unimportant. Last year's profits from this source, by the way, exceeded those of 1919. After payment of the increased dividend, a largely expanded balance goes forward. On the basis of the distributions for 1922, the yield is slightly over 9 per cent.

The forty-first annual meeting of the London Chamber of Commerce will be held at Skinners' Hall, Dowgate hill, London, E.C., on Wednesday, May 2, 1923, at 2.30 p.m., to receive the report and accounts for 1922, to elect a president and honorary auditors for the ensuing year, to fill vacancies on the council, &c. Lord Kysant, C.G.M.G. (president), will occupy the chair.

Obersea Correspondence.

UNITED STATES.—WAGE ADVANCES—MINIMUM WAGE LAW DECLARED VOID—WINTER WHEAT REPORT—FIRST QUARTER'S BOND OFFERINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 16.

FOR a number of reasons, the iron and steel industries have attracted more attention than usual during the past week. New high records were found to have been established in the March output of both pig-iron and steel ingots. The leading interest reported a further increase in unfilled orders, despite its unprecedented rate of production, exceeding even the peak of war time, and announcements were made that, from to-day, between 200,000 and 300,000 workers in the steel industry throughout the United States will receive wage advances, approxi-

mating 11 per cent. over the scale that has been paid since September last. According to the *Iron Age*, last month's output of pig-iron amounted to 3,521,275 tons, surpassing the previous high monthly total of 3,508,849 tons in October, 1916. For the first three months of this year production was 9,745,066 tons, representing a gain of 80 per cent. over the corresponding period of 1922, and of 4 per cent. over the first quarter of 1920. The Iron and Steel Institute announced March production of steel ingots at 3,402,007 tons, the largest monthly total ever recorded, and comparing with 2,370,751 tons in March of last year. The United States Steel Corporation reported unfilled steel orders as of March 31st as 7,403,000 tons, an increase of 119,343 tons over February, and making the total of unfinished business on hand the largest since January, 1921. Last month's shipments of finished products from the corporation's mills were much larger than expected; therefore, the gain in unfilled tonnage did not come up to some of the more optimistic estimates. Based on operations at more than 90 per cent. of capacity, the result of March operations is that the corporation shipped about 1,300,000 tons of finished products from its various manufacturing plants, while new business booked during the month probably aggregated 1,500,000 tons, approximately. The development, however, which attracted the widest interest was the Steel Corporation's action in advancing wages about 11 per cent. in all of its mills. The increase will apply to some 150,000 employees, and will add about \$25,000,000 to the annual pay roll. Practically all of the large independent steel manufacturers promptly announced a similar advance in wages, to take effect to-day. The Steel Corporation has been paying common labour 36 cents an hour, or \$3.60 for a 10-hour day. The 11 per cent. increase will bring the rate up to 40 cents an hour, or \$4 a day, which is exactly 100 per cent. above the rate paid in 1915. The highest wage reached during the war was \$5.06 for a 10-hour day, which became effective on February 1, 1920. The 11 per cent. rise in wages will mean an increase of about \$1.75 a ton in the cost of steel production, it is said, but steel prices have advanced a great deal more than that since last September, when the 20 per cent. wage increase was granted. The present average price of eight leading steel products is given at \$61.02 a ton, as compared with an average of \$53.21 last September and a low level of \$42.12 a ton last February, which marked the depth of the downward movement in the deflationary period. It is worth noting, however, that a very large percentage of shipments being made by mills, and especially by the Steel Corporation, is at the lower price level that was in effect last autumn. In view of the increased cost of production and the possibility of demand being checked by high prices, there is much speculation as to what the effect may be upon net earnings of various steel producers.

The past week also brought announcements of wage increases, varying from about 10 to 12 per cent., in the meat packing industry, to become effective immediately. Approximately 20,000 workers in Chicago and 60,000 in other cities, it is reported, will be affected, and a much larger number may eventually be benefited.

The steel and meat-packing wage advances follow those made in many other industries during the past month or two. In fact, there has been a veritable epidemic of wage increases. The number of upward wage scale revisions announced last month, according to a reliable compilation, was 218, as against the previous high record of 86 in January last. The increases occurred mainly in the textile, building, printing, metal, mining and machinery trades and industries.

It is a rather singular coincidence that, while wages for various classes of labour are being raised in all directions, the United States Supreme Court has just decided that Congress cannot legislate to fix wages for adult women in private employment. By a vote of five to three, the Court declared unconstitutional the law (as applied to adult women) passed by Congress in 1918 fixing the minimum wage for women and minor girls in the district of Columbia. The majority opinion of the court said that the statute was simply and exclusively a price-fixing law as applied to adult women, who were legally as capable of contracting for themselves as men. The law, he

added, "forbids two parties having lawful capacity—under penalties as to the employer—to contract freely with one another in respect to the price for which one shall render service to the other in a purely private employment, when both are willing, perhaps anxious, to agree, even though the consequence may be to oblige one to surrender a desirable engagement, and the other to dispense with the services of a desirable employee." In declaring that the act in question went beyond the constitutional limits, the opinion said that "the good of society as a whole cannot be better served than by the preservation against arbitrary restraint of the liberties of its constituent members." The Supreme Court's decision was rendered in two cases, and is generally regarded as one of the most important ever rendered by that tribunal, and seems likely to have far-reaching effect, since minimum wage laws are in force in many States, including New York, Kansas, California, Oregon, Wisconsin, and Michigan. A former assistant to the Attorney-General of the United States, who represented the plaintiffs, is quoted as saying that the decision would have more profound consequences than any other rendered by the Supreme Court in a generation. For obvious reasons, it is not surprising that the head of the American Federation of Labour issued a statement deploring the court's action.

The Department of Agriculture report on winter wheat conditions as of April 1st plainly shows the effect of the severe winter, and of the prolongation of the cold weather into the spring season. The condition of the winter wheat crop, as of April 1st, is given as 75.2 per cent. of normal, as against 79.5 on December 1st of last year, and 78.4 on April 1st a year ago; it is the lowest condition reported on April 1st since 1917. The exceptionally low percentage shown is attributed chiefly to dry weather in the western part of the wheat belt, from western Nebraska south to Texas, and to freezing and thawing east of the Mississippi River. The area seeded is shown to have been smaller than in the preceding year by 3.5 per cent. One of the doubtful factors, creating uncertainty as to the probable size of the crop, is that the area abandoned is still unknown; last year 5,500,000 acres were abandoned, and recent reports would seem to indicate that the abandoned acreage will be fully as large this year. Based on the April 1st condition, the Department of Agriculture estimates the winter wheat crop at 572,000,000 bushels. April crop forecasts, however, have often proved far out of line with the actual yield. A great deal can happen between now and harvest time.

During the first three months of this year new bond issues offered in the New York market totalled \$1,248,500,000, representing an increase of approximately \$145,000,000 over the aggregate for the corresponding period of 1922. These figures comprise only State and municipal, foreign, railroad, industrial, public utility, and farm loan bonds; they do not include real estate mortgage bonds, Government note flotations or new stock issues, all of which were put out in large volume. There was a striking difference in the character of this year's offerings. In the first quarter of 1922 many foreign bonds were floated here, whereas most of this year's large issues were for domestic needs, the major part consisting of industrial and public utility loans. While the increased offerings in 1923 have reflected to a considerable extent the greater demand from corporations for funds as a result of the business expansion, a substantial part of the new financing has been for the purpose of refunding, at lower rates of interest, numerous short-term bonds issued during the war.

FRANCE.—RUHR.—COAL DELIVERIES.—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, April 26.

THE Ruhr is still the one outstanding subject of all political and economical discussion, and promises to remain so indefinitely. The Chambers will not reassemble until May 8th, and the question that is being asked on all sides at present is whether German resistance to Franco-Belgian demands will be overcome before that date or afterwards. If before, then the political situation here

will be immensely simplified; but if no change takes place before May 8th it is more than possible that the present deadlock may prove a serious factor in French political calculations. All kinds of rumours have been prevalent during the past fortnight as to the situation of the Poincaré Cabinet, and rather more than the usual amount of political intrigue is in progress. The outstanding fact, however, is that the French *conseils généraux*, which correspond more or less to English County Councils, but whose resolutions in regard to political matters are generally a fairly sound reflection of the feeling of the country at large, have just resumed their sittings, and have—practically unanimously—adopted motions thoroughly approving the policy followed in regard to the Ruhr by the Poincaré Government. These resolutions, particularly in view of the fact that the French General Elections are due within another twelve months, are being regarded very seriously by both senators and deputies, and will undoubtedly have a very restraining effect on any incipient "revolts" against the Ministry which may have been under consideration in connection with the resumed session. Should the German Government decide to capitulate, it is quite probable M. Poincaré may decide to resign. He is no longer a young man, and the incessant strain which he has undergone since he came into office nearly eighteen months ago (as all who know anything about his untiring personal energy will confirm) might well have proved too much for any man of less sturdy constitution. As it is, the Premier makes no secret of the fact that he is anxious to leave office as soon as the object for which he returned to power has been attained—namely, the extraction from Germany of an admission that she has been beaten, and that she is willing honestly to accept such terms in regard to reparation payments as the Allies may impose.

Whether Germany is within measurable distance of capitulation, however, is quite another matter. The standard by which the world, rightly or wrongly, is estimating the success or non-success of the Franco-Belgian occupation of the Ruhr is the quantity of coal and coke which is being sent into France and Belgium as the result of the steps that have been taken. On this point a good deal of confusion exists, and anything like reliable and comparative figures are difficult to obtain. M. le Trocquer, the Minister of Public Works, who is the responsible official head of the technical side of the Ruhr enterprise, expresses himself well satisfied with the manner in which both the reorganisation of the railways and the development of the coal and coke transport services are proceeding. It is generally admitted, however, that the quantity of combustible which is being got out for the benefit of the French metallurgical industry is still very far below the amount that was being delivered by the Germans themselves prior to the occupation of the Ruhr. The average monthly deliveries of coal and coke during 1922, under the Reparation clauses, was 1,065,000 tons. According to German figures, the amount of coal and coke drawn from the Ruhr by the Franco-Belgian authorities from January 11th, the beginning of the occupation, down to the end of March was 240,000 tons, or about one-twelfth of the monthly average delivered by the Germans themselves throughout last year.

This figure, in view of the fact that no French official bulk figures are obtainable, may be accepted, I believe, as approximately accurate. It is, moreover, largely confirmed by the detailed figures published by the French authorities through representatives of their Press in the Ruhr. The *Information*, in a dispatch from its Ruhr correspondent on Monday, stated that so far 100,000 tons of coke have been sent out, and that the stocks of coke that have been seized total 410,000 tons, while another 518,000 tons are known to exist at various points. On March 3 the French were engaged in transporting coke from three depôts only. At the beginning of the present week loading for transport was in progress at 40 separate depôts. At present about 10,000 tons of metallurgical coke are being sent into France every day, which is for all practical purposes equivalent to the 300,000 tons a month sent out by the Germans under the reparations clauses prior to the occupation. At this rate, the stocks, including both those already requisitioned and otherwise, should be exhausted in three months. The stocks of coal are, of course, much

larger, and are reported as amounting to at least 1,550,000 tons, but only a trifling proportion of this class of combustible has yet been transported out of the Ruhr.

The effect of these increased deliveries of coke on the French metallurgical industry in the immediate future should be important. The critical period through which it has just passed may be judged from the fact that the number of blast furnaces in operation had fallen by April 1st from 116 to 74, and many of the latter were merely being kept warm to prevent injury to their structures. Meanwhile, the French steel industry has very few orders in hand of any importance, but it is expected that from now onwards, in view of the greatly improved deliveries of coke that now appear to be ensured, at least for the moment, orders will come in rapidly.

The French foreign trade returns for the first three months of the present year as compared with those for the corresponding period of 1922 are as follows (in francs):—

	First Three Months of		Inc. or Dec. in 1923.
	1922.	1923.	
Imports—			
Foodstuffs	1,193,697,000	1,623,062,000	+ 429,365,000
Raw materials	3,013,941,000	4,327,719,000	+ 1,313,778,000
Manufactured goods	1,026,141,000	1,023,263,000	— 2,878,000
Totals	5,233,779,000	6,974,044,000	+ 1,740,265,000
Exports—			
Foodstuffs	426,094,000	672,600,000	+ 246,506,000
Raw materials	1,152,390,000	1,892,882,000	+ 740,565,000
Manufactured goods	2,994,656,000	3,559,949,000	+ 565,293,000
Postal parcels	307,097,000	373,703,000	+ 66,606,000
Totals	4,880,237,000	6,499,134,000	+ 1,618,897,000

The values of the imports are based, as heretofore, on the declarations made by importers and controlled by the Customs authorities in connection with the assessment of the tax on turnover. Export values are based on the official scale fixed by the Permanent Commission for Customs Valuation for the year 1921.

The comparative tonnage of both exports and imports for the first quarters of 1922 and 1923 is returned as follows (in metric tons):—

	First Three Months of		Inc. or Dec. in 1923.
	1922.	1923.	
Imports—			
Foodstuffs	1,024,502	1,317,186	+ 292,684
Raw materials	10,474,826	10,341,405	— 133,421
Manufactured goods	440,807	423,908	— 16,899
Totals	11,940,135	12,082,499	+ 142,364
Exports—			
Foodstuffs	200,948	294,477	+ 93,529
Raw materials	4,008,624	5,237,496	+ 1,228,872
Manufactured goods	452,546	668,830	+ 216,284
Postal parcels	6,145	7,274	+ 1,129
Totals	4,668,263	6,208,077	+ 1,539,814

The most significant feature of the returns for the first quarter of 1923 is that, in comparison with the figures for 1913, the exports showed an increase of 1,471,497 tons in weight, and of 4,860,768,000 in value, while the imports showed an increased tonnage of 1,584,604 tons, and an increased value of 4,859,726,000. The increase on the figures for 1913 was common to all categories of imports and exports, with the exception of imports of manufactured goods (which were 52,611 tons less than during the first three months of 1913), and exports of postal parcels. The reasons for the enormous increases in values are obvious. One of the most satisfactory features of the returns, from the French point of view, is the fact that imports of manufactured goods show a falling off of 2,878,000 during the three months as compared with the corresponding period of last year, while exports of the same category of products have increased by over 565½ million francs. The trade balance against this country, which amounted in January to 448 million francs on a total volume of 4,840 millions, dropped in February to 14 million francs on a total volume of 4,681 millions, and in March to 12 millions, on total exchanges amounting to 4,861 million francs.

GERMANY.—RUHR.—EXCHANGE AND BANK RATE —BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, April 23.

It is understood that the Cuno Cabinet will make a new Reparations offer. Not much confidence is felt as to the result, because the Ruhr occupation, with the cessation of which the offer will be linked, is still, as from the first, looked on as primarily a political measure, and the fact that it was motivated not with the general Reparations failure, but with the imperfect delivery of coal and wood, is regarded as confirming this interpretation. Lord Curzon's speech was very well taken, but it is held to emphasise England's position as adviser, not as mediator. Of the offer which it is assumed is impending nothing is known; it may be made in a speech by the Chancellor or Foreign Minister, and it may be in a Note to the Treaty Powers.

The new fall in mark exchange and the unexpected act of the Reichsbank in raising its discount rate by another 6 per cent. have made a great sensation. In itself, and relatively, the mark drop from around 22,000 to around 30,000 to the dollar was a small thing; but although the basis of the pseudo-stability obtaining since mid-February was at best shaky, the public had got used to stable values, and there were even indications that industry, which had been threatened with dullness, would adapt itself. Several reasons are given for the heavy rise in the foreign exchanges on the 18th, but the more important only lead to what has been pointed out from here, that the stability, having ceased apparently to be threatened by international mark-selling, against which the Reichsbank still had weapons, must some day be threatened by the enormous inflation. If the collapse had not come last week, it would, presumably, have come at a not very distant date, owing to the inevitable effect upon the mark's internal value and through that upon foreign trade of the vastly increased quantity of payment means in public hands. In fact, the doubling of circulation between mid-February and mid-April had no visible effect upon home prices, which have gone back, though not much; and the reason is that the improving and, later, stable mark exchange continued, according to tradition, to govern prices; prices of imports necessarily declined, and the upward movement of home prices, which was formerly effected by a process which is here summarily, but not quite correctly, described as "sympathy," was stayed. But it was plain that this could not continue indefinitely, and that in the end home prices must be driven up for internal reasons, and then bring a mark-exchange fall.

Before there was time for this to take place, the inflation began to undermine the mark exchange in another way. It placed in private hands, in particular in the hands of the credit-takers whose record is written in the Reichsbank's weekly statements, enormous resources; and a part of these resources, instead of going into goods, and so raising prices, went into one commodity only, foreign bills and notes; and the panic purchase of foreign currencies on the 18th was the result.

Signs of this, as reported from here last week, were earlier visible. The Government and Press reproach the currency buyers; credits which were meant to sustain industry, threatened by the decline of receipts due to the Ruhr transport embargo, were used, it is charged, to speculate; and there is probably truth in this; but the inflation seems to be responsible, not only because it provided the resources, but also because, for the obvious reasons given above, it foreshadowed a new decline in mark buying power, and all those parties which had more marks than they could immediately use attempted to secure themselves against the future—just as in times of actual exchange decline—by buying stable currencies. There was further the fact that important interests wanted a moderate mark-exchange decline; the recovery of February frightened off the home buyer, and in certain branches threatened export, and to these parties the stabilisation appeared an ambiguous measure; it, indeed, checked the price rise, and thereby increased the Republic's resisting power in the conflict with France, but, at the same time, it injured business; and while it prevented wage-conflicts, it threatened, in some industries, a cessation of all wages.

The Reichsbank's policy on April 18th has been severely criticised. The Bank was undoubtedly surprised by the stormy demand for foreign bills—on the one day, it is stated unofficially, over 1½ millions sterling, in addition to large sums in other currencies, was demanded. Instead of preparing for a moderate rise in the exchanges, which was inevitable, the Bank proceeded to ration applicants, and the small proportions of the demands granted, recalling the great mark collapses of 1921 and 1922, induced panic conditions and increased the demand. When sterling rose to 115,000 marks, the Bank rationed with 20 per cent., with the result that the rate rose later to 145,000; the dollar was rationed with only 5 per cent., and ultimately passed 31,000; the gulden was rationed 10 per cent., and had a proportionate rise. Next day the Government issued a *communiqué* promising two measures: restriction of import, and compulsion to register holdings of foreign bills on a particular date, which is not yet stated. The increase of the Reichsbank's discount rate was not foreshadowed. It is surprising that restriction of import has not been earlier tried. The reason usually given is that such restrictions, being limited to certain goods, must appear to be directed against the producing countries, and that export would thereby be damaged. It is a fact, however, that there are large imports of unnecessary goods, and of goods—e.g., pottery—which Germany can herself produce almost exclusively from native raw materials.

From the registration of currency holdings not much is expected; this measure is in a class with the suspension of banking secrecy, which helped very little, did much harm, and was abandoned practically altogether this year. Compulsory registration will probably increase hoarding, and hoarded currencies will not be brought out when needed. At a conference between the Chancellor and the private banks it was estimated, according to newspaper report, that the high-exchange currencies in private hands have a value of 1½ milliard gold marks, and the high-exchange foreign notes about the same value, so that the total would be 3 milliards, or £150,000,000. A *Berliner Tageblatt* financial writer, Dr Pinner, thinks these totals too low. The first private bank report for 1922, that of the Berliner Handelsgesellschaft, which is the smallest of the great banks, shows foreign currency deposits of a value of 28,590,000 gold marks on December 31st last, which, being worth at the then exchange 50 milliards, exceeded largely the paper-mark deposits of 27,640 million marks. A year before the paper-mark deposits were 4,600 millions, and the foreign currency deposits had a value 500 million paper marks. If this bank's accounts are typical it may be concluded that the foreign currency holdings, as far as they are in native banks, have much increased of late. The writer mentioned considers that the currency holdings are larger than is required for current foreign trade purposes, and that they could be resorted to for mark exchange support. It is certainly remarkable that in one relatively small bank there should be high-exchange currencies equal to more than half the amount subscribed for the recent Gold Loan.

The increase in the discount rate from 12 to 18 per cent., advances 19 per cent., has not been well taken. On July 28th last the rate was 6 per cent., August 28th 8 per cent., November 13th 10 per cent., January 18, 1923, 12 per cent. In the last few weeks money has been easy, an increased proportion of newly discounted Treasury bills were placed with private capitalists, and the increase in circulation has been relatively small. The reason for increasing the rate has not been so much that the credit strain was abnormal as that, in view of the business dullness, part of the money was borrowed in order to finance exchange purchases. This is plain from Dr Havenstein's statement to the Bank Central Committee. Dr Havenstein appealed to the private banks not to execute orders to buy exchange where no legitimate trade interest is involved; and also asked the banks not to put up their own rates (which largely consist of so-called "commissions" on top of nominally moderate interest rates). Criticism of the Reichsbank's policy is that it will hamper industry, which is already badly hit, and that by sending up prices it will counteract the Government's own policy, and have the same effect as a rise of the foreign exchanges, to prevent which is the central point of the policy.

The Reichsbank statement for the 14th shows a new increase in the metal reserve of 2,566 millions, to 11,697 millions, due to booking of token coins. The gold deposits in foreign central banks are 184,452,000 gold marks, but it is stated that further shipments have since been made. None of this gold is yet pledged, and it is available as security for foreign bills in case of need. Noteworthy in view of the easier money situation is that the outstanding Darlehnskasse advances have fallen (by 61 milliards) for the first time for many weeks. Commercial bill discounts increased by 163 milliards, Treasury bills by 642 milliards, and circulation by 213 milliards. The Bank's note-printing capacity is stated to have been increased to 350 milliards a day, which far exceeds the need, at the present value of money. The Customs gold surcharge has been raised to 502,900 per cent. The Prussian 7 to 15 per cent. paper-mark loan has yielded so far 8 milliards, and is considered a success—no limit was placed to the total. As a great many other paper-mark loans are being floated, it must be concluded that the stabilisation restored a certain confidence in the paper mark. The Finance Ministry's report for the financial year 1922 (ending March 31st) shows the following yields of the chief sources of revenue:—

	(000's omitted.)	Marks.
Income-tax.....		533,340,556
Sales tax.....		215,867,063
Bourse tax.....		43,308,417
Railway freight tax.....		47,211,986
Customs, including surcharge.....		94,964,438
Coal tax.....		237,947,486
Tobacco tax.....		65,229,505
Export duties.....		159,917,930

The Bourse last week was firm. The *Frankfurter Zeitung's* index for home dividend-payers shows for April 20th 1,255,115, against 1,175,665 a week earlier. The Dollar Treasury bills are now admitted to quotation, although a precise total of the result is not yet known. Their quotation is a little below that of the dollar, but apparently the public accepts them as fully secured. The fusion plans referred to last week have been in so far completed that the Linke-Hofmann and Caro-Hegenscheidt concerns have united.

NORWAY.—PRINTING STRIKE—BANK REPORTS—TREATY WITH PORTUGAL—INDUSTRIAL CONDITIONS—EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, April 18.

LABOUR troubles have begun again, printers having gone out on strike after futile attempts at conciliation. All the dailies at Christiania continue appearing in the regular way, because they have special arrangements, and pay higher wages than those received by the rest of the printers, and the newspapers in the provinces, after some days of difficulties, most likely will contrive to appear. But the struggle most likely will be a protracted one.

Various fresh wage agreements fall due during the coming months, and most people look ahead with some apprehension.

The preliminary reports of the private banks during 1922 disclose several interesting facts. The means at the disposal of the banks during the year were reduced by 425 millions, or somewhat under 9 per cent. The maximum was reached in October, 1920, the sum then being 5,416.5 million kroner. The total reduction since then is about 900 million kroner. This reduction, of course, is due to contraction of credits, which is, in its turn, caused by the decrease in values. The loans since the maximum—also in October, 1920—have gone down by about 1 milliard kroner, or nearly 25 per cent. At December 31st the amount was 3,081 million kroner. In October, 1920, it was 4,066 millions. The share capital of 97 Norwegian private banks on December 31, 1922, was about 621 million kroner, and reserve funds 256 millions. Some of the big banks are continually overwhelmed with deposits, while some smaller, mainly provincial, banks are getting into difficulties for lack of money, not only because new depositors go to the bigger banks, but also because old depositors are withdrawing their funds. This is very troublesome, not only for the banks themselves, but also for their districts.

The treaty with Portugal now has been arranged, and business relations begin to assume their normal aspect. The next step will be to arrive at a permanent arrangement with Spain.

The cellulose and wood-pulp mills are continuing to have a good time. For instance, moist ground wood-pulp, which at the beginning of the year cost 110 kroner per ton (in itself a very good price), to-day costs 130 to 140 kroner. Easy bleaching sulphite pulp was 360 kroner per ton, but is now at least 400 kroner. Paper, on the other hand, remains cheap, although there is a brisker sale. According to *Farmand*, the production in 1922 of ground wood-pulp was 400,000 tons, of cellulose 200,000 tons, and of paper 220,000 tons, or considerably more than in any previous year. The pulp and paper industry ranks easily first among Norwegian industries, although hardly much more than 40 years old.

The codfisheries for this year have yielded a good result. The main fisheries take place at the Lofoden islands, and the cod caught there number about 16½ millions. The fish being very fat, the quantity of cod-liver oil was large, viz., about 64,000 hectolitres. The total quantity of cod landed in the whole country is nearly 32,000,000, of which 21,000,000 have been salted and 10,000,000 dried.

The prominent feature in the exchange market to-day was the enormous fall in Reichsmark. For a long time it has remained at 0.0275 pf. per krone. To-day, suddenly, it fell to 0.0185 pf. per krone. Otherwise, the exchanges remain rather stable.

The weather is fine, but cold, and it is evident that there will be a very late spring. Mills are still idle here and there for lack of water-power.

GREECE.—NATIONAL BANK'S MEETING—THE GOVERNOR'S REPORT—A GENERAL SURVEY OF THE ECONOMIC SITUATION.

(FROM OUR CORRESPONDENT.)

ATHENS, April 12.

At the annual meeting of the shareholders of the National Bank of Greece, held on April 4th, the Governor, Mr A. Diomède, stated that the economic situation of the country is dominated by the monetary problem. The difficulties of the moment, he said, due to the depreciation of the currency, are disturbing the economic and social equilibrium. Bank-notes issued amounted to 3,670 million drachmæ on December 31, 1922, an increase of 1,150 millions as compared with the circulation of the corresponding date of the previous year. However, an important amount of this increase in bank-notes had not yet been put in circulation at the end of the year. A great part of the circulation had been issued for the needs of the State. Therefore, it was covered by State bonds only. This situation is, of course, not satisfactory, but it is confidently expected that it will improve, when the credits

opened during the war by the Allies in favour of the Greek Government, and held still in suspense, will be realised in the end, since the right of Greece to encash them is legally unshaken. They served, as is known, as cover for a considerable part of bank-notes issued during the war. The governor declared himself in favour of taxation, wisely imposed, to meet the heavy expenditure of exceptional circumstances, and he referred to the satisfactory results so far obtained by that policy. In fact, the fiscal effort recently made is clearly shown in the revenue of the State from taxation, which has increased at a rapid rate. During the financial year 1921-22 it amounted to 920 millions, during 1922-23 to 1,588 millions, and for the period 1923-24 it is estimated at more than 2,500 millions. He uttered a warning, however, against attempting to exceed certain tolerable limits of taxation, and added that public expenditure, to cover which there existed no funds available from the country's resources, should be ruthlessly cut off, however painful such an operation might appear. A helpful sign on the economic horizon of the country is, according to him, the present situation of the public debt, the external part of which amounts to 1,700 million gold drachmæ. Interest and sinking fund on this amount require about £2,300,000 annually. The service of the debt is absolutely secured by the assigned revenues, which aggregated 463 million drachmæ in 1922, and which, he said, will yield nearly three times that amount in the current year, owing to the adjustment of the various rates with the present value of the currency. The appreciation of the efforts to secure the service of the external debt is reflected, he went on to say, in the rising price of the Greek bonds on the London market, quoted now from £40 to £45, after having dropped as low as £20. Equally significant as a proof of the economic power of the country is the fact that since 1917 the Government has contracted internal loans of no less than 2,700 millions, in actual money, borrowed from the savings of the people. With regard to the efforts repeatedly made during the past years to control the foreign exchange rates by various official measures, he was very strong in condemning any such effort as futile and incapable of preventing the rising movement of the rates. In his opinion, the rise in the foreign exchanges is due mainly to psychological factors, which account also for the conversion of a part of the people's savings into dollars and pounds sterling. On the other hand, the adoption of prohibitive measures creates a lack of confidence, and tends to keep inoperative at home or abroad the capital which would otherwise be utilised productively in the country. The diminished remittances from Greeks residing abroad and the decline in the rate of increase of the bank's deposits is attributed to the restrictions imposed from time to time. During the past year the bank's business showed appreciable increase in all the branches of its activity. The funds engaged in productive business show an increase ranging from 32 to 140 per cent., as compared with the sums employed in similar transactions during the previous year. Net profits reached the record figure of 168 millions, against 104 millions in 1921, notwithstanding the low

rate of interest charged by the bank. A sum of 85 millions has been transferred to the reserve funds, which now amount to 220 million drachmæ. Mr. Diomède ended his speech by expressing his belief that the current year will mark a new stage in the life of the country, and that the Greek people, devoting themselves with zeal and courage to peaceful pursuits, will lay those wider foundations which are necessary for the economic prosperity of the country in the future.

CANADA.—LATE WINTER—BUSINESS CONDITIONS—AGRICULTURAL AND MANUFACTURING PRICES—WHEAT-GROWING UNPROFITABLE IN MANITOBA—ATLANTIC SHIPPING COMBINE—DIFFICULTIES OF CATTLE EXPORTERS—BANK ACTS REVISION—LLOYD'S AND THE UNION BANK—THE GRATUITIES TO GRAND TRUNK DIRECTORS AND OFFICIALS—ONTARIO'S FUEL—MILLING INDUSTRY.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 9.

THE welcome thaw which began last week has been temporarily checked, and winter is still lingering except in a few favoured spots. A late seeding is now inevitable, and unless a spell of really warm weather sets in and drives the frost out of the ground there will be a considerable diminution of the crop acreage. In the west there is less snow to disappear, but the farmers like to be at their seeding not later than April 20th, and in many districts this will now be impossible. The abnormal prolongation of winter has seriously militated against the business activity which was expected after Easter. Climatic conditions have offered no inducement for people to discard their heavy winter clothes, and the sale of spring and summer goods has been very disappointing. Country storekeepers, although their stocks are depleted, will only buy to meet their day-to-day requirements, and a tendency towards higher prices in many commodities has not been popular with a public which already thinks many manufactured articles too dear.

Index figures published by the Federal Department of Labour show the difficult position in which the Canadian farmer began the year 1923 as compared with 1914. The relative prices of various farm products were shown as follows:—

	Jan., 1914.	Jan., 1923.	Inc.
Grains and fodder	140.9	171.5	30.6
Animals and meats.....	189.0	207.0	18.0
Dairy products.....	179.9	232.3	52.4
Hides and tallow.....	194.0	135.0	*59.0

* Decrease.

But the comparative wholesale prices of commodities which the farmers must purchase are as follows:—

	Jan., 1914.	Jan., 1923.	Inc.
Groceries	112.9	183.0	70.1
Woolens	137.5	225.4	87.9
Cottons	145.2	284.3	139.1
Implements	106.6	230.1	123.5
Lumber	183.5	334.4	150.9
Footwear	155.7	207.7	52.0
Paints, oils, glass	140.2	286.9	128.7

Since these data were compiled most of the prices in the lower table have risen, but taken as they stand they reveal a deplorable development in the farmers' condition. The most striking anomaly occurs in the price discrepancies between hides and tallow and the finished articles in the shape of footwear. While the former are 59 points lower, the latter are 52 points above the pre-war level. To bring back the ratio of wheat to manufactured commodities in the matter of price, the latter should be selling at \$1.57 per bushel, whereas very few western farmers have secured more than \$1 for their wheat crop this season.

A special Committee of Parliament has been investigating agricultural grievances and problems with a view to suggesting remedial measures, and some of the evidence given by western witnesses confirms the tale of the index figures. Mr. H. Grant, of Winnipeg, who holds a Fellowship in Rural Economy in Manitoba University, testified that at two average points in Manitoba where crops of 17 and 18 bushels per acre had been grown, the cost of production had been respectively 98 cents and

\$1.07 per bushel. As the Bureau of Statistics shows that the average price received for Manitoba wheat was only 85 cents per bushel, obviously many farmers are conducting their operations at a serious loss. Under such circumstances their representatives at Ottawa are not disposed to encourage any great expenditure on immigration schemes until conditions improve.

But perhaps the most interesting fruit of the agricultural Committee's investigations is the revelation of the close combine which exists in the Atlantic shipping trade. The evidence offered by steamship company managers demonstrated that the basic rates from both American and Canadian ports to Britain was settled at a weekly conference held in New York, and that the Canadian lines made minor adjustments by subsidiary conferences in Montreal. The disconcerting fact was also dragged out that the Canadian National Marine participated in these rate-fixing conferences, and instead of trying to break the ring joined in combating freight rate reductions. It was also discovered that flour ground in American mills is being carried from Canadian to British ports at a cheaper rate than flour of Canadian origin. The reason for this strange anomaly is that the United States Shipping Board, anxious to get flour cargoes, guaranteed a special rate to the American Millers' Association, and the Canadian boats have to meet it if they want to get any American flour.

But what has caused even greater indignation among the farming community is the news that British buyers who have come over to take advantage of the removal of the embargo and buy Canadian store cattle have found all the available space for cattle booked up for April and May. Its holders are demanding a rate of \$25 per head, which is considered excessive. The *Manitoba Free Press* and the *Toronto Star* have both protested fiercely against this situation, and demand Governmental action to cure it. The *Free Press* declares that thousands of cattle are ready in the West for shipment, but that a disgraceful "hold-up" is being attempted, whereby the feeders of the cattle will either have to pay extravagant toll for transportation services or sell them cheaply to speculators who have had the foresight or influence to pre-empt the available shipping space. At previous Imperial Conferences there have been tentative efforts made to deal with the problem of shipping combines, but nothing but a few futile committee reports have resulted. However, the Canadian delegates are likely to call for more strenuous measures at the next Imperial Conference.

The Committee on Banking and Commerce has not got down to serious work in its task of revising the Bank Act, but now that Parliament has reassembled after the Easter vacation, regular sessions will be held and a long series of witnesses examined. The Canadian Council of Agriculture have presented a memorandum to the Government asking that, while the committee should continue its work till Parliament rises, the actual legislation which will be necessary to give it effect should be deferred till next year in order that the country should have time to digest the various reports and proposals which will emerge from it. The banking interests will not relish any such delay, but if a by-election now being fought in the West does not result in a victory for the Government's candidate the latter may be under the necessity of conciliating the Progressive party, who are backing up the request of the Council of Agriculture. There are persistent rumours abroad that Lloyds Bank are engaged in negotiations which will give them either a controlling interest in or a close working alliance with the Union Bank of Canada. This institution has its headquarters in Winnipeg, and does a large Western business.

When it was announced a week ago that the Grand Trunk directorate had in December, 1919, voted themselves five years' directors' fees and very substantial gratuities to officials both in Canada and England there was an indignant outcry, which found expression in every shade of the Canadian Press. Under the Government's agreement with the company, it was stipulated that the company could not dispose of any of its assets without the assent of the Government, and although it did not become formally operative till March, 1920, its main terms had been definitely settled when the gratuities were voted. The gratuities to the officials were paid out of the fire

insurance fund, which, having reverted to the Canadian National Railways, is simply diminished by the amount paid out. So strong has been the public outcry that all the Grand Trunk officials who, after receiving the gratuities have secured employment on the Canadian National staff, have voluntarily agreed to return them to the public treasury. The general view in Canada is that the Grand Trunk directors were simply out to get what plunder they could secure, and failed to observe the terms of the agreement which had been arrived at. So widespread has been the protest against the transaction that the King Government have decided to appoint a Royal Commission, with full powers to investigate the whole circumstances surrounding it. The five years' directors' fees, which were voted as "compensation for loss of office," amounted to \$167,800, and the total value of the gratuities voted at the time by the English and Canadian boards was \$430,200.

The people of Ontario are determined to avoid if possible a repetition of the harassing fuel scarcity of the past winter. Through the enterprise of a number of newspapers, consignments of lignite coal from Alberta will arrive this week in Ottawa and other places, and will be distributed free to selected householders, who will test its quality. The average furnace in Central Canada has been constructed for the utilisation of anthracite coal, but the people of Winnipeg have successfully managed to adapt anthracite furnaces to Alberta coal, and an old prejudice against the latter has disappeared. If the Alberta coal finds favour in the East, the proposal is that the Canadian National Railways should carry the Alberta coal eastward at a rate which will enable it to compete with Pennsylvania anthracite.

The milling industry of Canada has been very much alarmed at the suggestion that the Law Government might place a duty on imported flour for the benefit of the British milling industry. Nor is it enamoured of the suggestion of the British agricultural tribunal that only flour accompanied by its offals should be admitted free. Grain offals are very bulky, and therefore difficult to transport profitably for long distances. Moreover, there is a good demand for them in Canada, and the cattle-raisers of the Dominion will raise strenuous objections if any large quantity of their offal supplies is shipped out of the country.

SOUTH AFRICA.—THE BUDGET—UNION RAILWAY AND PROVINCIAL DEFICITS—DIVERSION OF CAPITAL REVENUES—"WORST OVER"—MR. BURTON'S MODERATE BUDGET—ENLARGED PROTECTIVE POLICY—THE "AXE" AND THE CIVIL SERVICE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 4.

IN recent years the Union of South Africa, in its public finance, has developed an unpleasant capacity for piling up deficits. The accumulated deficit on the Union's budget is £2½ millions, that on the railways almost as much, namely, £2,300,000. With such a lead in the "higher command" of finance, it is not surprising that the provincial administrations should reveal deficits in their annual budgets, the Cape Province, one of £415,000, Natal £45,000, Transvaal £55,000, the Orange Free State £126,000, while the Cape School Boards are short of something like £600,000. Expensive administration, a large territory sparsely populated, and backward industrial development, are among the factors causing this unsatisfactory state of affairs.

Mr. Burton, the Minister for Finance, made his Budget speech on Wednesday last, giving members of the House of Assembly and the public the opportunity afforded by the Easter recess and holidays to ponder his remarks. Instead of a deficit as originally estimated of £349,000, and later (at the beginning of the session) revised to £900,000, latest calculations in respect of 1922-23 indicated a deficit of no less than £1,353,000, and "that after taking into revenue £800,000 properly belonging to loan funds," making in all £2,194,000 so diverted in the last three years. At April, 1922, the deficit was £1,146,000. Adding these three items, it will be observed that the real deficit in the triennium was no less than £4,693,000. Customs and Excise taken together are about up to esti-

mate, but "inland revenue has failed us badly, particularly that accruing from income-tax," the collection being approximately £16,508,000, in contrast with an estimate of £18,116,000. The deficit of £1,608,000 would undoubtedly have been greater had it not been for the revival in the diamond market, the export duty bringing in £200,000 more, and mining leases yielding £141,000 more than anticipated. Taking income-tax by itself, the short fall was no less than £1,608,000, a clear index of the depressed condition of the country.

From £650,000 to £700,000 have been saved on the expenditure side, by financing public debt by short-dated bills, reorganising public services, and in the falling cost of commodities. At £47,227,000 the value of merchandise imported reflected a decrease of £2,651,000, but it was largely a matter of values, the actual tonnage of 1,468,000 comparing with 1,317,000. Mr. Burton declared that he had not stood for pessimism, but for sober finance, and "they could reasonably hope that they had got over the worst, and look forward to a better future." There was a striking increase in imports of cotton goods, but a substantial decline in those of potable spirits. The Union's exports were valued at £13 million in excess of imports, a discrepancy which causes the present exchange position, and at £60½ millions were two millions down, a decline fully explained by the cessation of gold production on the Rand during the strike, the export of raw gold falling by over £5 millions. Similarly, coal exports, owing to lesser bulk and lower price, had fallen by £888,000. Severe drought had caused a drop of over 40 per cent. in maize exports, which were down to £1,716,000, while a bad season had affected sugar exports by nearly a million and a-half. Wool at £11 millions showed a substantial increase, although the quantity was considerably less.

The public debt is now £199½ millions, an increase of £7½ millions; fortunately, broadly, two-thirds of it is reproductive. The requirements of the railways and harbours in the current year would undoubtedly be large, as they would be for other public works. The only sinking fund provision was £400,000 a year in respect of the Transvaal and Orange Free State Guaranteed Loans. The whole question of sinking fund contributions was under consideration.

For the coming year revenue was estimated at £27½ millions, an increase of a million and a-half on the revised estimates, excluding loan receipts, while expenditure was put at £28½ millions. Current inland revenue was estimated at £15,700,000, an increase of £817,000, entirely under the head of diamond mines. It is interesting to notice that in February diamond production at £310,800 regained its position as only second to the gold output. "Now that the gold mines were on a sound basis they were in a position to meet the almost complete elimination of the gold premium," and were expected to yield £57,000 additional revenue. Allowing for a supplementary estimate of £90,000, there would be a total deficit of £896,000.

Mr. Burton eschewed the line of least resistance of taking the deficit out of the loan fund. He proposes to double the duty on matches, and to reintroduce the old Cape duties on patent medicines, these two yielding £130,000. As the result of recommendations of the Board of Trade, a series of protective duties, from detonators to confectionery, are promulgated. Boots are to pay 30 per cent., instead of 20 (British rebate 3 per cent. in each case), carbide 5s per 100 lbs, against 2s 6d, rebate 6d; paper, 3d per lb, instead of 3 per cent. Instead of the whole duty being rebated, only 3d is to be. Golden syrup is to carry 7s per 100 lbs, against 4s 6d—no rebate. Plywood is to be charged 20 per cent., asbestos-cement, manufacturers' bottles, embossed metal sheets, metal badges, paints, and colours 25 per cent., enamelled metal sheets and acetylene lamps 20 per cent. Hitherto the duty on most of these goods was 3 per cent., wholly rebated for British manufactures. Except in the case of asbestos tiles, metal badges, and paints (already protected), the increase in duty ranges from 17 to 22 per cent. The net duty revenue from these tariffs is put at £110,000. The much-criticised boot embargo is to be removed. On flour the duty is to be increased from 2s 3d

to 2s 11d per 100 lbs. A new scale of Civil Service pay is to be arranged, and until it comes into operation increments will be suspended. This is expected to save £850,000 in the course of a few years, and about £200,000 this year. "From no man will be taken a single penny he is drawing to-day." Similar procedure will apply to teachers. These measures would reduce the deficit to £436,000. The Minister claimed that his policy was "a fair, reasonable, and honest attempt, working towards the lines of sound finance, to get the country into a better and sounder financial condition."

There is a tendency in Johannesburg to think that revenue may prove more resilient than the Minister anticipates, and that the eventual deficit will be substantially less than contemplated. Let us hope that it will be so. Chemists and druggists are up in arms at the patent medicine duties, which it is said will be absorbed in expenses of collection.

Letters to the Editor.

MONETARY RECONSTRUCTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—At the end of the review of my "Monetary Reconstruction," in your issue of April 21st, your reviewer propounds the question whether a trader, who covers himself against exchange risks in the forward exchange markets, will thereby "merely pass on the risk to the dealers in this market."

If two countries are trading together, and if the exporters in each sell forward exchange upon the other, it may be that the dealers in forward exchange will assume no appreciable new liability involving an exchange risk.

But that was not the case with which I was dealing in the passage quoted by your reviewer. I referred there to the position of a great financial centre, of which the currency becomes unstable. Suppose that all the trade between two countries is financed by one of them. Exporters in both countries draw bills on only one of them, and discount the bills in the centre on which they are drawn. Exporters in this centre, being paid in their own currency, drop out of the forward exchange market. Exporters in the other country still need to sell forward exchange for the interval between their contracts to deliver goods, and their sale of bills in their own country. But if the importers in that country do not trust the currency of the other, they have to buy forward exchange for the whole period from the time that they first order the goods to be imported, down to the date at which the bills with which the goods are paid for mature. If the mutual payments of the two countries and the forward exchange requirements arising out of them were otherwise in equilibrium, the equilibrium would be upset by the need of the importers for forward exchange for the interval between the drawing and the maturity of the bills. In fact, there must be an amount of forward exchange sold, uncovered by any equivalent demand, equal at any time to the whole amount of the bills outstanding drawn upon the financial centre on behalf of importers in the other country. The whole of this uncompensated forward exchange represents an exchange risk falling on the shoulders of the dealers in the forward exchange market.

May I take this opportunity of making two other observations on your review? In the first place, the views expressed in my book have no relation whatever to those officially entertained by the Treasury or the Bank of England. They are entirely my personal opinions, written in a spirit of scientific enquiry.

Secondly, I should like to disavow the belief attributed to me that "all major economic movements can be interpreted and are best interpreted in terms of currency and credit, and that, since currency and credit can be controlled, it would and should be possible to gain almost complete mastery over economic movements, and to eliminate those which are undesirable."

I do not think there is anything in my book to support "this simple diagnosis of all economic ills." My contention is that a limited class of economic ills, those characteristic of the trade cycle, and more especially general

unemployment, can be cured through monetary stabilisation. The extremes of trade fluctuation that we have experienced in the last few years are the result of the extremes of monetary instability; they are only an exaggeration of the pre-war trade cycle, and are remediable in the same way. But grave as are the consequences of monetary instability, they are not co-extensive with "all economic ills."—Yours faithfully,

R. G. HAWTREY.

18 Elm Park gardens, S.W. 10, April 23rd, 1923.

THE APPROACH OF A FREE GOLD MARKET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is difficult to take your correspondent Mr. D. M. Mason seriously when he relates the efforts he made to turn Mr. Lloyd George from his alleged financial unrighteousness.

Does Mr. Mason suggest that the currency notes should have been retired and the country left without any money to enable the people to make their exchanges with each other in a civilised manner?

We are all aware that under the gold currency system Mr. Mason is attempting to revive the country was left without currency when war broke out. As a return to this system was impossible, surely some alternative scheme must have been laid before Mr. Lloyd George. Apparently, therefore, Mr. Mason has left out the most important and interesting part of his interviews.

It is correct to say that values have been altered—manipulated would have been a better word—in favour of the moneyholder, but I am afraid that a great deal more than the economic foundations have been disturbed by the very manipulation, and the handwriting on the wall is shown by the representation in the House of Commons.

It is to be hoped that financial sanity will come to the class Mr. Mason represents before it is too late.

Yours, &c.

LOUIS H. CROSS.

April 18.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Both Mr Gregory, in your issue of 7th inst., and Mr Mason, in that of Saturday last, agree that the Government can and does control prices by means of the issue or withdrawal of currency. The only danger is that of over-issue, and if this can be avoided stability of values would be ensured.

We are faced to-day with four problems, the solution of which is necessary to our national progress:—(1) Agricultural depression; (2) trade stagnation; (3) oppressive taxation; (4) chronic unemployment. I suggest that all of these could be greatly relieved, if not abolished, by the institution of a stable measure of value. The lines by which this could be secured were admirably indicated by the late Dr J. Ellis Powell in the course of an address to the Leeds Institute of Bankers in April, 1920. He stated:—

What was wanted was some means of establishing equilibrium in the price over time and space of that commodity (whatever it might be) which was the most vital to human existence. Stabilisation of all commodity prices was impossible, since they must fluctuate in relation to one another, but the stabilisation of one, and that the most important, in terms of currency, was probably attainable. If the volume of currency were so adjusted as to maintain wheat at a certain price per quarter, an inestimable factor of steadiness would be introduced into all business affairs. If the price of wheat went down, it would be obvious that more currency was required. If wheat went up, it would be equally clear that there was over-issue. Put the management of the volume of currency into the hands of a committee of trusted bankers and business experts, free of all political influences, like the judges. Let it be adjusted on the index number principle to the price of wheat, and you would attain stability of value in the commodity which was most vital to human existence. There would be a stabilised return, over any period of time, in the dominant food value, and that would tend to steady all other commodities, as far as steadiness was feasible amid the ebb and flow of economic evolution.

The adoption of such medium would result in the fullest measure of Free Trade, goods (exports) being exchanged against goods (imports), and in the event of gold being required for the rectification of international balances, this could be purchased in the open market, as is silver for Eastern exchange balances. Gold no longer being our nominal currency base, its withdrawal or otherwise would

cease to react on the Bank Rate, and, incidentally, on prices.

Wheat, in Great Britain, is the only substance possessed of absolute value, the potential energy it contains being the main means of subsistence. It is thus the source whence wealth is derived, whether potential or real. The adoption by the Treasury of a monetary system on the lines suggested, the volume of currency having a definite relation to the food requirements of the nation, and regulated so as to maintain our principal food product—wheat—at a fixed price when harvests were normal, would, I submit, give security to agriculture, encouragement to industry, and a just incidence to taxation, thus conducing to continuity of employment, stability of internal prices, and a recurrence of prosperity.—Yours faithfully,

W. G. REXWICK, General Secretary.

CAPITAL AND LABOUR.

TO THE EDITOR OF THE ECONOMIST.

SIR,—At a time when industrial disputes are so prominent in our minds, may I be permitted to call attention to one "platform" on which a substantial measure of agreement by representatives of capital and representatives of labour has been achieved? I refer to *Current Opinion*, the official organ of the Industrial League and Council, in the April number of which men of such divergent views and experience as Viscount Burnham, Lord Blyth, Lord Rotheredean, Sir William Noble, and Sir Ernest Benn on the one side, and Mr J. R. Clynes, Mr G. N. Barnes, Mr Philip Snowden, Mr J. B. Williams, and Mr Fred Bramley on the other, unite to pay tribute to the work of the Industrial League and Council in preparing the way for a measure of real peace in industry which alone can mean a return of prosperity.

At the present time we are apt to be appalled by the magnitude of the problems that surround us. We suggest remedies, which may or may not be effective. Too often, however, they are condemned out of hand because of the quarter from which they come. To labour the remedy of the employer is suspect. To the employer the labour remedy is greeted with the same objection. Yet no section of the community has a monopoly either of wisdom or of knowledge, just as none is devoid of both sanity and judgment.

For that reason I think the endeavours of *Current Opinion* to pick a middle course between the road followed by orthodox labour and orthodox capital deserve the widest possible support. That it has the goodwill of both sides is proved by the warmth of the congratulations offered on the occasion of its first birthday by the men whose names I have quoted.

If to know all is to pardon all, then to get at the facts is to advance on the way to that knowledge which is a necessary preliminary to the understanding of the other side's point of view.—Yours very truly,

WILLIAM GRAHAM.

House of Commons, April 24th, 1923.

Books and Publications.

M. CAILLAUX ON THE OUTLOOK.*

THE reader who will put aside all presuppositions about M. Caillaux, and read his book as if it was by an unknown author, will find that it deserves attention. He will doubtless be irritated by many question-begging assertions, such as the statement on page 1 that "in 1914 the reactionaries (of all countries), ever on the lookout for such a chance, profited by the sleep of the proletariat to wreck the peace of the world." He will be amused, and his confidence in the trustworthiness of his author will be undermined, by M. Caillaux's slapdash dogmatism on subjects on which he is manifestly

* "Whither France? Whither Europe?" By Joseph Caillaux. Translated by K. M. Armstrong. T. Fisher Unwin. 10s. net.

ignorant; as when he speaks of "the English Civil Servants" as being "grouped in such organisations as the Round Table," and scheming "to restore the tottering power of their caste" by—bribing the *Figaro*; or as when he describes "the great English industrialists belonging to the independent Labour party" as meeting at Grasmere to discuss constructive industrial policy. Moreover, even readers of the *Economist* will feel that in taking stock of the problems and the prospects of European civilisation, M. Caillaux confines his attention too exclusively to the economic aspect, and disregards less tangible issues which are not less important.

But when all this is said, the book is a challenging piece of writing; its author displays himself as a man of courage, insight and imagination; and even if his outlook is too narrowly economic, it is to his credit that he tries to see the wood as well as the trees. He has undertaken a task from which most of us shrink—the task of forming a judgment upon the trend of civilisation as a whole, at all events in its economic aspect.

M. Caillaux's main thesis is that European civilisation is in peril of shipwreck, and he diagnoses two main causes of this peril. The first is that, instead of realising the economic interdependence of all peoples which is due to the development of science, industry and commerce, the nations of Europe are carried away by an insanely exaggerated "nationalism," which drives them to pursue the impossible goal of economic self-sufficiency, ruining themselves in the process. This folly, instead of being checked, has actually been accentuated by the war, because the war forced all the belligerents to equip themselves with the means of producing goods they had previously been content to import. To maintain their artificially created industries they have betaken themselves to methods of protection even more ruinous than those they employed before the war. And under the shelter of these unhealthy conditions (this is M. Caillaux's second bugbear) there are rising formidable combines, like that of Stinnes, which more and more dictate national policy. M. Caillaux is not afraid of "international finance" or of international trusts; he can conceive of an international financial dictatorship as forcing some sort of order upon the world. It is the rivalry of national combines, exploiting nationalist sentiment, and controlling national policy for their own narrow and sordid ends, that he chiefly fears.

In the light of these conceptions M. Caillaux discusses the problem of reparations. He arrives at conclusions which (though vague) closely resemble the accepted English view; much of what he writes on this subject might almost be printed editorially in the *Economist*. And readers of the *Economist* will also find themselves in sympathy with the remedies for the malady of economic nationalism which he propounds: Free-trade, the substitution of direct for indirect taxation, and the working out of a Liberal, non-Socialist solution for the problem of industrial organisation. On the latter point M. Caillaux is extremely vague, but his view is in accord with that of the younger English Liberals of to-day.

But there is one grave shortcoming in M. Caillaux's survey. It is a shortcoming which he shares with many English thinkers who sympathise with his general point of view. He fails to give due weight to the motive of fear, to the sense of insecurity created by the war, as a principal cause of the spirit he deprecates. It is because they remember the necessities of war that the nations are striving after the impossible goal of economic self-sufficiency; even Free-trade Britain—the only great State whose economic policy has been systematically based upon the recognition of the interdependence of peoples—has fallen a victim to this fear, and has adopted foolish trade-hampering devices to foster dyes and other "key-industries." The sense of insecurity lies at the root of all our international problems—the problem of reparations among the rest. No purely economic measures will ever suffice to deal with this root-problem. It can only be solved by some form of co-operative guarantee through the League of Nations, or some equivalent. It is significant that M. Caillaux has practically nothing to say about the means of attaining security; it is equally significant that he mentions the League of Nations only in the most casual and perfunctory way, and that he

discusses military organisation, with futile petulance, merely as a source of waste, and a proof of the folly of the nations. He has tried to take a broad view of the prospects of civilisation; but just because he has confined himself to the more narrowly economic aspects of his problem, his treatment of it is incomplete and unsatisfying.

HUNGARY IN REACTION.*

BEFORE the war Hungary was conspicuous for her rapid progress and for her great and well-advertised economic and industrial enterprise. To-day, shorn of nearly three-fourths of her former territory, five-eighths of her population, and perhaps even a larger proportion of her pre-war resources, she naturally attracts an increased measure of the British sympathy already ensured to her by the similarity of the constitutional development in both countries, and of the pursuits and character of their landed aristocracies. Unfortunately her fate was the result of the persistent oppression exercised by her ruling class on the non-Magyar minorities, stripped in 1868 of their former privileges through the pact with Austria, and driven into disaffection by persistent efforts to crush their languages, abolish their native place-names, convert them into Magyars, and deprive them of political representation until the conversion should be complete. Partly, indeed, the motive was fear that Austria might use these races to abridge Magyar liberties by less warlike means than in 1849; but that does not justify what was done. The process was defended by a system of propaganda often carried out, consciously or unconsciously, by Englishmen; but it was effectively exposed in 1908 by Dr Seton-Watson, whose personal observation of it destroyed his prepossessions in favour of Magyar rule. The war was welcomed by the Magyars as a means of completing their ascendancy; and, as Mr Street very ably shows, it has left them possessed by a passionate Irredentism, which bodes trouble for the new States created out of the wreck. Hungary was shorn by the Treaty of Trianon, not as a punishment, but because the non-Magyar population could no longer tolerate Magyar oppression. At the end of the war the Magyars attempted to set up a democratic Republic, as a desperate effort to put themselves right with the Allies and President Wilson. But it failed to secure democracy even for their own race, and was speedily crushed between the forces of the landed aristocracy and the Bolsheviks of Bela Kun. His four months' rule, put down not by the rival Government set up at Szeged by the Magyar aristocracy, but by the intervention of the Rumanian army, was followed by the reactionary Government of Admiral Horthy, supported, as Mr Street shows, by terrorism. Its spirit is exhibited by its grants of land to the minor gentry on condition of military service, and it is aided by, and probably inspires, unofficial organisations, which stir up the fragments of the lost nationalities across the frontiers, strive to win over the Slovak priests and lawyers as centres of influence, send out propagandists as harvesters, and maintain an active Press in Austria, Switzerland, Holland, Great Britain, and the United States. He contrasts the treatment of the isolated Magyars and Austro-Germans in Czecho-Slovakia, which is above reproach, and in Rumania, where it is less satisfactory, and where recent events seem to indicate that he understates its dangers. And he closes by appealing to the Magyar rulers of Hungary to abandon their ideas of isolation and feudal rule, and find salvation in developing their own Magyar subjects as their lost non-Magyars have developed themselves. His book is an effective presentation of one of the dangers of Europe to-day.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
May 2.	May 3.

Business in the Stock Exchange markets has been active as regards investment stocks; contracted as regards speculative issues. As the bulk of Stock Exchange business is usually in the latter, the position just described means that at times the House has looked tired and listless, in spite of the fact that all investment stocks are strong, and it is only with difficulty that good stock can be obtained at anything like reasonable figures.

Practically all the British Government funds are better on the week. There has been exceedingly heavy buying of Funding, Victory Bonds, Conversion, and the War Loan itself, before the last-named went ex dividend on Thursday morning. Scores of rises have occurred amongst Colonial, Corporation stocks (both domestic and foreign), Indian railways, Home Railway prior-charge issues, and industrial debentures. Prices are marked up almost automatically day by day without attracting stock to market, and, although the question of a possibility of money becoming dearer is discussed, it causes no diminution in the investment demand.

Foreign bonds are a quiet market, with French moving irregularly. Greeks recovered after being dull. There has been a fair demand for Chileans; Brazilians pursued an uneven path.

Home Railway stocks have sympathised with the strength of other investment issues. North-Westerns and Great Westerns went ahead materially, and this revived the talk about the possibility of both stocks becoming split. Other Home Railways are also harder. Argentine Rails have gone ahead by points, and San Paulo is substantially higher on the week.

After stagnating for three or four days, rubber shares turned languidly better as the price of the produce hardened up a little. The oil market is placid. Banking and insurance shares have advanced every day. The P. and O. dividend served to put up the price of the stock by a score of points, but other shipping issues are no better. The bonus on Guinness stock lifted the price by 35 points, most of which was subsequently lost, as Irish holders came to sell. Babcock and Wilcox went ahead, on declaration of a share bonus, and so did Imperial Tobacco shares, though in both cases the full extent of the rise was not maintained. Iron and steel shares are good as a whole, the chaos in the Ruhr leading to many inquiries for shares in British coal companies. The textile group is hard, though activity in Courtaulds showed some little diminution. Cable stocks are better; the wireless issues gave way. Cement and other road-making shares hold their previous rises, and the tobacco market has been exceedingly active, in consequence of the Imperial Company's bonus announcement. *Sunday Pictorial* ordinary shares were introduced to the House on

Wednesday on the basis of 4½ for the £1 share. Other newspaper shares were sold in order that these newcomers might be taken up. New issues, markets in which have been started this week, are generally at a premium. The demand for preference shares is as eager as ever. Trust companies' stocks are almost unobtainable, in spite of substantial rises that have occurred, and amongst land descriptions Hudsons Bays threw off their recent dullness and came into line with other strong shares.

The Kafir market is languishing in the doldrums. Rhodesians have been dull, with Selukwe weak, on notification of a new issue of shares at £1. The fall in the price of tin found reflection in a few of the principal tin companies' shares. The mining markets are very quiet as a whole, and diamonds, although displaying rather more activity than usual, failed to hold their best prices.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	96,178,962			
ISSUES OF THE WEEK—				
4% Treasury Bonds, 1931-33 (by tender, April 20, 1923), £1,950,000 at £95 5s 4d		1,857,700		
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED APRIL 21, 1923.				
April 1, 1923, to April 21, 1923, £700,000		450,000		450,000

New South Wales.—This is an issue by the Government of New South Wales of £6,000,000 4½ per cent. inscribed stock, 1935-1945, at 94 per cent. The principal is repayable at par on July 1, 1945, the Government of New South Wales having the option to redeem, in whole or in part, at par, on or after July 1, 1935, on giving three months' notice. Interest will be payable half-yearly in London. The loan is raised for public works and other purposes, and for the redemption of £525,000 5 per cent. debentures and £1,473,400 5 per cent. inscribed stock, due July 1, 1923. Holders of these are offered conversion in whole or in part into an equal amount of the 4½ per cent. stock, and will receive a cash payment of £6 per cent. on the amount so converted, being the difference between the nominal value of the maturing debentures or stock and the issue price of the present loan. Any portion of the maturing debentures and stock which is not converted will be paid off on July 2. The usual statement disclaiming any liability of the Home Treasury appears in the announcement of the offer. This is a trustee investment, and met with an excellent reception.

Kingdom of Roumania.—4 Per Cent. External Loan of 1922 for £2,500,000, or \$12,500,000.—This is an offer of £1,620,000 4 per cent. sterling bonds, being part of the above loan, at £67 per £100. It is stated that the bonds will be redeemed by a cumulative sinking fund of 3.3115 per cent. per annum, to be applied by half-yearly drawings at par, beginning next July, and the whole will be repaid by December 1, 1942. The Roumanian Government, however, reserve the right to repay the whole, though not in part, on June 1, 1933, at 101. The loan is a direct obligation of the Roumanian Government, and its service, it is stated, enjoys "priority over all other external or internal indebtedness, present or future." The service of this loan is a first charge against the general revenues of the State, and is, in addition, a "first special charge" against the gross proceeds of the export taxes, present and future, "so long as these remain in force." The qualifying phrase is particularly interesting. But not too great a value should be attached to the "special" security. The taxes are levied in gold or in foreign currencies, and the Roumanian Government is under obligation to transfer them as and when collected to the National Bank of Roumania. Certainly the subscribers are given a very special position as to their claims on the Roumanian revenues, &c. For the period August, 1922, when collection of export taxes on the new scale began, to March 31, 1923, the sums remitted by the Roumanian Bank amounted to approximately £1,442,316. The entire service of the present loan would amount to £182,779. If export taxes fail to meet one-twelfth of the service of this loan and the other funded external loans in any month, the Government is under obligation to make up the deficiency forthwith out of its general revenues and assets. The Roumanian Government is also under obligation to leave with the National Bank of Roumania a fund equal to three months' service of the entire external funded debt, "thus providing at the end of each financial year more than a full year's service of this loan for the ensuing year." Principal and interest are payable in London in sterling, free of all Roumanian taxes, present or future. A sum of £810,000 of the loan has been underwritten firm and will be allotted. The question of priority charges upon revenues of States is one which must be carefully considered in financial circles before long, and when this happens the case of Roumania will be an interesting one. The issue, in view of its high yield, the chance of early profit on redemption and the rich natural resources of the country appealed to the speculatively inclined investor, and the list was closed on Thursday.

Port of Madras.—Issue of £330,000 5½ per cent. debentures to bearer at 97½ per cent., to be repaid at par on May 1, 1953. The Board of Trustees have the exclusive right, under the Port Trust Act, to levy tolls, dues, rates, rents, and charges for the landing, shipping, and storage of goods and for the use of all wharves, quays, stages, &c., vested in them under the Act, and no private wharves or landing-places exist in the port, nor can any be constructed without the Board's permission. The total liabilities of the port are £994,366 (exclusive of free grants), of which £894,967 has been lent by the Government of India and £99,399 by the Government of Madras. A sum of £60,960 is annually required at present for interest and repayment. Land, buildings, quays, railways, locomotives, &c., owned by the port are valued at £2,373,252. Income and expenditure for the last five years are given. The net profit, after payment of interest and sinking fund, last year was £14,772, the decline from the £49,700 of the previous year being due, it is stated, to the withdrawal of the surcharge imposed during the war on harbour dues on imports and exports. The board's policy, it is stated, is not to earn large profits, but rather so to adjust rates as to meet liabilities. Excepting £40,000 of it, the money raised by the present issue—which is, of course, a good investment—is to be devoted to improved equipment and to works of development which are expected to be remunerative. The powers of rate adjustment, coupled with the Indian Government's interest as a creditor, constitutes a reasonable safeguard for interest payments.

Loa Nitrate Company, Limited.—Incorporated under Chilean laws. Issued share capital £1,300,000. This is an offer for sale of £500,000 6½ per cent. first mortgage registered debentures at 98 per cent., "redeemable by 1939 by 15 annual drawings at £102." The debentures which are offered are the whole of the authorised issue, and will be constituted by a trust deed in favour of specified trustees, which will provide for the creation by the company of a specific first mortgage under Chilean law over the seven oficinas, with lands and nitrate grounds comprising an area of about 37 square miles in one block, belonging to the company, situated in the province of Antofagasta, together with the buildings, fixed plant, and other immovables thereon, which are estimated to be worth £1,600,000. The amount required for interest and sinking fund is £54,000 per annum, which is amply covered by the annual rate of profit for the past twelve years. The share capital has recently been watered by the distribution of a share-for-share bonus, and profits for the past two years are less than half the average for the preceding ten years. This

Bridges and Co. (Proprietors).—Authorised share capital £180,000, divided into 100,000 8 per cent. cumulative preference shares of £1 and 400,000 ordinary shares of 1s each. These are now issued at par, with £40,000 6½ per cent. five-year registered notes of £50 and £100 each at 95 per cent. The notes are repayable at par on October 1, 1928, or earlier upon notice being given by the company. 160,000 of the ordinary shares have been subscribed in cash by subscribers to the memorandum of association, and a further 160,000 are reserved for cash applications by underwriters of the preference shares. The other 80,000 are reserved for those who apply for the preference shares. The company has been formed for the purpose of acquiring the whole of the issued ordinary shares of Bridges and Co., Limited, retail cash drapers, &c., of Leeds, Manchester, and Sheffield. A balance-sheet of that firm has been included in the prospectus, and shows its issued capital to be 30,000 7 per cent. preference shares of £1 and 60,000 ordinary shares of £1. The sum to be paid for the 60,000 ordinary shares is £202,000, which, it should be noticed, is payable wholly in cash. Profits of the subsidiary companies are given for the past five years, but before charging depreciation, income-tax, and mortgage interest. In the year ended February 17, 1922, profits, before allowing for these items, amounted to £31,013. It would appear that the company has been fairly successful, but the attraction of the present offer, which should be left mainly to local investors, depends on the assumption that at least an equal degree of success will be achieved under the new control. The issue has been oversubscribed.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager, of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

The balance at the credit of profit and loss account amounts to £77,350, which, after deducting the half-year's preference dividend paid on February 1, 1923, and the ordinary dividend now recommended, will leave the carry-forward at £39,225, as shown in the directors' report—an increase of £6,564 over and above the amount carried forward from last year. This is a substantial unappropriated balance, in connection with which I can only repeat the remark I made last year—that we intend to use it to equalise dividends unless unforeseen circumstances should arise rendering this course inexpedient. You will agree with me, I feel sure, when I say that, however strong our position may be, and with whatever degree of confidence we may regard the future, a business such as ours is bound to be subject to fluctuations. Surely

The small trader, too, is likely again to flourish. His is a function which gives very great service to the community for the profit he receives, and the importance of this branch of British trade can hardly be over-estimated. Besides being an example

of individuality, the small trader shoulders the burden of civic life, and brings to it all the experience he has gained from his intimate association with the community; moreover, the money he makes is invariably invested in property in the district in which his business is situated. We welcome, therefore, the promised prosperity of this public benefactor—for such, indeed, he is. It has been our policy in the past—and we intend to continue it—to give generous financial facilities to the small trader of good repute.

We welcome, too, the somewhat delayed endeavour outlined in the Budget to return to more normal conditions. Not only are we grateful for the remission of taxation, but also for the reductions in the telephone and postal rates, for, although the benefits they bring cannot be closely calculated, they are very important to the introduction and development of fresh business. We shall now be able to add more space to our weekly paper, *The Produce Markets Review*, and in this way to supply the trade with more useful information and indirectly to strengthen the position of the firm.

TRIBUTE TO THE STAFF.

A loyal staff is a priceless boon to any firm, and in this respect we are happy to be able to report to you a most satisfactory state of affairs. We consider that our employees have the right to expect from us reasonable privileges which will add to their happiness, and with this end in view we are now forming an up-to-date sports club.

We would take this opportunity of expressing our thanks to our whole staff for their loyal assistance, in which we feel sure you will desire to join.

I now beg to move: "That the report, balance-sheet and profit and loss account for the year ended January 27, 1923, now laid before the meeting, be and the same are approved and adopted, and that the payment of a dividend of 17½ per cent. on the ordinary shares of the company, as recommended by the directors, be and the same is hereby ratified and declared."

Mr W. F. Travers (deputy-chairman) seconded the resolution, which was unanimously adopted.

The retiring directors (Mr S. J. Loder and Mr T. Strang) were re-elected, Messrs Price, Waterhouse, and Co. were reappointed auditors, and a vote of thanks to the chairman, directors, and staff terminated the proceedings.

THE UNION BANK OF SCOTLAND, LIMITED. SUCCESSFUL YEAR—SATISFACTORY RESULTS.

The annual meeting of shareholders was held, on the 25th instant, in Glasgow, His Grace the Duke of Atholl, K.T., chairman of the bank, in the chair.

The Chairman, in submitting the directors' report and statement of accounts, said: Since we met a year ago the country has again passed through a difficult period. There has been considerable disappointment that the trade revival has been so slow, but it is undoubtedly much better, taking the long view, that this revival should be on a sound basis rather than that it should be of a "boom" nature.

SCOTTISH INDUSTRIES.

With regard to Scottish industries, there has been a very marked improvement in the coal trade, but the better position during the past few months has undoubtedly been brought about by the shortage of coal due to the Ruhr occupation. Unfortunately, this has meant a very considerable increase in the price of coal, and that is a most serious matter for the important iron and steel industries which are carried on in Scotland.

During the period under review, there has also been a distinct improvement in the engineering trades, and, towards the end of 1922, a number of much-needed shipbuilding orders were placed on the Clyde and elsewhere. The amount of idle tonnage is now very much less.

The fishing industry is still passing through very bad times, and it is difficult to see how there can be any real revival until the foreign exchanges have improved sufficiently to enable the continental countries, which were the chief customers, to purchase freely once more. The one bright feature is that at present the unsold stocks on hand are practically negligible.

With regard to agriculture, another very important industry in Scotland, the farmers have had a none too profitable year, although they have probably done much better on the whole than in England, as there is a much smaller proportion of land under cultivation, and sheep farming plays a much more important part. Costs of labour and feeding stuffs, together with transport charges, are still very much higher than they were in 1914. The potato crop, although a good one last year, was very unsatisfactory from the point of view of profit. In addition there has been a big fall in values of stock, particularly of horses and, in a smaller degree, of cattle, but for sheep farmers it has been quite a satisfactory year.

The question of credit to the farming community has been much before the public of late, and I may say that this bank, which has a large number of farming customers on its books, has given liberal assistance in these difficult times.

Considering the outlook as a whole, one would say that everything is ready for a steady revival in trade. The danger, which one hopes will be averted, is a too rapid rise in commodity prices which would have the effect of defeating the revival we all hope for. In passing, I would like to say that, from a national point of view, it is very satisfactory that the question of our debt to the United States has been settled, although we realise that that settlement involves a very heavy burden on this country for many years to come.

The confidence of people abroad in the financial strength of Britain is very gratifying, and the period which we are considering has seen a marked improvement in the American exchange.

After dealing with the future of prices of Government securities, the chairman continued:—

THE BANK'S AFFAIRS.

Turning to our own affairs, I am glad to say that we have had a successful year, and have produced good results, and that we have again been able to strengthen our reserve fund and increase our dividend. The bank stands in an exceptionally strong position to-day, and we must thank the efficient management which has contributed materially to these satisfactory results. I am sure we would also like to place on record our most cordial thanks to the officials and staff of the bank as a whole, for their willing and efficient labours during the past year.

Particular care has been taken by the board in regard to the investment position, which has been of considerable importance, and, consistently with obtaining a satisfactory return, the maintenance of a liquid condition has been aimed at. Of our total investments, all but a comparatively small percentage—under 5 per cent.—are in British Government securities, and of these the bulk are repayable within the next seven or eight years.

Where possible, we have done all in our power to assist in financing trade, and we are in a position to take the fullest advantage of greater activity in industry. The merit of the smaller banking institutions is that very close personal touch can be maintained with their clients, and that all propositions can be considered carefully by the management and board.

As you will have observed from the report, we have lost by death our old friend Mr David Ritchie, who was associated with us for 40 years either as an ordinary director or, latterly, as an extraordinary director of the bank. Although Mr Ritchie had reached a great age, he maintained to the last a most active interest in the bank and its steady progress.

Mr Archibald R. C. Pitman, W.S., then dealt fully with the bank's figures.

The report and accounts were unanimously adopted, and a vote of thanks to the chairman terminated the proceedings.

THE LONDON ASSURANCE. CONTINUED PROGRESS—INCREASED DIVIDEND.

The annual general court of the London Assurance was held, on the 25th inst., at the offices of the corporation, 1 King William street, London, Mr Colin Frederick Campbell (the governor) presiding.

The Governor, in the course of his speech, said: Before dealing with the accounts I regret that I have to refer to three losses through death that the corporation has suffered since we last met. In the first place, Mr Otto Benecke, who had been a director of this corporation for 37 years, died on May 2nd. During that time his experience and knowledge of business affairs generally were of much service to us. Then our colleague, Rear-Admiral Stewart, died on October 28th. He represented that ancient and well-known institution, Trinity House, with which the corporation has been connected for a great many years; but, in addition to this, Admiral Stewart took a great personal interest in all the affairs of the corporation. Then on July 31st, our old and valued friend, Mr James Clunes, died. Mr Clunes had been manager of the fire department for 40 years and of the fire and life departments combined for 27 years, and his record during this long period was one of practically unbroken success. He was deeply attached to the interests of the corporation, and never spared himself in working for its welfare. In his death the corporation has lost a highly skilled and efficient manager and the directors a real personal friend. To fill these gaps we have appointed in succession to Mr Benecke Mr Michael Spencer-Smith, D.S.O., M.C., a partner in the well-known London house of Messrs H. S. Lefevre and Co., and also a director of the Bank of England; and in succession to Admiral Stewart Sir Arthur W. Clarke, K.B.E., one of the Elder Brethren of Trinity House. We have also appointed Mr Marks and Mr Durham as joint managers of the fire department and Mr Hemming, our actuary, as manager of the life department. Mr Marks and Mr Durham were joint assistant managers under Mr Clunes, and

they are both fully equipped from every point of view to assume control of this very important part of our business. Mr Hemming had been our actuary for a number of years, and he will now combine the position of manager with that of actuary.

THE ACCOUNTS—LIFE DEPARTMENT.

If you will now refer to the accounts, which have been in your hands for some days, you will find the first statement is that of the life department. The fund at the beginning of 1922 was £3,155,000, which was increased during last year by £225,000, so that it stands in the accounts now before you at £3,380,000. The new sums assured were larger than in 1921, being again well over £1,000,000, and the premium income increased to £349,000. The rate of interest on the invested funds was also slightly higher at £5 13s 9d per cent., against £5 11s 1d per cent. in 1921. On the other side of the account claims were below the expectation as worked out by our actuary, and the expenses of management were also lower at 15.80 per cent., including commission. The really satisfactory feature of the year, however, has been the steady rise in the values of securities, so that I am now in the happy position of being able to tell you that there is not a single Stock Exchange investment in the life fund worth less than the value at which it stands in the books of the corporation.

FIRE ACCOUNT.

Turning next to the fire account, we still see the prevailing depression in trade reflected in it, as, in spite of an extended and improved organisation, we have been unable to maintain the premium income at quite the same figure as in the previous year. The profit realised was a moderate one, and about what we expected, and we are satisfied that, with a revival in trade, we shall secure a fair share of the increased business activity that will result. Our experience at our New York branch was again unfavourable, though better than in the previous year, but we were fortunate in making a profit taking the United States as a whole. This was due to the very satisfactory business again transacted by our representatives in San Francisco and on the Pacific Coast. The foreign field has produced varying results, and has not been without its anxieties since we met a year ago. In some important parts of the Empire, such as Australia and South Africa, we have had nothing to complain about, but in parts of the Continent of Europe, in the Far East, and in South America the depreciation in the exchanges has rendered the transaction of profitable business almost an impossibility. Then latterly the political situation in Constantinople has been very unsatisfactory, and the position was brought to a head last month by a series of conditions which the Angora Government sought to impose on British and other foreign companies. The British companies decided, with much regret, that these conditions could not be complied with, and issued instructions to their agents in Constantinople to close down their offices and retire from that field. I can only hope that later on circumstances will permit the resumption of business under reasonably safe conditions. The fire fund now stands at £1,300,000, against £1,250,000 a year ago, after transferring £51,000 to the credit of profit and loss account.

MARINE ACCOUNT.

The marine account, which comes next, is an exceedingly good one, and its recovery from the unfavourable conditions prevailing a year ago is one of the main features of the accounts now before you, and when analysing the figures with the underwriters I was also interested to observe that the result was equally as good on the gross figures, without deducting reinsurances, as on the net. Competition for hull business has continued to be most pronounced, and it is to be hoped that both rates and values have nearly reached their lowest point, as this business cannot be con-

ducted at a profit until some improvement has been secured. We have been able to transfer £163,000 to the credit of profit and loss account, and to raise the marine fund from £800,000 to £950,000. The different branches of the accident department, which come next, call for no special comment. They continue to grow and develop, and we are extending the field of our operations every year as opportunity offers.

PROFIT AND LOSS ACCOUNT.

If you will turn now to the profit and loss account, the interest not carried to other accounts, amounting to £113,467, together with the various transfers from the departments, all appear as usual on the credit side, making a total, together with the balance brought in, of £566,000. This has been applied by appropriating £189,000 to the payment of dividends on the ordinary and preference shares, transferring £40,000 to contingencies account, £50,000 to premises account, and by increasing the balance carried forward by £41,000, thus bringing it up to £249,000. Your directors consider these figures justify an increase in the dividend this year of 2 per cent., making it 30 per cent., free of tax, instead of 28 per cent., as paid last year. Intimation of the directors' intention to recommend this increase was given in the newspapers a few weeks ago. Before leaving the accounts, I should like to draw your attention to a slight change in the wording of the auditors' certificate. The auditors now state directly that all the securities representing the investments and mortgages have been verified by them by actual inspection, or by the production of certificates from the High Court, the Bank of England, or other custodians at home and abroad. As a matter of fact, no change whatever has been made in the procedure, but as the subject was alluded to at the last annual meeting, the directors asked the auditors to make this slight alteration in their certificate, and so place the matter beyond all doubt. On the succeeding pages of the statement in your hands you will find the balance-sheets of the companies with which we are particularly associated, and of them all I can say is that they are doing a satisfactory and profitable business. It is particularly gratifying to see such a good balance-sheet as that shown by the Reinsurance Company, for, as you know, this company had to go through a very trying experience a year ago before it had had time to build up its reserves. Now that this crisis has been safely surmounted, we look forward to the company being able to develop its business under easier conditions.

OUTLOOK.

In turning away from this short review of the accounts, which are undoubtedly satisfactory, I would ask you not to carry away with you the impression that insurance business has now resumed a normal condition of prosperity, as such is by no means the case. In these days of world competition it is necessary to maintain a world-wide organisation if we are to hold and increase our business, and to do so is a very costly matter. There is no part of our business which requires greater watchfulness, both on the part of your directors and of the management, than this question of expenses, as these have an uncomfortable way of always increasing irrespective of whether times are good or bad. But beyond this, insurance business can only be really satisfactory when the political outlook is calm, and the industrial position clear, and no one can say that either of these factors is in existence to-day. A large part of our business is to afford protection to merchants and bankers against risks which they cannot gauge or provide against, and their margin of profit is such that they are only prepared to pay a relatively small sum for this accommodation. Consequently, an insurance company is only able to extend this protection to them on the assumption that world conditions are reasonably stable, for it requires very few losses in any one department of insurance business, arising from political or industrial instability, to produce an adverse balance at the end of a year.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

There is only one way in which an institution like the London Assurance can continue to maintain its sphere of usefulness in the City of London and elsewhere under such conditions and in such times as these in which we now live. It is by continuing to add to its resources year by year, and this is the policy your directors have always endeavoured to maintain, and which we have every confidence in believing is the one which meets with the full support and approval of the proprietors.

The report and accounts were unanimously adopted.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The fifty-second annual general meeting of the Ocean Accident and Guarantee Corporation, Limited, was held, on the 24th instant, at 36 to 44, Moorgate, London, Mr E. Roger Owen (the chairman) presiding.

The Chairman, in presenting the report and accounts for 1922, first drew attention to the new form which had been adopted, thus giving more detailed information to the shareholders. Proceeding, he said: The assets stand at £7,663,254, as against £7,657,433. The revenue for the year amounted to £5,694,547, as against £5,827,134 in 1921. The premium income amounted to £5,415,541, as against £5,500,791, a decrease of £145,250. The claims paid and provided for amounted to £3,076,974, representing 56.8 per cent. of the premium income, as compared with 54.1 per cent. in the previous year. The amount paid for commission to agents and expenses of management (apart from taxes) was £1,964,504, being 36.2 per cent. of the premiums, against 34.6 per cent. in 1921. In taxes (exclusive of income-tax deducted at the source) we paid 5.4 per cent. of the premiums, as against 4.8 per cent. in 1921. This is a very serious burden.

LEAN YEAR.

The year has been a lean one so far as concerns profit, but we have every reason to believe and expect that better results will be experienced when more favourable general trading conditions are in operation. The decrease in premiums was not due to loss of connections. The reduction was almost entirely due to diminished volume of premiums from workmen's compensation insurances, the result of continued industrial depression. Our loss ratio increased considerably in this department, both in the United Kingdom and in America, the increase at home being nearly 9 per cent. over the ratio for the previous year. Shrinkage in values and general shortage of stocks also had the effect of curtailing the expansion we anticipated in the fire and burglary departments. Our income in the other departments showed healthy increases, despite the adverse general conditions prevailing.

The Ocean has a fully equipped organisation throughout the world, and to preserve it intact during the present period of depression in readiness to take full advantage of better times is a costly undertaking, and consequently the expense ratio, inflated by reason of diminished premium income, increased in 1922 by 1.6 per cent. While I do not think I can go so far as to promise a reduction in the immediate future, I can say that the matter is engaging the very careful attention of the board, and every effort is being made to lower the ratio without impairing efficiency.

THE OUTLOOK.

Regarding the outlook for the future, it is most difficult to arrive at a reliable forecast. The more or less distant future, when trade and commerce shall have returned to their normal condition, does not at present cause us much anxiety, for whenever that happy time arrives the organisation of the Ocean will be found to be in such a condition as will enable the corporation to make the most of the opportunities which present themselves for extending and improving the business. As to the more immediate future, I am happy to say that there are indications of improvement in various directions. As to the home business, we are in touch with every section of the community, and here, again, our experience leads us to believe that, generally speaking, there is a more hopeful feeling that trade is reviving.

Towards that end reduction of taxation will undoubtedly help, and the relief given by the Chancellor of the Exchequer, though very moderate, will be appreciated by insurance companies for two reasons. In the first place there is the lightening of the heavy burden of taxation which the companies have borne for the last few years—that is a direct benefit. There is also the indirect benefit in the encouragement given to industry, which, with the hope of future further reductions, cannot but give our traders and manufacturers greater confidence, and a stronger inducement to increase their turnover. It is to be regretted that the Chancellor could not see his way to the abolition of the corporation profits tax, which, on his own showing, he could have done without loss of revenue during the financial year 1923-4.

On the whole, we have every reason to anticipate a better year

in 1923, both in volume of business and in profits. We can only judge by our experience up to date, but at the same time it must be remembered that the period is too short in which to form a reliable estimate.

Last year I told you that the Columbia Casualty Company, which we floated in America in 1920, had secured a premium income in 1921 of nearly £400,000. For 1922 the premiums were in excess of £600,000. Under the able direction of Mr Neely, the Columbia is now firmly established, and we look forward to considerable expansion in its activities with, we hope, remunerative results.

The report and accounts were unanimously adopted.

PHOENIX ASSURANCE COMPANY, LIMITED.

CHAIRMAN CONFIDENT OF THE FUTURE.

The one hundred and forty-first annual general meeting of the Phoenix Assurance Company, Limited, was held, on the 25th instant, at Phoenix House, King William street, London. The chairman—Sir Gerald H. Ryan—presided. In moving the adoption of the report and accounts, the Chairman said: The accounts submitted to-day embody the figures, for the first time, of the London Guarantee and Accident. These are relatively small in the fire department, of greater proportionate weight in the marine department, and of marked importance in the accident department. We have endeavoured to adjust the system and basis of reserves of our new ally to our own, and this gives our accounts a somewhat unusual appearance, and takes away all strict ground of comparison with past accounts.

Our invested securities have risen largely in value, and we have a considerable hidden reserve in the appreciation over the book value of our assets. The rate of interest has also been maintained at a high level.

FIRE LOSSES IN THE STATES AND CANADA.

The most noteworthy feature in the department is the loss ratio, which stands at 57.8 per cent., the heaviest we have recorded for many years. Exceptionally heavy losses arose in the United States and in Canada. In the United States the fire-waste for the year 1922 was in excess of that of any year since the great San Francisco conflagration, and in Canada there is no record of equally heavy losses. The reduced rate of expense is a gratifying feature in this account.

The claims applicable to the marine business underwritten in 1922 were only £397,018, or 27.6 per cent. of the premiums shown in the accounts, quite a moderate first year's settlement. Unless we bear in mind the curious course of events in marine insurance during the last ten years we might draw the erroneous conclusion that a heavy loss had been made, but an investigation of accounts in which the risks have practically run off shows a small profit to have been realised.

The large business controlled by the London Guarantee has been merged with our own and the combined figures are now given. For the first time in the company's career the accident premiums exceed those of any other department. With the profit of £156,506 realised by our efforts in this department we have good reason to be pleased, but we hope to do much better. With the largely increased figures shown in this branch the additional reserve of £184,000 had lost its significance and has therefore been merged in the other accident reserves.

Last year I pointed out that the improvement in the value of our securities had greatly strengthened the position of this department, which had suffered severely by depreciation of values owing to the war. A large accretion has taken place in the sterling value of our assets. This we have not brought into account at all. Our view is that for several reasons it is wiser to leave the balance as an unexhausted fund for future fluctuations and margins. The new business in the life account reached the substantial figure of £2,171,000 in sums assured. The department progressed satisfactorily, and its prospects are certainly very favourable. The death claims occurring in the year were considerably below the expectation, according to the mortality tables. An indication of the increasing surplus in the life funds is afforded by the declaration which the board has been able to make of a larger interim bonus on participating policies. A valuation of the non-participating fund, the surplus in which belongs to the shareholders, was made at the end of the year, and a profit of £15,000 carried to profit and loss.

TEST OF STRENGTH.

It has come to be regarded as a fair test of the strength of an insurance company to analyse to what extent the dividend is provided by the interest on its free funds. Our dividends and debenture payments amounted to £473,500, whereas our free-interest yielded £522,744. The year 1922 did not bear the full annual charge for the dividends on our increased capital, hence it would be unreasonable to expect that the interest revenue will exceed the dividend payments in our next accounts, but the dividend position

is exceedingly strong and full of promise. The figures of trading results, though smaller than in past years, might be regarded as satisfactory were it not for the heavy item of colonial and foreign taxes, but we have passed through a period of abnormal strain in nearly every one of our branches of business, and a return to the conditions of a few years back would produce a very large profit. And so we look ahead with confidence and ask our shareholders to extend their patience as regards an increase in the dividend a little longer. We have written off the cost of acquiring the London Guarantee and Accident Company no less than £250,887, reducing this account to £472,000. We could have removed the item altogether by taking credit for the improvement in our securities to the required extent, and we should still have had in our shareholders' funds a large sum in reserve as unappropriated appreciation.

The report and accounts were unanimously adopted.

ATLAS ASSURANCE COMPANY, LIMITED.

"VERY STRONG FINANCIAL POSITION."

GOOD PROSPECTS FOR THE FUTURE.

The annual general court of proprietors of the Atlas Assurance Company, Limited, was held, on the 27th instant, at the Cannon street Hotel, London, Mr Francis Alexander Johnston (chairman of the company) presiding.

The general manager and secretary (Mr C. H. Falloon) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said: Before dealing with the report and accounts which we are here to-day to consider, I wish to refer, and I do so with deep sorrow, to the loss which this company has suffered through the deaths of two of its directors, Mr Prescott and Captain Hooper. Mr Prescott was a comparatively young man of distinct character and ability, whose family had been actively associated with this company since its foundation in 1808, and he was a colleague to whom we could have confidently looked for more prominent help and guidance in the years to come. Captain Hooper, who joined the board in 1915, was a constant attendant at our weekly meetings, taking a keen interest in the company's affairs and losing no opportunity of advancing its interests in every way he could. We shall miss him and Mr Prescott very much indeed. To fill the two vacancies on the board caused by these lamentable events, the directors have appointed Sir Harold Snagge, of Messrs Edward Boustead and Co., and Mr George Finch Hotblack, of Messrs Grey, Dawes, and Co., two gentlemen whose services we are very fortunate to secure, they being not only, as you know, of proved capacity and influence in the City of London, but also very welcome and helpful colleagues to us on this side of the table. These two appointments I will with very great pleasure submit to you later on for confirmation.

Bearing in mind the difficulties to which business of all kinds is still exposed, I think you will have been not dissatisfied with the results we show to you. One of the most satisfactory features is that our fire premium income has not only been maintained but slightly increased, which compares with a fall of £216,000 in the previous year.

The fire underwriting profit last year was £128,157, against £97,525 in the previous year, or 6 per cent. profit against 4.6 per cent. in 1921, which was an exceptionally bad year for all fire companies. The loss ratio of 50.9 per cent. in 1922, which compares with 54.7 per cent. in 1921, was normal and would, had it not been for the high working charges, have shown a very handsome profit.

EXPENSE RATIO REDUCED.

Nevertheless we have got our ratio of expenses down from 44.7 per cent. to 42.8 per cent. Our vigorous economy campaign is thus bearing fruit, and the efforts of the management are not being relaxed in endeavouring to effect further savings during the current year with, I feel confident, a good prospect of success. It is, indeed, to the reduction of these working expenses that we must look for really satisfactory trading results in the future. This reduction of working costs is the great problem before the industrial and commercial concerns of this country if they are to prosper, and although the great British insurance companies are, thanks to the conservative finance they have pursued during the whole of their history, in an exceptionally favourable position, they, too, will have to leave no stone unturned to reduce their working ex-

penses to the lowest possible point consistently with the efficient conduct of their businesses.

During the year under review we purchased the stock of the Albany Insurance Company, of Albany, New York State, a company whose reputation stands very high in the United States. It was founded in 1811, and has a valuable and profitable fire premium income, amounting to some £100,000 per annum. We are confident that its acquisition is in the best interests of the "Atlas."

ACCIDENT AND MARINE FIGURES.

As regards the accident figures, we have had to face in 1922 a material loss of premium income in the workmen's compensation section. This was due to trade depression, reduced wages, and a reduction in rates. It is, however, satisfactory to be able to say that we have made up this premium loss in other directions, and that the premium income of the accident department has advanced by £6,741. The underwriting profit of £35,828 is the largest the company has so far obtained.

In the marine department we have continued the cautious policy we have pursued from its initiation in 1921. The premium income last year was £114,414, against £85,198 in the previous year. We are content that this should be so whilst the marine market continues to remain in such an unsatisfactory condition as regards rates. The second year settlements on the 1921 account amount to £36,757, making a total settlement to date of £40,812, which is equal to 58.4 per cent. We venture to think that the account will emerge with a reasonable profit. As regards the 1922 account, the first year's settlements were £34,204, which is 29.9 per cent. of the premium income.

LIFE DEPARTMENT.

The life department increases every year in importance, and the management is not only able, but enterprising and energetic. The net new life business in 1922 reached the large amount of £2,713,243, which constitutes a record, our previous highest figure being £1,972,269 in 1920. In 1921 the new business was £1,871,240. We entered during the past year into a contract with Messrs Lever Brothers to insure the lives of their co-partners, and this to a considerable extent accounts for the large increase in new business, but apart from that, our ordinary business expanded. We have been endeavouring in the life department to be progressive without sacrificing any of the essential principles of sound management, and I think we may claim a fair measure of success. Death claims in 1922 were £159,388, as compared with £133,276 in 1921. With a larger business some increase in the amount of death claims is not unreasonable, but the year 1922, so far as profit from favourable mortality is concerned, was worse than 1921 to the extent of £15,000.

I mentioned last year that the directors hoped to declare a bonus as at the end of 1922 instead of waiting until the end of the quinquennium in 1924. That hope has been realised, and bonus notices have now for some weeks been in the hands of with-profit policyholders. The result of the valuation must, I think, be regarded as exceedingly satisfactory.

A BONUS.

In respect of the triennium 1920 to 1922 a bonus has been declared at the rate of £1 10s per £100 per annum, calculated upon the sum assured and existing bonuses. A bonus at that rate compounded every three years (and we should not have declared it unless we had every hope of maintaining it in future) is really very substantial. Taking the average term of a policy as 25 years, it is equivalent to a bonus of £1 15s 6d per £100 per annum, calculated on the sum assured only.

We have declared an interim bonus at the rate of 30s on all policies which become claims or are surrendered during 1923, and towards the end of this year a declaration will be made in regard to 1924. We have distributed materially less than the total profit earned, and whereas in 1919 certain redeemable securities were not written down to their then values, that position was rectified during 1921, with the result that on December 31st last the book values of the Stock Exchange securities held by our life department were £205,000 below their then market value. The net rate of interest earned on our life and annuity fund in 1919 was £4 18 9d per cent., whereas in 1922 it was £5 0s 5d per cent.

PROFIT AND LOSS ACCOUNT.

We bring into the profit and loss account from 1921 £124,375, to which has to be added the profits and interests for the year under review of £296,814, giving us a grand total to deal with of £421,190. Of this amount income-tax, corporation tax, and excess profits duty absorb £72,119. I hope this item will continue steadily to decline, and it should, when next we meet, show a reduction. Interest on debenture stock accounts for £3,443. We have transferred £19,845 to the fire fund, bringing it up to £2,150,000; we transfer £10,000 to the "Essex and Suffolk" staff provident fund, and bring up our contingencies fund to the round sum of £50,000; pay you a dividend of 13s per share, free of tax, and carry forward to 1923 the sum of £145,262, increasing it by just

over £20,000. The dividend you will receive has thus been increased by 1s per share, and we are very glad to be in a position to give you this addition.

The financial position of the company is a very strong one. At £2,150,000 our fire fund is larger than the fire premium income, and the accident and marine funds total over £300,000. We have, in addition, a contingency fund of £50,000; the shareholders' investment fund of £79,275, which, as you will see by the auditors' certificate, is not required, and we carry forward to 1923 the substantial sum of £145,000, which is equal to a year's dividend at 13s per share.

Conditions continue difficult, but business is slowly improving, and while it would be foolish to attempt to predict what our experience in 1923 will be, I think our prospects are not unfavourable. Taxation will be somewhat lower, and the volume of goods to be insured against fire should, with improving trade, increase, and we also hope for some further reduction in working expenses, but what our fire losses may be is on the knees of the gods.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

INDO-EUROPEAN TELEGRAPH COMPANY, LIMITED. THROUGH ROUTE DELAY. DIVIDEND POSITION.

The fifty-sixth ordinary general meeting of the Indo-European Telegraph Company, Limited, was held, on the 25th instant, at the offices, 18, Old Broad street, London, E.C.

Mr J. Herbert Tritton (chairman of the company) presided.

The secretary (Mr John I. Bethell) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, first referred to the loss the company had sustained by the deaths since the last meeting of two of his colleagues, Mr Charles Holland and Mr Stratford-Andrews. Mr Axel W. Berg, he said, had been appointed acting managing director, and Mr Claude H. Tritton had taken Mr Charles Holland's place on the board.

As to the restoration of the company's through route, with which was bound up their capacity of earning receipts from traffic on an adequate scale, an unfortunate complication had arisen, which, so far, had had the effect of depriving them of their concession from the German Government. The directors had spared no efforts, whether in London or Berlin, to obviate this difficulty, which, however, had proved entirely beyond their power, involving, as it did, important and conflicting interests outside this company. They had been unwillingly, and it appeared unnecessarily, involved in this dispute to their great detriment. At this moment a satisfactory solution had not yet been found. It might come within a few days or it might be delayed for a few months. When it came it would carry with it the reopening of the company's through route and the power to handle international traffic exchanged with the United Kingdom, in addition to the similar traffic with the Continent already being carried. In spite of the fact that the company had been earning little or no revenue since the beginning of the war, the shareholders had nevertheless received satisfactory dividends.

This result had been, in the main, attained by the generous assistance of the company's friends and partners in the Cis-Indian Joint Purse, but the directors had been informed that this assistance could not be continued indefinitely. In the event, therefore, of the difficulties referred to being protracted over a considerable number of months, the shareholders could not expect the dividend to remain at its present level. On the other hand, if, as the directors had reason to hope, these difficulties quickly disappeared, there should be no question as to the continuance of a dividend, and the company would re-enter upon an assured and satisfactory career. It should be borne in mind that the company's capital resources, though probably still adequate for their purpose, had, as a result of the war, been reduced by £350,000.

REOPENING OF WARSAW-TEHERAN WIRE.

The disappointment of the directors at the enforced delay in the resumption of business was all the more keen because, by the most strenuous efforts on the part of all concerned, one wire had been restored between Warsaw and Teheran, and had been earning revenue by carrying in a very satisfactory manner Continental international traffic of a most varied kind, thus indicating the gap which the interruption of the route had left in the telegraph facilities of the world. The reopening of this wire had been accomplished only by the most wholehearted and indefatigable efforts on the part of all concerned. The portion of the route traversing Poland had had to be entirely rebuilt with three wires for a distance of 370 miles and repaired for a further distance of 180 miles. The difficulties in connection with this work had been enormous. The company had been greatly assisted in their work by the Polish and Soviet Governments, but, in addition,

an immense amount of co-ordination between their offices so far apart as Moscow, Warsaw, Odessa, Teheran and London had been required to bring about the result obtained, and the directors felt that great praise was due to the representatives and chiefs of stations abroad, to the chief engineer and staff, and to the management and staff in London. The work in Poland was not yet quite complete, certain sections in Poland and Russia having had to be bridged by the loan of Government wires, but there was no doubt that this summer the entire work would be completed. In the Ukraine circumstances had been more favourable. Only short sections had had to be entirely rebuilt; thorough repair had been sufficient for the remainder. East of Odessa, again, for the most part, only repair had been necessary, and the company's lines were in a fit condition to carry any traffic required. The work on all sections had involved an expenditure of about £170,000 to date, which would, no doubt, eventually be increased to £200,000, but much of this was the accumulation of repairs which, but for the intervention of the war, would have been spread over a period of eight years.

Sir William R. Brooke, K.C.I.E., seconded the resolution, which was carried unanimously, and the retiring directors (Mr Claude H. Tritton, O.B.E., and Mr Axel W. Berg) were re-elected.

NESTLE AND ANGLO-SWISS CONDENSED MILK COMPANY. IMPROVED POSITION AND PROSPECTS.

At the fifty-sixth annual general meeting, held on April 21, 1923, at Cham, Switzerland, the accounts of the company for the year ending December 31, 1922, were adopted by the shareholders.

The chair was taken by W. C. Escher, Esq., who, after referring to the very exhaustive report of the directors which had been issued to the shareholders, pointed out in the course of his speech that the year under review must be regarded as a period of liquidation, and that for that reason the trading results disclosed were too meagre to be looked upon as representing normal figures.

The programme of production for the current year, the conditions under which the purchase of raw materials had been made, and the fact that they had been able to maintain their selling prices in all their markets, enabled them to look forward to the results of the current period with greater confidence than they had last year. In addition to the great reduction in liabilities to their bankers during 1922 mentioned in the report, a further reduction of 18 millions had been effected in the first quarter of 1923, but, as the liquidation of the heavy stocks was now completed and they were working with stocks reduced to the fullest extent that their world-wide sphere of activities would permit, no further reduction in this direction could be looked for for the present.

INCREASE IN SALES.

The fact that they had not had to record a fresh drop in sales for nearly a year, and had even shown a gratifying increase in some markets, made the directors feel that the lowest point of the demand for their products had been reached, and that by constant propaganda and activity, as well as the continued uniformity and excellence of their products, they could look forward to a progressive increase in the consumption of the goods they manufactured. The part played by milk in the dietary of everybody was of continuously increasing importance, and was increasingly recommended by the medical profession.

All the company's depots were in a position to render a good account of themselves, as those of lesser importance and those which had been opened on account of the special situation created by the war and post-war period had been closed, and the directors considered that this system of depots rendered good service in facilitating direct contact with customers and the intensive and energetic development of markets.

INDIAN AND CHINESE MARKETS.

After referring to the future possibilities of such markets which were poorly supplied with fresh milk, as India and China, and when their economic situation would enable their enormous populations to purchase greater quantities of the company's products, the chairman expressed the hope that an increased demand would arise for the company's products in those countries whose currency was heavily depreciated, when their financial situation had improved. The excellent quality of their products had always been the distinguishing characteristic of the company, and, in addition to the regular analysis that was made as a matter of routine at all factories, they had instituted fully-equipped laboratories in all centres of production for bacteriological analysis, and they were fully confident, therefore, of retaining the reputation for perfection in their products that they had always enjoyed.

REORGANISATION OF SERVICES.

The directors had also devoted their efforts to the reorganisation of the company's services, the simplification and centralisation of its accountancy, and the speeding up of all its administrative departments, all of which were obviously of extreme importance to an organisation working in all corners of the globe and with fac-

ories so widespread that the constant alteration in exchange rates and variations in the cost of raw materials and labour had to be continually watched, to enable it to adapt itself to the circumstances of the moment with the least possible delay, and to continually supervise its cost and selling prices.

They were reducing their personnel to the minimum consistent with efficiency, not only in the parent company, but in all those undertakings in which they were interested, and they registered their appreciation of the capacity and zeal shown by the employees in all grades.

They recognised increasingly that articles of prime necessity like the company's products could not fail to attract serious competition, and that in view of the large capital invested in the company their efforts must continually be increasing, their decisions promptly arrived at and their contact with associated undertakings continually drawn closer. They were constantly striving to this end.

NESTLE'S FOOD COMPANY OF NEW YORK.

Dealing with the Nestlé's Food Company of New York, the Chairman remarked that the consumption of condensed milk in the United States exceeded that of the rest of the world, and that they hoped that this American concern would gradually yield satisfactory results, though, as far as could be seen, these would not attain the importance of the enormous services this organisation rendered during the war and the immediately succeeding period.

They were pleased to say that the little factory in Brazil was giving quite satisfactory results, both in the quality of its products and in output, and they looked forward with confidence to its gradual development. The directors' task was a sufficiently heavy one, and they had no intention for the present of extending their activity into new fields.

QUESTION OF RESERVES.

As shareholders were aware, owing to last year's losses, the important reserves that the company had accumulated have been absorbed, and it was desirable, from every point of view, to gradually constitute afresh a new reserve fund in consonance with the company's capital. A conservative policy was called for which would enable the company to replace the reserves which had disappeared, and, with the gradual liquidation of the bank liabilities, would put it back in the front rank to which it was daily progressing. They hoped that the losses of the participations would be gradually recovered, so that the reserve created thereagainst would thus become a real reserve fund to the company, and, in closing, the Chairman remarked that, notwithstanding their misfortunes, the company's goodwill had not suffered in any way in any part of the world.

CONSOLIDATED WATERWORKS OF ROSARIO, LIMITED. INCREASED BUSINESS AND PROFITS.

The twenty-eighth ordinary general meeting of the Consolidated Waterworks Company of Rosario, Limited, was held on the 24th inst., at 52 Moorgate, London, Mr James Anderson (the chairman) presiding.

The Chairman said that it was a great pleasure to the directors to be able to submit a report and statement of accounts showing a substantial advance in the business and profits of the company. The gross income for the past year amounted to £172,997, an increase of £14,357, or 9 per cent. over that of the previous year. Working expenses showed no increase at all, being slightly under those of last year, which was very satisfactory in view of the larger number of services in operation. For that reduction in working costs they were chiefly indebted to economy in fuel, the cost of pumping with oil alone having been found to have an economy of over 20 per cent. as compared with coal. Unless there was a substantial fall in coal, or a rise in the cost of oil, they would continue to use oil in future.

A good deal had been done in the way of capital expenditure during the year, the principal item in hand being the completion of the town tank, which they expected to finish during the current year. The question of capital expenditure had very careful consideration at hands of the board, and had special importance in view of the fact that the works reverted to the municipality without payment at the end of 35 years. They were charging the profits every year with a sum which, at compound interest, would equal the capital invested. As time went on the question would require more and more consideration.

The outlook for the current year was undoubtedly good. There had been a great deal of building going on, as was evident from the large increase in the number of services in the course of the past year. Rosario was the centre of a grain-growing and cattle-raising district. Grain harvests had been pretty good, but the cattle industry had been under a cloud for some time. The rate of exchange continued to be low. The loss they had made last

year on remitting was £4,347, and would have been larger but for their having used some of their income locally for capital purposes. There seemed little prospect of an early appreciation of the dollar towards its par value.

The Chairman concluded with an expression of appreciation of the work of the staff.

The report and accounts were unanimously adopted.

LONDON TRUST COMPANY, LIMITED. INCREASED REVENUE AND DIVIDEND.

The thirty-fourth annual meeting of the London Trust Company, Limited, was held, on the 26th instant, at Winchester House, Old Broad street, London.

Mr W. Douro Hoare, C.B.E. (chairman of the company), who presided, said that the total revenue for the year amounted to £103,352, as compared with £94,272 in the previous year, an increase of £9,080. The balance of revenue remaining after meeting debenture interest, preferred dividend and expenses, was £45,641, and the balance available from last year was £49,499, leaving a sum of £95,140 to be dealt with. During the year there had not been so great a deduction for income-tax from their dividends as in the previous year, which accounted for a portion of the net increase in the revenue. It was proposed to transfer £10,000 to reserve account and to pay a further dividend of 8 per cent. on the deferred stock, making, with the interim dividend of 4 per cent., 12 per cent. for the year, as compared with 10 per cent. for the previous year, which would absorb £33,750, leaving a balance to be carried forward to next year of £51,390. The reserve account would then stand at £230,000. Taken at the prices ruling on March 29 last, the investments showed a surplus over the amount at which they stood in the balance-sheet, and consequently the reserve account was intact. Although it was not wise to rely too much upon the valuation prices at any given time, shareholders would agree that the present position was most satisfactory, showing as it did that the break-up value of the deferred stock worked out at over 200 per cent., as compared with 134 per cent. on last year's valuation.

There had been some improvement in commercial activity during recent months. There seemed to be some possibility of an improvement in the situation with regard to the Reparations question, and if this were placed on a satisfactory basis, undoubtedly a marked impetus to trade would result. The company was still largely interested in the Argentine, and conditions ruling there had tended to improve. As the exports of the Argentine and Brazil expanded they hoped to see an improvement in the exchange rates, with a consequent beneficial result to the various undertakings working in those countries. The Mexican situation had remained almost stationary, but there was some prospect of progression.

The report and accounts were unanimously adopted.

HOPE BROTHERS, LIMITED. CONFIDENCE IN THE FUTURE.

The 23rd annual general meeting of Hope Bros., Limited, was held, on the 26th inst., at the Cannon street Hotel, London, Mr T. Edward Goodyear (the chairman) presiding.

The Chairman, in moving the adoption of the directors' report and accounts, said he thought the shareholders would agree that the results submitted were satisfactory, though, speaking personally, he might confess to a slight feeling of disappointment that they were

not even more favourable. The conditions of the summer and the past winter were not entirely to the board's satisfaction, but still more perhaps the company had felt the effects of the diminishing spending power of the community. In the great manufacturing districts in the North—where some of the company's most important branches were situated—the reduction in spending power had been especially accentuated. He thought, however, that the general state of trade was somewhat better than for some time past, but if a steady and permanent improvement was to come about we must have more peaceful conditions both at home and abroad. In spite of the difficult conditions which had prevailed, the directors were able to submit a satisfactory balance-sheet, and one which he thought might give shareholders complete confidence in the future as regarded this company. The stock was somewhat lower than a year ago. It was taken at or under cost price, and he was assured by the company's buyers and managers that it had never been in a more healthy condition. The cash position was somewhat stronger and their liabilities were less than last year to the extent of £30,000.

The company opened a branch in Edinburgh in December last, and their Christmas trade there considerably exceeded their expectations. The premises were situated in one of the best positions in Princes street, and the directors had every confidence that the branch would prove a very satisfactory one. At Liverpool they had felt it necessary to purchase the block of buildings of which their branch formed part, and they now held the property from the Corporation of Liverpool for a term of about 49 years at a peppercorn rental. The premises were situated in perhaps the finest position in the city, and, as the owners had decided to sell, the company purchased the property in order to preserve their valuable goodwill.

Mr W. W. Greenslade (deputy-chairman and managing director), in seconding the motion, said he regarded the trading conditions at the present time as being much more favourable than last year. The motion was unanimously adopted.

ANGLO-AMERICAN OIL COMPANY, LIMITED. SUCCESSFUL RESULTS OF YEAR'S TRADE.

The 36th annual general meeting of the Anglo-American Oil Company, Limited, was held on April 25th at 36 Queen Anne's gate, Westminster, London, S.W. 1, at 3 o'clock.

Mr F. E. Powell (chairman) presided.

The secretary (Mr A. H. Hewett) having read the notice convening the meeting,

The Chairman said that owing to improved conditions the net result of the company's business shows satisfactory profits. The value of inventory is less than at the end of 1922, although the quantities in stock are approximately the same. Owing to a revival in industrial activity there has been an increased demand for lubricating oils and other products, with the exception of fuel oil, which has suffered owing to the fall in the price of coal.

DIVIDEND 15 PER CENT.

The directors made the usual provision for depreciation on steamships, plant, &c., amounting to £745,768, and after making provision for income-tax, £435,730, there is a net balance to the profit and loss account of £747,063. On this the directors proposed a final dividend of 2s per share, absorbing £300,000, which would make with the interim dividend of 1s per share in December, 1922, a total dividend of 3s per share, or 15 per cent. for the year, free of tax. The general reserve fund and surplus, amounting to £3,074,039 19s 3d, stood at a figure somewhat larger than a year ago.

FUTURE OUTLOOK.

Since the date of the balance-sheet the favourable trading conditions have continued. The company has entered the candle business by acquiring an interest in the well-known candle company of Messrs J. C. and J. Field, which thus far has given most satisfactory results. The company's fleet of tankers are fully employed, but there are no further vessels building. During the past year \$2,500,000 has been paid into the gold note sinking fund without further borrowing, and a further \$1,250,000 has been remitted this year to meet the call due on these notes due April 1st.

Providing prices and trading conditions remain normal, it is not anticipated that additional capital will be required in the near future, and no arrangements have been made for issuing the fresh capital already authorised by the shareholders. The cash reserves of the company are larger than a year ago, and are sufficient for the company's present needs.

IRISH-AMERICAN OIL COMPANY.

In consequence of the formation of the Irish Free State the company has found it necessary to form the Irish-American Oil Company, Limited, with an authorised capital of £250,000 in 7½ per cent. cumulative preference shares and £250,000 ordinary shares.

This company will absorb the business formerly handled by the parent company in the Free State.

The Chairman concluded by moving the adoption of the report and accounts.

Mr James Hamilton (vice-chairman) seconded the motion, which was carried unanimously.

BIRMINGHAM DISTRICT POWER AND TRACTION COMPANY, LIMITED. IMPROVED FINANCIAL POSITION.

The thirty-ninth ordinary general meeting of the Birmingham District Power and Traction Company, Limited, was held, on the 27th instant, at Electrical Federation Offices, 88 Kingsway, London, W.C., Mr C. Shirreff Hilton presiding.

The acting secretary (Mr P. M. Rosedale) having read the notice calling the meeting and the auditors' report,

The chairman, in moving the adoption of the report and accounts, said that the balance-sheet showed a marked improvement in the financial standing of the company. The overdraft at the bank had been paid off; their available cash resources had been considerably increased, and under the trust deed a further £10,321 of first debenture stock had been redeemed and cancelled, the discount, £2,145, being added to reserve. The total sum redeemed and cancelled was £122,488. Net receipts showed a decrease of £11,000, but the expenses had been reduced by nearly £12,000. Part of the latter was due to a reduction in loan interest and income-tax. The final result was that there was a balance on the year's working of £48,103, compared with £47,391 in 1921. They were paying 5 per cent. on the ordinary shares, and carrying forward £3,959, as compared with £2,981 brought in. Last year they were able to recommend a dividend of 6 per cent., but it would be in the recollection of some of the shareholders that one of the terms of the reconstruction of the capital of the company in 1916 was that 35,000 ordinary shares did not rank for dividend until January 1, 1922. These shares, therefore, had ranked for dividend for the first time this year, and it would have been unwise, in the present state of business, to have paid the full 6 per cent. on the increased capital. The carry forward had, however, been increased, and with the advent of better times, which they expected, there should be no difficulty in a return to a 6 per cent. dividend. When the conditions which prevailed during the year were considered, he thought that the result which the board was putting before the shareholders was a matter for congratulation.

With regard to the Shropshire, Worcestershire, and Staffordshire Electric Power Company, of which they held the main portion of the ordinary shares, there had been a distinct improvement in the latter months of the year in the demand for electrical energy for industrial purposes, and he hoped this was one of the first signs of the industrial revival which they were all so anxiously awaiting. The Electricity Commissioners had made an order establishing that company, jointly with the City of Birmingham, as a Joint Advisory Committee for the supply of electricity in the South-West Midlands Electricity District, as delimited by the Commissioners. This should ensure a further expansion of the Shropshire company's activities in the near future.

The results of the Birmingham and Midland Motor Omnibus Company, of which this company held the whole of the ordinary capital, were good but not so good as last year. The depression which affected the Tramways and Power Company also affected the receipts of the Omnibus Company. The company was paying its usual dividend of 10 per cent., but had found it necessary to reduce the bonus.

Mr R. J. Howley, C.B.E., M.Inst.C.E., seconded the resolution, and it was carried unanimously.

ENGLISH ELECTRIC COMPANY, LIMITED. COMPANY'S WORK IN FOREIGN COUNTRIES.

The fourth ordinary general meeting of the English Electric Company, Limited, was held, on April 25th, at Connaught Rooms, London, Sir Charles E. Ellis, G.B.E., K.C.B., the chairman, presiding.

In moving the adoption of the report and accounts, the Chairman stated that the past year was one of the worst the engineering trade had ever experienced, so that he thought it was a satisfactory result to show a balance on profit and loss account of £318,264, as compared with £363,659 for the previous year. It was proposed to pay a dividend of 5 per cent. on the ordinary shares and to carry forward £68,982, as compared with £55,599 brought forward from 1921. The distribution of their productive activities over a number of works made it possible more easily to adjust productive capacity to the trade situation, and had enabled them to effect with the maximum of advantage and the minimum of disturbance what might otherwise have seemed the too drastic economy of concentrating on four of their factories and temporarily closing down

the fifth. The orders received during the year were in value one-and-three-quarters times those received in the previous year, and in the first three months of this year the improvement had been more than maintained. Last year the bulk of the turnover came from public works owing to the inability of the private buyer to finance new developments, but this year there had been a most encouraging revival in the application of their standard manufactures to steel works, coal mines, and other industries.

Improvements in designs and the development of new lines of machinery had been actively continued, and had assisted the company in obtaining contracts, particularly in electric railway and water-power work. Entire satisfaction had been given by the electric locomotives now in regular operation in the Pyrenees service of the Midi Railway of France. Motor coach equipments had been tested on the Cataluna Railway in the neighbourhood of Barcelona, and others would shortly be working in France, Holland, and Japan. The Japanese Government Railways had decided to adopt the high-tension direct-current system, and had placed with this company an order for 34 electric locomotives, the largest order of the kind ever executed entirely by British manufacturers. The contract had been secured from the Great Indian Peninsular Railway for electrical equipments for the suburban lines in and near Bombay. For India they were building a 15,000 h.p. water turbine, while for Brazil they had an order for one of 25,000 h.p., with the alternator to be driven by it. In this country the steam turbine and internal combustion engine were likely to remain the principal prime movers for the generation of electricity. The report was adopted.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED. "GOOD PROGRESS IN 1922."

The ordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held, on the 27th inst., at Cannon street Hotel, London, E.C. The Hon. Lionel Holland presided, in the absence of Mr Malcolm Low (the chairman of the company).

The Chairman said that excellent work had been done and good progress made in 1922. The tonnage of ore, slimes, and tailings dealt with was over 315,000 tons, against 314,800 tons in 1921; the underground development, 11,179 feet, showed an improvement of some 1,000 feet; very good progress was made in sinking the circular shaft, and last April work commenced on the auxiliary shaft, which, starting at the 50th level, was to go down to the 66th; and the reserves of ore at 420,779 tons showed an increase of 1,500 tons. The mining policy would not admit of further additions to ore reserves during the next two years. After completing the development work down to the 66th level they would rely upon existing reserves to supply revenue, and would proceed with no further development below that level until the circular shaft reached the 52nd and the auxiliary shaft was completed to the 66th level. The reserves were estimated on the most conservative basis, and did not take into account the rich discoveries at the 66th level. The length of the mine was 3,400 feet, and they found the remarkable and encouraging feature that at the 66th level—the deepest attained—already almost 2,000 feet of payable ore of good value existed. These richer deposits at depth could not be mined economically, however, without wholly adequate ventilation at the deepest levels. They must, therefore, now halt with development work until the shafts were completed to the depths required.

The return of fine gold was a record, exceeding by 253 ounces that of 1921. The increased production was much more than counterbalanced, however, by the heavy fall in the price of gold. Had the latter been maintained at its 1921 level the revenue of the past year would have benefited by over £60,000. It was the policy to increase the gold return so as to counteract the reduced price of gold and maintain a satisfactory scale of dividend after meeting capital expenditure. Gold sales produced £451,093, after deducting royalty and refining charges, and the total revenue was £458,569. Against this stood an expenditure of £253,489, or about £16,500 less than in 1921, leaving £205,080 to carry to profit and loss account. With dividends from the Kolar Power and Brickmaking undertakings there was a profit of £210,954 on the year's working. Capital expenditure during the year absorbed £106,329—£55,000 for machinery, plant, and buildings and £51,000 for sinking the circular and auxiliary shafts. They were writing off £20,000 under the former and £30,000 under the latter heading, and £25,000 against the current year's expenditure on mine equipment for the purchase, replacement, and upkeep of the deep mining plant. In the last year's account £60,000 was set aside, and the year before £50,000. After the current year this expenditure would be a diminishing quantity, since the bulk of the plant and equipment would have been obtained and put into use. The proposed final dividends would make the total distribution for the year 3s per share on the preference and 2s per share on the ordinary shares, or 30 per cent. and 20 per cent. respectively, and would bring up

to just under £3,180,000 the total sum paid out by the company by way of dividend since its incorporation.

Referring to their interest at Kharsawan, India, the Chairman said that in the current year they should learn whether the field would be likely to repay serious exploitation.

The report and accounts were unanimously adopted, and dividends as recommended were declared.

SCHWEPPE'S, LIMITED.

IMPROVED POSITION—SUBSIDIARY HOLDING COMPANY.

The twenty-sixth annual general meeting of Schweppes, Limited, was held, on the 26th instant, at Marble Arch House, 1 Connaught place, London.

Sir Ivor Philipps, K.C.B., D.S.O., who presided, said that the accounts showed that in the year under review the company made the largest profit in its history—a result brought about by economy and careful administration. The gross profit showed an increase of £13,000, and the net profit of £101,000 an increase of about £5,000. The summer trade was only a normal one, so that the year's results might be considered highly satisfactory. The export trade was still a restricted one, but the figures showed a slight increase on those of the previous year. The Australian trade was steadily improving. The company's financial position was better than ever it had been, but there was still much leeway to make up. In following a conservative policy of paying fair, but not excessive dividends, by making proper depreciation and setting aside substantial sums to reserve account and to writing down goodwill, the board were gradually but surely improving the property and putting the financial position on a sound footing.

Their export trade had for some years suffered from high shipping rates and foreign exchanges, and they had found it more and more difficult to sell their goods at profitable rates in Colonial and foreign markets, except Australia, where they had their own factory. To meet this difficulty they had under consideration a proposal to form a subsidiary holding company, to be known as Schweppes (Colonial and Foreign), Limited, which would organise companies in countries where they considered it advisable to manufacture locally. The present proposal was that the share capital of the new company should be taken and held by Schweppes, Limited, but if at any time the directors considered it necessary to raise additional capital from the public they would arrange that the shareholders of Schweppes, Limited, should be afforded an opportunity of participating, and be given priority, as far as it was possible, in allotment.

The new Budget, if the Finance Bill passed in its present form, would help the company in two ways—by reducing the corporation profits tax and by reducing the mineral water tax on sweet waters. The directors sincerely hoped that the Chancellor of the Exchequer would reconsider the proposal and remove the whole of the tax to the benefit of the consumer. In any case, the directors proposed to give the company's customers the full benefit of the reduction, whatever it might be, by making a reduction to the trade generally. The report and accounts were unanimously adopted.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £40,000,000 in three months' Treasury Bills dated from Monday to Saturday, April 30—May 5, were opened on April 27, 1923, and the total amount applied for was £61,230,000. Tenders for Monday and Saturday bills at £99 10s 4d and above in full, and for Tuesday to Friday bills at £99 10s 2d, about 65 per cent., and above in full. The average rate of discount for Treasury Bills was £1 18s 7½d. The amounts allotted were as follows:—In bills at 3 months, £35,500,000; in bonds, £4,500,000.

(a) Including Treasury Bonds.

4½% Treasury Bonds, 1931-33

Tenders will be received on Friday, May 4, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £35,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000, but, subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

	588,124

Messrs Samuel Montagu and Co. write, on April 25th, as follows:—

GOLD.

The available gold supplies were divided between America and India, the former taking the larger proportion. Gold valued at \$2,250,000 has arrived in New York from London. The following were the United Kingdom imports and exports of gold during the month of March, 1923: Imports, £4,346,442; exports, £4,635,587. India's foreign trade during March was as follows:—Imports, private merchandise, 18,54 lacs of rupees; exports, including re-exports, 32,63; net imports of private treasure, 7.19. The balance of trade, including Council bills and encased papers, is Rs. 7.06 lacs in favour of India. The following are the figures for the foreign trade of British India for the financial year 1922-23, as compared with the previous year:—

	1921-22.	1922-23.
Imports.....	26,635	23,259
Exports.....	23,138	29,885
Re-exports.....	1,406	1,516

The balance of trade in favour of India was 2,832 lacs of rupees, as compared with an adverse balance of 3,180 lacs of rupees in the previous year.

SILVER.

During the week the tendency of prices has been upward. The key to the present situation is continued inquiry from China, chiefly directed upon the American market. The speculative position in Shanghai (equivalent to bulling silver), is really large, and cannot be considered as founded upon trade requirements. Possibly some of the attitude of Chinese operators may be ascribed to a measure of uneasiness as to the political situation, the tortuous vagaries of which are perennial. As a consequence of the market being bereft of supplies from America, the moderate orders from the Indian bazaars had considerable effect upon prices. A considerable premium for immediate delivery is quoted in Bombay—the price for cash is cabled to-day as 85 1/2d, and for forward delivery 82 1/2d, per 100 only at rising rates. A further purchase of 1,500,000 ounces of silver under the Pittman Act was announced from Washington on the 13th inst., making the total amount bought under the Act up to that date 180,680,995 ounces.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

BRITISH AUSTRALIAN BROKEN HILL.—Cabled mill returns for the fortnight ended April 21st:—7,002 tons crude ore produced 1,150 tons lead concentrates, containing 729 tons lead and 31,050 ozs silver; also 1,000 tons zinc concentrates, assaying 85 per cent. lead, 95 ozs silver per ton, and 44 per cent. zinc. 180 tons carbonates raised. One day's stoppage.

MOUNT MORAN GOLD MINING Co.—For the four weeks ending April 17th treated 3,750 tons Mount Moran ore, 115 tons Many Peaks ore, 4,546 tons concentrates, and 3 tons of purchased ore and secondary products. Produced 422 tons of blister copper, containing 418 tons copper and 5,088 ozs gold, including 2 tons copper and 1 oz gold from Many Peaks, also 1 ton of copper and nil ozs gold from purchased ore and secondary products. Concentrator treated 14,375 tons ore for a production of 4,335 tons of concentrates, containing 249 tons copper and 2,811 ozs gold. In addition to the above production have made on hand containing 9 tons copper and 94 ozs gold. Decreased output due to Easter holidays.

chandise in stock is substantially the same as a year ago, but as values have decreased the investment under this heading has been considerably reduced. The fall in prices also accounts for the reduction in the amount outstanding for both bills and accounts payable and receivable. The revival of industrial activity has resulted in an increased demand for lubricating oils. The sales of refined oil and motor spirit also show an encouraging increase, which is continuing. On the other hand, the sales of fuel oil have been materially reduced owing to the fall in price of coal both for ships bunkers and industrial works. The following statement shows the actual position as to the year's trading:—Profit on trading after providing for depreciation on investments amounted to £1,841,939; dividend on investments, £37,757; gain in exchange on gold notes after providing for interest and premium on notes paid off, £46,544; other interest and exchange, £2,323—£1,928,563. Deduct—depreciation on steamships, plant, &c., £745,769; provision for income-tax, £435,730; leaving a net profit of £747,064. From this amount an interim dividend of 1s per share (Coupon No. 24) amounting to £150,000 was paid on January 15th last, and your directors now recommend that a final dividend (Coupon No. 25) of 2s per share (free of tax), amounting to £300,000, be paid on May 15, 1923, leaving a balance of £297,064, subject to corporation profits tax, to be carried to surplus. The surplus fund as per our last report showed a balance at December 31st of £476,976. From this must be deducted the final dividend paid on July 15, 1922, of £300,000, leaving a balance of £176,976. Add profit for year 1922, £747,064, less interim dividend paid January 15, 1923, Coupon No. 24, £150,000—£597,064, leaving a balance at December 31, 1922, of £774,040.

BRASILIAN WARRANT COMPANY.—The accounts for the year 1922, after provision for contingencies and all bad and doubtful debts, show a net profit of £231,320, to which has to be added £42,285 brought forward from 1921, making a total of £273,605, available in appropriation account. Interim dividends of 3½ per cent. on the preference shares and 2½ per cent. on the ordinary shares were paid in October last, absorbing £42,500, and the directors have placed to reserve fund the sum of £100,000 (bringing that fund up to £150,000), leaving an available balance of £131,105. The directors recommend the payment of final dividends of 3½ per cent. on the preference shares (making with the interim dividend 7 per cent. for the year) and 5 per cent. on the ordinary shares (making with the interim dividend 7½ per cent. for the year), which together will absorb £67,500, leaving £63,605 to be carried forward. The directors deeply regret to report the death of their late chairman, Lieut.-Col. C. E. Johnston, D.S.O., who had been a director of the company since its inception, and also of Mr Reginald Eden Johnston, who had been a director since 1917. Both these gentlemen were partners in the old-established firm of Edward Johnston and Co., founded in Brazil about 80 years ago, which business was absorbed by this company as a subsidiary in 1917.

JOSEPH NATHAN AND CO.—The report for the year ended September 30, 1922, shows the available profit amounts to £20,763. The balance from last account is £86,075—£106,838. The directors do not propose to recommend to the meeting the declaration of any final dividends, but will ask the meeting to confirm the following interim dividends, all of which have been paid, less income tax:—On January 1 and July 1, 1922, half-yearly interim dividends on the paid-up "A" preference share capital at the rate of 7 per cent. per annum were paid, amounting to a total sum of £17,500; on April 29, 1922, a half-yearly interim dividend on the paid-up preferred ordinary share capital at the rate of 8 per cent. per annum was paid, amounting to £16,000; on September 30, 1922, a half-yearly interim dividend on the paid-up preferred ordinary share capital at the rate of 8 per cent. per annum was paid, amounting to £16,000; on April 29, 1922, a half-yearly interim dividend on the paid-up ordinary share capital at the rate of 8 per cent. per annum was paid, amounting to £4,544. They recommend that the balance of £48,287 be carried forward to next account. The report states that the difficulties in trading throughout the world during the year under review are quite well known, and although the company's total turnover has been more than maintained, the ratio of profit has been seriously affected by the exceptional conditions ruling. During the year under review the directors have made changes in the general operations of the company. Non-profitable departments have been closed and certain special stocks liquidated. The losses arising out of this re-organisation and liquidation have been provided for out of reserves. Depreciation of machinery, plant, and fittings and estimated liability for income-tax, both British and Colonial corporation profits tax and land tax, has been provided for in the year's trading accounts.

MAYPOLE DAIRY COMPANY, LIMITED.—The net profits for year 1922 amounted to £473,934. The directors report that the margin of trading profit in some of the company's specialty goods has been somewhat reduced during the past year owing to severe competition. Trading conditions at the company's branches in those towns where in the year 1917 the sole right to sell margarine was transferred to the registered sugar retailers (before the rationing of fats commenced) have now become normal. The directors are consequently enabled to bring back into profit the £250,000 which was set aside as special depreciation in that year to cover loss of trade, and the consequent depreciation in value of goodwill and fixtures at those branches. The directors are pleased to state that they have now come to a settlement with the Government of the company's claim for refund of excess profits duty. The credits received by this repayment of tax have been apportioned to the respective accounts of the Maypole companies. An interim dividend of 1d per share was paid on the deferred ordinary shares in February last, and the directors now recommend the payment of

a further dividend of 3d per share, payable on May 5th. A credit balance of £3,426 is carried forward, against a deficit of £52,873 brought into the accounts from preceding year.

SPILLERS MILLING AND ASSOCIATED INDUSTRIES, LIMITED.—The accounts for the year ended January 31, 1923, show a balance of profit, after providing for the fees of the chairman and directors, and after reserving the bonus to staff under co-partnership scheme, but before making provision for Inland Revenue taxation, of £308,051. Adding to this the amount brought forward from last account, £159,305, there is a total sum to the credit of profit and loss account of £467,357, less amount reserved for taxation, £105,000—£362,357. Out of this amount there have already been paid dividends for the year to January 31, 1923, on the preference shares at the rate of 6 per cent. per annum (less income-tax) £41,768; interim dividend for the year ended January 31, 1923, on the ordinary shares at 2½ per cent. (less income-tax), £33,577; leaving a balance of £287,012. The directors recommend that this should be dealt with as follows:—To pay a dividend of 10 per cent. (making 12½ per cent. for the year) on the ordinary shares, amounting (less income-tax) to £134,308; to carry forward to next account £152,704. The report states that the profits in respect of the year under review have not been sufficient, in the opinion of the directors, to enable them to recommend a dividend on the ordinary shares at a higher rate than that indicated, and consequently, as the deferred ordinary shares rank for dividend only after 15 per cent. has been paid on the ordinary shares, no distribution can be made in respect of that class on this occasion. The shareholders have approved the new co-partnership schemes for staff and workpeople, and the nominal capital of the company has accordingly been increased since the date of the balance-sheet by £200,000, which will be issuable as and when required in co-partnership shares. A new company, Spillers Trustees, Limited, has been incorporated to carry out the administration of these schemes. The directors are pleased to report that considerable progress has been made in arriving at settlements with the Flour Mills Control, and various sums of money have been received during the year and credited to profit and loss on account of claims made in respect of the period during which the flour milling industry was under Government control. There are many other claims, however, which await settlement, and it is anticipated that some time must elapse before these are finally dealt with.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions marked a slight improvement, and farmers were able to push ahead with spring sowings. Standing crops present a healthy appearance, but a spell of sunshine would greatly improve agricultural prospects generally. A very firm tone continues to prevail at market, and although trade shows no appreciable expansion, full to dearer prices were again required, particularly for breadstuffs, in view of higher forward offers. Native wheat was in lighter supply, and values firmer at 10s 4d to 10s 8d for suitable milling grades, with inferior quoted at 9s 6d to 10s per 112 lbs, free on rail as to sample. Imported descriptions sparingly offered at a further advance. No. 1 Northern Manitoba quoted 53s, Rosafé 62½ lbs 52s 6d to 52s 9d, both ex ship to arrive, and Australian 55s 6d landed, all per 496 lbs. Improved inquiries in the floating and forward cargo section, combined with higher foreign advices, resulted in a firmer price-level. Steamers of Rosafé 62½ lbs on passage sold from 49s to 50s, Barusso 62½ lbs afloat 49s 3d, choice white Karachi May-June 49s 3d, Australian steamer afloat 53s 3d, and sailer of ditto afloat 53s, all per 480 lbs, c.i.f. terms. Of maize, cargoes of yellow 1a Plata afloat sold 39s, and May 15th 38s 4½d per 480 lbs, while a steamer of Black Sea barley due out to load mid May changed hands at 28s per 400 lbs. The general position of flour remains firm in sympathy with wheat, and there is a better trade passing. London standard straight run quoted 42s, patents 44s to 45s, town households 40s per sack delivered in Metropolitan area. All English country straights 34s to 35s delivered to London stations. Imported firm and sellers more reserved. Manitoba patents range from 37s 6d to 41s 6d, Minneapolis good patents 41s, and Australian 37s to 38s, all per 280 lbs ex store terms. Millers' middlings 7s 6d to 7s 9d, bags included, ex mill. Light oats 6s 3d, all per cwt free on rail. Barley firm. English ranges from 8s 9d to 10s 9d per 112 lbs free on rail as to quality. Imported maintained. Californian 45s-48s 6d, Australian Chevalier 42s to 52s, Danubian 30s-30s 6d, all landed per 448 lbs. Persian 27s, Plate 30s, Plate ex-ship 39s 3d, landed 40s 6d, No. 2 yellow American landed 39s 9d, No. 2 mixed American ex-ship 38s 3d, East African landed 38s 6d, red Karachi ditto 42s 6d, all per 480 lbs. Oats, English, firm at 9s-10s 9d per 112 lbs free on rail as to quality. Imported Western ex ship 25s 3d, landed 26s 9d, No. 2 Canadian Canadian feed ex ship 26s, landed 27s, New Zealand "A" grade 38s 6d, "B" grade 37s 6d, both landed, all per 320 lbs. Oatmeal steady, with a fair demand. London made all cuts 18s, rolled oats also whole groats 18s, flaked oats 20s 6d ex mill, ordinary Scottish oatmeal 18s 6d-19s 6d, and American all cuts 17s-17s 6d per cwt.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated April 26th, is as follows:—Pig-iron.—The easier demand for pig-iron has made certain producers rather anxious, and has caused them to reduce their selling price by 2s 6d per ton. Prompt iron is, however, as scarce as ever, and there does not seem to be any prospect of any more

Correspondence solicited.

being produced at present. No. 3 Cleveland G.M.B. is now 125s. Makers of East Coast hematite are prepared to cut their forward quotation to secure business. Manufactured iron and steel.—The steel trade is quiet, but there are good orders on hand. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £10 10s. Iron ore.—Business is idle, and works have sufficient supplies bought, and will not contract for forward delivery. Best Bilbao Rubio ore is 24s 6d per ton, c.i.f. Tees, sellers.

Our Sheffield correspondent writes:—The signs of reaction in the steel trade referred to in last week's report appear to have developed, and it cannot be questioned that the volume of orders booked has been steadily falling off since the end of March. The promise of revival which the conditions of the early part of the year gave have not been fulfilled. There is plenty of work in making mild steel, several plants running full time, and with orders on hand to last several weeks and even longer. New orders, however, are scarce. An additional 60-ton open hearth furnace has been started at a local works this week, and none have been stopped. Although prices are higher, producers still assert that their operations are unremunerative. Outside mild steel a state of all-round depression exists, for which it is believed that the Ruhr trouble is largely responsible. In the important tool steel branches no one can recall so quiet a time. Many makers of crucible steel files and certain kinds of tools are carrying on their businesses at a loss. Business on any appreciable scale with the Continent is impossible. The call for railway steel is fairly brisk, as substantial orders are on hand for rolling stock. Stagnation is general in cutlery and plate. A local house is casting lavatory and bath fittings in stainless steel, which represents an important step in the movement for saving the national wastage caused by the destruction of metals by corrosion. The coal trade is brisk in all sections, and prices are firm. Coke is less scarce than of late, but makers demand 30s for blast furnace coke, early delivery. Current quotations per ton at pits are: Best South Yorkshire hards, 22s to 24s; do., Derbyshire, 21s to 23s; rough slacks, 12s to 14s; smalls, 7s to 9s; hand picked branch, 32s to 34s; best Silstone, 28s to 30s.

Our Glasgow correspondent writes:—The week is ending with a very serious industrial complication threatening in several of the leading branches of the shipbuilding trade. Unless, in the course of the next few days, the boilermakers, wood workers, plumbers, and domestic engineers in the shipyards recede from the attitude they have taken up on the questions of overtime and night shift operations they will be locked out. It is realised by all interested that the trouble will not end there, or be confined to the limited circle in which it has broken out, but will extend to all shipbuilding and engineering sections, the consequences of which will be little short of disastrous for trade in general. It is reported that already the prospects have had an adverse effect on the placing of orders for home work in iron and steel connections, but it has to be borne in mind that these relations have booked a big lot of contracts in raw and manufactured materials of late, and that they will consequently be able to pull along in their special lines in a fairly satisfactory way for a couple of months or so to come. Inquiry for Scotch ordinary irons is not as brisk as it was recently, yet local foundries are taking decent deliveries of No. 3, and makers are finding no difficulty in getting rid of their outputs, chiefly on home account. Exports to America, on old orders, are favourable. Last week quite 3,000 tons were despatched from Glasgow to U.S. Pacific ports, and some small lots were arranged for forward shipment. In the last day or two consumers here have been dealing in Cleveland, at moderate price concessions, and they also have been tempted to lay in some Belgian assortments, and probably would have done more had the foreigners been in a position to guarantee deliveries. Scotch hematite is easy in tendency at £6 7s 6d, maker's works, while No. 1 foundry iron is called, unaltered, at £6 2s 6d. No. 3 £5 17s 6d. Steelmakers have been shading ship plates for export, to about £9 15s, and boiler plates round £12 18s 9d. Steel angles are given as at £9 17s 6d, steel channels £10 10s, joists £10. Given a break in coals, there would be at once a sharp drop in most kinds of manufactured materials; that at least, is the opinion of experts. So far as disclosed, there has been only one shipbuilding contract put through—the sale to a Glasgow house of a 7,500 ton modern cargo steamer—which can burn coal or oil—at near

£65,000, and regarded as a bargain at that. Rumour has it that an inquiry for 100 locomotives for South American railways is in this market, in fact, is expected to come here. Glasgow Corporation has given an order for 5,000 tons of tramway rails (at £11 per ton) to the Cargo Fleet Iron and Steel Company. Black sheets are in fair demand near £12 10s for $\frac{3}{8}$ in., and £20 for galvanised 24 b.g. Glasgow. Bar iron in moderate inquiry at £12 10s for crown quality. Tubes keep in good request, especially on export account. A large business continues to pass in coal. Generally, Scotch coalmasters have sold their whole outputs for the next two months, May and June, and at good figures.

Our Cardiff correspondent writes:—The Cardiff coal market has shown very little animation this week. The conditions are deterrent. There is very little free coal available. The collieries have rarely—probably never—before been so much oversold as they are to-day. The commitments of some of them are from 10 per cent. to 20 per cent. in excess of their normal output capacity, and it is easy to imagine the difficulties of those collieries which, in addition to the difficulties of overselling, have to adjust the execution of their contracts to the conditions of a diminished output due to non-unionist stoppages. Foreign buyers are influenced by the view that as it was the demand from the Continent following upon the occupation of the Ruhr by France that originally gave the market its present exceptional strength, the diminution of that demand which would ensue upon a settlement of the Ruhr problem would bring about a collapse in the current quotations once the present squeeze has been removed. They are, accordingly, holding off, and consequently very few new contracts have been reported. One of the South American railways, however, has just placed an order for 100,000 tons of Monmouthshire coals, to be delivered during the second half of the year. This contract is stated to have been placed at a pit-head price of 30s per ton, which is equivalent to between 33s and 34s f.o.b. That price is roughly about 6s below the present market quotation for this class of coal, but it is 6s to 7s per ton above the price at which contracts for such coals were concluded three months ago, and is certainly a very good price for the collieries concerned. One of the French railways has also placed an order for 50,000 tons of South Wales coals for delivery over the next few months. There has been very little variation in current market quotations, but the pressure of the "bears" has been greater than the resistance of the "bulls," and prices were certainly easier for steam coals at the end of the week. Anthracite qualities, however, and particularly machine-made cobbles and stove nuts, are becoming increasingly scarce, and the best grades of anthracite cobbles have advanced rapidly to 62s 6d. Patent fuel and pitwood are a shade easier. Production in the coalfield has recovered from the effects of the recent stoppages, and the output for the week ending April 14th has only been exceeded in two other weeks since the national coal strike. The miners have not entirely abandoned their non-unionist strike policy, but the discredit into which that policy has fallen may be gathered from the fact that in the Pontypridd No. 2 district, where nearly 50,000 miners are employed, less than 20 per cent. handed in notices on Monday. The following are the current approximate quotations:—Best Admiralties, 40s to 42s 6d; second Admiralties, 38s to 40s; best dries, 38s to 40s; Black Veins, 39s to 40s; Eastern Valleys, 37s 6d to 39s; Western Valleys, 39s to 40s; best bunker smalls, 29s to 30s; ordinary cargo smalls, 27s 6d to 29s; anthracite big vein, 45s to 47s 6d; machine-made cobbles, 52s 6d to 62s 6d; French nuts, 50s to 52s 6d; stove nuts, 47s 6d to 50s; rubbly culm, 16s 6d to 17s 6d; coke for export, 70s to 80s; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 40s to 45s; pitwood, ex ship, 29s 6d to 30s 6d. In the iron and steel trade employment is very active, and the output of the pig-iron blast furnaces is steadily increasing. There has been no change this week in the prices of tinplate bars and tinplates, but the shipments of tin plates are heavy, and the official returns for March establish a record in the exports of tin, terne, and blackplates. They were at the rate of over 600,000 tons per annum, compared with a pre-war record of 566,000 tons.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Values at the colonial wool sales in London this week have risen very much, as was generally expected, and on every side there appears to be the utmost confidence in the strength of the wool position. In this centre quotations have been advanced in sympathy with the rise in raw material prices, but it cannot be said that users have responded to any great extent. The state of trade in this country does not really warrant any advance at all, and the higher prices now being paid for wool are entirely due to the keenness of foreign competition, both in London and in the primary markets. Topmakers are protecting themselves by asking what in some cases are really prohibitive prices, and it will take some time for the market to adjust itself and find a new basis. Warp 6's tops are quoted in some quarters as high as 5s 6d, but very few users are prepared to go beyond 5s 4d, and in some instances small weights could doubtless be picked up at 1d less. However, there is a general feeling that the market is likely to continue very firm for some time to come, and in the circumstances topmakers are disposed to adopt a waiting policy, and allow spinners to adjust their ideas. Unfortunately, new business in yarns and pieces is somewhat difficult to obtain, especially in any bulk, and it remains to be seen if the strength of the raw material market can be used as a lever to induce wholesale fabric buyers to operate on a more liberal scale. Spinners are well engaged on old orders, and quotations show a hardening tendency, though it is exceedingly difficult to make more money. Both manufacturers and merchants are moving with extreme caution, and the demand for piece goods,

while showing some improvement in certain directions, still leaves much to be desired.

COLONIAL WOOL.

FROM A CORRESPONDENT.

The third series of sales of Colonial wool commenced in London last Tuesday. There was the usual large attendance of buyers, with a fair sprinkling from America. Altogether 187,500 bales are available, which should offer a good selection in all qualities of merinos and crossbreds. There is also a much larger supply of Capes, and the advance should see the bulk of these shifted into the hands of actual consumers, although with the Cape market being so high and dear throughout the recent season, a fair quantity of these Capes will, in all probability, have to be withdrawn on account of cost price and expenses not being bid. We understand that there are some staggering claims being made in Bradford and Roubaix because Cape wools are not giving the clean yield which was guaranteed when they were bought. The values paid at the Cape from October to the end of March were never justified by European or even American manufacturing conditions, and high prices for growers do not always guarantee correspondingly satisfactory selling results to the buyers. However, the all-round $\frac{7}{8}$ per cent. advance in South African wools should be of real help to importers, and they will be wisely advised to continue selling so long as first cost and expenses of shipment can be realised.

The opening sale was fully equal to expectations, and no one need be surprised if merinos make a full 10 per cent. advance in the course of a few days. All selling brokers agreed on the opening night that they showed $\frac{7}{8}$ to 10 per cent. advance compared with the close of the second series, medium combing wools displaying the most rise. We are not surprised at this in view of the hostilities of France to operate and the necessity on the part of Continental countries to buy liberally. America displayed eagerness to secure good substantial, light-conditioned parcels, and we fully expect buyers for that country to remain in the field during the whole of the series. Then the settlement of the Verviers strike is also a "bull" factor, and should lead to some good buying of carbonising merinos. In the case of crossbreds, prices were mostly $\frac{7}{8}$ to 10 per cent. dearer, the biggest rise being seen in 48-50's wools. Low crossbreds appreciated far more than the majority expected, and in view of the fact that at the second series these wools were "stinking" dear, compared with prices for the tops in Bradford, a further rise of 5 to 7½ per cent. is significant. It only serves to show that the trade has still faith in the raw material however untoward manufacturing conditions in the West Riding may be. However, the home trade will no doubt buy freely, because of the certainty that in matchings, tops or yarns a steady and progressive business will be done.

VEGETABLE OILS AND OILSEEDS.

The week has seen a sharp reaction in the market for linseed and linseed oil on lower American cables and the revised estimate of the Argentine surplus reported last week. The oil products especially experienced a marked decline, spot and month, ex Hull mill, falling from £52 to £47, the closing price on Tuesday, speculators, who have of late been very active, making haste to liquidate their commitments. Consumptive demand on both home and foreign account also fell away, but now that the market shows signs of recovering from its shock, this would appear likely to develop again. Prices in the past day or two have shown a hardening tendency, linseed oil, on Thursday, at Hull, closing at £48 15s spot, and £48 10s month. Plate linseed has steadied, and business for April-May shipment has been done at £20 to Hull, and Calcutta at £21 10s to London in the same position.

at 21 1/2 to 12 1/2 per ton. The same position.
Egyptian cotton seed has eased off to the extent of 5s per ton, 12 1/2 to 6d having been accepted for Black, and buyers bidding 11 1/2 to 12 1/2 for Sakellariadis. Demand for cotton oils has been only small, and values are somewhat easier, crude Egyptians quoting 41, and technical refined (soap makers' grade) 45. Some business has transpired in rapeseed, chiefly on Continental account. Rape oil is steady, and value lower forward. Palm kernel oil is in small supply, and only a moderate trade is doing in ground nut oil. Castor oil is firm and dearer. Linseed cakes are in good supply, but demand is not up to speculations, even though prices have been reduced. Neither is there much doing in cotton cakes.

The imports of oilseeds to the U.K. in March were 162,882 tons, against 101,632 tons in March last year, and of nuts and kernels 59,406 tons against 40,322 tons—together 223,288 tons against 141,954 tons in March last year. The total of oilseeds and nuts and kernels for the three months of January-March is 523,093 tons, comparing with 344,691 tons a year ago, an increase of over 50 per cent. The principal items in the quarter's imports were: cottonseed, 184,401 tons; linseed, 116,174 tons; soya beans, 40,664 tons; palm kernels, 65,993 tons; ground nuts, 52,925 tons; and copra 27,444 tons. The exports of unrefined oils in the quarter amounted to 21,247 tons, including linseed oil, 6,813 tons, and palm kernel oil, 4,208 tons. Last year we exported in the same period of linseed oil alone 17,684 tons, due to heavy shipments to America, but whose purchases this year are only now being shipped. The exports of refined oil last quarter were 5,353 tons, including 4,381 tons cotton oil.

HIDE, LEATHER, AND ALLIED TRADES

(BY OUR OWN CORRESPONDENT.)

The hide market was firm to an advance at Bermondsey auctions on Thursday, when best ox hides sold from 83½d to 94d. Advances of ¾d to 4d were noted, two classes of seconds also advancing ¾d on last prices. Best cows made 67½d, and seconds 54d to 54d. Calf remained steady, the only alteration being a slight fall of ½d on two classes in best, and ¾d in one class of seconds. Wools at 5s 6d to 12s 6d were unaltered, hogs at 6s to 14s 6d also showing no change. Exports of British hides for the past three months were valued at £99,174, as against £100,567 for the first three months of 1922. Business in imported hides is slightly better, and with some sorts quoted at less money tanners are entering the market. Imports of wet hides for the first three months of 1922-23 were valued at £473,858 and £457,456 respectively. The Chicago market is cabled as dull, with best heavy packers selling at 19 cents and native cows at 15 cents.

The demand for sole leather is moderate, but speculation still absent. On the whole, prices remain firm, although merchants say tanners are quite prepared to shade prices if there is a prospect of big business. The bulk of the business centres around dry hide bends at prices varying from 14d to 20d. Heavy weights in wet salted are difficult to move, and prices are sagging a little with some holders.

Carriers of kip leathers are still in a difficult position, as prices of rough kips in India are still very firm and supplies difficult to obtain. Seneschonroe sells only in very low grades, and profit is out of the question. Calf leathers are moving better, but as German box and willow have again been reduced by 1d to 2d per foot, home competition is almost out of the question. Glacé kid in black and brown is selling fairly well, whilst suedes in nigger browns and grey are wanted for women's shoes.

The boot trade shows an improvement in most directions, women's fancy wear being rapidly turned out in Norwich and Leicester. The value of exported footwear for the past month was £257,992, as against £221,788 for March, 1922, whilst the value of exports of leather and rubber footwear for the first quarter of the current year was £808,766, as against £689,184 for the same period of 1922.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, April 27.

There was a fair business doing in most directions, and the sugar market continued on a firm upward course, refined descriptions being sold to 12 per cwt dearer on the week, while supplies of all imported remain on a limited scale. Raw refining kinds also mark a substantial advance and continue to be sparingly offered. Cuban stocks stand at 754,330 tons, against 956,000 same time last year. Amongst fibres, jute took a sharp upward turn on considerable disposition shown to cover, together with buying orders cabled from Calcutta; but later a decline set in, as sellers became more prominent. Meantime, business with spinners is of a quiet character. A good deal of irregularity attended by weakness predominated for copra, as at certain periods orders to sell proved too heavy for the market to assimilate.

SUGAR.—Quite an active clearance resulted this week, chiefly British refined, owing to scarcity of foreign, and rates are again dearer. Messrs Tate and Lyle's cubes now 70s gd to 71s gd, as to quality: crushed, 68s 3d; nibs, 70s gd; granulated, fine and coarse grain, 66s 7½d; No. 1, 66s 4½d; No. 2, also London, 66s 14½d; ditto, May-June, 3d dearer, at 66s 3d; July, unaltered, at 66s 3d; August, 65s 9d; September, 64s 9d. Crystallised West India in small supply, and quoted 59s to 60s 6d. American granulated, solid, on spot, at 65s 3d to 65s 6d; April, steamer, quoted, 38s 9d; May, 38s 10½d, c.f. and l., London. White Java, spot, 63s 3d to 63s 9d; May-June,

Commercial Times. — Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

[illegible]

old, 33s 4½d to 33s; June-July, 31s 3d to 31s; July-August, 29s 6d, c.f.,
and i., London. Belgian granulated, October-December, 28s, f.o.b.,
Antwerp. Dutch granulated sparingly offered, and May-July, quoted,
38s, f.o.b. terms, Rotterdam. Czecho-Slovakian granulated, new crop,
November-December, sold, 28s 3d to 28s 6d, f.o.b., Hamburg. Cuban,
basis 96 per cent., May, quoted, 33s; Brazilian, ditto, 32s 6d; ditto,
basis 80 per cent., April-May, 19s 3d, c.f. and i., U.K. Madras, cane,
jaggery, May-June, sold, 18s 9d, c.f. and i., London. Terminal
market firm, though rather unsettled, with fair transactions. April,
sold, 37s; May, 37s to 37s 1½d and 36s 6d; August, 37s, 36s 9d, 37s and
36s 3d; September, 34s 6d to 33s 9d; October, 32s 7½d; December,
29s 3d to 28s 9d; October-December, 30s 3d. Liquid glucose, spot,
29s 6d cwt.

COFFEE.—Attention was again centred upon the really fine parcels, and these commanded steady prices, but common further favoured the buyer, while ruling quiet of sale. Good to fine bold Costa Rica, sold, 119s to 128s; Mysore, fine bold, 125s. Future delivery market less.

COCOA—This market remains very quiet, and of 13,600 bags offered in auction only 1,700 bags found buyers, chiefly Grenada sorts at a decline of 6d to 1s per cwt. Grenada, good to fine, 48s to 50s; St Lucia, 49s; Ceylon, fair red, 60s. Trinidad sold privately at 55s to 61s, as to quality. Accra easier forward, and down to 34s 6d, f.o.b. terms accepted for F/F quality, April-May, and 34s, June-July.

TEA.—Indian auctions during the week embraced some 40,000 packages, and with more active and better distributed competition prices for most descriptions moved against the buyer. Some invoices possessing autumnal flavour fetched high figures. 11,300 packages Ceylon received fair support, and really fine parcels commanded full rates. Inferior, however, were not so well competed for. Java and Sumatra sold at full rates for good liquoring teas.

RICE —Market remains very quiet. Two Stars, old crop, spot, 13s 9d; new, 13s 10d; afloat, 13s 6d. Broken kinds slow at about late rates.

THE "ALL-IN" LIFE POLICY.

Every married man should send for particulars of this new and advantageous form of Life Insurance, which provides for:—

- (1) Educational benefits (cash payments); (2) Financial protection for family; (3) Income for life on retirement or at an agreed date; (4) The remission of premiums in case of total disability through accident or illness; (5) Rebate of Income Tax in respect of premiums paid.

Send a pos'card to day. Address:—Life Debt.

EAGLE, STAR & BRITISH DOMINIONS INSURANCE Co., Ltd.
32, MOORGATE, LONDON, E.C.2.

ASSETS EXCEED £20,000,000.

MANCHESTER, April 26.

Since a week ago there has been some expansion of inquiry in the market. For some time buyers have been waiting for lower prices, and as there seems to be little prospect of their anticipations being realised, there is rather more disposition to place orders. It is doubtful whether at current prices free operations can take place. For India there has been an increased demand in grey shirtings, and lighter fabrics, such as dhooties, and fair lines have been booked for Calcutta and Madras. Printing descriptions have attracted rather more attention for Bombay. Business for China is slow in reviving, especially in grey staples, but steady buying continues to take place in fancies and specialities. In miscellaneous fabrics activity has been more prominent for the Near Eastern outlets, and certain markets in South America have done slightly better. For the home trade odd lots have been obtained out of stock, and the conditions in this section are not very favourable. American yarns for home consumption, have moved off quietly from

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Chartered 1838.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

Rangoon beans, on spot, 8s; Japanese peas, spot, 26s 6d; April-May, 24s 6d cwt.

SPICE.—Pepper remains generally slow, but quotations steady. Fair black Singapore, spot, 4½d; April-June, 4½d; Aleppy, spot, 4½d; Ceylon, 4½d; Tellicherry, 4½d; white Singapore, 6d; Muntok, 6d; ditto, April-June, buyers, 6d. Zanzibar cloves quietly steady. Fair quality, on spot, 1s; March-May, 1½d; May-July, buyers, 1½d. Flake tapioca quiet, and fair Singapore, spot, 3½d; fine Java, 4½d per lb. Singapore, April-May, Havre, 32s 6d; fair Penang, seed pearl tapioca, spot, 32s 6d; April-May, quoted 29s 3d to London. Singapore medium, largely nominal on spot, as supplies are found wanting, while for good, to arrive, 37s 6d, c.f. and i., asked. Sago flour, May-July, 13s 9d, sellers. American starch powder, spot, 15s 10½d. Desiccated coconut steady, and medium dearer on scarcity. Fine cut, spot, sold, 47s 9d; medium, 48s 9d to 49s; half-and-half, March-April, quoted 46s 6d; April-May, 45s; May-June, 44s. Ginger quiet, but held steadily. Calicut, brown rough, sound, 75s; fair washed rough Cochich ditto, 72s 6d cwt.

JUTE.—More reservedly offered and market firm, while a fair demand was experienced. First grade, old crop, May-June, continent, quoted £29 15s; new August-September, £29 10s; September-October, £29 5s; Lightning grade, August-September, £28 10s ton. Hessians and twills in slow request. 10-oz. spot, 30s; May-June, 30s 3d; 8-oz. spot, 25s; May-June, 24s 6d 100 yards. A twills, spot and May-June, 82s; B spot, 73s; May-June, 72s 6d; salts, May-June, 64s; sugars, spot, 82s; flour, 100s per 100 bags.

HEMP.—A moderate demand prevailed, and general steadiness governed the market for Manila. J grade, April-June buyers, £33 10s; K and L quoted £32 5s; M, £31 5s ton. New Zealand idle and nominal. African sisal, No. 1 Tanganyika, May-July, £37; No. 1 Kenya, £36 ton.

SHELLAC.—Market steady, quiet. T.N., fair quality, spot, 32s 5s; May, 31s 5s; August, 290s per cwt.

GAMBER.—Block, spot, 47s 6d, and shipment, 39s per cwt, c.f. and i.

SOAP.—Market rather unsettled, and trade moved quietly. F.M.S., Straits, February-April, to Rotterdam, quoted £29 7s 6d; March-May, sold, £29 8s 9d to £29 2s 6d; April-June, £29 2s 6d to £28 11s 3d, and £28 13s 9d; May-July, sellers, £28 10s. Ceylon, April-May, quoted £31 10s. Java, March-May, £29 10s; April-June, £29 5s. Dutch East Indies, March-May, £29 2s 6d; April-June, £28 12s 6d. Cebu, £28 5s, April-May, South Sea Islands, £28. F.M., Straits, April-May, Marseilles, £28 10s; mixed ditto, £28 7s 6d. Palm kernels quiet. May-July shipment, to Liverpool, quoted £20 per ton.

RUBBER. after a firmer opening, became easier, and the market disclosed some irregularity. Standard crepe and sheet, spot, sold, 15½d to 15½d; May, 16d to 15½d; June, 16½d to 15½d; July-September, 16½d to 16d; October-December, 16½d to 16½d and 16½d. To New York, standard sheet, afloat, sold, 16½d; May-June, 16d; June-July sold, 16½d; July-August quoted, 16½d, c.f. and i. terms. Fine hard Para, spot, 15d; soft fine, 14½d; and cauchó ball, 14½d per lb.

ESSENTIALS.—A quiet state of affairs continues in this market, and rates are somewhat nominal. Menthol, spot, quoted, 32s; April-May, 30s. Japanese peppermint oil, spot, 6s 1½d; forward, 5s 9d. Aniseed oil, spot, 1s 10d; forward, 1s 9d. Slab camphor, spot, 3s 9d; forward, 3s 5d; crude camphor, spot, 3s 4d; forward, 2s 11½d. Ceylon citronella oil, spot, 3s 2d; Java, spot, 3s 10½d; oil of lemon, spot, 2s 8d; oil of orange, Sicilian, spot, 9s; West Indian, 9s per lb.

ISINGLASS.—No. 1 Kobe strips, on the spot, 5s 8½d; No. 2, 5s 6d per lb.

EGG PRODUCTS.—Market steady, but demand shows no improvement. Prime liquid hen yolk, on the spot, quoted at 97s 6d; April-June, 82s 6d per cwt. Dried yolk, spot, 9½d; native dried whole egg nominal. Albumen, spot, 3s 3d; April-June, 3s 1d per lb.

FRUIT (dried).—There was a moderate movement in currants at steady rates. Pyrgos, quarter-cases, quoted 54s; half-bags, 53s; Panariti, 55s to 58s; good Vostizza, 67s to 71s. New arrivals of Australian, 72s 6d. With sustained inquiries for sultanas, there is quite a good volume of business doing, while prices manifest a hardening tendency. Good Smyrna, 80s to 82s; fine to choice, 95s to 115s; Californian, 65s. Valencia raisins steady, and half-boxes quoted 32s to 34s; quarters, 36s to 50s. Dates remain slow of sale, Hallowee, 19s to 21s; Siar, 15s. Evaporated fruits sold quietly, and trend of values favoured the buyer. Californian extra choice apricots quoted 145s; fancy, 160s; Cape apricots, 110s; Australian ditto, 130s; Californian pears, 65s to 75s. Peaches of various growths, 57s 6d to 65s. Californian apple-rings, extra choice, 56s to 58s. Canadian, 50s. Bosnian plums, 34s to 38s per cwt.

OILS.—Linseed market irregular after being lower. Spot, net, naked, 49s 6d; May, 45s 9d; May-August, 43s 6d; September-December, 39s 9d. Rape firm. Crude, spot, 45s; refined, 48s. Cotton dearer. Crude Egyptian, spot, 43s; common edible, 47s; deodorised (in barrels), 49s. China-wood dearer. Hankow, spot (barrels), 135s; May-June, 126s. Coconut quiet. Ceylon, spot, 48s; March-April, 47s; Cochich, ditto, quoted 50s. Soya quiet.

Oriental barrels, May-June, 43s. Japan fish steady. April-May, cases 29s. Cod firm. English, spot, 35s to 36s. Ground-nuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, nominal. Turpentine quiet. American, spot, 110s; April, 110s; July-December, 86s 6d. Rosin quiet. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W.G., 17s 6d; W.W., 18s 9d. French, F/G, 13s 6d; W.W., 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firmer. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical, 61s per cwt.

OILSEEDS.—Linseed opened easier but irregular since. Bold Bombay, afloat, £22 10s; small Bombay, ditto, £21 15s; Calcutta, afloat, £21 15s; April, £21 12s 6d; and April-May, £21 5s. Plate, afloat, £20; loading, £19 10s; April-May, sold, £19 10s to £20 2s 6d and £19 15s. Rapeseed easier. Toria, May-June, £18 5s; real bold Ferozepore, April-May, sold, £16 17s 6d; Jamba, April-May, £14. Cottonseed quiet, Egyptian black, May, £12 7s 6d; and white, £11 10s. Bombay, May-June, £9 18s 9d. Gingly seed quiet. Large Bombay, April-May, Continent, sellers, £24 10s. Chinese, ditto £24 15s to Continent, and £25 15s, Italy. Ground-nuts dull. Coromandel, machine dried, April-May, quoted £23 5s. Chinese decorticated, f.a.q., April-May, £23 10s. Nigerian, ditto, £24. Soya beans steady. Manchurian, April-May, £11 17s 6d. Castorseed dearer. Bombay, March-April, £22 ton.

METALS.—Tin opened firmer in view of higher Eastern advices, combined with a good demand and reserved sellers. Standard cash sold at £209 5s to £212, and three months at £208 10s to £212 15s, c.i.f. Later, business was carried up to £218 for cash, and £217 15s for three months. A sharp reaction occurred by the middle of the week on lower Eastern cables and selling pressure, standard cash being dealt in down to £210 10s, and three months at the same figures. The downward tendency continued on the following day, and some irregularity was noticeable. Cash sold at £210 to £209 to £209 15s, and three months £210 to £209 to £209 12s 6d. At the final session rates were firmer, though inclined to be irregular at times, especially with regard to forward positions. Sales were of moderate extent, including cash at £211 5s to £212 5s to £211 and three months at £211 10s to £212 10s to £210 15s to £211. English ingots £211 to £211 10s. Copper has maintained a generally steady tone, though slightly irregular at times, while a good business transpired. Cash sold at £72 15s to £72 5s to £72 10s; June, £73 5s to £72 15s, and £72 16s 3d, and three months £73 12s 6d to £73 and £73 5s. On Thursday rates weakened slightly, and a good demand ensued. Standard cash sold at £72 7s 6d to £72 2s 6d, and three months at £73 5s to £72 17s 6d. Values ruled easier at the final meeting, but the demand proved of a liberal character. Standard cash sold at £71 15s to £71, and three months £72 10s to £72 12s 6d to £72 2s 6d. Electrolytic £80 to £80 10s, and best selected £75 to £76 10s; strong sheets, £106; wire bars, £80 10s. Antimony dull, ordinary brands, £30 to £32. Special, £36 15s to £38. Aluminium quiet: Home trade, £110; export, £115. Lead quieter at £25 7s 6d to £25 12s 6d, as to position. Spelter easier at £31 17s 6d to £32 2s 6d.

TALLOW.—Messrs Colchesters and Woolner write on April 25, 1923, as follows:—The tallow market was easier during the week, and prices are about 1s lower to-day. Supplies in Australia are very short and in New Zealand barely normal, but South American killings are expected to show some increase. Shipments of tallow from Australasia during March amounted to 5,400 tons. At auction to-day 2,038 casks tallow were offered and 242 were sold. Quotations are:—Australian mutton: Fine, 44s 6d; good to fair, 43s to 41s 6d; dull to dark, 39s 6d to 38s; hard, 44s. Australian beef: Fine, 44s 6d; good to fair, 43s to 41s; dull to dark, 39s to 37s 6d; sweet, 45s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., 44s; and mixed, 43½, c.i.f., London, 47s. The market letter is unchanged for tallow, stuff 6d lower. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 29s per cwt. Quotations are:—Town, 37s, net cash, naked, ex works. Country: Frail casks, 37s; home melted, shipping casks, net, f.o.b., good coloured, 41s; fair to dull, 38s to 37s. Bone fat: White, none; pale, none; benzine, 36s; melted stuff, 36s 6d, f.o.b.

THE MONEY MARKET.

There was no disturbance in money at the end of April, but, on the other hand, the extreme ease expected as the result of dividend distributions on May 1st was not experienced, presumably because the Government was able to finance them without recourse to the Bank of England. In fact, in the middle of the week there were some indica-

Market rate (3 months' bills)	2	1½	2	2½	..

The Bank return showed an expansion of £1,412,000 in the note circulation, and a corresponding decline in the Reserve. Movements in the securities were considerable and puzzling, Government securities being £2,846,000 lower, while Other rose by £2,525,000. Public and Other deposits declined by £771,000 and £1,005,000 respectively. Currency notes outstanding were increased by £1,775,400 to £285,745,600, which includes £1,484,500 for notes called in but not yet cancelled. The fiduciary issue is £234,811,100, or £35,372,700 below the maximum.

THE STOCK MARKETS.

The Stock Exchange was closed on Tuesday for its annual May Day holiday, and the dullness of markets may be partly ascribed to this fact. War Loan has fallen from the highest point, and quiet selling of other gilt-edged stocks by those who anticipate higher money rates in the near future has been going on. Realisations, however, are readily absorbed. The effect of the German offer on the foreign market has been small, though both French and German bonds have been weaker. In the Home Railway market prices have been fairly steady, but Caledonian stocks were weak on the opening of the proceedings before the Court of Arbitration. The rubber and oil markets have been distinctly dull, but the cable group is higher, and banking and insurance shares have been good. The mining markets are without interest, but the tone is not weak.

THE COMMODITY MARKETS.

The commodity markets have this week been steady, with prices inclined in many cases to droop a little. The wheat market has been firm but quiet, but sugar prices show a further small advance. In raw cotton and cotton yarns there has been a slight downward movement of prices generally. The cloth section is unsatisfactory, and our Manchester correspondent reports that much machinery is idle for lack of contracts. High prices for the raw material are restricting business in the woollen industry. Spinners cannot get more than recent quotations for their yarns, and topmakers have no margin that would enable them to ease their prices. Our Bradford correspondent says that trade is also restricted in piece goods, and that English manufacturers are being cut out by imported goods from the Continent. Although the coal market is absorbing record outputs, our Cardiff correspondent reports a lull in the demand. Fortunately, the majority of South Wales collieries are not in any great need of orders for early delivery. At Middlesbrough rather easier prices for pig-iron have followed a slackening in the demand, and it is stated that consumers are now inclined to hold back in the expectation of some further reduction. Still, prices are unchanged, but the demand is not quite so good; our Sheffield correspondent also reports a lack of buyers. The demand for copper has been better, with quotations higher, and tin values have improved. Linseed and linseed oil, on the whole, have experienced a quiet market, the oil product at times showing signs of weakness. Rubber has dropped slightly in price. Hide values remain steady, while in the shoe trade conditions are stated to be better.

FOREIGN EXCHANGES.

In the foreign exchange market the German note and its reception by France has been the chief factor. Already at the beginning of the week it seemed clear that the Reichsbank control was not so effective as before, and by Monday already the rate was up to 149,500. After

some fluctuations, the issue of the note brought up the rate another 10,000 on Wednesday, and on Thursday the announcement of the French decision caused a rise to just under 180,000, at which rate it was quoted on Friday morning. To attempt any forecast of future movements is impossible; the outlook is gloomy, but it would seem most unlikely that much resistance can be shown to the combined pressure of continued rapid inflation and the now still more threatening external situation. Quotations for forward marks have jumped during the week from 12,000 marks to 20,000 marks per month above spot. In Paris also the rate has been unfavourably affected, moving from 68.25 on the 27th to 70 and over on the 2nd. On Thursday afternoon there was a further rise, followed by some recovery, and yesterday morning the rate was quoted again at 69.10, although there is a feeling that intervention has played a part in this recovery. There has been some considerable discussion on the Continent of late as to the real value of the franc, and it has been suggested that the true level is nearer 60 than the present rate. It is true that the trade position shows some improvement, and that the tourist season is bringing money into the country, but both the position of public finance and the political outlook are heavy factors in favour of a much less optimistic view. The Belgian franc has moved from 79.15 to 80, as usual following Paris. Forward rates in Paris and Brussels are unchanged at 45 above and 2½-3½ centimes below spot respectively for one month. Italy has moved up from 94½ to 94½, after being 95 and over on Monday. New York, during the earlier part of the week, showed a rather better tendency, but here, too, the gradual recovery was interrupted on Thursday, when the rate closed at 4.63½ as compared with 4.63½ the previous day, and yesterday morning was down at 4.62½, as compared with 4.63½ on the 27th. Forward rates, at ½-1 cent per month above spot, are slightly wider than a week ago. Among neutral exchanges Christiania, where the reaction from the recent banking troubles continues, has moved up again from 26.60 on the 27th to 27.15 yesterday morning, and both Stockholm and Copenhagen have moved slightly in our favour. Switzerland, under the continual depression due to the Ruhr policy, has moved up again from 25.60 to 25.67½, but Amsterdam has gone slightly against us from 11.85 to 11.84½. In Central Europe Vienna is unchanged at 325,000, but Warsaw is up again slightly at 229,000. Prague is practically steady at 156, while Bucharest has improved somewhat to about 965. In the East the rupee is very slightly cheaper at 1s 4½d, the yen has fallen also from 2s 1½d to 2s 1½d. Lack of supplies and orders from India and China brought up the spot price on Monday to 33½d, the highest figure for the present year, but some Chinese selling has brought it down again, and although the position is by no means clear, lower prices would seem probable. Hong Kong at 2s 4½d is unchanged, Shanghai at 3s 3d is ½d dearer. In South America Rio is slightly more expensive at 5 17-32d, as is also Buenos Ayres at 42½d. Montevideo, however, has fallen from 43½d to 42½d. Valparaiso shows an appreciation at 36.60 pesos, as compared with 37.40.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 28th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Northern Ireland Exchequer ..	397	From Revenue	13,821
Land Settlement	101		
Interest on War Debt, &c.	1,128		
Supply Services	6,239		
Increase in Balances	124		
Repayment of Debt	6,222		
	13,821		13,821

Revenue at £13,821,400 compares with £11,489,800 in the corresponding week of last year. Expenditure was £7,475,600 compared with £9,794,300. Income-tax and Super-tax brought in £3,672,000 last week against £1,820,000 a year ago. Special Receipts were £200,000 compared with £1,444,300. The decrease on the expenditure side is accounted for by interest on War Debt, £1,128,400 against £2,363,600 in the same period of last year, and Supply Services, which are down from £7,074,500 last year to £6,239,000. Excise and Customs receipts were again large. Customs were £4,366,000 against £1,984,000 last year, and Excise £1,833,000

compared with £437,000. The week's operations reduced the National Debt by £6,222,300, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	500	4% Treasury Bonds	1,858
Treasury Bills	4,130	National Savings Certificates ..	200
Public Department Advances ..	3,900	Unemployment Insurance ..	250
	8,530		2,308

The floating debt was reduced by £8,065,000 to £790,380,500.

FINANCIAL YEAR, 1923-24 (April 1 to April 28, 1923).

	£		£
Total Expenditure ..	62,989,764	Raised by Revenue ..	76,668,053

THE GERMAN OFFER.

THE omens attending the launching of the German offer, for which the world has been waiting, were decidedly evil. France could hardly have done more than she has done to create an atmosphere unfavourable to negotiation; for on the eve of the German Note's appearance she deliberately aggravated German national sentiment by the entirely tactless arrest of Herr Krupp, and worse still, allowed the semi-official voice of France to go forth that a German offer which did not amount to unconditional surrender and admit that France was justified in her occupation of the Ruhr, would be refused. Germany, on the other hand, puts into her Note a vague passage which, whatever its real intention, Frenchmen, as we feared, have apparently interpreted as meaning "clear out of the Ruhr at once, and then we will negotiate." However wrong we may judge the French advance into the Ruhr to have been, we cannot fail to admit that in leaving the Note open to such an interpretation Germany has thus gratuitously challenged the essential feelings of French national pride. All this is exceedingly unfortunate; and even if these obstacles of national pride—which obstruct a settlement now just as effectively as they always obstruct the approach to an armistice when two nations are openly at war—can be

surmounted, the actual terms of the German offer are not at first sight promising. The total sum of £1,500 millions offered is much lower than the figure which was peremptorily rejected by France when Mr Bonar Law put it forward in January. Moreover, the suggestion that £1,000 millions of the total should be raised in international loans and paid over within four years, while on paper perhaps the most attractive to France of all the points in the offer, can hardly be regarded as feasible, at all events by those experts who regard this very period of four years as the minimum needed to allow Germany to put her house in order. Above all, the Note is once again vague and indefinite on the all-important subject of guarantees. It was probably impossible politically for the Cuno Government to offer concrete assets such as her railways to foreign moneylenders at the opening of negotiations, but at the same time without precise guarantees and well-defined security there is obviously no assurance that the money markets of the world would lend a penny.

If this were all that could be said about the new German offer, immediate and curt French refusal to negotiate would command at least some degree of sympathy abroad. But in our opinion there are the strongest possible reasons why the Note should not be brushed aside on a cursory review of its unsatisfactory aspects. The first of these reasons is the German offer to submit the question of Germany's capacity to pay to an international commission, if the present offer is held to be insufficient. The second reason is contained in the following passage:—"The German Government are prepared to provide special guarantees for the proposed payment. The entire property and all sources of revenue of the German Reich and States are already pledged under the Treaty of Versailles. How this pledge can be rendered effective for the purposes of the loan, and what individual guarantees should be provided, can only be ascertained through negotiations with the international loan syndicate and the Reparations Commission." While, as we have said, this is vague and indefinite, it undoubtedly admits the necessity for specific guarantees. Subsequent discussion alone would show whether this means much or little. Another point to be noted is the absence of any suggestion that the Allies should guarantee the interest on the proposed loans—a condition which would certainly have rendered the proposal abortive. Again the German Government shows itself alive to the French demand for security, and in view of its own desire for security, which is sometimes overlooked, proposes (of necessity vaguely) a Rhine Pact and a Treaty of Arbitration. These four points, apart from any other considerations, are sufficient reason why the French Government, instead of yielding to the first impulse of immediate rejection, should make a considered reply pointing out its reasons for objection to the offer. Great significance, therefore, attaches to the belief, current as we go to press, that the French Government will couple with stern refusal at least some statement of reasons.

Some of the obvious flaws in the German proposal we have already pointed out. There are, of course, other points also which are unacceptable. In the first place, the sum offered—the present value of which is substantially less than £1,500 millions—compares with a present value in the Bonar Law scheme of about £1,750 millions. If the mark is once stabilised, either of these figures would leave Germany with a comparatively easy Budget problem. The limiting factor in the long run is not the burden on the German taxpayer, but the problem of making huge payments abroad. We think, however, that the German Government has put the possibilities in this respect on the low side; but the Note leaves open the possibility of assessment on a higher figure by the suggested reference of the question to international experts. We have frequently stated our opinion that such a body should find it quite possible to make a fair and reasoned assessment. Another flaw is the proposal that the whole of the money to be handed over should be raised in foreign loans. That interest should for the first few years be paid out of the capital of the loan is not an altogether unusual proposal. But, although Germany's capacity to make early payments

abroad must be definitely written down as a result of damage done by the French occupation of the Ruhr, Germany could surely find herself able to shoulder some part of the burden of interest forthwith out of her own resources, including her foreign balances.

But, important as such questions are, they are subsidiary to the main issue. It is not merely France and Germany that are looking for a solution of their troubles; the whole world is intimately concerned. It is surely reasonable to ask that both the main parties to the dispute should show clear recognition of that fact. Hitherto Germany, though not entirely through her own fault, has made no real attempt to produce a constructive contribution towards a solution of the Reparations problem, which is vexing and harassing the whole world. In this Note, despite its mistakes and ineptitudes, we detect a decided improvement of attitude. On the other hand, sympathisers with France are growing steadily more and more disappointed at her apparent inability to look at the question as one that concerns others as well as herself, or to realise her responsibilities to the world. By persistence in this purely selfish attitude she will before long bring herself into the unenviable position of being stigmatised by world opinion as the obstructor of world peace and recovery. The world still sympathises with her demand for money for the repair of the devastation of war, and her demand for future security. That sympathy would not be increased by an unreasoning rejection of the present offer. We earnestly hope that in the answer which is sent to Berlin the French Government will show less petulance and more dignity than it has sometimes shown of late; that it will recognise that the German Note leaves many doors open; and that, after all, the rest of the world is vitally concerned to see every possible approach to a settlement thoroughly investigated.

A week or two ago Lord Curzon made a statement in the House of Lords, the burden of which was that, although the British Government could make no move until some new offer from Germany was forthcoming, its good offices were available for both parties as soon as such an offer had been made. A fruitful occasion for these good offices has, in our opinion, arisen. We would urge the Foreign Secretary to take the German Note as the basis for addressing questions to both parties; to ask France to specify in terms the points in respect of which she finds the offer unsatisfactory; and to ask Germany for a clearer explanation of certain ambiguous passages and an amplification of certain suggestions. In this way the ball of negotiations would be set in motion, and two forces which might help to propel it towards the goal are the desire of both parties to re-establish themselves in the esteem of the world, and the yearnings of the populations of the world for the return of peace and well-being.

The German Note has, as was to be expected, been greeted with hasty anger by the French newspapers; and, indeed, we should have little hope of any progress resulting from it if the only forces at work influencing the French reply were the bigotry of the Paris Press and the restricted vision of M. Poincaré. But, fortunately, there is some reason to hope that some moderating influences will also operate. It was always open to doubt, for instance, whether Belgium would readily acquiesce in a scornful and uncompromising refusal, and there are also signs that some sections of French opinion are beginning to recognise the broader aspects of the position in which France stands. Preachers of moderation are not entirely lacking. According to the Paris correspondent of the *Times* (Wednesday, May 2nd) M. Gustave Hervé has uttered a "remarkable warning" against "the danger of excessive stiffness and a systematic distrust," and condemns "the too-great preoccupation of the French Government with preserving its reputation of intransigence in the hope of pleasing that part of the French Press that shouts the loudest." Similarly, Professor Charles Gide, one of the leading French economists, calls attention in an article in the *Progrès Civique* to the harm that has been done by futile repetition of the phrase, "Germany will pay everything," and the equally misleading complaint "that Germany has so far paid nothing." Of greater importance still is the fact that the *Petit Parisien*, the organ of M. Loucheur, finds the German offer only "partially inadequate and partially unacceptable," and regards it as a possible basis for discussion. For the sake of France her-

self and for the sake of the world, it is to be hoped that these voices represent a body of opinion powerful enough to exercise a moderating and broadening effect upon the policy of the Quai d'Orsay in this critical moment.

A CO-OPERATIVE POLICY FOR LABOUR AND CAPITAL.

We commend to our readers' attention the letter published in our last week's issue, in which Mr William Graham stresses the importance of endeavouring to reach a solution of industrial problems on lines which represent a middle course between the views of what he calls orthodox labour and orthodox capital. We are not among those who spend restless days and nights in fear of the Socialist menace, and one of our chief reasons for looking forward with some degree of assurance is that, in our opinion, the bulk of working-class opinion is steadily concentrated somewhere near the point of view which Mr Graham represents. It is quite evident that the present Government, influenced, as it necessarily is, to so large an extent by the type of Toryism which can see no need for interfering in any way with things as they are, will never satisfy the aspirations of those who are most conscious of our present industrial difficulties. But their term of office will not be altogether fruitless if the interval is used for discussing and working out the lines of future progress. The distance to which the pendulum will swing when the Government falls depends very largely on the finding of this middle course. The strengthening of moderate progressive opinion in the country, however, is by no means a purely Parliamentary affair, but will be to a much greater extent the result of economic experience, and of the relations which may be created between employers and workpeople in the conference chamber and in the workshop. The long series of economic lessons of the war, and still more of the peace, the failure of communism in Russia, and the demonstration in the last two years of the underlying factors which affect British economic prosperity, have greatly modified the destructive conceptions which were at one time prevalent in the labour world, and reconciled the mass of workpeople to the less spectacular but more useful task of making the system of private enterprise work to their advantage. But if we are to make a real success of British industry along these lines, the essential condition is to get the goodwill of workpeople enlisted in support of economical production. This in its turn depends on a number of conditions, among the most important of which are:—Confidence on the part of workpeople that they are getting a square deal, and that undue profits are not being made at their expense; the fostering of the sense of partnership; and thirdly, a reasonable degree of security. The first of these can only be achieved—as has been done in the coal industry—by disclosing to workpeople the financial state of the industry. There is no rule for applying this practice universally, but it is certain that in the future industrial peace will not be secured so long as there is any room for suspicion or uncertainty as to the profits of industry. But the spirit of partnership should not be merely negative. Experience shows that the best both of the leaders and of the rank and file in any industry will respond wholeheartedly to an appeal for co-operation in overcoming commercial difficulties if only the problems are explained to them. The fear that real frankness may be prejudicial to a business has been proved over and over again to be a complete bugbear. On the contrary, those employers who have gone furthest in disclosing their costings, profits, &c., testify to the profound regard for the secrecy of the information given on the part of the men's delegates, who have not infrequently been known to keep to themselves facts which it was intended should be passed on. We have yet to meet the employer who can complain of real damage to his business for information voluntarily given to his employees. But frankness can enlist the interest of workpeople not merely in the affairs

of a single firm, but also in those of the industry as a whole.

No one can look at the industrial record of the last four years without being struck by the fact that in wage negotiations there has been a marked tendency for the discussion to centre round large economic and very often international questions. The day has gone by when all knowledge of the economics of industry was on the employers' side of the table, and to-day the opinion among workpeople themselves and also among the public, who are often the deciding factor in such negotiations, is formed upon a much wider view of the situation than used to be the case. We believe that a sense of a common objective can be more readily aroused to-day than at any previous stage of our industrial history.

But discontent with the industrial machine will remain the predominant feeling of workpeople so long as they are harassed by the sense of insecurity of employment. The fear of being out of work, together with the suspicion that undue profits are being made from labour, has been the main cause of the restriction of output and the consequent high labour cost in many British industries. But to-day it is well understood by workpeople that low labour cost, which does not necessarily mean low earnings, is an imperative necessity if we are to regain the world's markets for our industrial products. To a considerable extent our unemployment insurance system supplemented by Poor Law relief have prevented the unexampled depression of the last few years from resulting in actual distress. But an unemployment scheme which makes no discrimination between the standards of living of various classes of labour and combines payment from various sources in a very awkward and undesirable manner is far from meeting all the needs of the case. There is ample ground for a thorough overhauling of the system. But if this is done, and particularly if it is done by collaboration and a system built up which would satisfy the worker's demand for greater security, it should be possible in return to enlist the support of labour in this country in favour of abolishing restrictive trade union practices, of extending the principle of payment by results, and generally of working for greater efficiency and output per head. This savours of a bargain, but it is really only a recognition that rapid developments in production and insecurity are commonly connected with one another. We agree with Mr Graham that there is plenty of work for men of goodwill to do in finding a policy for industry of national rather than of class interest.

This doctrine of "getting together" is relevant to one and all of the industrial discussions which are in the wind at the moment. We will merely apply it at present to the case of the railways. In connection with the conferences which are being held this week Mr Cramp, the railwaymen's industrial secretary, has made the very significant suggestion that the railway companies should make a further and more substantial reduction on freights in the hope that increased traffic would make good the loss of revenue, but that if it did not do so the matter should be submitted in a few months' time to the trade unions for consideration. The implication of this suggestion is clearly that the men's leaders recognise that the public have a strong claim for lower transport charges, that the worker's interest is to keep traffic on the railways in competition with other forms of transport, and that there is a limit to the extent to which freight reductions can be made at the expense of profits. We may remark here incidentally that this indicates a very sound view of the present level of railway rates. Although the increase in rates compared with the pre-war level is now even less than the average increase in the level of prices, the public expects that the cost of railway transport will fall much more than this. Comparisons between one country and another are always a little misleading owing to differences of circumstances; but British railway rates before the war per ton per mile were so much heavier than those prevailing among any of our commercial competitors as to be a serious handicap to our trade. The waste involved in our overlapping and complex railway system was largely responsible for this. The public accepted the principle of railway amalgamation into four large groups mainly in order that we might get more economical transport, and

not in order that the railway companies might be enabled to meet higher costs. It should be taken as axiomatic, both by railway directors and by railway men, that if prices remain at about 75 per cent. over the pre-war level railway rates should in a year or two not be more than 25 per cent. above the pre-war level. Such a reduction would go some way towards adjusting the difference in the cost of transport in Great Britain and abroad. It would, of course, improve traffic, and in the end probably give the companies more goods to handle and for longer distances than before the war; and this would partly compensate them for the lower rates. But it would also require an improvement in efficiency and a reduction in labour costs, and this in its turn would undoubtedly involve more elasticity in the application, though not the abandonment of the principle of the eight-hour day system. It might even involve temporary loss of profits and even reduction of wage rates, but it would undoubtedly pay in the end.

The discussion, however, calls for two comments bearing upon industrial relations. In the first place, the fact that the railway men propose—quite properly—to discuss with the companies the question of railway rates, emphasises one of several serious flaws in the Railways Act of 1921, which assigned the questions of railway rates and of wages and working conditions to the Rates Tribunal and the National Wages Board respectively—two bodies which have no connection with one another. The Rates Tribunal is to fix rates without any power to control costs, and the Wages Board is to determine questions vitally affecting the wages bill without having anything to say on, or even the right to examine into, the question of rates. This division perpetuates the great weakness which has existed in the past in our machinery of industrial negotiation in assuming that wage negotiations can be carried on regardless of the commercial conditions of an industry.

Our other comment is that though the Railways Act of 1921 makes provision for the supplying of a good deal more information than has hitherto been afforded, public knowledge of the state of affairs in the railway world is still much out of date owing to the fact that railway companies still persist in withholding from their periodical statements any information as to costs. Neither the stock markets, traders, railwaymen, nor the public generally will be able to follow the economic situation of the railways at the time when it is all-important that they should know what is happening, until our four big railways fall into line with other companies in various parts of the world, and publish both gross and net receipts every month. Thus we come back to our starting-point, that the real secret of a satisfactory industrial system is an adequate knowledge of the facts and the exorcising of the spirit of secrecy.

THE DOMINIONS AND TREATY SIGNATURE.

(BY A LEGAL CORRESPONDENT.)

THE incident which has occurred recently in connection with the negotiation and execution of the Halibut Fisheries Treaty between the Dominion of Canada and the United States of America is one of those affairs which, though small in themselves, raise big issues, and compel all persons interested in the right development of the Empire, to pause and think. The facts, so far as official reticence permits us to ascertain them, are that a treaty regulating the halibut fisheries in the North Pacific Ocean was negotiated between the Washington and Ottawa Governments (probably directly as has happened before), and that, when the document was ready for signature, the question of the proper signatories came under discussion between the Canadian Government and our Ambassador at Washington. The Canadian Government wanted Mr Lapointe, the Canadian Minister of Marine, who had received full powers to sign for Canada from the Imperial Government, alone to sign on the British side. Sir Auckland Geddes replied that he had been "instructed by His Majesty's Government to sign the treaty in association with Mr Lapointe," to which the Canadian

Government, through Lord Byng of Vimy, replied: "My ministers are of the opinion that as respects Canada the signature of Mr Lapointe alone should be sufficient, as it affects solely Canada and the United States." Sir Auckland, doubtless upon instructions from the Imperial Government, gave way, and the treaty was signed by Mr Lapointe alone. The incident is receiving a good deal of attention in South Africa, and doubtless in other Dominions as well.

There is a minor complication, which seems, however, to have arisen after the signature, and does not blur the issue raised between the Ottawa and the Home Governments, namely, that the United States Senate have ratified the Treaty, subject to the understanding that "none of the nationals or inhabitants or vessels or boats of any other part of Great Britain (*sic*) shall engage in the halibut fishery contrary to any provisions of the treaty." We are not concerned with this proposed extension of the scope of the Treaty to parts of the British Empire other than Canada, though had the proposal been made before signature, it is clear that Sir Auckland Geddes' claim to sign would have been greatly strengthened.

Before expressing any opinion upon the issue thus raised, it will be well to pass under review certain phases of the development of the treaty-negotiating power of the Self-Governing Dominions, and in particular of the pioneer in this matter, the Dominion of Canada. This development acquired an additional importance last year upon the ratification of the Irish Free State Treaty, whereby Dominion status on the Canadian model was granted to the Free State. (a) For many years past, certainly since 1895, the Self-Governing Dominions have been autonomous in the matter of tariff arrangements and commercial treaties with foreign countries, subject to the necessity of keeping the Imperial Government in touch with the progress of the negotiations. At first it was the practice to associate for the purpose a Dominion Minister with the British Ambassador or other representative in the country concerned, and both of them signed the treaty. In 1907, when Canada negotiated an important commercial treaty with France, the negotiations were conducted solely by the Canadian Ministers, but the treaty was signed by them and the British Ambassador jointly. (b) In 1909 the Canadian Parliament, following the lead of the Commonwealth of Australia, established a Department of External Affairs, charged with the "conduct and management of international or intercolonial negotiations, so far as they may appertain to the Government of Canada." (c) Finding even the association with the British Ambassador, and the necessity of signature and ratification by the Imperial Government embarrassing, Canada then developed a system of independent and direct negotiation on commercial matters with foreign consular officers in Canada, followed by the necessary legislation in Canada, but not requiring the conclusion of any formal treaty, or even the formal assent of the Imperial Government. This method was adopted in the case of commercial negotiations with Germany and Italy in 1910, and finally in the reciprocity agreement with the United States, which led to the downfall of the Laurier Ministry (see Professor A. B. Keith's "Responsible Government in the Dominions"). (d) Meanwhile the Dominions were securing the right of separate representation at certain international conferences of a non-political character, such as the Postal Union of 1906 and the Radio-Telegraph Conference of 1912.

Such are the principal landmarks in the development of autonomy in non-political matters. In the political sphere the development is more recent and more rapid. During the late war Dominion Ministers sat in the Imperial War Cabinet, and they were present at the peace negotiations at Versailles. They were not separate parties to the Treaty of Versailles, but their Ministers signed it on behalf of his Majesty side by side with the Ministers of the Imperial Government. At the same time the abortive Anglo-French (Defence of France) Treaty of 1919 was expressly made "to impose no obligation upon any of the Dominions of the British Empire unless and until it is approved by the Parliaments of the Dominions concerned." In addition, Canada, Australia, South Africa, and New Zealand became original members of the

League of Nations, each with a right of voting independently of the Mother Country. And within the last two years Canada has been conceded by the Imperial Government the right to appoint a Minister Plenipotentiary at Washington to represent her numerous interests there—a right which, however, she has not yet exercised.

Now, in view of these facts, the procedure which attends the actual execution of a non-political treaty negotiated by a Dominion with a foreign country is mainly a matter of form—but not entirely. There are several possible alternative modes of signature: (1) by a British Ambassador or other diplomatic representative of the Imperial Government alone—that, we may take it, is now obsolete; (2) by a Dominion Minister alone duly accredited and empowered *ad hoc* by the Imperial Government; (3) a combination of (1) and (2), that is, by joint signatures, as was suggested by Sir Auckland Geddes in the case of the Halibut Fisheries Treaty. To our mind the essence is that the Imperial Government should become cognisant of the proposed treaty during its negotiation, and should have an opportunity of pointing out any possible detriment to some other part of the Empire or any provision which might involve the Empire in a breach of an existing treaty obligation or some other infraction of international law. Whether the Imperial Government empowers a Dominion Minister or one of its own Ambassadors actually to sign the treaty is of secondary importance. But a treaty is a treaty, that is, a solemn international engagement binding an international person. The Dominions are not yet international persons except for the limited and special purposes of the League of Nations, and therefore it is the British Empire acting through the Imperial Government that must become a party to any international obligation entitled to the name and effect of a treaty. It is unlikely that a Dominion would ask for its Minister to be empowered by the Imperial Government to sign a treaty that was inimical to Imperial interests as a whole; but, as it seems to us, it is essential that such a request, or the similar request for a British diplomatic representative to sign, should be made. If the Imperial Government were unable to accede to it, then the Dominion could not enter into a "treaty," though it could conclude an informal arrangement with the other contracting party and give effect to it by Dominion legislation; in that event the Dominion would know that it had not the force of the Empire behind it, and the other party would know that the Empire had not endorsed the Dominion's cheque.

There are the strongest possible objections to rigidity in the constitutional relations between the Mother Country and the Dominions. But now that the latter are playing so important a part in world affairs (and no one more pleased to see it than the Mother Country), the time has come for a little plain thinking and frank talking round the fire-side as to the best method of giving effect to the new development in the interests of the family as a whole.

OIL.—I. THE DEVELOPMENT OF PRODUCTION AND CONSUMPTION.

THE popular and ignorant idea of oil in its economic relation to coal is well expressed by the repartee of the two eighteenth-century gentlemen on the placards who advertise respectively "The Beggar's Opera" and "Polly." The one is saying "Upstart," and the other is replying "Antediluvian," the while drawing his sword. Now, the "upstart" oil industry is popularly supposed to be preparing to annihilate the "antediluvian" coal. To this ignorant body of opinion the expert defender of the faith in coal has answered that the ratio of resource to the present rate of production in the case of oil is not comparable with that in the case of coal—that, in other words, the supplies of oil are being rapidly depleted, and that the oil industry is doomed to extinction rather sooner than later. Meanwhile, in the political world, the belief is persistent that the oil interests play the rôle of "the hidden hand" in the diplomacy of the Great, and lesser,

Powers, and that no international conference can be held without oil being discussed behind the scenes. It goes almost without saying that no one of these different views contains the exact and unadulterated truth. Indeed, each in small or large degree contains some distortion of the truth. We will therefore endeavour, as far as it is possible, to set the oil question in its true colours and proportions.

In its economic aspects, the question cannot be appreciated without some understanding of the remarkable development which has occurred in the world's production and consumption of oil. The United States began to produce oil commercially in 1859—with about 2,000 barrels, and the rapid growth in the American and world output since that date may be seen at a glance from the following figures of the total quantities produced in 10-year periods up to 1919 and in the last three years:—

CRUDE OIL PRODUCTION—In Barrels of 42 U.S. Gallons (6.6 Barrel to the Ton).			
Ten Year's Production—	World.	United States.	
1860-1869.....	29,807,720		27,705,534
1870-1879.....	119,978,104		104,161,464
1880-1889.....	409,425,470		272,947,976
1890-1899.....	1,033,684,920		535,169,704
1900-1909.....	2,188,778,783		1,228,324,216
1910-1919.....	4,267,644,834		2,817,984,027
Annual Production—			
1920.....	693,195,928		443,402,000
1921.....	765,064,600		472,183,000
1922.....	851,540,000		551,197,000
Grand total (1860-1922)	10,359,120,359		6,453,074,921

It will be observed that the world's output of crude oil, after its initial spurt, has roughly doubled itself every 10 years. The United States has accounted for about 62 per cent. of the world's total up to December 31st last year. The rate of increase in the United States production has averaged about 13 per cent. per annum from 1860 to 1880, 6 per cent. per annum from 1880 to 1900, 10 per cent. per annum from 1900 to 1920, and for the last two years has been 6.5 per cent. and 18.8 per cent. respectively. Expressing it in relation to population, the *per capita* production of oil in 1902 in the United States was one barrel, whereas in 1922 it was about 5 barrels. Comparing it with other industrial enterprises, since 1900 the production of crude oil has been proceeding at a greater rate of increase than the production of pig-iron, which latter is regarded as the best single index of manufacturing activity available in the United States.* Indeed, it may be taken that the output of oil in the world has forged ahead of the average rate of increase in the output of all other commodities.

This achievement was made possible partly because of the natural conditions peculiar to the business of oil production, partly because of the competitive conditions of that business in America. A prolific outflow of oil is continually being caused either by the chance striking of oil under strong pressure, which is marked by gushers or spouting wells, or by the competition between companies in a common oilfield forcing the pace of extraction. The classic example of "gusher" production is the "Southern Fields" of Mexico, where wells have been brought in at the terrific flow of 260,000 barrels a day, spouting a column of oil 500 to 600 feet high.† Mexican production, in consequence, rose from 1,005,000 barrels in 1907 to 55,292,770 barrels in 1917, and to 185,057,000 barrels in 1922. While production in Mexico proceeded since 1910 under natural pressure of gas or subterranean water, production in America has long proceeded under the artificial pressure of competition. The average oilfield in the United States is divided into a large number of small holdings. Whenever small holding A drills a well, small holding B adjoining must drill an off-set well to prevent his area being drained by A. If small holding A drills another well in the corner of its rectangular plot, then B, C, and D will drill off-set wells in their respective corners next to A's. So the fun goes on. Indeed, the

* "Review of Economic Statistics." Harvard University. December, 1920.

† Cerro Azul, No. 4 of the Huasteca Petroleum Company.

zest of competition in one of these chessboard oilfields of the United States is such that the worst slump in the world's markets will in no wise damp down the frenzy of off-set drilling. And when the oil is discovered under natural gas pressure as well as under such competitive conditions, the sudden rise in output can readily be imagined. Texas, Oklahoma, and California are still demonstrations. This competitive method of extraction is obviously wasteful, but it has undoubtedly served to push the rate of production of oil in advance of that of other commodities. The important fact to seize is that America is still discovering new oilfields, or new oilsands in the known fields, under the stress of competition. The world is still in the era of flush oil production.

Consider now the development in consumption. In the beginning, the outburst of oil production necessarily went ahead of demand. Indeed, it has been argued that, in the case of oil, supply shaped, if it did not create, demand, calling new uses of oil into being. When the first oil well was drilled in America in 1859, the only commercial use for oil was for lighting. The business of the oil industry became the refining of the crude oil into kerosene (lamp oil), without including therein the more volatile fractions (gasoline) which were liable to make the lamp explode. The disposal of these dangerous volatile fractions was then regarded as a necessary nuisance in the refining process. Because the supply was greatly in excess of the needs of the domestic markets of the United States, American kerosene began to be exported the world over. But it was not till the twentieth century was under way that the oil industry became assured of an outlet for its ever-increasing production—by the development of the internal combustion engine. Automotive transportation provided the use for the hitherto wasted gasoline products. Further, the heavy residual oil left over in the refining process began to be used in industrial plants, and in the merchant marine for burning under boilers for raising steam. So began and grew the present-day demand for oil as a power-producer.

This development in the world's consumption of oil products has led Mr Bedford, chairman of the Standard Oil Company of New Jersey, to declare that since 1906 a new industry has been created. The growth of the oil business, he has said, is a revolution rather than an evolution. In 1906 the oil industry existed primarily to supply the world with kerosene, which it was consuming at the rate of about 33,000,000 barrels a year, principally for burning in lamps. That entailed a crude oil output of approximately 213,000,000 barrels. In the year 1921 it produced 46,312,000 barrels of kerosene. In other words, if the industry had been called upon to increase its output to supply only the kerosene market, it would have become a "turgid backwater in the rushing flood of American commerce." But it happened differently because of the automobile engineer. In 1922 the oil industry existed primarily to supply gasoline, which it was consuming at the rate of 150,000,000 barrels per annum, and which entailed a crude oil output of 851,540,000 barrels. Such was the revolution in the oil industry.

Some misleading comparisons have been made between the respective rates of increase in production and consumption. No less an authority than Pogue, in his "Economics of Petroleum," has argued, we believe wrongly, that the consumption of oil has been increasing more rapidly than production. In support of this argument he gave the following series of index numbers:—

COMPARISON OF UNITED STATES DOMESTIC PRODUCTION AND CONSUMPTION OF CRUDE PETROLEUM IN PERCENTAGES OF THE FIGURES IN 1913. (Figures for 1913 = 100.)

	Production.	Consumption.
1917.....	135	145
1918.....	144	158
1919.....	152	161
1920.....	178	204

The data used were from the United States Geological Survey. One does not doubt their accuracy. But it is surely misleading to compare consumption of crude oil, which includes Mexican crude oil consumed, with production, which does not include Mexican crude oil imported. Moreover, it is wiser to take the actual consumption of oil products in the markets than consumption of crude oil by refineries. Index numbers based on production, plus imports, compared with consumption of all oil products, plus exports, will show a very different result.

COMPARISON OF UNITED STATES PRODUCTION plus MEXICAN IMPORTS with U.S. DOMESTIC CONSUMPTION of all OILS plus EXPORTS. (Figures for 1913 = 100.)

	Production.	Consumption.
1919.....	162	163
1920.....	207	200
1921.....	225	198
1922.....	257	223

It will be seen that supply of American and Mexican oil in the United States has been increasing more rapidly than domestic consumption and exports—the reverse of the accepted American doctrine. And 82 per cent. of the world's oil trade was handled in the United States last year. Nevertheless, one cannot deny that the growth in consumption has shown a remarkable upward course. Will production continue to meet demand? Is the turning-point near when the increasing demand for oil products can no longer be met by increasing the number of wells drilled? These are the questions, widely asked in America, which will next be examined.

(To be continued.)

OUR INDEX NUMBER.

An upward movement in wholesale prices is recorded in our Index Number as at the end of April, the total rising by 48 points to 4,440, the highest point touched since the end of November, 1921. This increase was due to the movements of two of the groups, namely, primary food-stuffs and textiles, for in other groups the changes were either very small or else (as in the case of butter and sugar) they neutralised one another. The table below shows that on balance there has been a considerable upward movement since the beginning of the year :—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, etc.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, etc.).	Total.	Percentage Change.
Bas. (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	382	616	464	553	2868	116.6
Dec., 1915	897	446	731	711	848	3634	165.7
Dec., 1917	1286	686	1684	839	1348	5845	265.2
Nov., 1918	1289	783	1848	903	1389	6212	282.6
Dec., 1918	1303	782	1805	866	1337	6094	277.0
Dec., 1919	1441	881	2442	1145	1453	7364	334.7
Mar., 1920	1808	919	2974	1246	1709	8352	379.6
Dec., 1920	1344	805	1284	1216	1275	5924	269.3
Dec., 1921	921	636	1106	782	931	4357	198.0
June, 1922	1000	676	1135	690	887	4389	199.5
Sept. "	873	682	1116	699	818	4189	190.4
Dec. "	861	706	1184	705	807	4264	193.8
Jan., 1923	860	711	1205	739	808	4324	196.5
Feb. "	847	746	1201	797	810	4402	200.1
Mar. "	824	752	1178	840	797	4392	199.6
Apl. "	858	752	1199	834	797	4440	201.8

In the first group there were no exceptionally large changes, but with the exception of beef and mutton each quotation moved upward, the most prominent rise being shown in wheat, potatoes, and pork. In the second group, in which no change is recorded, there was a sharp upward movement in sugar, the causes of which were discussed in last week's issue, but this was exactly offset by a decline in butter.

In the textile group changes were more irregular. American cotton and cotton yarn and cloth were a little higher, but Egyptian fell slightly. English wool was unchanged, but Australian recovered more than the previous month's fall. The largest increase was shown by silk, but hemp and jute fell a little. In the minerals group the only upward movement was a further advance in steam coal. Steel rails and iron bars were unchanged, but there was a small reduction in pig-iron prompted by an easing in the demand. Lead fell substantially for the second month in succession, and copper and tin dropped a trifle. In the miscellaneous section the only notable changes were an advance in oilseeds, which was offset by a similar decline in indigo.

The changes in each commodity's index as compared with the end of March are shown in the next table, the figure 50 representing in each the average price during the basic period 1901-5 :—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.

The month's changes have resulted in a rise in the percentage increase over the level prevailing at the outbreak of war from 71.2 per cent. to 73.1 per cent. The increases over the pre-war level for the five groups may also be seen from the following table, in which the index at the end of July, 1914, is taken as 100 :—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5

* Bradstreet's.

The figure for the United Kingdom on the same basis is 165. A comparison of this table with the previous one indicates that while a slight upward movement in prices is general, a greater degree of stability has been reached in the United Kingdom than in any of the foreign countries named.

FOOD SUPPLIES AND PRICES.

In a previous article (March 10th) we dealt with our imports of cereals and meat. Whereas our imports of cereals rose in value last year to £98,200,000 from £80,600,000 in 1913, our imports of meat rose in the same period to £96,300,000 from £50,500,000, a very much greater increase, although we produce approximately one-half of the meat we consume, and only grow about one-fifth of the cereals necessary to feed our people. Our imports of dutiable tropical produce last year were valued at £82,000,000, as against £49,000,000 in 1913; our imports of dairy products rose to £68,700,000 from

£46,300,000; and our imports of raw fruit rose to £26,100,000 from £10,400,000. We proceed to deal with these latter classes :—

TABLE VII. DAIRY PRODUCTS.	Weight in Million Cwts.			Inc. or Dec. on 1913.		Value in Million £'s.			Inc. or Dec. on 1913.	
	1913.	1921.	1922.	1921.	1922.	1913.	1921.	1922.	1921.	1922.
Butter	4.1	3.5	4.3	-14.6	+4.9	24.1	42.4	37.3	+76.7	+54.8
Cheese	2.3	2.8	2.7	+21.7	+17.4	7.0	17.4	12.4	+136.8	+77.1
Lard	2.0	2.3	2.3	+15.0	+15.0	5.6	10.5	7.7	+87.5	+37.9
Eggs (gt.bund'ds.)	21.6	10.5	13.7	-51.4	-36.6	9.6	11.4	11.3	+17.1	+17.7

Last year our imports of butter were 4.9 per cent. greater than in 1913, but their value was 54.8 higher. Our imports of cheese were 17.4 per cent. greater than in 1913, but their value was 77.1 higher; and our imports of eggs were 36.6 per cent. less than in 1913, but their value was 17.7 higher.

TABLE VIII.	1913.			1921.			1922.		
	Milln. Cwts.	Milln. £	Price per Cwt.	Milln. Cwts.	Milln. £	Price per Cwt.	Milln. Cwts.	Milln. £	Price per Cwt.
		s	d		s	d		s	d
Butter	4.1	24.1	117 7	3.5	42.5	242 10	4.3	37.3	173 6
Cheese	2.3	7.0	60 10	2.8	17.4	124 3	2.7	12.4	91 10
Lard	2.0	5.6	58 0	2.3	10.5	31 2	2.3	7.7	66 11
Eggs (great hundreds) .	21.6	9.6	8 11	10.5	11.4	21 4	13.7	11.3	16 6

Our imports of cheese were 17.4 per cent. heavier in 1922 than in 1913, but the price per cwt was 31s, or 51 per cent., dearer than in 1913. Imported butter was 4.9 per cent. heavier, but the price per cwt was 55s 11d, or 47.6 per cent. greater in 1922 than in 1913. Eggs were 36.6 per cent. less in quantity, but were 7s 7d, or 83.3 per cent., dearer last year than in 1913. The prices (wholesale) of imported dairy products were much lower than in 1921.

TABLE IX. RAW FRUIT.	Weight in Million Cwts.			Inc. or Dec. on 1913.		Value in Million £ s.			Inc. or Dec. on 1913.	
	1913.	1921.	1922.	1921.	1922.	1913.	1921.	1922.	1921.	1922.
Oranges	5.8	5.9	7.0	+ 1.7	+ 20.7	2.5	8.0	7.4	+ 216.0	+ 196.0
Apples	3.3	4.0	4.5	+ 21.2	+ 36.4	2.2	7.4	6.5	+ 236.4	+ 195.6
Bananas (bunches)	7.5	9.5	11.0	+ 26.0	+ 45.9	2.2	6.6	5.3	+ 208.9	+ 140.9
Nuts	8	1.2	1.4	+ 50.0	+ 42.9	1.8	3.6	3.6	+ 111.1	+ 100.0

In 1919 there was a shortage of supplies of raw fruit of all kinds, except nuts. In the next year supplies were abundant, only oranges, pears, and plums falling short; and in 1921 and last year there were heavier supplies of all kinds (except plums) than in 1913. How general had become the demand for raw fruit is shown by the fact that although the supplies were so much greater in 1921 and 1922, very much greater sums were paid for them than in 1913.

TABLE X.	1913.			1921.			1922.		
	Min. Cwts.	Min. £.	Price per Cwt.	Min. Cwts.	Min. £.	Price per Cwt.	Min. Cwts.	Min. £.	Price per Cwt.
			s d			s d			s d
Oranges	5.8	2.5	8 7	5.9	7.9	26 9	7.0	7.4	21 9
Apples	3.3	2.2	13 4	4.0	7.4	37 0	4.5	6.5	28 10
Bananas	7.5	2.2	5 10	9.5	6.7	14 1	11.0	5.3	9 8
Nuts	8	1.8	45 0	1.2	3.8	63 4	1.4	3.6	51 5

Oranges rose from 8s 7d per cwt in 1913 to 21s 2d in 1922, an increase of 12s 7d, or 146.6 per cent. Apples rose from 13s 4d per cwt to 28s 10d per cwt, an increase of 15s 6d, or 116.2 per cent. Bananas rose from 5s 10d in 1913 to 9s 8d in 1922, an increase of 3s 10d per bunch, or 65.7 per cent. Nuts rose from 45s per cwt to 51s 5d, an increase of 15s 8d, or 34.7 per cent. It will be noted that the import prices of last year were much lower than those of 1921.

TABLE XI. DUTYABLE TROPICAL PRODUCE.	Weight in Million Cwts.			Inc. or Dec. on 1913.		Value in Million £'s.			Inc. or Dec. on 1913.	
	1913.	1921.	1922.	1921.	1922	1913.	1921.	1922.	1921.	1922.

Coffee	85	6	1.1	-35.0	+29.9	2.5	4.5	4.5	+13.2	+55.2
Cocoa, Raw	7	1.2	1.3	+71.4	+85.7	2.3	2.9	2.9	+26.1	+26.1
Cocoa, Pre- parations	25	2	1	-9.0	-48.0	1.9	3.1	1.5	+66.0	-31.1
Raisins	74	74	1.2	..	+62.2	1.2	3.7	5.1	+200.8	+325.0
Currents	1.3	1.0	1.0	-23.1	-20.0	1.6	3.4	3.4	+100.0	+110.6

Sugar was imported in 1919 nearly one-fifth less in weight than in 1913, by 30 per cent. less in 1920, and by 35 per cent. less in 1921, but last year was only 2 per cent. less than the import in 1913. Tea and cocoa have been received in much greater quantities during the last four years than in 1913; but coffee has shown much smaller imports since 1919. Both raisins and currants were imported in larger quantities in 1919 than in 1913. After a 10 per cent. fall in 1920, raisins in 1921 equalled the weight of 1913, and last year rose by 62 per cent. above that weight. Currants during the last three years have shown a deficiency of imports.

When war broke out the tax upon tea was at the rate of 5d a pound. From 1919 to 1921 it was taxed at 1s a lb foreign and 10d a lb Indian and Colonial. Sugar was raised from 1s 10d a cwt to 25s 8d. The tax upon coffee and cocoa was raised in proportion, and the tax upon raisins and currants was raised to 10s 6d a cwt, the same amount being levied upon sweetened condensed milk. Our imports of this commodity rose in value from £2,100,000 in 1913 to £11,800,000 in 1919, and fell in the last three years to £10,500,000, £7,440,000, and £4,850,000. But the price of milk is still unduly high, and presses with the greatest weight upon the poorest class of consumers. The values of our imports of tropical produce were much lower last year and in 1921 than in the two previous years, with the exception of raisins, of which a much heavier importation was received in 1922.

TABLE XII.	1913.			1921.			1922.		
	Milln. Cwts.	Milln. £	Price per Cwt.	Milln. Cwts.	Milln. £	Price per Cwt.	Milln. Cwts.	Milln. £	Price per Cwt.

Currents									

Owing to the policy of restricting the production of tea pursued by certain tea-planters, the smaller importation of tea last year (3,700,000 cwts) compared with that of 1921, viz., 4,000,000 cwts, was valued at a higher sum, the price per cwt averaging £6 19s, against £5 15s 6d in 1921. Currants were a trifle higher in value last year: the other tropical products show considerable falls in the price per cwt imported compared with 1921. This important point is illustrated in the following table :—

TABLE XIII.	Million Cwts.		Price per Cwt.			Million Cwts.		Price per Cwt.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THE Lancashire cotton industry remains in a depressed condition. Owing to the scarcity of orders, most spinners and manufacturers are still curtailing production on a large scale. In the circumstances, unemployment amongst the operatives is extensive. In January there was a revival of demand, but the buying movement did not last very long, and during the last couple of months operations in all departments have been on a restricted scale. Developments of a favourable character are undoubtedly being held back by the unsettled political situation throughout Europe. The financial stringency is acute, and although since the beginning of this year there have not been quite so many failures as in the previous three months, it is well known that numerous firms are so tight for money that a policy of enterprise is quite impossible.

Since the beginning of this year raw cotton prices have shown considerable strength. On January 2nd the quotation for fully middling American on the spot in Liverpool was 15.40d. By the 25th the price had risen to 16.63d, but on February 2nd the quotation was 15.38d. A little later there was another stiff rise to 16.86d on March 8th. By the 29th, however, the price had fallen to 14.90d. On April 18th the figure was 15.65d. A decline has since been registered, and the quotation on May 2nd was 15.07d. The statistics published by the International Federation showing the cotton consumption during the six months ended January last were rather bullish, as the figures showed that users' requirements of American qualities were on the basis of 13,000,000 bales per annum. All interest is now being centred on the prospects for the new crop in the United States. An increase in the acreage of 10 to 15 per cent. is expected. Recently the weather in the growing area has not been very favourable, and it is said that farm work has been hindered by heavy rains. The critical time, however, will come later on, and the first official condition report will not be published until the beginning of June. An event of importance has been the second reading in the House of Commons of the Cotton Industry Bill, which provides for a levy of 6d a bale upon all cotton imported to this country, the fund created being for the purpose of carrying on the work of the Empire Cotton Growing Corporation. During the quarter Lancashire spinners have purchased American cotton very sparingly, but a considerable business has been done in Peruvian and Egyptian qualities. With regard to Egyptian cotton, the quotation for fully good fair Sakellaridis on the spot in Liverpool on January 2nd was 17.80d. A few days later the figure was 17.25d, but 18.25d was posted on the 18th and 17.65d on the 31st. The month of February brought very little change, the quotation on the 28th being 17.40d. There was an advance to 18.20d on March 19th, but 17.40d was the figure on the 29th, whilst 17.35d was registered on April 18th. An easier tendency has since prevailed, and 16.75d was posted on May 2nd. Rather mixed advices are coming to hand relating to the new growth in Egypt, but it is too early for reliable information. There is likely to be an increase in the acreage of about 10 per cent.

Although the amount of inquiry in piece goods during the past three months has been fairly extensive, the trade done has been very irregular. January can be described as a period of active buying. Just after the turn of the year numerous manufacturers secured big contracts, especially for India. The demand, however, fell off rather suddenly when makers had obtained a little relief and were endeavouring to obtain more remunerative prices for their productions. A hopeful feeling prevails with regard to future trade with India. On the whole, favourable clearances are being experienced in Calcutta, Bombay, and Madras. Dealers in the bazaars, however, are not prepared to replenish stocks at current rates, and latterly

operations have been of a hand-to-mouth character. Grey staples and plain goods remain very slow. On the other hand, steady buying has taken place during the past quarter in printed and dyed goods, and specialties of various kinds. Trade news from China has not been at all encouraging. The conditions in the Far East are very unsettled. Standard makes have been decidedly quiet, but a fair turnover has taken place in fancies. Useful contracts have been obtained from time to time for Java, Singapore, and the Straits Settlements. Recently there have been indications of rather more activity for Egypt. Better news is also coming through from Constantinople, and stocks of cloth in Turkey are said to be very low. Quite a healthy business continues to be done in fine goods for the United States, but makers are becoming rather chary at booking fresh contracts very far ahead. The South American outlets, after providing more orders, now seem to be rather quieter. Developments in the home trade are rather slow in taking place. The question of organised short time in the weaving branch of the industry is being considered, but there is little likelihood of any scheme receiving adequate support, and it is probable that manufacturers will continue to make their own arrangements as to the stoppage of looms.

Throughout the greater part of last year spinners of American yarns curtailed production on an organised scale, and the mills ran only 35 hours a week instead of the usual 48. This restriction of output continued up to the end of January. Partly owing to the improved demand, it was resolved to abandon concerted action in the way of limiting production. In February, however, yarn sellers experienced a distinct set-back. The position was again considered by the Masters' Federation, and it was decided to recommend users of American cotton to restrict yarn output from the beginning of March by 50 per cent. This action has not yet had the desired effect, and the short time is still going on. The accumulation of stocks is being kept down, but demand continues to run on small lots. Big attempts have recently been made to secure more profitable prices, and an agitation has started for the purpose of preventing sales at rates which do not cover the cost of production. Some success in this connection has been met with, but there are too many weak sellers about for the scheme to stop orders being accepted at a loss. In the mills using Egyptian cotton a steady improvement has shown itself during the past three months. A big business has not been done, but a fair demand has been experienced from week to week. Most Bolton firms are running full time, and the prices now ruling for yarn show a profit. There continues very little activity in yarns suitable for shipment abroad. Offers for India are very poor, and trade with European countries is thoroughly disturbed by the political situation and the unfavourable rates of exchange.

According to particulars available relating to the stock-taking results of 30 spinning companies for the half-year ending March, 22 concerns were unable to declare any dividend. The average dividend for the 30 companies was 2.5 per cent. per annum compared with 2.98 in September last and 3.73 twelve months ago. These companies have a paid-up ordinary share capital of £6,242,085.

The wages agreement between the employers and the trade unions expired at the end of April, leaving it possible for either side to give one month's notice of a further change. The situation is already receiving consideration, and the Operative Spinners' Amalgamation and the Operative Weavers' Amalgamation have proposed to the masters that the agreement be renewed for twelve months. It is important to mention that the Card-room Operatives' Amalgamation have now joined in this movement. The position of affairs was discussed by the employers and the trade union officials in Manchester last Tuesday, and at the close of the meeting it was announced that the conference had been adjourned until May 10th. It is understood that, in the event of the operatives not putting in a demand for an increase next year, the masters would seek no reduction this year. At any rate, an amicable settlement is expected. After allowance is made for the reduction in working hours present wages are 65 per cent. above July, 1914.

During the last ten days there have been indications in the Manchester market of a rather better feeling. Certain buyers of piece goods are undoubtedly displaying increased interest in prices. More inquiry is being dealt with for several outlets, especially India and China. It looks as though another buying movement is not far off. During the last couple of months customers have adopted a waiting policy in anticipation of lower rates. There is still a fear of depreciation in values if contracts of importance are arranged at the present time. It seems likely, however, that merchants in the near future will have to replenish stocks to some extent.

THIS YEAR'S BOOM IN INDUSTRIALS.

(BY OUR STOCK EXCHANGE CORRESPONDENT.)

THE Stock Exchange feature of the first four months of this year is undoubtedly the rise in gilt-edged securities of all descriptions. Following upon remarkable advances which occurred during 1922 in all such stocks, the further advances are the more noteworthy. The movement owes its inspiration to a variety of factors, most of which are apparent upon a very small amount of consideration. Credit must be also given where, possibly, it may not be directed without a closer scrutiny into the causes of the rise than casual observation may afford. The Treasury deserves well of the country for the manner in which it has handled the financing, so to speak, of the national credit over the past two years. Time was, and that not so long ago, when subscribers to the War Loan, Victory Bonds, Funding Stock, and even the Conversion Loan spoke none too respectfully of the Government in regard to the manner in which their investments had shrunk in value. The Treasury, however, pursued a level course undeterred by criticism or Stock Exchange prices. Its actions aroused mild astonishment from time to time through the way in which new British Government stocks were offered at what appeared to be, at the time, rather extravagant prices. Nevertheless, the securities became readily absorbed, and month by month the national credit has received valuable advertisement from the manner in which quotations have moved up. Another point of indirect bearing upon the situation was the determination of this country to repay its war debt to America, irrespective of what its debtors might choose to do in regard to their liabilities to ourselves. This, too, had its effect in attracting more and more capital, foreign as well as domestic, into British Government stocks, and through them into other high-class securities. So far as can be seen at present, there is no immediate likelihood of this strength of the gilt-edged market being disturbed by anything except such a boom in trade as might cause realisations of money stocks in order that the capital might be diverted into business channels.

It may seem a little anomalous that, side by side with insistent demand for the best-class securities, there should also have arisen an active demand for stocks and shares in those industrial companies whose activities, although quietly returning to life, may still be handicapped by the tardiness of the trade revival; that same tardiness which is the fount of the pressure to buy the gilt-edged stocks. Some industrial companies are, of course, doing exceedingly well, and the attractions of their shares appeal irresistibly to wide circles of more speculative investors who are looking for appreciation in capital value quite as much as for higher dividends than the War Loan and its satellites offer. It is useful at this juncture to tabulate some of the rises, amongst industrials, that have occurred since the end of last year, and taking, more or less at random, representative examples from various groups of trading and industrial shares, the following table gives a very fair idea of the way in which the buying has forced up prices of the shares in all kinds of companies:—

Share.	Price		Rise.
	Dec. 29, 1922.	May 2, 1923.	
Hongkong and Shanghai	116½	129½	12½
Lloyds	58½	61½	2/9
Westminster	17½	18½	1½
National Provincial, £4	10½	11½	1
Babcock and Wilcox	3½	4½	1½
Rolls Royce	21½	30½	9/6
Underground Incomes	87½	98	10½
P. and O. Deferred	330	340	10
Bradford Dyers	46/9	59/6	12/9
Coats	65/6	69/3	3/9
Fine Cotton Spinners	49/9	53/	11/3
Barker (John), Ord.	48/9	55/6	6/9
Courtaulds	63/3	73/	9/9
Harrods	28/6	39/	10/6
Whiteley Ord.	45/3	57/	11/9
Lyons	4½	4½	½
Guinness Ord.	440	525	85
Associated Cement	16/6	25/3	8/9
British American Tobacco	89/	95/	6/
British Oil and Cake	27/3	31/6	4/3
Gramophone	1½	35/	10/
Imperial Tobacco	73/6	88/	14/6
Marconis	2½	2½	½
Rosario Nitrate	26/	32/	6/
Salari del Carmen	50/	3½	½

What stands out more particularly in this list is the catholic character of the improvement. The banking and insurance markets benefit from the appreciation in their investments. Tobacco shares have gone ahead by reason of the huge profits which the companies are making. Textiles have caught the public imagination by reason of the dramatic rise in Courtaulds. The iron, coal, and steel group is in favour, owing to the fact that its business has received an undoubted filip from the chaos on the Ruhr. Electric lighting shares have enjoyed remarkable rises, thanks to the substantial increases in their dividends over those of 1921. The shipping market lags a little behind the rest. What are called "shop" shares, together with those in the hotel list, are enjoying popularity not only because of the better results achieved in 1922 as compared with the previous twelve months, but also because of the hope of a record London season this year. Moreover, business in the industrial market has broadened week by week. With rubber out of the running, owing to the disappointment felt with the course of the raw produce market; with oil shares attracting little general interest by reason of the inability of oil consumption to keep pace with production, the more miscellaneous markets receive the public's attention, and the public's money, in a manner which recalls to a mild degree the boom times of 1919. Fortunately, however, the present condition of business in the Stock Exchange market for industrial shares has few of the wild gambling elements that prevailed four years ago, and which had disastrous consequences for people who rushed into shares of all kinds, irrespective of the companies' merits, simply on the hope of snatching profits, dividend payments being regarded as negligible, sometimes even as undesirable, inasmuch as income-tax had to be paid on the latter. It is possible that the cautious may see in the appetite for industrials a source of danger in the present, of loss in the future, but anyone who studies the market conditions at close quarters is aware that the public purchases of to-day are directed to stocks and shares of far better character than those which wrought such widespread losses in the aftermath of the previous industrial boom.

Notes of the Week.

Mr Lloyd George and Free Trade.—We have always held that most of the talk of Liberal reunion was beside the point, because unity is not a thing that can be created by a formula or a handshake between two men. To declare that unity exists if it does not exist is mere delusion. If it does exist, no declaration is needed. Recently in the Liberal party it has not existed. If it is to exist once more it will grow into being through a community of view and programme and a correspondence of action and vote. If "National" Liberals and "Independent" Liberals in the country think alike on the great political questions of the day they will come together, and their

amalgamation in the country will, by the force of circumstances, bring into one fold at Westminster the Members of Parliament and the leaders of the two sections. The leaders, on their part, can, by their speeches and actions, stimulate or retard the rapprochement in the country. Some recent speeches of Mr Lloyd George, particularly his call for unity against Labour as the common foe, have retarded it. His speech at Manchester on Saturday, particularly the passage dealing with Free-trade, will stimulate it. Here the ex-Premier came out with an unequivocal, or, as our Tariff Reform friends would call it, a "whole-hogging," pronouncement for Free-trade. "I will tell you what I will do," said Mr Lloyd George. "If there is going to be a fight about Free-trade, and I believe it, let us clear the decks. Let us get rid of the three—the McKenna Tariff, the Paris Resolutions, and the Safeguarding of Industries Act. We had, each of us, his reasons for assenting to these propositions at the time, and I am sure neither Mr Asquith nor I would have done it without adequate cause. But, at any rate, these causes have disappeared; the occasion has gone; and let us clear the decks. If there is a fight for Free-trade, let us go forward as a united party." Into this outspoken announcement Mr Lloyd George was apparently enticed by the eloquence of Mr Oliver at a lunch preceding his meeting, wherein the speaker pronounced a warning on the danger to Free-trade, and "applied the birch" with a nice impartiality to Mr Lloyd George and Mr Asquith. We are not, perhaps, inclined to take quite so dark a view as Mr Lloyd George about the menace to Free-trade which is said to be developing. But it behoves Free-traders to be always on the look out and to close their ranks, whenever occasion serves, against all possible attacks of Protection. The mixed audience of "Nationals" and "Independents" whole-heartedly cheered Mr Lloyd George's pronouncement, and the cheers will find a clear echo among all Free-traders of both sections. Mr Lloyd George nails Free-trade once more to his mast, and even those Liberals who distrust him most will not complain too much if his cry of "peccavi" is coupled with the accusation "peccavisti." If Mr Lloyd George may be taken to have represented accurately the views of his "National" Liberal supporters, then Liberal unity is restored with regard to the single, but vital, question of Free-trade; although with regard to some of his colleagues at Westminster we should like to see their adherence to the Manchester declaration tested in the division lobby. By the same process of harmonising of voice and action will unity eventually be established with regard to the main planks of the Liberal platform. For the moment it is sufficient cause for satisfaction that Protection has displaced Labour as the "common enemy," and that Mr Lloyd George's Free-trade avowal has been made in terms that leave no room for subscription by the weak-kneed and the waverer.

Iraq Treaty Modified.—The result of the lay Cabinet deliberations on the British burden in Iraq was announced to the House of Commons on Thursday by Mr Baldwin. Last year, it will be remembered, a Treaty was signed with the King of Iraq which imposed formidable obligations upon Great Britain for a period of 20 years. Fortunately, however, this Treaty contained a clause providing for periodic revision at the desire of either party. Since the Treaty was signed the Iraq Government, according to Mr Baldwin, "has made great strides along the path of independent and stable existence, and has been able successfully to assume administrative responsibility." Modification of the Treaty has therefore become possible with the consent of both parties. This modification is carried out by means of a protocol, which stipulates that "the present Treaty shall terminate upon Iraq becoming a member of the League of Nations, and, in any case, not later than four years from the ratification of peace with Turkey." Thus, if the renewed negotiations at Lausanne fulfil the hope of speedy success, this country's costly responsibilities in Iraq will not last much more than four years as a maximum, and relief may come much earlier if the candidature of Iraq for membership of the League, which the British Government will support, is successful. Mr Baldwin made it clear that the matter will be fully debated in the House of Commons before Whitsuntide.

Pending the detailed information that will then presumably be given on various aspects of this affair, final judgment on the policy of the British Government would be premature. But, on the face of it, it would appear that the course adopted is entirely commendable; for, if the impression gleaned from Mr Baldwin's statement is correct, it promises the earliest practicable relief from responsibility without any breach of pledges given. We trust that the description of the great strides made by the Iraq Government is not over-optimistic.

The Second Lausanne Conference.—The second conference at Lausanne, writes a correspondent, may be expected to result in a peace treaty within about five weeks from the present date. That, at least, was the impression produced by a twenty-four hours' visit to the British and Turkish delegations a few days ago. The discussion of the capitulations on their financial and commercial side seems to have passed the danger point, and to have become safely immersed in detail. The French cry of alarm over alleged Turkish military concentrations towards the Syrian frontier is not being taken too tragically by other parties, and is unlikely to bring the Conference to an untimely end. The difficult questions are the juridical clauses of the capitulations; the determination of the currency in which Turkish debts are to be paid; and the Turkish claim to an indemnity from Greece for the devastation of Western Anatolia. The abolition of the capitulations on their juridical as well as on their fiscal side is one of the fundamental points in the Turkish national programme, and since the contrary Allied interest is obviously not worth a war, it is probable that the Turks will substantially obtain their demands. The utmost concession that is likely on their side is the appointment, for a limited period, of several technical advisers to the Turkish Ministry of Justice, these advisers to be citizens of countries that were neutral during the Great War. The Allied Governments will probably ask that the approval of these advisers shall be necessary in order to give validity to the judgments of Turkish courts in cases where foreigners are concerned; the Turks will insist that they shall be simply consultants and observers. At the Peace Conference the Turkish view is perhaps likely to prevail, but that does not mean that the practical problem will necessarily be settled according to Turkish desires and expectations. At present the Turks hope to establish their complete national sovereignty, and at the same time to retain the benefits of foreign capital and enterprise. But though they can dictate the conditions under which foreigners shall do business in Turkey if they remain there, to force them to remain under these conditions is beyond their power. A certain exodus is probable. The British insurance companies at Constantinople are already winding-up their business, and the supply of Western brains and money in Turkey will probably fall short of the Turkish demand for these commodities until the Turks grant, in their own interest, conditions of residence for foreigners which they are unwilling to concede now in negotiation with the Powers. The Turks also attach great importance to the currency question in connection with their liabilities, maintaining that if they are compelled to pay in gold when the Turkish lira has depreciated to a seventh or an eighth of its pre-war value, their whole national revenue will be drained out of the country. The Allies reply that gold payments are of the essence of the pre-war contracts, which are sacred, and that, even so, Turkey will be proportionately less heavily burdened than any other belligerent. The Turks rejoin that this is little comfort to them, since most belligerents are going bankrupt, and the Allied demands are sufficient to force Turkey along the same road. The debate will be obstinate, but since this is a question of quantities rather than principles, a compromise is surely possible. The Greek indemnity may be the most thorny point of all, for on this the Turkish (like the French) Government is acting under the pressure of a strong public opinion. The Greek devastations have been wide and systematic. The number of Turks who have been ruined by the loss of farms, houses, shops, goods, or cattle is very large, and they do not understand why military victory should fail to bring them compensation. The Greeks on their side have certain counterclaims for damage done by the Turkish troops in Macedonia during

the European war, but the damages suffered by Turkey are evidently far larger. Possibly the *amour propre* of both parties may be satisfied if the difference between the two claims is examined by the Conference and the amount payable determined by the Powers. But the Turks are unwilling to see Greek claims taken into account at all, since they look on the Greeks as unprovoked aggressors, while the Greeks are unwilling to figure merely as sinners, considering how much they have been sinned against in the past. It must be remarked that this question of devastations and indemnities is separate from that of the exchange of minorities and the valuation of their respective properties—a subject on which a separate convention between Turkey and Greece has already been signed.

The New British Naval Base.—The Washington Treaties have reduced naval armaments, but have also enabled the professional strategists to demand a new and costly addition to the defences of the Empire. The "Pacific Pact" between Great Britain, Japan, and the United States forbids the construction or strengthening of naval bases between the meridian of 110 deg. E. longitude and the western coast of America; so that our dockyard at Hong Kong, which lies east of the boundary, cannot be brought up to date. The Admiralty, therefore, demands a naval base at Singapore, at a cost, spread over about ten years, of £9,500,000. Its dry dock will take the largest battleships, and it will be equipped with all necessary repair works and stores for fuel. It is stated that the scheme has been under consideration for three years, and has been approved by the Imperial Defence Committee and the Imperial Conference of 1921—presumably in the strictly confidential discussions of the problems of Imperial defence. Singapore commands the chief British highway to China and Northern Australia, and the supporters of the scheme may fairly point to the resumption by Holland of the project for a large increase of her navy in order to defend her Far Eastern possessions, or, at any rate, to keep them neutral in that conflict for the supremacy of the Pacific Ocean which many observers of international politics expect in the near future. Stress was laid on its probability at the Imperial Conference, and it is universally contemplated as a possibility by the Japanese Government. But there is reason to expect that the estimated cost will be largely exceeded; moreover, the project looks like an attempt to evade the "Pacific Pact," and may be misinterpreted on the Continent; and it is based on the theory, strongly contested by many naval experts, that the "super-Dreadnought" will remain "the pivot of naval strategy," though it is even now almost too costly to be exposed to the risks of battle, and will probably soon become more costly and also more vulnerable by aerial, submarine, and chemical attacks. The coasts of Great Britain and the Channel Islands are strewn with the ruins of defensive works which, even before they were finished, had become obsolete either through political changes or alterations in the mechanism of warfare. It is a pity that the House of Commons did not take Mr Asquith's advice last Tuesday, and postpone the whole scheme till after a further discussion at the coming Imperial Conference. However, an adverse amendment was rejected by 253 to 94, and the Vote was accepted by 274 to 51.

Irish Stocks and Irish Investors.—Our Dublin correspondent writes:—In June last the *Economist* contained some observations as to the reaction of political unrest upon the prices of typical securities as quoted upon the Dublin Stock Exchange. A cursory examination of 12 leading securities of various types and of their price fluctuations for the previous 18 months pointed to the conclusion that there had been no great shrinkage of price values as a result of the destruction of capital wealth and the diminution of production during the hottest period of the "Black and Tan" campaign of Sir Hamar Greenwood and the succeeding periods under the Truce and thereafter under the Provisional Government established by the Treaty. On the contrary, it was apparent that the owners had been holding on, and that the market was generally supported by the dominant influences of the financial world. A similar comparison to-day gives

interesting results. With the progressive restoration of order and liberty a mild boom is taking place, for which the "public," as distinct from professional financiers or speculators, is responsible. There has been almost a year of disturbance and destruction by the de Valera faction, and various accounts, inspired by a variety of motives and by no means disinterested, have been given to the world of lowered national credit and dwindling resources. But comparing the prices of April 20, 1922, with May 3, 1923, representative Irish securities practically all show notable increases. Thus, Bank of Ireland stock (£100) has increased from 228 to 248½, Munster and Leinster Bank (£5 share) from 6½ to 8½, National Bank (£50 share) from 17½ to 21, Dublin Tramways Co. (ordinary £10 share) from 42 to 53, Dublin Corporation (3½ reduced) from 66½ to 72, E. and J. Burke, Limited (ordinary £5 share), from 54s to 63s 9d, Great Northern Railway (£100 stock) from 57½ to 70, Midland and Great Western Railway (£100 stock) from 29½ to 34½, Great Southern and Western Railway (£100 stock) from 50 to 51-52. Without plunging too deeply into inference or analysis, it is safe to say that this record is an indication of the public confidence that the backbone of the revolt has been broken, and of its disposition to keep its money at home and support the new system.

The Alliance Bank of Simla, Limited.—It is at least a moot point whether it would not have been wiser for the management of the Alliance Bank to have faced the inevitable when the serious position revealed by the June 30, 1922, balance-sheet became known. On the publication of the report last September several disquieting features came to light, and confidence in the institution was shaken. The considerable sum from the available balance transferred to reserve for bad and doubtful debts was apparently insufficient, and it was deemed expedient by the directors to divert also the whole of the bank's reserve fund—Rs. 42 lacs—to the same object. The directors reported that at the end of 1920 the bank's London agents, who held a controlling interest in the bank, themselves being in financial difficulties, were unable to place at the bank's disposal funds which were on deposit at call. Immediate steps were taken to protect the Alliance Bank, and a branch was opened in London. It was hoped that a considerable portion of the amount unsecured by securities and shares received as collateral might subsequently be recovered. The directors further reported a serious loss of about Rs. 6 lacs through misappropriation of securities by a European assistant in Calcutta. This loss was fully provided for, although a portion had been recovered. It was a position calling for

strong action, and although herculean efforts seem to have been made, under the skilful guidance of Sir David Yule, who joined the board without remuneration in July, 1922, it cannot be said that the bank ever recovered from the shock to its credit, and the doors closed, not to reopen again for business, on the evening of April 27, 1923. The failure seems to have been due to over-confident trading in the boom years, and to the subsequent difficulty of recovering advances when the necessity for calling them in became apparent. For some time it had been known that negotiations were in progress with a view to amalgamation, but when these failed the only course was for the bank to close its doors. It is reported that steps are being taken for the Imperial Bank of India to liquidate the Alliance Bank, and in the meantime to make payments on account of liabilities to depositors, it being estimated that the latter will possibly be enabled to draw 50 per cent. of their deposits as soon as the necessary arrangements have been completed by the Imperial Bank in India. So passes an old Anglo-Indian institution; it was established in 1874, had its head office in Simla, and 45 branches, including the London office, and 20 sub-branches and agencies. In 1916 the Punjab Banking Company, Limited, was taken over, and the Alliance Bank also acquired the Indian establishment of the Delhi and London Bank. The business of the Bank of Rangoon, Limited, was also acquired on December 31, 1917. The capital, subscribed and paid, of the Alliance Bank on June 30, 1922, was Rs. 88,94,100; reserve fund, Rs. 42 lacs; reserve against Government paper and other investments, Rs. 13 lacs; deposits, Rs. 15,73,98,045; loans against bills, &c., Rs. 1,45,50,000; bills payable, Rs. 1,02,67,215. The principal assets comprised cash in hand and at bankers, Rs. 4,50,13,779; loans, cash credits, &c., Rs. 9,65,77,256; bills receivable, Rs. 98,65,450; Government securities, Rs. 3,51,19,464; sundry assets, Rs. 20 lacs; bank premises, &c., Rs. 90,71,957. The failure, having been more or less expected both in India and London, has caused relatively little disturbance on either the money or silver markets in both places. By reason of its numerous up-country branches and its connection with the principal centres in India, the bank has a large number of small depositors; some of these are, of course, hard hit, but the possibility of an eventual liquidation has been sufficiently discounted for some time past to preclude any adverse effect on Indian banking and exchange generally.

Currency Depreciation and Prices in Austria.—In our issue of March 24th last we published an article on "Currency Depreciation, Wages, and Prices," which was based on statistics relating to Germany. For the purpose of comparison we have extracted the following figures from the first number of the *Statistische Nachrichten*, a new monthly publication of the Austrian Federal Statistical Office:—

	Cost of Living Index (July, 1914=1).	Dollar Index. 1 Gold Crown = Paper Crowns.	Share Index Number (1st Half 1914=1).	No. of Un-employed (at End of Month).	Note Circulation (000,000's Omitted).
1922.					
January	662	1,530	56	33,554	227
February ..	781	1,380	49	42,977	260
March	790	1,479	50	42,231	304
April	870	1,547	57	44,320	347
May	1,089	1,913	78	38,573	398
June	1,866	3,282	131	33,393	550
July	2,637	6,296	153	30,969	786
August	5,914	13,238	482	31,247	1,353
September ..	11,271	15,123	502	38,000	2,278
October	10,332	14,874	767	58,018	2,971
November ..	9,701	14,740	797	83,385	3,418
December ..	9,375	14,313	719	117,891	4,080
1923.					
January	9,454	14,272	893	161,360	4,054
February ..	9,601	14,387	751	169,075	4,073
March	10,151	14,414	882	155,772	4,196
April, 1st half	10,897	14,332	1,176	..	4,310

As a result of the steady depreciation of the crown, internal prices were far below world prices—a fact that

was duly appreciated by the crowds of foreigners that flocked to Vienna in 1921 and 1922. Towards the middle of last year a further sensational fall in the exchange was followed by a period of relative stability, which has lasted up to the present time. This was reflected in the Cost of Living Index, though this year there has been a marked tendency for prices to move gradually towards the world level. Our table shows, however, that this tendency has not as yet worked itself out fully, as the internal purchasing power of the crown is still considerably greater than the external. The note circulation continued to rise for some time after the exchange had been stabilised, though this increase, which is caused by the issue of crowns against foreign securities, has only been very gradual since December last. When stabilisation had become an accomplished fact producers were faced with a serious crisis, which was reflected in the growth of unemployment. Recently, however, there appear to be signs that the worst point has already been passed. As is usual in cases of currency depreciation, share prices did not rise to anything like the same extent as commodity prices. With the renewal of confidence, which has resulted from the improved financial outlook, the share index number has, however, risen considerably of late, though the greater part of this upward movement is due to a marked revival of interest in miscellaneous mining shares.

Income Tax in France.—The French Treasury authorities have recently published statistics of the number of persons assessed for income-tax, together with the yield from that tax in 1921. These are as follows:—

Categories of Assessed Income.	Number of Assessments.	Yield from (in millions of Francs).
From 6,000 to 10,000	272,274	10
" 10,000 to 20,000	320,137	36
" 20,000 to 30,000	84,464	30
" 30,000 to 50,000	55,979	56
" 50,000 to 100,000	31,015	126
" 100,000 to 200,000	12,277	191
" 200,000 to 300,000	2,794	121
" 300,000 to 500,000	1,607	150
" 500,000 to 1,000,000	641	148
Above 1,000,000	197	278
Totals	781,375	1,146

These figures disclose the fact that the 197 assessed persons who possess incomes of over a million francs pay 25 per cent. of the whole amount raised from this tax, while the 592,411 persons with incomes of less than 20,000f (or over 75 per cent. of the total number assessed) pay between them only 46 millions, or about 4 per cent. of the total yield. The rapid extension of the income-tax in France may be gauged from the fact that the number of persons assessed in 1920 was 528,971; in 1921, 781,375, or an increase of 152,404; while in 1922 the total assessments, according to a figure given by M. de Lasteyrie a few weeks ago, numbered "910,000, or an increase of 170,000 on the year." (As there is some discrepancy between the Minister's figures and the statistics given above, his statement is placed in inverted commas.) It must not be overlooked that a large proportion of these totals is composed of small wage-earners, who have shown a remarkable antagonism of late to the payment of any kind of income-tax.

Bawra Accounts.—The accounts of the British Australian Wool Realisation Association, Limited, for the year ended December 31st last show that sales of wool during 1922 brought in £7,185,374, as against £6,424,006 in 1921, while £363,574 was received for interest, premium on exchange, and sundry receipts, and £124,220 for commission on sales from the British Government. Costs of freight storage, port dues, &c., were £400,000 lower at £639,512, and after payment of administration expenses, £190,100, and other items, and making a provision of £750,000 for contingencies, there was a surplus for the year of £1,210,865, which compares with £13,823 for 1921. Stocks of wool on hand, valued

as at date of acquisition (cost, less 40 per cent.) were reduced during the year from £8,542,280 to £3,718,041, of which £2,982,760 was in the United Kingdom and £735,281 in Australia and aloft. It may be recalled that the value of the assets acquired by the association as at December 31, 1920, less liabilities, amounted to £22 millions, the consideration for which was the distribution to nominees of the Commonwealth of Australia Central Wool Committee of 11,848,036 fully-paid shares of £1 each and priority certificates £9,902,267, and the retirement of small interests and fractional payments, £249,697. On July 30, 1921, 47.5 per cent. of the priority certificates were repaid, and the balance were redeemed during 1922. The issued capital now stands in the balance-sheet at £5,924,020, the 11,848,041 shares of £1 each having been reduced in October to 10s each, a sum of £5,924,020 having been payable to shareholders on April 14th last. At the meeting to be held in Melbourne on May 17th a resolution will be submitted to reduce the 10s shares to 1s shares by returning 9s per share to the holders. If this is passed the authorised capital will be reduced from £19,075,979 to £13,744,361, there being 13,151,959 shares of £1 each unissued. The position disclosed by the balance-sheet is still more liquid than it was 12 months ago, cash, including money on deposit and at call, figuring at £7,043,361, while British Government securities stand at £2,637,686. Large floating balances are probably unavoidable, but that they have been ably handled is shown by the large amount received for interest. It will be remembered that at a special meeting held in Melbourne in December proposals were put forward for continuing the existence of B.A.W.R.A. with a permanent organisation, whose objects would include, *inter alia*, "the protection, the stabilisation, and the development of the Australian pastoral and agricultural industries," but were defeated by a large majority, which urged that the company should be wound up and dissolved as soon as the wool and other assets could be realised. To judge from the amount of stocks now remaining, it would seem that the activities of the association will cease by about the end of the current year.

Industrial Art.—A correspondent writes:—An Institute of Industrial Art was established some two or three years ago with a view to raising the standard of industrial craftsmanship in British industry. In 1921 a conference was held between representatives of this Institute and members of the Industrial Art Committee of the Federation of British Industries, and a special committee was appointed to consider and report on (1) the nature of the influence exercised on industrial art by departments of the Government concerned with the purchase of supplies, and (2) whether the Institute could usefully take any action to co-operate with the authorities concerned in improving and strengthening that influence. A report has now been published by H.M. Stationery Office (price 9d), describing the labours of this committee, and suggesting methods whereby artistic design in Government work and supplies should receive the greatest amount of practical encouragement. In view of the length of time the committee has been sitting, the number of meetings held, and the numerous conferences with high Government officials, the results can hardly be regarded as otherwise than futile and trivial. After considerable discussion of existing methods it was decided that it was not desirable to include fixed and definite designs in the specifications; and, on the other hand, it was also undesirable to give manufacturers an entirely free hand. The middle course is therefore suggested of including with the specification a model pattern or design. This model pattern and all the terms of the specification "should be worked out with the greatest care in consultation with the best technical and artistic advisers available"; but manufacturers would be allowed to submit alternative patterns if they complied with all the technical conditions of the specification, and did not raise the price. This suggestion does not appear to make for economy, or, necessarily, for a higher standard of design, and, although the result of prolonged deliberation, it is not original, for it had been already adopted by the Admiralty. And it involves also the difficult question of copyright, which is discussed at some length in the report.

On the question of Government printing and the design of medals, coins, stamps, and emblems, the gist of the committee's recommendations is that the services of the Institute of Industrial Art should be offered to departments through the medium of an advisory committee who would, presumably, give its services gratis, at least for the present. As an illustration of the value of such an advisory committee, reference is made to the Post Office, and it is pointed out that the procedure adopted some years ago in the attempt to improve the design of pillar-boxes would probably not have been followed had a recognised advisory committee been available. Whether or not the profound deliberations of an advisory committee sitting on pillar-boxes would have resulted in a very considerable improvement in their design is perhaps an open question of no very great importance; the point about pillar-boxes which most interests business men is not their more or less artistic design, but the little bit of printing near the top which states the time of the last collection. Similarly with stamps, if the 1½d on our ordinary letter stamps could be changed into 1d, we would try to tolerate a rather less artistic design. Undoubtedly there is a big field and plenty of work for a British Institute of Industrial Art if it can only get away from the committee habit, the bane of the present age, and concern itself with things that really matter.

The Mohair Outlook.—Our Bradford correspondent writes:—This month the new Turkey and South African clips of mohair will commence to come on to the market, and their arrival is being anticipated with no little interest by users in this country. In London and Bradford there are important mohair interests, particularly in the South African clip, and the season is opening with an exceedingly good outlook. During the war years mohair was placed at a serious disadvantage, both in respect of its importation into this country and the chances it stood of going into consumption even if it arrived here, because Germany, Bradford's chief customer for mohair yarns, was cut off. West Riding mohair spinners turned a very large part of their machinery on to wool, the yarn thus produced being used for khaki purposes. Since the war they have continued to use wool, with the difference that it has gone into hosiery yarn, though during the past two years they have been gradually going back to their pre-war production. During the war the output of mohair yarn dropped to 25 per cent., but something like 70 to 75 per cent. of the machinery originally engaged thereon has now got back to spinning mohair. The past year has been a particularly busy period, and prices have risen substantially, especially for the Cape article, and it is apparent that both the home and American trades are going to be more dependent upon South African mohair than they have ever been previously. Turkey mohair has always been regarded as being the best, but stocks have been seriously reduced by war in the district where most of it was produced. The British Chamber of Commerce in Constantinople recently issued a report to the effect that the new clip would only amount to 40 per cent. of the pre-war production, and would not be more than 30,000 bags of 200 lbs each. These circumstances are giving South African produce a better chance, and it is expected that a somewhat larger clip will be marketed during forthcoming months than was the case last season. The new clip will come on to the market with stocks of good quality hair practically non-existent. It has been estimated that supplies of South Africa hair of all qualities in this country amount to no more than 2,000 bales, there being very little good to superior quality hair, except in spinners' hands. Port Elizabeth is still the chief centre of supply for the South African article, and last year good summer kids sold up to 49d. Already there has been considerable speculation in South Africa, and 50d has been paid for good summer kids up country. In addition, summer firsts have been sold at up to 20d, and while such speculation is to be deprecated, it is not likely that the price will result in a loss, though at current values we fail to see why holders should not be free sellers. The comparatively limited supply of Cape summer kids is determining the price, and in view of the interest taken in mohair goods across the Atlantic, there is every prospect of all the

summer kids being eagerly absorbed. The huge business done by Bradford mohair merchants and spinners with the United States is a particularly satisfactory feature. Last month the value of the shipments of good mohair from Bradford were no less than £27,573, compared with £5,122 for the corresponding month of last year. The value of the mohair yarn exports was £92,267, compared with £39,376 in March, 1922. This, it is believed, is a record in mohair yarn shipments to America. Mohair fabrics reached £28,022, compared with £13,990 in the corresponding month of last year. The large purchases of mohair yarn by the United States are making up for the failure of German buyers to take their usual quantity. Everything points to an active market, with the full maintenance of current values both in this country and at the Cape, and prospects are made all the better by the indication of increasing interest in mohair goods in this country. Cables received this week from Port Elizabeth state that America is paying 53d to 54d for new clip summer kids.

Butter and Margarine.—Imports of butter to the United Kingdom appear roughly to have regained pre-war level, and with home supplies again about normal the consumption of this article of diet is now approximately 14½ pounds per head of the population per annum, or rather less than it was nine or ten years ago. At the same time, imports of margarine, though still substantial, are only about two-thirds of the quantity imported annually before the war, the balance of consumption of eleven pounds per head being made up by increased production in British factories. Together, butter and margarine, foreign and home-produced, give an average of 25½ pounds per head, or nearly half-a-pound per week for each man, woman, and child. The progress made in the importation is set forth in the following table taken from Board of Trade sources:—

GROSS IMPORTS OF BUTTER to the UNITED KINGDOM.

	Cwts.	Value, c.i.f. £	Average Shillings per Cwt.
1913 (pre-war)	4,139,028	24,083,685	116.3
1919	1,560,204	19,854,427	254.5
1920	1,702,203	24,518,748	288.0
1921	3,523,976	42,339,947	240.2
1922	4,268,561	37,315,536	174.8

The re-exports last year were 452,466 cwts, against only 105,670 cwts in 1913. So that the net imports are 217,263 cwts, or 5 per cent., behind 1913. Australia and New Zealand last year contributed over two million cwts, or just upon 50 per cent. of the total imports, against only 20 per cent. in 1913. Denmark, the principal source of pre-war supply, sent 1,423,796 cwts, equal to 33 per cent., comparing with 41 per cent. in 1913. These three sources thus contributed 82.5 per cent. Finland and Sweden, which formerly sent about a million cwts, or 25 per cent. annually, last year contributed only 16,554 cwts, or less than half of 1 per cent., their place, together with some of that once belonging to Denmark, having been taken by imports from Australasia. We are also getting more from Argentina and Canada, together accounting for under 12 per cent. Though the average value per cwt has declined since the years of acute shortage, last year it was 50 per cent. above 1913. The United Kingdom, which produces about 100,000 tons (or two million cwts) per annum under normal conditions, exported last year less than 15,000 cwts. Turning next to the figures of margarine imports, the course pursued since 1913 (excluding the war years) is as follows:—

GROSS IMPORTS OF MARGARINE to the UNITED KINGDOM.

	Cwts.	Value, c.i.f. £	Average Shillings per Cwt.
1913	1,518,297	3,917,701	51.6
1919	459,369	2,229,838	97.0
1920	897,972	5,514,325	122.8
1921	1,046,072	5,222,935	99.8
1922	998,970	3,870,070	77.5

There are no re-exports, and with the exception of 7,256 cwts, the whole of the imports last year were derived, as usual, from Holland. As in the case of butter, the average c.i.f. value per cwt was roughly 50 per cent. in excess of the pre-war year. Margarine imports, however, have not advanced at the same rate towards their former

bulk, and this is largely due to the fact that the factories in this country are turning out more and supplying domestic needs to a correspondingly greater extent. With butter plentiful and cheaper, and substantial imports of margarine over the last three years, the production of margarine here has declined, and though much greater than in pre-war days, is about only half of the high level of production reached during the later war years, when in ports were cut off, and butter was extremely scarce. Efforts are being made to maintain the popularity of margarine by improving its flavour by the admixture of a percentage of butter up to the limit allowed by law. The prospects of creating an export trade in margarine made in Britain do not improve. Last year such exports amounted to only 20,724 cwts, which is less than in 1913, and compares with 84,829 cwts in 1920.

Deep Sea Fisheries.—The landings of fish at the ports of Great Britain from the deep sea fisheries in the first quarter of the year fell below those of the corresponding period of last year, though those by foreign-owned vessels showed a substantial increase. The figures relating to fish caught by British-owned boats are as under:—

	January-March, 1922.	1923.	1922.	1923.
	Cwts.	Cwts.	£	£
England and Wales	2,297,414	2,136,170	3,448,898	3,348,300
Scotland	1,055,835	939,929	944,529	806,882
Total	3,353,249	3,076,099	4,393,427	4,155,182
Foreign caught	184,498	393,859	170,175	344,855

Shell fish landed had a value of £90,296, as compared with £96,763, and is in addition to the above British total. The advance in the quantity landed by foreign-owned fishing vessels (Dutch, Danish, and German) gives point to the agitation on the East Coast to prohibit the landing at British ports of at least German caught fish. In March alone the quantity was 203,495 cwts, against only 92,250 cwts in March last year, the percentage of the total (British and foreign) being 14.7, against 6.4. For the three months the percentage of foreign-caught is 11.3, against 5.2 a year ago. The proportion is regarded as considerable, and in the present state of the markets is often sufficient to depress seriously prices realised at auction to the point of making them unremunerative to British fishing vessels, the working costs of which are enormously more than a German-manned vessel, for instance. Apart from the above, Great Britain imports fairly large quantities of fresh fish from abroad, the returns for the past quarter being as under:—

	1922.	1923.	1922.	1923.
	Cwts.	Cwts.	£	£
January-March.	309,846	292,496	144,940	134,080
From Norway	83,374	187,271	225,149	477,669
„ Other countries	393,220	479,767	370,089	611,749

The imports from Norway are at present almost exclusively herrings, which are shipped to Hull by special steamers for the use of the curing industry, and are afterwards exported chiefly to Germany, Poland, and Russia. English-caught herrings are dealt with principally at Yarmouth and Lowestoft, which two ports have from the commencement of the season, on September 1st to April 7th, cured 338,849 barrels, of which 330,924 barrels have been exported. The main destinations have been:—Danzig, 90,106 barrels; Stettin, 82,202 barrels; Königsberg, 49,364 barrels; Libau, 30,996 barrels; Petrograd, 14,709 barrels; Riga, 12,678 barrels; and Reval, 11,752 barrels.

Cotton Trade Wages.—Our Manchester correspondent writes:—Conferences have been held between the several trade unions and the employers' federations with reference to the wages agreement in the Lancashire cotton industry. At the last joint meeting between the two sides the operatives signified their willingness to accept a two years' stabilisation of wages. It is understood that this course was not acceptable to the employers, and, as a counter proposal, the masters suggested that wages should remain unchanged for nine months, and at the end of that period, whilst the operatives were to be debarred from making an application for an advance, the employers could, if trade warranted, apply for a reduction in wages, any agreement

resulting to extend for the further period of nine months. The masters stated that the operatives could reserve the right to resist any decrease at the end of the first nine months. That is how the position stands at the moment. The various cotton trade unions are to meet on Monday next to discuss the masters' offer, and a further joint conference between the workers and the employers will be held in Manchester on the 10th inst. It is quite probable that the agreement will eventually provide for the stabilisation of wages for a further period of eighteen months. It might be mentioned that present wages are 60 per cent. above the pre-war rates list, that is, after taking into allowance the reduction in working hours when the 48-hour week was adopted.

White Star Line.—The report of the Oceanic Steam Navigation Company, Limited, for the year ended December 31, 1922, is, on the whole, as good as could be expected after the warning given by the directors last year that there would be a shrinkage in 1922 of the third-class Westbound passenger traffic owing to United States immigration restrictions, and that the outlook as to freights was discouraging. The present report confirms that prophecy, saying that the reduction in the third-class traffic during the past 12 months was remarkable. The report states that the "Majestic" sailed on her first voyage during the year, and that the "Doric" was launched; while, when the "Homer" has been, as proposed, converted to an oil-burner, the whole of the Southampton-New York mail service will be entirely operated by oil-burning vessels. It is clear that the company, in times when the sea-carrying business is not without difficulties, are keeping equipment up to the highest standards. Gross profits for the past 12 months at £1,448,880 compare with £1,630,037 in 1921. The following table gives the company's record for the past 15 years:—

	Profit.	Interest, &c.	Depreciation.	Reserve, &c.	Dividend.	Balance.
	£	£	£	£	£	£
1908	306,242	103,605	410,882	..	75,000 (10 %)	— 283,245
1909	620,345	118,890	366,932	..	150,000 (20 %)	+ 5,477
1910	1,070,274	106,222	370,016	360,626	225,000 (30 %)	+ 8,410
1911	1,102,756	137,580	414,141	..	450,000 (60 %)	+ 101,035
1912	919,033	146,040	527,649	100,000	225,000 (30 %)	+ 79,656
1913	1,121,268	166,445	437,168	..	487,500 (65 %)	+ 30,155
1914	887,548	255,151	398,967	..	262,500 (35 %)	+ 29,070
1915	1,568,285	256,904	628,712	500,000	487,500 (65 %)	+ 95,169
1916	2,402,758	258,138	440,752	810,000	750,000 (20 %)	+ 143,868
1917	1,534,261	401,702	318,940	210,000	750,000 (20 %)	+ 146,380
1918	1,341,542	419,469	317,793	100,000	637,500 (17 %)	+ 133,220
1919	1,746,694	387,627	397,521	128,000	750,000 (20 %)	+ 83,476
1920	1,372,158	307,673	388,112	..	750,000 (15 %)	+ 73,627
1921	1,630,037	346,510	438,967	25,000	750,000 (15 %)	+ 69,560
1922	1,448,880	349,090	512,723	..	625,000 (12½ %)	+ 37,914

Debentures have been reduced in the 12 months by £167,900, and there has been a saving in interest charges upon debentures of nearly £10,000, as compared with 1921. The allowance for depreciation, £512,723, is the highest for some years. General reserve remains unaltered at £430,000. The dividend, 12½ per cent., compared with 15 last year, is the lowest the company has paid since 1908. The balance-sheet shows a large increase in sundry creditors, £2,854,963 compared with £1,695,498; but, on the other side, steamers, &c., are given at £8,220,748, against £6,762,869 in the previous balance-sheet. General investments, which include the amount deposited with trustees for the debenture-holders, are lower by £341,000 and debtors by a quarter of a million. On the whole, the company seems to have come through a difficult period pretty well. The directors report that the "freight situation has shown some improvement, and the outlook is less depressing."

Edward Lloyd, Limited.—The two years ended December 31, 1922, are covered by the directors' report and balance-sheet to hand. At the company's annual meeting last year the chairman explained that the balance-sheet and accounts could not be presented, owing to delay in obtaining a settlement of an excess profits claim. He also announced that the company had met with serious loss, partly owing to the fall in value of stocks in hand, and would be unable to pay any dividend on the ordinary shares for 1921. The past year has been one of partial recovery. The following table giving the results for

1913, which are included for purposes of comparison, and the past seven years, shows how the company has fared:—

	1913.	1916.	1917.	1918.	1919.	1920.	2 Years 1921-22.
	£	£	£	£	£	£	£
Trading profit	152,363	123,953	151,536	177,941	223,033	119,876	194,219
Brought forward	23,629	39,304	37,195	39,923	52,690	10,977	21,464
Management exps., &c.	175,992	163,257	188,731	217,864	275,723	130,853	215,683
	9,869	23,937	24,183	40,549	5,121	7,201	11,530
Reserve, &c.	166,123	139,320	164,548	177,315	270,602	123,652	204,153
Preference dividend	20,000	20,000	20,000	20,000	20,000	..	..
Preference dividend	37,125	37,125	37,125	37,125	37,125	42,188	94,500
Ordinary dividend	67,500	45,000	67,500	67,500	67,500	60,000	75,000
Rate	(11½ %)	(7½ %)	(11½ %)	(11½ %)	(13¼ %)	(5 %)	(7½ % for 1922)
Carry forward	41,498	37,195	39,923	52,690	130,977	21,464	19,664

The directors put the position quite frankly, pointing out that while the average of profits for the two years, as compared with 1920, a year of severe depression, shows a decrease of £21,331, it shows a decrease of £126,567 as compared with 1919, a more normal year. "This decrease was chiefly due to the writing down in the value of the heavy stocks of raw material in 1921, which was greatly in excess of the amount recovered in the return of Excess Profits Duty and to reduced production in that year as the result of the coal strike." On turning to the balance-sheet, we find that the amount charged against profit and loss account for depreciation in the two years is £84,147. Stores and stock-in-trade, which stood at £1,406,883 in the last balance-sheet, are now stated at £583,596. Freehold land, dock, and water rights are valued at the figure of last balance-sheet, with an increase of £14,350 for additions in the two years, the total being £164,743. Investments have increased from £603,076 to £736,575, of which £688,778 consists of British Government bonds.

Bryant and May.—The year ended March 31, 1923, has been the most successful Bryant and May, Limited, have known. Profits reached £323,523, compared with £233,135 in the previous year. The following table gives results for the past six years:—

YEAR ENDED MARCH 31st.

	1918.	1919.	1920.	1921.	1922.	1923.
	£	£	£	£	£	£
Net profits....	127,233	149,556	226,642	215,324	233,135	323,523
Reserves, &c.	25,000	25,000	45,000	45,000	45,000	102,500
Preference div.	67,200	67,200	67,200	67,200	67,200	67,200
Ordinary div.	48,000	52,000	88,000	88,000	88,000	111,721
	(12 %)+	(9 %)+	(11 %)+	(11 %)+	(11 %)+	(12 %)+
To employees	..	..	24,000	24,417	24,854	38,620
Carried forward	12,967	5,356	2,441	9,293	8,081	3,482

† Free of tax.

After the payment of 14 per cent. on the preference shares, there is distributed to the ordinary shareholders a dividend of 8 per cent., with a further 4 per cent. under the Brymay co-partnership scheme, making 12 per cent., all free of tax. The amount for division among the employees under the scheme is £37,240, free of tax, the equivalent of 4 per cent. on the ordinary shares. The partnership shares have grown from 10,674 in 1921-1922 to 17,243 in 1922-1923. It will be seen from an analysis of the balance-sheet in another column that the £300,000 7½ per cent. notes, which the company had the option to redeem any time after July 1st last, have now disappeared from the balance-sheet. During the year under review £750,000 5 per cent. debentures were issued, and the directors now recommend that the discount of £52,500 should be written off out of profits. Further, a sum of £50,000 has been written off properties, buildings, plant, &c., which compares with £25,000 last year. Reserve stands at £260,000, compared with £240,000 in the last balance-sheet. Sundry creditors are £206,000 higher, while premises, goodwill, &c., have been entered at over half-a-million more than last year. The company, during the year, in association with two other companies, have formed the Canadian Match Company, Limited, whose first factory has been established at Pembroke, Ontario. Bryant and May have a one-third interest in the new company, which, the directors report, has made a good beginning. It is worth mention that the auditors' certificate again gives

the information that stocks-in-trade have been taken "at prices at or below cost, and not exceeding market value," and have been entered according to inventories certified by the managing director and the departmental managers. This is the kind of information one often misses from balance-sheets, and the example of this company is one which might be followed.

Alliance Assurance Company.—The fire business of this office is small by modern figures, but of the best quality, and is usually productive of sound profits. Last year the fire premiums were £1,908,611, as compared with £1,966,478 in 1921; the claims were at the rate of 46.8 per cent. of the premiums, against 48.2 per cent., and the expenses were 43.9 per cent., against 46.6 per cent. The result, after providing for unexpired risks, was a surplus of £196,754, or 10.3 per cent., against a surplus of £91,540, or 4.6 per cent. The reduction in the ratio of expenses and commissions to premiums is an important feature, as it had gone up 10 points since 1917, and was becoming oppressive. In the marine account the premiums were £509,951, against £550,819; the claims £592,796, against £855,452; and the expenses £96,518, against £123,620. The underwriting account for 1920 was closed, and the balance of £52,714, with current interest receipts of £45,956 reserved for further claims on that year's account. The premium income of the accident and miscellaneous accounts was £575,308, against £600,817 for 1921, and an amount of £114,426 was carried to profit and loss. Interest yielded altogether £288,324. The directors have resolved to declare a dividend for the year of 14s a share, less tax. The assets, of which the market value is stated largely to exceed the book value, amounted on December 31st last to £27,176,478.

Yorkshire Insurance Company.—In the fire department of this company last year the premiums were £834,455, as compared with £847,167, and the claims were 53.6 per cent. of the premiums, against 54.1 per cent. in 1921. Commissions and expenses absorbed £350,713 (42 per cent.), as against £358,679 (42.3 per cent.). The underwriting surplus, after provision for unexpired risks, was £41,479, or 4.9 per cent., as compared with £28,018, or 3.3 per cent. The marine department was less successful. The premiums were £419,919, the claims in 1922 and previous year, £542,384, and the expenses, £83,418; the marine fund was reduced by £187,876 to £512,872. The accident and general department, which is becoming an important part of the company's operations, showed premiums of £898,515 and claims of £484,758; after provision for unexpired risks, a surplus of £106,740 was carried to profit and loss. Interest receipts available for profit and loss yielded £87,404, dividends to shareholders cost £91,284, and after increasing the general reserve fund by £10,000 to £537,104, there was a profit and loss balance of £106,713.

British Banks in America.—According to a *Times* telegram the New York State Senate has passed an amendment of the banking law permitting banking corporations of foreign countries to maintain agencies in cities having 1,000,000 population or over to carry on the additional business of discounting and negotiating notes or bills, receiving deposits, and lending on real and personal property. This may lead to interesting banking developments. Hitherto British banks have been debarred from opening branches in New York and other American cities for the purpose of transacting ordinary banking business.

Gold Coast Amalgamated.—Our mining correspondent writes:—This financial undertaking fared rather better last year than in the preceding period; hence the directors are able to pay a final dividend of 7½ per cent., making a total of 10 per cent., as against 7½ per cent. for 1921-22. This, however, entails a moderate draft upon the carry-forward. Investments now stand at the slightly reduced amount of £489,000. They include interests in about 30 undertakings, some of the more important being the

American Trona Corporation, Burma Corporation, De Beers Diamond, Government Areas, Mexican Eagle, New Modder, and South American Gold and Platinum. The number of shares held in the last-named concern was reduced, and those in the Modder and Mexican Eagle increased, during the year. There is the anomaly that the current market value of "Amals" represents less than the quoted securities alone.

LONDON GAS COMPANIES. A CORRECTION.—With reference to our article on this subject in last week's issue, we are informed that the Commercial Gas Company of London sold 17,054,125 therms in 1922, as against 17,055,478 in 1921, being a decrease of 1,353 therms.

The Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on May 8, 1923, at 8.30 p.m., at which an address on "Trade within the Empire and how to develop it" will be given by the Hon. J. K. Merritt, M.L.C., Honorary Minister Victorian Government. The Hon. Sir George Fuller, K.C.M.G., Premier of New South Wales, will preside.

Oversea Correspondence.

UNITED STATES.—SHIPPING BOARD POLICY— GOVERNMENT TO OPERATE STEAMSHIPS— GOVERNMENT AND SUGAR SPECULATION.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 23.

At a recent conference between President Harding and the United States Shipping Board a definite attempt was decided upon to solve the difficult problem which has confronted the Administration ever since Congress, at its last session, failed to enact ship subsidy legislation. Owing to the refusal of Congress to provide a subsidy, the Shipping Board is left with its vast possession of ships, and faces heavy losses under the existing arrangement of allocated operations, under managing agents. The Government has now decided to operate itself all the ships it owns if it cannot sell them. The announcement is made that, in compliance with the Shipping Act, the Board will at once proceed to the consolidation of foreign trade lines, and then offer the sale of these lines and ships under the law, conditioned on a suitable guaranty from the purchasers that they will maintain service. If such sales, it is explained, cannot be made without unjustifiable sacrifice, then the Government "will proceed to direct Government operation, aggressively pursued." "In short," the statement continued, "there is unanimous agreement that the existing law contemplates and authorises an adequate and maintained American merchant marine, and such a course will be followed as will fully guarantee it and contemplate its larger development." In a supplementary statement, Chairman Lasker, of the Shipping Board, said that he, with the other members of the Board and the President, has been consistently opposed to Government ownership and operation, but in view of existing conditions it has been decided to go into Government operation on a larger scale in case the vessels cannot be sold. Congress, he added, has already given full authority for such operation, and there is available \$50,000,000 for the next fiscal year for Government operation of ships. That sum, in the opinion of the Shipping Board, will be sufficient to keep all trades lines open to American bottoms. "All shipping companies, under any flag," Mr Lasker remarked, "seem to be losing money now, but this Government cannot leave the seas to foreign competition." Present indications as to the action of the Board point to a consolidation of services which will reduce the trade routes to be offered for sale to about a score, and an incentive to purchasers will be given in the shape of a guarantee that the Government, if it is compelled to operate vessels on its own account, will not compete in any route taken over by private operators. That guarantee seems to have been overlooked in much of the criticism recently directed against the Government. The Government, it is understood, is willing to sell at the "market price" any of its vessels without requiring a

guarantee to maintain service. During recent months more than a score of oil tankers have been sold unconditionally by the Government at the market price. Operators who purchase below the market, however, will be obliged to give such guarantee, according to present plans. So far as is known, the proposal for Government operation primarily concerns cargo routes, and not passenger routes; the passenger business now seems satisfactorily organised by the private operators. The Shipping Board will probably call for bids shortly, but the outlook for the sale of its vessels is not considered very bright. One offer was made last week for three of its vessels at \$100,000 each, but was rejected by the Shipping Board, which refused to consider less than \$300,000 for each vessel.

The immediate effect of the extraordinary move by the Government to stop speculative dealings in sugar futures, through injunction proceedings brought against the New York Coffee and Sugar Exchange and the New York Coffee and Sugar Exchange Clearing Association, was to cause heavy liquidation of sugar options with sharp declines ranging from about ½ to ¾ of 1 cent a pound, and a decided slackening of speculative operations not only in sugar, but also in cotton and grain markets, and to a less extent in the stock market. Such unsettlement as occurred, however, which could be attributed to that unexpected development, proved only temporary. The Government's action was begun last week when, by direction of Attorney-General Dougherty (after the entire matter, it is said, had been laid before President Harding and the Cabinet), a petition was filed in the United States District Court here for an injunction against the institutions named, their officers, directors, and managers, to prevent the defendants "from further engaging in and carrying out in the United States a combination and conspiracy in restraint of trade and commerce in raw and refined sugar among the several States and with foreign nations." Details of the operation of the sugar exchange and clearing association are given to show that only a very small percentage of the transactions are actual sales for delivery, and that as a result prices have been advanced to a level not warranted by the amount of raw sugar on the market, which is placed at a figure larger than that of last year. "Sugar is a prime article of diet and a necessary of life," the petition sets forth. "The annual *per capita* consumption of sugar in the United States is 102.86 pounds," and every advance of 1 cent a pound in the price of refined sugar, it is said, costs the consumers in this country approximately \$2,000,000 a week. Figures are presented to show that of the total number of sugar contracts cleared through the defendant clearing association, only an infinitesimal percentage was consummated by delivery; the percentage for January, 1923, is given as .0010 per cent., for February .0002 per cent., and for March .0010 per cent. Although these dealings result in the actual delivery of very little sugar, they are carefully recorded, and set a price for sugar transactions all over the world the petition declares. In support of the claim that there was no reason because of inadequate supply for the increase in the price of sugar, the Government's petition asserts that from February 1, 1923, to the time of filing its suit "the situation of the United States and of the world in the matter of available stocks of raw sugar was more favourable than at any time within the last three years. The production of cane and beet sugar for 1921-22 was approximately 1,000,000 tons greater than in the preceding year, and the estimated production for 1922-23 was 521,000 tons more than for 1921-22, when the total was 17,686,000 tons. The United States Department of Commerce estimates the 1922-23 world production of sugar at 19,511,000 tons, an increase of 1,800,000 tons over 1921-22. "There existed during that period," the petition states, "no economic justification for a sudden or appreciable increase in the price of raw or refined sugar, or for any increase." The rapid advances which did take place are ascribed by the Government "to a combination and conspiracy" by the defendant institutions, which, it is alleged, sought to establish artificial and unwarranted prices, with the result that there has been "an orgy of speculation in raw sugar," based on fictitious sales.

The outcome of the Government's action will be awaited with keen interest, because of its bearing on dealings in contracts for future delivery not only of sugar, but of

National Bank of Commerce in New York

other commodities. The whole question hinges, obviously, on whether the rise in sugar prices has been due, as the Government alleges, to manipulation or to the operation of the law of supply and demand. Many authorities here believe the latter, rather than speculation, has been the chief factor. Estimates as to the size of the Cuban sugar crop still vary widely. Between the low estimate made by Cuban interests as to the probable yield and the higher estimate by authorities in this country there is a difference of some 500,000 or 600,000 tons.

FRANCE.—THE GERMAN OFFER—IRON AND STEEL— —THE USE OF CHEQUES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, May 2.

THE text of the German Reparations offer, which has been published here this evening, has been received with merely languid interest, as every probable proposal it would contain had been definitely rejected in advance. It has been regarded here for some weeks past as unthinkable that the German Government, in its "first offer," would make any kind of proposal that could be acceptable to this country, and the outstanding impression in the public mind has been what may be described as a form of impatience for what is universally regarded here as an inevitable but merely preliminary passage of arms to be got over and done with. Rightly or wrongly, French opinion is convinced that no practicable offer from Germany may be expected at the start. The entire absence of any suggestion of a pledge on the part of the Berlin Government that it is prepared to abandon its resistance to the occupation of the Ruhr—which it is certain the French will insist on obtaining before they will consent to open negotiations—has already proved sufficient to cause the German offer to be regarded here as stillborn from the moment of its announcement.

Two factors alone in the situation set up by the new German proposals are eliciting a certain amount of interest in this country. One is the widespread belief that Lord d'Abernon, the British Ambassador in Berlin, who has long been out of favour with the French political world, has secured the approval of the British Cabinet for the proposal that the German debt shall be definitely reduced to 30 milliard gold marks. There is consequently much curiosity as to what attitude the Bonar Law Cabinet may take in regard to the German proposals. The other factor, although a much less active one, is a certain amount of dissatisfaction as to the possibility that American financial interests may utilise the German offer, not so much for the benefit of purely selfish transatlantic ambitions, but to the detriment of this country.

Meanwhile, it must be admitted there is no symptom of any weakening on the part of French public opinion in its support of the Poincaré Cabinet's policy in regard to the Ruhr in particular, and to Germany in general. The *Matin*, a day or two ago, gave exceptional prominence to an article insisting that rumours that have been in circulation for some time past as to differences of opinion between M. Millerand and M. Poincaré are absolutely without foundation, and this denial has been accepted by the public with extraordinary unanimity. Alone M. André Tardieu, who is not only a fervent supporter of his old chief, M. Clemenceau, but who admittedly nourishes ambitions to succeed M. Poincaré as Premier, has voiced dissatisfaction with the practical results that have so far accrued from the occupation of the Ruhr. M. Tardieu has raised, in particular, the objection that, although official statements are issued in fairly rapid succession as to the number of trainloads of combustibles that on certain dates have been sent into France from the Ruhr, and as to the number of tons of fuel that have been dispatched on certain other specified days, exact information as to what is happening is difficult to obtain from the incomplete statements issued under official authority. M. Tardieu asks for definite global figures for corresponding periods in 1922 and 1923.

The Comité des Forges, the great association of French iron and steel masters, has to-day issued the following interesting statistics of the monthly output of iron and steel in France during December, January, February, and March last (which must, of course, be read in the light of the fact that the Franco-Belgian occupation of the Ruhr began in the middle of January):—

	Iron. Tons.	Steel. Tons.
December, 1922	513,288	414,597
January, 1923	486,210	407,731
February	305,526	289,787
March	316,146	315,807

March, the last month for which complete figures are available, shows an increase in the output of iron of about 26,000 tons, and of steel of rather over 10,600 tons, but it is evident, when it is recalled that February was a shorter working month, that the average output during the sixty days was approximately the same. When the figures for that part of the Lorraine area that was formerly German are taken alone, however, the impression is modified:—

	Iron. Tons.	Steel. Tons.
December, 1922	219,137	147,914
January, 1923	195,100	144,361
February	101,356	84,484
March	88,652	79,222

The falling off in Lorraine in March, however, was obviously more than compensated for in the other areas. The number of blast furnaces working on April 1st was the same as on March 1st, namely, 77, as compared with 90 on February 1st and 116 on January 1st. The number of furnaces in a position to work on April 1st was 96, while 46 were undergoing construction or under repair. The number in operation throughout the whole of the East of France (including Alsace and Lorraine) on April 1st, however, was only 46, of which some were working on reduced time. The Committee's figures show, in the last analysis, that the total number of furnaces shut down through shortage of coke during March was 39.

A curious sidelight is thrown on the hesitancy of the average French business man to utilise the system of payment by cheque by the fact that two Bills have been laid before the Chamber for the purpose, indirectly, of overcoming a portion at least of the objection to accepting or issuing cheques, which is still so widely prevalent in this country. It is almost incredible that an enormous number of important French firms even to-day persist in carrying on business without availing themselves of the advantages conferred by the possession of a banking account. One of the two Bills in question proposes to render it possible for the person in whose favour a cheque is drawn to insist, before accepting it, on having it certified by the bank on which it is drawn, thereby imposing on the banker the obligation to ensure its payment. The other proposal is to render banks, and not their customers, liable for any payments that may be wrongfully made in consequence of the loss, misappropriation, or misuse of cheques. As matters stand at present the majority, if not all, French cheque-books bear upon them a notice to the effect that "the bank assumes no responsibility" for any consequences arising from the misuse of cheques by third parties, while customers of a bank, on receiving a cheque-book, are invariably required to sign an acceptance of this stipulation. The *Temps* and other journals, curiously enough, regard both Bills as undesirable, the one on the ground that the possibility of obtaining certification of a cheque would lead to unnecessary complications, and the other on the ground that the banker who cashes a forged cheque ought not to be held responsible for "facts to which he is a stranger."

Under the influence of the expectation of proposals from Germany, the Bourse has more or less continued marking time until the situation becomes clearer. Price movements have been irregular, and, as a whole, within quite narrow limits. A good deal of irritation has been caused by the fact that, in consequence of the failure of this country to come into line with England and Belgium in regard to the adoption of summer time, the Paris Bourse now opens an hour later than the British and Belgian stock exchanges, which is naturally depriving the market here of a substantial share of its normal business, particularly in connection with arbitrage transactions. The Minister of Finance has been asked to receive a deputation of *agents de change* and bankers, with a view to the introduction of a short Bill, when the Chambers resume on May 8th, for the purpose of enabling them to begin the day's work an hour earlier.

GERMANY. — RUHR—FINANCES—EXCHANGE AND BOURSE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, May 1.

THE condition of industry in the Ruhr is getting worse, and the French have dealt it several more blows, the last being a measure against motor traffic, by means of which many works have so far kept themselves independent of the railways. Only 15 per cent. of the coke ovens are working, and these are connected with the local light and power supply. Coal production is estimated at as low as 40 per cent., and iron production at 50 per cent. of the normal figure. The iron works are almost entirely without a market, and there is no prospect of their being able to sell the goods which are now being produced for stock to the unoccupied provinces, even after the raising of the blockade, as unoccupied Germany is not suffering from any shortage. In general the iron market is dull, and there appear to be considerable fears of a general stoppage of iron-smelting, which would have very bad results, as it would entail the production of steel and rolling mill products, in which blast furnace gases are predominantly used, coming to a standstill. French policy seems now to be directly aimed at bringing about a catastrophe in the Ruhr.

Trade statistics for all 1922 show that there was a large

import excess of coal, and of heavy iron and steel. The figures are given below:—

	(In Metric Tons.)	
1922.	Imports.	Exports.
Coal	12,598,397	5,062,021
Pig-iron	294,311	157,792
Scrap	600,983	98,467
Ingots, blooms, slabs, &c.	325,211	102,115
Bars, girders, and bands	805,600	512,313

The coal figures exclude deliveries on Reparations account.

The Finance Ministry's report for April 20th gives the total debt at 9,681,299,000 marks, of which no less than 9,616,876,000 marks is floating debt. This latter has increased by nearly 8 billions since January 1st, though the rate of accumulation has fallen off in the last few weeks. An unofficial report states that the Budget for 1923, which is now being revised, will show a deficit of 10 billions. The last estimate of the cost of fulfilment of the Peace Treaty terms shows a rise since the former estimates from 8½ milliards to 1,400 milliards for the Ordinary Fulfilment Budget, and from 122 milliards to 809 milliards in the Extraordinary Budget, the total cost being 2.2 billions, or 11 times the earlier estimate. The Customs gold surcharge has been raised from 502,900 to 551,900 per cent. The State Brandy Monopoly shows a surplus of 10,297 millions for 1921-22, against 1,704 millions in 1920-21, the net profits being 7,442 millions, as against 1,341 millions in the previous year. The bill leasing Prussia's State-owned mines and certain other State undertakings to a privately organised company has been prepared. The properties in question are coal mines employing 45,000 men and producing 9,000,000 tons of lignite, as well as potash concerns, salt mines, iron ore mines, and smelting works, limeworks, and one amber concern. The lease is for a hundred years, while the capital will be supplied by the State. The reason given for this measure is that official management has proved to be cumbersome and unadaptable.

A Darmstadt court has dealt a new blow at the validity of the currency by declaring that the repayment of a mortgage debt in paper marks may be rejected. The principal ground for this decision is that to return almost worthless paper marks for gold marks lent is a breach of "loyalty and faith." In principle this judgment resembles the decisions of the Supreme Court, which we reported recently, to the effect that a contract to deliver goods at a fixed price cannot be enforced if between the date of the contract and that of delivery the currency has depreciated unreasonably. The new decision, however, goes much further than this. The previous judgment was based on grounds of expediency, since it was not to be tolerated that a solvent firm should be ruined by being compelled to deliver goods under an old contract at perhaps 1,000th of their current price. Mortgages, however, were regarded in a different light, as a mortgagee was looked upon as being a mere non-producing capitalist on the same footing as holders of State loans. His ruin, therefore, being gradual and not affecting production, had not the same meaning in practice as the bankruptcy of a manufacturer or trader. Hence, though mortgages have of late been paid off wholesale, big properties being cleared at trivial cost of debts representing normally two-thirds of their value, the Government has refused to intervene. The court now declares that "the extinction of a gold debt by paying paper marks with only a fraction of a thousandth of the buying power of the money lent, is a violation of loyalty and faith," and therefore the lender cannot be forced to accept payment. The court makes the strange ruling that to the law of August, 1914, compelling acceptance of the paper mark at its nominal value, "an exception has been made in that the power of business has set the law out of force."

The Reichsbank statement for April 23rd shows 258,087 million marks more notes in circulation, 171,644 millions more in commercial bill discounts, and 378,672 millions more in Treasury bills discounts; while the metal holding has risen to 14 milliards. The gold reserve shows a decline of 84,921,000 gold marks, owing to the pledging of this sum abroad for loans in foreign currency. Of the gold reserve actually in Berlin a further 65,251,000 gold marks were transferred abroad, while the not-hypothecated gold deposit in foreign central banks declined by 19,670,000

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital (Paid Up) - £1,250,000

to 164,782,000 gold marks. This is the first time the Reichsbank has made use of its foreign gold deposits in order to obtain a loan. The 84,921,000 gold marks now appears at its nominal value in the item "Other assets," while the amount borrowed by the bank abroad appears also at its nominal value under "Other liabilities." The entering of gold at about 1-6,000th of its value together with paper marks is highly misleading. The Reichsbank's report for the year 1922 as compared with 1921 is as follows:—

(In Millions of Marks.)			
	1921.		1922.
Gross profits	9,778	..	64,500
Loss on war guarantees	462	..	10,000
Net profits	565	..	43,500
Share of Republic	541	..	17,200
Dividends	18	..	72
Per cent.	10	..	40

Nervousness is felt about the mark exchange. After Bourse hours yesterday the dollar rose to 33,000, which is the highest figure touched since early in February. This anxiety is caused by the growing conviction that any attempt to maintain the mark by artificial banking expedients without the simultaneous introduction of measures aimed at maintaining the real value of the currency are sooner or later doomed to failure. The dollar rise yesterday evening is stated to have been directly caused by new wage demands which are being made by coalminers in connection with a possible new rise in coal prices. That the exchange value of the mark should thus be made dependent upon considerations of its home value is a novelty; hitherto the opposite process has prevailed. The *Frankfurter Zeitung*, after dealing with the recent growth of debt and of inflation, tending to reduce the mark's real value, says: "It is astonishing that up to this point the level of the exchanges has been maintained."

The Bourse was firm last week. The index of home dividend-payers stood at 1,359.115 on April 27th, as against 1,255.115 the week previously. Yesterday shares of all kinds boomed, and large foreign purchases were made. There was a particularly strong demand for the Stinnes Rhine-Elbe Union shares, and for the allied Siemens shares, on account of company amalgamation deals. The average of home bonds dropped slightly during the week, and yesterday Federal loans were irregular, War Loan was quoted 89.50, Fours 1.140. Three and a-Halves 570, Threes 4.400, Colonial Fours 10.000, Savings and Premium 290, and Prussian Threes 235. Forced Loan closed at 29.80, which was a considerable improvement on the previous quotation of 24. In February Forced Loan stood at 70; but last week there was general selling by holders, who needed money for payment of taxes before the 30th. Forced Loan is really as good as Threes, which stand more than a hundred times higher; and although for the moment it bears no interest, Threes and the other high-quoted loans actually yield practically nothing.

Prices are rising. According to the official commodities index prices were 5,738 times the pre-war level on April 25th last, while they were only 4,923 times that level on April 14th. Pig-iron prices have already risen, and an increase in Steel Syndicate prices is expected. The important Bismarckhuetten and Kattowitz Companies have been brought into Stinnes' Rhine-Elbe Union. Hitherto the Union embraced the Deutsch-Luxemburg, Gelsenkirchen, Bochumer Verein, Siemens Schuckert, Siemens and Halske, Braunschweig Coal, Gebrüder Boehler, and the Austrian Alpine Montan.A.G., most of these concerns

having ramifications of their own. The Bismarckhuetten Works in Upper Silesia embrace all processes—from smelting to fine steel production; and the inclusion of the Kattowitz concern broadens the Union's coal basis. Herr Stinnes has also acquired control of a Roumanian aluminium company.

The Iron and Steel Wares Association demands the abolition of the Foreign Trade Control System. Export duties on a considerable number of articles have already been reduced, in some cases to 1 per cent., while on certain goods the duties have been abolished altogether.

NORWAY.—THE BANKING CRISIS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, April 30.

TELEGRAMS before now will have informed your readers that the Foreningsbanken and Centralbanken for Norge have stopped payment. It will be remembered that both these banks were labouring under very great difficulties. Both of them—Centralbanken first and Foreningsbanken later on—last year received assistance to the extent of 50 million kroner each from the Bank of Norway and some private banks. It was confidently hoped that this assistance would suffice to help them over their difficulties; but the confidence which was absolutely essential was gone; the depositors withdrew their funds, and then, of course, the banks could go on no longer.

On March 24th this year a temporary Act designed to meet the exigencies of banks in difficulties was passed. It was provided that a bank that had to stop payment might apply to the Finance Department, which, if it was considered of importance to avoid the liquidation or bankruptcy, might, in concert with the Bank of Norway, decree that the bank concerned should be placed under public administration for one year (a period which might be prolonged). During such period no creditor who does not hold an absolute mortgage can enforce any claim, and even old depositors must rank after depositors who lodge money in the bank subsequently to the bank having become subject to such public administration. The chief object of the Act, of course, is to restore so much confidence in the bank as to attract fresh capital and business. Up till to-day 16 banks in difficulties have petitioned for treatment according to the Act; whether the latter will prove effective cannot, of course, be known till it has stood the test of time.

From the communiqué issued by the Foreningsbanken, it appears that the enormous amount to be written off as loss is about 106 million kroner. No such statement has as yet been made by Centralbanken, whose loss, however, no doubt will prove to be very great indeed. As far as can be ascertained, there cannot be a shade of suspicion of fraud on the part of any of the managers; but there seems to be good ground of reproaching them for lack of ability and circumspection. But they were acting under very difficult circumstances.

As was natural, the events caused a good deal of nervousness among the public; bank shares fell during the next two to three days about 10 per cent., and many people hastened to get their money out of the banks, no doubt hoarding it. The nervousness now seems to be over, and bank shares have gone up again. There is plenty of money in the market for the legitimate needs. The nervousness also showed itself in the quick rise in all foreign exchanges; but also in this respect equilibrium seems to be nearly regained.

After a long debate in the Storting it was decided to render State guarantee to creditors in the banks in trouble, and very extensive discretionary powers were vested in the Government to step in as occasion might be.

Two or three minor provincial banks also, on account of their relations to the two big banks, have had to follow suit with them, and there may still be some banks that will have to do so. The general opinion is, however, that the air has now been cleared so far, and that the country may be spared from further calamities of such magnitude as those just experienced.

ROUMANIA.—NEW CONSTITUTION—BUDGET—RENTING LAW—INDUSTRIAL BANK—PROPOSED BRITISH LOAN.

(FROM OUR CORRESPONDENT.)

BUCHAREST, April 25.

THE outstanding political and economic events in Roumania during an eventful month have been the enactment of the new Constitution; the voting of the Budget, with its aftermath in a general strike of Government employees; the passing of a new Rent Act; and the depositing with Parliament of a Bill for the creation of an industrial bank.

A careful study of the new Constitution shows it to be a measure that, in its political and social aspects, is sufficiently broad and elastic so that no alarm over it need be felt either by foreigners or by Roumanians themselves. Certain of its economic provisions—notably the "nationalisation of the subsoil" and the control of the Government over private property—might be distinctly prejudicial to foreign interests under a too radical or reactionary Government; but the present Government, with a full realisation of the necessity for co-operating with foreign capital in the development of Roumania's economic resources, can no doubt be relied upon to steer a middle course.

The most satisfactory feature about the Budget is that, on the basis of the estimates, it presents a comprehensive and balanced statement without any "reconstruction" or "extraordinary" Budgets lurking in the background; and what is also considered satisfactory is that the Minister of Finance seems confident that he can make revenue balance expenditure, and, at the same time, provide for the services of the external funded debt. The Budget allowance to provide a fund of 500,000,000 lei for salary advances for Government employees, however, is considered entirely inadequate to meet the pressing needs of the situation, and the result is that many thousands of Government clerks, although unorganised, are now on strike, and considerable apprehension is felt as to how far the movement may spread. Civilian employees of the Government make up probably more than 5 per cent. of the working population of Roumania, and the situation has been growing increasingly difficult for them with the cost of living mounting steadily throughout the past two years, while salaries have remained almost stationary.

The new Rent Act is, in the main, merely an attempt to relieve some of the hardships caused by a chronic housing shortage. Bucharest has now about doubled its pre-war population of 350,000, but the amount of new building since the war has been entirely inadequate. According to reliable estimates, at least 25,000 new dwelling-houses are needed to meet the present and prospective requirements of the city, while less than 2,000 houses were actually completed in Bucharest during 1922, and so far this year only about 200 building permits for new premises have been issued. This is directly due, of course, to the tight money situation and to the abnormally high prices of all building materials.

The proposed Industrial Bank which the Government has had under consideration for some time has for its principal object the rationing of the available credit resources, so that they may be used where the need is greatest and where they will do most good to the country's economic development. It is planned to start the organisation with a capital of 500,000,000 lei, to which the State and the Banca Nationala will subscribe 40 per cent.

The presence of a number of representatives of London bankers in Bucharest last week has given rise to many rumours as to the terms of the proposed British loan, which it is believed have been under discussion. The proceeds are said to be intended for railway material and similar purposes, and it is perhaps not out of place in this connection to note that Mr Vintila Bratiannu, the Minister of Finance, has recently announced that the Government is quite ready to consider the co-operation of foreign capital in the development of the oil lands to which the State now has title—provided that such co-operation leaves control in Roumanian hands.

SPAIN.—THE DEFICIT AND ECONOMY—A TRADE CONGRESS—TREASURY BOND ISSUE.

(FROM OUR CORRESPONDENT.)

MADRID, April 20.

SEÑOR VILLANUEVA, the new Minister of Finance, in a recent speech, made the usual promises of economies, and stated that the deficit (about 1,000 million pesetas) was due to a superabundance of Government officials, extraordinary expenses of the Moroccan campaign, and to the abuse of authorisations conceded with the object of reducing the cost of living. All the other Ministers manifested great willingness to help Señor Villanueva to combat these three evils in their respective Departments, but it remains to be seen how far this enthusiasm will go when internal opposition is met.

The Oversea Trade Congress was opened during the month by King Alphonso, and was carried out to programme. The delegates present numbered 825, of whom 245 were from abroad and 580 from the Peninsula, and it is hoped that the greater part of the conclusions may become effective within two or three years. Two of the difficulties which have to be solved before complete satisfaction can be given to representatives of Spain in America were mentioned by the King in his opening speech—i.e., the question of military service and that of the proper protection of agricultural interests in Spain. The Oversea delegates suggested that Spanish subjects living in America should be allowed to replace military service by some other activity in their place of residence, which would prevent their being registered as deserters. In view of the facility with which Spaniards assimilate themselves with other Latin-American nationalities, and of the very small number of those who return to Spain to accomplish their military service, it would appear that this proposition has much to recommend it. It was also suggested that a Member of Parliament should be elected by Spaniards living abroad to defend their interests in the House. This motion was opposed by the Home delegates, and it was finally decided that a permanent organisation should be founded in Spain for the purpose. It was also decided to ask the Government to support any measures tending to increase the import of frozen meat into Spain, this at the request of the Chambers of Commerce in Argentina. The question of a reduction of import duties gave rise to hot argument between the South American delegates and the representatives of Cataluña, and it looked at one time as if the harmony of the meeting was going to be spoilt; but an agreement was finally reached that a reduction should be asked for of the duties affecting South and Central America on such products as would conduce to a reduction of the cost of living in Spain. The Congress broke up in a spirit of enthusiasm and optimism that cannot fail to produce some good results, even if the whole of the resolutions passed do not, in practice, prove realisable.

On the 15th inst. the King signed a decree authorising the issue on May 4th next of 500,000,000 pesetas six months Treasury bonds, bearing interest at 4½ per cent. per annum, renewable for a further period of six months. In addition to this amount, sufficient bonds will be issued to cover those of the 5 per cent. series, which will be presented for renewal on May 4th instead of for payment. It therefore seems that the Government is inclined to continue the policy of temporary measures, in spite of the urgent necessity of a permanent consolidating arrangement. There is, however, no doubt but that the new issue will be readily absorbed by the public, and even considerably oversubscribed. A further issue has been made of 250,000,000 pesetas nominal 6 per cent. bonds of the International Railway from Tangiers to Fez. These bonds are to be reimbursed at par in 45 years from 1930, and are guaranteed, as usual, by the Spanish Government. The issue price was 95.50 per cent., or 477.50 pesetas per bond. The total amount asked for was subscribed without effort or depreciation of the Stock Exchange quotations. It is said that the Metropolitan Railway of Madrid intends to make an issue of 5 per cent. bonds direct to the public, dispensing with its usual underwriters. Although this procedure is adopted by the Banco Hipotecario and other semi-official institutions, it is quite possible that it may not work satisfactorily in the instance mentioned.

HARRISONS & CROSFIELD, LTD.,

The Stock Exchange has been very dull during the past month, and the violent fluctuations in exchange, emanating apparently from Paris, have effectively prevented any revival of business in the exchange market.

POLAND.—POLITICS—TREASURY BONDS—EXCHANGES—STOCK MARKET BOOM—NEW CAPITAL.

(FROM OUR CORRESPONDENT.)

WARSAW, April 25.

IN recent times one of the greatest drawbacks from which Poland has suffered has been the lack of a decided Parliamentary majority. The life of most Cabinets has been very precarious, and they were not able to pursue an energetic policy. General Sikorski has hitherto succeeded in maintaining his Cabinet in office with the help of the parties of the Left and small national groups (Ukrainians and White Russians). The final fixation of the Polish frontiers and the energy which he manifested in quelling disorder after the assassination of Mr Narutowicz have strengthened his position. On the other hand, his Administration is hampered by the fact that he has not behind him a stable majority on which he can count. The introduction of every new Bill makes it necessary for him to seek the support of the different Parliamentary groups.

Since the beginning of March efforts have been made to overthrow his Cabinet by forming a majority composed of the two strongest parties of the Diet—the National Christian Union and the peasant group of "Piast," with Mr Witos at its head. Though the negotiations have lasted more than six weeks, they have not yet had a positive result. This is easily explained by the great social and economic differences which divide the two parties. The National Christian Union includes among its members many landlords who, by the financial aid given during the elections, have largely contributed to the success of this party. The "Piast," on the contrary, represents the better-off-peasant class, whose principle economic aim is the division of all large estates among the small landholders. The negotiations conducted between the two parties were mainly devoted to the agrarian reform programme, and it seems that a compromise has been reached. The National Christian Union accepted in the main the postulates of the "Piast"—the fixation of a relatively low maximum of rural property, the allotment every year of 400,000 acres of land among the peasants, &c. The news of this agreement has produced a vehement protest of the Landlords' Union. It is probable that in the event of the formation of a new Cabinet the proprietors of large rural estates will not support the new Government. The political differences which make it difficult for the National Christian Union and for "Piast" to form a common Government are not smaller than the economic ones. The leaders of the National Christian Union are in favour of a political alliance with Czecho-Slovakia; the "Piast" has been hitherto strongly opposed to such a policy.

Nevertheless, it is possible that the difficulties will be overcome, and that a new Cabinet, formed of members of the National Christian Union and the "Piast," will be formed. Such Government, however, could hardly maintain itself a long time in power. Its numerical majority would be very small. Meanwhile, General Sikorski is making efforts to strengthen his Cabinet by reconstructing it. The near future will show if he will succeed or fail.

Since March the financial situation has shown signs of a marked improvement. The 6 per cent. Treasury bonds issued in zlotys (see *Economist*, March 17th, p. 598) by Mr Grabski at the beginning of this month have met with great success. The subscriptions up to April 21st amounted to 12,336,000 zlotys. On account of this sum 92 milliard Polish marks have been paid by the subscribers. Thanks to these revenues the Government could bring the printing press nearly to a standstill. While

from March 15th to April 4th 620 milliards of new Polish marks were passed into the market, this amount has been reduced during the subsequent fortnight (from April 4th to April 20th) to 34 milliards. This change produced some effect on the Polish exchange, the fluctuations of which since the beginning of this year have been as follows:—

	London.	Paris.	Zurich.	New York.	Berlin.
End of December, 1922 ..	82,600	1,335	3,400	17,800	2.55
" January, 1923 ..	150,000	2,085	6,150	32,500	1.15
" February, 1923 ..	225,000	2,915	8,900	47,000	2.08
" March, 1923 ..	197,500	2,800	7,900	42,000	2.05
April 24, 1923	229,000	3,270	8,940	49,100	1.72

On the Stock Exchange during March and April an unprecedented rise of all shares has taken place. During the last month the value of bank shares has trebled, sugar shares have increased by nearly 80 per cent., mining and iron companies' shares have appreciated at a rapid pace. As during this period the pound and the dollar have remained nearly unaltered, the rise of all shares expressed in gold corresponds to an increase in marks. This exceptional boom is probably due to the fact that since the beginning of this month the stringency on the money market has been lessened. The new trillion of paper marks put into circulation in March did not entail a fall of the mark. In consequence the circulation, which expressed in gold coinage amounted at the end of February to 20 million dollars, has been increased by nearly 25 millions. Poland possesses to-day a circulation which corresponds to nearly 45 million American dollars. Such an increase of the real value of the circulation surpassing 100 per cent. necessarily entailed a boom on the Stock Exchange. Many joint-stock companies, which during the period of capital famine were not able to obtain fresh funds, are taking advantage of the present state of the money market, and are announcing new issues.

Statistics of new capital created during the last three years show that, expressed in gold, the amount has steadily declined, as may be seen from the figures below:—

CAPITAL ISSUES OF NEWLY-CREATED and of EXISTING JOINT STOCK COMPANIES. SWISS FRANCES (000's omitted).

	1920.		1921.		1922.	
	No.	Amount.	No.	Amount.	No.	Amount.
Ind'stry & Agricult're	171	50,927	425	49,937	338	16,297.3
Commerce & Transp't	70	15,970	73	6,243.3	127	14,221
Banking	42	25,196.1	46	9,262.8	24	2,664.8
Insurance	10	1,543.1	3	64.3	10	92.8
Total	293	93,636.2	547	65,507.4	499	33,275.9

While in 1920 the newly created capital amounted to 93.6 millions, in 1922 only one-third of this sum has been floated.

Letters to the Editor.

THE APPROACH OF A FREE GOLD MARKET.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent, Mr Cross, "hopes that financial sanity will come to the class Mr Mason represents." This class comprises every ordinary man who has neither time nor inclination to trouble himself with values as represented by scraps of paper, whether they are called Bank of England notes, Government notes, or cheques, so long as he gets the exchange equivalent of their face value. As a matter of fact, the British Government note is a fraud on everyone who is compelled by law to take it, to the extent of about 1s in the £. This state of things does not appear to Mr Mason and the class he represents as satisfactory.

Mr Mason and the class he represents believe that the greatness and power of our country is based on good faith. "An Englishman's word is as good as his bond" no longer applies while his bond remains at a discount. Gold as a medium of exchange in civilised countries nobody, sane or insane, wants; witness America, with its

bank vaults full of useless gold for which there is no demand for exchange into American currency notes. Mr Mason (and the class he represents) think that before this country or any other country can hope to re-establish a stable currency the power of the printing press at present possessed by Governments should be withdrawn and placed in the hands of banks, like our Bank of England, free and unfettered from Government control.

So far as I can make out, the total issue of Bank of England and currency notes amount to about 385 millions, while the gold in the Bank of England amounts to 126,000,000. Were the whole of these notes Bank of England notes I don't see why anyone should come along to drain this gold out of the bank by accumulating notes and demanding gold in exchange. The way to resume payment in gold is to do it, and then see how it answers. Long before the war alarmists used to write periodically to the papers showing how a combination of capitalists could withdraw the bulk of the gold (then an average of about £23,000,000) held by the Bank of England and create a financial panic at any moment; but, of course, this was never even attempted. Possibly some understanding with the New York banks about further gold withdrawals might be useful, although there is no reason to suppose that American capitalists there would combine to create a financial panic here. Should such a thing ever be attempted it would be the immediate end of the so-called capitalist system under which modern civilisation lives and works.—Your obedient servant, G. S. PAWLE.

London, May 1st, 1923.

TO THE EDITOR OF THE ECONOMIST.

SIR,—If Mr Louis H. Cross had done me the honour to read carefully my letter with reference to this subject, he would have found that what I took exception to in Mr Lloyd George's action when the Treasury currency notes were introduced was the indication that the Government (1) had no intention to redeem these notes when the "occasion" or panic had passed, and (2) that they intended to use this method—i.e., the printing press—to inflate the currency as a means of financing the war. If the notes had been retired after the panic had passed we would have reverted to our pre-war currency, which surely provided us with plenty of "money to enable the people to make their exchanges with each other in a civilised manner." The Government decided to pursue the contrary policy, with the result which I previously described.

I am not attempting to revive a gold currency system, but to restore an effective gold standard. A gold currency is a luxury which we may not be able to afford for some time, but a currency redeemable in gold on demand and a free market in gold could be introduced and made effective this year. I don't know what Mr Cross means by my "financial sanity," and that this will come, he hopes, to the class I represent before it is too late.

I am not conscious of representing any particular class, and desire to see happiness and prosperity prevail among all classes. It is no use repining over the past, and I am bound to state that Mr Lloyd George has of late years pointed out, on more than one occasion, the evil effects of inflating the currency. What many of us desire is to establish an equilibrium between gold and paper currency; to link up our paper currency, which we believe has come to stay, with gold. At present it is depreciated (as witness the gold premium) because it is still redundant. If the currency is depreciated because it is redundant, then it is obvious it will become more valuable if it is gradually reduced. We, therefore, advocate the gradual contraction of the currency until parity of exchange has been re-established with gold standard countries. I do not agree with Mr W. G. Renwick that the Government can and does control prices, provided there is a free market in gold, and that gold is the basis of the currency. Without that proviso Mr Renwick himself evidently fears an over-issue, and certainly a Government can then to a large extent control prices. I do not agree with the suggestion as to stabilising wheat and currency, and still believe that gold, with all its faults, is the best standard for the purpose we have in view.—I am, Sir, your obedient servant, May 2nd, 1923. D. M. MASON.

INCOME-TAX AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the interesting article on "Income-tax and Prices" appearing in your current issue, after referring to the common belief that an increased income-tax is, in the main, passed on to the consumer, while it is questionable whether this is so in the case of a tax upon income. "Nothing, however, can be clearer in economic analysis than the teaching as to the incidence of any tax upon a 'margin' such as profit, which is held to be totally distinct from the incidence of a tax upon a unit of produce." The article then goes on to show that, according to the doctrine held almost universally by economists, any tax which is payable upon a product or article of consumption—such as beer—enters into the cost of production and is passed on to the consumer, while it is questionable whether this is so in the case of a tax upon income.

It seems to me that those economists who describe an income-tax as being a tax upon a "margin such as profit" are taking far too narrow a view in limiting the meaning of the word profit to that balance, or remainder, of the profit of an undertaking which is taken by the employer. Profit of an undertaking, in its true sense, is nothing less than the reward of the whole annual service rendered by man and by capital at that point of production. It thus includes the shares of production of all the co-operators in industry—wage-earners, salary-earners, employers, and the owners of industrial capital of every kind.

If this be so, the employer's share of profit, in return for his services and risks, enters into the economic cost of production equally with the shares of his various co-operators in an industrial undertaking. Employers are, in the main, the producers of everything, and they must fix prices at a level to yield them, in the long run, not less than an average fair share of production—which is profit—otherwise it is obvious they will gradually cease to produce. If, then, before the war, after paying income-tax at the then rate of a shilling in the pound, the employers' remainder was no more than a fair share, it must by now be substantially increased in order to enable a five-fold heavier income-tax—levied, in the form of progressive taxation, almost exclusively upon employers—to be paid, and the easiest way to attain this has been to raise prices. One clear indication of substantial increase in the shares of employers and owners of capital is the higher rates of interest now payable on preference shares, mortgages, &c.

It is easier for employers to pass on increased income-tax by raising prices of production than it is for them to pass on an increased tax upon those particular products—such as beer—which are commonly selected to bear our indirect taxes. The reason is that beer, for instance, has to compete with other products which are untaxed, and which may be used alternatively, whereas our present crushing progressive taxation covers the whole field of production. There is no alternative to production—the demand can be diminished but not extinguished by high prices—because production is indispensable to supply man's wants, and the selling prices of production must ultimately leave an average fair remainder to employers to compensate them for their services and risks.

All production is, of course, finally purchased by the consumers, of whom not more than 2½ per cent. are important employers—these being, in the main, the price-fixers—and 97½ per cent. are employed, or others with small incomes; and a simple calculation shows that the latter—the 97½ per cent.—must actually purchase and consume about 85 per cent. of all production. The question raised is, therefore, one of great importance to the wage-earners, and the fact that such widely different views are held on the subject emphasises the need for an immediate inquiry into the economic effects of our whole system of taxation, which is being strongly advocated in very influential quarters.—Yours, &c., P. D. LEAKE.

25 Abchurch lane, London, E.C. 4, May 2nd, 1923.
[Mr Leake is, of course, entitled to define "profit" in any sense he thinks fit; though if he gives the word an entirely new meaning, arguments relating to "profit" in his sense have very little to do with "profit" in the ordinary sense in which we used the term. His unusual

use of words, however, does not prove that the employer's share of profit enters into the economic cost of production, or that employers can get rid of a tax on their profits by raising prices. We must leave our readers to weigh Mr Leake's assertion of these propositions against the arguments we put forward to the contrary last week.—Ed. Econ.]

Books and Publications.

PRECEPT AND PRACTICE.

WITHOUT accepting Herbert Spencer's mystical analogies between the individual and the social systems, one may perhaps distinguish among economic movements those which are controlled, so to speak, by the voluntary muscles of the community from those which are spontaneous and unpremeditated. No such distinction was made by the Assembly of the League of Nations when, just a year ago, it set on foot inquiries "as to the measures taken to ensure the application of the resolutions of the Brussels Conference." It seems to have been assumed, by implication, that when things go wrong they have to be put right by human—even perhaps by Governmental—action, and as a stimulus to progress the assumption has its uses. But the fact is that when things go wrong they very often have a tendency to come right of themselves, and the intervention of Governments may be as likely to retard as to hasten their recovery. The experiences of the war encouraged us to believe that economic forces, once thought to be as intractable as the laws of Nature, could be manipulated at will; and it is now the fashion to think that at any rate in monetary matters we are the masters of our fate, provided we can muster sufficient foresight and resolution to anticipate and direct coming events. But whether or not these things might all be done, it is tolerably clear that they are not being done; and the first impression left on the reader of the two volumes now published* by the League, reviewing the progress made since Brussels, is likely to be one of relief and satisfaction that, in spite of conferences and controls and interference, economic forces still contrive in the end to work towards some sort of equilibrium.

That is, of course, not by any means the impression which the reports collected by the League ("official in all cases with the exception of those from the Argentine and the United States of America") were intended by their authors to convey. On the contrary, where progress has been made it is generally attributed to the meritorious conduct of those in authority (except perhaps in Professor Bachi's long report on the Italian situation, contained in Vol. 2). The best measure of the credit which is actually due, and the best test of the sincerity of Governments in their attempts to carry out the Brussels resolutions, is naturally to be found in the sections dealing with "commercial measures," where what we have called the voluntary muscles really do come into play. These have been reviewed in a previous number of the *Economist*,† and found to be, on inspection, less reassuring than they were meant to appear. Under the heading "Monetary Measures" there is also not much convincing evidence of any deliberate progress or of any settled policy of reconstruction. But there is much to fortify one's faith in the eventual restoration of some kind of stable monetary system in Europe, and that result need not seem any the less satisfactory if it is due to the healing hand of Time and the natural processes of economic evolution rather than to the resolutions of the Brussels Conference and the heroic efforts of Governments to apply them.

It was "the continuing gravity of the exchange crisis" which provoked the Assembly of the League to make the inquiries of which these two volumes are the result, and here, at any rate, there is improvement to record.

* Brussels Financial Conference, 1920. The Recommendations and their Application. A Review after Two Years. Vol. I. New and Enlarged Edition. Pp. lvi. + 243. 5s. Vol. II. Italy. Pp. 95. 2s. Ref. C. 10. M. 7. 1923 II.

† *Economist*, March 17th.

"Whereas at the end of 1920 the dollar stood at a premium of over 15 per cent. compared with every other currency save that of Japan, by the third quarter of 1922 that premium was less than 5 per cent. in the case of the currencies of five, and less than 10 per cent. in the case of the currencies of six (not six other) countries.....When it is remembered that the internal purchasing power of a dollar has itself increased by 15 per cent. during this period, and that it has therefore been incumbent on the other countries of the world to climb up, not to a fixed, but to an ascending objective, it is clear that the achievement is appreciably greater than the differences between the dollar agios at different dates indicate." It would be cavilling criticism to quarrel with the word "achievement," or with the comparison between the position at the end of the last quarter in one year and the third quarter in another. Let it pass that as regards exchange the stronger countries have grown stronger, even if the weaker have grown weaker.

But the Brussels Conference, in its report, scarcely alluded to exchange depreciation except as one aspect of the evil of inflation. Eight States (all among the belligerents of the Great War) are pilloried in the Introduction to the first volume of these reports, as being still addicted to inflation, in the sense that their note circulation continues to expand (generally at an increasing rate). But "out of the 33 States quoted there has been a reduction in note circulation since the end of 1919 in 14,".....and "there has been a fall in prices in 17 out of the 21 countries for which index numbers are quoted." It is in this connection that it becomes evident how often the unhappy victims of deflation have had greatness thrust upon them; their boasted compliance with the Brussels resolutions sometimes has a bitterly ironical ring. After all, the Currency Commission at Brussels was careful to say that "deflation, if and when undertaken, must be carried out gradually and with great caution, otherwise the disturbance to trade and credit might prove disastrous." And now, in reply to a question regarding the causes and effects of deflation, Denmark writes: "The principal cause of the decline of prices in this country must be considered to be the decline in the world level of prices which commenced in the autumn of 1920.....The decline of the world prices naturally affected the price level in this country, and the decline of the latter again resulted in the increase of the international and actual value of the Danish krone. This movement, which in itself was favourable, was, however, accompanied by an exceedingly heavy depression of the entire trade of the country, and not until lately, by the settling down of the price level, has it been possible to trace slight indications of a coming improvement." At the end of a movement which "in itself was favourable" we all find ourselves, in fact, panting still for an "improvement," but giving to the word the opposite sense from that which we gave it at Brussels two years ago.

In other words, whether necessarily or not, the major economic movements are still not subject to control. That is not to say that we cannot hope to make progress by taking thought; a mariner may cope successfully with the wind and the tide. But the limits of possible improvement by deliberate action are narrow, and those limits have been ignored both by the Brussels Conference itself and by the League of Nations when it took the trouble to compile these careful and laborious summaries. They have been ignored in two ways; first, by implying that Governments can be made answerable for what Professor Bachi calls "the spontaneous action of economic forces," and, secondly (what is more important), by allowing attention to be diverted from the narrower field in which our destinies certainly can be made or marred at will. It is true enough that we ought to balance our Budgets, and it is quite interesting to know that "the current expenditure of Norway, Holland, Switzerland and India has not yet been balanced by ordinary revenue" (though there seems to be an omission from the list), or that "scarcely any Government undertakings are at present paying their way." But the causes of the continued economic disintegration of Europe lie deeper, and are perfectly well known, even if neither the Brussels Conference nor the League of Nations cares to allude to them.

The reports included in these two volumes vary greatly

in length and interest. The second volume, devoted to a summary of the Italian situation down to the middle of last year by Professor Bachi, is interesting and very thorough, but not Fascist. Whereas the Belgian report (I. 27) misquotes the Brussels condemnation of exchange control as "futile and perhaps mischievous," Professor Bachi categorically asserts that "doubtless speculation in the exchange has been widely practised during the last few years, but its effects have always been very limited. The view held in many quarters that speculation is the cause of the rise in the exchanges is devoid of foundation." It is a pity (but probably inevitable) that international courtesies should forbid any drastic editing of the reports received by the League. Presumably, whatever is received has to be printed, whether it is too long (as in the case of Czecho-Slovakia) or too short (as in the case of Norway), and even when it is disingenuous (as in the case of Belgium), or non-existent (as in the case of France), Norway, by her cavalier reply on half a sheet of note-paper, has robbed herself of the honour of being included (on p. xxxvi. of the Introduction) among the nations which have introduced some sort of capital levy. The introductory summary provided by the League is competent and useful; in fact, there is little else in the first volume that the general reader will wish to look at except for special purposes.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. May 16. ACCOUNT. May 17.

This month of May includes three Stock Exchange settling days, in addition to the ordinary May Day holiday and the break at Whitsun. Some people are getting restive at the rapid way in which settlement succeeds settlement under the post-war arrangement of an equal number of days in each Account, complaint being made that this interferes with business, as well as throwing needless work upon office staffs. For in some parts of the Stock Exchange there is a great deal going on, and the hand of the investor is as obvious as ever, in spite of the fact that a few of the gilt-edged stocks have given way a trifle from the best prices touched.

For the underwriters of the six million pounds New South Wales 4½ per cent., issued at 94, to have had all the stock taken off their hands by the public is considered something of an achievement, even in these days, when investors clamour for good stocks. The price rose to 15s premium, and, amongst other new issues, the North Metropolitan Electric debenture scrip opened at 3 premium on the day when it came to market. Roumanian Government scrip, however, is still at a discount, and the new Andhra debenture is about 1 discount.

War stock has gone back a little from the top, on the discussion of the position in regard to the Money market. Experts differ considerably in their views, but evidently some who think that money is likely to become stiffer in the near future command a following who are quietly selling their gilt-edged stocks. So great is the amount of money available for investment, however, that realisations are easily absorbed, and in many cases, notably those for Colonial stocks, Corporation (both domestic and foreign), Home Railway pre-ordinary, and literally hundreds of sound industrial debentures, there is no stock on offer to supply the constant demand.

The German proposal in connection with reparations has had little effect in the foreign market, save that it has made French bonds weaker. The Stock Exchange puts no particular faith in the hope of permanent settlement arising from the present offer made by Germany. Argentine bonds are a good market, and Brazilians keep to the firmer side on balance. Paris has not been taking much of a hand in this market during the past few days. Chinese 8 per cents. are noticeably flat.

Amongst Home Railway stocks, the feature is the weakness of Caledonian deferred and ordinary stocks. The prices fell sharply on the opening of the proceedings before the court of arbitration last Tuesday. The stocks of the Heavy lines, London, Midland and Scottish and Great Western, especially, are better, though the former went back from the best when it was officially announced that no splitting scheme is in contemplation. The Undergrounds are quiet, with Income Bonds and Metropolitan better. A number of American railroad shares, including Canadian Pacifics, have fallen from 1 to 4 dollars. Argentine Railway stocks continue to rise on dividend expectation, and fresh improvement lifted the price of San Paulo, the prior-charge stocks as well as the ordinary going ahead.

Rubber shares remain in the doldrums. The Oil market is depressed and largely professional. The public just now are doing very little in oil shares, speculative interest having drifted into tobacco, where profit-taking has been in evidence; textiles, which have been a jumpy market, and newspaper shares, some of which have gone ahead strongly. The cable group is higher, more especially that which is concerned with the Eastern stocks, and Marconis, after being somewhat dismal, presented a brighter front towards the end of the week.

The Banking market is good, and insurance shares have steadily improved. In both cases the supply of stock available for investment is noticeably diminished from what it was even a month ago, and this applies not only to the London banking shares, but also to those in the Colonial and foreign companies. The Shipping market is quiet. Amongst tea shares, a very slight reaction occurred in a few of the leaders. The Nitrate market is steady, holding most of its recent substantial rise. Dunlops and some of the speculative counters hardened on speculative attention being directed to their possibilities in the future. Most of the shares in the Stores companies are decidedly firm. Breweries improved under the leadership of Watney deferred.

The Kafir market finds it difficult to throw off its inaction, for neither Paris nor the Cape are lending any aid to assist its shares. Prospects of satisfactory dividends, to be declared next month, are not enough to induce the public to take any particular hand, but the deep-level market is a little better. The tone is not unsatisfactory so far as it goes. Chartered and other Rhodesians are neglected, except by their own particular supporters. Diamond shares remain steady, and copper shares are good, though amongst tin descriptions, the only feature is the lack of energy which characterises the market in the various Cornish, Middle-East and West African shares. Mexicans are a shade better. No public attention is being directed to Russians.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Andhra Valley Power Supply Company, Limited (incorporated under the Indian Companies Act).—Authorised share capital 21,000,000 rupees, equivalent, at 15 rupees to the £, to £1,400,000, divided into 5,000 preference shares and 16,000 ordinary shares, each of 1,000 rupees, of which 4,934 preference and 15,958 ordinary shares are issued and paid up, except 15,200 rupees (£1,014). There is now offered for sale £1,000,000 7½ per cent. ten-year secured sterling notes at 98 per cent., part of an issue limited to 30,000,000 rupees (£2,000,000), of which 10,000,000 rupees (£666,666) has been issued in India. The company was formed, under the auspices of Tata Sons, Limited, for the purpose of meeting the demand for electrical energy in the city of Bombay over and above the capacity of the Tata Hydro Electric Power Supply Company, Limited. From that company the Andhra Valley Company has obtained a licence granted by the Government of Bombay for the supply of electricity in the city, other municipal areas, and local areas near railway stations on the Bombay, Baroda, and Central Railway. This company will be one of three in Bombay under the agency of Tata Sons, Limited. Its works are practically completed, the estimated total capital cost being approximately £3,400,000, and the notes are issued with a view to funding unsecured temporary loans obtained during construction, except a sum of £330,000 provided by Tata Sons, Limited, which will be gradually discharged out of profits and will rank behind the debentures upon which the notes will be secured. Twenty million rupees (£1,333,333) 8 per cent. first mortgage debentures will be issued to the trustee as security for the notes, constituting a first specific mortgage or charge upon the present and future lands and buildings of the company and a floating charge upon its other assets. The notes will be repaid on April 1, 1933, at par. After providing for the debentures issued in India, the estimated value of the first mortgage security is £2,733,334. The company has been supplying power in Bombay since September last, and has contracts for 10 years with industrial consumers, and a share in a contract with the Bombay Electric Tramways. The price agreed with the issuing house is 93 per cent., the purchasers paying an underwriting commission of 2 per cent. and an over-riding commission of ½ per cent. Though a speculative issue, the rate of interest offered is rather higher than might be expected.

Grovesend Steel and Tinplate Company, Limited.—A statement published in accordance with Stock Exchange regulations shows authorised capital at £750,000, divided into £250,000 6½ per cent. cumulative preference shares and £500,000 ordinary shares, all of £1 each. Issued capital is all the preference shares and £424,000 of the ordinary. Loan capital consists of £350,000 6 per cent. first mortgage debenture stock. Incorporated as a private company in 1904 to take over existing businesses of steel and tinplate manufacturers carried on as private partnerships, the company owns (*inter alia*) a controlling interest in the Killan Collieries, Limited, and Whitford Steel Sheet and Galvanising Company, Limited, and all the capital of the Raven Tinplate Company, Limited. The capital of the company (originally £120,000) has from time to time been increased, and in 1922 the concern was converted into a public company. Of the £424,000 ordinary shares, £68,000 were allotted fully paid in 1904 to the vendors of the Grovesend Steel and Tinplate companies, £32,100 in 1913 to the vendors of the Raven Company, £24,000 in 1923 for cash at par, and the other £299,900 was allotted in 1918 and 1920, fully paid, out of undivided profits. Of the preference shares, 154,996 were allotted between 1904 and 1920, and the remaining 95,004 have now been purchased at par by a corporation, the purchasers paying all commissions and expenses incidental to acquisition and re-sale, and receiving from the company a commission of 5 per cent. Application is to be made to the Committee of the Stock Exchange for permission to deal in the 6½ per cent. cumulative preference shares. The information offered is insufficient for outside investors.

Mozambique Portland Cement Company, Limited.—The company is incorporated in the Orange Free State and registered in the Transvaal and in the Province of Mozambique. Authorised share capital is £350,000, divided into 350,000 ordinary shares of £1 each, of which 210,460 have been issued. Its loan capital consists of £100,000 8 per cent. first mortgage debentures, in 600 debentures of £100 each, and 1,600 of £25 each. Of the debentures, £65,750 have been issued, of which £60,000 "are held by His Majesty's Department of Overseas Trade under the Overseas Trade Acts, 1920-22." The present issue is of £34,250 8 per cent. first mortgage debentures (in 1,370 debentures of £25 each) at £95 per cent., and 50,000 ordinary shares at par. The debentures will rank *pari passu* in point of security with those

already issued. They are "repayable" at par on December 31, 1926. Debenture holders have a right to convert debentures into fully paid shares in the company at the rate of two shares for every nominal £3 of debentures. An interesting point in the offer is the statement that "the debentures provide that the holders of 60 per cent. of the outstanding debentures of the entire series may, by writing, under their hands sanction any agreement with the company for any modification, or alteration, of the rights of the holders as a class, and an agreement so sanctioned will be binding on all the holders of debentures of the series." The security is "a deed of mortgage and hypothecation as a first charge on the landed property of the company in the Province of Mozambique, and a collateral general bond charging the company's immovable and movable property." We do not see the value of the land and property specifically stated; the consulting engineers of the company, however, in a certificate, state that in their opinion the value of the company's freehold property, Salamanga, "about 350 acres in extent, and containing vast quantities of limestone and clay eminently suitable for the production of high-grade Portland cement, together with your exclusive manufacturing rights in the Province of Mozambique, and your factory, including the cement plant, power plant, workshops, staff quarters, offices, railway siding, &c., is £325,000." Though the offer speaks glowingly of the company's trade possibilities, this is obviously a proposition which will only interest a narrow circle of investors.

Burt, Bolton, and Haywood, Limited.—Authorised capital £470,000 in £1 fully-paid ordinary shares, of which £373,503 have been issued, and £30,000 fully paid 5 per cent. cumulative preference shares, all issued. In a statement issued in compliance with Stock Exchange regulations, the reserve and depreciation funds of the company are set down at £299,731. There are 4½ per cent. first mortgage debentures to the amount of £80,600, and arrangements have been made to pay off the whole of them on May 5, 1923. The debenture debt will then be rearranged by the creation of first mortgage 5 per cent. debentures on the company's assets, with certain exceptions, not exceeding £200,000, to be issued to and held by the company's bankers as collateral security for current overdrafts, and £50,000 6 per cent. second mortgage debentures secured as a second charge on the company's freeholds, &c. The rearrangement, it is stated, does not increase the company's interest charges. The company has very wide interests, and the record of the past ten years given in the announcement shows that it has been prosperous. In 1910 £107,001 was capitalised from reserve and distributed among ordinary shareholders in fully-paid £1 shares. Investors will naturally require more information before making a purchase of any of the securities of this company.

M.C. Mining Company of British Columbia, Limited.—The capital of this company is £100,000 in 200,000 10s shares, of which 100,000 are being issued. A statement issued in compliance with Stock Exchange regulations says the company has been formed, in the first instance, to acquire as a holding company practically the whole of the issued capital of the M.C. Mining Company, Limited, registered in April, 1922, under the laws of British Columbia, with a capital of 4,000 shares of \$125 each, of which 3,608 have been issued. The new company intends further to exercise an option on three mining claims adjoining the three claims of the M.C. Mining Company in the Portland Canal district. The six claims adjoin the Premier Mine on its eastern boundary, and each is 500 yards by 500 yards. A body of ore has been located, "which appears to be similar in every respect to that of its famous neighbour, the Premier." Samples taken from this ore body at the bottom of a shaft average about \$80 per ton of silver and gold. The announcement says that no great extent of work has been done on the property. Obviously a highly speculative proposition.

Bowlana Tea Estates, Limited.—Share capital £30,000, in £1 shares, all issued and paid up. Of these 20,000 are now offered for sale at £1 1s. each by the Eastern International Rubber and Produce Trust, Limited, part of 26,000 held by them and another shareholder in the company. A letter from the chairman of Bowlana Tea Estates, Limited, states that the company was incorporated in August, 1921, to acquire the Oolooowatte, Bowlana, and New Maddegama Tea Estates in the district of Kandy in the Central Province of Ceylon, from the liquidator of the Deltota (Ceylon) Tea and Rubber Plantations, Limited, for £23,000. The purchase price was paid in cash under an agreement dated January 25, 1922, and the estates were taken over as from March 31, 1921. The chairman states that in the ten months April 1, 1921, to January 30, 1922, profits amounted to £1,764, which amount belongs to capital, and is not available for dividend, and that in the next ten months the profits, which were audited, were £2,475. Assets are estimated at £33,157, the estates being set down at cost price, and liabilities at £2,273, as at November 30 last, since when the assets have been increased by £2,000 received for unissued shares. The estimated crop for the year ended March 31, 1924, is 275,000 lbs., at a cost, including

export duty, of 8.60d per lb., and the whole crop, it is stated, has been sold forward at 1s 2.4d per lb. An application is to be made to the Stock Exchange for permission to deal in the shares. On the information supplied, the offer at a premium of one shilling is not attractive.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

ROYAL EXCHANGE ASSURANCE.

"EXTREMELY SATISFACTORY FIGURES."

GOOD RESULTS IN ALL DEPARTMENTS.

DIVIDEND INCREASED BY 2 PER CENT.

The annual general court of the Royal Exchange Assurance was held on the 2nd instant, at the head office of the corporation in the Royal Exchange, London. Mr Vivian Hugh Smith (the governor) presided.

The secretary (Mr Percy F. H. Hodge) having read the notice convening the meeting and the report of the auditor,

The Governor said:—Gentlemen,—As the report and accounts have been circulated and are now in your hands, I assume that you will take them as read, but before submitting them to you I am sorry to have to tell you that Mr Ernest H. Cunard, who had been a member of our court for nearly 30 years, has been compelled to retire on account of prolonged ill-health. His ready counsel and willing help are greatly missed by all of us. To fill the vacancy on the court the Hon. Rupert E. Beckett has been appointed. Mr Beckett was, as you probably know, a partner in the private banking firm of Messrs Beckett and Co., of Leeds, until it was acquired by the Westminster Bank, of which he is now a member of the board of directors. We find that Mr Beckett's influence, particularly in Yorkshire, is of marked benefit to the corporation.

GOOD RESULTS DESPITE YEAR'S DIFFICULTIES.

Some of you will remember that last year I referred to the effect which the depression in trade and the very uncertain conditions had on insurance business generally, and these factors have again, to a considerable extent, had their influence on the results for 1922. In spite of them you will, I think, have been interested in seeing that our total premium income still exceeds three million pounds, and, although there has not been much increase in this figure, it is a matter of congratulation to us all to have seen the very good results that have been obtained. You, no doubt, have also noticed that the difficult question of the expenses is being dealt with, as the total commission and expenses combined shown in the accounts are less than in the previous year, although the total premium income is slightly higher. This, I am sure you will agree, is a step in the right direction.

I will now take the results of the respective departments in the order in which they appear in the accounts which are before you.

LIFE DEPARTMENT.

In the life department 2,461 proposals were completed with new sums assured of £1,518,000. You will notice that the sums assured are about £100,000 less than the previous year, but it is interesting to see that the average sum assured per policy has increased from £581 to £617. This is a gratifying feature. The total premium income, after deducting reinsurance premiums, was £565,500, which shows an increase of nearly £20,000 over 1921. The interest earned on the life fund showed the very satisfactory figure of £5 10s 11d per cent. (gross), which was an increase of 3d per cent. over the previous year. You will remember that I referred last year to the increase which had taken place year by year in this respect, but I think it not unlikely that the figure we have now reached may prove to be the high-water mark. As a large proportion of the profits of the life department is derived from the interest on invested funds it is very satisfactory to know that this has been earned at such a high figure, without in any way infringing on the conservative lines of investment which are so important and necessary. The total claims paid and outstanding amounted to £339,000, which was considerably below the rate of mortality expected. The sum paid for surrenders amounted to £52,800; the expenses of management and commission to £99,500. The life fund has increased during the year by nearly £300,000 and now stands at £4,857,000. In the annuity department the fund has increased by £7,000, and now stands at nearly three-quarters of a million; while the capital redemption account shows an increase of £30,000 in the fund.

The trustee and executor department has again made a small profit, and we have been able to carry £2,600 from this account to our general profit and loss account. The example we set in 1905 in instituting this department has been followed by the big banks and several other insurance companies, and our experience over the past 18 years shows that it meets a real need.

FIRE DEPARTMENT.

We now come to the fire department, and I think that the results are particularly gratifying, as, with a premium income £53,000 less than in the previous year, we have been able to transfer £202,000 to the profit and loss account, of which only approximately £21,000 is on account of the decreased reserve required in respect of the smaller premium income. There are one or two points in connection with the fire account which may be of interest to you. The loss ratio has decreased from 54.9 to 46.1 per cent., which is satisfactory. You will notice that it has been felt necessary to provide a further £20,000 for claims on reinsuring companies in liquidation, but it is now hoped and believed that with the provision made in these accounts, together with that referred to in the previous year, it will be unnecessary to carry any further amount in this respect. You will also see that we have received over £70,000 through the Enemy Debt Clearing House in respect of certain transactions with the countries with which we have recently been at war, and that the funds of the department have been increased by £50,000, which had been transferred from profit and loss account to the additional reserve. After including the figures referred to, the total funds of the department have increased by nearly £30,000, and now stand at £842,000.

MARINE ACCOUNT.

In the marine account, the premiums, after deduction of reinsurance premiums, returns, commission, &c., amount to £369,000. As the market has been so uncertain, the greatest care has had to be taken in the underwriting, therefore no effort has been made to obtain a large premium income. I think we can congratulate ourselves that we have been able to transfer £75,000 from this department to our general profit and loss, and that, after doing this, the fund still stands at over £724,000, which represents nearly 200 per cent. of the premium income. This, as I think you will agree, is very satisfactory. The only other thing I wish to say about the marine account is that our arrangements in this department with the Prudential Assurance Company remain extremely cordial.

GENERAL ACCIDENT ACCOUNT.

The general accident account shows an excellent position. The premiums certainly are less, but our loss experience is considerably better, with the result that we have been able to transfer to profit and loss account over £120,000, which is nearly £50,000 more than in 1921. This figure is by far the highest that the department has shown since the corporation embarked on this class of business nearly 25 years ago. The account does not include the figures of our subsidiary companies, which, you may like to know, have all had satisfactory years, the Car and General Insurance Corporation, in particular, showing excellent results. In order to strengthen the accident fund, we have, as in the fire department, transferred £50,000 back from profit and loss as an additional reserve, and, including this amount, the fund now stands at £494,700.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account the results from the departments are summarised, and you will see that we have been in the happy position of having been able to transfer more than £400,000 from the departmental accounts, in addition to which the sum of £73,300 was received in respect of interest dividends, and rents not carried to the other accounts. On the other side of the account we have our general expenses of £50,700, and the large sum of over £157,000 in respect of income-tax, together with the necessary reserve for corporation profits tax and excess profits duty, the latter being payable in connection with the sum received in settlement of war debts. Then there are the two transfers to the fire and accident accounts to which I have already referred.

WIDOWS AND ORPHANS (STAFF) FUND.

I know that the two entries appearing on this side of the profit and loss account—viz., £20,000 transferred to pension fund and £10,000 to a widows and orphans (staff) fund—will meet with your entire approval. Up to the present we have had no provision for the widows and orphans of members of our staff, although

HEAD OFFICES: LIVERPOOL AND LONDON

ROYAL

INSURANCE COMPANY, LIMITED

ALL CLASSES OF INSURANCE EFFECTED

assistance has been given when occasion required, and it was with much pleasure that the directors felt that they would be carrying out your wishes if they instituted such a fund. After making these various payments and transfers, the balance of the profit and loss account, for the first time in the history of the corporation, exceeds the sum of one million pounds.

You see in the printed accounts in front of you that our profit and loss account is also described as a "general reserve fund," which, perhaps, more clearly sets out its real function. With a world-wide business of the size which your corporation conducts, it is absolutely necessary to retain not only adequate but even generous reserves to meet all unexpected and contingent liabilities. It is the practice in some cases to augment departmental funds by transfers from general reserve funds, leaving a comparatively small balance in the profit and loss account, and, although we have to some extent adopted this practice in the fire department, and are initiating it this year to a small extent in the accident department, your directors are of opinion that the existence of a large central fund available for any class of business at any time has outstanding advantages.

THE DIVIDEND.

I referred last year to the very small effect the difficulties which had arisen in connection with certain insurance companies who had gone into liquidation were likely to have on the figures shown by the large insurance companies, and I think that our own results for 1922 strengthen my remarks. You will remember that at the same time I explained the necessity for the building up of reserves and the adoption of a conservative policy regarding the payment of dividends, but I am very glad to be able to say that without any departure from these principles your directors feel in a position to recommend an additional 2 per cent. of dividend being paid, that is, that a total dividend of 18 per cent. should be paid on account of 1922 (of which 7 per cent. was paid in November last), and a resolution to this effect will be placed before you in a few minutes.

Gentlemen, you will have noticed an alteration in this room, and it gives your directors very great pleasure to welcome you in what I might call a new court room. This is part of the general scheme of expansion which has been carried out during the past year, and which followed the acquisition of the premises vacated by our friends the London Assurance. These rooms have now been occupied by portions of our own staff, who previously were working under cramped conditions, which were neither conducive to good health nor to the best results in the interests of the corporation.

YEAR'S GOOD RESULTS.

I think you will agree that the figures put before you to-day are extremely satisfactory. With the exception of the year 1919, when our figures included an amount of £350,000 brought in from our marine department, the results of the year 1922 are the best, I believe, ever shown by the corporation. Insurance is the hand-maid of trade, and to obtain the results shown, to my mind, is a remarkable achievement in times like the present, when trade is far from good in most parts of the world, and when competition is very keen. In the opinion of your directors, the very satisfactory figures which I have to-day put before you reflect the greatest possible credit on the managers of the various departments and branches both at home and abroad and on the staff generally, and I should like to take this opportunity on your behalf of assuring these gentlemen of our appreciation, and of congratulating them on the success which has attended their efforts.

Before putting the resolution to the meeting, gentlemen, I would invite any stockholder who wishes to do so to put any questions, which I shall be happy to answer.

No questions being asked, the Governor moved, "That the printed report and accounts for the year 1922 be adopted."

The Sub-Governor (Mr Seymour Grenfell) seconded the motion, and it was unanimously passed.

The proposed further dividend of 11 per cent., less income-tax, making 18 per cent., less income-tax, on the capital stock for the year 1922, was also agreed to.

A resolution reappointing Sir Nicholas E. Waterhouse, K.B.E., as auditor to the corporation, having been carried, on the motion of Mr A. Goldberg, seconded by Mr G. J. Maunder, the court adjourned.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED.

SPLENDID RESULTS OF THE YEAR. APPRECIATION OF COMPANY'S INVESTMENTS.

The first ordinary general meeting of shareholders of the London and Lancashire Insurance Company, Limited, was held, on the 2nd instant, at the company's Chief Administration Offices, Chancery Lane, London.

Mr F. W. Pascoe Rutter, chairman of the company, presided over a numerous attendance. He said:

I assume that, as usual, you will take the report and accounts as read.

In one respect, the past year for us has been exceptionally fortunate in that no changes whatever have happened in the personnel, and the directorate remains, without exception, as it did last year. In other respects, I may describe the year as one, so far as we are concerned, of uneventful prosperity. Not that there has been any slackening of effort, for you will naturally assume that our new managers have been keen to show their mettle, but because we have been passing through a time when the tide in many cases was against us, and when it was unwise to start out upon new ventures, at a time of uncertainty and disturbance.

WORLD CONDITIONS.

Not only have the markets of the world continued in their weakened condition, but the countries which, through the war, were closed to us, have continued closed. It is not a light thing that quite half of Europe, with its busy and active commerce and industry, now for us no longer exists.

Elsewhere there has been stagnation, but there are now signs of renewed activity, and we may hope that commercially we have not only "touched bottom," but are on the way to fresh, if gradual, progress.

In our own case, we have endeavoured to make up the shortage to some extent; first, by the purchase, during the course of last year, of the shares of the Merchants Fire Insurance Company of Toronto, which puts us into a still more prominent position in the developing Dominion of Canada, and, secondly, this year, by the acquisition of the British Fire Insurance Company, of which Viscountess Rhondda has been the chairman, and which, considering the short time of its existence, and operating as it did upon non-tariff lines, had quite a prosperous record.

UNDERWRITING RESULTS.

Our fire premiums for the year amounted to £2,904,400, and, after including the interest belonging to the account, we have been able to add £100,000 to additional reserve, and to carry forward to profit and loss £310,592.

It has not been considered a good fire year, partly because, generally speaking, the contribution from the American continent was weak.

Our accident premiums amounted to £1,447,519, and, similarly, after including the interest belonging to the account, the total surplus enabled us to add £100,000 to the additional reserve, and carry forward to profit and loss £198,943. It has been the best year which our accident department has ever experienced.

The marine premiums amounted to £1,144,399, and again we have increased the additional reserve by £100,000, and carried forward to profit and loss account £50,553.

I need not dilate upon this account. The drop in premiums is entirely due to our action in refraining from accepting much Hull business, for which only inadequate rates were obtainable. Considering the difficult circumstances surrounding marine business until it has fully recovered from the indigestion and competition engendered by the war, I think you may feel well satisfied with the aggregate result.

Finally, after making provision for the increased dividend, and for minor items as specified in the profit and loss account, the balance carried forward is now £1,075,343, against £1,026,431 last year.

DIVIDEND POSITION.

As you know, it has become almost a recognised principle amongst insurance companies to, as far as possible, pay dividends out of interest.

Last year we appeared to be in a strong position in this respect, because our interest happened to be some £35,000 more than the dividend which we were paying.

There were two important factors to be borne in mind. First, our reserves had temporarily been depleted, due, particularly, to the considerable decrease in our marine premium income, which had been inflated during the war, and which had necessarily become deflated after the war. And, of course, the reduction in premiums meant a corresponding reduction in reserves to pay for the losses occurring on the old accounts.

Second, last year the income-tax was reduced from 6s to 5s. That meant a 1s, or 5 per cent. increase in the dividend payable to you,

and most of that is has accrued to you on the payments to be completed to-morrow for the year 1922. On the other hand, our interest for 1922 has received but a partial benefit from that is off the income-tax, for the relief naturally only began to operate during the second half of the year.

Hence, when we came to consider our accounts, we found that our interest for 1922 was £338,195, as compared with £337,094. But the dividend payable to you had become increased by £27,000. This left a credit margin of less than £10,000, and under the circumstances those of our shareholders who had adumbrated the true situation have, doubtless, been surprised that we should now decide to increase the dividend at all.

But, of course, in 1923 we shall get the full benefit of the 1s reduction, and the new 6d reduction will benefit both the company and the shareholders in the accounts for 1923.

LIFE PROFITS.

And there was a further point which we have had under consideration, and which I am glad to refer to. That is, the accruing profits upon the life business which we are operating through the "Law Union and Rock."

You will remember that, in acquiring a controlling interest in that company, we counted upon regular appreciable profits from their life department.

For the quinquennium ending December 31, 1919, consequent upon the serious depreciation in investments up to that date, the surplus was disappointing, but since then the appreciation which has occurred has quite rectified the position, and if their quinquennium had happened at the end of 1922, there would be a substantial surplus to divide between policyholders and shareholders.

I think, therefore, we may confidently count upon a handsome division of life profits at the end of 1924, and we are depending upon this in declaring the dividend which we have done, and which we hope, therefore, we shall be able to maintain.

You will not forget that this is a share (apart from the 1s 6d in the £ which you get through the reduction of income-tax) means a substantial outgo for the company, equivalent to 5s a share, if, three years ago, we had not split the shares by five.

INVESTMENT APPRECIATION.

There is one further feature of our finances which perhaps I should emphasise. And that is, the considerable further appreciation which has taken place in the market values of our Stock Exchange investments. It is such a pleasure to use the word "appreciation," seeing that for so many years the only term we could use was "depreciation." I told you last year that we had shared in the full benefit of the very substantial recovery in values in 1921. That improvement has continued in the same advancing ratio ever since, so that, at the present moment, we have recovered, from the beginning of 1921 to date, the bulk of the £1,400,000 which our investments had depreciated, and which had been written off in our annual accounts during the previous 25 years.

The disintegration in the capital values of securities began virtually with the beginning of the century, and, in our case, the aggregate depreciation upon the average of the funds which we possessed during those 20 years was no less than 38 per cent. But, whilst the percentage of recovery during the past two years or so is only 16 per cent., this recovery has, fortunately for us, taken place at a time when our funds have shown a very large increase, due, partly, to our prosperity, and, partly, to the funds which we have taken over from the companies with which we have become associated.

The thought may have occurred to somebody that, if we have this large inner reserve, why not take advantage of it in our accounts. My answer is that, whilst the position at present is undoubtedly abnormal, we have never done so, and there is no practical reason why we should do so. We have always aimed at something in the nature of an inner reserve of this character, and as it does not, in any way whatever, have a bearing on the income of the company, it would not in the slightest respect affect our judgment in dealing, for example, with the question of dividend. It would simply mean that we should show in our accounts 60 much more funds, but we should then be deprived of that comfortable solatium which an inner surplus of this kind provides.

INVESTMENT APPRECIATION ARGUMENT.

You may have noticed that there has been something like a debate taking place in the Press, initiated by the able chairman of a life insurance company, as to whether an appreciation in the values of investments, which has not been actually realised, represents a true, a real surplus.

Candidly, whilst one might perhaps look at the matter a little differently when one is considering life business than when it is a matter of the disposable funds of mainly a fire and accident company, I cannot see how any real quandary arises.

I have told you that our investments, as shown in the accounts which you have before you, are worth very much more—call it a million for the sake of argument. That is surely a real improvement in the assets of the company, and if anything abnormal were to happen, that surplus, which is not shown in our accounts, would be available to meet the emergency.

Now, supposing, in order to make it a realised surplus, we were to sell all our Stock Exchange investments, including millions of British Government securities, we should thereby at once realise, and have to put into our accounts this extra million of profits on sales of investments. But what should we do with the proceeds? Re-invest them! In what? In similar securities, and, therefore, it would amount to little more than a book entry. Our investments would then be worth exactly what they were stated at in the accounts, and we should bring into profit and loss and add to our reserves this extra million.

That would be the way to make this a realised surplus; but would our position be any more secure by taking such a course, supposing that something extraordinary were to happen, some cataclysm or concatenation of events, which brought about an enormous depreciation of securities? Then, instead of having this large inner surplus to play with, and to bear the brunt of the catastrophe, the funds as shown in our accounts would suffer, and we should again have to embark upon the painful process of writing off the reduction in values, as we had to do year after year, until 1920 put a stop to it.

EXPENSES.

Perhaps the most anxious matter which directors and managers of insurance companies have to face, and constantly deal with, is that of expenses. Everybody is aware that the expense of running any business nowadays is necessarily much greater than before the war. In most cases it means an actually increased outgo, bearing heavily upon a reduced income.

In our own case, it is true that our income is substantially more than it was before the war. Still, it is substantially less than it was at the apex of the war, and it has been a daily problem how to keep down the cost of the business within such reasonable bounds that there is a substantial margin left for the advantage of the company and the shareholders.

RATES OF PREMIUM.

One further word on this subject of income and outgo, and the success of our efforts to not only make ends meet, but to secure a satisfactory surplus.

The profit we have made has not been in any way due to an increase of rates. On the contrary, rates in practically every section of the business show a tendency to dwindle, and, indeed, in some classes substantial reductions have been made.

Before I resume my seat, I would like to say a word in sincere commendation of the work which has been done, and done as well when I have been away as when I have been present, by our team of management and staff. I feel that nothing has been neglected to conserve the vital interests of the company.

In the "fall" of last year I went to America with Mr Hendry, one of our managers, and the whole situation there was carefully reviewed, leaving me with the same confidence in our American managers as I have entertained ever since I began my visits 35 years ago. On our return, Mr Mills, the other manager, set off for a tour of South America, which has been more prolonged than anticipated, and, not having yet returned, he is consequently not able to be with us to-day.

This is the first time that our annual meeting has been held in this building, and to some of you it may be a revelation that we have such quarters, and that our organisation is housed under circumstances, and with such abundant light and air, that we are able to take the fullest advantages from the services rendered by the staff.

We have thus concluded another year—a year which, admittedly, has, for companies generally, been indifferent, and, in some cases, even barren. But frankly, for us, 1922 is one of the best years we have ever had, and to my mind it is particularly reassuring, because I feel that we have for some time been navigating under unprecedented conditions. We now seem to be gradually reaching a smoother sea. Nevertheless, the situation still demands much caution and circumspection. Ours is a difficult business, with many vagaries, and, realising so intensely the weight of the expenses, one is compelled to be diffident in giving vent to anything like an expression of optimism as regards the future. But, for ourselves, whatever the size of our business, we have always aimed primarily at quality, and, having regard to the manner in which we have survived the turmoil of the war's back-wash, I think, barring accidents, we may look forward to the future with reasonable confidence.

I therefore now beg to move:

"That the report, accounts, and balance-sheet be received, adopted and entered on the minutes."

by £7,000. The net interest income progressed by £16,000 in amount and 3s 2d per cent. in rate, and the annuity purchase money by £58,000. There had been paid out £48,000 additional in claims, and somewhat more by way of annuities and cash surrender values, due to the larger business, but the expenses showed a welcome reduction of £4,000. The board had been able to return to the life fund £82,000, which had been provided in the 1920 accounts to meet the depreciation on investments. The funds had been reinforced by £310,000, and now amounted to £4,085,000. This increase in funds was the largest which the office had yet secured in a single year.

CENTURY ACCOUNTS.

Referring to their associated company, the Century, the chairman said that, inasmuch as all new life and annuity proposals were being made to the Friends' Provident, the premium income of the Century was a steadily diminishing quantity, but, notwithstanding this, its life fund continued to increase, and was likely to do so for some years to come. In consequence of the recovery in investment values the £40,000 provided for depreciation in the 1920 accounts was restored to the life fund. Mortality was extremely light, and altogether it was evident that in the ordinary course a large surplus would be disclosed at the actuarial valuation at the end of 1924. This office, as holder of the proprietary interest, would be entitled to one-tenth of whatever surplus might be declared to be available for distribution at that time. The fire premium income showed a decrease of £5,000, but both claim and expense ratios were reduced as compared with 1921. Inclusive of interest, a profit of £11,000 was realised. The income in the marine account consisted almost entirely of an account of modest proportions written by the Commercial Union Assurance Company on behalf of the Century, and a small income from foreign agencies accepted in connection with the foreign fire business. The first year's settlements on the 1922 income amounted to 25.6 per cent. The accident and general account displayed a gratifying increase of £5,000 in income, although owing to adverse commercial circumstances the income of the employers' liability section of the business had shown a marked diminution. A profit of £20,000 had been transferred to profit and loss account. The sickness account continued to pursue an even course, and the reserves were now equal to nearly eight times the premium income. The profit and loss account balance of £38,000 brought forward from 1921 had been increased during 1922 to £59,000. As a result of the year's operations, the funds of the Century had increased by £169,000. All the companies associated with the Century had made excellent progress, and the amounts at which the investments therein stood in the Century books were substantially less than break-up value.

APPRECIATION OF INVESTMENTS.

With regard to the balance-sheet of the Friends' Provident, the chairman pointed out that the book values of their Stock Exchange investments amounted to £1,758,000, which was £445,000 and £300,000 in excess of the relative totals in 1921 and 1919. The amount invested in Stock Exchange holdings was 40 per cent. of the assets. The aggregate income for 1922 was £1,522,000, as compared with £1,416,000 in 1921, while the aggregate funds, excluding all items which appeared in each of two or more balance-sheets, amounted to £5,858,000, an increase of £496,000 as compared with 1921. In all respects the year's experience had been favourable. Securities had advanced in value; new business was larger in each section of the business; the net rate of interest had been increased, and was likely to rise further during 1923; expense had diminished, and would probably decrease again in 1923; while mortality profit, one of the outstanding strong points of this office, was even greater than before.

The report and accounts were unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual general meeting of the above society was held, on the 30th ultimo, at the head office, Surrey street, Norwich, Sir Gerald H. Ryan, Bart., in the chair.

The Chairman, in moving the adoption of the report and accounts, said: In submitting the accounts to you to-day, I would first call attention to the fact that they deal with the 125th year of the society's existence—a long space, in which the commercial and social conditions of our country have undergone a vast change, indeed, have passed through many changes, many "ups and downs," in common parlance: In our fire department the unrest of trade and the continued low level of the price of commodities have led to a reduction in our premium revenue of £138,480, and I cannot truly say that there is any very hopeful sign of recovery in this direction. We have, however, an alert and powerful organisation all over the world, which is ready to take full advantage of any revival of business. In the accident department, our

business has not been increased in the aggregate volume—indeed, there is a small falling off in our premiums—an advance in certain sections being more than counterbalanced by a reduction in our workmen's compensation business. Not only has the general rate of wages fallen in practically all industries, but unemployment and slackness of trade, unfortunately, still prevail throughout our field of work, and while this remains the case, we cannot look for any growth in our premium income. In the marine department we have to report a premium income of some £50,000 less than in 1921, and claim payments of nearly £200,000 less. This branch of our affairs is now resuming a more normal course, and the effect upon our claim payments of the much larger business transacted in earlier years is rapidly diminishing. You will observe that the board has decided to vary the old practice of declaring interim and final dividends, and to follow a course which is becoming more customary, namely, to fix the year's dividend at the ordinary general meeting, payable by equal half-yearly instalments. I have no doubt you will approve of this change in our procedure, for which, indeed, there is much to be said. On the point of finance, I ought not to omit to inform you that our securities have largely increased in value during the year, and that the appreciation has not been taken credit for in our balance-sheet. This is a great source of strength to the society's position.

The report and accounts were carried.

NORTHERN ASSURANCE COMPANY, LIMITED.

YEAR'S RESULTS "EMINENTLY SATISFACTORY."

The annual meeting of the Northern Assurance Company was held, on the 2nd instant, at Aberdeen, Sir Thomas Burnett, Bart., presiding.

The Chairman mentioned that for the past two or three years reference had been made to the difficulties experienced in the conduct of insurance business, and that 1922 was no exception. Despite, however, continued unsettled conditions at home and abroad, there was reason to be eminently satisfied with the results presented. To sum up the position briefly, the fire account showed a modest profit, the marine account had produced a satisfactory profit, while the accident account exhibited a record profit.

FIRE AND ACCIDENT DEPARTMENTS.

The fire premium income of £2,384,138 was a decrease of £191,685 on that of the previous year, this reduction being entirely due to the adjustment of American exchange from \$4 to \$4.50. The consequent release of reserves for unexpired risk had produced a net profit of £110,782 on the fire account. The accident profit of £164,145 was a record, while the premium income at £907,437 showed a reduction of £67,316 on the previous year, the decrease being almost entirely in the employers' liability section.

MARINE AND LIFE RESULTS.

It was only to be expected that the marine premiums would show a decrease, the income being £1,608,096, or a fall of £350,000. The 1921 account produced a profit of £94,046. The 1922 account showed a normal experience.

The sums assured under new life policies were £720,810, a decrease of nearly £50,000 from the previous year's total, but still well above the pre-war average. The Chairman recorded a further very gratifying appreciation in the value of Stock Exchange securities as at December 31st last.

PROFIT AND LOSS ACCOUNT.

The profit and loss account opened with a credit balance of £132,475, while on account of the operations of the past year £634,561 had been transferred from fire, accident, and marine accounts, and sundry other items produced £7,920, making a total of £774,956, out of which debenture interest, preference dividend and interim ordinary dividend had been paid. Income-tax on profits and provision for corporation profits tax amounted to £83,501. A final dividend of 9s per share was declared on the ordinary shares and a corresponding payment of 7s 1.97d per share, less tax, on the preference shares, the same as for 1921. Transfers to accident reserve and staff pension fund reduced the carry-forward to £247,000, an amount substantially in excess of that brought into the account at the beginning of last year.

BRAZILIAN WARRANT COMPANY, LIMITED.

COFFEE CROP AND SUPPLIES.

The annual general meeting of the Brazilian Warrant Company, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad street, London, Mr Edward Greene (deputy-chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, first dealt with the balance-sheet. He pointed out that investments in subsidiary and connected companies, which con-

stituted the nucleus of the company's business, stood at £541,225. British Government and other Stock Exchange securities, at £817,601, showed a remarkable expansion, being £556,180 up, as compared with the previous year, and at to-day's market quotations their value was considerably above the cost figure. The net profit amounted to £231,321, and the directors, after transferring £100,000 to reserve fund, recommended final dividends which brought the distribution for the year to the full 7 per cent. on the preference shares and 7½ per cent. on the ordinary shares, leaving £63,605 to be carried forward, as compared with £42,285 brought in.

On the whole he trusted that the shareholders would not be dissatisfied with the results obtained during 1922. It was, indeed, a very busy year for the company, as they had to devote most of their energies to the carrying out of the responsible work entrusted to them by the Brazilian Government and the bankers who issued the Brazilian coffee security loan of 1922—Messrs Baring, Messrs Rothschild, and Messrs Schröder—that work consisting of the marketing and selling of the coffee given as security for the loan kept the company's organisation occupied to its utmost limits in every department. It was still so occupying it, and would continue to do so for some time to come. They were proud of the confidence which had been placed in them to carry out this important work, and he ventured to believe that they had done it to the satisfaction of all those interested.

In the course of further remarks the Chairman expressed the opinion that from many points of view—which he set forth at some length—there was some justification for the steps which the Brazilian Government had taken to defend such a "key industry" as coffee-growing, and said he hoped that with a better knowledge of the situation their good intentions would be appreciated.

NEWS OF FUTURE CROP.

The directors had just received a very interesting telegram from Dr. Numa de Oliveira, the Brazilian Government delegate to the London Coffee Committee, regarding crops and supplies, from which it appears that the Government were determined to regulate supplies during the coming season to the needs of consumption. In consequence, the discounts on future months of 20 per cent. to 30 per cent. as compared with the price of actual coffee which had been ruling in certain markets, appeared quite unwarranted. To many observers the visible supplies in the United States seemed to be at a dangerously low level, and it would seem that the recent fall in price in the New York market had gone too far. Dr. Numa de Oliveira's telegram was as follows:—"More careful calculations of a future crop do not exceed 13 million bags for Santos, but it is possible that this estimate may have to be further reduced owing to untimely heavy rain which is causing berries to fall off and be lost amidst growing unseasonable weeds and vegetation. Entries of new crop in appreciable quantities should not be counted on before July, especially good qualities, because ripening of latest flowering is very backward and coffee picked before the middle of May will be spoiled by the abundance of unripe bean. The Brazilian Government will regulate receipts of new crop at Santos to 35,000 bags and at Rio de Janeiro to 12,000 bags per day, which represents more or less average quantities exported monthly for consumption. Balance will be carried forward to 1924-25 crop, which will not be larger than ten million bags for Rio de Janeiro and Santos together. Henceforth, no cause for complaint will exist with regard to restriction entries owing to the fact that the Brazilian Government are building stores in the interior so as to enable planters to ship in a fair way for all and at the same time allow the Government to keep a strict control of entries, preventing any favouritism in the order of arrival at destination."

The above telegram was of great interest to the coffee trade throughout the world, for it contained confirmation of the Government's programme, and also the views about crops of a very experienced observer.

THE FUTURE.

As regarded the future of the company's particular business the year had not opened inauspiciously for them. Every department was busy, and when the special work on which they were engaged was completed they would return to their normal business with the satisfaction of knowing that there was a plentiful coffee crop to be harvested, milled, cleaned, carted, stored, bought, sold, and shipped, and, therefore, a large field for their multitudinous activities with excellent prospects, he believed, of a steady demand for the article from consuming countries.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

THE BRITISH THOMSON-HOUSTON COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

UNLIMITED FIELD FOR PROGRESS.

The twenty-ninth ordinary general meeting of the British Thomson-Houston Company, Limited, was held, on the 2nd instant, at the offices, Crown House, Aldwych, London.

Mr H. C. Levis, chairman, presided.

The assistant secretary (Mr Alfred Clements) read the notice convening the meeting.

The Chairman, having read the auditor's report, said:

The report which has been sent to the shareholders, and which is now formally submitted, will, I think, be considered satisfactory in view of trade conditions obtaining throughout the year. The profit for the year enables us to make proper depreciations, pay the interest on debentures and loans (we have no loans outstanding at this time), the dividends on the preference shares, and recommend the same dividend on the ordinary shares as last year, and carry forward a somewhat larger amount.

INCREASED VOLUME OF ORDERS.

The volume of orders received during the year was greater than in the preceding year. This increased volume, together with the large amount of unfilled orders on hand at the beginning of the year, brought about the results appearing in the accounts. There has been no increase in the issued capital during the year. There is a slight reduction in the outstanding amount of debentures by reason of the redemptions under the respective trust deeds.

In the balance-sheet for the previous year, a large amount was shown as owing to the International General Electric Company, but at our last annual meeting I called attention to the fact that this had been liquidated in full, and there is no further liability in this connection.

COMPANY'S STRONG FINANCIAL POSITION.

A comparison between the current liabilities and the liquid assets shows that your company is in a very strong financial position. You will see from the balance-sheet that the liquid assets are about four times the current liabilities.

All of the expenditure on factories shown in the balance-sheet, amounting to about £300,000, was in connection with extensions authorised prior to the year under review. It will be necessary in the near future to make further additions to some of our factories to provide certain manufacturing facilities which are required. The value of the various factory plants as they stand on the balance-sheet is very much less than the cost of replacement. Our policy is to keep the buildings and equipment maintained in first-class condition.

CHANGE IN PREFERENCE DIVIDEND.

As stated in the directors' report, the arrangements in connection with the change in the dividend on the preference shares have been carried into effect, and the cost will be liquidated in a comparatively short time by the application of the amount saved in income-tax.

In the profit and loss account for the previous year there was set aside a reserve for contingencies of £100,000. So far it has not been necessary to encroach on this, and it now appears on the balance-sheet. A general reserve of £50,000 made this year also appears on the balance-sheet.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss statement, it will be seen that the profit for the year, after deducting all expenses and charges other than interest on debentures and loans, is £494,592. To this there is to be added the amount brought forward from the previous year, £230,704, making the total amount to be dealt with £725,296. From this is deducted £118,614 for interest on debentures and loans, £99,386 for various depreciations, £13,125 has been written off the cost of converting the preference shares, and £50,000 has been set aside for a general reserve. This leaves to be carried to the balance-sheet £444,171.

DIVIDEND ON ORDINARY SHARES.

Dividends on the preference shares have been paid up to December 15th last, and the directors now recommend that a dividend of 6 per cent., free of income-tax, be declared and paid at once on the ordinary shares, which will absorb £120,000 and leave to be carried to the next balance-sheet £236,671.

It may be of interest to you to know that your company has now nearly 4,000 preference share and debenture-holders in this country.

POWER SECURITIES CORPORATION.

Our participation in the formation of the Power Securities Corporation, Limited, is referred to in the report. Your company and three others each subscribed for 100,000 ordinary shares. 500,000 preference shares and 100,000 ordinary shares were offered to the public, and the entire amount was taken up. The corporation

has secured the entire share capital of Messrs. Balfour, Beatty and Co., Mr George Balfour, M.P., becoming the chairman of the Power Securities Corporation, the joint managing directors being Mr A. H. Beatty and Mr William Shearer, both having been associated with Messrs Balfour, Beatty and Co. for a long time. It has commenced active operations, and we have every reason to believe that it will be successful.

THE FUTURE.

I hesitate to comment on general business conditions, as the position is somewhat obscure and uncertain. The conditions, however, appear to be more favourable than they were at the beginning of 1922, and unless something unforeseen occurs, I think we are justified in looking forward to an improvement in trade both at home and abroad, although this may be slow.

So far as the electrical industry is concerned, there seems to be an almost unlimited field for progress, and I think it is fairly safe to assume that the developments here will relatively approximate what has been done in other countries. In this progress we have every reason to believe that your company will have its full share, and it is well equipped to take advantage of any improvement in business which may occur.

The satisfactory results which are shown this year are due in large measure, as in the past, to the hearty co-operation of all of the company's employees, and to them are due the thanks of the shareholders.

MANAGING DIRECTORSHIP.

Before closing, I would like to refer to my resignation as managing director, and the appointment of Mr W. C. Lusk in my place. It is my intention to continue to take an active part in the affairs of the company, but naturally a considerable portion of the work and responsibility which has heretofore been mine will now devolve upon Mr Lusk. He has been connected with the company for a long time as a director and as manager of our commercial departments, and we can look forward with confidence to his administration of the affairs of the office of managing director.

I now beg to move: "That the report of the directors produced, together with the annexed statement of the company's accounts to December 31, 1922, duly audited, be now received, approved and adopted, and that the recommendations therein contained as to dividends or otherwise be adopted and carried out."

Earl Buxton seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Mr A. R. Monks, Messrs C. A. Coffin, E. W. Rice, and Gerard Swope, the retiring directors, also Mr A. W. Burchard (who has been elected a member of the board since the last annual general meeting), were re-elected directors of the company.

Major Martindale then proposed, and Mr A. R. Monks seconded, the re-election of Messrs Price, Waterhouse and Co., the retiring auditors, their remuneration to be fixed by the directors.

The motion was carried unanimously.

A hearty vote of thanks having been accorded to the chairman, directors and staff, by Major W. Martindale, the meeting terminated.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED.
BOARD'S SOUND AND CONSERVATIVE POLICY.

The sixty-first ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held on the 2nd instant, at Winchester House, London, the Hon. Herbert C. Gibbs presiding.

The Chairman, in moving the adoption of the report and accounts, said that the sinking fund which was established to supplement the amortisation of the capital expenditure now stood at £88,000, and investments allocated to that sum amounted to only £42,650. These investments were entirely in the company's own debentures, and during the current year about £16,000 more had been invested therein. The board recommended the payment of the usual 6 per cent. dividend, free of tax, instead of less tax as heretofore, as it would show the Government more clearly the actual return which the shareholders received on their investment. That return had been extraordinarily low, considering the risks entailed, the efficient manner in which the company had always carried out its duties, and also the fact that the rate of interest obtainable on the direct obligations of the Government was in excess of that paid to the shareholders.

THE FUTURE.

Taking a broad view of the situation, the board did not consider that the present situation as shown in the accounts was any certain indication of the future. For one thing the profit and loss account had had during the past year the benefit of a considerable revenue from interest on reserves; the rate of interest on money had now fallen, and the reserves themselves would be reduced as and when they were utilised for the purposes for which

they had been created. Then the low value of the currency in which their wages were paid would no doubt prove to be only a temporary advantage, for with the fall in exchange the rate of wages in currency had greatly increased, and it might not be possible to reduce wages in proportion to any future rise in exchange. The board had thought it prudent to conserve the company's resources by adding to the reserves and by carrying forward a substantial sum to next year's accounts. The company would receive the benefit of the reduction in income-tax and corporation tax, and if, as a consequence, the profits were increased the board would probably take advantage of this to write down the cost of "Offices, workshops, &c." If the current year was successful it was possible that the board might wish to make a provision of, say, £25,000 against these assets, so that there might be no question that the balance was the permanent property of the company.

Mr Edward Greene, who visited Rio last year, referred to the improved financial position of the company, and stated that sooner or later there would be a great revival in building activity in Rio de Janeiro, for the shortage of houses there was as great as anywhere else.

The report was unanimously adopted.

ELECTRIC SUPPLY CORPORATION, LIMITED.
BRIGHTER PROSPECTS FOR THE FUTURE.

The twenty-first annual general meeting of the members of the Electric Supply Corporation, Limited, was held, on the 30th ult., at Winchester House, Old Broad street, London, Mr J. G. B. Stone (chairman of the company) presiding.

The Chairman, in the course of his speech in moving the adoption of the report and accounts, said: This is our twenty-first annual meeting, and I hope and believe that it marks the end of long years of disappointment and the beginning of a period of greater prosperity.

I think the profit figures are encouraging—1920, £9,500; 1921, £19,500; 1922, £29,500.

Let us now turn to the accounts. The additional capital expenditure for the year amounts to £10,000, compared with £2,750 in the previous year. The total working expenses, including repairs, amounted to £59,000, against £72,461 in the previous year.

On the revenue side we have a total of £82,183, as against £87,282 in the previous year; but this year Dumbarton, owing to the deplorable state of the shipbuilding industry and to a reduction in our rates consequent upon the cheaper price of coal, contributes only £22,442, as compared with £32,257 in the previous year. It appears, therefore, that with £10,000 less from Dumbarton, our revenue has fallen by £5,000. The income derived from investments shows a satisfactory increase from £4,636 in 1921 to £6,383 in 1922.

The share capital now appears as 150,000 £1 shares; that is, £150,000 as compared with £250,000 before it was reduced, the balance having been written off. The amount of our debenture stock stands as before. The reserve we hold against investments has not been altered.

On the other side of the balance-sheet you will observe how we have treated the depreciation written off when we reduced our capital. Investments at cost are stated at a figure which is amply covered by the market value of our investments, more particularly when you take into account the reserve standing on the other side of the balance-sheet. Sundry debtors for current supplies show a reduction explained by the reduced revenue in Dumbarton.

During the year we have increased our holding in our own debentures, which now stands at £22,914 of this stock.

Mr A. A. Campbell Swinton seconded the resolution, which was carried unanimously.

SALAR DEL CARMEN NITRATE SYNDICATE, LIMITED.
IMPROVED OUTLOOK FOR NITRATE INDUSTRY.

The twenty-sixth annual general meeting of the Salar del Carmen Nitrate Syndicate, Limited, was held, on the 3rd instant, at Winchester House, Old Broad street, London, Mr H. W. Sillen (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross profit, inclusive of an item of £3,400, representing surplus on realisation of investments, was £70,017, from which was deducted reserve for income-tax and corporation profits tax and usual expenses of administration, amounting together to £11,811, leaving a net profit of £58,204. They brought in from last account £18,576. There was thus a total at credit of profit and loss account of £76,780. They would have seen from the directors' report that they recommend this sum be dealt with as follows:—(1) provision for the interim dividend of 5 per cent. less tax paid in November last, £8,112; (2) the payment of a final

dividend of 20 per cent., less tax, absorbing £32,450; (3) transfer to general reserve, £15,000; (4) depreciation of plant and machinery, £5,000; leaving to be carried forward £16,218. They regarded the result of the year's working as satisfactory, and, in view of the substantial profits earned, coupled with the greatly improved outlook of the nitrate industry, they felt justified in recommending an increased dividend of 25 per cent., as compared with 20 per cent. for 1921. The position disclosed by the accounts was a strong one. During last winter he had paid a personal visit to the company's oficina in Chile. His general impression had been very favourable, and he felt sure that they had a property of considerable value, with a long life before it.

With regard to the position of the nitrate industry generally, shareholders were probably aware that 98 per cent. of the nitrate produced in Chile was disposed of through the Association of Producers, of which their company was a member. The association had been in existence in its present form since January, 1919, and it should come to an end in January, 1924. The association had, however, proved itself so useful in many ways that it was almost certain to be prolonged for a further term of five years. The association fulfilled a most useful purpose, and imparted a steadiness to the nitrate business which would otherwise be absent. During the year the position of the industry had developed satisfactorily. Sales had been made on a considerable scale and stocks had been reduced to nearly normal.

At April 30, 1923, the total visible supply of nitrate was 1,344,500 tons, as compared with 1,981,500 tons at the same date in the previous year, showing a considerable improvement in the stock position. Consumption in the 12 months ending June 30, 1923, would amount approximately to 2,000,000 tons, and it was not improbable that in the following 12 months it would reach 2½ million tons. Demand in the United States had been developing rapidly, and the needs of European markets were likely gradually to increase. There was practically no synthetic nitrate of soda available in Germany at the present time, the manufacture having almost ceased. So far as one could see, market conditions for Chilean nitrate should be progressively favourable.

The report and accounts were unanimously adopted.

BRITISH ELECTRIC TRANSFORMER COMPANY, LIMITED.
DIFFICULT YEAR—ENCOURAGING SIGNS.

The twentieth ordinary general meeting of the British Electric Transformer Company, Limited, was held, on the 1st instant, at Winchester House, Old Broad street, London.

Mr A. F. Berry (chairman of the company) presided, and in moving the adoption of the report said that the results of the trading for the twelve months ended December 31, 1922, poor as they might appear to shareholders, were really not so very disheartening to those of them who, although the company had to forgo any dividend on the ordinary shares, knew how great had been the difficulties with which they had had to contend.

The present found them, in common with many others in industry, dealing with the most difficult period of their existence, but he had no doubt that they would win through. It would, however, certainly be well into next year before the company was able to reach a profit-earning stage that would permit any appreciable distribution to holders of ordinary shares, for, although the company last year was able to produce a profit, that was rather the result of work carried forward than the result of the prices obtained during the year under review. During the present year it would be difficult to produce results as good as those even for the past year, for although the actual volume of business was now growing, and orders to date amounted to more than for the first four months of last year, they had virtually come very near to giving two halfpence for one penny.

Even as those who were responsible for the management of the company pursued the policy of co-operation with their friends in various sections of the industry, so could a numerous body of shareholders, such as that company possessed, help themselves and the company. He referred particularly to the fact that shareholders could now hire "Tricity" products in many towns. The country was at the dawn of greater electrical domestic developments than many imagined. The sooner shareholders inquired of their electric supply authorities as to what they could do in the way of hiring "Tricity" electric heating and cooking appliances made by the company, the sooner would they obtain the additional comfort and cash savings that were now possible in so many houses where a public supply of electricity was available. Each year the board found some shareholders helping themselves much, and this company quite a little, in the directions that he had indicated, and with some three thousand shareholders a co-operative movement of that sort was of great value. A post-card to the supply authority asking for "Tricity" service, and a word to their friends to do the same thing, would make a beginning which he was quite sure would be of much value.

The report was adopted.

PERNAMBANG RUBBER ESTATES, LIMITED.
IMPROVED POSITION—NEW ESTATES.

The third annual meeting of the Pernambuco Rubber Estates, Limited, was held, on the 4th instant, at the offices of the company, 14 Great Tower street, London, Mr Eric Macfadyen (the chairman) presiding.

In moving the adoption of the report and accounts, the Chairman said: Against a loss for 1921 of £4,609 10s 3d, we were able to make a profit last year of £9,794 4s 10d. This result was brought about by the success of our managers in bringing down estate costs by over 3d per lb, and by an improvement of over 3d per lb in the price secured for our rubber. So far as costs are concerned, you may rest assured that the reductions effected have not been at the expense of the health of the trees and the condition of the estates. The shareholders have had to go without dividends for three years, and, in view of the improved prospects, your board have not felt that they would be justified in withholding the profits actually made, and have declared an interim dividend of 2½ per cent., which you will receive next week.

At the date of our last balance-sheet, the purchase of our two Kedah properties had not yet been effected, and the only estates we then owned were Bukit Blimbing and Cashwood. The cost to us of those two estates at that date was £108 8s 7d per planted acre. Last year, as I informed you at the last annual meeting, we acquired two new estates, Kuala Ketil and Jemili, and this year we have acquired two additional estates, Sepang Road and Bukit Kosa. The effect on the balance-sheet of the earlier of these transactions is shown in the printed report. The effect of these transactions will ultimately be to raise our issued capital to £379,200. The purchase prices of the four new estates average out under £47 per planted acre. Ultimately, when all capital expenditure has been met, I anticipate that our capitalisation, without further acquisitions, will stand not higher than £77 per acre.

We should still be open to consider further amalgamations of an equally satisfactory description, but, in the improved position of the rubber market, we can scarcely hope to have such opportunities again. One thing I should like all shareholders to feel assured of is that the acreage we have added during the past two years is in every respect equal, and probably somewhat superior, to our original holdings.

In the current year our crop will be restricted to conform with the percentage of our standard of 812,624 lbs which we may be permitted to export in accordance with the Stevenson scheme. We do not anticipate any increase in our very moderate producing costs, and our view is that the present level of price is likely at least to be maintained.

The report and accounts were adopted.

CEYLON CONSOLIDATED ESTATES (1920), LIMITED.
PROMISING OUTLOOK.

The second ordinary general meeting of the Ceylon Consolidated Estates (1920), Limited, was held, on the 30th ultimo, at Cannon street Hotel, London, Mr W. J. New (the chairman of the company) presiding.

The managing director and secretary (Mr W. Fenton Pugh) read the notice of the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: The report and accounts which have been sub-

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

ESTABLISHED 1889.

Head Office: HELSINKI (Helsingfors),
FINLAND.

Capital and Reserves - - - Fmk. 252,000,000
Deposits and Cheque Accounts

124 BRANCHES AT ALL IMPORTANT BUSINESS CENTRES IN FINLAND.

Telegraphic Address Kansallispankki.

mitted to you deal with the 12 months ended October 31st last, during which period the market price of rubber fluctuated between 6½d and 1s per lb, the average London price for the period being 8½d per lb. It was, therefore, an unprofitable year for rubber-growers, and a very difficult and trying time for all connected with the industry.

On November 1st, as you know, the restrictive measures came into force, and there being a considerable increase in the American demand for the commodity the position has changed materially for the better, and there is now reason to anticipate that remunerative prices will be maintained in the future. Our cost of production, 8½d. per lb, compares favourably with other estates with a similar output, and our costs will get lower as our permitted export increases. It would have been an unwise policy to have reduced costs by failing to maintain the estates in good order, a course which would have proved more expensive in the end.

The crop for the current year depends, under the scheme of restriction, on the market price over successive quarterly periods. For the first four months we have sold the exportable crop in the East, realising an average of 1s 3½d per lb delivered at Colombo.

We got through the year with a small profit, for which we may be thankful under the circumstances, but the deficit on realisation of the balance of the 1921 crop brought into the last account, owing to the fall in price which occurred last year when voluntary restriction was dropped, has the effect of increasing the adverse balance we have to carry forward. As against this, however, the advance in price which has taken place since last October will enable us to realise a substantial sum more than the valuation at which the balance of the 1922 crop is brought into the accounts.

During the last six months prices have been on a profitable level, and the lower stocks available should certainly affect the market favourably later in the year. I see no reason to be despondent on account of the setback in the price of rubber, which has occurred during the last few weeks. There is a good reason for confidence in the future, and, so far as our company is concerned, the results of the current year's working should be satisfactory.

The report and accounts were unanimously adopted.

NUNDYDROOG MINES, LIMITED.

FAVOURABLE OUTLOOK.

The second ordinary general meeting of Nundydroog Mines, Limited, was held, on the 1st instant, at Cannon street Hotel, London.

Mr V. Herbert Smith (chairman of the company), who presided, said that the records of the year's work were, on the whole, of a satisfactory nature. At the mill 115,002 tons of quartz were treated, yielding 54,316 ounces, and 200,705 tons of tailings and slimes were dealt with, from which were extracted 8,341 ounces, the total production being 63,129 ounces of fine gold of a value of £295,356. At the stamp battery 9,410 tons, and at the tailings and slimes works 38,215 tons more were treated than in 1921. The total return of gold for the year amounted to an increase of 107 ounces; the actual amount realised showed a decrease of £38,857 in value, caused by the reduction in the world's market price for gold. The yield of gold per ton of ore treated at the stamp battery was 9 dwts 11 grs, and the tailings and slimes dealt with produced 20 grs of gold per ton, in the first case showing a falling off of 1 dwt 2 grs, and in the latter of 2 grs per ton. The profit, £68,319, showed a decrease of £37,102, accounted for by the drop in the price of gold.

The actual costs for the year were only £1,216 in excess of those of the previous year, a fact which the directors regarded with satisfaction, especially as included in the past year's expenditure was the cost of treating an increase of 9,410 tons of quartz and 38,215 tons of tailings and slimes, as compared with the figures of 1921. Working costs showed a saving of 3s 4d per ton. The total distribution for the year was 1s per share, as against 1s 6d per share (both less income-tax) for the previous twelve months. He felt sure the shareholders would come to the conclusion that the work of the year had been the means of placing the mines in a more satisfactory condition than they were in a year ago. He desired to refer to the important discovery on the 56th level which was being driven for them into the Nundydroog property by the Ooregum Company. The satisfactory widths and values being encountered there were gratifying, and the finding of payable ore at this depth was considered of great importance to the future of the mines.

Mr Henry C. Taylor gave a detailed account of the mining developments during the year, and said that the outlook was even more promising than it was twelve months ago, when they were able to point to many distinctly favourable indications.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £35,000,000 in three months' Treasury Bills dated from Monday to Saturday, May 7-May 12, were opened on May 4, 1923, and the total amount applied for was £60,965,000. Tenders for Monday to Friday bills at £99 10s 10, about 20 per cent., and above in full, and for Saturday bills at £99 10s 3d, and above in full. The average rate of discount for Treasury Bills was £1 18s 8-29d. The amounts allotted were as follows:—In bills at 3 months, £33,500,000; in bonds, £1,500,000.

(a) Including Treasury Bonds.

4½% Treasury Bonds, 1931-33

Tenders will be received on Friday, May 11, 1923, for Treasury Bonds and Bills to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000, but, subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, April 25, 1923, amounted to 798 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of April was 103,956 barrels, equal to approximately 14,800 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to about 17,000 tons.

Reports and Notices.

The Earl of Bessborough, C.M.G., and Mr Walter Durant Gibbs (of Messrs Antony Gibbs and Sons) have been elected directors of the Brazilian Warrant Company, and the Earl of Bessborough, C.M.G., has been appointed chairman.

Mr John Howard Temple, of Liverpool, has been elected a director of the Equitable Life Assurance Society.

The Liverpool and London and Globe Insurance Company, Limited, notify the following appointments:—Mr W. J. Searis, deputy assistant London manager, to be an assistant London manager; Mr H. E. Farnol, district manager at Portsmouth, to be an assistant London manager; Mr E. C. Haigh, London fire superintendent, to be an assistant London manager; Mr A. Brown, accident superintendent, to be London accident manager; Mr J. W. Berry and Mr A. E. Marsden, assistant secretaries of the Central Insurance Company, Limited, to be also London foreign fire superintendents of the Liverpool and London and Globe Insurance Company, Limited; Mr C. A. White, district manager at Reading, to be district manager at Portsmouth; Mr A. Heber Burt, district manager at Croydon.

We are informed that the Coast Lines, Limited, have acquired the London Welsh Steamship Company, Limited, and that in future this company will be operated from the offices of the Coast Lines, Limited, 1 Seething lane, E.C. 3.

The registered offices of the Rajawalla Produce Company, Limited, have been removed to 32, Bishopsgate, London, E.C. 2, and the Ceylon and Eastern Agency, Limited, have been appointed secretaries.

It is announced that Mr E. Redmayne-Jones, of 411, Tower building, Liverpool, has joined the board of the Liverpool Marine and General Insurance Company, Limited.

Branches of the Meadow Dairy Company, Limited, have been opened at 15 Carolgate, Retford, Notts, and 141 Ladypool road, Spaldwick, Birmingham.

BANKS.

CREDITO ITALIANO.—The gross profit for 1922 amounted to 206,185,698 lire, and the net profit amounted to 38,793,103 lire, to which is added 3,422,725 lire brought forward from 1921, making an available balance of 42,215,828 lire. The sum of 10,000,000 lire is to be applied to extraordinary reserve. The full amount of the reserve will then reach 100,000,000 lire. Having deducted also the quota due to the board, the remainder of the profit will allow a distribution of a dividend of 9 per cent., leaving a balance of 3,064,104 lire to carry forward. The investment account consists of 10,818,257.75 lire in Government securities and other debentures, 37,033,176.35 lire in shares of railway and transport companies and banks, 48,238,280.80 lire in shares in other commercial and industrial companies, making a total investment account of 104,353,282 lire, against 113,257,404 lire at the end of 1921.

DUTCH BANK FOR THE MEDITERRANEAN.—The report for 1922 of this bank, which is a subsidiary of the Rotterdamsche Bank-vereeniging, and has a paid-up capital of 5,000,000 fl., shows gross profits of 1,175,267 fl. (1921, 889,471 fl.). Overhead charges came to 428,555.78 fl. (as compared with 702,110 fl. the previous year), resulting in a net profit of 755,581.64 fl., which is divided as follows:—Formation of reserve fund, 250,000 fl.; balance of preliminary expenses written off, 150,000 fl.; 5 per cent. dividend, including tax, 278,000 fl.; carry forward to 1923, 77,504 fl. In view of the preference given to Spanish banking institutions in the matter of taxation, it was decided to close down the Barcelona office at the end of 1922, whilst the Genoa branch has been transferred to one of the sponsors, the Dutch Bank for South America, which has more need of an office in Genoa.

INSURANCE COMPANIES.

EXCESS INSURANCE CO.—The 30th annual report for 1922 deals with the underwriting accounts for the three years, 1920, 1921, and 1922. These accounts are conveniently set out, to enable shareholders to ascertain the complete result of any one year without reference to previous balance-sheets. At the end of last year £55,000 was transferred from the 1920 underwriting account to the credit of profit and loss. That year's account is now closed by the transfer of a further sum of £58,667 to the profit and loss account, making a total of £113,667 in all. The 1921 underwriting account is running off, and the balance of £244,462 (or over 34 per cent.) is carried forward in full to meet third-year settlements. The premium income for the 1922 underwriting account is £574,243, again showing a reduction on the premiums for the previous year. The claims settled amount to £152,139, or only slightly over 26 per cent.

STANDARD LIFE.—The report for the year to November 15th last shows that 3,873 new life assurances were granted for £2,023,495 net. This compares with 3,170 policies, assuring £2,034,831, issued in the previous year. The net premium income was £878,713, against £907,539, and the expenses and commissions absorbed 20.2 per cent. of the premiums, as compared with 20.7 per cent. The life and annuity funds amounted at the end of the year to £13,533,104, an increase of £195,835.

WORLD MARINE.—The marine account of 1921 shows premiums of £254,100, first year's claims of £47,887, second year's claims (and on previous years) £174,523, and expenses £6,383. The sum of £30,000 is transferred to profit and loss, together with last year's interest of £27,878. The premiums for 1922 were £104,520, the first year's claims £40,080, and expenses £5,082. The marine fund at the end of the year was £330,282, as compared with £395,357 a year before. In the fire and accident account the premiums were £139,244, the claims £94,262, and the expenses and commissions £56,800. The sum of £13,581, including interest, was carried to profit and loss. The balance of profit and loss account, after reserving £15,000 for Government taxes, was £10,485. The directors recommend a final dividend of 12s a share, free of tax, making 35 per cent. for the year. This dividend will cost £35,000, against receipts from interest of £37,212.

MISCELLANEOUS.

THE LAUTARO NITRATE COMPANY, LIMITED.—The Lautaro Nitrate Company proposes to increase its capital by £3,650,000 to £4,000,000, with the objective of buying the control of the Lastenia Nitrate Company, "the largest nitrate producing company in Chile." Arrangements have been made to purchase 1,500,000 shares of the Lastenia Nitrate Company for £1,500,000 in cash, and an offer will be made to the other shareholders in that company to acquire their shares on the same terms. The Lautaro Company—with a capital of £350,000—proposes to issue £150,000, in the form of 30,000 fully-paid shares of £5 each, as covering shares to existing shareholders in the proportion of three new shares for every seven held. Shareholders will also have the right to subscribe for 20,000 of the new shares at par in the ratio of two new shares for every seven held at the present time. Lautaro Nitrate £5 shares at the end of March were quoted at £7 10s, they are now round about £4 10s.

TREDEGAR IRON AND COAL COMPANY, LIMITED.—In view of the requirements of capital for the new sinkings proposed to be undertaken, and in view also of the fact that certain moneys reserved by subsidiary companies for contingencies are no longer required for these purposes, it has been decided to add these reserves to the reserve of the Tredegar Company, and to recommend to the shareholders to capitalise the whole. The directors propose, therefore, to ask the shareholders for power to issue two new shares of £1 each, fully paid, for every £5 of capital held in the company. The directors propose to maintain the same dividend for the year ended March 31, 1923, as was paid in the previous year.

SULPHIDE CORPORATION.—During the four weeks ended on April 21st, 7,610 tons of ore and 1,802 tons of slimes were milled at the Central mine, producing 1,796 tons of lead concentrates (including 185 tons from the de-leading plant), which assayed 46 ozs silver, 67 per cent. lead, together with 2,741 tons zinc concentrates, assaying 10 ozs silver, 6 per cent. lead, 49 per cent. zinc per ton.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With a spell of fine warm weather experienced during the week, good progress was made with spring operations, and most of the seed has now been drilled. Early-sown oats are coming up fairly well in some districts, but in others are somewhat patchy. Winter cereals present a healthy appearance, and give every promise of a full average yield. Native wheat continues in light supply, both here and at provincial markets, and prices continue to move in an upward direction in sympathy with the general position. Suitable milling grades were held for 11s to 11s 4d, with inferior at 10s to 10s 4d per 112 lbs, free on rail. Imported grades are sparingly offered, and generally firmer, though towards the close of the week top rates were not maintained owing to the indifference of buyers. No. 1 Northern Manitoba quoted 52s 9d, and Barusso 62½ lbs 51s 9d, both ex ship to arrive per 496 lbs. The demand for floating and forward cargoes shows a falling off, and though sellers showed no undue anxiety to press, recent top rates were maintained with difficulty. Steamers of South Australian expected loading sold at 52s 6d, choice white Karachi afloat at 51s, Baril 62½ lbs, shipping or shipped, 49s 3d, all to U.K., and Rosafe 62½ lbs on passage at 50s 1½d to Portugal. Crop reports from the United States show some improvement, but estimates of winter wheat have been further reduced, while Spring sowings are expected to be smaller. In other exporting countries, conditions are generally favourable. Flour ruled firm but quiet. London standard straight run quoted at 42s, town households 40s, patents 44s to 45s per sack, delivered in metropolitan area. All English country straights 35s to 36s per sack, delivered to London stations. Imported continues quiet, but firmly held. Manitoba export patents range from 37s 6d to 41s 6d as to quality. Minneapolis good patents 41s, and Australian 37s to 38s, all per 280 lbs, ex store. Millers' offals quiet, broad bran quoted 7s 3d, ordinary ditto 6s 3d-6s 6d, middlings 7s 6d-7s 9d, bags included, ex mill, light oats 6s 3d, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 13s 9d, all per cwt, free on rail. Barley, English steady, while ranging from 8s 9d-11s 6d per 112 lbs, free on rail as to quality. Imported, fully steady. Californian quoted 45s to 48s 6d, Australian Chevalier 42s-52s, New Zealand 35s to 47s, all landed per 44s lbs. Persian 27s 6d, Plate 30s, Danubian 30s-30s 6d, all landed per 400 lbs. Maize steady. Plate, ex ship, 39s 6d, ditto landed 40s 6d, No. 2 yellow American landed 39s 9d, No. 2 American mixed, ex ship, 38s 3d, East African landed 38s 6d, and red Karachi ditto 42s 6d, all per 480 lbs. Oats, native steady at 9s to 10s 9d per 112 lbs, free on rail as to sample. Imported, quiet and occasionally the turn easier. Plate, f.a.q., ex ship, 25s to 25s 3d as to position, ditto landed 26s 3d, No. 2 Canadian-Western, ex ship, 28s 9d, ditto landed 30s, No. 3 ditto landed 28s, No. 2 Canadian feed, ex ship, 26s, ditto landed 27s, New Zealand A grade 38s 6d, ditto B grade 37s 6d, both landed, all per 320 lbs. Oatmeal quiet, London made, all cuts 18s, rolled oats, also whole groats, 18s, flaked oats, 20s 6d, ex mill. Ordinary Scottish oatmeal 18s 6d to 19s 6d, and American all cuts 17s to 17s 6d, per cwt.

is not far short of the maximum, as contracts placed some time ago reached the largest tonnage ever experienced in the history of the trade. These will take several more weeks to complete, and a fresh batch of orders is anticipated before the end of that period. Mills are busy on mild steel for export, and there is great activity in cold rolled strip and wire. Makers of railway steel are fairly busy. Outside mild steel the trend of business has been in a downward direction since Easter, and April operations are well below those of the preceding months of the year in fine steels, castings, forgings, tools, and cutlery and plate. The continued dullness of most of the engineering branches is a very unsatisfactory feature. Agricultural engineering is almost at a standstill owing to the loss of the great buying markets of Eastern Europe and South America, and makers have been compelled in self-preservation to direct their activities into entirely new channels. British farmers are too poor to buy implements this year, and are making their old machines serve for another season. A small proportion of the foundries are fairly well placed for work, but the rest are extremely quiet. Over a large portion of Sheffield industry there is a return to the stagnation of six months ago. There is an active market for all kinds of fuel. Coke is more plentiful for home use, but it still costs the user from 30s to 32s per ton. Steam and small coal is going into consumption as fast as it is produced, and there are no stocks at pits. Prices remain firm as previously quoted.

Our Glasgow correspondent writes:—The week ends with the general industrial position in this and other steel and iron districts as bad as it can be. The boiler-makers, as was feared, have been locked out, and all other relative producing and consuming branches are operating on restricted lines. Many thousands of hands have been already added to the unemployed list, and, from current appearances, it looks as if the numbers will be seriously augmented in the immediate future. There is still, however, a lot of work in course of execution, especially in shipbuilding and engineering, and its progress will absorb active attention for a period, gradually becoming less, unfortunately, and leading inevitably, if nothing satisfactory transpires in the interval, to an all-round stoppage of production. Before that stage is reached it is recognised that measures will be initiated for a modification of the position, but what will come of these no one can formulate a definite and conclusive opinion. Meantime, judging from the temper and attitude of the parties interested, much harm will have resulted, injuries inflicted that will not be readily, if ever, made good. As can be understood, and in the circumstances, trading in the iron and steel trades is on the quiet side, buyers and sellers in all relations waiting to see what will turn up. Scotch pig-iron makers have been fairly busy delivering material against old contracts. Amongst other despatches, they have just sent 3,780 tons of different brands to the Pacific Coast of the United States, and to replace these they have happily sold some respectable quantities. Home orders for foundry iron and hematites leave little to be desired at the moment. Quotations keep steady at about £6 7s 6d (steel works) for hematite, £6 2s 6d for No. 1 foundry, and £5 17s 6d for No. 3, each f.o.t. makers' works. Aluminium, c.i.f. Glasgow (home), is unchanged at £110, while ditto foreign has risen £5 a ton, at £110, for export. Bar iron makers are better employed, and are naming £12 10s for "crowns," Glasgow delivery. Boiler plates, Glasgow stations, £13; ship plates, 3/4 in. and up, £10 5s; sections, £10; light sections, £11; angles, £10 10s; hoops, £12; channels, £10 15s; and joists, £10 10s. Black sheet makers are pretty busy on 3/4 in. to 3/8 in. at £12 10s, and on galvanized iron, 24 b.g. (Glasgow), at £20. In the tube trade a moderate business is passing, and so is there in steel rails, wagons, rivets, bolts, and nuts, but all over consumers are operating cautiously. At Wednesday's iron market it was reported that Continental pig-iron makers were offering some parcels of medium qualities, but buyers were, on the whole, indifferent. Cleveland iron was also on offer at reduced terms, but resident consumers were not tempted. Coals were rather off demand, for home as well as export, but buyers were working for a break in values, which holders were not disposed to concede.

Our Cardiff correspondent writes:—The coal market is absorbing record outputs, but there has been an unmistakable lull in the demand during the past week or two. The majority of the collieries are not in any great need for new prompt orders. They are well sold, and, in many cases, still oversold, and they are abundantly supplied with shipping. All the docks are in a state of congestion, and demurrage cases are common. A fair quantity, however, of the contracted coal is being delivered to middlemen who are not covered, and who, in view of the comparative paucity of new business, are offering supplies at lower figures than those quoted by the collieries. The competitive scope of the middlemen is limited by conditions which, in some cases, prohibit them from re-selling on the market, and in other cases from supplying particular coals to closed foreign markets. Under conditions of depression violations of these contractual obligations are winked at, but when collieries find it difficult, under conditions of exceptional pressure, to meet all the demands made upon them, they are disposed to enforce the terms of their contracts with middlemen, and to refuse delivery when they discover violations of those contracts. Still, there has been this week sufficient free coal to produce a depressing effect on prices, and for spot or prompt shipment buyers have been able to obtain parcels at from 2s to 3s per ton less than those ruling a week or two ago. The volume of trade remains very considerable. Exports are showing record figures, and the foreign demand is being supported by record outputs from the collieries. This is usually one of the most productive periods of the year, and the pits have recently been yielding up to limits of their output capacity under a seven-hour day. Last week in the colliery owners asked the miners' representatives on the National Board to appeal to the Government to amend the Seven Hours Act to allow an extension of working hours in those

cases where employers and workmen jointly desired it. The proposal was rejected, and at Blaenavon this week Mr. Frank Hodges, the secretary of the Miners' Federation of Great Britain, stated that the men were unflinchingly hostile to a reduction in working hours, and that in their view the only way by which production could be increased was by greater mechanical and technical efficiency in the administration of the collieries. The miners' wages in South Wales have to remain at the minimum up to the end of June. The official audit certified a wage of only 20.05 per cent. on the standard rates, or 1.05 per cent. below the minimum. The miners, however, are now assured of an advance in July on the strength of the March and April audit, and the coalowners are now being practically arranged for the working of a third shift at the docks, and it is expected that the extended working hours will become operative during the next few weeks.

The approximate current quotations are as follows:—Best Admiralties, 39s to 41s; seconds, 37s 6d to 40s; best drys, 37s 6d to 40s; Black Veins, 37s to 37s 6d; Western Valleys, 36s to 37s 6d; Eastern Valleys, 35s to 37s 6d; best bunker smalls, 30s to 31s; ordinary cargo smalls, 24s to 26s; anthracite big vein, 45s to 47s 6d; machine-made cobbles, 52s 6d to 62s 6d; French nuts and stove nuts, 50s to 52s 6d; rubbly culm, 10s 6d to 17s 6d; coke for export, 70s to 80s; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 40s to 45s.; pitwood, ex ship, 28s 6d to 29s 6d. In the iron and steel trade the position is slightly easier. Minimum prices are unaltered, but the market prices are a shade lower than they were a week ago, and foreign demand, and particularly that of the Continent, for tinplates is less active.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Wool continues to sell remarkably well in London and in the colonies, and prices remain very firm, but very little response is seen in the consuming centres here. The piece goods trade is exceedingly restricted, and both in yarns and pieces British producers are being cut out by imported goods from the Continent, which can be sold so much cheaper on account of lower conversion costs and the advantage derived from the exchange. Until there is more doing in semi and fully manufactured goods, it is difficult to see how spinners and manufacturers can afford to buy tops and yarns on to-day's basis, and it is evident from the lull in new business that most firms are simply adopting a waiting policy. Prices are too high to permit of anything in the nature of speculative purchases, and current business is therefore mostly confined to the catering of small immediate requirements. Topmakers' quotations show little change on the week. They are still firm at last Thursday's rates, and in many cases 5s 4d is the quoted price of a warp 04's top. The trouble is that spinners cannot pay that figure as a general thing, for they find it practically impossible to get any more money for their yarns. Yet current quotations for tops are by no means too high if account be taken of the cost of wool bought in London this series of auctions. New business in yarns is patchy, and lacks bulk, and the fear is expressed that short time will have to be introduced if their fears do not improve during the next three or four weeks. As it is, short time is general in the combing industry, and the production of tops is in excess of the demand. The piece goods trade is unchanged. British wools are selling well at recent rates.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A very active week has been experienced at the sales in London, and prices have remained quite intact. Last Tuesday ample evidence was forthcoming, if such was wanted, of the great change which has come over the wool situation compared with the previous series, during which we called attention to the comparatively low prices ruling for some of the very superior clips from West Victoria. Throughout the whole of the March series only one brand (Hyde Park) touched 36d. Only after a struggle was 35d realised for such an excellent clip as EO grown upon Worriwryte. Last Tuesday the second portion of that clip was catalogued, and it realised 30d for the top line of combing, which compares very favourably with 35d made last series; broken made 35d, compared with 30d-31d in March, pieces 30d, and lambs 32d. Another excellent clip, JM/Moranghurk, touched 30d for the best parcel of combing, 34d for necks, 32d for pieces, and 31d for lambs. These prices clearly indicate a greatly improved market for these superior lines. Many lots withdrawn in March, and which have been re-catalogued this series, have made anywhere from 4d to 6d per grease lb more compared with the prices previously bid. Im-

porters have done better with their second-hand parcels, and prices are now often 10 per cent. higher than in March. Scoured Queensland merinos have also made exceedingly good prices, and show a decided improvement on the opening week. Several clips have sold at up to 50½d, while Dunlop touched 48d for combing, 57½d clothing, 55½d fleece, 50d broken, 44½d necks and pieces, 36d bellies and locks, and lambs 50d.

Of course, this is one of the best scoured clips from New South Wales, and was always a favourite with the Continent. Being scoured to perfection, the clip calls forth the best buying power of the entire trade. There is nothing whatever wrong with the position of merinos from the selling point of view, and though the home trade is not following prices in London, the time will come when wholesale piece buyers will be compelled to face the position and to purchase on to-day's basis of values if they intend to continue in business. Some entertain doubts about the possibility of the piece goods end rising to the occasion, stating that merinos are above an economic value from the home trade standpoint. This may be quite true, but the fact that the prices are being paid indicates that there is a demand for them even on to-day's level, and all things considered the position of merino wool is exceedingly strong.

Crossbreds are also moving well, prices being fully maintained. There is no mistaking the improvement which has taken place in this description of raw material. America is still buying moderately, for Bradford topmakers are taking the bulk of the crossbreds. Comeback wools continue to realise very big figures, while the improvement in medium crossbreds is mostly 12½ per cent. It is impossible to ignore the fact that the trade is taking crossbreds, and we do not think their confidence will be misplaced.

The annual statement of the activities of the British Australian Wool Realisation Association, issued by Sir Arthur Goldfinch, is well worth close analysis. The fact which emerges above all others in the data given is that the world's production of wool is not equal to what is being consumed, and as soon as the association's stocks are all cleared there will probably be a squeeze somewhere. It is more clearly evident than ever that consumers may look forward to having to pay more for raw wool than in the past, and however undesirable it may be at the present juncture to see high wool prices, we do not anticipate much, if any, relief in the near future.

MANCHESTER, May 3.

Rather a more cheerful tone has prevailed in the Manchester market during the past week, but it cannot be said that there has been any real increase in the turnover, either with regard to yarn or cloth. A large percentage of the offers from abroad has failed to materialise into actual business, and our customers do not appear to be inclined to raise limits. Business generally has been of a hand-to-mouth character. There has been rather a larger inquiry in cloths suitable for India, and earlier in the week some fair transactions were recorded, particularly in light cloths and fancy materials. Bids in grey steaps have had to be turned down. A large amount of machinery is still at a standstill, owing to the absence of fresh contracts. The demand for China has some-

what tapered off. Advices from Shanghai read dolefully. Buyers for the outlets of the Near East, South America, and the United States have not been altogether idle. The yarn section has continued featureless. The output in American counts has been in excess of the demand. Egyptian spinnings continue the best situated. Prices, compared with a week ago, are slightly easier.

VEGETABLE OILS AND OILSEEDS.

Linseed and linseed oil on the whole have been quiet, and although the former is steady at a lower level of values, the oil product has shown renewed signs of weakness, and prices have fallen away considerably. In addition to the absence of an effective demand for oil, either for home consumption or export, depressing factors have been reports of a very much larger area in America going under linseed, and a suspicion that America at the moment has overbought herself. Rumours that there were further orders on American account for oil have not been borne out by events, but the opinion is that when a favourable opportunity occurs, more business in this direction may be done. The fact that the shipments of Plate linseed to the United States so far this year have reached 300,000 tons indicates that the domestic production of oil will soon be increasing, and that there will be less dependence than heretofore on imports from Europe. Here, the market appears to be in a state of flux and suffering from the after-effects of a wave of speculation. Crushers are buying very little seed indeed, recent business for Plate being done at £20 April and £19 7s 6d April-May, and for Calcutta £21, April shipment. The latter has been done at £20 15s for shipment to London. Raw linseed oil at Hull has dropped to under £46 for spot and £45 for month.

Egyptian cottonseed is dearer, and the market fully steady. Cotton oils have been in rather disappointing demand, but are steady at lower values, and more inquiry noted for common edible and deodorised. Crude palm kernel oil is again easier, and offering at £42 10s per ton naked ex Hull mill.

The movement of linseed has continued in the past month on the substantial lines, so much so that the first four months of the year show that shipments of Plate and Indian aggregate 736,650

Directors: CUTHBERT E. HEATH (Chairman); GEORGE HEATH; ARTHUR BURNS; MONTAGUE EVANS.
Auditors: TURQUAND, YOUNGS & CO., 19, Coleman Street, London, E.C.2.
Secretary: F. E. JOHNSON.

UNDERWRITING OFFICE 10, ROYAL EXCHANGE, LONDON, E.C.3.
MOTOR CAR AND PERSONAL ACCIDENT DEPARTMENT 1, ROYAL EXCHANGE AVENUE, LONDON, E.C.3.
Underwriter: E. MERRICK TYLOR.

DIRECTORS' REPORT.

The Directors have pleasure in presenting to the Shareholders the 30th Annual Report of the Company, dealing with the Underwriting Accounts for the three years 1920, 1921 and 1922. These Accounts are now set out to enable Shareholders to ascertain the complete result of any one year without reference to previous Balance Sheets.

At the end of last year £55,000 was transferred from the 1920 Underwriting Account to the credit of Profit and Loss. That year's Account is now closed by the transfer of a further sum of £58,667 5s. 5d. to the Profit and Loss Account, making a total of £113,667 5s. 5d. in all. This figure, being in excess of 10 per cent. of the Premium Income for that year, is considered quite satisfactory in view of the conditions which prevailed during that period.

The 1921 Underwriting Account is running off in a normal manner and the balance of £244,462 13s. 1d. (or over 34 per cent.) is carried forward in full to meet Third Year Settlements. This should be fully sufficient for the purpose and leave a satisfactory surplus.

The Premium Income for the 1922 Underwriting Account is £574,243 15s., again showing a reduction on the Premiums for the previous year. This reduction is not unexpected and is due to the general trade conditions of the Country. The Claims settled amount to £152,139 2s. 3d., or only slightly over 26 per cent.

In respect to the alteration in the definition of our Reserve Fund, we have already paid in 1923, £175,000 for taxation. We are in dispute as to whether some of this will have to be returned, but, in any case, we think that the Shareholders must bear in mind that we shall almost certainly have to draw on our Reserve Fund for the payment of these back taxes.

It is proposed to pay a final Dividend of 2½ per cent., free of Tax, which, together with the interim Dividend of 5 per cent., free of Tax, paid in June last, makes a total of 7½ per cent., free of Tax, for the year.

The Auditors, Messrs. Turquand, Youngs & Company, retire, but offer themselves for re-election.

C. E. HEATH (Chairman),
ARTHUR BURNS,
MONTAGUE EVANS, } Directors.

THE MONEY MARKET.

QUITE inconvenient scarcity was produced on Wednesday, when four banks were said to be calling in money for balance-sheet or other purposes, and on Thursday the publication of the Bank return showed plenty of reason for this scarcity in the reduction of 4½ millions in the Government and Other securities, which had brought the Other deposits down to a low figure. Discount rates, which had been flabby owing to the extreme quietness of

the market, hardened appreciably, and three months' bank bills were quoted a shade under 2 per cent.

	May 11, 1923.	May 4, 1923.	Apr. 27, 1923.	Apr. 20, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discount/Call	1	1	1	1	1% (Jly. 13, '22)
Houses (Notice	1½	1½	1½	1½	1½ (Jly. 13, '22)
Market rate (3 months' bills)	1½	2	1½	2	..

The Bank return showed that the note circulation had declined by £415,000, and there had been a small increase in the stock of gold, so that the Reserve was £416,000 higher. Decreases of three millions in the Government and a million and a-half in the Other securities, and an increase of a million and a-quarter in the Public deposits, had all combined to deplete the private deposits, which were 5½ millions lower and stood at 102 millions. Currency notes outstanding were increased by £1,303,700 to £287,049,300, which includes £1,482,800 for notes called in but not yet cancelled. The fiduciary issue is £237,616,500, or £32,667,300 below the maximum.

The monthly statement of average weekly balances for April issued by the London Clearing Banks, which is given in full on a later page, shows for the first time for three months an increase in deposits, while a further expansion in loans and advances is also recorded. The table below shows the aggregate figures for the nine English banks:—

	Dec. 1921.	Dec. 1922.	Jan. 1923.	Feb. 1923.	March, 1923.	April, 1923.
Capital and reserves	115.9	116.0	116.2	116.2	116.2	116.2
Acceptances	65.3	72.9	78.3	78.8	79.2	78.0
Deposits (incl. undiv. profits, &c.)	1,818.6	1,684.7	1,682.2	1,643.9	1,596.4	1,606.0
Total Liabilities	1,999.8	1,873.5	1,885.3	1,836.9	1,792.5	1,800.2
Cash, notes, balance at bank, and cheques in course of collection	273.5	253.0	246.5	234.5	232.3	240.0
Money at call	105.7	106.0	108.0	103.0	104.4	110.5
Investments	343.3	384.5	382.0	373.4	357.4	351.3
Discounts	421.3	298.3	320.0	286.4	250.4	249.5
Loans and advances	762.3	732.7	726.5	736.5	741.6	744.4
Cover for accept., premises, &c.	90.7	99.0	102.3	103.1	106.4	101.5
Total assets	1,999.8	1,873.5	1,885.3	1,836.9	1,792.5	1,800.2

There is a further substantial decline in investments, and bills discounted are slightly lower, but the cash item has risen by nearly £8 millions, and money at call is over £6 millions higher.

THE STOCK MARKETS.

There has been a good deal of selling on the Stock Exchange during the past week, and prices are mostly lower, the buying movement in industrials having given way to a bout of realisations. Political developments on the Continent have overshadowed the Consol market, but the early closing of the lists of the New Zealand 4 per cent. loan shows that the investor is active, and led to improvement in Home Corporation and Colonial stocks. Home Rails were good at the beginning of the week, but failed to hold their prices. A further weakening in the price of the raw material caused weakness in the rubber share market, and oil shares suffered from liquidation to which Amsterdam contributed. The brightest features of the Miscellaneous section have been bank shares, shipping issues, and electricity supply stocks. The Mining markets have been so quiet that such selling orders as have come in have had an exaggerated effect on prices.

THE COMMODITY MARKETS.

Price movements in the commodity markets this week have shown no outstanding developments, and while in the majority of cases prices show a sagging tendency there has, in some directions, been a further rise. The wheat market has been inclined to weakness, but towards the end of the week there was more strength. Business has been quieter in the sugar market, and prices are unchanged. A feature has been the sharp fall in rubber which has dropped from 15 3/4d to 15 1/4d per lb. As a result of the fall in cotton rates, dealings in yarn and cloth have been restricted; a few sellers have been prepared to

accept slightly lower prices for manufactured goods, but the majority of buyers have adopted a waiting policy pending more settled conditions. Prices at the London wool sales have been exceedingly good, and although foreign competition has been responsible for the high values it is said that the statistical position is such as to justify the belief that prices will be maintained. The pig-iron market is passing through a quiet period. The boiler makers' dispute is adversely affecting both pig-iron and steel production. The general demand for steel is fairly good, although steel for shipbuilding experiences little request. Copper is down to £68 10s per ton, while tin has fallen from £215 to £208 per ton. Quotations in the South Wales coal market at the beginning of the week were weak. On Monday best Admiralties were 37s 6d per ton; towards the end of the week the price had improved to 41s 3d, other descriptions of coals moving on similar lines. Tanners again had to pay more for hides at the Bermondsey auctions. The boot trade is improving, Leicester and Norwich especially working hard to get out Whitsuntide orders. The tone in the oil and oilseeds markets shows some improvement.

FOREIGN EXCHANGES.

The foreign exchange market has again been quiet with very restricted dealings. The main feature of the week has been the steady fall in the New York rate from \$4.62½ on the 4th to \$4.60½ yesterday, the lowest figure since the early part of December last. To some extent the fall is accounted for by the gloominess of the political outlook in Europe, but the more important factors are the adverse movement customary at this time of the year in preparation for raw material imports, and, further, the rise in English price levels which, after lagging for some time behind those in America, have now caught up if not gone beyond them. On the whole, there would seem no reason to anticipate any sharp arrest in this downward movement, as the rate is not yet sufficiently low to tempt those who have bought American securities recently to take their profits on the exchange, but at the same time the rapidity of the fall may be diminished. The outlook for Germany is reflected in a further fall in the mark, which after intervention on Saturday last was brought back to 157,500, but rose again by yesterday to 182,000 as compared with 171,000 on the 4th. Inflation continues as rapidly as before, and the chances of an understanding with France seem as remote as ever. Forward marks are quoted at 16,000 to 18,000 marks per month over spot. The Paris rate has remained quiet, but with an upward tendency, being quoted yesterday morning at 69.90 as compared with 69.45 the week before, while Brussels has moved up from 80.40 to 80.90. Forward rates in Paris remain the same at 4 to 5 centimes per month above spot, in Brussels they have narrowed ½ centime to 2 to 3 centimes below. After steadiness for some time the Italian rate has moved up sharply from 94.60 to 96.50. Of the neutral exchanges Amsterdam, as usual, moving with the American exchange, has dropped from 11.82½ to 11.80½. Madrid also has improved somewhat from 30.38 to 30.30, while Switzerland has gone in our favour from 25.61½ to 25.65½. In Scandinavia Christiania moved up rapidly again through most of the week from 27.21 to 27.70 on the 9th, but yesterday had a slight recovery to 27.62½. It would seem that, although the banking crisis is far less acute, confidence has not yet been completely restored. Stockholm is unchanged at 17.35, but Copenhagen is rather better at 24.67½. Helsingfors at 168 is ½ mark higher. In Central Europe Vienna at 325,000 is still remarkably steady, and shows a slight tendency towards improvement, although it is unlikely that any material alteration in the rate will be permitted. Warsaw at 225,000 is unchanged, and Prague at 155½ is also the same. Bucharest at 960 is rather better, and Sofia also shows a slight tendency to improve. In the East the rupee at 15 1/4d is practically the same as last

week, after being slightly higher; the yen is a little cheaper at 2s 1½d. The silver market has been dull, with not much business, but prices have been brought down somewhat by offerings from China. Hong Kong is ½d cheaper at 2s 4½d, Shanghai ¾d cheaper at 3s 2½d. In South America Rio has fallen from 5 17-32d to 5 7-16d, Buenos Ayres from 42 1/2d to 42 1/4d. Montevideo at 41 1/4d shows a sharp fall from 42 1/4d last week, while Valparaiso has recovered from 36.50 to 35.50 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 5th:—

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Northern Ireland Exchequer ..	075	From Revenue	14,561
Land Settlement	039	Amount borrowed	3,185
Interest on War Debt, &c.	9,062		
Supply Services	8,400		
Increase in Balances	155		
Other Consolidated Fund	015		
	17,746		17,746

Revenue was £14,561,000, compared with £12,794,000 in the corresponding period of last year. Income-tax and Super-tax brought in £4,776,000, which varies little from the figure last year—namely, £4,650,000. Special receipts were £2,256,000, against £546,000, and accounted for the increase in the week's total revenue. Expenditure at £17,591,000 compares with £15,310,000 in the same period of the previous year. Supply services absorbed £8,400,000, against £6,200,000. Interest on War Debt at £9,062,000 was nearly £30,000 lower. Customs brought in £2,705,000, against £1,337,000 a year ago, and Excise £1,485,000 against £2,576,000. The week's operations increased the National Debt by £3,185,000, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	125	Public Department Advances	3,702
Treasury Bills	3,881	4% Treasury Bonds	4,280
National Savings Certificates	050	Sundries	909
Unemployment Insurance ..	750		
	4,806		7,991

The floating debt was reduced by £185,000 to £790,195,500.

FINANCIAL YEAR, 1923-24 (April 1 to May 5, 1923).

£	£
Total Expenditure .. 80,580,915	Raised by Revenue .. 91,228,974
Net Capital Repayments 13,934,271	Decrease in Balances 3,286,212
Total	94,515,186

ESTIMATES FOR YEAR 1923-24.

THE DIFFICULTIES OF THE ENTENTE.

THE statements made in Parliament by Lord Curzon and Mr Baldwin expressing regret that France and Belgium should have sent a reply to the German Note without making a serious endeavour to secure a joint reply from the Allies as a whole have created great uneasiness in Paris. This is not very surprising. To the French mind, which regards Great Britain as having abandoned France at the crisis of the Reparations problem, it appears that the country which has been left to shoulder the burden of enforcing its rights must be left a free hand to determine the basis of agreement with its debtor. This is, of course, an incomplete and illogical view of the situation. The direct interest which this country has in the problem of Reparations, and the responsibilities which Great Britain assumed in 1919 towards Europe—responsibilities which we have not either specifically or by implication disavowed—make it impossible that the problem can ever be settled without the concurrence of this country. The attempt to draw a distinction in France between the question of the occupation of the Ruhr and the Reparation settlement itself, and to say that the present exchange of Notes is related to the former problem only, is unsound, just as the attitude of Great Britain itself in refraining from either approving or disapproving the Ruhr adventure was and is untenable for any length of time.

However, in spite of the statements in the House this week, we venture to doubt whether there is, as yet, sufficient agreement between the British and French points of view to enable a real and useful reply to be made to which the Allies could have jointly put their signatures; and the possibility of restoring Allied unity which was destroyed by France's separate action in January is not brought nearer by such events as the unusually heavy sentence passed on Herr Krupp.

We have repeatedly insisted that the need of the moment is for a careful declaration by Germany's creditors of the points on which the German Note is unacceptable, and for a much clearer statement by Germany of such case as may exist for any figures she may put forward. It is possible that in the end the German figure may prove to be the maximum payable by her; but the question of amount is still in the region of speculation and estimate, and while it is a subject on which discussion can and should proceed vigorously, Germany has failed to state any reasonable grounds for the figure which she proposes. In the absence of any authoritative argument, the opinion of the world generally, and even in some quarters in France, continues to be influenced unduly by the course of events, so that the total is continually being modified by a very cumbersome and unscientific method of trial and error. On the other hand, Germany's main creditors naturally feel resentment at the too frequent assumption that, because in fact Reparations are not being paid beyond a certain amount,

Germany therefore cannot pay. There is no prospect of a sufficient change of opinion in France on this subject except by an objective and careful study of the economic facts and possibilities. In this respect we think that Germany has done herself very great harm by suppressing such vital statistical indications of her internal situation as the output of iron and steel. The withholding of such figures naturally provokes the assumption that she is much more prosperous than she wishes the world to believe. If Germany's case for fixing the Reparation total at a sum near the British proposal of January or even at her own latest figure is a good one, and if she really wishes a settlement of the question, it is imperative that authentic information, which can be checked, as to her productivity to-day should be forthcoming.

Germany has certainly bungled. Nevertheless, in our opinion, France has also made bad use of a good opportunity. The whole world, and particularly those countries who, like Great Britain, are co-creditors of Germany, cannot afford to see good chances thrown away. The outside world is not primarily interested to-day in questions of *amour propre*. It is, first and foremost, interested to see an approach to a settlement of the reparations problem, which must be settled some day, but remains a more formidable element of international insecurity every day that it remains unsolved. It is, moreover, at least equally impatient of the blank and unhelpful *non-possumus* on the one hand, as of the inadequate and sketchy offer on the other. Germany opened a little way—clumsily and tactlessly perhaps—the door which the whole world wants to throw open wide. M. Poincaré has taken a grave responsibility in slamming it without waiting even the few hours needed for consultations with his fellow-janitors. Through him France has once again failed to show consideration for the opinions and interests of other nations, even those who helped to save her from German conquest.

The chances of good understanding are by no means improved by events in another portion of these much-disputed Rhineland marches. The administration of the Saar territory for 15 years was vested by the Versailles Treaty in a Commission placed under the authority of the League of Nations. In 1935 a plebiscite of the population will decide its future government. For some long time past there has been uneasiness as to the conduct of affairs by this Commission; but a decree put into operation by the Commission on March 12th has turned uneasiness into anxiety and indignation, which was strongly voiced in the House of Commons on Thursday by Mr Asquith, Lord Robert Cecil, and Sir John Simon. This decree provided repressive penalties for a list of offences, including such terrible crimes as criticism of the Versailles Treaty or of the League of Nations, and gave power to prohibit meetings at which such criticism might be made. Mr Asquith, whose indictment was in general endorsed by Lord Robert Cecil, said: "One might ransack the annals of the history of the Russian treatment of the question of Poland without finding a more monstrous specimen of despotic legislation, or an example more suppressive of the ordinary elementary rights of free citizenship than is here to be found." We do not find Mr Asquith's words too strong, and that such an edict should go forth with the authority of the League of Nations is a thing that cannot be tolerated. Anything more calculated to destroy that authority can hardly be imagined. As co-member of the League we cannot evade responsibility. But it appears that France has succeeded in dominating this Commission, and the blame in the first instance is hers. The one member of the Commission who has played a lone and courageous hand on behalf of proper government appears to be Mr Waugh, the Canadian delegate, to whom full credit should be given. The affair was brought to the notice of the last League Council meeting at Geneva, but no definite action was taken. The British Government are now sounding their co-members with regard to having an official inquiry made into the affair. Consultation is certainly desirable, but the matter is too serious to admit of any unavoidable delay, and, in our opinion, the British Government should insist on the matter being again brought, forthwith, before the League Council, when British disapprobation should be unequivocally and

THE SAVINGS MOVEMENT.

ALWAYS an unpopular virtue, thrift is under an especially thick cloud in these times, owing to the ineradicable delusion that by spending money people give employment, which leads to the pleasant conclusion that self-indulgence is a public duty in times when a million and a quarter of our workers are unemployed. Spending money certainly gives employment, but it does so not a whit more than saving, by means of which money, instead of being devoted to satisfying the needs and whims of individuals, is put at the disposal of industry, and is spent by it on materials and equipment and fixed capital, and so not only gives employment, but sets and keeps going the machinery by which mankind is fed and clad, and given such comforts as his quarrelsome temper gives him time to collect and consume. By means of saving, if the money saved is lent abroad, not only is our export trade helped, but our impoverished neighbours are enabled to buy goods from us that will restore their equipment, bring them back to economic health, and make them the solvent and ready customers that they were before the war.

These things being so, it is highly satisfactory that the efforts of the Savings Committee, whose success during the war was one of the bright spots in our war-time financial record, should have been continued since the war ended, with results that have been even more striking, in view of the natural reaction towards extravagance and self-indulgence, and the period of depression and unemployment. When we also remember how much of the work of the Savings Associations throughout the country is done by voluntary helpers, and how easily their effort might have been expected to wane and slacken when the incentive of "feeding the guns" was no longer present, it is certainly a remarkable evidence of widespread public spiritedness that all over the country people can still be found to continue the very thankless work of organising thrift, and to do so with the astonishing success that was shown by the figures given by Colonel Amery at the meeting at the Mansion House last Wednesday. This was a meeting organised to further the savings movement in the City, and was to have been addressed by the Chancellor of the Exchequer, who, however, was kept tied to the House of Commons owing to the absence of the Prime Minister, and so had to be represented by the First Lord of the Admiralty, who opened the proceedings with appropriate eloquence. He might, however, have been more accurately briefed when about to talk on a subject in which he naturally needed to be coached. Colonel Amery implied that the £7,000 millions of debt which is our legacy from the war represents the value of our wealth destroyed and wasted during the course of the contest, and that whatever was done by way of capital levy or otherwise to evade or avoid the burden of debt, that destruction and waste would still leave a gap in the national economy that no ingenuity could fill in except by means of the thrift and saving which the meeting had been assembled to promote. But this is surely an exaggerated view of our loss and impoverishment owing to the war. The war debt represents a mortgage on our national resources held (for the most part) by certain members of our community who during the course of the war placed more of their incomes and property than did the rest of us at the disposal of the Government to be spent on the war. If the war had not happened, it is surely certain that a large part of the money spent on it would have gone on purely frivolous and luxurious private expenditure—much of it possibly mischievous, and so would have been wasted in at least as true a sense of the word as it was when it was spent on securing our national existence, to say nothing of the "cause of liberty and justice." The true measure of our national impoverishment is, surely, not the figure of our war debt, but the extent to which our productive power has been reduced—and is it certain that our productive power would show any reduction at all if it could find solvent customers for all its output?

Opportunely enough in the week in which the Mansion House meeting was calling attention to the savings move-

ment and all that it has done and has yet to do, the report has been issued of the Committee of Inquiry into Savings Certificates and Local Loans, &c. (Cmd. 1865, 6d net). This was a Committee appointed last November to inquire into the arrangement by which half the proceeds of Savings Certificates were issued from the Exchequer to the Local Loans Fund, and to report whether, having regard to the probable future requirements of the Fund, this arrangement should be altered or continued, and further to report on future relations of the National Savings Committee, the Scottish Savings Committee, and the Post Office and Trustee Savings Banks. Originally the whole of the proceeds from the sale of Savings Certificates was received by the Exchequer, but early in 1920 the Savings Committee submitted to the Treasury certain proposals designed to link up the savings movement with the finance of local authorities, so as to enable these authorities to finance the large after-war expenditure, especially on housing, with which they were faced, and at the same time to maintain the pace of the thrift movement, which was inclined to slacken owing to the withdrawal of the war incentive. Legislation was accordingly obtained in the Finance Act of 1920, embodying a scheme under which half the gross proceeds from sales of certificates after September 30, 1920, was made available for loans for local authorities, being handed over to the National Debt Commissioners for that purpose. There is no doubt that by this arrangement the interest of local authorities in the savings movement has been markedly increased, and Lord Islington, the chairman of the Savings Committee, was emphatic in his evidence to the effect that the savings movement would not have achieved its present position, when once the war stimulus had passed, without this support and active co-operation of the local authorities; and the reporting Committee is convinced that if the savings movement is to prosper in the future as it has in the past it is essential to maintain the goodwill of local authorities and the practical assistance that results from it. At the same time, the effect of the arrangement on the Exchequer has not been fortunate. In the first six months of its currency the gross proceeds of certificates were £20,370,000. Half these proceeds, £10,185,000, had to be issued to the Local Loans Fund, and during the same period £13,450,000 was disbursed in repayments of certificates, excluding interest. Thus in the first six months of the scheme the Exchequer had to issue three and a-quarter millions more than it derived from new sales of certificates, and this position was all the worse because it appears that the Local Loans Fund does not really require the money. The Committee thinks it clearly indefensible that the Treasury should be required to invest half the proceeds of certificates in Local Loan stock if that money is not really necessary for purposes of the Fund. It accordingly suggests that the obligation of the Treasury to issue half the gross proceeds of Savings Certificates to the National Debt Commissioners should be revoked, thus making the whole proceeds of certificates applicable to the repayment of debt; at the same time, in order to maintain the goodwill of the local authorities, it is recommended that the arrangement should be continued under which an authority may apply for a loan from the Local Loans Fund up to the equivalent of half the gross sales of certificates in its area.

The question of the future relations of the Savings Committee, the Scottish Savings Committee, and the Trustee Savings Banks was referred to a sub-committee. The point in its report that is of most public interest was the contention by Sir Thomas Jaffrey, actuary of the Aberdeen Savings Bank, in a précis of evidence furnished to the Committee, that out of the total of 575,000,000 certificates sold up to March 31, 1922, the number purchased by the small investor is only some 50,000,000 or 60,000,000. He maintained that a security offering a return of 5½ per cent., as was the case of the certificate issued at 15s 6d, with immunity from income-tax, required no propaganda to secure its popularity with the income-tax payer, and he accordingly contended that it is at least doubtful whether the results achieved by the savings committees are commensurate with the cost involved. This very disconcerting contention, however, was by no means accepted by the Committee, which was able to show good reason for its belief that at least half

the certificates sold represented subscriptions by those classes of the community for whom this form of saving was primarily designed. The main Committee in concluding its report pays a handsome tribute to the "invaluable service" rendered by the national savings organisation with its thousands of voluntary workers. It states very truly that the power for good which can be exerted by an organisation of this nature is incalculable, and hopes for the beginning of a period of yet greater prosperity in the whole thrift movement. This hope we heartily endorse.

THE OUTLOOK IN TURKEY.

(BY A RECENT VISITOR.)

As fast as prestige has been lost by the British Empire in the East during the last three years it has been gained by Angora. Therefore, what Nationalist Turkey does to-day the neighbouring Muslim nations are likely to do to-morrow, and since for the last century Great Britain has invested (imprudently, perhaps, but irrevocably) in Oriental dominions, the present trend of affairs in Anatolia and Constantinople has an intimate bearing upon our "Imperial destinies."

The most striking general impression resulting from a rapid journey last month, through Constantinople to Angora and Smyrna, is that the Turks are at present more interested in economics than in politics. Two years ago questions of frontiers were absorbing their attention. By now these have been settled substantially in their favour. The only exception is the Vilayet of Mosul, and here political motives are certainly still in the foreground, for the Kurds, and not the oil, are the Turks' objective. They feel that they cannot afford to leave Kurdistan half inside and half outside the boundaries of Turkey, and in order to recover political control over the southern Kurds they are even willing to leave the economic control of the Mosul oil to British enterprise. But this is an exception that proves the rule, for the Turks still rashly hope to assimilate the Kurds to their own body-politic, while they have definitely renounced all ambitions in the Arab provinces or in the Balkans. This may be believed with some confidence, not so much because the Turks give assurances to this effect, as because their interest is visibly becoming concentrated upon questions of internal development. The ascendancy of pure Nationalism over their minds is the explanation of this recent tendency. "Pan-Islamism" and even "Pan-Turanianism" are out of fashion. The Turks are tired of fighting the battles of their co-religionists and kinsmen, and when once they have secured the national frontiers which they have marked out for themselves in their National Pact, they are not anxious for adventures beyond them. Possibly they aspire eventually to be *primi inter pares* among a group of independent Muslim national States, stretching (say) from Tunis to Afghanistan. But Turkey can hardly play this part if she remains a depopulated, poverty-stricken, and illiterate country. Even, therefore, on the grounds of her future international position, Turkey's internal national reconstruction has to be placed first on the order of the day, and—last month, at any rate—the "Chester Concession" was a more popular topic of conversation than the second Conference at Lausanne.

I was in the strangers' gallery of the National Assembly when the "Chester project" was debated. A lengthy discussion was expected, but the scheme had been previously examined by several of the standing Parliamentary Commissions; the criticisms of private members were answered in detail on the Government's behalf by the distinguished railway-engineer Mukhtar Bey; and the Bill went through. How far the leading members of the Government believe in it, it is difficult to say. The concessionaires' offer to Turkey seems almost too good to be true. There is no kilometric guarantee, though some of the projected lines (for example, Trebizond-Erzurum) could hardly repay the cost of construction, and the whole concession and installation is to revert to the Turkish State without compensation to the company after 99 years. The company's *quid pro quo* is

the monopoly of mining rights for the period of the concession in a zone extending 20 kilometres on either side of all their lines. The value of this privilege remains problematical until a systematic survey has been made. On the other hand, the company are said to have deposited only \$50,000 caution money, and if their survey is disappointing they are entitled to withdraw, so that they need not very seriously burn their fingers. It is difficult, indeed, to believe that those streams of American gold, which refuse to descend upon Europe, are going to pour down upon the still more distant and disturbed land of Anatolia. That, however, and nothing less, is evidently the expectation of a majority of the Turkish people. Whether it is their imagination or Mr Chester's eloquence that has run away with them I cannot say, but the American concessionaire has undoubtedly become a Turkish *deus ex machina*. He is to send down from heaven a new Angora, as comfortable as Washington, for the unfortunate deputies and officials who have squatted in the old Angora for the last three years; he is to restore the ruined towns and villages of the war-zone with a wave of his magic wand; he is to give the new generation technical instruction; and, meanwhile, he is to keep his accounts in Turkish and employ an almost exclusively Turkish personnel. The "Projet Chester" corresponds so aptly to the national needs and desires of the moment that the Government were bound to take it up in the Assembly, and to stand by it at Lausanne. The Turkish people—exhausted by war, massacre, eviction, and devastation, and at the same time freshly fired by the idea of economic progress—is sucking this grandiose scheme like a piece of sugar. One may laugh at their naiveté, but when one sees the state of the country one realises the pathetic side of it. No doubt every nation has to purchase its experience dearly at the beginning of its economic career.

The effect of the "Chester Concession" upon Franco-Turkish relations has been destructive, for whatever may be the legal status of the previous French railway concession, each party genuinely believes that it is being treated outrageously by the other. The Turks have concluded that the French are Shylocks, and the French that the Turks are incurable fools or knaves in economic affairs. "What can you expect of such people?" a French friend of mine at Constantinople shouted to me; and he flourished in my face a copy of the economic National Pact, the offspring of the recent Turkish economic congress at Smyrna. After glancing through the document, I suggested to him that the Turks had been studying his compatriot, Dr. Coué. The style of this Pact was somewhat as follows:—"The Turk is not lazy but industrious; the Turk is just as much interested in economics as in politics or war; the Turk is just as capable of being a good engineer as the Greek, Armenian, or European," and so on through a whole series of articles. Our Western devotees of auto-suggestion could no further go, but the Turk has shown practical faith in his spell-binding. Having decided that he must learn to swim in the mighty river of the Western economic system, and that he can do it if he tries, he has not lingered, repeating incantations, on the bank, but has thrown himself boldly into the water. He has turned out the Greek and Armenian minorities wholesale; he is frightening away Western enterprise by abolishing the Capitulations; and he is thus leaving himself no alternative but to do for himself what others did for him before.

Will he "make good"? Some light is thrown upon that question by what is happening on the railways. The traffic managers of the French and the British railways, which run into the interior from Smyrna, both told me that they had changed 90 per cent. of their staff simultaneously, and the Anatolian-Baghdad line has changed its executive as well—a revolution which must be unique in the history of railway management. The permanent way, moreover, has been systematically wrecked in the course of the recent military operations, and much rolling stock and many locomotives have been destroyed. The greater part of the system is still isolated by broken bridges from the coast, so that it is difficult to transport new material or even coal (the Anatolian railway is depending entirely upon wood fuel). Yet, with a good deal of creaking and groaning, the traffic crawls along. On the British railway instruction courses have been organised for the new

Turkish staff. In so far as technically trained Turks have been forthcoming already, they have mostly been provided by the Army (which, in Turkey for the last century, has been the principal channel of Westernisation). The English and French railway experts praised the efficiency with which the Turkish military engineers had built a temporary bridge over the Maeander, and had run a decauville round the gap where two big bridges are down between Ushag and Alasbehr. Judging by the railways, I should prophesy (if a hasty and amateur judgment has any value) that the Turk will not go under, but that, after much splashing and spluttering, he will emerge from his self-imposed ordeal as a fairly competent swimmer. But there is one thing that may hang round his neck like a millstone, and that is Constantinople.

If Anatolia were starting unencumbered, like Greece in 1831 or Bulgaria in 1878, she could afford to learn her economic lesson by half a century of trial and error, for a primitive agricultural country has always a margin of vitality to spare. Not so, however, a complex urban centre like Constantinople; and the economic life of Constantinople is being profoundly dislocated by the Anatolian Revolution. Formerly, this city of a million souls lived on the income of two classes—the Turkish officials in the Government offices in Stamboul and the foreign business community in Pera. The offices have now been closed and the officials retired without salary, owing to the abolition of the Sublime Porte and the transference of the Sultan's sovereignty to the Assembly at Angora; and, across the Golden Horn, the business interests, after being hard hit by twelve years of war and by the closing of the Russian, Balkan, and Anatolian hinterlands, are being thrown into a panic by the threatened abolition of the Capitulations. Anatolia is jealous of Constantinople, and there seems no place for the imperial capital in the new national state. Possibly, in the long run, Constantinople will reassert her ascendancy—especially if Mr Chester's town-planning schemes at Angora prove abortive. Meanwhile, she is likely to be driven along the same downward path as Vienna and Petrograd, and that is bound to react upon the entire economic life of the Turkish state, for the Constantinople area contains at least one-seventh of the total population. "We are in just the same position as the foreigners," a Constantinople Turk remarked to me a few days ago; and though this feeling will not perceptibly affect the present elections, it will certainly find political expression within the next two years. Economically, as well as politically, Constantinople will prove to be the Achilles' heel of Nationalist Turkey.

MILK SUPPLY AND PRICES.

Milk is almost as essential to human existence as bread. It is the first food of the infant, and often the last food of the aged, and throughout life, in one form or another, it is an indispensable part of the people's diet. It is humiliating to think that its supply depends on a conspiracy of petty larceny against the cow, or, more precisely, the calf. We can only plead that the production of milk in excess of the requirements of calves is the result of the enterprise of man, who has cultivated the milk-producing propensities of the cow, and regards the calf as an unfortunate but unavoidable incident. At the present time the Ministry of Agriculture calculates that, after providing for the calves, British cows produced last year 1,320 million gallons of milk, of which about one-half was consumed as milk, the rest being made into butter, cheese, and condensed milk. The consumption of liquid milk, on this calculation, amounted to an average of about one-third of a pint per day per head of the population. From the point of view of the cow the quantity is large; from that of the public it is lamentably small.

It is commonly alleged that the consumption of milk in this country compares unfavourably with that of other countries. There is practically no statistical evidence on which such a statement can be based, though there is good reason to believe that the *per capita* consumption is higher

in the United States—or, any rate, in a large part of that great country. It is, at any rate, evident—except to a few medical men—that an increased consumption of milk, especially by children, would be advantageous. Two reasons are sometimes given for the present low consumption. One is inappreciation of the food value of milk, and the other is fear of its dangers as a vehicle of disease. It is doubtful if either of these causes has much real influence. The value of milk in sickness and in health is well known to the public, and the belief in it is based on the practical experience of generations. The occasional diatribes of dietetic theorists reach only a very limited section of the community, and convince only those who are naturally sympathetic to eccentric opinions—a class, happily, which does not include many mothers. The laborious and persistent efforts of hygienic enthusiasts to demonstrate that there is "death in the cup" of milk have had, perhaps, a greater measure of success. Many timid persons, no doubt, refrain from drinking raw milk because of their conviction that it invariably contains the germs of tuberculosis, and frequently those of diphtheria. To be consistent they should refrain, on similar grounds, from breathing, or should at any rate habitually wear a protective mask or respirator. But after all, the mass of the people are not particularly credulous or timid, or, as hygienists would, no doubt, put it, not sufficiently careful. The main reason why more milk is not consumed is much more simple. The price is too high, and the distribution is elaborately ineffective.

A Report (Cmd. 1,854) recently published, on the price and distribution of milk furnishes for the first time, definite information on this subject. The public have long been curious to know the facts, and in this document they are set forth clearly and concisely. Incidentally the interim report of the Departmental Committee on the Distribution and Prices of Agricultural Produce provides a good example of perverse economy. An inquiry of wide public interest is undertaken, and a number of busy people gratuitously spent time and trouble upon it, and collect a large amount of important information. If this is worth while, as it is, the least the State can do is to ensure that the results are made readily accessible to the public. Under the present system, which still squanders tens of thousands on things which "never would be missed," the few hundreds necessary to give publicity to the information laboriously collected cannot be provided, and the public who wish to know the true results have to buy the Report at a price which is, relatively, exorbitant. The whole question of the accessibility to the public of information which is now compiled at great expense, and then to a large degree, for all practical purposes, suppressed, needs reconsideration. Such a report as this, on a subject of intimate interest to every householder, ought to be available freely (or at a merely nominal price) to every citizen who desires to read it. When that complete overhaul of the machinery of Government takes place, which is so long overdue, this is a subject which needs attention. To arouse an intelligent interest in the government and administration of the country is one of the imperative, as it is one of the most difficult, duties of a democratic State. Our present system presents every possible obstacle to those who wish to be informed.

The facts as to the price of milk during the past ten years are given in considerable detail in the Report. Briefly, they may be summarised thus:—

	Producers per Gallon.	Distributors per Gallon.	Total per Gallon.
January, 1913	0 10	0 6	1 4
December, 1918 (maximum) ..	3 4	0 8	4 0
December, 1922	1 8	1 0	2 8

These are London prices, but particulars are given for a number of other towns which are in substantial agreement. It will be noticed that these are all winter prices, and they show that compared with the pre-war level the public was paying twice as much, and also that producers and distributors alike were receiving 100 per cent. more. The Committee report that the "new and governing factor" in regard to producers' prices in England and Wales is the agreement made in September, 1922, between the National Farmers' Union and the National Federation of Dairymen's Associations. In terms this applies only to

London, but, in effect, its influence is widespread. Shortly, it gives the farmers a winter price—October to March—of 1s 8d, and a summer price—April to September—of 1s per gallon. In all cases the price includes delivery at a London station, the railway rates ranging from 0.78d per gallon up to 20 miles, to 2.34d above 150 miles. In Birmingham and some other places the winter price to the farmer, under similar conditions, was fixed at 1s 6d per gallon. The agreements include certain stipulations as to the terms on which "surplus" milk—the bugbear of the milk-selling farmer—may be disposed of. The Committee make no attempt to examine the adequacy of the price received by farmers—a very complex and thorny subject. They assume, no doubt reasonably, that the agreements would not have been made at a price which was unremunerative. In any case, a price agreed in September last is not likely to be less remunerative now. The Committee discuss pretty fully the cost and conditions of distribution. In London, as noted above, the distributive cost is 1s per gallon, of which 4d goes to the wholesaler and 8d to the retailer. They express the definite opinion that the former sum is excessive, but with regard to the retailer's margin they do not consider it more than is necessary to provide a living "for the small retailer who relies entirely on the sale of milk for his livelihood." They condemn unreservedly the system of door-to-door delivery of small quantities, and the wasteful overlapping of distributive agencies as we know it, but they conclude that, in existing circumstances, "no acceptable alternative has been devised."

The net result of what is, on the whole, a very painstaking and conscientious investigation, is that no hope of any reduction in the present price of milk is offered. The Committee refer to the limitations of our coinage system, which they suggest preclude reductions in retail prices by "smaller amounts than one penny per quart." Our coinage system, no doubt, has defects, but this assumption is hardly justified. After all, the halfpenny and farthing exist, and in the drapery business, for example, they are very much utilised. Is there any logical reason for excluding them from the milk business? Only a very small proportion of milk is sold over the counter, even in the poorer districts. Indeed, the door-to-door delivery is not a cash system, and consequently the coinage difficulty exists only to a limited extent. It does not prevent the use of farthings in the price of bread, and there is no reason why it should do so in the case of milk.

RUBBER AND INTERNATIONAL POLITICS.

(BY AN AMERICAN CORRESPONDENT.)

As rubber played its part in international politics during the war, so now again it is beginning to make its appearance in that fruitful field of difficulties and disputes. Readers of the *Economist* need not be told of the controversy between British, Dutch, and American interests over the oil industry, and the disturbing manner in which trade rivalries are permitted to involve their Governments in political discussions, apt to develop into acrimonious disputes. A similar state of affairs, arising from entirely different circumstances, is taking place in the case of rubber.

For present purposes the case of rubber can perhaps be best considered in comparison with oil. The oil industry is controlled by a comparatively few very powerful companies, who direct and superintend the whole operation from production and refining to the marketing and distribution of their products to the consuming public. These companies are therefore in a position to protect themselves and their markets, and they do not indulge in that expensive uneconomic luxury of "cut-throat" competition. Rubber, on the other hand, comes from many thousands of individual producing units of greatly varying size, situation, importance, and conditions, and under the most diverse control. As a raw material it is only sold to manufacturers, and has to pass through many technical processes before distribution to the public. The larger

producing estates are mainly controlled by British, Dutch, Belgian, and French companies, and, in addition, there are Japanese and Chinese estates in Malaya, besides a great many small gardens of a few acres only in native holdings. Between no appreciable section of the producers, nationally or otherwise, is there any practical co-operation on the most important problem on which their prosperity depends, the marketing or value of their product; there is no leadership worthy of the name, and vested interests and jealousies are so apparent that there seems little reason to expect any possible combination for any constructive purpose. They are content merely to produce, and leave to others, of whom they know little or nothing, the question of finding a market for their crops. When faced with such a crisis as has been experienced during the last two or three years, British producers could find the only possible remedy in an appeal for Government assistance, and even in that there was nothing like unanimity.

These remarks are certainly not intended as criticisms on a body of men who have done so much in the development of a great new industry; they are believed to be a correct representation of the facts, and are admitted by many. The periodical difficulties under which rubber has suffered have been almost exclusively due to the want of cohesion amongst producers, and there is no reason to suppose that matters will be different in the future. Now, for good or evil, the British producers have succeeded in securing Government assistance in enacting the Stevenson Restriction Plan. The arguments for and against that plan have been fully discussed elsewhere, and need not be dealt with here; but obviously it is a direct Government interference in an international trade, and for the express purpose of raising the price of a commodity largely owned or controlled by British interests, and consumed to a predominating extent in America.

Now, while many of the American rubber manufacturers have shown a remarkably sympathetic consideration to the troubles of the producers, and are not unwilling to give the restriction plan a fair trial, largely in the hope that it may be the means of influencing less instability in price fluctuations in the future, strong opposition is developing from others. They argue that the Restriction Enactment is an arbitrary Government interference between seller and buyer to overcome the operation of the law of supply and demand; they draw a broad distinction between protection by tariff for national revenue and support of domestic industry on the one hand and the enactment, which obviously was not intended for national revenue, but merely to raise the price of something like a British monopoly, and mainly at America's expense, on the other. But, above everything else, the American consumer fears the power that the enactment inevitably places in the hands of speculators. This is no idle fear, as bitter experiences in the past amply prove.

Naturally, there are many cross currents in all the various discussions which take place on the subject. Interests only indirectly concerned in rubber—e.g., the motor manufacturers—have taken alarm, politicians "mix in," and the American Administration is induced to appropriate \$500,000 for what is in effect an attempt at reprisals. The Press takes up the tale, and once again the main-in-the-street is regaled with accounts of the insidious and unscrupulous methods of the British Government in bolstering up their commercial advantages at the expense of others, particularly America. It is curious to note that the same consequences, politically speaking, have arisen from the operations of the highly centralised and powerful oil interests as from those of the unorganised weakness of rubber producers.

It has been said above that the American rubber manufacturers, as a body, were encouraged to regard restriction in a sympathetic spirit in the hope that it might promote stability. In spite of a certain class of politicians and Press here, there is an undoubted willingness on the part of business men in general to rely on the British word and sense of fair-play. The manufacturers, as a whole, were quite willing to accept assurances from the producers that a sufficient supply would be available as required; and if the estates required 1s 6d per lb to justify normal increase of production and planting, they were raising no serious objection. Therefore, since restriction was legalised they have been buying their normal requirements

steadily and paying current prices without complaining. Having done so, however, they are suddenly faced with the realisation that no restriction of output is apparently in force. For, notwithstanding the reduction in the London stocks, the volume of shipments from British Eastern Colonies since the restriction period is shown to be upwards of 40,000 tons in excess of the 60 per cent. of the official standard production on which they have been relying. Rubber's best friends here are bewildered, and asking themselves where they stand. Once again it appears that the speculators have scored—firstly, in raising prices on the foundation of restriction; and then, when it appears to be non-existent, breaking the market and making the manufacturer's cost prices look foolish. Instead of stability either side of 40c a lb, a weak market at little more than 30c. Naturally, he is disgruntled, and his manufacturing policy thrown into confusion just at the time when his consumption and sales to the public are proceeding at record limits. It is profoundly to be hoped that before this article appears the Colonial Office will have published a straightforward explanation of the large discrepancy between their official limitation of exports and the actual shipments. Otherwise, to the ranks of those who are always prepared to see sinister motives in British politics may be added a body of men who have proved remarkably reasonable and sympathetic to the producers' difficulties.

OIL.—II.—THE WORLD'S RESOURCES.

To recapitulate, the index numbers which we gave last week indicated that the production of oil since 1913 has been increasing at the rate of 15.7 per cent. per annum, and the consumption of oil at the rate of 12.3 per cent. per annum—taking the United States as an index of the world situation. For the purpose of considering the availability of supply to meet demand in the future, we will assume that these rates of increase in production and consumption will continue without abnormal disturbance.

Prognostications of the approaching exhaustion of the world's oil will generally be found to be based upon erroneous or misleading calculations. For example, future production has been estimated in the United States largely from the basis of the decline curves shown by existing fields. That is particularly misleading when applied to the world situation. One does not doubt that an oilfield is a wasting asset, that sooner or later the production of a well or group of wells will decline if unsupported by the bringing in of new wells, and that sooner or later even the production of new wells will fail to make up for the decrease of the old. The production of a typical group of actual wells in Oklahoma, taking over a period of ten years from 1913, showed a rate of decline of approximately 40 per cent. per annum. From the mass of production data that has been collected and analysed in the United States, it has been shown that oil decline curves are notably symmetrical, and it has been argued that these curves "can be extended (graphically) beyond the actual period of production by continuing the curves in accordance with their symmetry, and that such projections, if skillfully made, provide fairly trustworthy estimates of the future production of the well.*" All this may be true of the individual well. And it is also true that the production of the world is merely the composite of a great number of individual pools, each yielding decline curves after the drilling programme has been completed, and that logically the world's production will some day display the same declining tendency that inevitably affects the individual well, the property, the pool, and the field. But the world's future production cannot be predicated on the basis of a 40 per cent. per annum decline curve. These "declines" are the results of present methods of drilling, which are not extracting all the oil in the underground oil-bearing strata that are tapped by the drill. American geologists confess that as much oil is left in the ground in the United States and Mexico

* "Manual for the Oil and Gas Industry under the Revenue Act, 1918." By Arnold, Darnell, and Others. 1920. (New York.)

as is taken out. This is on account of the wasteful methods of competitive drilling we have described, when a number of small companies are all tapping a common pool without any common policy or scientific plan for the draining of that pool. The value of a unified scientific control of oil extraction has been demonstrated beyond question in Mexico, where, after a pool has been flooded by salt water, following upon competitive drilling, and a single company later acquires control of all the formerly producing wells, a "stripping" production has been obtained and maintained. A change in drilling methods, or control, may therefore prove that the decline which had apparently overtaken certain fields was not real, but premature; that oil fields had not in reality entered upon the period when the production of new wells fails to make up for the decrease of the old. Indeed, the likelihood of areas in these older fields "coming back" has already been shown, in fact, in parts of Pennsylvania and Texas.

How dangerous it is to estimate future supply on the basis of past production and "decline," may be illustrated from what has been described as "the oil man's Bible,"[†] which, published in 1921, gave elaborate production and decline statistics, and drew this conclusion: "These figures indicate that production in the United States is fast approaching its limit, and there is much evidence to suggest that 1921 will register the maximum rate of output this country will enjoy." Happily the author lived to read the record production figures for 1922, and witness therein his own discomfiture. Yet he was no alarmist, but the most careful student of economics, albeit a consulting engineer. "This deduction," he added, "is based upon a study of production curves, that is to say, is the result of mathematical analysis, and is not predicated upon estimates of the size of unmined supply." If mathematical analysis can do no better, what shall we say of the geologist guesswork that is quoted widely for propaganda purposes?

At this point it seems advisable to give the details of the world's production of oil in the last three years, during which we were told to expect the beginning of the decline in the United States :—

------------------------	-------------	----------------	----------------

All the important producing countries will normally increase their output this year, with the possible exception of Mexico, whose "Southern Fields" continue to decline with no new production yet developed to replace them, and of the Dutch East Indies, where the Royal Dutch-Shell group are restricting operations as a result of the Dutch Government's export taxes. The output of Persia, now become fourth in the production list, is only limited by the capacity of the Anglo-Persian Oil Company's pipe-line and refineries, which latter are to be increased up to 4,500,000 tons (29,700,000 barrels) by the end of the year. Popular opinion would have Venezuela ready to take the place of Mexico. Certainly Venezuelan fields, which can already boast of two gushers after the style of the prolific Mexican wells, are capable of enormous development, and are only waiting upon the provision of

† J. E. Pogue: "Economics of Petroleum."

transportation facilities. That will take anything from one to two years.

Estimates of the unmined supply of oil cannot be more than guesswork. Oil mining is not like the mining of solid minerals, which, by the sinking of so many shafts can be blocked out and measured up fairly accurately. Oil geologists have certainly arrived at more precise methods of guessing, but no two of them will agree. Five estimates of the unmined supply of oil in the United States have been made at intervals from 1908 to 1918, which show each time a tendency to increase the apparent size of the resource. In 1922 a Joint Committee of the United States Geological Survey and the American Association of Petroleum Geologists declared that American supplies would only last 20 years. Typical of this school of thought are the following estimates, compiled in 1920 by Mr Stebinger, of the U.S. Geological Survey, of the world's unmined supplies of oil:—

ESTIMATED UNMINED SUPPLY of OIL in WORLD.

Region.	Relative Magnitude.	Quantity in
		Millns. of Barrels.
United States	100	7,000
Canada	14	995
Mexico	65	4,525
N. South America, including Peru	82	5,730
S. " " " " Bolivia	51	3,550
Algeria and Egypt	13	925
Persia and Mesopotamia	83	5,820
S.E. Russia, S.W. Siberia, and the region of the Caucasus	83	5,830
Rumania, Galicia, and Western Europe	16	1,135
Northern Russia and Saghalien	13	925
Japan and Formosa	18	1,235
China	20	1,375
India	14	995
East Indies	43	3,015
Total	..	43,055

Mr David White, chief geologist of the U.S. Geological Survey, puts the total reserve at 60 billion barrels, as against Mr Stebinger's 43 billions. But one is as good or as bad as another. Oil reserves cannot safely be estimated. There is this important and paradoxical feature to remember in connection with oil—that new discoveries and developments have tended to increase rather than decrease the possibilities of its occurrence. With other minerals it is the reverse. Dr Veatch, the chief geologist of the Sinclair Consolidated Oil Corporation, stated before the American Petroleum Institute last year: "It is now known that petroleum deposits may occur in sedimentary beds of any age from the oldest to the youngest—and in any structural position. As the greater part of the earth's surface is composed of sedimentary rocks, so the problem of accurately estimating the oil reserves of the United States and the world becomes a very broad one.The conclusion may be stated proportionately: as the ultimate production of the United States is to the total area of sedimentary rocks of the country, so the total oil production of the world will be to the whole area of sedimentary rocks of the world." Because the ultimate supply of oil has a limit, it does not imply that the rate of production is limited. Indeed, the rate of production can go on increasing each year until the final decline comes. The indications are that for an indefinite time the supply of oil will be governed by the rate of drilling new wells, and, as one writer puts it, by "the intelligence shown in their location."

THE FOREIGN TRADE OF SOVIET RUSSIA.

(FROM A CORRESPONDENT.)

THE Russian trade returns for 1922 and for January last enable us to estimate the extent of the revival of business in that country. The following table gives the figures of foreign trade (excluding charity deliveries in connection with famine relief) in millions of roubles at pre-war prices:—

	1921.				1922.			
	First Quarter	Second Quarter	Third Quarter	Last Quarter	First Quarter	Second Quarter	Third Quarter	Last Quarter
Imports	38.4	71.1	49.6	51.5	39.7	114.5	70.7	50.3
Exports	1.5	1.6	6.9	10.1	7.0	16.0	27.9	28.3
Percentage of exports to imports	3.9%	2.2%	13.9%	19.6%	17.6%	14.0%	39.5%	56.3%

The total imports in 1921 were 210.6 million pre-war roubles, whereas last year the figure had risen to 273.8 millions. The rise in exports was considerably greater, the total passing from 20.1 millions in 1921 to 81.6 millions in 1922. The proportion of exports to imports, which was as low as 9.5 per cent. in 1921, rose to 29.8 per cent. last year, while the figures for January of this year show an even greater proportion of exports, though on a greatly diminished total volume. A comparison of the returns for January, 1923, and the same month last year gives the following result in millions of roubles at pre-war prices:—

Month.	Imports.	Exports.	Percentage of Exports to Imports.
January, 1922.....	11.0	2.5	22.5
January, 1923.....	6.9	4.5	65.2

Examining, in the first place, the import figures, we see that having reached their maximum in the second quarter of 1922 (in May), imports have since then been definitely decreasing, so that the figure for the last quarter of 1922 is below that of 1921. This decrease continued also in January, 1923, when imports sank to their lowest level.

It is clear that in the first half of 1922 the increase of imports was merely temporary, and arose in connection with the famine, as it was necessary to make considerable purchases abroad. No conclusion as to the growing capacity of the Russian market for foreign goods can, therefore, be deduced from this increase, and this conclusion is confirmed by the figures illustrating the nature of imports in the first and second half of 1922 (*Economicheskaja Thizn*, 1923, N. 39):—

	First Half.	Second Half.
	Miln. Roubles.	Miln. Roubles.
Foodstuffs	59.6	33.6
Textiles.....	8.2	6.0
Metal goods.....	40.3	45.1

Nearly the whole difference between the two halves of 1922 (31 million roubles) is thus accounted for by the difference in the value of imported foodstuffs (26 million roubles). Indeed, if we disregard the temporary increase in connection with the famine, Russian imports have remained more or less stationary since the beginning of 1921, though in the last quarter of 1922 and in January, 1923, they even show a tendency to fall below the level of 1921.

The export figures, however, give a different result. After a certain fall in the first quarter of 1922, they begin gradually to increase, and even reach a considerable figure, though a new reduction is recorded towards the end of 1922, which is continued in January. Nevertheless, the figure for the last quarter of the year exceeds all the preceding figures, and is nearly three times more than the corresponding figure for 1921. The net result of these movements is to make the Soviet trade balance considerably less unfavourable.

But this change does not mean, as might at first sight appear, that the economic life of Soviet Russia has become more sane, nor does it imply any serious development of the productive forces of the country. It is important to note that Soviet Russia is exporting not the surplus of her production, but the goods of which she is in dire want herself. She is forcing her exports at the expense of her own consumption. The chief articles exported in 1922 were timber (to the value of 30 million gold roubles at present prices), flax (20-25 million gold roubles), and oil (18-20 million gold roubles), the balance consisting mainly of a certain amount of manganese ore, furs, leather, coal, iron ore, asbestos, and salt. Timber, of course, is not so scarce in Russia, though the area fit for exploitation has contracted very much of recent years. As to the oil, the situation is very serious, for, owing to the almost complete exhaustion of the old stocks (only 20-30 million poods remained at the end of 1922) and a wholly inadequate production, Russia is confronted in 1922-23 with an oil deficit. Flax is in no better position. The Russian flax market, according to official Soviet sources*, could furnish in 1922-23 about 1½ million poods of flax of middle and better quality, and about 2-2½ million poods of lower quality, these figures including outstanding stocks. The whole of this quantity of middle and

better varieties is, as a matter of fact, required by Russian industry. The lower qualities remain for export, but as they are not wanted abroad, the better sorts are actually exported, in spite of the acute crisis of raw materials through which Russian industry is now passing. The same is true in the case of iron ore, leather, &c. This forcing of the export of raw materials, of which the country is itself in great need, is explained by the fact that the Soviet Government is itself in still greater need of money, as the gold reserve, out of which imports were formerly paid, is apparently drawing to an end.

The reduction in exports towards the end of 1922 is due, according to the Soviet view, to a temporary check in the realisation of Russian goods on foreign markets owing to the low quality of some of the last batches of goods, as well as to defects in assortment and packing. This in turn has led to a diminution of imports, as purchases depend now, more than ever, upon the successful realisation of exports.

The policy of encouraging exports at all costs has found expression in large exporting schemes. Legislative measures were passed favouring export activities, among them being the decree of January 11th last sanctioning the repayment of Excise duties paid on exported goods and granting a rebate of Custom duties on imported materials used for the production of export goods. It appears, however, that this policy meets with a certain amount of opposition in Soviet circles, especially on the part of the Supreme Council for National Economy which directs the nationalised industries, as this organisation is interested in retaining in the country the raw materials it itself requires. Thus we know that, in opposition to the large "exporting plan" drawn up by the Commissariat for Foreign Trade, the Supreme Council has drawn up its own scheme on a much smaller scale. It advocates the principle of "limitation"—i.e., of establishing definite limits beyond which the export of goods that are needed by home industry will not be allowed. With regard to some categories of goods limitation of this kind has already been officially recognised. Thus the State Planning Commission has established an export limit for timber (12 million cubic feet) and for hemp (1 mill. poods), though these limits appear to be very high.

The following table gives some idea of the direction of Russian foreign trade in 1922:—

	Imports.	Exports.
1922.	%	%
Germany	33.1	17.9
Great Britain	18.1	30.3
Latvia, Estonia, Finland	13.9	14.0

Great Britain appears as Russia's best customer, while Germany heads the imports. The small volume of total trade with the new Baltic States is undoubtedly to be ascribed in large measure to the efforts that are being made by the Soviet Government to develop the port of Petrograd at the expense of the entrepôt trade of the small succession States.

Notes of the Week.

The Ultimatum to Russia.—The ultimatum which has just been dispatched to the Russian Government has produced a crisis which may prove to be one of the most important of the remarkable series into which we have plunged since the Government came into power on its policy of tranquillity. The Note states that the Trade Agreement between Great Britain and Russia of March, 1921, will be terminated at the end of 10 days unless satisfaction is given in respect of three claims:—(1) Apology for and the repudiation and suppression of anti-British propaganda, particularly in Persia, Afghanistan, and India, carried on in violation of the provisions of the Agreement; (2) the admission of liability by Russia and an undertaking to pay compensation in respect of outrages on certain British subjects, and the treatment of British trawlers; (3) the withdrawal of two communications of M. Weinstein in reply to the appeal of Mr Hodgson against

the execution of Mgr Bukevich. The Memorandum setting out the grievances under these three heads presents a very strong case, and some of the points made undoubtedly demand the most vigorous protest against the truculent attitude of the Russian Government. At the same time, the British memorandum is itself not a model of moderation; it represents an abrupt change of tone, and is in some respects extremely controversial. The evidence of Russian propaganda is convincing. But the publication of documents obtained through secret service channels is not without danger, and the cases of propaganda quoted are, after all, comparatively insignificant. This is an old subject of controversy which has been discussed both by correspondence and in conferences at Genoa and elsewhere, and a case for making it a vital issue now rests upon the assertion that there has been a renewed outbreak of such propaganda. It is left to be assumed that the Foreign Office regards the cases quoted as specimens rather than an inventory. The treatment of British subjects and of British trawlers also calls for protest, but it is worth recording that the action of the Soviet Government in restricting fishing within a twelve mile limit is in accordance with the traditional policy of the Czarist Government, which, in spite of protests from the Powers, prohibited fishing within twelve miles of the shores of the White Sea. The Curzon Note is not justified in its assumption that there is international agreement on the principle of the three-mile limit. Finally, the Notes which were recently addressed to us in connection with the religious persecutions, in which the Russian representative deliberately misreads the British appeal as an attempt to interfere with the undeniable right of a Sovereign State to pass sentence according to its own legislation, considers such an attempt "to protect spies and traitors in Russia" as "an unfriendly act," and proceeds to make sweeping assertions as to the assassination in cold blood of political prisoners in Ireland, and of barbarous and inhuman treatment at the will of Great Britain, merits the description by our Foreign Office as being irrelevant and insulting. The case against the Russian Government is undoubtedly a strong one. But we doubt whether it was wise to couch the protest in terms so challenging and undiplomatic in their condemnation as to make it impossible for the Russian Government to comply promptly with the terms demanded. The Foreign Office has evidently made up its mind to bring the Trade Agreement to an end, in spite of the obvious fact that in the last two years there has been a steady evolution in the internal organisation of Russia and a marked progress which we have from time to time recorded towards a state of affairs in which it was increasingly possible to make contacts with the new Russia. We have an uneasy feeling that Lord Curzon may have fallen into the old error of supposing that we can hasten this evolution and affect the internal politics of Russia in our favour by hectoring rather than by patience. According to Russian opinion the denunciation of the Trade Agreement, not by giving the six months' notice, but on the ground that its clauses have been violated, will revive a state of war; an assumption supported by the determination of Great Britain to send a British gunboat to protect British trawlers in the region affected. The decision will mean the withdrawal of the British Trade Delegation in London, and trade with Russia will be carried on, if at all, under conditions of much greater uncertainty than before. The Agreement will put Russian assets in London presumably outside the protection of the Courts here, and will make impossible any concessions to British subjects in Russia. It is anticipated that the lead by Great Britain may be followed by certain European countries, notably by Scandinavia, but there is no reason to suppose that Germany will make any alteration in her attitude towards Russia. Indeed, it looks as though the effect of the episode will be to hand over Russian trade in a greater degree than ever to Germany.

Revaluation of Property.—The revaluation of house property for income-tax purposes is being made an occasion by several newspapers to attempt to throw dust into the eyes of the general public, but whether through ignorance or not it is difficult to say. The sudden outcry against the time limit of 21 days laid down in Schedule A, the now notorious Blue Form, is rather strange in view of the

fact that the Inland Revenue Authorities are proceeding on a long-standing practice as laid down by Parliament. Obviously, the purpose of the notice is to secure from property owners a further contribution to the Exchequer in the form of income-tax, and it is only natural that post-war values should be reflected in the fresh valuation. It is obvious, also, that a revaluation of this immense size must be undertaken on a broad principle. The normal basis of assessment is the annual value of the property. Where an owner occupies, the value of the house is considered to be that which might be obtained if let on a yearly tenancy. What constitutes annual value, no doubt, may provide interesting material for academic discussion, but the main objective of and necessity for the revaluation must not be overlooked while this is taking place. It is quite true that the greater part of the increases of rent upon a considerable amount of property were permitted on account of the heavy costs of repairs, and these increases were granted, it must be remembered, subject to such repairs being undertaken. So far as this is the case, the increase in assessment should be less than the increase in rent. But there remains a real increase in net rent, and it is certain that many people have profited by the long suspension of the regular revision of the assessment. In the present attempt to place matters in better order, it may be that on account of a staff which have not the necessary experience a large number of blunders may possibly result. Once, however, these errors have been adjusted, another attempt to distribute more evenly the burden of taxation will have been successfully achieved.

Overseas Trade in April.—The monthly trade returns, published yesterday, show a recovery in British exports in April compared with the previous month, and a falling off in imports. The comparison with a year ago offsets the less favourable impression which was given by the March returns, for exports are up by over 7 millions compared with April, 1922, while imports are up by 6 millions. The actual figures are as follows:—

	1922.	1923.	Increase or Decrease in April, 1923.
	£	£	£ %
Imports	80,633,061	86,417,017	+ 5,783,956 + 7.2
British exports	55,507,649	62,871,102	+ 7,363,453 + 13.2
Re-exports	9,199,773	12,428,500	+ 3,228,726 + 35.1
Total exports	64,707,424	75,299,602	+ 10,592,179 + 16.4
Excess of imports over total exports	15,925,638	11,117,415	— 4,808,223 — 30.1

FOUR MONTHS ENDED APRIL 30.

	1922.	1923.	Increase or Decrease in 1923.
	£	£	£ %
Imports	314,275,275	359,994,229	+ 45,718,954 + 14.6
British exports	241,570,501	248,240,604	+ 6,670,103 + 2.8
Re-exports	37,986,412	41,135,426	+ 3,149,014 + 82.9
Total exports	279,556,913	289,376,030	+ 9,819,117 + 3.5
Excess of imports over total exports	34,718,362	70,618,199	+ 35,899,837 + 103.5

In spite of prices, which, on the whole, are lower than a year ago, British manufactures show an increase of £2½ millions, but, of course, the largest change is due to increased exports of coal, which amounted to £8.9 millions, compared with £4.6 millions in April, 1922. We shall deal more fully with the returns next week.

The Case of Art O'Brien.—On Wednesday last in the Court of Appeal considered judgment was delivered by Lords Justices Bankes, Scrutton, and Atkin allowing an appeal from the decision of the Divisional Court refusing an application for a writ of *habeas corpus* made on behalf of Mr Art O'Brien. This gentleman, it will be remembered, was one of the persons arrested in London and deported to Ireland by order of the Home Secretary on March 11th last. He describes himself as "the representative in London of the Irish Republican Government," but the real interest attaching to the case arises not from the personality of the applicant, but from the whole momentous question of the liberty of the subject which it involves. The Attorney-General has announced that he will apply by way of appeal to the House of

* *Econ. Thizn*, 1922, Nos. 217, 228, 279.

† *Econ. Thizn*, 1923, No. 55; *Commerce and Industry Gazette*, No. 44.

Lords; so the case remains *sub judice*. At the same time, the importance of the issues involved makes it essential for more than a passing reference to be made to a case which will certainly claim a place among the *causes célèbres* of English constitutional history. The order for the arrest and deportation of Mr. O'Brien was made by the Home Secretary under Regulation 14B of the regulations made under the Restoration of Order in Ireland Act, 1920. Perhaps the most important legal point to be decided was, in Lord Justice Bankes' words as reported in the *Times*, "whether, since the establishment of the Irish Free State, an order can be lawfully made by the Home Secretary for the internment in that State of a person at the date of the order residing in England." The consequence of the passing of the Irish Free State Constitution Act, 1922, was held to be that "no writ of *habeas corpus* can issue out of England by authority of any Judge or Court of Justice therein into the Irish Free State." Accordingly the question arose as to whether a branch of the Executive in this country could enjoy "the absolute power of internment persons without trial, and without informing them of the nature of the details of the charge made against them," if the same authority had no power of discharge or release. Their Lordships held unanimously that the setting up of an Irish Constitution had put an end to the power of the Home Secretary to intern in the Irish Free State. Lord Justice Scrutton drew a consequence from the contention put forward on behalf of the Executive which is not devoid of piquancy. "It would probably startle the Irish Free State Government," he said, "to know that his Majesty's Ministers claim that the King, on the advice of his British Ministers, may by Order in Council impose regulations having the force of statute on the Irish Free State." His Lordship was somewhat scathing in his criticism of the manner in which many of the old Defence of the Realm Regulations were enacted by Order in Council for England under the Restoration of Order in Ireland Act. The connection between the regulation of the keeping of pigs in England, or the limitation of English season tickets on the one hand with the maintenance of law and order in Ireland on the other, is not perhaps obvious at first sight. His Lordship professed himself unable to understand "why these regulations were ever enacted in this lazy and unintelligent way." The Home Secretary had defended himself in the House of Commons against the charge that the deportees were no longer under his control in the following manner. "I maintain," he said, "that by these undertakings given me by the Free State Government we have a complete control over the position in which the internees are placed." But in Court "the Attorney-General relied on the absence of control as fatal to the applicant's motion for the writ." The apparent dilemma was overcome, in the opinion of Lord Justice Atkin, by testing the validity of the internment order according to whether or not the Home Secretary retained a legal right of control, while regarding his liability to the writ in terms of *de facto* control. In other words, while not legally competent to compel the production of Mr. O'Brien before the Court, the Home Secretary might in fact bring about the same result by an understanding with the Free State Government. Their Lordships were, in any case, unanimous that the writ should be made absolute, and the decision of the House of Lords will certainly be awaited with intense interest by a far wider circle than that of students of the Constitution. Whatever be our opinion as to the wisdom of any given policy, we conceive it to be of the utmost importance that the executive should act strictly in accordance with the law of the land, and it is this, rather than any precise intricacy of legal terminology, which gives to "*ex parte* O'Brien" an interest far transcending the merits or demerits of the "representative in London of the Irish Republican Government."

Conditions in Ireland.—Our Dublin correspondent writes:—The decision of the Court of Appeal in England on the *habeas corpus* application of Mr. Art O'Brien has astonished no one in Dublin who had occasion to study similar or cognate issues during the Anglo-Irish conflict. Whatever the decision of the House of Lords may be—whatever the merits as between British citizens and the British Government—there can be no question but that the

action of the Executive contributed materially to the disintegration of the Irregular Republicans. Cut off suddenly from a base—theretofore deemed quite secure—which was almost indispensable for munitionment, intelligence, and organisation, their movement has crumbled rapidly. It has now reached the point where surrender is seeking to save its face by a species of peace negotiation, and where the only pressure upon the Government to comply arises from a belief in clemency to the vanquished as being politic as well as humane. Of course, Irish difficulties are by no means at an end, but they are all relatively small compared with that which has now been disposed of with apparent finality. The Customs Boundary round North-East Ulster apparently involves at present the prohibition of all motor traffic from one area to the other between the hours of 5 p.m. and 9 a.m. on week-days, and from 5 p.m. on Saturday until 9 a.m. on Monday. The income-tax arrangements pursuant to the legislation and resultant agreements for the avoidance of double taxation are still unascertainable; the banks, which are bound to deduct income-tax in respect of dividend warrants, being still without instructions although May dividends are imminent. These matters will, however, be gradually adjusted, though apprehensions are felt as to how major matters of financial policy may be prejudiced by the inexperience of the new officials. An able and energetic Treasury clerk does not by any means necessarily make a good departmental chief, and the great volume of intricate and perplexing problems involving large questions of policy and of national interest places the Irish Free State officials under a severe handicap. Unemployment is also a serious difficulty, but possibly not so acute as elsewhere. In North-East Ulster there are 45,000 unemployed, as against 33,000 in the Free State, and for the last financial year the deficit in the Central Fund for Unemployment Insurance was £757,000 in the former, against £550,000 in the latter. These figures will tend to increase in both areas as prisoners of whom there are large numbers interned or imprisoned in each area are released and armed forces disbanded—as they must be sooner or later. Exchequer returns for period from April 1, 1923, to May 31 show total receipts £3,410,613, and a credit balance of £1,022,920 on the latter date. These receipts for 35 days compare favourably with £2,901,700 for the 30 days to May 6th last year, especially having regard to the respective amounts of borrowed money in each figure. In last year's figure was included £1,000,000 Ways and Means advances by public departments. This year's figure includes—an interesting and novel item—money raised by creation of debt by Irish Free State bills, £609,000. Thus revenue is coming in more abundantly than in the corresponding period of 1922.

Australian Borrowings.—Some misunderstanding has been caused by a short *Reuter's* cable from Melbourne, stating "that the borrowing requirements of the Commonwealth and the States during 1923-24 will total £45,000,000." This seems a large figure for one year's borrowing, and has been made the occasion by one of our contemporaries for reading the Commonwealth a lesson on the need of economy. But, in fact, the bulk of these borrowings are for replacement of existing loans falling due in the next financial year. A summary of loans falling due in each year is presented in the Commonwealth budget paper. It is true that the position is not shown as clearly as it might be. In 1923-4 the State loans falling due amount to approximately £11 million in London and £20½ million in Australia, but it is not clear how much of this latter figure is owed by them to the Commonwealth. The need of money for replacement purposes is now much more striking when the requirements of the Commonwealth itself are considered. Thus a 5 per cent. War Loan is due for repayment in Australia in September, 1923, for about £37½ millions, while nearly £14½ millions of 5½ per cent. bonds, representing part of the outstanding war gratuity liability, is redeemable not later than May 31, 1924. That Australia has turned the corner, and is now steadfastly attempting to follow the path of financial probity, is now generously admitted. The success of the recent New South Wales loan is strong evidence of this. It would be unfortunate if a

misleading idea of her situation were to detract from the improving credit of the Commonwealth and its component parts.

Cotton Trade Wages.—Peace has again been restored in the cotton industry with regard to the wages question. The proposal given below, writes our Manchester correspondent, will stabilise wages for a period of at least nine months. A joint conference between the representatives of the Master Spinners' Federation and the Cotton Spinners' and Manufacturers' Association, and the representatives of the various union amalgamations was held in Manchester on Tuesday, under the chairmanship of Mr. F. Holroyd, president of the Federation. The application of the operatives for an extension of the wages agreement which expired on April 25th last was considered. A long discussion took place, and it was decided to submit the following terms to the respective organisations of the employers and the operatives for approval or otherwise:—That the present rates of wages shall continue in operation until January 25, 1924. After that date the employers shall be at liberty to take whatever action they think fit on giving one month's notice. The operatives' organisations further agree not to make any application for a general advance in wages until after a period of nine months from January 25, 1924, and that after September 25, 1924, both sides shall be at liberty to take whatever action they think fit on giving one month's notice. Nearly 500,000 operatives are affected.

The Shipping Outlook.—In shipping circles considerable interest is being taken in the decision of the Supreme Court of the United States in regard to the question of intoxicating liquor on board ships, but the drastic measures talked about in some quarters are not likely to come into force. The North Atlantic Conference is dealing with the matter, and well-informed shipping opinion takes the view that a way out of the difficulty will be found. There has been a slight revision in passage rates to the East, but otherwise there is little change in fares. The freight position this month has undergone some deterioration, but this will probably be only temporary. Chartering during April was on a good scale, but the uncertainty of the political position on the Continent, added to the slow grain markets and the exchange movements, have held up business since the commencement of the present month, and the tendency of homeward freights has been against shipowners. The figures issued recently in connection with laid-up tonnage showed that British shipping is now fairly evenly distributed, and shippers for the most part are well covered over the next few weeks. There is not a great deal of tonnage out at the River Plate ready to load before the end of the month, but the interest in June-July steamers has evaporated for the time being, and there has been a set-back in values. In some cases steamers have been put on the berth. The outlook for nitrate business is not so promising as it was, and while there is a certain amount of parcel trade offering, full cargoes are difficult to place. Chartering from the Canadian ports has been seriously upset by the lateness of the season. This week a fair amount of tonnage has been taken up for May-June loading to the Continental and Mediterranean ports, but this market should show more activity later on. Navigation should be open in a few days' time. North American shippers have been doing very little lately, neither grain nor coal orders making their appearance. Steamers have been offering space rather freely and rates have moved downwards, with coal from the Northern Range ports to the Continent much cheaper. Eastern business has come to hand very slowly, with the Indian market well supplied for the time being. Rice to the Continent has taken up one or two steamers, and there are inquiries about from Java. A feature has been the reappearance of orders for tonnage to load maize from South Africa during August and September. Ore receivers in the United Kingdom have been more inclined to fix steamers for June loading from the usual Mediterranean and Bay ports, but rates still remain on a low level. There has been more inquiry for vessels on time charter after a long period of stagnation, and during the last day or two steamers have been taken in the Atlantic trade for general trading purposes.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that, as a rule, the autumn-sown corn crops are satisfactory plants. The cold winds of April retarded growth, and wheat has frequently lost colour, especially on heavy land. Winter oats have not suffered so much from the cold, but in some cases these also have rather a yellow appearance. Beans are still backward in many districts, but satisfactory crops may be anticipated, although in some of the eastern counties they are rather foul with weeds. The few warmer days at the end of the month caused some improvement in the appearance of the crops. The sowing of spring corn is more forward in the north and west than in other parts of the country, a fairly large area, especially of barley, being still undrilled at the end of April in the south and east. As a result of the cold weather germination has been slow, but where showing above ground there is a regular plant. The early-sown crops have made slow growth, and generally spring corn is rather backward. Very variable progress has been made in different parts of the country with potato planting; in some districts this work was practically finished by the end of April, whilst in others it had just started, and on the whole potato planting is rather backward. As spring corn sowing started late, and heavy soils have required much extra work, the preparation of the land for root sowing is generally backward, and in some parts sowing will be delayed until heavy land has been softened by rains. Blossom has been affected by frost in some districts, but no serious damage is reported. As a rule, there is a promising show of apple blossom, and plums and cherries have flowered well. The amount of pear bloom has been below average. There is a heavy set of fruit on gooseberries, and currants are blooming well and look healthy. Many of the early-sown cabbages have bolted, but later plantings are doing well, whilst spinach is a good average crop, but shows signs of running to seed early. Autumn-sown lettuce have stood the winter well, and autumn-sown onions are also promising. Spring-sown onions and also carrots and parsnips are backward, but germination has been good. On the whole the lambing season has been quite satisfactory. The fall of lambs among lowland flocks was slightly over average, being exceptionally good in some districts in Wales and north-west. As a rule, losses have not been above average. There is a plentiful supply of labour available in practically all districts, and with spring work in progress there is less unemployment than a month ago.

Gilt-Edged Stocks and Industrial Shares.—The investor's dilemma was dealt with in the *Economist* of a fortnight ago (p. 878), when the various considerations affecting the outlook for money stocks were set out at length. This dilemma is accentuated week by week, writes a Stock Exchange correspondent, owing to the difficulty of obtaining good-class stock at reasonable prices. Added to this there are the problems that surround the outlook for money, having regard to the expansion of trade, the practical possibility of which might induce sales of stock, in advance, by large companies and corporations whose business it is to watch closely for the signs and indications of the direction in which Stock Exchange markets will trend. New Zealand is good-humouredly accused of greediness for asking 92 in payment for her new 4 per cent. stock of 1933-43. The effect of this issue has been to put up the prices of all similar securities, and to bring about rises this week in several scores of home corporation and Colonial loans. There is a touch of irony in the remembrance that underwriters of the New South Wales 4½ per cent. loan were expecting, only a fortnight ago, to be left with a fair proportion of their obligation, whereas the event proved that not only were they relieved of their liability altogether, but the price of the scrip has since risen, under the kindly influence of the New Zealand offer, to 2 premium. The investor in high-class stocks is anxious, it is no exaggeration to say, to take advantage of the present range of prices, if only he can see some method of employing money realised by the sale of such securities. What has happened is simply that everything has gone up in much about the same proportion, so that the man who sells one

stock to-day, because he is tempted by the high level, cannot find anything to replace it of the same class, except at a price which is relatively the same as that ruling in the stock which he has just sold. The only thing he can do if he sells good stock, desiring to replace it with something which will pay the same rate of interest, is to venture into lower-grade securities, the prospects of which must wait upon more speculative possibilities than those which govern what the Stock Exchange calls the money stocks. Some people are, indeed, deliberately turning their money from gilt-edged stocks into shares of industrial companies, on the presumption that, if there should be such revival in trade as would bring about a lowering of gilt-edged prices, it would be caused and accompanied by a new era of prosperity in trade circles, and, therefore, would react favourably upon the shares in companies connected with industry. On the other hand, caution is sufficiently strong in the minds of most investors to render them reluctant to make a change in the status of their stocks. The man who holds War Loan may feel he is doing despite to his conscience in selling this in order to buy, say, Imperial Tobacco shares, and a proprietor of the Conversion Loan finds it difficult to bring himself to sell this in order to put the money into shipping shares. The caution is useful, and very necessary, particularly at a time when all sorts of industrials are being sedulously puffed by a number of outside houses whose expenditure upon stationery and postage must be so substantial as to argue a willing ear on the part of the public to listen to blandishments of such nature. It may happen that the industrial shares so advertised are excellent in their way, and, possibly, may be cheap at the prices mentioned. The same caution, however, to which reference has already been made should render a man, and more especially a woman, extremely careful of taking up shares in which there is not a ready Stock Exchange market. A great many industrial concerns are only just emerging from the disastrous effects of their post-war experiences. The cutting in half of the Aerated Bread dividend, the passing of the interim dividend by Dorman, Long and Co., the non-payment of a dividend on Siemens' ordinary, and the postponing of six months' dividend on the preference, are all clear signs that should not be overlooked by the investor who may be feeling very optimistic in regard to the immediate outlook for trade. Industrials are all very well, and those people who are prepared to take risks in order to obtain a high yield on their money cannot go far wrong so long as they buy shares in good companies, and are not in too much of a hurry for profits on their purchase price. But to exchange gilt-edged securities for shares in trading concerns is a policy which may turn out to be far from profitable, and in spite of the natural desire to increase income in order to pay for the still high costs of living, the capitalist may well remember that safety first is a good motto for money as well as for motor-buses.

The Caledonian Railway Amalgamation Terms.—The Railways Amalgamation Tribunal announced on Thursday that in connection with the amalgamation of the London, Midland, and Scottish and Caledonian Railway Companies the tribunal have decided to provide in the scheme which they are framing for the following allocations out of the capital of the amalgamated company as fully constituted:—(1) To the holders of each £100 of preferred converted ordinary stock of the Caledonian Railway Company, £50 4 per cent. preference stock, 1923, and £13 6s 8d ordinary stock of the amalgamated company. (2) To the holders of each £100 of deferred converted ordinary stock of the Caledonian Railway Company, £10 ordinary stock of the amalgamated company. (3) To the holders of each £100 of (unconverted) ordinary stock of the Caledonian Railway Company, £50 4 per cent. preference stock, 1923, and £23 6s 8d ordinary stock of the amalgamated company, and so in proportion for any part of £100 in each case. They do not propose to make any allocation to the holders of deferred ordinary stock No. 1 or of deferred ordinary stock No. 2 of the Caledonian Railway Company. They have decided to adopt the proposal of the London, Midland, and Scottish Company to allot to the holders of 4 per cent. guaranteed annuities stock of the Caledonian Railway Company, an

equal amount of 4 per cent. debenture stock of the amalgamated company. The terms for the deferred stock are not so good as had been anticipated in the market, and the price of Caledonian deferred ordinary, which at one time this year have been as high as 18½, fell on Thursday from 13 to 11½, which is roughly their present exchange value.

Egyptian Trade in January and February.—The statistics of Egyptian trade for the first two months of this year show a considerable revival in the volume of business, while the trade balance is even more favourable than in the corresponding period of 1922:—

	(In Egyptian Pounds.)	
	Jan.-Feb. 1922.	Jan.-Feb. 1923.
Imports	6,962,129	7,006,620
Exports (and re-exports)	8,994,795	12,150,262
Balance	2,032,666	5,143,642

The slight rise in imports is caused primarily by an increase in cereals and agricultural produce, while the outstanding feature in the large increase in exports is accounted for above all by the figures relating to raw cotton. Whereas in the January-February period in 1922 this was 1,093,507 Egyptian quantars (1 quantar = 44.928 kilogs.), at a value of £60,808,624; the corresponding figures this year were 1,086,451 quantars and £10,397,626 respectively. The principal countries of destination were the United Kingdom with £4,505,282, or nearly 44 per cent.; the United States, with £2,565,872, or 24.6 per cent.; France, with rather more than 8 per cent.; Japan, with 6 per cent.; and Italy, with 5.7 per cent. Raw cotton alone accounts for nearly 88 per cent. of the total of Egyptian exports, the other important items being cereals and agricultural produce, and animal food produce (notably eggs, of which over 70 million, worth £257,884, were exported, almost entirely to the United Kingdom, during the two months). On the imports side, yarns and textiles occupy the first place with £2,355,128—a slight fall compared with the corresponding period in 1922. Next in importance come cereals, &c. (£912,003, as against £676,527 last year); metals and metalware (£901,172, against £942,103); and wood and coal, which shows at £601,539 a small increase over 1922. The United Kingdom is still the chief source of supply with a total of £2,204,142 (against £2,302,826 in 1922), France coming second with £630,413 (as compared with £744,388), and Italy third. Imports from Germany, which now stands fourth on the list, have risen from £411,705 in January-February, 1922, to £491,981 this year.

The Honduras Debt.—After fifty years of default and seven or eight unsuccessful efforts at a settlement, Honduras has compounded with her external bondholders on the lines foreshadowed two months ago. For the next 40 years £30,000 will be provided annually for the purchase and cancellation of bonds to be deposited with the Council of Foreign Bondholders, those of all the four external loans being treated alike, at a price per £100 bond of not more than £20 during the first 15 years, and not more than £25 thereafter. Should the number of bonds offered prove insufficient, drawings will be resorted to. It is anticipated, however, that many of the present holders, who have purchased at much less than the limit price, will tender at considerably less than £20, in which case the rest will gain by an eventual increase in the rate of amortisation. The necessary funds will be provided by an additional tax of 3 per cent. on the value of imports, which last year reached £2,000,000. This will be collected by stamps affixed to the Consular invoices and sold by bankers in the exporting countries, so that it will not pass through the hands of any Honduran Government. The settlement was nearly wrecked at the last moment by ostensibly legal and technical objections from a totally unexpected quarter, but it is understood that its unanimous acceptance by the bondholders ensures its enactment by the Honduran Congress. Honduras is to be congratulated on her return to solvency, and the Council of Foreign Bondholders on its persistence in pressing the claims of its clients and on its success in obtaining better terms than those offered at first.

Vickers, Limited.—A slight decline of profits is revealed in the report and balance-sheet of Vickers, Limited, for the year ended December 31, 1922, the amount being £683,205, compared with £708,103 in 1921. With £872,993 brought in, the available sum is £1,556,198. Preference dividends absorb £398,465. Out of the balance the directors recommend the payment of 5 per cent. on the ordinary shares, which will take £453,827, and the carrying forward of £703,907. The dividend is the same as last year. The directors report that the armament business during the year remained insignificant, but at its close "certain important orders were received from the Admiralty in connection with the two capital ships under construction." The following table summarises the company's balance-sheets since 1912. No balance-sheets were issued for 1916, 1917, and 1918:—

	Ordinary Capital.	Prof. Capital.	Reserves	Property, Plant, &c.	Subsidiary Cos.	Stock-in-Trade.	Cash and Bills.
	£	£	£	£	£	£	£
1912.....	3,700,000	1,500,000	Nil	3,757,020	4,095,602	1,120,739	261,396
1913.....	4,440,000	1,500,000	1,070,000	4,096,481	4,025,473	1,656,701	269,689
1914.....	5,549,262	1,500,000	1,764,000	4,243,326	4,706,097	914,899	792,828
1915.....	5,519,784	1,500,000	2,064,261	5,724,487	5,448,734	785,003	875,426
1919.....	12,311,548	8,351,640	6,669,159	7,314,055	17,236,517	3,911,685	3,361,958
1920.....	12,315,483	8,362,943	6,495,871	7,570,660	18,076,591	3,481,572	700,388
1921.....	12,315,483	8,362,943	6,495,871	7,660,474	18,144,967	2,689,323	1,620,345
1922.....	12,315,483	8,362,943	6,495,871	7,660,474	18,020,216	1,444,234	499,391

Again, this year the company does not issue a profit and loss account, and it is, therefore, impossible to learn what is the precise significance of the directors' statement that "the negotiations with Government Departments for the settlement of accounts alluded to in the two last reports have now been nearly concluded." Last year the directors said these accounts had been considerably reduced, and this year they state that little remains outstanding for discussion, and that it is expected that full settlements will be arrived at in the current year. The absence of information about these payments, together with the qualification which accompanies the net profit figure in the balance-sheet that it has been arrived at "after allowing for adjustments of reserves and taxation," make it quite impossible to estimate what exactly the company has earned in the year. The balance-sheet shows a very big reduction of debts owing to the company, which now stand at £3,629,945, against £6,213,704 in the last balance-sheet, while the item of marketable securities has increased from £1,044,464 to £4,028,683. Cash and bills in hand have been reduced from £1,620,345 to £499,391. Creditors are now stated at £4,157,166, against £6,084,364. These figures show a much improved position compared with that revealed in the last balance-sheet, and it would seem that the company and its subsidiaries have better times ahead. The directors, reviewing the past year, say that "only meagre profits, where profits could be earned, were to be expected.....Some slight improvement in the trade outlook became apparent towards the end of the year, and there are grounds for hoping that it may be continued."

Eagle Oil Transport Company, Limited.—Another very good year is recorded in the report of the Eagle Oil Transport Company, Limited, the net profit at December 31, 1922, as will be seen from the comparative table below, being £1,297,008, compared with £944,316 in the preceding 12 months. The dividend on the ordinary shares has been increased from 8 per cent. in the past three years to 10 per cent. Despite the larger distribution, the contributions to reserve and the carry forward are considerably increased:—

	1919.	1920.	1921.	1922.
	£	£	£	£
Issued share capital	2,240,000	4,000,000	5,000,000	5,000,000
12-year 7½ per cent. notes ..	..	..	3,000,000	3,000,000
Gross profits	349,523	530,844	1,066,440	1,502,363
Net profits	323,592	473,201	944,316	1,297,008
Reserve and depreciation ..	153,232	250,244	536,042	692,838
Preference dividend	160,000	160,000	160,000	160,000
Ordinary dividend	19,200	51,224	172,756	300,000
Rate of ordinary dividend ..	(8 %)	(8 %)	(8 %)	(10 %)
Carried forward.....	8,840	11,734	75,517	144,170

Depreciation and sinking fund reserve now stands at £1,894,934, and repair and other reserve accounts at £341,624. The company's liquid position is good.

Creditors amount to £635,412, debtors, &c., to £277,680. Bills payable, which stood at £849,358 in the last balance-sheet, have disappeared, while cash in hand and on loan against guarantee stands at £1,434,739, against £2,069,348 in the previous account. In the balance-sheet one item is made of "Cost of steamers, expenditure on account of uncompleted vessels, and purchase price of shares of subsidiary companies," which covers £9,821,040 out of total assets of eleven and a-half millions. This reduces the information given to a minimum. It would be much more satisfactory if the item were divided, and the amounts in the separate branches given with some detail. The directors say that the increase in profits is due to additions to the company's fleet, six vessels having been commissioned during the year, and to reductions in working costs.

Pease and Partners.—In the year ended March 31, 1923, Pease and Partners, Limited, have made a good recovery from the losses which attended the previous year's working. The directors report that the year on the whole has been one of increasing activity. Since June last there has been a great improvement in the demand for the company's chief products, but the directors state that, while abnormal prices are at present obtainable for fuel, the fact that a large proportion of the company's deliveries are made under contract have prevented the trading results being substantially effected except during March. Profit, after providing for taxation, depreciation, and contingencies, amounted to £218,235, which compares with a loss of £97,955 recorded in the last accounts, which covered a period of 11 months. The dividend of 6 per cent. compares with 5 per cent. paid out of reserves last year. The following table gives the company's record for 16 years:—

April 30.	Gross Profit.	Net Profit.	Dividends paid.	Rate.	Special Expenditure.	Reserve.	Carry Forward.
	£	£	£	%	%	£	£
1908.....	288,624	216,779	125,000	12½	12½	47,291	35,000
1909.....	160,389	97,782	80,000	8	8	34,278	16,000
1910.....	207,759	143,417	100,000	10	10	23,917	12,374
1911.....	233,933	158,033	90,400	8	8	27,951	30,000

The balance-sheet, an analysis of which will be found in the usual column, shows that, after repayment of the old 5 per cent. debentures, there is a net increase of £888,555 in debenture stock, consequent upon the issue of £1,000,000 in November last. Unpaid purchase moneys show a considerable increase, which is perhaps explained by the fact that the company has acquired a two-thirds interest in the ordinary shares of William Whitwell and Co., Limited, whose works, consisting of blast furnaces, coke ovens, &c., are at Thornaby-on-Tees. In comparison with the last balance-sheet, the one now presented reveals a notable improvement in the liquid position of the company, the bank overdraft, which stood last year at £96,000, having gone, while cash in hand is nearly £63,000 more. Reserves and investments are not appreciably different from last year. The increases under the head of minerals, &c., £116,393, rolling stock, &c., £323,808, and debtors, £233,223, are sufficiently large to merit some explanation at the annual meeting. Apparently the company has had a great deal of preparatory work on hand during the past year. They have leased, with option to purchase, the undertaking of the Skinnin-grove Iron Company, and have paid the heavy cost of re-starting the works out of revenue. They have also made good progress with the sinking of the Thorne Colliery. Since the end of the financial year they have purchased the Adelaide Colliery.

British Oil and Cake Mills.—The report for the year ended December 31, 1922, shows that, although the dividend on the ordinary shares has been maintained at 10 per cent., the British Oil and Cake Mills have not had so successful a year as during the previous 12 months. The net

profit was £335,872, compared with £351,083. On the whole, however, the company have come very well through a difficult year, in which, as the directors state, the "acute depression in the agricultural industry was reflected in a reduced demand for the company's manufactures," and in which their trading was hindered by wide fluctuations in exchange. A comparative table of the company's results for the past six years, and for 1913, is given below:—

	1913.	1917.	1918.	1919.	1920.	1921.	1922.
Trading profit	189,860	303,016	333,552	605,064	425,267	349,495	322,338
Net profit	139,041	329,591	322,008	604,733	446,994	351,083	335,872
Depreciation res., &c.	72,500	146,000	104,441	246,922	32,530	57,500	40,000
Preference dividend	34,650	40,871	40,871	40,871	40,751	40,870	40,870
Ordinary dividend	30,950	149,299	174,766	312,500	372,898	250,000	254,140
	(5%)	(15%)	(15%)	(25%)	(15%)	(10%)	(10%)
Carried forward	941	573	1,330	4,440	696	2,712	862

An increase of £82,801 in ordinary shares appears in the balance-sheet, and the directors' report tells us that during the year the business of the Hull Oil Manufacturing Company, Limited, was purchased with fully paid ordinary shares in the British Oil and Cake Company. Loans and deposits are £76,000 higher than a year ago, but the liabilities as to the current accounts of allied companies are £44,278 lower. On the other side of the balance-sheet there is an increase of £323,564 in the item of "allied companies' capital and current accounts." It is not made clear how this item comes to be so large. Properties, &c., and investments vary little from the previous balance-sheet. The stocks of raw materials and products, taken at market price or under, and stores, at cost or under, are stated at £691,320, which compares with £862,814 twelve months ago. Evidently the directors have pursued the policy, noticeable during the previous 12 months, of reducing these items to manageable proportions. Trade and other debtors have also been reduced. Cash in hand is £25,400 lower than at the end of the previous year. The directors state that the company's position in regard to liability for excess profits duty, income-tax, and corporation profits tax, has not yet been determined, "but every effort is being made to bring these matters to a final settlement." An analysis of the balance-sheet appears in the usual column.

Slubbers' Good Year.—The year ended March 31, 1923, has been a very prosperous one for the British Cotton and Wool Dyers' Association, Limited. The net profit, after deducting interest charges, administration expenses, and repairs and renewals, is £201,547, which compares with £149,641 last year. Depreciation fund is brought to £190,000 by an addition of £25,000, and the reserve fund to £225,000 by an addition of £50,000. The employers' benefit fund receives £20,000. After these substantial allocations, the ordinary shareholders receive a dividend of 10 per cent. and a bonus of 5 per cent. The carry forward is £42,382, against £28,928 brought in. The following table gives the record of the association for the past seven years:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Gross profits	110,419	227,978	240,719	300,221	270,803	258,318	318,144

	(5%)	(10%)	(10%)	(10%)	(10%)	(10%)	(15%)
Carried forward	12,737	45,914	40,259	39,003	23,700	28,178	42,382

As is customary with this company, there is enclosed with the directors' report and balance-sheet a long separate report by the auditor on the affairs of the undertaking. He gives the usual certificate, subject to the remarks contained in his report. These remarks are almost all of an explanatory nature; for instance, where the balance-sheet gives a long item of land, water rights, &c., at £1,289,510, the auditor divides the items under half a dozen heads, giving under each the valuation, and pointing out that the figures include the capital value of closed works, stated at £22,226. This practice of giving full information is greatly to be commended, and the example deserves the attention of other companies. Stock-in-trade is stated at £138,857, as certified by the managing

director and branch managers, and the auditor's report contains also a certificate from the association's secretary. The liquid position of the association is good, and the auditors point out that trade and loan creditors at £154,776 compare with £621,121 of liquid assets. At an extraordinary general meeting of the association a resolution will be proposed that £103,541, part of the undivided profits standing to the credit of the reserve fund, shall be distributed as a bonus, free of income-tax, to the holders of the issued ordinary shares of 5s each. Evidently there is confidence in the continued prosperity of the association.

Boots Pure Drug.—A year of striking success is disclosed in the report and accounts of Boots Pure Drug Company, Limited. The directors state that in the year ended March 31, 1923, a profit of £752,091 was earned, which, with transfer fees of £355, gives a total of £753,046. They transfer £59,788 to repairs and renewals, write off £36,993 as depreciation, and contribute £20,000 to the staff pension fund. Balance of income-tax, Schedule "D," and provision for corporations tax are set down at £34,944, and Stamp Duty on increase of capital at £6,500. Dividends on the preferred and preferred ordinary shares absorb £96,720, the balance available for dividends being £499,082. A dividend of 300 per cent. has been paid on the £100,000 ordinary shares in the company. The issued capital bearing fixed interest amounts to £1,400,000, and, as above stated, receives a little less than a hundred thousand pounds. The remarkable dividend does not comprise all the good fortune of the ordinary shareholders. The directors point out that certain reserves, both in this and subsidiary companies, which were built up against a fall in prices, have not all been required. Altogether there is a surplus account, amounting with the balance from the past year, to £1,413,071. An item of £45,088, for goodwill, is to be written off out of surplus. The authorised share capital of the company has been increased by £655,000 to a total of £2,400,000, and under resolution of the company passed in March last the 900,000 unissued ordinary shares will be paid up in full by the appropriation of £900,000 from the surplus account and distributed among the holders of the unissued ordinary shares. This will leave £49,798 to be carried forward. Last year the report and accounts were a combined statement for the associated companies, and it is therefore not possible to make comparisons with this year's, which refer only to Boots Pure Drug Company, Limited.

Commercial Union Assurance Company.—The Commercial Union has produced what, in these difficult times, is a very fine account for last year. In the fire department the premiums were £6,742,172, against £6,118,495 in 1921. Claims were at the rate of 49.1 per cent. of the premiums, as compared with 57.2 per cent., and expenses and commissions amounted to 40.6 per cent., against 42.7 per cent. The underwriting surplus, after allowing for the increase in unexpired risks, was £442,856, or 6.6 per cent., as compared with £238,168, or 3.9 per cent. In the marine department the premiums were £388,388, against £270,646, the claims £208,514, against £354,118, and the expenses £94,075, against £124,058. The large accident department (which includes the Ocean Accident and Guarantee Corporation) showed premiums of £6,619,965, a decrease of £200,144; the claims were £3,647,408, and the expenses £2,683,429. The underwriting surplus, after providing for unexpired risks, was £169,471. Interest receipts, less debenture interest, amounted to £664,502, and the transfers to profit and loss from the trading departments were £650,000. Income-tax, excess profits duty, and corporation tax absorbed £472,649. The balance of profit and loss was then £918,261. The directors recommend a total dividend for the year of 22s 6d a share, tax free, against 20s, tax free, for 1922. It is also proposed to transfer £295,000 from the uncalculated capital reduction fund to pay up 10s a share (making the shares then £5, £3 paid), and to divide each share into two shares of £2 10s, £1 10s paid. In 1919 and 1920 £590,000 was applied in this way

to reduce the uncalculated capital. After the completion of the new transfer the paid-up capital will be £1,770,000, as compared with £295,000 at the beginning of 1919. In the life department the valuation for the five years ended December 31st last showed a surplus of £843,810, of which £673,979 (in addition to £102,826 paid as interim bonuses) belongs to the policyholders, and £86,312 to the shareholders, £83,519 being carried forward.

North British and Mercantile Insurance Company.—At the end of 1920 the depreciation of securities for which £1,412,273 was provided prevented the distribution of other than interim bonuses to life policyholders. A new valuation was made as at December 31st last, at which the improvement in security values permitted the release of £590,000 from the investment reserve fund. There was a surplus of £1,447,990 over liabilities of £15,639,378. It is now possible to allot to with-profit policyholders of the North British and Mercantile Company a compound reversionary bonus for 1921 and 1922 at £3 10s per cent. per annum. The interim bonus payable on claims during 1923 to 1925 inclusive have been increased from £1 to £1 5s per cent. per annum. In the fire department last year the premiums were £3,740,353, as compared with £3,546,153 in 1922. The claims worked out at 49 per cent. of the premiums as against 55.1 per cent., and the expenses were 41.1 per cent. against 43.3 per cent. The result, after providing for unexpired risks, was a surplus of £282,471, or 7.5 per cent. of the premiums, as compared with £306,507, or 8.6 per cent., in 1922. In the marine department (Ocean Marine) the balance of £51,904 remaining in the 1921 account has been carried to reserve, and £150,000 has been transferred to the marine fund from profit and loss. In 1922 the marine premiums were £339,544, against £358,435 for 1921. The accident department (Railway Passengers) showed an underwriting profit of £131,690, and the Fine Art Company a profit of £35,904. Interest yielded £335,119. The directors recommend a dividend for the year of 13s a share, less tax, costing £265,707, against 11s a share, less tax, for 1921. The profit and loss balances of the allied companies on December 31st last was £3,340,987, as compared with £2,958,622 a year before.

London and Scottish Assurance Company's Valuation.—Five years ago this assurance company suspended the allotment of bonuses to life policyholders. The new valuation, as at December 31st last, shows, however, a surplus which permits the resumption of bonus distributions. The ascertained surplus on a 3½ per cent. valuation of liabilities was £272,182, from which £29,440 has been taken to place the reserves on the basis of the British Offices Om. table in place of the old Hm. The net divisible surplus was £189,792, of which the proprietors' share is one-tenth (£18,979). The balance will provide for interim bonuses paid on claims during the past five years, a deferred bonus of 30s per cent. per annum on contingent profit policies, and a reversionary bonus of 20s per cent. per annum on ordinary with-profit policies. The sum of £20,875 is carried forward.

Anglo-American Mining Group.—The South African interests of the Consolidated Mines Selection Company having been acquired by the Anglo-American Corporation of South Africa, writes a mining correspondent, the title of the group perforce becomes changed. Last year the corporation earned £325,200, as against £257,000 in 1921, and has paid 1s 6d per share dividend in place of 1s, leaving an increased balance to be carried forward. Shares, investments, &c., figure in the balance-sheet at £3,703,100. The assets total nearly 5½ millions, having been substantially expanded by the acquisition of the interests above referred to, in connection with which about half a million shares were issued. The portfolio now includes large holdings in the Consolidated Diamond and the Angola Diamond undertakings, but the batch of reports just issued relates to the Rand gold concerns. Of these, the most important at the moment are the Brak-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorized ... £3,000,000

* At standard value. † Including £59,540 from clean-up of obsolete plant.

The statistics of both undertakings reflect, of course, the troubles of the early part of the year, and may be left to speak for themselves. There are, however, points of special interest in the position of both companies. The marked discrepancy between the sums earned and those distributed is largely due to heavy capital outlays. Last year the Brakpan appropriated £100,000 for this purpose. To render future profits available for distribution, and to provide for the purchase outright of certain claims hitherto worked on a royalty basis, 170,000 shares are to be offered to the members at 30s. The current market price being well over £3, this will represent a substantial bonus, and will furnish some compensation for the curtailed dividends of the past few years. During 1922 the capital of the Springs was increased by the subscription of further shares at £3 in pursuance of the agreement made in 1917, part of the proceeds being applied to shaft sinking and development, part to the reduction of the debenture debt; the latter now stands at £54,400 only. Out of last year's profits £76,700 was set aside for the reorganisation of the plant and equipment. As already mentioned in our columns, the directors some time ago decided to adopt the "all-sliming" process; the conversion of the works will be completed in 1924. During the current year the capacity of the reduction works is to be increased to 60,000 tons monthly. Hence, altogether, there is the prospect of enlarged returns at a lower ratio of cost, with a larger proportion of the gold contents of the ores extracted. Even now, less than half a pennyweight remains behind. By the recent debenture issue of £350,000, the West Springs, whose property adjoins that of the Springs Mines, has been placed in funds for the provision of a reduction plant. The latter is to have a capacity of 40,000 tons per month on the "all-sliming" system, and should be ready by June next year. At the end of March the "indicated" ore was computed at 1½ million tons, of a probable yield value of 32s 6d per ton. The Daggafontein still awaits an opportunity to raise fresh funds for the resumption of operations.

Waihi Gold.—Our mining correspondent writes:—Shareholders in this veteran New Zealand gold-producer—and especially those who became interested recently—will have been disappointed in the proceedings at the annual meeting, as well as in the showing made

by the report for 1922. The latter, it is true, recorded an expansion in the ore reserve tonnage—albeit the outcome of a substantial increase in the amount of development performed. In this connection £15,000 was transferred from mine development to profit and loss account. Moreover, the directors appropriated £50,000 from dividend equalisation reserve, thus providing the bulk of the 20 per cent. distributed during the year. After allowing for depreciation, the sum carried forward is practically identical with that brought in. The financial position remains strong, the surplus cash assets (irrespective of the £212,500 receivable from the New Zealand Government in 1931 for the Hora Hora hydro-electric works) being equivalent to fully 10s per 10s share, now quoted at 22s 6d. Last year a Government official made a geological examination of the Waihi district, and his report was favourable as to the possibilities of finding fresh ore at depth in the company's mine. On the strength of these views the shares became the subject of speculation, and the price rose to 36s. Several discoveries have since been made, both laterally and in depth, but the runs of pay ore have proved comparatively short. Of late the company has paid dividends half-yearly on fixed days. At the meeting the announcement was made that in future there will be only one interim distribution, the final being declared in connection with the issue of the accounts. Hence, after the receipt of 1s per share in June next, the members will get nothing for twelve months.

Bezende.—This Rhodesian enterprise last year crushed a larger tonnage than before and secured an increased working profit, but owing to some expansion in the miscellaneous expenses the net profit came out at the reduced amount of £55,100. The dividends were maintained at 40 per cent., but as the capital has in the meantime been swollen by the issue of bonus shares, the distributions, together with the directors' percentage, call for £8,000 more than the actual earnings. At 148,400 tons, value 9.85 dwts, the ore reserves show some gain under both headings; the quantity, however, represents only about two years' supply for the mill. The opening up of a small tonnage of rich ore in the Streatham section affords ground for hope regarding this area. The current price of the shares represents eight years' dividends at the recent rate.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during the month of April amounted to 743,651 ounces of fine gold, as compared with 761,586 ounces during March. The following table shows the production for a number of years:—

	1917.	1918.	1919.	1920.	1921.	1922.	1923.
January..	782,634	714,182	676,059	670,503	651,593	639,728	764,469

December	722,419	641,245	660,191	632,215	681,847	790,712	...
Totals ..	9,018,084	8,418,292	8,330,091	8,153,625	8,114,516	7,020,111	2,974,676

The following are the number of natives employed at the end of the last eight months by members of the Witwatersrand Native Labour Association and contractors:—

	Sept., 1922.	Oct., 1922.	Nov., 1922.	Dec., 1922.	Jan., 1923.	Feb., 1923.	Mar., 1923.	April, 1923.
Gold mines....	174,565	175,129	173,173	176,834	181,985	182,983	181,473	178,337
Coal mines....	12,000	11,495	11,089	11,001	14,664	14,717	14,710	15,040
Diamond	1,234	1,218	1,237	1,253	1,222	1,227	1,273	1,860
Total	187,799	187,842	185,499	189,068	197,871	198,927	197,456	195,237

A further considerable decline is recorded, but the total is still substantially higher than the average for the second half of last year.

Irish Stocks—A Correction.—In a Note of the Week in our last issue on "Irish Stocks and Irish Investors," an error occurred through a typing slip. In a list of rises in quotations over a given period, our Dublin

correspondent included "Dublin Tramways Company (ordinary £10 share), from 42 to 53." This should have read "Dublin Tramways Company (ordinary £10 share), from 7½ to 72, Arthur Guinness, Son, and Co. (ordinary £10 share), from 42 to 53."

Obersea Correspondence.

UNITED STATES.—THE PETROLEUM INDUSTRY—STEEL CORPORATION'S EARNINGS—GOVERNMENT TO SELL SHIPS.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 30.

OWING to severe declines during the past fortnight in oil shares on the Stock Exchange, following reductions in prices of both crude and refined products, more attention than usual is being given to the situation and outlook in the petroleum industry of this country. A few days ago the Standard Oil Company of New Jersey cut the gasoline price 4 cent a gallon throughout its domestic territory, similar action being taken by its subsidiary, the Standard Oil Company of Louisiana, which operates in that State, Arkansas, and Tennessee. The reduction, which was the second cut of that amount in a week by the New Jersey Company, was the result of surplus production of crude oil, and was promptly met by the Standard's competitors. The Prairie Oil and Gas Company, considered the principal factor in the mid-Continent oilfields, announced a reduction last week of 10 cents a barrel in the price of various grades of crude oil produced in that section. At the lower levels thus established, quotations range from \$1.40 to \$2.50 a barrel, according to gravity. Last week's cut was the first change in Middle West oil prices since February 17th. During the month preceding that date there were six advances of 10 cents a barrel each. As indicated, heavy production is mainly responsible for the present downward price revisions. According to the Geological Survey, the output of petroleum during March continued to increase, and reached the new high record of more than 1,810,000 barrels a day. Imports also were slightly larger. Despite the fact that the indicated consumption likewise established a new high record of more than 1,867,000 barrels a day, pipe-line and tank-farm stocks of crude petroleum increased 3,353,000 barrels during the month. During the first three months of 1923, production was at the annual rate of about 624,000,000 barrels, as against 551,000,000 barrels in 1922, the increase being attributed chiefly to flush production in California; the yield in that State during the first quarter of this year was 80 per cent. greater than in the corresponding quarter of 1922. Shipments of crude petroleum from California increased from 795,000 barrels in December to 3,334,000 barrels in March. Consumption, as indicated by deliveries to consumers in the first quarter of 1923, was at the record rate of 655,000,000 barrels a year. Production, together with imports, however, continued to exceed consumption plus exports, with the result that pipe-line and tank-farm stocks showed an increase of 8,507,000 barrels during the first quarter of this year. Some authorities claim that California is responsible for the present slump in oil prices, and may be the controlling factor in oil for a number of years, because of the big production of light refinable crude for the first time in the history of that State. Heretofore, California's output has been a heavy crude, yielding little gasoline, and chiefly valuable as fuel; the light refinable crude is said to yield 30 per cent. gasoline. Furthermore, according to a reliable authority, it can be laid down in Bayonne, New Jersey, for about \$1.80 a barrel, whereas mid-Continent crude of average quality costs \$2.75 laid down in Bayonne. That wide difference in costs is held to explain the recent reduction in mid-Continent crude oil prices.

In view of the great revival which has taken place in the steel industry since the first of the year, it was generally expected that the United States Steel Corporation would make an exceptionally good showing in the matter of profits for the opening quarter of this year. Actual results, however, as disclosed in the corporation's

report, were much better than most people had anticipated. Net earnings for the first three months of 1923 amounted to \$34,780,069—the largest reported for any quarter since the period of depression which began in 1920. That total compares with \$27,552,392 for the preceding quarter, and with \$19,339,985 for the corresponding quarter of 1922. Perhaps the most striking feature of the report is the heavy increase in earnings recorded in the third month of this year. The corporation's net profits of \$10,561,241 in January compare with \$9,322,687 in December of last year, and exceeded those of any other month since 1920, with one exception. Net earnings in February, a short month, dropped to \$9,527,181, but those of March, \$14,691,647, were the largest reported for any month since November, 1920, when they totalled \$15,002,919, and were close to the monthly average for 1920. The larger earnings last month reflect not only increased production, but also better prices obtained for steel products. It is quite apparent that the corporation has reached the more profitable business on its books, that is, it is filling orders taken at higher prices than those which prevailed a while ago. The gain in March earnings over those for preceding months is believed to foreshadow a favourable exhibit for the current quarter. After taxes and other charges, the surplus available for dividends for the past quarter amounted to \$17,518,051, equivalent after the preferred dividend to \$2.20 a share earned on the \$508,302,500 common stock. That compares with \$11,283,346, or only 97 cents a share on the common stock in the preceding quarter, and with \$5,909,232, or \$1.64 a share on the \$360,281,100 preferred stock, in the opening quarter of 1922. For the first time in two years the corporation during the past quarter earned the 5 per cent. dividend on the common shares, with a wide margin; the surplus for the quarter, after all charges and dividends, amounted to \$4,859,351.

The United States Shipping Board has set May 28th for the opening of such bids as may be received for the purchase of vessels which the Government owns, but which it has decided to dispose of, if possible. It is understood that approximately 375 vessels will be offered for sale. For the purposes of the sale, the Shipping Board has regrouped the regular services, now being operated by it through agents, into 18 different routes. Every bidder is required to include in his offer a guarantee to operate for a specified period over the routes selected by him, and not elsewhere, the ships to be purchased.

FRANCE.—THE REPLY TO THE GERMAN NOTE—RUHR COKE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS May 9.

WITH the dispatch of the Franco-Belgian reply to the German Note in regard to the Ruhr and the reassembly of the Chambers, interest in the Ruhr question itself has fallen back, for the time being, to the second place. The outstanding feature of the controversy now centres on the question as to what effect the fact that France and Belgium have thought fit to make an independent reply to the Berlin Government without really consulting their British and Italian Allies, will have in modifying the attitude of the latter—and especially of Great Britain—in regard to the future of the Reparations problem. The French official argument, of course, is that, as the whole question of the occupation of the Ruhr *per se* directly concerns France and Belgium more than any of their Allies, and as the bulk of the German Note constitutes a direct attack against the Governments of these two countries, it was imperative that France and Belgium should send in their own personal reply at the earliest possible moment, entirely without prejudice to any supplementary replies that Great Britain or Italy may think fit to make.

The more moderately-inclined sections of French opinion show a tendency to regret that the Poincaré Cabinet should have thought fit to take this course, which, it is feared, may be interpreted in England as evidence that France is anxious if not to shake off the British connection, at all events to try and settle the Reparations question on her own account, and without being obliged to pay too much

deference to British opinion. There is also evident a tinge of nervousness as to the possibility that Italian diplomacy may take advantage of the opportunity to play off Great Britain and France against each other, in an endeavour to obtain political and economic benefits elsewhere, in exchange for Italian support in the conflict with Germany. It would be an exaggeration to state that any of these ideas ought to be taken very seriously at the present moment, but they are worthy of being placed on record as indicating certain significant tendencies on the part of some sections of French opinion to-day.

The last available weekly report on the French metallurgical industry reveals several interesting facts. The most striking of these, perhaps, in its relation to the present situation is that the Minister of Public Works, M. Le Trocquer, who is responsible for the organisation of the distribution of the combustibles that have been requisitioned in the Ruhr, has issued a circular to French iron and steel masters advising them to accumulate, out of the deliveries of coke that are being made to them from the Ruhr, reserves for the purpose of being utilised in the event of these deliveries being temporarily suspended in the future. The Minister suggests that one-third of the tonnage received from such deliveries should henceforward be utilised to create these reserves until such time as a stock of sufficient coke shall have been accumulated to enable work to continue for at least 15 days. In official quarters the issue of this circular is explained as merely a measure of ordinary prudence. There is a fear in metallurgical circles, however, that it may be interpreted, in certain quarters, as a confession that the occupying Governments are finding it impossible to do more than requisition existing stocks, and the occupying authorities are being appealed to to demonstrate that they intend in the near future to organise definitely the "rational exploitation" of the great German industrial region. By this it is obviously meant that the French authorities in the Ruhr ought by this time to be in a position themselves to ensure the actual exploitation of the coke plants, which is yet far from being the fact.

Further, there is more than a suspicion here that the Berlin Government is adopting a policy in regard to the Ruhr coke plants that may render it impossible to carry out the "rational exploitation" referred to. It is suggested that the Germans are convinced that the French, as part of any settlement that may be made, will demand that the greater part, if not all, of the coke plants connected with the fiscal mines shall be handed over to them. This, it is argued, explains why a large proportion of the ovens have deliberately been allowed to go cold, which means that they will have to be practically reconstructed before their utilisation for production is again possible. The Germans, in effect, are suspected of having adopted in this connection the tactics put into operation at the time of their retreat to the Hindenburg line, when they devastated the whole country behind them. The object is obvious. They reason that if the French eventually insist on the fiscal mines and coke plants being handed over to them, they will find themselves faced with the necessity of expending some 400,000,000 on reconstructing the plants, with the additional handicap of having to lose, perhaps, a whole year before this work could be

completed. Meanwhile the Germans would be able in much less time to reconstruct on the latest modern principles the 20-year-old ovens that would be left to them, and would be in a position again to dominate the coke market before the French could restart production. The situation of the privately owned coke plants is, of course, another matter entirely.

All this, of course—particularly when similar reasoning is also applied to the State collieries in the Ruhr—affords much food for thought when the immediate future of the French metallurgical industry and the success of the operations in the Ruhr is under consideration. In the report presented to the Chamber by the Finance Commission on March 27th, on the Bill asking for credits to meet the cost of the operations, it was stated that although 40 of the 114 blast furnaces in action on January 1st had been shut down through shortage of coke, "the programme that is being carried out will enable the whole of the furnaces to be started up again in from five to six weeks." This statement, I believe (although I have not the exact figures at hand for the moment), has been to a very large extent justified. The deliveries in France of metallurgical coke from the Ruhr, according to the latest figures available, have been as follows:—April 26th, 7,457 tons; April 27th, 5,728 tons; April 28th, 5,378 tons; April 29th, 7,054 tons; April 30th, 6,978 tons; May 1st, 5,340 tons; May 2nd, 5,821 tons, or an average of over 6,000 tons a day.

One of the most striking features in the whole situation is, perhaps, the manner in which the German resistance has reacted on the output of the French coke plants and the stimulus it has given to home producers of metallurgical coke. The output of coke from the mines in the Nord and the Pas de Calais, which was 47,000 tons in October last, rose to 97,800 tons in March (against 205,000 tons per month in 1913), an increase of over 100 per cent. in six months. Of this total, 65,000 tons went to the French metallurgical undertakings. Agreements have been made recently under which the colliery concerns of the two departments in question undertake to deliver to the French metallurgists 60,000 tons of coke per month by the end of 1923, and 110,000 tons by the close of 1924. By the latter date the northern coal field expects to be in a position to produce about 170,000 tons of coke per month, or very nearly its average in 1913. Construction of new coke plants is being put in hand on a very large scale, both in the coal field in question and in Lorraine and the Sarre. In other directions, also, there is evidence the French mean to leave no stone unturned to exploit to the utmost the opportunity that has come to them, as the result of the war, to assume a very much more important place in the steel trade of the world.

The Bourse, under the influence successively of the announcement of the new German proposals and of the Franco-Belgian reply, has remained uninteresting and characterless. French Rentes, however, where they have not remained stationary, have moved up fractionally. As a whole, all departments have shown more firmness than might have been expected, and price changes, with rare exceptions, have not been notable.

GERMANY.—REPARATIONS—FINANCES—EXCHANGE AND BOURSE—PRICES—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, May 7.

THE rejection of the Cuno Cabinet's Reparations offer has caused no surprise. A certain unreality underlay the whole transaction. At the time of Lord Curzon's speech the German public was getting used to the idea of a long struggle of exhaustion against France, the end of which, it was imagined, would be the overthrow of the Poincaré Cabinet and admission of the failure of the Ruhr adventure. This view took into account the fact that with the Poincaré Cabinet the Ruhr raid had become an issue of prestige, but ignored the fact that it is probably so regarded by all France. Lord Curzon's speech compelled Dr Cuno to make an offer. The speech

and the Press comments on it everywhere implied that Germany ought not to sit with folded hands, and the offer was duly prepared in the belief that an offer was necessary to put Germany right in the eyes of the world, and to show that she did not want to continue the struggle for the struggle's sake. As Germans all along proclaimed that France's aim was not a Reparations settlement, but merely aggression and annexation, the offer was not made in the belief that it would be accepted; and, that being so, it seemed that the mere making of an offer, and not the terms of the offer, was the chief thing in Wilhelmstrasse's mind. The terms of the Note also had a certain unreality. The 30 milliards apparently represents an unmotivated compromise between two extremes, and is not based on any data. There is nothing in Germany's present position showing that she could pay the interest on international loans representing this sum after a four years' moratorium, and there is nothing showing that she could not pay on a larger sum. As regards the independent guarantees to be given by German private interests the Note was very vague. The earlier proposals were for guarantees by "industry" in the narrow sense; and to a foreign mind "industry" means something more concrete than the whole German "Wirtschaft," mentioned in the Note, which, according to a speech by Dr Cuno, means industry, agriculture, trade, and finance, and, according to the official translation, "the entire German business world." It is not clear how the whole of German private economic interests can be organised in such a way as to give a legally enforceable guarantee and an immediately realisable security for enormous foreign loans; but if the Cabinet had any clear scheme it ought to have been expounded in the Note. Whether a big international loan is really to be had is considered by experts here very doubtful, and some neutral newspapers have been pointing out that while in all Reparations discussions the loan is taken for granted it only the other questions are first settled, the settlement of these other questions would almost certainly be followed by difficulties in obtaining a loan. The Franco-Belgian reply to the offer is even more uncompromising than was expected, and the tone shows that the writers, like the Germans on their side, knew that they were not seeking a settlement but putting themselves right before the world by a typical war-propaganda document, which, like most such documents, contains a good many misstatements.

The Finance Ministry's report for April, the first month of the new financial year, shows revenue from taxation of 498,108 millions; receipts from Floating Debt operations of 1,840,960 millions, which is over a billion less than in March; expenditure 2,339,082 millions, of which 1,331,634 millions for general administration and Peace Treaty obligations in native currency, 89,271 millions for Peace Treaty obligations in foreign currency, and 797,288 millions for deficit on State undertakings, of which 778,099 millions is for railways. The Customs gold surcharge has been raised to 614,900 per cent. Summing up the concluded Budget for 1922-23, the Finance Minister, Dr Hermes, states that of 6,300,000 millions increase in Floating Debt, 2,600,000 millions were due to losses on Railways and Posts, 2,000,000 millions to Peace Treaty costs, and 1,600,000 millions to the deficit on the General Administration Budget. The Prussian Government, after raising about 8 milliard marks by a paper-mark loan with variable interest, announces a 5 per cent. potash loan of value 50,000 tons of potash, and a 5 per cent. rye loan of the value of 20,000 tons of rye. A law abolishing the remnants of the breadstuffs requisition system and bread cards has been submitted. In order to ensure against scarcity, the State will create a breadstuffs reserve of 3,500,000 tons. It is proposed to impose the Forced Loan a second time, and to use the yield for cheapening bread to pensioners, bondholders, unemployed, and persons with large families.

The Reichsbank statement for April 30th shows an increase in note circulation of 449.9 milliards to 6,545

milliards, in discounted Treasury bills 405.2 milliards to 6,224 milliards, and in commercial bills 227.9 milliards to 2,986 milliards. Outstanding Darlehns advances rose to 1,477 milliards, Darlehns note circulation being 12½ milliards. The statement shows the despatch abroad to foreign central banks of a further 52.5 million marks in gold, the uncharged gold deposit abroad being now 217,282,000 gold marks. The metal reserve continues to grow by the booking of base metal token money, and is now 14,517,340,000 marks, of which 919,909,000 marks is gold. The heavy fall in mark exchange which followed upon news of a bad reception of the Cuno Reparations Note was followed by a moderate recovery, due to reports of the English resolution to have the Reparations question settled by all the interested Powers, leaving the Ruhr occupation question to be settled by Germany with France and Belgium. Dr Hermes has told the Reichstag that "the Government is firmly resolved, together with the Reichsbank, to continue the mark-support action with all its power." Stocks last week had a big rise. The *Frankfurter Zeitung's* index for dividend-payers on the 4th shows 1,713,005 against 1,359,115 a week earlier; the figure for May 4th is the highest so far, the highest preceding being 1,507,265 on February 9th. May 3rd was a boom day, resembling certain days during the heavy mark falls in 1921 and 1922, but on the 4th profits were taken in connection with the mark recovery. Stinnes securities were in demand in connection with his acquisition of control of the Silesian Kattowitz and Bismarckhütte companies, the shares in which were bought from Herr Flick of the Bismarckhütte Company. The inclusion of Kattowitz materially increases the coal resources of Stinnes Rhine-Elbe Union, and the Bismarckhütte produces everything connected with steel production, from ore and blast furnaces to fine steel. Herr Stinnes has also gained control of a Roumanian (formerly Hungarian) bauxite company. Bond quotations on the 4th were: War Loan, 89.50; Fours, 1180; 3½ per cent., 565; Threes, 4575; Colonial Fours, 10,000; Savings and Premium, 310; Prussian Threes, 235.

Prices again rose in April, and passed the highest point attained on February 1st. The April rise was 28 per cent. The *Frankfurter Zeitung's* index for 98 commodities (basis 1 in July, 1914) shows:—

	Food.	Textiles and Leather.	Minerals.	Miscellaneous.	Manufactured Articles.	All 98 Wares.
January, 1920	20	26	27	11	15	20
" 1922	38	58	52	31	33	42
" 1923	1,758	3,206	2,622	1,778	1,518	2,054
April, 1923	5,350	8,854	7,822	6,434	5,135	6,427
May, 1923	7,003	14,066	10,186	6,844	5,903	8,217

As the gold index on May 1st stood at 8,869, prices were again under world-market prices; the figures for April 1st were: Gold index, 5,024; prices, 6,427. The index figure for 10 native products was 6,621, and for 10 imported products 8,819. At present gold exchange manufactured articles are again materially cheaper than in 1914.

The March trade figures, like those of the preceding months, are imperfect, owing to lack of returns from the occupied territory. The provisional report shows imports of 5,220,100 metric tons, against 3,166,100 tons in February, and exports of 938,200 tons against 1,096,100 tons. The imports increase is under all headings except manufactured goods, which have declined; but the main increase is in coal, which rose from 1,820,000 tons in January to 3,400,000 tons in March. The Prussian Trade Ministry's report on industrial conditions in April is on the whole unfavourable. The mark drop in the second half of the month brought in some branches a certain increase in activity; and in the textiles and leather branches there was a great demand. In most industries, however, orders continued to fall off. The chemical manufacturers declare that their prices are higher than those of America's, but this report probably referred to the mark stability period. A report of the Automobile Dealers' Association shows that the use of motor vehicles is rapidly increasing, one reason being that purchase of a motor-car is an obvious form of "flight from the mark." In 1922 there were in use 37,941 heavy motor cycles, against 26,666 in 1921, 82,595 private cars against 60,111, and 43,457 motor

AUSTRIA.—THE POLITICAL SITUATION—STATE FINANCES—INDUSTRIAL CONDITIONS—FOREIGN CAPITAL—MONEY, STOCKS, AND PRICES.

(FROM OUR CORRESPONDENT.)

VIENNA, May 5.

THE most recent developments here have called forth criticism of the League of Nations' reconstruction programme for Austria in business and financial circles. Until quite recently it was exclusively the Social Democrat party which obstructed the carrying out of the reforms of the League of Nations, while bourgeois circles were at one mind with the Government that Austria's salvation depended entirely on thoroughly carrying through the programme. However, within the last few days a conference of all the Austrian Chambers of Commerce has taken place in which the results of reconstruction up till now were very strongly criticised, and it was pointed out that so far the Austrian people have made one sacrifice after another without seeing the expected alleviation of conditions. It was added that, in the first place, the Government is responsible for this because it has raised taxes and fees to the highest point, though it has not been able to enforce the necessary reductions in the Budget in face of the opposition of the political parties. The Bill for allowing further control in the form of an adviser for the Austrian National Bank has also disturbed many nationalists. It can be said, therefore, that whilst a short time ago a new election would have greatly decreased the number of the Socialist members and increased the Government's majority, an election now would hardly change prevailing conditions.

As often as the representatives of the Austrian Government confer with the delegates of the League of Nations to negotiate for an advance on or the issue of the intended loan, rumours of new difficulties arise in financial circles, which, it is true, have always been denied. These same rumours were repeated recently when Doctor Seipel suddenly left for Geneva. The realisation of the big foreign loan is very urgent for Austria, since the Government must prepare to pay back the gold Treasury bonds issued in dollars in December, and which fall due in June of this year. Further, the recent increase of prices which has raised the index figure 7 per cent. in the last few months forces the Administration to increase automatically the wages of its employees. The last index figure increased the State pay rolls by 28 milliard kronen monthly. Since the Government no longer has the note printing press at its disposal it must cover these new advances by raising taxes and fees.

Industrial and economic conditions in Germany always exert a strong influence on Austria. For example, the Prussian State Railways placed large orders for railway materials in Austria because the German works asked for too extended periods of delivery, but further big orders which were already under negotiation have been withdrawn in the last few days owing to public protests in Germany against placing such orders abroad. These orders have effected a slight decrease of unemployment in Vienna and the provinces. In Vienna, for example, the number of the unemployed in the first half of April fell from 85,593 to 83,268. In purely commercial enterprises, however, the number of unemployed is still very high. This and the continuous high cost of living are the reasons why the Social Democrat party has asked for a further considerable increase of the unemployment dole,

which has been granted after a compromise with the Christian Socialist party. Several strikes in the Styrian iron industry ended in failure on the part of the workmen, whose ranks were weakened by differences between the Christian Socialist and Social Democrat workmen.

The stabilisation of the krone, which has effected a slight reduction in foreign exchanges, has caused foreign capital to take an interest in Austria and to acquire participations in industrial enterprises and banks. This explains the fact that money conditions on the Vienna market remained easy in spite of a strong boom on the Stock Exchange. Austrian capital alone would never have been strong enough to make such great purchases of securities. It is worth noting that these purchases were not only made by capitalists in the surrounding Succession States, but also by English, American, Dutch, and Swiss capitalists.

In the last two months a general tendency towards raising the value of all securities on the Stock Exchange has set in. Compared with the prices at the beginning of the year bank shares have risen 300 per cent. and industrial securities about 380 per cent. This is to be explained mainly by the fact that until a short time ago numerous shares were at such a low level that one could get them for the price of a few tramway tickets. The balance-sheets of the Austrian banks and industrial companies also show for the first time a tendency to accommodate themselves to changed money conditions.

The cost of living index number, which in the middle of September, 1922, went down from its highest point of 100 to 83 at Christmas, has since the beginning of this year shown a continuous rising tendency and has reached 98½ this month, and shows no prospect of stopping at this figure. This movement of prices has been caused partly by the general movement of world market prices, and also, to a certain extent, by the new tax on all sales and exchanges of goods, which was introduced on April 1st.

The appointment of a foreign adviser for the Austrian National Bank is expected in a short time. His duty will be to see that the Government has no unjustified recourse to the Issue Bank. The note circulation of the Bank was 4,388 milliard kronen on April 15th, as against 4,258 milliard kronen on March 15th. The gold reserve was increased from 1,351 milliards to 1,510 milliards in the same period. Large amounts of foreign currencies have been invested abroad.

Through the influx of foreign money from abroad the National Bank has been able to hold the money market under its control. The Bank would even have been able to reduce the prices of foreign currencies, but refrained from doing so in order not to increase export difficulties for Austrian industry.

THE WORK OF THE LEAGUE.

(BY A SPECIAL CORRESPONDENT.)

GENEVA, April 30.

THIS has been a busy, controversial month for the League of Nations, and round about it two important things have been stirring. America is trying to make up her mind whether she will join the Permanent Court of International Justice, and has not yet emerged from many of her muddled misconceptions about the League; Ireland has notified officially her intention to apply for admission to the League at the next assembly—the little nation unafraid and looking to the bigger step of full League membership as a symbol of national liberty; the big nation hesitating to take the more restricted step for fear of vague entanglements, which so far, however, have not proved conspicuously inconvenient for the Powers already within the fold. In the more urgent problems pressing upon Europe there have been proposals tending to put the League to dangerous uses, but all these elements of discussion are outside the scope of actual League work. Long discussions have also taken place on the unhappy Saar problems, and some of the German commentators seem unduly satisfied with the fact that for the first time there were definite signs of remonstrance against the methods of the Governing Commission. From other quarters, particularly from Great Britain, far more serious criticisms on the Saar admini-

stration have arisen, and these I must leave to be discussed in your editorial columns.

The April session of the Council gives point to a few necessary considerations. In the first place, there were 22 States participating in the discussion, including the ten members of the Council, and the agenda concerned the interests of nearly every country in Europe, as well as several outside, excluding the more general international questions which concerned everybody. Nearly the whole of the Council's work was done in public. It was open diplomacy practically demonstrated, with real and animated debates, the significance of which is scarcely realised outside the remote quarters of Geneva. It showed the value of the League as a safety valve, even if the solutions may not always have satisfied objective observers.

The Council is frequently regarded either as a dull, judicial body from which the sting of conflict has been withdrawn and replaced by the milk of human kindness, or as a set of amiable gentlemen wasting their time in irresponsible efforts, such as are the prerogatives of pacifists and cranks of all lands. The Council, of course, is neither of these things. It is not a judicial body, but a collection of Government representatives under Government instructions, acting on diplomatic and political grounds, seeking to find agreed solutions by compromise or other means in a mediatory way, without delivering sentences like a court. It is true its members work on a code—the Covenant—and have at least to pretend to live up to its terms. This is no mean controlling force, but those who imagine that the League is the end of politics and diplomacy are living under a great illusion. What it has done is to put international relations on a higher plane, but this does not mean moral objectivity in all decisions. The greatest piece of constructive work which the League has yet done, namely, its plan for the financial restoration of Austria, has been full of practical difficulties, which have had to be settled on a political basis; nor are these difficulties yet at an end. But the League's system has made the handling of them simpler by the mere fact that they are taken on an international basis. One does not want to underestimate the League's spirit, which after all is a matter of evolution, but to put it in some reasonable and sane perspective.

Another illustration lies in the remarkably interesting case brought forward by Hungary, under Article 11 of the Covenant, against Rumania. Hungary claimed that the Rumanian expropriation law, as applied to Hungarians who have left Rumania, but whose property rights are secured by the Treaty, is contrary to the terms of the Treaty. It is not possible to enter into the complicated arguments, but the point is that the Council first suggested reference to the Court, which met with Rumanian opposition. It then proposed that the Council should ask for an advisory opinion of the Court, followed by a suggestion for adjournment under conditions, and finally reached the point upon which it secured agreement, namely, unconditional adjournment to a later session, with arrangements to enable the contestants to reach an agreed solution under the direction of a member of the Council as mediator. This may not seem bold, and it is certainly not pontifical, but it shows how the Council takes account of all kinds of political considerations, and starts by feeling its way to broadly acceptable results.

In a similar way the dispute between Bulgaria and Greece, under Article 11, concerning the expulsion of Bulgarians from Western Thrace, resulted not in immediate solution, but in a certain alleviation of the situation and the discovery of a *modus vivendi* which satisfied both parties well enough. Another instance of frank recognition of real politics was the request to the Court, on the application of Finland, for an advisory opinion as to whether under the Treaty of Dorpat the question of the autonomy of Eastern Carelia constituted for Russia obligations of an international character. While doing this, and emphasising the importance of the Russian side being heard by the Court, the Council made it quite plain that, in the present state of affairs, Finland must be under no illusions as to what the League could do, assuming that the Court decided in favour of Finland.

Yet the Council meeting, despite these necessary limitations, has shown how large are League possibilities. The

Austrian affair alone (concerning which the Council's main decision was the authorisation of the floating of a long-term loan for Austria) has demonstrated clearly the difference between separate, piece-meal assistance given without control and without a plan, and real international co-operation in enforcing a complete and comprehensive scheme of reconstruction. A similar contrast is provided by the case of Albania, whose separate existence and independence has been saved by continuous League effort over-riding the sport of a few nations thirsting for Albanian control. The final step has been the appointment by the League of a Financial Adviser, who is the first of a series of advisers for various public services, with the object of achieving the economic development of the country. The Council took this decision in accordance with a general resolution of the Assembly undertaking to consider the provision of such expert assistance to States requesting it. Another instance of the direction in which League action is developing in this respect is the consideration by the Financial Committee of the League, at the request of the Greek Government, of the terms of Greek proposals for the raising of a £10,000,000 loan for refugee purposes.

Among the other work of the Council was the settlement of the frontier dispute between Hungary and Czechoslovakia in a way acceptable to both sides. The Council took some steps forward on the disarmament question, deciding to ask America on what terms she would be willing to co-operate with other States in the control of the trade and traffic in arms, and to ask the Members of the League for their opinion on Lord Robert Cecil's mutual guarantee scheme.

Some important decisions were also taken on the control of the traffic in women and children, the chief of which was a plan for an international inquiry. A grant of 50,000 Swiss francs was made to Dr Nansen to assist him in a colonisation scheme which has been started for Asia Minor refugees in Greece.

ITALY.—BANK OF ITALY REPORT—FOREIGN TRADE BALANCE—FLUCTUATIONS OF NOTE ISSUES AND DISCOUNTS—GOLD RESERVES.

(FROM OUR CORRESPONDENT.)

TURIN, May 1.

FROM the report of Signor Stringher to the last ordinary meeting of the shareholders of the Bank of Italy one can glean some interesting figures on commerce, banking, and finance in Italy. On the adverse foreign trade balance, which may be calculated at 6,000 million lire yearly, Signor Stringher remarks that Italy can only compensate it in the usual old way of remittances of Italian emigrants and expenses of foreign travellers. These are difficult to gauge, but remittances from emigrants through the agency of the Bank of Naples were in 1920 980,756,000 lire, in 1921 711,549,000 lire, and in 1922 525,688,000 lire. The Bank of Naples handles about a quarter of the savings of the emigrants, so that it may be calculated that remittances contribute over 2,000 millions to alleviate the annual indebtedness of Italy on the score of foreign trade.

The note issue at the end of the four last half-years was as follows (in millions of lire):—

	Issued by Banks for the Account of the			Issued by the State.	Gross Total.
	Trade.	State.	Total.		
June 30, 1921.....	9,436.6	8,722.3	18,158.9	2,268.4	20,427.3
December 31, 1921..	10,704.1	8,504.8	19,208.9	2,268.3	21,477.2
June 30, 1922.....	9,773.9	8,049.1	17,823.0	2,267.0	20,090.0
December 31, 1922..	9,935.4	8,076.6	18,012.0	2,267.0	20,279.0

The maximum was reached at the end of 1921, in consequence of the collapse of the Banca Italiana di Sconto; and it is easy to see that the banking issues on account of the State were not responsible for the rise, which was wholly limited to the issues on account of trade. This unfortunate affair retarded for a year a decrease which should have taken place in the note circulation. The losses will be borne ultimately by the taxpayers, as the Government, by a royal decree of January 2, 1923, agreed that three-fourths of the tax on notes issued above a certain limit and not covered by gold, instead of being

paid into the Exchequer, should be paid from January 1, 1922, to December 31, 1925, into a special fund, which eventually will cover the losses incurred by the banks of issues on Banca di Sconto liquidation. An indication of the pressure exercised by these extraordinary rediscounts of banking bills may be gathered from the fact that the Consortium for industrial securities, largely an offspring of the banks of issues, which rediscounts long-dated bills of industry and trade, increased its operations from 1,496 million lire in 1921 to 2,254 millions in 1922, and closed the past year with the big sum of 767 million lire in loans and discounts; to which were to be added 898 million lire of a special section of this same Consortium created for the rediscount of banking bills.

The bills discounted by the Bank of Italy increased, therefore, very largely. The following figures of such bills may give an idea of the extent to which bankers and traders had recourse to the aid of our first bank of issue (millions of lire):—

November 20, 1921.....	3,328.9	October 20, 1922.....	4,365.3
December 31, 1921.....	3,895.8	November 30, 1922.....	4,596.2
January 10, 1922.....	4,244.3	December 31, 1922.....	4,635.3
April 30, 1922.....	4,559.8	March 20, 1923.....	4,288.6
June 30, 1922.....	4,539.1		

The item of bills discounted by the Bank of Italy, which increased between November 20, 1921, and April, 1922, by the huge sum of 1,231 million lire, has fluctuated since; but at the end of 1922 was at its highest point. It is to be hoped that the decrease experienced in the New Year may not prove a merely seasonal movement. Loans on securities have done better; beginning at 3,669.5 million lire at January 31, 1922, they decreased, almost continuously, to 1,955.2 million lire at November 30, 1922, only to increase to 2,533 millions at December 31, 1922, owing to the usual end-of-the-year necessities.

While the official discount rate remained at 6 per cent. until July 10th, and was reduced to 5½ after that date, the average effective rate of discount applied was 5.55 per cent. in 1922, against 5.83 per cent. in 1921 and 5.69 in 1920.

A great deal of interest was aroused in Italy by Signor Stringher's utterance about gold reserves and the war transfer of gold to England. It appears that the reserves of the Bank of Italy varied thus (in millions of lire):—

	December 31, 1921.	December, 1922.
Gold	1,077.4 ..	883.9 ..
Silver	104.8 ..	75.8 ..
Gold credits on foreign countries	48.1 ..	320.1 ..
Various	27.9 ..	9.6 ..
	1,258.2 ..	1,289.4 ..
Deposit of gold in foreign countries' certificates	73.7 ..	381.4 ..
	1,331.9 ..	1,670.8 ..

It was always the custom of the Bank of Italy to hold a part of its gold reserve under the form of gold credits on first-rate foreign banks. It was a sort of informal gold exchange system, and was useful, in old times, for the regulation of exchanges. But the item of "deposit of gold certificates" has to-day a wholly different signifi-

cation. This sum of 381.4 million lire is a part of a greater sum of 562.3 million lire which the Italian Government deposited in London, at the request of British Government, for the sake of pegging the sterling exchanges in the common interest of the Allies. This is the sum which the British Premier proposed at Paris should pass to the British Treasury in part compensation of the cancellation of the Italian debt to Great Britain. We do not know in Italy if this same gold is counted somewhere in foreign gold reserve. If so, it would be necessary not to count it twice in figuring world gold reserves.

SWITZERLAND.—THE INITIATIVE IN CUSTOMS DUTIES—FINANCIAL POSITION OF THE FEDERAL RAILWAYS—THIRD FEDERAL RAILWAY ELECTRIFICATION LOAN.

(FROM OUR CORRESPONDENT.)

GENEVA, May 1.

THE chief event of April was the rejection of the Initiative demanding the reduction of Customs duties by a majority of nearly 300,000. The motives of the rejection were not only political, they were largely financial and economic. Under the Federal Constitution the Customs receipts form one of the principal sources of Federal revenue. Before the war they were five-sixths of the total revenue; to-day, when the Federal needs have increased immensely, they form a much smaller proportion.

The Budget for 1923 estimates the Federal receipts at approximately 426 million francs. Subtracting the 203 millions representing the revenues under separate administration and those derived from the postal, telegraph, and telephone services, the actual receipts are only 223 million francs; of this the Customs duties furnish 158 millions, the other taxes 28 millions. The abolition of the provisional tariff would have reduced the Customs revenue by at least 70 millions, and the Federal revenue would have been only 153 millions, covering only about half the ordinary expenditure, which amounts to about 300 million francs, apart from those of the separate administration above referred to. The disproportion would be still greater if the extraordinary expenditure were taken into account—e.g., on unemployment and subsidies to industry.

The passing of the Initiative would have necessitated new direct Federal taxes, and the proportion of indirect to direct taxation is much lower in Switzerland than almost anywhere else. Of the public expenditure of the Confederation, the cantons, and the communes, three-fourths is covered by direct taxes and one-fourth by indirect; and in view of the heavy deficits—Federal, cantonal, and communal—new direct taxes would have been a crushing burden to industry and trade.

In a previous letter it has been shown that the financial results of several Federal services, notably the posts, telegraphs, and telephones, and of the Military Department, had considerably improved in 1922. The accounts of the working of the Federal Railways show a marked improvement likewise. It was, indeed, only in the second half of the year that the traffic increased, but the working expenses were so reduced that the excess of receipts was 30.5 million francs, against 12 million in 1921. As in other departments of the Federal Administration, this is largely the result of the reduction in the number of employees and in the extra allowances to cover the increased cost of living, and of economies realised in railway material. The working expenses, in 1921 96.59 per cent. of the total revenue, fell in 1922 to 91.14. The number of passengers carried decreased by 0.38 per cent., the goods traffic, however, increased by 10.61 per cent. But the excess of receipts over expenditure has since 1914 been insufficient to cover the deficits caused by the payment of interest. Still there is a slight improvement, the deficits in the profit and loss account having fallen by 8.71 per cent. in 1922. The aggregate amount of war and post-war deficits to the end of 1922 is 231.4 million francs, and the profit and loss account will probably close with a deficit this year also. Judging from the figures of working of the first two months of 1923, it is possible, according to the Financial Bulletin of the Crédit Suisse for April—from which these figures are taken—

the financial position of the Federal Railways may even this year show an important change. In January and February, 1922, the deficit on working was 9.55 million francs, for the corresponding months of 1923 there is an excess of receipts of 5.45 millions. It may be hoped that the period of deficits will end in 1924 or 1925.

It is under these conditions that the Confederation has issued its third electrification loan, bearing 4 per cent. interest, and intended to consolidate the floating debts contracted for the electrification of the Federal railways. The works in question, covering a total of 2,942 kilometres, of which 412 have been electrified to date, will enable the railways to be worked in a more rational manner and render the main lines independent of foreign coal. When traffic reaches its pre-war figure, and the electrification is finished, it will be possible to save 530,000 tons of coal of the 750,000 tons employed annually before 1913, or, taking the average price as 50 francs per ton, 32 million francs. It is estimated that the electrification of the 1,529 kilometres of line to be dealt with in the next six years will cost about 750 million francs, of which 230 millions will be spent on the purchase of rolling-stock. The loan in question, 120 million francs, issued directly by the Confederation, was offered for public subscription from April 24th to April 30th at 94½. It will be repayable at par on May 15, 1928. Its yield, taking account of redemption, will, therefore, be slightly more than 4½ per cent., the rate of yield in Switzerland of first-class securities. We learn that it has been fully subscribed, but that the Federal Council did not exercise the right which it had reserved—the right of increasing the amount to 200,000,000 francs.

DENMARK.—FOREIGN TRADE—BUSINESS CONDITIONS—PRICES—LANDMANDBANK—NEW ISSUES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, April 20.

THE latest monthly report of foreign trade refers to February, and shows increased figures for exports and imports. The value of the imports during that month was 155,000,000 kr., as against 142,000,000 kr. for January. At the same time, exports of Danish goods increased from 103,000,000 kr. to 113,000,000 kr., while the re-exports of foreign goods were unchanged 5,000,000 kr. Accordingly the import surplus was 37,000,000 kr. against 34,000,000 kr. in January. The predominant part of the exports is agricultural produce, and during the winter comparatively favourable prices have been obtained for this, with the exception of eggs; this has undoubtedly affected the balance of trade in a favourable direction. As, however, the world price-level is rising for a number of import articles, which are indispensable for Denmark, especially raw materials and auxiliaries, it is now a question whether exports can increase at the same rate as imports, thereby maintaining the present balance of trade. It is expected that the shipping trade—although not enjoying exceptionally favourable conditions—will earn a sufficient surplus to influence the final financial balance.

The general feeling in trade circles is rather unsettled. The decline of the number of unemployed is a sign of the increasing initiative generally experienced with the advent of spring, and in a special, but rather important, line like the boot manufacturing industry a certain optimism is expressed. Several other Danish industries have been somewhat relieved during the last few months by the stabilisation of the mark rate, which has lessened German dumping. This factor may have contributed to the comparatively bright outlook which appears to prevail. Generally speaking, the tone has improved since the new year, but expectations are nowhere exaggerated, and, although wholesale prices are firmer, no very great increase in the volume of business can be traced.

On April 1st the wholesale price index of the "Finanstidende" showed a figure of 200 points, as against 199 points on March 1st. The paper states that as far as foodstuffs are concerned a rise has taken place in pork, meat, sugar, and potatoes, while the market has been weaker for butter, eggs, and cereals. The London market for butter and eggs is said to be irregular, but

there is reason to believe that after a decline in the course of six months from 380 to 140 egg prices have now reached bottom. A further rise has taken place in coal and iron, owing to the Ruhr occupation. The Danish wholesale prices are now on the average 12 per cent. higher than at this time last year.

From the banking world there is no news of importance. After the big events, which for a long time had such serious effects, things have again settled down. It is noted with interest that the deposits in the Landmandsbank increased during March, as this is a sign of the reassurance with regard to the bank, which is felt after the grant of the State guarantee. For the four classes of deposits the total increase is 4,400,000 kr., viz., from 727,300,000 kr. to 731,700,000 kr. Call deposits have been reduced from 43,300,000 kr. to 42,600,000 kr., and time deposits from 287,400,000 kr. to 280,000,000 kr. On the other hand, deposits on current account have increased from 243,500,000 kr. to 252,900,000 kr., and at the same time saving deposits proper have increased from 153,100,000 kr. to 156,200,000 kr., a not inconsiderable increase, and the most interesting change in the balance-sheet of the bank.

From some of the larger limited companies noteworthy reports of new establishments and increases of share capital have appeared. At the initiative of the East Asiatic Company, Limited, a new plantation company has been established in London under the style of "The East Asiatic Rubber Estates, Limited," with a capital of £600,000. That part of the capital, which had not been taken over beforehand, was over-subscribed several times. The East Asiatic Company and the East Asiatic Plantation Company have sold to the new company four plantations on the Malacca Peninsula of an aggregate area of 11,000 acres. Further, the board of Burmeister and Wain, Limited, shipbuilders, have convened an extraordinary general meeting, at which will be proposed an increase of the share capital from 10,000,000 kr. to 15,000,000 kr., in order to provide for new plant—i.e., a new floating dock and extensions required for the manufacture of the new double-action Diesel motor. The new shares will be offered to the present shareholders at par in the proportion of one new share for each holder of two old shares.

A few weeks ago Burmeister and Wain published the remarkable results of experiments, which have been carried on secretly during the last two years for the purpose of producing an entirely new type of motor—i.e., a double-action four-stroke Diesel motor. This motor will now receive its trial in practical life, as Burmeister and Wain have contracted with the Swedish-America Line to supply the machines for the big new luxury liner for the New York route, which is being built by Messrs Armstrong, Whitworth and Co., in Newcastle. The machines will be two 6-cylinder main Diesel motors, aggregating 13,500 h.p., besides a complete set of auxiliary Diesel motors.

CANADA.—CROP PROSPECTS—THE REVISION OF THE BANK ACT—THE STEAMSHIP COMBINES—THE MINING BOOM—ATTITUDE TO BRITISH FISCAL CHANGES.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 23.

THE very severe and protracted winter has now come to an end, and everywhere the farmers are busy upon the land. In many localities it is still very wet, and seeding there will be delayed beyond the normal date. In Ontario the winter wheat is reported in good condition, and some pasture is beginning to be available. There has been great anxiety in business circles about the effects of the possible lateness of the western crop, but the first reports of the *Manitoba Free Press*, compiled from data procured at 50 points in the prairie provinces, are reassuring. They indicate that a very substantial acreage will be seeded by April 30th. Manitoba has usually a larger acreage seeded at this date, and heavy floods are hampering farming operations in the Assiniboine Valley, but luckily there is a large amount of summer fallow ready the moment that the land is dry enough to carry the seed drills. In some districts of Saskatchewan there will be a curtailment of

acreage, and in others the wetness of the land is a drawback. Alberta, which enjoyed a lighter snowfall, reports a larger proportion of seeding completed than its neighbours, but some points are complaining of a lack of rain. Taken all round, the moisture conditions which are most important are exceedingly satisfactory.

Since the Easter recess the Banking and Commerce Committee, which is charged with the reshaping of the Bank Act, has got down to serious work, and has been holding almost daily sessions, at which a variety of witnesses have appeared. The strong agitation for radical changes in Canada's monetary system, which has developed in the West, found vigorous expression from a number of western witnesses. In the province of Alberta there has grown up a regular school of thought, which definitely challenges the whole fundamental basis of the present banking system. Two Alberta farmers, George Bevington and Neil East, astonished the Committee and the bankers and lawyers who were present by their wide grasp of the theoretical principles of banking and finance, and launched a very formidable indictment against the present Canadian system. They were also completely conversant with the farm credits legislation lately passed at Washington, and were insistent that some parallel machinery must be devised for Canada. Mr Bevington opposed any reversion to the gold standard, and sketched a scheme for a Federal farm bank, which would be financed by the issue of Dominion notes and would operate through subsidiary provincial organisations. He was backed up by many of the Progressive members, and managed to face with success a very severe cross-examination at the hands of members who were supporters of the existing system. Mr East was more visionary, being unable, for instance, to see why the whole of the railway obligations assumed by the State should not have been met by the issue of Dominion notes. After other critics of the banking system had unburdened themselves of their views the bankers were given a turn, and it would be difficult to aver that they were fortunate in the impression created by their first champion, Sir Frederick Williams-Taylor, general manager of the Bank of Montreal and president of the Bankers' Association. Sir Frederick assumed the attitude that all was well with the most perfect banking system in the universe. He was, however, faced with some very competent young Progressive members, who did not spare him in cross-examination. He was followed by Sir John Aird, the general manager of the Canadian Bank of Commerce, who was a much more impressive witness. He was willing to recognise other points of view, and did not claim that the Bank Act was the last word in financial perfection. Other bankers, like Sir Edmund Walker, will now give their testimony, and this week there will also appear Major C. H. Douglas, who has been specially brought from London by some of the friends of credit reform. Mr H. T. Tulloch appeared to place before the Committee the views of the Bradford and other British Chambers of Commerce upon certain sections of the Bank Act, which have operated in the past to the disadvantage of British exporters, and his representations received a good hearing.

Revelations about the operations of the highly organised steamship combines which control freight rates both on the Great Lakes and the North Atlantic have aroused deep discontent in Western Canada, whose farmers feel that an unjust toll is being taken of the produce of their labours. The *Manitoba Free Press*, which is the most influential organ in the West, has opened a strenuous campaign for redress. Among other allegations, it declares that the ocean steamship companies last December lowered their rates on Canadian cattle to \$15 per head. When, however, the definite announcement was made that the British embargo on Canadian cattle would be lifted, and cattle-raisers in every quarter of Canada began preparing shipments to take advantage of the new market, the steamship companies promptly raised the rate per head from \$15 to \$22.50. British graziers arrived in Western Canada to buy cattle, but when they asked for rates for shipments they were told that no space was available because an individual in New York had contracted for practically all the space available up till June. The cattle-raisers of Canada are now confronted with the alternative of keeping their cattle at home, or of paying this

individual \$22.50, plus a profit per head. Naturally such episodes have intensified in rural communities the criticism now directed against the present economic order, and if the Canadian delegates to the forthcoming Imperial Conference do not raise the question of shipping combines and their activities, the King Government will pay the penalty at the next election.

The boom in mining stocks still continues, and there is great activity in the various mining camps in Northern Ontario, and the adjacent Quebec area. During the winter many of the leading mines have been handicapped by a lack of electric power, but with the advent of a thaw which has filled the rivers, this disability has been cured, and full production will now be assured.

The attempts to work up a gold mining boom in Labrador still continue, but grave doubts are now being cast upon the real value of the discoveries which have been made. The Mines Department at Ottawa are undertaking an investigation of the prospects of the locality, and if their pronouncement is adverse it may help to avert hardship and loss of money. Meanwhile, the Department of Mines for Quebec Province has published the following statement upon the new goldfields of North-western Quebec.

"During the summer of 1922 two geological parties under H. C. Cooke made a preliminary examination of the district, and although the report has not yet been published, it is understood that the Government geologists are favourably impressed with the conditions in this field, and the tract of country over which they went appears to warrant expectations of the development of future gold mines. Numerous large bodies of porphyry were noted, as well as syenite and granite intrusions, and taking into account the keynote of the advice of the Ontario Bureau of Mines to the prospector, which can be summed up in one sentence—for gold deposits look for feldspar porphyry and quartz-porphry intrusions, in or near great belts of pre-Cambrian sediments, particularly the Timiskaming series—this area in the Province of Quebec is most promising."

Canadian millers are much relieved that not only will no duty be imposed by Great Britain on imported flour, but that the recommendation urging a proportion of offals as a concomitant of every shipment of flour has also been rejected. There is, however, some expectation that the preference of one-third given to barley and hops imported from the Dominions may stimulate exports of these products to Britain. In the fiscal year 1922 Canada exported to Britain 9,481,888 bushels of barley valued at \$7,582,764, but the United States sent a much larger quantity, chiefly from California. With American barley faced with a duty of 10s per quarter, the Canadian farmer ought to be able to supplant it at least partially with his own product. Canada's exports of hops in 1922 were very trivial; their total value was \$377,123, and practically all went to Britain. But in the same period Canada had herself to import hops of more than twice this value, mainly from the United States, so that this particular preference is unlikely to bring much benefit.

There is just a possibility that the legislation embodying the new Bank Act may be postponed for another year: Mr Fielding admitted that he had received a number of representations to this end, and was giving the suggestion consideration. The Budget is expected next week, and very few fiscal or taxation changes are anticipated.

Letters to the Editor.

A CO-OPERATIVE POLICY FOR LABOUR AND CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The leading article on "A Co-operative Policy for Labour and Capital," in your issue of May 5th, touches so many points of interest to this society that I am prompted to offer a brief comment. In particular, your suggestion that if the employers and workpeople would collaborate in a thorough overhaul of the whole system of the relief of unemployment, which would give a sense of security, "it should be possible in return to

enlist the support of labour in this country in favour of abolishing restrictive trade union practices, of extending the principle of payment by results, and generally of working for greater efficiency and output per head," is of special interest to us, since our membership is to be found among those salaried officials, administrative and technical, engaged in the engineering and allied industries, whose duties consist in a ceaseless search for efficiency in design, production, and distribution.

We more than any other section of the industrial community are brought face to face with the facts as to the manner in which efficiency is reduced and production limited in the workshops by a thousand details of trade union practice. Those of us whose duties bring us into daily contact with the workpeople become aware of the grounds upon which those restrictions are based, and however much we may be withheld thereby from the realisation of our own visions of efficiency we cannot but often be made to feel that the lines taken by the unions are intelligible, especially when seen in the light of their experiences in past years.

Most especially are we brought to feel that the primary need of the workers is for some reasonable degree of security, and that most trade union practices which are restrictive of efficiency are to be traced to the dread of unemployment.

We occupy a mid position between the workpeople and the employer, see something of both sides, and are therefore disposed to an attitude of mind in some sense neutral as between the protagonists of either side. We should like to see the question of the relation of output with security of employment thoroughly explored by the employers and the workpeople, because it is clear that if any practicable scheme for "enlisting the support of labour in favour of abolishing restrictive trade union practices" could be devised, it would not be easy to overestimate the beneficial results to all concerned.

There are several other points raised by you in connection with the possibility of reaching the solution of industrial problems along "a middle course between the views of orthodox labour and orthodox capital," upon which I should like to touch, but must have regard to the limits of your space.—I am, Sir, yours, &c.,

NORMAN WYLD

(Director, Society of Technical Engineers).

102 Belgrave road, London, S.W. 1.

INCOME-TAX ASSESSMENTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In all the discussion of the Budget, both in Parliament and in the Press, I have so far observed no comment on the proposal to extend the period during which assessments may be re-opened from three years to six. May I suggest that this provision should receive some consideration before the Committee stage of the Finance Bill is reached?

There can be no sympathy with those who evade their share of the staggering burden which has in recent years been imposed on the taxpayer, but it seems doubtful whether the remedy proposed may not prove worse than the disease.

It is, I believe, the experience of most payers of income-tax and super-tax that for years past existence has been made almost intolerable not so much by the ferocious fines which public extravagance has imposed on private thrift as by the ineptitude with which they have been collected.

From the beginning to the close of the year we are harassed by an interminable stream, or deluge, of communications—applications, circulars, notices, and inquiries of every description, many of them futile, inadmissible or superfluous, emanating from a host of departmental officers, often ill-acquainted with their business, and between whom there appears to be no adequate liaison. However careful our returns, to get a correct assessment, or to obtain the statutory allowances—e.g., that on earned income or that on income taxed elsewhere, usually involves months of wearisome correspondence and repeated explanations. I believe that this experience is so general that to give any examples or details would constitute an unjustifiable encroachment on your space. But,

as a single illustration of the practice of re-opening assessments for which it is now proposed to extend the period, I may perhaps mention that I was recently asked what amount was included in my super-tax return in respect of certain dividends declared more than three years ago.

In ordinary circumstances I suppose the only reply which could be made to such a query—for which no reason was assigned—would be that the amount returned was presumably the amount received plus the addition necessary, according to the then current rate of tax, to represent the difference between net and gross income. As however, it so happened that I had not received either of the dividends specified I had no difficulty in making a "nil" return.

I was then informed that the Commissioners proposed to re-open the assessment, and demand payment in respect of these dividends, on which the amount due had presumably long since been paid by the recipient. I then sent a circumstantial letter, giving further particulars, of which I received no acknowledgment, but which I now understand was "accepted as satisfactory."

It can scarcely be expected that the ordinary private individual should preserve detailed accounts, covering several years, of matters long since adjusted. Should the extension proposed by the Chancellor be adopted without qualification, it will certainly add a new terror to the taxpayer in his passage through life and in many cases to his executors after his demise.

May I suggest that if experience shows that in certain cases some prolongation of the period in question is desirable, it should be confined to instances where there is strong *prima facie* ground for supposing that incorrect returns have been submitted, and the reason for re-opening should be clearly indicated.—Yours, &c.,

April 25th, 1923.

A HARASSED TAXPAYER.

Books and Publications.

RECENT ECONOMIC LITERATURE.—A TWO MONTHS' SURVEY.

ECONOMIC students, to judge from recent literature, are mainly engaged upon the useful and necessary task of examining, and restating, established principles. To a large extent this restatement is conditioned by reference to what one is tired of hearing described as the "chaos of Europe." That chaos occupies a lion's share of space among the recent publications of a more or less economic character that have come from the publishers in the last two months. There is an unusually high proportion of the books bearing definitely on the history of the years of the war, including four volumes in the admirable series of Economic Monographs, for which the Carnegie Endowment is responsible. In addition, there are a number devoted to the outstanding problems of the Treaty period, and of course, in the first instance, to currency questions. Another group deals with matters of what may be called domestic controversy. Of these there are likely to be more and more as the Socialist party in the House of Commons forces its theories to the front, in connection with this issue and then with that, and, in general, tries to assail the whole fortress of accepted economic theory.

Of works on pure economics, whether advanced or elementary, there are hardly any. Even Professor O. Fred Boucke's suggestive "Critique of Economics" (New York, the MacMillan Co., 9s) has a distinct political, though not partisan, bearing and interest; one can only regret the deplorably unattractive style which seems to afflict nearly all trans-Atlantic writers on any department of sociology. No such criticism lies against Mr D. H. Robertson; his *Control of Industry* (Cambridge University Press, and Nisbet, 5s) in the admirable series edited by Mr J. M. Keynes, of which it forms the fifth volume, is delightfully written, and the quotations from *Alice in Wonderland*, which form the chapter headings, are a miracle of ingenuity. They will draw the least attentive reader on. Not that they represent the principal merit of a book which is a model of arrange-

ment and of presentation. The argument is always lucid and tolerant, and the plea for a liberal policy in industry very well put, though it will not satisfy those who jib at Whitley Councils, from whichever point of view. The new edition of Mr Frank McVey's *Modern Industrialism* (Appleton, 12s 6d), which has been thoroughly revised, and, to a large extent, rewritten by the author, covers a much more extended space, but the gist of the matter is contained in Mr Robertson's modest volume and more fully expressed. Mr E. H. Lloyd's little volume on *Stabilisation* (Allen and Unwin, 4s 6d) is, in the main, a simplified statement of the Currency Reconstruction proposals put forward at the time of the Genoa Conference, with suggestions from their extension to staple raw materials. A very much more technical and authoritative examination of all the ideas underlying the terrifying word stabilisation is to be found in *The Stabilisation of Business* (MacMillan Co., New York, 12s), which contains contributions from Professor Seligmann, Professor Irving Fisher, and others.

Sir Josiah Stamp has issued a new edition of his invaluable *Wealth and Taxable Capacity* (P. S. King, 7s 6d), with some additional matter, bringing right up to date a volume which is the basis for all sound discussion of the problems of national finance. Another new edition, which is to all intents and purposes a new book, so far as the student of to-day is concerned, is the revision prepared by Mr T. E. Gregory, of the London School of Economics, of Bastable's famous *Commerce of Nations* (Methuen, 6s). It is very interesting to compare with this such a book as Mr Watson Kirkconnell's *International Aspects of Unemployment* (Allen and Unwin, 6s 6d). Take the two together, and you have a pretty clear apprehension of at least one side of the Free Trade case.

Sir Thomas Middleton's monograph on *Food Production in War* (Carnegie Endowment and Oxford University Press), which was reviewed in the *Economist* of March 24th, is pretty certain to rank as the standard work on the subject, and, further, to provide a handbook for British students of agriculture for some time to come. It contains a mass of most useful statistics, and some warnings, not too bluntly expressed, as to how not to do it, for the future. On various points the fact that Sir Thomas was an official limits his critical expression; but not to a degree that at all interferes with the utility of his work. Of course, he is not one of those amiable enthusiasts who think that Britain can, or should, try to grow all its own food. No one can maintain that position who is not prepared to feed himself, and believes that he can get his fellow countrymen to allow themselves to be fed, upon a diet of calories, irrespective of the human illusion that feeding, while necessary, can also be pleasant. With his facts in mind, one can turn, intelligently equipped, to such a brochure as *The Farmer's Problem* (John Murray, 1s, with an introduction by W. T. Layton). If the farmer who writes this were typical, the solution would be much nearer than is generally assumed.

Even more interesting is Sir Richard Redmayne's *British Coal Mining Industry During the War*. The subject is certainly more shapely and tractable, and the human aspect more constantly present, although Sir Richard's treatment is thoroughly scientific. A fascinating background is given by Mr Welbourne's scholarly *The Miners' Unions of Northumberland and Durham* (Cambridge University Press, 10s 6d), while the other side of the facts is provided in the *Colliery Year-Book and Coal Trades Directory for 1923* (Louis Cassier Company, Limited, 21s). It is to be hoped that this will now be an annual volume. It contains a useful survey of the present-day position of the industry, as well as statistical data, and a complete list of colliery owners, &c. Again in the Carnegie series there are two volumes from the indefatigable pen of Mr G. H. Cole, *Trade Unionism and Munitions* and *Workshop Organisation* (Oxford University Press, 7s 6d each). These cover a very important aspect of the history of the Home Front, and, as such, will be indispensable as works of reference. Neither can be described as "light reading."

One has definitely crossed the line that separates economic from political argument with the next group of books. M. Caillaux's *Whither Europe? Whither France?* (Fisher Unwin, 10s) reviewed in the *Economist* of April 28th, is interesting not only as the work of the man

GOOD RESULTS OF YEAR'S BUSINESS.

The annual general court of the Alliance Assurance Company, Limited, was held, on the 9th instant, at the head office, Bartholomew lane, London.

Mr C. E. Barnett, who presided, said that in the life department the net new business completed during the past year amounted to £1,826,496. Four years of the current quinquennium had now expired, and the profits made so far gave the directors every reason to anticipate that next year they would be able to resume the bonus on participating policies at the pre-war rates, even without taking into account the large appreciation in the values of the Stock Exchange securities on the life fund. As a result of the quinquennial valuation of the provident life fund bonuses at a satisfactory rate had been allotted to the participating policyholders. The combined life accounts premium income for the year was £1,185,665, and the combined life and annuity funds amounted to £18,648,732.

The sinking fund and capital redemption business was progressing, and the total funds were now well over £1,000,000. In the fire account the premium income showed a decrease of about £57,000, which was to be attributed to the condition of the trade throughout the world, and particularly in this country. The ratio of losses to premiums was somewhat smaller than in the previous year, and the ratio of expenditure showed some reduction in spite of the diminished income. The total fire insurance fund remained unaltered at £2,286,592.

MARINE DEPARTMENT.

The net premium income in the marine department was £509,951, after deducting the returns of premium on previous years' policies, amounting to £82,774. The claims paid were £592,796, of which £152,489 belonged to 1922, the balance being in respect of previous years. They were now closing the underwriting account for 1920. The balance remaining thereon was £52,714, but as a considerable sum would still be required to meet further claims, this amount, together with £45,055, the current year's interest on the marine insurance fund, was being carried forward, and no transfer was made to profit and loss account. They had been passing through a very difficult period for marine business, but it must not be forgotten that the three previous years showed a good profit. He hesitated to prophesy as to the results for 1921 and 1922, but there appeared to be every prospect of an ultimate profit.

Apart from workmen's compensation the business of the accident department had made satisfactory progress during the past year. In the trustee department the number of trusts administered by the company continued to grow.

From the profit and loss account it would be seen that the interest, dividends and rents not carried to other accounts amounted to £78,500. The amounts transferred from the various revenue accounts totalled £402,597, and £12,885 had been received from the Provident life account, being the shareholders' proportion of the quinquennial profit. After deducting dividends paid, expenses, &c., the balance carried forward was £1,025,422, as against £948,875 brought in.

He thought shareholders would agree that the results of the year's working had been on the whole quite satisfactory. The report of the auditors certified that the assets set forth in the balance-sheet were in the aggregate fully of the value stated therein, and that the book values of the Stock Exchange securities were in the aggregate under the market values; in fact, there was a considerable appreciation in values.

NATIONAL BOILER AND GENERAL INSURANCE PURCHASE.

Since the close of the year the directors had entered into an agreement for the purchase of the shares of the National Boiler and General Insurance Company, Limited, which agreement became absolute on January 30th. With the association of the National Boiler Company, which was one of the leading companies transacting the insurance of boilers and engineering risks, having been established in 1864, the Alliance was now equipped for handling all classes of accident business, thus meeting the demands of its extensive connections. The arrangement was for the business of the National Boiler to be transacted as hitherto from its head office in Manchester. The chairman of the National Boiler Company, Sir Christopher Needham, had been appointed to a seat on the Alliance Board.

In conclusion, the Chairman thanked the local boards, agents,

and other representatives of the company, both at home and abroad, for their valued services.

The report and accounts were unanimously adopted, and a dividend for the year of 14s per share, less income-tax, was declared.

The retiring

the world, and had in all 29 foreign representatives. They had been able to secure quite a number of influential people to represent them.

Mr J. E. Hodgkin seconded the motion.

During the course of the discussion which followed the Chairman, in reply to a question, stated that the present market value of the investments was very considerably in excess of the figure shown in the balance sheet.

The motion was then put to the meeting and carried.

The retiring director (Mr J. E. Hodgkin) and the auditors (Messrs Geo. R. Helmore, Helmore and Co., C.A.) were re-elected, and the proceedings terminated.

LONDON LIFE AND CLERGY MUTUAL.

NEW ARRANGEMENT FOR CLOSER UNION.

The ordinary general meetings of the London Life Association, Limited, and of the Clergy Mutual Assurance Society and the ordinary joint general meeting of the association and the society were held, on the 9th instant, at 81 King William street, London, Mr R. B. Jacomb, president of the association, presiding.

The Chairman, in introducing the report, said: Last year's results are too good to pass over in silence, and, although we have a great deal to get through, I must make brief allusion to some of the more important. Taking the London Life first, we have an increase in funds of no less than £583,000. The net new business of £1,570,123 has surpassed the figures for 1921, and at the same time our expenses of management show a very satisfactory decrease in proportion to premium income, namely, £5 16s 5d per cent., as against £6 5s 11d. Surely, if any justification of the system of paying no commission be needed, these figures supply it. The mortality has been very favourable, and we have been able, in addition to declaring the usual increase in the rates of reduction of premium and the usual compound reversionary bonus of 35s per cent. for policies of that class, to apply large sums in strengthening the already stringent valuation bases and in increasing the reserve.

In considering the results of the Clergy Mutual I am able to strike the same happy note, for, in company with the London Life, the society has had a most successful year. We have increased the rates of bonus on whole-life policies from 28s to 30s per cent., with a corresponding increase at ages over 65, and on endowment assurances from 32s to 35s per cent. We have applied £116,423 in strengthening the valuation basis by reducing the rate of interest from 4 to 3½ per cent., and we leave £53,449 unappropriated.

CLOSER UNION.

I will now proffer a few remarks upon the closer union of the two offices. In the opinion of the directors some such scheme as this was to be expected, and it is a natural and logical outcome of the movement of events. The only question was, when was the right moment? Let me take you back to the position of affairs when the agreement of July 3, 1918, was completed. At that time members of the Clergy Mutual were greatly disappointed with the passing of the quinquennial bonus, and it is possible that even then many of them would have welcomed a scheme for union with the London Life on the lines now proposed, but from the point of view of the London Life that was out of the question. We should have had no justification for suggesting it to the members of the London Life. At that time it was impossible to forecast what was going to happen either during the war or after it. To-day I am able to say that our hopes as to the recovery of the Clergy Mutual have been more than realised, and as directors of both companies we are proud that so great an improvement should be shown. The outline of the scheme appears in the report, and the details in the formal notices which were sent out with the report. We have endeavoured to set out the arrangement as plainly as possible, but so many technical points come up on a matter of this kind that we should try and form our judgment on broad lines and accept the advice of the eminent independent actuaries who have been consulted on the difficult actuarial points that it involves.

PRE-WAR FIGURES COMPARISON.

Sir John Barran, Bart., said he took the occasion when he received the notices of meeting to look up the figures relating to the last complete year before the war, which brought altogether abnormal conditions, in order to see exactly what the London Life Association had done since that date. The figures were so startling that he did not apologise for giving them briefly to the meeting. In 1913 the London Life Assurance issued 339 new policies; in 1922 they issued 1,470. In 1913 the total premium income was £404,000; last year it was £760,000. The interest income in 1913 was £240,000; last year it was £388,000.

The total funds in 1913 were £5,410,000; in 1922 they were £7,134,000. The interest rate earned in 1913, after deduction of income-tax, was £4 6s 7d, and last year, although the gross rate

was, of course, far higher, it was £4 8s 2d. The one and only particular in which they could not show a corresponding advance was in the rate of management expenses, for in 1913 these were £4 0s 8d per £100, and last year they were £5 16s 5d—a very heavy expense increase, but one for which no one was to blame. He questioned whether such figures as these could be brought forward by any old-fashioned office doing life assurance business in the United Kingdom. Therefore they said to their friends of the Clergy Mutual that in seeking this union they were seeking it with an association which probably stood pre-eminent for stability and solidity. He supported the proposal with the utmost assurance. He did not for a moment hesitate to say that in years to come they would look back on the arrangement to be consummated that day as a happy and fruitful arrangement for all.

Mr Hutton said he believed that every member of the Clergy Mutual with whom he had been associated felt that the question of an arrangement with the London Life was very much to the benefit of the Clergy Mutual.

The special resolutions were unanimously carried by the members of each company.

LICENCES AND GENERAL INSURANCE COMPANY, LIMITED.

STEADY PROGRESS—SUB-DIVISION OF SHARES.

The twenty-third ordinary general meeting of the Licences and General Insurance Company, Limited, was held, on the 9th inst., at the head office of the company, 24, 26, and 28 Moorgate, London, E.C., Mr A. W. Ruggles Brice (the chairman) presiding.

The secretary (Mr Victor Thomson) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: It can be no new thing to say that the year under review has not been a good one for insurances generally, and therefore, considering the conditions of the world's trade for 1922, surely in presenting a premium income of £325,663 we can earn your commendation.

Claims payments over all are heavier than in 1921 by 5 per cent. They compare favourably with the average experience, and do not exceed our anticipations.

Coming to the management expenses, you will find a slight reduction in ratio again this year, in continuance of our policy of economical working, but we are not content—our aim is towards a lower plane. But I think you will agree that it is not possible to do otherwise than move slowly in this direction. We must base our economies practically.

Our main issue of licence insurance may not call for any material comment, but I would like to say that the virtue of properly assessing insured values is one which is gaining approval throughout the trade. During yet another year we have witnessed uneventful sessions, but we cannot regard the prospect of continued fair and unclouded skies. Several legislative measures have appeared on the horizon, and one of these has actually taken place. With long experience behind us, I am constrained to say again that, in claiming that the policy we offer is the most reasonable insurance proposition extant, we offer to-day very substantial protection, expert advice, and collaboration at no more than the minimum fire insurance rate.

THE ACCOUNTS.

In the fire department we are more than pleased with the progress made, and view the future as important to our well-being.

In the employers' section a diminution of income is evident, but it is not substantial, and the reason is patent to all, premiums being assessed on wages paid.

Refer to unemployment figures and the state of trade, and you will realise that a loss of income is inevitable. What is not quite evident, however, is that we record a normal increase of new policies and withal no loss of connections.

The general account pursues a normal course, and I should like to point out that, apart from licence and marine, this account covers motor, public liability, plate-glass, boiler, burglary, drivers, and many other forms of contingency insurance.

Turning to the financial side, our total assets this year are increased by £40,325, and the depreciation reserve, which was fully provided for last year, enables us to release to profit and loss no less a sum than £33,131. Since December 31st there is a further appreciation of our securities of £10,505. We recommend a final dividend for the year of 7 per cent., free of tax, or equivalent, with the interim already paid, to 12½ per cent. As a matter of fact, with the tax this represents 16.4 per cent. gross. This is an increase of 1½ per cent. over 1921, and I am sure will be welcomed. The total payment again comes well within our actual interest earnings, and leaves a margin for the future apart from natural increase of interest.

Turning to reserves, we are enabled to provide 45 per cent. for unexpired risks. We have transferred £50,000 to general reserve account, making this item £100,000. Excluding uncalled capital, depreciation reserve, and suspense claims, our total security

to policy holders equals 104 per cent. of the premium income—surely an attainment of which we may all be justifiably proud.

Altogether your directors are very satisfied with the position of the company, and eminently pleased with the progress made during the year. Consolidation might be a very happy word to apply in recording its passage, and I cannot conclude my remarks without a word of hearty congratulation to the general manager on his work, and the results of his second year of office. By his energy and tactful resourcefulness he is laying a very solid foundation for future success.

SUB-DIVISION OF THE SHARES.

Referring to the sub-division of the company's shares, the Chairman said that the proposition was that each present share issued and unissued of £10 be divided into ten £1 shares, the preference ranking as fully paid and the ordinary as 10s paid. The effect of this should be to obtain a freer market on the Stock Exchange, this enabling present holders more easily to negotiate, and placing the shares within the reach of the small investor. He concluded by moving the adoption of the report and the declaration of the dividend recommended.

Lord Ernest Hamilton seconded the motion, which was carried unanimously.

LONDON AND SCOTTISH ASSURANCE CORPORATION, LIMITED.

RECORD QUINQUENNIAL SURPLUS.

The sixtieth annual meeting of the London and Scottish Assurance Corporation, Limited, was held, on the 8th instant, at the Cannon street Hotel, London, E.C., Sir Vesey Holt, K.B.E., presiding.

The Chairman, in moving the adoption of the report and accounts, said that some of the adverse conditions resulting from the war had now passed away, although not all the difficulties had been entirely surmounted.

In the life department, 2,973 policies were issued for £1,334,959. The total premium income of £56,099. The total premium income of £408,875 showed an increase of £8,193. The claims amounted to £423,128. The mortality experience was satisfactory. The life and annuities funds were increased by £31,812, and now amounted to £4,471,952.

The report on quinquennial valuation showed a surplus of £272,181, which was the largest in the history of the company. Of this surplus, £43,253 had been supplied to strengthen the actuarial reserves. Then, after payment of the 5 per cent. dividend, there remained £210,667, of which it was proposed to divide £180,791, carrying forward £20,875. After crediting the proper share of the net divisible life profits, and allowing 10s per cent. of the net divisible surplus provided a deferred bonus of 30s per cent. per annum, and a reversionary bonus of 20s per cent. per annum on the sum assured to ordinary with-profit policyholders, these bonuses being in respect of each full year's premium paid during the quinquennium. The directors were gratified that they were thus able to resume the declaration of bonuses. They had further decided to allow an interim bonus in respect of each full year's premium paid during the current quinquennium at the rate of 20s per cent., and at the rate of 15s per cent. on the ordinary with-profit policies. It had been thought desirable that the valuation of the "Scottish Metropolitan" should be made at the same date. This disclosed a surplus of £32,000.

With regard to the fire insurance account, the operations were on the whole satisfactory. The premium income showed a slight reduction, but the loss ratio at 48.8 per cent. and the expense ratio at 43.3 per cent. was not unfavourable. A profit of £12,608 was carried to the profit and loss account.

The marine account showed a net premium income of £767,188, a reduction of £114,054. The claims were £237,685, being 30.98 per cent. There remained a balance of £788,623, which was carried forward. The additional marine insurance reserve fund inaugurated last year has been increased by the transfer of £100,000 from profit and loss account, and now stood at £160,000. The total marine fund was £948,623.

The premium income of the accident employers' liability and general account was £231,158, a reduction of £26,455. The claims, which amounted to 52.4 per cent., were heavy. There remained a balance of £18,429.

The profit and loss account disclosed satisfactory results. After payment of dividend, provision for taxes, &c., there was a balance of £181,463, of which £41,000 was transferred to fire insurance account and £100,000 to the marine insurance account, leaving £40,463 to be carried forward. They recommended a dividend of 25 per cent., less tax, and had also pleasure in recommending that on this their sixtieth annual meeting a bonus of 5 per cent., less tax, should be paid to the shareholders.

The report and accounts were unanimously adopted.

INCORPORATED ACCOUNTANTS.

The thirty-eighth annual general meeting of the Society of Incorporated Accountants was held, on the 10th inst., at Carpenters' Hall, London. Sir James Martin (president) occupied the chair.

The President, in moving the adoption of the report and accounts, referred to the continued progress of the society, and indicated that 299 new members were added during the year, bringing the membership at the close of 1922 up to 3,597. One thousand four hundred and forty-one candidates presented themselves for the examinations, of whom 944 passed. The President went on to refer to proceedings in Parliament affecting the accountancy profession, and particularly drew attention to the Landed Property Practitioners (Registration) Bill. While the society viewed with favour any step having for its object the development of professional organisation, the President stated that certain clauses of the Bill, if passed, would prevent accountants from carrying out professional business which for a long period of years had been entrusted to them in connection with the administration of trusts, winding-up of companies and estates in bankruptcy. The Bill was not now in a favourable position on the Order Paper of the House of Commons, and he did not think it was likely to be proceeded with without a proper effort being made on the part of the bodies indicated to meet the reasonable views and requirements of the accountants' profession.

In dealing with taxation matters, Sir James Martin referred to the Committee appointed by the Chancellor of the Exchequer to consider the simplification of income-tax and super-tax forms. The Committee requested the council of the society to submit their suggestions, and this request had been complied with. The Finance Bill was free from clauses to which the public had become accustomed during the past few years dealing with the clearing up of war taxation and finance. But some important new provisions had been introduced in the Bill with regard to a considerable increase in the time for amending or making assessments with a view, it was said, for the prevention of fraud and evasion. He considered that commercial and professional men would willingly co-operate with the Government in any well-considered proposals to prevent fraud and evasion, the result of which was only to increase the burdens of honest taxpayers who keep proper books of account audited by professional accountants.

"I cannot leave the subject of taxation," said the President, "without once again referring to the question I brought before the society in October last relating to the activities of income-tax

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATED INSTITUTIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

agencies and associations advertising accountants and others. There is little if any improvement to report, and I regret to say that some of the banks are extending their activities in connection with income-tax work. I recognise that this is a serious matter, especially for our younger practitioners, and the council may be relied upon to take every legitimate step which they possibly can to protect the proper professional interests of our members. At the same time, the council cannot allow any of our members to join the crowd of advertisers, and participate in a course of conduct which is contrary to the ethics of a self-respecting profession."

In concluding his speech the President said that he had been actively connected with the society since its inception 38 years ago, and he claimed that their members could be favourably compared with that of any other body of professional men in the British Empire.

EXTERNAL DEBT OF HONDURAS.

SCHEME OF ARRANGEMENT APPROVED.

A general meeting of holders of bonds of the External Debt of Honduras, convened by the Council of Foreign Bondholders, was held, on the 8th instant, at Winchester House, Old Broad street, London, to consider a scheme of arrangement with the Honduras Government for the settlement of the debt.

The Right Hon. Viscount Goschen (president of the Council) occupied the chair.

Mr James P. Cooper (secretary of the Council) having read the notice convening the meeting,

The President said: All the External Loans went into default in 1873, just 50 years ago, and nothing has been paid on them since. During this long period attempt after attempt has been made to come to a settlement. We were informed during last year that the Government of Honduras were favourably disposed towards a renewed effort to arrive at a compromise, and we lost no time in again getting into touch with them. In this we were very greatly assisted by Mr. George Lyall, the British Consul at Tegucigalpa. We also received from the Foreign Office all the help they could properly give us. We sent out early this year, to Mr Lyall, a draft arrangement, accompanied by a power of attorney to sign as our representative an agreement on the bases laid down. After protracted negotiations, Mr Lyall signed an agreement with the Honduras Executive Government on March 21st, the power of attorney sent him not having at that time come to hand. The arrangement was submitted to the Honduras Congress on March 22nd, but it was not accepted. This information led us to fear that the arrangement had met with the same fate as its predecessors, but a few days ago we received a further telegram from Mr Lyall saying that Congress will accept the arrangement, provided the bondholders first approve it without reservation, and that we will send him a new power of attorney authorising him to sign on our behalf. I will, with your permission, briefly run over the principal points of the arrangement.

All the four loans which constitute the External Debt of Honduras—viz., the old Federal Loan of 1867, the Ten per Cent. Railway Loan of 1867, the Six-and-Two-thirds per Cent. Loan of 1869, known as the French Loan, and the Ten per Cent. Railway Loan of 1870—are to be treated alike.

All interest claims, past and future, are condoned, and a sum up to £1,200,000, payable in 30 years, at the rate of £40,000 per annum, is to be paid by Honduras in respect of the principal of the debt outstanding. This sum is to be applied semi-annually to the redemption of the bonds. The rate at which the amortised bonds are to be acquired by the Government is fixed at 20 per cent. for the first 15 years and 25 per cent. thereafter. Redemption will be effected if possible by purchases and, if this is not possible, by drawings. We think, however, that there can be little doubt that the Council will be able to obtain tenders or make purchases on the market at prices substantially lower than the rates mentioned, and it is a very important feature of the arrangement that the saving effected—subject to the deduction which I shall mention later—is to go to the benefit of the bondholders, by increasing the amortisation rate. Against each half-yearly remittance of £20,000 during the first 15 years, the Council has to deliver to the Government £100,000 of cancelled bonds, and thereafter, until the bonds deposited under the arrangement are all paid off, £80,000 each half-year. Beyond this, the Government of Honduras is not concerned with the method of application of the money.

As regards the important question of security, a special tax of 3 per cent. *ad valorem* is to be levied on all exports to Honduras from foreign countries. This tax is to be collected by means of adhesive stamps, affixed to the Consular invoices, and no invoice is to be valid without such stamps. The receipts from this tax, up to £20,000 in each half-year, are to be remitted by the bankers charged with the sale of the stamps direct to us. We understand that the proceeds of the tax should be amply sufficient to cover the

service of the debt, and, it seems to us, the collection of the money at this end, so to speak, affords much better security than the collection of a special impost in Honduras as was first proposed. You will see that a copy of the Projects of Decree, creating the tax, is appended to the arrangement.

We understand that this tax is to come into operation three months after the conclusion of the present arrangement, so that the first amortisation of bonds should take place early next year.

I may also mention that the existing bonds will remain in our hands, and will only be cancelled and delivered to the Government as and when the half-yearly payments have been made. In case of a failure on the part of Honduras to fulfil her engagements under the arrangement, the present rights of the bondholders are to be revived.

You will, no doubt, understand that in order to participate in the benefits of the arrangement, if it is carried into effect, bondholders who have not already done so must deposit their bonds with the Council in due course. For this, a limited period of two years is fixed by the arrangement, but, of course, until the bonds have been actually deposited with us, they will not participate in the half-yearly amortisations.

The resolution embodying the acceptance of the scheme was unanimously approved.

BELL'S UNITED ASBESTOS COMPANY, LIMITED.

A DIFFICULT TRADING YEAR.

BOARD'S CAUTIOUS POLICY JUSTIFIED.

DETAILS OF NEW COMPANY.

The thirty-fifth ordinary general meeting of Bell's United Asbestos Company, Limited, was held, on the 10th instant, at the Cannon street Hotel, London.

Mr J. Alfred Fisher, chairman and joint managing director, presided.

The secretary (Mr Frank G. Brook) read the notice convening the meeting and the report of the auditors.

Having referred to the retirement of Mr Giles as secretary and general manager, and of Mr Joseph Hawkridge as assistant secretary after over 40 years of service, and to the election of Mr Giles as a director, the Chairman said:

Turning now to the report, I cannot yet say that we have emerged from the industrial gloom to which I alluded when addressing you in May of last year. I then remarked that in some departments we were selling goods at prices which contributed little or nothing towards establishment charges, and it is my duty to tell you to-day—reluctantly, but not without hope of improvement—that there are not yet any clear indications that the tide has turned. Prices have continued to decline, and the trade profit for the year is substantially smaller than it was a year ago.

DECLINE IN PROFITS COMPARED.

This is not surprising when we bear in mind that the Asbestos trade is largely dependent upon the coal, iron, steel, engineering, and shipping industries for its turnover. Anything that adversely affects those industries is, therefore, bound to tell against us. While there has been acute depression in shipbuilding, it is common knowledge that the coal, iron, steel, and motor trades—there may have been exceptions, but, as a whole, those trades have suffered more than any others, the net profits, according to the *Times*, of some 40 important concerns having declined by 50 per cent. in 1921 compared with 1920, and by a further 44 per cent. in 1922 compared with 1921; while the net profits shown by this company's accounts in 1922 were only 45 per cent. below those of 1920, which, for us, was a very high record year. The average rate of dividends declared by the 40 representative concerns alluded to declined in the two years by 45 per cent.; ours by 20 per cent., viz., from 12½ per cent. in 1920 to 10 per cent. in 1921 and 1922.

BOARD'S SOUND AND CAUTIOUS POLICY.

This favourable comparison, ladies and gentlemen, is one of the results of a cautious policy in good times. We built up strong reserves, so that it was not necessary to bring into the accounts before you heavy charges for Imperial taxation, which had been anticipated and provided for in previous years. How far it may be necessary or prudent to avail ourselves of the liberty, which you were kind enough to reaffirm at our last meeting, to draw on our reserves in the present or future years we cannot say, for this wholly depends on the course of trade.

FOREIGN EXCHANGES AND UNEMPLOYMENT.

I have read, as no doubt many others have done, the recent speeches of financial and commercial authorities, and it is encouraging to see that they take a hopeful view of the future, but so long as exchanges remain in their present unsatisfactory state, there can be no real revival of foreign trade, and home industries cannot be prospering while considerably over a million workmen remain unemployed.

One of the most optimistic, yet practical reviews I have seen relating to general trading conditions appeared in a London paper a few weeks ago, wherein it was stated with a surprising degree of confidence that, while many new factories had been and were still being erected in overseas markets served by this country, the quality of the goods produced was decidedly inferior to the British-made article, and the writer emphatically advised British manufacturers to adopt a policy which has frequently been referred to by your directors as the policy of this company. The key-note of his review was expressed in these words: "Get the highest possible quality, lower the price to the smallest point consistent with a commercial profit, look into every item of management, and put your backs into it."

COMPANY PREPARED FOR TRADE REVIVAL.

That, ladies and gentlemen, is good advice, and it is just what we have been doing. In the past year considerable reductions have been made in standing charges, and management expenses. Our sales organisation is being improved, and, as a result, we hope, even though we may have to face another bad year or two, to find ourselves in a position to take advantage of a general revival in trade, which must come sooner or later. The requirements of an ever-increasing world population, and of an advancing civilisation in remote and undeveloped areas, must be met, and the economic advantages of the use of asbestos, in one form or another, in almost every industry are bound to become more and more universally recognised.

BELL'S POILITE AND EVERITE COMPANY, LIMITED

I referred last year to the growing need of co-operation between firms engaged in the same trade, with the object of reducing manufacturing and distributing expenses with corresponding advantages to customers and producers, and my remarks were received with approval by the shareholders. Subsequent negotiations led to the amalgamation—referred to in the report—of the "Poilite" (asbestos-cement) section of this company's business (including plant for making building slabs) with that of the British Everite and Asbestitile Works, Limited, of Manchester, under the name of "Bell's Poilite and Everite Company, Limited." Particulars of the amalgamation were sent to every holder of debentures and shares in this company in November last, but you may desire to have some further information elucidating the important changes in the balance-sheet figures which the amalgamation has rendered necessary.

In proceeding with the negotiations we considered that, although in the present state of trade, and with the low and unremunerative prices now ruling, we might be taking some risks, the position, on the whole, should be strengthened by co-ordinating the manufacturing and selling arrangements of the two concerns.

Moreover, as I reminded you a year ago, the policy of interlocking similar businesses under a united control has made great strides in recent years, and has generally been followed by good results.

ADVANTAGES OF AMALGAMATION.

One of the direct advantages of amalgamation in our case should be the saving in transport charges. When I point out that those charges on low-priced articles like "Poilite" and "Everite" building materials are frequently as much as 20 to 35 per cent. of the value of the goods, you will realise, and our customers will appreciate, that by standardising the manufactures, and giving deliveries from a factory in the North of England to customers in the North, and from another factory in the South of England to customers in the South, considerable savings to them in time and money should be effected, resulting, we hope, in increased business to the united concern, and enabling it, in normal times, to effect further savings in costs of production.

I said just now that we might, in the present unremunerative state of the trade, be taking some risks, but it is usually easier to arrive at a permanently satisfactory arrangement when both parties to the negotiations recognise that it is desirable. In such circumstances, a sounder scheme can be evolved than would be possible if one's ideas were unduly enlarged by inflated balances or doubtful schemes of aggression.

DETAILS OF SCHEME.

Our principal difficulty arose from the fact that the capital outlay on the British Everite Company's factory—which is situated near Widnes in Lancashire, is very substantially built and well equipped, and includes 35 acres of freehold land—was considerably in excess of the outlay on this company's Poilite factory at Harefield, although the profit-earning capacity of both factories was considered to be about equal.

It was, therefore, decided that each company should receive as the purchase price for the properties the same amount, namely, £120,000, in fully-paid preferred ordinary shares of the new company, part of the excess expenditure on the British Everite factory being recognised by an allotment to the British Everite Company of £56,000 in fully paid deferred shares entitled to rank for dividend only after a cumulative dividend, at the rate of 12½ per cent.

per annum, has been paid on the preferred, which are further protected by the directors having the right, before paying any dividend on the deferred shares, to place a certain amount out of annual profits to reserve, the preferred shares also having preferential rights as to repayment of capital in the event of liquidation.

This company also received £8,000 in fully-paid deferred shares in part payment for certain other buildings, adjacent to the Poilite factory, which have been transferred to the new company.

STOCK-IN-TRADE.

The stocks-in-trade of Poilite and Everite manufactured goods and raw materials taken over by the new company were paid for in the case of this company as to £68,626 in fully-paid preferred shares and as to £30,000 in debentures. The British Everite Company received for their stocks £36,797 in fully-paid preferred shares, £30,000 in debentures, and £20,000 in cash, all stock being valued on the same basis.

It was agreed that each company should discharge all liabilities and collect all accounts in respect of trading down to the date of transfer, December 1st last.

It was also part of the arrangement that this company should provide the new company with the £20,000 paid in cash to the British Everite Company on account of stocks, and an additional £30,000 as working capital, by subscribing for £50,000 of its debentures. All the debentures of the new company carry interest at 7 per cent. per annum. They constitute a first charge upon the whole of its property and assets, and are redeemable in 29 years by annual drawings commencing in 1927 at a premium of 10 per cent.

TOTAL HOLDING IN NEW COMPANY.

The total holding of this company in Bell's Poilite and Everite Company, Limited, is now, therefore, £188,626 in fully-paid preferred shares, £8,000 in deferred, and £80,000 in debentures, while the nominees of the British Everite Company hold £156,797 in preferred shares, £56,000 in deferred, and £30,000 in debentures. The whole of the shares and debentures are held by, or on behalf of, these two companies.

As the deferred shares do not carry voting rights for ordinary purposes, this company has a controlling interest in the management of the new company in all matters other than those relating to its constitution and authorised capital, which can only be altered by special resolution requiring a three-fourths majority. It follows that we have also a majority of seats on the board.

In connection with this company's cash subscription for £50,000 of the new company's debentures, it was also decided to redeem the outstanding balance of our existing 5 per cent. debentures, amounting to £42,200, and to provide the funds for both purposes, as stated in the report, by an issue of £100,000 new 5½ per cent. first debentures, which was largely over-subscribed. Although your directors might have applied £50,000 of our invested funds to this purpose, it was deemed inadvisable in the prevailing conditions of trade to weaken our available cash resources, particularly as the plan adopted was the more economical having regard to the appreciating market value of our securities.

MANAGING DIRECTORS.

You may be interested to hear that our colleague, Mr Charles S. Bell, and Mr E. Fontana Jucker are the managing directors of the new company. Mr Jucker was the managing director of the British Everite Company, and is largely interested not only in the new company, but also, as a shareholder, in this company. He is the Royal Italian Consular Agent and a past president of the Consular Association in Manchester, and, as the governing director of the old-established British firm of Felber Jucker and Co., Limited, is widely known and respected. This, I think, is a very satisfactory arrangement, as it ensures continuity of management by gentlemen who have an intimate knowledge of the requirements of the business. I hope, ladies and gentlemen, that you will approve, by your adoption of the report and accounts to-day, the terms of this amalgamation which I have endeavoured to make clear, and which we believe are equitable to both parties to the arrangement.

THE RESOLUTION.

The Chairman then alluded to the company's strong cash and investment position and to various other items in the balance-sheet, and having expressed appreciation of the services of the staff, moved the usual formal resolution that the report and accounts be approved and adopted, that a balance dividend of 7½ per cent. be paid, making, with the interim dividend already paid, 10 per cent. for the year, and that £37,910 16s be carried forward, this being £3,897 6s 11d more than in the previous year, which was carried unanimously.

The retiring directors and auditors were then re-elected, a special meeting being afterwards held, at which an alteration in the articles of association empowering nominee directors of the company to receive remuneration from the associated companies was approved.

EDWARD LLOYD, LIMITED.**RECOVERY IN SECOND HALF OF 1922 AND IMPROVED PROSPECTS FOR 1923.**

The thirty-third ordinary general meeting of Edward Lloyd, Limited, was held, on the 11th instant, at the head office of the company, 4-7 Salisbury court, Fleet street, London, Mr Frank Lloyd (the chairman and governing director) presiding.

DIRECTORS' REPORT.

The report of the directors for the two years to December 31, 1922, states that:—

The profits for the two years, after crediting the amount of excess profits duty to be refunded and allowing for depreciation, making provision for bad and doubtful debts, estimated corporation profits tax and contingencies, amount to £194,219 1 9
Making, with the balance brought forward from December 31, 1920 21,464 12 4

A total of 215,683 14 1
Deducting:—
Interest on pension account, directors' and auditors' fees, head office and transfer office expenses 11,529 18 2

Dividend on the preference shares for the two years to December 31, 1922 £94,500 0 0
Interim dividend on the ordinary shares for the year 1922 at the rate of threepence per share (free of income-tax), paid October 9, 1922 15,000 0 0

There remains a balance as per balance-sheet of... £94,653 15 11
The directors now recommend the declaration of a final dividend for the year 1922 on the ordinary shares at the rate of one shilling and threepence per share (free of income-tax), making 7½ per cent. for the year £75,000 0 0
Carrying forward to the next account 19,653 15 11

The average of the profits for the two years, after making provision for company expenses, shows a decrease of £21,330 14s 7d, as compared with 1920, a year of severe depression in trade, and a decrease of £126,566 19s 4d, as compared with 1919, a more normal year. This decrease was chiefly due to the writing down in the value of the heavy stocks of raw material in 1921, which was greatly in excess of the amount recovered in the return of excess profits duty, and to reduced production in that year as the result of the coal strike.

The secretary (Mr T. Gerald Denson) having read the notice convening the meeting and the report of the auditors, The Chairman, in moving the adoption of the report and accounts, said:—

At the general meeting, held in October last, your directors expressed their regret that they were unable to present a balance-sheet and profit and loss account for the year ended December 31, 1921, owing to the delay in obtaining a settlement of the company's claim for repayment of excess profits duty. This has only been effected within the last few weeks, so your directors are presenting a balance-sheet covering the two years to December 31, 1922.

As explained in the report, the bad result for this period was mainly due to the heavy loss resulting from the writing down of our large stocks of raw materials at the end of 1921 and to the reduced production of paper in the first half of that year owing to the coal strike. The last six months of 1922 saw a return to greatly improved results, whilst the production of paper for that year was over 20,000 tons in excess of the previous year. This enabled us to wipe out part of the loss on the working of 1921, and to show a profit of £182,689 3s 7d for the two years. We were unable to recommend any dividend on the ordinary shares for 1921, but we are now recommending a final dividend of 6½ per cent. for 1922, making with the interim dividend of 1½ per cent. paid in October last, a total of 8 per cent. for the year, equivalent to an average of 3½ per cent. per annum over the full period.

The demand for our product is now very active, and our machines are all running at their fullest capacity. Our production is larger than ever, and we look forward to a record output in 1923 and a return to normal prosperity. The pulp mills in Norway are turn-

ing out a high grade pulp, which continues to yield very satisfactory results.

THE ACCOUNTS.

A reference to the accounts reveals a very strong financial position. Stocks and book debts have decreased by no less than £581,235 18s 3d during the period under review, and creditors, bills payable, and sundry other liabilities, show a fall of £423,091 11s 9d. Cash in hand is less by £773 15s 2d. You will, therefore, see that working capital to the extent of £158,918 1s 8d has been released as the result of the fall in value of raw materials and the manufactured article, of which £133,499 15s 10d has been added to our investments and £25,418 5s 10d to our land, buildings, and machinery, after allowing for depreciation written off.

IMPORTANT EXTENSIONS.

We have recently put in hand a large addition to the mill on a suitable site, midway between the present mill and Ridham Dock, comprising two wide and fast-running paper machines, with the most up-to-date preparatory plant, embodying all the latest improvements, which we hope to put into operation early next year. The most careful study has been given to every detail in this new development, and it is hoped that it will represent the highest possible efficiency and economy in the production of "news."

CONGRATULATIONS TO THE STAFF AND EMPLOYEES.

I desire to offer our warmest congratulations to the staff and employees for their successful efforts in bringing about the present high efficiency of the mill. Fuller experience of the eight-hour day has more than confirmed our anticipations of its value, both to the employee and to improved running of the mill. Our thanks are also due to the staff and employees at Honefos and Vittingfos, at both of which production and quality have been well maintained.

Mr Harry Lloyd seconded the motion, which was unanimously adopted, and a final dividend of 1s 3d per share (free of income-tax) was declared on the ordinary shares, making, with the interim dividend already paid, 7½ per cent. for the year 1922.

The retiring directors, Lt.-Col. J. R. Garwood, D.S.O., Mr R. B. Miller and Mr Herbert W. Clarke were re-elected, and Messrs Turquand, Youngs and Co. were reappointed auditors.

The meeting concluded with a vote of thanks to the chairman, directors, and staff.

AFRICAN STEAM SHIP COMPANY.**IMPROVEMENT IN WEST AFRICAN TRADE MAINTAINED.**

The annual general meeting of the proprietors of the African Steam Ship Company was held, on the 10th instant, at the company's offices, 23 Billiter street, London, E.C.

Viscount Pirrie, K.P., P.C. (the chairman), presided.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I presume you will take the report as read. (Agreed.)

In my speech to the shareholders last year I pointed out that there had been a slight recovery in the West African trade, and I had hopes that the trade would gradually improve. I am glad to tell you that the improvement generally in the trade has been maintained. Unfortunately, shipping has not altogether shared in this revival. Shipping throughout the world has not been very remunerative in 1922, and in West Africa the severe competition that exists has led, of course, to drastic cutting in the rates of freight, but I think we can fairly claim not only to have held our ground, but to have improved our position in every way. We have met the increasing volume of trade by putting into the line extra steamers and improved services, and I am confident that with our up-to-date methods and good services, and low freights, we shall continue, as in the past, to secure the bulk of the West African trade.

THE DIVIDEND.

As you see from the report, we propose to pay a dividend of 7 per cent. for the year. This is a drop of 1 per cent. as compared with the previous year, but, having regard to the difficult position which the shipping trade has had to face, I think you will agree with me it is a fairly satisfactory result. We have always pursued a policy of writing the ships well down, and the book values of our fleet stand at a satisfactory figure.

It is very gratifying that we are again able to report that no serious casualty has occurred to any of the company's vessels during the past year, and I think this reflects the greatest credit on the captains and officers of the fleet.

The directors have always had before them the question of the provision of comfortable passenger vessels, and there has been added to the fleet during the year the new motor passenger vessel "Adda," which replaces in the service the s.s. "Apapa," lost during the war. The "Adda" follows on the lines of the "Appam," which has proved such a useful vessel, and contains

all the latest improvements in passenger vessels tending to the comfort of passengers. During the short time the vessel has been on the service she has given great satisfaction.

ADDITIONS TO THE FLEET.

Since the close of the year further additions have been made to the company's fleet by the delivery of two cargo boats, the steamship "Cochrane" and the motor-ship "Ediba." The branch steamer "Uromi" has been sold, she being no longer required.

I now have pleasure in formally moving: "That the report and accounts be received and adopted."

Mr Owen Harrison Williams seconded the resolution, which was carried unanimously.

The Chairman next moved: "That a dividend of 4½ per cent. be declared for the six months ended December 31, 1922, which, with the interim dividend of 2½ per cent. paid on October 19, 1922, makes a total payment of 7 per cent. for the year 1922, less income-tax."

Mr G. W. Neville seconded the motion, which was unanimously agreed to.

The retiring director, Mr Owen Harrison Williams, was re-elected, and Messrs Cooper Brothers and Co., chartered accountants, were reappointed auditors.

A cordial vote of thanks to the chairman, the directors, the superintendents, officers, and engineers of the company concluded the proceedings.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.**GREATLY IMPROVED RESULTS.**

The annual meeting of the Army and Navy Co-operative Society, Limited, was held, on the 8th instant, at Caxton Hall, Westminster, London, the Right Hon. Lord Ebury, D.S.O., M.C. (the chairman), presiding.

The Chairman said it was a great satisfaction to the board to be able to present results which showed such a marked improvement upon those of 1921-22. The gross profit and miscellaneous revenue showed an increase of £24,319 upon the previous year's figures, while the working expenses, after providing the usual amount for depreciation of premises, showed a reduction of £94,915, with a resulting increase in net profit of £119,234. The increased gross profit was entirely accounted for by relief under the head of stock depreciation consequent upon the further very substantial reduction of £193,669 in the value of the stock-in-trade. This was not only satisfactory from a financial point of view, but the fact that the gross profit had been at a slightly lower rate of percentage than in the previous year was evidence that the shareholders' interests as purchasers had been carefully watched in accordance with the fundamental policy of the society of keeping down prices. This claim had been made by many other trading concerns, some of whom, to attract business, incurred such lavish expenditure as could hardly be regarded as conducive to low prices. Many of the shareholders needed no assurance of the advantages of dealing with this society, and those who did were recommended to make comparisons. The result would not only be convincing, but, he ventured to say, surprising, particularly in the case of articles other than groceries and fresh provisions, in regard to which the quality and value supplied by the society had always been unquestionable. From purchases they had made of a comprehensive variety of commodities for purposes of comparison throughout the past financial year, it was found that the differences were of a substantial character, and showed a considerable advantage to those who obtained their supplies from the society.

SOCIETY'S INDIAN DEPOTS.

He only returned from his second visit of inspection of their Indian depots on April 23rd. As the result of first-hand knowledge, he was glad to be able to say that the position of the society in regard to its shops was now thoroughly sound. He could also state, as the result of a careful study of conditions there, that the society had passed through the financial strain far more successfully than the majority of its competitors. It was true that since his last visit a great improvement was to be observed in the political situation, but it must be realised that conditions in India had changed greatly in the last few years, and altered conditions presented fresh problems; but their solution was receiving the most careful and earnest attention. The society's premises, resources, and organisation in India were well equipped, and when the hoped-for turn of the tide of business occurred the depots would be ready and capable of producing satisfactory results.

The total of the staff benefit funds was nearly a quarter of a million pounds, and while the employees' provident fund was contributory, the benefits the staff had received from it amounted approximately to £300,000, or more than twice the amount they had contributed. The general reserve, amounting to £353,731, showed an increase of £65,559, consequent upon the appreciation in the value of the investments, which had more than compensated for the withdrawal of £60,000 from the reserve in the previous

year, which was then necessary to provide the dividend for that year. Stock in trade had now been reduced to practically pre-war level. The investments amounted to £505,611, and, adding the mortgage debenture fund investment of £107,274, they had a total of £612,885 invested outside the business, as against the reserve fund of £353,732, or a surplus of £259,153, apart from the cash balance of £150,000. There appeared to be an unfounded impression in the minds of some members that the expenditure now being incurred upon improvements to their premises was a charge upon the profits which might be devoted either to paying larger dividends or to reducing prices. This was not the case, and he hoped it would be clear that this expenditure was an investment in their valuable premises, of which they were now the freeholders, in lieu of investments in Government or other securities.

IMPROVEMENTS TO PREMISES.

There was an increase of £19,111 under the head of freeholds in London, representing expenditure on the new bridge and subway in Howick place, and the new shop windows in Victoria street. These improvements had given general satisfaction, and were proving advantageous to the business, evidenced by the fact that they had had throughout the whole of the past year a consistent and growing increase in their orders sufficient since May last not only to counteract the fall in values, but to produce an increase in the amount of the turnover. While there was still a considerable period required to remodel the interior of the premises, every care would be taken to cause as little inconvenience to members as possible. The board was conscious of the patience with which the inconvenience so far had been accepted by members, and much appreciated the toleration which had been shown. The honorary membership scheme had been very successful, having already added over 36 per cent. to their clientele, and the numbers continued to increase daily. They had therefore every reason to hope for a satisfactory expansion of the business.

The report and accounts were unanimously adopted.

SPILLERS MILLING AND ASSOCIATED INDUSTRIES, LIMITED.**"VERY STRONG STATE OF AFFAIRS."****TAXATION AND THE MILLING INDUSTRY.**

Sir Wm. E. Nicholls, presiding at the thirty-sixth annual ordinary general meeting of Spillers Milling and Associated Industries, Limited, at Cardiff, on the 5th instant, said that the present issued capital of the company had slightly increased since last year, and was now £3,582,287, and that there was no indication that any further increase in this figure (except for co-partnership purposes) would be required for the present. The amount of the deposits received from shareholders and others stood at £489,568, being £65,000 less than last year, whereas the contingent reserves and assets account had gone up by £71,000 to £847,079. Included in this figure were ample reserves for all possible outstanding liabilities. Debit balance of account with the associated companies had been reduced from £171,841 to £1,074, and in this connection he pointed out that there was no balance owing as between one associated company and another. The guaranteed fund for associated companies and the reserve fund were respectively £100,000 and £300,000, the same figures as last year, and the insurance reserve fund had increased by £50,000 to £300,000.

YEAR'S PROFIT.

The profit for the year amounted to £308,051, and, following the principle adopted only to bring amounts into account after payments are actually made, this sum included moneys received during the year on account of claims agreed with the flour mills control. On the other side of the balance-sheet, cash in hand and at bank was slightly less at £133,279, and the investments of associated companies stood at £4488,339, as against £4,511,327 last year, the difference being accounted for by purchase and cancellation of debentures of the only associated company having such an issue. Included in the assets of the associated companies was an amount of nearly £3,000,000, representing stocks on hand and book debts. The stocks were taken at cost or value (whichever was lower), and the book debts after full provision for bad and doubtful debts. The foreign debts of the company were negligible. The investment of the British Oak Insurance Company, Limited, was taken at par value only, viz., £234,137 10s, and this contained a substantial potential reserve as the progress of this company continued to be satisfactory. Investments in British Government securities, taken at cost or value (whichever was lower), exceeded at January 31st £759,000, and since that date had been increased to over a million pounds. The increase in the freehold, leasehold, and sundry properties was accounted for by the fact that the building of the company's new London offices had commenced, and he hoped these would be completed for occupation next year.

BURDEN OF TAXATION.

Of the figure of profit of £308,051 shown, £103,000 had been set aside for inland revenue taxation, and the object of showing

this sum separately was that shareholders might appreciate the large proportion so payable under the present rate of taxation. Corporation profits tax, although reduced by the Budget now before the House of Commons, should be abolished altogether, as it was designed only to catch a few private companies who were conserving their profits in view of the high rate of income-tax, and it had been to the serious detriment of the large majority of limited liability traders.

The balance-sheet disclosed a very strong state of affairs, and this, to the company, was of prior importance to dividend variations. The directors had taken the wisest course, in his opinion, in recommending a final distribution of 10 per cent. (making 12½ per cent. for the year) on the ordinary shares. This was the first time since 1911 that this class of share had not had at least 15 per cent. for the year. The deferred ordinary capital did not rank for dividend until 15 per cent. had been paid on the ordinary, and consequently nothing would be paid on that class on this occasion.

INCREASED MILLING CAPACITY.

Since decontrol of the flour mills the milling industry had not adapted itself to free conditions; this was due to several factors—in the first place, foreign exchanges had made operations in the wheat market extremely hazardous, so much so that some importing merchants had gone out of business, thus narrowing the channels through which the raw materials were obtained.

Warehoused stocks of wheat and flour had enormously decreased in common with other goods, and there was not more than the equivalent of 640,000 quarters held outside millers' hands in the country to-day, as against 1,150,000 quarters a year ago and 1,570,000 quarters the previous year. The main difficulty, however, arose from the fact that, whereas before control there was a milling capacity in this country of about 800 sacks per hour in excess of requirements, this had been increased, owing to the operation of control, by a further 700 sacks per hour, and, allowing for increased population, the excess capacity to-day was not less than 1,200 sacks per hour. To put it in another way, whereas the total annual capacity of the flour mills in England and Wales was 40 million sacks, the consumption did not exceed 30 million sacks, and, as a consequence, competition was probably more severe than it had ever been before.

TAXATION RELIEF REQUIRED.

The recommendations of the Agricultural Tribunal of Investigation, if adopted, would have had a beneficial effect on the milling trade, but these recommendations, in so far as they affected this trade, had not been accepted by the Government. The establishment of a volume of export trade would also tend to relieve the position, but economic conditions were against this. He suggested that to enable the British exporters generally to re-establish their position manufacturers might be given some relief in direct taxation proportionate to the volume of export trade done.

In conclusion, the Chairman paid a tribute to the work of his colleagues and the staff under the very difficult conditions prevailing during the year.

The report and accounts were adopted, and the retiring directors and auditors re-elected.

LA GUAIRA HARBOUR CORPORATION. IMPROVED RESULTS—BETTER PROSPECTS.

The ordinary general meeting of shareholders was held, on the 9th instant, at Winchester House, Old Broad street, London, Mr J. G. B. Stone, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, dealing first with the revenue account, said: The figures show that we earned during the year under review a total of £24,594, as against £20,722 in 1921, an increase of £3,872, whereas last year I had to refer to a decrease of £29,292. After adding interest received from the Macute Railway with sundry receipts our total receipts amount to £25,301. From this amount we have to debit £20,999 interest on the first debenture stock and £29 interest on loan, and £7,553 for income-tax and corporation profits tax. The large debit for taxation this year is accounted for by our being assessed under the basis of three years' average of our profits, consequently we were still paying on the figures in respect of the years 1919 and 1920. You may remember that in the accounts for 1920 and 1921 there were credits of £3,831 6s 7d and £4,163 16s 3d respectively for income-tax, arrived at on the same basis. The result is that this year the net revenue account is left with a debit balance of £3,281.

Our total revenue on the tonnage shows a substantial increase, the actual tonnage handled during the year being 1,269,195 tons, against 1,036,520 in 1921, an increase of 232,675 tons, although there were decreases in both the tonnage of coffee 2,738 tons and cocoa 328 tons, amounting to 3,066 tons, due to the failure of last year's crops. Our general manager writes, regarding the crops for the current

year, as follows:—"The exportation of coffee and cocoa has been smaller lately owing to the delay in the harvests. The continued rains in the coffee and cocoa regions are hindering the gathering of the crops, and possibly only in February shall we see a liberal entry of products for exportation, which it is hoped will result in some movement in commerce in general."

Referring to the balance-sheet, there has been no expenditure on construction account, and while our plant account shows additions at a cost of £2,799 4s 10d, our stores account has been reduced by £5,724 os 11d. Of these amounts, however, £2,310 represents spare parts of plant that have hitherto figured under our stores account, but should have been included in plant.

I am sorry to say that our financial resources do not yet allow of any payment being made in respect of the deferred interest warrants and accumulated interest on the second mortgage stock, but you may be assured that we are not making any but necessary expenditure so as to resume payments as speedily as possible.

The motion was seconded and agreed to unanimously.

PHENIX OIL AND TRANSPORT COMPANY, LIMITED. THE COMPANY'S PHENOMENAL PROGRESS.

Sir Edward Manville, M.P., the chairman of the Phoenix Oil and Transport Company, Limited, presided at an extraordinary meeting of the company on the 4th instant, which was called for the purpose of increasing the company's capital to £4,500,000 in order to make the necessary exchange of shares in connection with the recent acquisition of the Societate "Orion" of Roumania, on a share basis, by the company.

In moving the resolution approving the action of the directors in connection with the acquisition, the Chairman said that as the circular informed them, the Orion Company had a regular production of about 4,000 tons monthly, and that, together with their own and that of the Consolidated Company which they recently absorbed, gave them an immediate total output of something like 10,000 tons per month.

Like their own company, the Orion had an extensive drilling programme of some 20 wells, which they would be able to increase on taking over, and as so many of both their own and the Orion wells were so near the oil sands, they thought the shareholders might safely anticipate very large increases in the combined production in the very near future.

ADVANTAGES OF THE DEAL.

It might be suggested that their board was too enterprising and was moving too swiftly, but they had his assurance that their directors had not been carried away by enthusiasm, and they would not have entered into that new business if they were not convinced it was a real acquisition for the company, and that the terms made it truly attractive and capable of returning good profits upon the price paid.

The board could confidently say that they had now in Roumania a complete organisation, with adequate refining capacity, storage equipment, as well as reserve lands in the very best proven oil districts, which, even with their own extensive drilling programme—which he believed was second to none in Roumania—would last them for very many years to come and ensure good and increasing returns upon their capital.

The speaker went on to express their thanks to Mr Cornrich for the successful outcome of the long and arduous negotiations which had culminated in the acquisition of the extremely valuable property of the Orion Company. Their first resolution that day was to increase the capital from £3,550,000 to £4,500,000, which would not only enable them to complete the deal, but would leave a very large margin of capital in reserve, which the directors considered prudent to provide for now, so as to be prepared for securing any other really advantageous opportunity which might occur.

WELLS BROUGHT INTO PRODUCTION.

The shareholders would remember that at the annual meeting last December he reported that their well No. 8 at Moreni had been brought into production, and it had since made several big flows, one carrying away the head-valves. As was usual with the Moreni wells, it had each time been blocked with sand, but that was a very healthy sign, and their management were convinced that it would equal their No. 5 well in that district, which came into production over 12 months ago and was still flowing. He was also pleased to report that on the 21st ult. well No. 12, on their Roumanian Consolidated properties at Moreni, "struck oil sand in abundance," and now arrangements were being made to handle the heavy output which the initial flow gave every proof of. Seeing that a large number of their wells were approaching the oil sands, they were looking forward to a rapid increase in their production.

UNFOUNDED RUMOURS.

Before concluding, he wished to say a word or two concerning the rumours regarding Roumania which had appeared in the

Press recently, and which might have disturbed their shareholders. One rumour was that Roumania was on the brink of a revolution, but that was quickly denied officially. Captain Masterson, who had just arrived from Roumania and was present at the table that day, expressed his utmost surprise that such absolutely false rumours had been circulated in the country. Again, prominence was given to the new taxation laws in Roumania, which came into force on April 1st last. Those were exaggerated to such an extent as to shock any investor in Roumanian securities.

In conclusion, Sir Edward warned the shareholders not to be alarmed at similar rumours, evidently calculated to shake confidence in Roumania, for he could assure them that their directors knew of no factor to alter their confidence in the future of their company and its ability to earn satisfactory profits on its increased capital.

The various resolutions were carried unanimously.

KEPONG (MALAY) RUBBER ESTATES, LIMITED.

CAPITAL INCREASED—PURCHASE OF SUNGEI TAMPAYAN.

The eighteenth annual general meeting of the Kepong (Malay) Rubber Estates, Limited, was held, on the 8th instant, at the Great Eastern Hotel, Liverpool street, London, Sir Gordon Voules (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—Last year I had to preface my remarks with regrets that for the first time for many years we were unable to recommend the payment of a dividend. No such melancholy introduction is requisite to-day, and I hope in the future we shall maintain our reputation of being one of the safest of dividend payers.

You will see from our report that the profit for the year, added to the balance brought forward from the previous account, amounts to £19,285. From this has to be abated £4,424 for corporation profits tax and income-tax, leaving an available balance of £14,861. Your directors now recommend payment of a dividend of 10 per cent., less income-tax, and the transfer to a reserve account of £5,000, leaving a balance of £2,611 to be carried forward.

The crucial point on which I should like to dwell is that, though the gross price realised by our rubber was just under 10d. a lb as compared with nearly 1s 2d a lb in the previous year, we have still made a profit of just under £7,500. This result, I think you will agree, reflects very great credit on our general manager and his staff.

In the current year, so far as our crops are concerned, the great difficulty will be how most advantageously to keep them within the prescribed limits, i.e., something less than 500,000 lbs., plus an addition of 5 per cent., which will be allowed from May 1. From this date the export licence will be automatically increased from 60 to 65 per cent. of our standard production, in view of the price of rubber on the London market having averaged a figure between 1s 3d and 1s 6d per lb for the three months ended April 30th last.

SUNGEI TAMPAYAN ESTATE.

Now, gentlemen, just a few words with reference to our recent purchase of Sungei Tampayan Estate. It consists of 707 acres, practically all in bearing, and is situated within 15 miles of Kepong. It can consequently be supervised by our general manager, Mr Dunbar Fraser, and run by one of his assistants now working at Kepong, thus only very slightly increasing the cost of our present European staff. The purchase price is £33,000, payable by £22,000 in cash and £11,000 in 44,000 2s Kepong shares taken by the vendor at 5s a share. Our present planted area is 2,320 acres, against an issued capital of £72,000 for the combined estates of Kepong and Bujong, or £31 per planted acre. By the purchase of Sungei Tampayan the planted area will be brought up to 3,012 acres, and should you agree to the proposal we shall make after this meeting for increasing our issued capital to £95,000, our capitalisation will still be £31 per planted acre, and in addition the company will have a substantial working capital. It is very rarely so good a property in Selangor comes into the market. While we all agree that it is a difficult matter to improve on Kepong, we think that by the recent purchase we have managed to do so, and we have every confidence that our shareholders will agree with us.

POSITION OF RUBBER.

Now, before I sit down you may expect me to say a word or two with regard to the present position of rubber. There is nothing wrong with the commodity; plantation rubber still holds the field, and to-day commands a better price than the indigenous Brazilian product. I do not think we need worry about the American idea of a synthetic rubber to be made out of oil shale at a cost of 1½d per lb. The stocks in the Port of London are

being steadily reduced; to-day they are less than 59,000 tons, as compared with over 70,000 a short time ago.

Although we must regret that the price of rubber has not increased as we probably expected it would increase with the diminution in stocks, yet we should not consider that the Restriction Act, under which we have been working, has been at all a failure. Before that Act was passed rubber, you may recollect, was as low as 7d per lb; to-day it is 1s 3d—slightly below it this morning I am sorry to say, but we may take it at 1s 3d, and I am inclined to think that we ought all of us to be very grateful to the Rubber Growers' Association for the way in which they have been "applying ginger" to the authorities to enforce this limitation of output. I will not say that it has been the salvation of Kepong, because Kepong is, I think, very difficult to kill, but I do think it has been the salvation of a great number of estates, especially in the Malay States, where it did appear at one time that many estates would be unable to continue in existence.

Sir Francis Voules, C.B.E., seconded the motion, and it was carried unanimously; and at a subsequent extraordinary general meeting a resolution was passed increasing the capital from £72,500 to £100,000.

SAPUMALKANDE RUBBER COMPANY, LIMITED.

SATISFACTORY RESULTS.

The thirteenth ordinary general meeting of the Sapumalkande Rubber Company, Limited, was held, on the 10th instant, at 14 Great Tower street, London.

Mr Henry John Welch (chairman of the company) presided, and in moving the adoption of the report and accounts, said: The total cost of our properties and their development and equipment at December 31, 1922, was £185,851. After deducting from our issued capital the excess of our liquid assets over our liabilities (including the dividend to be paid to-day) our share capital represents a little under £56 per planted acre.

The restricted rubber crop harvested was 680,000 lbs, against 602,800 lbs in the previous year. The f.o.b. cost of production was 7.77d per lb, against 6.89d per lb. The increased cost was due to expenditure on cultivation, and to depreciation written off. The crop realised a net average price of 1s 0.13d per lb, as against 8.68d per lb in 1921. The tea crop harvested amounted to 218,900 lbs, against 233,700 lbs in the previous year. The smaller crop was due to unfavourable weather conditions, and to finer plucking. The f.o.b. cost of production was 9.40d per lb, against 6.34d per lb, the higher cost being due to the necessary expenditure on cultivation and to the smaller crop. The net average price realised was 1s 1.27d per lb, against 10.59d per lb in 1921. The labour force was sufficient for all requirements, and the health conditions were satisfactory. The visiting agent reports that the rubber trees are in good condition, and the estate free from weegds. The profit for the year amounted to £15,044, to which has been added the amount brought forward from last year, making £25,909, out of which the directors recommend the payment of a dividend of 7½ per cent., and that £4,106 be transferred to reserve account. This will raise our reserve to £30,000, and will leave £9,427 to be carried forward. The restricted crop of rubber to be harvested during the current year is estimated at 567,500 lbs, and the tea crop 250,000 lbs. No rubber was harvested to March 31st, but of the estimated tea crop we have harvested 57,131 lbs, against 49,292 lbs for the corresponding period of last year. We have sold forward half of the current year's tea crop at a figure which will give us a net sale price of approximately 1s 2½d per lb, as against 1s 1.27d per lb last year. The balance is being sold in the open market, and is obtaining very satisfactory prices.

Mr C. Heath Clark seconded the resolution, which was carried unanimously, and after the usual formal business had been transacted, a cordial vote of thanks was passed to the staff in the East.

BRYANT AND MAY, LIMITED.

YEAR'S EXCELLENT RESULTS.

The thirty-ninth annual ordinary general meeting of Bryant and May, Limited, was held, on the 9th instant, at 1, Fairfield Works, Bow, London.

Mr William Alexander Smith, the Chairman, presided, and, in moving the adoption of the report and accounts, said it was once more his good fortune to be able to congratulate the shareholders on an excellent year's business. Like their friends in the somewhat kindred industries of "Baccy and Beer," they had every reason to be satisfied with the result. Their Colonial factories had continued to prosper, and in that connection he would like to say that the directors and shareholders were greatly indebted to Mr Bartholomew for his prolonged and arduous labours in both Australia and Africa. He would like to refer to an approaching notable event in the history of the company, namely, the twenty-fifth anniversary of their friend and colleague,

Mr Paton, becoming a "match man." Mr Paton had done so much both for the company and for the employees that no celebration of the event would be complete without giving all an opportunity of participating in it. On behalf of the shareholders, the board had decided to ask Mr Paton's acceptance of his portrait in oils by the Hon John Collier, and it had been decided to give all the workers an opportunity of having a trip to Blackpool on June 1st next, the anniversary of the day of Mr Paton's entry into the business.

Mr George W. Paton, deputy chairman and managing director, in seconding the resolution, said that on more than one occasion the chairman had used the expression, "Good wine needs no bush." That was doubly true now, for they had never presented a better or healthier balance-sheet to the shareholders of the company. Nearly four years ago, when asking the shareholders to sanction the profit-sharing and co-partnership plan, he had said that the workers would so apply themselves to their task that the amount which might come to be distributed would be more than earned. He hoped the shareholders would agree that the results shown in the accounts abundantly justified what the directors had then asked them to do. Much of the distress from unemployment was occasioned by the constantly threatened and recurring disputes, strikes, and lock-outs in the great industries. He believed that co-partnership between capital and labour, which had identical interests, was the only means by which the distrust, unrest, and dissatisfaction could be removed.

The competition from matches imported from countries with depreciated exchanges continued very severe, but the company fully held their premier position against all comers.

The report and accounts were unanimously adopted.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED. PROGRESS OF DEVELOPMENT AT BOTTOM LEVELS.

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 11th instant, at the Cannon street Hotel, London, Major the Hon. A. T. J. Fraser, D.S.O., the chairman, presiding.

The Chairman said this was the first meeting of the new company to review a full year's working. Shareholders would remember the objects of the directors in raising additional capital. After some 30 years of very profitable exploitation, in the course of which the workings had attained a depth of 6,000 feet, the conditions at the bottom of the mine had become far from ideal, and it became essential to remodel and amplify the ventilation especially, and to reorganise the handling of rock at the lower levels. Until this was done, rapid, efficient, and economical development at depth was impossible. A further purpose in raising new capital was to make certain additions and improvements to the machinery and plant, especially with a view to the capacity for handling accreted tailings. At the time of the last general meeting a start had barely then been made with the new scheme. By the end of July good progress had been made with the ventilation scheme, and they were in a position really to start with serious development at the bottom of the mine. Unfortunately, two very bad rockbursts occurred about the beginning of September, which badly put back work at the bottom of the mine. The position at the end of the year, therefore, was that the ventilation scheme throughout was practically completed, with extremely satisfactory results; the re-organisation of the handling facilities was well in hand, and the additions to plant were nearing completion. In fact, general progress was good, but the development at the bottom levels—really the main point—had been held back for three or four months longer than was expected by the rockbursts. Since the end of the year they had been able to "get away" at the bottom of the mine, and the results so far, he thought he could say, were distinctly satisfactory.

COMPARISON WITH DEEP LEVEL RAND MINES.

Before leaving this question of the position underground, he would point out the difference between such a mine as the Champion Reef, which had been exploited from grass roots down to 6,000 feet vertical, and one of the deep level mines of the Rand. When the latter was begun, the proprietors knew that they had a well-defined body of ore at a depth of from 3,000 to 6,000 feet. They had not to work down the whole way from the top to the bottom, but they came in, and, with heavy capital expenditure, sank their shafts, and laid out the whole of the equipment of the mine underground, including ventilation and everything, knowing just where they were. With a mine such as the Champion Reef they had, so to speak, to chase their way down to the bottom, never expecting in the early days, he supposed, that after 30 years they would be working at a depth of 6,000 feet. The point always arose in such a mine that ventilation and equipment at the bottom must require reorganisation.

Turning to milling operations, it would be seen that a small profit—approximately £10,000—had been made. This had been

possible only by strict economy. The working costs for the year were almost exactly 30s per ton, of which 6s was spent on development. In view of the circumstances, he considered that they were low costs, on which the managers and the staff on the mine were to be congratulated. In the current year, however, there was likely to be an increase in the working costs per ton. As foreshadowed in the report, they had to reduce the monthly tonnage, and although the total expenditure per month would decrease, it would not do so in proportion to the decrease in the tonnage, leading, therefore, to slightly higher costs per ton.

Another point, and an adverse one, he feared, was the gold yield. Last year the figure realised was £4 14s 1d per ounce of gold. This year it did not appear probable that they would get much more than £4 7s, or possibly £4 8s per ounce—a difference of somewhere about 6s or 7s per ounce.

The ore reserves had decreased by 12,000 tons. The extraction for the year was 96½ per cent., or slightly less than in the preceding year, when it was 97 per cent. He did not know whether the shareholders all realised how extraordinarily good it was; he thought he was right in saying that no other field in the world had such a high percentage of extraction. There was nothing much to explain in the balance-sheet. The shareholders would at once notice the very strong financial position, but they must realise that the bulk of the capital expenditure, on development especially, was still ahead of them.

The report and accounts were unanimously adopted, and the usual formal business was transacted.

Treasury, May 7, 1923.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and three months' Treasury Bills dated from Monday to Saturday, May 14-May 19, were opened on May 11, 1923, and the total amount applied for was £62,300,000. Tenders for Monday to Friday bills at 99 9s 9d, about 81 per cent., and above in full, and for Saturday bills at 99 9s 11d, and above in full. The average rate of discount for Treasury Bills was 2 1/2 1/2. The amounts allotted were as follows:—In bills at 3 months, £28,000,000; in bonds, £2,000,000.

(a) Including Treasury Bonds. † 4% Treasury Bonds, 1931-33.

Tenders will be received on Friday, May 18, 1923, for Treasury Bonds and Bills to be issued to the maximum amount of £30,000,000. The amount of Treasury Bonds issued will not exceed £3,000,000, but, subject to that limit, the total amount issued will be divided between Bills and Bonds in such proportions as The Lords Commissioners of His Majesty's Treasury may determine.

Messrs Samuel Montagu and Co. write on May 9th as follows:—

GOLD.

The Bank of England gold reserve against its note issue on the 2nd instant was £125,693,415, as compared with £125,602,670 on the previous Wednesday. This week's arrival was on a smaller scale, and most of the supplies will be shipped to America, India being but a small buyer. No arrivals of gold in New York are reported this week.

CURRENCY.

It is reported that the new Czechoslovakian gold ducat will be of the ancient fineness—.986—which exceeds that of the sovereign, the quality of which .9163 has hitherto held the pre-eminence among those of modern minted coins. The ducat, which is now being coined by the Czechoslovak Republic, has an historical tradition, not only as a coin, but also as regards its value. Like the ducat of John Luxemburg, which weighed 53.86 grains, the Czechoslovak ducat will weigh not more than 53.86 grains, with about 52 grains of pure gold. It will be coined from a mixture of roughly 986 parts of gold and 14 parts of copper. The new ducat, being a continuation of the ancient ducat, will bear on the obverse side the portrait of St Venceslaus, with the inscription "Nedej zahynouti nam ni budoucim" ("Let neither us nor our descendants perish"), and on the other side a small coat-of-arms of the Republic, with the inscription "Ceskoslovenska Republika" (the Czechoslovak Republic). The first thousand of the new ducats will be numbered, the rest will bear only the year in which they are minted. The size of the new ducat is 19.75 millimetres. It is not intended to be a circulating medium, but a coin for commercial purposes only, and its price will be fixed by those by whom it will be bought and sold.

SILVER.

The market has been dull during the week under review. This week is the last in which silver shipments can be made in time to reach Bombay for the June settlement, but, in spite of this, buying orders from India have been small. America has been inactive, and although China has both bought and sold, it was owing to offerings to-day from this quarter that prices fell to 32½d and 32½d—a drop of ½d for cash and ½d for forward delivery. The tone of the market is quiet.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Apl. 15, 1923.	Apl. 22, 1923.	Apl. 30, 1923.

The silver coinage during the week ending 30th ultimo amounted to 7 lacs of rupees. The stock in Shanghai on the 5th instant consisted of about 32,100,000 ounces in sycee, 44,000,000 dollars, and 1,230 silver bars, as compared with about 27,200,000 ounces in sycee, 41,000,000 dollars, and 710 silver bars on the 28th ultimo. The Shanghai exchange is quoted at 3s 2½d the taal.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as follows:—

1923.	Gold.		Silver.		Date.	Silver.	
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.			Cash, Per Ounce.	
May 5..	89 0	32½	32½	May 18, 1917	37½

NOTICES.

Barclays Bank, Limited, announce that they have opened a new sub-branch at Lelant (Cornwall), under the management of the St. Ives branch, and a new branch at The Parade, Trowbridge, under the management of Mr. E. Bonner.

The London Joint City and Midland Bank announce the opening of new branches at 16 and 17 High Street, Maidstone (manager, Mr. H. A. Holmes); in High Street, Broadway, Worcestershire (manager, Mr. C. F. Carter); at 13 Broadway, Crouch End (manager, Mr. R. H. Seward); at 1 The Square, Holsworthy (manager, Mr. A. W. Blackall); and at 63 High Street, Lewes (manager, Mr. H. E. Hardy).

The first office to open in Bush House, Aldwych, will be that of the Kingsway office of the Guaranty Trust Company of New York, on Monday next, May 14th. The Kingsway branch of the bank will occupy premises on the right of the main entrance in Aldwych.

(b) Tax free.

DENT, ALLCROFT, AND Co. announce that they are unable to pay dividend on 7½ per cent. cumulative first preference shares on the preferred ordinary shares at the rate of 8 per cent. per annum, less tax, for the half-year to March 31, 1923, payable June 30th. It is decided not to make an interim distribution on the ordinary shares. No dividend was paid on the ordinary shares in respect of the previous year, which showed a profit of £160,369.

SIAM (SUMATRA) RUBBER.—The board have arranged for the postponement until January 1, 1926, of the 6 per cent. debenture stock redemption payments of £3,000 per annum.

SIXMENS BROTHERS AND Co. announce a profit for the year 1922 of £14,041, but are unable to recommend a dividend on the ordinary shares or a dividend for six months to December 31st last on the 10 per cent. cumulative preference shares. For 1921 the ordinary shares received 10 per cent. tax free.

VEGETABLE OILS AND OILSEEDS.

(BY OUR OWN CORRESPONDENT.)

Tanners were again faced with an advance in hides at the auctions in Bermondsey on Thursday last, as the more important classes of ox hides sold from 8½d to 9½d per lb. This was a rise of ½d to ¾d on last week's prices, and tanners seem quite unable to control the position. Best cows at 7½d also showed an advance of ½d, as they sold at 7½d. In calf the tone was slightly weaker, and falls of ½d to ¾d were noted in some classes. Wools sold from 5s 6d to 12s 6d each, the hogg class selling from 6s to 14s 6d, and lambs from 2s 6d to 6s each. The slight easing in River Plate hides has led to a greater interest in this class of raw stock, and tanners have taken fair-sized parcels from this market. Smithfield ox have sold on a basis of 9½d, and it is probable that hides of this class at 9d would meet with a good market. Saladeros are firm, and sales are reported from 8½d to 9½d. Drys are very firm, as tanners are still trying to pick up low grade hides for common bends. The Chicago market is cabled as steady, with best heavy packers selling at 19 cents.

Although a fair amount of sole leather is changing hands, most merchants still report trade as quiet. Orders are for small parcels, and consumers refuse to stock bends in quantity, but the frequent repetition of this small business is clear proof that users have very little leather in stock. Prices, on the whole, are firm, but sales are reported at less money to factors who take large parcels of tanners. Rough leather is a dull sale, and at present the export trade to the Continent is quiet.

Estimated number of spinning spindles, April 30th, 56,500,000;
estimated number at work, 46,000,000.

City & Midland Bank, Limited; Cox & Co.

Shippers of Egyptian cotton seed have failed to maintain their high quotations in the absence of demand, and prices have declined 2s 6d per ton, but have failed to attract buyers. The demand for cotton oils is far from good, and values are easier, crude Egyptian offering freely at £40 ex Hull mill. Little is doing in soya beans, and crude oil is lower. A good deal of Oriental soya oil appears to be offering for shipment at low prices. Rape oil is not so firmly held. Palm kernel oil has further eased, and offers from Hull at £41 10s. Ground nut oil is quiet, but quotations are maintained, and the same may be said of castor oil. Some improvement in linseed cakes is reported for forward delivery.

Mincing Lane, Friday, May 11.

SUGAR.—No change occurred in prices of spot refined, though business pursued a quiet course. Of British, Messrs Tate and Lyle's cubes quoted 70s 9d to 71s 9d; granulated, fine and coarse grain, 66s 7½d; No. 1, 66s 4½d; and No. 2, also London, 66s 1½d; ditto, June and July, 66s 3d; August, 65s 9d; September, 64s 9d. Yellow crystals, spot, 60s 1½d; caster, 67s 3d to 68s 1½d; finest, 69s 10d. Crystallised West India in retail supply, and quoted 60s 6d to 63s 6d. American granulated, spot, 65s; May, steamer, 37s 9d, c.f. and i., London. White Java, spot, sold, 62s 6d to 63s, as to quality; May-London, 32s 6d; June-July, 30s 6d; July-August, 29s 3d, c.f. and i., London. Czechoslovakian granulated, December, 27s 9d, f.o.b., Hamburg. Of Dutch, Dinteloor, November-December, sold, 27s 9d, f.o.b., Rotterdam; and J, ready, 37s. Cuban, basis 96 per cent., May-June, sold, 31s 6d; Brazilian, ditto, basis 80 per cent., sellers, 19s, c.f. and i., U.K. Terminal market unsettled. August, sold, 34s 1½d to 33s 3d, 35s, and 34s 6d; October, 30s 4½d to 29s 9d, 30s 9d, 30s 6d; December, 28s to 27s 3d, 27s 10d, 27s 6d. Cuban stocks stand at 753,400 tons, against 1,032,500 same time last year. Liquid glucose, spot, 20s 6d.

COFFEE.—A fair demand continued at steady prices for the finer qualities, but common further moved against sellers, while somewhat difficult of sale. Nairobi, good bold sizes, sold, 104s to 106s; Costa Rica, fancy blue, 122c. Future delivery inactive and nominal.

COCOA.—Market still very slow, and spot quotations rather nominal. Accra, for June-July shipment, sold 33s to 32s 9d, f.o.b. terms.

Accra, for June-July shipment, sold 35 packages. The following were sold in
TEA.—In auction, some 42,230 packages Indian were catalogued in
-auction; but while good to fine liquoring descriptions came in for
good support at full recent rates, competition for the commoner kinds
(and which were in full supply) ruled quiet at $\frac{1}{2}$ to $\frac{3}{4}$ cent lb decline.
17,340 packages Ceylon submitted to public sale went off, showing
features similar to those governing Indian. Java and Sumatra sold
moderately at easier rates.

RICE.—Market remains in the same inactive state, and general position of the market is purely nominal. Parcels arriving are being put into store, as buyers cannot be found. Two stars, spot, 13s 9d to 14s; Spanish, 21s 6d. Rangoon beans, spot, 8s 9d. Japanese peas, spot, sold, 25s; May-June, 23s 6d; and new crop, September-October, 24s.

248. **SPICE.**—Pepper generally steady, but trade quiet. Fair black Singapore, spot, 44d; May-July, 44d; Aleppo, spot, 44d; white Singapore, spot, 63d; Manto, 63d; ditto May-July, buyers, 64d. Zanzibar clove, spot, 10s; March-May, 10½d; May-July, buyers, 10½d per lb. Tapioca, both with regard to spot and forward, calls for no comment. Decimated coconut steady. Spot, fine cut, 47s 6d; medium, 49s 6d; halves, April-May, sold, 44s to 44s 3d; and May-June, 43s to 43s 3d per cwt.

JUTE continued in quiet support, and though sellers were not pressing to any extent, prices ruled weaker. First grade, May-June, continent, sold, £28 10s to £28 15s; new crop ditto, August-September, £28 to £28 5s; September-October, buyers, £27 15s ton. Hessians and twills dull at late lower prices.

HEMP.—Manila steadily held, but there was not much response from buyers. J grade, April-June, sellers, £32 15s; K and L quoted £31 5s; M, £30 10s ton. New Zealand quite nominal in absence of business.

SHELLAC remains slow. T.N., spot, 310s; August, 260s; October, 250s cwt.

2. COPRA quieted, and prices slightly weaker. F.M.S. Straits, March-May, to Rotterdam, sold, £28 15s to £28 7s 6d; ditto, April-June, £28 5s to £28; Ceylon, May-June, quoted £30 15s; Java, April-June, £28 7s 6d; Dutch East Indies, March-May, £28 10s; ditto, April-June, sold, £28 2s 6d; Cebu, April-May, quoted £27 10s; South Sea Islands, £27 5s; F.M. Straits, April-May, to Marseilles, £27 10s; mixed, £27 7s 6d. Palm kernels dull; June-August, Liverpool, quoted £19 10s.

RUBBER.—Dealings were on a moderate scale, while considerable irregularity was again observable. Standard plantation crepe and sheet, spot, also May delivery, sold 13½d to 13½d; June, 14d, 13½d, 14½d, and 14d; July-September, 14½d, 14d, and 14½d; October, December, 14½d, 14½d, 14½d, and 14½d; January-March, 15d to 14½d and 15d. To New York standard sheet, afloat, sold 14d per lb, c.f. and i. terms. Wild, dull of sale.

SHELLS (M.O.P.).—At periodical auctions a fair quantity was brought forward, but with a quiet demand only a small proportion found buyers. Sydneys disclosed irregularity, with defective shells cheaper. Of West Australian mostly chicken sold at limits imposed, being unaltered from last public sales. Egyptian and Bombay tended in sellers' favour. Green snail eased in price to a slight extent, with Manila barely steady despite the fact of only a limited quantity being offered.

ESSENTIALS.—Market quiet. Menthol, spot, 33s; forward, 31s. Japanese peppermint oil, spot, 6s 1d; forward, 5s 9d; aniseed, spot, 1s 10d; forward, 1s 9d; slab camphor, spot, 3s 8d; forward, 3s 5d; crude camphor, spot, 3s 3d; forward, 2s 10d; Ceylon citronella oil, spot, 3s 3d; Java, spot, 4s 1d; oil of lemon, spot, 3s; oil of orange, spot, 10s 6d; West Indian, 9s 6d per lb.

ISINGLASS.—Market dull. No. 1 Kobe strips, spot, 5s 6d; No. 2, 5s 1b.

EGG PRODUCTS.—Steady, but there is only a retail amount of trade doing. Prime liquid hen yolk, spot, 97s 6d; April-June, 82s 6d cwt. Dried yolk, spot, 94d; albumen, spot, 3s 3d; April-June, 3s 1d per lb. Native dried whole egg is scarcely mentioned.

FRUIT (DRIED).—The market for currants presented steady features, and a moderate amount of business was effected. Pyrgos, quarter cases, quoted 54s; half bags, 53s to 53s 6d; Panarit, 55s to 58s; good Vostizza, 67s to 71s; new Australian, 72s 6d. Quite a good demand ensued for sultanas, and the higher grades are now very scarce. Good Smyrna quoted 80s to 82s; fine to choice, 95s to 115s; Cretan, 63s; Californian, 65s. Valencia raisins command fair support, and general stability governed proceedings. Half-boxes quoted 32s to 34s; quarters, 36s to 46s, as to quality. Dates continue to show a very slow movement. Hallowee quoted 19s to 21s; Siar, 15s. Evaporated fruits again experienced a quiet market, and any alteration in prices proved in favour of the buyer. Cape apricots, 92s 6d to 110s; Australian ditto, 130s; Californian pears, 65s to 75s; Californian apple-rings, extra choice, 54s to 56s; Canadian, 48s to 50s.

CANNED GOODS.—Sardines came in for improved inquiries, and French 18 oz, sold, 165; quarter tins, 7s 6d; Portuguese quarters, 2s 6d to 3s 3d; ditto 12 oz, 4s 9d to 5s 6d; 18 oz, 9s 6d to 11s per dozen tins. Lobster appreciated in value owing to continued scarcity, and fancy halves, on spot, quoted 175s to 180s. Quite a brisk demand predominated for salmon, and recent rates were fully maintained, while showing a hardening tendency. 1 lb flat reds, labelled, quoted 55s to 58s; ditto talls, 40s to 42s; 1 lb flat pink, 35s; ditto talls, 23s 6d to 24s 6d; and cases of 96 half lbs, 31s 6d to 33s. Crayfish steady at 85s for cases of 96 half lbs. Crabs, quietly steady. Canned fruits disclosed a steady trade in force, and prices manifest a firmer tendency. Singapore pines, 1½ lbs, spot, quoted 6s 3d; apricots, 8s 6d to 10s 6d; peaches, 9s 6d to 11s; pears, 12s 6d to 14s 6d. Tomatoes: Spanish threees, quoted 6s 6d; Italian ditto, 7s per dozen tins. Only moderate inquiries continue for meats and also tongues, but prices show no essential alteration.

OILS.—Linseed market irregular. Spot, net, naked, 46s; May,

[May 12, 1923.]

435; May-August, 40s 9d; September-December, 37s 9d. Rape steady. Crude, spot, 45s; refined, 48s. Cotton steady. Crude Egyptian, spot, 43s; common edible, 47s; deodorised (in barrels), 49s. China-wood quiet. Hankow, spot (barrels), 135s; May-June, 120s. Coconut quiet. Ceylon, spot, 47s 6d; May-June, 46s 6d; Ceylon, ditto, quoted 50s. Soya quiet. Oriental barrels, May-June, 39s. Japan fish steady. April-May, cases 29s. Cod firm. English, spot, 35s to 36s. Ground-nuts quiet. English, crushed, naked, spot, 47s; deodorised, barrels, nominal. Turpentine lower. American, spot, 100s; May, 100s; July-December, 74s 6d. Rosin quiet. American, grade B, 13s 6d; F, 13s 9d; G, 13s 9d; H to I, 13s 9d; W, 17s 6d; WW, 18s 9d. French, F/G, 13s 6d; WW, 15s 6d per cwt. Petroleum steady. American standard, white, spot, 1s 1d; and water white, 1s 2d per gallon. Castor oil firm. First pressure, spot, to August, quoted 56s; second pressure, 55s, and pharmaceutical, 61s per cwt.

OLSEEDS—Linsed quiet and easier, but somewhat irregular. Bold Bombay, afloat, £22 5s; small Bombay, ditto, £21 5s; Calcutta, afloat, £21 7s 6d; April-May, sold, £20 5s to £20 10s; and May-June, £20 5s. Plate, afloat, £19 15s; loading, £19 12s 6d; April-May, £19 5s. Rapeseed easier. Toria, May-June, £17 15s; real bold Ferozepore, May-June, sold, £16 10s to £16 7s 6d; Jamba, May-June, £13 5s. Cottonseed firm. Egyptian black, May, £12 5s; and white, £11 10s. Bombay, May-June, £9 17s 6d. Gingelly-seed quiet. Large Bombay, April-May, Continent, sellers, £24 10s. Chinese, ditto £24 10s to Continent, and £25 15s, Italy. Ground-nuts dull. Coromandel, machine dried, May-June, quoted £22 12s 6d. Chinese decorticated, f.a.q., May-June, £23 10s. Nigerian, ditto, £24. Soya beans steady. Manchurian, April-May, £11 17s 6d, Castorseed quiet. Bombay, May-June, £21 per ton.

METALS—Tin commenced the week with an easier tone, due to lower cables from the East, while at times some irregularity was noticeable. Cash sold at £209 15s to £211 to £210 5s; June, £211 to £210 to £210 10s; and three months, £211 10s to £210. Sales were reported from the East on the basis of £216, c.i.f. Values further gave way on selling pressure though steady at the decline, and a fair business transpired. By the middle of the week standard cash stood at £206 10s to £206 15s; while three months sold at £206 5s to £206 10s. Further sales were reported in the East on the basis of £211 5s. At Thursday's session the tendency was firmer, and a liberal business occurred. Standard near dates sold at £208 5s, £208 10s; three months, £207 10s, £208 10s, £207 15s. At the final market rates ruled easier. Standard cash sold at £205 10s to £205 5s, and three months at £207 to £204 10s. English ingots quoted at £205 to £205 10s. Copper opened with a steady tone and sellers somewhat reserved, but buyers were indifferent, and only small sales occurred. Cash quoted at £70 10s to

£70 12s 6d; three months sold at £71 7s 6d to £71 5s to £71 3s 3d to £71 7s 6d. Later prices ruled easier, due to selling pressure and lower American advices; but at the decline business was on a larger scale. On Wednesday, standard cash sold at £68 10s, and three months £70 to £69 and £69 10s. Values were slightly easier on the following day, and a good demand transpired. Standard cash, sold at £68 12s 6d to £68 5s; three months, £69 15s to £69. Also easier at the final session while in good demand. Standard cash sold at £67 7s 6d, and three months at £68 10s to £68 5s to £68 15s to £68 10s. Electro, £78 to £79; best selected, £71 to £73; strong sheets, £106. Wire bars, £79. Lead easier at £25 to £24 10s. Spelter lower at £30 to £30 10s, as to position. Aluminium, home, £110; export, £115. Antimony, ordinary brands, £30 to £32.

TALLOW—Messrs Colchesters and Woolner write on May 9, 1923, as follows:—The tallow market was quiet during the week, and prices are 6d lower to-day. So far there has been very little improvement in the demand, although prices have now reached a more reasonable level. At auction to-day 1,560 casks tallow were offered and 603 were sold. Quotations are:—Australian mutton: Fine, 44s; good to fair, 42s to 41s; dull to dark, 37s 6d to 36s 6d; hard, 42s 6d. Australian beef: Fine, 42s; good to fair, 41s 6d to 39s; dull to dark, 37s to 36s; sweet, 44s. Present shipment from Australasia:—Mutton, good coloured, 46 degs., 44s; and mixed, 43s, c.i.f., London, nominal. The market letter is unchanged. Town tallow, 36s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 28s 6d per cwt. Quotations are:—Town, 36s, net cash, naked, ex works. Country: Frail casks, 36s; home melted, shipping casks, net, f.o.b., good coloured, 39s 6d; fair to dull, 37s to 36s. Bone fat: White, none; pale, none; benzine, 35s; melted stuff, 34s 6d, f.o.b.

BRAKPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1922, to be submitted at the Twentieth Ordinary General Meeting of Shareholders, to be held in the Board Room, "The Corner House," Johannesburg, on Friday, the 8th June, 1923, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen.—Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1922, accompanied by the Reports of the Consulting Engineer and the Mine Manager.

CAPITAL.—The capital of your Company is unchanged at £850,000, in 850,000 shares of £1 each, fully paid and issued.

PROPERTY.—No change has taken place during the year in your Company's holdings, which remain as follows:—

Mynpacht No. 490/1919, in extent 405'754 acres, equal to ...	276'06 Claims.
Mynpacht No. 543/1906, in extent 889'996 acres, equal to ...	604'80 "
Claims on Farm Benoni No. 3, with Coal Rights on 73'326 Claims ...	201'50 "
Claims on Farm Weltevreden or Brakpan No. 5 ...	68'00 "
Claims on Farm Weltevreden or Brakpan No. 5—leased from Union Government ...	1,811'70 "
Claims on Farm Koolbult or Schapenrust No. 7 ...	424'90 "
	3,897'05 Claims.

The Undermining Rights of seven Stands and four portions of Stands on Farm Benoni No. 8.

Three Stands on Farm Benoni No. 3.

Twenty-one Freehold Stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the Reports of your Consulting Engineer and Mine Manager.

FINANCIAL.—From the Working Expenditure and Revenue Account it will be seen that the profit, based on the standard value of gold, amounted to £370,240 5s 6d; Add—Premium on Gold, £69,596 4s 2d—£439,836 9s 8d; Deduct—Donations and Enemy Shares Expenses, £11,045 18s 4d; Strike Expenses, £68,964 13s 8d—£80,010 12s 0d—£529,825 17s 8d; Add—Interest and Commission, Dividends on Shareholdings, Estate and Sundry Revenue, £3,610 0s 8d; Leaving a Nett Balance of Revenue over Expenditure for the year of, £968 48s 18s 4d; Add—Balance to Credit of Appropriation Account at 31st December, 1921, £44,467 13s 5d; Making a total available Credit of £407,953 11s 9d; Against which the following amount, have been appropriated:—Government Taxes, £37,147 11s 5d; Participation in Profits, £45,329 11s 5d; Funds appropriated for Capital Expenditure—Leased Area, £100,000 0s 0d; Stores and Materials—Depreciation, £14,000 0s 0d; Dividend No. 31, £170,000 0s 0d—£366,477 2s 11d; Leaving a Balance unappropriated at 31st December, 1922, of, £41,426 8s 10d. Capital Expenditure for the year amounted to £125,375 0s 5d, made up as follows:—Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet, £124,568 5s 11d; Shares and Interests in Other Concerns, £708 14s 6d—£125,375 0s 5d.

The capital funds on hand at the beginning of the year amounted to £29,865 8s 2d, and in order to make provision for the balance of expenditure a sum of £100,000 was appropriated from profits.

Expenditure on development for the year amounted to £126,782 9s 8d. The fixed charge of 5s per ton milled provided £137,487, which amount was debited to working Costs. The unexpended balance of £10,654 10s 9d is carried forward.

Stores and materials on hand at the end of the year in excess of standard stock were valued at £10,450 11s 7d, of which £6,460 16s 9d represents stores and materials in stock in connection with the capital construction work on the Lease Area. The Balance of £3,989 14s 10d represents the value of current stock, and is a reduction of £40,084 9s 7d as compared with the corresponding figure as at 31st December, 1921. An amount of £14,000 was appropriated to write down stores on hand as at 31st December, 1922, to current prices.

The net premium realised on gold sales was £69,596 4s 2d. Your Company's gold has been dealt with by the Rand Refinery as from the 15th June last.

Expenditure incurred during the strike period amounting to £68,964 13s 8d, has been written off in the General Expenditure and Revenue Account.

The amount payable to the Government in terms of the Mineral Lease Agreement in respect of the year under review is estimated at £37,170 5s 0d. The percentage of profits payable under the Schapenrust Claims Purchase Agreement is estimated at £3,160 6s 6d.

During the year under review the Provincial Council of the Transvaal imposed an Employers' Tax of £1 per head on the number of persons employed, the tax being leviable in respect of both white and coloured employees. Your Company was assessed at £4,415 under this Act.

DIVIDENDS.—A Dividend (No. 21) was declared, payable to shareholders registered on the 30th December, 1922, amounting to £170,000.

You are requested to confirm your Board's action in this matter.

Owing to expenditure incurred in connection with the industrial upheaval on the Rand during the first three months of the year, practically no profit was made up to the 31st May, 1923, so that the above-mentioned Dividend is virtually in respect of the remaining portion of the year.

DIRECTORATE.—In terms of the Articles of Association, Sir Ernest Oppenheimer and Mr A. F. Lyall retire from the Board of Directors by rotation, but are eligible and offer themselves for re-election.

AUDITORS.—You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs A. E. Page and L. A. Whiteley, retire, but are eligible and offer themselves for re-election.

GENERAL.—During the year the ex-enemy shares in the Company vested in the Custodian were purchased and offered to shareholders pro rata to their holdings. The number of shares involved was 76,859.

The South African assets of The Consolidated Mines Selection Company, Limited, have been acquired by The Anglo American Corporation of South Africa, Limited, that Corporation has been appointed to fill the administrative offices of this Company formerly held by The Consolidated Mines Selection Company, Limited.

THE MONEY MARKET.

It was soon discovered that the contraction of credit indicated by last week's Bank return had reduced the money market to poverty, and the early part of the week saw borrowers going to the Bank of England to borrow large amounts. With this assistance, and by some extensive sales of June Treasuries to banks and—according to some authorities—to buyers who officially come to the rescue of the market when it threatens to be too expensively firm, money became comparatively plentiful, and discount

rates eased off. Three months' bank bills had been quoted in some quarters at $2\frac{1}{2}\%$, and even $2\frac{1}{2}\%$ per cent., but slipped back to $2\frac{1}{2}\%$ per cent. Yesterday the abundance of money and the low rate at which the Treasury Bills were placed brought the market rate down to a weak and nominal 2 per cent.

	May 18, 1923.	May 11, 1923.	May 4, 1923.	Apr. 27, 1923.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3% (Jly. 13, '22)
Banks Deposit Rate	1	1	1	1	1% (Jly. 13, '22)
Discount/Call	1	1	1	1	1% (Jly. 13, '22)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (Jly. 13, '22)
Market rate (3 months' bills) ..	2	$1\frac{1}{2}$	2	$1\frac{1}{2}$	2

The Bank return showed that, owing to the reflux of £299,000 notes from circulation and a small addition to the stock of gold, the Reserve was £303,000 higher. Borrowing by the market and other adjustments had added $5\frac{1}{2}$ millions to the securities, and so the deposits were $5\frac{1}{2}$ millions larger, most of the increase being in Other. Currency notes outstanding were increased this week by £366,900 to £287,416,200, which includes £1,480,300 for notes called in but not yet cancelled. The fiduciary issue is £237,985,900, or £32,197,900 below the maximum.

THE STOCK MARKETS.

Business has been quiet this week, and fits of depression and cheerfulness alternated. On the whole, it may be said that the markets closed in far more confident tone than that which prevailed early in the week. In the Consol market the tone was set by Conversion Loan, which gave way sharply in the early part of the week, but recovered equally sharply on Government support. French bonds, after a fall, picked up later in the week, but Germans are lower. A sharp break occurred in Rio Tintos, but here, too, a smart recovery restored most of the loss. In the Home Railway market the carry-over revealed unexpected scarcity of stock, and a fairly general advance took place. Argentine rail stocks came on the market, but were well absorbed. Rubber shares are stagnant and lower on the continued fall in the price of the commodity. In the oil market a fresh drop in Mexican Eagles checked activity, but there were sharp fluctuations in favourite counters. On the whole, the general industrial markets were without prominent features. Kaffirs weakened as a result of shares being offered from the Cape in a dull market.

THE COMMODITY MARKETS.

Quietness in the commodity markets has been the dominant note during the week, partly attributable, no doubt, to the prevailing holiday spirit. Although wheat values were inclined to be slightly lower, the market for sugar maintained a very steady tone. The Manchester cotton trade continues to present an unsettled appearance, fluctuations in raw cotton rates acting as a disturbing factor. Conditions are quiet but steady in the wool trade, our Bradford correspondent writing that "there is hardly enough new business passing adequately to test values." Jute was accorded but little support, and linseed values are unchanged. The tendency of prices on the Cardiff coal market has been to go still higher, and best Admiralties have again touched 45s per ton. Our Sheffield correspondent mentions that the supply of coal for home consumption is more plentiful, on account of congestion at ports. Trade is quiet in pig-iron, consumers, according to our Middlesbrough correspondent, "waiting the turn of events on the Continent." With reference to manufactured iron and steel, conditions are somewhat easier; the boiler-makers' dispute is still interfering with work in shipyards, while some steel works are expected to close for a two days' holiday next week. Rubber is a little steadier, but prices are still irregular. The tone of the Bermondsey hide market has been rather quieter, and a fair proportion of hides offered on Thursday failed to find buyers. The tendency of timber prices is upward.

FOREIGN EXCHANGES.

The foreign exchange market has been, on the whole, quiet during the week. The chief point of interest was the fall in the value of the mark consequent on the British Government's note. At the end of last week the mark stood at 185,000; but on Monday the effect of the note was felt, and at one time the rate touched 225,000 to the £1, closing finally at 208,000 middle. After a slight improvement on Tuesday, it fell again, touching 214,000 on Thursday, and is quoted at 210,000 on Friday morning. The fall was due to this political event; but it would seem probable that, in the absence of any further outside influences, some attempt will be made to keep the mark round about its present figure. The forward rate for marks is now 25,000 per month above spot. The Paris rate has remained comparatively steady this week, after a fall to 70 on Saturday, though the tendency would appear to be slightly in an upward direction, viz., from 69.70 on Monday to 69.25 on Friday. Brussels has improved from 81 on Saturday to 80.35 to-day. Forward rates on Paris are slightly lower at 3 centimes per month above spot, while in Brussels they are $1\frac{1}{2}$ to $2\frac{1}{2}$ centimes below. The New York rate has changed from 4.60 $\frac{1}{2}$ at the end of last week to 4.62 $\frac{1}{2}$ to-day. Some such reaction was not unexpected on the publication of the adverse figures of American trade, and considering the length of the fall which preceded. Some doubt, however, is expressed as to the permanency of the recovery. Forward rates do not show much variation at $\frac{1}{2}$ cent for one month, and $1\frac{1}{2}$ cents for two months above spot. Montreal is now 4.72 $\frac{1}{2}$ from 4.71 last week. The Italian rate has improved from 96 to 95 $\frac{1}{2}$. Of the neutral exchanges, Amsterdam once more follows New York, and has improved from 11.80 $\frac{1}{2}$ to 11.81 $\frac{1}{2}$. Madrid has weakened from 30.30 to 30.40, while Switzerland remains at 25.65, after touching 25.73 on Saturday. The Scandinavian centres report a quiet week, though Christiania, after weakening from 27.62 $\frac{1}{2}$ to 28.36, recovered on Thursday to 28.05. It is to be hoped that confidence will now be restored after the recent banking crisis. Stockholm is stronger at 17.32 $\frac{1}{2}$; but Copenhagen has fallen from 24.67 $\frac{1}{2}$ to 24.85. Helsingfors has fallen again from 168 to 166 $\frac{1}{2}$. In Central Europe, Vienna and Prague have remained steady at 325,000 and 155 $\frac{1}{2}$ respectively. Warsaw is unchanged at 230,000. Bucharest, at 945 is 15 points stronger than last week. Athens, however, which stood at 327, has risen remarkably, reaching 240 to-day on large forward sales of dollars by the tobacco trade, against shipment, and the report of a new loan abroad. In the East, the rupee has remained absolutely steady at 1s 4 $\frac{1}{2}$ d, and the yen at 2s 1 $\frac{1}{2}$ d. The silver market has seen a larger volume of business during the week, the falling off in the Chinese demand being more than set off by increased Indian bazaar purchases. The movement, however, was not strong enough to have any important effect on prices. Hong Kong is steady at 2s 4 $\frac{1}{2}$ d, after touching 2s 4 $\frac{1}{2}$ d, and Shanghai is $\frac{1}{2}$ d cheaper at 3s 2d. In South America, Rio has been fairly steady round 5 $\frac{1}{2}$ d, and Buenos Aires at 42 $\frac{1}{2}$ d. Monte Video has recovered from 41 $\frac{1}{2}$ d to 42. Valparaiso, after reaching 35, now stands again at 35.50.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 12th:

EXPENDITURE.	Min. £	RECEIPTS.	Min. £
Land Settlement	008	From Revenue	11,838
Interest on War Debt, &c.	504		
Supply Services	6,850		
Increase in Balances	328		
Other Consolidated Fund	228		
Reduction of Debt	3,920		
	11,838		11,838

Revenue was £11,838,000, which closely corresponds with the £11,963,000 in the similar period of last year. Income-tax and Super-tax brought in £3,288,000, against £2,471,000 last year. Special receipts amounted to £1,500,000, compared with £600,000 in the corresponding week of 1922. Customs and Excise were lower than a year ago, the former at £2,895,000 comparing with £4,025,000, and the latter at £1,101,000 with £1,904,000. Expenditure was £7,591,000, against

£8,614,000 in the same period of last year. Interest on War Debt was considerably lower—£504,000, against £1,374,000. Other Consolidated Fund Services appear again at £228,000, and Supply Services absorbed £6,850,000, against £6,500,000 a year ago. The week's operations reduced the National Debt by £3,920,300, and caused the following changes:—

	Min. £		Min. £
National War Bonds repaid ..	250	Treasury Bills	3,750
Public Department Advances ..	9,000	4% Treasury Bonds	1,430
		National Savings Certificates ..	150
	9,250		5,330

The floating debt was reduced by £5,250,000 to £784,945,500.

FINANCIAL YEAR, 1923-24 (April 1 to May 12, 1923).

£	£
Total Expenditure .. 88,171,836	Raised by Revenue .. 103,067,338
Net Capital Repayments 17,854,626	Decrease in Balances 2,959,224
Total	Total

ESTIMATES FOR YEAR 1923-24.

PROGRESS IN THE REPARATIONS PROBLEM.

SOME weeks ago the Governments of Europe appeared to be drifting aimlessly on the question of Reparations. The events of the past week have served to restore to a slight extent some sense of direction. The British reply to the German offer contained no startling surprise. It stated, in the declamatory style with which Lord Curzon is making the Chancelleries of Europe familiar, that the offer was disappointing on two grounds. In the first place, Germany was not offering enough, and what she did offer was made dependent upon the very uncertain success of large international loans; and, in the second place, no definite guarantees were given as to the security for payment. The Note declared that the Government of Great Britain had no intention of abating or surrendering its interest in Reparations, and concluded by urging the German Government to make a new offer. It appears to be accepted in Berlin that the task of submitting a second Note will be attempted, and if this happens Lord Curzon will have succeeded by this roundabout method in restoring the process of discussion and negotiation which ought

never to have been abandoned. This in itself is a great advance, and justifies a slightly more optimistic view of the European situation. It only means, however, that the gloom is a little less black, and there is no real sign as yet of an actual break in the clouds.

The British Note does not carry the question of Germany's capacity to pay any farther. Indeed, the strongest criticism in financial circles that has been made against it is that it made no reference whatever to Germany's offer to accept an independent valuation of her debt, if her present proposal is deemed inadequate. Lord Curzon says, in fact, to Germany that its offer is inadequate not because Germany can afford to pay more, but because France will not accept so small a sum, seeing that she rejected the more liberal proposals put forward by Mr Bonar Law in January. But Great Britain never gave any reasoned argument for the sum which she put forward, and if we are to stop beating about the bush, we must get down to the problem of finding out not what the creditors want, or even consider essential to their needs, but what the debtor can pay. There are those who think that a court of financial experts making an assessment without reference to politics would name a figure something like that of the present German offer. If this is so, we are as far off as ever from a settlement, so long as we try to base our arrangements on what is considered politically practicable instead of what is economically possible.

But while we regard the British reply as based upon the wrong ground, we are disposed to agree with Lord Curzon that the German offer is in fact inadequate. In a reply given in the House on Monday the Chancellor of the Exchequer states that whereas the British Paris proposal represented a present value of £2,500 millions, which would have been reduced to £1,975 millions if the second series of bonds had been proved beyond German capacity (and might have even fallen to £1,775 millions in the highly improbable event of Germany redeeming in a single payment the whole of the first series bonds in the first year), the present German offer has a maximum present value which may be either £1,500 millions or £1,300 millions according to the interpretation of an obscure passage in the Note, and a minimum value of less than £800 millions. In our opinion, we think it could be demonstrated that Germany can pay substantially more than these figures. The two limitations on the amount which she can reasonably offer are on the one hand the sum that she can put into her Budget and raise from her nationals, and, secondly, the amount which she can, in practice, succeed in paying abroad. From the first point of view the offer is obviously well within her capacity. By the process of inflation she has practically done away with her internal debt, and the Reparations total will, in fact, be the whole of the war debt which will remain to her. For a country which has very little military expenditure and a low standard of war pensions, a war debt of £1,500 millions to be distributed over a population of 60 millions is obviously not a difficult burden to bear. It is certainly much lighter than that which will be left upon the shoulders of the British and French taxpayers. The question of the amount she can pay abroad is the more difficult one. The point has been discussed freely by economists, but until either Germany or the Allies begin to put this problem into the forefront of their arguments—whether conducted by question and answer through the post—or by the method of conference, we shall not succeed in bringing the issue down to earth.

But while the British Note lacked definiteness on this issue, and equally failed to commit the British Government to the proposal to submit the question to expert consideration forthwith, it does, in fact, embody a very important break, not so much with the actual letter of Mr Bonar Law's proposal in January, as with the general idea which that unfortunate Note created in the public mind. We refer to the question of the offer by Germany of adequate guarantees. In January Great Britain contrived to give Europe the impression that she was prepared to accept Germany's note of hand; Lord Curzon to-day puts in the forefront the demand that Germany should propose some definite and specific security for the payment of her bill. The Note quite properly makes no suggestion, but, as we have repeatedly urged, it puts upon Germany the onus of suggesting her own security.

The Italian Note makes the same substantial points as the British Note, but its reasons for regarding the total as inadequate are somewhat different. The greater part of Signor Mussolini's draft is concerned with reiterating that Italy rejects the German offer, just as it rejected the total proposed by Mr Bonar Law in January, on the ground of the serious position Italy will be in if her claim upon Germany, together with that of her Allies, is very substantially written down, while she is left to pay her large inter-Allied war debts. The importance of this consideration to Italy is shown by the fact that she owes the United States £340 millions and Great Britain £475 millions. Against this big total, her claim upon Germany amounts to 10 per cent. of Germany's payments after the armies of occupation and various other charges, of which she has a very small share, have been met. Under the Bonar Law scheme, Italy might possibly have got £240 millions, and under the German offer she would probably not get more than £100 millions. These figures show at once where Italy's real interest lies. But it is obvious that this is a problem of distribution and arrangement between the Allies, and is nothing to do with Germany, whose capacity to pay quite clearly cannot be affected by the amount of money Italy owes to other people. The Italian Note, like the British Note, illustrates the indeterminateness of the problem so long as it is looked at from the point of view of what the creditors desire to receive, instead of as a simple problem of Germany's capacity to pay.

When we turn to the effect of the British and Italian Notes in France, there are several features which support our view that the nations of Europe are beginning to find a sense of direction in this problem. In the first place, there is considerable talk of an armistice in the Ruhr pending further discussion, and there is much sound sense in this suggestion, which is designed to harmonise the incompatible demand of France for surrender and the cessation of passive resistance with that of Germany for evacuation. The idea is that Germany should temporarily cease her passive resistance, while France would, for the time being, make her occupation as passive as possible, and limited to the original idea that her technicians should exercise an oversight over proceedings in the Ruhr. Clearly some such proposal as this must be adopted before the problem can be carried much further. But it is unlikely that if normal conditions are restored Germany could hope to revive passive resistance, or that opinion in France would willingly renew military action in the Ruhr, even if the discussion breaks down. It is, therefore, to be doubted whether any armistice will be brought about until there is a reasonable expectation that agreement is, in fact, in sight, and we are inclined to think that two or three further exchanges of Notes are required before this stage can be said to have been reached.

Another significant feature of French opinion is the discovery that after all France, perhaps, is not so interested as she thought in the flotation of an international loan, provided adequate annuities can be obtained from Germany. As a matter of fact, for some time past there has never been any prospect that France could, or would, spend a large sum of money if she succeeded in obtaining it. The real argument for an international loan rests on the quite different ground that the debt of Germany should as soon as possible be converted from a debt by Germany to certain Allied Governments into a debt by Germany to private individuals. Until this happens, the reparations question will remain a serious menace to the peace of the world. At the same time it is clear that a large loan in dollars or sterling would not, in fact, be the best way of meeting France's need. The francs required for restoring France are being found by the French peasant. France needs the means of assuring the payment of interest on this capital, much of which has already been spent. It is desirable that those Frenchmen who have already found this essential capital should become creditors, together with German, English, and American investors, of the German Government, rather than of the French Government, and should look to the German taxpayer for their interest. In this and many other ways French opinion is clearly beginning to face the realities of the problem, and it is equally evident that there is an increasing desire to seek

a solution of the situation, which is doing serious harm to both parties. In Germany the question of adequate and precise guarantees is being seriously discussed by all political parties. The drama is, in fact, developing towards its appointed end—whatever that may be. There remains, however, in the background the fact that when it comes to an issue, it cannot be settled, as Italy rightly urges, without a solution of the whole problem of international indebtedness.

In the meantime, precious months are passing. Great Britain and some other countries of the world have been sharing a reflected benefit from the American boom in trade, and the many factors to which we look in considering the state of industry have been increasingly favourable for the last six months. But readers of our various industrial reports will have noted that there are difficulties ahead, and that the placing of orders is not so free as a month or two ago. Most significant of all is the news from the United States. America has been buying on so unprecedented a scale that, in spite of the Fordney Tariff, her trade returns for March show for the first time for many years an actual surplus of imports. A state of affairs in which America sells raw materials at comparatively low prices and is buying manufactured goods, in spite of tariff and other hindrances, is one which European producers have dreamed about, but hardly expected to see again in practice. At the same time, our American correspondent notes a cloud on the horizon in the fact that the rise of prices appears to have been checked, the index number of wholesale prices having fallen 2 per cent. during the month of April. We clearly cannot rely indefinitely on America to keep the world busy in the face of the confusion in Europe; and if we are to avoid a further period of prolonged stagnation, it is high time that we reached finally on the reparations issue.

THE DIRECTION OF OVERSEAS TRADE.

The quarterly statistics showing the countries of origin of imports and of destination of exports and re-exports, and relating to the first three months of the current year, are published in the April returns of overseas trade. As usual, we have regrouped the figures in more detail than do the official returns, and are able to compile the following table, which shows how the visible adverse trade balance for the first quarter of each of the past three years and of 1914 is made up:—

	FIRST QUARTER. (Million £'s.)							
	1914.		1921.		1922.		1923.	
	Excess of Imports.	Excess of Exports.	Excess of Imports.	Excess of Exports.	Excess of Imports.	Excess of Exports.	Excess of Imports.	Excess of Exports.
Europe	16.1	..	..	2.8	..	15.2	..	0.8
U.S.A.	24.6	..	67.2	..	31.3	..	..	34.9
Other foreign countries ..	..	7.3	..	4.2	..	2.7	..	18.8
British Dominions	0.7	..	..	7.2	..	3.0	..	5.0
Total	41.6	..	53.0	..	18.8	..	..	59.5

The increase in the import surplus as compared with the corresponding period of 1922, which amounts to £11 millions, is accounted for partly by the disappearance of an export balance in trade with the Continent, partly by a very substantial increase in the import surplus in trade with foreign countries, and partly by a change from an export to an import balance in trade with the Overseas Dominions. In trade with the United States the adverse balance remains practically unchanged. In the table above, it should be mentioned, re-exports have been included in the calculations.

Taking first our trade with the Continent, we show in the next table our imports from and exports to the principal European countries:—

JANUARY TO MARCH (000's omitted).

	Imports From.				Exports To.			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.

Netherlands	..	1,199	879	1,305	..	397	247	753
Finland	..	..	..	..	..	..	..	..
Total	75,818	84,357	65,982	80,151	44,261	73,879	65,871	64,944

The alteration in the position as compared with last year, it will be seen, is almost entirely due to an increase in our imports from Europe, our exports thither having declined by less than a million. On the import side the increase is fairly general, but, while exports to a few countries increased, these increases were offset by a larger number of small declines. The most conspicuous figure is that of exports to Germany, which is only exceeded by the totals to France and Holland, and is very little below the 1914 amount. As in 1922, imports from and exports to Germany are almost equal in value. The total of British exports compares favourably with the corresponding figure for 1914, while imports are considerably less, if price changes are taken into account.

The next table shows similar figures for other foreign countries, including the United States:—

JANUARY TO MARCH (000's omitted).

	Imports From.				Exports To.			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.
United States	43,443	84,874	53,967	59,458	10,261	11,601	13,249	16,242
Cuba	960	458	2,806	1,469	488	887	276	603
Mexico	439	2,432	2,230	1,055	272	1,753	540	577
Argentina	8,337	20,040	13,943	18,542	5,209	10,213	6,292	7,310
Brazil	3,016	1,642	3,491	1,865	2,164	3,748	2,226	3,020
Chile	1,095	1,280	816	1,446	1,404	2,359	1,294	1,955
Peru	676	1,825	1,609	1,594	402	1,117	366	712
Uruguay	477	2,125	838	1,491	592	1,264	704	739
Japan	1,062	3,454	1,994	2,189	2,660	5,064	3,994	5,341
China	957	9,302	1,681	3,710	4,944	9,654	6,908	4,794
Turkey (Asiatic)	1,007	93	97	295	1,331	56	25	105
Egypt	..	..	..	11,107	..	11,107	4,922	3,811
Other countries	2,861	7,034	7,135	9,595	6,729	9,131	4,922	4,708
Total	64,329	129,335	90,207	113,800	36,456	56,847	44,573	49,417

Here again an expansion in imports is largely responsible for the change in position. There is, however, an increase of nearly £5 millions in exports, of which exports to the United States account for £3 millions, but the change made in the official returns, under which Egypt is now given under foreign countries, is responsible for an addition of nearly £4 millions to exports and of over £11 millions to imports. Of the remaining £12 millions increase in imports, America accounts for £5½ millions and Argentina for £3 millions.

Trade with the principal Overseas Dominions in the first quarter of the year is shown in the next table:—

JANUARY TO MARCH (000's omitted).

	Imports From.				Exports To.			
	1914.	1921.	1922.	1923.	1914.	1921.	1922.	1923.

But for the transfer of the figures for Egypt to the previous table, there would here again be a very substantial increase in imports, but exports would still be slightly lower. As it is, imports show an increase of £3 millions, which is accounted for by an expansion of £7 millions in imports from India and Ceylon, and of £4 millions in imports from Australia.

The final table shows the destination of re-exports:—

RE-EXPORTS—JANUARY TO MARCH.

(000's omitted.)

To—	1914.	1917.	1918.	1919.	1920.	1921.	1922.	1923.

These figures show no very striking changes, but there is a welcome increase in re-exports to the United States. Re-exports to Australia fell from £1,253,500 in the first quarter of last year to £920,000, and there were also slight decreases in the figures for Canada and India and Ceylon.

MODERN HUNGARY.

(BY A CORRESPONDENT.)

ONE has a sense of isolation in Hungary, an isolation which is at once political, economic, and commercial. In part this comes of Hungary's own policy and in part from the attitude of the Succession States. Politically Hungary feels that she is menaced by her neighbours and uncared for by the Western Powers. There is some truth in this; and, indeed, it is difficult for those inside the country to think otherwise, even when they succeed in realising that the old order has gone. On the other hand, mutual suspicion is so rife throughout Central Europe, and nerves generally are so strained, that the outsider can understand, without necessarily sharing, the apprehensions of the Little Entente.

Roumania, Jugoslavia, and Czecho-Slovakia fear that Hungary will seize any moment when their attention is directed elsewhere to attack them, and, with the help of discontented minorities, to enlarge her frontiers as established by the Trianon Treaty. Colour is lent to this belief by irresponsible agitators in Hungary and Hungarian political exiles abroad. On the other hand, a large body of Hungarian opinion fully realises that irredentist aspirations are not practical politics, and knows that against the combined forces of her neighbours Hungary stands no chance in any conflict. The internal political situation is slowly improving. All parties agree that this is the case, and that both anti-Semitism and Hungarian Fascism will die away if a period of quiet consolidation can be assured. The Government is setting its face against irredentist propaganda and agitation, but among all classes there exists this fear of the neighbouring States and anxiety as to the possible consequences of the French precedent in the Ruhr. In fact, Reparations are a financial and political nightmare. Considerable deliveries in kind have been made, but nobody who has investigated the general finances of the country believes that any immediate payments are possible. If cancellation should prove possible, a lengthy moratorium should at any rate be accorded. In this matter Hungarian policy has itself been partly at fault, for the idea is current that Hungary will not pay. The State Budget, however, shows clearly that payments are at present out of the question, yet Hungary fears that the Little Entente will endeavour to follow the example of France and exact Reparations by force. These States have, in fact, been led to expect Reparations from Hungary both by the Treaty and by subsequent Allied jugglings with German payments, and an invasion of Hungarian territory would almost certainly lead to demands for frontier rectification, in the approved French style.

Former Hungary was practically a self-sufficing unit. Were the national Budget to-day free of war burdens, the country would certainly be capable of producing sufficient

to enable it to purchase such manufactured articles as have to be imported. Hungary still possesses some of the richest wheat lands, and Buda-Pest, next to Minneapolis, is said to be the greatest milling centre in the world. The fine flour produced is Hungary's greatest economic asset. Eventually, no doubt, there will arise a movement in favour of Free-trade; but, having regard to the present economic isolation of the country, this question is driven into the background, and all classes support the rigid Protectionist measures of the Government.

High export taxes (as much as 50 per cent. of the internal price in the case of flour and 25 per cent. in the case of cattle) are imposed with a view to keeping down the cost of living, while imports are restricted by a rigid control of the available foreign currency. When normal times come, and with them a free exchange, export duties will probably have to go, though until quite recently the rationing of foreign exchange by the *Divisen Zentrale* prevented the Hungarian crown from plunging after its Austrian, German, and Polish counterparts. This system has led, however, to a contraction of imports and exports which has gradually suffocated trade, and it has not been able to prevent the inevitable fall in the value of the crown, both at Zürich and in terms of internal purchasing power. There is at present an almost universal lack of confidence, and it is realised that something must shortly be done to give Hungary a fresh lease of life.

Economic isolation cannot continue because it leads to commercial seclusion, while a continuous diminution in the volume of trade must result from export taxes and exchange control. The former are a barrier to commercial agreements with the surrounding States, and the latter stifles the merchant, who is already hard hit by the disappearance of all transit trade. The new States deviate traffic through their own territories wherever possible, whilst Roumania and Yugoslavia rigidly insist on the letter of the Treaty in excluding foreign vessels from trade between their Danube ports. The Hungarian railways are heavily overstaffed, with about nine men per kilometre, and have to import sleepers and to some extent coal from abroad. At the same time, upwards of 50 new frontier stations have to be built.

Taxation in Hungary is heavier in appearance than in reality, as is the case in all countries with a depreciating currency. The export taxes, however, ensure prompt payment from the agricultural element, which would otherwise be difficult to reach. As these cannot remain in force indefinitely, it is essential that some other system of taxing the landed proprietors should be devised, though this will certainly prove difficult for political reasons.

The soil is rich and the peasant a hard worker, but despite these facts the yield per hectare of cereals in pre-war days was well below that of Western Europe. The existence of very large estates does not appear to have made for efficiency in agricultural production, and the great reduction in the acreage under cereals, which has been so prominent a feature in the economic life of South-Eastern Europe of recent years, is even more marked in the case of Hungary than in Roumania, where agrarian reform has been carried through. Up to the present the agrarian question has been shirked by the large landed proprietors who still govern Hungary; but upon its solution depends in very large measure the whole problem of social reconstruction. Indeed, the very existence of a small country of latifundia, surrounded by neighbouring States where peasant proprietorship is the rule, does much to justify the fears of the Magyar aristocracy.

Following the separation from Austria in 1867 came a period of rapid, though not altogether sound, economic development, of which railway construction figures over 25 years provide some indication. But this expansion was only possible by external borrowing, and the amount of foreign capital invested in public and private enterprises is not generally realised. Pest itself dates from this period, and in no way approaches Vienna as a capital market; while to-day there is very little Hungarian capital either inside or outside the country. As pre-war expansion was financed mainly by borrowings in London and Paris, this policy now recoils very heavily on the new State. After the indefinite sum of Reparations comes the heavy fixed external debt as the chief burden on Hungarian

State finances. There is a universal desire on the part of all statesmen and bankers to honour these public and private pre-war debts, and an eagerness to repay which loses sight of what is feasible. With the best will in the world, it is manifestly unwise for Hungary to jeopardise her Budget by paying the current interest (in the currency of the lenders), to say nothing of eight years of arrears. The solution must rather be sought in the making of some kind of funding arrangement with both public and private creditors, and at the same time, as an earnest of its good intentions for the future, the country must start putting its economic house in order, as Austria is doing.

While it is easy to offer such advice, it must not be forgotten that fulfilment will entail great sacrifices. The overstaffing of Government services is the consequence of the return (whether compulsory or voluntary) of Hungarian-speaking civil servants from the Succession States, whilst over and above those actually employed there are some 300,000 refugees with no means of livelihood. These people represent a charge on the State Budget which cannot immediately be removed. They must inevitably be a burden for some years to come, but by a system of bonus, pension, land settlement, or other device the Exchequer must contrive that they cease to be a permanent incubus.

The recent visit of the Premier, Count Bethlen, to London and Paris has brought the question of Hungary once again to the fore. The Government is prepared to accept control by the League of Nations over its finances in return for a temporary waiving of the Reparation liens. Under present conditions, however, it seems very doubtful whether a Hungarian loan could be floated on the international market even so. The only solution is to be found in self-help, difficult as this will undoubtedly prove; and it will be interesting to see whether the governing class will be prepared to make the necessary sacrifices in the interests of the nation as a whole.

THE WOOL TRADE.

(FROM OUR BRADFORD CORRESPONDENT.)

A POSITION of some complexity has been created in the wool textile industry, on account of the remarkable strength of the raw material markets of the world. Under normal conditions a keen demand for wool would manifestly imply activity in the consuming centres, but so far as this country is concerned there is at present the apparent anomaly of high and advancing wool values on the one hand, and restricted demand for the products of wool on the other. At first glance this appears to be an impossible situation, but a little reflection and a study of world conditions generally reveal the explanation of this topsy-turvy state of affairs.

It is well known that for a considerable period the raw material has dominated the whole industry, and for several months past it has been common knowledge in the industry that the farther one got away from the raw material, the more difficult it has been to sell semi- and fully-manufactured goods at a profit. The manufacturers and merchants in the piece goods trade have not yet recovered from the effects of the devastating slump which followed the brief "boom" period that reached its apex in the early part of 1920. Confidence which was then shattered has not yet been re-established, and in a general sense financial stringency in the merchanting section of the industry is as acute to-day as ever. Moreover, during the whole of the intervening period business in piece goods has been conducted on exceedingly restricted lines, so that while some firms have been fairly busy on the production of dress goods and fancy worsteds, others have experienced great difficulty in keeping even a limited number of their looms fully employed. In recent months, also, producers in this country have encountered the keenest competition from manufacturers on the Continent, lower production costs and depreciated exchanges enabling French firms to undersell their British rivals, not only in this market, but also in several foreign countries. While it is recognised that this form of competition is not

BANKING FACILITIES

100 Broadway

New York City

likely to be permanent, there is no doubt that it is at present exercising a most depressing effect upon trade in the West Riding.

To a considerable extent the same influences are being felt in the spinning section. Home manufacturers are curtailing their purchases of yarn to a minimum because they cannot pay current prices, and make cloth to sell at a profit. Spinners are also feeling the effect of Continental competition in the sale of yarns, and for several weeks past it has been quite a common thing to find imported yarn offered, especially in Leicester, at prices showing, on an average, a difference of at least 8d per lb in favour of the Continental-spun yarn. Lower costs and depreciated exchanges are again mainly responsible for this, though it is necessary to remember that even before the war dry mule-spun yarn from the Continent found a very ready sale in the hosiery trade here.

At the beginning of this year most spinners were in a fairly comfortable position, and had sufficient orders on their books to keep frames busy for at least three months. The first set-back came with the occupation of the Ruhr, and this is not surprising in view of the close business connection that has always existed between the West Riding and Germany. Before the war Germany was by far the best customer of this country in tops, worsted yarns, and mohair and alpaca yarns, and it necessarily follows that anything which tends to check business development in Germany must re-act upon trade in the West Riding. The present trouble in Germany, therefore, must be regarded as being mainly responsible for the altered conditions here, for whereas at the beginning of the year there was plenty of work in sight, to-day most spinners are unable to see more than a few weeks ahead, and unless demand improves considerably during the next month, it is certain that short time will become fairly general. The absence of demand in the yarn trade is reflected in a comparatively inactive market for tops, and it is significant that combing machinery is already on short-time running. Up to a few months ago the demand for fine tops was such that all combs were kept fully employed, and practically no stock existed at any point. Now stocks are accumulating, and combers, instead of being in a position to refuse work, are open to take almost anything.

On turning to the raw material market, however, one finds evidence of great strength, demand for wool being general, with prices showing a distinct upward tendency. The apparent anomaly is explained by the extraordinary demand from America and the Continent. Notwithstanding the high tariff imposed on imported wool, American mills are to-day consuming more raw material than at any time in the history of the trade, and the American Woollen Company are working 100 per cent. of capacity. All reports agree that America is experiencing a wave of prosperity, but there is some difference of opinion as to whether this is real or artificial. Some observers express the view that the immense activity in the wool textile industry in the United States is due to some extent to inflated credit, and that sooner or later the banks will be compelled to adopt a more conservative policy. Even in America fears are expressed that over-production may

result from the present boom, though it must be confessed that there are no indications of any weakness at the moment. The all-important point is that American manufacturers are consuming huge weights of combing wool, and the operations of American buyers in London and in the primary markets constitute one of the main factors in the recent advance in wool values.

Continental mills are also exceedingly active, and, as in the United States, stocks of raw material are reported to be comparatively light. Consumption in Germany has suffered in consequence of the French action in the Ruhr, but against this may be placed the increased activity of French and Belgian mills. As mentioned above, the French manufacturers engaged in the export trade are reaping a very material advantage from the depreciated currency, but it is recognised that any favourable settlement of the reparations problem would almost certainly be followed by an appreciation in the franc, in which case much of this temporary advantage would disappear. Reports from Japan indicate a very healthy position in the textile industry of that country, and, taken all round, the British industry at the moment seems to be in the least favourable position. The great activity abroad, however, accounts for the strong demand for wool and the upward movement in values, and users in this country are being forced into the position of having to pay higher prices for their raw material, although they are unable to sell their products at anything like commensurate prices. How long this state of affairs will continue it is impossible to say, but at present there are no signs of spinners and manufacturers even attempting to follow the lead of the wool market. For the most part they profess complete inability to do business on to-day's basis of values, and so while the market for tops is nominally firm in sympathy with the wool market, there is very little actual business passing.

Notwithstanding this unsatisfactory position, however, there seems to be a very general impression that wool will remain firm. Few in this country are prepared to go all the way with Sir Arthur Goldfinch when he predicts a great scarcity of wool in the near future, but most agree that fine combing wool is not likely to depreciate much this year. Of course, if consumption throughout the world continued on the heavy scale of last year it is manifest that wool supplies would prove to be inadequate, for the surplus stocks of merino held by B.A.W.R.A. have already been absorbed, and big inroads are now being made into the surplus stock of crossbred. Unfortunately, it is impossible to obtain reliable statistics relating to actual stocks in the hands of the trade throughout the world, and it is equally impossible to say with any degree of certainty what the actual consumption is in any given period.

The preference of the public for the fine soft-handling fabrics made from merino is still very pronounced, but it seems reasonable to suppose that, just as demand has been checked in this country, so throughout the world, if values rise to a famine level, consumption will be forced on to the lower qualities, of which, at present, there are ample supplies. To sum up, the strength of the statistical position is generally admitted, and values are being largely determined by American and Continental

competition. The only possible hope of cheaper wool, therefore, would seem to depend on the inability of overseas users to continue their present heavy buying, in which case values might decline to a level more in keeping with the ideas of users in the West Riding.

LONDON ELECTRICITY SUPPLY COMPANIES.

THE Electricity Supply Bill, discussed in our annual review of London electricity supply companies, of last year, was reintroduced into Parliament in the session of 1922, and finally passed into law as the Electricity (Supply) Act, 1922.

Meanwhile, the suggestions made by the Electricity Commissioners as regards London were not satisfactory to the companies concerned, and the Commissioners thereupon made other proposals, which at present are under consideration by the companies. In the meantime, the associated companies have produced their own scheme, and, we understand, hope to present in the ensuing session of Parliament a Bill which aims at centralising the generation of electricity for supply in the London areas and adjacent districts served by companies, and seeks to extend the tenure of the companies as regards their distribution business.

In the following analysis of the results of representative London electricity supply companies we tabulate from those reports which give the information the amount of Board of Trade units generated and sold:—

B.T. UNITS SOLD (in 1,000's).

	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Charing Cross, W. End.	13,270	11,776	12,390	11,591	12,649	14,563	14,949	17,224
Do City	22,603	28,397	32,209	29,985	34,349	38,358	38,511	41,771

City of London	29,113	28,982	29,697	26,656	31,256	36,730	35,931	42,605
County of London	25,743	35,030	37,595	40,326	42,488	49,553	51,220	58,444
Kensington & Knightsbridge	5,671	4,697	4,581	4,628	5,811	6,507	7,457	8,457
London	35,336	49,810	49,014	46,357	42,908	47,366	47,491	49,676
Metropolitan	18,109	24,595	28,446	26,761	25,127	27,799	26,945	29,624
St James' and Pall Mall	11,605	11,272	11,986	10,591	12,190	13,510	13,464	15,827
Westminster	21,906	23,499	27,813	25,211	24,676	25,659	25,254	30,261
	187,807	222,329	239,037	226,553	254,496	264,265	265,101	297,956

It is a pity, perhaps, that a little more information is not offered in these reports as to the prices charged to consumers for electricity. The Brompton and Kensington maintains its useful statistical record, which goes back to 1890; in that year the average price per unit was 7.43d, in 1914 it was 3.92d, while in 1921 it was 5.236d, moving to 5.28d for 1922. Also we find an interesting comparative statement issued by the City of London. This company reduced its charges from 4.37d in 1921 to 4.05d for 1922; in 1917 its average price per unit was 2.61d.

The next table shows gross annual earnings of the principal London companies for the past seven years. The figures for 1913 are appended for comparative purposes:—

GROSS REVENUE.

	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Brompton & Kensington	56,482	55,878	61,898	56,759	74,045	103,372	110,130	121,459
Charing Cross, W. End.	151,240	150,413	165,136	193,858	265,856	311,046	318,534	333,156
Do City	149,819	176,464	212,542	238,074	331,332	339,772	339,772	429,724
Chelsea	72,602	76,314	86,602	86,698	92,629	115,404	120,416	128,742
City of London	311,822	330,752	347,979	389,859	521,116	649,391	676,456	710,158
County of London	255,670	343,066	379,836	451,811	576,116	698,625	769,834	895,783
Kensington & Knightsbridge	81,850	68,485	78,711	78,268	95,871	127,141	138,105	180,185
London	162,854	222,406	228,032	245,539	305,109	372,230	393,674	374,092
Metropolitan	217,605	277,909	318,216	348,726	413,259	516,594	538,471	597,086
St James' and Pall Mall	146,151	143,072	161,151	160,806	208,467	227,959	254,077	294,437
South Metropolitan	65,635	95,883	131,930	167,233	166,996	199,037	216,809	227,900
Westminster	256,800	262,624	306,184	286,712	362,839	404,010	437,093	458,683

The increases in gross revenue do not reveal the full story of the prosperity which the companies are now enjoying. The gains on previous years set out above are, of course, welcome, but the more important addition to net revenue has been obtained from a substantial decrease in expenditure. This is shown in the following table:—

EXPENSES, including REPAIRS and MAINTENANCE.

	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Brompton & Kensington	24,984	31,940	31,580	40,272	44,684	59,469	69,089	70,239
Charing Cross, W. End.	66,866	78,831	103,268	103,267	167,242	208,314	212,116	187,007
Do City	80,639	110,909	147,153	147,153	273,721	355,061	328,493	247,920
Chelsea	35,052	44,635	51,040	56,880	59,591	73,530	76,979	69,003
City of London	139,724	199,111	209,525	249,252	341,124	434,132	445,142	421,188
County of London	120,534	186,172	226,340	272,381	358,643	454,372	427,432	374,013
Kensington & Knightsbridge	47,679	42,695	50,194	53,228	73,172	97,107	104,099	107,495
London	91,101	167,192	163,239	167,563	209,868	272,743	291,388	223,893
Metropolitan	111,317	161,009	184,543	208,112	242,623	318,638	329,291	263,902
St James' and Pall Mall	94,010	115,076	123,306	130,551	170,441	187,012	203,951	198,733
South Metropolitan	24,065	45,373	76,767	103,846	96,881	116,216	116,493	85,176
Westminster	154,254	167,055	188,067	204,259	266,188	315,726	348,829	326,668

Briefly, profits have been realised not so much by better sales of electricity as by a lower expenditure, mainly on account of decreased fuel costs. The Brompton and Kensington makes a profit of £51,221, as against £41,041 a year ago, a profit brought about by increased revenue. The Charing Cross, West-End shows a profit of £146,149, as against £100,415 for 1921, these results having been contributed to by increased revenue and reduced expenditure; the City undertaking earned £190,072, as compared with £111,279, revenue remaining round about the same figure, but expenditure falling from £328,493 to £247,920. Chelsea, with a profit of £60,738, makes a remarkable increase upon the previous figures of £43,437, expenditure falling from £76,979 to £60,003, and revenue improving from £120,416 to £129,742. The City of London followed in the same steps, only on a larger scale, with profits of £318,971 for 1922 and £231,313 for 1921. The County of London records a profit of £521,769, as compared with £342,201. As this is the most prominent company in our group, a closer examination of the accounts may prove of interest. The heavy increased earnings were the result of an increase from £709,633 to £895,783 in revenue, and a decrease from £427,432 to £374,014 in expenditure. For just under 584 million units of electricity the company obtained £858,317, as against £742,887 for approximately 514 millions. The decreased expenditure is mainly on account of coal and fuel. This item in 1921 amounted to £184,757; in this year's accounts it is down to £117,699. Salaries and wages are only slightly lower. Incidentally, the cost of the purchase of current has increased from £6,459 to £16,940. Kensington and Knightsbridge secured total receipts of £150,185, but although the expenses at £107,195 are slightly higher than those of a year ago, the net profit has risen from £34,006 to £42,690. With expenditure reduced from £329,291 to £203,903, the Metropolitan is able to show a profit of £293,184—an excellent increase on £209,180 for 1921. Expenditure of the London Electric Supply fell from £291,388 to £223,893, thus giving a profit of £150,199, as compared with £102,236. St James' and Pall Mall made £80,704, as against £50,146; the South Metropolitan £142,724, against £100,315, and the Westminster £131,906, against £88,264.

In the concluding table we show the yields obtainable from the shares of these companies calculated on recent dividend distributions. Share prices are also appended over a period of years:—

(1) £20 shares.

Shares in electricity supply undertakings continue to be in considerable demand by the investing public. It will be noticed in our table that ordinary shares have improved

in value, as well as preference issues. This is a favourable sign, and suggests that the public are keenly alert to the very large development possible in connection with supplying London with its electrical energy.

LATIN-AMERICAN NOTES.

(BY A CORRESPONDENT.)

NICARAGUA.—Foreign control of Nicaraguan national revenues and expenditures appears to have been rather less successful than proved the case in Santo Domingo. In both Republics financial commissions, appointed by the United States, have taken complete charge of the countries' finances. Twelve years after the introduction of currency reform, Nicaragua now finds itself in a rather worse economic condition. Under pressure, and contrary to the advice of experienced local experts, the Government handed over to an American banking firm the whole of the railways and steamboat transportation of the country, as well as the control of the national bank, and the collecting of internal taxes on tobacco and liquor, together with all other custom house duties. For administering these services the Collector-General is in receipt of a salary of \$15,000 a year, representing five times the amount paid to the President of the Republic. The rate of interest charged by the bank for all advances is now between 1 1/2 and 2 per cent. per month, while in country districts the rate is as much as 4 per cent. per month. Upon such ruinous terms commercial prosperity has become almost impossible, notwithstanding the undoubted agricultural and mineral richness of the country. The effort recently made by the Nicaraguan Government to raise a loan for the purpose of constructing a new railroad, much needed, to Bluefields from Granada, to connect the Atlantic coast with several large industrial towns of the Pacific, proved unsuccessful. The only offer received was from the United States; the terms demanded, however, were so onerous that, in spite of the advice of the American High Commission to accept and certain pressure applied by the head of the Government, Congress rejected them. The suggestion was a loan for \$3,500,000 at 8 per cent., the American bankers to take the bonds at 75 cents on the dollar; interest for one year to be deducted in advance; and \$300,000 to be taken over and put into a reserve fund at the National Bank of Nicaragua.

ECUADOR.—Recent political upheavals in Ecuador have interfered very little with economic conditions in that country. Now that cacao, the chief local product, has improved in price, and the exchange on the United States has become more evenly adjusted, prospects for the current year have brightened. Late statistics tend to show that export values are still slightly above imports. A move by the Government to help the economic situation has been the abolition of the official rate of exchange, in view of the negative results obtained from the expropriation of export drafts. Various new schemes for securing increased stability in exchange are still under consideration by Congress. It is hoped that the abandonment of an official exchange rate may assist the present position, but when the large sums withdrawn from the country annually for the maintenance of Ecuadorean families resident abroad, and for the payment of interest, freight, insurance, and other services, are taken into account, it will be found that exports must be greatly increased and imports considerably decreased before any material improvement in the exchange situation can be expected. The United Kingdom plays but a small part in the trade of this South American Republic. Little more than 29 per cent. of the imports, and barely 8 per cent. of the exports, relate to the United Kingdom. On the other hand, the United States hold 49.5 per cent. of all foreign trade of the country. Improved arrangements are contemplated in place of those hitherto existing in regard to credits. It is reported that some of the Ecuadorean banks have completed arrangements whereby foreign exporters may receive guarantees from these institutions; their drafts covering sales of goods to approved customers in Ecuador

will be paid on presentation on maturity. Of late two additional banks have been established in the Republic, at Riobamba—the Sociedad Bancaria del Chimborazo, and the Banco de los Andes, affiliated with the Banco de Descuento de Guayaquil. The Banco del Ecuador has recently granted a loan to the Government of 2,000,000 sucres, at 7 per cent., to be used exclusively for public expenditures already incurred.

MEXICO.—The persistent refusal upon the part of the United Kingdom and the United States to recognise Mexico officially is fraught with great inconvenience and occasional losses to British shareholders in Mexican undertakings. In the absence of any diplomatic representative of either country, it is impossible to approach the Mexican Government with any prospect of receiving attention. At the present time there are several matters of pressing importance deprived of any chance of remedy. For a considerable number of years the Palmarejo and Mexican Goldfields Company has awaited a settlement of its claims against the Mexican Government for compensation in connection with loss and damage caused by the revolution. This claim, amounting to £260,000, might have been settled had there been available any recognised diplomatic agent of the British Government, or, failing him, through the friendly representations of the United States Government, since the Mexican Administration, through its own valuer, appointed for the purpose, confirmed the justice of the company's valuation of loss. The Palmarejo and Mexican Goldfields Company have expended over £1,000,000 upon their property, and for years past have paid heavy taxes to the Government. Equally unfortunate has been the British Tlahualilo Colonisation Company (the Mexican Cotton Estates of Tlahualilo, Limited), whose property has recently been seized by the Agrarian Commission of the State of Durango, under the provisions of a new agrarian law, an act which the Mexican Government itself has denounced, and failed to endorse. In the face of this, and notwithstanding an injunction granted by the Mexican High Court, the Agrarian Commission has seized and divided up among the inhabitants of the neighbouring village the British company's property, extending over an area of 9,000 acres. Here, again, relief would have been certain had it been possible for a British diplomatic agent to have presented the claims of the company to President Obregón or his Minister of Agriculture. Even these two cases, however, do not fill the measure of injustice to which British companies operating in Mexico have of late been subjected. Under the present régime, foreign tenure of land has been rendered far less safe than in the days of the late President Porfirio Díaz, when British, among other foreign, companies thrived apace. News of numerous high-handed acts of despoilment and trespass has reached us. Agrarian outrages have taken place in the neighbourhood of Pachucha, where a considerable amount of British capital is invested in silver and gold mines; hydro-electric undertakings, and where there are a number of foreign-owned ranches—Santa Rosa, San Antonio Tula, El Durazno, and Zacoalco. Upon all of these agricultural damages has been caused by bands of hostile agricultural workers. The hacienda Almolonga, attacked by a band of 30 *agrarristas*, has been seized, and is still held by force of arms. These assaults upon private property have been occasioned, it would appear, by official misconception of the meaning of certain Presidential in-

structions, which have been misread so as to infer administrative approval of taking forcible possession of private lands that had failed to comply with some newly-issued rules in regard to the payment of wages, and a new ordinance as to the hours of labour.

Notes of the Week.

The Indemnity Bill.—On principle we strongly dislike indemnity bills. If Parliament were to permit them to pass too easily or too frequently, we should reach the dangerous position in which any Government with a working majority would cheerfully perform any illegal act, which seemed to them politically or otherwise expedient, and rely on their followers to see that punishment was averted by special legislation. We trust that when the Indemnity Bill, in respect of the deportations to Ireland, comes before Parliament after the Whitsuntide recess, this dislike will be freely voiced from the Government benches as well as from the Opposition. We think also that something should be done to mark the present occasion as exceptional and most regrettable. That the Home Secretary should resign is unreasonable, for presumably the decision for which Mr Bridgeman assumes responsibility was really a decision of the whole Cabinet. But the position of the Attorney-General, on whose learned advice the deportations were undertaken, is on a very different footing. He has made a blunder which has had very serious effects, and ought publicly to tender his resignation. As regards the Bill itself, however, we should not go so far as to welcome its defeat with all the consequences which defeat would involve, including, of course, the resignation of the Government as a whole. We should be content with Viscount Grey's attitude of non-opposition provided—of course an essential proviso—that the Bill confines itself purely and simply to the present case. This at first sight it appears to do. The public interest, in our view, would best be served if the Bill, indemnifying the Home Secretary in respect of this case, is passed, but only passed under a protest sufficiently powerful to make this and future Governments very chary of risking a breach of the laws of the land, especially of those laws which guard the liberty of the subject.

Great Britain and Russia.—The state of tension caused by the Curzon ultimatum seems to have been slightly relieved this week. On the one hand the arrival of M. Krassin in London, together with the apparently conciliatory tone of the Soviet Government's reply, indicate Russian unwillingness to break with this country. On the other hand, the Under-Secretary of State for Foreign Affairs stated in the House of Commons on Tuesday that Lord Curzon was prepared to see M. Krassin and to go through the whole of our claims with him, while even more significant was the addition that a reasonable extension would be granted to the time-limit stipulated in the British Note in order that M. Krassin might communicate with Moscow for instructions, should he so desire. For our part we prefer to emphasize this aspect of the case, rather than to enlarge upon the volume of the cheers which arose from the Ministerial benches when Mr MacNeil told the House that the Government had negotiated until it was sick of negotiating. If we assume the truth of all the allegations contained in the Curzon Note—and the attitude of the Soviet Government has, in fact, been most provocative—we are still forced to ask how redress would be obtained by breaking what Mr Asquith aptly described as "the only cord of friendly communication" between the two countries. Would the withdrawal of our delegation from Moscow put a stop to Bolshevik propaganda in the East or obtain compensation for Mrs. Stan Harding? It would seem more probable that such action would rather intensify the evils of which this country rightly complains, and we earnestly hope that the Government will be guided in this matter by the realities of the situation rather than by the dictates of passion and righteous indignation. The problem is a two-fold one, and involves both economic and political considerations. In a leading article last week we analysed the foreign policy of Soviet Russia, and saw that the total sums involved were relatively small. In the same number we

pointed out a fact which we still believe to be unassailable, in spite of last Tuesday's debate, and that is that British trade with Russia, small though it is, would be much more difficult to undertake if we revert to the conditions which prevailed before the negotiating of the Trade Agreement. But if we assume with the spokesmen of the present Government that this is not the case, and that trade would continue as at present, even if Soviet House were closed, then it is obvious that the denunciation of the agreement is not an effective means of bringing economic pressure to bear on Moscow. More important for the moment, however, than these economic considerations is the political aspect with which Mr Lloyd George dealt in his most eloquent vein on Tuesday night. It was not the old Czarist régime or the Bolshevik Government that counted: Russia, he declared, was the thing that mattered. The foreign policy of the present Soviet Government was tending daily to become more Imperialistic, and the time might well be near when this Government itself, based in theory upon the principles of justice and humanity, would stand in the eyes of all Russians as the representative of nationalism rampant. Russian Imperialism is the real danger, in Mr Lloyd George's opinion; and, with Europe in a state of turmoil, it behoves us not to create new enmities nor to add yet another to our many troubles and difficulties. We may add that it seems probable that a rupture would prove most acceptable to certain Bolshevik extremists, and would be a definite set-back to the "new economic policy," upon the success of which the future of Russia so largely depends. It is because we believe in the essential rightness of this diagnosis, and because we hold that the internal administration of a country is primarily a matter which each country must decide for itself, that we hope that counsels of moderation will prevail and Anglo-Russian relations be placed on a firmer footing. It is surely futile to proceed with a policy the logical outcome of which is war, unless we are at the same time prepared to have recourse, if needs be, to the arbitrament of force.

Overseas Trade in April.—We gave in our last issue a brief summary of the chief figures in the overseas trade returns for April which appeared just as we were going to press. Generally speaking, those figures at first sight appeared to counteract the disappointing effect of the March returns, for, as compared with April of last year, total exports were up by £10½ millions, as against a rise of £5½ millions in imports. However, comparisons, both as regards aggregate and detail, cannot be used for more than tentative conclusions, for in April, for the first time, the Dominion status of the Irish Free State took effect. This means that the direct trade of Southern Ireland with countries other than the British Isles was for the first time excluded from the British figures, while, on the other hand, the accounts include the trade carried on by Great Britain and Northern Ireland with the new Dominion. Further reasons why comparisons based on the April figures are dangerous and unreliable are given as follows in the *Board of Trade Journal*. Trade with the new Dominion "was not, during April, on a normal basis, as anticipatory shipments of dutiable goods are reported, and, as a further element in the confusion of accounts, the collection and transmission of returns, the making of which was a novelty to those concerned, cannot be supposed to have settled down to the regular routine established in regard to our trade with other parts of the world." All this must be borne in mind in judging the figures for April, and the effect of it cannot be gauged with accuracy. Another point to remember is that practically the entire effect of Easter fell on April this year. In former years, when Easter has fallen in April, April imports and exports fell short of those of March. This year exports are much higher in April than in March, though imports are £3½ millions lower. This import decline is more than accounted for by raw materials, and the falling off of £4,280,000 in cotton is a striking feature. In quantity, the raw cotton imports were little more than half those of March, but this decline is seasonal. Imports of crude rubber also fell away sharply in April. Irish trade is probably responsible for an increase in April of our takings of butter, eggs, bacon,

and some other articles of food; but, on the other hand, figures in many classes of imports must be decreased by the exclusion of direct imports into the ports of Southern Ireland. Four months' totals of leading British exports cannot as yet have been very greatly affected by the Irish separation, and how they compare with the past two years is shown below:—

QUANTITY OF BRITISH EXPORTS.

	Four Months Ending April 30.		
	1913.	1922.	1923.
Coal.....tons	23,589,878	17,333,082	25,535,825

* Yards.

Exports of coal and pig-iron are well in excess of the 1914 figures, and although there are one or two declines, the comparison with a year ago gives a pretty good result in the list as a whole. It would be a serious matter if the lack of truly comparable overseas trade figures, due to the establishment of the Irish Free State, were allowed to continue. The Board of Trade should, we think, be able to provide separate figures for the trade between Great Britain and the new Dominion, and also approximate figures of the extent of trade a year ago between Southern Ireland and the rest of the world. We hope they will give immediate attention to the matter.

The Trade Boards Bill.—A year ago the Cave Committee on Trade Boards after an exhaustive inquiry presented a report which, though unsatisfactory alike to those who would leave the most defenceless to the free play of competition, on the one hand, or to those who would like to see the State step in and control all wages, on the other, endeavoured to lay down the lines for the future development of the Trade Board system. The report, which was explained in the *Economist* of July 15th, p. 102, recognised the social benefits which have already been conferred in low-paid industries by Trade Boards, but endeavoured to define very carefully the field over which the compulsory powers of the State should be exercised; and the fact that the Committee, which included three Labour representatives, as well as employers and other members, was unanimous, shows that this attempt was not entirely unsuccessful. The Committee clearly desired that while the State should enforce a minimum standard in low-paid trades, it should not intrude into the whole field of wages regulation, but should encourage the development of organisation on both sides with a view to arriving at voluntary collective agreements regulating all wages in these unorganised industries; it was, therefore, proposed that under certain conditions wage rates could be fixed for other than unskilled workers by agreement between the parties. As, however, organisation is *ex hypothesi* inadequate in such trades to enforce the general adoption of these higher wage rates, they should, if approved by the Minister, become statutory and enforceable as a civil right in contrast to the minimum wages of the lowest grade which should be enforceable by criminal proceedings. But, again, seeing that the workers in such trades are often few in number, widely scattered, and unable to institute proceedings either by themselves or through their Unions, which are often non-existent, impotent or bankrupt, the Committee recommended that the Inspector of the Trade Boards Department should be empowered to take proceedings where such rates are not being paid. This is a vital point, for it is evident that without this protection the provision under which it was hoped that the Trade Boards would develop into a form of machinery for effective collective bargaining, and for

the development of organisation, would become a dead letter. It is, therefore, very much to be regretted that the Bill just introduced into the House of Commons, which proposed to give effect to most of the Cave Committee's numerous recommendations, omits this vital provision. The report of the Cave Committee has already been quite unreasonably condemned as an attack on Trade Boards by many who have not taken the trouble to master a complicated subject; but by omitting so essential a part of the scheme, the Government have given colour to these attacks, and will render much more acrimonious the discussions on their Bill which would, if unamended, undoubtedly very much diminish the appropriate and necessary functions of Trade Boards.

The Pan-American Congress.—The proceedings* of the fifth Pan-American Congress, in session from March 25th to May 3rd at the Chilean capital, have been reported somewhat inadequately in Europe, but the results have proved disappointing. Mexico, Peru, and Bolivia held aloof altogether, the first-named in view of her non-recognition at Washington, the two latter through the feud with Chile over their lost provinces, and the scheme for limiting armaments failed through the insistence of Brazil on a larger allowance of tonnage for capital ships than either Chile or Argentina would sanction. Brazil apparently contends that as her territory is nearly as extensive as that of all the other South American States together, and her population is more numerous, she is entitled to claim a proportionately large armament, if only to secure that her national unity shall be maintained. So her delegates insisted on a tonnage of 80,000, against 50,000 suggested by Argentina, and 65,000 put forward by Chile as a compromise; and the dissension was aggravated by the revelation that the Brazilian Government had negotiated separately with Chile last December, and had eventually intimated (but not with sufficient clearness) that it would only take part in the proceedings out of courtesy, in view of the rejection of its proposal for a preliminary change of views. Brazil has now no possible antagonist either in America or in Europe, and it is difficult to see the need for naval protection against the contingency of secessions. But her Navy has taken an important part in her recent history; it offers an attractive career for her upper classes, and it gives her a certain prestige abroad. The Congress has scarcely compensated for its failure in this matter by its dealings with a number of subjects of comparatively minor importance. Nearly all of these will come up again. Conventions have been signed for the protection of trade marks, the prevention of the spread of epidemics, and the intervention of a tribunal of inquiry in disputes between the participating nations, and reports have been presented on various subjects and referred to select committees for further study; some of these questions, however, may be important hereafter, especially the proposed formation of a code of international law for America, to include the Monroe Doctrine. This matter is to be dealt with by a Conference of Jurists, to meet in 1925 at Rio Janeiro. Good work is also stated to have been done by the Committees on Agriculture and Education, and further Pan-American Conferences have been arranged to deal with electrical communications, roads, and journalism. The Constitution of the Pan-American Union in Washington has apparently been so modified as to open membership in it to all American Governments whether recognised by the United States or not, and its Presidency, now permanently vested in that Power, is to be held by all the States in rotation. But the most conspicuous result of the Congress at present is the bitter strife set up between the Argentine and Brazilian Press, and President Alvear's Message to the Argentine Congress proposes to "modernise the naval material" and make additional provision for universal military service during war.

Public Trustee's Report.—The result of the year's work of the Public Trustee is a surplus of £75,000, as compared with a deficit of £41,000 for the previous year, and of £98,000 for the year 1920-21. This result, it is stated, is due not so much to the increase of revenue as to reduction in expenditure. Expenses are lower, partly due to the fall in the Civil Service bonus, but mainly on

account of "the cumulative effect of the economies resulting from re-organisation during the past three years." It is pointed out that expenditure includes all charges which an ordinary commercial enterprise would have to meet—reserve against pensions, rent, rates, sinking fund on building, maintenance, lighting, heating, telephones, postages, &c.—with the sole exception of Schedule "A" income-tax. In anticipation of the surplus, a sharp reduction was made on January 1st in the capital fees payable upon acceptance. As a few months normally elapse between the acceptance of a case and the payment of the fee, the reduction has had very little effect on the revenue of the year under review. The report shows that the aggregate value of new business during the year was £15,332,309, as compared with £19,911,220 for the previous year, when, however, the aggregate was swollen by one estate of unusually large value. The number of new cases accepted during the year was 955, as compared with 1,136 for the previous year, the ordinary trusteeships dropping temporarily about 20 per cent., but they are now showing an upward tendency. The average value of the probates accepted during the year was £17,286, and of the trusts £11,891, as compared with £14,321 (excluding one large estate), and £12,222 respectively during the previous year. The number of cases under administration was 15,600, having an estimated value of approximately £168,600,000. It is interesting to find the Public Trustee explaining that "the investment turnover for the year has been large, owing partly to the transfer of funds from short-dated to long-dated securities in trusts likely to prove of long duration. Of the first-class securities, many are virtually unprocurable, and many have gone to a prohibitive premium; selection from second-class securities, even where desirable, is far from easy, particularly when the wishes of individual co-trustees or beneficiaries have to be considered; and above all there is the difficulty of finding investments with suitable dividend dates, since a trustee cannot adjust cum-dividend or ex-dividend transactions between capital and income in the same way as an absolute owner." The Public Trustee's holdings of Home Railway stocks amount in nominal value to approximately £23,000,000, divided into nearly 18,000 holdings. It is stated that "great progress" has been made in the realisation of enemy property, the gross proceeds amounting at the end of the year to about £60 million, and "corresponding progress has been made in the delivery of accounts to ex-enemy owners." The branch offices at Manchester continue to develop steadily.

Rubber Market Problems.—In a temperately-worded statement, an American correspondent set before readers of last week's *Economist* the views on rubber which obtain in United States circles. He showed that the buyers are bewildered by the unexpected conditions which have followed upon the Restriction Enactment, and inferred the exasperation felt by rubber purchasers who, looking for stability in the produce market, find that the price steadily droops. To some extent, the British proprietor of rubber shares is in similar case. The price of rubber has fallen from nearly 1s 6d per lb. to about 5d less, and this in the face of a weekly reduction, carried on for 15 consecutive weeks, in the stock of visible supplies. Many of the recently issued reports show that British companies are abiding loyally by the Stevenson restriction scheme. Costs, too, are coming down, and rubber can be produced at 9d per lb. or thereabouts, all in. The hubbub raised not long ago, mainly by Americans, about the probability of restriction leading to acute shortage and florin-a-pound rubber, has naturally subsided. Shareholders, rather elated at the 2s prospect, are gloomily regarding the present price of 13d. Meanwhile, the bulls of raw rubber—and they are to be found in country parsonages, schoolmasters' quarters, and other unexpected places—bemoan the losses that the closing of their speculations must land them in. Their frequent sales add to the weakness of a market already disposed to be demoralised by the quantities of rubber that seem to spring up so lavishly through smuggling and other evading practices. And people ask where all this confusion is likely to end. Stock Exchange prices of rubber shares go down, yet there seems to be no quantity of supply for those who are

prepared to pick up shares at what they consider to be bargain prices. People are afraid to sell their shares, although they grumble freely at the present state of affairs. So often in the past has raw rubber taken a swift turn for the better that the likelihood of this occurring again is enough to restrain any but a thoroughly wearied holder. Some people are obliged, of course, to sell; their stock adds to the tiredness of the market, and the market situation drifts from bad to worse. So, indeed, will conditions remain until the Mincing Lane situation clears up. The underlying sentiment is not bad: hope springs more eternally in the breast of the rubber shareholder than in that of anyone else. The constant diminution of the visible stocks of raw rubber will make its effect felt in time. American buyers, full up with orders for motor-cars, will speedily abandon their present procedure of hand-to-mouth purchases directly the raw rubber market steadies. Shareholders in rubber companies are schooled by long experience to the exercise of patience, and the unceasing reduction of costs on the rubber estates will bring its own reward when the produce market resumes what the Americans call normalcy. At the meeting of the Kapar Para Rubber Company, on Monday, the chairman, Mr. A. A. Baumann suggested that what was really required in the rubber market was control of selling. He criticised the Stevenson restriction plan as "only half a scheme," and said that at present there were over 600 sellers and only four buyers, so that the buyers "really have the absolute control of the whole game." Mr. Baumann expressed the opinion that there will never be a stable market until the selling market as well as output is controlled. The point made by Mr. Baumann is attracting a good deal of attention, and the question of forming an effective selling organisation is likely to be a lively topic of discussion.

The New Rumanian Constitution.—The new Constitution of Rumania, which recently passed its final readings in both Houses of Parliament by large majorities, represents the triumph of the centralist idea which has been consistently advocated by the Liberals, and is the final consummation of Rumanian Unity as conceived and planned for many years by this historic party. It is significant, however, that the Opposition parties refrained from voting, and one may be permitted to doubt whether the differences between the Old Kingdom and the New Provinces, such as Transylvania and the Banat, which formed part of the Kingdom of Hungary for a thousand years, or Bessarabia and the Bucovina, which were separated from the old Principalities in 1812 and 1774 respectively, representing as they do varying degrees of civilisation and of economic development, would not best have been overcome by the institution of a Federalist régime. But for good or for ill the French precedent, in this as in so many other respects, has proved the most attractive, and uniformity seems to have been mistaken for unity. From the economic point of view, however, the new Constitution contains two provisions of considerable interest. Ever since the passing of the various Agrarian laws, which divided up the large estates amongst the peasantry, the future of the subsoil has been in dispute. By the Constitution, this question seems to have been definitely settled, and the subsoil is now declared to be the property of the State. This, in itself, is a logical and necessary consequence of previous Agrarian legislation, as there is no reason why the mineral wealth of the country should be handed over to the new peasant proprietors at State expense. The economic effect of this measure, however, will depend almost entirely upon the policy to be adopted by the State in relation to the granting of concessions, notably in the oil districts. Existing holdings are to be respected, but the State claims the right to decide as to how the mineral wealth of the country is to be exploited in the future. This gives a great deal of power to the executive, and might lead to considerable abuse in actual practice. Moreover, the future development of the Rumanian oil industry depends almost entirely upon the active co-operation of foreign capital, and it is much to be hoped that this fact will be borne in mind by the Government when the terms on which concessions are to be granted are definitely decided upon. It is only natural that the Rumanian people should desire to participate in the enjoyment of the natural wealth of the

country and have means of guaranteeing that its exploitation is carried out in the best interests of the country. It is equally important, however, that the great resources of Rumania—which is potentially a very rich country—should be developed, and this should not depend upon the caprice of possibly unscrupulous bureaucrats. Of considerable interest, also, is a further article of the Constitution which decrees the expropriation of the forests. Under the Agrarian legislation of 1920, the former owners retained possession of the forests, save only in Bessarabia, and in the case of the forests belonging to the Church, which were of great extent in the Bucovina. Now, however, the principle of State ownership is established through the whole kingdom, and it is hoped that communal forests will be instituted as a further step in the consolidation of the social life of rural Rumania.

Swiss Finance and Trade.—The report for 1922 of the Commercial Secretary to the British Legation at Berne, recently issued by the Overseas Trade Department, while describing very grave economic depression, indicates that the worst is over, and that the country is essentially sound. It is surrounded by neighbours with depreciated currencies, from whom it is tempted to buy, but who cannot purchase its staple exports (except cheese and cattle) because they are mainly luxuries: its industry is hampered by high cost of living and shortened hours, and has suffered from Socialist agitation, especially the proposal for a capital levy; but the defeat of this latter and of the Socialist candidates at the elections in October have somewhat revived confidence. Deficits in public finance have mounted since 1914 to a total of 500 million francs; the Federal Budget, which in 1910 was 160 millions, was brought up in 1920 to 518 millions by Federal subsidies, increased salaries and wages, extraordinary expenditure, and the debt service; and the estimated deficit in 1923, taking account of certain items not included in the Budget, is 173,900,000. The Federal railway traffics have been disappointing, though lower traffic rates may improve them: the returns should be increased by a fall in working expenses through gradual electrification and the lower price of coal. The postal receipts fell off also. The Swiss franc has recovered its strength, and, though some local banks went into liquidation, the large banks maintained their dividends. Swiss policy-holders in German insurance companies have had to be partly protected by a Federal advance to the companies of 33½ million francs; the policies will be paid partly in cash and partly in scrip, redeemable eventually at 15 per cent. discount, and one-fourth of the advance will be recovered, partly through this discount, the rest directly from the German Government. But this arrangement may have to stand the chance of a popular vote. Imports and exports were greater in volume during the first nine months of 1922 than during the corresponding period of 1921, but lower in value through the fall in the price of raw materials; the imports of textiles and metallic goods from Great Britain increased considerably, and there was a large import over the German railways of Durham coke. The exports of cheese and cattle were larger also. The trade controls are gradually being abolished. The abundant vintage led to restrictions on the importation of wine. Of the industrial exports, "fine foodstuffs" fell off, notably condensed milk and chocolate, the latter partly owing to the competition in British markets of the British product. Of embroideries, silk piece-goods, artificial silk, and dyes more was exported, especially to Great Britain, which is Switzerland's best buyer, and stands fourth among her sources of supply. The exports of watches, clocks, and their parts (except silver watches) increased likewise; but the embroidery and watch trades have had to be aided by Federal (and the former also by Cantonal) subsidies. The machinery trade is also severely depressed. The development of electric power on the railways and in industry is a hopeful sign, but at present must be slow. The working week has been extended in a number of trades to 52 hours by temporary Federal licences under a law passed last year; but unemployment had increased in November, and the Federal Executive is encouraging emigration overseas. The British Chamber of Commerce is doing useful work, notably in assisting British firms to recover debts due. Nothing (as usual) is said of the tourist industry, except

that the substitution of motor-cars for horsed diligences on the mountain routes has nearly quintupled the traffic. The report gives an immense mass of valuable detail, though unfortunately it still keeps up the unscholarly British habit of calling an initiative a referendum and German towns by French names.

Cotton Standards.—Our Manchester correspondent writes:—A controversy is taking place at the present time between the United States Government and cotton trade interests in this country. A few months ago a new law was passed in America dealing with cotton standards, and the provisions of the Act come into force on August 1st. The changes are considered so objectionable, that it has been decided to send a delegation of representatives of the Liverpool and Manchester Cotton Associations and the Federation of Master Cotton Spinners' Associations to place their views before the authorities at Washington. It may be said that the cotton exchanges in European countries agree with the opposition in Lancashire. The new American law provides that no American citizen will be permitted to enter into transactions for the shipment of cotton based on any foreign standards. Further, an American citizen, even if he sells cotton based on American standards or on a private type subject to arbitration in any foreign country, will always be entitled to appeal to Washington to have the samples of his cotton arbitrated upon by the Government Department. For over 100 years past the Liverpool standard has governed the purchase of cotton both for this country and for Europe generally. When any difficulty has arisen with regard to the quality of cotton supplied, the matter has been promptly arbitrated upon by the Liverpool Cotton Association. The effect of the new American law will be that for redress on matters of this kind action will have to be taken in the American courts. This would cause considerable delay, and involve serious expense. It is believed that as a result of the visit of the delegation from Lancashire to Washington some amicable agreement will be reached.

Regulating Food Prices in Spain.—The Spanish Government has passed a law which fixes the price of all food products, its object being "to prevent producers, merchants, and middlemen from making net profits in excess of the margin fixed by the Central Council of Provisions." In fixing prices the Government will consider the following points:—The cost of production, the type of merchandise, the cost of transportation to market centres, and the municipal taxes, if any exist. The net profit and the profit of middlemen and merchants are fixed by the council at Madrid, which establishes a minimum and maximum price according to the class of merchandise. A council will be established at each provincial capital, which will operate under the rules established for the central council, and will be presided over by the various provincial governors. The councils are allowed to name two women members to represent the consumers, as it is considered their advice might be of value in view of their intimate association with problems of domestic economy. The decisions of the provincial councils are subject to appeal before the central council, and those of the latter before the Minister of Public Works. In a statement accompanying this decree, the Minister of Public Works mentions that although he "deplores the necessity of regulating prices," and cites the unfavourable experiences of other European countries in that respect, he feels that "it is the only method by which the exorbitant difference between the price of raw materials and that of the finished product can be reduced."

The Non-Ferrous Metals.—The marked weakness displayed by the non-ferrous metals during the early part of the week would appear to have been closely allied to the extraordinary wave of pessimism which has been sweeping over most markets during the last fortnight or so, and it is difficult to account for this sudden change of sentiment. Some people can trace it to New York, where official action in connection with speculation in commodities has been the subject of much comment, but on this side the political tension and industrial unrest have been generally blamed. Last week all the markets closed lower, and early this week there was a big selling move-

ment, chiefly to liquidate, but also for bear account. The copper market broke very badly, the weakness being accelerated by easier cables from the United States, reports that the demand for the metal on German account had practically ceased, and talk of a rapidly expanding production. Trading was again very active, but sellers were always predominant, although in the late trade offers were made with a certain amount of caution, and trade buying was a feature. Standard copper at one time showed a fall of more than £10 per ton from the best of the year touched in March last, but the price still kept a few pounds above the lowest recorded in 1922, and it was also better than the bottom price reached in 1913, with a good recovery near the close. Tin was sold in a very aggressive fashion, but Eastern smelters followed the recession very unwillingly and bids round about £200 or so received very little attention. At one time about mid-week the London price of standard showed a break of more than £40 per ton compared with the high level reached two months ago, but even at the worst the price of standard was about £50 per ton above the lowest registered last year, and compared with the bottom figure touched in 1913 there was a margin of something like £25 in favour of the present year. The lull in the tin-plate trade, absence of American business, and heavy speculative selling on the part of leading operators were the chief adverse factors, the further decrease in the stocks to 3,750 tons being ignored. Dealings near the close, however, became very active, but the undertone remained nervous, although there was a strong upward reaction in prices. A lot of option buying was a feature. The lead market, after breaking to £24 7s 6d last week, closed better, and this week the metal more than held its own, despite the weakness displayed in other directions. Quite an active business was put through, and at one time values moved up rather sharply. Zinc, on the other hand, was early in the week freely offered, chiefly on Continental account, and at one time was below £29, representing a fall of nearly £10 per ton from the highest reached last March, although still well above the lowest for all 1922. The price was thus at one time this week little more than £2 better than the best figure noted in 1913, but there was a sharp upward reaction on good buying by galvanisers and others, which lifted the metal over £30 again. This was continued, and on Thursday very active buying was seen, which put the spot quotation over £31. Copper and tin in the late trade were strong and active again, with sellers remarkably scarce, the forced realisations having come to an end and confidence been restored. Private American advices were more encouraging, and there was a lot of bear covering on this side, both standard and refined being better. Tin was brought round about £193 to £195 for American account, and the firmness in the East, coupled with active bear covering, trade buying and operations by dealers who had sold to the States, caused a very sharp reaction, cash and June jumping up to £199 for standard, the undertone being very strong. Lead continued firm and sentiment generally changed for the better, all non-ferrous metals closing good in tone.

Brunner, Mond, and Co., Limited.—The year ended March 31, 1923, proved a very successful one for Messrs Brunner, Mond, and Co., Limited. The report shows net profit of £1,650,295, which compares with £1,022,000 in the previous year. On the ordinary shares a dividend of 11 per cent is declared, against 8 per cent. in the two preceding years. The following table gives a summary of the company's accounts for the past six years and for 1913-14:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.	1922-23.
Paid-up capital	4,031,870	3,244,888	3,244,888	3,244,888	3,244,888	3,244,888	3,244,888
Reserves	1,338,000	141,881	603,508	2,817,680	3,038,680	2,808,788	3,002,788
Gross profit, investment receipts, &c.	851,290	1,264,514	1,199,040	1,319,389	1,182,271	1,220,310	1,845,412
Charges, &c.	81,947	152,686	186,959	190,239	243,754	196,310	185,117
Net profit	769,343	1,111,828	1,012,081	1,129,150	938,517	1,024,000	1,660,295
Brought forward	130,179	214,131	117,072	136,315	123,703	138,308	90,293
Prof. dividend	889,520	1,325,959	1,129,153	1,265,465	1,062,220	1,160,308	1,740,588
Reserve, &c.	105,000	105,000	105,000	105,000	105,000	245,312	300,000
Out. dividend	2,500	250,000	100,000	50,000	50,000	50,797	287,215
Balance	671,102	851,907	785,753	984,224	765,912	770,908	1,061,462
	(77½ %)	(11 %)	(10 %)	(11½ %)	(8 %)	(8 %)	(11 %)
Balance	110,920	118,072	138,400	126,241	141,308	83,293	91,911

The gross profits in the table include £632,198 investment and loan revenue, but are taken after deducting £200,000 on depreciation account. From investments and loan revenue the company received last year approximately £130,000 more than in 1921-22. General reserve, which was not increased a year ago, receives £62,215. An interesting item is the contribution of £225,000 to suspense account. Last year the allocation to this account was £50,000, and the directors will probably give an explanation of the largely increased contribution now recommended at the annual meeting. At the year end the balance in the account was £9,019, a sum of £61,648 having been written off during the year. It will be seen from the analysis of the balance-sheet, which appears in our usual column, that the larger profits of this year have been earned on practically the same capital as last year. Investments in associated companies now stand at £7,504,905, against £7,225,752 a year ago. The liquid position, as a whole, has improved, creditors being £880,400 less, and stocks £316,175 less. Debtors have grown slightly. Cash is £580,945, compared with £1,209,344. The report states that at the annual meeting the shareholders will be asked "to empower the directors, from time to time, to issue to the staff and workpeople (not being directors) ordinary shares in the company to a number not exceeding 100,000, without such shares being first offered to the ordinary shareholders, in proportion to their holdings."

Fine Cotton Spinners.—The report for the year ended March 31, 1923, shows that the substantial recovery which the Fine Cotton Spinners and Doublers' Association made in the previous year was more than maintained in 1922-23. In respect of dividends, the year just ended is the best the association has had, excepting 1920. Profits, including amounts received for enemy debts—which are not specified—and after charging £180,000 for depreciation and providing for corporations tax and bonuses to management, are £943,460, which compares with £613,339 in the previous year. The dividend on the ordinary shares is 12½ per cent. The table below, giving the association's record since 1906, shows that this is the highest dividend paid, except the 20 per cent. paid for 1920:—

Year Ending March 31.	Profits.	Deb. Interest.	Prof. Dividend.	Ord. Dividend.	To Reserve, &c.	Ord. Dividend.	Ord. Div. Rate.	Carry Forward.
	£	£	£	£	£	£	%	£

1922.....	611,339	110,000	150,000	47,000	294,000	8	138,222	
1923.....	943,460	110,000	150,000	47,000	165,000	458,375	12½	210,331

* Including £12,358 for expenses of new issue of shares.

The amount brought in is £198,246, making the sum available for distribution £1,141,706, or, deducting £110,000 debenture interest, £1,031,706. Reserve for equalisation of dividends receives £100,000, pension fund £50,000, and a welfare fund, which now makes its appearance in the accounts, receives £15,000. The research fund is decreased by £15,000. The balance-sheet, an analysis of which appears elsewhere, shows some changes in the liquid items. Creditors are £347,353 higher than in last year's; stocks-in-trade are up by £690,885; debtors are £141,906 lower. These figures are such as might be expected in a period of better trade; but the item of stocks and stores at £3,769,752 appears at first sight a little high, even in an industry that has to look well ahead. Investments are lower by £250,768. They include holdings in subsidiary companies. Cash is £325,359, against £32,298 in the last balance-sheet. The auditors state, as they did last year, that the position with regard to the association's investments in France is practically unchanged since the date of their last report.

The Royal Insurance Group.—The accounts of the Royal and Liverpool and London and Globe Insurance Companies may conveniently be dealt with together, although they are issued in detail separately. The Royal's fire premiums remained last year practically stationary at £6,427,122. The claims were 53.1 per cent. of the premiums, against 58 per cent. in 1921, and the expenses were 40.9 per cent., against 41.1 per cent. The underwriting result was a surplus of £382,480, or 5.9 per cent. of the premiums, as compared with a surplus of £303,550, or 4.7 per cent., in 1921. The Liverpool and London and Globe, on the other hand, with fire premiums of £4,230,020, against £4,406,804, had a claims ratio of 60 per cent., against 63.3 per cent., and expenses of 42.4 per cent., against 42.8 per cent. There was an underwriting deficit of £32,821 (.8 per cent.), as compared with a deficit of £23,295 (.5 per cent.) in 1921. The Royal's marine statement showed a profit on the 1921 account of £68,380, while the Liverpool and London and Globe, which sets out its figures on a different principle, showed a deficit for 1922 of £54,457, against a deficit for 1921 of £36,083. The employers' liability department of the Royal contributed £100,000 to profit and loss, and £400,000 was taken from the general contingencies fund. The Liverpool and London and Globe transferred to profit and loss £57,025 from the employers' liability account, £88,191 from the miscellaneous insurance account, and £250,000 from the investment fluctuation fund. The Liverpool and London and Globe received in interest on investments, less debenture interest, £363,372, and paid in dividends (to the Royal) £327,260. The Royal's receipts from interest and dividends, less debenture interest, were £859,083, and the dividends (23s a share, less tax) amounted to £955,053. The Royal's dividends for 1921 were 22s a share, less tax, and those for the current year will apparently be 24s a share, less tax. The total premium income of the joint companies amounts to £21,038,380, and the funds to £42,629,418. It is proposed to apply £279,971 from the undivided profits to pay up 5s a share, thus making the Royal's shares £5. 1s 10s paid. The paid-up capital will then become £1,679,829.

Sun Insurance Office.—This, the oldest joint-stock fire insurance company with a continuous history, shows substantial results for last year. The fire premiums were £2,207,438, as compared with £2,199,041 in 1921. The fire claims were 49.26 per cent. of the premiums, as against 52.3 per cent., and the expenses were 43.76 per cent., against 44.2 per cent. The underwriting surplus was £155,071 (7 per cent.) as compared with £143,354 (6.5 per cent.). The growth in expenses is the trouble of the Sun as of most other big insurance offices, and though the proportion to premiums is slightly lower than in 1921, the ratio of 43.76 per cent. is four points higher than in 1920 and six points higher than in 1918. The total income from investments was £144,578, and the amount paid in dividends last year was £151,200. The balance at profit and loss on December 31st last was £654,987, against £642,864 brought forward, and the dividend declared on account of 1922 will cost £168,150, leaving £486,837 unappropriated.

Lonely Reef.—As this important Rhodesian gold mining enterprise is one of the few which follow the practice of issuing quarterly ore reserve estimates, the annual report contains nothing new as to the position in this respect. It is, however, a little striking to find that the estimate of December, 1922, compared with that of 1921 shows a decrease of nearly 2 dwts in the value, as well as some reduction in the tonnage. Developments during the year were fairly good, but not good enough to replace the ore extracted. As previously pointed out in our columns, the company has crushed ore substantially above the grade of the reserves; and sooner or later this procedure requires to be paid for. In 1921 the average value of the ore milled was fully 20 dwts. Last year it equalled no more than 17.6 dwts. The effect of this reduction, in conjunction with the decline in the gold premium, has been to more than offset a marked economy in expenses. Owing to the growing shortage and high cost of wood fuel, the directors decided in 1921 to instal a gas-producer plant. This came

into operation during November of that year; consequently the report for 1922 reflects a full 12 months' results. The saving due to the new plant, together with lower charges for stores, represents 13s 7d per ton. Yet the net profit comes out at only £93,850, in place of £133,700. The dividends having been maintained at 30 per cent., the necessary provision for taxes, depreciation, &c., entails a substantial appropriation from the carry-forward. On the basis of recent distributions, the shares yield about 17 per cent.—a high rate, but none too much in the circumstances. Members are now offered one share in ten, or 30s to provide for the completion of the capital expenditure.

Central Mining and C.M.S.—The reports for 1922 of the Central Mining and Investment Corporation, and of the Consolidated Mines Selection Company have just been issued. The first-named undertaking is, of course, the premier Kaffir finance house, although in recent years its interests have become of a very diversified character. Well-informed Stock Exchange men expected that a bonus of 4s per share would be declared in conjunction with the final dividend for the past year. The anticipation proves correct; indeed, an even larger amount could have been provided, the profit showing an increase of nearly £214,000 upon that of 1921. The directors, however, transfer £100,000 to reserve, which a year ago received nothing, and still carry forward a slightly enhanced balance. Appended is an analysis of the accounts for the past three financial periods:—

	1920.	1921.	1922.
	£	£	£
Shares, investments, &c.	5,732,430	5,736,470	6,244,850
Debtors, less reserves	601,570	55,420	149,030
Creditors	3,191,170	2,565,380	4,369,100
Loan	808,900	936,450	1,983,240
Cash	327,630	77,330	334,820
Dividends, profits, &c.	506,630	444,490	650,570
Management, &c., expenses ..	37,350	41,320	68,630
Taxes	78,990	88,820	53,920
Net profit	390,280	314,360	528,030
Dividends	255,000	255,000	340,000
Do per share (tax free)	12½	12½	16½
To reserve fund	100,000	..	100,000
For income-tax	70,000	65,000	65,000
Brought forward	145,260	100,400	90,500
Carried forward	100,400	90,300	92,850

* After deduction of directors' percentage.

The whole of the receipts are lumped together, but it may be safely concluded that at any rate the greater part of the expansion in last year's earnings represents surplus on realisations; indeed, as much is indicated by a contrast of the assets in the last two balance-sheets. The expansion in the portfolio is entirely accounted for under the heading of gilt-edged securities, which comprise nearly one-third of the total. With regard to the interests other than South African, the directors intimate that the base-metal undertakings have fared better than before, and that satisfactory progress is being scored by the oil undertakings. A departure consists in the acquisition of a participation in a banking firm. When the strength of the Corporation's position was pointed out in last year's "Note," the price of the shares stood at 7½. It is now over 10, still showing a return of 8 per cent., tax free, on the basis of the distributions for 1922. The South African interests of the Consolidated Mines Selection Company, as mentioned in our columns recently, are now represented by shares in the Anglo-American Corporation; the other interests do not count for much, figuring in the balance-sheet at barely £32,000. Last year's revenue in the shape of interest and dividends naturally fell somewhat below the 1921 total, but the present accounts show a profit of about £20,000 from the sale of securities, giving a net surplus of £57,800, as against £23,700 last time. The dividend of 12½ per cent. will absorb £61,250, leaving a slightly reduced balance to be carried forward. In respect of the preceding year no distribution was made, there being a heavy writing-off, towards which the reserve of £100,000 was appropriated. Securities appearing in the balance-sheet at £756,300 are nearly all quoted, and show a large appreciation over book values. The issued capital is £600,000, and the 10s shares are quoted about 15s. The debenture issue has been reduced to £55,300.

Farm Crops in 1922.—The final crop returns which have recently been issued by the Ministry of Agriculture show that the total value of farm produce in 1922 amounted to approximately £400,000,000. The total production of wheat was over 1,000,000 quarters less than in 1921, and of barley a quarter of a million quarters; this latter crop being the smallest recorded, with one exception, since 1885. The total production of oats was about three-quarters of a million quarters less than in 1921, and was the smallest since 1912. In the case of beans there was a slight increase over 1921, but in most districts the crop was below the average, particularly in the Eastern Counties. The yield of peas was the worst on record, and, in spite of an increased area under cultivation, the total crop fell below that of 1921. The potato crop was estimated to be slightly over 4,000,000 tons, which was more than a million tons above the previous year, and 50 per cent. over the pre-war average. The yield of 7.1 tons to the acre is the highest recorded since official returns were first collected in 1885. In spite of the reduced area under turnips and swedes, the total production was greater than in 1921, and yields above the average were obtained in most parts. The yield of mangolds was considerably higher than in 1921, and about 1,000,000 tons more than the average for the previous ten years. Although the total crop of hay was less than in 1921, meadow hay produced a better crop, and the area mown was some 360,000 acres higher than the previous year. The total crop of hops was greater by 77,000 cwt. than in 1921.

A New Rubber Process.—Our New York correspondent writes:—In a special report to stockholders of the United States Rubber Company, C. B. Seger, chairman of the board of directors, announces a new method of producing crude rubber from the original latex. The process is said to insure, for the first time since rubber was discovered, "a pure and absolutely uniform product," which is described as "sprayed rubber." Heretofore all rubber produced and sold on the market, it is explained, has been coagulated out of the rubber latex by means either of smoke or chemicals. Rubber produced by the old primitive native methods of heat and astringent smoke over a slow fire is contaminated with smoke and other combustion products, and there is no assurance of uniform quality. When rubber is produced by treating latex with acetic acid, the rubber is said to contain acid residues which tend to destroy some of the valuable natural properties of the latex. By the new spraying process the latex is sprayed into a snow-white mist; the latter is brought into contact with pure superheated air, which drives out the water of the latex, but nothing else, leaving, it is claimed, 100 per cent. pure solids from the virgin latex. Mr. Seger says that sprayed rubber has greater strength because it contains all the natural strength of the rubber of the original latex unimpaired by chemicals or the destructive effect of machine working.

A Textile School for China.—To prepare for the inevitable development of the Chinese cotton industry, and to ensure that British influence and British machinery shall have their fair share in the process, it is proposed to establish a School of Textile Industry at Shanghai, in which instruction will be given both in the technical manufacturing processes and in the scientific and economic conditions governing production, including the means for promoting the efficiency and securing the welfare of the workers. The scheme is actively supported by the Textile Machinery Makers' Association, whose headquarters are at Manchester, on the ground that it would stimulate the sale of British machines in China, where American and German competition is becoming acute. Some of the machinery needed will probably be presented by its British manufacturers, and it is hoped to obtain a share of the Boxer indemnity wherewith to start the enterprise and provide part of its annual cost. The remainder will be furnished by subscriptions from Chinese manufacturers and by students' fees, and the best students will be enabled by scholarships to complete their training in England. Other British industries concerned may possibly aid in the work.

Oberzee Correspondence.

UNITED STATES.—NEW GOVERNMENT FINANCING—FEBRUARY FOREIGN TRADE—FURTHER CRUDE OIL PRICE REDUCTIONS—SUPREME COURT'S PROHIBITION DECISION.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 7.

New financing by the Government this month will consist of an issue of \$400,000,000 Treasury notes, dated May 15th, maturing March 15, 1927, and bearing interest at the rate of $4\frac{1}{2}$ per cent. As heretofore, the Treasury Department reserves the right to allot notes in excess of the amount mentioned to the extent that $4\frac{1}{2}$ per cent. Victory notes may be tendered in payment. Victory notes maturing on May 20th aggregate \$765,000,000, while those which came due on December 15th last, but which have not yet been presented for redemption, approximate \$65,000,000, making a total of about \$830,000,000 outstanding. Some estimates of the amount of Victory notes that will be offered in exchange for the new Treasury notes run as high as \$200,000,000; but, as indicated, additional notes of the new offering will be allotted to whatever extent may be necessary. Furthermore, the Treasury Department has on hand an exceptionally large balance in the general fund, it is understood, which will be available, if needed, for the redemption of Victory notes. In a letter to banking institutions Secretary of the Treasury Mellon predicts that the national budget for the fiscal year ending June 30, 1923, will show a surplus of more than \$125,000,000. He believes that henceforth the budget will be balanced from year to year, and that with economy in expenditures the process of gradually reducing the public debt will be continued. Substantial progress has already been made in that direction. The gross public debt, which on April 30, 1921, totalled \$24,000,000,000, will have been reduced by June 30, 1923, to approximately \$22,400,000,000, and all of the old \$7,500,000,000 short-dated debt (consisting of Victory notes, certificates of indebtedness, and war savings certificates) will have been retired or refunded.

Import trade for February, valued at \$290,000,000 according to the Department of Commerce, was \$34,000,000 below the total for January, but showed little, if any, falling off if allowance be made for the shorter month. The February total was only slightly less than the aggregate for September, when the new tariff took effect, and was \$81,000,000, or 37 per cent. larger than in February of 1922 or 1921. Exports in February of this year, totalling \$307,208,000, represented an increase of 23 per cent. over February of last year, when the outward movement was the smallest recorded for any month since the outbreak of the war. Of the \$57,000,000 gain in all exports last February, as compared with a year ago, manufactured products accounted for \$31,000,000, crude materials \$21,000,000, and foods only \$4,000,000. For the eight months ending with February the excess of exports over imports has fallen to \$337,860,426, as against \$858,421,598 for the corresponding period of the fiscal year ending June 30, 1922, and \$2,365,447,711 in the like period of 1921. Obviously, if the swelling tide of imports continues, it will not be long before the excess of exports disappears, provided there is no marked revival in export trade. Such a turn in the balance of foreign trade against the United States would help to relieve this country, to some extent at least, from what many authorities regard as its "troublesome gold supply."

The downward movement in commodity prices, noted in March, gathered greater momentum during April. Bradstreet's index number at May 1st, namely, \$13.6665, marks a lowering in the general level of 2 per cent. during April, as compared with a decrease of only two-hundredths of 1 per cent. in March. As against May 1st of last year, the present index number is 16.7 per cent. higher, while the rise from June 1, 1921 (the low point of recent years) is 28.7 per cent. Compared with February 1, 1920, the highest point reached since the war, the May 1st index figure shows a decrease of 34.5 per cent., but it is 56.9 per cent. above the August 1, 1914, level. Last month,

as was the case in March, the sharpest declines were recorded in provisions and textiles.

Further reductions in crude oil prices have been announced during the past week, all Pennsylvania grades, with the exception of Corning, having been cut 25 cents a barrel. Wyoming grades were lowered 10 cents a barrel. At the new levels, Pennsylvania crude, Bradford district, is quoted at \$3.75, and other grades at \$3.50 a barrel. Corning crude was cut 15 cents, and is now quoted at \$2. The widespread reductions are attributed to overproduction in this country. According to the American Petroleum Institute, the total output of crude oil in the United States for the week ending April 28th averaged 1,946,500 barrels daily, as against 1,945,850 for the preceding week and 1,411,700 barrels for the corresponding week of last year. Companies operating in California, where there has been a tremendous increase in output in recent months, are now taking steps to curtail production. Additional reductions have also been made in gasoline prices, with the result that the average tank wagon price in 30 representative cities of this country is now 20.4 cents a gallon, or only one-fifth of 1 cent above the low average price of 1921.

The recent decision by the United States Supreme Court, holding that, under the prohibition law of this country, no liquor may be allowed on foreign or domestic ships within the three-mile limit, although permitting American vessels to carry it on the high seas, came as a distinct surprise to all steamship interests here. This decision has been heralded as a victory for American steamship companies. But it is favourable to them only to the extent that it places American ships on a parity with foreign vessels plying to and from United States ports. It has met with a great deal of adverse criticism here. Whatever the legal aspects may be, a very substantial part of public opinion in this country is that prohibition enforcement is being carried to ridiculous extremes. It may be well, however, to reserve judgment until the Treasury Department issues regulations which are now being prepared, and which may be sufficiently liberal to overcome difficulties, at least so far as foreign ships are concerned.

FRANCE.—REVISING THE BUDGET—SENATE COMMISSION'S REPORT—REVENUE RETURNS—PRICES FALLING.

(FROM OUR CORRESPONDENT.)

PARIS, May 16.

WITH the resumption of the session, after the Easter recess, the Finance Commission of the Senate has presented its report on the Budget Bill as sent up to the Upper House from the Chamber. The Bill, it will be recalled, leaves a deficit of over 3,700,000,000 in the estimates of revenue and expenditure for the current year, to be got rid of. This problem the Senate Finance Commission has resolutely faced, and in the report it has presented it proposed not only to get rid of nearly one-half of the deficit by a further drastic cutting down of the estimated expenditure for the year, but also to wipe out the balance by taking advantage of the increased yield from taxation, as compared with the Finance Minister's estimates.

In his report M. Henry Bérenger states that, as the result of hard work by the Commission, the budgets of the various Government departments have been carefully re-examined, and, after taking into consideration the actual situation on March 31st last (three months after the current financial year had begun), it feels justified in recommending a cutting down of proposed expenditure during the present year by a total of 1,150,000,000. The second important factor in bringing about the balancing of the Budget the Commission finds in the fact that the revenue from taxation has proved to be enormously greater since the beginning of the year than had been estimated. The Commission, basing its conclusions on the figures actually reached during the first four months of the present year, estimates that the Treasury may rely on receiving, before the end of the year, a total of 2,300,000,000 more than M. de Lasteyrie expected to

secure from taxation during the current financial year. The Commission suggests that if to this be added the 500,000,000 which the railway companies, now that they are on their feet again, may reasonably be called on to hand over to the Government during the present year, in payment for rolling stock and other material transferred to them after the Armistice, the Budget will not only balance, but actually show a surplus of 260,000,000. The Budget, therefore, as modified by the Senate, may be expressed in tabular form as follows:—

EXPENDITURE.	Frs.	REVENUE.	Frs.
As proposed by Chamber	23,971,000,000	As proposed by Chamber	20,281,000,000
Less economies suggested	1,150,000,000	Estimated increased yield from taxation	2,300,000,000
By Senate	22,821,000,000	Due from railway companies	500,000,000
Estimated surplus	260,000,000		
	23,081,000,000		23,081,000,000

This surplus, the *Rapporteur* states, would be further increased, in view of the fact that, supposing the economies in question are realised, it will no longer be necessary to raise the loan of 3,800,000,000, by which the Chamber proposes the deficit shall be met, consequently the expenditure in the form of interest, &c., in connection with this loan would not be required. This would mean a further saving of 164,000,000 at least, the final figures of the modified Budget therefore being:—

	Frs.
Estimated revenue	23,081,000,000
Estimated expenditure	22,656,000,000
Estimated surplus	425,000,000

In his report, however, M. Henry Bérenger goes still further, and urges that the greater part of the interest charges on the floating debt, amounting to over 3,000,000,000 for the current year, should be transferred from the Ordinary Budget to the Budget for Expenditure Recoverable from Germany. These charges, he argues, have hitherto been wrongly included in the general Budget. M. Bérenger raised the same question a year ago, it may be remembered, in his report on the Budget for Recoverable Expenditure, and his proposal was on that occasion approved by the Senate, as there is little doubt it will again be on the present occasion. The Government itself has approved and adopted the principle advocated by the Senate last year, as it has included in this year's Budget for Recoverable Expenditure a sum of 589,000,000, representing the interest charges payable during the current twelve months in respect of the 6,000,000,000 of National Defence Bonds, the produce of which has this year been advanced in payment of Reparation claims.

In a statement made to the Finance Commission of the Chamber a few days ago, M. de Lasteyrie reported that the recent issue of three-, six-, and ten-year Treasury bonds resulted in a total subscription of 9,778,000,000, of which about 2,200,000,000 represented entirely fresh money, the balance being in the form of exchanges of previous issues, &c., for the new bonds.

That the Senate Finance Commission's optimistic views as to the yield from taxation during the present year are justified is evident from the returns that were published on Monday showing the amounts actually recovered during April. The return establishes an entirely new record for this country. The total amount received by the French Treasury for the month in question, including direct and indirect taxation, income-tax, the yield from the State monopolies, the special tax on war profits, and the sale of war stocks, was 2,018,744,900. In this total the yield from income-tax figures for 237,144,700, and that from the special tax on war profits (which is merely a temporary impost) for 112,817,000, while sales of war stocks, another exceptional source of revenue, produced 92,676,000. The yield from indirect taxation and the State monopolies during the month was 1,549,832,000, or 12 per cent. more than in the corresponding month last year. The revenue for the month from these sources alone exceeded the Finance Minister's estimates by 179,436,500, which, added to the surplus received during the three previous months, brings the total received since the beginning of the year in excess of Budget estimates to 428,581,500.

The index figures for wholesale prices for the month of April (based on 100 for 1901-1910) have now been pub-

lished by the Statistique Générale, and are as follows, in comparison with those for the previous month:—

	March	April
	(Corrected)	(Provisional)
General index figure for 45 categories	490.2	479.5
Foodstuffs, index figure for 20 categories ..	459.2	451.5
Vegetable foods (8 categories)	400.1	386.0
Animal foods (8 categories)	487.6	486.7
Sugar, coffee, cocoa (4 categories)	520.7	527.3
Raw materials, index figure for 25 categories ..	515.0	499.4
Minerals and metals (7 categories)	510.9	467.8
Textiles (6 categories)	632.7	619.6
Sundries (12 categories)	458.6	457.4

As will be noted, the figures show a fall in prices in all categories, with the exception of sugar, coffee and cocoa (which may be interpreted as meaning sugar alone). The most striking fall recorded is that of 43 points in the quotations for ores and metals, which is significant, in view of the present situation in the Ruhr, while textile prices have also dropped 13 points. Retail prices in Paris naturally did not feel the effects of the drop in wholesale quotations immediately, but here also the downward tendency was visible even before the month had closed. The index figure for the retail price of 13 categories of foodstuffs in Paris for April is returned as 3439, or 220 per cent. higher than the prices of the same commodities in 1914 (as compared with 3454 in March, when the figures showed an increase of 221 per cent. on those for the corresponding period of 1914).

GERMANY. — REPARATIONS — FINANCES — EXCHANGE DECREE — PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, May 15.

THE British and Italian Notes rejecting Herr Cuno's Reparations plans caused some disappointment at first, because while the refusal was discounted in advance it was in sharper terms than were expected. The present attitude, however, is that a new offer must be made. Only the extreme Right is solidly against this, on the grounds of its general policy that no Reparations should be paid at all. The People's Party, which counts most when it comes to concrete measures for organisation of an industrial guarantee, seems to be divided. Herr Stinnes' chief organ holds that it is not possible to offer more, but other journals of this party declare that the British Note gives an opportunity for making a new offer which should not be lost; and the Left parties' organs demand an offer. The criticism in the Ally Press and Notes of the vagueness of some of the last Note, in particular the vague handling of the private guarantee, is repeated by a good many writers. Underlying this there remains the feeling mentioned from here last week, that the making of suggestions is rather more a move in the game of putting one's self right with the world by showing reason and conciliation than a measure likely to bring settlement. The present nature and the tradition of the Reparations question, which is mostly prestige, complicated by unwise promises and boasts, almost make it impossible for the Ally Governments to accept any German offer; all dealings with Germany since 1918 have been on the basis of dictation, which is inevitably a bad basis when the dictation admittedly runs up against material obstacles, as was the case with the Ultimatum of two years ago. As the Ally Governments have admitted that the terms of that Ultimatum cannot be carried out, but still maintain the claim, based on the Peace Treaty, that they alone shall fix the Reparations liability, it would probably help towards settlement if they stated—this time after consideration—what are their own new terms. It must be repeated that no one in Germany has any notion what Germany can pay; pay anything in the present state of the foreign payment balance she presumably cannot, and as to what would happen after a four years' moratorium any calculations are legitimate. Herr Franz Urbig, the chief of the Disconto-Gesellschaft Bank, has published an article to show that 20 milliards of gold marks as the capital Reparations sum would impose an impossible burden; the whole profits of such part of industry as is organised in share companies amounts only, he attempts to show, to 433,000,000 gold marks, of which, of course, all is not available for

Reparations; and as the capital sum mentioned would involve annual payments of 1,250,000,000 gold marks, industry would not nearly produce enough. These kinds of calculations appear almost daily in the German Press; they are usually made by correctly converting paper mark figures into gold mark at current exchange; but are, as a rule, unreliable owing to blunders of principle, one of which is taking paper-mark profits over a long term, usually a year, and converting them to gold at the latest and worst exchange, although the greater part of the profits were earned in marks of a much higher gold value. It is very hard to believe that German industry, which has been working until lately smoothly and abundantly, and which has charged what prices it liked, is not earning considerable profits; and it is wholly impossible to believe that it would be harder for Germany, which pays very little for debt and has very small and cheap armaments, to raise 1½ milliards of gold marks, or about £60,000,000, than it is for Great Britain to raise £470,000,000 this year for debt and armaments.

There is every day better reason to believe that Germany's difficulty with Reparations does not lie in any insufficiency of real substance, but in the chaos in the distribution of values caused by the currency depreciation. The creation of an export surplus by means of taxation is impossible as long as the decaying currency automatically reduces to very little the nominally enormous burden of direct taxes, to the loss of the State. Effective direct taxation would enforce economy in consumption, and so make for an active payment balance; but as long as the currency is getting worse the State will not get the substance of direct taxation, and the taxpayer who is thereby spared will not save even for himself what he is spared. If a moratorium and a satisfactory Reparations settlement established general confidence, the mark selling due to distrust would no doubt cease; and the other factor in mark depreciation, the passive trade balance, would tend to be removed by the increased real burden of taxes and the economy thereby induced. It does not therefore seem that the total of Reparations, whether 30, 40, or even more milliards, is such a vital factor as the German public believes; if things went ill the smaller burden would remain impossible, but if they went well, as Germans expect in case of a settlement, the larger burden might easily be borne. The only certainty is that no burden will be borne as long as the present instability and lack of confidence prevail.

The floating debt increased in April by only 2,017 milliards, as against 3,645 milliards in March. The improvement is largely due to the stability of values; the April returns show a large revenue increase without an increase of expenditure. The floating debt on April 30th totalled 10,291 milliards, of which more than 8,000 milliards were accumulated in the four months of the year. The Customs gold surcharge has been raised to 740,000 per cent. The completed accounts for Posts and Railways for the financial year 1922 (ending March 31, 1923) with those of 1921 for comparison, are as follows:—

	Milliards of Marks.	
	1921.	1922.
Posts, telegraphs, and telephones ..	10,286	255,247
Railways	42,118	1,853,199
Whereof goods traffic	31,917	1,600,239

The relative cheapening of the postal service and of passenger fares as compared with freight rates is shown by this table.

The foreign exchanges had another big rise immediately before and immediately after the publication of the Government measures which are supposed to protect the mark. The new "exchanges emergency decree" has therefore had no more effect than experts anticipated; but it meets a demand from the part of the public (based on the belief that the mark declines are due to speculation) that something shall be done. The decree repeats some of the regulations in Dr Wirth's decree of October, and contains important new provisions. A class of "exchange banks" alone authorised to conduct exchange business is created. In home business foreign currency payments may not, with certain exceptions, be asked for, paid or taken. Permission of the local offices of the Finance Ministry is required for purchase of exchange abroad, where the buyer is not a registered trader. The

exchange banks must report exchange deals of certain kinds to a department of the Reichswirtschafts Ministry. Marks must not be lent on security of foreign coins or notes. The Reichsbank can demand from anyone a statement of the amount of foreign currency held, and can requisition such currency as it considers is not required for legitimate trade; and persons suspected of speculating in currency to the detriment of the nation may be required to obtain the Reichsbank's permit for every single deal. The decree is accompanied by elaborate official instructions for its execution. It invests the Reichsbank, which is a private institution, with official powers, and its execution will involve a great expenditure of time and money.

Commodity prices are still moving upward. Hematite pig has been raised to 744,000 marks per metric ton, ingots to 899,000 marks, bars 1,250,000 marks, and other sorts in proportion. Export duties are still being reduced, although the mark exchange is falling. This has always been the experience, it being impossible to alter the duties sufficiently quickly to keep pace with the mark. Hamburg shipping in April was:—Arrivals, 1,165 vessels, of 1,319,240 net tons; departures, 1,438 vessels, of 1,323,804 tons. For the first four months of the year Hamburg shipping material exceeded that of 1913, arrivals being 4,889,802 tons, against 4,518,548 tons, and departures 4,878,136 tons, against 4,595,020 tons. The Badische Aniline Company, a chief member of the Aniline Trust, reports profits in 1922 3,901 millions, against 168 millions last year, with a dividend of 300 per cent., against 30 per cent.

IRISH FREE STATE.—BORROWING PROBLEMS AND THE CREDIT POSITION.

(FROM OUR DUBLIN CORRESPONDENT.)

WITH the re-establishment of order there is a good deal of discussion in semi-official and business circles of prospective borrowings on the credit of the Irish Free State. Once confidence is felt in the stability of its new political institutions, there is no reason why Ireland should not be able to borrow such capital as she may need upon advantageous terms. She has many points in her favour. During the past year of most formidable domestic unrest, she actually collected a revenue of some twenty-six millions sterling, or roughly twice the amount of the pre-war cost of administration for the whole of Ireland at its maximum level. She has no existing debt save such claim as Great Britain may be able to sustain under Article 5 of the Treaty after the consideration of counter-claims therein expressly preserved. Whatever the claim may amount to (and instructed Irish opinion does not believe that it can or will be sustained for any large amount), it can scarcely be utilised to affect Ireland's credit and borrowing power. According to Mr Ormsby-Gore, speaking officially in Parliament, it is the considered policy of the British Government to support the credit of the Irish Free State for the purpose of its projected borrowings.

Again it is well known that Ireland is very backward in development, both agricultural and industrial, and that she is relatively rich in hoarded and invested savings. She has all the incentive to progress which national liberty has recently created, and she has fiscal and financial independence for a borrowing upon most favourable terms. Therefore, it only remains to inquire whether there is confidence in Ireland itself, or, in other words, whether Irish credit stands high in Ireland; for every other condition exists for the maintenance abroad of her credit at a high level. It is known that there is British money to be had for the asking, and it is also known that there is American money equally if not more ready. In any discussion of terms the important issue is how high Irish credit stands in Ireland or, otherwise put, how far Irish investors would relieve the lenders of the burden of maintaining the new securities at or about par in the stock exchanges? An Irish confidence in Irish credit will mean cheaper money and easier terms generally. The best course, as was pointed out in this column six months ago, would be for Ireland to finance her own capital requirements at present, and a close co-operation of the Irish

Produce Estates and Companies.

banks and other monied interests with the Government in regard to its borrowings is obviously necessary. The Government has wisely been holding back its main loan, and is relying in the interval on saving certificates and compensation bonds and discounting bills for temporary requirements. No final decision has been arrived at as to the ultimate borrowing, and at the moment the crucial point is to ascertain the value of Irish credit in Ireland, on which so much depends. In this view bankers and business men are deploring a quite extraordinarily indiscreet interview given to the Press by the recently elected president of the Stock Exchange, in which he cried down Irish credit and Irish confidence in the stability of its own institutions. As the Government had been in confidential discussion with the Stock Exchange Committee, there can have been no real object to serve; but perhaps his action was valuable in eliciting the immediate protests of other stockbrokers. The latter have emphasised the fact that there is so keen a demand amongst Irish investors for Irish securities that price levels have risen substantially. The yield on Dublin Corporation 3½ per cent. stock at its present quotation is barely 4½ per cent., and on Great Northern Railway 4 per cent. debentures not more than 5 per cent.

AUSTRALIA.—CONVERSION LOAN—AGRICULTURAL CONDITIONS—POPULATION.

(FROM OUR CORRESPONDENT.)

MELBOURNE, April 16.

THE Commonwealth Government has issued the prospectus of a conversion offer to holders of the 5 per cent. loan maturing on September 15 next, the original amount of which was £44,072,640, reduced to £38,723,950 as at December 31, 1922, by repurchases on account of sinking fund, and by conversions into other issues. The conversion loan is at 5 per cent., with a currency of 25 years, being repayable on September 15, 1948, and is offered at £99 per cent., the difference of £1 being payable by the Government as a cash bonus to those who convert. The yield, inclusive of redemption, is about £5 1s 5d per cent. The maturing loan was floated in October, 1918, on terms giving a yield of £5 4s 11d per cent., and was the seventh of the series of ten war and repatriation loans issued in Australia from 1915 to 1921 for an aggregate of £250,172,440 (reduced to £241,746,090 at December 31, 1922). The number of subscribers to the maturing loan was 243,181, or nearly 100,000 greater than in any other instance. Cash subscriptions to the present conversion loan are not invited, and no definite announcement is made as to the manner in which money is to be raised to redeem the unconverted portion, though in urging the advantages of conversion the Treasurer, Dr Earle Page, refers to the possibility of raising the money overseas. Whatever may be done in the form of raising money overseas, the large revenue is placing the Treasury in a favourable position as regards cash, which should also help to facilitate the repayment operation. Business comment on the conversion offer is that the long currency, 25 years, is better suited to insurance offices, and some other classes of large investors, than to the average investors, who are accustomed to relatively short terms for public securities. On the other hand, the rate of interest, 5 per cent. (subject to Federal income-tax, but free of State income-taxes), is regarded as rather high for the long currency to which the Government commits itself.

The weather is now causing much anxiety amongst farmers and graziers throughout Australia. So far this year there has been little rain in most districts, and at the moment the weather has a settled aspect of the sort usually leading to a drought. Wheat-growers would be satisfied with April rains as a start for the new season, but for pastoralists the position is becoming urgent.

The Australian population at the end of 1922 was 5,634,552, or an increase of 124,323 on the year, of which 38,138 was due to excess of arrivals over departures. This shows a substantial improvement in immigration as compared with recent years, and although it is below the rate reached during the last few years before the war, it is now hoped that increased progress is about to be made.

GREECE. — EXCHANGE REGULATIONS — AGRICULTURAL PRODUCTION — FOREIGN TRADE — COST OF LIVING.

(FROM OUR CORRESPONDENT.)

ATHENS, April 28.

By a law recently published in the *Government Gazette*, the regulations concerning the import and export of foreign exchange, and reported in the *Economist* of October 21 and December 30, 1922, are maintained, with some modifications, the most important of which are given hereafter. Instead of the obligatory cession to the State, against payment in drachmæ, of the whole or of part of the foreign exchange, representing the value of articles exported abroad, an export duty is imposed on the principal articles of export, except as regards black Corinthian currants, which continue to be subjected to the same regulations as before. The duty is levied and collected at the moment of export of each dutiable article, and is payable in pounds sterling, by cheque on London or in English banknotes. The minimum rate of duty payable is 3 per cent., and the maximum 25 per cent., according to the article exported. The value of the merchandise on which the duty is payable is given in pounds sterling, and is declared by the exporter to the Custom house authorities. The latter must proceed to a valuation of the goods in the manner prescribed by the law, and if the exporter disagrees, he may have recourse to the Minister of Finance, whose decision is final. The Minister of Finance may set up a committee for the purpose of fixing the price of some of the dutiable articles. The prices thus fixed serve for the appraisal of the corresponding goods when exported, and for the assessment of the export duty.

The agricultural production of 1922 was generally poorer than that of 1921. The value of the crops is estimated at some 5 milliards drachmæ. The principal products are cereals, currants, olive oil, and tobacco. Production of these four articles was as follows for the last two years:—

	1921. Tons.	1922. Tons.
Wheat	300,000	240,000
Currants	118,000	107,000
Olive oil	45,000	98,000
Tobacco	25,000	20,000

Though Greece is an agricultural country, one-third of the wheat needed by the country annually is imported from abroad. During 1922 purchases abroad amounted to 372,000 tons of wheat and 25,000 tons of flour, while not less than £5,400,000 have been paid during the same period for this purpose. The wave of refugees that has flooded the country since September last will increase considerably the quantities to be imported from abroad in the current year. Yet the country might become at least self-supporting, if only it were properly and sufficiently cultivated.

Foreign trade in 1922 shows the following changes as compared with the previous year:—

(In millions of drachmæ.)

	Imports.	Exports.	Excess of Imports.
1921.....	1,726	948	778
1922.....	3,079	2,462	617
Difference +	1,353	+ 1,514	— 161

The increase in the value, both of imports and exports, is easily explained, if account be taken of the depreciation of the drachma during the past year. Unfortunately quantity figures are not yet available.

Corrected figures for the minimum cost of living in Athens for an average individual before and after the war show the following increase since 1914:—1914, 100; 1922, December, 1034.2; 1923, April, 1357.8.

Letters to the Editor.

INCOME-TAX AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your note to Mr Leake's letter opens the door to an interesting controversy as to the effect of the income-tax on profits, i.e., whether the tax actually raises prices to the consumer. If the driving forces of industry are examined they can fairly be placed in three broad classifications—(1) Thrift, (2) dexterity, (3) the spirit of adventure. The first creates capital; the second represents the most essential quality of labour; the third is the source of enterprise, invention, organising and originating power. Thrift will certainly not prosper equally on unequal terms, as is shown by the high rates of interest that are paid nowadays as compared with the rates before the war. Nor will superior dexterity long be satisfied to accept terms not compatible with its superiority or with the cost incurred in training. Is it, then, possible to argue that the third of these classifications is exempt from the laws that govern the others; that the risk-bearers of industry can forgo a substantial part of their gains without any reaction on their activities?

It seems to me that the proof of this lies in the state of British enterprise to-day. The figures you published on April 7th show that the total amount of investment in British, foreign, colonial, or other industrial issues in the first quarter of 1923 was only £24.4 million compared with £39.2 million for the corresponding period of 1913, notwithstanding a Government revenue surplus of £130 millions which was applied to the payment of public debt (£85 millions of it in the last five weeks of the financial year), and which, therefore, as suggested by you in a recent issue, would become available for re-investment in industry. To make the comparison fair also, it must not be forgotten that the purchasing ratio of the pound in 1922 is only four-sevenths of its value in 1913 on the basis of the *Labour Gazette* cost of living. The inference is that enterprise is subject to the same law as capital and labour. It must have its reward; and it seems clear from the evidence before us that the springs of enterprise are drying up under present conditions. The important question is not whether profits can temporarily be raided without re-acting on production, but rather whether the present heavy levies on profits do not in the long run fall upon the consumer. Should this prove to be the case it may necessitate an examination of our fiscal system from a new point of view.

If any further proof were needed of the failure of enterprise to make good under present conditions, it will be found in the ease of the money market and the strength of the gilt-edged market, simultaneously with an excessive degree of unemployment amongst our working classes, who find that neither the sincerest desire on their part to work, nor super-abundant funds in the money market, nor the goodwill of a benevolent and well-supported Government, can fill the gap that means unemployment to them when enterprise fails.

The risk-bearer has been hard hit in the last few years. Probably it is true that he has not been able to pass on his burden in sufficient measure to give him an adequate return on his risk during the last few years. Certainly his struggle to retain his export markets has been a stern one. The period of deflation hit him hard by increasing the real cost of wages and the real cost of capital, and stifled too many of his ventures. His successes may make a brave showing sometimes, though even in your valuable Quarterly Summary of public companies' returns the strain is shown. But these represent the "survival of the fittest." How many have fallen by the wayside unnoticed and forgotten? This section of the business world is a stern battle-ground with many and continuous casualties, and it is therefore simply a question of degree when taxation on the profits derived from mercantile ventures takes on the character of a "heads I win, tails you lose" bargain. And how otherwise are we to explain the fact that notwithstanding an admitted shortage of houses, and the ease of the money market through the large repayments of the Government, there are still 141,500 men unemployed in the building trade?—Yours faithfully,

FREDERICK WIGGLESWORTH.

82, Fenchurch street, London, E.C. 3, May 8th, 1923.

REVALUATION OF PROPERTY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Press campaign against the new Schedule A assessments to income-tax is even less justified than appears from the note on the above subject in your issue of May 12th, for it is not the case that "the increase in the assessment should be less than the increase in the rent," so far as the increase of rent is on account of heavy cost of repairs.

By the Finance Act, 1919, the limit of annual value of property, in respect of which the taxpayer might claim relief where the actual cost of repairs, &c., on the average of the preceding five years, exceeded the statutory allowance for repairs, was raised from £12 to £70 in the Metropolitan Police District, £60 in Scotland, and £52 elsewhere; the Finance Act, 1920, raised these limits to £105, £90, and £78 respectively, and the Finance Act, 1922, abolished all limits as from April 6, 1923. The new statutory allowances for repairs of one-fourth, one-fifth, and one-sixth part of the gross assessments (according to the value of the property) are only minimum allowances granted whether that amount is expended or not, but they can be increased now to any amount on proof of actual outlay for repairs, insurance, and management on the five-year average.

The grant of this relief will result in many cases, if my experience is at all typical, in the ultimate net amount assessed to tax being less than under the old assessments. It would appear that newspaper editors would be very much better advised were they to draw their readers' attention to this important relief, instead of making unjustifiable attacks on the moderate increases in the gross assessments.

Nevertheless, the Inland Revenue Commissioners' estimate of the increased revenue to accrue from the new valuations is probably conservative enough, for it is certain that, in spite of the fact that the taxpayer's attention is drawn to this relief by words in heavy type on every assessment form, comparatively few will notice them, and still fewer trouble to make a claim.—Yours, &c.,

W. L. SELBY.

LETTERS ON PRACTICAL BANKING.*

TIMES change, and we change with them, and as Bagehot himself said: "Banking in England goes on growing, multiplying, and changing. The effects of it are one thing to-day and another to-morrow. Everything changes." The banker of to-day has to grapple with far more intricate problems than those with which his predecessors were faced; his lot is cast in less pleasant places—in the City of London especially. Outside London branch banking is still very much akin to the business that existed years ago, and it is to the branch manager that the book before us is presumably addressed. He must be efficient in his calling, for second only in importance to the financial strength of banking is the efficiency of its executive officers, and Mr Brunton has certainly laid his hand on many a spot which, in the absence of a trusty guide, may contain traps for the unwary. We are not so sure that he has done the wisest thing in building his book up on a series of letters, all purporting to be from an inspector to a manager. It is an unusual form for a book of the kind, and, generally speaking, does not make for either good or easy reading. Further, he seems to assume in the early letters a lack of knowledge of some of the most elementary principles of banking, which might be excusable in a junior, but would be appalling in a manager who has to deal with men, money, and affairs. In the view

* By John Brunton. Pp. 144. (London) Edward Arnold and Co. Price 7s 6d net.

of some inspectors it is good to damn a manager with faint praise; but however correct that may be in a confidential report, it is hardly politic to practise the art in a book that he who runs may read. Probably the little digs the imaginary inspector has at the manager are a quaint vein of humour; but it would have been better had the tendency been avoided, and in letters it is best "just to hint a fault" and leave it at that. In reading the letters, too, we wonder whether it really was necessary for the author to instruct the manager in the principles to be observed in opening new accounts, or in closing them for that matter.

We are not quite sure that the writer of the letters appreciates the effects of banking amalgamations, since in his view this policy has made competition in banking keener than ever. We had rather considered that the amalgamation of interests made for the elimination of competition. Granted that there is still enough competition between the big banks to preserve something of a free market, yet, undoubtedly, the ultimate effect of amalgamations will be *pro tanto* to diminish competition. That this is no idle statement is clear enough, for the rates offered for deposits and advances by the existing banks rise and fall together, and it seems that by common consent they do not outbid each other in other directions. Rather quaint, too, is the author's advice to the manager to exert pressure on farmers who have fallen on bad times to sell out before the position becomes hopeless. It may be the wisest course to pursue; but who will buy farms at such times, and how much would the banker to whom the farmer is indebted get out of the wreck if the advice be followed? Again, on page 35, it may be admirable counsel to advise the manager to endeavour to induce a shaky draper to offer his account to another bank, but one can hardly imagine the other banker being so foolish as to accept the account. In fact, we go so far as to say that no reputable bank would lend itself to an attempt to pass on a bad account to another bank. It might close the account, but that is another matter. In fact, on the very next page Mr Brunton says: "I am sure that you, even in order to protect yourself from loss, would not take any action which would reflect on your reputation as a banker." It will be plain to the reader that the advice given on the previous page would reflect very seriously on a banker's reputation.

Such are a few points that strike one in reading the letters contained in the book, the title of which is really a misnomer, since it deals more particularly with loans and advances, and the provision and lack of security for the accommodation, though, as we have shown, there are letters on opening and closing the account. There is also a very good letter on the analysis of balance-sheets, and equally good pages on branch management and staff training; but on cheques, bills of exchange, and the like there is singularly little information. It is a defect which might well be remedied in any future edition. For the rest, Mr Brunton does, as he says in his preface, appear to saddle the manager with responsibilities which in practice ultimately rest with the board of directors. We go so far as to say that many of the advances, loans, and overdrafts that he has described are such as most branch managers would not be allowed to grant without reference to the general managers at head office. For example, on page 52 he refers to a manager's having allowed large overdrafts to municipalities; in the one case £50,000 on gas revenue account, and in another instance £40,000 for the provision of small holdings. In still another case the poor manager appears to have committed himself to an advance which may run up to £70,000. Well, we imagine that any branch manager who had entered into such liabilities on behalf of his bank without the special permission of his head office would very soon find himself in the ranks of the unemployed.

In the opinion of the reviewer the book needs recasting. Split up into chapters with proper headings, the letter form dropped, and the matter put into the third person, there is in it the elements of a sound book for the use of the practical banker, and it might even form a good addition to the general manager's bookshelf. In its present form it is unlikely to commend itself to either the branch manager or the higher officials.

GOVERNMENT RETURNS.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £30,000,000 in Treasury Bonds and three months' Treasury Bills dated from Tuesday to Saturday, May 22-May 26, were opened on May 18, 1923, and the total amount applied for was £52,979,300. Tenders for Tuesday to Friday bills at £99 10s 6d, about 67 per cent., and above in full, and for Saturday bills at £99 10s 8d, and above in full. The average rate of discount for Treasury Bills was £1 17s 1 1/2d. The amounts allotted were as follows:—In bills at 3 months, £30,000,000; in bonds, nil.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills. Average Rate.	4% Treasury Bonds, 1923. Average Price.

THE MONETARY PUZZLE.

A YEAR ago, in our Banking Number of May 20, 1922, attention was called to the "curious, and at first sight, unaccountable phenomenon of the extraordinary clamour for investments which has shown itself at a time when the country was continually complaining that it was being taxed to the bone." As our readers are aware, this curious phenomenon has been with us, with occasional setbacks and seasonal disappearances, ever since. The year 1922 saw no important changes in the general conditions under which banking was carried on, the period being one of consolidation after the preceding tempests. The monetary situation has, however, been by no means free from obscurity, and it is well worth the study of our readers.

If banking figures could be taken as a plain and safe guide to the monetary position, we ought, with their help, to be able to walk quickly and with confidence to the solution of the puzzle. Banking figures being what they are—very informing to those who know what is behind them, and as unsafe as most other statistics if they are taken without the most rigorous inquiry and examination—we can only grope our way with much doubt and many guesses, and finally reach a point which may, or may not, be firm ground. The figures must, of course, be read in conjunction with those furnished by the governmental statements of income, expenditure, &c., and if we take the past quarter—the first of the calendar year and the last of the official financial year—its statistics may, perhaps, give us some light, thanks to the large movements that take place at that time of the year.

At first, the figures of this period go far to account for the demand for securities that has marked its course, and seem to bear out two popular explanations of it. For their outstanding features are the large amount of debt redeemed by the Government, and the large decrease in bank deposits. And so it is quite easy to be convinced that securities have been wanted for the re-investment of money paid to holders of redeemed debt, until we are pulled up short by asking ourselves where the Government got the money for redeeming debt, and then we remember that the Government got it out of our pockets through the vacuum cleaner applied by the Inland Revenue Department. And as for the question of deposits, which some people suppose to have declined because the money has "gone into investments," it has to be observed that investments made by ordinary individuals do not affect deposits. The buyer draws a cheque and hands it to the seller; it transfers a deposit, but does not cancel one.

Let us go back to the Government figures for a fresh lead. During the March quarter it had a revenue surplus of £110 millions, and received £31 millions by the issue of new securities—£5 millions of Saving Certificates and £26 millions of Treasury bonds. It was thus enabled to pay off £103 millions of Treasury bills, £28 millions of Ways and Means Advances, of which £16½ millions were from the Bank of England, and £6½ millions from public departments, and then add £3½ millions to its balance at the Bank of England. As soon as we begin to try to draw inferences from the figures, we find that we have to move with so much caution that it is hardly safe to stir. One would naturally suppose that with regard to the 30 odd millions of debt redeemed out of the proceeds of new debt issued, this would be a mere balancing transaction, and that the problem might be narrowed by eliminating new debt issued and old debt cancelled to a like amount on each side of the balance-sheet. But this is by no means necessarily so, and this is a striking example of the ease with which one may be misled by figures if we take them at their face value, without first making sure that we know enough about them to justify us in doing so. For in this case everything depends on who are the holders of the new debt issued and of the old debt redeemed. Holders of debt have to be divided into two main bodies—banks and private investors, who include companies and trustees and all other holders besides banks. When a

bank invests it makes a deposit, equal in amount to the sum invested, for itself or another bank, and so adds to the aggregate of bank deposits; when a bank's investments are reduced by the redemption of securities held by it, a deposit is cancelled in its books, or those of another bank, and so the aggregate of bank deposits is reduced; and in each example the aggregate of the bank's cash remains unaltered. So far, in speaking of the banks, we have meant only the ordinary banks, with which the man in the street keeps his account. A quite new set of circumstances arises if the Bank of England is a party to the transaction. For it also, when it makes an investment or an advance, increases its own deposits, and when a security held by it or a loan made by it is paid off or repaid, its own deposits are decreased; but when these movements take place, it is nearly always the deposits of the other banks that are increased or decreased, and so their "cash at the Bank of England," part of the cash foundation of their credit fabric waxes and wanes as the Bank of England's securities expand or contract. So that before we can make approximately correct guesses about the effect of the Government's repayments of debt during the March quarter, we want to know whether the securities redeemed were held, and whether the new securities issued were taken up by the public, the banks, or the Bank of England; and on these points the only thing that the official figures tell us is that Ways and Means Advances from the Bank of England to the extent of £10½ millions were paid off during the period. Perhaps the figures published by the Bank of England and the other banks will throw some light on the problem. Taking the Bank of England first, we find the following movements:—

BANK OF ENGLAND RETURN.

	Jan. 3, 1923.	March 28, 1923.	Increase (+) or Decrease (—) in March Quarter.
	Mln. £.	Mln. £.	Mln. £.
Public deposits	12.9	35.7	+ 22.8
Other deposits	144.9	97.0	— 47.9
Government securities	59.7	48.3	— 11.4
Other securities	94.2	79.8	— 14.4

Precise agreement with the Government's figures is not to be expected, because the period covered is not exactly the same. But it will be noted that the Government securities have declined £11½ millions, a figure that is not too wildly discordant with the £10½ millions of the Exchequer return. Other securities, which are always pulled out to a gargantuan size at the end of December, when the great window-dressing effort takes place, are down by £14½ millions, and as Public deposits have been piled up by the tax-gatherer to the extent of nearly £23 millions, we find a fall of nearly £48 millions in the Other deposits, causing probably a roughly corresponding decline in the "cash at the Bank of England" of the other banks. The monthly statements of the London clearing banks show that during the same period (though here again we have to remember that dates of statements do not exactly agree)—

Deposits fell by	£88.3 millions
Investments fell by	27.1 "
Discounts fell by	47.9 "
Cash fell by	21 "
Loans and advances rose by	8.9 "

It will be noted that "cash," which, of course, includes the balances at the Bank of England, only fell by £21 millions, as compared with a decline of £48 millions in the "Other deposits." This discrepancy is wide, but Other deposits include other accounts besides the balances of the clearing banks; and it is also possible that the banks may have to some extent replaced balances at the Bank of England by larger holdings of currency notes. The fall in discounts was presumably due to repayments of Treasury bills, which has been seen to be one of the great features of the quarter's history. In fact, it seems likely that of the £103 millions paid off, quite half were held by banks, since there must surely have been some increase in the banks' holdings of commercial bills, in view of the extent to which

London has lately regained her old business of financing foreign trade by acceptances. Another interesting feature is the large decline in investments. It will be remembered that Mr McKenna is his speech at the London City and Midland meeting charged the Government with having caused depression by carrying out a policy of deflation by paying off Treasury bills held by the banks, and so reducing their deposits. It was then suggested that the banks might have countered the movement by increasing their investments, and so corrected the deflation, if it was really a cause of unemployment. It now appears that the banks have been, on the contrary, emphasising the deflation by selling securities. At the same time, however, a small increase in loans and advances may perhaps be taken, very cautiously, as a symptom of improving trade—or is it a consequence of Stock Exchange activity, financed with the help of the banks? When the reaction in Stock Exchange prices came a few

days ago, some of the selling was said to be caused by the calling in of bank loans.

We emerge from this tortuous maze of figures with the impressions (1) that in so far as the Government took money from taxpayers and paid off securities held by ordinary investors, it stimulated the demand for securities, thus showing that taxation, if spent on debt redemption, is good for business and prices on the Stock Exchange; (2) that in so far as money was used to pay debt held by the Bank of England, it caused real deflation and a decline in the "cash" of the other banks; and (3) that in so far as the debt redeemed was held by the other banks, the repayment reduced their deposits and their investments, or discounts, and left their cash unaltered, with the result that their proportion of cash to liabilities was higher, and they were more ready and able to finance active trade if and when it comes.

THE BANK ACCOUNTS OF THE UNITED KINGDOM.

THE banking figures of the United Kingdom at the end of 1922 showed some noteworthy changes as compared with the two preceding Decembers. The expansion of deposits, begun during the war, continued to some extent in 1921, but in the past year a movement in the opposite direction took place, and the banking accounts for the year show a decrease of bank deposits other than those of the Bank of England, from £2,527 millions at the end of 1921 to £2,362 millions at the end of 1922. This total is very similar to the total for 1919, when deposits amounted to £2,356 millions, but in that year the Treasury and other note circulations were considerably larger than in the past year. As will be seen from figures given later on, the rate of decrease in deposits was 6.5 per cent., and the amount £164,631,000. At the same time, the decline in legal tender currency has been continued.

The table below gives a comparison of the total amount of currency and credit of all kinds at the end of each of the past five years, in comparison with 1913:—

	End of						Inc. on 1913.
	1913.	1918.	1919.	1920.	1921.	1922.	
Bank of England deposits	71	172	199	189	122	133	+ 62
Other banks' deposits	1,032	1,988	2,356	2,492	2,527	2,362	+ 1,330
Bank of England circulation	30	70	91	133	127	125	+ 95
Scottish note circulation	8	25	28	29	25	21	+ 17
Irish note circulation	8	31	29	25	19	17	+ 9
Currency note circulation	..	323	356	368	326	301	+ 301

English banks have no note issues outstanding other than those in the Isle of Man. The table shows that in the year legal tender currency decreased by £31 millions, of which £25 millions were represented by the reduction of currency notes. Scottish and Irish banks' circulations fell by £2 millions each, as did also the Bank of England's. The currency note contraction compares with a decrease of £42 millions in 1921, and the £6 million fall in circulation of bank notes with one of £16 millions. The total note circulation at the end of the year was £466 millions, against £497 millions at the end of 1921. If we compare these figures with those for 1913 we find that the increase in the circulating medium amounts to about £296 millions, since in that year the total note circulation in the United Kingdom was £46 millions, and the official estimate of gold held by banks, and in circulation, was £123 millions. In 1921, the peak year, the total circulating medium was £555 millions.

The bearing of these figures on trading conditions may be inferred if we consider them in conjunction with the returns for the year of the Bankers' Clearing House. The total clearings for 1922 were 6.3 per cent. higher than in the preceding year, which year, compared with 1920, showed a decrease of 10 per cent. Town clearings, which are, of course, very largely affected by Stock Exchange and City dealings, increased by 8.3 per cent. The item in the Clearing House returns, which offers a criterion of trading conditions—the country clearings—may be considered dis-

tinctly favourable, for in 1922 it showed a decline of only 6.5 per cent., against one of 25 per cent. in 1921. When it is taken into account that prices were lower in 1922, and that, therefore, a greater quantity of commodities could be purchased with the same amount of money, it seems evident that last year, on the whole, saw an upward movement of trade; and this conclusion is supported by evidence as to the absorption of a number of the unemployed, increased railway traffics, and the very much-improved profits disclosed in the majority of company balance-sheets so far to hand for the year 1922.

There can be little doubt that the year under review has been one of stabilisation in banking affairs, as in trading conditions. A broad view of the figures for recent years shows that the period of quick change which accompanied war has been followed by one of slower, but not less important, adjustment to peace time conditions of a new order, the worst period of which came with the fall of prices in 1920-21. In the year 1922 conditions have been made stable to an unexpectedly large extent, and it seems evident that the measures taken by the banks to protect their position, and to keep themselves in a good way for meeting demands of reviving trade, have been wholly successful. As will be seen from the following table, there have been no changes in capital during the past year by the English, Scottish, or Irish joint-stock banks. The substantial increase in the figures of the private banks in this and in later tables is due not to a sudden expansion on their part, but to the fact that three private banks—Messrs Drummond, Grindlay, and Holt—have, for the first time, made public their balance-sheets. A later article on banking profits shows that the English banks have set aside over £1½ millions to reserve and contingency funds, but owing to the different methods in which these allocations are treated in the books, the reserve funds shown in the balance-sheets of the English banks have only increased very slightly, whereas those of the Scottish and Irish banks are very substantially higher:—

CAPITAL AND RESERVES.

	1921.	1922.	Increase.
	£	£	£
English joint-stock { Capital ..	72,477,400	72,477,400	..
Reserves ..	56,653,200	56,695,100	+ 41,900
English private (capital and reserves)	3,186,700	3,813,400	+ 626,700
Scottish { Capital	10,077,000	10,077,000	..
Reserves	8,443,800	9,653,700	+ 1,209,900
Irish.. { Capital	7,609,200	7,609,200	..
Reserves	5,545,000	6,170,000	+ 625,000
	163,992,300	166,495,800	+ 2,503,500

The banks, it must be remembered, have admittedly very large reserves, in addition to those figuring in the balance-sheets. During the past decade an enormous amount has been written off the book value of invest-

ments. The latter, mostly British Government securities, have greatly appreciated in value during the past two years, but, as far as we are aware, no bank has written up its investments. Here, therefore, is a very substantial "hidden" reserve, to which may be added the fact that premises, from which large amounts have been steadily written off year by year, must be now worth a great deal more than the figures at which they appear in the balance-sheets.

From the table below it will be seen that the decrease of deposits in the case of the English joint-stock banks was 7.1 per cent., which compares with an increase of 0.7 per cent. in 1921. The private banks show an increase of 5.5 per cent. for the reason mentioned above. The deposits of Scottish banks fell by 8 per cent., which compares with an increase of 4.2 in the preceding year. In the case of the Irish banks, the shrinkage was less pronounced, there being a decrease of 1.4 per cent. compared with an increase of 6.2 per cent. in 1921:—

CURRENT AND DEPOSIT ACCOUNTS.

	1921.	% of Assets	1922.	% of Assets	Inc. or Dec.	%
English joint-stock banks	1,974,838,400	90.1	1,833,971,200	89.0	-140,867,200	-7.1
Private banks	48,506,800	92.0	50,955,700	91.2	+2,448,900	+5.5
Scottish banks	291,060,300	84.6	267,792,700	83.2	-23,267,600	-8.0
Irish banks	212,860,200	86.4	209,777,100	85.5	-3,083,100	-1.4
Total	2,527,255,700	89.2	2,362,496,700	88.2	-164,759,000	-6.5

The total of acceptances, usually taken as a fairly reliable foreign trade indicator, shows an increase of £13½ millions, which follows a decline of £30 millions a year ago. The acceptances of the English banks are £11½ millions higher, those of the Scottish banks one million higher.

Cash in hand and at the Bank of England, cheques in course of collection, balances with other banks, and money at call and short notice, taken together, show a fall of 5.8 per cent., which follows decreases of 3.5 per cent. in 1921, 1.1 per cent. in 1920, and over 4 per cent. in 1919:—

CASH IN HAND AND AT BANK OF ENGLAND, AND MONEY AT CALL AND SHORT NOTICE.

	1921.	% of Assets	1922.	% of Assets	Inc. or Dec.	%
English joint-stock banks	438,519,100	20.0	423,091,700	20.6	-15,427,400	-3.5
Private banks	8,484,700	16.2	8,593,000	15.4	+108,300	+1.3
Scottish banks	70,232,200	21.0	63,814,200	19.8	-6,418,000	-9.1
Irish banks	42,886,700	17.4	31,833,900	13.2	-11,052,800	-25.8
Total	560,122,700	19.8	527,332,700	19.7	-32,790,000	-5.8

The decline in the total corresponds closely, it may be mentioned, to the decrease in legal tender currency. There has again been a large fall in this item in the case of the Irish banks, and the ratio to total liabilities is now lower for them at 13.2 per cent. than for any of the other groups. In the case of the English joint-stock banks, the percentage of cash, &c., to assets has moved up slightly, the figure now being 20.6, against 20.0 at the end of 1921. The Scottish banks in 1920 showed an increase of 11½ per cent. in this item, but in 1921 there was a decline of 3.8 per cent., and last year of 9.1 per cent. The ratio to liabilities for the whole of the banks is almost identical with the preceding year, being 19.7 compared with 19.8.

A comparison of the cash and short money to notes and deposit liabilities shows a similar movement to that recorded in the previous table, the English banks having increased the ratio to 23.1 per cent., against 22.1 at the end of 1921, and the Scottish and Irish banks showing a decline, the former to 21.9 per cent. from 22.2 per cent., and the latter to 14.0 per cent. from 18.5 per cent.:—

(In £1,000's.)

	1921.			1922.		
	Deposits and Notes.	Cash.	%	Deposits and Notes.	Cash.	%
English joint-stock banks	1,975,070	458,519	23.1	1,834,141	423,092	23.1
Private banks	316,248	70,232	22.2	291,112	63,814	21.9
Scottish banks	231,912	42,887	18.5	227,098	31,834	14.0

The next table shows at a glance how much of the cash is in hand, and what proportion is at call or short

notice. Some banks still include money at call or short notice with cash in hand in their balance-sheets. Of English banks, those holding 0.5 per cent. of the total amount make a distinction between the items:—

EXCLUDING BANK OF ENGLAND.

Year, December 31.	(1) Total Cash in Hand and Money at Call and Notice.	(2) Together.	(3) Per Cent. of (1).	(4) Cash in Hand and Money at Call and Notice.	(5) Per Cent. of (2).
1908.....	194,134,000	172,774,600	89.2	91,710,600	53.1
1913.....	255,978,000	212,722,700	83.1	15,489,100	7.2
1914.....	276,045,900	230,722,700	83.6	169,520,500	77.5
1915.....	262,453,200	217,313,700	82.8	178,919,500	82.3
1916.....	369,459,900	343,494,000	93.0	177,973,500	72.2
1917.....	427,855,200	404,036,700	94.4	184,556,300	45.3
1918.....	481,220,000	454,701,200	94.5	170,135,000	37.4
1919.....	452,765,400	424,569,100	93.8	170,135,000	37.4
1920.....	449,153,400	428,678,800	95.3	104,510,400	24.4
1921.....	438,519,100	413,735,100	95.4	104,510,400	25.3
1922.....	423,091,700	402,081,300	95.0	111,068,100	27.6

The changes in the table are such as might be expected in view of the fact that the figures of banking business as a whole during the year were on a smaller scale than in the years immediately preceding it. A fall of £15½ millions is recorded in the general total compared with 1921. A little alteration in the distribution of the money is revealed by the accounts of the banks which separate the items, the ratio of cash in hand and at the Bank of England to the total having decreased from 73.4 per cent. to 71.9 per cent., while there was an increase of money at call or short notice from £109 millions in 1921 to £113 millions in 1922—28.1 per cent. of the total last year, against 26.6 in the previous year.

Large increases are shown under investments, which are compared with the previous year in the following table:—

INVESTMENTS.

	1921.	% of Assets	1922.	% of Assets	Inc. or Dec.	%
English joint-stock banks	375,564,400	17.2	424,413,200	18.2	+48,848,800	+12.9
Private banks	6,108,600	11.6	11,524,700	20.6	+5,416,100	+88.6
Scottish banks	114,530,800	32.2	126,024,700	39.2	+11,493,900	+10.0
Irish banks	81,670,200	33.1	103,019,300	42.5	+21,349,100	+26.1
Total	577,874,000	24.0	665,981,900	24.9	+88,107,900	+15.2

The increase in investments of 15.1 per cent. represents a total of £87 millions, and has been spread over all the groups. Last year an increase of 3.4 per cent. was shown, for more than half of which the Scottish banks were responsible. This compared with a total decrease in 1920 of 7½ per cent., the investments of English banks having declined by 7½ per cent. in that year. From an examination of the monthly statements of the clearing banks, it is clear that the whole of this increase in investments occurred in the first few months, when Treasury bills, which are included under discounts, were being exchanged for Treasury bonds, which figure under investments.

Discounts and advances, as will be seen from the table below, last year moved more markedly than in 1921. The meaning of the figures is not as clear as could be wished since Treasury bills are included under discounts, and the correspondence of the two items, with conditions of trade, is therefore disturbed:—

DISCOUNTS AND ADVANCES.

	1921.	% of Assets	1922.	% of Assets	Inc. or Dec.	%
English joint-stock banks	1,280,170,800	58.7	1,102,647,800	53.6	-177,523,000	-13.8
Private banks	36,214,400	9.0	33,307,800	5.9	-2,906,600	-8.0
Scottish banks	150,849,700	43.9	122,366,100	38.1	-28,483,600	-18.8
Irish banks	119,271,700	48.4	104,554,400	43.0	-14,717,300	-12.3
Total	1,586,506,600	56.2	1,362,876,100	51.0	-223,630,500	-14.1

Decreases are common to all the groups, and on a considerable scale. In the English joint-stock banks the decrease of £177½ millions compares with an in-

crease in 1921 of £17 millions. Practically the whole of the English banks now show bills discounted and advances as separate items, and from the following table, which applies to English banks only, we get a clearer idea of the nature of the movements:—

	1921.	1922.	Decrease.
Discounts	445,526,100	301,313,300	-144,212,800
Advances	834,644,700	801,329,500	-33,315,200
Total	1,280,170,800	1,102,642,800	-177,528,000

In this table it is seen that the decrease in discounts for the English banks was no less than £144 millions, for which the decline in Treasury bill holdings is undoubtedly mainly responsible. Under advances the English banks show a decrease of £33 millions, compared with a decrease last year of £95 millions. The fall in trade accommodation is not serious, since it applies to a period in which prices were on a lower level than in the period with which it is compared. The ratio of the two items of discounts and loans is not markedly dissimilar to that which we find in the figures for 1920.

In the following table the aggregate liabilities and assets of the banks of the United Kingdom, excluding the Bank of England, are shown. In the large summary table of the individual balance-sheets which appears on another page we have, for consideration of

space, included, as heretofore, cover for acceptances with premises and sundry items:—

LIABILITIES.—(000's omitted.)

	1913.	1921.	1922.	Inc. or Dec.
Capital and reserves	114,076	163,992	166,496	+2,504
Undivided profits	6,457	8,547	8,800	+253
Deposits	1,032,986	2,527,126	2,362,491	-164,632
Acceptances	67,534	78,870	92,140	+13,270
Notes, drafts, &c.	24,984	50,251	46,185	-4,066
Total	1,246,033	2,828,786	2,676,115	-152,671

ASSETS.—(000's omitted.)

	1913.	1921.	1922.	Inc. or Dec.
Cash in hand and money at call and notice	293,576	560,123	527,333	-32,790
Investments	191,041	577,874	664,982	+87,108
Discounts and advances	682,966	1,586,509	1,362,865	-223,644
Premises and cover for acceptances	78,450	104,280	120,935	+16,655
Total	1,246,033	2,828,786	2,676,115	-152,671

Very little comment need be made on this table, but it is noteworthy that the item of undivided profits, which last year was decreased by £311,000, as compared with 1920, has been increased by £253,000, as a result of the past year's transactions.

BANKING PROFITS.

The principal factors affecting the profit and loss accounts of the banks in 1922 were the stagnation in trade and low money rates on the one hand, and the great appreciation in the market value of gilt-edged securities. The first affected the amount of the profits earned, and, in the case of the English banks, reduced them, but the rise in market values obviated the necessity for withdrawing large amounts from profits to meet investment depreciation, and as a result, although profits in many cases fell, dividends were maintained. Other sources of profit, apart from loans and advances, which are the main source, such as acceptance business, foreign exchange, and so on were also affected by the slackness of trade and to some extent by the fall in commodity prices, while bad debts were no doubt a substantial item. The table below shows the striking fall in average money rates as compared with recent years:—

	Average Bank Rate.	Average Market Rate (3 months).	Average Short Loan Rate.	Average Deposit Rate.
1910.....	£ s d 3 14 5	£ s d 3 3 7	£ s d 2 14 10	£ s d 2 4 4
1911.....	3 9 4	2 18 5	2 6 8	1 19 4
1912.....	3 15 5	3 12 7	2 19 11	2 5 5
1913.....	4 15 5	4 7 5	3 15 10	3 5 3
1914.....	4 0 9	2 17 7	2 4 3	2 2 4
1915.....	5 0 0	3 14 1	2 18 4	2 12 0
1916.....	5 9 3	5 4 3	4 12 8	3 14 4
1917.....	5 3 0	4 16 2	4 8 3	4 0 0
1918.....	5 0 0	3 11 9	3 5 6	3 1 3
1919.....	5 3 0	3 18 10	3 9 7	3 3 10
1920.....	6 14 4	6 7 11	5 3 7	4 14 4
1921.....	6 2 4	5 4 3	4 12 8	4 2 4
1922.....	3 13 10	2 13 0	2 5 11	1 13 10

The volume of commercial bills has been small, and bankers have also complained of their inability to find industrial borrowers to anything like a sufficient extent. They have partly recouped themselves, however, by maintaining the margin of 2 per cent. between Bank rate and deposit rate, the latter having been at 1 per cent. for nearly six months out of the twelve. The margin between the rate charged for loans and advances and deposit rate has also been the same as in 1921, since the former varies with Bank rate. The margins between the various rates are shown below:—

	Bank Rate and Market Rate.	Deposit Rate and Market Rate.	Deposit Rate and Short Loan Rate.
1910.....	£ s d 0 10 10	£ s d 0 19 3	£ s d 0 10 6
1911.....	0 10 11	0 19 1	0 7 4
1912.....	0 2 10	1 7 2	0 14 6
1913.....	0 8 0	1 2 2	0 10 7
1914.....	1 3 2	0 15 3	0 1 11
1915.....	1 5 11	1 2 1	0 6 4
1916.....	0 5 0	1 9 11	0 18 4
1917.....	0 6 8	0 16 2	0 8 3
1918.....	1 9 3	0 10 6	0 4 3
1919.....	1 4 2	0 15 0	0 5 9
1920.....	0 6 5	1 12 7	0 9 3
1921.....	0 18 1	1 1 11	0 10 4
1922.....	1 0 10	0 19 2	0 12 1

Very few of the banks disclose their gross profits and expenses, and it is therefore impossible to tell how far the slow rate at which the latter have decreased is responsible for the decline in the net figure. In the table on the next page the net profits and appropriations for 1922 for the individual English, Scottish, and Irish banks are set out. It will be seen that in no instance was an allocation for investment depreciation made from profits. From the smaller tables, in which aggregate profits for a number of years back are shown, it will be seen that the profits of the Scottish and Irish banks were higher in 1922 than in 1921:—

ENGLISH.

Year.	Profits.	Per Cent. of Resources.	Dividends.	Per Cent. of Profits.	Investments.	Reserve Funds.	Premises.	Staff.	Movement of Carry Forward.
1908.....	7,743,491	96.6	9,254,254	89	14,350	395,74	295,960	177,153	+25,832
1909.....	7,453,621	91.6	7,721,554	90	92,700	235,689	162,008	76,324	+76,324
1910.....	8,241,490	91.6	7,760,889	82	1,105,766	222,57	237,000	107,500	-192,182

The English banks show a decline for the second year in succession, but the amount distributed in dividends continues to rise, and in 1922 equalled 74 per cent. of profits. This figure, however, is well below the aver-

age for the five years preceding the war. Investment depreciation has made no call on profits in the past two years, and for 1922 reserve allocations were less than half the amount set aside at the end of 1921. Premises and staff funds get slightly less than a year ago, but a further addition is made to balances carried forward.

The table of profits of the Scottish banks shows an unbroken record of expansion, and although dividend rates have in several instances been raised, the percentage of profits distributed to shareholders is only slightly higher at 50 per cent., which makes a very favourable comparison with the 74 per cent. shown for the English banks. Reserve allocations are almost as large as in 1921, and the transfers to premises and staff funds are increased, balances forward being also expanded by over £16,000. The profits of the Irish banks have not moved so steadily as those of the Scottish banks, but for 1922 the total is the highest in the table, while the proportion paid to shareholders is almost the lowest. Reserve allocations were increased in 1922 by nearly 50 per cent., and a substantially larger amount was transferred to premises accounts, but the aggregate balance carried forward was reduced.

On the whole, the figures show that the banks, while suffering to some extent from the trade depression, have been able to employ their resources fairly remuneratively, while the steady rise in gilt-edged security values has strengthened their internal positions. An increase in profits, however, cannot be expected with any confidence unless activity in general trade develops more strongly in the remainder of the year than it has already done.

BANK SHARES.

THE past twelve months have seen a rise in Bank shares, which, although of substantial dimensions, did not approach in extent that which took place in 1921-1922. As a rough generalisation, it may be said that the chief influences affecting this particular section of the Stock Exchange markets were similar to those that operated in the previous year. Until the autumn, trade depression showed small signs of lifting, and although since October last evidence has on all hands accumulated that the worst of the bad period has been left behind, the betterment so far has not gone far enough to raise monetary rates, or to make any very pronounced increase in the demand of industry and commerce for the credit which the banks have to lend. As has been pointed out in a previous article, Bank profits for 1922 in many cases suffered a further decline, but as in the previous year, profits were not drawn upon for writing down investment holdings. On the contrary there has been, as everybody knows, a renewed advance in gilt-edged stocks. Thus banks were, generally speaking, able to maintain last year's dividends—a few even raised the rate—while the continued gilt-edged rise increased balance-sheet strength by adding to the hidden reserves which are created when investment holdings rise above the level at which they are entered in the books. Thus conditions have continued to be such as to reinforce investors' confidence in the great banks, and, in addition, the bank share market has had some share of benefit from the strong demand, which has persisted during a considerable period of the past 12 months, for all kinds of well-secured investments. With these influences at work, it would be strange indeed if bank share quotations had not risen. The extent to which they have done so is indicated in the following table, in which we give a calculation of the average market price at April 30th in each of the past 15 years of the shares of English, Scottish, and Irish bank shares, adding, for purposes of a standard of comparison, the yearly movements in the price of Consols:—

	Average Price of Bank Shares.					Price of Consols	% of 1909.
	English	% of 1909.	Scottish	% of 1909.	Irish	% of 1909.	
1909.....	322	100	364	100	282	100	100
1910.....	316	98	369	101	279	99	96
1911.....	315	98	359	99	278	99	96
1912.....	299	93	354	97	248	88	78
1913.....	286	92	343	94	226	80	74
1914.....	281	87	319	88	220	78	71
1915.....	239	74	235	65	190	67	58
1916.....	241	75	237	65	187	66	55
1917.....	257	79	256	70	203	72	55
1918.....	282	88	269	74	161	57	47
1919.....	229	71	211	58	159	57	47
1920.....	280	87	240	66	173	61	59
1921.....	297	92	258	71	187	66	59
1922.....	297	92	258	71	187	66	59

It will be seen that the rise in bank shares of all the three countries has been proportionately far greater than that recorded by Consols, which between April 30, 1922, and April 30, 1923, advanced in price by less than 1 1/2 per cent., as compared with advances of over 6 per cent. in English bank shares, of 7.5 per cent. in Scottish bank shares, and 8.1 per cent. in Irish bank shares. The last-mentioned percentage is encouraging. In 1921-22 Irish bank shares, owing to political instability, had not risen relatively so much as those of the banks of Scotland and England. In the past year the slow but steady success of the Free State Government in suppressing the forces of rebellion has improved the position of the banks, and increased the confidence of the Irish investor in Irish stocks and shares, whether of banks or of other concerns.

With the rise in quotations continuing, and dividends either remaining steady or being increased, the yields obtainable have declined. The three following tables show for English, Scottish, and Irish bank shares the yields obtainable now and a year ago. The first table shows the figures for the English:—

ENGLISH BANKS.

"A"	5	1	12½	2½	5	4	0	12½	2½	5	12	9
Do "B"	1	1	12½	2½	5	4	0	12½	2½	5	12	9

In view of the fact that uncalled liability is a frequent deterrent to investors in the case of bank shares, it may be as well to point out that the lists given above include nine fully paid stocks or shares, namely, Bank of England (£100 stock), Barclays "A" (£4 share), Barclays "B" (£1 share), London Joint City and Midland (£2 10s share), Westminster Bank (£1 share), Williams, Deacon's "B" (£1 share), British Linen

(£100 stock), Commercial of Scotland (£1 share), Bank of Ireland (£100 stock). On some others the uncalled liability is small. During the past 12 months the market has shown a steady upward trend, without any periods of serious set-back, but the rise is attributable more to the effects of the gilt-edged rise than to any very great expansion in business.

AMERICAN BANKING.

(BY OUR NEW YORK CORRESPONDENT.)

ACCORDING to the Federal Reserve Board's latest index figures, based on returns from all sections of the country and from all the more important branches of trade and industry, production in basic industries of the United States showed a further increase of 4 per cent. in March to a level 8 per cent. above the 1920 peak, and 67 per cent. above the low point reached in July, 1921. March sales by department stores were 22 per cent. greater than in the corresponding month of last year. Sales by mail-order houses were larger than in any month since November, 1920, and exceeded by 35 per cent. those of March, 1922. Wholesale and retail trade showed a marked expansion in all lines, employment increased, and wages of both skilled and unskilled labour were sharply advanced. The business revival, indicated by the foregoing data, has occurred for the most part in the past six or eight months. During the first quarter of this year, the Reserve Board remarks, the volume of goods produced and passed into consumption "probably exceeds that of any similar period" in the history of the country. Naturally, the tremendous trade and industrial expansion greatly increased demands upon banks. They have not only met all requirements without any undue strain, but have so strengthened their position that the present lending capacity of the American banking system as a whole is officially stated to be far in excess of the credit needs of the country's productive capacity.

Convincing evidence of the improved banking situation is found in recent statements covering the entire Federal Reserve system. Comparisons, for instance, between dates when low points were reached and April 11th, of this year show that loans and investments of member banks in leading cities increased \$1,974,000 since March 8, 1922, or 14 per cent. Since August 30, 1922, commercial loans increased \$783,000,000, or 11 per cent. The marked growth of total loans and investments since the first of this year is attributed entirely to the rapid increase in commercial loans, since loans on stocks and bonds and the investment holdings of the member banks have actually declined. This change in the form of bank credit probably reflects the growing demand for credit in commercial and industrial undertakings.

Aggregate loans and discounts of 777 leading banks reporting to the Federal Reserve Board in Washington amount to \$11,821,111,000. From the low point of last July, the present volume represents an increase of \$1,081,975,000, although there has been a decrease of about \$58,500,000 during the past fortnight. Since January 1 there has been a gain of \$223,600,000, approximately, whereas for the corresponding period a year ago there was a decrease of nearly \$360,000,000.

Total cash reserves of the Federal system amounted to \$3,179,042,000, as on April 25th. Such holdings have been well stabilised; the aggregate represents an increase of about \$54,000,000 compared with a year ago. Combined earning assets of the Federal Reserve system on April 25th stood at \$1,104,489,000, representing an increase of approximately \$138,000,000 since August, 1922, or 14 per cent., but a decrease of \$45,000,000 from the total a year ago. The earning assets consist of loans, discounts, and investments, and the increase in such assets since last summer reflects to a considerable extent the wider use of reserve bank credit, notably in the industrial sections of the United States. Federal Reserve notes in circulation on April 25th totalled \$2,222,588,000, or about

\$65,000,000 more than a year ago, the increase being due to the greater business activity.

There has been considerable talk lately about the bank loan situation in this country, and warnings have been given by various interests, including Federal Reserve officials, that caution should be exercised by both lenders and borrowers. In other words, that every precaution should be taken by all concerned to avoid over-extension. Bankers generally have been guarding against any possible repetition of the experiences of 1919 and 1920. Such warnings have evidently been heeded. But, as previously indicated, there is really no cause for the slightest concern in regard to the loan situation or the lending capacity of banks. Rediscunts, it is true, have lately shown heavy increases. During the past week they have shown a gain of \$93,700,000, bringing the total for the entire system up to \$730,340,000—a new high record for this year. Still, that total might be described as very small compared with the peak reached in the winter of 1920, when rediscunts amounted to \$2,826,825,000. The present total is more than \$2,000,000,000 below that high point. Each of the 12 central Reserve institutions has greatly reduced the total of its rediscunts from the maximum amounts in 1920. The New York Federal Reserve Bank, for instance, then showed a total of almost one billion dollars; the figure last week stood at only \$154,000,000. Rediscunts with the Chicago Federal Reserve Bank, at the peak, exceeded \$493,000,000; a week ago they aggregated only \$90,000,000 approximately. It is evident that member banks, in meeting demands of their customers for increased credit and currency, have not been seeking or receiving so much loan co-operation as formerly from the Federal Reserve Banks. By withdrawing funds from investments, and because of the further inflow of gold, they have been able to meet requirements quite independently of the Reserve institutions.

Meanwhile the Federal Reserve system has been accumulating a tremendous reserve of lending power, largely as a result of the continued influx of gold. On April 1st the stock of gold in the United States reached a new high record, \$3,099,193,743, which compares with \$3,750,671,539 on the corresponding date of 1922, and shows an increase during that period of \$218,576,204. Gold holdings of the Federal Reserve system on April 1st, this year, amounted to \$3,060,495,000, representing an increase over April 5th, 1922, of \$86,294,000. The present gold holdings alone give the Federal Reserve system a credit expanding power of approximately \$30,000,000,000.

The following table gives the ratios of total reserves to net deposit and Federal Reserve note liabilities combined, for the 12 Federal Reserve banks and for the entire system, as on April 25th, compared with a year ago:—

	April 26, 1922.	April 25, 1923.
Boston.....	75.5	82.6
New York.....	86.5	86.4
Philadelphia.....	78.8	73.8
Cleveland.....	77.9	76.4
Richmond.....	63.0	60.4
Atlanta.....	78.4	70.4
Chicago.....	75.6	80.0
St. Louis.....	74.8	66.3
Minneapolis.....	71.3	70.8
Kansas City.....	58.1	60.1
Dallas.....	62.4	47.7
San Francisco.....	74.4	65.5
Total.....	78.3	77.0

The Federal Reserve ratio of 77 per cent. is the high point of this year, and within 3.4 points of last year's top record. It is also more than 1 point above the ratio on February 21st, when the New York and Boston Federal Reserve Banks raised their rediscount rates. As compared with that date the ratios of both the New York and Boston Reserve Banks are about 6 points higher, which would seem to indicate that whatever inflationary tendencies there may have been several weeks ago in the eastern reserve districts have been checked. The ratio for the entire Federal Reserve system at present (May 3rd) is 75.2 per cent. The past week's decline from 77 per cent. should not be construed as indicating any material impairment of banking strength; the decline is due chiefly to the fact that member banks have been increasing their reserve accounts with regional institutions, which had recently been reduced. It is pointed out by one of the Federal Reserve bank governors that by selling investments owned the 12 Reserve institutions could put the combined reserve ratio well above 80 per cent.

The relatively low ratio (47.7 per cent.) reported by the Federal Reserve Bank at Dallas, Texas, is attributed largely to investments in bankers' acceptances and United States obligations, and not to heavy loans to member banks in that district. The head of the Dallas institution explains that by disposing of its investments, which were made to employ funds not otherwise in demand at the time, the bank's ratio could have been brought up above 76 per cent. To a certain extent that

applies to all of the 12 Federal Reserve Banks, which, theoretically, could augment their cash holdings by more than \$500,000,000 by disposing of acceptances and United States Government obligations.

In this connection it is interesting to note that approximately \$523,700,000 bankers' acceptances were outstanding in the United States on April 1st, as against \$416,400,000 on that date a year ago; the increase, amounting to \$107,300,000, in such acceptances plainly reflects the business revival during the past 12 months.

Money conditions generally throughout this country are reported as comfortable. Although bankers are advancing loans cautiously, for reasons stated, funds are in abundant supply for all legitimate requirements. Time-money is now available for all maturities up to five months, on both mixed and all industrial collateral, at 5½ to 5¾ per cent., while commercial paper discounts at 5 per cent. for prime and 5½ per cent. for other names. The rediscount rate of all Federal Reserve Banks throughout the country remains at 4½ per cent., and there is nothing in the present situation or outlook that foreshadows an increase in the rate in any district. It is, perhaps, worth mentioning that, owing largely to the recent heavy liquidation in the stock market, Wall Street brokers' loans have fallen to the lowest point of the current year. The total of such accommodations is now estimated at approximately \$1,750,000,000, as compared with the high point in February last, when the aggregate was about \$2,000,000,000.

GERMAN BANKING.

(BY OUR BERLIN CORRESPONDENT.)

BANKING in the last six months has continued on the same lines as in the first post-armistice years, with numerous fusions and large increases of capital. A new feature, which has not yet touched the more important banks, is the entry of the fictitious gold-mark or "currency in kind" (usually coal or rye) into banking. Although the Berlin Bankers' Association has formally condemned the keeping of gold-mark accounts, mainly on the ground that this would compel the banks to put part of their resources into dollars, such accounts have made a certain progress; a "gold-bank" has been started, gold-mark savings accounts have been regulated by the Prussian Government, and "currency in kind savings" are recognised, and a Rye Renten Bank exists at Berlin. This development arose inevitably out of the issue of loans in gold-marks or in rye or coal currency. The inconveniences for trade of the simultaneous circulation of several currencies are not as great as is generally believed, and the movement seems to prepare the way for the extinction altogether of the old currency, leaving the question of secured debts, mortgages, bonds, &c., to be regulated by legislation.

The reports for 1922 of the biggest Berlin banks have not yet appeared. Judging by those reports which have appeared, the coming reports will show enormous increases in all transactions and in nominal profits. Owing to the great industrial activity, to the wild Bourse boom accompanying the mark depreciation, and to the flood of emissions due to the same cause, banking has been very profitable. Dividends are expected to be 100 per cent. or more. The Berliner Handelsgesellschaft, the first bank to publish its report for 1922, has declared a 200 per cent. dividend, against 16 per cent. in 1921. This bank is in an exceptional position because it is working still with its pre-war capital, but in other respects the following figures of its activities are probably typical of all the bigger banks:—Gross profits 2,654,662,398 marks against 151,558,922 marks in 1921, of which 1,685,979,174 marks (against 67,984,329 marks) came from bill and exchange transactions; net profits 680,030,988 marks, against 61,967,725 marks. Administration cost was 1,724,195,569 marks against 53,080,830 marks, and taxes 250,435,841 marks against 15,240,837 marks. The liabilities of the bank on December 31st were 27,598 millions against 4,294

millions, or 13,827 per cent. of capital and reserves, against 2,081 per cent. Liquid assets were 18,169 millions, or 65.70 per cent. of liabilities, against 3,104 millions, or 66.10 per cent. The capital of the bank remains at 110 millions, reserves being 90 millions, against 50 millions at the close of 1921. Despite recent big increases, the capitalisation of the other big banks bears an ever smaller proportion to the totals of business done. One large Berlin bank reports that its expenditure in two days exceeds its whole share capital. The banks are still heavily burdened with information work for the Government, but they were relieved by partial restoration last winter of secrecy. They lose badly on dealings in bonds and mortgage bonds, which have ceased to represent any appreciable values, but which cost as much as big accounts to administer; and there is a growing agitation for the buying back of the small units of war and other loans, the whole capital value of which would sometimes only pay for a postage stamp.

Increases of capital have continued. The motive is partly to have greater resources, though even the biggest capitalisation increases are insignificant in proportion to the increase in the nominal value of business done. Partly the reason given is the need for protecting the banks against foreign control. This is achieved either by giving the new shares double, treble, or even five-fold voting power, and ensuring their being in firm hands, or by issuing the shares to a syndicate. The capitalisation of the chief banks at present is:—

	Mln. M.		Mln. M.
Deutsche	1,500	Darmstädter und	
Dresdner	1,100	National	600
Disconto	900	Mitteldeutsche Kredit ..	510
Commerz	700	Berl. Handelsges.	110

Some provincial banks fell, in regard to capital, into the first rank. The Barmer Bankverein has a capital of 1,000 millions; the Allgemeine Kreditanstalt of Leipzig 800 millions, and the Bayerische Vereinsbank lately decided to raise its capital to 870 millions. The Dresdner Bank doubled its capital in January, giving as one reason the need for protection against foreign control. The agitation for protection was greatly strengthened last autumn when Herr Stinnes got into the Berlin Handelsgesellschaft in connection with a deal by a foreigner. Stinnes has been given two seats in the control board of the bank. The Mitteldeutsche Kredit-

bank decided to treble its capital in November; in the same month the Disconto to raise its capital from 600 to 900 millions. The Deutsche Bank's last increase, from 800 to 1,500 millions, was announced in February. Many mortgage banks and unions of such banks have also increased their capital, the Gemeinschaftsgruppe deutsche Hypothekenbanken having doubled its capital last month in connection with a plan of further expansion. Quotations of bank shares have risen very much:—

	Dec. 30, 1921.	Dec. 12, 1922.	April 5, 1923.
Deutsche	507 ..	7,800 ..	31,750
Dresdner	398 ..	3,100 ..	20,000
Disconto	430 ..	3,800 ..	22,250
Darmstadt und National ..	303 ..	2,400 ..	22,100
Commerz und Privat	302 ..	1,800 ..	18,500
Berl. Handelsge.	460 ..	16,900 ..	82,000
Mitteldeutsche Kredit	303 ..	1,500 ..	10,250

The fusion policy continues, though there has been nothing as important as the union of the Darmstadt and National Banks, which took place in 1921. Last year chiefly brought combinations between Berlin and provincial, in particular South-German, banks. One such deal was between Mendelssohns and the Bavarian Vereinsbank, which had already associations with the Bavarian Handelsbank and the Nürnberg Vereinsbank. The Deutsche Bank extended its influence in the same direction by fusing its dependent, the Rhenish Creditbank with the Pfälzische Bank, and the Commerz und Privatbank fused altogether with the Chemnitz Bankverein and certain associated banks, doubling its capital in this connection. After this deal the Commerz und Privatbank controlled or was associated with 8 provincial banks with 178 branches, and a capital (November, 1922) of 185,500,000 marks. The Freiberg Bankverein, which is among the eight, is to be wholly taken over by the Commerz Bank. The Darmstadt und National Bank is reported to be negotiating for union with Königsberg and Danzig banking institutions with interests in East Europe. Last month a union of South German mortgage banks, under the title "Arbeits-

gemeinschaft süddeutscher Hypothekenbanken" was founded on lines similar to the combinations of mortgage banks in North and Central Germany.

The chief new foundation in recent months is the Thuringian State Bank, for whose liabilities Thuringia is responsible. This is an outcome of the union of the small Thuringian States. In 1922 70 banks were founded with capital of 1,222,792,000 marks. The majority are small institutions, and many of them have no reason for existence except the inability of the big banks to handle their enormous business rapidly. The new banks appeal to the floating and speculative public, especially for exchange transactions. In Berlin, with the support of important provincial banks, the Standard Bank has been formed with 500 million marks capital, and in Munich is another new bank of importance, the Sued-Nord Bank A.G., capital 525 million marks. This bank proposes to increase its capital to 1 milliard, and to open branches in Berlin and Mannheim.

Of the position of the banks from the point of view of security, little can at present be said. Most experts agree, and nothing has happened to shake their opinion, that the banks are in a sound condition, and would be able to meet any demands caused by a possible political or other crisis. Currency depreciation does not in itself make for insecure banking, and the worst banking crises of late have been in countries with good and almost stable currencies. Such part of the German banks' assets as are in Treasury bills are ideally liquid, and the banks' claims upon trade and industry seem to be well secured by the steady rise in values, which has practically extinguished bankruptcies. Naturally in this process there is a constant loss of substance, but it does not fall upon the banks, which can, much better than some institutions and individuals, work on the official principle that "a mark is a mark." Any serious price-fall due to a radical change in foreign exchange tendencies, or to an incautious currency reform, would provide a new test for the soundness of the banking system.

BANK OF ENGLAND.

The Bank of England received its first charter in 1694. Its capital is now £14,553,000, in fully-paid stock, which is a "trustee" security. For each year from 1904 to 1913 the dividend was 9 per cent., paid in equal instalments, free of income-tax, in April and October. From April, 1914, the dividend has been at the rate of 10 per cent. per annum, less income-tax. The price of the stock on April 30th, 1923, was 255, giving a yield of £4 10s 3d per cent. The

authorised note issue against securities is now £19,750,000, having been increased by £1,300,000 in February last in accordance with an Order in Council. The Government Debt of £11,015,100 forms part of the security. All notes issued in excess of this amount must be covered by an equal amount of gold, except in so far as the Currency and Bank Notes Act, 1914, abrogates the provision of the Bank Act, 1844, in this connection.

THE National City Bank of New York and the International Banking Corporation are equipped to supply every banking facility for international trade. They buy and sell exchange, and are prepared to grant commercial letters of credit for purchases in any part of the world.

The Bank also offers highly developed trust services for individuals, corporations, estates, and for insurance companies and like institutions. It acts as executor and trustee of estates, custodian of securities, agent in the management of property, and as fiscal agent for foreign governments and foreign corporations.

INVESTMENTS

THE NATIONAL CITY COMPANY

[Affiliated with THE NATIONAL CITY BANK OF NEW YORK]

Head Office: 55 WALL STREET, NEW YORK · Offices in 50 Leading American Cities
Foreign Offices: LONDON GENEVA TOKIO Canadian Offices: MONTREAL TORONTO

THE National City Company, through its offices and affiliations at home and abroad, offers exceptional facilities for the purchase or sale of Dollar Bonds and Short Term Notes. The London Office at 34, Bishopsgate, which has an extensive statistical department and is in daily cable communication with New York, invites enquiries from European investors relative to American securities.

Continued on page 1092.

The most desirable form of INVESTMENT is one in which the CAPITAL is guaranteed, and one which gives an adequate return on the money invested.

AN ENDOWMENT ASSURANCE IS AN INVESTMENT OF THIS NATURE

The capital is assured from the moment the first premium is paid, the benefits are secured by an annual charge on income, and the return is always adequate. Rebate of income tax at half the standard rate is allowed on premiums paid up to 1/6th of assessable income and on a premium not exceeding £7%

CURRENCIES.By R. A. LEHFELDT, D.Sc., Professor of Economics in the
University of the Witwatersrand, Johannesburg; Author of
"Gold Prices and the Witwatersrand." 6s. Just Published

HISTORY OF THE BANK OF ENGLAND.

By A. ANDRÉADES, Professor of Political Science in the
University of Athens. Preface by H. S. Foxwell, M.A., F.B.A.,
Professor of Political Economy in the University of London.
12s. 6d.Banker's Magazine: "This fascinating book should be on the
bookshelf of every student."

WEALTH AND TAXABLE CAPACITY

By SIR JOSIAH STAMP, K.B.E., D.Sc. Being the Newmar-
ch Lectures of 1920-21 on Current Statistical Problems in Wealth
and Industry. Second Edition. 7s. 6d.In the House of Commons, during the Budget Debate of April, 1922,
this book was much referred to.Economist: "The statement that taxation to-day is heavier than the
nation can bear, has been in constant use during the last few months
as the phrase is highly relevant to the Budget discussion,
we would commend to our readers Sir Josiah Stamp's discussion of this
subject in a book recently published."

2 & 4 GT. SMITH ST., WESTMINSTER.

75th Year.

THE
CANADA LIFE
ASSURANCE COMPANY

A GREAT RECORD FOR 1922:

Business in Force ... £74,174,217 Increase £8,402,277
Total New Business
Paid for in Year £13,257,687 Increase £505,053

LATEST BALANCE-SHEETS OF COLONIAL AND FOREIGN BANKS HAVING LONDON OFFICES.

(1) COLONIAL BANKS.

AFRICAN BANKS.

ANGLO-EGYPTIAN BANK, LIMITED.

The report presented at the meeting, held on November 28, 1922, states that the gross profits for the year ended August 31st last, including adjustment of taxation, and after making full provision for all bad and doubtful debts, are £436,576, and deducting the expenses, amounting to £316,877, there remains a balance of £119,699 net profit for the year. To this amount must be added £52,304, the balance carried forward on the August 31, 1921, making £172,003, which the directors propose shall be dealt with in the following manner:—Contribution to staff provident fund, £7,270; interim dividend of 5s per share paid, free of income-tax, June 1st, £30,000; dividend of 10s per share, free of income-tax, to be paid on December 1st, making, with interim dividend 15 per cent. for the year, £60,000; written off premises account, £22,000; balance carried forward, £52,733—£172,003.

BALANCE-SHEET—August 31, 1922.

NATIONAL BANK OF EGYPT.

The report presented at the meeting, held in Cairo, on March 19th, states that the gross profit for the year ending December 31, 1922, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to £906,870. After deducting from this sum, for directors' fees, £11,937; for current expenses, £302,830; £404,770, there remains £502,094. In conformity with article 40 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000. After this statutory distribution there remains £382,094. Adding to this the balance brought forward from last year, £180,920, the amount available is £563,014. The directors consider it prudent to allocate to special reserve for contingencies a sum of £50,000, which leaves £513,014. From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb £330,000, and leave a balance to be carried forward of £183,014. The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share. An interim dividend of 8s having been paid on September 4, 1922, the balance remaining to be distributed will be £1 2s per share.

BALANCE-SHEET—December 31, 1922.

196, STRAND, LONDON, W.C.2

BANK OF NEW ZEALAND.

The report for the year ended March 31st last states that the profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, for special grant to increase pension benefits, also for bonus to staff, are £703,242. From this has to be deducted interest on guaranteed stock, £21,199—£682,043. Of this sum the directors have allocated in reduction of bank premises and furniture, £50,000; leaving balance of profit for the year £632,043, to which has to be added balance brought forward from last year, £361,276—£993,319, from which there has been paid:—Dividend on preference "A" shares, £50,000; interim dividend on preference "B" shares, £21,875; interim dividend on ordinary shares, £131,250—£203,125; leaving available for distribution £790,194. This the directors propose should be disposed of as follows:—Dividend on preference "B" shares, making £62,500 for the year, equal to 2s per share, £40,625; dividend on ordinary shares, making £300,000 for the year, equal to 2s 8d per share, £168,750; transfer to reserve fund (making reserve fund £1,675,000), £150,000; leaving balance to be carried forward £430,819—£790,194.

BALANCE-SHEET—March 31, 1921.

BANK OF VICTORIA, LIMITED.

The report for the year ended June 30, 1922, shows:—Balance brought forward from June 30, 1921, £35,845; net profits for the past year, £179,930—£215,775; interim dividend at 9 per cent. for half-year July to December, 1921—preference shares, £18,754; ordinary shares, £47,756—£66,510; to officers' provident fund, £3,000—£69,510; balance, £146,265. The directors recommend that the remaining profits for the year be apportioned as follows:—To dividend on preference shares, at 9 per cent. per annum, for half-year ending June 30, 1922, £18,754; to dividend on ordinary shares, at 9 per cent. per annum, for half-year ending June 30, 1922, £47,756—£66,510; to reserve fund (making it £650,000), £50,000; to balance to be carried forward, £29,755—£146,265.

Australian Mutual Provident Society

Estab. (A.M.P.)

1849.

THE LARGEST BRITISH MUTUAL LIFE OFFICE.

SOME FIGURES from the SEVENTY-FOURTH ANNUAL REPORT, sent 31st DECEMBER, 1922

ORDINARY DEPARTMENT.

NET NEW BUSINESS.—25,106 Policies Assuring £10,767,776, with Annual Premiums of £336,580.
DEATH CLAIMS.—£1,414,833, including Bonus Additions of £461,914. This is only 53 per cent. of the "Expected."
MATURITY CLAIMS.—£1,152,395 including Bonus Additions of £315,475.
ACCUMULATED FUNDS (including Industrial) have increased by £2,736,997 and amount to £49,448,175.
WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £13,660,000.
THE DIVISIBLE SURPLUS (after strengthening the Reserves by the application of £175,000) is £1,756,738, which represents a return of 47.3 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £3,000,000.
THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 7s 3d per cent. There is therefore an Interest Margin of nearly 2½ per cent.
THE EXPENSE RATE (excluding Taxes) was only 12.95 per cent. of the Premium Income. This is only about two-thirds of the provision for expenses included in the Premiums.
THE TOTAL ASSURANCES issued in 74 years amount to £227,702,775, of which £122,607,257, or 53.8 per cent., are still in force.

PROFIT AND LOSS ACCOUNT.		
Dr.	Cr.	£
Interim dividend paid October 3, 1922	Balance brought forward	31,181
Balance	Net profits for the year ended December 31, 1922, after deducting expenses of management and general charges at head office and branches, and providing for bad and doubtful debts, depreciation, income-tax, and corporation tax	120,320
		151,501

The report presented at the meeting on March 21st is as follows:—The net profits to December 31, 1922, after providing for contingencies and including the balance brought forward from the last account, as shown by the annexed statements, amount to £151,501. An interim dividend at the rate of 4s a share was paid in October last, absorbing £40,000, and the directors now recommend a final dividend of 5s a share, less income-tax at 3s 9d in the £ (after allowing for relief in respect of Indian taxation). They propose to add £20,000 to the reserve fund, which will then stand at £320,000, and to write £10,000 off premises account, leaving a balance of £31,501 to be carried forward to the next account.

PROFIT AND LOSS ACCOUNT.

Dr.	Cr.	£	£
Ad interim dividend at the rate of 20 per cent. per annum for the half-year ended June 30, 1922	200,000	Balance brought forward	164,096
Expenses of management at head office and branches	580,187	Gross profits for the year ended December 31, 1922, after providing for all bad and doubtful debts	1,115,347
Balance	499,256		1,279,443

The report for the year ended December 31st last states that the net profits for the year, after providing for all bad and doubtful debts, amount to £535,160, and adding £104,096 brought forward, the available total is £639,256. An ad interim dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 10th last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,700,000. They propose to write £20,000 off house property account, and to add £20,000 to the officers' pension fund, leaving a balance of £159,256 to be carried forward.

THE TATA INDUSTRIAL BANK, LIMITED.

BRITISH BANK OF SOUTH AMERICA, LIMITED.

The report for the financial year ended December 31st last states that the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and making ample provision for bad and doubtful debts and contingencies, amount to £525,076; this, with the balance of £105,897 brought forward from the previous year, makes £630,973. After deducting all charges of the head office and branches, amounting to £399,175, and Government taxes in Brazil and the River Plate, £15,017, there remains £216,781 available. Out of this sum the directors have transferred £10,000 to pension and benevolent fund, which, with interest at 5 per cent., now amounts to £153,732. A dividend on account of 10s per share, amounting to £50,000, was paid in September last, and it is recommended that a further dividend of 10s per share, amounting to £50,000, be now declared, payable on May 4th, making for the year a distribution of 20s per share, or 10 per cent., subject to income-tax, on the paid-up capital of the bank of £1,000,000. After making this transfer and paying this dividend, there will remain the sum of £106,781, which the directors propose to carry forward.

BALANCE-SHEET—December 31, 1922.

The report presented to the meeting, held on March 28th, states that the balance shown by the profit and loss account for the year 1922 amounts to £41,016. Deducting the additional remuneration of the directors in accordance with the articles of association, viz., £2,051—£38,965, and adding the undivided balance carried forward from 1921,

£27,724, a total profit of £66,689 becomes available for allocation. The directors recommend, as last year, the distribution of a dividend of 4 per cent., free of income-tax, absorbing £40,000, and that the balance of £26,689 be carried forward to new account—£66,689.

PROFIT AND LOSS ACCOUNT.		£
Dr.	Cr.	
Provision in respect of interest charged to debtors but unpaid	30,022	
Balance, being profit carried to balance-sheet	39,412	
	69,434	69,434

The report presented at the meeting on April 9th states that the profit and loss account for the past year, during which conditions were specially unfavourable, shows a net balance of profit amounting to £39,412. The provision made last year by the writing down of capital, for anticipated losses, and for depreciation in the value of investments in subsidiary companies, has proved to be insufficient. The unsettled political and economic conditions in the Near East have been prejudicial to the operation of those companies, and have retarded the resumption of normal and profitable business after the crisis of 1921. The directors now find it necessary to recommend the writing down of a further £2 10s on each of the 200,000 shares of the original issue. This further provision is in respect of depreciation of assets existing in 1921, and no part of it is required in connection with the business of the past year.

COMMERCIAL BANK OF THE NEAR EAST, LIMITED.

The company was incorporated on October 17, 1922, and the report for the period ended December 31, 1922, shows an excess of expenditure over income of £396, which may be considered as part of the cost of the organisation and development of the business.

COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

The report for the year ending June 30, 1922, is as follows:—Having regard to the unsatisfactory state of

trade and the adverse conditions which have prevailed during the period covered by this balance-sheet, the directors, after carefully reviewing the position, consider it advisable to create a "contingency account" as a provision for bad and doubtful debts by transferring the amount of £77,750 from reserve fund and crediting thereto £60,000 from profit and loss account.

BANKING DEPARTMENT

Current Accounts are opened for Shareholders and Customers or Friends introduced by them. Interest at the rate of 2½ per cent. per annum, credited annually, is allowed upon the minimum monthly balance, provided it is not under £20. No commission charged for keeping Accounts, but the opening lodgment must not be less than £20, nor the minimum balance less than £10.

Money is received on Deposit in sums of £1 up to £500 subject to seven days' notice of withdrawal. Amounts over £5 0 are received on special terms as to notice. Interest is allowed from date of deposit to date upon which withdrawal notice expires, and is credited or paid half-yearly, viz., 30th June and 31st December.

The Directors reserve to themselves the power to return Deposits or change the rate of interest.

Country and Foreign Drafts, Dividends, Coupons, Annuities, Pensions, etc., received and placed to credit. Drafts, Circular Notes and Letters of Credit issued.

American and Canadian Express cheques cashed and Foreign money exchanged.

HAMBROS BANK, LIMITED.

The report to be submitted at the meeting on May 24th states that, after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, income-tax, and corporation profits tax, the accounts for the year ending March 31, 1923, show a profit of £359,088, to which falls to be added the balance brought forward from last year of £79,413, making an available total of £438,501. After setting aside the sum of £150,000 to contingency reserve account, £25,000 to pensions fund,

and allowing the sum of £60,000 for the interim dividend of 6 per cent., free of income-tax, paid on October 23, 1922, the directors now recommend the payment of a further dividend of 12 per cent., making a total of 18 per cent. for the year, free of income-tax, and that the balance of £83,501 be carried forward.

BALANCE-SHEET—March 31, 1923.

Paid on August 8, 1922, of £3 per share on 160,000 shares = £480,000 at 2s 7½d ..	Amount of net profits for the year ending December 31, 1922, after making provision for bad and doubtful debts and contingencies, deducting all expenses and interest paid and due
Balance to be appropriated ..	
—£11 dividend of £3 per share on 160,000 shares = £480,000 at 2s 2½d = £4,306,542; bonus of £2 per share on 160,000 shares = £320,000 at 2s 2½d = £2,871,028	
Transfer to silver reserve ..	
Transfer to bank premises account	
Balance forward to next year	

The report to the meeting held on February 24, 1923, states that the net profits for the year ending December 31, 1922, including \$3,331,778, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$16,264,182. The directors recommend the transfer of \$1,000,000 from the profit and loss account to credit of the silver reserve, which will then stand at \$24,500,000. They also recommend writing off bank premises account the sum of \$1,000,000. After making these transfers, deducting the interim dividend of £3 per share, paid on August 8th last—viz., £480,000

The report for the year ended January 31st last shows an available balance of £539,976 (including £498,622 brought forward from last year). An interim dividend of 10s per share, amounting to £75,000, was paid in October last. The directors now recommend a further payment of 10s per share, being a dividend at the rate of 10 per cent. per annum, less income-tax. The above payments will absorb £150,000, leaving a balance of £389,976, with which it is proposed to deal as follows:—£200,000 to special contingency account, and £189,976 to the credit of profit and loss new account.

SWISS BANK CORPORATION.

The report presented to the meeting held at Basle on March 23rd states that, after deduction of expenses and taxes and making provision for bad and doubtful debts, &c., the net profit for the year ended December 31, 1922, amounts to £421,084. The board propose to allocate to pension fund £20,000, to pay a dividend of 5 per cent. on the paid-up

capital (according to article 36 of the articles of association), £240,000—£260,000, leaving a balance of £161,084, less statutory participation of directors, £16,108; the remainder, £144,976, together with the amount carried forward from last year, £39,285—£184,261—is at the disposal of the general meeting; and the board propose to pay a further dividend of 3 per cent. (making in all 8 per cent. for the year 1922), which will absorb £144,000, and to carry forward £40,261.

ORGANISATION.

Nippon Kwangyo Ginko (The Hypothec Bank of Japan) is a joint stock company established by Law No. 82, of 1896. The Bank has a capital of Yen 59,734,750 (£5,973,475), divided into 1,194,695 shares of Yen 50 (£5) each. This amount may be increased, however, subject to the approval of the Government, by the decision of a general meeting of shareholders. The Bank is incorporated for a period of one hundred years from the date of its establishment, 1897; but this period may be extended, subject to the approval of the Government, by the decision of a general meeting of shareholders. (Chapter I., Law of Nippon Kwangyo Ginko.)

OFFICERS.

The Governor and the Vice-Governor are appointed by the Government for a term of five years from among shareholders owning at least four hundred shares. The Managing Directors and Directors are appointed by the Government for a term of five years from among shareholders owning at least two hundred shares who have been elected as candidates at a general meeting of shareholders.

BUSINESS OF THE BANK.

The business of the Bank is as follows:—

- (1) To make loans, on the security of immovable property, redeemable in annual instalments within a period of fifty years.
- (2) To make loans redeemable in one sum within a period of five years on the security of immovable property or fishery rights.
- (3) To make loans, on the security of "the mass of property" belonging to factories, light railways or tramways, redeemable in annual instalments within a period of fifty years, or redeemable in one sum within a period of five years.
- (4) To make loans redeemable in annual instalments, or in one sum without security to prefectures, counties, cities, towns, villages and other public bodies organised by law.
- (5) To make loans without security to Arable Land Readjustment Associations, Co-operative Societies, Fishery Associations, Forestry Associations, Livestock Associations, or Unions thereof.

The rate of interest on all loans is determined by the Governor within the limits approved by the Minister of Finance.

The Bank is also assigned by the Government to make special loans to the public bodies and associations mentioned above (clauses 4-5), at particularly low rates of interest, for which special funds are furnished to the Bank from the Treasury.

To make loans of every kind mentioned above through the Agricultural and Industrial Banks, the Bank of Taiwan, the Colonial Bank of Hokkaido, the Industrial Bank of Chosen and the Oriental Development Company, acting as sureties.

- (7) To make loans redeemable in annual instalments, against loans made by Agricultural and Industrial Banks, on the security of mortgages created by said banks.
- (8) To take up debentures of Agricultural and Industrial Banks, the Colonial Bank of Hokkaido and the Industrial Bank of Chosen.
- (9) To receive deposits and to apply them to loans redeemable in one sum as mentioned above, and to the advancement of loans on, or the purchase of, negotiable instruments, and to the discounting of bills drawn against agricultural, industrial and aquatic products.
- (10) To act as the depositary of public bodies.
- (11) To engage in other kinds of business prescribed for this Bank by Law. (Chapter IV., Law of Nippon Kwangyo Ginko.)

DEBENTURES.

In order to carry on its business, the Bank is authorised by law to issue special Debentures (Kwangyo-Saiken), with or without premiums, up to an amount not exceeding fifteen times its paid-up capital, provided such debentures do not exceed the combined total value of loans redeemable both by annual instalments, and in one sum and debentures of Agricultural and Industrial Banks and other debentures actually taken up by the Bank. The debentures are issued in denominations of Yen 10 (£1) and upwards, and bear interest at the rate of from 3.6 to 7.2 per cent. per annum. They are redeemed by semi-annual drawings within a period fixed in the case of each issue, but not in any case exceeding fifty years. Premiums are paid on 10 yen (£1) and 20 yen (£2) debentures, and are divided into several classes, the highest being Yen 5,000 (£500), and the lowest Yen 3. (Chapter V., Law of Nippon Kwangyo Ginko.)

GOVERNMENT SUPERVISION.

The Minister of Finance exercises a general control over the business operations of the Bank, and may suspend such operations as he deems contrary to Laws or Ordinances, or to the Articles of Association of the Bank, or injurious to the public interest. The Bank must obtain the sanction of the Minister of Finance in making any alteration in its Articles of Association, and in fixing the rate of dividend to be distributed among its shareholders.

The Minister of Finance appoints special Government officials to supervise the business operations of the Bank. (Chapter VII., Law of Nippon Kwangyo Ginko.)

AMALGAMATION WITH AGRICULTURAL AND INDUSTRIAL BANKS.

In April, 1921, the Law authorising the Bank to amalgamate the Agricultural and Industrial Bank of each prefecture was passed. By March, 1923, nineteen such banks came under the vast organisation of the Bank, and are already conducting business as branches of the Bank.

Foundations
of Fame

Just 800 years ago a jester turned pilgrim and crusader—one Rahere—built the splendid London church of St. Bartholomew the Great, Smithfield, and founded the hospital famous the world over as "Bart's."

His effigy is on his tomb in his church, but he needs no other monument than the great work of social service he instituted. His work speaks for him.

It has been our aim to establish the name Chatwood with equal security and to create that which is as nearly perfect as can be, in design, material and craftsmanship. We are proud of the general verdict that we have succeeded.

The Chatwood Security is the result of 70 years' unremitting endeavour to attain perfection in its own field—and stands to-day as the nearest approach to that intention.

THE NEW CHATWOOD SAFE BOOK

The guiding factor in the preparation of this book has been a desire to convey something of the standard of quality of work and high ideals of the firm in the hope that their worth may be gauged in some measure by their aims as well as their achievements. It contains 58 pages, many in full colour, and includes the fullest particulars of each model of The Chatwood Safe and Strong Room. A complimentary copy will be sent gratis on receipt of a postcard.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
May 30. May 31.

Stock Exchange markets have been almost as variable this week as the weather. Buyers and sellers were alike capricious. The tone of the House changed literally from hour to hour, with sunshine, depression, cheerfulness, and heaviness following each other in quick alternation. Minor financial difficulties are known to have arisen in Glasgow, Mincing Lane, and other directions. The "hammer" fell in the House for the first time in nine years. These have played their part in the sentiment rather than in the business of the House. The week winds up with a more confident tone than prevailed before the Settlement started, and members separated on the eve of the Whitsun holidays with pious expressions of hope that business, so quiet this week, would be better after Whitsun.

Conversion Loan has assumed the place of leadership in the stock markets which in bygone days used to be occupied by Consols, and later by the 4½ per cent. War stock, which in its turn was superseded by the present 5 per cent. War Loan. The latter has come to be regarded as a short-dated security, and most of the speculation in gilt-edged stock seeks Conversion for its expression. The price gave way sharply, to recover with equal abruptness, the Government supporting the market. This had the effect of reintroducing strength into other British Government securities. New Zealand's success in getting her four million pounds in 4 per cents. at 92 evidenced the public's willingness to take stock even so high-priced as this. Underwriters were left with 51 per cent. of the new Indian Government loan, but dealing in the scrip started yesterday at ½ premium.

French bonds, after a fall, picked up again later in the week, taking French Railway bonds along with them. Germans are lower. Several of the Chinese Railway bonds improved, and Brazilians assumed a better complexion. A bad break in Rio Tintos led to gossip of financial difficulties in Paris, but a subsequent recovery, on a rise in copper, restored most of the previous loss.

In the Home Railway market, the carry-over revealed an unexpected bareness of supply, and prices responded to the easing-off of contango rates by a fairly general advance, the Scottish stocks participating. Argentine Rails were sold by tired holders, whose places, however, were taken by a fresh set of purchasers, and the market left off with a good tone, this dividend hopes being responsible for the cheerfulness in this department. Other foreign railway stocks are steady, United of Havana recovering briskly from its recent flatness.

Rubber shares are stagnant and lower, in consequence of a further shrinkage in the price of the produce. In the oil market, the favourable effect produced by a fresh drop dividend has been neutralised to some extent by a fresh drop in Mexican Eagles, due to dividend fears. This influenced Shells, and served to keep the public away from the market. The speculative counters have undergone sharp fluctuations, fairly general liquidation on the part of weaker holders being followed by prompt recoveries after the contango account had been arranged. A number of tea shares are materially better, by reason of a batch of first-rate dividends declared by some of the leading companies. In the textile market, the changes are narrow and irregular. Shipping shares are quiet. The banking market shows no particular alteration except in some of the Colonial and Foreign shares, which have become rather more difficult to sell. The insurance group weakened a little after its long and substantial rise. Shares in the Stores and Hotel companies are fairly well maintained, though Harrod's Buenos Aires issues gave way on disappointment at the dividend on the preference shares being postponed again. Siedend and other electric manufacturing shares lean to the heavy side, in consequence of the ordinary, and six months' preference dividends, being passed by the first-named company. The cable group is hard, and Marconis managed to give a better account of themselves. A few rises in brewery shares and erratic movements in newspaper issues served to keep their markets interesting. Most of the new issues have been readily taken, and it is known that half-a-dozen fresh prospectuses are to be launched immediately after the holidays.

Kaffirs were as a result of shares being offered for Cape account on a dull London market. A break in Selukwes was the feature amongst Rhodesians. Diamond shares have been swaying according to the Paris mood of the moment. Tin fell violently, and an upward turn on Thursdays failed to restore losses incurred by tin shares. East Pools make a bright exception, good developments being reported from the property. Russians went up a little on account of the political outlook being read as clearer. Professional dealings were mainly responsible for narrow movements amongst Mexican mining shares.

We are officially informed that Mr. John William Haselden and Mr. Sydney Cornelius Blair Levett, trading as J. W. Haselden and Co., have been declared defaulters upon the Stock Exchange.

NEW ISSUES.

1916	216,532,137			

Government of India 4½ per Cent. Stock.—This is a further issue, at £90 per cent., of £20,000,000, which will be consolidated with the existing India 4½ per cent. stock. The proceeds will be utilised for Indian railway and general purposes, and if not previously redeemed the stock will be repaid at par on May 15, 1955, the Secretary of State for India reserving, however, the right to redeem the loan at par on, or on any half-yearly interest date after, May 15, 1950. It will be recalled that the Indian Government proposed to spend £100,000,000 during a period of five years upon its railway systems, and this issue is the third of a series of which part of the proceeds are to be devoted to this specific purpose. The prospectus, it should be noticed, states that the proceeds of the loan may also be utilised for "general purposes." The yield of the last issue, which was also for £20,000,000, calculated at the latest date of redemption and allowing for profit at maturity, worked out at approximately £5 10s per cent. The present issue shows a return of £5 per cent. The previous issue to these two loans was for £12,500,000, and gave a yield of £6 1s per cent., but this was a short-dated loan running for but ten years, while the present issue is redeemable at the earliest in 1950 and at latest in 1955. Thus, when the comparatively generous offer of the 7 per cent. Indian loan and the subsequent successes of the various issues following are considered, it must be admitted that the Indian Government has been able to take considerable advantage of cheaper money rates. Assuming that the political risks in India are not of serious moment, and that the Budget deficit is only a passing phase, the issue, when considered in relation to yields of home gilt-edged securities, looks cheap at the price offered.

John Bright and Brothers, Limited.—Authorized share capital is £1,050,000, divided into 1,050,000 ordinary shares of £1 each; issued £972,000, all held by Crosses and Winkworth Consolidated Mills, Limited. Loan capital is £1,000,000, and the whole of this is now offered for sale in 6 per cent. guaranteed first mortgage debenture stock at 95½ per cent., repayable on June 1, 1963, at 103 per cent., or redeemable in whole or part on any interest date on six months' notice at 105 per cent. Crosses and Winkworth, Limited, guarantee the stock as to principal, interest, and premium. The stock, which is limited to £1,000,000, will be secured by a trust deed giving a specific first charge on the company's

fixed assets and a first floating charge on other assets. The company is restricted from creating any charge ranking in priority to or *pari passu* with this stock, "except upon its raw materials or upon any documents of title to goods and merchandise in the ordinary course of business." The business consists of spinning, weaving, manufacturing, &c., and was established in Rochdale 114 years ago. Its properties, machinery, and plant were valued in January, 1921, at £993,528, but these assets now stand in the books at £605,025. Cash in hand, investments, trade debts, &c., amount to £867,502. After deducting creditors, the total of liquid assets is £696,947. Profits are given for five years. The security offered as first mortgage appears to be inadequate. With reference to the guarantee by Crosses and Winkworth Consolidated Mills, Limited, it would be interesting to know the full terms of the document. Is this simply an open guarantee, or is the guaranteeing company to be restricted in its commitments?

Smith, Bulmer and Co., Limited.—This company has been formed to acquire the business of Sir James William Bulmer, carried on under the title Smith, Bulmer and Co., worsted spinners, wool combers, and top-makers, at Halifax and Bradford. The share capital is 600,000 ordinary shares and 600,000 7 per cent. cumulative preference shares, all of £1 each. Of the ordinary shares, 521,040 will be allotted to the vendor in part payment of the purchase consideration, and 304 to three directors and the subscribers to the memorandum. The balance of 78,656 shares will remain unissued. Of the preference shares, 500,000 are offered for subscription at par, and applications for 100,000 have been made by directors and their friends. Founded in 1912, the original company owns five worsted spinning mills, a combing mill, and a wool warehouse. Properties, plant, &c., are valued at £756,765, stock-in-trade at £940,569, and debts at £376,516. Including investments of £45,750, the total is £2,119,500. Creditors and loans amount to £1,568,346, leaving a balance of £551,244. The purchase consideration of £551,244 is to be satisfied as to £521,040 by the issue of 521,040 fully-paid ordinary shares of £1 each, and as to £30,204 in cash. Profits average for the past four years £119,955, but they are taken before charging income-tax, depreciation, vendor's salary, interest on capital, borrowed moneys, &c., although after charging £104,806 renewals and repairs and after writing off bad debts £166,607. The articles provide that no mortgages on the existing freehold and leasehold premises, and no debentures or debenture stock, shall be created unless approved by a three-fourths majority of the preference shareholders, and that until a reserve fund of £126,000 has been created the dividends on the ordinary shares shall not exceed 5 per cent. Sir W. Bulmer will become governing director for ten years, with powers to appoint other directors and fix their remuneration. The prospectus is frank and full, but the investment is evidently one for those who are intimate with the conditions of the industry. The list was closed on Wednesday.

South Wales Power Company, Limited.—Authorised capital £600,000; issued and converted into ordinary stock, £278,344. Issue of £600,000 first mortgage debenture stock at 98 per cent., repayable at 103 per cent. on June 1, 1950, or in whole or in part after June 1, 1927, at 103 per cent., at the option of the company. This is part of a total authorised issue of £750,000. The stock will be secured by a specific first mortgage upon 5 per cent. prior lien debenture stock of the South Wales Electrical Power Distribution Company to the nominal amount of the stock outstanding, with a margin of at least £276,000, and by a first floating charge on the undertaking, &c. There will be a cumulative sinking fund for redemption. Formed in 1907 as the Treforest Electrical Consumers Company, Limited, to manage and operate the South Wales Power Distribution Company, the company has financed and managed that concern up to the present time. It will be covenanted that no further prior lien stock of the distributing company shall be issued unless the same is to be deposited as security for the debenture stock of the operating company. Since its formation the South Wales Power Distribution Company has not paid a dividend on the ordinary stock, having so far been "operated mainly in the interests of its chief consumers." Under recent arrangements, 70 per cent. of the total consumers have entered into agreements running to December 28, 1923, at least, to take supplies at a price of over 50 per cent. above pre-war prices. Considering the past financial history of the enterprise, we do not consider this issue an attractive proposition. The issue was, however, underwritten on reasonable terms.

Delagoa Bay Development Corporation, Limited.—Share capital £166,300, divided into 267,400 ordinary shares, all issued and paid up, and 130,400 7 per cent. cumulative preference and participating shares, the first block of which is now offered. First debentures for £144,400 are still outstanding. This is an issue of £110,000 7 per cent. second debentures of £50 each at £37 10s per debenture, and 65,200 7 per cent. cumulative preference and participating shares of 5s each at par. The Delagoa Bay Development Corporation, Limited,

holds concessions covering the waterworks, electric tramways, electric light, &c., in Lourenco Marques, Portuguese East Africa. These, with sundry other assets, are valued in the balance-sheet of the corporation, as at June 30, 1922, at £513,617. The shares can be subscribed for only by shareholders in the corporation. The second debentures will be secured by a floating charge on assets, subject to a floating charge in respect of the first debentures, with the right reserved to issue £20,000 unissued first debentures. The second debentures will be repayable at par in 1939, and will be redeemable by a fund commencing in 1924, which is to be applied in redemption by purchase or by tender at not exceeding par, or by yearly drawings at par. The corporation may also redeem the debentures at par in whole or in part at any time on six months' notice. The rate of interest offered indicates the speculative nature of the debentures.

The National Bank of Australasia, Limited.—The board of directors propose to recommend at the annual general meeting to be held in Melbourne on the 30th inst., that 88,000 of the unissued preference shares be cancelled and a similar number of fully-paid £10 shares be created. It is intended to issue 41,750 of these new fully-paid £10 shares, and to make them available to shareholders on the basis of:—(a) One new share for every seven fully-paid £10 shares held on May 17, 1923; (b) one new share for every 14 ordinary shares of £8 each, paid up to £5, held on May 17, 1923. The price of issue of the new shares will be £13 per share. It is also proposed to recommend that 16,500 ordinary shares of £8 each, paid up to £5, be offered by tender to shareholders registered on May 17, 1923. Allotments will be at the discretion of the directors, but not more than 2,000 of these ordinary shares will be allotted to any one applicant. All premiums in respect of these issues will be credited to the bank's reserve fund.

Bank Holdings, Limited.—Authorised capital £100,000, divided into 400,000 shares of 5s. each, of which there have been issued 300,800 shares at par, in respect of which 5s per share has been paid. The company has been formed for the primary purpose of acquiring and holding stocks, shares, debentures, debenture stock, and other securities, and has acquired 150,000 shares of the Niederösterreichische Escompte Gesellschaft Bank of 400 Austrian gold crowns each for a cash payment of £75,000. Under its memorandum the company has power to borrow money, and under its articles of association this power is exercisable by the directors up to an amount at any one time outstanding not exceeding the authorised capital of the company. The borrowing powers have not been exercised. The preliminary expenses were estimated at £1,200, which has not been exceeded. No commission has been paid for subscribing or procuring subscriptions for shares. These details have been taken from an advertisement issued in accordance with the regulations of the Committee of the London Stock Exchange.

Stableford and Co., Limited.—Authorised capital £500,000, in shares of £1 each, of which 242,000 have been issued. First mortgage debentures, carrying interest at 6½ per cent., for £180,000 have been issued. These debentures constitute a specific first mortgage on the company's properties and fixed assets, and a floating charge upon all the other assets. Redemption is to be made, on or before January 1, 1948, at par, by annual drawings, commencing in 1924, power being reserved to repay whole or part, at par on six months' notice. The company was incorporated in 1900 to acquire the carriage and wagon builders at Coalville, Leicestershire. Surplus assets are valued at £407,449, fixed assets appearing at £234,820. Profits given from 1900 form a remarkable record. These details are taken from a Press announcement made to comply with Stock Exchange regulations, but they are information enough to indicate that the company has been sufficiently prosperous to give its full record.

The Union Oil Trust, Limited.—Authorised capital £135,000, divided into 188,000 ordinary shares of 5s each and 352,000 preferred ordinary shares of 5s each. Ordinary shares to the number of 187,464, and 352,000 preferred ordinary, have been issued, making the issued capital £134,866. The preferred ordinary shares are entitled to receive two-thirds of the profits available for dividend each year, until 100 per cent. in dividends in all has been paid, and after to a 20 per cent. non-cumulative dividend in priority to the ordinary shares. This company was incorporated as "The Union Oil Company of South Africa, Limited," on May 7, 1914. In June, 1915, South Africa, Limited, to prospect for oil in Cape Colony, in consideration of the allotment to the shareholders in the latter company of five ordinary shares of 5s each, credited as 4s per order "to acquire certain oil-bearing properties and productive wells in Galicia, Poland," it was decided to convert and issue £88,000 of the company's share capital into 352,000 preferred ordinary shares of 5s each, and to change the name of the company to "The Union Oil Trust, Limited." The purchase consideration for the Galician properties was £74,000 in cash.

This and other information is given in the Press in order to comply with Stock Exchange regulations. A speculative enterprise.

Batura Monguna Tin, Limited.—Nominal capital of the company is £150,000, divided into 750,000 shares of 4s each, now offered for subscription at par. The whole of the issue has been underwritten by the Niger Minerals Development Company, Limited, for a cash commission of 2½ per cent., and the underwriters have applied firm for 250,000 of these shares. The prospectus states that the company has been formed particularly to acquire and work 23 tin properties, and about 92 square miles in extent, in the Monguna, Mama, and Jos districts of Northern Nigeria. Tin concentrates so far developed amount to 2,800 tons, and are from an aggregate of one square mile. A highly speculative venture.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED.

SOUND FINANCIAL POSITION.

The annual meeting of the Liverpool and London and Globe Insurance Company, Limited, was held in the board room, at No. 1 Dale street, Liverpool, on Tuesday, the 15th instant, the chairman, Mr A. Kentish Barnes, presiding.

On moving the adoption of the report and accounts, the Chairman said that while they had had a good year in the life and accident departments, results in the fire and marine departments were still far from normal.

While declining to make any prophecy as to what the future had in store, Mr Barnes said that there were indications of a gradual emergence of trade and industry from its long period of depression, which gave rise to the hope that at their next meeting there would be a more cheerful tale to tell.

YEAR'S FIGURES.

Dealing with the figures for 1922, the Chairman remarked that there was a welcome cessation in the fall of premium income as a whole, and a considerable improvement in respect to losses during the latter months of the year by comparison with the earlier period thereof. The general ratio of expenses for the fire, accident, and marine departments at 40.04 per cent., compared with 40.77 per cent. in the preceding year, continued higher than in pre-war times, and required time for adjustment, whilst the taxation in foreign fields remained a cause of sustained anxiety.

FIRE DEPARTMENT.

Turning to the individual accounts, Mr Barnes said that in the fire department there had been a shrinkage in the net premium income of £176,784, reducing it to £4,230,020, but, on the other hand, the losses were down by £248,216 to £2,540,248. He reported a loss of £32,821 on the account, but in so doing pointed out that, following their custom, foreign and colonial taxes were debited against underwriting results, and interest omitted from the account. If this had not been done—and the practice of many other companies followed as regards these items—there would have been a credit of £203,628. So far as the Home and General foreign business was concerned, i.e., excluding the U.S.A. and Canada, a satisfactory profit in both these sections had been made.

LIFE DEPARTMENT.

The volume of new sums assured in the life department after deducting reassurances was £1,374,891, showing an increase of £135,342 over the previous year. This was more than double the business of any pre-war year, and with the exception of 1919 and 1920 was the highest in the history of the company. Undoubtedly the unique bonus record had largely contributed to these results.

The total life and annuity funds on December 31st last stood at £5,815,179, and showed an increase of £364,434 during the year. The claims by death and maturity amounted to £326,522.

The year 1923 was the last year of the current quinquennium, and the actuarial valuation fell to be made at December 31st next. Mr Barnes said he looked forward to being able to present next year a favourable valuation report.

ACCIDENT AND MARINE DEPARTMENTS.

In the accident account the premium income was increased by £82,387 to a total of £3,412,632. The claims experience was satisfactory, and the net amount carried to profit and loss account from the accident underwriting account was £133,220.

The marine department was passing through an epoch of severe depression, and it had not been possible to do much more than mark time, but even so, an underwriting loss of £54,457 had to be reported. The Chairman said that what was a matter of concern was the apparent absence of any real effort on the part of many underwriters to modify the evils of unrestricted competition.

PROFIT AND LOSS ACCOUNT.

The transfers to profit and loss account totalled £415,130. This included £250,000 taken from the investment fluctuation fund, to which reference would be made later. Adding to this sum interest at £390,389 not otherwise dealt with (which compared with £370,214 in 1921), together with the balance brought forward from last year, a total of £1,035,519 was reached. Against this had to be set the various amounts shown in the report, which included a provision of £149,949 for British Government Taxes, £132,095 for loss on realisation of securities, and £50,000 transferred to staff pension fund.

THE DIVIDEND.

In November last an interim dividend of 8s 6d, less tax, was declared, and the Chairman announced that the directors now recommend a similar payment, making 17s per share, less tax, for the year, after which payment there remained in the profit and loss account a balance of £223,135 to be carried forward, as compared with £230,000 brought into the account at the beginning of the year.

Continuing, he explained that as the company's Stock Exchange securities were fully of the value stated in the balance-sheet without taking the investment fluctuation fund into account, the amount £1,250,000 in this fund was, therefore, available to meet any depreciation which might possibly occur in the future, and for any contingencies which may arise.

Mr Barnes mentioned that the company celebrates this year the completion of its 75th year in the States, and spoke of the way that country had come to regard it as almost one of their own institutions.

TRIBUTE.

In concluding, the Chairman expressed the appreciation of the board of the service rendered to the company by the staff throughout the world. They had passed through another trying year, and the duties falling to their officials and particularly to their capable executives in consequence had been more than usually onerous, but they had responded to the calls made upon them with an energy and loyalty worthy of the fullest commendation.

The motion was duly carried.

The directors of the Liverpool and London and Globe Insurance Company, Limited, have re-elected Mr A. Kentish Barnes and Mr R. Q. Wilson as chairman and deputy-chairman respectively of the company.

EAGLE STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

IMPROVED RESULTS DESPITE DIFFICULTIES.

CONDITIONS OF MARINE INSURANCE MARKET.

The annual general meeting of the Eagle Star and British Dominions Insurance Company, Limited, was held, on the 17th instant, at the Moorgate offices of the company, Moorgate street, London, Sir Edward M. Mountain, Bart., J.P., presiding.

Mr J. Gardiner (the secretary) read the notice convening the meeting and the auditors' report.

The Chairman said that during the last fortnight the reports and accounts of most of the leading insurance companies had been issued, and they would have seen from the speeches of the various chairmen that the year 1922 had again been a difficult one for insurance companies. It could not very well be otherwise when trade throughout the whole world had been going through such a bad time. He would go further than this, and say that it would not be to the advantage of insurance companies if it had been otherwise. Their good friends and best clients consisted of ship-owners, merchants, and manufacturers, importing and exporting firms. Every business man knew the adverse period through which they had been passing, and if insurance companies had been having a very prosperous time while their clientele had been having such a bad time, it would, in his opinion, have shown a lack of judgment on the part of those who controlled insurance companies. Taking into consideration the world-wide difficulties that existed, he thought their company had every reason to congratulate itself on the very satisfactory accounts it was able to present. During the course of the year they had absorbed the Threadneedle Insurance Company, Limited, and the Premier Motors, Limited, with both of which bargains the directors were well satisfied.

THE FIGURES.

They would see from the figures before them that they brought forward £394,921; that their net premium amounted to £664,004; together, £1,058,926, against which they had settled for the year 1922, and all previous years, £407,154. The expenses of management, including income-tax, amounted to £75,200. They had transferred to profit and loss account £65,000, and the marine fund at the end of the year was £511,570, which fund, from their previous experience, was more than sufficient to cover all liabilities—the bulk of their business consisting of risks of a short nature. Although the net premium appeared larger than in 1921, it was not really so, because it included Threadneedle figures, and the 1921 year's premium income was reduced owing to so many "time risks" being cancelled during that year, the returned premiums for which came out of last year's income, although the premiums had been received in 1920.

MARINE MARKET CONDITIONS.

After referring to their very conservative policy in regard to the writing of Hull risks, and mentioning in regard to the cargo

business that the year under review had been in a very difficult one owing to the competition in this class of risk being very keen, he went on to say that the first year's settlement in this section was the lowest they had ever had. This was the outcome of their very careful underwriting. As he said last year, their underwriting had been done with extreme care, and this was certainly true of the year under review. There was no doubt, in his opinion, the marine insurance market was in a very unsatisfactory condition, and he did not think they had very far to go to seek the cause. Owing to world-wide depression there was, to start with, less business to go round, and, although the large number of "mushroom" companies which sprang up during the war had ceased to exist, many large and wealthy companies had during the last few years entered this market. Not only in this country, but in America, there had been a great desire among the leading insurance companies to secure a large premium income in all departments; firstly, so that interest would more than pay their dividend to shareholders, and, secondly, so that their expenses might not show a higher ratio than they already did. Both these principles were fundamentally sound, but they ceased to be so, and might become a "fetish" when a large income was kept up on unprofitable business. The losses which some companies had made in the marine market had been very heavy. That they have not been heavier was due, in his opinion, more to luck than judgment. At any rate, it was their considered policy, whilst times were as they were, to continue on the same, or even more, conservative lines, with regard to this department.

FIRE AND GENERAL INSURANCE.

Last year he had to report a slight reduction in their premium income amounting to £5,000 odd, and this was very much smaller than the reduction disclosed by many other leading insurance companies. Although trade continued to show very little improvement, the increase in these departments this year amounted to £152,444.

The net premium income was £2,401,659 16s 8d. The claims paid and outstanding amounted to £1,238,237 11s 10d., which was 51.5 per cent., or 5.1 per cent. less than last year. That figure he had quoted did not agree with the figure in the revenue account under claims paid and outstanding. The difference was £17,201, and this was accounted for by the fact that the outstanding claims brought forward on account of employers' liability section were greater in 1921 than the amount required in 1922 by this amount. Commission and brokerage amounted to £494,984 8s 1d, whilst expenses of management, including income-tax, amounted to £488,928 11s., which gave a ratio of 40.9 per cent.

After providing a full reserve of 40 per cent. of the total premium income, including increase in premiums, they had been able to transfer to profit and loss account the sum of £114,631 8s 7d, as against £95,093 4s 3d last year. This was better even than it looked, because last year they credited the account with £35,369 of interest and this year they had carried all interest direct to profit and loss account.

Fire business in America showed no improvement last year, and Canada shows very poor results. The experience was universal with all our leading insurance companies, but the business had passed through the same phases before, and he thought they could look forward to better times. Because of this their own fire profit had been small for the year, but otherwise it had shown very good results, more especially the home business, which, he thought, would compare more than favourably with that of most other companies.

LIFE DEPARTMENT.

Having referred to their accident and motor vehicle departments, he said their life department was in a very prosperous condition. The sums assured under new life policies issued amounted to £1,864,483, which was somewhat less than the corresponding figure for the previous year. On the other hand, the average sum assured under new policies continued to increase, and for 1922 amounted to £573, as against £558 for 1921. Their total life fund continued to grow; their mortality experience was very favourable, and their interest yield was such as to show a substantial margin of profit. The net yield, after allowing for income-tax on the combined life and annuity account, amounted last year to £4 12s 8d, and their expenses were very moderate. These features must be reflected in the profit from time to time divisible. The quinquennial investigation of the "Star" and "Sceptre" closed funds would be made at the end of the present year, and there was every indication that the results would be eminently satisfactory to all parties concerned.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, they would see that to maintain their dividends of £250,000 it had cost them, out of their trading profits, in round figures, £60,000, considerably less than in 1921. This, in a normal year, would only be about 25 per

cent. of their profits, and in the opinion of the directors was a very reasonable proportion, especially in view of the fact that they had established such powerful reserves. To sum up, they would see from the balance-sheet that the year 1922 was a considerable improvement on 1921, and in spite of the difficult times to which he had referred it was an indication that trade and conditions in the world were slowly but steadily improving. He knew they would be pleased to hear that 1923 had opened well, and, although it was early days to prophesy, he should be disappointed if it was not an improvement on 1922. There had been a further upward move in the value of their Stock Exchange securities since the end of the year, and although it seemed doubtful how far the present level of prices would be maintained, the appreciation to date was very considerable. In conclusion, he said that he would like to record the great appreciation of himself and colleagues for the excellent work done for the company by their general manager—Mr S. A. Bennett—the managers of the various departments, and their staff who had all done so well in very difficult times. Their thanks were also due to their representatives abroad and to all the agents of the company who continue so loyally to support them. He moved the adoption of the reports and accounts.

Mr J. Douglas Watson, F.I.A., F.A.S., seconded the resolution, which was carried unanimously.

The retiring director, Mr Charles Williams, was unanimously reappointed, and the auditors, Messrs Edwin Guthrie and Co., were re-elected.

Mr A. Goldberg, in proposing a hearty vote of thanks to the chairman and the directorate, observed that they, the shareholders, were very grateful to the chairman, the board, the managers, and staff for having placed the company in the foremost ranks of British insurance companies.

The resolution was carried with acclamation, and the Chairman having responded, the proceedings terminated.

MOTOR UNION INSURANCE COMPANY, LIMITED.

FIRST QUINQUENNIAL VALUATION—STRONG POSITION.

The ordinary general meeting of the Motor Union Insurance Company, Limited, was held, on the 15th instant, at the head office, 10 St James's street, London, Mr C. H. Dodd (the chairman of the company) presiding.

The general manager and secretary (Mr H. F. Baker) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the premiums in the fire insurance account showed a reduction at £452,719, as against £509,000 for 1921. That was accounted for by the decrease in the values insured; as a fact, they had written a larger number of policies than in the previous year. The claims experience was better than in 1921 at 55.36 per cent., as compared with 63.60 per cent., and as a result they were able to transfer to profit and loss account the sum of £15,986, as against a transfer from profit and loss account last year of £14,824. Their most important account and the mainstay of their business was the motor and general insurance account.

GOOD RESULTS IN MOTOR DEPARTMENT.

As to that, he was happy to be able to again say that they did the largest motor insurance business in the world, and looked like maintaining that position. In this account the premium income had risen, the figures being £1,030,182, as against £1,016,710. The claims showed a considerable decrease, and the result of the year's working of that account was really extremely good. They were able to transfer to profit and loss the sum of £40,814, as against £4,287 last year. As to the marine insurance account, the board had been endeavouring steadily to decrease the premium income there. Nothing had been transferred from that account to profit and loss, and they left the fund at £470,766.

The life assurance and annuity account this year was of special interest, because it marked the end of the company's first quinquennium. During the year 408 policies had been issued by the life department. Of those, 401 were for life assurances, three for life annuities, and four for capital redemption assurances. The net amount of new life assurances retained at the company's risk was £158,956, and by the operations of the year the life assurance and annuity fund had increased by £21,914 to £83,431, and the capital redemption fund by £1,159 to £2,141. The actuary's report made at the end of the quinquennial valuation disclosed a very strong position. The board had set aside reserves on bases of exceptional stringency, and had allocated a bonus of £1 10s per cent. per annum to participating policyholders in the ordinary section, while those in the abstainers' section received a bonus of £1 15s per cent. per annum.

The liabilities under life assurance contracts had been valued by the British Offices On Table, interest being taken at 3 per cent., and to the value thus ascertained supplementary reserves

to an amount exceeding £6,000 were added, producing a net liability of £56,382. Life annuities valued by the British offices select annuity experience, with interest at the very low rate of 2½ per cent. per annum, called for a reserve of £6,348. The total estimated net liability under life assurance and annuity business was thus £62,730, against which the amount of the life fund was £83,430.

DIVIDEND OF 50 PER CENT.

Those results were highly gratifying. The first quinquennial period in a life company was rather a critical period, and the figures showed that their company had come through, in spite of the bad times through which they had been passing, uncommonly well. They had earned the very substantial bonus of £1 10s per cent., which had been guaranteed, and the fund was in a very sound financial condition. In view of the favourable outlook the directors had resolved that all participating policies which were in force at the date of the next valuation—December 24, 1927—or became claims before that date, should be guaranteed an addition of bonus at the rate of £1 10s per cent. on the sum assured for each year's premium due and paid during the quinquennium. Results had been so good that they felt they could again safely guarantee that bonus, and he hoped that that would have the effect of increasing the company's life business. Dealing with the general results of the year, the Chairman said that they had a balance available of £165,178, as against £132,135 last year, or a substantial increase of something like £33,000. The preference dividend and an interim dividend of 4s per share on the ordinary shares had already been paid, and from the balance remaining the board proposed a final dividend of 6s per share on the ordinary shares, making 50 per cent. for the year. They also recommended a grant of £2,500 to the staff pension fund, leaving £81,848 to be carried forward, as against £38,475.

Mr J. E. Hodgkin seconded the motion, and the Chairman having replied to questions it was carried unanimously.

RICHARDSONS, WESTGARTH, AND CO. LIMITED.

SATISFACTORY YEAR—DIVIDEND AND BONUS.

RESEARCH WORK IN MARINE ENGINES.

The twenty-second annual meeting of Messrs Richardsons, Westgarth, and Co., Limited, the well-known marine, electric power, and land engineers, of Hartlepool, Middlesbrough, and Sunderland, was held, on the 17th instant, in Hartlepool, when accounts were submitted showing a profit for the year 1922 of £329,547, out of which, after making certain reserves, a dividend of 8 per cent. and a bonus of 10 per cent. were declared on the ordinary shares.

Mr D. B. Morison (chairman and managing director) presided. Reviewing the salient points in the balance-sheet, he stated that the policy of the directors had been to build up a strong financial position, and provide a sufficiency of working capital to meet the requirements of possible difficult times ahead.

PROTECTION OF CUMULATIVE PREFERENCE DIVIDEND.

Referring to the £100,000 invested in 5 per cent. War Stock, for the protection of the cumulative preference dividend, Mr Morison emphasised the value of this provision in times of depression, when dividends might not be earned, and pointed out that such a reserve materially increased the stability of the ordinary shares by reducing the possibility of the preference dividend arrears accumulating as a prior charge against profits.

Directing attention also to the sum of £100,000 which has now been set aside for the development of the internal combustion oil engines manufactured by the company, Mr Morison remarked that never before in the history of marine engineering had there been so many competitive types of propelling machinery as at present, and, to ensure to the shipowner reliability in working at a minimum cost for fuel and labour, both at sea and in port, the engine builder must perform constantly be engaged in that first essential of engineering success—practical research. Hence it was impossible to over-estimate the latent potentialities of the sum to which he had just referred.

BEARDMORE-TOSI OIL ENGINES.

Observing further that it gave the shipowner confidence when he knew that no expense had been spared to prove his machinery before it was put on board ship, Mr Morison stated that the Beardmore-Tosi oil engines of which he spoke last year were now approaching completion, and would be officially tested in the near future under the auspices of the Institution of Mechanical Engineers and the Institution of Naval Architects. The results would be published by those institutions in the interests of engineering progress generally.

DOXFORD OIL ENGINE.

The Chairman also made the important intimation that Messrs Richardsons, Westgarth, and Co. had recently taken a licence to

manufacture the Doxford opposed-piston oil engines, which, he said, had given such excellent results in high-power cargo boats. In fact, no effort was being spared by the company in the development of the internal combustion oil engine for the economical propulsion of ships.

As to the future, Mr Morison stated that, pending a revival in shipbuilding, remunerative contracts could not be obtained, the political tension in Europe and the recent rise in steel prices having effectually damped down inquiries. In the meantime, cost of production could only be reduced by an aggregation of small economies, the dominant elements of cost being wages and labour efficiency.

STAFF BENEVOLENT FUND.

Alluding, in conclusion, to the staff benevolent fund, Mr Morison stated that, though it was impossible to consult all the shareholders regarding the reserve of £10,000 which it was now proposed to place to that fund, he had the pleasure of laying the whole matter before those who had recently acquired the majority of the ordinary shares, and their sympathetic approval was immediate.

Adding that he was retiring from his position of sole managing director some time next year, Mr Morison said: "Since my appointment to that position in 1912, nothing I have accomplished has given me greater pride and pleasure than the inauguration of the staff benevolent fund of Messrs Richardsons, Westgarth, and Co."

Mr Morison then moved the adoption of the directors' report and statement of accounts.

Mr C. T. Watson seconded the motion, which was carried unanimously.

Mr Magee, Mr Crosby, and other critics of previous years congratulated the chairman and directors on the results achieved.

As an expression of appreciation the meeting decided to double the directors' remuneration for the year, and add £2,500 to the staff benevolent fund.

The appointment of Sir George Goodwin as a director was confirmed, and the proceedings terminated.

JUGRA LAND AND CAREY, LIMITED.

UNIQUE POSITION FOR CHEAP PRODUCTION.

The third annual general meeting of shareholders was held in the hall of the Institute of Accountants and Actuaries, 218 St Vincent street, Glasgow, on Monday, May 14, 1923, at 12 o'clock noon, Mr Wishart presiding.

Mr Stewart, for the secretaries, having read the notice calling the meeting, the Chairman said:—

Gentlemen,—I am sorry that, on account of illness, Mr Macdonald is unable to be present to-day, but you will be glad to know that he is now making good progress towards recovery.

With your permission the directors' report and statement of accounts, which you have had before you for more than the statutory period, will be held as read.

VISITING AGENT'S REPORTS.

It is gratifying to note that the visiting agent's reports in regard to the Island and to Paradise Estate continue to be thoroughly satisfactory. The planted area has been considerably increased, and a recent report shows that a further area of 132 acres has been planted in coconuts since the close of the year. I should like to say that we have again to congratulate ourselves on the thoroughly efficient manner in which our interests have been looked after by Mr French and his assistants, to whom our thanks are again due.

You will observe that the policy of economy to which I referred last year has resulted as anticipated in a considerable reduction of the "all-in" cost of rubber, which works out at 5.61d per lb. or almost 3½d per lb less than last year.

The average price received for the rubber sold was 11.34d per lb, and notwithstanding the severe depression in the industry during the financial year, this shows a profit which I trust may be considered satisfactory.

RUBBER PRODUCTION UNDER RESTRICTION.

As the result of recent legislation, the quantity of rubber this company is permitted to export during the current year is 1,599,924 lbs, being 60 per cent. of its 1920 standard production, subject to any alteration in the percentage, such as the increase to 65 per cent. allowed for the quarter beginning May 1st current. It remains to be seen what the general result of the Government restriction policy will be, but I am hopeful that it will promote confidence and prevent violent fluctuations in the price of the commodity. While the reduced output will increase the cost per lb, the present selling price is considerably better than last year's, yet we cannot look for the same total profit from rubber. On the other hand, this may exceed our expectations, according to economy in cost or increase of the export allowed.

As to copra, the output has increased during the year by 47

tons, and the cost during the previous year of £19 11s 10d per ton has been reduced to £10 18s 7d. The average price realised was £24 7s 8d, and it is expected that during the current year the profit will be increased considerably.

During the year the company appealed against the income-tax assessment for 1921-22, on the ground of "specific cause," and claimed to be assessed on the actual results instead of on the three years' average. In November last the case came before the Commissioners, and in February they gave their decision in our favour. The Inland Revenue have intimated an appeal. We are advised that we could hardly have a stronger case. The amount involved is £23,839.

The water scheme is now in operation. The cost may appear high, but the work was absolutely essential. There is a population of almost 4,000 on the island, and pure water which is now being supplied is the surest preventative of tropical diseases.

CONFIDENCE IN THE FUTURE.

I do not think everybody realises our enormous advantage in the question of cheap production, as compared with other companies, in possessing, as we do, on the island alone, rubber and coconut plantations with a total planted area of over 12,000 acres, worked under the supervision of one general manager. This, with our reserve area of over 15,000 acres, makes our position unique, and I therefore look forward to the future with great confidence.

The report and accounts were adopted, and it was decided to pay a dividend of 5 per cent. to shareholders registered in the books of the company on Wednesday, May 2, 1923, warrants to be posted on Tuesday, 22nd, payable on Wednesday, May 23, 1923.

Mr Dougal was re-elected a director, and Messrs Gibson and Anderson, C.A., auditors.

KAPAR PARA RUBBER ESTATES COMPANY, LIMITED.

RESTRICTION SCHEME—CENTRAL SELLING AGENCY.

The seventeenth annual ordinary general meeting of the shareholders of Kapar Para Rubber Estates Company, Limited, was held, on the 14th instant, at the London Chamber of Commerce, Oxford court, London.

Mr A. A. Baumann (chairman of the company) presided.

The Chairman said that the balance available, out of which

corporation profits tax for 1922 was payable, was £24,886, and it was proposed to pay a dividend of 10 per cent. for the year, carrying forward £9,886. The output of rubber amounted to 848,610 lbs, the cost of production being 5.41d per lb, as against 6.44d for 1921, and the net average price realised, 9.08d per lb, compared with 8.02d. The standard production of the company's property under the Rubber Restriction Ordinance had been fixed at 1,085,808 lbs, and on the basis of the present rate of restriction the company would be allowed in 1923 to export 651,500 lbs, which had been estimated to cost 7.04d per lb f.o.b.

Proceeding, he said: I would like to say one or two words about the restriction scheme. It is quite evident to me that there are some defects either in the scheme itself or in its administration. I hear all kinds of reports about licences being improperly given, about smuggling rubber from the British Colonies to the Dutch Colonies, about undisclosed supplies in the East; and we also hear a great many execrations heaped upon the head of that very necessary individual, the speculator. If it were not for speculation there would be no free market in any commodity.

What I do say about the whole scheme, however, is that it is only half a scheme. I do not myself see that you will ever get a stable market and a satisfactory profit unless you can control the selling market as well as restricting the output. The present position is that there are about six hundred sellers and four buyers. Therefore, the four buyers really have the absolute control of the whole game, and you will never, in my opinion, settle this matter satisfactorily until you can get a central selling agency which shall be able to deal with the market as well as control the output in the East. Most of you know that about ten years ago a proposal was made to create a selling agency. Mr Harrison, myself, and several other gentlemen in the City proposed that scheme. The Rubber Growers' Association in their wisdom turned it down; they said that it was not feasible, because you could not get the six hundred British companies to act in concert. Well, the six hundred British companies have had ten years' experience in which to reflect upon the desirability of controlling the selling market. I can only hope that after the ten years we have gone through the Rubber Growers' Association may make another attempt to complement their scheme by trying to get control of the selling market, which, I am quite convinced, is the real solution of the difficulty.

The report was unanimously adopted.

EAGLE OIL TRANSPORT COMPANY, LIMITED.**INCREASED PROFITS—DECREASED OPERATING COSTS.**

The twelfth ordinary general meeting of the Eagle Oil Transport Company, Limited, was held, on the 15th instant, at Winchester House, Old Broad street, London, the Hon. Clive Pearson (the chairman) presiding.

The secretary (Mr C. H. M. C. Wilson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: After providing for note interest the net profit of £1,237,277 shows an increase of some 30 per cent. over that of the previous year. This increase is primarily due to the additional tonnage which has been brought into commission during the year, the tonnage in commission now amounting to some 420,000 deadweight tons. I am pleased to report a further satisfactory decrease in operating costs, and that during the year your fleet has run efficiently with a minimum of lost time for repairs and overhauls. It would be well to remind the shareholders of the circumstances under which this company is able to make good profits at a time when most shipowners are suffering from high operating costs and low freights. Our vessels are, as you know, all under long-term charters to the Mexican Eagle Oil Company at rates which do not vary with the ups and downs of the freight market. As a result the charterers were able to obtain the advantages of high freights such as prevailed up to two years ago, although we derived no benefit therefrom; on the other hand, during periods such as have been experienced recently the terms of our charters, onerous to the charterers during the year under review, have afforded protection to us, so that we have not suffered during the period of low freights.

WRITING DOWN BOOK VALUE.

In transferring the amount of £617,837 to depreciation and sinking fund reserve, your directors have followed the course pursued last year in utilising a substantial portion of the available balance of profits for writing down the book value of the vessels at a rate considerably in excess of previous years, the writing down of values as quickly as possible being the wise policy. You will also note that we have, as in the last two years, made a special transfer of £75,000 to the repair reserve, which will thus stand at a figure of over £400,000.

There has already been paid the fixed dividend of 6 per cent. on the preference shares, and you will later be asked to sanction a further dividend of 2 per cent., making 8 per cent. for the year. You will remember that the articles provide that no greater dividend than 8 per cent. be paid on the ordinary shares till our reserves reach the figure of £1,000,000, but now that these will, with the transfers above, total over £2,000,000, your directors feel justified in declaring a dividend of 10 per cent. on these shares, a proposal which will no doubt receive your approval. These payments will leave £144,170, subject to corporation profits tax, to be carried forward.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, the depreciation and sinking fund reserve at £1,894,934 shows an increase of some £661,000. The repair and other reserve accounts are increased by some £139,000, and will be further increased by the allocation of the £75,000 to which I have already referred. Creditors show a decrease of some £200,000, and the item of bills payable, £849,358, appearing in the last year's balance-sheet, has disappeared, and thus the whole of your fleet is now free of mortgage.

On the credit side, cost of steamers, &c., shows an increase of nearly £700,000, and according to our present programme expenditure under this head will be completed during the current year. Debtors and payments in advance are down some £90,000, and cash shows a decrease of some £600,000.

In his presidential address at the annual meeting of the Chamber of Shipping in March last, Sir Ernest Glover expressed the hope that something would be done in the future to ensure more steady and continuous employment for the men of the mercantile marine. The uncertainty as to the length of voyage and the fact that the tramp steamer has no regular home port are big difficulties in the way of a practical scheme. The company have always held out inducements to their men to remain in its service, and I am glad to say that our efforts have met with a good measure of success, a large proportion of the petty officers and many of the men having remained long periods in our employ. In the case of our officers and engineers the difficulties of continuous employment do not arise to the same degree, and we are proud that their records of length of service are extremely good.

In conclusion, I have much pleasure in expressing the board's appreciation to the management and staff ashore and afloat of their good services, which have so largely contributed to the present successful position of the company.

Mr Clive Bowring seconded the resolution, which was carried unanimously.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.**GOOD RESULTS—INCREASED DIVIDENDS.**

The thirty-third ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 17th instant, at the Cannon street Hotel, London, Sir Vesey Holt, K.B.E. (the chairman), presiding.

Mr A. Waller Hall, one of the joint secretaries, read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said: It is a pleasure to me to submit the report and accounts, as, not only do we recommend an increase of dividend to 9 per cent., but are also able to show you that the company has further improved its position and has a reserve account which is practically intact. Interest and dividends from investments amounted in the past year to £95,872, and after adding the sundry items shown in profit and loss account "A," the gross revenue amounted to £99,950, which compares with £99,623 for the previous year. This increase would have been larger had it not been for profit on exchange, which fell from £2,808 in 1922 to £1,217 in the past year. Interest and dividends from investments show the satisfactory increase of over £3,000, in spite of the fact that this year we have deducted from gross revenue the American income-tax, whereas last year we showed that charge as a separate item. After deducting the expenses, which are less than last year, the interest on the 4 per cent. debenture stock and the dividend on the 4½ per cent. preference stock, which shows an increase of £2,820 owing to the capitalisation of the special reserve account carried through last year, there is £41,551 to carry to the appropriation account, or an increase of £2,400 compared with last year. We have transferred to reserve £9,424, and now recommend a dividend of 9 per cent., compared with 8 per cent. last year. There will be a sum of £10,678 to carry forward.

We hope to continue the 9 per cent. dividend. Otherwise your directors would not have recommended the increase this year. Provided conditions justify it at the time, we propose in November to increase the interim dividend to 4 per cent., and this will leave a final dividend of 5 per cent., to be paid if, as I sincerely trust, we are able to continue the 9 per cent. dividend.

Last year I reported the working arrangement that we had made with the Railway Debenture and General Trust Company, Limited, and the Railway Share Trust and Agency Company, Limited. I am very glad to record that the association of these three companies has been of benefit to each. We have the same staff for the three companies, and it is very gratifying to find that the merging of the offices has been carried out so harmoniously.

The Deputy-chairman, Mr Richard S. Guinness, seconded the motion, which was unanimously adopted.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.**GRATIFYING RESULTS—INCREASED PROFIT.**

The twenty-seventh ordinary general meeting of this company was held, on the 17th instant, at the Institute of Journalists, Tudor street, London, E.C., Sir J. Fortescue Flannery, Bart., M.Inst.C.E. (chairman of the company), presiding.

The secretary (Mr Howard Foulds, F.C.I.S., Assoc.I.E.R.) read the notice and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that, although general conditions during the past year had been bad for British trade, this company, which had been fortunate enough to do better each year since the war, had been

able again to improve upon the results of the previous year. At the commencement of last year they had in hand substantial orders, which gave them a good start, and during 1922 they had reaped a full year's benefit of the new plant and reorganisation in the works, begun half-way through the previous year. The volume of orders secured during the year was fairly maintained, and, as a consequence, in spite of a fall in prices, they had been able to improve upon the trading results, as the profits for 1922 was approximately £34,000 more than those for 1921. With the balance brought forward from the previous year, they had an available total of £301,901. Having dealt with the balance-sheet, and emphasised the increasingly liquid position of the company, the Chairman said that the directors considered it prudent to maintain the dividend at the same rate as had been paid for several years past, namely, 15 per cent. per annum, and to carry forward £226,901. This balance would be employed in strengthening and developing the business, in meeting the competition which was always with them, and generally in furthering the interests of the shareholders.

Coming to the general outlook, he said that the expectation of the board in the manufacture of super-tension cables had been only partially realised. The development has been much slower than they had thought would be the case. The interlinking of neighbouring power systems, a process which sooner or later must become universal, had developed slowly, but there were indications that this very necessary feature in the distribution of electrical energy was likely to be largely adopted.

The electrification of our railways was reaching practical fulfilment; and the consequent demand for super-tension cables would, he trusted, be reflected in the orders which this company would thus obtain. The present unsettled condition of affairs in Europe was seriously reflected in the trade of this country, rendering it difficult to obtain orders from the Continent, but in India, South America and several of our Colonies the work they had carried out had been substantial. They had recently opened out in the Far East, and had every reason to believe that their adventure in China would bring satisfactory business to their factories at home.

Sir T. O. Callender, J.P. (managing director), in seconding the motion, referred to the visit which he had paid to India, and said he had been able to build up and strengthen many of the connections which his previous visits to that great country had enabled him to commence.

The motion was carried unanimously.

POTTERIES ELECTRIC TRACTION COMPANY, LIMITED.**RESULTS OF A DIFFICULT YEAR.**

The twenty-fifth ordinary general meeting of the Potteries Electric Traction Company, Limited, was held, on Friday, the 18th instant, at 88 Kingsway, London.

Mr R. J. Howley, C.B.E., M.Inst.C.E., chairman of the company, presided.

The secretary (Mr H. Kingsbury) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that the result of the year's working had been unsatisfactory, and the accounts showed a very serious decrease in net revenue. The traffic receipts for the year under review amounted to £237,504, a decrease of £44,863, while, on the other side of the account, working expenses, &c., showed a decrease of £24,898.

The pottery industry had been through hard times during the past 18 months, many of the factories had only been working three or four days a week, and unemployment had been considerable. The effect was shown very clearly in the sale of workmen's weekly tickets on the tramways. During the year 1922 the number of such tickets sold showed a reduction of 1,179,000. The keen competition experienced from motor vehicles was responsible for the greater part of the decreased revenue. A large number of licensed vehicles had been competing directly with the tramway services, and in order to meet that competition fares had been reduced. Many of them were down to pre-war rates, although the average cost per mile of operating was two to two and a half times greater than in 1913.

The amount available for distribution, including £6,873 brought forward, was £17,626, which the directors recommended should be applied in payment of the cumulative preference dividend for the year, amounting to £12,250, leaving £5,376 to be carried forward.

A Bill had been introduced into Parliament providing that if the local authorities did not purchase the whole of the tramways and light railways in 1925, they could not purchase, otherwise than by agreement, until 1950. A clause had been included in the Bill, as lodged, seeking power to restrict competition by motor vehicles with the tramway services of the company, but it had

met with such serious opposition in the House of Commons on second reading that the clause had to be withdrawn. A Bill had, however, been introduced into Parliament by the Corporation of Stoke-on-Trent, in which the corporation sought powers of control over the number of omnibuses which might apply for hire on any route within the borough. The corporation therefore would, if they obtained powers, be in a position to regulate to some extent competition over the tramways. There was still a very hard fight in front of the company, but they had confidence in the future of the business. The policy of the board was a forward one—there was to be no standing still. The company had undertaken to provide for the passenger transport needs of the district, and they would do so by the best means possible. That would necessitate considerable expenditure, but a sound, honest policy of that sort, coupled with the efficient administration and management, would succeed.

Mr F. W. Chanter seconded the motion, which was carried unanimously.

WHITEAWAY, LAIDLAW, AND CO., LIMITED.**IMPROVED RESULTS DESPITE UNFAVOURABLE CONDITIONS.**

The 15th annual general meeting of Whiteaway, Laidlaw, and Co., Limited, was held, on the 18th instant, at the offices of the company, 3 Cripplegate buildings, London, Mr Mence Wilkinson, chairman and managing director, presiding.

The Chairman, in the course of his remarks, said: We are glad to be able to lay before you accounts which show a substantial improvement on the figures we had to submit a year ago; and this, although conditions all over the world, and not least in the areas which are of most interest to us, have been distinctly unfavourable to trade. It is satisfactory that in spite of all these difficulties we have been able to turn the loss of £32,761, which we had to report to you last year, into a profit of £173,826.

The trading profits, rents, &c., amount to £173,826. We propose to pay a final dividend of 5 per cent., making 7½ per cent. per annum, free of tax, on the ordinary shares, £29,469; to pay to the trustees of the employees' provident fund £1,000, and to carry forward the balance, £19,568, to the next account, subject to the payment of corporation profits tax.

The recent increase in import duties imposed by the Indian Government are undoubtedly detrimental to both the retailer and the consumer, and, to my mind, benefit only a comparatively small number of Indian manufacturers, who, by the imposition of high duties on imported goods, are able to make higher profits. In other words, our European and native customers are both penalised by the protection afforded to those who should be well able to compete on even terms with English producers. While I am not too sanguine about an early improvement in India, I am glad to be able to tell you that the returns of the past two months, that is, since the accounts were closed, are such as to justify this view.

Difficult as business has been in the Malay Peninsula during the year under review, the outlook to-day is brighter than it has been for some time, and we have the right to expect that all our branches in that territory will show improved returns and profits during the current year.

As regards Java, there seems reason to hope that conditions are again favourable for trading in Sumatra and Java, and your directors feel confident that this important unit of the company's business will justify its existence this year.

I have now only to refer to Kenya Colony and Uganda. The present political trouble in Kenya is only too well known to all of us, and, together with the recent Government interference with the currency, still renders business difficult to do.

Mr A. F. Lake seconded the motion, and it was unanimously carried.

also sold silver for forward delivery. About 12,000,000 ounces have still to be purchased under the Pittman Act, and about 26,000,000 ounces of the total amount required are not yet delivered. The director of the United States Mint announced in March last that silver purchased by him could be delivered as late as October 1, 1924, but we hear, from private advices, that delivery might even be extended to a later date if the sellers so desire.

BROKEN HILL PROPRIETARY.—Cabled report for four weeks ended April 25th:—“Iron and steel works—Coke ovens—Produced 23,219 tons of coke. No. 2 blast furnace—Produced 9,228 tons of pig-iron. No. 3 blast furnace Produced 11,850 tons of pig iron. Open hearth—Produced 16,902 tons. Blooming mill—Produced 14,914 tons. Rail mill—Produced 11,137 tons. Merchant mills—12 in mill and 8 in mill resumed operations April 4th. 18 in mill—Produced 1,574 tons. 12 in mill—Produced 1,361 tons. 8 in mill—Produced 890 tons. Steel foundry Produced 302 tons of castings. Iron Knob—Shipped 6,204 tons. Broken Hill—U derground—Position unchanged. Ore dressing mills—Produced 205 tons of lead concentrates and 4,250 tons of slimes. Zinc separation plant—Produced 1,242 tons of zinc concentrates. Slimes flotation plant—Produced 1,490 tons of lead concentrates and 3,644 tons of zinc concentrates.”

BURMA CORPORATION.—April: 18,137 tons of ore were mined; 21,620 tons of ore were milled in the treatment plant, producing 10,955 tons of lead concentrate; 12,286 tons of lead-bearing material were smelted in the blast furnaces, producing 4,302 tons of lead for treatment in the refinery. Refinery products were 3,631 tons refined lead and 367,531 ozs refined silver. Tonnage milled includes re-treatment 1,490 tons tailings.

CORNISH KALIN.—Production of china clay for April:—Washed, 1,230 tons; dried, 1,375 tons; despatched, 1,888 tons.

ELECTROLYTIC ZINC.—Production during four-weekly period ended May 2nd, 3,227 tons zinc; silver-lead product for shipment to Port Pirie for realisation containing 550 tons lead, 75,000 ozs silver.

FALCON.—April: Crushed 15,316 tons of ore, producing 255 short tons of blister copper, containing 2,165 ozs of gold, 4,950 ozs of silver; estimated value, £27,235 (taking copper at 88s per short ton, gold at 88s per oz, and silver at 26d 6d per oz).

THIBDI MINERALS.—Production of china clay for April:—Washed, 1,000 tons; dried, 630 tons; despatched, 956 tons.

ZINC CORPORATION.—April: “Lead concentrator treated 14,799 tons of ore, producing 3,116 tons of lead concentrates, assaying 63.1 per cent. lead and 4,620 tons of zinc middlings.”

Reports and Notices.

Mr Martin Luther Saunders has been appointed a director of the General Life Assurance Company.

At the annual general meeting of the Insurance Officials' Society, held on May 15th, Mr E. Roger Owen, the deputy-chairman of the Commercial Union Assurance Company, Limited, was re-elected president.

The San Paulo (Brazilian) Railway Company, Limited, announce that, in accordance with the terms of the quarterly adjustment of tariffs under the sliding scale, an increase of 76 per cent. on basic tariffs will come into force on the 1st prox. in place of the 66 per cent. increase at present in force.

The council of the Society of Incorporated Accountants and Auditors have elected Mr George Stanhope Pitt (Bolton, Pitt, and Breden), London, and Major Gwilym Arnold Evans, J.P. (G. A. Evans and Evans), Cardiff and London, to the respective offices of president and vice-president for the ensuing year.

BANKS.

BANK VOOR INDIE.—The Bank Voor Indie, which commenced operations on January 1, 1921, with a paid-up capital of 12,600,000 fl, and which is a subsidiary of the Rotterdamsche Bankvereniging, has just published its results for 1922. The total income for 1922 amounts to 2,683,013.13 fl, which has been utilised as follows:—General expenses, 1,202,978.60 fl. Written off doubtful debtors, 226,052.20 fl; premises account, 144,225.01 fl; balance of outstanding establishment expenses, 76,583.39 fl. Formation of reserve fund, 500,000 fl; 5 per cent. preference dividend, 5,000 fl; 4 per cent. ordinary dividend, 500,000 fl; carried forward 1923, 28,173.84 fl. Moneys entrusted to the bank increased with 1,107,012.11 fl to a total of 27,964,375.25 fl, whilst on the other side of the balance-sheet the improvement in trade in the Dutch East Indies is shown by an increase in advances of some nine million guilders to a total of 31,299,679.85 fl, over thirty-one millions of which are against satisfactory security. The cash in hand and at bankers amounts to 8,261,688.12 fl.

THE YOKOHAMA SPECIE BANK, LIMITED.—The net profit of the bank for the half-year ended December 31, 1922, after providing for all bad and doubtful debts, rebate on bills, &c., shows 15,015,825 yen, inclusive of 4,902,694 yen brought forward from last account. The directors propose that 4,000,000 yen be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb 6,000,000 yen. The balance, 5,015,825 yen, will be carried forward to the credit of next account. The capital of the bank is 100,000,000 yen, and the reserve fund stands in the balance-sheet at 65,000,000 yen. Reserve for doubtful debts is 2,136,638 yen. Deposits amount to 473,616,462 yen, and notes in circulation to 5,832,577 yen. Bills payable are at 425,625,181 yen. Cash stands at 70,951,974 yen, investments at 199,335,680 yen. Bills discounted, loans, &c., are at 259,120,580 yen, and bills receivable amount to 530,594,565 yen.

MISCELLANEOUS.

ARTHUR GUINNESS, SON, AND CO.—A circular issued by this company states that "the development of the company's business has rendered it necessary from time to time to reserve out of profits large sums to meet additional expenditure, and to form a reserve available for contingencies as they arise, and this policy it will no doubt be necessary to continue in the future. In these circumstances, the directors recommend—and they believe the proposal will be approved by the ordinary stockholders—that a portion of the present reserve should be made a permanent addition to the ordinary capital of the company, which at present stands at £5,000,000. The board proposes, therefore, with the sanction of the ordinary stockholders, to transfer £2,500,000 from reserve to the ordinary capital account, and to issue to the ordinary stockholders who are on the register on May 28th instant (in satisfaction of a bonus of 50 per cent., free of income-tax) new fully paid-up ordinary shares, to be subsequently converted into ordinary stock, for an amount representing one-half of their holdings (any fractions arising being satisfied in cash, at stated in the resolutions), thus increasing the paid-up ordinary capital to £7,500,000. This operation, while capitalising a portion of the reserve, will not alter the position beyond increasing (as aforesaid) the amount of ordinary capital held by each ordinary stockholder. Assuming it possible to distribute in the future by way of dividend the same amount of profits, as in previous years, each ordinary stockholder would receive in dividend on his or her increased holding the same amount

as paid on his or her present holding, although the rate of dividend calculated on the increased capital would be reduced by one-third. The new capital will rank for dividend and bonus (if any) rateably with the present stock in respect of the current year ending June 30, 1923 (except as regards the interim dividend already paid on account thereof and the present bonus), and in respect of subsequent years rateably and on an equal footing with the existing ordinary stock of £5,000,000."

HOULDER BROTHERS AND CO., LIMITED.—The revenue account for the year 1922, after provision for taxation, &c., shows a credit balance of £106,987, to which must be added the carry forward from last year of £19,740, giving a total of £126,727. After making provision for remuneration of managing directors, payment of debenture interest, preference dividend, and transfer of £25,000 to general reserve account, there remains a disposable balance of £80,601. An interim dividend on the ordinary share capital of 4 per cent. was paid on July 25, 1922, and it is now recommended that a final dividend of 4 per cent., free of tax, be distributed, leaving £16,601 to carry forward. The new office premises of the company at Buenos Ayres are now entirely completed, the lower floor accommodation being reserved for the company's own use, and practically the whole of the remaining accommodation has been let out on favourable terms. The new office premises at Monte Video are also now completed, and the office staff has moved into the new building.

MONTEVIDEO GAS AND DRY DOCK COMPANY.—The report for 1922 shows that, after providing for interest on debenture stock and other charges, and including £14,010 brought forward from the previous year, the balance at the credit of profit and loss available for dividend is £35,753. An interim dividend of 2 per cent., free of income-tax, was paid on December 1, 1922, in respect of the half-year ended June 30th, and the board now recommend the payment on June 1st next of a further dividend of 2 per cent., free of income-tax, making together a dividend of 4 per cent. for the year, carrying forward a balance of £14,076. The balance at the credit of reserve account remains at £52,500, the deferred maintenance account at £15,000, and the contingency account at £17,739. Compared with the previous year, the total gas sales show an increase of 1.09 per cent. The dock and workshops department shows a large falling off in the amount of work done. Mr T. F. Lane has retired from his position as general manager at Montevideo, which he had held with distinction for 33 years; in recognition of which, and of his long service of 50 years with the company, the directors have elected him to a seat on the board. The company's plant and property have been maintained in a state of efficiency.

SIEMENS BROTHERS AND CO., LIMITED.—Net profit for the year ended December 31, 1922, is £14,041, compared with £71,894 last year. Adding £334,112 brought forward, there is an available balance of £348,153. Dividend for the half-year to June 30, 1922, on the 10 per cent. cumulative preference shares absorbs £15,000, payments on account of excess profits duty £100,000, interest on and redemption of 4½ per cent. debentures £67,439, and income-tax for 1922 £38,405. The directors recommend that the balance of £127,309 should be carried forward. The preference dividend was last year paid for the whole year, and on the ordinary shares, which receive no dividend this year, 10 per cent., free of income-tax, was paid in the previous year. The balance-sheet shows creditors at £185,649, and debtors at £647,291. Debenture redemption fund is at £95,988, sundry reserves £44,871, building reserve £45,000, pensions fund (which receives £8,150 this year) £48,891, and general reserve £75,000. Scarcity of orders at greatly reduced prices and decrease in the value of stocks are, the directors state, responsible for the diminished profits. Establishment charges have been reduced wherever possible.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.—For the month of March, 1923, the following are the approximate net operating returns of the companies in which Whitehall Electric Investments, Limited, is interested:—Operating in Chili: Cia. Chilena de Electricidad, Limitada, £23,500. Operating in Mexico: Cia. Electrica de Tampico, S.A., £14,000; Puebla Tramway Light and Power Company, £9,900; Vera Cruz Electric Light, Power, and Traction, Limited, £2,700; Cia. de Luz Electrica y Fuerza Motriz de Orizaba, S.A., £1,420; Cia. Electrica de Cordoba, S.A., £480. Chilian exchange calculated at \$36.70 = £1. Mexican exchange calculated at \$1 = 24.5d.

RUBBER, &c.

HIGHLANDS AND LOWLANDS.—The year's working to December 31, 1922, resulted in a profit of £23,419, and the available balance, including £33,161 brought forward, is £56,580. The directors recommend a dividend of 7½ per cent., absorbing £23,211, which leaves £33,369 to be carried forward. A restricted output of 1,171,977 lbs of rubber was harvested, and the average net sale price, including the estimated value of the unsold portion of the crop, was 9.73d per lb. The managers' report states that the correct area of the estate is:—Total, 7,979 acres; planted, 4,914; mature, 4,381; unplanted, 3,065. Condition is reported to be good. The company's standard of production is fixed at 1,800,974 lbs, and at the present time a crop of 60 per cent. of the standard is being worked to. The gross proceeds from sales of rubber, with a surplus of £549 on the 1921 crop, amounted to £52,620. Eastern expenses were £28,154, selling expenditure £4,555, and home expenses £1,284, leaving a balance of profit of £18,627, to which is added £3,344 received from investments and some minor receipts. Expenditure on the estate and buildings during the year amounted to £2,154. A deduction of £2,000 is made for depreciation. The company's investments (including £35,000 5 per cent. War Loan and £10,000 National War Bonds) stand at £71,449.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have been unsettled, with further rains, and a spell of warmth and sunshine is needed in order to germinate seedlings, and bring winter crops to maturity. Spring sowings are completed, while early-sown fields do not give general satisfaction. Offerings of native wheat were on a lighter scale, but prices showed a declining tendency in sympathy with foreign descriptions. Suitable milling samples sold up to 10s 10d, with inferior at 9s 9d to 10s 12d, free on rail. Imported qualities met a slow demand and rates were the turn easier in view of lower forward offers. No. 1. Northern Manitoba quoted 52s, Rosafé 62½ lbs, 51s 9d, Barusso 62½ lbs, 51s 3d, and choice white Karachi 52s 6d, all per 49½ lbs, ex ship terms. The floating and forward section remained dull, apart from a small inquiry on Continental account, and rates displayed weakness owing to easier foreign cables. Cargoes of Barusso 62½ lbs afloat sold 47s 6d, No. 2 white Pacific expected to load June 10th 51s 9d to U.K., Rosafé 62½ lbs, June-July, 47s 3d, and No. 2 hard winter, July-August, 46s 9d, both to Germany. Crop prospects in the principal exporting countries are maintained, and the improvement with regard to the United States winter wheat is officially confirmed. United Kingdom port stocks continue to decrease owing to small arrivals. Flour remains quiet of sale, and prices barely steady. London standard straight-run quoted at 41s, patents 43s to 44s, town households 39s per sack, delivered in Metropolitan area. All English country straights 33s 6d to 35s, delivered to London stations. Imported dull, and prices largely nominal. Manitoba patents range from 37s 6d to 41s 6d as to sample, Minneapolis good patents 41s, Australian 37s to 38s per 28½ lbs, ex store. Millers' offers steady. Broad bran quoted at 7s. ordinary ditto 5s 9d; middlings 7s 6d bags included, ex mill; light oats 6s 3d, powdered oat husks 6s 3d, feed oatmeal 8s 9d, ground oats 13s 9d, all per cwt free on rail. Barley.—English quiet and ranges from 8s to 11s 6d, with best malting samples in fair demand at 10s to 12s per 112 lbs, free on rail. Imported dull, and values weak. Californian quoted 44s 6d to 46s 6d, Australian Chevalier 42s to 48s, New Zealand 33s to 47s as to quality, all landed, per 44½ lbs;

Persian 27s, Plate 30s, Danubian 30s, American malting 48 lbs 28s 6d, No. 4 Canadian Western 28s 6d, Karachi 28s 3d, all landed, per 400 lbs. On c.i.f. terms a cargo of Danube-Bessarabian due out to load sold 26s 9d. Maize.—Steady but quiet. Plate, landed, 30s 6d; No. 2 Yellow American ditto, 30s; East African, ex ship 36s 6d, landed 37s 6d; all per 48½ lbs. Oats.—English quiet, while ranging from 8s 2d to 10s 6d per 112 lbs, free on rail as to sample and descriptions. Imported lower. Plate, f.a.q., ex ship 23s 6d, landed 24s 9d; No. 2, Canadian Western, ex ship 27s 6d, landed 28s 9d; No. 3 ditto, landed 27s 3d; No. 2 Canadian feed, ex ship 25s 3d, landed 26s 3d; New Zealand A grade 38s, B grade 37s, both landed; all per 320 lbs. Oatmeal.—Quiet at late rates. London made, all cuts quoted at 18s; rolled oats, also whole groats, 18s; flaked, 20s 6d, ex mill; ordinary Scottish oatmeal, 19s 6d, 20s 6d; American, all cuts, 17s 6d per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1922-23, contrasted with 1921-22, 1920-21, and 1919-20:—

	1922-1923.	1921-1922.	1920-1921.	1919-1920.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 12	342,617	273,827	289,212	82,761
35 weeks to May 12	15,183,793	14,723,937	11,241,134	10,458,224
Average price of English wheat per cwt.	s d 10 10	s d 12 11	s d 20 1	s d 16 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1919 to 1922:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
May 5	Cwts. 332,687	Cwts. 98,621	Cwts. 55,099	s d 10 8	s d 8 11	s d 10 9
May 12	342,617	70,624	29,597	10 10	9 0	10 8

1921	273,827	31,489	43,950	12 11	11 5	11 4

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated May 17th, is as follows:—Pig-iron: Trade is quiet, but not weak. Consumers are holding off waiting the turn of events on the Continent, and if no change of importance occurs then further orders will be placed. No. 3 Cleveland G.M.B. is now at 124s per ton, and mixed numbers East Coast hematite at 122s 6d per ton. Manufactured iron and steel: The boiler-makers' dispute is still interfering with work at our shipyards, and local steel works are expected to close down for a two days' holiday next week. Steel ship plates, 10 to 10s; steel ship angles, 10 to 10s; iron bars, 12 to 12s; steel rails, 10 to 10s. Iron ore: No forward buying, and very little inquiry for prompt. Good deliveries of ore are being made. Best Bilbao Rubio is nominally 24s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—The position of crude basic steel has recovered its strength this week, and current prices, although not altered, are firmer, notwithstanding offers of cheaper Continental material. Practically all the furnaces producing such steel are on full time. Business in acid steel has contracted of late, both as regards specifications to contracts and new orders. Firms producing such steel for their own requirements have been compelled to reduce output, although the railway steel departments are doing fairly well. There is slackness at the heavy steel forges and foundries, and in heavy engineering. Pig-iron has weakened of late, and there is very little buying. Prices would be shaded to secure an order. Hematite has dropped several shillings from the highest level, and supplies are now ample. The rise in the iron market has necessitated an advance of 10 per cent. on castings used in building construction. All branches of crucible steel trade are quiet, nor is any prospect of revival in sight. In plate and cutlery extreme depression is being experienced, accompanied by severe competition and underquoting. In consequence of congestion at the ports domestic supplies of steam coal are more plentiful, but demand is good and prices firm. Nuts and slacks

are also a brisk market. House coal has experienced a poor season. Prices are generally as previously quoted.

Our Glasgow correspondent writes:—A rather better business has been transacted this week in the superior brand of Scotch pig-iron, thanks to the revived demand in force for shipments to the Pacific coast of the United States. Makers advise that generally stocks of Scotch foundry are exceedingly light, and they feel satisfied that the furnaces now being rapidly overhauled in Ayrshire and Lanarkshire will be fully required to meeting the working exigencies of the coming season. Values are steady, Scotch hematite standing at £6 7s 6d (f.o.t.) at works; No. 1 foundry, 117s 6d; and No. 1 foundry, £6 2s 6d per ton. Big quantities of ordinary plates, sections, and general constructive material are being turned out, and in nearly all the leading establishments operations are assured for a couple of months or so, and that explains in a measure for the hardness of prices. Iron castings, such as go largely into house building, have been advanced in the last day or two by 10 per cent. Some of the other standard terms are, for home business:—Crown bars, £12 10s a ton; boiler plates (being made for stock), £13; ship plates, 1/2 inch and up, £10 5s; sheets, 1/2 inch, £12 10s; gal. cor., 24 B.G. (export), £20; best bar iron, £13; B.B., £13 10s; extra best, £14; best horseshoe bars, £13 2s 6d; ditto extra, £16 2s 6d; best cable, £14 5s; rivet, £12 10s; best scrap rivet, £14—all net free on trucks Glasgow. Tube makers, wire-ropes makers, founders, and nailmakers are fully engaged; bridge builders have several excellent contracts on hand. Shipments of coal are lighter than they have been for weeks, and the inclination of prices is to ease. Since the beginning of April quotations have given way by from 1s to 2s a ton, and consumers are operating on the basis of a further series of brakes.

Our Cardiff correspondent writes:—The great strength which the Cardiff coal market developed somewhat unexpectedly towards the end of last week has been fully maintained this week. The tendency of prices has been to even slightly higher levels, and

best Admiralties have once again touched 45s. Several new forward contracts have been arranged with foreign railways for delivery over the second half of the year, but the firmness of the market this week has been due to the exceptionally heavy commitments of colliery companies and the pressure of the demand for cargoes and parcels for shipment before or immediately after the holidays. The collieries have continued to be favoured by an abundant supply of tonnage. The export trade is maintaining record figures, and the completed returns for April justify the prediction of a substantial advance in wages and a big increase in profits under the next audit. That audit will deal with the financial results of the working of the collieries in March and April. The f.o.b. proceeds of the coal exported in those two months was nearly £1,100,000 greater than the proceeds in January and February, and as the proceeds in the first two months of the year were almost enough to pay the minimum wage without the surrender of standard profits the addition of over £1,000,000 to the revenue creates a surplus which may be enough to certify for July and August next a general wage rate of from 13 per cent. to 15 per cent. above the minimum, and a 15 per cent. increase would be equivalent to over 8s per week.

The current approximate quotations are as follows:—Best Admiralties, 42s 6d to 45s; second Admiralties, 40s to 41s; best dries, 38s to 40s; black veins, 39s to 40s; Eastern Valleys, 37s to 37s 6d; Western Valleys, 39s to 40s; best bunker smalls, 32s to 32s 6d; ordinary cargo smalls, 29s to 30s; anthracite big vein, 47s 6d to 50s; machine-made cobbles, 57s 6d to 60s; French and stove nuts, 52s 6d to 55s; rubble culm, 17s to 17s 9d; coke for export, 67s 6d to 75s; inland blast furnace coke at ovens, 35s to 40s; patent fuel, 40s to 43s 6d; pitwood, ex ship, 30s to 31s.
